		7/07/2023 8:47	7/07/2023 8:47	Outbound Email		(SDWK-05 Xen)	Acknowledgement and response to feedback from 20/6/23.	N/A	Thank you for your email dated 20 June 2023 acknowledging receipt of the information provided. We also note your comment around not knowing how your Shire would be impacted as our activity is "very remote". You are correct in pointing out the Beehive project location, and perhaps the distance offshore, relative to the Shire of Derby and West Kimberley ("SDWK"), is large – around 600 km in a straight line from the Beehive-1 drilling location to the town of Derby. As such, EOG's planned activities as noted in the Flyer sent on 19 May should have not impact the SDWK. Due to the Beehive-1 Drilling Environment that May Be Affected ("EMBA") developed as part of emergency response planning for a loss of well control event, EOG is required to consult with the SDWK as this does have a low, but non-zero probability, to reach your Shire if and only if such a highly unlikely incident were to occur. As such, we would encourage that you visit EOG's Social Pinpoint Consultation Hub to learn more and provide any further feedback or concerns you or your organization may have so that we may respond and provide additional information as may be needed.
Shire of Wyndham / East Kimberley	Western Australian Local Government Authority covering 121000 square kilometres of land in the Kimberley Region with an expansive coastline within their authority area.	24/01/2023 12:00	24/01/2023 12:00	Outbound Phone Call	119		Called the Wyndham Office of Shire of Wyndham / East Kimberley to enquire re approvals required to place Public Notice at the boat ramp in Wyndham.	No approvals required from Wyndham Shire for placement of Public Notices at Boat Ramp or Community Noticeboards in Wyndham.	Provided background on the Beehive Project and potential EMBA should a discharge occur. Explained that we are completing engagement on the project to identify relevant persons that may be affected by the activity and that one of the engagement activities is placing Public Notices at Boat Ramps. Asked what approvals would be required to place a Public Notice at the boat ramp in Derby.
		19/05/2023 13:53	19/05/2023 13:53	Outbound Email		(SWEK-01 Xen)	Beehive Project information for proposed Geotechnical & Drilling activities and seeking feedback for these 2 proposed activities to assist with Environment Plan acceptance.	N/A	* Information and flyer for Beehive Project Geotechnical and Exploration Drilling provided: * The Geotechnical environment plan is currently under assessment with NOPSEMA with the activity scheduled to occur over approximately 2 weeks between the 1st of October 2023 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2023. More information will be provided prior to the start of this geotechnical program. * Drilling of a single exploration well, Beehive-1, is planned to take place over a 55-to-100-day period between the 1st of January 2024 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2024. The drilling environment plan is currently under assessment with NOPSEMA with activity timing contingent on the receipt of environment plan acceptance, rig, and equipment availability. More information will be provided prior to the start of drilling. * Guidance provided to EOG Australia Website and NOPSEMA website for further information and access to EP's. * Request made to provide feedback on any affects the Beehive Project may have to them to which we will assess and respond as required. * Information provided on how sensitive information is handled. * Options provided to respond via email, mail or phone.

(DBCA-19 Xen)	Talking about the EP and the OPEP for the Beehive exploration drilling project.	N/A	Thanks for calling back. We have just resubmitted an EP and OPEP for the Beehive exploration drilling project in the Joseph Bonaparte Gulf. Our risk assessment for a worst-case crude oil spill (Section 8.7 of the EP) has identified the potential for oiling of seabirds, shorebirds, turtles and other species. The OPEP identifies oiled wildlife response as being a priority with estimates of approximately 200 personnel and significant support infrastructure required within 6 weeks of a spill occurring. EOG is a member of AMOSC and OSRL, and has access to significant other support, but does recognise that the DBCA is the lead agency for OWR under the SHP-MEE. If the WAOWRP is activated, EOG has committed to providing all necessary resources to assist the WA DoT and/or the NT DEPWS as the Control Agencies. We would request that the DBCA review the OWR arrangements in the OPEP to ensure that they are consistent with your expectations. Any advice or comments are welcome. Additionally, we would like to meet early in the new year to further discuss the arrangements with a view to better coordinating responses between DBCA and EOG. The appendices to the EP have not been attached – if required, they can be downloaded from attached link. If you have any questions, please don't hesitate to contact me.
(DBCA-15 Xen)	Email from DBCA to EOG stating query had been passed on to the Environmental Management Branch (EMB) and that EMB receives and responds on behalf of the Department of Biodiversity, Conservation and Attractions, to advice requests and invitations to comment from petroleum operators in relation to the development of Environment Plans where the department is identified as a relevant stakeholder. Email also advised that the EP and OPEP email attachments had been lost in the email chain and asked if we would mind resending the documents. DBCA also advised they do not have access to the SharePoint folder and if EOG could allow email address access to the folder.	DBCA comments: * EP and OPEP email attachments had been lost in the email chain. Can you resend the documents. * DBCA also advised they do not have access to the SharePoint folder and if EOG could allow email address access to the folder.	Refer to email dated 20-Dec-22.
(DBCA-20 Xen)	Previous query had been passed onto the Environmental Management Branch (EMB). Asked to have the EP and the OPEP resent.	Your query has been passed on to the Environmental Management Branch (EMB). EMB receives and responds on behalf of the Department of Biodiversity, Conservation and Attractions, to advice requests and invitations to comment from petroleum operators in relation to the development of Environment Plans where the department is identified as a relevant stakeholder. I'm afraid the EP and OPEP have been lost in the email chain; would you mind resending the documents? Similarly, I do not have access to the SharePoint folder. If you can allow my email address access to the folder, it would be much appreciated.	N/A
(DBCA-16 Xen)	Email from EOG to DBCA providing links and attachments for OPEP & EP.	No concerns raised.	N/A
(DBCA-17 Xen)	Email from DBCA to EOG confirming receipt of documents and that it would be the new year before they reviewed as going on leave today. Asked if there was a timeframe in which a response is required.	No concerns raised.	N/A
(DBCA-18 Xen)	Email from EOG to DBCA confirming also on leave till new year and that perhaps we get back in contact in the new year.	No concerns raised.	N/A
(DBCA-23 Xen)	Setting up a contact time in the New Year.	N/A	I'm off on holidays from today as well and won't be back until 9 January. We expect that that we will receive comments on the EP/OPEP from NOPSEMA in late January. I appreciate that there is a lot of information to review, so would appreciate whatever you can manage. Perhaps if we get back in contact in the new year and see how we're travelling.
(DBCA-22 Xen)	Thanking EOG for getting back to them and updating them on a timeframe.	Thanks for getting back to me; the link worked perfectly. Today is my last day in the office for the year, so I won't be able to review the documents before the new year. Is there a timeframe in which you require a response I can work towards?	N/A
(DBCA-24 Xen)	Response to previous email 20/12/22.	No problem, we'll be in touch then.	N/A
(DBCA-21 Xen)	Thanking DBCA for the update and attaching the files.	N/A	Thanks for the update. The EP and OPEP are attached. The appendices to the EP are here: Sharing with third parties. If it doesn't work, give me a bell.
(DBCA-25 Xen)	Checking in after the New Year and asking if the DBCA has had a chance to review the EOG'S OPEP.	N/A	Have you managed to have a review of EOG's OPEP? We have now received comments back from NOPSEMA and are planning to meet them in Perth on Wednesday 22 Feb. Would you be available for a meeting on Thursday 23 Feb? If so, do you have any preferred times? Although there were no significant comments related to oiled wildlife response, we would like to ensure that the OPEP is appropriate and integrates with the WAOWRP.
(DBCA-26 Xen)	EP & OPEP feedback.	Thank you for your time on the phone this morning. As discussed, the Department of Biodiversity, Conservation and Attractions (DBCA) typically review Fact Sheets for Environment Plans (EPs) relevant to offshore petroleum and gas operations and undertake a high-level risk assessment to determine an appropriate response. DBCA does not typically review offshore oil and gas EPs and Oil Pollution Emergency Plans (OPEPs) at a detailed level unless it presents a high risk to values pertinent to the Conservation and Land Management Act 1984 and the Biodiversity Conservation Act 2016 (i.e. Marine Parks and threatened species in State waters) due to limited internal capacity to undertake such reviews. DBCA has undertaken a broad review of EOG's Environment Plan (EP) and Oil Pollution Emergency Plan (OPEP) for exploration activities associated with Beehive-1, located in exploration licence WA-48-P. As discussed on the phone, Section 8.12.4 of the OPEP states that DBCA is the responsible body for the Controlled Waste Tracking System; however, this system is managed by the Department of Water and Environmental Regulation. Provided that the information within the plans aligns with the recently released revised WA Oiled Wildlife Response Plan and complementary manual in 2022 (found online here), DBCA has no further comments to provide. EP Factsheets can be sent to EMBadmin@dbca.wa.gov.au for consultation purposes, and a response will be provided directly by an officer from the Environmental Management Branch.

