I RECENTLY visited King Island for work. It was the first time back on the island in 40 years and ten of my classmates from King Island District High School (1972) still live there. My partner and I met up with eight of them for dinner at the Golf Club for a long-awaited reunion.

My family lived on King Island in the 60s and early 70s at the Butter Factory where my father Keith was the mechanic. We lived there with my mother Shirley (dec), brother Andy, and sisters Jane, Lisa,

and Joanne. I left the island in 1973 when I was 15 to join the Navy where I served for 33 years.

I now live in West Ulverstone, where I work for the Australian Bureau of Statistics.

My family moved to Melbourne in the mid-seventies but we remained connected to the island through David and Sheila Sweeting, my uncle and aunt, both now deceased.

The ABS asked me to go to the island to conduct some surveys and hopefully, I will have the opportunity again should some more samples be included.

# Lee a natural horseman

AGFEST fun for King Islanders included getting to the Lee Davies horsemanship display.

Lee is well known to island horse owners and riders for his visits and natural horsemanship tools and training clinics.

His understanding of horse psychology has grown over the years and the gentler approach is the only way for him and his devotees.

Lee was due to come to King Island in February to hold a horsemanship clinic for adults and young riders, however, flight cancellations and no replacement flights meant the three-day clinic had to be

postponed. Just prior to his scheduled trip he had returned from competition in the US and late last year he won the Trainers Challenge at the Man from Snowy River Festival.

Kirstie and Trish McKenzie joined the Agfest audience where he "showed an exercise in creating lightness in their horse, through being consistent, breaking the task down into smaller pieces and presenting that puzzle piece to the horse and allowing them to put it in the correct place."

It is hoped that the next LD Horsemanship Clinic on King Island will be in July.

Lee Davis from LD Horsemanship and Kirsty McKenzie at Agfest 2023.

# Positive outlook in dairy UK trade opens despite easing of prices

KAROLIN MACGREGOR

DAIRY prices are expected to ease down from current record levels, but producers are being told to expect another favourable season.

In its annual Australian Dairy Seasonal Outlook report, Rabobank says the sector is set for its fourth consecutive profitable year.

Rabobank says while the upcoming season's milk price will likely be lower, reflecting the current downturn in the global commodity price cycle, there is a firm landing zone expected for new season Australian milk prices.

It says this is due to stronger domestic dairy market returns, a weak Australian dollar and aggressive recruitment and retention strategies by dairy processors in a competitive market for milk supply.

Report author Michael Harvey says these factors are providing a buffering effect to the full extent of global pressures.

With the June 1 deadline approaching for minimum milk price offers from Australian dairy companies, the bank is forecasting minimum offers for new season milk in southern Australia to be between \$8.50-\$9 a kilogram of milk solids.

"At worst, this represents a 10 per cent decrease from 2022-2023 prices and a farmgate milk price that is well above the medium-term average for southern Australia since the introduction of the industry's Dairy Code of Conduct in January 2020," Mr Harvey said.

"Another season of historically elevated milk prices will support farmgate margins."

The report, titled Looking for a Firm Landing Zone, says there is welcome relief for dairy

farmers from a recent record-high cost base, with lower prices for purchased feed and fertiliser now flowing through.

"Even if some dairy farmers see an easing in minimum price offers, this should come with cost relief," Mr Harvey said.

Global feed benchmark prices are down compared with last year, although still above medium-term averages, while local wheat prices are tracking close to global trends.

"Locally, grain supplies are high, after several bumper winter crops, with the prospect of another decent winter crop this year meaning feed supply will

be adequate for buyers and will help to dampen feed supply risks," he said.

Mr Harvey said Australian dairy farmers will already be seeing the benefits of a significant correction in global fertiliser prices.

"Looking forward, the bank expects the underlying fundamentals in the fertiliser market to lead a period of price stability," he said.

However, the Rabobank Outlook warns, there will still be other cost headwinds on farm in 2023-2024 including higher interest rates and it says labour is a major headache.

The report says milk prices in a number of dairy-exporting regions around the world have already fallen, following the large decline in global dairy commodity prices seen since their peak in the first half of 2022.

"Since that time, prices in the dairy commodity basket have fallen significantly on the back of a shift in underlying fundamentals in the market," Mr Harvey said.

These included a return to growth in milk supply across most dairy-exporting regions, coupled with softer domestic demand, sluggish import

appetite from the world's largest dairy importer China and widespread demand 'rationing' in many dairy markets across retail, food service and ingredient channels.

As a result, Mr Harvey said, returns for Australia's dairy product mix have fallen between 30 per cent and 40 per cent compared with the same time last year and are now at, or below, average returns of the previous five years.

Rabobank says increasing growth in milk production in export regions through 2023 and largely absent Chinese buyers until the second half of the year will keep downward pressure on global dairy commodity prices.

"However, at some stage the cycle will turn and global commodity prices will begin to increase, but this will depend on when China returns as a meaningful buyer in export markets," Mr Harvey said.

Locally though, Australia's domestic market returns have reset for the better.

Mr Harvey said the domestic market is experiencing a structural increase in consumer prices across the dairy aisle, led by drinking milk and cheese in particular.

This is important as it will support the value chain and lead to stable farmgate milk prices over multiple seasons for those milk producers supplying the domestic market.

However, Australia's dairy supply chain continues to be challenged by a declining milk pool.

The report says in 2022-2023, the annual availability of milk for manufacturing will fall below six billion litres, for the first time since 1990.

AUSTRALIAN farmers have received some good news with the long-awaited Free Trade Agreement with the UK finally coming to fruition. This agreement is expected to increase two-way trade between Australia and the UK, which was valued at \$10 billion in 2022, and making it easier for young people to move between the two countries for work.

While it may take time for products to appear on supermarket shelves, and restaurant menus and be regarded as mainstream fare, King Island produces premier, world-class products – beef, sheep meat, rock lobster, and dairy, that stand to benefit in the longer term.

The FTA will have a significant impact on the Australian export industry as it eliminates tariffs on over 99 per cent of Australian goods going to the UK, including wine, rice, honey, most seafood, processed foods, nuts, fruit, and vegetables. Furthermore, the FTA includes bigger quotas and tariff reductions for beef, sheep meat, sugar, wheat, and dairy.

Under the agreement, beef tariffs will be eliminated after ten years, and during the transition period, Australia will have immediate access to a duty-free quota of 35,000 tonnes, rising to 110,000 tonnes over ten years. Similarly, tariffs on sheep meat will also be eliminated after a decade, and quotas will be increased.

The FTA also includes an increased age limit for working holiday visas to 35 years and extends the time people can stay to five years.

Farmers are hopeful that this will increase the number of people coming to Australia for seasonal work.

# Names through the decades

## TROY SMITH

LOOKING back 100 years, the North Football Club held their AGM on April 25, 1923 and Mr F Summers presided over it.

The elected officials were Mr G P Huxley president and Mr H J Williams secretary. KIFA delegates were Messrs G Jaynes, R Crack & H J Williams. Committee Messrs J Broomhall, R Hutton, E Wicks, A Conley, A Stillman, A Grave, R Young, R & H Crack.

A CENTURY later some of the island footy players' surnames are still recognised, although Pegarah FC no longer exists.

On May 12, 1923, Pegarah Football Club won by 24 points in a point-scoring fest in Currie with a strong Easterly blowing. PFC 9-15-69 d CFC 4-21-45. Pegarah goal kickers were F Fiske 3, J Clemons 3, O Johnstone 2, H Strickland 1. CFC goal kickers were W Dolliver 3 & C Warren 1.

Harry Strickland was best on the ground with great support from J Clemons & S Hardman. W Dolliver, C Warren & C Huxley were Currie's best.

IN THE next game on May 19, North was playing on their new ground at Yambacoona against the Currie football club, where a close game resulted in a 5-point win to Currie.

Umpire Davies had jurisdiction. The visitors scored well in

the last quarter to take victory. Currie 5-11-41 d NFC 5-6-36.

The goal kickers for Currie were Leach 2, Warren, Seaton

**KIFA president Jan van Ruiswyk, left, with Vernon Philbey who 50 years ago this week rucked well for Currie.**

and Dolliver 1 each. For North - Lott, Summers, Wilkins and Bennett all booted 1 each. No best players were named.

FAST FORWARD to 50 years ago to this footy fortnight, Grassy's foreign legion was no match for Currie and not too different to the start of the 2023 season.

The players of that day are no longer running, punting and contesting on the field, but can be found watching the game at the Currie oval, and are still active in the game in some way.

IN 1973, the Hawks had 12 new players in for their first game of the year and they didn't gel well enough to overcome Currie in Currie.

It was reported that a few players were still short of a run and conversely, the ground was in perfect order and the conditions blustery. Currie booted a 5-8 to 1 goal in the opening quarter.

Drop kicks were a feature of the game with Vernon Philbey rucking well and the Currie on ballers were good at his feet. Currie peppered the goals being 11-18 to GFC 5-1 at half time.

Peter Stephens, D Munro & R Cooper were doing well in defence for Currie and the floodgates opened with J Triffit & P Power providing some drive to Doug Bell and Kerry Colgrave who enjoyed a feast in the middle and up forward. D Richards, P Loring & R Conley were working hard for Grassy but were overrun.

CFC 24-28-144 d GFC 9-5-59.

Goal kickers for the CFC were K Colgrave 7, D Bell 4, C Burley 3, I Hay 3, R Vokes 2, R Power 2, J Triffit 1, P Power 1 & R Morrison 1. For the GFC; N Gonzalez 3, P Loring, R Bird, I Wiseman, R Conley, G Conley & D Muggleton 1 each.

Best players for the CFC were Kerry Colgrave, J Triffit, Colin Burley, Vernon Philbey, D Munro, R Cooper & Doug Bell and for the GFC, D Richards, N Gonzalez, R Conley, P Loring M Abrahams.

Grassy won the juniors 11-8-74 d CFC 6-7-43. R (Ricky or Ray?) Taylor kicked 7 goals, W Blake 2, Ricky Munday, D Kaine 1, and Jim Sartori 1 for the winners. J Bruinwood 3, D Anthony 2 & J Keys 1 for Currie juniors.

Specialised psychosocial mental health support for rural and remote Tasmanians

Rural Alive & Well (RAW) is a Tasmanian not-for-profit organisation, building mentally healthy and resilient rural communities and primary industry sectors to reduce the prevalence of suicide in ages 14 years and above.

RAW specialises in delivering proactive outreach and psychosocial counselling services which are evidence informed. RAW is 'non-clinical', genuine and non-intrusive. The service is confidential with no waiting lists or fees for participants.

Rural Alive & Well was established in Tasmania in 2009 and operates Statewide, including King and Flinders Island, with staff currently visiting the islands bi-monthly.

Rural Alive & Well provides a free, 24 hour phone service - 1800 RAW TAS. This service is available 365 days a year, including public holidays, and connects callers with RAW's on the ground support staff.

Last year's state budget ignored some long-awaited south-west projects, but are they likely to get funding from a debt-ridden government in 2023?

# Will budget deliver for south-west?

**POLITICS**  
**BY BEN SILVESTER**  
**Region**

THERE is a long list of projects waiting for funding across the south-west as the state budget approaches, but with election promises to deliver and government debt levels mounting, are any of them likely to feature on Tuesday?

Last year's budget brought funding across a range of areas - \$250 million for new VLocity trains, \$39 million to rebuild Camperdown's Merindah Lodge aged care home, \$12 million for Budj Bim, \$7 million for school upgrades, and some modest road funding - but all the high priority projects earmarked by local MPs and councils were overlooked.

Top of the list was The Lookout drug and alcohol rehabilitation centre in Warrnambool, which would need up to \$36 million, but has consistently missed out on funding for five years despite being "shovel ready".

Warrnambool's crumbling breakwater, which needs at least \$8 million, was also overlooked, as was the \$10 million plan to renovate

Koroit's main street. The successful scheme providing tens of thousands of dollars to local farmers to build cattle underpasses, was also scrapped amid deep cuts to the Department of Agriculture.

Since the 2022 budget the Warrnambool Surf Life Saving Club has finalised its \$12 million plan to replace its dilapidated facility, which earned a funding pledge from the opposition in the lead up to November's election, but never got Labor backing.

The Andrews government made many of its own pledges throughout the south-west before the election, which it will have to account for on Tuesday. Cutting the price of V/Line tickets from nearly \$80 to just \$9.20 is expected to cost the government more than \$200 million over the next four and a bit years.

Labor also pledged more than \$23 million for south-west school upgrades, \$5 million for a Building Innovation and Design Centre at Warrnambool's Deakin campus, a share of \$116 million for a new tech school at South West TAFE, and a \$5.5 million PET scanner for the Warrnambool Base Hospital.

Both Daniel Andrews and Treasurer Tim Pallas have lowered public expectations about the coming budget, with the Premier warning "very difficult measures" were on the way, which makes any funding beyond election commitments unlikely.

But both Moyne and Corangamite Shire councils have said they're hopeful of extra funding for refurbishing the arterial roads managed by the state government. South West Coast MP Roma Britnell has also pushed for more funding for the roads.

Warrnambool City Council is looking for at least \$10 million to fund its transformation of Brierly Recreation Reserve and is in the early stages of a multi-million dollar plan for overhauling AquaZone, for which it has pushed for funding for years.

The government has invested more than \$1 million in temporary housing for essential workers, as well as nearly \$30 million for social housing in Warrnambool, but the latest data shows more south-west residents on the verge of homelessness than ever before.

# School to get \$5m revamp

## EDUCATION

BY KATRINA LOVELL

### Warrnambool

AN ELECTION promise for a \$5 million upgrade of Warrnambool's Our Lady Help of Christians school will go ahead after funding was set aside in Tuesday's state budget.

Principal Stephen Madden welcomed the commitment which will mean its senior pupils can eventually move out of the portable classrooms.

"We'll build purpose-built boomerang-shaped grade 5 and grade 6 classrooms with a gathering space," Mr Madden said.

The school is bursting at the seams with enrolment over the past 10 years going from 290 pupils to 480 next year.

"It's grown significantly," Mr Madden said.

He said it was now the third biggest Catholic primary school in the diocese which runs from the ocean to the Murray River.

Warrnambool's St Joseph's Primary School is the biggest and Mildura the second biggest.

Labor MP Jacinta Ermacora confirms Our Lady Help of Christians school will get its promised funding, which was welcomed by principal Stephen Madden and school captains Finn Byrne and Lara Janesch. Picture by Anthony Brady

The new grade 5 and 6 wing will be built on the school's basketball court so it doesn't interfere with the operation of the school.

It would also replace three of the four portable

classrooms which currently housed the senior pupils, Mr Madden said, with the school planning to retain the newest portable for now.

The new building is stage two of the development plan

for the school which started with a junior wing that was built in 2018.

Stage three will include a new administration area, library and classrooms for its grades three and four pupils.

Mr Madden said the school held its prep parent information night this week, but staff had to clear out the library to do that.

"We don't have a room to put people. Staff meet-

ings are still in classrooms," he said.

Mr Madden said the staff room was built to cater for a school that had a population of 200 and it was now more than double that.

The school has about 60 staff working full-time and part-time.

Mr Madden said it was also exploring the option of having a kinder on-site in future years.

He said it was something the school would have to explore with the state government's childcare reforms coming into effect with an increase in three-year-old kinder hours.

Mr Madden said now that Warrnambool's schools all came under the one parish, there were no school zones.

"It's a perfect storm for us in terms of growth - it just gives us some challenges in terms of logistics," he said.

Member for Western Victoria Jacinta Ermacora said the government was supporting low-fee schools because it had a priority of supporting all children regardless of where they were learning.

# Old site set for a new life

## LOCAL GOVERNMENT

BY JESSICA GREENAN

### Ecklin South

PART of a 22-hectare quarry nearing its end of life in Ecklin South will be turned into a hard waste recycling facility.

The proposed facility, which would be used to crush and blend concrete and bricks for further civil

and construction use, was approved by Corangamite Shire councillors at a monthly meeting on Tuesday night.

The planning permit was granted subject to conditions to address one objection which was received concerning amenity and health impacts (noise and dust), application information detail and planning policy response.

Central ward councillor Laurie Hickey said the extensive list of requirements gave him the confidence to vote in favour of the proposal.

"Resource recovery is something very important to us as we move towards making roads and footpaths we need," he said.

"This is the best outcome for the site considering it's an unused quarry."

Deputy mayor Geraldine Conheady agreed with Cr Hickey.

"We're making the most of our resources and materials through re-use and re-purpose," she said.

"I do think this activity is unlikely to introduce any significant variation to the quarrying activity that's carried on there for some years up until now.

"Another quarry continues to operate nearby which again indicates there's not much variance in terms of the activity occurring."

Under the proposal, a segment of the quarry floor would be established for hard waste recycling including bricks and concrete sourced externally from projects and demolition, which would be crushed and blended for fur-

ther use as road base.

It would also be used for the stockpiling of raw materials, crushing and screening equipment and space for vehicle loading and movement.

No fixed infrastructure or buildings would be established on-site.

The proposed hours of operation would be from 7am-6pm Monday to Friday, with no weekend activity.

## Toy library demand surges

### COMMUNITY

#### Warrnambool

DEMAND for Warrnambool's toy library has surged with families looking to spend less on children's toys during the cost of living crisis.

With half of the \$220 million Australians spend on toys each year ending up in landfill within 12 months, its members are conscious of their environmental footprint.

The group received a Warrnambool City Council grant of \$5000 to purchase high-quality sustainable toys made from wood and

recycled plastics. Committee member Jymia Payne said it had more than 1000 toys, 135 active members and it was only getting busier. "Toy libraries, like ours, play an important role in the community by reducing the number of toys ending up in landfill, as well as offering affordable access to a wide range of toys," she said.

Ms Payne said parents were mindful of their consumption and wanted to provide engaging, educational and age-appropriate toys and activities, many of which were transitory or costly items with a short lifespan.

Committee member Stephanie Tuisuva made a conscious effort to not buy any new toys for their third child Isoa, 2, due to budget, environmental and space reasons. "I come and get toys for all of our kids," she said. "It's been fantastic. It means I can refresh their toys every fortnight whatever developmental stage they're up to."

Ms Tuisuva said its gold membership - \$100 annually - was its most popular.

■ Visit the group's Facebook page or email [warrnambooltoylibrary@gmail.com](mailto:warrnambooltoylibrary@gmail.com) for information.

Brian Hancock opens the bidding on this property in Nelson Street, which eventually sold for \$755,000.

# Homes sell, 'market cools'

REAL ESTATE  
BY KATRINA LOVELL

Warrnambool

A CENTRAL Warrnambool home that has been in the same family for 70 years sold at auction on Saturday.

The three-bedroom property in Nelson street sold for \$755,000 to a local family.

More than 30 people watched the auction, which kicked off with a vendor's bid of \$700,000.

It only drew one bid of \$725,000. After discussions

with the owner, it was placed on market with another vendor's bid of \$750,000 before a single bid of \$755,000 sealed the deal.

Auctioneer Brian Hancock, of Brian O'Halloran and Co real estate, said there were signs of a correction in the market or of a slow down.

"The owner is happy and the buyers are happy too," he said. "It was good fair price on both sides."

It was among three Warrnambool properties that sold at auction at the weekend.

Three bidders battled it out for a two-storey, three-bedroom unit in King Street which sold for \$445,000 - which was above the advertised price range of \$390,000 to \$429,000.

A cottage in need of renovation on half an acre in Moore Street was passed in on a vendor's bid of \$500,000.

About 50 people had turned out for the auction of the property which has the potential for development or subdivision, but it failed to attract a single bid.

The listed price range for the property was \$599,000 to \$650,000.

A three-bedroom house in Breton Street in north Warrnambool sold for \$460,000 under the auction hammer.

Bidding opened with an initial bid of \$400,000 followed by a vendor bid of \$420,000 before a final bid of \$460,000.

Mr Hancock said changes to land tax announced by the state government this week which hits landlords and those who own a second

property were not going to help the situation.

As part of measures to pay back debt the state government racked up to pay for its pandemic measures, a suite of changes to land tax rules that will begin on January 1, 2024 lowers the tax-free threshold for general land tax rates from \$300,000 to \$50,000.

Landholdings valued between \$50,000 and \$100,000 will attract a fixed \$500 charge each year and those between \$100,000 and \$300,000 will incur a \$975 charge.

Landholdings worth more than \$300,000 will attract an additional charge of 0.1 per cent of every dollar above \$300,000. "It's put a lot of fears into landlords and second property owners with this prevailing land tax," he said. "You've got to look at what bracket creep is going to do to it over a period of time - over a period of years."

"It's going to be interesting over the next six to 12 months what the knock on effect is going to be."

The prime parcel of land, located near Gateway Plaza in the city's east, is on the market for the first time.

## Commercial land on market

ONE of the last commercial-zoned allotments in east Warrnambool is on the market.

The 1268-square-metre block is being sold by Ray White Warrnambool.

Agent Jason Thwaites said the parcel at 29 Gateway Road was expected to fetch between \$550,000 and \$600,000. "Its proximity to major retailers and exposure

is ideal," Mr Thwaites said.

He said the listing was attracting strong interest.

"The property has been listed for a week and we have fielded a range of local and national interest," Mr Thwaites said.

"It could suit a range of uses for retail and service industries."

Mr Thwaites said there was a healthy appetite for com-

mercial properties in the city.

"There is an under-supply of commercial properties," he told *The Standard* earlier this year. "As the area grows, new businesses want to come to town and existing businesses are looking to upsize."

It is the first time the parcel, which is located next to Wannon Water, has been listed for sale.

# Bill passes on role after 30 years

AFTER 30 years as Cobden CFA brigade captain Bill Nelson is preparing to pass on the mantle.

He said he is stepping down from the role at the end of the month, with Dale Robertson taking on the position.

Mr Nelson said he believed it was time for a change after 30 years.

"I'm just stepping down from the captain's role to let the next generation have a crack," he said.

"I feel like it's a good time, I just decided after 30 years it's time."

Mr Nelson's involvement with the Cobden brigade spans 50 years.

"I joined to be part of the competition running team in 1973," he said.

"We're a happy team, we get along well together that's the positive thing for me."

Mr Nelson said there had been many changes within CFA in his time as a volunteer.

"Communication is the biggest thing that's changed I think," he said.

"We all used to be alerted to a call out by the landline and the siren."

"We all have pagers now, that's been a big positive."

"The equipment is so much better too."

Mr Nelson thanked the brigade for its support over the three decades as captain.

"Thank you to the volunteers for their support over the years, it is appreciated," he said.

Mr Robertson said he was looking forward to taking on the role.

"We're a good team, it will just follow on from what Bill's done," he said.

"I'm looking forward to the new challenge."

Mr Robertson said his own involvement with the Cobden CFA began when he started in the junior competition team at 11 years-old and progressed from there.

"The old man is a member, that's what got me interested," he said.

"I've been a lieutenant the last 10 years."

Mr Robertson encouraged community members interested in joining the CFA to get in contact.

"Any people interested are welcome to come down to the station, we meet on the first Monday of the month at 7.30pm," he said.

Congratulations: Dale Robertson will be inducted as the new captain at the Cobden CFA unit after Bill Nelson announced his intention to step down from the role. 2023D

# Phones to start ringing

PHONES are ringing as the 2023 Community Satisfaction Survey finds out what residents think of Corangamite Shire Council.

An independent market research company started calling residents earlier this month.

In previous years, the survey has been carried out by interviewing 400 residents in a single time frame.

This year the same total number of interviews will be carried out, but with 100 in each of four separate periods:

- June 1 to July 2;
- August 17 to September 17;
- November 1 to December 3;
- Feb/March 2024.

Mayor Ruth Gstrein said National Field Services was calling randomly selected residents to conduct the annual community satisfaction survey.

"The survey has been designed to assess Council's performance across a range of measures," she said.

"Residents' opinions about council services will be gathered then compared against our performance in previous years."

"The responses will identify ways we can improve our service to our community."

"We appreciate participants taking the time to help us with their valuable feedback."

Cr Gstrein assured residents all responses and personal information were strictly confidential.

"Only the overall results are shared with Council," she said.

"This is a very important piece of work that is done every year and lets us know what we're getting right and where we need to improve."

To reassure householders the calls are legitimate, the researchers will:

- Always identify as National Field Services and introduce themselves by name;
- Never ask for people by name (calls are random and the researchers do not have actual names); and
- Always say how long we expect the survey to take.

Calls will come from a number with the prefix: (03) 9977. This may change over time but no calls will come from a mobile number.

Individual responses are confidential and only the overall results will be shared with council.

Results are expected by the middle of the year and will rate council in comparison to similar sized councils and the state average.

The state government requires all councils to participate in the annual Community Satisfaction Survey.

For more information, call Corangamite Shire Council on 5593 7100

# King Island Courier

*A Beacon for the Community*

Vol. 38 No. 26

THURSDAY, JULY 6, 2023

\$1.50

## Dolphin Mine dons hi-viz

COMMERCIAL production of concentrate has started at G6M's Dolphin Tungsten Mine and the first saleable 10-tonnes is ready for shipment this month.

The processing plant achieved 70 per cent runtime processing in excess of 10,000 tonnes of lower to medium grade ore at an average grade of 0.3% WO<sub>3</sub>,

which produced about 10 tonnes of saleable tungsten concentrate in June.

Preliminary site assays indicate the concentrate produced has achieved average grade of 55% WO<sub>3</sub> and maximum grade of 68% WO<sub>3</sub>, the company reported in an ASX statement this week.

"We are thrilled to achieve

commercial production within weeks of the first concentrate ... our achievement of successfully processing more than 10,000 tonnes of ore in June and producing concentrate ready for sale is another significant milestone for the company and a credit to the hard work and dedication of our site team and contractors.

"We look forward to the first shipment of concentrate which is expected in a matter of weeks," Group 6 Metals managing director and CEO Keith McKnight said.

**Islanders turn out for a sneak preview, pages 8&9**

The King Island community donned their hard hats and hi-vis to go on tour and enjoy a barbecue at the G6M Dolphin Mine.

## Let's get physio

# ISLAND HEALTH CARE PETITION

INDEPENDENT Murchison MLC Ruth Forrest has sponsored an e-petition in the Upper House on behalf of King Islanders.

The petition called for increased physiotherapy services for King Island to reduce waiting times and to ensure King Islanders get access to physiotherapy in a timely manner particularly in the areas of chronic health care, acute injuries and post-operative patients requiring regular physiotherapy.

**Continued page 3**

# Bomber crash recalled

King Island Cemetery on Tuesday 13 July 1943, around 4.30 pm, during the closing stages of Chaplain Deakin's funeral Service for the crew Beaufort Bomber A9-352. There was a good attendance by islanders including the island's defence members.

## KING ISLAND RSL SUB BRANCH

IT IS only a few days until two very special commemoration ceremonies that relate to the very strong heart of our island community, and to your RSL Sub branch. We need you on Tuesday 11 July.

The 80th Remembrance Ceremony of the crash of Beaufort Bomber A9-352 will commence at 11am in the King Island Cemetery. This commemorative event has created

national interest and will include senior Airforce Officers and a RAAF fly over (subject to weather). We need you!

The descendants of Pilot Officers Bill Edwards, John Kildea and Harold Snell are honouring the island and travelling from the mainland for this commemoration. The relatives of Clarence Leesue, from South Australia, are unable to attend but will be represented by an RSL member. The Lancaster family will be speaking about relatives Buff Cheese and Jack

Lancaster, and an RSL member will speak about Nancy Morrison.

The discussion with the families has resulted in two copyright photographs, from the Edwards family collection, that have not been seen since the 1940s. They depict the 1943 funeral, and show how islanders quickly responded to the tragedy.

Jim and Dick Chitts were cartage contractors and their truck became the makeshift hearse. Mr Athol Hill, who knew the brothers well, confirmed that it was their Fargo truck. The photo, showing the four coffins draped in Australian flags, we believe was taken at the King Island aerodrome.

The second photograph was taken at the cemetery during the final benediction by Chaplain Victor Deakin from the RAAF Base, East Sale. When first viewed something was wrong – the graves in the background were outside the boundary. When the image was flipped, all was well but it appeared that the RAAF Honour Guard was saluting with their left hands. In fact they were in the process of removing their hats, and this is probably what confused the photographic developer all those years ago.

The community is strongly encouraged to attend and should arrive at the John Street Currie cemetery by 10.50 am. You are welcome to bring a seat and a lay a wreath, just let Margaret Bennett know so you can be included in the Order of Service. In the case of poor

The Fargo hearse, owned by the Chitts family, photographed before proceeding with the four coffins, draped with the Australian flag, to the Cemetery on Tuesday 13 July 1943. The hut foundations indicate recent construction and the telephone pole at top right is a now a long gone reminder of the island's communication system.

Pictures: King Island RSL Sub Branch

weather an adjacent venue will be used for the main service and this will be announced on the day.

We ask is that you do not stand on any grave and have your phone on silent.

The RSL subbranch will have a second function in the Town Hall commencing at 7.30 pm. This is focussed on the World War 2 King Island Comforts Fund. The list of letter writers is extensive and includes King Islanders who enlisted in the Services, family members, islanders who made donations and service personnel who were not from here.

Ann Ghazarian and her team have spent countless hours cataloguing and transcribing over 600 documents. The following is a list of the majority of the writers. They are in alphabetical order, showing surname first. A number of writers have the same surname and they are listed together. This does not mean they are necessarily related.

Archie Loris and Lorna, Arkley-Smith John, Ayton John, Baker M, Barlow Ken, Barnes Eric, Jeff and Len, Barr Harold, Batten Lewis, Bertram Barbara and Tom, Birch Graham, Birrell Hayden, Blain Jack, Blight Mervyn, Bowling Bruce, Bramich Alfred, Barth Cecil, Mrs O, Broderick Norman, Brooks Claude, Tom and Victor, Brown Keith, Burkett Charles, Burns Frank, Cheese W.(Buff), Clemons Richard,

Conley Albert, Connors Stanley, Cooper Freda and Ian, Cornelius Walter, Cox William, Curbishley Ted, Davies Desmond and N, Denby Jessie, Dobson Albert, Drake Harry, Enniss Dick, Farrell John, Philip and Tom, Fisher A and W, French Reg.

Goldsworthy Lindsay, Graham Jack and Jim, Groom Reg, Gunter Colin, Haines John, Harris Bernard, Hays Darcy and William, Heddle J, Robert and Walter, Heinrich Ray, Hill L (Mrs), Holmes Joseph, Hooley John, Hooper Richard, Ibbott Charles, Ims Ron, Jackson Alice, Allan, Ernest and Jim, Jaynes Robert, Johnstone Easton, Joyce Joseph, Keating Jack, Kee Gordon and Joyce, Khyatt Ray, Lacey Keith, Lancaster Jack and Peter, Last A and Harold, Littlejohn Frank, Lonongan H, Lott Dorothy, Fred and Harry, Lynch Kelvin and Les, Mallett James, Manson John, Marshall John, McArthur Robert, McHugh Linda and Max, Milgate Stan, Miller Jean and Sydney.

Milsom Frank, Nance and Ruby, Misson Bert, Monger Roulston, Moon George, Morrison Code, Paterson Donal and Dudley, Percy Royce, Phelps William, Phillips Max, Punshon Eric, Reading Leslie, Ross Len, Rowe Don, Russell Ern, Sadleir Joseph, Scott Mick, Shea Reg, Smith Earl and Raymond, Stansfield Les, Stillman Ron and Stella, Stuart Jock, Stubbs John, Sullivan

Jack and Richard, Summers Eliz, Jack and Lil, Tatham George, Tattersall Murray, Thompson Mick, Thow Charlie, Towns Gordon. Viney Alf, Walsh Ambrose, Walters Victor, Watson Carrie, Whitty John, Wilshire John and Tom, Wilson Stan and Victor, Yeomans Monty, Youl Beryl and William.

Some Service files include a photograph of the veteran and these have been recently added to a person's dossier. If you have a photograph of a person named please let Margaret Bennett know – margiejenn51@protonmail.com

The collection will remain on King Island and will take pride of place in the RSL Sub branch in a controlled atmosphere. The intention is to eventually have online access so all can view the collection.

Don't miss out, so attend the Community Presentation in the Town Hall at 7.30 pm on Tuesday 11 July.

All the records will be there for viewing only (due to conservation and preservation requirements) and there will be a unique 45 minute visual presentation, followed by a question session. Again, don't let the weather keep you away, come and learn how this small island truly united when times were really tough and battled way above the national average.

Hot drinks and snacks will be provided and we ask for a gold coin donation per family.

## Water costs rise a 'modest' 3.5%

TASWater increased water prices by 3.5 per cent from July 1.

The increase was approved by the Tasmanian Economic Regulator (TER) in May 2022.

"The independently assessed and approved four-year price and service plan gives Tasmanians certainty on their water and sewerage bill increases," General Manager Customer and Community, Matt Balfe, said in a statement.

"While price certainty

allowed customers to prepare for the modest increase, supporting customers facing hardship had never been more important.

"The 3.5 per cent increase is well below inflation, seeing an average household's water and sewerage bill increase around \$11 a quarter – prices in line with the national average.

"We know that parts of the community are doing it tough, so our customer support

program is more important than ever.

"For those customers requiring support, it's as simple as calling us on 13 6992."

Mr Balfe explained that TasWater is facing rising costs associated with its operations and maintenance of 170 treatment plants and over 11,500 km of pipeline.

"Well managed water and sewerage underpin community well-being. TasWater is investing \$1.4 billion in water

and sewerage services over the next five years, delivering further customer and environmental benefits. TasWater's prices are regulated for a four-year period, with its last Price and Service Plan (PSP4) coming into effect on 1 July 2022.

As outlined in PSP4, the TER approved a price increase of 3.5% each year until 30 June 2026," the company said.

For more information on the program visit: [www.taswater.com.au/CSP](http://www.taswater.com.au/CSP).

# Island signs up for healthcare

From page 3

The petition requested the Tasmanian Health Service gain an understanding of the island's unmet needs; extend the number of days that physiotherapists are on the island to enable more appointments and consider a change to the current same day fly-in fly-out approach.

The Premier and Health Minister Jeremy Rockliff acknowledged in his reply the unique challenges of King Island and its remoteness.

While he pointed to the Government's healthcare priorities, the response avoided addressing the petition's specific King Island requests and spoke more broadly and descriptively about health and physiotherapy services across the North West.

"Recent changes to the Patient Travel Assistance Scheme aim to address these issues [access to allied health and preventive services which includes physiotherapy]," Mr Rockliff said.

The response to the petition included discussion around healthcare worker resourcing, healthcare scholarships, state budget health services funding

**There is a backlog of patients needing physiotherapy services on King Island.**

of PTAS for physiotherapy services is again welcome but may be somewhat self-defeating as the trip to and from mainland Tasmania may exacerbate their injury or surgical recovery, they are seeking the physiotherapy care for.

"I appreciate the work of UTAS in commencing training of local allied health workers but this does not assure us of more physiotherapists and certainly does nothing to address the current backlog of patients needing physiotherapy on King Island.

"I was disappointed with the response overall as it completely ignored the very simple and practical solution for the short-term demand provided by the community," Ms Forrest said.

The petitioners request and the government's full response can be read at [ruthforrest.com.au/images/Petition\\_KI\\_Physiotherapy.pdf](http://ruthforrest.com.au/images/Petition_KI_Physiotherapy.pdf)

and the release for public consultation of the Long Term Plan for Healthcare in Tasmania 2040.

Ms Forrest was disappointed in the response to the King Island resident petition.

"While the response is welcome it failed to address, or seek to resolve, the very real and current challenges faced by King Island residents in terms of timely access to locally

provided physiotherapy," she said.

"The specific request in the petition to have physiotherapists visit extended to two days, rather than a fly-in fly-out one day service means residents of King Island have very limited access, and was completely ignored by the Government response.

"To suggest a person can fly off King Island with the support

## Momentum prices unknown

IT'S unclear whether King Island residents will face power price rises similar to those set for mainland Tasmania.

Electricity prices in Tasmania are set to rise from July 1 by 9.51 percent following a ruling from the independent Economic Regulator. It's expected to add around \$200 a year to the average electricity bill.

Momentum Energy, part of energy generator HydroTas, is King Island's retail electricity supplier. A request for information to Momentum Energy regarding the 2023/24 pricing and tariffs was not received before going to print.

Momentum's Bass Straight Islands prices, tariff and charges for King and Flinders islands are reviewed annually and any changes are generally reflected in billing after August 1.

The Tasmanian Economic Regulator (TER), Mr Joe Dimasi, approved mainland Tasmania's proposed 9.51 per cent increase in standing offer prices under regulated tariffs for Tasmanian residential and small business customers to apply from 1 July this year to 30 June 2024. Mr Dimasi said that Tasmanian bills are among the lowest in the nation.

Both the Australian and Tasmanian governments are offering \$250 rebates for eligible households to help offset the increase and separate rebate of \$650 is available for eligible small businesses.

## Local community grants

THE King Island Council has announced the recipients of its Community Assistance 2023/2024 program.

The council allocates funds through their Policy, Sponsorship – Financial and In-kind program which offers the opportunity for organisations within the King Island community to apply for funding under its Community Assistance Program. The Council Budget for the program is \$30000.

A total of 10 applications were received, with the combined total cash sponsorship request of \$15,466.00 and \$6,800 in kind support.

The cash recipients were: Festival of King Island \$2,500 (+ in kind); King Island Community Radio \$2,500; King Island Football Association \$2,500 (+ in kind); North Football Club \$2,258; King Island Show Society \$708 (+ in kind); King Island Netball Association \$2,500; King Island Landcare Group \$2,500

Total In-Kind recipients were: King Island Community Car Inc \$2,500 (in kind - fuel); Festival of King Island \$3,505.68 approx. (in kind); King Island Show Society \$795 (in kind - portaloos); King Island Football Association Assistance to install cupboard.

The Council agreed to the King Island RSL Sub Branch project amendment for previous grant funds provided for the remaining amount of \$946.53.

# Joc making music with angels

## OBITUARY

### TRACEY COLLYER

JOCELYN Bowden was many things to many people, a gardener, a farmer, a Nana, a crusader against injustice.

But to me she was a musician. I've been making music on King Island for two decades and I made most of that music with Joc.

I had been on the island just six days when Joc called me out of the blue.

"I hear you play clarinet? Do you want to join some bands". By the end of the week, I was in five of them.

As the Music Makers dwindled in members, we found new opportunities to regroup and play music.

From playing at Netherby Home, to Senior Citizen's dinners, to the Imperial 20, to Christmas street markets, Joc was always the one to find reasons to spread joy through music.

As Joc's feet began to fail her, (a side effect from the medication she was on for rheumatoid arthritis), she could no longer operate the kickers on a drum kit. This didn't stop Joc collecting an array of percussion instruments, handing them out for audience participation at

every opportunity.

When Tim Woodburn, of 40 Degrees South fame, offered to teach a ukulele group, it went without saying that Joc and I would embrace this new way to make music together.

From humble beginnings in a cold, damp artist's space in town, we have become an all-inclusive group, encouraging anyone and everyone to pick up a uke, rattle something, or simply sing along.

We even had our 15 minutes of fame with the nationally broadcasted Ukecantbeserious song 'Stewy Get Gold'.

But it was always Joc that collected and encouraged new members to join. Because that's what Joc did. She found people and found ways to integrate them into our community. Once Joc found you, you became one of us.

No matter who you were, Joc found something valuable in you. People like her are the glue that hold small communities together. Joc was the very model of resilience and she epitomised the spirit of community engagement.

It was an honour to be included in her network of friendship and creativity. Vale Joc Bowden.

Jocelyn Bowden loved her music, the community and was always there.

Jocelyn Bowden loved her music, the community and was always there.

## Cemetery fees rise

THE King Island Council 2023-24 budget 5% increase included King Island Cemetery fees and charges.

The new fees and charges are inclusive of GST, where applicable and apply from July 1.

As part of the review the cemetery fee descriptions have been amended for sensitivity and clarity, in line with commonly used terminology and requests made to the council front office.

A burial on private land has been moved from the Council's Development Services fees page to Cemeteries and the fee has increased from \$274 to \$568 in line with the work and permits required.

The current cost to council to

excavate and backfill a straight-forward cemetery plot site is about \$660 incl GST.

From July 1 the burial fee - single is \$944. A double depth burial fee is \$1,466 for both a first and a second burial, however the latter excludes any costs to uncap a grave. These fees do not include the plot fee - \$523, which can be prepaid as a reservation, per single or double plot.

After hours, weekend and public holiday burials will incur a \$522 surcharge.

Burial of ashes in an existing grave or Columbarium wall interment fee per niche is \$238. A fee of \$100, which can be prepaid, has been added for Columbarium wall niche.

# Pension age rise a punishing end

**AS of July 1, the qualifying age for the Age Pension increased to 67. National Seniors Australia rejects calls for raising the age to 70 on both fiscal and social policy grounds. NSA chief advocate IAN HENSCHKE writes....**

FOR decades, men could look forward to retiring at 65 and getting the pension.

For women, it was 60. Their eligibility was increased over 10 years between 1995 and 2004 until they too reached the same qualifying age.

In 2009 the Rudd government lifted it to 67 for men and women but it was to be phased in from 2015, with six month increases every two years, starting from July 1, 2017. Now we've arrived, after almost 30 years, at a pension age of 67.

Almost 10 years ago Treasurer Joe Hockey announced it would go to 70 by 2035. He asserted it was "highly probable a child born today would live to 150."

Really? His move followed on from a report from the Commission of Audit, which recommended the qualifying age be linked to life expectancy.

The thinking was because we are living longer than our parents and grandparents, we should remain in the workforce longer.

There was a huge backlash including a campaign led by National Seniors.

A popular slogan at the time was: "Only someone who's worked in an office their whole life would think you can work until you're 70."

In the run up to the 2019 election Scott Morrison dropped the age-70 target as Liberal policy.

**National Senior Australia chief advocate Ian Henschke.**

was it was just 2.7% of GDP five years ago, and Rice Warner projected "expenditure to fall to 2.5% of GDP by 2038." It added "the downward trend will continue well into the future."

It's predicted to be just 2.1% of GDP by 2060. Why? Superannuation has been delivering, just as Paul Keating predicted.

His "magic of compound interest" has been adding to the retirement incomes of millions. We reject calls for raising the age to 70 on both fiscal and social policy grounds. Many people exit the workforce because of ill health. We should consider a Canadian style system where you can opt to get the pension earlier but get a bit less. We've also argued the best way to tackle declining participation is to provide incentives to those who choose to work longer.

Our Let Pensioners Work campaign calls for a reduction in the income test taper rates so you can keep more of your pension if you choose to continue working.

This is fairer than raising the pension age because it rewards people who want and need to work.

Pensioners who chose to work would benefit from extra income and their participation would also help the economy.

If you are on a pension, and you want to keep working it'll be a win for the economy, it'll be a win for the pensioners, and it will be a win for the government. A note to politicians, our latest poll of more than 2,000 people showed just 7% support the move to 70, 45% are fine with 67 and 46% want it back to 65.

An election winning policy would be to lower it back to 65 as they've just done in Canada.

His deputy Michael McCormack said it was "probably a step too far" adding "I think if you're a tradie, or a brickie, or a shearer in rural and regional Australia you don't want some suit in Canberra telling you you're going to have to work until you're 70," he said.

At National Seniors, we were pleased the government backed away from the unpopular idea and called the decision "a win for common sense".

A group of academics has revisited the statistics and released a report saying a further rise is warranted to ensure the country has a sufficient supply of workers into the future. Macquarie University Business School Professor Hanlin Shang and his co-authors say there should be three more pension-age increases over the next 27 years.

They suggest 68 by 2030, rising to 69 in 2036, and 70 by 2050. Professor Shang says Australia's low birth rate is one of the key factors.

"Less people in the working group and more in retirement will make the old age dependency ratio (OADR) higher," he said.

"What this means is there is less working people to support elderly people. And with more elderly people in the population, this will create a burden for the government pension system." Professor Shang and his team should read, or hopefully re read, "The Age Pension in the 21st Century" by 2018 Actuary of the Year Michael Rice.

He revealed the cost of the age pension as a per centage of GDP will fall, not rise in the decades to come.

There will be far fewer full pensioners, and far more part pensioners and self-funded retirees.

The "burden" simply won't be there. The pension was 2.9% of GDP when Peter Costello's 2002 Intergenerational Report predicted it would grow to 4.6% of GDP by 2042. But it

# Rural health strategy call

A NEW independent report commissioned by the National Rural Health Alliance says that each person in rural Australia is missing out on nearly \$850 a year of healthcare access.

This equates to an annual rural health spending shortfall of \$6.5 billion and is urgently calling for a National Rural Health Strategy to bring scattered rural health initiatives under one umbrella.

NRHA is made up of 48 national peak professional bodies which include the Royal Flying Doctor Service, Royal Australian College of GPs, health, education, student and primary care bodies and the Indigenous health sector. It determines key issues that affect health in rural and remote areas.

"This is money that could have allowed Australians living rurally to access health and medical services where they live," NRHA said in a statement.

The report looks at health spending per person and reflects the day-to-day realities for rural Australians who are unable to access equitable care.

"Over 7 million people, who make up nearly a third of Australia's population, experience a greater burden from illness and early death, in part due to inadequate funding for their health care. This is despite the significant contribution they make to Australia's economy," said the Alliance Chief Executive Susi Tegen.

"Resources and rural industries generate around 80 per

cent of Australia's exports, excluding the extra contribution of rural-based services and manufacturing. The value of agriculture, fisheries and forestry exports is \$76 billion, while commodities exports are worth \$497 billion – a collective value to the nation of over \$500 billion.

"More than 90 per cent of fresh food sold in Australia is produced rurally. In addition, nearly half of the nation's tourism income is from rural Australia and over half a million people are directly employed in rural tourism-related industries.

"Rural people experience a triple health disadvantage: poorer circumstances in terms of social determinants of health, a lack of service availability, and higher costs of

access and delivery, all resulting in poor health outcomes.

"Although the government invests in workforce initiatives ... to support rural health, these need to be augmented...they still do not sufficiently improve service availability and a patient's access to health care.

"Social determinants of health negatively impact rural people, who are sick for longer periods and end up in hospitals because of inadequate primary care access to doctors, nurses and other health workers.

"Rural communities need government to be more flexible...costs of access and delivery are higher, so the delivery of health care will be different and broader. It does not fit into the model available to urban people," Ms Tegen added.

KING ISLAND COUNCIL  
NOTIFICATION OF MAKING RATES FOR  
2023/2024

In accordance with Section 118 of the Local Government Act 1993 notice is hereby given that the Council made its rates and charges for the 2023/2024 financial year at the Council meeting held on Tuesday 20 June 2023. The following is a summary of the rates and charges for 2023/2024:

Definitions and Interpretations

In these resolutions:

- “AAV” means assessed annual value as defined in the Local Government Act 1993 (the Act) and adjusted under Sections 89 and 89A of the Act;
- “land” means a parcel of land within the King Island municipal area which is shown as being separately assessed in the valuation list prepared under the Valuation of Land Act 2001;
- Unless a contrary intention is clear, the words and expressions used in these Rates Resolutions have the same meaning as the words and expression used in the Act, or where applicable, the Fire Services Act 1979;
- The exemptions provided in Sections 87(1), 93(4) and 94(4) of the Act apply.

General Rate		Cents in \$ of AAV	5.84257
		Minimum	\$342.00
Fire Protection Rates	Rural	Cents in \$ of AAV	0.26862
	Urban	Cents in \$ of AAV	0.33954
	Both	Minimum	\$48.00
Waste Management Service	All residential properties	General Waste Management Service Charge	\$461.15
		Landfill Levy	\$49.60

Ratepayers have the option to pay rates in full or by four instalments. Due dates are: 18 August 2023, 17 November 2023, 19 January 2024 and 15 March 2024.

A penalty of 10% of the unpaid rate of instalment is payable; and Daily interest charge, at the prescribed rate, is payable in respect of the unpaid rate or instalment to the date of payment.

Please refer to the King Island Council Rates & Charges Policy, which alongside a full copy of the resolution is available from the Council Office, George Street, King Island or on Council’s website [www.kingisland.tas.gov.au](http://www.kingisland.tas.gov.au)

# Two full teams p

## KING ISLAND FOOTBALL ASSOCIATION

IT WAS good to see that both North and Currie were able to field a full side of 15 players each on Saturday without having to call on top ups from Grassy.

Loki Bell was back for Currie and Max Sainsbury dusted off his old boots to play his first game in quite a while. Glenn Aldridge played for North, also for the first time in quite a while.

Currie won the toss and elected to kick to the tennis court end and were quick to get the ball forward for a strong mark by Tom Graham, but his kicking let him down and the goal umpire only raised one flag. North rebounded from the kickout to see Keenan Fanning mark up forward and he did not miss.

From the bounce Currie worked the ball round to see Jak Youd drift forward, but he to missed what he should have got. North worked it forward again to see Luke Graham mark, played on and dribbled one through for their second. David Vellekoop lined up for a shot and missed but then got a 50 metre penalty for some reason and this time he did not miss.

Young Mathew Button got into a fair bit of the play and kicked a nice goal along the ground from the boundary.

Justin Summers scored a nice goal from the boundary when he grabbed the ball from a throw in and snapped it out of the pack to see it go through just before the siren to see North 32 points up at quarter time.

The second quarter saw Currie start well with a quick goal from Josh Bellchambers. Justin Summers got a free and handballed it off to his brother Jeramy who slotted

through a quick reply.

Play was getting tight with both sides working well at times to get the ball forward but unable to convert. Youd copped a heavy knock which saw him leave the ground with the blood rule.

Max Sainsbury took the resulting free and then awarded a 50 meter penalty to kick an easy goal. Sainsbury was in the action again when Currie got the ball out of the center to him, and kicked a big goal from the 40 meter line to see them reduce the margin to 21 points at half time.

The third quarter saw teams once again going in hard for the ball with players getting frustrated at times with how the play was going. Vellekoop had a chance to get North their first goal of the quarter, but he had his points boots on and another goal went begging.

Tom Graham took a strong mark forward for Currie and kicked a nice goal. There was still a bit of heat in the game which saw Fanning get a free and then a 50 for an easy goal. Play out of the center went North’s way and a tackle ended up in a bit of a brawl.

Jeramy Summers got a free and a 50 for an easy goal on the siren to see them 27 points up at three quarter time.

Currie started the last quarter well with some nice play to Joel Williams, who had moved forward, and he did not miss. Vellekoop replied for North when he took a pack mark in the square and found his goal kicking boots for an easy goal. North replied with another through Alex Goldsmith who kicked it off the ground and it went through for a major.

Justin Summers was giving North plenty of drive round the ground and from the center. He took a big run

out of the center and through to Vellekoop, who was playing his best game this season and kicked his third. Bailey Rainbow was a real workhorse for North in their back line, while Dale Ellis was also giving North plenty of drive round the ground. Josh Bellchambers worked hard for Currie along with Dylan Beecroft and Jak Youd. Max Sainsbury was enjoying his game as he kicked his third for the game. Some clever short passing saw the ball end up with Youd, who was able to convert for Currie. Clint Stretton took a nice one handed mark and went back and slotted it through to see Currie end up going down to North by 21 points.

If Currie had been able to match North in the first quarter, the score line might have been a lot closer, however this was still an entertaining game - apart from the two reports. Next week North and Grassy do battle again. The last time they met things got a bit heated, so it will be interesting to see how both sides attack in this round.

## Community Information Session

ConocoPhillips Australia is currently developing an Environment Plan for the proposed Otway Exploration Drilling Program and will be hosting two community information sessions on King Island in July.

Residents and all relevant persons are encouraged to come along to a session of choice to learn more about the progress of the environmental impact and risk assessments and the typical control measures that have been identified to support ongoing consultation.

The content will focus on activities specific to King Island, with ample opportunity to ask questions and provide feedback.

### Sessions:

**Thursday 13 July 2023**  
**11am-1 pm**  
**King Island Town Hall**

**Thursday 13 July 2023**  
**6-8 pm**  
**King Island Town Hall**

Light refreshments will be provided.

# G6M's Dolphin Mine goes hi-viz

Group 6 Metals general manager Chas Murcott was delighted with the island's support for the mine open day and barbecue.

The King Island community donned their hard hats and hi-vis to go on tour at the G6M Dolphin Mine.

LAST Sunday Group 6 Metals held their much-anticipated open day and tours.

It was a celebration with the community to showcase the operations, explain how it all works, and to mark the important milestone of becoming an operating mine.

After a week of rain and mud, bathed in sunshine, islanders came from far and wide.

"From the lookout in Grassy, you can see the mine and all the activity with the load and haul fleet, but you can't see what's happening over the hill," G6M general manager Chas Murcott said.

"Over the hill is the processing plant, which operates 24 hours a day, seven days a week. We deliberately did that to keep the noise and lights down for Grassy residents.

"We invited the island to come and have a look at the processing plant, which is in operation today," he said.

"More than 185 people booked out the four tours and then enjoyed a company provided community barbecue.

"The tour timeslots were fully booked and we had to turn some away. It's great to see this sort of response. All sorts of people wanted to come on tour – from the old miners who were involved with the previous operation through to little kiddies.

"Some wanted to see big trucks and some because they're interested and supportive of what we're doing," he said.

The company had displays and experts on hand to answer a wide variety of questions.

Various media has reported that King Island is starting a second mine at Bold Head, Mr Murcott said.

"Grassy is the Dolphin deposit – the mother lode – and that's the main deposit.

"Three kilometres north is Bold Head, so it's almost like the Dolphin deposit's been shoved three kilometres north.

"Historically, Bold Head was the first little underground mine and it's where they mined the very high-grade stuff and they left most of it behind.

"We've applied for a mining lease so we can do further exploration, and it'll be in conjunction with this processing plant.

"So, the plan for Dolphin is mining open pit for about six to seven years and then go

underground at Dolphin and that's a lower throughput rate through the plant.

"That would dovetail nicely with Bold Head where there's a small pit, and then go back underground adding to what we get out from Dolphin underground.

"We've got six to seven years of mining with the Dolphin open pit before we'll do that.

"There's some drilling and a lot of planning to do, but we can certainly see the 14-year life we've got here at Dolphin getting extended with Bold Head.

"And then of course, we've done drilling around the perimeter of this. We've had some good hits of scheelite at the Investigator site as well. So, it's all about trying to extend the life of the operation and maximise the resource on King Island."

In the future, material from Bold Head, will be trucked to Grassy for processing.

"We've been talking to Whyalla Beef, and we've purchased some land from them," Mr Murcott said.

"The old Hall Road went from Grassy to Graham's Road, and we can truck the material to this processing plant," he said.

**ROBBIE PAYNE** was impressed and remembers the old mining operation.

"It's very impressive, it's operational for a start. It looks as though it's been put together quite well, and sustainable in the sense of everything that they've used," he told King Island TV.

"It's a much bigger and more modern operation than the previous mine.

"It's good for everyone on the island."

**MARIE REED** is a lifetime Grassy resident and worked for the old King Island Scheelite mine.

"I used to work in the mill years ago, doing the samples, and getting them ready to send through to the lab, to be tested," she said.

"That's a long time ago, probably in 1988. This mine is very different.

"It's a lot more advanced with newer technology."

**Jarred Perryman** said after touring the operations "It's a lot bigger than I expected. It's absolutely amazing.

"I was just expecting a crusher loaded in the back of

a truck ... but no, this is an amazing process. It goes from what I guess is just dirt right through to what we see down here," he said pointing to bags of tungsten.

**TRISH MCKENZIE** was another who remembers the old mine days.

"The tour was so interesting. It's all absolutely much bigger than I thought. I went underground twice with the old mine back in the seventies, and that was quite scary.

"The whole thing is more complicated than one would think. But technically quite simple.

"It starts off as big rocks. It goes through all this. It gets shaken into very small dust. And there's your final product. So very clever."

**JAN VAN RUISWYK** worked at the old scheelite mine when it was all underground, starting in mill maintenance and later as a fitter at Bold Head.

He travelled and on returning to the island he re-joined the Bold Head site until closure and then transferred to underground at Dolphin until it closed.

Jan has been involved with the mine reopening since the beginning as a filmmaker. He has been observing and documenting the restart.

"I have been very impressed how the mine has evolved over the last 18 months. They've had the setbacks, but I have watched it go from what was a sand dune to being an operational mine after so many years.

I'm really appreciative that G6M have let me film its progression," he said.

**BILL DE WAARD** started at the KIS mine in 1975 and finished in 1990, starting as an underground shift fitter, then a heavy vehicle shop foreman and finally the mine maintenance supervisor.

He didn't expect the mine to reopen, but he is pleased and believes it will bring island growth.

"It's going to bring people to the island and hopefully that will reduce prices.

"The more people that are here, the more consumption." But Bill says that even if he were younger, he wouldn't work for the mine, as he is enjoying the King Island lifestyle and 'living.' He was looking forward to the tour as a new experience, as even though he worked for the old mine, he never

## TASMANIAN FREIGHT TO KING ISLAND

**FREIGHT CONNECTIONS PTY LTD**  
DEPOT: 1-3 ANGLESEA STREET, WIVENHOE (BURNIE)  
PHONE: 03 6432 4362 or 0403 540 633

Freight Connections will commence receiving freight for King Island Wednesday 19/4/23 at the above depot in Wivenhoe.

**NOTE:** Initially, receipt days for delivering freight into the depot will be Wednesdays and Thursdays, 8:30am - 3pm.

Freight Connections will pick up freight Monday - Friday (5 days a week) statewide.

**FREIGHT CONNECTIONS: 6432 4362**  
**JIM MCKENZIE AGENCIES: 6462 1415**

LEFT: Nearly 200 King Islanders toured the G6M processing plant to see the mine in operation and viewed displays and heard from experts to mark the beginning of production milestone

RIGHT: Jarred Perryman was surprised at the size of the operation.

Robbie Payne was impressed.

Trish McKenzie remembers the old days.

Lee Jefferies was among the hundreds at the open day.

Marie Reed worked at the old mine.

Jan van Ruiswyk has been documenting the growth.

Bill de Waard worked underground at the old mine.

# Beyond the gloom of war

King Island War Memorial Park in Meech Street Currie which houses a library and the King Island RSL Sub Branch and, insets, boards honour King Island's fallen in World War II.

## TROY SMITH KING ISLAND FOOTBALL ASSOCIATION

THE Pacific war had seen the Japanese beaten back onto home territory (but still fighting) and local attention turned to home affairs and in 1945 the possible resumption of the many sports that had faltered because of the war effort. Horse racing, cricket and tennis were all in abeyance during the latter war period. The King Island community was now asked to fill its Victory Loan quota, which was another government organised bond scheme to raise capital.

The local war service fund was still operating and supplying parcels to the services. The armed forces would take years to wind down and forces were now occupying territories, the first POWs would not return until later in the year, however island soldiers were returning home. These service men and women were honoured by many community functions at the town hall as they were delisted.

A war memorial was proposed and ideas for its design were presented to council, where the idea of a library building was received favourably. Against this backdrop the KIFA met at the Druids Hall on March 16 where the Currie, North & Grassy football clubs decided to get the great game up and going again as soon as possible.

The KIFA president was Mr L C Ross and Mr J V Dolin, the Secretary. Ern Morrison, Tyson and Charles Burkett were the CFC delegates, Owen Horton and Len Burnett for the GFC and Arthur Deanshaw and one of the Graves were the delegates for the NFC.

The KIFA had to apply to the Commissioner for Transport & Rationing to gain approval for the securing of the 12 footballs needed and the

guernseys. They would also have to apply for permission to use a bus and fuel for transportation. Footballs were allocated and transportation approved by the government in time for the season to begin in May.

The Association adopted the rules of the VFA, and Coad Morrison and Len Murray were appointed central umpires. Mr W Anderson offered to provide a trophy for the Best and Fairest player for the season. The KIFA decided on only 4 rounds of football as they gingerly trod back into the establishment of some sort of sporting normality. Mr Ern Morrison was still the CFC president and as Council Overseer he organised the necessary repairs to the ground. Mr L Fenner offered to cut and erect the goal posts and the Currie football club organised a scratch match for the following Saturday. No results were found for this match.

The season opener was played on May 19, 1945, when Currie met Grassy at the Currie ground. The ground was deemed ideal for football and there was good spectator attendance, but the players were "...unfit due to a lack of training."

The first official post WW2 KIFA game resulted in Currie 12-11-83 d Grassy 7-10-52, with new umpire Len Murray in charge of the game. For Currie, Tyson booted 4 snags, Rig Johnstone 3, Phil Farrell 2, R Starling, R Butler and Des Barnes 1 each. Grassy had Bryan with 3, Ted Porter 2, Harvey and William Groom 1 each. Currie then walloped North by 131 points, kicking 21-14-140 to 1-3-9, with Rig Johnstone kicking 8 goals and being named best on ground.

The NFC were in very uncharacteristic poor form at this time getting another drubbing the next week at the hand of Grassy 14-31-115 d North 7-14-56. North saved somewhat by

Grassy's record point scoring! Ted Porter was best on ground and kicked 6 goals for the green and golds. Des Barnes and Stan McHugh were granted clearances from the CFC to the NFC and an 'ugly man' competition was organised as an Association fund raiser. Imagine being nominated for that prestigious title! Grassy beat Currie by 10 points in the next game whilst Currie defeated an improving North side by 9 points, with Jimmy Graham picking up BOG honours. North then readjusted their compass and got a 33-point win over Grassy with Des Barnes, Keith Revil (NFC) and Ted Porter (GFC) being named the best players. Currie then won a nail biter by 1 point over Grassy in a low scoring game. Bill Morrison was likely BOG with Ted Porter again noted. North continued their resurgence with a 39-point win over Currie with Keith Revil again being named as BOG and then North also got over Grassy by 32 points with Ted Porter deemed as the best man on the ground and K Revil was noted. Currie defeated Grassy in the next game by 10 points wrapping up the minor premiership with Rig Johnstone booting 6 goals, Jim Graham (CFC) and D Da Rui (GFC) the pick of the players. The NFC were undaunted though and overcame the Currie side (with only 15 men) in a very wet game by 22 points and according to the newspaper report, "North could draw level with Currie on wins and losses" with A Grave being the most conspicuous in this game for North.

Someone hadn't done their homework as this clearly wasn't the case as the next week Grassy 13-16-94 d North 8-10-58 in another wet match, leaving Currie officially on the top of the ladder with 20 points, Grassy 16 points and North 12 points. A Grave was again prominent, with Grassy's

win being determined as a team effort.

The semifinal was played on the 13th of August in wet and windy conditions (normal) with North regaining their threatening late season form to beat Grassy in a spirited close game 10-16-76 to 9-13-67. North goals were kicked by George Summers 5, Jeff Summers 3, Mick & Geoff Scott and Grassy's by Ron Smith 3, W (Ted) Porter 3, F Purton, J Kummrow and Frank (Pop) Elliot. The best players were Jeff & George Summers, Geoff Scott, A Grave, and Des Barnes for North. GFC were best served by Reg Phillpott, Ted Porter, Ron Smith, F Purton, S Harris and William Groom.

On the 17th of August the war in the Pacific was officially over and it seems that on this joyous occasion, it was strangely business as usual on King Island. The next day, the Grand Final was played with no mention of any special event to mark the end of the war, although a V-P Day celebration was organised with a well-attended sports meeting and children were given a piece of fruit and bag of sweets.

The football season was far from done as the in form North side defeated Currie at Yambacoon in the Grand Final necessitating a challenge Grand Final to be played. NFC with 35 scoring shots 8-27-75 played a more systemic game than their rivals and easily defeated CFC 5-7-37. Best for the NFC were Keith Revil, Geoff Scott, A Williams, Des Barnes, Jack Coulter & S Wilson and goals came from, Keith Revil 4, Des Barnes & C Connelly. Currie had the best man on the ground in Jack Palmer. Jim Graham, L Fenner, Max Williams, Rig Johnstone and Ted Curbishley were also named for Currie, with goals coming from L Fenner 3, Ted Curbishley and Rig Johnstone.

Currie as minor premiers challenged and the rematch with North was held at the Currie Recreation Ground, this time with a strong westerly wind blowing. Currie were short 3 men for the opening part of this important game, but they got there midway through the first quarter. North led by 2 points at half time and by 9 points at lemons. Theoretically Currie could over run North with a 4-goal breeze in the last, but it was not to be. North bottled the ground up nicely and neither team could kick a goal in the final term. The press reported North's pace, their superior marking and the crowd apparently got great value for their money. Keith Revil was named best on the ground and was ably supported by Geoff & Mick Scott, A Williams, Willy Grave, Keith Lynch, Jack Coulter and James Cooper. Jack Palmer was noted as "outstanding for Currie until getting injured in the last quarter" and was well assisted by Phil & Tom Farrell, Arthur Marshall, Jack Simmons, Rig Johnstone and L Fenner. North had started the season slowly but had come home like a winter westerly to take out another premiership.

The KIFA organised a Grand Ball and season trophy presentation, however the results could not be found. Thus, the ugly man has faded into obscurity!

We do know that Edward (Ted) Porter (GFC) won the Association Best & Fairest award; Rig Johnstone's career was just starting, and he was the leading goal kicker with 19 goals for the season and Keith Revil was best on ground in the Challenge Grand Final.

Mine teams, the Mill played the Cut in their annual fundraiser at Grassy for the Cottage Hospital match where the Mill 10-22-82 d the Cut 6-8-56. £8 was raised from the gate. No junior games were played.

# Cold takes a heavy toll

**BUGGY**

THE JBS Monthly Mug was played on Saturday. The first day of the financial year was sunny but a rather chilly southerly breeze saw 16 players attack the links golf course.

The mowing teams had very limited time on the course this week due to regular showers. Here's hoping a few dry days to keep the course in good trim.

The winner which was a stroke event saw Tim Barnes hit a 76 nett 75. A solid effort.

Runner up Roger Clemons 77 nett.

Nearest the Pin 3/12  
Brendan Strickland

18th Adam Hely

**Around the traps**

A couple of players failed to finish because it was too cold. These two players were 20 years younger than most of the field. Weak as water.

We have a new player who originates from Japan Taki has taken up golf and plays most days after working night shifts

.He loves the game so welcome to King Island and golf.

Good to see Greg Barratt 79 nett and Alan Aylett 80 nett back on the course. Pity their footy teams didn't get a win at the weekend.

Shot of the day – two actually, both on the 18th. Adam Hely hit a beauty onto the back half of the 18th green – only one to actually get on the green.

The last two players yelled out that they could beat that.

The buggy of Adam was left in front of the green – Tim Barnes' hit ended up well short but bounced into the buggy and stayed there.

Lance Anderson tried and ended up 20m into the bushes near the ladies first tee.

Getting ready to play the 18th are Adam Hely, Rab Denby and newcomer from Japan, Taki.

# Fiction brings history to life

## Shipwreck inspiration

**AWARD** winning author Michelle Cahill was a recent artis-in-residence at the King Island Arts and Cultural Centre. During her residency she was able to expand her research around the Brahmin shipwreck on the island's west coast in 1854, which is the inspiration and backdrop for her latest novel. Cahill has been announced as the University of Tasmania Hedberg Writer-in-Residence, commencing in Hobart in August and has been long listed for the Australian Literature Society Gold Medal 2023. She writes for us ...

IT IS bliss for a visual artist or a writer to have space, time and the perfect surroundings to create.

Residencies are important because they validate creative labour. Telling stories in visual art, and through books matters, because art is a contribution, a way of remembering and celebrating that enriches our lives as communities.

A writer's occupation is mostly not visible, though it's physically and psychologically challenging, requiring intensity, commitment to the craft, and patience. Being artist-in-resident at the Currie Lighthouse, was an immersive experience of sea and skies and their subtle changes, of birdlife, people, animals. I could bring natural phenomena to my writing, without the usual chores and routine that crowds our daily lives.

As a writer, I am interested in islands, their histories, and fragile ecosystems as our climate warms from carbon emissions, and sea levels rise. As an immigrant, sea journeys, migration and travel have featured often in my writing.

Last year, I came upon the maritime footnote of one shipwreck, the Brahmin, when I was researching the footprint of

The recent writer-in-residence at the King Island Arts and Cultural Centre Michelle Cahill.

of the past. This story first emerges from early news reports appearing in several newspapers and shipping gazettes. An aspect of the story is the gaps and the inaccuracies owing to memory and cultural differences, and quite possibly to language barriers. I've been reading other documents from the time such as letters, expedition reports before and after the wreck, and the diary of John Scott, the sealer.

Somewhere in my writing and reading subconscious there are echoes and vestiges of literary texts that are about shipwrecks, from *The Tempest* to James Bradley's *Wrack*, or Jock Serong's novel, *Preservation*. Shipwreck is powerful as a metaphor for new life.

I'd like the novel to be consistent with historical records and maritime archaeology, and after all it is a story about King Island, its natural beauty.

Being here on the island allowed me to observe weather, sky and seas, and imagine what it was like for the lascars to be living here for five months during winter.

A huge encouragement has been receiving the Hedberg Writer-in-Residence Fellowship at the University of Tasmania. The residency and prize money will help support me during the long, slow months it takes to write the first draft and then to revise it to a finished novel with the help of a team.

I'm sure the competition was tough, so it indicates that there is much national interest in King Island's history. A section of my novel will also be set in Hobart, so I'll be able to soak in the climate and harbour while there and access library archives. I'm looking forward to working alongside a distinguished and progressive Creative Writing Faculty at the University of Tasmania.

History comes alive on King Island. I'm thankful to Christian Robertson, a natural historian who generously shared his knowledge of the Quarantine Bay site, and the survivor's camp, south of Whistler Point between Eel Creek and Duck Bay, where the Brahmin was shipwrecked. My thanks as well to the King Island Historical Society and the King Island Council for generously supporting my writing.

lascars in Australasian waters.

'Lascar' is a Portuguese word that was adapted from the original Hindi word, 'lashkar' referring to Indian seamen, and it dates to the Portuguese colonial presence in the Indian Ocean from 1548. It became used by the East India Company along with other interchangeable words to describe a lower status work force, a cheap alternative to British seamen.

By the nineteenth century the term 'lascars' included other Asian seamen, often called 'Malays', and sometimes African seamen.

They were recruited as teams by ghat serangs, or labour brokers, and on board the ships they were managed by a ship 'serang'.

Lascars were often young men, vulnerable and exploited as they were paid little more than one third of their European counterparts.

The Brahmin was a three-mast ship of 616 tonnes built in Greenock in 1842, it was used for trade between England to India and often China. In May 1854 it was caught in a three-day gale after leaving the Cape of Good Hope.

The captain could not take accurate navigational bearings and the ship went off course, breaking up after striking a reef south of Whistler Point on the western coast of King Island.

It was only 700 metres from shore. Seventeen crew and passengers including the captain drowned as the boats were put down.

Nineteen lascars, a Malay woman and three British seaman survived for five months on the island with the help of two Tasmanian Aboriginal women who helped them survive, trapping wallaby and fishing.

The lascars were found when the *Waterwitch* ship headed from Melbourne for Mauritius wrecked further south along the west coast of King Island, on September 17, 1854. The crew of the *Waterwitch* came upon the lascars. The two Tasmanian women, Mary and Maria had lived for 20 years on King Island, with the sealer John Scott. He had drowned in 1843 after helping the captain of another ship, *The Rebecca*.

These events are an early example of multi-ethnicity

and cooperation. Being of Indian heritage, this is a really intriguing and meaningful story for me.

History is a narrative that is made official by authority and power, and certainly there are filters determining who and what enters the archives; what stories are allowed to be told about the nation, and by whom. What I like about fiction is that it can take all forms. More subtle and evocative than history, fiction can be playful or experimental. It can be provocative in how it interprets the past to reform cultural histories. However, it's very important not to impose my voice over other stories.

To adapt my skills to write with respect, understanding the brutal colonial trauma

QLD GOES AGAINST RIGHTS ACT ON DETENTION

DECHLAN BRENNAN

The Queensland Government has introduced legislation that is incompatible with human rights, for the second time this year, with the changes expected to disproportionately impact Indigenous children.

The legislation — implemented to allow children to be imprisoned in police watchhouses designed for adults — was introduced by the State's Police Minister Mark Ryan last Wednesday.

It will require a suspension of the State's Human Rights Act.

Change the Record national director, Gunggari advocate Maggie Munn, said the decision to put through amendments to an unrelated Bill was "outrageous and deliberately harmful".

"This is now the second time Queensland has suspended its Human Rights Act to criminalise and punish children in this State. Incarcerating children whether in prisons or watch houses is harmful, the Government knows this and yet continues to enforce these conditions," they told National Indigenous Times.

"To have a legal instrument like a human rights act in place means there should be protections, but if governments can decide to suspend those protections, it's the most vulnerable people who suffer."

In the Bill's notes, Mr Ryan said the change was necessary to guarantee that "immediate capacity issues" in the State's

Queensland Police Minister Mark Ryan introduced the Bill amendments on kids in watchhouses.

Albanese  
poised to  
announce  
the Voice  
ballot date

CALLAN MORSE

Prime Minister Anthony Albanese plans to announce the date of the Voice to Parliament referendum on Wednesday.

Set to be made at an event in Adelaide, the announcement will be held in the same State the Yes campaign launched in earlier this year, suggesting the Government believes South Australia looms as a key battleground.

Australia's only other referendum specifically relating to First Nations Australians, the successful 1967 referendum which asked for Indigenous people to be counted as part of the population and empowered the Commonwealth to make laws for them, was also launched in South Australia.

Previously suggesting the referendum will be held in October or November, speculation has arisen the vote will be held on October 14 based on Mr Albanese's travel commitments in the coming months.

"Very soon, our nation will have a once-in-a-generation chance to recognise Aboriginal and Torres Strait Islander people in our constitution — and make a positive difference to their lives with a voice," Mr Albanese said last week.

"I will be campaigning for constitutional recognition. Because if not now, when?"

An October 14 referendum date would allow for a six-week campaign before Australians decide whether to enshrine an Indigenous Voice in Australia's constitution.

Preceding referendum date, the Australian Electoral Commission will deliver nearly 13 million Voice referendum pamphlets to Australian households and other residences.

Distribution of the 20-page document, which details both the Yes and No case, has begun and coincides with the AEC's Your Answer Matters advertising campaign, designed to educate voters ahead of referendum day.

"This is one of the nation's, and the AEC's largest printing

# Bail Act lacks clarity: VALS

DECHLAN BRENNAN

Indigenous and legal groups have commended the Victorian Government for introducing bail reform legislation but warn that it does not go far enough.

Attorney-General Jaclyn Symes introduced legislation into Parliament on August 15 in a bid to reduce unnecessary remand for people accused of low-level offending.

Under the reforms, low-level offenders would find it easier to receive bail and people who committed crimes unlikely to result in a custodial sentence would not be remanded in jail while awaiting sentencing.

"These offences were introduced in 2013 and have been shown to disproportionately impact women, children and Aboriginal people with no clear deterrent benefit or improvement to community safety," the Victorian Government said.

Bail reforms would also redefine "unacceptable risk" so a court wouldn't refuse bail over a risk of minor reoffending.

However, various legal groups have argued that while scrapping certain provisions is a step in the right direction, the reforms do not go far enough.

The Victorian Aboriginal Legal Service said it was "concerning" the Government was proposing only a slight modification of the reverse onus provision, given it is incompatible with the Victorian Charter of Human Rights and Responsibilities Act.

"We are also concerned that the Victorian Government's Bill will make the Bail Act more complicated, rather than making it simple and clear so that it can function more effectively," the VALS statement said.

VALS chief executive, Yorta Yorta and Narrandjeri woman Nerita Waight, said the changes were a small step in the right direction.

"This is a first small step towards ending the damage that Victoria's bail laws have done over the last five years particularly," Ms Waight said.

"There have been three bail

Bills before this in the last decade and the Government has admitted that there were mistakes in all of them. They should accept that they probably haven't got this one right either and set a timeline for reviewing the Bill in the legislation."

Referring to Veronica Nelson, whose death in custody in 2020 was deemed preventable by the Coroner and led to calls for an urgent review of the bail act, Ms Waight said Ms Nelson's family had played a significant part in the reforms.

"Veronica is the reason the Government is changing the bail laws. All the Parliament should centre her story when they debate the Bill and be respectful of her family," she said.

"Veronica's family have been clear on asking for changes to the bail laws and I hope the Parliament will ensure the Bill reflects the family's wishes.

"There are some good changes thanks to the advocacy of Veronica's family, especially in relation to removing bail offences, making it easier for children to

Victorian Aboriginal Legal Service CEO Nerita Waight.

get bail, and changes to reduce the over-incarceration of Aboriginal people."

The Bill delays implementation of reforms by six months, which the Human Rights Law Centre says will see thousands of people continue to be funnelled into Victoria's prisons.

The family of Ms Nelson have previously called on the Victorian Government to implement "urgent, wholesale changes" to the bail laws in the next three months and for these reforms to be known as

Pocum's (Veronica Nelson's childhood nickname) Law.

Amala Ramarathnam, acting manager lawyer at the Human Rights Law Centre, said the Andrews Government had acknowledged the failures of the bail laws, but was still failing to take all the action required.

The Law Institute of Victoria's president, Tania Wolff, said more work on the reforms was required.

The Victorian Government has been contacted for comment.

## Racist comments persist online despite Assembly plea

DECHLAN BRENNAN

Social media giant Meta has been criticised for its response to people making racist comments on its platform.

Meta, which owns Facebook and Instagram, received complaints about racist commentary on the platform from the First Peoples' Assembly of Victoria in March.

The First Nations body met a Meta representative; but the comments have not abated. Assembly co-chair and proud

First Peoples' Assembly petition banner.

Gunditjmarra man Rueben Berg said the announcement the Federal Liberal Party would oppose the Voice to Parliament

coincided with a surge in abuse.

"Since Peter Dutton announced that his party would campaign for a No vote, we've seen a dramatic rise in racist abuse and hatred directed at First Peoples, both online and in everyday life," Mr Berg said. "The No case is really emboldening the trolls and bigots. Our Assembly Facebook page went from getting a handful of racist comments a week to our staff having to report and block hundreds of people every week. "So, we started our petition

calling on Facebook owner Meta to do better in order to help protect the mental health and wellbeing of First Peoples during the referendum."

The Assembly said since meeting Meta, many racist comments have been reported.

Comments such as "feral Abos" and "black k..ts" were deemed to have not breached Facebook's community standards and no action was taken.

A Meta spokesperson told National Indigenous Times that

"no one should have to experience racist abuse anywhere".

"We are sorry to hear that the First Nations Assembly of Victoria is still receiving racist comments on their accounts," they said. "When they raised a complaint with us earlier in the year, we investigated it thoroughly and took action. It was our understanding that we had responded to and addressed their concerns. We will be following up with them to understand what more we can do to support them."

## Relevant Person Consultation:

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

# Federal Court grants Native Title in Chillagoe

## Historic day for Wakaman People

JESS WHALER

The Wakaman People of Far North Queensland were granted Native Title rights by the Federal Court of Australia this month, via a determination providing the right to access and care for Country extending over 14,861sqkm of land in Chillagoe.

After a more than 20-year fight for land rights, Justice Berna Collier presented recognition to the Wakaman People during a ceremonial on-Country sitting on Wakaman Country on August 18.

The Federal Court accepted and acknowledged the Wakaman People's proven, unbroken connection to more than 715,000ha of their traditional homelands.

Despite the devastating history of being removed from their land and restricted from practising culture during the aggressive colonisation period, the Wakaman People have maintained a strong connection to their country.

State member for Cook Cynthia Lui noted that "Aboriginal people have inhabited this area of Queensland for over 25,000 years".

"It's been a long road for the Wakaman People to have their claims recognised and I hope the determination gives them a sense of peace," she said.

"Being able to maintain their traditional lands and ensure the cultural practices, skills and stories are passed on to the next generation is a wonderful thing."

Queensland Minister for Resources Scott Stewart said the recognition of native title is "a fundamental step in changing the relationship between the Queensland Government and our First Nations communities".

"We are fortunate in Queensland to be home to two of the longest, continuing cultures in history, in the Aboriginal cultures and Torres Strait Islander cultures," he said.

Represented by the North Queensland Land Council, the applicants of the claim were Wakaman People — Mr John Alvoen, Mr William Thomas, Ms Robyn Hooley, Ms Raelene Madigan and Ms Carol Payne.

John Alvoen and Robyn Hooley with a gift from the State. Top: Justice Berna Collier receives a gift from Robyn Hooley and the Wakaman People.

Justice Berna Collier, Carol Payne, John Alvoen, Robyn Hooley, William Thomas.

Mungana Rock art site.

Robyn Hooley said the determination "means everything".

"It's been a long process. The sacrifice my family made and their contribution to getting recognition to country, it makes me feel very proud that we finally achieved a good outcome," she said.

Wakaman man William (Billy) Thomas said: "We have been going back to country and teaching my children, nephews and grandchildren about country, about what's on the river and land."

"We teach them about hunting and fishing, showing coun-

try and sacred sites, like my mother did with me. We can continue doing this, that's why it means a lot to me," he said.

"The Tate River is special to me, as that's where my mother was born."

Maintaining their traditional lands ensures the Wakaman

People can continue to pass these cultural practices, skills and stories on to the younger generations.

The North Queensland Land Council said the decision was welcomed and congratulated the Wakaman People on this momentous occasion.

## AEC rolls out campaign to inform public about referendum

CALLAN MORSE

The Australian Electoral Commission has started the main phase of its referendum education campaign with the launch of Your Answer Matters.

Reminding voters that their answer matters in the lead up to

the Voice to Parliament referendum, the campaign will have a dedicated website and will be shown on TV, online and in the press with the aim of assisting Australians to get "vote ready".

Your Answer Matters will provide a range of information resources as well as translated

and accessible material. Australian Electoral Commissioner Tom Rogers said the campaign is deliberately starting before the referendum voting date is announced.

"It's been 24 years since we last had a referendum," Mr Rogers said.

"Approximately 6.4 million enrolled Australians weren't of voting age when we had our most recent referendum in 1999 — for a lot of people the role of a referendum won't be familiar.

"This campaign ramps up the public education we've been doing all year, educating Aus-

tralian about the importance of referendums and how to cast a formal vote."

With record growth in general, Indigenous and youth enrolment rates, the campaign will continue encouraging voters to update their enrolment details or enrol to vote.

# Memories spur language fight

JARRED CROSS

A half-century old memory still brings tears to the eyes of Bunuba Elder Patsy Bedford.

At 15, in the night, she was driven from Derby to Halls Creek, crossing the Kimberley and the river at her birthplace in Fitzroy Crossing.

She said the Department of Native Welfare made the journey in the dark “so that I wouldn’t see my country and my siblings”.

Her first years were spent by the river with her people and surrounding tribes. By five, her family were moved west to Ellendale Station and later to Derby.

At nine, “because of the colour of my skin”, the department removed her from her parents to a hostel for schooling with teachers who “had no real interest in teaching us” and without the opportunity to visit her family.

Aunty Patsy said up until that time she was out in her true classroom “learning about survival on the

land, learning about bush medicine, bush tucker and about country”.

“I never spoke English until I was about eight,” she told National Indigenous Times.

“At the hostel we weren’t allowed to speak our language.”

Her siblings were later made State wards and taken to the mission in Fitzroy Crossing.

Soon after, the journey to Halls Creek with the Department followed, being told a job waited for her.

It was there she met her future husband, had her children, was reconnected with her brother, and made occasional visits to Fitzroy and to see her Bunuba family before permanently returning home.

Now in her 70s, some of the details of her early years are foggy – and, like many Elders across the country, she’s never had a birth certificate.

The difficulties which come without this kind of documentation are

varied. People in her community are made to go through onerous processes – often needing a Justice of the Peace, which Patsy has become.

Patsy knows she was born with her name Ngalu and to her skin group Nyanjili. Multiple anthropology reports she has since recovered recorded her “as a half-caste child” under multiple first names.

“I don’t know how I got Patsy. I will never do research to find out where Patsy came into this whole picture,” she said.

She said memories of her earlier years will never leave her. They’re “still raw and still hurt”.

“That’s my history. And I’m back in Fitzroy. I chair the Kimberley Language Resource Centre, and I fight for languages,” Aunty Patsy said.

She is also a board member of Language Policy Partnership, a group made up of Coalition of Peak leaders.

Her granddaughter Obby Bedford has joined her in the pursuit of seeing generations grow up with a tradition inseparable from culture.

There are five language

Patsy Bedford, and inset left, Obby Bedford. Pictures: Rhiannon Clarke

groups around Fitzroy; Bunuba, Gooniyandi, Wangkatjungka, Walmajarri and Nyikina.

Ms Bedford told the National Indigenous Times there was a time when she was young where her grandmother only spoke to her in Bunuba.

She spent her school and university years living in Melbourne, where she lost big pieces of this language and was at times mocked for using it.

Now 25, the move back home to Fitzroy Crossing was done to be reconnected with “language and culture”.

“If we don’t act now, then

we’re going to lose language. We’re going to lose fluent language. I came back . . . so that I could learn it for myself from people who were still speaking it fluently, as it was their first language, so that I can pass it down as well,” Ms Bedford said.

Aunty Patsy still sees funding and power to decide where resources go as a hurdle.

“The Government expects you to bring in a qualified linguist,” Patsy said. “That’s a big insult to people like myself and other community linguists right across the Kimberley who read and write the language.”

“The Voice will allow us to be able to give our opinion, to sit at the table, talk from experience, and **bring that value** to the conversation.”

Dr Stephanie, Kununurra

Yes23.com.au

When people listen, we make better decisions.  
That’s why we’re voting Yes to a Voice.

## Amendment to Bill allows kids held in watchhouse

FROM PAGE 1

prison system could be rectified.

"It is not intended to make acceptable the long-term use of watchhouse or corrective services facilities for young people."

The amendments come after the Queensland Supreme Court on August 18 ordered the urgent transfer of three children who were detained in police watchhouses, after the State Government conceded it had no lawful basis to detain them.

The Bill was initially introduced to amend reporting obligations for sex offenders and includes decriminalising public drunkenness, preventing police from surveillance of sex workers, and reforming police disciplinary processes.

Queensland Greens MP Michael Berkman called the decision an "absolute dog act".

"I've just seen one of the most disgraceful acts from Qld Labor since I was elected," he tweeted last Wednesday. "At 3.30pm, they moved 57 pages of amendments to an unrelated Bill w(ith) 30 mins for debate. They suspend the Human Rights Act to allow children to be kept in watch houses & adult prisons."

Queensland has the highest youth jail population in the country. In June, data showed of the 169 children charged under recently introduced offences, 112 were Indigenous. Debbie Kilroy, chief executive of Sisters Inside, told Guardian Australia the decision means the community "will also be harmed".

"It's time to reimagine communities with funding taken away from police and prisons so we can develop our own modes of safety and security," she said.

This is the second time the Labor Government has had to breach its human rights charter in order to pass legislation.

Earlier this year, it passed legislation that made breach of bail for children a criminal offence, which Mr Ryan spruiked as the "toughest in the country".

At the time, Queensland's human rights commissioner Scott McDougall stated "the measures introduced are predicated on a flawed perception that recidivist children will respond positively to punitive measures."

"I am unaware of any evidence that increased maximum penalties of imprisonment will deter a child from engaging in risk-taking behaviour," Mr McDougall said.

In June, Youth Advocacy Centre chief executive Katherine Hayes it was seeing children plead guilty to avoid spending time in detention.

"We have seen children plead guilty to charges because they are less likely to receive a sentence. If they are on remand, they are highly likely to be held in detention — often for months," she said, noting young people are kept in detention for crimes unlikely to carry a custodial sentence.

# Martu Native title ruling is welcomed

GIOVANNI TORRE

The Martu people of the Western Desert, WA, took another step last Thursday in their long battle for Native title over their Traditional lands.

Martu celebrated as the Federal Court in Perth made its declaration on the Martu #3 Native title claim.

Martu applicant Kennedy Finlay and Jamukurnu-Yapalikurnu Aboriginal Corporation (JYAC) representatives were in the Federal Court to witness the determination.

The Martu #3 claim picks up a number of small to medium blocks along the western boundary of Martu ngurra (country).

The WA Government accepted the Martu people are the right people for that claim area and agreed to a consent determination of Native title.

The Wanajarra and Yina (Elders) Council and meetings of Martu common law holders have talked about getting all of Martu ngurra into the determination for many years.

Martu focus is now turning to Karlamilyi National Park — the largest national park in WA and the subject of a protracted negotiation with the State Government.

Mr Finlay said: "We are very happy today that governments and the court have agreed this land belongs to Martu."

"Our ancestors cared for this land, and then gave us the responsibility."

"We will use our native title rights to care for country and keep our culture strong."

JYAC chairperson Simon Frank said Western Desert lands were important for all Martu families.

"We have our culture and spirits in that ngurra," he said.

"Martu want to use the land properly — we will protect ngurra that must be kept safe and we will do mining and other business where that's agreed."

"The country is important to us for the culture, for the environment, and for economic op-

Terrance Jack, Olivia Wilson, named applicant Kennedy Finlay and JYAC legal Rewi Lyall. Picture: JYAC

portunities. This has been our ngurra since before time."

Jamukurnu-Yapalikurnu Aboriginal Corporation chief executive Tony McRae said Martu exclusive possession native title rights put Martu "in a strong position to control access to their land".

"JYAC is the trustee (land council) for Martu rights and

we ensure any activities on country are done under binding agreements. This gives Martu control over country and gives land users the certainty they want to do business," he said.

"The JYAC board has strong instructions from Martu to now focus on getting Karlamilyi back in Martu hands. Martu

have waited more than 46 years to get this country back.

"Premier Charles Court declared that sacred part of Martu ngurra a national park without any consultation and Martu have been fighting to get it back ever since. It is a great injustice that must not be allowed to just drift along. Justice delayed is justice denied."

## Conference speakers prompt backlash

FROM PAGE 1

and distribution jobs so it'll take time for all deliveries to occur — delivery is getting under way shortly and will be completed by mid-late September," AEC commissioner Tom Rogers said.

As referendum day nears, the Voice debate dominated the recent Conservative Political Action Conference (CPAC) Australia event, which sparked a backlash after guest speakers made derogatory comments about Indigenous culture and praised assimilation.

The conference, chaired by No

campaigner Nyunggai Warren Mundine, hosted a range of anti-Voice speakers, including Senator Jacinta Nampijinpa Price, former prime minister Tony Abbott, Advance Director Matthew Sheahan and former Liberal MP Bronwyn Bishop.

During the two-day event, Recognise a Better Way committee member Gary Johns urged assimilation of Aboriginal communities, claiming some in Indigenous communities lived in a "stupor", and recommended they "learn English" if they wanted a voice.

Earlier, self-described "hoax

speaker and corporate imposter" Rodney Marks, as character "Dr Chaim Tsibos", addressed the event for 25 minutes, beginning by mocking the Acknowledgement of Country.

"I'd like to acknowledge the traditional rent-seekers, past, present and emerging," he said, before smearing Traditional Owners as "violent black men".

"I hope there are some real feminists in the audience who appreciate the part-truth of that joke," he said, before describing Indigenous leader Bennelong as a "woman-basher".

Megan Davis and Auntie Pat

Anderson AO of the Uluru Dialogue issued a statement in response in which they urged the No campaign to stop "racist jokes and misinformation".

"Sadly, this sort of abuse is not uncommon on social media, weaponised by trolls and sham accounts that the No campaign does little to nothing to discourage or condemn," the statement said.

"Our young people around the country will be seeing supposed jokes on their social media feeds portraying Indigenous Australians as 'rent-seekers', 'violent' and 'woman-bashers'."

# Call to UN over WA mess

DAVID PRESTIPINO

The United Nations Committee on the Elimination of Racial Discrimination has been urged to take a stance on Western Australia's bungled attempt to reform Aboriginal cultural heritage protection.

A letter sent to UNCERD chair Varena Shepherd this month by Environmental Defenders Office members Slim Parker, Kado Muir, Dr Anne Poelina, Clayton Lewis and Hannah McGlade raised the group's serious concerns about WA's cultural heritage law reform process and requested the international organisation make a formal decision on the matter.

The WA Government admitted it "took things too far" as it announced earlier this month it would revert to the 1972 laws covering Aboriginal cultural heritage in WA, which were in force when Rio Tinto destroyed sacred rock shelters at Juukan Gorge in 2020.

Premier Roger Cook said tweaks to the 50-year-old Act would prevent another catastrophe like the mining titan's and apologised for the stress, confusion and division the new laws had created.

But Dr McGlade, a Curtin University school of law associate professor

and expert member of the UN Permanent Forum on Indigenous Issues, said the group was extremely concerned at the lack of Aboriginal consultation before the Act was repealed.

"It's very disappointing the WA Government under Premier Cook's leadership has once again shown failure to respect Indigenous peoples' right to cultural heritage under the frantic legislative reforms passed recently," Dr McGlade said.

The Permanent Forum is an advisory body to the UN's Economic and Social Council and has the mandate to discuss Indigenous issues related to economic and social development, culture, the environment, education, health and human rights.

Dr McGlade, pictured, a Noonang human rights lawyer and academic who has published on many aspects of First Nations legal issues, said the latest change to legislation in WA did not constitute effective remedy.

"The Bill gives Aboriginal Affairs Minister Tony Buti further rights to intervene and 'call in' appeals from the State Administrative Tribunal, thereby allowing the Premier to determine the matter and removing the right

to be heard by the tribunal," part of the letter to the UN said.

"We also note the SAT has no expertise in Aboriginal cultural heritage and fails to even include Aboriginal members in the tribunal composition, therefore this is also problematic and unacceptable."

The EDO is not the only organisation concerned at the lack of consultation with First Nations organisations, with prominent bodies such as the Kimberley Land Council and the Puutu Kuntj Kurrama and Pinikura Aboriginal Corporation, whose sacred caves Rio Tinto destroyed, also claiming they were not part of discussions the Cook Government had with industry and stakeholders, including miners and farmers, before repealing the Act last week.

PKKP land and heritage manager Jordan Ralph said reverting to the culturally inappropriate 1972 legislation was among the worst outcomes for Aboriginal cultural heritage protection and has demanded Dr Buti clarify a range of issues.

"First Nations people are being treated as second-class citizens in their own Country," Dr Ralph said.

The letter to the UN outlined the EDO's position that Australia's approach to cultural heritage protection should be pursued at a national level by the Albanese Government.

## BHP

"A job I love  
on my family's Country  
To me that's big."

It means a lot to up-and-coming generations of the Tjiwarl community to have a seat at the table. Shania, with the backing of her community in the Northern Goldfields, is working on Country and making a pathway for herself.

BHP is proud to support a program that gives generations of the Tjiwarl people employment and a source of pride for their communities.

bhp.com

# Video shows teen with disability knocked down by officer

Stills from video of the arrest, circulated on social media.

# Probe into violent arrest

**CALLAN MORSE**

A NSW police officer involved in the violent arrest of an Indigenous teenager earlier this month has been placed on restricted duties.

The 18-year-old, who lives with a disability, was arrested in the mid-north coast town of Taree on Tuesday, August 15.

The officer was put on restricted duties after NSW Police launched an internal investigation, sparked by videos of the arrest on social media, described as “difficult to watch” by NSW Police Minister Yasmin Catley.

One of the videos appears to show the plain-clothes officer perform a leg sweep manoeuvre, knocking the teenager to the ground.

A second video shows the

pair fall to the ground, before the teenager appears to have a seizure. The officer then pulls the teenager upright before he is handcuffed.

The teenager was later charged with being in possession of suspected stolen goods, and was refused bail in Taree local court. He is set to return to court next month.

The teenager’s aunt told Guardian Australia her nephew said he thought he was going to die after the arrest. “He said, ‘I thought I was dying in the cell last night’. He said ‘I couldn’t move’. No one deserves to be treated like that,” she said.

The teenager’s aunt said the wellbeing of her nephew, who has foetal alcohol spectrum disorder and attention deficit hyperactivity disorder, was

not taken into consideration during the arrest.

“There were other ways they could have dealt with him. He wasn’t resisting arrest or anything,” she said.

“They nearly broke this little boy’s arm. This little fella was having seizures and they didn’t even have the courtesy to ring an ambulance.”

She said her nephew hit his head during the arrest, resulting in a cut on his head.

Greens NSW MP and spokesperson for justice Sue Higginson renewed calls for a parliamentary inquiry into NSW Police, labelling the teen’s treatment “shocking”.

“A vulnerable person was experiencing a medical episode and the police responded with violence instead of calling an ambulance,” she said.

“This is completely unacceptable and shows us once again that we do have a police problem in this State.

“NSW Police have announced an internal investigation which goes nowhere near what is needed to deal with the systemic issues that allow this to happen.”

Ms Catley confirmed the officer was on restricted duties while an investigation was under way. “I acknowledge the video that’s circulating is difficult to watch. That’s why this investigation will consider the police response and arrest. I cannot comment further while this takes place,” the minister said.

NSW Manning-Great Lakes Police District said it would investigate the “response and arrest . . . by a police officer”.

The incident has drawn parallels to a previous case involving a NSW police officer, who was found guilty of assaulting a 16-year-old Indigenous boy in 2020 after performing a similar leg sweep manoeuvre.

Ms Higginson said NSW Police were experiencing a “substantive deficit” in their ability to respond to vulnerable people, such as First Nations Australians, calling for further action and an inquiry to address the “alarming number of violent incidents involving NSW Police and vulnerable people”.

“We know we have good people in the NSW Police force, but it’s not enough to leave this important work up to them. The Government must act.”

# Thorpe says cancel Voice vote

**JESS WHALER**

Independent senator Lidia Thorpe called for the Voice to Parliament referendum to be called off in her address to the National Press Club in Canberra this month.

The Djab Wurrung, Gunnai and Gunditjmarra woman said the Voice proposal does not go far enough, and urged all Australians to look through the lens of First Nations Peoples.

The senator also spoke on the Frontier Wars, noting: “It was a sport to shoot blacks, a sport to shoot blacks, my people”, and adding that the wars have never ended.

“Same war, different weapons, the same domination of First Peoples for access to our land and resources,” she said.

“Our people are still rounded up and locked into cages at the highest rates in the entire world.”

She paid tribute to the strong line of Aboriginal female activists and ancestors from which she came.

Ms Thorpe called for Treaty, for legislation in line with the United Nations Declaration on the Rights of Indigenous People (UNDRIP), and for the referendum to be called off. “Adhering to the UNDRIP would do vastly more for our people than any voice,” she said.

“We’re talking about almost 250 years of invasion, disease, murder, theft, destruction, poisoning waterholes, poisoning trees, 250 years almost.

“(It’s) 2023 and all they have to offer is a powerless little advisory body with parliamentary supremacy over it at all times.”

Ms Thorpe said First Nations people deserve more than what is being offered, which she referred to as “false hope”.

“That’s another insult to our intelligence. That’s an insult to our ancestors. And all of our people who passed in every prison, in every institution,” Ms Thorpe said.

“It’s an insult, because it’s not good enough, after 200 years, that we

just get offered a powerless advisory. It’s not good enough,” she said.

Ms Thorpe invited the Australian people to stand with First Nations people, to stand up for what matters.

“I want to see Federal leadership on the conversation. I think that the King has to be at the table,” she said.

Ms Thorpe noted First Nations’ connection to and care for country. “We are the oldest continuing living culture on the planet. Surely that’s something to be proud of,” she said.

“We have lived through ice ages, countless fires, droughts and floods. We know how to care for country, but we are not allowed to do so.”

Prime Minister Anthony Albanese later told a press conference that a Yes vote would “advance reconciliation”.

“And that is doable from my perspective. Everyone will come to their own decision. From my perspective I fail to see how other issues will be advanced if a No vote is recorded,” he said.

Senator Lidia Thorpe at the National Press Club of Australia.

# Celebrating 20 years of Fortescue

**Since our inception 20 years ago, our focus has always been on communities benefiting from our success.**

Through initiatives such as our Billion Opportunities program, we have delivered economic and employment opportunities for First Nations people. As we look ahead to our next 20 years and beyond, giving back to communities remains at the forefront of everything we do.

## Vibrant view of culture and creativity

### FROM THE EDITOR

It has been a colourful month for our Style Up team, fitting given this is certainly a colourful edition.

The team attended the Darwin Aboriginal Arts Fair where Country Road denim was worn and much talent seen.

This included the Country to Couture runway, National Indigenous Fashion awards and the overall Darwin Arts Fair where dancers performed and stories were showcased.

The music awards were also held. Our fashion journalist attended the Brisbane Fashion Festival and we sadly said our goodbyes to our social media intern who filled in by holding down the fort in the online world during our director's absence.

It has been another month when we have grown and adapted. I look forward to the coming weeks when I will be attending fashion weeks around the world and providing you with more talent and inspiration.

SHAHNA SMITH

# Expressive handiwork

Iltja Ntjarra is known for its vibrant collection.

### PHOEBE BLOGG

After making headlines with its recent Country to Couture runway presentation — which featured watercolour-splashed and dyed clothing — Iltja Ntjarra Art Centre is injecting elements of fun and experimentation back into the fashion industry.

Using a talented team of local Indigenous artists has had the not-for-profit art centre fuse fashion with cultural relevance, artistic expression and bold experimentation.

"Iltja/hands Ntjarra/many, implies the coming together of different Western Aranda family groups," project manager Koren Wheatley said.

"Iltja Ntjarra/Many Hands is the home of the Hermannsburg School of Art, a transformational Central Australian art movement instigated by Albert Namatjira. "Here at the art centre, the Pareroultja, Malbunka, Inkamala, Rununtja, Coulthard, Namatjira, Wheeler and Ebatarinja families work side by side to create powerful interpretations of their custodial country. Many hands and many families coming together to represent culture and country," Wheatley said.

With Albert Namatjira's legacy at the core of everything

the centre's artists create, it only seemed natural that continuing his legacy would see the centre's artists experiment with watercolour.

"As the craft of watercolour, especially landscape, is incredibly challenging and at times overwhelming, this project was an opportunity to engage younger emerging artists by encouraging them to explore their interest in textile design as a creative medium.

"The new generation of watercolour artists are innovative, explorative and are guiding the Hermannsburg School of Art movement in their own direction by speaking to what influences their lives in this current social environment and life as they experience it," Wheatley said.

Iltja Ntjarra's senior artists and mentors Dellina Inkamala and Vanessa Inkamala, along with emerging Iltja Ntjarra artists, Dianne Inkamala, Delray Inkamala and Mandy Malbunka worked in collaboration with APM Employment and Disability services participants, Rhonda Jones, Teresa Wilson, Lucinda Forrest, Amanda Long and Leah Johnson.

The collection itself was led by Wheatley in the capacity of designer, with the help of seamstress Nghia Pham.

# Designers soar even higher

## PHOEBE BLOGG

With more than 20 designers presented across two runways, this month saw Darwin's annual Country to Couture runway make headlines once again.

Presented by the Darwin Aboriginal Art Fair Foundation as part of its Indigenous Fashion Projects, the Country to Couture

runway shows celebrated modern storytelling through textile craft.

Exhibiting a series of collections from Indigenous designers and artists across Australia, the Country to Couture runway was supported by the Northern Territory Government, along with Country Road.

"The event is recognised globally and in Australia's Indigenous

communities for celebrating and propelling designers to new heights while maintaining an authentic and grassroots feel," said the DAAF Foundation's artistic director Shilo McNamee. Despite this being the event's eighth year, attendees were once again amazed at the level of talent and creativity coming from the local community.

While notable designer

favourites, including Ikuntji artists and Miimi & Jiinda, returned to the runway, up-and-comers, such as Yapa Mali, made very fashionable Darwin debuts.

Aside from emerging designers, colourful collections and cultural storytelling, this year's runway also celebrated a variety of both established and emerging First Nations models. With celebrated

models Cassie Puruntatameri and Cindy Rostron returning to the Country to Couture runway, all eyes were on both women as they strutted their stuff, smiled for the camera and interacted with guests.

With projects already planned for 2024's Country to Couture runway, we here at Style Up believe next year's event will be bigger, if not better, than its 2023 counterpart.

## Artists get the chance to profit in dynamic setting

### SHAHNA SMITH

Entering the vibrant scene at the Darwin Convention Centre, attendees were immediately embraced by a dynamic display of Indigenous culture. The air buzzed with an infectious blend of excitement and reverence, setting the tone for an unforgettable experience.

Navigating the diverse array of booths, a ray of colours and textures greeted visitors courtesy of more than 70 talented Indigenous artists. The artwork, ranging from captivating paintings depicting Dreamtime narratives to meticulously crafted homewares and rugs, held an irresistible allure. From a small \$4000 budget in its first year to having up to 10 employees now, Style Up spoke to DAAF's Tikesa Docherty-Cole about the exponential growth.

"It's very special," she said. "It has come a long way. We had seven new art centres apply to be part of DAAF

Picture: Dylan Buckee

showing that as we grow, there are new art centres popping up that we can continue to support."

What truly distinguished DAAF was the opportunity to engage with the artists.

The fair's commitment to allowing 100 per cent of sales to the artists fostered an ethical and empowering trade environment.

Live performances elevated the ambience, infusing traditional dance and music with vitality.

## Indigenous creatives weave traditional with contemporary

### PHOEBE BLOGG

After months of anticipation and excitement, the National Indigenous Fashion Awards have finally crowned their winners.

Taking place at Darwin's Deckchair Cinema on August 9, this year's NIFA awards attracted a sellout crowd.

Breaking records with more than 60 nominees, this year's awards celebrated and supported the industry's top-performing Indigenous creatives.

Proudly presented by Darwin Aboriginal Art Fair and Indigenous Fashion Projects, this year's awards event also partnered with the Northern Territory Government to showcase creative excellence across six categories.

Rowena Morgan of Nagula Jarndu took out the textile design award, Yarrenyty Arltere Artists' Rhonda Sharpe went home with the wearable art award and Wiradjuri Gangulu and Yorta woman Lillardia Briggs-Houston was crowned with the fashion designer award.

Gapuwiyak Culture & Arts artists won the traditional adornment award, Gapuwiyak Culture & Arts X's Aly de Groot walked away with the community collaboration award and Ikuntji Artists won the business achievement award.

"The work of this year's winners all carry such a beautiful weaving together of traditional and contemporary practice imbued with deep connection, pride and love of

country and community," said Indigenous Fashion Projects manager Michelle Maynard.

"I think they really represent the heart of our people."

The winners will each receive a range of tailored funding, mentorships and other opportunities available through Indigenous Fashion Projects and presenting partners.

Judges at the awards included Yatu Widders Hunt, Lisa Waup, Nimmi Premaratne and Perina Drummond.

# Creating dreams under a rainbow of expression

SHAHNA SMITH

Nestled in the heart of South Australia, Mali Isabel is painting waves in the world of contemporary art with her vibrant creations. Her artwork is a testament to her deep-rooted cultural pride, her values of peace and equity, and her unyielding positivity.

A proud Arabana-Kokatha woman from Port Augusta, Isabel's upbringing in Adelaide was shaped by her multicultural surroundings.

"I have always felt people assumed I would be embarrassed or ashamed of my culture, and I often left them confused when they realised I embraced my heritage with unwavering pride," she says.

Frequently the only Aboriginal child in her community, Isabel chose to break stereotypes and shatter assumptions.

Her artistic journey began early in life as she explored various outlets for her creativity.

"When I pick up a paint brush, it's like the world and time no longer exist and I can forget the worries in the world," she said.

Graduating with a degree in primary education, majoring in visual arts, Isabel initially intended to pursue teaching.

But her passion for art took precedence. In a leap of faith, she dedicated a year to honouring her craft. Ultimately it led to the establishment of her successful business, Mali Isabel Art. "At the start of 2021, I secured a coveted studio residency at Carclew and spent the majority of my time developing my practice and artistic style," she says.

A hallmark of Isabel's art is her exceptional use of colour, which is not only visually striking but also carries deep significance.

"Each hue and shade captures the essence of how I am feeling at a particular moment in time," she says.

Her use of rainbow colours serves as a symbol of her commitment to achieving equality for all and breaking traditional moulds in Aboriginal art in a positive way.

Drawing inspiration from nature, memories, music and human emotions, Isabel's art seamlessly blends reality and fantasy. "I want to evoke a sense of wonder and awe, reminding others that magic exists in both

**Aura Objects — Panton chair by Verner Pantan in glacier blue \$660; Lexi — Cruz dress in turquoise \$499; Luminous Assembly — Maya pumps \$189; This Wee Piggy for Leonard St — Blossom earrings \$35**

the grand and subtle moments of life," she says.

Her approach bridges the gap between tradition and contemporary expression.

"It shows the richness and versatility that our heritage offers, especially for other artists like myself who have been raised in the modern world."

The pinnacle of Isabel's journey so far is her role as the poster artist for the 2022 Adelaide Fringe Festival. She is the first Aboriginal person to receive this honour in the festival's 62-year

history. And 95 per cent of artworks from her solo exhibition, *Rainbow Dreamz*, sold.

"This was a huge milestone for me, because it meant the risk I took on for my art was truly worth it all," she says.

Her artwork has also graced the pages of *British Vogue*.

For aspiring artists, Isabel's journey serves as a beacon of inspiration. She advises embracing opportunities, remaining persistent in the face of challenges, unleashing one's uniqueness, prioritising

self-discovery, and above all pursuing personal happiness.

Isabel exemplifies the transformative power of art, the celebration of identity and the impact of positive representation.

"I aim to build a community where individuals can immerse themselves in a world that celebrates the beauty of life and encourages connection and compassion," she said.

Her journey is about the magic that happens when passion, purpose and positivity collide in a symphony of colours and inspiration.

# Kamara stuns with new range

## PHOEBE BLOGG

Since launching on to the fashion scene, First Nations-owned and founded swimwear Kamara, has had fashion enthusiasts, consumers and critics on the edge of their seats — and this week's Brisbane Fashion Festival presentation was no different.

Presenting its new collection Universe, Kamara returned to

the runway where the brand began. For founders and business partners, Naomi Collings and Kirsty Parnel (Parnel is taking a step back from the brand) seeing their sun-friendly garments walk the runway was yet another rewarding moment.

"We're thrilled to be back at Brisbane fashion month and to have been selected for the Hancock Prospecting Next Gen

Group show," creative director Collings said. "It's an honour to return to the Queensland runway, especially since we showcased our very first collection here in 2017."

Having launched soon after Collings received a shock melanoma diagnosis, Kamara was designed to be an apparel business with advocacy at its core. Creating gorgeous, sun-conscious swimwear and

paying homage to their Indigenous roots, is what has made Kamara stand out.

Collings created the innovative swimwear line — made using rich, protective fabrics — with the hopes it would both sell and start conversations. Continuing to celebrate their diverse cultural background, the collection features a collaboration print with Yaggerah artist, Jenine

Godwin-Thompson. And it has a one-piece, named Onyx, made completely of recycled material. "Onyx is made with ECONYL-regenerated nylon from the healthy seas initiative — elegant, fine, soft, and breathable fabrication. It offers muscular compression, comfort, and UV protection (UPF50+) while resisting chlorine, sun creams, and oils," Collings said.

## Building stronger futures through positive partnerships.

We are committed to helping young Aboriginal people reach their potential through our Indigenous scholarship and career development program, Hanrine Futures. The program currently has 18 participants from primary to tertiary age. Each participant is supported through school and university or vocational education with mentors and additional learning opportunities, and into the workplace with internships, work experience and employment.

Visit the website to learn more about Roy Hill's community partnerships.

# Elders proud to share the 'key to life'

SHAHNA SMITH

As a Kariyarra Elder, Patricia Mason is entrusted with passing down tens of thousands of years of knowledge to the next generation.

But Ms Mason says she also shoulders responsibility to share this “key to life” — knowledge of significant sites, language, wisdom and culture — with non-Aboriginal people.

Which is why her family invited renowned photographer Russell James on to Kariyarra country, which encompasses lands around the town of Port Hedland in north-west WA.

The images captured on his visits, which include a birthing place that was used by Kariyarra women, form part of a new exhibition that seeks to shine a light on Elders from across Western Australia.

Ms Mason is one of more than a dozen Elders and Aboriginal leaders whose portraits feature in *The Elders: Legacy of Leadership* at the Perth headquarters of Mineral Resources.

At the unveiling, Ms Mason said she hoped the photographs furthered understanding of the deep connection to Country.

“Truth needs to be told that there are places that we feel very sincerely about. We have to show people that they do exist, because without them we wouldn’t be here today — we wouldn’t have survived,” she said.

Russell James regards working on the exhibition as one of the greatest privileges of his career. Other Elders and leaders featured include Noongar man and leading Aboriginal performer Dr Richard Walley, Kaprun Elder Brian Champion, Noongar woman Emeritus Professor Colleen Heyward and Noongar Elder Professor Len Collard.

# Budjerah on song for top artist’s award

NEVE BRISSENDEN

Coodjinburra musician Budjerah has been crowned artist of the year at the 2021 Indigenous Awards, being crowned the best breakthrough artist at the 2021 ARIA Awards and taking out the ARIA for best soul/R&B release for his album *Conversations* last year.

The 21-year-old singer-songwriter from Fingal Head, in northern NSW, has spent the past year touring with Ed Sheeran and released his hit-single *Therapy* in February. His list of Australian accolades will now grow after winning the young

territory, released the single *Let’s Go* in May 2022 and their debut self-titled album in August last year. This is the band’s second year winning song of the year after taking out the category last year with their single *Milkumana*.

Gamilaraay musician Thelma Plum was also recognised, winning album of the year with her EP *Meanjin*, written during COVID-19 lockdowns.

The ARIA Award winner has been shortlisted for the

Indigenous Awards 10 times but has not won since 2015.

The community clip of the year was awarded to Arnhem Land group *Wildfire Manwurrk* for *Mararradj*.