(DBCA-27 Xen)	Discussing the EOG arrangements.	N/A	Thanks for the phone call and the previous response below. As discussed on the phone, we understand that DBCA believes that EOG's arrangements generally align with the revised WA OWRP (and Manual), apart from Section 8.12.4 of the OPEP. We'll update Section 8.12.4 and review the revised WA OWRP (and Manual) to ensure EOG's arrangements align with them. Additionally, could you please confirm that DBCA does not want to meet with EOG in Perth in February (as requested in my email from 30 Jan 23)?
(DBCA-28 Xen)	Stating there is no benefit to a meeting this month.	I can confirm that DBCA does not anticipate any additional benefit in meeting with EOG this month to discuss this exploration project.	N/A
(DBCA-29 Xen)	Response to email from DBCA 1/2/23.	N/A	Thank you
(DBCA-30 Xen)	Beehive Project update for proposed Geotechnical & Drilling activities and seeking feedback for these 2 proposed activities to assist with Environment Plan acceptance.	N/A	* Follow up on updated information and flyer for Beehive Project Geotechnical and Exploration Drilling provided: * The Geotechnical environment plan is currently under assessment with NOPSEMA with the activity scheduled to occur over approximately 2 weeks between the 1st of October 2023 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2023. More information will be provided prior to the start of this geotechnical program. * Drilling of a single exploration well, Beehive-1, is planned to take place over a 55-to-100-day period between the 1st of January 2024 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2024. The drilling environment plan is currently under assessment with NOPSEMA with activity timing contingent on the receipt of environment plan acceptance, rig, and equipment availability. More information will be provided prior to the start of drilling. * Guidance provided to EOG Australia Website and NOPSEMA website for further information and access to EP's. * Request made to provide feedback on any affects the Beehive Project may have to them to which we will assess and respond as required. * Information provided on how sensitive information is handled. * Options provided to respond via email, mail or phone.
	Follow up phone call re May 2023 Beehive Project Update made to enquire if they had and comments or feedback to be considered in the Environmental Plan to be submitted to NOPSEMA.	Unsure if information flyer / letter had been received. Will find out and respond.	N/A
20230630 Email Follow Up June 2023	Follow up email seeking feedback by 21 July 2023 on update that was provided in May 2023 via email.	N/A	This message is in follow up to the email below providing an update to the Beehive project and requesting that you (or your organisation) share your assessment of how you may be affected by our proposed activities. We are kindly requesting feedback from you by 21 July 2023.
(DBCA-32 Xen)	Feedback from May 2023 Beehive Project Update.	<p>Thank you for providing the Department of Biodiversity, Conservation and Attractions (DBCA) with the attached information in relation to EOG Resources' proposed activities in WA-488 within Commonwealth waters. DBCA has undertaken a review of the documentation provided and other readily available information, and provides the following comments on matters relevant to DBCA's Conservation and Land Management Act 1984 and Biodiversity Conservation Act 2016 related responsibilities.</p> <p>There are a number of ecologically important areas, including marine parks, and islands and coastal conservation reserves located in the vicinity of the proposed operations, including the North Kimberley Marine Park (M 20) and the Ord River Nature Reserve (R 31967). Based on the information provided, it appears that there is potential for these areas to be affected by EOG Resources' operations if there is a substantial hydrocarbon release and subject to particular weather or other environmental conditions. Given the ecological importance of areas potentially affected by a hydrocarbon release from the proposed activities, it is considered important that the baseline values and state of the potentially affected environment are appropriately understood and documented prior to any operations commencing that have the potential to lead to hydrocarbon releases.</p> <p>DBCA would like to have confidence that EOG Resources has established appropriate baseline survey data on the current state of areas supporting important ecological values and any current contamination if present within the area of potential impact of hydrocarbon releases (as identified through EOG Resources' modelling). Following a desktop review and risk assessment, EOG Resources should also collect appropriate baseline abundance and distribution data for benthic habitat and marine fauna species in the area of potential impact,</p>	N/A

		19/07/2023 3:01	19/07/2023 3:01	Outbound Email		(DCBA-32 Xen)	Response to feedback email 11/7/23.	N/A	<p>A comprehensive description of the environment at risk in the event of a large hydrocarbon release is provided in Appendix 5 of the Beehive-1 Drilling Environment Plan (EP). This chapter uses publicly available baseline data from a range of sources to describe protected areas, flora and fauna, heritage and socio-economic values with the environment that may be affected (EMBA) in the event of a large hydrocarbon spill. Section 5.4.9 of Appendix 5 describes the North Kimberley Marine Park, while the Ord River Nature Reserve is described in the context of its Ramsar site listing, but not as a Nature Reserve per se. We will correct this in the EP.</p> <p>An Operational and Scientific Monitoring Programme (OSMP) has been prepared for the project and is available as Appendix C to the Oil Pollution Emergency Plan (OPEP). Chapter 3 of the OSMP provides links to existing publicly available baseline data, and Chapter 4 (particularly Table 4.3) outlines the priority pre-spill contact survey areas in the event of a spill. The North Kimberley Marine Park and Ord River Floodplain are listed in this table as priority areas for water and sediment sampling. Chapters 9 and 10 and Part B of the OSMP describe the capability and implementation arrangements in place to implement the OSMP. This ensures that in the event of a spill, EOG has in place the capacity to undertake pre- and post-contact environmental monitoring.</p> <p>EOG has factored in the National Light Pollution Guidelines for Wildlife (DoEE, 2020) in its impact assessment (Section 7.3 of the EP) but will update the EP to reference the more recently released Light Pollution Guidelines for Wildlife Including Marine Turtles, Seabirds and Migratory Shorebirds (DCCEE, 2023). EOG will specifically reference this guideline in Chapter 9 of the EP, which focuses on the impact assessment for hydrocarbon spill response.</p> <p>Emergency response contact details in the event of a hydrocarbon spill are included in Section 3.1 of the OPEP. The DBCA's Kimberley office will be added to this section of the OPEP as requested, and we note your comments about the whole-of-government spill response. The DoT's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of September 2018 titled Marine Oil Pollution: Response and Consultation Arrangements have already been taken into consideration in the preparation of the OPEP. EOG is committed to clean-up and monitoring of areas of DBCA's interests in the event of a hydrocarbon spill; NOPSEMA will not accept the EP unless they are satisfied that EOG has demonstrated the capability to do so.</p>

(WA DOT-08)	WA DoT replied to EOG stating that if there is a risk of a spill impacting WA State waters from the proposed drilling activities, EOG must ensure that the WA DoT is consulted as outlined in the DoT Offshore Petroleum Industry Guidance Note - Marine Oil Pollution: Response and Consultation Arrangements (July 2020).	WA DoT comment: * If there is a risk of a spill impacting WA State waters from the proposed drilling activities, EOG must ensure that the WA DoT is consulted as outlined in the DoT Offshore Petroleum Industry Guidance Note - Marine Oil Pollution: Response and Consultation Arrangements (July 2020).	N/A
(WA DOT-09)	EOG emailed WA DoT Information Flyer 3 to notify of the Beehive-1 exploration well drilling program.	No concerns raised.	N/A
(WA DOT-10)	EOG had a meeting with WA DoT to discuss resourcing and state requirements in relation to oil spill response. EOG sent an email with a summary of the meeting discussion to WA DoT.	WA DOT comments: * asked if there was anything in particular EOG wanted to know at this time. * pointed out that it is a very remote area and that mobilising people and resources would take time and that there are significant safety considerations involved. * said that one of WA DoT's primary focus is ensuring cross-jurisdictional arrangements are properly planned for and implemented. * asked if EOG understood the cross-jurisdictional arrangements. * noted that Wyndham Port had been acquired by Kimberley Ports. * noted that there is potential for significant impact in NT waters and asked if EOG knew about their requirements in particular, how many people would they want in an NT IMT (noting that there could be significant resource requirements for WA and NT IMTs). * asked whether EOG had engaged an OSMP service Provider. * asked about EOG's presence in Australia and whether EOG were members with AMOSC and OSRL.	EOG comments: * gave brief overview of potential spill impacts, noting the extensive shorelines predicted to be contacted along with very short times to landfall. Explained that we are planning to submit the EP and OPEP by the end of April, but expect 3 revisions from NOPSEMA, with acceptance in Q1 2023. * indicated we were just looking at an introductory meeting. * EOG understand the WA requirements (e.g. initial 11 people into WA IMT, with likely more to follow) and submitting the OPEP to them at the time of submission. WA would be the lead agency for Shorelines and OWR, and that EOG would support them. Tactical Response Plans (TRPs) will probably be required however these will most likely be developed following the first submission. * sent information to Wyndham Port and were hopeful of potentially using the port as a Forward Operations base. * very little published about the NT's response arrangements. Same information sent to NT EPA as sent to WA DoT and still waiting on a response. * our current knowledge of NT arrangements is based on the information within another proponents OPEP which is currently under assessment. * EOG are planning to use the APPEA Framework for the OSMP and that RPS are provisionally available to act as an OSMP Service Provider. We recognise that detailed OSMP Implementation Plans may need to be developed following the first submission. * EOG currently only has a Drilling Manager in Australia but does have a Crisis Response Team and Crisis Management Plan based in Houston and have said that they would supply a Deputy IC and Liaison Officers to the IMT in the event of a spill. * EOG are not yet members of AMOSC but plan to join AMOSC. EOG are a member of OSRL and will ensure that local membership is obtained prior to drilling activities. EOG also have MSAs with Wild Well Control (WWC) and other well control companies and consultants. EOG had engaged AGR for drilling services and that AGR would supply the bulk of the IMT requirements through Australia, with surge capacity from the UK and Singapore.
(WA DOT-11)	WA DoT replied via email and confirmed that the summary of meeting was as per the meeting discussion on 30 March 2022 and thanked EOG for the advance consultation provided.	No concerns raised.	N/A
(WA DOT-12)	EOG emailed Information Flyer 4 with an update on the PDSA phase and invited return comment. The flyer also notified the stakeholder that the Drilling EP was available on NOPSEMA's website for public exhibition for 30 days, until 8th June 2022.	No concerns raised.	N/A
(WA DOT-13)	EOG emailed WA DoT to notify that the Drilling EP is open for comment on NOPSEMA's website & provided a copy of OPEP, EP, the oil spill modelling report including EOG's response to Appendix 6. In addition EOG clarified a QA correction in the OSTM report.	No concerns raised.	N/A
(WA DOT-14)	WA DoT emailed EOG confirming receipt of information sent on 12 May and said they will review the info and provide comments if they have any. WA DoT advised EOG to use the generic email for future correspondence.	No concerns raised.	N/A
(WA DOT-15)	EOG emailed Flyer 5 with updates to the Geotechnical phase and invited to return comment.	No concerns raised.	N/A
(WA DOT-16)	Automated acknowledgment of email received from WA DoT.	No concerns raised.	N/A
(WA DOT-17)	EOG sent copy of OPEP as per consultation requirements. EOG sent copy of OPEP as per consultation requirements.	No concerns raised.	N/A
(WA DOT-20 Xen)	Email received from DoT. "Thank you for providing us with the OPEP. We will review this and get back to you with any comments / queries".	No concerns raised.	N/A
(WA DOT-18 Xen)	Email sent from EOG to DoT providing Beehive Project update, providing details of where information can be found, information on how sensitive information would be handled, seeking feedback / objections / claims for the project and asking if there are other persons / organisations that may have interest in the project.	No concerns raised.	N/A
(WA DOT-19 Xen)	Email sent from EOG to DoT. "We have now resubmitted the EP and OPEP to NOPSEMA (revised OPEP attached). Thanks for your comments from the 8 August review and the feedback from our 1 September 2022 meeting. The OPEP has been significantly updated, addressing your comments and feedback, and includes new appendices demonstrating the capability of the DINT and operational teams (based on an analysis by AMOSC). We have incorporated the DoT Kimberley shoreline cells and have committed to developing TRPs for a number of locations (in development by OSRL). RPS has reviewed the capability requirements for the OSM BIP and we include additional updated information on monitoring priorities and capability. We welcome any comments / feedback on the revised OPEP.	No concerns raised.	EOG requests: * We recall that you mentioned that other THs have TRPs for the region and that you may be able to put us in touch with them. Is this possible? * As part of our re-assessment of the response strategies, and to ensure better integration between the DoT and EOG IMTs, we would like to invite the DoT to participate in some of the OPEP Testing in the new year. If this is possible, could you please indicate when might be a good time? * The OPEP references information within the EP and the EP Appendices. If you would like a copy of these, or if you have any other questions, please don't hesitate to contact me.
(WA Dot-21 Xen)	Automated acknowledgment of email.	No concerns raised.	N/A