The group also won the Archie Roach Foundation Award. The Indigenous Language Award went to Ngulmiya, an Arnhem Land songman and ceremony leader, for his self-titled single.

Musical trailblazers Yothu Yindi were inducted into the Hall of Fame.

# INDIGENOUS-INSPIRED MASSAGE PROVES A POPULAR CHOICE

PHOEBE BLOGG

North of Sydney on the NSW Central Coast, Bells Day Spa is where relaxation and rejuvenation meet culture and tradition.

In conjunction with Bells at Killcare Boutique Hotel, Bells Day Spa welcomes both hotel guests and the general public. Bells offers its very own Indigenous-inspired

massage. The popular massage — the Indigenous Clay Earth & Ocean Dreaming Ritual — has been created to encourage rest in the

guest’s mind, while striving to replenish energy levels through the natural healing powers of earth.

Since the massage was added in 2020 to Bell’s offering of tranquil body treatments, guest feedback has been superb. “This treatment is our most popular body treatment and guests return time and time again to receive it,” head spa

therapist Yvette Roberts told *Style Up*. To create this experience, the team at Bells contacted the area’s local Darkinjung Aboriginal Land Council for approval.

“Our therapists are trained in the Indigenous aspects of our treatments, particularly when using a coolamon for cleansing and welcoming before the treatment starts,” Ms Roberts said.

# Midden at the Opera House is a dream come true for Olive

PHOEBE BLOGG

While it’s not uncommon for celebrity chefs to break away from the spotlight to launch their own venture, celebrated chef and proud Bundjalung man Mark Olive — otherwise known as *The Black Olive* — did so not with the intention of profit, but passion.

Thus came the launch of

Olive’s Indigenous-inspired restaurant, *Midden* by Mark Olive. Located in Sydney’s stunning Opera House, *Midden* is where culture and craft meet culinary creativity.

Fusing his Indigenous Australian

heritage, with seasonal produce and local delicacies, *Olive*, pictured, has ensured *Midden* is a reflection of both his culture and favourite cuisine.

“Opening *Midden* by Mark Olive at the Sydney Opera House on Tubowgule, Gadigal country is a dream come true,” he said.

Since opening on July 4, *Midden* has welcomed foodies,

socialites and celebrities into the restaurant.

He has designed *Midden*’s menu to touch on his culture and trendy tastebuds. It ranges from eucalyptus whipped butter and quandong paste, to smoked kangaroo and bush honey. “It’s very adventurous and truly Australian,” Olive said. “Our diners can expect a variety of Indigenous produce

like crocodile, kangaroo, emu and wallaby shanks.”

Aside from his appearances on *Masterchef Australia*, Olive is admired for his work in the SBS hit series, *The Outback Chef*. Assisting Olive is executive chef and friend, Damien Worthington, who brings a wealth of experience working at some of Sydney’s top restaurants.

## MOVING FORWARD. TOGETHER.

Woodside is supporting the Yes campaign for an Indigenous Voice to Parliament.

We believe having a formal pathway for First Nations people to share their views on policies that matter to them can only result in better outcomes.

A Yes vote would be a historic step forward in the reconciliation of our nation and an opportunity to unite all Australians.

Read more about Woodside's reconciliation journey at <https://www.woodside.com/sustainability/indigenous-peoples>

# Force of language fuelling the Red Power legacy

Tashina Banks Rama outside the heritage centre at Red Cloud Indian School. Picture: Giovanni Torre

GIOVANNI TORRE

Red Cloud Indian School (Mapiya Luta Owayawa) was named for the venerated Oglala Lakota Chief, who led his people from 1865 to 1909 in a struggle to defend their culture, land, language and way of life.

More than a century after his death, the school's executive vice-president Tashina Banks Rama advocates, promotes and upholds Lakota values, and engages the community in ways that continue to transform the multi-faith organisation.

The daughter of American Indian Movement co-founder Dennis Banks, Ms Rama has served the community school, located on sovereign Oglala Lakota land in South Dakota for 14 years and as executive vice-president for three years.

Once a church-run residential school, Red Cloud is now managed by the Oglala Lakota community and is no longer residential.

Ms Rama told National Indigenous Times language revitalisation is "critically important" to the community's wellbeing.

"It's the core of who we are. Our language is the lens in which we are able to view the world. In our belief, we believe that we're all related and that in order to have harmony and balance in our lives, it's important that we respect all living things.

"Our language communicates that in ways that English cannot. So, to speak the language really is to be able to identify as a Lakota and as a being that is part of this circle of the sacred group that we live in," she said.

"This school today is staffed 70

per cent by Lakota people. It's 99 per cent Lakota students.

"There are some non-native students who go to school here, but the majority of our students are Lakota and I feel very proud about that."

Ms Rama noted the importance of teaching the history of her people after many decades of misrepresentation and marginalisation.

"I can tell you this as a person who grew up in the American school system, I never learnt about Native people (in school) in the way that I learnt about them at home. (In) history books of the United States, we're invisible, or if we are in the history books, we are in past tense, right, there are the Indian Wars or you know, Indians were conquered . . . the 'people who used to be here'?" she said.

"So who we are today is nothing like what is written in the history books. In fact, today we're a vibrant, thriving community . . . (and) leading the way, in our language revitalisation programs.

"And we have professors, we have faculty, you know, from K through 12. More importantly, we have the most PhDs we've ever had teaching in universities

across the United States. It's very important because we're here . . . And it's important that my children feel proud in who they are, and that we are continuing to instil that pride in the next generation. So, seven generations from now, our children are speaking the language, they know where they come from, they know the history of our people and our creation stories, and why it's important to live the way we do with our traditions."

Ms Rama's father, Dennis Banks, was one of the founders of the American Indian Movement, which embraced a strategy of direct action in response to many decades of human rights abuses by police and treaty-breaking by the US government, and because of the dire conditions on reservations.

"The American Indian Movement was a movement of men and women who were fighting to be recognised. They were fighting against police brutality that was taking place at the time in Minneapolis. The beginning of AIM was 1968 . . . the environment of Minneapolis was really harsh for Native people," she said.

"Police brutality was at its worst in the late Sixties against

Native people. And that was when people like my father, Dennis Banks, Clyde Bellecourt, Vernon Bellecourt, and other leaders came together and formed the American Indian Movement.

"It started out as a community-organised group that were trying to protect each other, and look out for one another. And then it just grew very quickly from there."

Ms Rama said the legacy of AIM and the stand it took for justice can be seen in the Native people empowering themselves through education.

"My bachelor degree is a business degree, but my minor is Native American studies. And the fact that there was a Native American Studies Department at a public university has a lot to do with the American Indian Movement. American Indian studies departments popped up all over the United States and public universities because of the work of the American Indian Movement.

"The legacy (of AIM) gave agency to a lot of people who are working in those spaces, here comes this movement, right, this Red Power movement. And so, people were using their agency,

and they're feeling empowered by this community group that was starting to rise in ranks and starting to be really viewed as a legitimate organisation that was making change."

Ms Rama said there is an ongoing struggle for recognition and to end racism.

"As Native people there's a sense of we just are not here, that we just are invisible and we don't exist, or if we exist, we are caricatures, and we're just not a real culture or we're not a real people that still live in lands and practice ceremonies and have a language and practice traditions that have been happening for thousands of years," she said.

"In this State (South Dakota), particularly, you feel the racial tension is very strong, it's very alive. That's something we try to combat with our work and language and culture here so that our kids feel as confident as they can be when they walk into a gas station, or a grocery store that's off the reservation, where they're viewed, as you know, the 'other', when in reality, this is our homelands, you know, the Black Hills, we have been praying there for thousands of years. That's the home of our sacred sites, and our creation story.

"Native people have to do the best that we can to make sure that we're being recognised, we have to advocate for ourselves, because there's nobody else out there advocating on our behalf."

Ms Rama noted that the "land-back" movement is "huge" in the US, Canada and around the world.

"The Red Power movement is really very much alive today and getting stronger."

“Our language is the lens in which we are able to view the world . . . Our language communicates that in ways that English cannot. So, to speak the language really is to be able to identify as a Lakota and as a being that is part of this circle of the sacred group that we live in.”

# DV and health challenges for tribal leaders

GIOVANNI TORRE

For 45 years the White Buffalo Calf Women's Society has served vulnerable women and children in South Dakota.

The society is in south central South Dakota and was the first organisation of its kind in the US; a Native American-run service providing shelter and support to victims of domestic violence, sexual assault, dating violence, and stalking.

Prairie Rose Chapin, a Rosebud Sioux woman, is the executive director of the society and spoke to National Indigenous Times during the 18th Annual Government-to-Government Violence Against Women Tribal Consultation in Tulsa, Oklahoma this month, involving federal authorities consulting with tribal organisations and leaders, as mandated under Federal US law.

"White Buffalo Calf Women's Society ... was created and funded by Lakota grandmothers who saw there was a need to address violence against women, children and elders, and support those that are afflicted by domestic violence and family violence," she said.

"We ... provide an array of services to women that are affected by domestic violence, stalking, sexual assault, human trafficking ... We do young people's programs, youth programs, as well as the teen dating. We also go into the schools and do programs for young ladies and younger girls. So, they're starting to learn about how to keep themselves safe and how to help others that are in need or need safety."

The society's shelter, founded in 1978, now includes a 36-bed facility which tribal leaders hope to expand.

"As much as we are celebratory (for the upcoming 45th anniversary of the society) it is almost with much sadness that we have to convey that we're still incurring family violence in our communities," Ms Chapin said. "We do help other tribal nations, we help those in need ... We're going to help everybody."

Ms Chapin noted an executive order was issued by the White House in 2004 "for the United States government to have meaningful consultations with the tribes, so the United States government is able to create and develop objective plans to help the tribal nations regarding violence in our communities and mostly regarding with women".

Ms Chapin said the "trust responsibility" relationships between the US government and the sovereign tribal nations are at the heart of the treaties.

"That's why these tribal consultations are so meaningful, because they listen to the tribes and are trying to help address the issues within the tribal communities," she said.

Ms Chapin noted there were almost 600 federally recognised tribal nations in the US with distinct needs.

"That lets you know how many tribal leaders have sent designees, representatives — as well as tribal leaders themselves — that are here (at the August consultation conference in Tulsa) to convey the information that is so dire in our communities," she said.

"The Department of Interior has oversight of what's going on between the United States government and our Tribal nations ... (Federal authorities) also provide funding to the Department of Interior to

**“**  
That's why these tribal consultations are so meaningful, because they listen to the tribes and are trying to help address the issues within the tribal communities.  
**”**

Prairie Rose Chapin

be filtered down to tribal nations under what they call Public Law 93 638 contracting.

"They provide the funding, we execute the contract ... however, we're going to need more funding for more policy, procedure, training opportunities. Because the people are in dire need here, as well as any other Indian nations.

"We have the same issues, but different nations (are) unique. Now we have missing murdered indigenous women. We have missing murdered indigenous relatives. We have domestic violence, family violence, we have cops that are shooting and cops that are killing. And they all revolve around back to training, training, training. It's not enough... we have to teach our culture to change."

Ms Chapin said it is was a public responsibility as well as an individual responsibility to

Prairie Rose Chapin at the conference in Tulsa. Picture: Giovanni Torre

teach the community's children to "be right and to be productive members of society".

"Teach them cultural-specific ideals, ideology, historical information, so we can move forward."

She noted the social, health and economic damage alcohol and other drugs have done.

"Too often the drugs and alcohol have infiltrated our reservation from the beginning of time as a trading source (and) we still have poor economies on Indian reservations," she said.

"Even now, today's inflation affects what we have received on reservations. Some reservations don't even have a store. You know, in order for us to even go to somewhere with the food chain like McDonald's, or to Walmart, is more than 100 miles away from most reservations. And it's the same with health care."

Ms Chapin said isolation and inadequate services put lives at risk during times of crisis, both natural and man-made.

"We don't handle law enforcement, so with many crimes, especially violent crimes... it can take days to get that response. And some people die during while waiting for that response," she said. "We had an array of snow storms this past winter, where it was very life threatening ... six to eight feet of snow, and law enforcement or emergency services not able to respond. Tribal governments and the (US) government have to meet in the middle somewhere. It was the US government that created these Indian reservations. There's a lot of treaty rights that were set aside by the US government."

Ms Chapin said there was still a lot of work to be done to address the challenges and injustices tribal nations face.

"They gave us land pieces that sometimes have nothing. Some tribal nations have no water and there's still none, they go to town to fill buckets for water, or canisters for water, just for basic needs."

## Together with reconciliation at our heart

Woolworths Group's commitment to reconciliation is stronger than ever.

That's why as Australia's largest retail group we are partnering with UTS to help realise the dream of a new First Nations residential college; the first of its kind in Australia. And it's why we aim to contribute positively to all the communities in which we serve across the country.

Learn more about our partnership here.

# Diversity's the aim in tech talent boot camp

NINA HENDY

Indigitek aims to boost the number of Indigenous people entering the tech industry, improving diversity and alleviating talent shortages in the sector.

Aboriginal and Torres Strait Islander people make up close to zero per cent of the tech industry, yet its importance as an employer is set to surge.

Indigitek, a not-for-profit group, has joined forces with course provider General Assembly, which specialises in cultivating diverse tech talent, and built a scholarship program designed to train Aboriginal and Torres Strait Islander candidates for tech startup Cash App, a money transfer app.

The scholarship program has been designed to create a chance for interested candidates to supercharge their careers in engineering. It's made up of a three-month software engineering immersive course, then a six-month internship.

The first successful candidate to land full-time work with Cash App is Joshua Towney, pictured, who started the journey 18 months ago, and admits he sometimes has to pinch himself to make sure he's not dreaming.

His wife had been encouraging him to look into coding for a decade but he was reluctant to dedicate years to being a struggling student. "The silver bullet of it only being a short course won me over in the end," he said.

He was one of about 15 students in the course. Born and raised in Dubbo, he's part of the Wiradjuri Country. "The initiative was subsidised by the Indigitek and Cash App partnership, so all costs for the course were covered," Mr Towney said.

Learning there were only about 200 Indigenous developers Australia-wide drove home the challenge in getting more Aboriginal and Torres Strait Islanders into the industry, he added.

Mr Towney said it has been his toughest endeavour to date, but he wouldn't trade the experience for anything.

# Diving into history for lucrative trade

DAVID PRESTIPINO

A First Nations business operating on WA's Coral Coast is resurrecting a centuries-old trade route between Indigenous Australians and Asia.

Denham-based Tidal Moon is a nod to the origins of Australian commerce, which began with the trade of sea cucumbers from Indigenous people from the Kimberley and Arnhem Land regions to Macassan seafarers from what is now Indonesia.

Tidal Moon managing director and Mulgana traditional owner Michael Wear said his goal was to preserve and enhance Indigenous heritage while creating a business that would remain viable for decades, and forge a path for more First Nations organisations to enter the lucrative commer-

cial fishing industry. Tidal Moon gained access to the sea cucumber fishery in Shark Bay in 2017, improving the lives and skills of traditional custodians, but is now fighting for a commercial licence so it can continue its good work.

"We want to be in the mainstream industry and have the ability to set up a business that's not reliant on grants or funding but stands on its own as a First Nations-owned company," he said.

While Tidal Moon's focus is sea cucumber fishing, it also has exciting partnerships with the likes of the CSIRO, APEC and the Harry Perkins Institute of Medical Research, helping the latter determine the health benefits of sea cucumbers, particularly in cancer treatments.

The sea cucumber harvest-

ing business, which was kick-started in 2019 with a \$92,000 investment from the Indigenous Land and Sea Council, has also established one of the world's largest seagrass restoration projects through BHP's Blue Carbon initiative, targeting a portion of the estimated 100,000ha of damaged sea grass meadows in Shark Bay.

Tidal Moon has trained and employed more than 10 Malgana traditional custodians in dive operations, delivering certified training in marine industry operations through partnerships with TAFE WA Maritime Centre and the Swan Maritime Institute.

Divers record all their interactions in nature, with Mr Wear planning to create a "living library" in conjunction with the CSIRO of Indigenous

observations with the environment. Export opportunities are also in demand, with sea cucumbers considered a delicacy in Asia and also popular across Europe, prized for their culinary and medicinal properties.

Tidal Moon's potential lucrative export contract with a Singapore company was recently skittled when its five-year fishing licence obtained through a minister's exemption expired in July.

Mr Wear said the WA Government had placed roadblocks to Tidal Moon's growth on a local front, leaving the company floating as it fights for a commercial licence to enable further development.

He said all sea cucumber commercial fishing licences in WA were currently owned by Tasmanian Seafoods.

# Supply Nation's new boss to tackle funding challenges

BRENDAN FOSTER

Supply Nation's new chief executive Kate Russell says the rise in First Nations businesses in the past 10 years has been phenomenal but fledgling Indigenous companies still face significant barriers.

The proud Awabakal woman, pictured, who recently replaced interim chief executive Michelle Deshong, said despite only being in the top job a few

weeks she is keen to tackle the age-old issue of access to capital for Aboriginal and Torres Strait Islander people.

"Our entrepreneurs continue to face significant barriers to establishing a successful business, including difficulty in attracting low-cost finance, building a customer base, winning contracts or establishing

links with reliable suppliers," she said. "I see helping our mob overcome these barriers as a fundamental and ongoing challenge of my role."

"One thing that has become apparent to me over the last few weeks is that we need to be supporting the diversity of our suppliers — from a mum and dad operating out of a garage, to a

bi-coastal organisation with its own philanthropic fund."

A board director of the NSW Aboriginal Land Council, Ms Russell said First Nations businesses still don't get some of the recognition they deserve in contributing to the economy.

It's estimated they pour about \$5 billion a year into the nation's coffers. "I think recognition of how our businesses contribute to the national economy is growing," Ms Russell

said. "This success is in spite of the unique set of challenges that Aboriginal and Torres Strait Islander people face — including historical and institutionalised inequities, limited access to the market and complex social stratification."

Ms Russell said the Federal Government's Indigenous Procurement Policy had enabled a tremendous growth in the First Nations business sector, but the policy could be improved.

# NOTICE TO GRANT MINING TENEMENTS

## NATIVE TITLE ACT 1993 (CTH) SECTION 29

The State of Western Australia HEREBY GIVES NOTICE that the Minister for Mines and Petroleum, C/- Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004 may grant the following tenement applications under the *Mining Act 1978*:

Tenement Type	No.	Applicant	Area*	Locality	Centroid	Shire
Exploration Licence	15/1955	MONGER EXPLORATION PTY LTD	14BL	18.4km E'ly of Kambalda	Lat: 31° 11' S Long: 121° 51' E	COOLGARDIE SHIRE, KALGOORLIE-BOULDER CITY
Exploration Licence	16/633	AMERY HOLDINGS PTY LTD	3BL	35.7km W'ly of Ora Banda	Lat: 30° 19' S Long: 120° 41' E	COOLGARDIE SHIRE
Exploration Licence	28/3267	CARAWINE RESOURCES LIMITED	9BL	157.6km N'ly of Balladonia	Lat: 31° 2' S Long: 123° 48' E	KALGOORLIE-BOULDER CITY
Exploration Licence	28/3347	REGENER8 RESOURCES NL	200BL	176.5km SE'ly of Edjudina	Lat: 30° 48' S Long: 123° 46' E	KALGOORLIE-BOULDER CITY
Exploration Licence	28/3348	REGENER8 RESOURCES NL	63BL	164.9km SE'ly of Edjudina	Lat: 30° 53' S Long: 123° 31' E	KALGOORLIE-BOULDER CITY
Exploration Licence	31/1363	M3 MINING (EDJUDINA) PTY LTD	1BL	16.4km W'ly of Edjudina	Lat: 29° 46' S Long: 122° 11' E	MENZIES SHIRE
Exploration Licence	31/1365	M3 MINING (EDJUDINA) PTY LTD	2BL	16.3km W'ly of Edjudina	Lat: 29° 51' S Long: 122° 11' E	MENZIES SHIRE

Prospecting Licence	39/6424	SIMMONS, Wayne Anthony	8.01HA	60.9km E'ly of Leonora	Lat: 28° 59' S Long: 121° 56' E	LAVERTON SHIRE, LEONORA SHIRE
Prospecting Licence	40/1575	DIXON, Craig Leslie	9.90HA	45.1km S'ly of Leonora	Lat: 29° 16' S Long: 121° 27' E	MENZIES SHIRE

**Nature of the act:** Grant of prospecting licences which authorises the applicant to prospect for minerals for a term of 4 years from date of grant. Grant of Special Prospecting Licences, which authorises the applicant to prospect for minerals for a term up to 4 years from the date of grant. Grant of exploration licences, which authorises the applicant to explore for minerals for a term of 5 years from the date of grant.

**Notification day:** 23 August 2023

**Native title parties:** Under section 30 of the *Native Title Act 1993* (Cth), persons have until 3 months after the notification day to take certain steps to become native title parties in relation to applications. The 3 month period closes on **23 November 2023**. Any person who is, or becomes a native title party, is entitled to the negotiation and/or procedural rights provided in Part 2 Division 3 Subdivision P of *Native Title Act 1993* (Cth). Enquiries in relation to filing a native title determination application to become a native title party should be directed to the Federal Court of Australia, 1 Victoria Avenue, Perth WA 6000, telephone (08) 9268 7100.

**Expedited procedure:** The State of Western Australia considers that these acts are acts attracting the expedited procedure. Each licence may be granted unless, within the period of 4 months after the notification day (**i.e. 23 December 2023**), a native title party lodges an objection with the National Native Title Tribunal against the inclusion of the statement that the State considers the grant of the licence is an act attracting the expedited procedure. Enquiries in relation to lodging an objection should be directed to the National Native Title Tribunal, Level 5, 1 Victoria Avenue, Perth, or GPO Box 9973, Perth, WA 6848, telephone (08) 9425 1000. For further information about the act (including extracts of plans showing the boundaries of the applications), contact the Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004, or telephone (08) 9222 3518. *Please note – Not all Intention to Grant notifications are published in the National Indigenous Times. For more information please contact the Department above.*

\* - 1 Graticular Block = 2.8 km²

# NOTICE TO GRANT MINING TENEMENTS

## NATIVE TITLE ACT 1993 (CTH) SECTION 29

The State of Western Australia HEREBY GIVES NOTICE that the Minister for Mines and Petroleum, C/- Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004 may grant the following tenement applications under the *Mining Act 1978*:

Tenement Type	No.	Applicant	Area	Locality	Centroid	Shire
Mining Lease	15/1897	OPHIR MINING RESOURCES PTY LTD	130.23HA	22.9km SW'ly of Kambalda	Lat: 31° 19' S Long: 121° 28' E	COOLGARDIE SHIRE
Mining Lease	15/1898	ROBUSTELLINI, Anthony	3.50HA	94.4km NE'ly of Southern Cross	Lat: 30° 44' S Long: 120° 8' E	COOLGARDIE SHIRE
Mining Lease	15/1904-G	FRANCIS, Raymond John	7.34HA	25.1km SW'ly of Kambalda	Lat: 31° 22' S Long: 121° 29' E	COOLGARDIE SHIRE
Mining Lease	24/1007	ARCHER, Glenn Douglas	129.90HA	7.9km SE'ly of Ora Banda	Lat: 30° 25' S Long: 121° 6' E	KALGOORLIE-BOULDER CITY
Mining Lease	29/444	MT IDA GOLD PTY LTD	572.21HA	88.2km NW'ly of Menzies	Lat: 29° 4' S Long: 120° 27' E	MENZIES SHIRE
Mining Lease	39/1155	E-COLLATE PTY LTD	153.44HA	60.3km E'ly of Leonora	Lat: 29° 0' S Long: 121° 56' E	LEONORA SHIRE

**Nature of the act:** Grant of mining leases, which authorises the applicant to mine for minerals for a term of 21 years from notification of grant and a right of renewal for 21 years.

**Notification day:** 23 August 2023

**Native title parties:** Under section 30 of the *Native Title Act 1993* (Cth), persons have until 3 months after the notification day to take certain steps to become native title parties in relation to applications. The 3 month period closes on **23 November 2023**. Any person who is, or becomes a native title party, is entitled to the negotiation and/or procedural rights provided in Part 2 Division 3 Subdivision P of *Native Title Act 1993* (Cth). Enquiries in relation to filing a native title determination application to become a native title party should be directed to the Federal Court of Australia, 1 Victoria Avenue, Perth WA 6000, telephone (08) 9268 7100. The mining tenements may be granted if, by the end of the period of 4 months after the notification day (**i.e. 23 December 2023**), there is no native title party under section 30 of the *Native Title Act 1993* (Cth) in relation to the area of the mining tenements.

For further information about the act (including extracts of plans showing the boundaries of the applications), contact the Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004, or telephone (08) 9222 3518. *Please note – Not all Intention to Grant notifications are published in the National Indigenous Times. For more information please contact the Department above.*

# NIAA called out on lack of fraud checks

DAVID PRESTIPINO

An alarming lack of audit controls has been exposed at Australia's leading Indigenous funding organisation.

A new report by the Australian National Audit Office has found the National Indigenous Australians Agency, the Commonwealth body responsible for policy development, implementation and service delivery for First Nations people, is failing to properly detect and manage fraud.

The agency, which has more than 1300 employees across Australia, had its budget in 2022-23 increased to \$4.5 billion, to provide funding for programs through the Federal Government's Indigenous Advancement Strategy.

In 2021-22, the NIAA funded spent \$1.03 billion on more than 1000 external providers to deliver IAS activities and services, yet it failed to initiate a single fraud investigation.

ANAO analysis of Federal Government entities in June 2022 found the average number of external fraud investigations in medium agencies was 25 and in large agencies 12. Its report said the NIAA was not meeting legislated requirements for "risk and fraud management" in its role co-ordinating service delivery and policies for First Nations people.

The inadequacies in its fraud management were enough for the Federal Minister for Indigenous Australians Linda Burney to instruct the NIAA to implement further anti-fraud measures, in addition to seven recommendations from the ANAO in its report.

"I am very disappointed and concerned by the ANAO's findings," Ms Burney told the National Indigenous Times.

The NIAA was designed to improve Indigenous communities through the delivery of services but the report found it lacked proper oversight and compliance mechanisms to ensure funds were directed appropriately. One area of concern for the ANAO was the NIAA's management of fraud and non-compliance risks with service providers. "Its frameworks for managing provider fraud and non-compliance are not fully fit-for-purpose," the report said.

Ms Burney said the systems put in place by the previous Federal government were "clearly deficient". "Strong governance and accountability are critical to ensuring delivery of high quality services and better outcomes for Aboriginal and Torres Strait Islander communities," she said.

"The NIAA has already agreed to all the recommendations by the Auditor-General, and is in the process of implementing them."

Ms Burney said she had also instructed the NIAA to: establish an integrity group to elevate fraud prevention and detection; introduce a program of pro-active random compliance checks that is best-practice; start additional training for staff on fraud prevention and detection; and ensure staff are taking preventive and proactive steps to prevent and detect fraud.

In a letter to Auditor-General Grant Hehir in May addressing the ANAO's report, NIAA

chief executive Jody Broun said the agency would implement all seven recommendations and meet its obligations under Commonwealth legislation.

"The opportunities for improvement identified in the audit report, in conjunction with the work already under way to enhance practices and processes, support the agency's continuous improvement of its management of risk, provider

fraud and non-compliance," she wrote.

An ANAO review of five investigation closure reports by the NIAA found there was no or insufficient evidence of fraud. The ANAO noted of the five reports that three were not approved and one was not dated. Of the four that were dated, three were not endorsed by case officers and three did not have information on lessons learnt.

Federal Minister for Indigenous Australians Linda Burney.

## American tribes' move a blueprint for Australia

ZAK KIRKUP

The rise of Native American tribes as major economic players has been transformative, marked by innovation and diversification.

Once reliant on casinos, now an \$A61.5 billion industry, tribes have expanded into health and other sectors. This shift from casino gaming is all about self-determination and sovereignty.

The Native American experience in diversifying their economic base provides a blueprint for Aboriginal communities in Australia. The principles of self-determination, sovereignty and cultural preservation resonate deeply with both communities.

Shawn Terry, secretary of health for the Muscogee Creek Nation, speaks of a radical shift in health care, yielding an "entire economic development win". Larry Wright Jr, executive director of the National Congress of American Indians, highlighted how health care is a major economic driver.

The story of casino-based gaming in Native American economies is well-known, with the Indian Gaming Regulatory Act in 1988 considered the biggest single economic driver for tribal nations. The shift into the healthcare sector, for example, has been strategic, building financial resilience.

The Native American journey towards economic self-sufficiency offers valuable lessons for Aboriginal Australia in terms of community engagement, governance structures and innovative business practices. Collaborative efforts between the two communities could foster shared learning and growth.

Mr Terry told the National Indigenous Times it's about more than profits: "If our babies are dying quicker, then we're not going to survive as a people. Health care has to be at the centre of that."

The Native American tribes' success in transforming traditional services into economic drivers can inspire Aboriginal communities. In embracing cultural strengths and aligning them with modern business strategies, Aboriginal Australia can create a new narrative of economic empowerment.

The parallels between Native American and Aboriginal Australian experiences offer an opportunity for cross-cultural exchange. By studying the Native American model of economic diversification, Aboriginal communities can develop strategies that reflect their cultural values and regional needs, for a more inclusive and sustainable economic landscape.

This progression from gaming-based economies to a diversified portfolio reflects a sophisticated understanding of economic development and cultural preservation. It embodies the tribes' commitment to self-sufficiency, autonomy and the protection of their people, offering critical insights for Aboriginal communities in Australia.

## Qantas support for Yes sparks some backlash

DAVID PRESTIPINO

Qantas will fly the flag for the Yes team on twin fronts in our skies, decorating three of its planes and funding the travel of campaign members.

The commercial arrangement has raised some eyebrows, including those of Adam Giles, former chief minister of the Northern Territory who now runs mining magnate Gina Rinehart's agricultural empire, Hancock Agriculture and S. Kidman & Co.

Qantas chief executive Alan Joyce said branding three of its planes with the Yes23 campaign logo was part of the airline's commitment to reconciliation.

The company's support of an Indigenous voice being enshrined in the Constitution is aligned with leading Australian conglomerates such as Woolworths, Wesfarmers, Rio Tinto and BHP, but providing travel for the Yes23 Campaign and Uluru Dialogue teams invited controversy, given public backlash over its high airfares and cancelled flights.

Mr Joyce said Qantas was covering their costs "so they can engage with regional and remote Australians".

"We're supporting the Yes23 campaign because we believe a formal Voice to Government will help close the gap for First Nations people in important

Noel Pearson speaks at the launch at Sydney Airport.

areas like health, education and employment," he said at the official launch at Sydney Airport, alongside Prime Minister Anthony Albanese and other prominent First Nations leaders, including football great Adam Goodes and advocate Noel Pearson.

Mr Albanese praised Qantas for its long-standing commit-

ment to reconciliation and throwing its weight the Yes campaign. "Qantas has a long history of doing its bit to carry the nation, to lift all of us a little bit higher, both literally and figuratively," he said.

But Mr Giles, an Indigenous man, said big business should not take sides or spend millions supporting the campaign.

# Santos

Greg McKellar, Wongkumara Elder & Cultural Heritage Manager

## “I’M PROUD OF MY COUNTRY AND THE PROTECTION OF OUR CULTURAL HERITAGE SITES.”

“Being able to work on country is a privilege. Santos and Wongkumara people working together in the Lake Eyre Basin enables us to go out to country to see things physically, to see the things that my grandmother told me about.”

# Walk the talk for AFL star

DAVID PRESTIPINO

This year's 20th Long Walk will bear extra significance for Indigenous AFL trailblazer Michael Long as he strives to unite the nation behind the Voice to Parliament.

The Essendon great will again walk the 650km journey from Melbourne to Canberra, as he first did 20 years ago when setting off to speak with then-prime minister John Howard after the Aboriginal and Torres Strait Islander Commission (ATSIC) was abolished.

This year's event aligns the Voice referendum campaign and is expected to take the Australian Football hall-of-famer 30 to 40 days.

The 53-year-old is re-creating the first journey, stopping in regional communities along the way to discuss how the upcoming referendum could band the country together

before reaching Parliament House for meetings with Prime Minister Anthony Albanese and Opposition Leader Peter Dutton.

In its 20 years The Long Walk has transformed into an annual charity event, where people join Long in the trek from Melbourne's Birrarung Marr to the MCG before the annual Essendon-Richmond Dream-time game during AFL Indigenous Round.

Long said football had played a crucial role in improving the lives of Indigenous people in Australia, and the two-time premiership player believed the Voice can help change lives and bring Australians together for good.

"What I have learnt from footy, I have seen things transformed. I've seen sport change lives," he said.

"One of the greatest advocates is (former Collingwood

Anthony Albanese will meet with former AFL star Michael Long after the Long Walk. Picture: AAP

player) Damian Monkhorst, he has become a great advocate for change."

During a 1995 match between Collingwood and Essendon, Monkhorst used racist language during a tussle with Long.

Long spoke candidly about the referendum and the opportunities it posed, inviting all

Australians to join him along the journey to Canberra. The first leg began at Melbourne Town Hall on Sunday finishing later at the Bombers' Windy Hill home ground in Essendon.

"I want all Australians to come walk with me," Long said.

"I want all the sporting codes — Australian Rules, soccer, netball, basketball, rugby, swim-

ming, tennis — to come walk with me. I want corporate Australia to come walk with me.

"I want community groups to come walk with me, and I want Aboriginal organisations to come walk with me."

More information on The Long Walk and its legs and destinations is available at [thelongwalk.com.au](http://thelongwalk.com.au).

## SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing LNG projects in Australia. Today, we aim to thrive through the global energy transition with a low cost, lower carbon, profitable, resilient and diversified portfolio.

We are committed to consulting and ensuring feedback from relevant persons is considered and used to inform the development of an Environment Plan for the Scarborough Offshore Facility and Trunkline Operations.

### Our activities

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities.

Located around 374 km off the coast of Dampier in Western Australia, work is planned to start in the second half of 2025. We are seeking input from relevant persons whose functions, interests or activities may be affected by the proposed operations.

### The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by a highly unlikely release of marine diesel to the environment as a result of loss of damage to the production facility or vessel collision.

The EMBA represents the merged area of many possible paths a hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time.

### We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the proposed activity, we would like to hear from you by Monday, 11 September 2023 to identify as a relevant person.

### Want to know more or provide input?

A feedback form and more information can be found at: [www.woodside.com/sustainability/consultation-activities](http://www.woodside.com/sustainability/consultation-activities). You can also subscribe via our website to receive future information on upcoming activities.

## SPORT

# Mason sprints toward future

JOSEPH GUENZLER

Proud Gangalu athlete Tuqiri Mason is making a name for himself in the world of athletics at only 15 years of age.

Mason recently etched his name in the record books of NSW Hastings Secondary College after shattering a two-decade standing record in the 100m spring in the open and under-16 divisions.

Despite his nerves and running barefoot with no starting blocks or specific training, Mason clocked a staggering 10.92sec, passing Adam Miller's record set 20 years ago.

Miller, who became a notable Australian sprinter with a 100m PB of 10.17sec, showcased his skills on international stages including the 2004 Olympics, 2006 Commonwealth Games and 2007 IAAF World Championships.

Though Mason's favourite event is long jump, he is grateful for what he has been able to achieve so far with such little help.

"It feels incredible to have broken the record, I'm proud

and grateful for this achievement," Mason told National Indigenous Times.

"My favourite event is long jump just because I get really nervous for my running events."

During the Lower North Coast Districts competition hosted in Coffs Harbour, Mason displayed his diverse athletic prowess by clinching first place in the 100m, 200m, and long jump events.

This feat has propelled him into the next phase of competition, a testament to his natural talent and skill which he hopes to take to the highest level.

"I'm only 15 going on 16 and would love to represent my culture and country and would like to see myself in the Olympics," he said.

"I have had lots of community support which encourages me to better myself."

Despite his high ceiling for potential, financial constraints loom as a hurdle in Tuqiri's path.

With a time frame of just one month, his family is seeking support to ensure he can com-

Tuqiri Mason recently clocked a 100m time of 10.92s while barefoot on grass.

pete in next month's NSWCHSSA (NSW Combined High Schools Sports Association) — Secondary Athletics — Championships.

His mum Candice is proud of her son's achievements and a firm believer in his potential in athletics. "His personality is family grounded and he's a

pretty chilled relaxed young boy," she told National Indigenous Times.

"If he put his mind on his athletics he can go along way."

"I remember when he was in Year 3, he had to race against the Year 6 and 7 boys and he beat them. That's how I knew he had potential."

Mason will be competing from September 5-8, coinciding with his 16th birthday on September 7.

As he embarks on this next chapter of his athletic journey, a GoFundMe account has been established to help with registration fees, uniforms, accommodation and fuel.

## Kozzie earns third selection in young guns' side

JARRED CROSS

A trio of young Indigenous stars have been named in the AFL Players Association's 22under22 class for 2023.

The fan-voted contest presented Demons livewire Kysaiah Pickett with his third selection, and handed debuts to St Kilda bolter Nasiah Wanganeen-Milera and former No.1 draft pick and Bulldog Jamarra Ugle-Hagan.

The trio slot in the forward pocket, back pocket and centre-half-forward respectively.

Kozzie continues his electric start to AFL footy, leading the fourth-placed Dees' goal kicking this season.

The 22-year-old signed a four-year deal to remain at the club in

Jamarra Ugle-Hagan, Kysaiah Pickett and Nasiah Wanganeen-Milera.

May, already boasting a premiership in 2021.

After establishing himself among the competition's most exciting prospects, St Kilda's Wanganeen-Milera has grown into his role as a damaging

half-back. His exploits are beginning to compare with his uncle and 1993 Brownlow medallist Gavin Wanganeen, and he has shaped as a major influence in St Kilda's tilt at a deep September.

The 20-year-old hasn't dipped

below 20 disposals since round nine for an average of 24 touches a game in 2023, and has three times eclipsed 30 — including career-high 33 disposal efforts against Melbourne and Hawthorn, adding a goal in the latter.

His previous best was 22 touches in round 12 of his debut season last year.

As well as finding the footy, the smooth-operating South Australian averages six marks and two tackles.

There's a sense of vindication for Western Bulldogs forward Ugle-Hagan in a breakout year.

The 21-year-old has gone a long way to proving whispers of doubt around his credentials wrong with 34 majors in 2023.

Ugle-Hagan was the second-most popular selection in the

side, named in 88 per cent of all fan votes for their 22. Like most key position players, Ugle-Hagan has taken time to develop into a genuine weapon in his club's forward line.

Marra has matched personal best of five goals in a game, first kicked against Melbourne last year, twice in 2023, and inspired with the feat a week after enduring racial attacks from the stands earlier in the season.

The tall has threatened to become one of the game's biggest headaches for opposition defences, with only inaccuracy in front of goal — 34.35 so far in 2023 — holding him back.

Carlton's Jesse Motlop missed out on selection after being named in the 22under22 squad of 40 earlier this month.

## Community consultation on the draft replacement of the Intersecting Streams Water Sharing Plan

The NSW Government has developed the draft replacement water sharing plan for the Intersecting Streams Unregulated River Water Sources 2024.

The draft plan and supporting documentation are available for viewing on the Department of Planning and Environment website from 4 September to 13 October 2023.

Join us at one of the information sessions listed below to learn more about:

- the draft replacement plan
- how to make a submission.

### Information sessions

Date/Time	Location	Event time
14 September 2023	Live webinar	5pm–6.30pm
19 September 2023	Face to face meeting Lightning Ridge Bowling Club, 29 Morilla Street, Lightning Ridge NSW 2834	10am–12.00pm

During the public exhibition period DPE staff will also be available for 30 minute booked phone interviews.

To find out more information, including how to make a submission please visit: [water.nsw.gov.au/intersecting-streams-water-sharing-plan](http://water.nsw.gov.au/intersecting-streams-water-sharing-plan) or email [intersectingstreams.wsp@dpie.nsw.gov.au](mailto:intersectingstreams.wsp@dpie.nsw.gov.au)

Submissions close at 11.59 pm on Friday 13 October 2023.

LP1022

## Parramatta Road, Camperdown NSW Aboriginal Cultural Heritage Assessment – Community Consultation Stage 1

Urbis has been commissioned by the University of Sydney's University Infrastructure Unit (the Proponent) to conduct an Aboriginal Cultural Heritage Assessment (ACHA) for their site on Parramatta Road, Camperdown NSW (Lot 1/DP 1171804). This ACHA has been prepared to support a State Significant Development Application, which seeks approval for the development of a multi-disciplinary General Teaching Space at the site. The proponent can be contacted directly via:

Julie Parsons  
Community Engagement Manager  
[julie.parsons@sydney.edu.au](mailto:julie.parsons@sydney.edu.au)  
Services Building G12, 22 Codrington Street, Darlingtown, 2006

In accordance with Section 4.1.3 of the Aboriginal Cultural Heritage Consultation Requirements for Proponents (DECCW, 2010) and Clause 80C of the NSW National Parks and Wildlife Regulation 2009, the Proponent is seeking the registration of Aboriginal persons or groups who may hold cultural knowledge relevant to determining the significance of Aboriginal object(s) and/or place(s) that may be present in the subject area.

The purpose of community consultation with Aboriginal people is to assist the Proponent in the preparation of the ACHA and the assessment of the cultural heritage significance of the subject area.

Please register your interest in writing to the contact details provided below by 21st September 2023.

Ginger-Rose Harrington

Consultant  
Urbis Pty Ltd [gharrington@urbis.com.au](mailto:gharrington@urbis.com.au)  
Level 8, 123 Pitt Street, Sydney, 2000.

Please be advised that the Proponent is required to forward the names of Aboriginal persons and groups who register an interest to The Aboriginal Cultural Heritage Regulation Branch- Heritage NSW  
- Department of Premier and Cabinet and the Metropolitan Local Aboriginal Land Council; unless the person or group specifies that they do not want their details released.

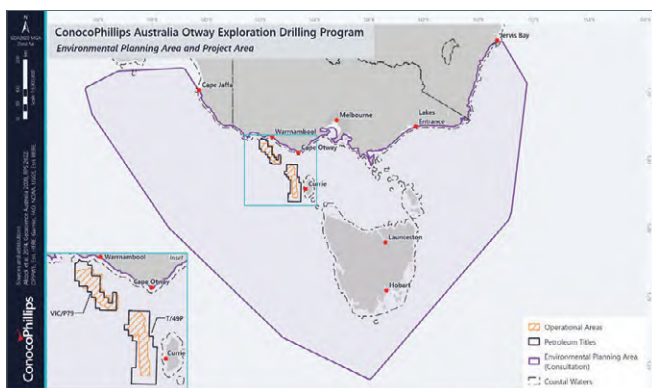

## Relevant Person Consultation:

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

## Notice under Section 29 of the Native Title Act 1993 Exploration Licence Number EL9590 (Act 1992)

This notice is given in accordance with the requirements of section 29 of the Native Title Act 1993 (Commonwealth).

### Description of the nature of the act

Pursuant to the Native Title (Right to Negotiate (Exclusion) – NSW Land) Determination No. 1 of 1996 (Cth), Exploration Licence 9590 includes a condition to the effect that the holder must not prospect on any land or waters covered by the licence in relation to which native title exists without the prior written consent of the Minister administering the Mining Act 1992 (the 'Native Title Condition').

The Minister administering the Mining Act 1992 intends to give consent to prospecting on land subject to native title in the licence in accordance with the Native Title (Right to Negotiate (Inclusion) – NSW Land) Approval No. 1 of 1996 (Cth).

Should consent be granted, the licence holder may apply to renew or transfer the licence prior to it expiring (including partial renewals or partial transfers).

**Note:** If the consent is granted, it will apply to any renewal, re grant or re-making (including partial renewals or partial transfers) or extension of the term of the licence, which may be valid pursuant to section 24MD(1) of the Native Title Act 1993 (Cth) without a further notification under section 29.

### Holder's details

Westrock Minerals Pty Ltd (ACN 625 790 187) is the holder of Exploration Licence 9590 for Group 1 minerals.

The licence contains a condition that the holder must not prospect on any land or waters on which native title exists without the prior consent of the Minister administering the Mining Act 1992. The licence holder has sought the Minister's consent to conduct prospecting activities in the entire licence area.

### Description of area that may be affected

The entire area of Exploration Licence 9590 which covers about 69 units and is situated approximately 32 kilometres north of Moruya, in the State of NSW.

### Name and postal address of person by whom the act would be done

The Minister administering the Mining Act 1992, PO Box 344, Hunter Region Mail Centre, NSW 2310.

### How further information about the act can be obtained

Further information may be obtained from; Assessments and Systems, Regional NSW on (02) 4063 6600 or [titles@regional.nsw.gov.au](mailto:titles@regional.nsw.gov.au).

### Notification Day

For the purposes of section 29(4) of the Native Title Act 1993 the notification day is 21 September 2023 Under section 30 of the Native Title Act 1993 persons have until 3 months after the notification day to take certain steps to become native title parties in relation to this notice.

Australian Heritage Council

Environment Protection and Biodiversity Conservation Act 1999

## PROPOSED AMENDMENTS TO A NATIONAL HERITAGE LISTING: WAVE HILL WALK OFF ROUTE

### CALL FOR PUBLIC COMMENT

The Australian Heritage Council is proposing amendments to the **Wave Hill Walk Off Route** National Heritage listing to correct factual errors in the listing. The National Heritage List recognises places that are of outstanding significance to the nation for their natural, Indigenous and/or historic heritage values.

The Australian Heritage Council, on community advice, proposes to change the date of the Walk Off from the **22nd of August 1966 to the 23rd of August 1966**. Further to this, parts of the Buchanan and Buntine highways that relate to the Walk Off Route have been renamed. The Council proposes amendments to the listing to correlate the historical route to contemporary maps. The Council's initial assessment concludes that all of these proposed amendments do not alter the National Heritage listed values of the place.

Comments are invited on these proposed amendments to the Wave Hill Walk Off Route listing. Further information is available by contacting the Australian Heritage Council at [heritage@dcceew.gov.au](mailto:heritage@dcceew.gov.au). The Wave Hill Walk Off National Heritage listing can be accessed via the Australian Heritage Database, <http://www.environment.gov.au/cgi-bin/ahdb/search.pl>.

#### Contact us

Please provide any written comments by **5:00 PM AEST on 2 November 2023**.

Australian Heritage Council

GPO Box 3090

CANBERRA ACT 2601

Or by email to: [heritage@dcceew.gov.au](mailto:heritage@dcceew.gov.au)

All comments will be provided to the Minister for the Environment for consideration when making her decision on whether or not the proposed amendments alter the heritage values of the National Heritage Listing.

# NGUJIMA-YIN FLOATING PRODUCTION STORAGE AND OFFLOADING FACILITY OPERATIONS AND PYRENEES FACILITY OPERATIONS ENVIRONMENT PLANS

For more than 35 years, Woodside has been developing and operating LNG and oil projects in Australia. Our focus is the safety, reliability, efficiency and environmental performance of our operations and activities.

Woodside consults so that feedback from relevant persons is considered and used to inform the revision of two operations Environment Plans for the **Ngujima-Yin Floating Production Storage and Offloading Facility Operations and Pyrenees Facility Operations**.

## Our activities

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin Floating Production Storage and Offloading (FPSO) facilities and is submitting a five-year revision to the operational Environment Plans. The Environment Plans for the Pyrenees FPSO and Ngujima-Yin FPSO facilities will cover operations including offloading and associated activities, inspection, maintenance, monitoring, and repair of the FPSOs and subsea infrastructure, disconnection and sail-away of the FPSO facilities when required, and production from two proposed additional wells from the Ngujima-Yin FPSO.

The Pyrenees FPSO is located about 45 km northwest of Exmouth, Western Australia. Production began in 2010 and is scheduled to end in 2035. The Ngujima-Yin FPSO is about 50 km, northwest of Exmouth, Western Australia. Production began in 2008 and is scheduled to end in 2028.

We are seeking input from relevant persons whose functions, interests or activities may be affected by continued operations.

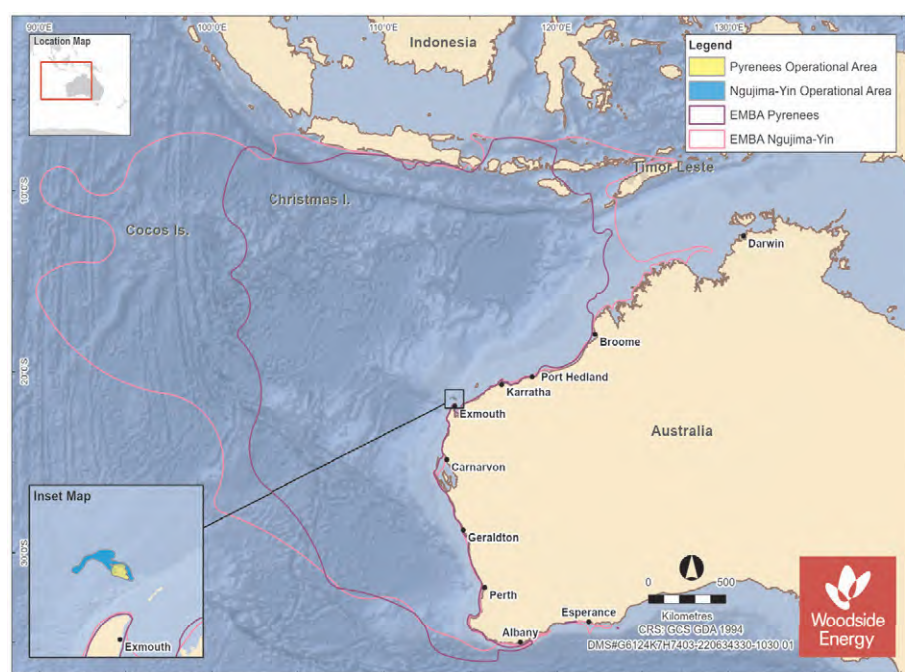

## The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for these two Environmental Plans, is determined by modelling a highly unlikely release of hydrocarbons from loss of well control or a vessel collision with the FPSO with enough force to breach the hull.

The EMBA represents the merged area of many possible modelled paths that a highly unlikely hydrocarbon release could travel if left unmitigated and depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected.

## We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by our activities, we would like to hear from you by **Friday, 27 October 2023** to identify you as a relevant person.

## Want to know more or provide input?

A feedback form and more information can be found at:  
[www.woodside.com/sustainability/consultation-activities](http://www.woodside.com/sustainability/consultation-activities).

You can also subscribe via our website to receive future information on upcoming activities.

# 'Solar garden' helps city dwellers buy plots

Nick O'Malley

When the idea to create a "solar garden", in which local or city residents could buy "plots" in a regional solar farm, began to evolve, its advocates had no idea they would end up being delayed by a punishing federal tax, pandemic and foreign war.

Nonetheless, this month the final panels were bolted into place at the Grong Grong Solar Farm, which is to host the Haystacks Community Solar Garden, and by year's end it is hoped the first "solar gardeners" will begin to receive the benefits of the clean energy it produces.

The model is simple. Supporters can either buy shares in the broader community solar farm, or they can purchase "plots" in the garden. All 175 plots have been sold, for \$4200 each. Their owners will receive a discount of \$505 a year on their electricity bills for the next decade, while the family that owns the land on which the solar farm has been built is benefiting from the lease.

"It's a little bit of income-proofing for us," said Gemma Purcell, who with her husband, Reiner Meir, grows cereals and runs cattle and sheep on the farm not far from Narandera, in the NSW Riverina.

The income stream will be welcome, she says, particularly if dry weather sets in, but she was drawn to the idea because she wanted to contribute to a climate change

Kristy Walters and Jonathan Prendergast at HCB Solar in Grong Grong. Photo: Patrick Ronald

solution. Using her land to help create a medium-scale solar farm that would give access to the benefits of solar to renters and apartment owners in cities made sense.

She recalls telling another of the project's proponents, Kristy Walters, director of the Community

Power Agency, "we grow the cereal and grains that make your breakfast and we grow your meat, we may as well grow your energy too."

Conversations that began in 2016 evolved into making plans between Purcell, the Community Power Agency and an energy retailer. By

the time they had found a solar developer, Komo Energy, and were ready, the COVID-19 pandemic had brutalised supply chains, causing delays and driving up costs. As the situation eased, the Russian invasion of Ukraine shook up the energy market, eventually knocking out the

electricity retailer the farm had begun discussions with. The enterprise suffered another blow when they discovered a tax regulation change introduced under the Abbott government imposed a heavy impost on not-for-profit renewable energy outfits.

Walters says many of the garden's subscribers are as interested in supporting renewable energy as they are in cost savings. One purchaser, she says, bought three plots for families who lost their homes in the Lismore floods. The gift will ease their bills.

Others have been bought by parents of children starting their lives in city apartments without space for solar panels.

While Australia has the highest per capita uptake of rooftop solar, about 30 per cent are "locked out" because they rent, live in an apartment, or have an unsuitable roof. A solar garden provides a way to access those benefits, says Walters.

The relatively small scale of the development – about 1.5 megawatts of power generated on a parcel of land about the size of a Bunnings store with its car park, according to Purcell – means it can connect to existing power lines without needing expensive infrastructure, says Walters. It will generate enough electricity for about 700 homes.

BUSINESS Page 24

# Warning as deadly heatwaves loom

Natassia Chrysanthos  
Angus Thompson

Heatwaves are silent killers that lead to more deaths each year than other natural disasters and Australians need to be prepared for them, Emergency Management Minister Murray Watt has said before what is forecast to be the country's hottest and driest weather since the Black Summer.

Melbourne, Sydney and Canberra have all endured heatwaves this month and the Bureau of Meteorology last week declared an El Nino event and a positive Indian Ocean Dipole.

Watt said that would bring a

more difficult summer, in terms of hot weather risk, than the country had experienced since the Black Summer of 2019-20.

"And while there's been a lot of focus on bushfires, and understandably so, one of the other risks that we face this year is heatwaves, which of course are the silent killer of Australians," he said yesterday. "Actually, we lose more people to heatwaves every year than we do from other forms of natural disasters."

As the federal government convened its first major summit of 2023 for emergency services, different governments and the private sector to get ready for the summer, Watt said the elderly and disabled were at

*'Look after your neighbours, in particular the elderly.'*

Joe Buffone, Emergency Management Australia

greatest risk. "Some people will be better positioned than others, depending on whether they have air-conditioning in their homes," he said.

"But we're also working with local governments around public libraries, swimming pools, public facilities

that people can use to get relief in those heatwave conditions."

Brianna Casey, chief executive of Foodbank, said she was particularly concerned about the impact on cash-strapped clients who "just don't have the resilience that we need right now".

"We've already got people seeking food relief bringing in empty containers of water for us to actually freeze on their behalf in lieu of freezers because they can't afford the running costs of keeping fridges and freezers on," she said.

Joe Buffone, director-general of Emergency Management Australia, said the agency had been learning from North America and Europe.

"But there is a national framework that makes sure there's consistency and warning. We're also working with the energy sector and with health sectors to make sure that they are acutely aware of the potential impacts of heat," he said.

"The big focus is around people: making sure that they have the information to protect themselves and have support. Look after your neighbours, in particular the elderly, and those that have [mobility issues]."

The Bureau of Meteorology's heatwave warning service provides alerts via its mobile app four days in advance. The alert also provides health messages tailored to particular areas or at-risk communities.

# Joyce in firefight as an inquiry turns into an inquisition

ANALYSIS  
Clancy Yeates

Qantas boss Alan Joyce received applause from sharemarket types when he delivered his final profit as chief executive last week, but the divisive CEO received a far frostier reception at a parliamentary hearing yesterday.

The inquiry was about the cost of living, and Joyce had been summoned last week to make his first appearance before the Senate in 14 years. But Joyce endured a

fierce grilling, with the questioning significantly more venomous than the standard fare most CEOs often endure.

The inquiry turned into a full-blown interrogation of Joyce over issues spanning from aviation regulation, to whether Qantas had granted the prime minister's son a membership of the exclusive Chairman's Lounge, to Qantas' reputation with the public.

The aggressive questioning revolved around the litany of complaints surrounding the airline.

Labor senator Tony Sheldon, a former head of the Transport Workers' Union and long-time critic of Joyce, was particularly

forceful. He fired questions at Joyce over issues including the airline's handling of unused credits for flights that were cancelled in COVID; Qantas' industrial arrangements with staff; and the damage to its corporate reputation from cancellations.

He put it to Joyce that the company was the "most discredited" in Australia and wanted to know if this had been raised by the Qantas board.

Joyce dug in, defending the airline and at one point telling Sheldon: "The facts that you're raising are wrong. And senator, I know you're getting a bit worked up, but please ... give us the

privilege of just not interrupting every few minutes."

Late in proceedings, which were extended for half an hour, committee chair Liberal senator Jane Hume intervened to tell Sheldon he was using a "slightly aggressive tone".

Joyce acknowledged Qantas had opposed a request by Qatar Airways to sharply increase how many flights it flew to Australia, though he would not reveal what he had said to ministers about this.

The government recently rejected the Qatar Airways request, and Joyce backed the decision on the grounds of protecting the national interest.

Senators appeared particularly keen to explore the Qatar rejection, no doubt partly because of comments from Assistant Treasurer Stephen Jones, who yesterday was quoted as saying the record \$2.5 billion profit from Qantas last week was a "good news story".

Late yesterday, Jones' office was directing media questions about these comments to Transport Minister Catherine King.

Jones' comments didn't do Joyce any favour at the inquiry and while he argued it was common for governments to make decisions such as this, it is a tough message for him and the Albanese government to sell.

# Qantas boss defiant over Qatar call

Amelia McGuire

Qantas boss Alan Joyce has again defended the government's choice to reject an application by Qatar Airways for more flights to Australia, hours after assistant treasurer Stephen Jones said it was in the national interest to protect Qantas from foreign carriers.

Joyce received a fierce two-hour grilling from the Senate select committee on the cost of living crisis in Melbourne, just days after the airline group – which controls 60 per cent of the domestic market through carriers Qantas and Jetstar – revealed a record \$2.47 billion profit.

"We think Australia should protect its national interest," Joyce said.

Joyce appeared at the inquiry with Jetstar boss Stephanie Tully and Qantas' head of corporate affairs, Andrew McGinnes. All three were embroiled in at times hostile exchanges with senators over allegations the airline had made the cost of living crisis worse for its staff and customers.

Alan Joyce defended Qantas' profits during the Senate cost of living inquiry. Photo: Eamon Gallagher

Joyce repeatedly asked to be granted the opportunity to speak after senators interrupted to demand he answer the question asked, rather than give a speech littered with information already on the public record.

Had Qatar Airways been granted the right to increase to 21 services a week, it would have generated up to \$800 million additional revenue for the tourism industry and put down-

ward pressure on airfares to Europe. However, Joyce countered that Qatar had the option to fly bigger aircraft to smaller cities including Adelaide and Darwin if it was truly committed to boosting seat capacity in Australia.

Earlier yesterday, Assistant Treasurer Stephen Jones told media the federal government had

made its call on the Qatar Airways request to ensure Qantas was profitable, contradicting previous statements by Transport Minister Catherine King, who has faced backlash over last month's decision.

King said yesterday she disagreed with Jones' characterisation. "I wouldn't have used the same words that Stephen did ... I've re-

peatedly said this was a decision that was taken in the national interest, and there's no one factor that swayed my consideration," King said.

She also said the government had historically rejected multiple applications for additional bilateral air rights from other governments, deeming it "entirely unremarkable".

Joyce reiterated he would not comment on a report by the *Australian Financial Review* that said the 23-year-old son of Prime Minister Anthony Albanese, Nathan, had been issued a membership to the airline's Chairman's lounge, usually reserved for business leaders and politicians.

Joyce – who is the only ASX-100 chief executive to be summoned to appear before the inquiry so far – had a particularly heated exchange with Senator Tony Sheldon, a Labor MP who has long been critical of Joyce and formerly held senior positions within the Transport Workers Union, over Qantas' alleged obfuscation on flight credits.

Qantas conceded after relentless questioning that the true sum of COVID-19 credits yet to be redeemed remains at least \$100 million higher than the \$370 million figure it has repeatedly referenced when accounting for Jetstar and overseas-based bookings.

Tully said the outstanding amount for Jetstar bookings was about \$100 million, with the majority for tickets worth less than \$100. The outstanding dollar figure for overseas bookings is expected to be between \$50 million and \$100 million, but Qantas said it would provide more information on notice.

The group has refunded \$3 billion in COVID-19 travel bookings that the airline cancelled due to COVID-19 and has extended their expiry three times.

planning and engagement manager, Elise Lerpiniere, says game music is a natural extension of the orchestra's 50-year history of performing narrative art forms like opera and ballet. The concert will feature music from independent games such as *Journey*, *Hollow Knight*, *Celeste* and *Necrobarrista*.

Lena Raine, an American-Canadian composer who created the soundtrack for the platform game *Celeste*, says these concerts demonstrate to those who may not play video games how diverse and sophisticated video game music is.

Meena Shamaly, a composer and presenter on ABC Classic radio who will present Indie Symphony, agrees. "We used to think that

sophisticated music, aka classical music, was music made without electronic technology, forgetting the term technology just describes any sort of advancement in tools. For example, the piano was a technological advancement on the harpsichord," she says. "It's all part of the continuum of classical music."

Earlier games did draw from classical music. *Tetris* features an electronic arrangement of Pyotr Tchaikovsky's *Dance of the Sugar Plum Fairies*, while music in *Donkey Kong 64* was inspired by Johann Sebastian Bach's *Tocatta and Fugue In D Minor*.

*Indie Symphony: Video Games in Concert* is at Hamer Hall on Friday.

# Veteran built case on lies, cost hearing told

Michael Bachelard

Former SAS corporal Ben Roberts-Smith knew he had committed the murders described in a series of news articles, so should pay all the costs of running the defamation proceedings he brought against three newspapers, the media outlets' lawyer has argued before the Federal Court.

Roberts-Smith has accepted he is liable for the millions of dollars of costs accumulated in the war crimes case after the date of a settlement offer he rejected on March 18, 2020.

However, the lawyer for the newspapers, Nicholas Owens, SC, told the court yesterday that Roberts-Smith should have never brought the case and should pay the costs from August 2018, when he first sued.

The total cost of the case is estimated at \$25 million, and the newspapers will argue Roberts-Smith's key backers at Seven West Media should ultimately pay the costs.

Roberts-Smith's lawyer, Arthur Moses, SC, countered the newspapers were "not entitled" to write stories about war crimes committed by the decorated soldier because he was entitled to the presumption of innocence.

Owens told Justice Anthony Besanko – who found resoundingly in favour of the media outlets in the defamation case in June – that Roberts-Smith had sued *The Age*,

*The Sydney Morning Herald* and the *Canberra Times* for defamation, knowing "the fundamental premise" of his case was false.

"Your honour was presented with a case that was either true or false to the applicant's knowledge," Owens said. "He was the moving party to the litigation ... he was the person who brought this whole thing into existence."

Owens said Roberts-Smith had given a "positive account" of his actions, spent a week being cross-examined over it, called witnesses

what happens after that because it involves bringing forward of false evidence ... it involves a public and ... vehement challenge to the honesty and reliability of witnesses that your honour knew were fundamentally honest, and it means the whole conduct of the litigation becomes a waste of both court and party time and money," Owens said.

He said the newspapers deserved to be compensated for the full cost of the litigation because they bore the burden of proving their reports had been true.

If the court disagreed, Owens said, the newspapers should receive their costs from the time that Roberts-Smith rejected a "generous" settlement offer to walk away from the litigation – each side paying their own costs – in June 2019.

However, Moses argued that Roberts-Smith should only have to pay the full costs if he had prolonged the case unduly with "groundless contentions", and if his case had been doomed to fail.

Roberts-Smith had brought the case, according to Moses, because of the "provocation" by the newspapers that he was a "war criminal who had assaulted a woman", and it was "not for them" to suggest he was a criminal.

Roberts-Smith was in an "invidious position": he could either "allow the publications to continue and trash his presumption of innocence or ... protect his rights", Moses said.

The reports of allegations of war crimes were "not investigative journalism", he added, because they were already being investigated by the Inspector-General of the Australian Defence Force.

"The media were not entitled to go around publishing these articles in the situation where he was entitled to the presumption of innocence," Moses said.

Owens countered that the presumption of innocence "does not operate as some overriding prohibition on the publication of material, and therefore it cannot be used as an argument justifying why Mr Roberts-Smith chose to commence these proceedings".

Besanko reserved his decision.

*'He was the person who brought this whole thing into existence.'*

Nicholas Owens, SC,  
lawyer for the newspapers

over a month, and disputed allegations from the newspapers' witnesses over three months, all the while taking the "knowingly false position" that he had not committed the murders reported.

This was the "classic definition of an abuse of process", Owens said, because the time of the court had been invoked "to achieve an injustice, that is a result that a party knows is based on a lie".

"It corrupts the whole process of

# 'I was planning my funeral': How an organ donor pulled Marianne back from the brink

Henrietta Cook

Marianne Thrush had just weeks to live when she received an unexpected phone call.

It was a transplant nurse, urgently telling the then 32-year-old that an organ donor had been found.

"I was silent," Marianne recalls. "Then I started shaking and crying."

Marianne, who has a rare degenerative disease that means she has no muscles in her gut and experiences excruciating pain, had been on and off the organ donation waiting list for more than 12 years.

On that morning in May 2022, Marianne drove to the Austin Hospital in Melbourne's north-east with her mother Lorraine to meet a team of medical specialists.

They removed her failing organs and commenced a high-risk six-organ transplant, with a new stomach, duodenum, small bowel, pancreas, liver and colon stitched into her abdomen and connected to her arteries. A young boy had recently died in hospital, and his grieving family consented to his organs being donated. "Without that gift, I know, without a shadow of a doubt, I wouldn't be here," Marianne, now 33, says.

Over the past decade, Marianne has spent more time in hospital than at home, with one admission lasting four years.

Unable to absorb nutrients via her digestive system, she has been kept alive by bags of liquid food that have been pumped into veins above her heart. This constant intravenous feeding has led to numerous life-threatening blood infections. Frequent vomiting had disintegrated her teeth, some of which have been replaced with veneers. She experiences constant toothaches but can't afford to visit the dentist.

"I was too sick to keep going. I was planning my own funeral. I was going to give it one more month of fighting ... three days after making that decision, I got the call."

Only 36 per cent of Australians are registered organ donors.

There are currently 1800 people waiting for a transplant, and in the past six years, 242 Australians have

Marianne Thrush is building a new life for herself after a six-organ transplant. Photo: Justin McManus

died while waiting for an organ, according to Australia and New Zealand Dialysis and Transplant Registry data.

Victoria lags the national average and all other jurisdictions in registration rates, with just 23 per cent of people signed up to be organ donors. This compares with 42 per cent of residents in NSW and 72 per cent in South Australia – the only jurisdiction where motorists can sign up for organ donation on their driver's licence.

It's a situation that puzzles Dr Rohit D'Costa, the medical director of DonateLife Victoria, which coordinates organ and tissue donation across the state. D'Costa says that while Victoria has low registration

rates, actual rates of donations in the state are high. There were 144 deceased organ donors in Victoria last year, compared with 122 in NSW and 39 in South Australia.

In its submission to a state parliamentary inquiry into increasing organ donor registrations, DonateLife Victoria called for motorists to be able to register as organ donors when applying for their licence – a process that was in place in Victoria until 2000, when the Australian Organ Donor Register was set up as the national register.

Marianne spent almost two weeks in intensive care following her 22-hour transplant surgery and another three months recovering in

hospital. She describes this time as "the toughest period in her life".

The details of Marianne's donor have to be kept confidential under organ and tissue donation laws. But Marianne and her donor's family have exchanged de-identified letters, describing their pain and gratitude. Marianne has framed the letter from the family, displaying it in her bedroom in Doreen, in Melbourne's north-east.

"Their son gets to live through me now," she says, choking back tears. "He's still alive and I think that is a pretty special thing."

Her long-term doctor, Adam Testro, who is the Austin Hospital's director of liver and intestinal transplant medicine, says one of the

biggest challenges was finding a donor who was about the same size as Marianne. She weighed just 40 kilograms at the time of surgery.

The donor also needed to have the same blood type as Marianne and to die in hospital, most likely on a ventilator so their organs were not starved of oxygen. Only 2 per cent of people who die in Australian hospitals every year are suitable for organ donation.

Testro is impressed with how Marianne has bounced back.

Marianne will need to take expensive immunosuppressant medication for the rest of her life, which increases her risk of kidney dysfunction and other health complications, and she continues to experience some nausea and pain.

"It's certainly not a normal life but it's a heck of a lot better than what she had two years ago," Testro says. As time goes on, the risk of organ rejection decreases.

"If you make it through the first year, your outlook of getting to five years is pretty good," Testro says. "If you get to five years, your outlook of getting to 10 or 20 years is excellent. Most of the complications happen quite early."

Marianne has finished a real estate qualification and is now working part-time at Morrison Kleeman, an agent in Melbourne's north-east. She dreams of working full-time, having her own home and starting a family.

Chris Thomas, chief executive of Transplant Australia, says that as well as registering as organ donors, people need to communicate their wishes to their family, because families must still consent to the transplants when the time comes.

About 80 per cent of families consent to their loved ones donating their organs if they are registered, compared with 40 per cent whose loved ones aren't registered.

Marianne is also urging people to sign up and discuss organ donation with their families. She says she will always feel indebted to her donor family.

"I want them to see the life I'm creating," she says. "I want them to know that the gift their son has given me has not gone to waste."

## Island Hub a step closer

A BREAKING ground ceremony is planned for October 19 to formally start construction of the much-anticipated new Hub complex near the Currie lighthouse.  
STORY: PAGE 2

An artist's impression of the approach to the new Hub complex near the Currie lighthouse.

### Life in Liberal dog

FEW expected the Government to make it to the end of the year before calling an election they would inevitably lose.

Fast forward eight weeks and following the Premier's winter "reset", the latest EMRS poll shows a remarkable turn-around in the Government's fortunes, with their primary vote up two points, and Rockliff once again ahead as preferred premier.

Stansfield says, page 4

### Recycling update

A MINI-Materials Recovery Facility, a material collection vehicle, roadside bins, and shipping containers are among plant and equipment being ordered by the King Island Council in updating the collection and shipping of recyclable materials.

Funding for the update is being provided under the Government's Recycling Modernisation Fund.

Full story, page 5

### New fitness focus

AN INCREASED focus on health and fitness is driving the King Island Council's push for a public gym and improvements to the existing outdoor tennis and netball courts at the Currie Oval.

Funding of \$1 million has been granted by the Commonwealth Government to bring this vision to life and enhance the well-being of the island's community.

Full story, page 9

**BATTLE LINES OVER THE VOICE – Page 8**

# Hub construction a big step forward

CONSTRUCTION of the new Hub complex near the Currie lighthouse is another step closer to starting.

Federal and State Government representatives, as well as key local stakeholders, will be invited to attend a breaking ground ceremony on site on Thursday, October 19.

"Details of the event are being refined and invitations are expected to be issued in early September," the council reported in the August ordinary council meeting.

Victorian headquartered Evolve Commercial was selected as the preferred managing contractor for the King Island Hub project.

"They have operated on the island for the last four years and have an established King Island presence with a King Island-based site supervisor supported by resident and off-island trades and specialist contractors.

"Through the procurement process,

this organisation demonstrated commitment to and a real passion for the project.

"The Hub project team is passionate about ensuring this new facility reflects the whole of King Island. This will be done not only in how the facility is managed and used, but also in how it is constructed."

The central fireplace will feature rock from the Grassy Scheelite mine, the display cabinet that wraps around the verandah will hold artefacts from the island's rich history and creative present, and statement pieces of furniture will be constructed from local materials, ideally by local artists.

Any community member who has a piece of King Island that could be used to showcase in this way is encouraged to contact the project team by emailing [kicouncil@king-island.tas.gov.au](mailto:kicouncil@king-island.tas.gov.au).

"We are particularly keen to get

hold of local timbers, especially any timbers that may have washed free of the Naracoopa Jetty," the council said.

The project team has been in discussion with HydroTas regarding electrical connection to the Lighthouse Street site.

The age of infrastructure along Lighthouse Street means it is not possible to simply add a connection for a new building. Discussion between HydroTas, JMG – the electrical engineer on the project – and council's engineer is ongoing with a potential link from the Currie Harbour appearing to be the most efficient option at this time.

Since the approval of the development application in April 2023, the design team have identified some improvements to the construction of the new build, including separating the earth berm from the side of the

building, reducing the structural load and creating another point of interest in a small bridge over the gap to the rooftop lookout.

This has been provided to the council's planning office for consideration in advance of the design being finalised and a building permit sought.

The title for 38 Lighthouse Street also has a covenant attached to it which aims to protect development that would diminish the impact of the Currie Museum.

Conversations with key stakeholders are under way on the operations of the King Island Hub.

An MOU has been in place with KIRDO since 2021, but the current status of the project allows for more detailed commitments on how the space will be operated once construction is completed.

This process has also included

conversation with representatives from the King Island Arts & Cultural Advisory Committee, volunteers and artists at the King Island Arts & Cultural Centre, King Island Tourism and King Island Chamber of Commerce.

As well as preparing a draft operating budget for the facility, consideration is being given to a first-year program for the site.

Opportunities discussed so far include an exhibition of art works by past King Island artists in residence and Australia Day celebrations, with multiple King Island businesses and Tasmanian organisations considering hiring the facility for a board meeting in 2025.

Community members are invited to share any suggestions for one off or regular events which could be hosted at the site by emailing [kicouncil@kingisland.tas.gov.au](mailto:kicouncil@kingisland.tas.gov.au).

## Declining supply lifts beef prices

KAROLIN MACGREGOR

WHILE beef prices have fallen significantly across Australia the latest market data shows that is not the case in all countries.

Rabobank's latest beef Quarterly report says declining supply and strong consumer demand in the US, Canada and Europe is driving cattle prices higher, while in most other regions including Australia, increased supply and lower demand is making prices softer.

Report lead author and Rabobank senior animal protein analyst Angus Gidley-Baird said US cattle prices have increased almost 30 per cent over the past 12 months, while Australian cattle prices have dropped by more than 30 per cent.

"This price spread is the largest we have seen in the past 10 years," he said.

"Such a separation in prices will have consequences for beef exporters' competitiveness, and we expect to see some shift in trade volumes as a result."

A consistent theme across most markets, other than the US, is softer consumer demand and full supply chains.

In a number of regions, particularly in Asian countries,

beef purchases made through 2022 and into 2023 in anticipation of recovery from Covid have not been consumed, the

report says.

These are now part of growing stock levels that also include other proteins.

"Softer consumer demand is making it harder to move these volumes through the system," Mr Gidley-Baird said.

After falling for most of the year, Australian cattle prices had levelled out in mid-June, the report said.

Mr Gidley-Baird said the market had seen heavy steer prices rise towards the end of July before dropping again.

Meanwhile national saleyard restocker steers have drifted down slightly in August.

The Eastern Young Cattle Indicator was down 45 per cent year-on-year for the month of August to average AUD 5.40/kg.

Mr Gidley-Baird said through May and June, prices had eased due to producer concerns about the seasonal outlook, which added additional cattle to the market.

"At the same time, producer buying activity dropped as cattle numbers were building, processing capacity remains constrained and consumer markets are still soft," he said.

This saw prices fall to their lowest levels in five years through July. But with some rain through cattle-producing areas in July, stability returned to the market."

# Lions cake an Aussie staple

THE Lions Christmas cakes and puddings have been a major fundraiser since the first 1-pound cake was introduced in the 1960s and has become an Australian tradition.

It has been savoured by Australian troops overseas, and for hundreds and thousands of Australians, it's a festive tradition both for eating and gifting.

This isn't just because they are renowned for quality and taste, but because when you buy a Lions cake or pudding you are helping to make a difference.

Purchase proceeds fund medical research into children's cancer, mobility aids for kids with disabilities, blindness prevention, also emergency relief for people in need. Even better, because it's a Lions project we make every cent count.

If you would like to order a cake or pudding, please phone, Jenny Marshall, 0429833728 Or email, [jennifer.marshall1@bigpond.com](mailto:jennifer.marshall1@bigpond.com). Christmas Cake 1.5 kg \$20 1 kg \$16.00 Plum puddings, \$16.00 Mini cakes, \$2.

**It's only 109 days until Christmas and Lion Jenny Marshall knows King Islanders eat Christmas Cake and puds year-round so get in early .**

# Council seeks deputy to GM

AS King Island continues to grow and thrive, the scope and complexity of the council's responsibilities also expand.

There's an increasing need for a dynamic Deputy General Manager to ensure the council's goals and community initiatives are executed efficiently and effectively.

This role is designed to work closely with the General Manager to provide essential leadership and oversight across all aspects of the council's functions.

The person appointed in this newly created position will have a pivotal role in operational and strategic decisions.

They will directly impact various departments within the council, ranging from Development Services Operations to Human Resource Management, Governance, and Regulatory Compliance.

The Deputy General Manager is to act as General Manager when notified by the General Manager.

"The Deputy General Manager will free up the General Manager to focus on broader, more strategic issues, ensuring that the Council's initiatives align well with its mission and long-term vision," Mayor Marcus Blackie said on King Island Radio.

"This collaborative leadership style will facilitate quicker decision-making, more effective implementation of community projects, and improved responsiveness to the needs and aspirations of the King Island community."

Advertising has commenced with a recruitment company and applications close 5pm on September 17.

# Rocky 'reset' a resounding success Life in the Liberal dog yet

## STANSFIELD says

with Brad Stansfield

**T**HERE'S no denying it, whichever way you look at it, Premier Jeremy Rockliff's winter political "reset" has been a resounding success.

Two months ago, the Rockliff Liberal Government was down and out. Liberal backbenchers John Tucker and Lara Alexander had betrayed the Premier and the party, quitting for the cross-bench and throwing the Rockliff Government into a precarious minority with only 11 of a required 13 votes on the floor of Parliament.

The Government was taking heavy water over the foolish policy to forcibly merge councils (as I wrote about in my June column), with the entire north-east Liberal branch quitting in protest.

Concerns were growing about the apparently ballooning cost of the Marinus Link interconnector, and the Minister for Police, Fire and Emergency Management was stubbornly pushing ahead with his new fire levy (first revealed in this column in January) which would hit rural and regional Tasmanians hard in the hip pocket, right in the middle of a cost of living crisis.

On top of this, the proposed Macquarie Point AFL stadium was draining what was left of the Government's political capital.

Hamstrung by having management of the time-consuming health portfolio, the Premier seemed either unable or unwilling to address these serious problems.

Few expected the Government to make it to the end of the year before calling an election they would inevitably lose.

Fast forward eight weeks and following the Premier's winter "reset", the latest EMRS poll shows a remarkable

turn-around in the Government's fortunes, with its primary vote up two points, and the Premier once again ahead of Opposition Leader Rebecca White as preferred premier.

Sure, an election tomorrow would still likely result in a hung parliament, but it's suddenly the Liberals again in the ascendancy.

While political turnarounds of this type aren't uncommon when a government finally sees common sense and undertakes some political barnacle scraping and policy reversals, this one is nonetheless remarkable.

It shows that despite everything, despite all the travails and mistakes of the past 12 months, there remains a deep pool of goodwill in the Tasmanian community for the Hodgman-Gutwein-Rockliff Liberal project.

It shows that the Liberals are not so far gone that the public has given up on them and stopped listening.

In fact, it even shows that should Premier Rockliff and his team manage to keep the ship of state on the correct course for the next 12 to 18 months (a big "if"), there remains the slimmest of chances that they could actually win majority government again.

All of this should be a cause for deep concern for the state Labor Party. They've undeniably been working harder of late spending most weekends knocking on doors, and making a concerted effort to reconnect with business and industry.

On top of this, they have regularly outflanked the Government on both policy and politics, and even took the understandable step of spending more than \$200,000 of scarce campaign funds in sending out two statewide mailouts over winter to try and capitalise

Changes to the Electoral Act - free taxpayer cash to the political parties.

on the Government's apparent dysfunction.

The net result: they went backwards and on current polling numbers would struggle to form a minority government after the next election even if they did the unthinkable and did another deal with the Greens.

All the while, the David O'Byrne problem continues to plague the party and destabilise Ms White's leadership.

It's a truism of life and it is of politics: if you keep on doing the same thing, you will get the same result. Just ask Premier Rockliff who after 12 months of sleepwalk to the edge of the political cliff took some strong decisions and suddenly he's in front again.

It's time for the Labor Party to do likewise; to get their heads out of sand and realise that they need to move on from

Ms White as leader if they are to have any chance of winning the next election.

**M**EANWHILE, politicians are taking Tasmanians for a taxpayer-funded ride.

This week, the Legislative Council will consider changes to Tasmania's Electoral Act which will fundamentally change the way our elections operate.

Going by the public utterances of politicians and most of the media, you'd be forgiven for thinking that this Bill is about one thing and one thing only: setting an appropriate number for the public disclosure of political donations – currently proposed at \$5,000 but likely to be lowered to just \$1,000 by the Legislative Council.

An act of political self-immolation by the

Rockliff Government and Attorney-General Elise Archer to be sure, but not half a bad as the political heist the Bill sets out to achieve from the Tasmanian taxpayer.

Under the provisions of this Bill, political candidates will be paid \$6 for every primary vote they receive at the election – with a minimum threshold of four per cent of the votes in each seat required to access the taxpayer funded moola.

Last state election, there were around 340,000 votes cast. A bit of basic maths tells me that means that should this Bill pass the Parliament, around \$2 million of taxpayer funds will be doled out to the three major political parties for the next election.

On top of that, the major parties are also entitled to over \$130,000 per year in

**✓** Sure, an election tomorrow would still likely result in a hung parliament, but it's suddenly the Liberals again in the ascendancy.

what's called "administrative funding".

And it's not just limited to the parties – independent candidates are also entitled to six bucks per vote if they can beat the four per cent threshold, and if elected nearly \$40,000 per year in taxpayer-funded administrative funding.

It takes some kind of chutzpah from the political class to think that they can get away with this heist in the middle of a cost of living crisis. But hey, what's \$2 million when Tasmanians can't pay their power bills?

**Brad Stansfield is a political and campaign strategist and a partner at Font PR and Font Publishing, owner of the King Island Courier.**

## KING ISLAND COUNCIL EMPLOYMENT OPPORTUNITY: Deputy General Manager

As King Island continues to grow and thrive, the scope and complexity of the Council's responsibilities also expand. There's an increasing need for a dynamic Deputy General Manager to ensure the Council's goals and community initiatives are executed efficiently and effectively. This role is designed to work closely with the General Manager to provide essential leadership and oversight across all aspects of the Council's functions. This is a unique opportunity for a highly skilled and committed individual to step into a key leadership role within the King Island Council and contribute to the island's vibrant community.

### How to Apply:

Please direct any enquiries to Belinda, Managing Director of The BelRose Group on 0409 002 654 or [bel@belrosegroupp.com.au](mailto:bel@belrosegroupp.com.au)

To apply, submit your application by 5:00 pm on 17th September 2023.

Kate Mauric  
GENERAL MANAGER

# Praise for Anchor Garden

TWELVE months ago, King Island Landcare supported by the King Island Council cut back an overgrown tree and bushes, cleared grass and weeds, cleared grass and weeds and created a new shipwreck memorial “anchor garden” on the corner of Huxley and Main streets.

Eve Woolmore and Nathalie Amaral from Landcare created a walking path and received very positive feedback from the community for their renovation work.

A year later with continued cleanup, planting and seaweed mulching, the community is once again full of praise for the Landcare team.

In 1985, the King Island Jaycees, (ceased) proposed that a competition be held to find an appropriate design to incorporate one of the two shipwrecks anchors they had stored in seawater and the anchor’s preservative to be done by the Queen Victoria Museum.

Gary Strickland said that the anchor used in the memorial is a stabiliser anchor from the Cataragui and had been retrieved from the shipwreck site by Jaycee members with the guidance of Len Sullivan.

“It was treated and preserved by me, under the advice given by the Queen Vic Museum,” Mr Strickland said,

At that time the Jaycees also proposed that a bronze plate with the names and dates of all known shipwrecks be

The Anchor Garden at the shipwreck memorial displaying a stabiliser anchor from the Cataragui ship in Currie and the finished garden and paths.

mounted on the monument and the original site proposed for the memorial was on the grassed area outside the library, which was then Jaycee Park and now known as Memorial Park.

The winner of the design competition was Anne

Shimmings, an artist and author who lived on the island and wrote Eden Observed.

Past president of the King Island Historical Society, Sue Fisher who now lives in Tasmania, reminded the community on social media last year that there was a

time capsule buried when the anchor was placed in its current location.

“From this basic structure, to this today,” she said.

“So proud of this unique and striking garden.”

“Well done to the Landcare crew,” Eve Woolmore said.

# Waste recovery spending starts

THE King Island Council is updating the collection and shipping of recyclable materials.

Funding provided under the Government’s Recycling Modernisation Fund is being spent on plant and equipment to facilitate collection and shipping.

This includes a mini-Materials Recovery Facility, a material collection vehicle, roadside bins, and shipping containers.

In June, the council approved the engagement of Waste Initiatives to provide plant and equipment for installation at Charles Street creating a Materials Recovery Facility.

The design of the MRF has been based on the recommendations of the 2019-2029 Waste Management Strategy, building on broad community research.

An on-site design meeting was held in early July and subsequent review meetings were held online.

The outcomes of these meetings is being reviewed by council staff with confirmation of the final design anticipated to

be given to Waste Initiatives by mid-September 2023.

Burcher Municipal was advised in July of the council’s decision approving their provision of a vehicle for the roadside collection of co-mingled recyclables from residences across the island.

The detail of this vehicle will be finalised in the coming weeks as decisions are made on the methodology by which recyclables will be shipped off the island.

While the council was unanimous in its decision to apply to the Recycling Modernisation Fund for plant and equipment, the particulars of how recyclables will be collected and shipped for processing are yet to be determined.

Three consultants have been invited to quote on providing an assessment to the council of the comparative costs and benefits of a range of options.

This includes how far recyclables can be co-min-gled; how often they will be

collected; and the implications each option will have on the life of Parenna landfill and the operating costs of council. It is anticipated that this information will be provided to the Councillor Waste Working Group for consideration and recommendation to Council in October, following a comparison of quotes and selection of the successful consultant by early September.

Once a determination has been made on the operational feasibility of each option and the associated costs, it is the project team’s intent that the community be invited to comment on their preferred option.

This feedback will then be presented to the council, together with the project team’s assessment, for a final decision to be made.

Council received its first payment of \$144,000 under the Recycling Modernisation Fund grant in July 2023.

The next payment, \$365,000, will be made to council upon NRE’s receipt

of the first progress report, confirming that all plant and equipment funded has been ordered.

Council was approached in late July by the Tasmanian Department of Natural Resources & Environment with an offer to extend the completion date of the RMF project.

It appears this was prompted by other recipients of funding across the country having experienced delays in their projects.

While King Island Council is still on track to complete the project by the current deadline of June 30, 2024, it was decided that accepting the offer of an extension would provide an additional level of comfort and the ability to absorb any delays that may emerge as the project progresses and more time to develop the operational model.

A revised deadline of January 31, 2025 was discussed. Confirmation of this variation was reported at the last council meeting and still pending.

FOR Paul and Cynthia Daniel biodynamic farming is a passion. Phoenix House, the Men’s Shed, residents and visitors went on tour last week visiting The Garden in Pegasus. They learnt about soil health, biological pest control and the principles of biodynamic farming on a large scale, and the principles and techniques that can be equally applied in a backyard veggie patch. Biodynamics is a holistic, ecological, and ethical approach to farming, gardening, food, and nutrition.

Biodynamics is rooted in the work of philosopher and scientist Rudolf Steiner, whose 1924 lectures to farmers opened a new way to integrate scientific understanding with a recognition of the spirit in nature. It goes beyond traditional organic farming practices. Biodynamics considers that a farm or garden is an integrated whole, living, interdependent organism. Biodynamic practices continuously renew and replenish soil micro-organisms creating a resilient and healthy ecosystem enabling nutrient-rich

produce on farms and gardens that can be applied anywhere food is grown, with thoughtful adaptation to scale, landscape, climate, and culture. There is a focus on self-sufficiency and respect for the environment. Planting, pruning and harvesting are often timed to align with lunar cycles, and for some, astrological cycles, which proponents believe can enhance plant vitality and productivity. Soil is considered the foundation of biodynamic gardening. Emphasis is placed on building and maintaining

# from the ground up

LEFT: There was a big turnout for the Phoenix House and visitors' growing tour and workshop at The Garden with biodynamic grower Paul Daniel.

healthy soil through the use of compost, cover cropping, and crop rotation.

Biodynamic practitioners create special compost preparations, known as "biodynamic compost," that involve specific herbs and minerals to enrich the soil.

The compost preparations are used to enhance soil fertility and stimulate microbial activity.

Promoting biodiversity through crop variety and incorporating companion planting techniques can help reduce the risk of pests and diseases, improve overall plant health and increase natural disease resistance.

Biodynamic gardens

often integrate animals like chickens, cows, and bees.

These animals contribute to nutrient recycling, pest control, and pollination, enhancing the overall sustainability of the garden.

The aim is to grow which minimises external inputs.

Paul's market garden and hot houses shifted after many years of operating in Currie to bigger land in Pegarah.

The vegetables – lettuce, tomatoes, capsicums, carrots, potatoes, onions, garlic and other in-season vegetables are found in the Currie supermarkets, at POKI markets and a selection at the CWA in Edward Street on a Friday morning.

# Date set for referendum

## Battle lines over the Voice

**CLAIRE CHANDLER**  
Tasmanian Liberal Senator

LATER this year, Australians will be asked to vote in a referendum about establishing an Aboriginal and Torres Strait Islander Voice to Parliament.

The Referendum will take place in mere months – yet Australians are none the wiser as to the exact function and impact of the Voice.

How can Australians consider voting for a proposal that they still know relatively little about?

In our federal parliament, the Opposition has consistently asked for the answers to very practical questions about how the Voice will operate.

But instead, the Minister for Indigenous Affairs and the Government have refused to provide answers and have instead made disparaging comments to those asking these questions.

Labor's attempts to shut down anyone seeking further information on the Voice to Parliament tells you everything you need to know about their proposal.

The Government is asking Australians to consider making a significant change to our constitution – our most important legal document.

Suffice to say, changing our constitution is no trivial matter.

Labor has been unable to provide assurances on the legal ramifications of the Voice or guarantee that their proposed change to our constitution wouldn't create loopholes for exploitative legal challenges from activists.

To make matters worse, proponents have openly said that the Voice will 'punish' any government or political party that does not support one of the demands of the Voice.

Inner-city activists have already made known their intentions to hijack the Voice to push for reparations, compensation, and moving the date of Australia Day. It's hard to know what other radical changes they will agitate for in the absence of any detail of how the Voice will operate.

We've also heard the Prime Minister and his Government state that voting 'Yes' in the Referendum would result in better outcomes for Indigenous Australians and help close the gap.

You'd be hard pressed to find anyone who doesn't want to provide meaningful and effective support to Indigenous communities to deliver better outcomes and facilitate lasting

change. An Indigenous Voice to Parliament wouldn't achieve this.

It would only add yet another layer of bureaucracy and more Canberra-based public servants.

And last, but not least, permanently enshrining a Voice in the Constitution for one group of Australians means permanently dividing our country. It's as simple as that.

The government insists that this referendum to change the Constitution is just a modest request – but how can we be certain that that's the case? How can we know this will only be a modest change if the

Government isn't willing to provide us with the details on what the Voice is or how it will work?

There are simply too many unknowns, too few details, and too much at risk.

If you don't know, vote no.

It's hard to know what other radical changes they will agitate for in the absence of any detail

**ANNE URQUHART**  
Tasmanian Labor Senator

WHAT kind of Australia do you want to see?

While you contemplate your answer, let me give you mine.

I believe in an Australia that provides opportunity, equality, and prosperity for all its people. A country that is proud of its history and reconciled with its past. A nation that embraces its rich diversity and is at one with its First Peoples, walking together, and celebrating our shared stories.

This is a vision of Australia built on hope, goodwill, hard work, and honesty.

These characteristics are at the heart of the plan to establish an Aboriginal and Torres Strait Islander Voice to Parliament.

On October 14, Australians will be asked to vote in a referendum that will decide if the "Voice" becomes a reality or not. You get to make history. The decision you make will leave a lasting legacy for our nation.

So, beyond the internet trolls, the hysteria and fear-mongering of some politicians, and the doomsday misinformation merchants on talk radio and TV, let's cut to the chase about what the Voice is.

It will provide independent advice to the Parliament and government on pertinent issues impacting First Nations communities.

It will be chosen by Aboriginal and Torres Strait Islander Peoples based on the wishes of local communities.

It will be representative, community-led, accountable, and transparent.

It will work alongside existing organisations and structures.

That's it. Nothing more, nothing less.

Despite the incessant fear campaign being run by opponents of the Voice, there is one question they can't answer.

If we are not prepared to meet the humble aspirations of the over 200 Aboriginal and Torres Strait Islanders leaders who came together to write the Uluru Statement from the Heart which asked for a Voice to Parliament, then what?

If we are to turn our back on this step towards addressing the issues that still trouble our First Peoples, what is their plan?

The answer is that the "No" campaign has no plan. It is a dead end.

The Voice is about recognition, listening, and better outcomes for Aboriginal and Torres Strait Islanders, who still live with an appalling gap in health and education outcomes, and life expectancy.

We know in our daily lives that when we truly listen to others, whether at work or at home, with our friends or even a stranger who just needs to be heard, we are all better off.

Listening makes us better people. It will make Australia an even better place.

The Voice will be a simple but powerful change. In 1967, Aboriginal Australians were finally counted in the census. By voting "Yes" on October 14<sup>th</sup>, you can ensure they are now also heard.

This is your history. Now go and make it.

It will provide independent advice to the Parliament and government on pertinent issues

Prep students joined classes across the King Island District High School school and around Australia for the Daniel Morcombe Foundation "Biggest Child Safety Lesson".

## Hands up for child safety

NATIONAL Child Protection Week from September 3 to 9 aims to engage and educate all Australians to understand they have a part to play in keeping our children and young people safe and to understand the complexity of child abuse and neglect and work together to prevent it.

King Island District High students took part in the Daniel Morcombe Foundation "Biggest Child Safety Lesson".

Produced annually, the free

award-winning Australia's Biggest Child Safety Lesson is live streamed across Australia and this year's safety message, is aimed at junior primary and early years, four to seven years of age, and upper primary aged children, eight to 12 years was "Consent".

Communication is key to giving and getting consent. Students learnt how to recognise, react and report and practice strategies they can use when they need to give or refuse consent.

The foundation was established by Daniel Morcombe's parents to make Australia a safer place for children.

Their son was abducted and murdered in December 2003 while waiting to catch a bus on the Sunshine Coast, Queensland.

The aims of the foundation are to educate children and young people about how to stay safe in physical and online environments and to support young victims of crime.

# Gym at core of healthy future

THE King Island Council is following its vision for a brighter, healthier future.

The 2019-20 King Island Recreation Strategy unveiled its ambitious plan for a gym and wellbeing centre on the island.

Residents, health and fitness practitioners, sporting clubs and visitors reflected the island's increased focus on health and the strategy laid out an essential need: a public gym and improvements to the existing outdoor tennis and netball courts at the Currie Oval.

Funding of \$1 million was granted by the Commonwealth Government to bring this vision to life and enhance the well-being of the island's community and the funding agreement was signed in February 2022.

The council decided to act, and they purchased a piece of land in Netherby Rd, a prime location for expanding the Currie Oval amenities and the island's recreational facilities.

This site was destined to become the new home for a community gym and facilities supporting the island's commitment to a healthier lifestyle.

The council's Development Services Coordinator with a dedicated project team rolled up their sleeves.

The Development Application (DA) had multiple issues to consider. One of the major considerations was whether to request a boundary adjustment or a title consolidation as part of the DA.

Both approaches had their merits, but the common goal was clear: position the gym building closer to the existing driveway into the oval.

This would allow for potential future expansions without encroaching on the neighbouring properties to the north.

A crucial factor in choosing between adjustment and consolidation was access to water. Generally, TasWater

connections are limited to one per title.

Given that the existing connection was already maxed out, the gym needed a separate water connection to make the showers and plumbing fully functional without disrupting other oval facilities.

TasWater was approached to explore the possibility of two connections on one title, considering the unique circumstances. Any title changes remain with the council.

HydroTas weighed in on the project, delivering good news. The existing network on Netherby Road could comfortably supply the gym's needs without the need for costly infrastructure upgrades.

The project team is a collaborative effort. Dock4 Architects and @leisure Planners, the latter renowned for their experience in rural and remote communities, joined forces with the council's Parks and Recreation Working Group.

The document underwent scrutiny by the project's Quantity Surveyor and awaits the final nod from the Project Control Group.

Builders, both traditional and pre-fab, can submit tenders.

The refurbishment of the tennis and netball courts at the Currie Oval are also well under way. A specification is being crafted, and soon to be released for Expression of Interest (EOI) through an LGAT Panel of suppliers.

The PCG is to decide the operational model for the gym. Options span from leasing the facility to a third-party business to direct operation by the Council, funded through a new position. Each option comes with its unique set of challenges and opportunities. The PCG is considering the implications of each choice, which includes exploring potential funding sources for a Council-led model.

## Labor health pledge

KING Island District Hospital is listed to benefit the Tasmanian Labor Party's promised investment in a statewide regional health policy – their Right Priorities Plan.

The plan highlights the need for more resources for the King Island District Hospital, with the Labor Party pledging to employ more staff to increase service.

Among those staff increases is the promise to employ five more nurse practitioners, as well as an additional rural generalist for King Island.

Nurse practitioners and rural generalists provide a dynamic range of skills and services, including experience, expertise and authority to diagnose and treat people of all ages

with a variety of acute or chronic health conditions.

Labor Leader Rebecca White announced the health plan to deal with the chronic shortages Tasmanians have been experiencing in their communities.

"We want Tasmanians to be able to access healthcare close to where they live," Ms White said.

"As a mum and someone who grew up on a farm, I understand that Tasmanians want to be able to receive care close to home, whether it be for a sick child in the middle of the night or rehabilitation from illness or injury."

"Our dedicated health workers are the backbone of the health system."

"Rural generalists will be able to work as part of a multidisciplinary

team of nurse practitioners, who can provide diverse and valuable services in regional areas in particular."

Labor Member for Braddon and health spokesperson Anita Dow said a Labor Government would urgently get to work on repairing our broken health system, helping to rebuild healthcare in rural and regional Tasmania.

"Under Labor's plan, \$14.9 million per year will be invested per year to employ 90 nurse practitioners, 18 rural generalists, 36 nurses and five clinical nurse educators, guaranteeing that Tasmanians can receive care closer to where they live."

"These nurses will be part a multi-disciplinary team, working collaboratively with General Practice across our regional and rural communities."

# It's written in the stars

with SABINE GABAUER

**W**E begin September on the heels of an intense winter full of lessons around relationships, our value system, our likes and dislikes and internal challenges.

Luckily this ninth month of 2023 offers us a gentle reprieve.

We are getting ready to find new clarity and security as the planets cradle us in a loving and firm embrace.

This week, Venus, the planet of all things beautiful, of love and finances is emerging from her retrograde motion straight into an indulgent mood.

This week we are cleaning up what is overwhelming, too much or excessive.

King Island Buy, Sell and Swap might be the place to offer your items.

We are clearer and more discerning and slowly but surely leaving our caves of retreat as we are returning to reconnect with ourselves and others.

Hopefully, with greater self-awareness after a prolonged time of healing wounds from the past. And, be aware of over-indulgence.

ARIES

This is a week of energetic renewal with a greater focus on your health and well-being. New solutions are on the horizon as you are making decisions on your work-life balance. Supportive energies are flowing in helping you to re-organise your finances. Happy days Aries!

TAURUS

This is an expansive week for you Taurus where ideas and communication are flowing as smoothly as the Sea Elephant River. Your creative juices are bubbling up to the surface. Great time for practical, hands-on "Shenanigans". Be mindful not to overindulge.

GEMINI

It's all about your home this week for you Twins. There might be some good news around property sales and purchases, or you might just come up with grand ideas around renovations and re-decorations. In case you are overwhelmed with too many innovative ideas, just take a breather and watch the sunset at Devil's Gap.

CANCER

We know you love to retreat into your shell little crab, but this week you are more outgoing as you share practical, effective and beneficial ideas with your community. Nevertheless, home is where your heart and hearth are residing as you are balancing inner and outer experiences this week. Enjoy!

LEO

This week is a great time to re-organise your finances and make adjustments in your career. What do you desire and what makes you feel special and valued? You are showered with warmth and love and might be on the list for a pay rise. Don't spend it all at once in Currie's CBD.

VIRGO

Mental, physical and spiritual aspects unite this week, and you are much more grounded in word and deed. You are the go-to person for practical solutions and your broad visions are inspiring for those around you. Keep up the good work Virgo!

LIBRA

Are you procrastinating again or are just feeling indecisive using the scales of your judgement and weighing up all the alternatives before taking action? You might need to take a bit of time out and trust your inner master judge. What about a visit to the Cultural Centre to get your art fix?

SCORPIO

You are future-oriented and more engaged within your social contacts and all things relational. This week you are leaving your cave of retreat and returning to connection and creation. Your relationships are inspiring and more harmonious. Just ease into every day's mysteries. You know how to do it!

SAGITTARIUS

Your adventuresome spirit is directed into your work life this week. Your vast visions and grand ideas will be an inspiration for others as well. A great week to implement new lifestyle choices and share your grounded ideas or just simply "zen out" in the kitchen creating a beautiful meal.

CAPRICORN

This week there is an emphasis on your greater vista mountain goat! If things have been unpredictable, shaky and your schedule subject to change, this week you are invited to be more playful, to trust your instincts and keep on climbing that mountain. Why not check out Seal Rocks this week for a little hop around?

AQUARIUS

Relationships are looking up as you are more open to intimate connections. This new found intimacy could be just for yourself and your own creative genius to rebirth that spark of revolutionary innovation. Get out your paints, brushes and canvas and splash those colours in your unique style.

PISCES

Don't hold back any longer swimming in known and comfortable waters... Dare to be you and more outgoing. What has been unclear or has left you feeling all at sea is clearing up this week. Now is the time to drop your anchor and start formulating a plan.

# Spring weather beefs up field

Winner John Mauric hitting off the 16th tee.

## BUGGY

THE JBS King Island Beef Day monthly mug stroke event was a closely contested event.

On the glorious first days of spring, sun shining and no breeze, 26 players hit the links course for a great day out.

The winner was John Mauric with a solid 85 off the stick and 70 nett. On shot back on 71 nett were three players with Chris Richards grabbing runner-up from Geoff Watts and Jim McFadzean.

Nearest the Pin 3/12 John Mauric  
18th Roger Clemons  
Money Hole 2/11 S. Sims  
Other good scores on 72 nett Mick Lincoln and Jenny Attrill.

## AROUND THE TRAPS

Pud Watts had put together a very good round until the 17th hole. His shot to the green landed in the lone pine tree and became lodged in the bottom branches.

The match-play event is proving to be a very well contested affair, moving to the semi-final stage. Tim Barnes will play Adam Hely and John Mauric will play Brendan Strickland.

Earlier in the week Tim Barnes and Roger Clemons had an extraordinary match with Tim prevailing on the 19th hole.

Tim raced to 4 up on the first nine sinking three putts on the 2nd/3rd/4th holes, all from the edge of the green. On the back nine, Tim 4 up with 9 to go. Roger responded to square the match by the 16th hole. Tim won the 17th and in an all-or-nothing, Roger won the 18th with a magnificent hit onto the middle of the green.

Tim wins the 19th and the match.

On Saturday three players managed 11 shots on one hole. - Alan Muir, Lance Anderson and Sam Woolley.

## NEXT WEEK

The Cape Wickham single stableford.

## ON THE COURT Finals

Netherby Under 16 2023 Premiers. Back: Tegan Hennessy (coach), Sarah Lancaster, Jana Burgin (coach) Sarah McRae, Chelsea Harding, Kaylie Smith, Nicole Vasta (coach) Front: Maya Flood, Lilly Sims, Emily Fisher.

## LOZ HARVEY

### OPEN WOMEN'S - SALTY'S v. NORTH

Friday night's Open Women's grand final was highly anticipated. The top two teams Saltys and North battled it out in a physical, high-possession match-up with Saltys taking out the 2023 King Island Netball Association 2023 Premiership.

As expected, both teams went goal for goal in the first half of the first quarter - with Saltys managing to break a few North centres and take a handy lead.

This lead soon dissipated when an injury to Paige Williams unsettled the Saltys and North broke back to even the score at halftime.

Saltys' lead going into the last quarter proved too much for North to claw back.

Abbey Jones was Best in Final.

### UNDER 12 - EMERALDS v. RUBIES

Our youngest netballers did not disappoint in their Grand Final. Top of the ladder Emeralds versus the fighting underdog Rubies. The goal for goal first quarter proved just how far Rubies had come with their skill and game development - a credit to their coaches.

Possession was relatively even throughout the somewhat scrappy game; however, Emeralds were able to convert with Harriet Clemons scoring some sensational long-bombs. The ability of Emeralds to be able to link some beautiful leads and passes down the court meant they were able to run away with a handy lead securing them the 2023 Premiership. Heidi Smith was named Best in Final.

### UNDER 16 - NEVA v. NETHERBY

One of the best U16 Grand Finals our Netball Association has seen. Neva had been dominant all season, gelling right off the bat. Whereas,

Netherby had slowly built from strength to strength, peaking at the right time.

It was a fast start to this final, with both shooting ends on song. It was clear from the outset that the game would be won or lost in the mid-court, with strong leads, clean passing and pressure being the key.

The lead changed hands throughout every quarter, with the crowd on the edge of their seats. No team was able to break away with a lead larger than four goals. The final quarter even had our visiting umpires preparing for overtime. With the ball going back and forth with no score for at least eight minutes in the final quarter, it came down to the last 20 seconds for Netherby to take the lead. A strong intercept by Chelsea Harding in GK, just seconds before the final siren saw Netherby claim the 2023 Premiership. Jana Burgin was named Best in Final.

#### 2023 JUNIOR GRAND FINAL, September 3.

**Under 12s**  
Emeralds (20) def Rubies (6)  
Best Players  
Emeralds - Heidi Smith & Hattie Clemons  
Rubies - Dakota Davis & Lexie Reed

Premiership Cup.

LAST Saturday night the Currie Football and Netball Club kicked up their heels at their club home at the King Island Club.

Surrounded by the honour board heroes, the wins, trophies and awards of the past, the Robins footballers, netballers and club supporters celebrated the CFC 2023 season.

The night highlighted the Juniors' premiership and included slideshow reflections on the year that was and recognised this year's on-ground, on-court and in-club performances.

The night's highlights were the club's recognition and presentations to the 2023 CFC award winners.

"Around 100 members attended a celebration of all three teams having another successful and fun year, both on and off the

field," CFC president Thomas Graham said.

"We celebrated the combined Currie and North juniors who won the grand final with 20 seconds to go.

"The Currie seniors made the grand final and the netball girls had a good fun year.

"Moving forward Currie Football and Netball Club is striving to build a fun family-friendly club where all members are included and supported.

"In the 2024 season, Currie will be striving to grow our participation in all three teams, to prosper and to have a season that is enjoyed by all.

For those unable to attend the dinner and presentations, the slide shows can be viewed on the CFC Facebook page and on YouTube, search King Island TV.

Fred Perry, left, and Gary Johnson receive Life Membership at the King Island Boat Club watched by Fred's wife Shona.

## Festival to maintain 'family friendly' feel FOKI SECURES SITE

NEXT year's Festival of King Island will have a professional security presence.

Organisers say festival goers may notice changes to security arrangements.

"Changing times means changing needs," FOKI president Kim George said.

"The organisers have engaged security due to increased concerns around safety and rules at the family-friendly festival," he said.

"The sense of community and the family-friendly nature of the festival is something that all visiting performers comment on and is a FOKI hallmark and differentiates it from other music festivals around Australia.

"The FOKI committee in debrief immediately after last year's festival decided that there were some areas that needed to be controlled and this would require professional security.

"We considered the main risks for accidents, crowd control and similar.

"We looked at things like people going in/out through the gates, or avoiding the gates; people turning up late often after another function and the alcohol mix; toilet accessibility and locations," he said.

"Last year the stacked hay bales protected the site from wind, and keeping people off the

stacked hay bales is needed to avoid accidents and incidents.

"There are also areas around potential issues for children.

"Young children standing in front of speakers to feel the vibe maybe different, but one spike and there could be major consequences.

# Change of direction for gallery

THE King Island Arts and Cultural Centre had an active winter planning and organising for a busy last quarter and coming 2024 – and – after 20 years – the name is changing.

After almost 20 years, the Arts and Cultural Centre or the more recognised “Cultural Centre” is changing its name to the King Island Gallery.

“Since the renovation of the space a few years back, the number of cultural and workshop activities has diminished and the space has focussed more on the display of items made by local creatives,” the council’s Community Development Officer Mark Wischnat said.

“The gallery will now become a dedicated space for viewing, learning and sales,” he said.

“Fortunately, we have two studio spaces, the wharf studio, and the previous porcelain painters’ studio in Meech Street, that are now available for workshops and activities.

“The council will hold a launch event, with a local exhibition to celebrate the new direction and name change in mid-November.”

Other developments include a refocus on local and visiting exhibitions.

“We learnt from the nature photography exhibition in April that locals want to see new work at the centre and that we need a process to respond to exhibition enquiries from off-island artists and to develop a calendar of exhibitions and activities,” he said.

“To present a broader range of exhibitions, we are introducing a simple call-out process that includes a small group that will help plan, make decisions, and curate an exhibition calendar. Eventually, we will move to an annual call-out similar to the

**Open studio at 38 Lighthouse Street, hosted by recent Artist in Residence, Julie Ryder, professional textile designer and screenprinter who worked with natural materials, substances, and dyes to create a range of artworks during her time on King Island.**

Artist Residency program which has worked smoothly for the last few years and is developing a strong reputation.

“We would ideally like to present four to five exhibitions throughout the year, with half being local creatives or community art activities,” Mark said.

Other works in the pipeline include the development of a standalone website for the gallery, added support for volunteers, two new exhibitions and the two studio spaces that will be available for the community to

access.

The extremely popular Artist Residency program is currently open for 2024 residency applications.

“The program is receiving strong enquiries from across Australia ahead of the October 1 closing date.

“We will announce the successful 2024 artists at the mid-November launch.”

Island creators are encouraged to hold an exhibition of their work in 2024. The King Island Council website [kingisland.tas.gov.au](http://kingisland.tas.gov.au)

has more information and a simple form to complete. The closing date for the exhibition Expression of Interest is October 9.

“If you are interested in an exhibition, want to display new work in the gallery or are keen to spend a couple of hours each week or fortnight surrounded by art, we are always looking for volunteers and would love to have a chat about what would work for you.” Contact Community Development Officer Mark Wischnat on 64629000.

# FOKI to remain family friendly

From page 1

“Our liquor licensing has strict controls, all staff have the required responsible liquor service certification and FOKI has always taken the responsibility and obligations very seriously.

“In past festivals, committee members, who are volunteers, spend a lot of time overseeing the site and try to make sure there are no behaviours that impact individuals or others or in some cases have had to intervene and stop risky behaviour.

“It is very hard to manage risk with a small number who are responsible for various other festival stations. So, we decided to engage professional security. The time has come

**All roads lead to FOKI on King Island on February 2 and 3 next year.**

is in full swing for what has become the biggest event on the island’s cultural calendar on February 2 and 3 next year.

Bands are being announced, flights, accommodation, hire cars booked, new volunteers being briefed and discussions around food vendors, merchandise and side activities are happening.

that we need to evolve.

“This decision is expensive and includes wages, airfares, accommodation and car hire,

but it is necessary to maintain a family-friendly and safe festival,” Mr George said.

Meanwhile, the committee

# Long-time couple farewelled

THE lyrics say it's time to say goodbye and Anna De La Rue and husband Adrian Gobel left King Island this week. Anna, after more than 20 years and Adrian after 60 years.

The pair have joined an increasing number of long-term residents, and in some cases, lifetime King Islanders who as they age, leave to be closer to family, medical care, and hope for a reduction in the cost of living.

"I have lived on King Island for over 20 years and for Adrian it is more than 60 years," Anna said.

Adrian came to the island with Dutch family connections to take up dairy farming. This migrated to beef farming on their South Road property.

"The farm has sold and Adrian's daughters both now live in Tasmania," Anna said.

"My daughter and grandson live in the US.

"Now the family is close by, and we increasingly have medical issues, I can comfortably know that if I visit my daughter and grandson, Adrian has his daughters only a few minutes away in Launceston."

Over the years the couple have been involved in many community groups and

**"Cheers and it's not really goodbye but farewell," says Anna De La Rue and husband Adrian Gobel, as they start a new adventure on mainland Tasmania.**

community acting as both a liaison and service leader in the weeks when the priest is not visiting the island and with Adrian was part of the church's Holy Donut team making and selling donuts at events.

"I also instructed Tai Chi on a Tuesday at Phoenix House and a member of the island's Red Cross, a member of Lions and also the cross churches Christian Women's Group," Anna said.

"I was a volunteer ambulance officer for many years and while the Red Cross closed on King Island, I'm still an active member of the Red Cross Emergency Response team.

"Over the years I have had the phone duties, but I have also been deployed off the island to disasters like floods and bushfires," she added.

"I will miss King Island and most of all the community. Yes, it's the community I will miss and the bonds we all have."

businesses. Adrian enjoys sailing and his sloop, moored in Grassy will make the journey to Tasmania.