(WA DoT-22 Xen)	Email from DoT. "Thank you for providing us with the updated OPEP. Can you please provide a response to our comments with this? I can certainly advise who has TRP's in the area (just specify which area you are interested in) but it will of course be up to EOG to make contact with them. How early in the New Year are you looking to exercise the OPEP?"	DoT comments: * Can you please provide a response to our comments with this? 1 - Please ensure that it is clear within the Beehive-1 Exploration Drilling Oil Pollution Emergency Plan (OPEP) that the Department of Transport (DoT) is the Hazard Management Agency for marine oil pollution in WA State waters under the Emergency Management Act 2005 2 - There are references in Section 2.1.4 to a 'lead' Jurisdiction Authority. Please clarify this. 3 - Section 2.1.4 also states that 'If a Level 2/3 Petroleum Activity in Commonwealth waters is likely to enter WA or NT waters, the Jurisdictional Authority remains true to the source of the spill (i.e., NOPSEMA for Commonwealth waters).' Please clarify the detail and intent of this statement. 4 - Provide detail on the risk assessment undertaken in relation to those potential spill scenarios as covered by this OPEP. 5 - Provide details on the properties of all potential spill types as covered by this OPEP. 6 - Provide a map of the Environment that May Be Affected (EMBA) based on the spill modelling that has been conducted. 7 - Have limiting conditions of each of the potential response method been considered? 8 - Provide detail on what equipment, personnel, supplies and services may be required. 9 - Please provide detail on where the above will be sourced. 10 - Does the 128 persons identified in Appendix B (DIMIT) include all field-based responders? 11 - It is unclear in the OPEP where the initial 11 personnel that may be required by DoT would be sourced from. Please clarify this noting that for certain positions,	Refer to email dated 20/12/22 & 22/12/22.
(WA Dot-23 Xen)	Email from EOG to DoT. "Response has been prepared which is being reviewed and will be provided in the next few days."	No concerns raised.	EOG response: * Response has been prepared which is being reviewed and will be provided in the next few days.
(WA DoT-24 Xen)	Email from DoT to EOG acknowledging receipt of email from 20/12/22.	No concerns raised.	N/A
(WA DoT-40 Xen)	Response to email from DOT dated 19/12/22.	Comments raised by DOT in email dated 19/12/22: 1 - Please ensure that it is clear within the Beehive-1 Exploration Drilling Oil Pollution Emergency Plan (OPEP) that the Department of Transport (DoT) is the Hazard Management Agency for marine oil pollution in WA State waters under the Emergency Management Act 2005 2 - There are references in Section 2.1.4 to a 'lead' Jurisdiction Authority. Please clarify this. 3 - Section 2.1.4 also states that 'If a Level 2/3 Petroleum Activity in Commonwealth waters is likely to enter WA or NT waters, the Jurisdictional Authority remains true to the source of the spill (i.e., NOPSEMA for Commonwealth waters).' Please clarify this noting that for certain positions, DoT's preference is that these are filled by people with an intimate knowledge of	Following up from previous email 19/12/22, please find attached EOG's response to the DoT's comments on the Beehive-1 drilling OPEP. EOG's response to each point raised in email dated 19/12/22: 1 - OPEP: Table 2.1 – Note 3; Section 2.3.2. 2 - OPEP: References to 'lead' jurisdiction authority removed. 3 - OPEP: Section 2 revised to provide clarification on Jurisdictional Authorities. 4 - EP: Chapter 6 of the EP details the Environmental Impact & Risk Assessment Methodology. Sections 8.6 and 8.7 provide the risk assessments for Marine Diesel Oil (MDO) Release and Loss of Well Containment. Chapter 9 provides the risk assessment for oil spill response activities. 5 - OPEP: Table 1.3 provides summary information on indicative crude oil and MDO properties. OPEP Appendix B (Basis of Design): Section 4 provides an overview of the oil spill modelling; Section 4.2 describes the response planning thresholds; and Section 4.3 details the deterministic modelling outcomes used to select the worst-case discharges (WCD) used for the Basis of Design. 6 - OPEP: Figure 4.2 (LoWC EMBA) and Figure 4.32 (MDO EMBA). 7 - OPEP Appendix B (Basis of Design): Section 6 outlines the Field Capability Basis of Assessment, including the use of cone of response models (Section 6.2), oil spill budgets (Section 6.3) and tiered response (Section 6.4). AMOSC provided an assessment of response requirements (Section 6.5). Section 6.6 presents the overall field capability assessment. Section 7 provides information on field capability arrangements, including limiting conditions. Section 8 describes the arrangements for each response strategy, including limiting conditions. 8 - OPEP Appendix A (DIMIT Capability Assessment): Section 1.2 describes the methodology used (including AMOSC's justification) for determining DIMIT requirements. The rest of Appendix A describes the capability for a DIMIT from initial ramp-up through to peak requirements. OPEP Appendix B (Basis of Design): Sections 6 through 8 provide details on the equipment, personnel, supplies and services required to implement the response strategies. 9 - OPEP: Table 6.2 provides details on where equipment, personnel, supplies and services will be sourced. OPEP Appendix A (DIMIT Capability Assessment): Section 2 provides detail on where DIMIT personnel would be sourced. OPEP Appendix B (Basis of Design): Section 7 provides overarching details on where equipment, personnel, supplies
(WADOT-41 Xen)	Email to WADOT advising locations where EOG has committed to preparing TRP's.	N/A	The attached file has the locations where EOG has committed to preparing TRPs (based on contact within 15 days). Could you please advise whether any other titleholders have TRPs for these locations (or nearby locations)? If so, could you provide their contact details?
(WADOT-42 Xen)	Response to email 17/1/23 re TRP's.	I've checked our database and unfortunately we do not have any records of TRP's in that location. My only suggestion would be if you are aware of operators within a similar area that you could ask them if they have any. They may do and we just may not be aware of them.	N/A