For many years Adrian ran a tour coach and tourism

business before selling and focussing on the farm.

Anna is a qualified psychologist and in private practice as well as working for many years at the King

Island District Hospital as a rural resource worker until the position was defunded.

As an authorised marriage celebrant, she has officiated many island couples'

marriages and as a funeral celebrant helped families and friends say goodbye to loved ones.

Over the years Anna has served the island's Catholic

# Fishers welcome slipway re-opening

## Covid risk level 'low'

THE Currie Slipway is now operational, and it is welcome news for fishers who can now undertake boat repairs on the island.

"On behalf of King Island, I acknowledge the refurbishment work and investment by TasPorts to get our Currie Harbour slipway operational again in a relatively short timeframe over winter," Mayor Marcus Blackie said.

"It is great news for our fishing fleet and maritime safety as a whole that this facility is now up and running again," he said.

"Innovative design work and engineering were required to replace the corroded sections and ensure the slipway meets all current compliance requirements.

"Hopefully, it will now receive more use than in the past to service our fishing fleet in situ and return the infrastructure investment.

"We continue to work very collaboratively with TasPorts under our reset relationship and they deserve credit for forward-leaning on this successful outcome," Mr Blackie said after meeting with TasPorts executives.

King Island fishers and boat operators were concerned about the closure of the Currie Harbour slipway last November

when the commercial Southern Rock Lobster season was due to open. With the slipway closed

fishers travelled to the Port of Stanley. Some fishers travelled to Hobart due to Stanley's slip congestion and lack of space

**Currie Harbour slipway now repaired and reopened to fishers for boat repairs.**

and others to Victoria for boat repairs.

"TasPorts closed the facility last year because of the poor condition of submerged sections of the slipway given its age and exposure to the marine environment over many years. The decision was an important one taking account of the safety of King Island's fishing fleet operators, TasPorts' personnel, and the wider community," TasPorts said in a statement.

"TasPorts would like to thank the local fishing community, particularly Paul Graham, which worked so collaboratively with us on the remediation project," TasPorts Chief Executive Officer Anthony Donald said.

"The work was completed by Tasmanian-based contractor BridgePro Engineering."

TASMANIA'S Covid-19 and respiratory infection risk level has been changed from moderate to low after continued low numbers of cases and declining influenza and Respiratory Syncytial Virus cases across the community.

A low risk level means cases of Covid-19, influenza and RSV per day in the community are decreasing or stable, and Tasmania is not seeing as many serious respiratory infection cases in hospitals and aged care facilities.

Health Minister Guy Barnett said the news was welcome.

"The Government will continue to be informed by public health advice as we have done throughout the pandemic," Mr Barnett said.

"Importantly, Tasmanians can protect themselves from illness by ensuring they are up to date with their vaccines and staying home when they're unwell."

For more information about Covid-19, including care options and risk levels, visit [www.health.tas.gov.au/covid19](http://www.health.tas.gov.au/covid19)

## Light on horizon

THE King Island Council has taken steps to ensure delayed repairs, repainting and maintenance works on Currie Lighthouse are completed this summer.

"The King Island Council has terminated the previous painting contract for the Currie Lighthouse and we are retendering for completion of the painting and corrosion protection works, in accordance with the required specifications to protect the Currie Lighthouse from the relentless King Island weather," Mayor Marcus Blackie said.

The Currie Lighthouse's previous refurbishment, paint and repair was nearly a decade ago.

Currie Lighthouse.

The lighthouse comes under the auspices of the King Island

Council and in 2020 \$450,000 was allocated for the refurbishment and tendered, however, the works were delayed due to the Covid -19 pandemic and commenced in January 2022.

"We anticipate the new contractor will complete the remaining rectifications during the upcoming summer period," Mr Blackie said.

"Once this work is completed the lighthouse will then be able to open for the long-awaited public lighthouse tours that have attracted significant advance interest," Mr Blackie said.

#### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

# Kelp plays a vital role in rocky nest

There are several locations where the Black-faced Cormorants nest around King Island. This image shows the steepness of the rock and the bulky nest which is made from kelp. There are several well-grown chicks in their nests while a few adults linger as the others go out to feed and bring fish back for their chicks.

Picture: MARGARET STANSFIELD

### MARGARET STANSFIELD

JUST north in Currie Harbour is Gull Rock, well known to our local fishermen.

Recently I did some observations from Devil’s Gap, noting the weather and ocean conditions, as well as the time I was there. As an observer of the coastline, I’m not usually in one spot for any length of time. It might just be for a few minutes and often determined by the amount of time available and the number of birds in the area to watch.

My observations are just a snapshot of that brief period, and if I go back to the same place later, the observations are always different. Occasionally the results are very different - as the birds are moving all the time.

A brilliant observation point is on the top of the cliff at Devil’s Gap, looking westward towards the horizon. I saw several fishing boats and one of them was motoring back towards the harbour followed by several Australasian Gannets.

They were soaring above the waves with no sign that they were feeding. Closer inshore, Silver Gulls were randomly flying about, while several Black-faced Cormorant were flying low over the water from the north in a direct line for Gull Rock.

Along the waterfront, fresh kelp gets dumped on top of older kelp.

I could see little kelp flies in the sunlight, a perfect place for the Pied Oystercatchers to be gorging themselves in preparation for their breeding season.

Hooded Plovers were on a nearby patch of sand enjoying a meal of flies and hoppers near the edge of the water. Rotting kelp is an important source of food for our shore birds as it breaks down like compost and provides an ideal environment for hoppers to breed and a place where kelp flies lay their eggs.

Hoppers will bury themselves under the kelp or dig into the sand while kelp fly larvae provide excellent protein for foraging birds.

Dense wind-pruned and stunted coastal scrub surrounded me.

These bushes were loaded with small bush birds darting in and out, chasing small insects and whatever else they wanted to eat.

The White-fronted Chat is often seen feeding on the kelp and is common around the coastline, although they can be found further inland along with many other small bush birds.

I could see birds on Gull Rock, and I walked closer to investigate. Gull Rock is a safe haven for breeding birds as it is surrounded by water at all times of the year.

This makes it more difficult for feral cats to hunt and eat incubating birds and chicks. Although I only viewed the rock from one angle, I could see a large colony of nesting Black-faced Cormorants.

Some were sitting on eggs, while others were still building their nests, flying in with beaks full of soft kelp. Some of the substantial nests were on quite steep rocks and as the kelp dries the nests stay in place, so the eggs and chicks don’t tumble out.

A few Gulls were perched up near the top of the rock as well as several Crested Tern.

Gull Rock is generally used by other breeding birds each spring and summer. Once the Black-faced Cormorants have raised their chicks to fledglings, the Silver Gulls move onto the rock and make it their home while they raise their family of chicks.

And when this is complete, a colony of Crested Tern take over to raise their own families. Gull Rock is a prized place for the breeding birds of Currie Harbour.

It was a most enjoyable and relaxing experience recording these observations for the Tasmanian Bird database. I encourage you to be observant when visiting the beach as you never know which birds you will see.

# by! It's Grassy's night

al Wendy and  
ation night.

Netball Runner-up B & F Leah Hainsworth all  
dolled up.

Netball Best and Fairest and Players'  
Player Demi Forrest putting on the Ritz.

Pictorialist Sam Winkel documented the night  
with the door dame Irene Robins.

SATURDAY night was party time in the Currie Town Hall for the Grassy Football Club.

It was also the club's award night and in Grassy form a night to celebrate the 20s as the club clinched their three-peat Premiership.

Grassy players, committee, members, and supporters pulled on their glad rags, embraced the Gatsby vibe, wine and dined and kicked up their heels to the music of Ally Row.

Grassy Football president Tanya Stellmaker took to the stage, razzed, and shared some memorable Season 2023 stats or as she calls them, 'fun facts.'

- Fun fact no 1: This year Grassy won eight games out of 10, the other teams won 3 and 4.

- Fun fact no 2: Of the Best and Fairest vote at the Keating Medal Count, Currie and North as teams received 62 votes each, yet the

season's dominant team of the season, Grassy, only received 57.

"I'd like to think it's because we are a team, rather than a group of individuals, therefore we just get on with the job together without standouts."

- Fun fact no 3: This year we had 23 players who have come through our junior ranks, and one 'very old' player who defected from Currie, five of whom also played juniors this season.

"This is a testament to the importance of junior development.

"Unfortunately, we lose seven of our current junior force next year; four age out and three leave town.

"This leaves a huge hole to fill, so let's hope some new footballers arrive on the island to fill that void."

The hoofers kicked on to the wee hours and after a swanky celebration, the club will start planning for 2024.

# 90 years of fond memories

ABOVE: Old and newer family friends celebrated Jan Strickland's 90<sup>th</sup> birthday at Marshall's Road.

BELOW: Back left to right: Daughter in law Helen Strickland, son-in-law Fred Wesley, daughter Sally Wesley, grandson David Strickland, son Brendan Strickland, son Gary Strickland, Steve Bishop and Tim Attrill.

Front left to right: Granddaughter Lizzie Strickland, birthday girl Jan Strickland cutting her birthday cake, Tracey Richards and Jenny Attrill.

Birthday girl Jan Strickland with grandson David and sons Brendan and Gary.

CELEBRATING a person's 90th Birthday is celebrating a person's lifetime.

Family, friends and Jan Strickland, who lives independently in Currie, returned last Sunday to Marshalls Road where many island memories were made, for her party at her son Gary and daughter-in-law Helen's property.

In Jan's lifetime, Marshalls Road was well known for the Strickland's dairy farm, tennis tournaments, and family and community gatherings.

The Stricklands were connected to the island's dairy industry for

generations, and when bought by Gary and Helen from Jan and Dick (dec) were award winners and went on to produce a third of King Island's milk product.

Jan and her husband Dick supported many organisations over the years including Jan winning not only the island but off-island tennis tournaments when tennis was 'the' island sport.

They established the Strickland Family Bursary for the school children of King Island which still runs today. Jan has been active within King Island Lions Club

from pre-membership Lions Club as a Lioness in their auxiliary group, at the club's foundation and is a Lion's past president.

Jan is a recipient of the James D. Richardson Award for service to Lions Australia.

She has rarely missed an event, travelled at her expense to represent the island and knitted some of the best jumpers (raising money) that you will find.

Jan's memory is long and strong, and she remembers the shock and angst when the King Island scheelite mine closed and

the call to action to provide food and support as the mine cleared out over one week.

She has sold many barbecue van sausages and steak tickets at events, has seen councils come and go, supported many ventures and projects and has an abundance of island stories from her life on King Island that she is happy to share.

Last Sunday was a milestone celebration.

"We had a beautiful sunny day for Jan's 90th Birthday," Helen Strickland said.

"Daughter and son-in-law Sally and Fred Wesley travelled from Launceston.

"Granddaughter Lizzie came from Hobart and grandson David from Melbourne.

"Very old friends who celebrated with Jan included Barbara Lancaster, Len and Cecily Sullivan, Jenny Hill, John De Rooy and Lions Club members Linda Payne and Hans Pedersen."

There are too many names, old and newer to list and many thanks to all who helped celebrate Jan's birthday."

## KING ISLAND BRAND MANAGEMENT GROUP

invites any King Island resident, producer or business operator to come along and discuss how this group could continue to protect and promote the King Island brand.

Please RSVP to [kicouncil@kingisland.tas.gov.au](mailto:kicouncil@kingisland.tas.gov.au) to inform catering requirements.

6PM, WEDNESDAY 27 SEPTEMBER  
CATARAQUI ROOM  
KING ISLAND HOTEL

## AGM NOTICE

King Island Landcare group AGM will be held on **Monday 16th October** in the KIRDO conference room at 5.30pm.

All positions will be declared vacant and nomination forms available from:  
[accounts@kingislandlandcare.org.au](mailto:accounts@kingislandlandcare.org.au)

We are very keen to welcome new members, so come along and find out what we do.

**The ordinary business of the annual general meeting is to be as follows:**

- to confirm the minutes of the last preceding annual general meeting and of any general meeting held since that meeting;
- to receive from the committee, auditor and servants of the Group reports
- on the transactions of the Group during the last preceding financial year;
- to elect the officers of the Group and the ordinary committee members;
- to appoint the auditor and determine his or her remuneration;
- to determine the remuneration of servants of the Group.

# Uncertainty sees farm confidence fall

**KAROLIN MACGREGOR**  
Tasmanian Country

FALLING commodity prices and seasonal uncertainty have caused a significant drop in farmer confidence across Tasmania.

Results from the latest Rabobank Rural Confidence Survey show farmer sentiment across the state has fallen for the second quarter in a row.

Tasmanian confidence fell to -44 per cent, down significantly from -30 per cent last quarter.

While a similar number of Tasmanian farmers expect the agricultural economy to improve over the next 12 months, 51 per cent now expect conditions to worsen, up from 36 per cent last quarter.

Once again, commodity prices were shown to be the driving factor for negativity.

Although fewer farmers nominated this as a reason for conditions to worsen over the next 12 months compared with the previous quarter.

However, there was increasing

worry about drought with 19 per cent nominating it as a concern this quarter, up from six per cent in the last survey.

Rabobank area manager for Tasmania, Stuart Whatling, said while there was a long-term trend of farmer confidence dipping at this time of year due to seasonal uncertainty, this year it was compounded by commodity price pain.

"The continued downward trend of red meat prices – coming off historical highs – is the driving factor for lowered rural confidence in Tasmania,"

Mr Whatling said. "The red meat industry has also been hit by a double whammy of reduced prices hand-in-hand with increased interest rates and input costs. When you factor in the time of year, with spring lambing upon us and concerns about a dry spring and summer – especially in the south and on the east coast – it's contributing to decreased confidence levels."

Although concerns around falling commodity prices were highest for sheep and beef producers, they also remained top of mind for Tasmanian

dairy producers. "In the dairy sector, although farm-gate milk prices remain at a profitable level thanks to domestic demand in Australia, we're seeing some factors play out in the dairy industry which are impacting confidence," he said.

"These include the falling away of the Chinese heifer market, as well as the recent announcement by Fonterra in New Zealand of a reduction in milk forecast – these have cast a bit of a cloud on the dairy industry's outlook beyond the 2023/24 financial year."

# Big ideas for small business

**CHRIS GREEN**

OCTOBER is Small Business Month on King Island. It's back with an enormous range of events tailored to the needs of the business community.

The first King Island Small Business Month organised by King Island Regional Development Organization (KIRDO) and the King Island Chamber of Commerce (COC) was in October 2021 and its aim was to re-energize the King Island economy and assist Small Business operators in getting back to their usual vigour after the island's travel restrictions, border closures and Covid-19 impacts on the local economy. It was declared a success with an amazing conference month of free learning, networking, and speakers.

In 2023 the aim is to present options for businesses to gain knowledge and skills to operate strategically in a friendly competitive environment and the month-long celebration is packed with events open for business operators, employees, and their customers.

According to recently published statistics, King Island has a total of 312 registered businesses with all but one being classified as small. In official terms, a small business is defined as one with less than 20 employees.

KIRDO in partnership with the CoC surveyed all 311 local businesses to learn what the needs of King Island's business owners are and how they would like those needs to be met. Interestingly, but perhaps unsurprisingly, the

**Melita Wischnat, Evelyn Caro and Fay Pilon in KIRDO have the October month-long conference program ready for you to collect and it's time to book your spots.**

many how-to sessions such as turning your hobby into a business; to exit and how to strengthen a microbusiness. The Tasmanian Government's new business advice services commence in October 2023, and they will present their roadshow around the free support available to assist you in starting or running a business in Tasmania.

The final wrap and celebration of Small Business Month will be held on 27th October from 2-4 pm at the Brewhouse with free celebratory drink and pizza.

The development of the program and brochure has been a huge commitment for the staff and volunteers at KIRDO. Special thanks are due to Evelyn Caro and Melita Wischnat who have been ably assisted by Fay Pilon and Chris Conn.

Most events can be booked online using the QR codes in the brochure or call into KIRDO 5 George Street Currie, phone 6462 1778 if you need assistance.

Most events are free, but all the paid workshops represent excellent value for money and bookings are required for catering. The organisers are confident that everyone is certain to find something to enhance their business and even help to reach that goal of improving their work-life balance.

overwhelming number-one request was for advice about achieving a better work-life balance.

Consequently, the opening event on October 1 will feature Les Watson, nicknamed 'The Time Lord' due to his expertise in self-management and productivity. He is the author of 'Get Back an Hour In Every Day' and has helped businesses in Australia and overseas, both small and large to

better manage their time. Les made a big impression when he participated in last year's Small Business Month, which is why he has been invited back as the keynote speaker.

Les will be followed by Sally Higoe, an evidence-based coach, leadership, and team specialist on October 7th who will further help our time-poor and under-pressure business owners with a workshop titled, 'The Fulfillment Formula'

which has the aim of helping those who struggle to balance the needs of business and life in general.

The Small Business Month brochure is out now and available from KIRDO. It features a minimum of 25 events throughout the month. Sessions include managing customer conflict, developing new leaders and teams, and a day allocated to entry-level Barista training. Workshops will cover

recruitment, workforce culture and development.

Week 3 focuses on marketing design tools, setting up and utilizing the Australian Tourism Data Warehouse (ATDW) which is suitable for all businesses and is not tourism operator exclusive. A movie-themed night session on artificial intelligence (AI) will be a bit of fun, perfect not only for business operators but also for the curious. The final week offers

# It's written in the stars

with SABINE GABAUER

**W**ELCOME Island Folk. This week the Sun

enters the sign of Libra, marking the Spring or Vernal Equinox here in the southern hemisphere.

Day and night are of equal length, like the Libran scales.

This is a time to feel balance, harmony, and relational smoothness, and to work out anything that is not aligned within ourselves or with others.

We are engulfed in Libra's beauty within the scented island air where all the spring flowers abound.

The planets are supporting our efforts for growth and helping us stabilise changes after a prolonged period of introspection and preparation.

As we move ahead, our hearts beat with the spirit of renewal, strength, and a greater capacity for light after a winter of meeting our fears and depths.

You are experiencing some magic and empowerment in your work life this week. Your hard work and diligence are paying off. While your work life is receiving a boost, your relationships need some attention. Maybe it is time for a loving, heartfelt conversation with a significant other.

A zest for life is running through your veins bull. The pastures are greener on the other side this week even though nothing can beat the island's lushness and diversity. A well-deserved trip across the waters might be just what's in the cards for you. You will feel more balanced and at ease when you get back.

If you are renovating or thinking about buying or selling your property, the stars align for you this week. Finding the balance between work and play, commitments and creative endeavours could be the challenge for you twins. Don't overthink things, just be. She'll be right.

It's a family affair for you crustaceans. Home is where your heart and your hearth are. You might be hosting a party this week. Watch your spending habits as you might be called to revamp or re-decorate. You are the one sign that loves to nest.

You are shining bright Lion, inside and out. Spring has sprung with such creative and sexual tension. The island's community has got your back and once again you are centre stage. Dare to shine, you know how. You don't have to travel afar; all the glitter is being sprinkled right on your doorstep. Have fun.

This is a week to practice gratitude and embrace your current financial situation. It may not be perfect or your ideal but by being grateful you will keep the ball of abundance rolling. What's been on your back burner is gaining momentum, and opportunities abound. Keep that perfectionism at bay... maybe at 'Surprise Bay' this week.

Dare to take the lead and make some decisions even if it feels at odds. Trust yourself and allow yourself to be the most important person in your environment. Life is a balancing act, and you are in the leading role this week. Follow your dreams and create a vision board or collage. What about an art class offered by one of the many artists on the island?

This is a week to retreat and take time away from the buzz. Take some time to honour body, mind and spirit and get plenty of sleep. The Equinox invites you to self-reflect and self-care. Scorpio you are the sign that knows how to retreat for the greatest rejuvenation. Enjoy.

Pack your backpack or even a larger piece of luggage and get out there. You are a social butterfly this week. Spending time with friends is uplifting for both parties. You are open to receiving abundance, even financially there might be some good news coming. Bon voyage.

We know you are a committed and hard worker climbing up the ladder, mountain goat. You have stamina and determination and show up for the work at hand. Follow through to the finish line and let the universe bless and reward you. You deserve it.

This is a wonderful week to broaden your horizons and spread your wings. You are social and your unique ideas are powerful and meant to be shared. Enjoy being seen and recognised. You might be picking up your study books and learning about a new subject. Maybe King Island's history is of interest

Trust your intuition, go with the flow and do what fish do... Your spiritual nature is heightened this week and you are learning to trust yourself more. Anyone who wishes to engage in deep and meaningful conversations will be drawn to you this week. Embrace purposeful connections. The island folk are a very friendly bunch.

# Golf breaks the wind

BUGGY

Money Hole Steve Sims

THE golf on Saturday attracted a reasonable field despite the misty, horrible wind from the northwest.

A pairs event of Stableford was well contested. The links course was in tip-top condition due to the extra efforts put in by the volunteer mowing team.

A field of 22 played, with a win to Marty Monson and Steve Sims, 59 points. Well done lads, a great effort. Runners-up Rab Denby and Mick Lincoln, 58 points. Other good scores were Dave Munday and Brendon Strickland, 57 points. Best individual scores Rab Denby 35 and John Cross and Lance Anderson 33 points.

Nearest the pin 3/12 Jim Cooper  
18th Jack Nosedá

## AROUND THE TRAPS

Lance Anderson launched off the 16th tee with the wind behind him and hit through the green – a fantastic shot. Unfortunately, he three-putted. Adam Hely managed to keep his record intact with his 5th around the Bay hole, out of bounds. The last group of players ended up in the bushes, one should have and Jigs Denby with one arm hit up the middle with a perfect shot.

Assistance with mowing is required over the next couple of weeks.

It's a month until the sign-up for the King Island Open 2023 closes. Go to [golfkingisland.com](http://golfkingisland.com) and register.

Winners Marty Monson and Steve Sims.

# Life Members set sail

Fred Perry and Gary Johnson received KIBC Life Membership.

THE King Island Boat Club has two new Life Members, Commodore Gary Johnson and Fred Perry.

Wayne (Woody) Woodcock was pleased to present the Life Memberships at last week's AGM.

Both have supported the club over many years.

Past Commodore and Life Member John Brewster who now lives in Victoria, nominated Gary and highlighted his years of service.

"Gary has been a long-standing member of KIBC contributing in a leadership/organisational role whenever needed."

Gary stepped up to coach the Stonehaven team and continued after his own children aged out. He has held

various positions on the committee.

"Fred Perry is a valued member of King Island Boat Club," KIBC secretary and acting Treasurer Niki Mead said.

"He was nominated by Andrew Day and Gary Johnson."

"Fred joined KIBC in 1990 and has been the breakfast chef for the King Island Yacht Race (Queenscliff to Grassy) for over 20 years."

"Fred also supplies the wood to KIBC for chilly days fire and barbecue and in the past organised fishing competitions."

Fred and Gary both said they were honoured to receive life membership and they join the club's Life members'

honour roll - Don Shaw (dec), Jim Titley (dec), Bob Jordan (dec), Lynette Brewster (dec), Robert Williams, Wendy Williams, John Brewster and Michael Youd.

The incoming committee following the 2023 AGM are Commodore Gary Johnson, Vice Commodore Mark Poulsen, and Susan Poulsen Rear Commodore, Secretary and Acting Treasurer Niki Mead and six other committee members. The club is seeking someone to take on the role of Treasurer.

The first sail day of the new season is October 8 at 10.30 am at the Boat Club Grassy Harbour, followed by a family style barbecue.

Please bring a salad. All are welcome.

Beyond the fun and frolic, Talk Like a Pirate Day raises vital funds for a noble cause—Childhood Cancer Support. KIDHS staff joined in the fun for their Launching into Learning Program

STORY: PAGE 4

KIDHS staff Niki Mead, left, Megan Chivers, and Lynda French release their inner-pirate for the school's Launching into Learning program.

## King Island freight shakeup looms SHIPPING FACES STORMY WATERS

THE suitability of the TasPorts/ Bass Island Line-owned ship John Duigan for the King Island service has been questioned by a major government inquiry.

The inquiry by the Office of the Tasmanian Economic Regulator into the BIL freight pricing has determined costs are acceptable.

However, it said specialist advice should be sought on available alternatives

# Students free to feel fantastic

KING Island District High School, the Lions Club of King Island, and the King Island Leo Club joined forces and held the third annual Freedom to Feel Fantastic Day.

Freedom to Feel Fantastic is the national positive body image and self-esteem campaign of the Australian Lions Wellbeing Foundation.

The event helps raise awareness and discussion to help us all to see, think, feel, and talk body and

self-positive; tear up the negatives; reframe our thinking; and create a world where we can be who we want to be judgement-free.

"Students and staff enjoyed the day that spread the message of encouraging positive body image. Funds raised will go toward supporting the work of the Australian Lions Wellbeing Foundation and the Smith Family charity," the school posted on their social media page.

"What a great experience we had at KIDHS running our third annual Freedom To Feel Fantastic Day. We had a Lion and a dinosaur to help us with our Splat Wall.

"The Lion even helped deliver sausages and cupcakes to everyone (without stealing any). Lions and Leos worked together in the school's kitchen and Leos raised \$150," Leos of King Island said.

"Thanks go to students and families who donated coins; to

the Bakery for the cupcakes; to KIDHS school staff for allowing us to hold our event; and to the 10 Lions and Leos who clocked up 26 hours of volunteering to make it happen.

"Next year we hope to have an activity for the younger kids," Lion Linda Payne added. Lion's president Bert Nievaart said that he hopes there will be more joint Leos and Lions activities in the future.

**ABOVE:**  
King Island Leos Amelia Poulsen, left, Chelsea Harding, Leila Bell, and Leo Mascot Henry Perry in front of the popular 'Splat wall'.

**ABOVE LEFT:** Preps to senior students, the Freedom to Feel Fantastic Day was once again a great success.

## Shipping faces stormy waters

From page 1

to the John Duigan based on suitability, level of service and operating costs.

The Regulator found BIL's pricing was within the range of its direct competitors and shipping companies serving comparable markets. The report recommended a review of the suitability of the John Duigan to consider whether the asset base should be optimised.

"I will consider these recommendations and intend to discuss them with the board and executive," Transport Minister Michael Ferguson said.

The Regulator's report states BIL's annual operating and trading results over the past five years have cost close to \$22m in taxpayer funding.

"The independent expert report also addressed the range of opinions on Bass Island Line, such as 'operating at a loss, it is setting prices so low as to exclude competition from the market', to the opposing view that its prices are too high and unfairly take advantage of its market position.

"While this service is still not profitable on an annualised basis, it received stronger demand for its services

**Freight is unloaded from the John Duigan at Grassy Harbour.**

operating in a competitive, commercial market for more than five years and provides King Island's only dedicated weekly sea freight service," the Minister said.

However, this is disputed by competitor Eastern Shipping Line.

"The report also found that notwithstanding stakeholder concerns that Bass Island Line's participation in the market had the potential to discourage other players from entering the market, a third player has announced its intention to enter the King Island sea freight market," Mr Ferguson said.

Preliminary questions also have asked why TasPorts port charges, which impact freight pricing and costs, have not been included in the report.

Next week's Courier will have the island's stakeholders, shipping companies, and Independent Murchison MLC, Ruth Forrest, who initially proposed the government inquiry into King Island Freight costing and prices, responses to the report.

since the shift to the new service model in early 2022," Mr Ferguson said.

TasPorts CEO Anthony Donald said the review found no evidence of overcharging by BIL.

"Further, it recognised BIL's pricing behaviour to be consistent with other shippers and that there was nothing in BIL's pricing outside of what is considered normal practice within the shipping industry," he said.

King Island Mayor Marcus Blackie said he needed more time to digest the report but remained hopeful it will

provide King Island some leverage.

"More importantly for us, Mr Ferguson also mentioned that he has instructed his department to start drafting the scope for our Grassy port expansion study, to be funded by the State Government.

"So, I will take that as the good news for the week on the shipping front."

There are elements within the report that have raised eyebrows and questions are already being asked by stakeholders around accuracy.

"Bass Island Line has been

Red Cross volunteers Ricci and Steve Bishop with Grade 3 and 4 students and their Red Cross emergency preparation and decorated pillowcases.

# Be prepared, not alarmed

RED Cross Pillowcase workshops help children prepare for, cope with and respond to an emergency.

Pillowcase was originally inspired by events during Hurricane Katrina in the US. While evacuating campus, students of a local university used pillowcases to carry their cherished and basic possessions.

After hearing this, American Red Cross staff developed the concept of using a pillowcase as an emergency kit. The program quickly grew into a global preparedness education program that has

since become known as Pillowcase.

Red Cross volunteers Ricci and Steve Bishop delivered the workshop to Grades 3 and 4 at King Island District High School. The program encourages children to be active participants in their own emergency preparedness.

The content is useful for all kinds of emergencies and includes activities to highlight the importance of being prepared. Pillowcase helps to reduce real and imagined fears and has successfully built children's stress management skills.

Aimed at students in Years 3 and 4

(ages 8-10), the one-hour workshop involved engaging discussions and interactive activities to help students:

- understand and discuss the importance of being prepared;
- prepare their mind for the thoughts and feelings that may arise before, during and after an emergency; and,
- know what to pack in an emergency kit.

Each student was then given a pillowcase to decorate and take home, to start their own personal emergency kit.

# Online business advice

OCTOBER is small business month on King Island organised by KIRDO and the Chamber of Commerce and coincides with the Tasmanian state government's launch of their free Tasmanian Business Advice Service.

The new website is now live and registrations of interest will get first access.

Small Business Minister Madeleine Ogilvie says the launch of the website is a game changer for Tasmania's small business community.

"This new website features information for the Tasmanian Business Advice Service and also for the New Business Support Pilot Program, with both services to commence the provision of free and independent advice from Monday, October 2," Ms Ogilvie said.

"Existing small businesses will be able to access up to five hours of advice under the Tasmanian Business Advice Service, and new or early-stage businesses can access up to two hours of advice through

the New Business Support Pilot Program."

The Tasmanian Business Advice Service will provide advice on subjects including managing cashflow, marketing, risk management and small business planning and strategy.

"The New Business Support Pilot Program offers guidance on key aspects of starting a business, including establishing a business structure, determining business viability, financial forecasting and identifying new opportunities," Ms Ogilvie said.

"Both services increase the choice and flexibility for businesses as to who they receive advice from and how they receive it by enabling them to select their advisor and to meet either in person or online.

"I encourage any Tasmanian business wanting free and independent business advice to check the site and register.

For more information and to find out how to access these services visit [www.business-advice.tas.gov.au](http://www.business-advice.tas.gov.au).

# Hydro bosses visit island

HYDRO Tasmania is working through options with the Health Department to use the vacant Hydro building in Currie by the island's Volunteer Ambulance and SES

Members of Hydro Tasmania's executive and senior leadership team, including the new chair Richard Bolt and CEO Ian Brooksbank, visited King Island recently.

This visit aimed to meet local staff, discuss upcoming work, tour field sites, and meet members of the King Island community.

Mayor Marcus Blackie joined the group for dinner in Currie.

"There are no further advances on the vacant building," a Hydro Tasmania spokesperson said.

However, following the Hydro Tas visit, CEO Ian Brooksbank advised Mayor Marcus Blackie there are several factors to work through and he hoped to have a position landed in the near future.

"We understand the need on the island and will be in touch as soon as we have progressed our discussions," Mr Brooksbank said.

Hydro Tasmania is currently using the building at Currie for storage while they assess longer-term options.

"At this stage, no decision has been made about the future

Members from Hydro Tasmania's executive and senior leadership team, including new chair Richard Bolt visited King Island last week.

of the building. If Hydro Tasmania does decide to transfer ownership of the building in the future, we will follow a fair and equitable process," a Hydro spokesperson said.

Construction of the almost six-hectare solar farm, comprising 5000 panels is part of a long-term plan for King Island to transition away from diesel and to renewables.

The new King Island Solar Farm was officially completed

at the start of August.

Hydro confirmed that there has been a delay in the solar farm completion.

"Currently, Hydro Tasmania is waiting for one final component that will connect the solar farm to the electricity grid.

"We expect the solar farm to be fully operational by the end of October."

Hydro Tasmania's electricity retailer Momentum increased their Bass Strait Island prices

by 9.51 per cent on September 1 in parity with the July 1 Tasmanian mainland price rise approved by the Tasmanian Economic Regulator.

King Island has one all-energy Tariff 51 which increased to 31.7933 c per kWh for 2023 - 24. The island does not have other tariffs which are offered to other Tasmanian householders and businesses. Previously Hydro Tasmania said, "Hydro-Tas under their Customer

Service Obligation is chartered to guarantee electricity supply on the island ...Our Community Service Obligation helps shield the island from the full cost of electricity generation."

Since the first announcement of the Hydro Tasmania solar farm build, the company consistently says "The new solar farm will save an additional 300,000 litres in diesel and 800 tonnes in carbon emissions annually and deliver

even greater reliability in electricity supply for local homes and businesses."

Hydro Tasmania has not indicated that there would be any electricity cost saving for King Island residents or businesses due to and following the reduction in the company's diesel purchase from TasPorts nor from the saving of 300,000 litres in diesel consumption and the increased usage of solar in their renewable mix.

## Doubloons for charity

ARGH, avast, ahoy, shiver me timbers, it was Talk like a Pirate Day at King Island District High Launch into Learning program.

In a place not so far away, a heartwarming tradition comes to life each year.

It is a day filled with camaraderie and creativity, where schools, childcare centres, workplaces, and community groups across the country join forces to support a unique cause known as 'Talk Like a Pirate Day.'

This international observance started 20 years ago as a bit of fun and has evolved to support many causes worldwide on September 19.

In Australia, the day aids

Childhood Brain Cancer support.

People of all ages transform themselves into swashbuckling buccaneers, donning eye patches, tricorn hats, and billowing pirate shirts.

They set sail on their own adventures by hosting pirate-themed morning teas, complete with barrels of beverages and treasure chests of delectable treats.

Beyond the fun and frolic, this day carries a deeper purpose. Every gold doubloon collected during these spirited gatherings is destined for a noble cause—Childhood Cancer Support.

This organisation provides

vital support needed to ensure these families can focus on what matters most: their child's well-being.

While the official day of merriment is the 19th, the spirit of giving and togetherness is embraced throughout the entire month of September - National Childhood Cancer Awareness Month, a time when communities unite to bring comfort, healing, and strength to those who need it most.

Talk Like a Pirate Day continues to inspire, reminding us that even in the face of challenges, a little bit of pirate spirit could go a long way in making the world a better place for children and their families.

# Landcare launches weed offensive

Resist the temptation to plant the colourful cape tulip weed in your garden.

One leaf cape tulip is pretty but it is also a toxic and invasive declared weed.

KING Island Landcare is on the offensive against invasive species plants on the island. Some invasive species are considered 'pretty' and easy to grow and are collected to plant in gardens. Over the coming weeks, Landcare will highlight some of the 'pretty' plants that are to be avoided and are targeted for removal.

Cape tulip is smothering the Tip and in Elginshore Drive, Currie, it is spreading out. It is also in Naracoopa, on the airport runway and can be spotted in clumps around the base of trees on properties and roadside verges. It is very attractive, but don't take it home.

It is a declared weed in Tasmania under the Tasmanian Weed Management Act 1999. The importation, sale and distribution of cape tulips by law are prohibited in Tasmania.

There are two species of cape tulip in Tasmania: one-leaf cape tulip (*Moraea flaccida*) and two-leaf cape tulip (*M. miniata*). Their features are similar so for practical purposes they are treated as one weed.

Cape tulips are perennial (long-lived) herbs growing to 70 to 80 cm high. The leaves are long and linear and droop above the flowers; one-leaf cape tulip has a single leaf, while two-leaf cape tulip has two or three leaves.

The flowers are usually orange to salmon pink with a yellow centre, but occasionally plain yellow. Flowering takes place in

spring. Plants do not flower until they are two or three years old.

Cape tulips produce underground bulbs, or corms, each year; the corms of one-leaf cape tulips are covered by a brown fibrous sheath, and the corms of two-leaf cape tulips are covered by a hard black sheath. One-leaf cape tulip produces seeds and Two-leaf cape tulip does not, but pro-

“

Due to their bright and cheerful flower, they are tempting to pick for a vase or to plant in the garden for colour - but don't.

duces clusters of small corms, or cormils, at the base of the leaves and around the parent corm.

Cape tulips emerge in autumn after rain. Depending on the season, up to 60% of corms can remain dormant in the soil,

while cormils can remain dormant for up to eight years.

Dense infestations can have up to 7,000 corms per square metre.

They are serious weeds of pasture and severe infestations can significantly reduce productivity and are also poisonous to stock. The plant remains toxic even when dry, so contaminated hay can also be a problem. Cape tulips can also invade native vegetation and become an environmental weed.

Due to their bright and cheerful flower, they are tempting to pick for a vase or to plant in the garden for colour - but don't. If you locate cape tulips anywhere on King Island, contact Bioscurety Tasmania on 03 6165 3777 to report this weed or as a landholder or stakeholder, there is a requirement to remove it under Statutory Land Management Plans.

Removal can be done by hand or by chemical controls. A number of herbicides are registered for use on cape tulip in Tasmania and can be found at nre.tas.gov.au with usage guidelines and information concerning waterways protection.

NRE and King Island Landcare recommend that where cape tulip is evident in pastures or roadsides wash down vehicles after works to avoid further distribution and inspect hay bales for corms, and importantly do not plant in cleared areas or in a garden.

## Netball fans set to mix it up

KING Island's netball season 2023 is over, but netball on King Island continues and joins the rapid rise in Mixed Netball competitions that are happening around the country.

Mixed sports events are not unusual on the island and have occurred periodically throughout the island's history with matches in football, tennis, cricket, bowls, golf and other, however, an organised Mixed competition is a little more unusual.

Data from the Australian Sports Commission's latest sports survey shows an estimated 115,400 men played netball in 2022 - up from 64,300 in 2020. Women

and girls still make up the vast majority of more than 1 million netballers, which has overtaken Aussie rules (924,400) to be the third-highest team participation sport in Australia after soccer (1.7 million) and basketball (1.1 million).

Interstate netball associations and corporate sports companies are reporting the demand for mixed netball competitions is rapidly increasing and they expect this to continue.

In the capital cities mixed office worker lunchtime comps are now commonplace and it appears to be a sport of choice for many

accountants and lawyers and it suits warmer weather nighttime sports activities.

Locally, the senior and junior mixed competition is gearing up with the competition commencing at 3.15pm for juniors followed by seniors at 6pm Thursday, October 26 and both conclude on Thursday, December 7.

There is no cap to the number on a team for the seniors mixed team and there is a maximum of three men per team on the court at any one time

All games are round-robin each week with seniors having two 15-minute halves and juniors two 10-minute halves.

Junior teams will play two games every Thursday for six weeks.

The cost for each player is \$20. Senior team submissions should be made to kinetballassoc@gmail.com by Thursday October 5.

Junior teams will be assigned during the Term Three school holidays. KINA encourages under 16 players to use this opportunity to try umpiring.

For those unable to make the Grades 3 - 10 mixed netball round robin session held last Monday after school who want more information please contact Tegan Hennessey on the KINA Facebook page or email kinetballassoc@gmail.com.

Some fancy footwork by Annalyse Dwyer.

THE King Island District High School annual Cross Country was under a cloud the night before its running due to the island’s weather predictions, but by morning the school’s runners and parents woke to blue skies and sunshine. The annual event is for all ages across the year levels.

“There was a big crowd of parents who joined us to see the friendly competition at our annual Cross-Country carnival. The final scores were; Cataraqui - 320 Bronzewing – 294. The class champions will be announced and recognised in the first week back of next term,” KIDHS principal Denise Bryant said.

# Pets part of preparedness

Marian Joubert with Lulu. The Dog Tails family involves three generations (Marian, Harriet and Marian) who breed Dachshunds of all shapes and sizes and encourage the island's pet owners to have a plan for pets and livestock in an emergency.

FREIGHT CONNECTIONS: 6432 4362  
JIM MCKENZIE AGENCIES: 6462 1415

RSPCA Tasmania has introduced "READY PET, GO" a project aimed at safeguarding human and animal lives during emergencies.

With the predicted warm and dry spring and summer ahead, risks for bush fires and drought are at an all-time high.

The initiative provides an invaluable solution to lack of preparedness during emergencies by offering free, accessible step-by-step guides and materials.

The resources will help to prepare essential documentation, kits, supplies and plans

promptly and effectively.

The "READY PET GO!" package comes with a complimentary brochure outlining three critical facets of emergency readiness and evacuation.

A free QR coded vehicle sticker is also provided allowing users to stay informed about ongoing emergencies across the state regardless of location or travel plans.

The "GET READY" section emphasizes the gathering of vital documents, encouraging their regular review and updating every 12 months as well as storing a week's worth

of pet's medication for potential evacuation.

Under "Get, PET," the project delves into crafting an actionable plan and gathering immediate supplies for each pet.

RSPCA Tasmania's guide recognises the ease to which essential items can be forgotten or neglected during emergencies.

The guide addresses transportation containers, leads, comfort items, food and toileting necessities all to ensure pets' comfort, security and continuity of routine during evacuation process.

The "GO" section equips individuals with tools to authenticate emergencies and make informed decisions.

A TasALERT QR coded vehicle sticker allows real-time access to the TasALERT website which aids in determining travel safety, identifying threats to planned safe zones and locating nearest evacuation centres.

"The directive is clear: when it's time to "GO" hesitation could be life-threatening."

The free DL Brochure and vehicle sticker can be accessed from [rspcatas.org.au](http://rspcatas.org.au)

## Asparagus fern FIELD DAY

*Come and see a gorgeous spot.  
See our Asparagus fern control trials.

# It's written in the stars

with SABINE GABAUER

**T**HIS week's Full Moon in the sign of Aries represents a culmination of powerful, creative and tense energies that we will be navigating our ship through.

Can we steer our boat safely into Currie harbour within a finely tuned spirit of gentleness and equilibrium, or will we allow the roaring forties to take hold of our inner balance and fortitude?

It's up to us! You smooth sailors out there and expect heightened emotions, unexpected events as well as waves of epiphanies.

This week we are invited to embrace the power of all things "Libran", the scales that teach us about balance, harmony, and beauty within relationships.

A great week to explore the remains of some of the shipwrecks and maybe to re-evaluate the hidden treasures of our own vessel.

ARIES

**Aries** – You feisty ram! This week starts with a big bang as you feel a great sense of liberation and the wish to assert your will. Relationships are highlighted as creative tension arises and you will be busy balancing the energies of me versus the other. You can do this!

TAURUS

**Taurus** – If you find yourself striving for perfection at work this week, try to surrender to what is and remain in the moment. You may feel like a good workout at the newly renovated gym in order to release any built-up and internalized feelings that are ready to be let go of. Work it bull!

GEMINI

**Gemini** – Your motif of conquest this week is grand as projects and events around your home are gaining momentum. Your mind is active and busy and so are your social interactions. Make sure you find equilibrium from within and lovingly bring any issues to the table. Your kindred spirits will applaud you!

CANCER

**Cancer** – Home is where your heart and heart are crustacean! This week might bring some tension between your innermost self and outer-worldly expectations. Allow some retreat time and find the balance between being and doing and this week will be a breeze. Watch your spending habits!

LEO

**Leo** – This week the sun is shining onto your belief system and how you claim your authority while creating win-win situations. You are summoning and integrating a new sense of self that could even surprise your wild cat! A Catch-up with a dear friend might be due for a much needed debrief. The girls at the "Larder" have done a marvellous job!

VIRGO

**Virgo** – This is a fast-paced week of healing wounds from the past as well as re-evaluating matters of intimacy and closeness. A great week to reflect and spend time in nature as you boost your own worthiness and allow some fresh salty air to sweep out the corners of your thinking mind and your heart.

LIBRA

**Libra** – You are in the spotlight this week! This week's energy brings up discussing and thinking things through before acting. It is important to act with a well-considered intention that is not based on the past. Here's a hint: Libra + Aries = Libraries ... Maybe you will find the book of relations.

SCORPIO

**Scorpio** – This week order meets chaos and commitments mirror sweet surrender. Which one will you choose? Don't take anything personally and allow others to be on their own healing journey. I know you want to go into the depth of the matter, but this week try to be the observer. Stillness speaks!

SAGITTARIUS

**Sagittarius** – What you want and what is might be an odd pair of socks this week. Check with the "Laundry Mat" if in doubt. Harmony and grace yes, peace for any price no! Your urge for autonomy might rock the boat a little. Nothing you can't handle!

CAPRICORN

**Capricorn** – Stand your ground this week, assert your vistas but refrain from passive-aggressive behaviours. Your immediate environs might be triggering this week as you juggle family and work life. Spontaneity will loosen any rigid grip. What about a lovely meal at Oleada? It's always a winner and so are you!

AQUARIUS

**Aquarius** – You are one of the social signs this week, inclusive and involved in community shenanigans. This week could see you taking on an assertive and leading role. Close relationships could instigate sudden changes and surprises bringing a fresh spring-like flair into your already colourful life. For any advice on art and colour ask Karryn Lesley.

PISCES

**Pisces** – Still waters run deep like at "Penny's Lagoon" ... If you have been overspending lately, this week you will get the reminder that balance is required. Themes around mine, yours and ours could be the monster arising out of the depth. A great week to let go, put your flippers on and swim steadily....

# War declared on feral cats

FEDERAL Environment Minister Tanya Plibersek has declared war against feral cats – Australia's latest "environmental disaster" bringing native species to extinction.

The federal government will act against feral (free roaming) cats as part of a new national action plan pitched to save thousands of native species on the brink of extinction.

Cats kill 6,000,000 animals every night and two billion reptiles, birds, and mammals in Australia every year, and are responsible for about two-thirds of the most recent native animal extinctions seen across Australia.

Ms Plibersek said she wanted to see a feral cat-free Australia.

"If we are serious about protecting our precious threatened species, then we have to tackle one of their biggest killers," she said.

The government will move to save vulnerable species by rolling out a new tool, Felixer, designed to kill feral cats by spraying them with a toxic gel and look at expanding cat-free fenced and island havens.

"We know that people love their domestic cats. While they have to look after them, have to keep them inside, they have to stop them killing wildlife," she said.

The federal government has already invested \$4m to eradicate feral cats from Christmas Island and \$2.2m towards the French Island feral cat

**The endangered endemic King island Scrubtit is at risk from predation by feral cats.**

Picture: MARK HOLDSWORTH

on wildlife.

A lesser-known publicised problem of roaming cats is the spread of toxoplasmosis.

Toxoplasmosis is caused by infection by a parasite *Toxoplasma gondii*.

All warm-blooded animals are susceptible to toxoplasmosis infection including humans, wildlife, and livestock.

Toxoplasmosis is cat-dependent and is considered rampant in Tasmania, with studies showing that more Tasmanians have antibodies to toxoplasmosis in their bloodstream than mainland residents.

Toxoplasmosis is estimated to cost Australian agriculture \$10 million per annum and \$76.2m in direct human costs which include medical, residential, therapeutic, and other direct health costs of the disease.

Humans become infected when they ingest oocysts (tiny eggs), which are in the soil and dust in places where cats have defecated, especially sandpits, vegetable gardens or kitty litter.

Humans can also become infected from eating undercooked meat if those farm animals have come into contact with cat-shed oocysts.

The most at risk are the immune-compromised, and

pregnant women.

King Island Landcare Group has carried out cat management programs in the past including trapping feral cats and offering reimbursement for desexing services, with the aim of protecting native wildlife.

In 2023, KILG started a new project assisting primary production landholders with feral cat control.

King Island is home to two critically endangered and endemic bird species: the King Island Scrubtit and King Island Brown Thornbill which are vulnerable to cat predation.

As part of Cradle Coast NRM's efforts to improve habitat and reduce threats to these species, the Cradle Coast regional NRM Committee has funded the lease of four Felixer grooming traps that are being trialled on King Island.

The first stage is a photo-only trial and managed under all relevant legislation and permits and in collaboration with King Island Council and KILG.

KILG is currently providing a small number of cage traps to landholders managing primary production land.

KILG is recording details of trap locations and results and informing landholders of their legal responsibilities.

A collaboration with Deakin University is enabling additional monitoring data to be collected from a network of wildlife cameras across the island to study feral cat

population and distribution and a component planned is feral cat stomach analysis using cats trapped by KILG landholders to determine what native species are most vulnerable to cat predation.

Since March 2022, it has been a legal requirement under the Tasmanian Cat Management Act 2009 to desex and microchip any owned cat over the age of four months.

KILG is not currently funded for cat management projects, however, they can lend out cat traps free of charge to anyone in the community.

A trap would come with information on the state and federal legal agencies' requirements.

This includes that any cat trapped within 1 km of a residential property must be checked for a microchip to ensure they are not a pet.

All cats caught and determined to not be domestic pets, must be euthanised humanely (shot by a licensed shooter or taken to a vet).

"Cat owners can do best for themselves, their cats, and King Island native wildlife by keeping their cats indoors, ensuring they are desexed and having them microchipped and collared," Landcare said.

"King Island Landcare is not against ownership of household cats but merely wants them to not pose a threat to the overall population of the native King Island species."

# Greens ready and waiting

BOWLS on King Island has gone from strength to strength over the past few years. Barefoot Bowls on a Thursday night is a hit welcoming both residents and visitors.

The Saturday individual and team comps are social yet competitive and the 2023-24 season is about to start.

Bowls practice started on Saturday, and everyone is welcome to the King Island Golf and Bowling Club from 1pm.

The greens are ready and waiting for both beginners and experts (or would-be experts).

Island bowlers willingly assist and coach beginners and no one should be nervous about taking up the game.

It is a very sociable game and people of all ages and abilities can take part.

Its simple rules mean that it's an easy game for first timers to understand.

It's also a great form of exercise, and its low-intensity nature means that there is minimal risk of injury, so people with limited

physical ability can still take part and it's a great way to meet new people of all ages and island interests.

The KIGBC club rooms encourage the social side where golfers, bowlers, locals, and visitors mingle over the spring and summer months.

Bare Foot Bowls will be starting on Thursday, October 5, traditionally followed by a barbecue and Saturday's individual and team competition start and the tournament dates and sponsors will be announced soon, so in the meantime get some practice in.

**ABOVE:**  
The footy season is a memory and Craig Constable hits the greens and starts practice for the start of the island bowls competition.

## School goes by the book

King Island District High School was a blaze of colour and fantasy as characters emerged from the school bus and drop-off cars during Book Week celebrations this week

STORY, PICTURES: PAGE 4

Favourite book characters came alive at KIDHS during National Book week.

## Would-be troublemakers on notice

# BOOZERS FACE BAN

TROUBLEMAKING drinkers have been warned if they engage in violent, criminal, or anti-social behaviour at a licensed premises they may find it hard to get a drink on King Island.

The King Island Liquor Accord has recently introduced the multi-venue barring policy covering all licensed venues that are members.

The Liquor Accord signatories at this time are The King Island Hotel, The King Island

Club, The King Island Golf and Bowling Club, the Grassy Club and the King Island Brewhouse.

The "barred from one, barred from all" initiative will see patrons barred for between three months and life from all participating venues and businesses depending on the severity of the act.

The King Island Police fully support the King Island Liquor Accord and its members in their endeavours to promote safe and responsible

drinking and reduce alcohol-related crime by introducing this policy. Brewhouse co-owner Corey Brazendale said the Liquor Accord was not a new thing on the island.

"There was similar solidarity and a Liquor Accord with venues going back over the years," he said.

"Licensees meet periodically and this is a way that they can be proactive, can support responsible alcohol sales and consumption, and

safeguard individuals, the community, and the establishment," he said. "We want to make our expectations around drinking clear to patrons and to the community.

"Licensees take their roles very seriously and we can administer these controls if needed ourselves.

"We generally don't have any trouble and are very family-friendly, and we are supportive and part of the accord," Mr Brazendale said.

GRASSY MAKES IT THREE IN A ROW – Page 6&7

# Mine officially opens

THE Group 6 Metals (G6M) mine was officially opened last week and a plaque was unveiled by Tasmanian Resources Minister Felix Ellis to commemorate the occasion.

In July, G6M showcased its operations for King Island residents when the mine commenced its first commercial production.

Last Thursday investors and guests flew in for the official opening event. Guests toured the mine operations and production facilities.

The tour explained how it all works, and a small ceremony marked the formal opening of the mine.

Mr Ellis declared the mine officially operational.

"Fourteen years in the making, it is tremendous to see this economic gamechanger get going," he said.

"The Dolphin Mine is known for hosting the highest-grade tungsten deposit of significant size in the western world.

"In recent years the tungsten prices have surged significantly, and it is now classified as a critical mineral by the Australian Government, and others globally," Mr Ellis said.

G6M Executive Chairman Johann Jacobs, Managing Director and CEO Keith McKnight, Labor Senator for Tasmania Anne Urquhart and King Island's Mayor Marcus

**General Manager of Project and Development Operations G6M Charles (Chas) Murcott, left, with Resources Minister Felix Ellis on-site at the official opening of the mine at Grassy.**

those staying went to the King Island Hotel for drinks and dinner with the option of playing golf or taking a culinary tour on Friday.

The Grassy mine first operated between 1917 and 1992 and then closed due to low tungsten prices and geopolitical changes.

It is estimated that 50 per cent of the known mineral resource is unmined. This year, the company embarked on an exploration drilling program and aims to test the full potential of the area (63 sq km) under exploration lease and to extend the Dolphin Tungsten Project life beyond the current 14 years.

G6M's plan is to resume exploration after steady-state production is achieved at the Dolphin Mine, Mr McKnight recently reported to the Stock Exchange.

"All three exploration holes have successfully intersected skarn mineralisation in the mine series validating the exploration potential of the Grassy region.

"The presence of scheelite mineralisation associated with the skarn indicates the right geological processes for significant mineralisation in the district.

"The company is excited by the results from step-out exploration in this region and systematic drilling is planned to allow more targeted exploration on structural targets," he said.

Blackie joined Mr Ellis and spoke of the mine's achievements and milestones after

being dormant for 33 years; its critical importance; the contribution to federal, state and King Island's economy and the support received.

"With about 95 full-time jobs expected to be supported through this operation, the mine will be King Island's single biggest employer, keeping roofs over the heads of local families and meals on their tables.

"It also provides a further

economic boost to the local community with flow through to local businesses.

"Around \$5 million will go into the local economy directly through salaries alone and, for the broader state, around \$30 million is expected to be returned to the Tasmanian taxpayer through mining royalties and other payments," Mr Ellis said.

The day was not overly burdened with speeches and

formalities and the visitors were able to have, albeit a time-restricted, "King Island experience".

Guests mingled at the mine owned Portlinks facilities prior to going to the site and heard about the mine's history, the journey to this point of formal opening and the value and role of tungsten as a global critical mineral.

Following the opening guests departed the island and

## Pamphlets put Yes, No cases as Voice Referendum date set

THE Voice Referendum will be held on October 14, Prime Minister Anthony Albanese announced yesterday.

Voice Referendum pamphlets arrived on King Island this week and were distributed to enrolled voters at their registered address.

The Australian Electoral Commission (AEC) is required to distribute a pamphlet to Australian voters, containing the Yes and No cases prepared by parliamentarians who voted for and against the proposed law.

The AEC must administer the law and has addressed

media discussions around what will and will not be a formal vote for the 2023 referendum.

The issue is specifically around whether or not a tick or a cross will be able to be counted.

"Much of that commentary is factually incorrect and ignores the law surrounding 'savings provisions', the long-standing legal advice regarding the use of ticks and crosses, and the decades-long and multi-referendum history of the application of that law and advice," the AEC said.

"The formal voting

instructions for the referendum are to clearly write either "yes" or "no", in full, in English.

Given the simplicity, the AEC expects the vast majority of Australian voters to follow those instructions and cast a formal vote.

"Instructions for casting a formal vote – to write either yes or no in full, in English, will be part of the AEC's advertising campaign, on the AEC website, in the guide delivered to all Australian households, on posters in polling places, and on the ballot paper itself.

"An instruction will be

issued by our polling officials when people are issued with their ballot paper," the AEC said.

"This is not new, nor a new AEC determination of any kind for the 2023 referendum."

If you have not received the pamphlet presenting the cases for yes or no prepared by parliamentarians who voted for and against the proposed law or want to obtain information about the Referendum, the question that will be put to voters, completing the ballot form and other explainers go to [aec.gov.au/referendums](http://aec.gov.au/referendums).

## Ambo headquarters a step closer

THERE has been a breakthrough from lobbying by organisations, politicians and individuals for the vacant Hydro-owned building in George Street Currie to be used by King Island Volunteer Ambulance and SES.

The matter was raised during the State Government Regional Cabinet meeting held on the

island earlier this month.

Mayor Marcus Blackie said he received a letter from Police, Fire and Emergency Management Minister Felix Ellis on August 18 as a direct follow up to the recent State Cabinet visit.

"The letter states that they have now initiated discussions across the required Tasmanian Government agencies to

identify opportunities for multi-use facilities to be established on King Island as a matter of urgency.

"So, this is another firm step in the right direction that we hope will soon approve the repurposing of the old Hydro Tas compound on George Street in Currie for emergency services use in the future," he said.

"That being said, the compound has now been empty for a few years and the clock is ticking to ensure this decision is made before significant further deterioration of the facility occurs.

The King Island Volunteer Ambulance does not have a dedicated base and there has been considerable lobbying.

# Considering careers

Students Grades 3 – 10 spoke with exhibitors throughout the day and were able to ask questions, collect giveaways and engage in activities.

STUDENTS from the King Island District High School attended this year's Career's Expo in the Town Hall in Currie.

The Expo organised by MAS National provided exhibitors the opportunity to talk to students about careers and pathways from Grades 3 through to Year 10.

Exhibitors ranged from on-island businesses such as Group 6 Metals,

and the King Island Council as well as education institutions such as UTAS, and recruitment and training companies.

Older students discussed in-school and vocational apprenticeships, and training and also met with prospective employers.

The Australian Defence Force table was busy.

Navy CPO Sarah Lindsay said that

students were keen to know about career paths and were most interested in the travel that she and Army WO Luke Phillips had done.

Younger students enjoyed interactive activities and the exposure helped with vocational and future pathway awareness and options.

Senior students visited Hydro Tasmania at their Huxley Hill operations and were able to find out about King

Island's energy production and usage as part of National Science Week and were also able to find out about jobs, training and careers.

The exhibition was open to all businesses and King Islanders and it is hoped that next year even more will attend the customised event to find out about employment, funded apprenticeships, and re/training opportunities for both on and off the island.

ABOVE: MAS National Career Development Team Leader and member of the Intowork network Hope Wooldridge collaborated with KIDHS and island employer groups to run the 2023 Careers Expo.

# Online health option

OCHRE Health Medical Centre has trialled a new online prescription and specialist referral product.

“Don’t feel like coming up the practice? Run out of time or don’t have the time? No appointments available? Don’t worry we have you covered,” the King Island Medical Centre posted on social media.

The practice has been trialling a new online feature for existing patients needing urgent repeat prescriptions or repeat referrals. Following the click instructions, the online scripts are sent to your phone, the pharmacy or left at the practice for collection.

Once you have requested an online script, a medical practitioner will assess and accept, or decline based on clinical grounds. If your repeat or referral is very urgent, it is suggested you select collect from the practice to avoid delays in processing time.

A patient may request more than one medication repeat prescription. Fees are payable at the time of the online request. Medical Centre appointments in person or via Telehealth phone or video call are bulk billed.

# School does it by the book

AROUND Australia, the night before Book Week is one of celebration and excitement and for others, it's a night of panic to get a costume together by the morning. On King Island, it's a week of book love and celebration.

The Children's Book Council of Australia's Book Week 2023 theme was "Read, Grow, Inspire," and it was an opportunity for children, teachers, parents, and guardians an excuse to dive into the world of children's books together.

King Island District High School was a blaze of colour and fantasy as characters emerged from the school bus and drop-off cars.

A late school option, for those who needed even more to celebrate, was a request to wear some green and gold to celebrate the Matilda's FIFA Women's World Cup soccer triumphs and their fairy tale.

There was Wally, Harry, a few Spidermen, a crocodile or two, cowboys and princesses, witches and farmers and the not-so-well-known characters that have grabbed the hearts and minds of our island's young and not-so-young readers.

The school held a parade for the big and small and embraced their communal love of books and reading.

**ABOVE:**  
KIDHS Teachers and staff joined students and together got creative to celebrate National Book Week.

**RIGHT:**  
A multitude of characters gathered to celebrate books.

**BELOW:**  
Tash Overton goes down the rabbit hole in the KIDHS office.

KIDHS librarian Megan Chivers and Lynda French put their inner child on show.

Ollie Wallis dressed as a zombie pirate for Book Week inspired by Two Stubborn Pirates. Ollie thanks his MS Readathon sponsors.

# Innovation powers future industries

DENISE BRYANT  
KIDHS PRINCIPAL

NATIONAL Science Week is Australia’s annual celebration of science and technology. Running each year in August, it features more than 1000 events around Australia.

Established in 1997, National Science Week is a program of Inspiring Australia and provides an opportunity to acknowledge the contributions of Australian scientists to the world of knowledge.

At KIDHS, Science Week was led by Jen Holbrook, our Head of Science.

This year’s theme; Innovation: Powering Future Industries, provided our students with opportunities to learn through inquiring into the possible technological advances of the future.

The theme incorporates the advancement in technology in all industries, especially using artificial intelligence (AI).

The curriculum focus of the theme was on: Science as a Human Endeavour; Chemical Sciences; Physical Sciences; Earth and Space Sciences, and Biological Sciences.

A range of projects was undertaken across the school.

Parents and community members visited the school on Sunday to view our students’ work and The Rock Cafe served coffee and sweet and savoury treats.

Prep student Bodhi McGrath undertook a STEM challenge to make a Mars Rover for National Science Week.

**Three Premiership cups in a row 21, 22, 23. Craig Constable GFC player and Grassy Juniors coach and father Peter Constable with the three-peat Senior trophies.**

## Currie/North in a close junior Grand Final

### KING ISLAND FOOTBALL ASSOCIATION JUNIOR GRAND FINAL

Grassy .....	Currie/North
1-4-10 .....	0-2-2
2-4-16 .....	2-6-18
4-8-32 .....	5-7-37
7-8-50 .....	7-12-54

#### Grassy

Goals: Xavier Berkin 3, R. Esquerra 2, T. Berkin, Cruz Osborne  
Best: R. Payne, Cruz Osborne, X. Berkin, Chase Osborne, C. Stellmaker, C. Harvey, R. Esquerra

#### Currie

Goals: L. Reeman 3, Hugh Lincoln 2, G. Freeman, M. Button  
Best: L. Reeman, M. Button, T. Hyde, E. Clemons, M. Poulson, A. Perry.

THE junior Grand Final went right down to wire with the Currie/North combined side winning the game with the last kick of the day.

The game had been tight all game with Grassy leading early and then Currie/North fighting back. Currie/North had a 2-point lead at halftime and a 5-point lead at three-quarter time.

The last quarter saw Grassy regain the lead, but then Currie/North got it back. Grassy got the lead again and looked like that was it, but Currie/North kept attacking their goal but were only kicking points.

Grassy were able to clear it again but only as far as the centre with Currie/North moving it forward to a running Mathew Button who was able to get his big boot to the ball and saw it go over the Grassy players and roll through for a fantastic goal.

The went back to the centre and the siren blew to see them win by four points in what was a great game. The Keven Grave Medal for the best player in the grand final went to Tyreese Berkin from Grassy and was presented by Kevin Grave himself.

### KING ISLAND FOOTBALL ASSOCIATION

IT IS finally here, the last Saturday in August and the 2023 King Island Football Association's Grand Final day where the minor premiers Grassy Hawks will take on the Currie Robins.

All clubs, umpires and support staff wore black arm bands for the passing of Peter Youd this week. Peter was a long-time supporter of the Currie FC and football in general on King Island. He was president of the KIFA for 6 years from 2010 to 2015. A minute's silence was held for him before the national anthem.

Grassy started hot to trot and were first to score through Jackson Taylor with some hot wheels on sprinting up the wing but ground grubs the kick into the goal post, a second attempt is also made by Grassy with a Brady Rhodes mark that he dribbles over the boundary for a throw-in.

Currie win the clearance to get their first serious look forward for a behind by Ben Doherty. In a forward press for Grassy, the ball meets a contest and dribbles over the boundary again.

Currie have indeed brought their high-pressure game into the final and neither team can get a clean hand to it, but the ball spends a lot of time the Grassy forward line early.

Rory Taylor is also making an impact early. Pressure from Clint Stretton onto Sam Reeves means his errant kicks is immediately turned over. In the Currie forward area, Dylan Keeley gets a look at the ball but has neither the time or space to make an impact. Jack Worrall marks in defence, the turnovers are fierce and the only consistent thing happening so far in this game.

Sukma Bowling touches another on the line for Grassy, so far behinds have been the only score available. Dale Reed has the ball outside 40m and looks for a way in but all he's met with is congestion. Brandon Blomfield gives Grassy something to aim at in the forward line but no possession is easy and J Taylor takes a well-fought mark just left of the goal from a body-on-body with Joel Williams, and the result is the same, just left of goal.

The pace of the game moves quickly and I fear if I stop typing for even a moment I will miss things, which I almost do when Tristan Forrest runs from the centre, breaks the drought with a big kick and a lucky bounce

for the first goal of the match.

The Taylor boys link up to put Grassy forward again but are met by Worrall who turns it over and gives Currie another shot forward, while Currie's pressure has been intense their forward entries have been few and far between, they do not have the luxury of missed opportunities today. Forrest, again, gets possession at centre half forward and wheels around a few to slot his and Grassy's second of the match.

Jack Nosedo in defence plays in front for an easy turnover and Grassy goes forward again to their leading goal kicker Tyler Rhodes who gets involved, a shot on and his big kick is an accurate one. Mole (Joel Williams) is doing a power of work for Currie in the middle and is rewarded with a free, into Jak Youd, who slots it over to Keeler who will have Currie's first set shot at goal of the match and he capitalises. Bowling wins a clearance and the contest follows the ball out on the wing. Currie gains possession and another opportunity that Dylan Keeler puts an end to. Grassy go in at quarter time it 14 points up.

Rory Taylor v Michael Laskey in the first ruck, an even contest is immediately held up in congestion. Doug Cox receives a free in the wing and get its forward for Currie until Rory Taylor is awarded a free deep in defence and as Grassy head up the canteen wing Currie is caught off guard. Jackson Taylor sprints out with a shot on with no one home for Currie but gets unlucky on the second bounce and goes through for a behind.

Grassy get a second chance shortly after when T Rhodes gets a free in close to goal and makes it happen. Jackson Taylor out of centre goes into Tyler Rhodes on the lead who goes bang bang with two goals in as many minutes. Grassy get another free up forward and Forrest will line up for another, and gets it. Grassy have blown out the scoreboard in this second quarter but Currie's pressure has not ceased.

Mole kicks in from a behind and they move the ball back to their forward line which meets Nosedo's golden fist. Freddy Tatawaqa at full back puts a stop to any scoring ideas Currie has. Bowling gets some air and takes a contender for mark of the year but his kick is errant and finds Grassy's seemingly impenetrable backline. Jakawenko gets a shot at 40 out and gives Currie something to

## ANNUAL GENERAL MEETING

**Wednesday 13th September 2023**

Hoopers Room, King Island Club

6.30pm

### Agenda

- Confirmation of 2022 AGM Minutes
- President's Report
- Treasurer's Report
- DRAFT Annual Report incl. Auditors Report

- Nominations must be received by the 8th September 2022
- Appointment of the Public Officer
- Appointment of the Auditor

Members must be financial to nominate and vote, payment would be appreciated before the meeting.

Sally Haneveer, Public Officer.

# n row

Coach Stacy Martin with the 2023 Juniors Currie-North Premiers.

## FINAL SCORES

### King Island Football Association Scores 19-08-2023

Seniors	
Grassy .....	Currie
3-3-21 .....	1-1-7
9-7-61 .....	2-2-14
13-10-88 .....	4-3-27
17-11-113 .....	5-3-33
Grassy	
Goals: T. Rhodes 5, T. Forrest 4, D. Reed 2, D. Keely 2, J. Taylor, M. Monson, B. Blomfield, C. Constable	
Best: T. Forrest, R. Taylor, B. Blomfield, F. Tatawaqua, D. Keely, J. Taylor	
Currie	
Goals: C. Keeler, C. Stretton, J. Youd, D. Cox, D. Beecroft	
Best: J. Williams, T. Smith, J. Bellchambers, J Worral, J. Youd, S. Bowling	

cheer about shortly after ,Smith and Doherty put a nice little package together in Currie’s forward line but results in nothing.

Bradey Rhodes gets a controversial mark in the pocket and sprays his first one for the day, but the ball only gets as far as the centre where Blomfield tackles and gets the free, goes forward, finds Forrest who goals again. Frosi and Worral in a ruck contest and they both miss everything and flattens them both hard on the deck. Rory Taylor takes an intercept in the centre and runs on, kick is touched by Worral, but Reed runs in and picks it up on the line to chip it through for a certain Grassy goal.

Forrest from the centre, into Reed, back to Forrest who will go for goal and misses by an edge which has been a rarity for him as he has put together a stella performance so far today see him help Grassy to a 47 point lead at half time.

Worral and R Taylor go up in ruck and Bowling gives Currie the first look, until Reeves receives a free, but kicks it into

Worral, there is s contest in the middle until Grassy find their way forward and over the line for a throw in that Jackson Taylor speeds out of and gets the first for Grassy in the second half.

With no wind there is a silence around the field since half time, the scoreline continues to blow apart. Jak Youd take a nice intercept mark at half forward and punts one home for a Currie goal. Forrest pirouettes out of trouble, to Wardlaw and push forward where Reed gets a nice low mark in front of the Grassy faithful in the pocket, he makes the most of his opportunity with a long bomb goal. Grassy spend some time up forward.

Amie (Arnold Stellmaker) gets involved in the centre, Youd sells some candy into Doug who marks, plays on, and runs into open goal. Wardlaw and Stretton in a nice contest that Stretton wins this time getting the ball deeper into Currie’s forward line but is met by a roaming, unmanned Nosedo for an easy turnover. Bellchambers unusually quite today finds a behind. Reed another goal for Grassy. Perhaps it is the intensity of the game or the chill that is

descending but the game is slipping away from Currie. Play has deteriorated but the pressure remains, but some passes get sloppy, players are getting slower and the scoreline continues to widen.

Laskey runs down the wing and dodges two, but the ball gets caught in the centre, and ultimately back in Grassy’s forward line where Monson will get a shot on and scores and see Grassy increase their lead to 61 points at lemons.

The final quarter starts and Currie have unleashed Tommy Graham, and to Currie’s credit with the margin seemingly insurmountable they continue to go hard and put up a fight to the end. Although, Nosedo does continues his free reign in the backline. Youd hits the point post so squarely the top might wobble off. Grassy exit the backline up the golf course side to Keeley in the centre but finds a Worral fist, contest, wich goes over Monson’s head and finds the boundary. Bellchambers, to Bolwing, to the centre, Nosedo strolling through procures it and pops one into Forrest, T. Rhodes calls for it, but Tristan takes on the kick, misses to the centre that finds Monson

who gets it into Keeley who goals it. There’s a lot of congestion in the centre and Tristan Forrest takes it out of Currie’s forward line, he’s been both back and forward today. Tyler Rhodes lines up from the pocket wing probably 20, 30 out. Three minutes to go. There is a ball up in Grassy’s forward line. Dyland Keeley comes out with it and has a pot shot for a goal. The ball goes back to centre and what you would think will be the last ball up of the game, Rory and Laskey contest the ruck but there is just more congestion. James Jakawenko takes possession but goes to ground. Grassy sneak in another goal, and as the ball is returned to centre the final siren sounds to the cheers of the Grassy faithful and they become premiers by 80 points for 2023 and see themselves enter the record books by winning 3 in a row for the first time in their history.

Winner of the Jim Sartori Medal for the best player in the grand final went to Tristan Forrest from Grassy and was presented by Jim’s son Donald Sartori.

Donald Sartori, Kelsey Watts, Chris Barnett (GFC Coach) with Tristan Forest (GFC Captain) and winner of Grand Final best on ground Sartori Medal with his children Harrison and Sadie.

Junior Grand Final Best on Ground Kevin Grave Medal awarded to Tyreese Berkin GFC pictured with Kevin Grave.

# Key steps before cast off

SEPTEMBER is the traditional time for football finals – and summer dreaming about the boating season ahead – as well as an excellent time for regular boat maintenance.

Many Tasmanian boaters stow their craft on trailers through the winter months.

You should check your boat and its components to ensure they are in good order and operational.

In general:  
**INSPECT** aluminium boats for cracked welds or electrolysis, delamination, rotting in fibreglass boats, cracks and general wear and tear.

**TEST** your steering. Does it move freely? Check the cable or hydraulic line for leaks top up hydraulic fluid if necessary.

**ENSURE** bung is in good condition and not damaged. Does it seal off correctly?

**CHARGE** the batteries and ensure they are secured.

**CHECK** wiring for cracking, loose wires and corrosion.

**ENSURE** bilges are clean and dry.

**CHECK** your fuel system – inspect the tank for cracks and corrosion; replace old fuel with new after periods of inactivity; drain water and debris from fuel.

This is also a good to review all your safety gear,

Go boating with the confidence of knowing your boat has been serviced and well prepared.

and adjust their height for even distribution of load. Test the indicator and brake lights regularly; check tyre wear and pressure regularly. **REPLACE** the trailer's tie down straps if frayed and replace the winch cable/strap if it has become frayed.

Make sure you have your outboard or diesel engine serviced. For regular servicing and advice on servicing intervals contact your local outboard or diesel engine dealer.

Manufacturers usually recommend a service by a specialised workshop at least every 12 months.

All of this preparation means that the next time you go boating, you can be confident knowing that your boat has been serviced and is well-prepared.

For more information and tips, go to: <https://mast.tas.gov.au/safe-boating/vessel-maintenance/>

including:  
**HAVE** your inflatable life jackets been serviced in accordance with the manufacturer's instructions. **ARE** your flares in date? If they're out of date or close to it, consider purchasing a new Electronic Visual Distress Signal. If you

choose to carry an EVDS make sure your vessel is fitted with a GPS enabled EPIRB and a working VHF radio in Sheltered Waters. EVDS are ineffective in daylight hours **TEST** your VHF radio to ensure it is functioning correctly Check your EPIRB

expiry date and ensure the unit is registered with AMSA. **TEST** any electrics operating from the battery such as radios and navigation lights; test that navigation lights and bilge pump work, if fitted. **INSPECT** anchor, shackles,

chain and line for any sign of wear or corrosion. Make sure shackles are tight and moused (pin secured with wire). **OPERATE** your auxiliary engine periodically to ensure it will work when required. **CHECK** your trailer. Replace deteriorated rollers

## Races to ring in New Year

TASRACING has accepted the King Island Racing Club's request to hold the King Island Cup day on New Year's Eve, Sunday December 31 instead of January 6.

The 2023 racing season starts with the Official Trial Day on November 18. Ladies' Day will be Saturday, December 2 and KI Beef Day Saturday, December 16. There are races on Boxing Day and New Year's eve.

There are three race days scheduled in 2024, KI Recreation Day Saturday, January 13, the Maritime/Miners Rest Cup Day, January 20 and Southern Airlines Fly-in Day Saturday, January 27, 2024.

# Shipping review report due

THE Office of the Economic Regulator (OTTER) confirmed last week that the report from their inquiry in relation to the pricing policy of TasPorts' wholly owned subsidiary Bass Island Line (BIL) will be handed to the Treasurer and Minister for Infrastructure and Transport by today.

In November 2022, Infrastructure and Transport Minister and Treasurer Michael Ferguson initiated a prescribed body inquiry under the Economic Regulator Act in relation to the pricing policy of TasPorts' wholly owned subsidiary Bass Island Line (BIL).

"The Economic Regulator would be looking at the economic elements and the pricing components that go into prices charged to customers," Mr Ferguson said.

Murchison MLC Ruth Forrest expressed her concerns

**Murchison MLC Ruth Forrest visited King Island to discuss shipping issues with the community.**

delays and the difficulty many King Islanders may have in presenting a written submission and urged OTTER to visit the island for oral submissions.

The Regulator visited in May; however, OTTER did not undertake an awareness campaign or any advertising to encourage community participation or provide transparency around engagement.

OTTER was criticised for having a "narrow enterprise

definition of customer and freight user".

Ms Forrest, said after the OTTER team visited the island there had not been any advertising or information to at least let people and businesses be aware of this visit.

"The expectation is that it's understood by the regulator and the inquiry that everyone on King Island is a customer.

"Shipping and freight tasks and costs, pricing, and regularity impact everyone every day," she said.

"It's apparent that a highly targeted approach is being used, which misses the point of the total island reliance on shipping and freight.

"They need a full and complete understanding. Everyone on the island has skin in the game."

OTTER was informed that

island businesses, who consider themselves regular freight users and sizeable BIL customers were unaware of the OTTER team visit or found out about the visit by an email on their arrival sent by KIRDO.

"The Regulator has identified key stakeholders to consult with, namely major customers, intermediaries involved in the King Island freight task, and those who have been in touch with the Regulator's office," the regulator said.

"Interested parties were welcome to contact OTTER to make a submission."

According to OTTER the Treasurer will receive their prescribed body inquiry report by August 31.

The Treasurer has been asked by the Courier for a response to the report and if the report will be published in due course.

## It's written in the stars

with SABINE GABAUER

**W**ELCOME to this week's Astro weather! This week's energies are as unpredictable as the weather on the island.

Just when we feel the warming, nurturing sun rays teasing us with Spring-like radiance, we are surprised by sudden showers and gusts of seaweed infused yet refreshing, rebirthing winds.

The planetary dialogues are very much in sync. Time to batten down the hatches, check all the lines, and get your ship ready to sail.

We've got a tough captain in the Bass Strait this week, so we all need to straighten up to ship out.

How do we best navigate through a week of change, unexpected twists and turns and greater inner focus?

Well, the invitation is to slow down, take a break, don't take on more than you can commit to and don't bite off more than you can chew even if your crayfish pie from the bakery tastes just too good to resist.

This is the week where you want to attend to unfinished business, line up your ducks and chickens, prepare, back up your gadgets, check itineraries and practice mindfulness.

ARIES

Relationships are starting to get more harmonious for you as you are invited to heal wounds from the past. Your kindred spirits are supporting you! This is a great week to introduce new lifestyle choices. What about some cold-water exposure at "Pennys Lagoon" to boost your immune system.

TAURUS

Your self-worth, likes and dislikes and value system are highlighted this week. What works for you and what is no longer serving? A creative breeze is sweeping into your island life. Check out what's on at Phoenix House, there might be just the right art class for you!

GEMINI

Your home life is undergoing some change. It might be time to de-clutter your wardrobe, re-arrange furniture or simply potter at home. You are invited to create more balance between family and work, inner versus outer, intuition and thinking mind. You are a born multi-tasker; you can do this.

CANCER

Your home life is more balanced and harmonious even though you might be busier than usual. Remain calm and focused, one step at a time little crab. If you find yourself overthinking things, maybe try a hot bath and a good book.

LEO

Have you done your tax return yet Leo? This is a great week for you to get organized with all things money-related! After so much centre stage, take the opportunity to slow down, go within, join a yoga class, or simply be.

VIRGO

This week expect some chaos, sudden windfalls, twists and turns. Maybe you can see the beauty in the seemingly imperfect as you might find that the only constant is change. Even this will pass. You are the wise one! Enjoy a blissful walk along Naracoopa Esplanade.

LIBRA

You are enjoying social outings and might bump into an old friend you haven't seen for some time. While you are interacting with your peers, you might feel that some valuable "you time" is needed. No big decisions just cruise a bit ... what about a scenic drive to Sea Elephant Bay this week?

SCORPIO

Your deep urge for privacy is lightened up with community and group activities. Expect last-minute changes and adjustments to any of your schedules. Take a light-hearted approach when re-evaluating your work commitments. How much value do you put upon yourself?

SAGITTARIUS

Don't blow things out of proportion or overindulge too much this week. Interruptions in your work schedule might be an invite to take a deep breath and have a much-needed break! It is time for an adventure of the heart where you feel liberated from any constraints.

CAPRICORN

You might be questioning your values and core beliefs this week. Your innate organisational skills might get shaken up a little. What if there were no boundaries to what you are called to be and do? Allow yourself to play this week even more

AQUARIUS

This is a creative deep dive into the island mysteries. Expect epiphanies and lightning bolts from the inside while you are attending to tidying up loose ends. A significant relationship might prompt you to re-assess your values.

PISCES

You are the last sign in the zodiacal wheel, and you might feel it this week. Who am I? Where am I heading and with whom and when? Just some minor questions you might be asking yourself this week. If you feel trapped, expand your wings and gently fly with an eagle's eye perspective.

# Rosellas find island friends

RACHAEL Cannon, Phoenix Community House, and the Men’s Shed are working together to help King Island’s Green Rosellas.

Last year Rachael erected nesting boxes to provide an alternative dwelling for the Green Rosellas visiting her garden when a natural hollow is not available.

The boxes attract rosellas and provide them with a home for 10-plus years.

Recently Rachael posted on social media that her family has returned for a second season after a good season last year when all three fledglings successfully left the nest.

This year she has added two more boxes around her property, making it four boxes.

“I’m excited to advise Phoenix House has reached out to me with the help of the Men’s (and ladies) Shed. They will be making five boxes for me to put up around the island for our Green Rosellas.

“Very generous given the cost of marine ply alone. Thank you, Phoenix House, Katey Griffiths, and Sally Haneveer.

“So, for anyone who has seen Green Rosellas around their place on a regular basis please reach out as it will be good to have an extra set of eyes looking out there.

“Every little bit helps these guys that are special to our island being a subspecies to the standard Green Rosella.”

Raymond (Stumpy) Hill is in nesting box overdrive and has set up a colony of boxes. “It passes the time,” he said.

ABOVE: King Island Green Rosella happy with a local new purpose-built hollow.

LEFT: As Ray (Stumpy) Hill waits for the racing season to start he has commenced a nesting box production line.

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

# Golfers off early to catch footy final

## BUGGY

A SATURDAY of calm and sunshine on the golf course with the smell of freshly cut grass. A day to inspire the 19 golfers who all seem to hit off early in the hope of seeing a close footy grand final. Just as well they all enjoyed a game of golf first.

The 4 BBB was a closely contested event. The winners were the match play pairing of Nathan Melville and Rogers Clemons with a solid 45 points.

The next best was 44 points with three groups and on a count back Runners-up were the pairing of Greg Barratt and Garry Batchelor from Tim Barnes and Lance Anderson and Alan Muir with John Mauric.

Nearest the Pin 3/12 Tim Barnes  
18<sup>th</sup> Nathan Melville  
Money Hole 14<sup>th</sup> Roger Clemons  
The best individual score was Garry Batchelor with a magnificent 41 points. The next best on 37 points were kindergarten mates, John Mauric and Roger Clemons.

The match play between Roger, the saint, Clemons and Nathan, ET, Melville was finally completed. The saint got off to a flyer with 3 up after three and then the battle began. Both

Winners on the day Nathan Melville and Rogers Clemons.

birdied the par 5 4<sup>th</sup> hole, nip and tuck on the turn, and both birdied the 9<sup>th</sup> hole.

The saint grabbed two more to go 5 up, as ET had pushed the wrong buttons and needed to reboot. Nathan reconnected, birdied the next hole and drove across the bay. The ball hit the

rocks and landed just in front of the green to be 3 down.

The saint prevailed with a twenty-foot putt on the 16<sup>th</sup> to win 4 and 2. Both players were happy to win the daily competition.

Next week the JBS King Island Beef Monthly medal, a stroke event.

# Big boost for cancer research

A cancer research grant is honouring the efforts of a Colac fundraising group, as it embarks on its second major fundraiser for the year.

Tomorrow is Daffodil Day, with members of the Cancer Council Victoria's Colac branch selling daffodil-themed items to raise money for cancer research and support programs.

The fundraiser comes after the group's Biggest Morning Tea event in May, which raised thousands of dollars for the Cancer Council.

That event was so successful, that the Cancer Council has named a research grant in honour of the Colac group.

The Colac Volunteer Group Research Award will help fund research like a project investigating a novel gene-editing approach for enhancing cell therapy in solid tumours, led by Professor Phillip Darcy at the University of Melbourne's Sir Peter MacCallum Department of Oncology.

Professor Darcy and Associate Professor Paul Bevis hope to improve the effectiveness of immunotherapies on solid cancers by using gene editing to overcome the environment in tumours which suppresses the immune system.

The results from this project have the potential to transform therapy for the treatment of solid cancers which have failed conventional treatments.

Meanwhile, Cancer Council Victoria Colac branch members will be out selling daffodil items, and people can also pick up items at Denise Duryea Hairdressing in Bromfield Street, Colac.

An average of 808 Colac Otway residents face a cancer diagnosis each year.

Cancer Council Victoria's head of fundraising Lyrian Fleming-Parsley said almost everyone would know someone dealing with cancer.

"Cancer takes so much - from all of us. It takes from our friends, neighbours, colleagues, and our family. By giving this Daffodil Day, we can help stop cancer from taking so much," she said.

"We can give for all the people who've been affected by a cancer diagnosis, whether that's you, or someone close to you. Giving, that's what Daffodil Day is all about."

All donations and funds raised through Daffodil Day will directly fund cancer research projects across Australia, helping save lives and bringing us closer to a cancer-free future.

BLOOMING: Denise Duryea is supporting Daffodil Day fundraising this year in her Colac hairdressing salon.

SMASH: A man in his 20s crashed his Tesla into a butcher's shop at Camperdown, causing damage to the front window and door.

## Electric car smash a valuable lesson

BY GRETA LANNEN

A man was hospitalised after he crashed his Tesla into a Camperdown butcher's shop, giving emergency responders on-the-job training of isolating the power of a battery-powered car.

The driver and sole occupant in his 20s crashed into the building on the corner of Manifold and Leura streets just before 1.30am yesterday.

Emergency crews received reports that the motorist was trapped but he was able to extricate himself from the vehicle.

Camperdown SES, CFA crews from Camperdown, Cobden and Bostocks Creek CFA crews, and Warrnambool police were also on scene.

Camperdown SES unit controller Michael Carman said crews were on scene for about an hour and a half.

"It's broken the big front window and smashed our front door that you walk in," he said.

"Because it was a battery-powered vehicle we had to try and isolate the power source, it was a Tesla.

"That was our first experience with one so it was a big learning curve for us all. We were trying not to get ourselves electrocuted," Mr Carman said.

An Ambulance Victoria spokesperson said paramedics transported the man to South West Healthcare Warrnambool in a stable condition with an upper-body injury.

# Family bids farewell to Colac

BY GRETA LANNEN

**Colac's lake, gardens and community service groups are just some of the many things Pat and John Dunn will miss about Colac.**

The Dunns will farewell the city after 48 years, which has seen them raise a family, work hard and contribute to their community.

Pat and John moved to Colac in 1975, with their six-week-old daughter Catherine, when John took up a position as a trade instructor at the then Technical School.

"I chose Colac because the school had a good vibe and because of its tree lined streets, green spaces and beautiful lake," John said.

Sons Lincoln and Warrick joined the family and the Dunns started to integrate into the community through their jobs, schools and involvement in community groups.

Pat said during the first year living in Colac, she would have walked back to Melbourne.

"However, at the end of 12 months when I knew my neighbours, when I could walk down the street and I knew the teller behind the counter in the bank and could go into the supermarket and the check-out person was familiar, we loved it and we stayed," she said.

"We chose Colac because it was such a green area, the lake was so beautiful, the parks were lovely."

Pat said it was a big transition coming from Melbourne and not knowing anybody in Colac, but

as time went on, the pair got involved in different groups and schools and connected with other community members.

She worked in disability for 35 years including a period at Colanda which she said was challenging and rewarding.

Pat has also had various roles in Colac's Country Women's Association including committee members, secretary, treasurer and president, and committee member and secretary with Colac's Red Cross.

She said forming friendships and a sense of giving back were what she loved about being part of community groups.

"I am going to miss those but I'm still going to travel back for those meetings," she said.

As well as teaching, John was also involved service clubs and organisations like the SES and Rotary, a member of the Army Reserve, a facilitator and host for exchange students and the foundation Officer Commanding of the local Army Cadet Unit.

After teaching he became a counsellor and still has a position as a counsellor in the Scouts.

John said he felt privileged to be part of Colac and its community in many different ways.

"What I have come to realise lately (is) that I was gifted to be in so many positions where I have met so many people and been a part of their lives as well," he said.

Downsizing and moving closer to family is the reason behind the Dunns' move.

**FAREWELL:** Pat and John Dunn have reflected on their time living in Colac, after moving from Melbourne in 1975. The couple will be downsizing and moving closer to family.

"If I had a choice and I could move Colac with its lake to somewhere around the You Yangs we would still be there," John said.

"The gardens and lake are exquisite. To those that want to drain or put a road across the

lake, I feel sorry for as they have no perception of nature's unique gifts."

Pat and John thanked the wonderful people they had met and shared special experiences with during their time in Colac.

"A deep appreciation of what

we have in Colac in the way of community, our environment and to be mindful of what we do each day, in every little and big way, will make the foundation of what Colac, and we, will become tomorrow and all the tomorrows to come," John said.

## Council investigates Bay site for housing

CONTINUED FROM PAGE 1

"Council is also seeking funding from other levels of government to undertake the project, which would include investigating an alternative site and the cost to establish a new depot, undertaking environmental investigations such as potential contamination of the site, and then understanding how development for residential accommodation could occur."

Mr Seuren said local government was pushing for projects in the Colac Otway to be included in the Regional Housing Fund, which received a boost after the State Government pulled the pin on hosting the 2026 Commonwealth Games.

"Directly and through our partners we have highlighted opportunities in Colac and Apollo Bay and continue to work with the Victorian Government on affordable and social housing options," he said.

"We expect the State Government will look at government-owned and private land to identify all possible opportunities and we hope to see some of the Regional Housing Fund deliver projects in our towns."

Mr Straw said he also supported the Bay community's decision to lobby against the sale of the old kindergarten site on McLachlan Street.

Councillor Graham Costin submitted a notice of motion to rescind a resolution made at last month's council meeting to put the address on the market and the coastal com-

**POSITIVE:** Chris Straw, pictured right with Bob Knowles earlier this year at Apollo Bay's Nelson Street site, has welcomed a feasibility study at the council-owned depot for key worker housing opportunities.

munity is petitioning against the sale led by the Apollo Bay Community Voice.

Mr Straw said it was important to keep any land which could solve the housing crisis problem.

"From a Colac Otway point of view, they own very minimal land here in Apollo Bay, so they shouldn't be selling it off," he said.

"From memory the land is about 800 square metres and it's zoned in an area that can't be subdivided."

"It needs to either have a rezoning to allow a greater density on the site or people can look at other options like boarding houses."

"We need to find out what's highest and best use for it."

MILESTONE: Bhakti De Bon, Jan Healey, Laurie Ryan, Rachel Wood and Emma Cullen celebrate the Colac Otway L2P program's 10th birthday.

# Mentors and drivers mark milestone

BY GRETA LANNEN

**It doesn't matter where you go in your life, but what matters the most is who you have beside you along the way.**

It's an important message, and one that Samara Riley says perfectly describes the Colac Otway TAC L2P Program, which has been operating for a decade.

The L2P program assists learner drivers between 16 and 21 who do not have access to a supervising driver or car to gain the driving experience required to apply for a probationary licence.

Samara was one of the first learner drivers to graduate from the program and said the 10-year milestone was a real credit to the community, but most importantly the program's mentors, including her mentor Laurie Ryan.

"This program not only provides a way, it also provides an unexpected friend," she said.

"Mentors donate their time and skills to ensure our young people have opportunities to succeed.

"Laurie (Ryan) helped me to gain further independence and this in turn assisted me to enhance my career.

"However for me, the greatest benefit has been the strong bond and long-lasting friendship we formed while connecting and sharing stories during our driving practice," Samara said.

Current program learner driver Shay-Lee Pyke said she greatly appreciated the L2P program.

"The structure of this program provides a great experience because you're learning how to drive, in a beautiful part of our country while growing a new friendship," she said.

The program is a partnership between local councils and community organisations, the Department of Transport and the Transport Accident Commission, delivered locally by Colac's Community Hub.

"The TAC L2P program, supported by the Department of Transport, our CHI team and our dedicated

Jenny Grenfell and Arthur Hollis

driver mentors, is a critical process for young and up and coming drivers to gain a practical understanding of our road rules while gaining on-road experience under the watchful eyes of their mentor," Colac Community Hub Inc board member George O'Dwyer said.

"It is so important for our L2P participants to learn the right way to drive and do so with confidence, this not only ensures their safety on the roadways but also other road users.

"We look forward to another 10 years of support for the L2P Program from our wonderful service clubs, the many businesses and the Colac and surrounding communities that get behind this simple but effective program," he said.

L2P program co-ordinator Bhakti De Bon said the program had supported more than 140 learner drivers, successfully helping 80 learners attain their probationary licence.

"Road safety and good driving habits are something that the whole community benefits from and it's pleasing to see the results achieved by the Colac Otway L2P program to date," she said.

"Since gaining their P-plates, some of the participants have secured employment which may not have been possible if it were not for the program."

# Social housing plan for Colac

BY ALISON MARTIN

Colac leaders have welcomed the State Government's commitment to build at least 50 social housing dwellings in Colac, however views on the site chosen are divided.

Premier Dan Andrews announced on the weekend that a social housing development was planned for Pound Road, on land next to Colac Cemetery, and would be funded as part of the \$1-billion Regional Housing Fund.

The fund was announced in July following the cancellation of the 2026 Commonwealth Games, and Colac Otway Shire Council has been advocating for the shire's share of social housing, however the announcement came as a surprise for the local community.

The amount of funding allocated to the Colac project and other details are yet to be revealed, however the Premier's office has confirmed "due diligence, feasibility and design work" for the development is set to start.

Member for Polwarth Richard Riordan said the government's commitment was "fantastic" but other land should be considered so the Pound Road site could be retained for Colac Secondary School to expand in the future.

Colac Otway Shire Mayor Cr Chris Potter was pleased with the announcement, explaining the Pound Road site was the council's preference, but he hopes further funding will be directed to Colac and Apollo Bay.

"We welcome the State Government's investment in public hous-

ing in Colac – it is something we have been lobbying hard for over the last two years and this Pound Road site was one we have been advocating for," Cr Potter said.

"This is some reward for persistence. We've known our case across Colac Otway was strong and officers and councillors have raised the need for housing at every opportunity. We've also been supported in our advocacy by our regional partners.

"We are focused on housing shortages right across the shire and will continue to push for more outcomes like this; we still have a long way to go to meet demand for affordable and key worker housing.

"We would hope this is only the beginning for the shire with clear needs in Apollo Bay also."

Colac Otway chief executive Anne Howard said council had been in regular communication with Homes Victoria over the past few years about opportunities for social and affordable housing in the shire, particularly in Colac and Apollo Bay.

"Whilst we weren't aware that an announcement was ready to be made, we were anticipating a favourable outcome following the release of Victoria's Housing Statement," Ms Howard said.

"Council is supportive of a development of this nature, which

PHOTO SUPPLIED

COLAC SITE: Crown land near Colac Cemetery is earmarked for a social housing development.

is aligned to a key council priority of addressing the housing shortage in the shire. Council's Social Housing Plan 2021 identified that there was a need for an additional 344 affordable dwellings across the shire. This is a good step in addressing the housing needs in Colac.

"We're yet to understand the design and consultation process, however we will take a very close interest in the design and provide input where we can with a view to getting a great long-term outcome for our community. Council will work with the Victorian Government to ensure the final design is appropriate for the site."

In contrast, Mr Riordan said he believed the Pound Road site "doesn't make sense".

Mr Riordan, the Opposition's housing spokesperson, said he was hopeful that the lack of information was positive for Colac because it meant there was time for the community to activate during the feasibility stage.

"It's a fantastic commitment (50 social housing dwellings for Colac) but there should be two houses here, two houses there," he said.

"If we'd run out of land then perhaps you would use that site, but it doesn't make sense.

"There's certainly still parcels of vacant land and reinvest where possible; I'm not entirely clear what's still government owned in the Queen Street and Bilson Street areas but there are certainly some houses beyond their usefulness (that could be rebuilt).

"There's a lot of subdividing going on and the government could purchase blocks.

"But just not that parcel of land; it's an education precinct and it has a better use for our community."

Mr Riordan, who had previously advocated for the Colac Specialist School to be relocated to the Pound Road site because of its proximity to CSC, the library, swimming pool and other sports facilities, said the land needed to be retained for CSC's expansion as Colac grew.

"There's nowhere else for the school to go."

Ms Howard said the council was "unaware of any need for Colac Secondary College to plan for expansion, but it is a matter better addressed by the Victorian Government".

OPEN TODAY: Colac's ANZ branch will re-open today after a third party assessed the branch on Monday, after works to repair water damage.

## Colac bank branch re-opening today

BY GRETA LANNEN

Colac's ANZ branch will re-open today after receiving a third-party assessment this week.

It comes more than four months after the Murray Street branch closed due to extreme water damage.

Monday's assessment analysed and confirmed the repairs the branch had un-

dergone and aimed to minimise the chance of any further disruption to banking services in the future.

In May, ANZ district manager Renee Stewart marked a July reopening date for the branch, but it has remained closed until today at 9.30am.

"We are excited to resume full-suite banking services in Colac, and welcome

customers back to the branch," an ANZ spokesperson said.

"We appreciate the continued support and patience of our ANZ customers in the Colac community."

The spokesperson did not confirm what had caused the water damage and why there had been a delay in reopening the branch.

# Ready, Pet, Go keeps them safe in a crisis

**Duncan Abey**

Keeping your companion animals safe during an emergency is now as easy as Ready Pet Go.

Launching on Tuesday, and developed by RSPCA Tasmania in the wake of the Dunalley bushfires and the 2016 floods, the new resource provides pet owners with a three-step process to keep their moggie and pooch safe.

RSPCA Tasmania's Kerri Walsh said Ready Pet Go's compact brochure, poster, and QR-coded bumper sticker were all designed to help owners develop a plan well ahead of time.

Ms Walsh said emergencies often caught people off guard, triggering panic.

The Ready Pet Go resource provided advice and step-by-step guides to ensure people felt comfortable evacuating with their pets, Ms Walsh said.

"Ready" highlighted the importance of assembling of vital documents, and of storing a week's worth of each pet's medication.

"Pet" focused on gathering supplies for each animal, including transportation containers, comfort items, food, and toileting

necessities. Finally, "Go" aimed to equip owners with tools to stay up to date in emergency situations, and to make informed decisions including locating the nearest evacuation centre.

Ready Pet Go was developed with support from the National Partnership Agreement on Disaster Risk Reduction, and in collaboration with the SES and local government councils in Tasmania.

Kingborough Deputy Mayor Clare Glade-Wright backed the Ready Pet Go program for her municipality.

"Kingborough residents are passionate pet owners, so this is an important campaign which guides people through the processes of planning for an emergency with their pets," she said.

"With just under 6000 dogs registered in Kingborough and 24 per cent of households owning cats, planning for how you are going to transport, feed, and look after your pet in an emergency is extremely important".

Ready Pet Go brochures and bumper stickers are available from [rspcatatas.org.au](http://rspcatatas.org.au), or from any of Tasmania's 29 councils.

# Firm's future hits brick wall

## Multi-Res collapse 'forces' company's sale

**Katie Hall**

A northern construction business has been put on the market after being caught in the fallout of a failed Hobart builder that owes its creditors millions – with the company claiming they're almost \$400k out of pocket.

Prospect Vale-based Energy Street Pty Ltd entered external administration last week, with David Mansfield and Travis Anderson appointed joint administrators on August 29.

The company, which is headed by directors Rodney Patterson and Wayne Mitchell, had recently taken a financial hit after the May liquidation of Hobart-based Multi-Res Builders Pty Ltd.

According to a report to creditors authored by its liquidator, David Levi, Multi-Res' proof of debt amount to Energy Street sits at \$251,289 – but Mr Mitchell says they are owed more for works in progress that took the amount closer to \$400k.

A Multi-Res representative denied the claim that Energy

**Wayne Mitchell**

Street was owed more.

The embattled company's total estimated liabilities sit at more than \$6.219 million, according to extracts from Multi-Res records.

Mr Anderson said the first meeting of creditors will be held this Friday, but that it would be "business as usual" for Energy Street, who will continue operating as normal.

"We are looking to sell the business ... We are currently running a sale process, and are looking for a new owner of the business," Mr Anderson said.

He said the business employed 13 staff but had a "significant number" of subcontractors who were "heavily reliant" on the business, and that a "pretty urgent review" was underway.

A rise in material costs and

the current "inflammatory environment" of the building industry was also a contributing factor in the company's administration, Mr Anderson said.

Speaking to the Mercury, Mr Mitchell said it was "unfortunate" their business had "suffered" because of the collapse of Multi-Res.

He agreed that while costs including building materials and labour had contributed to their situation, he said Multi-Res "is our main reason why our business is in the position it is today".

He said expressions of interest in the business were open, and that all offers would be considered.

"We are looking for a fairly quick turnaround, especially for our business clients and more so for our staff, to make sure we have a business to continue – and all signs point to [that] we will," he said.

Mr Mitchell said Mr Patterson would likely exit the business in the next three weeks and it was their priority to find a viable option to ensure the continuation of the business.

New \$45.5m UTAS building a glimpse into the future

# Timber the star of build

Alex Treacy

With 32.5 per cent less embodied carbon, a “first of its kind” heated blue gum floor, and extensive use of Tasmanian oak, the state’s local timber industry is holding up the University of Tasmania’s newest building as an exemplar for the future.

Industry heads were taken on a tour of the newly completed \$45.5m River’s Edge building at the university’s Inveresk campus, home to Humanities, Social Sciences, Law, Education and Business, on Friday.

The building incorporates an extensive range of Tasmanian timber products including veneer panels, timber battens, solid flooring, wall and ceiling linings, furniture, kitchen joinery, acoustic panels, and a cross-laminated timber staircase, all manufactured locally from native and plantation timbers, particularly Tasmanian oak.

The extensive use of wood plus other green innovations, including recycled concrete and pilings made from repurposed steel gas pipelines, has resulted in 32.5 per cent less embodied carbon – carbon emitted during a building’s construction.

Significantly, the design and

Inside the University of Tasmania’s new River’s Edge building. Picture: UTAS

construction of the building revealed a groundbreaking development in the use of native timber: that Tasmanian blue gum was suitable for use in heated floors.

“We know timber is not the biggest fan of being heated and changed with moisture,” said Dr Louise Wallis of The Centre for Sustainable Architecture with Wood.

However, a slab constructed beside the building to test a

“whole heap of different species, with the heating cranked up for some time,” revealed blue gum was suitable for this type of application, once glued to a thin plywood board to ensure its stability.

“This was the first time [blue gum] has been put in a commercial environment where it’s on an underfloor heated slab,” Dr Wallis said.

“It’s quite likely this product will be able to be used across

the rest of Australia. This building is now the experiment giving other people the confidence to do this.”

Only one other Australian supplier is producing timber for heated floors with the others all manufactured in China.

Tasmanian Timber chairman Shawn Britton, the managing director of Britton Timbers, which supplied the oak for River’s Edge, said large-scale timber products are

Professor Dom Geraghty.

growing in popularity.

“More architects and designers are looking for solutions that have carbon benefits. Timber is the obvious choice not only for carbon storage, but also for the raw beauty and functionality,” he said.

Mr Britton nominated two main “threats” to Tasmania’s timber industry: outbidding by mainland producers, particularly in Victoria, and undercutting by cheap imports.

“Most people in Tasmania’s industry want to see processing of our products into value-added products on the island,” he said.

Mr Britton said demand was “strong” and it was up to producers and regulators to ensure consistency of supply.

## Rapist’s sentence review

Amber Wilson

A repeat rapist and violent recidivist criminal – and one of the few men in Tasmania deemed dangerous enough to be incarcerated for life – is inching closer to the possibility of freedom.

Ian John Brumby, aged in his mid-60s, appeared in the Supreme Court of Tasmania on Monday via video link from the Ron Barwick medium security prison.

Brumby was jailed indefinitely 20 years ago under Tasmania’s Dangerous Criminals legislation, when he was sentenced for stabbing a man’s throat, slicing halfway through his windpipe, in an unprovoked New Year’s Eve attack.

It came after a criminal history described by one judge as “appalling”, which included aggravated rape and the fracturing of a woman’s skull.

Earlier this year, the Supreme Court heard Brumby’s Dangerous Criminal declaration would be reviewed.

The move has come due to changes to the legislation passed in 2021 that mean a person’s declaration must be reviewed every three years.

On Monday, Justice Gregory Geason heard the report was not yet complete – adjourning the matter until October 19.

## Keeping Children Safe

*“It is only by working together with a shared sense of purpose, that we will make Tasmania a safer place for all.”*

Premier Jeremy Rockliff

The Report of the Commission of Inquiry into the Tasmanian Government’s Responses to Child Sexual Abuse in Institutional Settings will be tabled and made public at Parliament House in Hobart at 11.30am on 26 September 2023. Individuals who have been affected by this issue are welcome to attend (please arrive from 10:30am to allow time for entry).

Visit [www.keepingchildrensafe.tas.gov.au](http://www.keepingchildrensafe.tas.gov.au) or call 1800 093 758 Monday-Friday 9am-5pm for more information, and advice on support services available.

# Watt feels holiday heat

## Brutal fire season expected

Eli Green  
and Eleanor Campbell

Emergency Management Minister Murray Watt hasn't ruled out the prospect of taking a holiday during what's been forecast as the most brutal bushfire season since the 2019-2020 Black Summer crisis.

The minister took questions ahead of a historic two-day summit in Canberra, where more than 200 organisations will gather to discuss what more can be done to prepare for the oncoming heat.

He said he intended to take one week off in December that "will depend on the disaster situations that we face".

"I can assure you, since I've been the minister, I have not had a whole lot of holidays and every time I have I've been on the phone to my staff," he told media.

Former prime minister Scott Morrison weathered a fierce backlash two years ago when he flew to Hawaii for a family

Australia could experience a torrid bushfire season with El Nino bringing extreme heat and drier conditions. Picture: Morten Boe

vacation while the worst bushfires in Australia's history burned across the country.

He was heavily criticised by then opposition leader Anthony Albanese for a "lack of transparency" about the timing and location of the trip, which Mr Morrison later apologised for.

Mr Albanese and Senator Watt will join crisis management, response and recovery specialists this week to discuss

how to prepare for the high-risk season.

Mr Albanese said he was concerned about the "worrying conditions" and wanted to avoid clashes with state governments this summer.

He cited the "great deal of disagreement" between Mr Morrison and then NSW premier Gladys Berejiklian, who publicly clashed over a lack of consultation on the deployment of Australian De-

fence Force personnel. "This week is all about preparedness, we are bringing together all the states and territories," Mr Albanese said on Monday.

His concerns came after the Bureau of Meteorology confirmed the country would be experiencing an El Nino weather event for the next year, bringing an increased risk of extreme heat as well as a worsening bushfire outlook in southeastern Australia. Na-

tional Emergency Management Agency co-ordinator-general Brendan Moon said people should also prepare for the possibility of cyclones and floods.

"The strategy for this week is to look at national arrangements to actually deal with those compounding and cascading events that may impact the nation during this high-risk weather season," Mr Moon said.

## Squabble over new jobs goal

A stoush looms over the federal government's new jobs goal as bosses and unions clash on whether the change will make the Reserve Bank's fight against inflation more difficult.

On Monday, the government released its jobs strategy, which included a broadened union-backed definition of 'full employment' to 'everyone who wants a job can get one without searching for too long'.

The government's new definition draws a distinction with the RBA's unemployment forecasts, which are based on the non-accelerating inflation rate of unemployment (NAIRU) – the lowest level of unemployment before the economy starts generating inflation and sharp wages growth.

The RBA forecasts the NAIRU is between 4-4.5 per cent, which means the current 3.7 per cent unemployment rate is unsustainably low.

In June, then-RBA deputy governor Michele Bullock said that unemployment was forecast to rise to 4.5 per cent as the economy slowed as a result of its aggressive rate hikes, which she said would be "closer to a sustainable balance point".

But employers criticised the change, claiming it was at odds with the RBA's fight against inflation.

### Federal Court of Australia Count Financial Limited Class Action

The Federal Court of Australia has ordered this notice be published. A class action has been commenced in the Federal Court of Australia by R and N Hunter Pty Ltd (ACN 105 163 522) atf the Hunter Family Super Fund (the **Applicant**) against Count Financial Limited (**Count**). You should read this notice carefully as it may affect your rights.

The Applicant alleges that some of Count's financial advisers breached the law by failing to comply with duties to act in their clients' best interests and failing to give priority to their clients' interests. The Applicant alleges that Count as Licensee is liable for the conduct of its financial advisers and that Count itself breached the law by both failing to take reasonable steps to ensure that its financial advisers complied with those duties and by engaging in misleading or deceptive conduct (or conduct that was likely to mislead or deceive). The Applicant alleges that Count and its financial advisers breached fiduciary duties owed to the Applicant and Group Members. The Applicant also alleges that, for some Group Members, Count's financial advisers entered into ongoing services agreements pursuant to which they promised to provide services on an ongoing fee basis, which they did not provide on some or all occasions. Finally the Applicant alleges that Count incorrectly advised its financial advisers that conflicted remuneration could continue to be paid on arrangements entered into between the financial advisers and their clients where the arrangement was entered into prior to 1 July 2014.

Count denies the allegations and is defending the class action. In summary Count defends the class action including on the basis that:

- the receipt and retention of commission payments by Count's financial advisers (including in circumstances expressly permitted by legislation) is not conduct in breach of the law and not contrary to the best interests duty and duty of priority;
- Count took reasonable steps to ensure Count financial advisers complied with their legal obligations described above;
- Count did not engage in the alleged misleading and deceptive conduct;
- the alleged fiduciary duties are not owed by Count, or by each financial adviser, to clients;
- there was no breach of the ongoing service arrangement entered into by the Applicant; and
- Count did not incorrectly advise its financial advisers in relation to the acceptance of conflicted remuneration.

The Federal Court of Australia has set 1 December 2023 as the date by which group members may choose to opt out of the class action.

You may be a group member if you:

- received personal advice from a financial adviser in the Count network;
- acquired, renewed and/or continued to hold insurance, financial or platform products; and
- paid initial and/or trail commissions in respect of those products between 21 August 2014 until 21 August 2020.

If you believe that you may be a group member then you should read the Notice that the Federal Court has ordered be published. The Notice is a very important document which may affect your legal rights. A copy of the Notice and further information about the class action may be viewed at <https://tinyurl.com/CountClassAction> or by contacting the Applicant's lawyers, Piper Alderman, on (02) 9253 9999.

## Police hunt ends in arrest

**Katie Hall**

A man was taken into custody after police swarmed a small North-West Coast community – as officers conducted a search for a “person of interest” in the area.

Tasmania Police descended on the town of Penguin, near Devonport, on Monday morning, as part of a search for a 36-year-old man.

The man was described as having blonde hair, with a light/fair complexion and a medium build.

He was described as being approximately 182cm tall.

The man had last been seen near Dial Rd and South Rd in Penguin, while wearing a black hooded jumper.

He was taken into police custody just before midday on Monday.

Tasmania Police told the Mercury the man had been arrested for family violence-related offences.

At the time of writing, the man remained in custody, but no charges had yet been laid.

## Renowned Hobart restaurant is hitting the market

Louie Sorgi, owner and chef of Amici restaurant in North Hobart, is selling his popular business for \$353,000. Picture: Sam Rosewarne

# Italian fave is on menu

GET THE NEWS FIRST  
Download our app

**Katie Hall**

Hobart restaurateur Louie Sorgi has spent almost his entire life in hospitality – but after running four eateries, he’s decided to put his renowned Italian restaurant on the market.

North Hobart’s Amici Italian has been running since 2012, but owner Louie Sorgi says now is the time for him to take a step back and enjoy his retirement.

But lovers of Italian cuisine are not to fear: the restaurant will remain open.

The business has hit the market for \$353,000, walk-in walk-out.

Mr Sorgi – who just turned 60 and has run four restaurants during his career – said he had found it hard to step back, but he knew it was the right time to sell up.

“I did explore my options of

going back in myself, but I weighed it up ... a lot of people can manage with other people running (their business) and being less hands-on but I struggle to do that,” Mr Sorgi said.

“A big part of that was the creativity; I do have a passion for the food industry and it was tempting to go back in ... (but) that balance is my achilles heel.”

Mr Sorgi said he’d even started thinking about tapping into the vegan market.

“I mean it is highly unlikely, but I never say never, and if the right opportunity came along, I would look at it,” he said. At 60,

Mr Sorgi said he still believed he had plenty to learn but was excited about what lay ahead for his new-found retirement – which he hoped would include some travel.

For those looking at jumping into the hospitality business Mr Sorgi said it was a challenging craft but one that was also very rewarding.

“Being your own boss and having that creative side to it as well ... I get excited. You’ve got to have that creative side to you, you have got to be driven – but it’s very rewarding,” he said.

After previously running restaurants The Riviera and Rozzini’s, Mr Sorgi said the key to being in business was “seeing things others don’t see”.

“For me, it’s about understanding the market ... if there’s not a market or a niche (to fill), then there’s no point, because people won’t want it.”