(WA DoT-25 Xen)	Response to email about the Exploration Drilling Oil Pollution Emergency Plan.	Thank you for providing us with the EOG Beehive-1 Exploration Drilling Oil Pollution Emergency Plan, Rev 3 (96161-2022-Beehive*1-Drilling-OPEP-Rev3) and response to our comments. These have been reviewed and comments generated from this review are outlined in the attached document. If you have any queries, please don't hesitate to contact me. Summary of attached document: 1 - No further comment. 2 - No further comment. 3 - No further comment. 4 - No Further comment. 5 - No Further comment. 6 - Can you please clarify what concentrations the EMBA's as depicted in Figure 4.2 and Figure 4.3 have been modelled at? 7 - No further comment. 8 - No further comment. 9 - No further comment. 10 - No further comment. 11 - Table 3.1 indicates that the majority of the positions to be provided to DoT would be made up of EOG and EOG contractors. It also indicates the Deputy Planning Officer and Deputy Logistics Officer positions would not be filled by EOG staff. Please clarify why these positions are not filled by EOG staff and/or provide an indication as to how EOG contractors would have an intimate knowledge of an EOG plan given they are not from EOG? It is also noted that Table 3.1 of Appendix A indicates that the 11 personnel may not be available until Day 3-8. What provisions are in place in the event they are required before then? 12 - No further comment.	Refer to email dated 30/1/23
(WA DoT-26 Xen)	Response to DOT email 24/1/23.	N/A	Thanks for the comments. I think that we have a good understanding of what is required to address most of these comments but would like a couple of clarifications. Comment 11: * EOG are considering who would be suitable for the Deputy Planning Officer and Deputy Logistics Officer positions. EOG's contractor engaged for Drilling Management Services and for the DIMIT, we were wondering if EOG's contractor staff would be suitable for these roles? * We will commit to providing the Deputy Planning Officer and Deputy Logistics Officer positions within 24 hours. When would you expect the other positions to be required? Comment 16: * Table 2.1 of Appendix A identifies that the Planning Section Chief has overall responsibility for communications and that the Communications Unit Manager will ensure effective communications from the IMT to the field, and intra-field communications * Table 5.15 of the OPEP identifies that EOG would utilise the services of a specialist communication provider * Table 6.2 of the OPEP identifies that up to 50 satellite phones would be hired. * As any response which includes WA waters would involve WA DoT and DBCA, we were wondering if you have an existing system/plan that we can align with? Comment 19: * In the event of a LOWC event, all of the approved dispersants listed in Table 8.1 of Appendix B would likely be used. * I could find no records of Jabiru crude actually being tested against dispersants. * We have received advice from AMOSC and OSRL that Jabiru crude would likely be amenable to dispersant use. We could probably provide copies of these emails (with approval) – would this be sufficient? On another note, we will be in Perth for a number of meetings in late February and were hoping to meet with you on Friday 25 February . Would you be available then? If so, what time/s would you prefer?
(WA DoT-27 Xen)	Auto reply from DoT.	Thank you for your email. I am currently out of the office until Tuesday 31 January 2023. For emergencies regarding marine oil spills, please contact the 24 hour duty officer on (08) 9480 9924. For any urgent matters, please email marine.pollution@transport.wa.gov.au, otherwise I will respond to your email as soon as I can.	N/A
(WA DoT-28 Xen)	Asking about availability for a meeting.	N/A	We have other meetings in Fremantle on Thursday 23 Feb. Would you be available for a meeting on Thursday from around 10.30 AM?
(WA DoT-29 Xen)	Confirming meeting and discussion.	Yes, that time/date works for a meeting. Is it primarily for a discussion around the comments on Beehive-1? I'll respond to your other email in regards to comments clarification shortly.	N/A
(WA DoT-29 Xen)	Thanks for confirming appointment.	N/A	Thanks for confirming appointment.
(WA DoT-31 Xen)	Purpose of meeting.	Are you able to please clarify the purpose of the meeting for us?	N/A
(WA DoT-32 Xen)	Outlining the purpose of the meeting.	N/A	Key people from EOG will be in town and are keen to introduce themselves. We'd probably like to spend a bit of time discussing the comments, but would also like to discuss some other aspects of EOG's response and testing arrangements. We're in the process of reviewing and updating the OPEP and have identified that we need to provide more detail on personnel, equipment and response strategies. At this time, we think that we may want to discuss how EOG's arrangements integrate with the WA arrangements, particularly at the operational (in-field) level. We'd also like to talk about proposed OPEP testing arrangements, including WA DoT's involvement. We may also identify other questions for WA DoT as we revise the OPEP. I'll prepare a short agenda closer to the time. I'll follow up with a meeting request.
(WA DoT-33 Xen)	Meeting arrangements.	Thanks for that, that is very helpful. And an agenda at some stage will be great. I note it may not work but just wanted to see if a 1pm meeting that day is possible? If not, happy for the morning one to go ahead it just means that one of my colleagues won't be able to attend. If so, I can just take any questions offline if I am unable to answer them at the time.	N/A
(WA DoT-34 Xen)	Meeting arrangements.	N/A	We are keen to investigate you and your colleague's availability for two hours on Wednesday 22 Feb from 1pm, later than 1pm on Thursday 23 Feb, or any time Friday 24 Feb. If nothing else suits, we can make the 1 pm meeting.
(WA DoT-35 Xen)	Meeting arrangements.	My colleague is able to make from 1330 -1430hrs on Thursday 23 Feb if that works?	N/A.

		3/02/2023 7:40	3/02/2023 7:40	Outbound Email		(WA DoT-36 Xen)	Meeting arrangements.	N/A	Thanks for that. I'll cancel the previous meeting and send out a new invite.
		8/02/2023 15:11	8/02/2023 15:11	Inbound Email		(WA DoT-38 Xen)	Responses from the DoT to EOG email 30/1/23. Responses as follows: Comment 11: * The Department of Transport expectations are outlined in the Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements (IGN). If a deviation to this was to be proposed we would require some justification as to why and how the alternative would be able to deliver what is required before we can comment on suitability. * As per the IGN, the remaining positions are required to be provided by 8am the following day that the request for the personnel is made. Comment 16: * We do not have a publicly available plan that we can provide for alignment, however, if you can provide us with some of the details (as you've started to do above), we can comment on suitability. Comment 19: * Some confirmation on advice sought would be appreciated.	Please see some responses to email from 30/1/23 in red. We are happy to discuss these further in the meeting if that's preferred. Responses as follows: Comment 11: * The Department of Transport expectations are outlined in the Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements (IGN). 		24/05/2023 21:31	24/05/2023 21:31	Inbound Email		(TUNAA-02 Xen)	Acknowledgement of receipt of email 24/5/23.	Thank you for your enquiry, we have received your message and will be responding shortly.	N/A
		25/05/2023 19:58	25/05/2023 19:58	Inbound Email		(TUNAA-03 Xen)	<p>Response to Email 25/5/23:</p> <p>* Confirmed members and non members are being inundated with consultation requests from energy companies.</p> <p>* Tuna Australia decided at board meeting to consult with members and provide submissions reflecting views of the fishery in response.</p> <p>* Provided industry position statement and encouraged contact with regulator for clarification of position.</p> <p>* Suggested entering into a services agreement to assist with projects and plans.</p>	<p>Thank you for reaching out to Tuna Australia regarding your environmental plans.</p> <p>Tuna Australia members and non-members in the Eastern Tuna and Billfish Fishery, the Western Tuna and Billfish Fishery, and the Australian Skipjack Fishery are being inundated with consultation requests from energy companies seeking advice on environmental plans. To address this issue, the Tuna Australia board decided at their meeting to consult with members and provide submissions reflecting views of the fishery in response to proposals.</p> <p>Tuna Australia's outreach covers all concession and permit owners and holders in the fisheries I mentioned previously. Some of our members also hold concessions in the Southern Bluefin Tuna Fishery. However, for advice from the SBT fishery I suggest you contact them.</p> <p>Please find attached our industry position statement which expands on the points in this email. Also, I encourage you to contact NOPSEMA if you want any clarification of our position.</p> <p>After you have reviewed our industry position statement and would like to enter a services agreement with Tuna Australia to assist you with your projects and plans, please contact us and we will send you the agreement for consideration.</p>	Refer to email 26/5/23.
		26/05/2023 22:28	26/05/2023 22:28	Outbound Email		(TUNAA-04 Xen)	Response to email 26/5/23 thanking for information and requesting copy of services agreement for consideration.	Refer to email 28/5/23.	Thank you very much for the information, we greatly appreciate it. Can you please send on the information for the services agreement for our consideration?
		28/05/2023 19:38	28/05/2023 19:38	Inbound Email		(TUNAA-05 Xen)	Response to email 26/5/23 providing services agreement for consideration.	Please find attached our services agreement for your consideration.	Refer to email dated 28/6/23.
		28/06/2023 7:21	28/06/2023 7:21	Outbound Email		(TUNAA-06 Xen)	Response to email 28/5/23 confirming receipt of services agreement and that EOG would review and respond.	N/A	My apologies for the delayed response, we are in receipt of your services agreement, our team will review and follow back up with you.
		19/07/2023 11:28	19/07/2023 11:28	Outbound Email		(TUNAA-07 Xen)	Response to emails 25/5/23 & 28/5/23 regarding services agreement.	N/A	<p>Thank you for your email dated 25 May 2023 providing Tuna Australia's Position Statement as well as email dated 28 May 2023 providing a copy of Tuna Australia's form of Service Agreement for consideration. Please find attached a Beehive Project Fact Sheet July 2023 – Tuna Australia ("Fact Sheet"), which responds to the request contained in Tuna Australia's Position Statement for "information in a written succinct manner including estimated boundaries for extent of planned activity impacts (i.e., artificial light, noise, discharges etc.) as well as activities within the operational area."</p> <p>As noted in the Fact Sheet, the Environmental Plan has identified control measures in place to minimize these impacts to as low as reasonably practicable. We have also attached a link to NOPSEMA's brochure entitled "Consultation on offshore petroleum environment plans" (the "Brochure").</p> <p>https://www.nopsema.gov.au/sites/default/files/documents/Consultation%20on%20offshore%20petroleum%20environment%20plans%20brochure.pdf As indicated on the fourth page under the heading "What if I don't have the resources to participate?", NOPSEMA has confirmed that there is no requirement in law for titleholders to pay costs associated with consultation. EOG is consulting with the individual Southern Bluefin Tuna and Western Tuna and Billfish Fishery license holders and peak representative bodies because the fishing zones for those specific fisheries overlap the Geotechnical and Drilling Environment that May Be Affected ("EMBA"). Nonetheless, we note that no recent historic fishing effort has occurred near the Beehive project for any of the tuna fisheries. You may also be aware that the proposed activity is relatively minimal in that the proposed activity consists of geotechnical work and a single exploration well that would be capped and abandoned at the end of the work program. Given (1) NOPSEMA's position on costs as set forth in the Brochure, (2) the lack of fishing in the area for the last three years, (3) the fact that we are consulting directly with the fisheries that overlap the EMBA, and (4) the scope of the activity being proposed, we do not see a Service Agreement with Tuna Australia as being appropriate. Of course, we would be pleased to hear from you further regarding the information we have provided and to understand any additional feedback (whether in relation to artificial light, noise, discharges you specifically requested or otherwise) should you have any outstanding comments, questions, or concerns.</p>