### Parramatta Road, Camperdown NSW Aboriginal Cultural Heritage Assessment – Community Consultation Stage 1

Urbis has been commissioned by the University of Sydney’s University Infrastructure Unit (the Proponent) to conduct an Aboriginal Cultural Heritage Assessment (ACHA) for their site on Parramatta Road, Camperdown NSW (Lot 1/DP 1171804). This ACHA has been prepared to support a State Significant Development Application, which seeks approval for the development of a multi-disciplinary General Teaching Space at the site. The proponent can be contacted directly via:

Julie Parsons  
Community Engagement Manager  
[julie.parsons@sydney.edu.au](mailto:julie.parsons@sydney.edu.au)  
Services Building G12, 22 Codrington Street, Darlingtown, 2006

In accordance with Section 4.1.3 of the Aboriginal Cultural Heritage Consultation Requirements for Proponents (DECCW, 2010) and Clause 80C of the NSW National Parks and Wildlife Regulation 2009, the Proponent is seeking the registration of Aboriginal persons or groups who may hold cultural knowledge relevant to determining the significance of Aboriginal object(s) and/or place(s) that may be present in the subject area.

The purpose of community consultation with Aboriginal people is to assist the Proponent in the preparation of the ACHA and the assessment of the cultural heritage significance of the subject area.

Please register your interest in writing to the contact details provided below by 21st September 2023.

Ginger-Rose Harrington

Consultant  
Urbis Pty Ltd [gharrington@urbis.com.au](mailto:gharrington@urbis.com.au)  
Level 8, 123 Pitt Street, Sydney, 2000.

Please be advised that the Proponent is required to forward the names of Aboriginal persons and groups who register an interest to The Aboriginal Cultural Heritage Regulation Branch- Heritage NSW  
- Department of Premier and Cabinet and the Metropolitan Local Aboriginal Land Council; unless the person or group specifies that they do not want their details released.

### Notice under Section 29 of the Native Title Act 1993 Exploration Licence Number EL9590 (Act 1992)

This notice is given in accordance with the requirements of section 29 of the Native Title Act 1993 (Commonwealth).

Description of the nature of the act

Pursuant to the Native Title (Right to Negotiate (Exclusion) – NSW Land) Determination No. 1 of 1996 (Cth), Exploration Licence 9590 includes a condition to the effect that the holder must not prospect on any land or waters covered by the licence in relation to which native title exists without the prior written consent of the Minister administering the Mining Act 1992 (the ‘Native Title Condition’).

The Minister administering the Mining Act 1992 intends to give consent to prospecting on land subject to native title in the licence in accordance with the Native Title (Right to Negotiate (Inclusion) – NSW Land) Approval No. 1 of 1996 (Cth).

Should consent be granted, the licence holder may apply to renew or transfer the licence prior to it expiring (including partial renewals or partial transfers).

**Note:** If the consent is granted, it will apply to any renewal, re grant or re-making (including partial renewals or partial transfers) or extension of the term of the licence, which may be valid pursuant to section 24MD(1) of the Native Title Act 1993 (Cth) without a further notification under section 29.

Holder’s details

Westrock Minerals Pty Ltd (ACN 625 790 187) is the holder of Exploration Licence 9590 for Group 1 minerals.

The licence contains a condition that the holder must not prospect on any land or waters on which native title exists without the prior consent of the Minister administering the Mining Act 1992. The licence holder has sought the Minister’s consent to conduct prospecting activities in the entire licence area.

Description of area that may be affected

The entire area of Exploration Licence 9590 which covers about 69 units and is situated approximately 32 kilometres north of Moruya, in the State of NSW.

Name and postal address of person by whom the act would be done

The Minister administering the Mining Act 1992, PO Box 344, Hunter Region Mail Centre, NSW 2310.

How further information about the act can be obtained

Further information may be obtained from; Assessments and Systems, Regional NSW on (02) 4063 6600 or [titles@regional.nsw.gov.au](mailto:titles@regional.nsw.gov.au).

Notification Day

For the purposes of section 29(4) of the Native Title Act 1993 the notification day is 21 September 2023 Under section 30 of the Native Title Act 1993 persons have until 3 months after the notification day to take certain steps to become native title parties in relation to this notice.

## Relevant Person Consultation:

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

Australian Heritage Council

Environment Protection and Biodiversity Conservation Act 1999

## PROPOSED AMENDMENTS TO A NATIONAL HERITAGE LISTING: WAVE HILL WALK OFF ROUTE

### CALL FOR PUBLIC COMMENT

The Australian Heritage Council is proposing amendments to the **Wave Hill Walk Off Route** National Heritage listing to correct factual errors in the listing. The National Heritage List recognises places that are of outstanding significance to the nation for their natural, Indigenous and/or historic heritage values.

The Australian Heritage Council, on community advice, proposes to change the date of the Walk Off from the **22nd of August 1966 to the 23rd of August 1966**. Further to this, parts of the Buchanan and Buntine highways that relate to the Walk Off Route have been renamed. The Council proposes amendments to the listing to correlate the historical route to contemporary maps. The Council's initial assessment concludes that all of these proposed amendments do not alter the National Heritage listed values of the place.

Comments are invited on these proposed amendments to the Wave Hill Walk Off Route listing. Further information is available by contacting the Australian Heritage Council at [heritage@dcceew.gov.au](mailto:heritage@dcceew.gov.au). The Wave Hill Walk Off National Heritage listing can be accessed via the Australian Heritage Database, <http://www.environment.gov.au/cgi-bin/ahdb/search.pl>.

#### Contact us

Please provide any written comments by **5:00 PM AEST on 2 November 2023**.

Australian Heritage Council

GPO Box 3090

CANBERRA ACT 2601

Or by email to: [heritage@dcceew.gov.au](mailto:heritage@dcceew.gov.au)

All comments will be provided to the Minister for the Environment for consideration when making her decision on whether or not the proposed amendments alter the heritage values of the National Heritage Listing.

# NGUJIMA-YIN FLOATING PRODUCTION STORAGE AND OFFLOADING FACILITY OPERATIONS AND PYRENEES FACILITY OPERATIONS ENVIRONMENT PLANS

For more than 35 years, Woodside has been developing and operating LNG and oil projects in Australia. Our focus is the safety, reliability, efficiency and environmental performance of our operations and activities.

Woodside consults so that feedback from relevant persons is considered and used to inform the revision of two operations Environment Plans for the **Ngujima-Yin Floating Production Storage and Offloading Facility Operations** and **Pyrenees Facility Operations**.

## Our activities

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin Floating Production Storage and Offloading (FPSO) facilities and is submitting a five-year revision to the operational Environment Plans. The Environment Plans for the Pyrenees FPSO and Ngujima-Yin FPSO facilities will cover operations including offloading and associated activities, inspection, maintenance, monitoring, and repair of the FPSOs and subsea infrastructure, disconnection and sail-away of the FPSO facilities when required, and production from two proposed additional wells from the Ngujima-Yin FPSO.

The Pyrenees FPSO is located about 45 km northwest of Exmouth, Western Australia. Production began in 2010 and is scheduled to end in 2035. The Ngujima-Yin FPSO is about 50 km, northwest of Exmouth, Western Australia. Production began in 2008 and is scheduled to end in 2028.

We are seeking input from relevant persons whose functions, interests or activities may be affected by continued operations.

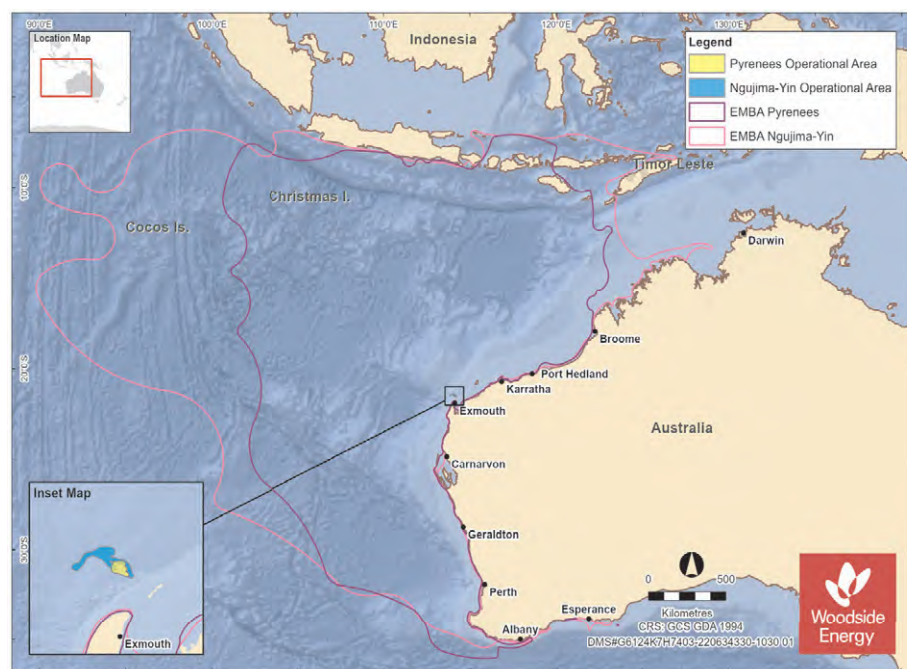

## The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for these two Environmental Plans, is determined by modelling a highly unlikely release of hydrocarbons from loss of well control or a vessel collision with the FPSO with enough force to breach the hull.

The EMBA represents the merged area of many possible modelled paths that a highly unlikely hydrocarbon release could travel if left unmitigated and depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected.

## We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by our activities, we would like to hear from you by **Friday, 27 October 2023** to identify you as a relevant person.

## Want to know more or provide input?

# Mass frog mortality event

NEAVE MOORE

HUNDREDS of frogs have mysteriously died at Bool Lagoon, with authorities searching for a cause.

The lagoon, located south of Naracoorte, was closed to the public by the Department of Environment and Water in an effort to investigate a mass frog mortality event happening at the site.

Discussion on a local Facebook group in late August had residents and tourists questioning why the lagoon was closed for visitors with no signage explaining the decision.

Department for Environment and Water Principal Ecologist Dr Karl Hillyard said that it is estimated that hundreds of frogs, in particular the striped marsh frog and the endangered southern bell frog, had died in what he termed as an “unusual event” for Bool Lagoon.

“The cause of the deaths has yet to be determined and, as a precautionary measure, the campground and walking trains are temporarily closed while investigations take place,” he said.

“National parks staff are regularly attending the site to monitor conditions, including for the prevalence of dead frogs.”

Dr Hillyard said that while the cause of

Friends of Bool and Hacks Lagoon host Shadow Minister for Water Resources Nicola Centofanti in late 2022 for a meeting on preserving the site.

Bool Lagoon hosts visiting birds.

death was not confirmed, it is believed to involve the chytrid fungus, an infectious fungal disease that is fatal to amphibians.

“Further testing is underway to investigate other possible causes of the deaths,” he said.

The Department of Environment and Water issued permission for a sample of the deceased frogs to be collected for testing and the results are being analysed by department staff and frog experts.

“The closure will be reviewed later this

week, and the department will look to reopen the campground and walks when it is suitable to do so,” he said.

“Our regular monitoring at the site indicates the number of frog deaths has been reducing each week.

“There remains evidence of active frog populations, which is a good sign.”

As of Tuesday, August 29, the closure of the Bool would last until Thursday August 31 depending on the investigations progress.

When the Bool Lagoon is reopened to the public, Dr Hillyard said that people can help reduce the potential spread of disease by staying on designated paths.

“People should also clean their footwear after visiting the site by drying shoes or boots for a minimum of three hours, or cleaning them with water and one per cent bleach for a minimum of one minute,” Dr Hillyard said.

“Ideally, people should visit only one wetland site per day and follow the above decontamination advice.

“If you find more than five dead frogs, please email details to [wildlife@sa.gov.au](mailto:wildlife@sa.gov.au).”

## Naracoorte High to close for state strike

NEAVE MOORE

NARACOORTE High School is to close on Friday September 1 due to a vote for industrial action by members of the Australian Education Union and joins other public schools around South Australia.

A survey completed by union members returned that 80 per cent of participants voted to walk off the job on Friday.

Schools around the district have issued statements to families, should the strike influence weekly class schedules.

On Tuesday afternoon, Naracoorte High School principal Lynette Corletto said in a statement that to ensure adequate standards of studentsafety and welfare, the “Education

Director has approved the closure”.

“[The closure was approved] on the grounds that insufficient staff will be on duty to enable me as Principal to ensure that adequate standards of student safety and welfare can be provided,” she said.

In the same statement, Principal Corletto reported that normal education programs will commence at the site from Monday September 4.

The union’s statewide strike is for a pay increase of amounts up to 20 per cent over three years, more time for teachers to complete administrative work and additional classroom support for teachers from the government.

Naracoorte High School to close doors on Friday due to state strike.

# MP pays tribute to Rex Hall

A LIMESTONE Coast stalwart has been remembered in state parliament for a lifetime of community service, particularly to the Country Fire Service.

The late Rex Hall was acknowledged by Member for MacKillop Nick McBride who said his legacy would live on.

At 84, Mr Hall passed away on June 2 this year.

He was remembered at a memorial service where hundreds attended to celebrate the life of not only a father, family man, expert chrysanthemum grower and champion ram breeder but also a dedicated volunteer, author and lifelong member of the South Australian Country Fire Service.

Mr Hall started his CFS career in 1960 at the One Tree Hill EFS brigade where he was the inaugural secretary and substation officer.

He remained at the One Tree Hill brigade for 15 years until 1975, when he and his wife, Dawn, and son, Alan, moved Gadang, their property between Keith and Willalooka.

Here, Mr Hall became a champion ram breeder, with his Poll Dorset and later White Suffolk Studs.

His expertise was recognised, with championships at many Adelaide and Melbourne royal shows.

He later went on to judge at many shows, including Royal Adelaide, Wagga Wagga, Melbourne Royal, Hobart, Perth Royal and many more.

Building a life in the South East, Mr Hall was a foundation player, member and inaugural president of the Willalooka Cricket Club.

He was heavily involved in the Willalooka Progress Association and helped develop the Willalooka Oval.

Mr Hall was also the Willalooka CFS brigade captain and sat on the Tatiara Fire Fighting Association training committee, communications committee, and equipment committee.

This led to roles of regional and state training committee representatives and CFS board liaison positions.

Mr Hall spent countless hours training volunteers across the South East and was a driving force behind the establishment of the CFS South-East Training Centre in Naracoorte.

In 1994, Mr Hall was awarded the Australian Fire Service Medal for his distinguished service to the Australian Fire Service.

When it came time to retire in the late '90s Mr Hall moved to Naracoorte and joined the Naracoorte CFS as group officer.

Rex Hall, with his son Alan and daughter-in-law Christine, after he was awarded the inaugural Life Membership to the SA Volunteer Fire Fighters' Museum.

He was on the State Incident Management Team for several years, which saw him deployed to all corners of the state, as well as to incidents in Victoria and New South Wales.

He also spent many years as both local and state representative for the CFS Volunteer Association.

It was his involvement with the CFS Volun-

teers Association and a trip to New Zealand which sparked his passion for preserving CFS history.

Mr Hall had a vision for a South Australian firefighters museum to honour the history of the CFS and preserve and protect memorabilia and vintage fire vehicles.

This vision came to fruition in his town of Naracoorte.

Stage 1 of the museum was opened in February 2020, but he did not live to see stage 2 completed, which involves a visitor and training centre and a conference facility.

Mr Hall and his committee of volunteers were also the driving force behind the state's first CFS memorial to honour volunteer firefighters who lost their lives in the line of duty.

This was opened in Naracoorte in 2016 and every year a memorial service is held.

The memorial represents the ultimate sacrifice made by enormously important volunteer CFS firefighters who dedicate their time to protect lives and infrastructure.

As well as this, Mr Hall wrote six books, with his last book, Volunteer Fire Fighting in South Australia, being launched at his memorial service.

In 2022, Mr Hall's dedication to the CFS was recognised when he received the South Australia CFS 60-year Service Medal, and, again earlier this year when he was awarded the first life membership of the South Australia Volunteer Fire Fighters Museum.

In closing, Mr McBride thanked Mr Hall for his lifetime of service.

"Rex has left an enormous void in the South Australian Country Fire Service, but his legacy will live on in the South Australia Volunteer Fire Fighters Museum and in the CFS memorial," he said.

"I thank Rex for his service to the community. His passion and drive for the CFS and his Volunteer Fire Fighters Museum and memorial will long be remembered.

"May he rest in peace."

Deputy Speaker Tony Piccolo also paid tribute to Mr Hall.

"On behalf of the house I would like to extend our condolences to the family," he said.

"I had the privilege of meeting Rex in Naracoorte and also of visiting his museum. He was a great man—a gentleman, I would say."

Mr Hall is survived by son Alan Hall, daughter-in-law Christine, three granddaughters, four great grandchildren and their extended families.

COMING EVENTS

SEPTEMBER

Author Talk

- September 26. Meredith Appleyard will present her new book Daisy and Kate. Starts 2pm. Bookings essential on 8762 2338.

OCTOBER

Naracoorte Show

- October 14 at Naracoorte Showgrounds.

SCHOOL HOLIDAY ACTIVITIES

Tuesday, October 3

- Create your own dragon or rainbow blower. All ages. 9-4pm

Wednesday, October 4

- Monster dress-up day. Create your own paper masks. 9 years and under 9-1pm. Geometric mask model 10+ yrs. Bookings essential. 10am start.

Thursday, October 5

- Teddy Bears Picnic at the Caves. Bring along your favourite teddy, a picnic rug and food. Teddy Bears are then invited for a slumber party sleep over at the Library! Teddy craft available 9-4pm at the Library.

Friday, October 6.

- Make your own beaded key chain- 9yrs and under 9-4pm.
- Cross stitch keychain/ Rainbow wall hanging- 10+ years. Bookings essential.

Monday, October 9

- Make your own fairy garden terrarium. Bookings essential. 10am start. Younger craft available 9-4pm.

Tuesday, October 10

- Create your own magical dream catcher. Use feathers and wool to make it unique. 9-4pm

Wednesday, October 11

- Fairy Day - Dress up and come and listen to Liz Crowley read her new book. Colouring competition will be judged. Create your own magical nature inspired fairy wand.

Thursday, October 12

- Visit from the Caves. Come along for some fun activities hosted by the lovely staff from the Naracoorte Caves. 10am.

Friday, October 13

- Try your luck- will you make a lucky shamrock or an "un-lucky for some" black cat? 9-4pm

NOVEMBER

- Tennis SA State League All Stars at Lucindale.

REGULAR EVENTS

MONDAY

- Lions Club of Naracoorte: Help make a difference to your local community through a service club which raises money for projects locally, and at State, national and interna-

tional levels. Location: "Lion's Den", Deviation Road Time: 7.30pm Dates: 1st & 3rd Monday of the month For more information: Malcolm McEachern 0418 524 045

- Rotary Club of Naracoorte Inc. Location: Billy Mac's, Ormerod Street, Naracoorte Time: 6pm for 6.30pm start Dates: 2nd & 4th Monday of the month For more information phone Lis on 0488 991 951.
- Naracoorte Singers: If you enjoy singing, come along and join in with the Naracoorte Singers. New singers are welcome. Location: Seymour Hall, Naracoorte Anglican Church Time: 7.15pm Dates: Every Monday night For more information: Amanda Wardle 0437 001 522.
- Naracoorte Mill Quilters: A group of like-minded people that meet monthly to create, chat and share. New members are always welcome, especially beginners. Location: Naracoorte Presbyterian Church Hall Time: 9.30am-3pm Dates: 2nd Monday of the month. For more information: Phone 0427 189 862
- Naracoorte Men's Probus: Fun and friendship in retirement. Probus provides you with the opportunity to join a social club in Naracoorte to meet retirees on a regular basis, listen to interesting speakers and join together in activities. Location: Naracoorte Bowling Club on the 3rd Monday of the month at 9.30am For more information: Wayne 0429 647 455
- Naracoorte Ladies Probus: Billy Mac's , Naracoorte Hotel on the 4th Monday of the month at 10am For more information : Anna 0403 913 246
- Soroptimist International, Naracoorte Club This international service club for women focusses on issues relating to women and children worldwide in areas of health, education, and safety. Location: Bushman's Arms Hotel, Robertson Street, Time: 6pm for 6.30pm Dates: 4th Monday night of the month (except December) For more information: Phone 0456 562 521 or email sinaracoorte@siswp.org
- Card Making Classes Everyone welcome. Kits are prepared in advance for anyone attending, so bookings are essential. Location: CWA Hall, Sandstone Avenue Time: 12.30pm Dates: 15, 17 April, 20, 22 May, 17, 19 June For more information: Margaret 0438 886 424

Lucindale Community Nursing Service

Country Health Connect Community Nursing Service provides professional nursing care to people living and working in the Limestone Coast.

Our experienced nursing team works in the community to deliver a broad range of services. We work in your home or in one of our nursing clinics.

The aim of Community Nursing is to provide specialised short to medium term clinical care, tailored to individual health care needs, in order to avoid hospitalisation and/or support discharge from hospital.

Services available include:

- Catheter care / management
- Home oxygen management
- Medication administration
- Wound care / management
- Pathology

How to make an appointment:

For those living in the Lucindale area, you can call our Naracoorte team on: **8762 8160** (8.30 am – 4.30 pm)

Alternatively, you can be referred by your doctor or My Aged Care. A small fee for services and some consumables costs may be incurred.

**Community Nursing Services are available by appointment.**

Please call **000** in case of an emergency.

# Listen to cross-border towns

**CHARLOTTE VARCOE**

charlotte.varcoe@btwtoday.com.au

THE issues regarding the cross-border communities between the South Australian and Victorian border should be included in a nation-wide Covid-19 inquiry, according to cross-border advocate Paula Gust.

Last week, Prime Minister Anthony Albanese announced the federal government would fund a Covid-19 response inquiry and make recommendations to improve response measures during future pandemics.

As a whole, the inquiry is expected to look into a wide range of impacts from the pandemic across multiple portfolios and communities.

It will also consider the findings of previous relevant inquiries and reviews and also identify "knowledge gaps" for further investigation.

Mr Albanese has appointed an independent panel of three people to conduct the inquiry which will consult with relevant experts with a diverse range of backgrounds and lived experience.

Ms Gust - who was a vocal advocate for cross-border communities during the pandemic - told the Naracoorte Herald she believed cross-border issues "must be a prominent part" of the inquiry.

"Everyone thinks a pandemic would never happen again but we never thought it would happen in the first place," Ms Gust said.

"Nobody knew what they were doing and a lot of decisions were more reactive than proactive and nobody on the border was consulted regarding business, health, medical or school-wise."

Ms Gust said she believed the issues of the cross-border communities should be a "major part" of the investigation in order to learn how to better deal with the issues in the future.

"The focus should be how it impacted border communities as I understand Melbourne's lockdown was long and horrible but they were still able to go and see a doctor or have their breasts screened," she said.

"Whereas we were trapped along the border not only from going across to where we would usually go but we were trapped because if we would go any further into Victoria we would lose our privilege."

"We were affected just as much as everywhere else especially the farming communities as it was quite cruel with just the testing."

Ms Gust said during the pandemic there

Paula Gust will continue to advocate for cross-border communities going into the national Covid-19 inquiry.

Picture: FILE

were 26 weeks in a row where she got a Covid-19 test just so she could take her children to school or go grocery shopping.

"There was also a lot of segregation among the states because if you were from Victoria people did not want to stand next to you in the shops," she said.

"It brought up a lot of things in our society that we should not have had to deal with and Victorians along the border really protected a lot of South Australia."

"We were that line of protection and through us doing the right thing and going through continual testing we were stopping Covid from getting into the state."

Ms Gust said she would be "very surprised" and believed a lot of people would be "quite

angry" if border communities were not included in the national inquiry.

She said even now the cross-border communities have ongoing mental health effects following the pandemic.

"There are so many people scarred from this and we don't have a very robust mental health system in those regional areas," she said.

"Add this on with people who have lost their jobs, had to change careers, we ourselves had to move interstate in the end but there was also the financial impact of businesses and families."

"It was really tough and there were also families who split up over it physically and with the pressure it put on everyone."

Ms Gust said she would put her cross-border advocate hat back on and ensure cross-border communities were included in the inquiry.

"I will be getting in touch with a couple of politicians to make sure cross-border communities are included as it is absurd it is even questioned."

"I would also like to know if anything has been done or assessed on how we can do it better as hopefully it is not needed but if we don't prepare for another pandemic it will be another knee-jerk reaction."

The panel is expected to deliver a final report to the government, including recommendations, by the end of September 2024.

## Relevant Person Consultation:

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

QLD GOES AGAINST RIGHTS ACT ON DETENTION

DECHLAN BRENNAN

The Queensland Government has introduced legislation that is incompatible with human rights, for the second time this year, with the changes expected to disproportionately impact Indigenous children.

The legislation — implemented to allow children to be imprisoned in police watchhouses designed for adults — was introduced by the State's Police Minister Mark Ryan last Wednesday.

It will require a suspension of the State's Human Rights Act.

Change the Record national director, Gunggari advocate Maggie Munn, said the decision to put through amendments to an unrelated Bill was "outrageous and deliberately harmful".

"This is now the second time Queensland has suspended its Human Rights Act to criminalise and punish children in this State. Incarcerating children whether in prisons or watch houses is harmful, the Government knows this and yet continues to enforce these conditions," they told National Indigenous Times.

"To have a legal instrument like a human rights act in place means there should be protections, but if governments can decide to suspend those protections, it's the most vulnerable people who suffer."

In the Bill's notes, Mr Ryan said the change was necessary to guarantee that "immediate capacity issues" in the State's

Queensland Police Minister Mark Ryan introduced the Bill amendments on kids in watchhouses.

Albanese  
poised to  
announce  
the Voice  
ballot date

CALLAN MORSE

Prime Minister Anthony Albanese plans to announce the date of the Voice to Parliament referendum on Wednesday.

Set to be made at an event in Adelaide, the announcement will be held in the same State the Yes campaign launched in earlier this year, suggesting the Government believes South Australia looms as a key battleground.

Australia's only other referendum specifically relating to First Nations Australians, the successful 1967 referendum which asked for Indigenous people to be counted as part of the population and empowered the Commonwealth to make laws for them, was also launched in South Australia.

Previously suggesting the referendum will be held in October or November, speculation has arisen the vote will be held on October 14 based on Mr Albanese's travel commitments in the coming months.

"Very soon, our nation will have a once-in-a-generation chance to recognise Aboriginal and Torres Strait Islander people in our constitution — and make a positive difference to their lives with a voice," Mr Albanese said last week.

"I will be campaigning for constitutional recognition. Because if not now, when?"

An October 14 referendum date would allow for a six-week campaign before Australians decide whether to enshrine an Indigenous Voice in Australia's constitution.

Preceding referendum date, the Australian Electoral Commission will deliver nearly 13 million Voice referendum pamphlets to Australian households and other residences.

Distribution of the 20-page document, which details both the Yes and No case, has begun and coincides with the AEC's Your Answer Matters advertising campaign, designed to educate voters ahead of referendum day.

"This is one of the nation's, and the AEC's largest printing

# Bail Act lacks clarity: VALS

DECHLAN BRENNAN

Indigenous and legal groups have commended the Victorian Government for introducing bail reform legislation but warn that it does not go far enough.

Attorney-General Jaclyn Symes introduced legislation into Parliament on August 15 in a bid to reduce unnecessary remand for people accused of low-level offending.

Under the reforms, low-level offenders would find it easier to receive bail and people who committed crimes unlikely to result in a custodial sentence would not be remanded in jail while awaiting sentencing.

"These offences were introduced in 2013 and have been shown to disproportionately impact women, children and Aboriginal people with no clear deterrent benefit or improvement to community safety," the Victorian Government said.

Bail reforms would also redefine "unacceptable risk" so a court wouldn't refuse bail over a risk of minor reoffending.

However, various legal groups have argued that while scrapping certain provisions is a step in the right direction, the reforms do not go far enough.

The Victorian Aboriginal Legal Service said it was "concerning" the Government was proposing only a slight modification of the reverse onus provision, given it is incompatible with the Victorian Charter of Human Rights and Responsibilities Act.

"We are also concerned that the Victorian Government's Bill will make the Bail Act more complicated, rather than making it simple and clear so that it can function more effectively," the VALS statement said.

VALS chief executive, Yorta Yorta and Narrandjeri woman Nerita Waight, said the changes were a small step in the right direction.

"This is a first small step towards ending the damage that Victoria's bail laws have done over the last five years particularly," Ms Waight said.

"There have been three bail

Bills before this in the last decade and the Government has admitted that there were mistakes in all of them. They should accept that they probably haven't got this one right either and set a timeline for reviewing the Bill in the legislation."

Referring to Veronica Nelson, whose death in custody in 2020 was deemed preventable by the Coroner and led to calls for an urgent review of the bail act, Ms Waight said Ms Nelson's family had played a significant part in the reforms.

"Veronica is the reason the Government is changing the bail laws. All the Parliament should centre her story when they debate the Bill and be respectful of her family," she said.

"Veronica's family have been clear on asking for changes to the bail laws and I hope the Parliament will ensure the Bill reflects the family's wishes.

"There are some good changes thanks to the advocacy of Veronica's family, especially in relation to removing bail offences, making it easier for children to

Victorian Aboriginal Legal Service CEO Nerita Waight.

get bail, and changes to reduce the over-incarceration of Aboriginal people."

The Bill delays implementation of reforms by six months, which the Human Rights Law Centre says will see thousands of people continue to be funnelled into Victoria's prisons.

The family of Ms Nelson have previously called on the Victorian Government to implement "urgent, wholesale changes" to the bail laws in the next three months and for these reforms to be known as

Pocum's (Veronica Nelson's childhood nickname) Law.

Amala Ramarathnam, acting manager lawyer at the Human Rights Law Centre, said the Andrews Government had acknowledged the failures of the bail laws, but was still failing to take all the action required.

The Law Institute of Victoria's president, Tania Wolff, said more work on the reforms was required.

The Victorian Government has been contacted for comment.

## Racist comments persist online despite Assembly plea

DECHLAN BRENNAN

Social media giant Meta has been criticised for its response to people making racist comments on its platform.

Meta, which owns Facebook and Instagram, received complaints about racist commentary on the platform from the First Peoples' Assembly of Victoria in March.

The First Nations body met a Meta representative; but the comments have not abated. Assembly co-chair and proud

First Peoples' Assembly petition banner.

Gunditjmarra man Rueben Berg said the announcement the Federal Liberal Party would oppose the Voice to Parliament

coincided with a surge in abuse.

"Since Peter Dutton announced that his party would campaign for a No vote, we've seen a dramatic rise in racist abuse and hatred directed at First Peoples, both online and in everyday life," Mr Berg said. "The No case is really emboldening the trolls and bigots. Our Assembly Facebook page went from getting a handful of racist comments a week to our staff having to report and block hundreds of people every week. "So, we started our petition

calling on Facebook owner Meta to do better in order to help protect the mental health and wellbeing of First Peoples during the referendum."

The Assembly said since meeting Meta, many racist comments have been reported.

Comments such as "feral Abos" and "black k..ts" were deemed to have not breached Facebook's community standards and no action was taken.

A Meta spokesperson told National Indigenous Times that

"no one should have to experience racist abuse anywhere".

"We are sorry to hear that the First Nations Assembly of Victoria is still receiving racist comments on their accounts," they said. "When they raised a complaint with us earlier in the year, we investigated it thoroughly and took action. It was our understanding that we had responded to and addressed their concerns. We will be following up with them to understand what more we can do to support them."

# Federal Court grants Native Title in Chillagoe

## Historic day for Wakaman People

JESS WHALER

The Wakaman People of Far North Queensland were granted Native Title rights by the Federal Court of Australia this month, via a determination providing the right to access and care for Country extending over 14,861sqkm of land in Chillagoe.

After a more than 20-year fight for land rights, Justice Berna Collier presented recognition to the Wakaman People during a ceremonial on-Country sitting on Wakaman Country on August 18.

The Federal Court accepted and acknowledged the Wakaman People's proven, unbroken connection to more than 715,000ha of their traditional homelands.

Despite the devastating history of being removed from their land and restricted from practising culture during the aggressive colonisation period, the Wakaman People have maintained a strong connection to their country.

State member for Cook Cynthia Lui noted that "Aboriginal people have inhabited this area of Queensland for over 25,000 years".

"It's been a long road for the Wakaman People to have their claims recognised and I hope the determination gives them a sense of peace," she said.

"Being able to maintain their traditional lands and ensure the cultural practices, skills and stories are passed on to the next generation is a wonderful thing."

Queensland Minister for Resources Scott Stewart said the recognition of native title is "a fundamental step in changing the relationship between the Queensland Government and our First Nations communities".

"We are fortunate in Queensland to be home to two of the longest, continuing cultures in history, in the Aboriginal cultures and Torres Strait Islander cultures," he said.

Represented by the North Queensland Land Council, the applicants of the claim were Wakaman People — Mr John Alvoen, Mr William Thomas, Ms Robyn Hooley, Ms Raelene Madigan and Ms Carol Payne.

John Alvoen and Robyn Hooley with a gift from the State. Top: Justice Berna Collier receives a gift from Robyn Hooley and the Wakaman People.

Justice Berna Collier, Carol Payne, John Alvoen, Robyn Hooley, William Thomas.

Mungana Rock art site.

Robyn Hooley said the determination "means everything".

"It's been a long process. The sacrifice my family made and their contribution to getting recognition to country, it makes me feel very proud that we finally achieved a good outcome," she said.

Wakaman man William (Billy) Thomas said: "We have been going back to country and teaching my children, nephews and grandchildren about country, about what's on the river and land."

"We teach them about hunting and fishing, showing coun-

try and sacred sites, like my mother did with me. We can continue doing this, that's why it means a lot to me," he said.

"The Tate River is special to me, as that's where my mother was born."

Maintaining their traditional lands ensures the Wakaman

People can continue to pass these cultural practices, skills and stories on to the younger generations.

The North Queensland Land Council said the decision was welcomed and congratulated the Wakaman People on this momentous occasion.

## AEC rolls out campaign to inform public about referendum

CALLAN MORSE

The Australian Electoral Commission has started the main phase of its referendum education campaign with the launch of Your Answer Matters.

Reminding voters that their answer matters in the lead up to

the Voice to Parliament referendum, the campaign will have a dedicated website and will be shown on TV, online and in the press with the aim of assisting Australians to get "vote ready".

Your Answer Matters will provide a range of information resources as well as translated

and accessible material. Australian Electoral Commissioner Tom Rogers said the campaign is deliberately starting before the referendum voting date is announced.

"It's been 24 years since we last had a referendum," Mr Rogers said.

"Approximately 6.4 million enrolled Australians weren't of voting age when we had our most recent referendum in 1999 — for a lot of people the role of a referendum won't be familiar.

"This campaign ramps up the public education we've been doing all year, educating Aus-

traliens about the importance of referendums and how to cast a formal vote."

With record growth in general, Indigenous and youth enrolment rates, the campaign will continue encouraging voters to update their enrolment details or enrol to vote.

# Memories spur language fight

JARRED CROSS

A half-century old memory still brings tears to the eyes of Bunuba Elder Patsy Bedford.

At 15, in the night, she was driven from Derby to Halls Creek, crossing the Kimberley and the river at her birthplace in Fitzroy Crossing.

She said the Department of Native Welfare made the journey in the dark “so that I wouldn’t see my country and my siblings”.

Her first years were spent by the river with her people and surrounding tribes. By five, her family were moved west to Ellendale Station and later to Derby.

At nine, “because of the colour of my skin”, the department removed her from her parents to a hostel for schooling with teachers who “had no real interest in teaching us” and without the opportunity to visit her family.

Aunty Patsy said up until that time she was out in her true classroom “learning about survival on the

land, learning about bush medicine, bush tucker and about country”.

“I never spoke English until I was about eight,” she told National Indigenous Times.

“At the hostel we weren’t allowed to speak our language.”

Her siblings were later made State wards and taken to the mission in Fitzroy Crossing.

Soon after, the journey to Halls Creek with the Department followed, being told a job waited for her.

It was there she met her future husband, had her children, was reconnected with her brother, and made occasional visits to Fitzroy and to see her Bunuba family before permanently returning home.

Now in her 70s, some of the details of her early years are foggy – and, like many Elders across the country, she’s never had a birth certificate.

The difficulties which come without this kind of documentation are

varied. People in her community are made to go through onerous processes – often needing a Justice of the Peace, which Patsy has become.

Patsy knows she was born with her name Ngalu and to her skin group Nyanjili. Multiple anthropology reports she has since recovered recorded her “as a half-caste child” under multiple first names.

“I don’t know how I got Patsy. I will never do research to find out where Patsy came into this whole picture,” she said.

She said memories of her earlier years will never leave her. They’re “still raw and still hurt”.

“That’s my history. And I’m back in Fitzroy. I chair the Kimberley Language Resource Centre, and I fight for languages,” Aunty Patsy said.

She is also a board member of Language Policy Partnership, a group made up of Coalition of Peak leaders.

Her granddaughter Obby Bedford has joined her in the pursuit of seeing generations grow up with a tradition inseparable from culture.

There are five language

Patsy Bedford, and inset left, Obby Bedford. Pictures: Rhiannon Clarke

groups around Fitzroy; Bunuba, Gooniyandi, Wangkatjungka, Walmajarri and Nyikina.

Ms Bedford told the National Indigenous Times there was a time when she was young where her grandmother only spoke to her in Bunuba.

She spent her school and university years living in Melbourne, where she lost big pieces of this language and was at times mocked for using it.

Now 25, the move back home to Fitzroy Crossing was done to be reconnected with “language and culture”.

“If we don’t act now, then

we’re going to lose language. We’re going to lose fluent language. I came back . . . so that I could learn it for myself from people who were still speaking it fluently, as it was their first language, so that I can pass it down as well,” Ms Bedford said.

Aunty Patsy still sees funding and power to decide where resources go as a hurdle.

“The Government expects you to bring in a qualified linguist,” Patsy said. “That’s a big insult to people like myself and other community linguists right across the Kimberley who read and write the language.”

“The Voice will allow us to be able to give our opinion, to sit at the table, talk from experience, and **bring that value** to the conversation.”

Dr Stephanie, Kununurra

Yes23.com.au

When people listen, we make better decisions.  
That’s why we’re voting Yes to a Voice.

## Amendment to Bill allows kids held in watchhouse

FROM PAGE 1

prison system could be rectified.

"It is not intended to make acceptable the long-term use of watchhouse or corrective services facilities for young people."

The amendments come after the Queensland Supreme Court on August 18 ordered the urgent transfer of three children who were detained in police watchhouses, after the State Government conceded it had no lawful basis to detain them.

The Bill was initially introduced to amend reporting obligations for sex offenders and includes decriminalising public drunkenness, preventing police from surveillance of sex workers, and reforming police disciplinary processes.

Queensland Greens MP Michael Berkman called the decision an "absolute dog act".

"I've just seen one of the most disgraceful acts from Qld Labor since I was elected," he tweeted last Wednesday. "At 3.30pm, they moved 57 pages of amendments to an unrelated Bill w(ith) 30 mins for debate. They suspend the Human Rights Act to allow children to be kept in watch houses & adult prisons."

Queensland has the highest youth jail population in the country. In June, data showed of the 169 children charged under recently introduced offences, 112 were Indigenous. Debbie Kilroy, chief executive of Sisters Inside, told Guardian Australia the decision means the community "will also be harmed".

"It's time to reimagine communities with funding taken away from police and prisons so we can develop our own modes of safety and security," she said.

This is the second time the Labor Government has had to breach its human rights charter in order to pass legislation.

Earlier this year, it passed legislation that made breach of bail for children a criminal offence, which Mr Ryan spruiked as the "toughest in the country".

At the time, Queensland's human rights commissioner Scott McDougall stated "the measures introduced are predicated on a flawed perception that recidivist children will respond positively to punitive measures."

"I am unaware of any evidence that increased maximum penalties of imprisonment will deter a child from engaging in risk-taking behaviour," Mr McDougall said.

In June, Youth Advocacy Centre chief executive Katherine Hayes it was seeing children plead guilty to avoid spending time in detention.

"We have seen children plead guilty to charges because they are less likely to receive a sentence. If they are on remand, they are highly likely to be held in detention — often for months," she said, noting young people are kept in detention for crimes unlikely to carry a custodial sentence.

# Martu Native title ruling is welcomed

GIOVANNI TORRE

The Martu people of the Western Desert, WA, took another step last Thursday in their long battle for Native title over their Traditional lands.

Martu celebrated as the Federal Court in Perth made its declaration on the Martu #3 Native title claim.

Martu applicant Kennedy Finlay and Jamukurnu-Yapalikurnu Aboriginal Corporation (JYAC) representatives were in the Federal Court to witness the determination.

The Martu #3 claim picks up a number of small to medium blocks along the western boundary of Martu ngurra (country).

The WA Government accepted the Martu people are the right people for that claim area and agreed to a consent determination of Native title.

The Wanajarra and Yina (Elders) Council and meetings of Martu common law holders have talked about getting all of Martu ngurra into the determination for many years.

Martu focus is now turning to Karlamilyi National Park — the largest national park in WA and the subject of a protracted negotiation with the State Government.

Mr Finlay said: "We are very happy today that governments and the court have agreed this land belongs to Martu."

"Our ancestors cared for this land, and then gave us the responsibility."

"We will use our native title rights to care for country and keep our culture strong."

JYAC chairperson Simon Frank said Western Desert lands were important for all Martu families.

"We have our culture and spirits in that ngurra," he said.

"Martu want to use the land properly — we will protect ngurra that must be kept safe and we will do mining and other business where that's agreed."

"The country is important to us for the culture, for the environment, and for economic op-

Terrance Jack, Olivia Wilson, named applicant Kennedy Finlay and JYAC legal Rewi Lyall. Picture: JYAC

portunities. This has been our ngurra since before time."

Jamukurnu-Yapalikurnu Aboriginal Corporation chief executive Tony McRae said Martu exclusive possession native title rights put Martu "in a strong position to control access to their land".

"JYAC is the trustee (land council) for Martu rights and

we ensure any activities on country are done under binding agreements. This gives Martu control over country and gives land users the certainty they want to do business," he said.

"The JYAC board has strong instructions from Martu to now focus on getting Karlamilyi back in Martu hands. Martu

have waited more than 46 years to get this country back.

"Premier Charles Court declared that sacred part of Martu ngurra a national park without any consultation and Martu have been fighting to get it back ever since. It is a great injustice that must not be allowed to just drift along. Justice delayed is justice denied."

## Conference speakers prompt backlash

FROM PAGE 1

and distribution jobs so it'll take time for all deliveries to occur — delivery is getting under way shortly and will be completed by mid-late September," AEC commissioner Tom Rogers said.

As referendum day nears, the Voice debate dominated the recent Conservative Political Action Conference (CPAC) Australia event, which sparked a backlash after guest speakers made derogatory comments about Indigenous culture and praised assimilation.

The conference, chaired by No

campaigner Nyunggai Warren Mundine, hosted a range of anti-Voice speakers, including Senator Jacinta Nampijinpa Price, former prime minister Tony Abbott, Advance Director Matthew Sheahan and former Liberal MP Bronwyn Bishop.

During the two-day event, Recognise a Better Way committee member Gary Johns urged assimilation of Aboriginal communities, claiming some in Indigenous communities lived in a "stupor", and recommended they "learn English" if they wanted a voice.

Earlier, self-described "hoax

speaker and corporate imposter" Rodney Marks, as character "Dr Chaim Tsibos", addressed the event for 25 minutes, beginning by mocking the Acknowledgement of Country.

"I'd like to acknowledge the traditional rent-seekers, past, present and emerging," he said, before smearing Traditional Owners as "violent black men".

"I hope there are some real feminists in the audience who appreciate the part-truth of that joke," he said, before describing Indigenous leader Bennelong as a "woman-basher".

Megan Davis and Auntie Pat

Anderson AO of the Uluru Dialogue issued a statement in response in which they urged the No campaign to stop "racist jokes and misinformation".

"Sadly, this sort of abuse is not uncommon on social media, weaponised by trolls and sham accounts that the No campaign does little to nothing to discourage or condemn," the statement said.

"Our young people around the country will be seeing supposed jokes on their social media feeds portraying Indigenous Australians as 'rent-seekers', 'violent' and 'woman-bashers'."

# Call to UN over WA mess

DAVID PRESTIPINO

The United Nations Committee on the Elimination of Racial Discrimination has been urged to take a stance on Western Australia's bungled attempt to reform Aboriginal cultural heritage protection.

A letter sent to UNCERD chair Varena Shepherd this month by Environmental Defenders Office members Slim Parker, Kado Muir, Dr Anne Poelina, Clayton Lewis and Hannah McGlade raised the group's serious concerns about WA's cultural heritage law reform process and requested the international organisation make a formal decision on the matter.

The WA Government admitted it "took things too far" as it announced earlier this month it would revert to the 1972 laws covering Aboriginal cultural heritage in WA, which were in force when Rio Tinto destroyed sacred rock shelters at Juukan Gorge in 2020.

Premier Roger Cook said tweaks to the 50-year-old Act would prevent another catastrophe like the mining titan's and apologised for the stress, confusion and division the new laws had created.

But Dr McGlade, a Curtin University school of law associate professor

and expert member of the UN Permanent Forum on Indigenous Issues, said the group was extremely concerned at the lack of Aboriginal consultation before the Act was repealed.

"It's very disappointing the WA Government under Premier Cook's leadership has once again shown failure to respect Indigenous peoples' right to cultural heritage under the frantic legislative reforms passed recently," Dr McGlade said.

The Permanent Forum is an advisory body to the UN's Economic and Social Council and has the mandate to discuss Indigenous issues related to economic and social development, culture, the environment, education, health and human rights.

Dr McGlade, pictured, a Noonang human rights lawyer and academic who has published on many aspects of First Nations legal issues, said the latest change to legislation in WA did not constitute effective remedy.

"The Bill gives Aboriginal Affairs Minister Tony Buti further rights to intervene and 'call in' appeals from the State Administrative Tribunal, thereby allowing the Premier to determine the matter and removing the right

to be heard by the tribunal," part of the letter to the UN said.

"We also note the SAT has no expertise in Aboriginal cultural heritage and fails to even include Aboriginal members in the tribunal composition, therefore this is also problematic and unacceptable."

The EDO is not the only organisation concerned at the lack of consultation with First Nations organisations, with prominent bodies such as the Kimberley Land Council and the Puutu Kuntj Kurrama and Pinikura Aboriginal Corporation, whose sacred caves Rio Tinto destroyed, also claiming they were not part of discussions the Cook Government had with industry and stakeholders, including miners and farmers, before repealing the Act last week.

PKKP land and heritage manager Jordan Ralph said reverting to the culturally inappropriate 1972 legislation was among the worst outcomes for Aboriginal cultural heritage protection and has demanded Dr Buti clarify a range of issues.

"First Nations people are being treated as second-class citizens in their own Country," Dr Ralph said.

The letter to the UN outlined the EDO's position that Australia's approach to cultural heritage protection should be pursued at a national level by the Albanese Government.

# Video shows teen with disability knocked down by officer

Stills from video of the arrest, circulated on social media.

## Probe into violent arrest

CALLAN MORSE

A NSW police officer involved in the violent arrest of an Indigenous teenager earlier this month has been placed on restricted duties.

The 18-year-old, who lives with a disability, was arrested in the mid-north coast town of Taree on Tuesday, August 15.

The officer was put on restricted duties after NSW Police launched an internal investigation, sparked by videos of the arrest on social media, described as “difficult to watch” by NSW Police Minister Yasmin Catley.

One of the videos appears to show the plain-clothes officer perform a leg sweep manoeuvre, knocking the teenager to the ground.

A second video shows the

pair fall to the ground, before the teenager appears to have a seizure. The officer then pulls the teenager upright before he is handcuffed.

The teenager was later charged with being in possession of suspected stolen goods, and was refused bail in Taree local court. He is set to return to court next month.

The teenager’s aunt told Guardian Australia her nephew said he thought he was going to die after the arrest. “He said, ‘I thought I was dying in the cell last night’. He said ‘I couldn’t move’. No one deserves to be treated like that,” she said.

The teenager’s aunt said the wellbeing of her nephew, who has foetal alcohol spectrum disorder and attention deficit hyperactivity disorder, was

not taken into consideration during the arrest.

“There were other ways they could have dealt with him. He wasn’t resisting arrest or anything,” she said.

“They nearly broke this little boy’s arm. This little fella was having seizures and they didn’t even have the courtesy to ring an ambulance.”

She said her nephew hit his head during the arrest, resulting in a cut on his head.

Greens NSW MP and spokesperson for justice Sue Higginson renewed calls for a parliamentary inquiry into NSW Police, labelling the teen’s treatment “shocking”.

“A vulnerable person was experiencing a medical episode and the police responded with violence instead of calling an ambulance,” she said.

“This is completely unacceptable and shows us once again that we do have a police problem in this State.

“NSW Police have announced an internal investigation which goes nowhere near what is needed to deal with the systemic issues that allow this to happen.”

Ms Catley confirmed the officer was on restricted duties while an investigation was under way. “I acknowledge the video that’s circulating is difficult to watch. That’s why this investigation will consider the police response and arrest. I cannot comment further while this takes place,” the minister said.

NSW Manning-Great Lakes Police District said it would investigate the “response and arrest . . . by a police officer”.

The incident has drawn parallels to a previous case involving a NSW police officer, who was found guilty of assaulting a 16-year-old Indigenous boy in 2020 after performing a similar leg sweep manoeuvre.

Ms Higginson said NSW Police were experiencing a “substantive deficit” in their ability to respond to vulnerable people, such as First Nations Australians, calling for further action and an inquiry to address the “alarming number of violent incidents involving NSW Police and vulnerable people”.

“We know we have good people in the NSW Police force, but it’s not enough to leave this important work up to them. The Government must act.”

## Thorpe says cancel Voice vote

JESS WHALER

Independent senator Lidia Thorpe called for the Voice to Parliament referendum to be called off in her address to the National Press Club in Canberra this month.

The Djab Wurrung, Gunnai and Gunditjmarra woman said the Voice proposal does not go far enough, and urged all Australians to look through the lens of First Nations Peoples.

The senator also spoke on the Frontier Wars, noting: “It was a sport to shoot blacks, a sport to shoot blacks, my people”, and adding that the wars have never ended.

“Same war, different weapons, the same domination of First Peoples for access to our land and resources,” she said.

“Our people are still rounded up and locked into cages at the highest rates in the entire world.”

She paid tribute to the strong line of Aboriginal female activists and ancestors from which she came.

Ms Thorpe called for Treaty, for legislation in line with the United Nations Declaration on the Rights of Indigenous People (UNDRIP), and for the referendum to be called off. “Adhering to the UNDRIP would do vastly more for our people than any voice,” she said.

“We’re talking about almost 250 years of invasion, disease, murder, theft, destruction, poisoning waterholes, poisoning trees, 250 years almost.

“(It’s) 2023 and all they have to offer is a powerless little advisory body with parliamentary supremacy over it at all times.”

Ms Thorpe said First Nations people deserve more than what is being offered, which she referred to as “false hope”.

“That’s another insult to our intelligence. That’s an insult to our ancestors. And all of our people who passed in every prison, in every institution,” Ms Thorpe said.

“It’s an insult, because it’s not good enough, after 200 years, that we

just get offered a powerless advisory. It’s not good enough,” she said.

Ms Thorpe invited the Australian people to stand with First Nations people, to stand up for what matters.

“I want to see Federal leadership on the conversation. I think that the King has to be at the table,” she said.

Ms Thorpe noted First Nations’ connection to and care for country. “We are the oldest continuing living culture on the planet. Surely that’s something to be proud of,” she said.

“We have lived through ice ages, countless fires, droughts and floods. We know how to care for country, but we are not allowed to do so.”

Prime Minister Anthony Albanese later told a press conference that a Yes vote would “advance reconciliation”.

“And that is doable from my perspective. Everyone will come to their own decision. From my perspective I fail to see how other issues will be advanced if a No vote is recorded,” he said.

Senator Lidia Thorpe at the National Press Club of Australia.

# Celebrating 20 years of Fortescue

**Since our inception 20 years ago, our focus has always been on communities benefiting from our success.**

Through initiatives such as our Billion Opportunities program, we have delivered economic and employment opportunities for First Nations people. As we look ahead to our next 20 years and beyond, giving back to communities remains at the forefront of everything we do.

## Vibrant view of culture and creativity

# Expressive handiwork

### FROM THE EDITOR

It has been a colourful month for our Style Up team, fitting given this is certainly a colourful edition.

The team attended the Darwin Aboriginal Arts Fair where Country Road denim was worn and much talent seen.

This included the Country to Couture runway, National Indigenous Fashion awards and the overall Darwin Arts Fair where dancers performed and stories were showcased.

The music awards were also held. Our fashion journalist attended the Brisbane Fashion Festival and we sadly said our goodbyes to our social media intern who filled in by holding down the fort in the online world during our director's absence.

It has been another month when we have grown and adapted. I look forward to the coming weeks when I will be attending fashion weeks around the world and providing you with more talent and inspiration.

SHAHNA SMITH

Iltja Ntjarra is known for its vibrant collection.

### PHOEBE BLOGG

After making headlines with its recent Country to Couture runway presentation — which featured watercolour-splashed and dyed clothing — Iltja Ntjarra Art Centre is injecting elements of fun and experimentation back into the fashion industry.

Using a talented team of local Indigenous artists has had the not-for-profit art centre fuse fashion with cultural relevance, artistic expression and bold experimentation.

"Iltja/hands Ntjarra/many, implies the coming together of different Western Aranda family groups," project manager Koren Wheatley said.

"Iltja Ntjarra/Many Hands is the home of the Hermannsburg School of Art, a transformational Central Australian art movement instigated by Albert Namatjira. "Here at the art centre, the Pareroultja, Malbunka, Inkamala, Rununtja, Coulthard, Namatjira, Wheeler and Ebatarinja families work side by side to create powerful interpretations of their custodial country. Many hands and many families coming together to represent culture and country," Wheatley said.

With Albert Namatjira's legacy at the core of everything

the centre's artists create, it only seemed natural that continuing his legacy would see the centre's artists experiment with watercolour.

"As the craft of watercolour, especially landscape, is incredibly challenging and at times overwhelming, this project was an opportunity to engage younger emerging artists by encouraging them to explore their interest in textile design as a creative medium.

"The new generation of watercolour artists are innovative, explorative and are guiding the Hermannsburg School of Art movement in their own direction by speaking to what influences their lives in this current social environment and life as they experience it," Wheatley said.

Iltja Ntjarra's senior artists and mentors Dellina Inkamala and Vanessa Inkamala, along with emerging Iltja Ntjarra artists, Dianne Inkamala, Delray Inkamala and Mandy Malbunka worked in collaboration with APM Employment and Disability services participants, Rhonda Jones, Teresa Wilson, Lucinda Forrest, Amanda Long and Leah Johnson.

The collection itself was led by Wheatley in the capacity of designer, with the help of seamstress Nghia Pham.

# Designers soar even higher

## PHOEBE BLOGG

With more than 20 designers presented across two runways, this month saw Darwin's annual Country to Couture runway make headlines once again.

Presented by the Darwin Aboriginal Art Fair Foundation as part of its Indigenous Fashion Projects, the Country to Couture

runway shows celebrated modern storytelling through textile craft.

Exhibiting a series of collections from Indigenous designers and artists across Australia, the Country to Couture runway was supported by the Northern Territory Government, along with Country Road.

"The event is recognised globally and in Australia's Indigenous

communities for celebrating and propelling designers to new heights while maintaining an authentic and grassroots feel," said the DAAF Foundation's artistic director Shilo McNamee. Despite this being the event's eighth year, attendees were once again amazed at the level of talent and creativity coming from the local community.

While notable designer

favourites, including Ikuntji artists and Miimi & Jiinda, returned to the runway, up-and-comers, such as Yapa Mali, made very fashionable Darwin debuts.

Aside from emerging designers, colourful collections and cultural storytelling, this year's runway also celebrated a variety of both established and emerging First Nations models. With celebrated

models Cassie Puruntatameri and Cindy Rostron returning to the Country to Couture runway, all eyes were on both women as they strutted their stuff, smiled for the camera and interacted with guests.

With projects already planned for 2024's Country to Couture runway, we here at Style Up believe next year's event will be bigger, if not better, than its 2023 counterpart.

## Artists get the chance to profit in dynamic setting

### SHAHNA SMITH

Entering the vibrant scene at the Darwin Convention Centre, attendees were immediately embraced by a dynamic display of Indigenous culture. The air buzzed with an infectious blend of excitement and reverence, setting the tone for an unforgettable experience.

Navigating the diverse array of booths, a ray of colours and textures greeted visitors courtesy of more than 70 talented Indigenous artists. The artwork, ranging from captivating paintings depicting Dreamtime narratives to meticulously crafted homewares and rugs, held an irresistible allure. From a small \$4000 budget in its first year to having up to 10 employees now, Style Up spoke to DAAF's Tikesa Docherty-Cole about the exponential growth.