		28/09/2021 0:00	28/09/2021 0:00	Inbound Email		(NPF-1, 2 & 3)	NPF responded requesting shape files of the Beehive project area to help inform their response. EOG responded via email with attached shape files.	NPF requested shape files of the Beehive project area to help inform their response.	EOG responded via email with shape files.
		27/10/2021 0:00	27/10/2021 0:00	Outbound Phone Call		N/A	EOG spoke to NPF who confirmed the shapefiles were sent to the NPF CEO on 11 October to have a look at it. NPF advised it is best to contact NPF CEO directly and provided the email and mobile details.	No concerns raised.	N/A
		28/10/2021 0:00	28/10/2021 0:00	Outbound Email		(NPF-4)	EOG emailed NPF CEO the information flyer and asked if NPF had any feedback on the project based on the information and shapefiles that were sent to NPF on 28 September. EOG requested a reply email to confirm receipt of email and any questions from NPF.	No concerns raised.	N/A
		28/10/2021 0:00	28/10/2021 0:00	Inbound Email		(NPF-5)	NPF CEO replied to EOG that they had received the shapefiles internally on 11 October but was out of the office. She confirmed that she would review the files and get back to EOG early next week.	No concerns raised.	N/A
		8/11/2021 0:00	8/11/2021 0:00	Outbound Phone Call		N/A	EOG spoke to NPF CEO who apologised for not providing comments sooner. She confirmed she hadn't read the whole EP and that she would provide some comments by mid week at the earliest re potential impact on NPF. EOG stated that Chapter 7 of the EP would be worth directing focus on as it addressed potential impacts and the mitigation measures. EOG also mentioned the survey area has been reduced and offered to send through the updated map. NPF CEO was keen to see the updated map and requested new coordinates to assist her with a quick turnaround of comments. EOG will send those to her asap.	Apologised for not providing comments sooner. Confirmed she hadn't read the whole EP and that she would provide some comments by mid week at the earliest re potential impact on NPF. Was keen to see the updated map and requested new coordinates to assist her with a quick turnaround of comments.	EOG stated that Chapter 7 of the EP would be worth directing focus on as it addressed potential impacts and the mitigation measures. EOG also mentioned the survey area has been reduced and offered to send through the updated map. EOG to send shape files.
		9/11/2021 0:00	9/11/2021 0:00	Outbound Email		(NPF-6)	EOG emailed NPF CEO the revised PDSA survey area map & coordinates and resent the information flyer requesting feedback via reply email.	No concerns raised.	EOG emailed the revised PDSA survey area map & coordinates and resent the information flyer requesting feedback.
		10/11/2021 0:00	10/11/2021 0:00	Inbound Email		(NPF-7)	NPF CEO requested shapefiles for the revised survey area.	Requested shapefiles for the revised survey area.	Refer to email 12-Nov-21.
		10/11/2021 0:00	10/11/2021 0:00	Inbound Email		(NPF-8)	NPF CEO emailed EOG concerns including the NPF is totally opposed to any exploratory or drilling activity which may impact on catches and / or fishing operations from 1st August to 1 December in any given year. In addition, due consideration has not been given to the potential immediate hazards and / or long term impacts of the proposed operation on TEP species, including sawfish.	Concerns including the NPF is totally opposed to any exploratory or drilling activity which may impact on catches and / or fishing operations from 1st August to 1 December in any given year. In addition, due consideration has not been given to the potential immediate hazards and / or long term impacts of the proposed operation on TEP species, including sawfish.	Refer to email 12-Nov-21.

(NPF-9)	EOG responded to NPF's concerns via email.	No concerns raised.	EOG responded to the NPF concerns with the following: * Acknowledgement of the low fishing effort and catch in the PDSA area, noting that the EP includes an impact assessment for impacts to the fishery, including vessel displacement. * Acknowledgment that the PDSA will aim to be completed prior to the start of August in order to avoid disruption to the fishery. This will also negate the need for compensation. * Impacts to threatened species, such as turtles, sawfish and sea snakes, along with impacts to prawns, are addressed in the EP. * Committed to continuing consultation with the NPFI as planning for the drilling campaign progresses.
(NPF-10)	EOG advised NPF that the EP had been submitted to NOPSEMA for a completeness check prior to its publication on the NOPSEMA website; and provided a copy of the EP (in advance of public exhibition).	No concerns raised.	N/A
(NPF-11)	EOG emailed Information Flyer 2 to notify the stakeholder that the PDSA EP was now available for public exhibition and comment on the NOPSEMA website and the latest updates to the EP.	No concerns raised.	N/A
(NPF-12)	EOG emailed Information Flyer 3 to notify of the Beehive-1 exploration well drilling program.	No concerns raised.	N/A
N/A	EOG called NPF no answer left message. EOG called NPF no answer left message.	No concerns raised.	N/A
N/A	EOG called NPF call went to voicemail left message to callback.	No concerns raised.	N/A
(NPF - 13)	EOG emailed Information Flyer 4 with an update on the PDSA phase and invited return comment. The flyer also notified that the Drilling EP was available on NOPSEMA's website for public exhibition for 30 days, until 8th June 2022.	No concerns raised.	N/A
(NPF-14)	NPF replied to say thanks for the advice.	No concerns raised.	N/A
(NPF-15)	EOG emailed Flyer 5 with updates to the Geotechnical phase and invited to return comment.	No concerns raised.	N/A
(NPF-16 Xen)	Email sent from EOG to NPF CEO providing Beehive Project update, providing details of where information can be found, information on how sensitive information would be handled, seeking feedback / objections / claims for the project and asking if there are other persons / organisations that may have interest in the project.	No concerns raised.	N/A
(NPF-17 Xen)	Beehive Project Update for proposed Geotechnical & Drilling activities and seeking feedback for these 2 proposed activities to assist with Environment Plan acceptance. Also provided information to mitigate a previous concern raised by the NPF for the activity occurring between 1 August - 1 December in any year.	N/A	* Follow up on updated information and flyer for Beehive Project Geotechnical and Exploration Drilling provided: * The Geotechnical environment plan is currently under assessment with NOPSEMA with the activity scheduled to occur over approximately 2 weeks between the 1st of October 2023 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2023. More information will be provided prior to the start of this geotechnical program. * Drilling of a single exploration well, Beehive-1, is planned to take place over a 55-to-100-day period between the 1st of January 2024 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2024. The drilling environment plan is currently under assessment with NOPSEMA with activity timing contingent on the receipt of environment plan acceptance, rig, and equipment availability. More information will be provided prior to the start of drilling. * Guidance provided to EOG Australia Website and NOPSEMA website for further information and access to EP's. * Request made to provide feedback on any affects the Beehive Project may have to them to which we will assess and respond as required. * Information provided on how sensitive information is handled. * Options provided to respond via email, mail or phone.
	Call received from CEO as they had not received any updates on the Beehive Project but was made aware that a recent update had been sent out on the Beehive Project.	CEO called and said they had not received any recent updates on the Beehive Project but had been made aware that a recent update has been sent out. CEO said: * they have an interest in the project as their members fish in the project area. * couldn't find any updates in her emails other than an email from November 2021 although updates could have been sent to a past Project Manager. * asked for an email address to send what they thought was the last update they received.	EOG response: * confirmed a recent update was sent in May 2023 which contains the most up to date information and superseded past updates. * would resend update from May 2023. * asked that if there was any feedback or comments to send them through in writing via email.
(NPF-18 Xen)	Email received from CEO following todays phone call with the last correspondence they believed they had received.	As discussed in phone call.	Refer to email 19/6/23 15:03.
(NPF-19 Xen)	Email resending Beehive Project update from 24/5/23 and seeking clarity on email address for future correspondence.	N/A	The most recent email from 24/5/23 (copy attached for your review) has been sent to an NPF email address. Can you please confirm if this email address is the appropriate email address or should we update our records with another email address for all future correspondence. If you have any comments or feedback in relation to the attached email which contains the most current information for the Beehive activity, can you please email those comments or feedback to (email addresses provided).
(NPF-20 Xen)	May 2023 Beehive Project Update	* Thanks for the email below and also from 24th May. * To cover the bases for the future, please also include my other email address for all future correspondence. * I'll give you a call a bit later in the day to discuss the May email but in the meantime can you please advise if the area in question has changed since we last reviewed the shape files in 2021. If there have been changes it would be appreciated if you could send me the latest shape files so we can overlay the NPF effort data to assist with our comments on the EP.	Refer email dated 20/6/23 16:20.
(NPF-21 Xen)	May 2023 Beehive Project Update	N/A	* Thanks for the note. I have added your second email address so that all future correspondence goes to both addresses. The May 2023 email I sent yesterday gives the most current up to date information for the Beehive Project. * In relation to the shape files, I can confirm the ones you reviewed in 2021 remain current. * We look forward to receiving any written feedback or comments you may have on the Beehive Project.

		20/06/2023 17:07	20/06/2023 17:07	Inbound Email	114	(NPF-22 Xen)	May 2023 Beehive Project Update	* Is there a cut off date for comments / feedback?	Refer to email dated 21/6/23 08:51.
		21/06/2023 8:51	21/06/2023 8:51	Outbound Email		(NPF-23 Xen)	May 2023 Beehive Project Update	N/A	It would be appreciated if you could send through comments or feedback before 21 July 2023.
		21/06/2023 9:01	21/06/2023 9:01	Inbound Email		(NPF-24 Xen)	May 2023 Beehive Project Update	Thanks – will get back to you asap.	N/A
		19/07/2023 3:50	19/07/2023 3:50	Outbound Email		(NPF-25 Xen)	Provision of updated DRAFT Commercial Fisheries Compensation Protocol	N/A	We have made additional revisions to the DRAFT Commercial Fisheries Compensation Protocol and have attached for your information.
		27/07/2023 10:27	27/07/2023 10:27	Inbound Email		(NPF-26 Xen)	Feedback.	Apologies for the delay in providing NPFI’s latest response on the Beehive project to you. Will ensure this is on your desk by Monday latest.	N/A
		2/08/2023 15:22	2/08/2023 15:22	Outbound Email		(NPF-27 Xen)	Follow up on feedback.	N/A	Thanks for the note below. Just thought I would follow up on NPFI’s latest response on the Beehive Project that you indicated in your note. We are working on finalising our Environment Plans in preparation for submission to NOPSEMA towards the end of August 2023 and would like to consider feedback or comments from NPFI in our Environment Plans for the submission. Look forward to hearing from you soon.
		3/08/2023 10:34	3/08/2023 10:34	Inbound Email		(NPF-28 Xen)	Feedback from May 2023 Beehive Project Update and DRAFT Commercial Fisheries Compensation Protocol.	Further to our previous discussions/input, NPFI reiterates our earlier concerns regarding the potential impacts of the EOG Resources Beehive Project WA-488-P proposal, summarised below: Overview: The JBG redleg banana prawn fishery – managed by the Australian Fisheries Management Authority - is highly regulated and represents a significant component of the NPF, both in terms of catch and economic value. There has been significant investment over time in quantifying the abundance of juvenile redleg banana prawns in estuarine habitats (by estuary and region), defining the spatial relationship between juvenile and adult habitats, and defining the drivers of stock productivity (Plagányi et al. 2021). Various harvest strategies have been simulation-tested to ensure the stock and fishery in the JBG are robust to climate variability, with an optimal harvest strategy adopted in 2020 (Blamey et al. 2022). In addition, the impacts of fishing on other components of the JBG ecosystem have been assessed, including the temporal benthic fish and crustacean community, their habitats and large-scale geo-features of the JBG ecosystem (Jarrett et al. 2015, Tonks 2006). This ongoing investment in research, annual stock assessment and strict management has enabled the JBG redleg banana prawn fishery to be certified by the Marine Stewardship Council (MSC) as sustainable (2012, 2018, 2023) Fishing Effort: NPFI notes that there is low level of NPF commercial prawn fishing effort/catch in the specific area proposed, with the majority of fishing effort occurring on adult prawns to the north and north-west of the drilling location. However, our records show that there is very significant historical concentration of fishing effort/catch adjacent to the proposed area – as such, the potential impacts to fishery productivity and disruption to fleet activity in the vicinity of the area	N/A
		3/08/2023 11:36	3/08/2023 11:36	Outbound Email		(NPF-29 Xen)	Acknowledgement of feedback for our review.	N/A	Thank you for the feedback in the below email dated 3 August 2023 on behalf of NPFI. Our team will review the feedback provided and will follow back up with you upon completion of our review.
		25/08/2023 6:22	25/08/2023 6:22	Outbound Email		(NPF-30 Xen)	Response email providing response to previous email points.	Consultation with other operators, acknowledgement of opposition to drilling, mutual access, unavoidable impacts compensation, vessel and equipment	N/A

(WAFIC-10)	EOG emailed Information Flyer 3 to notify of the Beehive-1 exploration well drilling program.	No concerns raised.	N/A
(WAFIC-11)	WAFIC emailed EOG regarding Flyer 3 and asked EOG to confirm whether the following would be undertaken in the event of an unplanned discharge incident.	WAFIC questions to confirm whether the following would be undertaken in the event of an unplanned discharge incident: * Established baseline scientific data on aquatic organisms and the aquatic environment. * Communication strategy and scenario/exercise training that considers the commercial fishing industry in the event of an incident. * Support to the commercial fishing industry with regards to traceability of fish products to manage tainting risks. * A detailed process for post spill scientific monitoring of aquatic organism and aquatic environment. * Commitment for financial adjustment to the commercial fishing industry.	Refer to email dated 9-Mar-22.
(WAFIC-12 & 13)	EOG responded to WAFICs query on the handling and management of oil spill response in the event of an unplanned discharge incident. WAFIC thanked EOG for their comments and offered EOG any guidance or feedback on the Compensation policy/procedure should EOG wish to take up the offer. At this stage WAFIC have no further comment on the drilling activity.	WAFIC response: * Offered EOG guidance or feedback on the Compensation policy/procedure should EOG wish to take up the offer. * No further comments at this stage.	EOG reviewed the concerns raised by WAFIC regarding the PDSA and in response: * Agreed to no fishing from activity vessels (see PDSA EP). * Control measures in relation to temporary displacement of commercial fishers and interference with commercial fishing vessels is addressed in in the EPs. * Baseline publicly available data on the existing environment is included in Chapter 5 of the EPs. * The OPEP includes the communication strategy between EOG and fisheries. * The OSMP framework includes testing for fish tainting. Baseline data on water quality and sediment quality would be obtained from control sites in the event of a large-scale hydrocarbon spill to inform the analysis of impacts. * EOG is required to provide NOPSEMA with a demonstration of Financial Assurance in the event of a worst-case incident (typically a hydrocarbon spill) and EOG has the financial resources to respond.
(WAFIC-14)	EOG emailed Information Flyer 4 with an update on the PDSA phase and invited return comment. The flyer also notified that the Drilling EP was available on NOPSEMA's website for public exhibition for 30 days, until 8th June 2022.	No concerns raised.	N/A
(WAFIC-15)	WAFIC emailed to thank EOG for the update.	No concerns raised.	N/A
(WAFIC-16)	EOG emailed Flyer 5 with updates to the Geotechnical phase and invited to return comment.	No concerns raised.	N/A
(WAFIC-17)	WAFIC emailed to thank EOG for the update and confirmed WAFIC had no comments to the proposed changes.	No concerns raised.	N/A
(WAFIC-18 Xen)	Email sent from EOG to WAFIC seeking to take them on the offer to review our Draft Commercial Fisheries Compensation Policy (which was attached), providing Beehive Project update, providing details of where information can be found, information on how sensitive information would be handled, seeking feedback / objections / claims for the project and asking if there are other persons / organisations that may have interest in the project.	No concerns raised.	EOG asked WAFIC to review the Draft Commercial Fisheries Compensation Policy as previously offered.
(WAFIC-19 Xen)	Email received from WAFIC introducing additional relevant person and providing contact details.	No concerns raised.	N/A
(WAFIC-21 Xen)	Email received from WAFIC. They will review the draft protocols next week but asked for clarity if EOG based them on the NERA collaborative seismic EP protocols or was something new developed?	WAFIC confirmed they will review the draft protocols but asked for clarity on whether EOG based them on the NERA collaborative seismic EP protocols or was something new developed?	N/A
(WAFIC-20 Xen)	Email sent by EOG to WAFIC thanking for the update.	No concerns raised.	N/A
(WAFIC-22 Xen)	Email sent by EOG to WAFIC that EOG will seek further information to clarify as requested in email 15 November 2022.	No concerns raised.	N/A
(WAFIC-23 Xen)	Email sent by EOG to WAFIC. EOG protocols broadly align with the NERA collaborative seismic EP protocols but is adapted to be more applicable to the non-seismic activities EOG are contemplating over the next two years.	No concerns raised.	EOG confirmed protocols broadly align with the NERA collaborative seismic EP protocols but is adapted to be more applicable to the non-seismic activities EOG are contemplating over the next two years.
(WAFIC-24 Xen)	Review of compensation protocols.	Email received from WAFIC. Apologies for the delay in replying. I have reviewed the compensation protocols and have a few questions/clarifications: * Section 7 - Where there may be some behavioural or biological impact to a fishery, which may not have an economic impact to commercial fishing. Just to clarify any changes to behavioural or biological impacts the resources available to harvest and therefore economically can impact commercial fishing. * Just to clarify is the history of fishing within the EOG petroleum permit or the actual operational area of the activity? * for at least two out of the last five years. Is these two full years or just active for a set period of time in each year? * Section 8 - All fishing history and potential economic losses must relate directly to the EOG Petroleum Activity, during the time period of the operations associated with the same Petroleum Activity. It is not clear in the statement above, how to demonstrate a direct loss in relation to the EOG Petroleum Activity, this is potentially subjective, this may require an additional statement just to clarify the intent. With regards to the drilling and geotechnical activities, please refer to the attached confidential advice.	N/A
(WAFIC-25 Xen)	Email sent by EOG to WAFIC. We will follow up with our team to provide the answers and clarifications needed. Thank you for your confidential advice which will be handled as confidential.		EOG response: * We will follow up with our team to provide the answers and clarifications needed.

		<table><tr><td>24/05/2023 2:49</td><td>24/05/2023 2:49</td><td>Outbound Email</td></tr><tr><td>28/06/2023 11:08</td><td>28/06/2023 11:08</td><td>Outbound Phone Call</td></tr><tr><td>3/07/2023 22:53</td><td>3/07/2023 22:53</td><td>Inbound Email</td></tr><tr><td>6/07/2023 22:10</td><td>6/07/2023 22:10</td><td>Outbound Email</td></tr></table>	24/05/2023 2:49	24/05/2023 2:49	Outbound Email	28/06/2023 11:08	28/06/2023 11:08	Outbound Phone Call	3/07/2023 22:53	3/07/2023 22:53	Inbound Email	6/07/2023 22:10	6/07/2023 22:10	Outbound Email	<table><tr><td>(WAFIC-26 Xen)</td><td><p>* Provide responses to previous questions and provision of Fisheries protocol.</p><p>* Beehive Project update for proposed Geotechnical & Drilling activities and seeking feedback for these 2 proposed activities to assist with Environment Plan acceptance.</p></td><td>N/A</td><td><p>Apologies for the delayed timeframe in which to respond but we are now able to provide answers to your previous questions, provide a project update and provide a revised version of Fisheries protocol for your additional review and feedback.</p><p>We appreciate WAFIC's previous comments on the Fisheries protocol. We have taken these comments into account, along with other feedback so that we may finalize this document in due course. We have provided a summary of the Fisheries protocol on the EOG website for anyone to access and intend to provide the full document once finalized to anyone who requests a copy in writing. Answers to the questions you have asked are provided below:</p><p>* Section 7 – Where there may be some behavioural or biological impact to a fishery, which may not have an economic impact to commercial fishing. Just to clarify any changes to behavioural or biological impacts the resources available to harvest and therefore economically can impact commercial fishing.</p><p>o For clarity we have removed this text from the Protocol. The likelihood and extent of a behavioural or biological impact will be important to quantifying any economic impact, which could be positive, negative, or neutral. Given the relatively small Petroleum Activity areas the Beehive activities will take place in relative to the size of the fishing grounds, any impact is expected to be minor and temporary especially as both the fish and fishers are mobile.</p><p>* Just to clarify is the history of fishing within the EOG petroleum permit or the actual operational area of the activity?</p><p>o EOG would initially only request the history of fishing within the Petroleum Activity area to determine the validity of any claims. Further analysis could require data over a larger area, but this would be requested from the claimant only if needed with rationale for such a request provided.</p><p>* "For at least two out of the last five years". Is these two full years or just active for a set period of time in each year?</p><p>o EOG would initially only request the current and historical catch history, in hours, during the calendar month of the Petroleum Activity for the month(s) a claim is being made and for the same calendar month(s) during the 5 previous calendar years. Further analysis could require data over additional months, but this would be requested from the claimant only if needed with rationale for such a request provided.</p></td></tr><tr><td></td><td>Follow up phone call re May 2023 Beehive Project Update made to enquire if they had and comments or feedback to be considered in the Environmental Plan to be submitted to NOPSEMA.</td><td>Confirmed correspondence had been received and that they would review and provide any comments / questions to EOG via email.</td><td>N/A</td></tr><tr><td>(WAFIC-27 Xen)</td><td>Beehive Project & DRAFT Commercial Fisheries Compensation Protocol feedback.</td><td><p>Thank you for your email, we acknowledge receipt on the project update for Beehive WA-488-P and the revised Commercial Fisheries Compensation Protocol.</p><p>Just to note, the revised protocols now seem to include several disclaimers that have a legal basis. I understand the recent court case has resulted in changes around consultation. At WAFIC we don't have the expertise or resources to consider this from a legal perspective, we trust that the consultation process undertaken by titleholders with our industry is genuine and transparent and not guided and developed by legal professionals. Any advice provided by WAFIC is provided based on our best knowledge, with a focus on ensuring the rights of the fishing industry are considered.</p><p>We provide the following feedback on the protocols:</p><p>* Commercial fisher definition – you may need to expand “licence holder” to “The holder of a licence, or a person acting on the licence holder’s behalf” to allow for transfer of units or leasing arrangements.</p><p>* Current catch definition – reflected in hours may to need be reflected in a measure of time relevant to the fisheries management requirements. Some logbooks for reporting catch have different methods.</p><p>* Safety – Is EOG’s only communicating with fishers via the notice to mariners, will EOG also send notifications?</p><p>* Loss of catch – can you please specify the time required to lodge a claim – up to 12 months?</p><p>* Fishing Gear Loss or Damage – Is the intention to make fishers lodge insurance claim before coming to EOG? If the loss was a direct result of the survey, why can't EOG cover that. Some fishers may have additional costs associated with making an insurance claim, so they would be left out of pocket.</p></td><td>N/A</td></tr><tr><td>(WAFIC-28 Xen)</td><td>Acknowledgement of feedback 3/7/23.</td><td>N/A</td><td>Thank you for your email and notes around the changes in consultation resulting from the recent court case. 		19/07/2023 3:25	19/07/2023 3:25	Outbound Email		(WAFIC-29 Xen)	Response to feedback email 3/7/23.	N/A	<p>Thank you again for your comments regarding the Beehive Exploration Fisheries Compensation Protocol. We have made revisions as a result of your feedback, and these are incorporated in the attached revised version and the notes below.</p> <p>* (WAFIC Feedback) Commercial fisher definition – you may need to expand “licence holder” to “The holder of a licence, or a person acting on the licence holder’s behalf” to allow for transfer of units or leasing arrangements. (EOG Response) We have made this change in the attached revised version.</p> <p>* (WAFIC Feedback) Current catch definition – reflected in hours may to need be reflected in a measure of time relevant to the fisheries management requirements. Some logbooks for reporting catch have different methods. (EOG Response) We have made this change in the attached revised version.</p> <p>* (WAFIC Feedback) Safety – Is EOG’s only communicating with fishers via the notice to mariners, will EOG also send notifications? (EOG Response) We have made this change in the attached revised version to add email notifications where possible, although we note that EOG does not have email addresses for most license holders.</p> <p>* (WAFIC Feedback) Loss of catch – can you please specify the time required to lodge a claim – up to 12 months? (EOG Response) Further to this request, we have adjusted the claim period from 3 months to 6 months, and to ensure consistency and administrative simplicity made this applicable to all claims, which is reflected in the attached revised version.</p> <p>* (WAFIC Feedback) Fishing Gear Loss or Damage – Is the intention to make fishers lodge insurance claim before coming to EOG? If the loss was a direct result of the survey, why can’t EOG cover that. Some fishers many have additional costs associated with making an insurance claim, so they would be left out of pocket. (EOG Response) Part of our concern is ensuring the Compensation Protocol and insurance coverage work together and do not conflict. Our intention is to ensure that there is clarity for the Commercial Fishers in regards to coverage and to avoid the likelihood of problems with insurance coverage due to the potential for overlapping reimbursement. We have made a minor revision in the attached revised version to hopefully clarify this point.</p> <p>* (WAFIC Feedback) 3 month claim period for fishing gear loss – can this be extended to up to 6 months to allow for changes in fishing patterns. (EOG Response) Further to this request, we have adjusted the claim period from 3 months to 6 months, which is reflected in the attached revised version.</p>

N/A	Thank you for the chat today at the AFANT office. Please find attached a copy of the Public Notice that EOG Resources Australia Block WA-488 Pty Ltd (EOG) would like to share with stakeholders on their Beehive Project in the Joseph Bonaparte Gulf. As discussed, I dropped into AFANT to seek suggestions on how EOG could get the information in the Public Notice regarding the Beehive Project out to amateur and recreational fishers or groups in the NT that may be a stakeholder. We have done Public Notices in NT Newspapers and placed a copy of the Public Notice on non-social media Community Noticeboards around Darwin however any other suggestions on how to reach more amateur and recreational fishers or groups would be greatly appreciated. We did also approach the NT Department of Planning, Infrastructure and Logistics about placing a Public Notice at boat ramps for which they have responsibility for however our request was not allowed. The intent of the Public Notice is to search for information about what environmental values people may have in the EOG project area for the Geotechnical and Drilling activities and requests that they share their assessment of how their functions, activities, interests, or values in or around the project area may be affected by our proposed activities and the predicted environmental impacts and risks. On receipt of their assessment, we will assess the merits of any objections or claims they make and provide a response to them which will outline our assessment of merit and any actions taken to mitigate the degree to which they may be affected. Once again, thankyou for your time and we would appreciate any suggestions AFANT may have.
		15/02/2023 10:44	15/02/2023 10:44	Inbound Email		(AFANT-06 Xen)	Email from AFANT requesting consultation period closing date.	Email from AFANT: Are you able to please tell me the consultation period closing date?	Refer to email sent to AFANT dated 16/2/23.
		16/02/2023 8:06	16/02/2023 8:06	Outbound Email		(AFANT-07 Xen)	Email sent to AFANT advising would need to clarify consultation closing date.	Emails to AFANT: Will just confirm the revised closing date and come back to you later today or tomorrow.	Refer to email sent to AFANT dated 17/2/23.
		17/02/2023 7:54	17/02/2023 7:54	Outbound Email		(AFANT-08 Xen)	Email sent to AFANT confirming consultation closing period.	Email sent to AFANT: The consultation period closing date is 14 April 2023.	No concerns raised.
		3/03/2023 8:48	3/03/2023 8:48	Outbound Email		(AFANT-09 Xen)	Follow up of previous email 14/2/23.	N/A	I am just following up to see if AFANT has any suggestions to assist EOG in getting the information in the Public Notice out to amateur and recreational fishers and groups in the NT?
		25/05/2023 22:23	25/05/2023 22:23	Outbound Email		(AFANT-10 Xen)	Beehive Project update for proposed Geotechnical & Drilling activities and seeking feedback for these 2 proposed activities to assist with Environment Plan acceptance.	N/A	* Follow up on updated information and flyer for Beehive Project Geotechnical and Exploration Drilling provided: * The Geotechnical environment plan is currently under assessment with NOPSEMA with the activity scheduled to occur over approximately 2 weeks between the 1st of October 2023 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2023. More information will be provided prior to the start of this geotechnical program. * Drilling of a single exploration well, Beehive-1, is planned to take place over a 55-to-100-day period between the 1st of January 2024 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2024. The drilling environment plan is currently under assessment with NOPSEMA with activity timing contingent on the receipt of environment plan acceptance, rig, and equipment availability. More information will be provided prior to the start of drilling. * Guidance provided to EOG Australia Website and NOPSEMA website for further information and access to EP's. * Request made to provide feedback on any affects the Beehive Project may have to them to which we will assess and respond as required. * Information provided on how sensitive information is handled. * Options provided to respond via email, mail or phone.

NT Demersal Fishery	Peak industry body representing Demersal fishing allowed from 15 nautical miles from the low water mark to the outer boundary of the Australian Fishing Zone, excluding the area of the Timor Reef Fishery.	17/09/2021 0:00	17/09/2021 0:00	Outbound	113	(Demersal- N/A)	EOG emailed Flyer 1.	No concerns raised.	N/A
		7/10/2021 0:00	7/10/2021 0:00	Outbound Phone Call			EOG spoke DF who confirmed email was not received. EOG confirmed email to resend Flyer 1.	No concerns raised.	N/A
		7/10/2021 0:00	7/10/2021 0:00	Outbound Email		(Demersal-02)	EOG spoke to DF who issued a different email address for EOG to resend Flyer 1. DF sent EOG a test message to EOG in response.	No concerns raised.	N/A
		7/10/2021 0:00	7/10/2021 0:00	Outbound Email		(Demersal-03)	EOG resent email with Flyer 1 to DF.	No concerns raised.	N/A
		7/10/2021 0:00	7/10/2021 0:00	Inbound Email		(Demersal-03)	Automated acknowledgment of email.	No concerns raised.	N/A
		13/10/2021 0:00	13/10/2021 0:00	Inbound Email		(Demersal-04)	NT Fisheries emailed EOG stating concern about potential impacts to fish from seismic.	NT Fisheries concerns: * Requested no seismic activity during fish species spawning seasons. * NT Fisheries strongly advised EOG to undertake Ecological Risk Assessment (ERA) style process rather than the ALARP. * Indicated if EOG required more information to refer to DPIRD - fisheries department. * Potential impacts to fish from seismic including impacts to audio organs, larval survival and other varying spatial and temporal impacts. * In addition, requested that any seismic work necessary to be undertaken through this permit, does not occur within the warmer months of the year which generally coincide with many tropical fish species spawning seasons.	Refer to email dated 18-Oct-21.
		18/10/2021 0:00	18/10/2021 0:00	Outbound Email		(Demersal-05)	EOG emailed NT Fisheries a response in relation to concerns of impacts from seismic activity.	No concerns raised.	EOG response: * Confirmed that the EIA will take into account spawning for key commercial fishing targets, especially prawns. * Reiterated the risk assessment process. * Asked NT Fisheries if they were happy to receive an earlier version of EP (prior to public exhibition) to review the risk assessment.
		23/11/2021 0:00	23/11/2021 0:00	Outbound Email		(Demersal-06, 07 & 08)	EOG advised DF / NT Fisheries that the EP had been submitted to NOPSEMA for a completeness check prior to its publication on the NOPSEMA website and provided a copy of the EP (in advance of public exhibition). DF replied to EOG but confirmed unable to access the EP via the link sent in the email due to IT security and would resolve it internally with their IT department. EOG responded and offered alternative options for file sharing with DF should they wish to do so.	No concerns raised.	N/A
		2/12/2021 0:00	2/12/2021 0:00	Outbound Email		(Demersal-09)	EOG emailed Information Flyer 2 to provide notification that the PDSA EP is available for public exhibition on the NOPSEMA website.	No concerns raised.	N/A
		28/02/2022 0:00	28/02/2022 0:00	Outbound Email		(Demersal-10)	EOG emailed Information Flyer 3 to notify of the Beehive-1 exploration well drilling program.	No concerns raised.	N/A
		12/05/2022 0:00	12/05/2022 0:00	Outbound Email		(Demersal-11 & 12)	EOG emailed Information Flyer 4 with an update on the PDSA phase and invited return comment. The flyer also notified that the Drilling EP was available on NOPSEMA's website for public exhibition for 30 days, until 8th June 2022.	No concerns raised.	N/A

		12/05/2022 0:00	12/05/2022 0:00	Inbound Email		(Demersal-13)	NT Fisheries provided comment to EOG via email.	NT Fisheries comments: * Expressing concerns on the negative impact on shared fish stocks that straddle the WA/NT border. * Queried the estimated number of holes that are expected to be drilled and ongoing concerns over the cumulative effect of localised impacts from benthic smothering and the possible flow-on effect this could have on biota and higher trophic organisms.	Refer to phone call 13-May-22.
		13/05/2022 0:00	13/05/2022 0:00	Outbound Phone Call		N/A	EOG spoke to NT Fisheries and talked them through the 2D shallow seismic survey concerns (no concerns now as they thought it was conventional seismic) and concern about cumulative impacts to seabed critters from muds/cuttings from drilling and/or Geotech drilling. The differences between Geotech drilling and exploration drilling were explained and pointed NT Fisheries to the detailed muds/cuttings modelling in the drilling EP so they could see that we'd addressed those concerns.	NT Fisheries concerns were addressed.	EOG response via phone call: * Talked NT Fisheries through the 2D shallow seismic survey concerns and concern about cumulative impacts to seabed critters from muds/cuttings from drilling and/or Geotech drilling. * Explained the differences between Geotech drilling and exploration drilling. * Pointed NT Fisheries to the detailed muds/cuttings modelling in the drilling EP so they could see that we'd addressed those concerns.
		27/06/2022 0:00	27/06/2022 0:00	Outbound Email		(Demersal-14)	EOG emailed Flyer 5 with updates to the Geotechnical phase and invited to return comment.	No concerns raised.	Consultation now via NT Department of Industry, Tourism and Trade (DITT).
		25/05/2023 22:27	25/05/2023 22:27	Outbound Email		(NTDF-15 Xen)	Beehive Project update for proposed Geotechnical & Drilling activities and seeking feedback for these 2 proposed activities to assist with Environment Plan acceptance.	N/A	* Follow up on updated information and flyer for Beehive Project Geotechnical and Exploration Drilling provided: * The Geotechnical environment plan is currently under assessment with NOPSEMA with the activity scheduled to occur over approximately 2 weeks between the 1st of October 2023 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2023. More information will be provided prior to the start of this geotechnical program. * Drilling of a single exploration well, Beehive-1, is planned to take place over a 55-to-100-day period between the 1st of January 2024 and no later than the 31st of December 2025, which was previously estimated to occur between March 2023 and December 2024. The drilling environment plan is currently under assessment with NOPSEMA with activity timing contingent on the receipt of environment plan acceptance, rig, and equipment availability. More information will be provided prior to the start of drilling. * Guidance provided to EOG Australia Website and NOPSEMA website for further information and access to EP's. * Request made to provide feedback on any affects the Beehive Project may have to them to which we will assess and respond as required. * Information provided on how sensitive information is handled. * Options provided to respond via email, mail or phone.
		29/06/2023 11:25	29/06/2023 11:25	Outbound Phone Call			Follow up phone call re May 2023 Beehive Project Update made to enquire if they had and comments or feedback to be considered in the Environmental Plan to be submitted to NOPSEMA.	N/A	Attempted call no answer. Left message for return call.
		6/07/2023 18:21	6/07/2023 18:21	Inbound Email		(NTDF-16 Xen)	Response to May 2023 Beehive Project Update.	Thank you for the opportunity to provide comment on the Beehive project occurring within the Joseph Bonaparte Gulf. As you are aware, the permit area is contained wholly within WA waters and consequently there are no Northern Territory commercial fisheries operating within the area. Nonetheless, the stock structure of many commercially and recreationally important fish species is not well understood and any potential impact on aquatic life within the permit area, as a result of this work, could potentially negatively impact on shared fish stocks that straddle the WA/NT border. NT Fisheries notes that the requirement to conduct seismic work has been completed and the project is now moving to the Geotechnical Assessment and the subsequent Exploration Drilling. NT Fisheries are comfortable that the proposed control measures contained within the Environmental Plans and believe that the impacts on straddling fish stocks will be minimal and for the most part localised.	N/A
		7/07/2023 6:59	7/07/2023 8:32	Outbound Email		20230707 Email Follow Up June 2023	Follow up email seeking feedback by 21 July 2023 on update that was provided in May 2023 via email.	N/A	This message is in follow up to the email below providing an update to the Beehive project and requesting that you (or your organisation) share your assessment of how you may be affected by our proposed activities. We are kindly requesting feedback from you by 21 July 2023.
		10/07/2023 11:29	10/07/2023 11:29	Outbound Email		(NTDF-17 Xen)	Acknowledgement of response from 6/7/23.	N/A	Thank you for providing comments on our Beehive project, your timely response is much appreciated.

		10/08/2023 4:06	10/08/2023 4:06	Outbound Email		(SNZ-02 Xen)	Communications between licensed fisher, and consulting with Tuna Australia as a Relevant Person due to their role as a peak industry body.	Received notification regarding a consultation process around Environmental Plans to be submitted to NOPSEMA around the end of August in regard to the Bee Hive Project. Welcome the opportunity for the fishing industry to consult directly with yourselves. The correct and only industry empowered body to consult directly with you on behalf of the members of the Western Tuna and Bill Fish fishery is TUNA AUSTRALIA. For everybody's best outcomes working with TUNA AUSTRALIA is the most efficient way for our industry to engage in any consultative process and urge you to contact them directly.	Thank you for your response. In addition to reaching out to licensed fishers like yourself directly, we are already consulting with Tuna Australia as a Relevant Person due to their role as a peak industry body. Relay any questions, comments, or concerns about the Beehive project directly to us or via Tuna Australia as you see fit.