"It's very special," she said. "It has come a long way. We had seven new art centres apply to be part of DAAF

Picture: Dylan Buckee

showing that as we grow, there are new art centres popping up that we can continue to support."

What truly distinguished DAAF was the opportunity to engage with the artists.

The fair's commitment to allowing 100 per cent of sales to the artists fostered an ethical and empowering trade environment.

Live performances elevated the ambience, infusing traditional dance and music with vitality.

## Indigenous creatives weave traditional with contemporary

### PHOEBE BLOGG

After months of anticipation and excitement, the National Indigenous Fashion Awards have finally crowned their winners.

Taking place at Darwin's Deckchair Cinema on August 9, this year's NIFA awards attracted a sellout crowd.

Breaking records with more than 60 nominees, this year's awards celebrated and supported the industry's top-performing Indigenous creatives.

Proudly presented by Darwin Aboriginal Art Fair and Indigenous Fashion Projects, this year's awards event also partnered with the Northern Territory Government to showcase creative excellence across six categories.

Rowena Morgan of Nagula Jarndu took out the textile design award, Yarrenyty Arltere Artists' Rhonda Sharpe went home with the wearable art award and Wiradjuri Gangulu and Yorta woman Lillardia Briggs-Houston was crowned with the fashion designer award.

Gapuwiyak Culture & Arts artists won the traditional adornment award, Gapuwiyak Culture & Arts X's Aly de Groot walked away with the community collaboration award and Ikuntji Artists won the business achievement award.

"The work of this year's winners all carry such a beautiful weaving together of traditional and contemporary practice imbued with deep connection, pride and love of

country and community," said Indigenous Fashion Projects manager Michelle Maynard.

"I think they really represent the heart of our people."

The winners will each receive a range of tailored funding, mentorships and other opportunities available through Indigenous Fashion Projects and presenting partners.

Judges at the awards included Yatu Widders Hunt, Lisa Waup, Nimmi Premaratne and Perina Drummond.

# Creating dreams under a rainbow of expression

SHAHNA SMITH

Nestled in the heart of South Australia, Mali Isabel is painting waves in the world of contemporary art with her vibrant creations. Her artwork is a testament to her deep-rooted cultural pride, her values of peace and equity, and her unyielding positivity.

A proud Arabana-Kokatha woman from Port Augusta, Isabel's upbringing in Adelaide was shaped by her multicultural surroundings.

"I have always felt people assumed I would be embarrassed or ashamed of my culture, and I often left them confused when they realised I embraced my heritage with unwavering pride," she says.

Frequently the only Aboriginal child in her community, Isabel chose to break stereotypes and shatter assumptions.

Her artistic journey began early in life as she explored various outlets for her creativity.

"When I pick up a paint brush, it's like the world and time no longer exist and I can forget the worries in the world," she said.

Graduating with a degree in primary education, majoring in visual arts, Isabel initially intended to pursue teaching.

But her passion for art took precedence. In a leap of faith, she dedicated a year to honouring her craft. Ultimately it led to the establishment of her successful business, Mali Isabel Art. "At the start of 2021, I secured a coveted studio residency at Carclew and spent the majority of my time developing my practice and artistic style," she says.

A hallmark of Isabel's art is her exceptional use of colour, which is not only visually striking but also carries deep significance.

"Each hue and shade captures the essence of how I am feeling at a particular moment in time," she says.

Her use of rainbow colours serves as a symbol of her commitment to achieving equality for all and breaking traditional moulds in Aboriginal art in a positive way.

Drawing inspiration from nature, memories, music and human emotions, Isabel's art seamlessly blends reality and fantasy. "I want to evoke a sense of wonder and awe, reminding others that magic exists in both

**Aura Objects — Panton chair by Verner Pantan in glacier blue \$660; Lexi — Cruz dress in turquoise \$499; Luminous Assembly — Maya pumps \$189; This Wee Piggy for Leonard St — Blossom earrings \$35**

the grand and subtle moments of life," she says.

Her approach bridges the gap between tradition and contemporary expression.

"It shows the richness and versatility that our heritage offers, especially for other artists like myself who have been raised in the modern world."

The pinnacle of Isabel's journey so far is her role as the poster artist for the 2022 Adelaide Fringe Festival. She is the first Aboriginal person to receive this honour in the festival's 62-year

history. And 95 per cent of artworks from her solo exhibition, *Rainbow Dreamz*, sold.

"This was a huge milestone for me, because it meant the risk I took on for my art was truly worth it all," she says.

Her artwork has also graced the pages of *British Vogue*.

For aspiring artists, Isabel's journey serves as a beacon of inspiration. She advises embracing opportunities, remaining persistent in the face of challenges, unleashing one's uniqueness, prioritising

self-discovery, and above all pursuing personal happiness.

Isabel exemplifies the transformative power of art, the celebration of identity and the impact of positive representation.

"I aim to build a community where individuals can immerse themselves in a world that celebrates the beauty of life and encourages connection and compassion," she said.

Her journey is about the magic that happens when passion, purpose and positivity collide in a symphony of colours and inspiration.

# Kamara stuns with new range

## PHOEBE BLOGG

Since launching on to the fashion scene, First Nations-owned and founded swimwear Kamara, has had fashion enthusiasts, consumers and critics on the edge of their seats — and this week's Brisbane Fashion Festival presentation was no different.

Presenting its new collection Universe, Kamara returned to

the runway where the brand began. For founders and business partners, Naomi Collings and Kirsty Parnel (Parnel is taking a step back from the brand) seeing their sun-friendly garments walk the runway was yet another rewarding moment.

"We're thrilled to be back at Brisbane fashion month and to have been selected for the Hancock Prospecting Next Gen

Group show," creative director Collings said. "It's an honour to return to the Queensland runway, especially since we showcased our very first collection here in 2017."

Having launched soon after Collings received a shock melanoma diagnosis, Kamara was designed to be an apparel business with advocacy at its core. Creating gorgeous, sun-conscious swimwear and

paying homage to their Indigenous roots, is what has made Kamara stand out.

Collings created the innovative swimwear line — made using rich, protective fabrics — with the hopes it would both sell and start conversations. Continuing to celebrate their diverse cultural background, the collection features a collaboration print with Yaggerah artist, Jenine

Godwin-Thompson. And it has a one-piece, named Onyx, made completely of recycled material. "Onyx is made with ECONYL-regenerated nylon from the healthy seas initiative — elegant, fine, soft, and breathable fabrication. It offers muscular compression, comfort, and UV protection (UPF50+) while resisting chlorine, sun creams, and oils," Collings said.

## Building stronger futures through positive partnerships.

We are committed to helping young Aboriginal people reach their potential through our Indigenous scholarship and career development program, Hanrine Futures. The program currently has 18 participants from primary to tertiary age. Each participant is supported through school and university or vocational education with mentors and additional learning opportunities, and into the workplace with internships, work experience and employment.

Visit the website to learn more about Roy Hill's community partnerships.

# Elders proud to share the 'key to life'

SHAHNA SMITH

As a Kariyarra Elder, Patricia Mason is entrusted with passing down tens of thousands of years of knowledge to the next generation.

But Ms Mason says she also shoulders responsibility to share this “key to life” — knowledge of significant sites, language, wisdom and culture — with non-Aboriginal people.

Which is why her family invited renowned photographer Russell James on to Kariyarra country, which encompasses lands around the town of Port Hedland in north-west WA.

The images captured on his visits, which include a birthing place that was used by Kariyarra women, form part of a new exhibition that seeks to shine a light on Elders from across Western Australia.

Ms Mason is one of more than a dozen Elders and Aboriginal leaders whose portraits feature in *The Elders: Legacy of Leadership* at the Perth headquarters of Mineral Resources.

At the unveiling, Ms Mason said she hoped the photographs furthered understanding of the deep connection to Country.

“Truth needs to be told that there are places that we feel very sincerely about. We have to show people that they do exist, because without them we wouldn’t be here today — we wouldn’t have survived,” she said.

Russell James regards working on the exhibition as one of the greatest privileges of his career. Other Elders and leaders featured include Noongar man and leading Aboriginal performer Dr Richard Walley, Kaprun Elder Brian Champion, Noongar woman Emeritus Professor Colleen Heyward and Noongar Elder Professor Len Collard.

# Budjerah on song for top artist’s award

NEVE BRISSENDEN

Coodjinburra musician Budjerah has been crowned artist of the year at the 2021 Indigenous Awards, being crowned the best breakthrough artist at the 2021 ARIA Awards and taking out the ARIA for best soul/R&B release for his album *Conversations* last year.

The 21-year-old singer-songwriter from Fingal Head, in northern NSW, has spent the past year touring with Ed Sheeran and released his hit-single *Therapy* in February. His list of Australian accolades will now grow after winning the young

territory, released the single *Let’s Go* in May 2022 and their debut self-titled album in August last year. This is the band’s second year winning song of the year after taking out the category last year with their single *Milkumana*.

Gamilaraay musician Thelma Plum was also recognised, winning album of the year with her EP *Meanjin*, written during COVID-19 lockdowns.

The ARIA Award winner has been shortlisted for the

Indigenous Awards 10 times but has not won since 2015.

The community clip of the year was awarded to Arnhem Land group *Wildfire Manwurrk* for *Mararradj*.

The group also won the Archie Roach Foundation Award. The Indigenous Language Award went to Ngulmiya, an Arnhem Land songman and ceremony leader, for his self-titled single.

Musical trailblazers Yothu Yindi were inducted into the Hall of Fame.

# INDIGENOUS-INSPIRED MASSAGE PROVES A POPULAR CHOICE

PHOEBE BLOGG

North of Sydney on the NSW Central Coast, Bells Day Spa is where relaxation and rejuvenation meet culture and tradition.

In conjunction with Bells at Killcare Boutique Hotel, Bells Day Spa welcomes both hotel guests and the general public. Bells offers its very own Indigenous-inspired

massage. The popular massage — the Indigenous Clay Earth & Ocean Dreaming Ritual — has been created to encourage rest in the

guest’s mind, while striving to replenish energy levels through the natural healing powers of earth.

Since the massage was added in 2020 to Bell’s offering of tranquil body treatments, guest feedback has been superb. “This treatment is our most popular body treatment and guests return time and time again to receive it,” head spa

therapist Yvette Roberts told *Style Up*. To create this experience, the team at Bells contacted the area’s local Darkinjung Aboriginal Land Council for approval.

“Our therapists are trained in the Indigenous aspects of our treatments, particularly when using a coolamon for cleansing and welcoming before the treatment starts,” Ms Roberts said.

# Midden at the Opera House is a dream come true for Olive

PHOEBE BLOGG

While it’s not uncommon for celebrity chefs to break away from the spotlight to launch their own venture, celebrated chef and proud Bundjalung man Mark Olive — otherwise known as *The Black Olive* — did so not with the intention of profit, but passion.

Thus came the launch of

Olive’s Indigenous-inspired restaurant, *Midden* by Mark Olive. Located in Sydney’s stunning Opera House, *Midden* is where culture and craft meet culinary creativity.

Fusing his Indigenous Australian

heritage, with seasonal produce and local delicacies, *Olive*, pictured, has ensured *Midden* is a reflection of both his culture and favourite cuisine.

“Opening *Midden* by Mark Olive at the Sydney Opera House on Tubowgule, Gadigal country is a dream come true,” he said.

Since opening on July 4, *Midden* has welcomed foodies,

socialites and celebrities into the restaurant.

He has designed *Midden*’s menu to touch on his culture and trendy tastebuds. It ranges from eucalyptus whipped butter and quandong paste, to smoked kangaroo and bush honey. “It’s very adventurous and truly Australian,” Olive said. “Our diners can expect a variety of Indigenous produce

like crocodile, kangaroo, emu and wallaby shanks.”

Aside from his appearances on *Masterchef Australia*, Olive is admired for his work in the SBS hit series, *The Outback Chef*. Assisting Olive is executive chef and friend, Damien Worthington, who brings a wealth of experience working at some of Sydney’s top restaurants.

## MOVING FORWARD. TOGETHER.

Woodside is supporting the Yes campaign for an Indigenous Voice to Parliament.

We believe having a formal pathway for First Nations people to share their views on policies that matter to them can only result in better outcomes.

A Yes vote would be a historic step forward in the reconciliation of our nation and an opportunity to unite all Australians.

Read more about Woodside's reconciliation journey at <https://www.woodside.com/sustainability/indigenous-peoples>

# Force of language fuelling the Red Power legacy

Tashina Banks Rama outside the heritage centre at Red Cloud Indian School. Picture: Giovanni Torre

GIOVANNI TORRE

Red Cloud Indian School (Mapiya Luta Owayawa) was named for the venerated Oglala Lakota Chief, who led his people from 1865 to 1909 in a struggle to defend their culture, land, language and way of life.

More than a century after his death, the school's executive vice-president Tashina Banks Rama advocates, promotes and upholds Lakota values, and engages the community in ways that continue to transform the multi-faith organisation.

The daughter of American Indian Movement co-founder Dennis Banks, Ms Rama has served the community school, located on sovereign Oglala Lakota land in South Dakota for 14 years and as executive vice-president for three years.

Once a church-run residential school, Red Cloud is now managed by the Oglala Lakota community and is no longer residential.

Ms Rama told National Indigenous Times language revitalisation is "critically important" to the community's wellbeing.

"It's the core of who we are. Our language is the lens in which we are able to view the world. In our belief, we believe that we're all related and that in order to have harmony and balance in our lives, it's important that we respect all living things.

"Our language communicates that in ways that English cannot. So, to speak the language really is to be able to identify as a Lakota and as a being that is part of this circle of the sacred group that we live in," she said.

"This school today is staffed 70

per cent by Lakota people. It's 99 per cent Lakota students.

"There are some non-native students who go to school here, but the majority of our students are Lakota and I feel very proud about that."

Ms Rama noted the importance of teaching the history of her people after many decades of misrepresentation and marginalisation.

"I can tell you this as a person who grew up in the American school system, I never learnt about Native people (in school) in the way that I learnt about them at home. (In) history books of the United States, we're invisible, or if we are in the history books, we are in past tense, right, there are the Indian Wars or you know, Indians were conquered . . . the 'people who used to be here'?" she said.

"So who we are today is nothing like what is written in the history books. In fact, today we're a vibrant, thriving community . . . (and) leading the way, in our language revitalisation programs.

"And we have professors, we have faculty, you know, from K through 12. More importantly, we have the most PhDs we've ever had teaching in universities

across the United States. It's very important because we're here . . . And it's important that my children feel proud in who they are, and that we are continuing to instil that pride in the next generation. So, seven generations from now, our children are speaking the language, they know where they come from, they know the history of our people and our creation stories, and why it's important to live the way we do with our traditions."

Ms Rama's father, Dennis Banks, was one of the founders of the American Indian Movement, which embraced a strategy of direct action in response to many decades of human rights abuses by police and treaty-breaking by the US government, and because of the dire conditions on reservations.

"The American Indian Movement was a movement of men and women who were fighting to be recognised. They were fighting against police brutality that was taking place at the time in Minneapolis. The beginning of AIM was 1968 . . . the environment of Minneapolis was really harsh for Native people," she said.

"Police brutality was at its worst in the late Sixties against

Native people. And that was when people like my father, Dennis Banks, Clyde Bellecourt, Vernon Bellecourt, and other leaders came together and formed the American Indian Movement.

"It started out as a community-organised group that were trying to protect each other, and look out for one another. And then it just grew very quickly from there."

Ms Rama said the legacy of AIM and the stand it took for justice can be seen in the Native people empowering themselves through education.

"My bachelor degree is a business degree, but my minor is Native American studies. And the fact that there was a Native American Studies Department at a public university has a lot to do with the American Indian Movement. American Indian studies departments popped up all over the United States and public universities because of the work of the American Indian Movement.

"The legacy (of AIM) gave agency to a lot of people who are working in those spaces, here comes this movement, right, this Red Power movement. And so, people were using their agency,

and they're feeling empowered by this community group that was starting to rise in ranks and starting to be really viewed as a legitimate organisation that was making change."

Ms Rama said there is an ongoing struggle for recognition and to end racism.

"As Native people there's a sense of we just are not here, that we just are invisible and we don't exist, or if we exist, we are caricatures, and we're just not a real culture or we're not a real people that still live in lands and practice ceremonies and have a language and practice traditions that have been happening for thousands of years," she said.

"In this State (South Dakota), particularly, you feel the racial tension is very strong, it's very alive. That's something we try to combat with our work and language and culture here so that our kids feel as confident as they can be when they walk into a gas station, or a grocery store that's off the reservation, where they're viewed, as you know, the 'other', when in reality, this is our homelands, you know, the Black Hills, we have been praying there for thousands of years. That's the home of our sacred sites, and our creation story.

"Native people have to do the best that we can to make sure that we're being recognised, we have to advocate for ourselves, because there's nobody else out there advocating on our behalf."

Ms Rama noted that the "land-back" movement is "huge" in the US, Canada and around the world.

"The Red Power movement is really very much alive today and getting stronger."

“Our language is the lens in which we are able to view the world . . . Our language communicates that in ways that English cannot. So, to speak the language really is to be able to identify as a Lakota and as a being that is part of this circle of the sacred group that we live in.”

# DV and health challenges for tribal leaders

GIOVANNI TORRE

For 45 years the White Buffalo Calf Women's Society has served vulnerable women and children in South Dakota.

The society is in south central South Dakota and was the first organisation of its kind in the US; a Native American-run service providing shelter and support to victims of domestic violence, sexual assault, dating violence, and stalking.

Prairie Rose Chapin, a Rosebud Sioux woman, is the executive director of the society and spoke to National Indigenous Times during the 18th Annual Government-to-Government Violence Against Women Tribal Consultation in Tulsa, Oklahoma this month, involving federal authorities consulting with tribal organisations and leaders, as mandated under Federal US law.

"White Buffalo Calf Women's Society ... was created and funded by Lakota grandmothers who saw there was a need to address violence against women, children and elders, and support those that are afflicted by domestic violence and family violence," she said.

"We ... provide an array of services to women that are affected by domestic violence, stalking, sexual assault, human trafficking ... We do young people's programs, youth programs, as well as the teen dating. We also go into the schools and do programs for young ladies and younger girls. So, they're starting to learn about how to keep themselves safe and how to help others that are in need or need safety."

The society's shelter, founded in 1978, now includes a 36-bed facility which tribal leaders hope to expand.

"As much as we are celebratory (for the upcoming 45th anniversary of the society) it is almost with much sadness that we have to convey that we're still incurring family violence in our communities," Ms Chapin said. "We do help other tribal nations, we help those in need ... We're going to help everybody."

Ms Chapin noted an executive order was issued by the White House in 2004 "for the United States government to have meaningful consultations with the tribes, so the United States government is able to create and develop objective plans to help the tribal nations regarding violence in our communities and mostly regarding with women".

Ms Chapin said the "trust responsibility" relationships between the US government and the sovereign tribal nations are at the heart of the treaties.

"That's why these tribal consultations are so meaningful, because they listen to the tribes and are trying to help address the issues within the tribal communities," she said.

Ms Chapin noted there were almost 600 federally recognised tribal nations in the US with distinct needs.

"That lets you know how many tribal leaders have sent designees, representatives — as well as tribal leaders themselves — that are here (at the August consultation conference in Tulsa) to convey the information that is so dire in our communities," she said.

"The Department of Interior has oversight of what's going on between the United States government and our Tribal nations ... (Federal authorities) also provide funding to the Department of Interior to

**“**  
That's why these tribal consultations are so meaningful, because they listen to the tribes and are trying to help address the issues within the tribal communities.  
**”**

Prairie Rose Chapin

be filtered down to tribal nations under what they call Public Law 93 638 contracting.

"They provide the funding, we execute the contract ... however, we're going to need more funding for more policy, procedure, training opportunities. Because the people are in dire need here, as well as any other Indian nations.

"We have the same issues, but different nations (are) unique. Now we have missing murdered indigenous women. We have missing murdered indigenous relatives. We have domestic violence, family violence, we have cops that are shooting and cops that are killing. And they all revolve around back to training, training, training. It's not enough... we have to teach our culture to change."

Ms Chapin said it is was a public responsibility as well as an individual responsibility to

Prairie Rose Chapin at the conference in Tulsa. Picture: Giovanni Torre

teach the community's children to "be right and to be productive members of society".

"Teach them cultural-specific ideals, ideology, historical information, so we can move forward."

She noted the social, health and economic damage alcohol and other drugs have done.

"Too often the drugs and alcohol have infiltrated our reservation from the beginning of time as a trading source (and) we still have poor economies on Indian reservations," she said.

"Even now, today's inflation affects what we have received on reservations. Some reservations don't even have a store. You know, in order for us to even go to somewhere with the food chain like McDonald's, or to Walmart, is more than 100 miles away from most reservations. And it's the same with health care."

Ms Chapin said isolation and inadequate services put lives at risk during times of crisis, both natural and man-made.

"We don't handle law enforcement, so with many crimes, especially violent crimes... it can take days to get that response. And some people die during while waiting for that response," she said.

"We had an array of snow storms this past winter, where it was very life threatening ... six to eight feet of snow, and law enforcement or emergency services not able to respond. Tribal governments and the (US) government have to meet in the middle somewhere. It was the US government that created these Indian reservations. There's a lot of treaty rights that were set aside by the US government."

Ms Chapin said there was still a lot of work to be done to address the challenges and injustices tribal nations face.

"They gave us land pieces that sometimes have nothing. Some tribal nations have no water and there's still none, they go to town to fill buckets for water, or canisters for water, just for basic needs."

## Together with reconciliation at our heart

Woolworths Group's commitment to reconciliation is stronger than ever.

That's why as Australia's largest retail group we are partnering with UTS to help realise the dream of a new First Nations residential college; the first of its kind in Australia. And it's why we aim to contribute positively to all the communities in which we serve across the country.

Learn more about our partnership here.

# Diversity's the aim in tech talent boot camp

NINA HENDY

Indigitek aims to boost the number of Indigenous people entering the tech industry, improving diversity and alleviating talent shortages in the sector.

Aboriginal and Torres Strait Islander people make up close to zero per cent of the tech industry, yet its importance as an employer is set to surge.

Indigitek, a not-for-profit group, has joined forces with course provider General Assembly, which specialises in cultivating diverse tech talent, and built a scholarship program designed to train Aboriginal and Torres Strait Islander candidates for tech startup Cash App, a money transfer app.

The scholarship program has been designed to create a chance for interested candidates to supercharge their careers in engineering. It's made up of a three-month software engineering immersive course, then a six-month internship.

The first successful candidate to land full-time work with Cash App is Joshua Towney, pictured, who started the journey 18 months ago, and admits he sometimes has to pinch himself to make sure he's not dreaming.

His wife had been encouraging him to look into coding for a decade but he was reluctant to dedicate years to being a struggling student. "The silver bullet of it only being a short course won me over in the end," he said.

He was one of about 15 students in the course. Born and raised in Dubbo, he's part of the Wiradjuri Country. "The initiative was subsidised by the Indigitek and Cash App partnership, so all costs for the course were covered," Mr Towney said.

Learning there were only about 200 Indigenous developers Australia-wide drove home the challenge in getting more Aboriginal and Torres Strait Islanders into the industry, he added.

Mr Towney said it has been his toughest endeavour to date, but he wouldn't trade the experience for anything.

# Diving into history for lucrative trade

DAVID PRESTIPINO

A First Nations business operating on WA's Coral Coast is resurrecting a centuries-old trade route between Indigenous Australians and Asia.

Denham-based Tidal Moon is a nod to the origins of Australian commerce, which began with the trade of sea cucumbers from Indigenous people from the Kimberley and Arnhem Land regions to Macassan seafarers from what is now Indonesia.

Tidal Moon managing director and Mulgana traditional owner Michael Wear said his goal was to preserve and enhance Indigenous heritage while creating a business that would remain viable for decades, and forge a path for more First Nations organisations to enter the lucrative commer-

cial fishing industry. Tidal Moon gained access to the sea cucumber fishery in Shark Bay in 2017, improving the lives and skills of traditional custodians, but is now fighting for a commercial licence so it can continue its good work.

"We want to be in the mainstream industry and have the ability to set up a business that's not reliant on grants or funding but stands on its own as a First Nations-owned company," he said.

While Tidal Moon's focus is sea cucumber fishing, it also has exciting partnerships with the likes of the CSIRO, APEC and the Harry Perkins Institute of Medical Research, helping the latter determine the health benefits of sea cucumbers, particularly in cancer treatments.

The sea cucumber harvest-

ing business, which was kick-started in 2019 with a \$92,000 investment from the Indigenous Land and Sea Council, has also established one of the world's largest seagrass restoration projects through BHP's Blue Carbon initiative, targeting a portion of the estimated 100,000ha of damaged sea grass meadows in Shark Bay.

Tidal Moon has trained and employed more than 10 Malgana traditional custodians in dive operations, delivering certified training in marine industry operations through partnerships with TAFE WA Maritime Centre and the Swan Maritime Institute.

Divers record all their interactions in nature, with Mr Wear planning to create a "living library" in conjunction with the CSIRO of Indigenous

observations with the environment. Export opportunities are also in demand, with sea cucumbers considered a delicacy in Asia and also popular across Europe, prized for their culinary and medicinal properties.

Tidal Moon's potential lucrative export contract with a Singapore company was recently skittled when its five-year fishing licence obtained through a minister's exemption expired in July.

Mr Wear said the WA Government had placed roadblocks to Tidal Moon's growth on a local front, leaving the company floating as it fights for a commercial licence to enable further development.

He said all sea cucumber commercial fishing licences in WA were currently owned by Tasmanian Seafoods.

# Supply Nation's new boss to tackle funding challenges

BRENDAN FOSTER

Supply Nation's new chief executive Kate Russell says the rise in First Nations businesses in the past 10 years has been phenomenal but fledgling Indigenous companies still face significant barriers.

The proud Awabakal woman, pictured, who recently replaced interim chief executive Michelle Deshong, said despite only being in the top job a few

weeks she is keen to tackle the age-old issue of access to capital for Aboriginal and Torres Strait Islander people.

"Our entrepreneurs continue to face significant barriers to establishing a successful business, including difficulty in attracting low-cost finance, building a customer base, winning contracts or establishing

links with reliable suppliers," she said. "I see helping our mob overcome these barriers as a fundamental and ongoing challenge of my role."

"One thing that has become apparent to me over the last few weeks is that we need to be supporting the diversity of our suppliers — from a mum and dad operating out of a garage, to a

bi-coastal organisation with its own philanthropic fund."

A board director of the NSW Aboriginal Land Council, Ms Russell said First Nations businesses still don't get some of the recognition they deserve in contributing to the economy.

It's estimated they pour about \$5 billion a year into the nation's coffers. "I think recognition of how our businesses contribute to the national economy is growing," Ms Russell

said. "This success is in spite of the unique set of challenges that Aboriginal and Torres Strait Islander people face — including historical and institutionalised inequities, limited access to the market and complex social stratification."

Ms Russell said the Federal Government's Indigenous Procurement Policy had enabled a tremendous growth in the First Nations business sector, but the policy could be improved.

# NOTICE TO GRANT MINING TENEMENTS

## NATIVE TITLE ACT 1993 (CTH) SECTION 29

The State of Western Australia HEREBY GIVES NOTICE that the Minister for Mines and Petroleum, C/- Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004 may grant the following tenement applications under the *Mining Act 1978*:

Tenement Type	No.	Applicant	Area*	Locality	Centroid	Shire
Exploration Licence	15/1955	MONGER EXPLORATION PTY LTD	14BL	18.4km E'ly of Kambalda	Lat: 31° 11' S Long: 121° 51' E	COOLGARDIE SHIRE, KALGOORLIE-BOULDER CITY
Exploration Licence	16/633	AMERY HOLDINGS PTY LTD	3BL	35.7km W'ly of Ora Banda	Lat: 30° 19' S Long: 120° 41' E	COOLGARDIE SHIRE
Exploration Licence	28/3267	CARAWINE RESOURCES LIMITED	9BL	157.6km N'ly of Balladonia	Lat: 31° 2' S Long: 123° 48' E	KALGOORLIE-BOULDER CITY
Exploration Licence	28/3347	REGENER8 RESOURCES NL	200BL	176.5km SE'ly of Edjudina	Lat: 30° 48' S Long: 123° 46' E	KALGOORLIE-BOULDER CITY
Exploration Licence	28/3348	REGENER8 RESOURCES NL	63BL	164.9km SE'ly of Edjudina	Lat: 30° 53' S Long: 123° 31' E	KALGOORLIE-BOULDER CITY
Exploration Licence	31/1363	M3 MINING (EDJUDINA) PTY LTD	1BL	16.4km W'ly of Edjudina	Lat: 29° 46' S Long: 122° 11' E	MENZIES SHIRE
Exploration Licence	31/1365	M3 MINING (EDJUDINA) PTY LTD	2BL	16.3km W'ly of Edjudina	Lat: 29° 51' S Long: 122° 11' E	MENZIES SHIRE
Exploration Licence	31/1366	M3 MINING (EDJUDINA) PTY LTD	1BL	15.7km SW'ly of Edjudina	Lat: 29° 52' S Long: 122° 12' E	MENZIES SHIRE
Exploration Licence	31/1367	M3 MINING (EDJUDINA) PTY LTD	1BL	9.7km W'ly of Edjudina	Lat: 29° 47' S Long: 122° 15' E	MENZIES SHIRE
Exploration Licence	36/1068	METAL HAWK LIMITED	21BL	30.8km S'ly of Leinster	Lat: 28° 11' S Long: 120° 41' E	LEONORA SHIRE
Exploration Licence	46/1477	TMB NULLAGINE PTY LTD	32BL	36.8km SE'ly of Nullagine	Lat: 22° 2' S Long: 120° 25' E	EAST PILBARA SHIRE
Exploration Licence	46/1503	TMB NULLAGINE PTY LTD	9BL	46.9km E'ly of Nullagine	Lat: 21° 54' S Long: 120° 33' E	EAST PILBARA SHIRE
Exploration Licence	46/1504	TMB NULLAGINE PTY LTD	20BL	46.1km E'ly of Nullagine	Lat: 21° 59' S Long: 120° 32' E	EAST PILBARA SHIRE
Exploration Licence	46/1505	TMB NULLAGINE PTY LTD	3BL	55km E'ly of Nullagine	Lat: 21° 55' S Long: 120° 38' E	EAST PILBARA SHIRE
Exploration Licence	51/2167	MINING EQUITIES PTY LTD	32BL	47.5km SE'ly of Peak Hill	Lat: 25° 55' S Long: 119° 4' E	MEEKATHARRA SHIRE
Exploration Licence	51/2170	MINING EQUITIES PTY LTD	11BL	42.9km SE'ly of Peak Hill	Lat: 25° 49' S Long: 119° 5' E	MEEKATHARRA SHIRE
Exploration Licence	70/6447	RIO TINTO EXPLORATION PTY LIMITED	169BL	62.4km N'ly of Mukinbudin	Lat: 30° 21' S Long: 118° 8' E	MOUNT MARSHALL SHIRE, MUKINBUDIN SHIRE
Exploration Licence	70/6462	CODRUS MINERALS LIMITED	1BL	32.7km N'ly of Mukinbudin	Lat: 30° 37' S Long: 118° 8' E	MUKINBUDIN SHIRE
Exploration Licence	70/6463	CAULDRON ENERGY LIMITED	82BL	23.3km SE'ly of Dalwallinu	Lat: 30° 23' S Long: 116° 51' E	DALWALLINU SHIRE
Exploration Licence	70/6469	CAULDRON ENERGY LIMITED	74BL	59.7km NE'ly of Wongan Hills	Lat: 30° 33' S Long: 117° 12' E	KOORDA SHIRE, WONGAN-BALLIDU SHIRE
Exploration Licence	70/6472	CODRUS MINERALS LIMITED	54BL	43.7km N'ly of Mukinbudin	Lat: 30° 32' S Long: 118° 4' E	MOUNT MARSHALL SHIRE, MUKINBUDIN SHIRE

Prospecting Licence	39/6424	SIMMONS, Wayne Anthony	8.01HA	60.9km E'ly of Leonora	Lat: 28° 59' S Long: 121° 56' E	LAVERTON SHIRE, LEONORA SHIRE
Prospecting Licence	40/1575	DIXON, Craig Leslie	9.90HA	45.1km S'ly of Leonora	Lat: 29° 16' S Long: 121° 27' E	MENZIES SHIRE

**Nature of the act:** Grant of prospecting licences which authorises the applicant to prospect for minerals for a term of 4 years from date of grant. Grant of Special Prospecting Licences, which authorises the applicant to prospect for minerals for a term up to 4 years from the date of grant. Grant of exploration licences, which authorises the applicant to explore for minerals for a term of 5 years from the date of grant.

**Notification day: 23 August 2023**

**Native title parties:** Under section 30 of the *Native Title Act 1993* (Cth), persons have until 3 months after the notification day to take certain steps to become native title parties in relation to applications. The 3 month period closes on **23 November 2023**. Any person who is, or becomes a native title party, is entitled to the negotiation and/or procedural rights provided in Part 2 Division 3 Subdivision P of *Native Title Act 1993* (Cth). Enquiries in relation to filing a native title determination application to become a native title party should be directed to the Federal Court of Australia, 1 Victoria Avenue, Perth WA 6000, telephone (08) 9268 7100.

**Expedited procedure:** The State of Western Australia considers that these acts are acts attracting the expedited procedure. Each licence may be granted unless, within the period of 4 months after the notification day (**i.e. 23 December 2023**), a native title party lodges an objection with the National Native Title Tribunal against the inclusion of the statement that the State considers the grant of the licence is an act attracting the expedited procedure. Enquiries in relation to lodging an objection should be directed to the National Native Title Tribunal, Level 5, 1 Victoria Avenue, Perth, or GPO Box 9973, Perth, WA 6848, telephone (08) 9425 1000. For further information about the act (including extracts of plans showing the boundaries of the applications), contact the Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004, or telephone (08) 9222 3518. *Please note – Not all Intention to Grant notifications are published in the National Indigenous Times. For more information please contact the Department above.*

\* - 1 Graticular Block = 2.8 km²

# NOTICE TO GRANT MINING TENEMENTS

## NATIVE TITLE ACT 1993 (CTH) SECTION 29

The State of Western Australia HEREBY GIVES NOTICE that the Minister for Mines and Petroleum, C/- Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004 may grant the following tenement applications under the *Mining Act 1978*:

Tenement Type	No.	Applicant	Area	Locality	Centroid	Shire
Mining Lease	15/1897	OPHIR MINING RESOURCES PTY LTD	130.23HA	22.9km SW'ly of Kambalda	Lat: 31° 19' S Long: 121° 28' E	COOLGARDIE SHIRE
Mining Lease	15/1898	ROBUSTELLINI, Anthony	3.50HA	94.4km NE'ly of Southern Cross	Lat: 30° 44' S Long: 120° 8' E	COOLGARDIE SHIRE
Mining Lease	15/1904-G	FRANCIS, Raymond John	7.34HA	25.1km SW'ly of Kambalda	Lat: 31° 22' S Long: 121° 29' E	COOLGARDIE SHIRE
Mining Lease	24/1007	ARCHER, Glenn Douglas	129.90HA	7.9km SE'ly of Ora Banda	Lat: 30° 25' S Long: 121° 6' E	KALGOORLIE-BOULDER CITY
Mining Lease	29/444	MT IDA GOLD PTY LTD	572.21HA	88.2km NW'ly of Menzies	Lat: 29° 4' S Long: 120° 27' E	MENZIES SHIRE
Mining Lease	39/1155	E-COLLATE PTY LTD	153.44HA	60.3km E'ly of Leonora	Lat: 29° 0' S Long: 121° 56' E	LEONORA SHIRE

**Nature of the act:** Grant of mining leases, which authorises the applicant to mine for minerals for a term of 21 years from notification of grant and a right of renewal for 21 years.

**Notification day: 23 August 2023**

**Native title parties:** Under section 30 of the *Native Title Act 1993* (Cth), persons have until 3 months after the notification day to take certain steps to become native title parties in relation to applications. The 3 month period closes on **23 November 2023**. Any person who is, or becomes a native title party, is entitled to the negotiation and/or procedural rights provided in Part 2 Division 3 Subdivision P of *Native Title Act 1993* (Cth). Enquiries in relation to filing a native title determination application to become a native title party should be directed to the Federal Court of Australia, 1 Victoria Avenue, Perth WA 6000, telephone (08) 9268 7100. The mining tenements may be granted if, by the end of the period of 4 months after the notification day (**i.e. 23 December 2023**), there is no native title party under section 30 of the *Native Title Act 1993* (Cth) in relation to the area of the mining tenements.

For further information about the act (including extracts of plans showing the boundaries of the applications), contact the Department of Mines, Industry Regulation and Safety, 100 Plain Street, East Perth WA 6004, or telephone (08) 9222 3518. *Please note – Not all Intention to Grant notifications are published in the National Indigenous Times. For more information please contact the Department above.*

# NIAA called out on lack of fraud checks

DAVID PRESTIPINO

An alarming lack of audit controls has been exposed at Australia's leading Indigenous funding organisation.

A new report by the Australian National Audit Office has found the National Indigenous Australians Agency, the Commonwealth body responsible for policy development, implementation and service delivery for First Nations people, is failing to properly detect and manage fraud.

The agency, which has more than 1300 employees across Australia, had its budget in 2022-23 increased to \$4.5 billion, to provide funding for programs through the Federal Government's Indigenous Advancement Strategy.

In 2021-22, the NIAA funded spent \$1.03 billion on more than 1000 external providers to deliver IAS activities and services, yet it failed to initiate a single fraud investigation.

ANAO analysis of Federal Government entities in June 2022 found the average number of external fraud investigations in medium agencies was 25 and in large agencies 12. Its report said the NIAA was not meeting legislated requirements for "risk and fraud management" in its role co-ordinating service delivery and policies for First Nations people.

The inadequacies in its fraud management were enough for the Federal Minister for Indigenous Australians Linda Burney to instruct the NIAA to implement further anti-fraud measures, in addition to seven recommendations from the ANAO in its report.

"I am very disappointed and concerned by the ANAO's findings," Ms Burney told the National Indigenous Times.

The NIAA was designed to improve Indigenous communities through the delivery of services but the report found it lacked proper oversight and compliance mechanisms to ensure funds were directed appropriately. One area of concern for the ANAO was the NIAA's management of fraud and non-compliance risks with service providers. "Its frameworks for managing provider fraud and non-compliance are not fully fit-for-purpose," the report said.

Ms Burney said the systems put in place by the previous Federal government were "clearly deficient". "Strong governance and accountability are critical to ensuring delivery of high quality services and better outcomes for Aboriginal and Torres Strait Islander communities," she said.

"The NIAA has already agreed to all the recommendations by the Auditor-General, and is in the process of implementing them."

Ms Burney said she had also instructed the NIAA to: establish an integrity group to elevate fraud prevention and detection; introduce a program of pro-active random compliance checks that is best-practice; start additional training for staff on fraud prevention and detection; and ensure staff are taking preventive and proactive steps to prevent and detect fraud.

In a letter to Auditor-General Grant Hehir in May addressing the ANAO's report, NIAA

chief executive Jody Broun said the agency would implement all seven recommendations and meet its obligations under Commonwealth legislation.

"The opportunities for improvement identified in the audit report, in conjunction with the work already under way to enhance practices and processes, support the agency's continuous improvement of its management of risk, provider

fraud and non-compliance," she wrote.

An ANAO review of five investigation closure reports by the NIAA found there was no or insufficient evidence of fraud. The ANAO noted of the five reports that three were not approved and one was not dated. Of the four that were dated, three were not endorsed by case officers and three did not have information on lessons learnt.

Federal Minister for Indigenous Australians Linda Burney.

## American tribes' move a blueprint for Australia

ZAK KIRKUP

The rise of Native American tribes as major economic players has been transformative, marked by innovation and diversification.

Once reliant on casinos, now an \$A61.5 billion industry, tribes have expanded into health and other sectors. This shift from casino gaming is all about self-determination and sovereignty.

The Native American experience in diversifying their economic base provides a blueprint for Aboriginal communities in Australia. The principles of self-determination, sovereignty and cultural preservation resonate deeply with both communities.

Shawn Terry, secretary of health for the Muscogee Creek Nation, speaks of a radical shift in health care, yielding an "entire economic development win". Larry Wright Jr, executive director of the National Congress of American Indians, highlighted how health care is a major economic driver.

The story of casino-based gaming in Native American economies is well-known, with the Indian Gaming Regulatory Act in 1988 considered the biggest single economic driver for tribal nations. The shift into the healthcare sector, for example, has been strategic, building financial resilience.

The Native American journey towards economic self-sufficiency offers valuable lessons for Aboriginal Australia in terms of community engagement, governance structures and innovative business practices. Collaborative efforts between the two communities could foster shared learning and growth.

Mr Terry told the National Indigenous Times it's about more than profits: "If our babies are dying quicker, then we're not going to survive as a people. Health care has to be at the centre of that."

The Native American tribes' success in transforming traditional services into economic drivers can inspire Aboriginal communities. In embracing cultural strengths and aligning them with modern business strategies, Aboriginal Australia can create a new narrative of economic empowerment.

The parallels between Native American and Aboriginal Australian experiences offer an opportunity for cross-cultural exchange. By studying the Native American model of economic diversification, Aboriginal communities can develop strategies that reflect their cultural values and regional needs, for a more inclusive and sustainable economic landscape.

This progression from gaming-based economies to a diversified portfolio reflects a sophisticated understanding of economic development and cultural preservation. It embodies the tribes' commitment to self-sufficiency, autonomy and the protection of their people, offering critical insights for Aboriginal communities in Australia.

## Qantas support for Yes sparks some backlash

DAVID PRESTIPINO

Qantas will fly the flag for the Yes team on twin fronts in our skies, decorating three of its planes and funding the travel of campaign members.

The commercial arrangement has raised some eyebrows, including those of Adam Giles, former chief minister of the Northern Territory who now runs mining magnate Gina Rinehart's agricultural empire, Hancock Agriculture and S. Kidman & Co.

Qantas chief executive Alan Joyce said branding three of its planes with the Yes23 campaign logo was part of the airline's commitment to reconciliation.

The company's support of an Indigenous voice being enshrined in the Constitution is aligned with leading Australian conglomerates such as Woolworths, Wesfarmers, Rio Tinto and BHP, but providing travel for the Yes23 Campaign and Uluru Dialogue teams invited controversy, given public backlash over its high airfares and cancelled flights.

Mr Joyce said Qantas was covering their costs "so they can engage with regional and remote Australians".

"We're supporting the Yes23 campaign because we believe a formal Voice to Government will help close the gap for First Nations people in important

Noel Pearson speaks at the launch at Sydney Airport.

areas like health, education and employment," he said at the official launch at Sydney Airport, alongside Prime Minister Anthony Albanese and other prominent First Nations leaders, including football great Adam Goodes and advocate Noel Pearson.

Mr Albanese praised Qantas for its long-standing commit-

ment to reconciliation and throwing its weight the Yes campaign. "Qantas has a long history of doing its bit to carry the nation, to lift all of us a little bit higher, both literally and figuratively," he said.

But Mr Giles, an Indigenous man, said big business should not take sides or spend millions supporting the campaign.

# Santos

Greg McKellar, Wongkumara Elder & Cultural Heritage Manager

## “I’M PROUD OF MY COUNTRY AND THE PROTECTION OF OUR CULTURAL HERITAGE SITES.”

“Being able to work on country is a privilege. Santos and Wongkumara people working together in the Lake Eyre Basin enables us to go out to country to see things physically, to see the things that my grandmother told me about.”

# Walk the talk for AFL star

DAVID PRESTIPINO

This year's 20th Long Walk will bear extra significance for Indigenous AFL trailblazer Michael Long as he strives to unite the nation behind the Voice to Parliament.

The Essendon great will again walk the 650km journey from Melbourne to Canberra, as he first did 20 years ago when setting off to speak with then-prime minister John Howard after the Aboriginal and Torres Strait Islander Commission (ATSIC) was abolished.

This year's event aligns the Voice referendum campaign and is expected to take the Australian Football hall-of-famer 30 to 40 days.

The 53-year-old is re-creating the first journey, stopping in regional communities along the way to discuss how the upcoming referendum could band the country together

before reaching Parliament House for meetings with Prime Minister Anthony Albanese and Opposition Leader Peter Dutton.

In its 20 years The Long Walk has transformed into an annual charity event, where people join Long in the trek from Melbourne's Birrarung Marr to the MCG before the annual Essendon-Richmond Dream-time game during AFL Indigenous Round.

Long said football had played a crucial role in improving the lives of Indigenous people in Australia, and the two-time premiership player believed the Voice can help change lives and bring Australians together for good.

"What I have learnt from footy, I have seen things transformed. I've seen sport change lives," he said.

"One of the greatest advocates is (former Collingwood

Anthony Albanese will meet with former AFL star Michael Long after the Long Walk. Picture: AAP

player) Damian Monkhorst, he has become a great advocate for change."

During a 1995 match between Collingwood and Essendon, Monkhorst used racist language during a tussle with Long.

Long spoke candidly about the referendum and the opportunities it posed, inviting all

Australians to join him along the journey to Canberra. The first leg began at Melbourne Town Hall on Sunday finishing later at the Bombers' Windy Hill home ground in Essendon.

"I want all Australians to come walk with me," Long said.

"I want all the sporting codes — Australian Rules, soccer, netball, basketball, rugby, swim-

ming, tennis — to come walk with me. I want corporate Australia to come walk with me.

"I want community groups to come walk with me, and I want Aboriginal organisations to come walk with me."

More information on The Long Walk and its legs and destinations is available at [thelongwalk.com.au](http://thelongwalk.com.au).

## SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing LNG projects in Australia. Today, we aim to thrive through the global energy transition with a low cost, lower carbon, profitable, resilient and diversified portfolio.

We are committed to consulting and ensuring feedback from relevant persons is considered and used to inform the development of an Environment Plan for the Scarborough Offshore Facility and Trunkline Operations.

### Our activities

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities.

Located around 374 km off the coast of Dampier in Western Australia, work is planned to start in the second half of 2025. We are seeking input from relevant persons whose functions, interests or activities may be affected by the proposed operations.

### The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by a highly unlikely release of marine diesel to the environment as a result of loss of damage to the production facility or vessel collision.

The EMBA represents the merged area of many possible paths a hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time.

### We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the proposed activity, we would like to hear from you by Monday, 11 September 2023 to identify as a relevant person.

### Want to know more or provide input?

A feedback form and more information can be found at: [www.woodside.com/sustainability/consultation-activities](http://www.woodside.com/sustainability/consultation-activities). You can also subscribe via our website to receive future information on upcoming activities.

## SPORT

# Mason sprints toward future

JOSEPH GUENZLER

Proud Gangalu athlete Tuqiri Mason is making a name for himself in the world of athletics at only 15 years of age.

Mason recently etched his name in the record books of NSW Hastings Secondary College after shattering a two-decade standing record in the 100m spring in the open and under-16 divisions.

Despite his nerves and running barefoot with no starting blocks or specific training, Mason clocked a staggering 10.92sec, passing Adam Miller's record set 20 years ago.

Miller, who became a notable Australian sprinter with a 100m PB of 10.17sec, showcased his skills on international stages including the 2004 Olympics, 2006 Commonwealth Games and 2007 IAAF World Championships.

Though Mason's favourite event is long jump, he is grateful for what he has been able to achieve so far with such little help.

"It feels incredible to have broken the record, I'm proud

and grateful for this achievement," Mason told National Indigenous Times.

"My favourite event is long jump just because I get really nervous for my running events."

During the Lower North Coast Districts competition hosted in Coffs Harbour, Mason displayed his diverse athletic prowess by clinching first place in the 100m, 200m, and long jump events.

This feat has propelled him into the next phase of competition, a testament to his natural talent and skill which he hopes to take to the highest level.

"I'm only 15 going on 16 and would love to represent my culture and country and would like to see myself in the Olympics," he said.

"I have had lots of community support which encourages me to better myself."

Despite his high ceiling for potential, financial constraints loom as a hurdle in Tuqiri's path.

With a time frame of just one month, his family is seeking support to ensure he can com-

Tuqiri Mason recently clocked a 100m time of 10.92s while barefoot on grass.

pete in next month's NSWCHSSA (NSW Combined High Schools Sports Association) — Secondary Athletics — Championships.

His mum Candice is proud of her son's achievements and a firm believer in his potential in athletics. "His personality is family grounded and he's a

pretty chilled relaxed young boy," she told National Indigenous Times.

"If he put his mind on his athletics he can go along way."

"I remember when he was in Year 3, he had to race against the Year 6 and 7 boys and he beat them. That's how I knew he had potential."

Mason will be competing from September 5-8, coinciding with his 16th birthday on September 7.

As he embarks on this next chapter of his athletic journey, a GoFundMe account has been established to help with registration fees, uniforms, accommodation and fuel.

## Kozzie earns third selection in young guns' side

JARRED CROSS

A trio of young Indigenous stars have been named in the AFL Players Association's 22under22 class for 2023.

The fan-voted contest presented Demons livewire Kysaiah Pickett with his third selection, and handed debuts to St Kilda bolter Nasiah Wanganeen-Milera and former No.1 draft pick and Bulldog Jamarra Ugle-Hagan.

The trio slot in the forward pocket, back pocket and centre-half-forward respectively.

Kozzie continues his electric start to AFL footy, leading the fourth-placed Dees' goal kicking this season.

The 22-year-old signed a four-year deal to remain at the club in

Jamarra Ugle-Hagan, Kysaiah Pickett and Nasiah Wanganeen-Milera.

May, already boasting a premiership in 2021.

After establishing himself among the competition's most exciting prospects, St Kilda's Wanganeen-Milera has grown into his role as a damaging

half-back. His exploits are beginning to compare with his uncle and 1993 Brownlow medallist Gavin Wanganeen, and he has shaped as a major influence in St Kilda's tilt at a deep September.

The 20-year-old hasn't dipped

below 20 disposals since round nine for an average of 24 touches a game in 2023, and has three times eclipsed 30 — including career-high 33 disposal efforts against Melbourne and Hawthorn, adding a goal in the latter.

His previous best was 22 touches in round 12 of his debut season last year.

As well as finding the footy, the smooth-operating South Australian averages six marks and two tackles.

There's a sense of vindication for Western Bulldogs forward Ugle-Hagan in a breakout year.

The 21-year-old has gone a long way to proving whispers of doubt around his credentials wrong with 34 majors in 2023.

Ugle-Hagan was the second-most popular selection in the

side, named in 88 per cent of all fan votes for their 22. Like most key position players, Ugle-Hagan has taken time to develop into a genuine weapon in his club's forward line.

Marra has matched personal best of five goals in a game, first kicked against Melbourne last year, twice in 2023, and inspired with the feat a week after enduring racial attacks from the stands earlier in the season.

The tall has threatened to become one of the game's biggest headaches for opposition defences, with only inaccuracy in front of goal — 34.35 so far in 2023 — holding him back.

Carlton's Jesse Motlop missed out on selection after being named in the 22under22 squad of 40 earlier this month.

# efficient German makeover

According to DocoMomo Australia, a heritage site specialising in modern architecture, early versions of demountables (called mobile or portables in some states) were considered “superior” to permanent classrooms in space and facilities, and included sun shading.

In 1966, they were envisaged as a temporary fix. This author’s classrooms at Lindfield Public

School are still there more than 50 years later.

Self-described design nerd Tim Ross said he had powerful memories dating back to his time in a portable classroom. In *Designing a Legacy* on ABC, Ross said the humble demountable was an Australian design legend.

“They’re robust, they’re practical and they’re pretty much unchanged, apart from some much-needed heating and cooling.”

And despite “the amazing longevity of the portable classrooms, they’ve never been properly appreciated”, he said.

Ross said Australian Pritzker prize-winning architect Glenn Murcutt’s most-awarded buildings had some similarities with the demountables: they were long and thin and sat on the earth lightly.

The demountables also slotted into the landscape, said Menden.

## HARDSHIP NOTICES

# Westpac sued over delays in customer aid

Millie Muroi

Westpac could face millions of dollars in penalties for failing to respond to customers’ hardship notices quickly enough if the Federal Court rules in favour of the corporate regulator.

The Australian Securities and Investments Commission (ASIC) will today say it has commenced civil penalty proceedings against the bank in the Federal Court, alleging that 229 Westpac customers from 2015 to 2022 did not receive a response to their hardship notice within the required timeframe.

ASIC deputy chair Sarah Court said the regulator had taken court action to highlight the importance of lenders reducing harm to their customers by responding to hardship notices within the timeframe required by law.

“Submitting a hardship notice, which results in a change to the credit contract, can be a lifeline for people experiencing challenging financial circumstances,” she said. “Westpac’s failures to respond to these notices compounded their customers’ difficult financial circumstances.”

It comes as some indicators of financial stress on households are starting to pick up, with banks warning the full impact of rate rises is yet to flow through, although arrears and delinquencies among the major banks remain below historical averages. Westpac said last month the proportion of customers more than 90 days behind on their repayments rose by 7 basis points to 0.8 per cent of its loan book.

Last week, the regulator published an open letter to 30 large lenders urging them to step up their support for customers experiencing financial hardship amid a 29 per cent increase in calls to the National Debt Hotline compared with the same time last year.

ASIC said many customers allegedly affected by Westpac’s failure to respond to hardship notices also disclosed difficult circumstances and vulnerabilities, including their inability to work, the impacts of serious medical conditions or carer responsibilities.

“In some cases, customers endured debt collection activities by Westpac while waiting for the bank to respond to their hardship notices,” the regulator said.

A lender has 21 days to notify the customers if it does not agree to change the contract or if it requires further information to make its decision.

ASIC has alleged Westpac breached the National Credit Code by failing to respond within that timeframe and by failing to act efficiently, honestly and fairly when it came to responding to its customers’ hardship notices.

In its concise statement filed to the Federal Court yesterday, ASIC alleged the issues came about as a result of a Westpac system failure and/or IT error.

Westpac group chief information officer Scott Collary has acknowledged the civil penalty proceedings and said the technology failure meant the bank did not provide some of its customers with the help they needed. “For this, we are deeply sorry,” he said.

Collary added since uncovering the issue, the bank had contacted affected customers and completed a remediation program including refunds of fees and interest, debt waivers and payments for non-financial loss, totalling about \$900,000.

ASIC has also alleged that Westpac did not do enough to investigate and rectify the systems issues plaguing its online hardship notification process and is seeking declarations, pecuniary penalties and adverse publicity orders against the bank from the court.

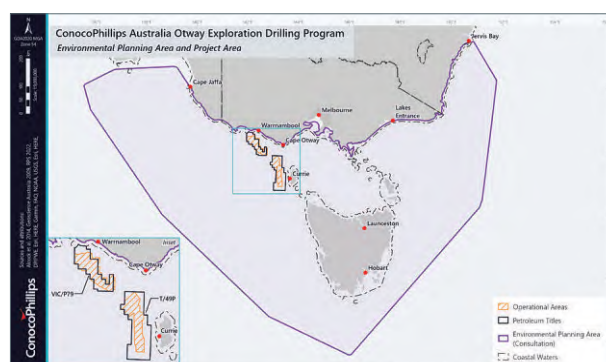

## Relevant Person Consultation:

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

## RARE GENETIC CONDITIONS

## Study aims to unravel dementia riddles

**Angus Thomson**  
Health reporter

Mostly, Charlotte Colley is just like any other two-year-old. She goes to daycare, loves splashing in the pool or at the beach, and has no problems letting her parents Brett Colley and Sarah Matthews know exactly what she wants.

"She is very vocal for someone who's non-verbal," Colley said. "She makes you work for the smiles and the laughs, but she's got a lot of sass and she's a brave little thing."

But Charlotte's doctors and parents aren't sure if she will be able to walk, talk or swallow food. In November, she was diagnosed with Cockayne syndrome, an extremely rare and inherited condition affecting the neurological development of children.

It is one of more than 150 rare genetic conditions Australian scientists have identified as causing dementia in children in world-first research that hopes to boost scientific and public understanding of a condition most people don't even know exists.

The study, published in the journal *Brain*, estimated that more than 100 babies born in Australia each year would develop childhood dementia, a similar number to those born with cystic fibrosis.

The 91 Australians who died from the condition in 2021 are only slightly fewer than the number of

Sarah Matthews cuddles Charlotte, diagnosed last year with a form of dementia. Photo: Steven Siewert

children who died from cancer before the age of 15.

The conditions are all marked by a period of development before the often rapid onset of symptoms of premature ageing. Life expectancy is nine years, and 70 per cent don't live to see their 18th birthdays.

Lead author Dr Nick Smith from Adelaide University said some of the genetic abnormalities that

cause dementia in adults can also cause dementia in children, such as the defect in one gene which causes both Gaucher's disease in children and Parkinson's in adults.

"The usual reaction you get is that this doesn't happen to children, but quite the contrary; this is a condition that young people in our community are dealing with," he said.

Megan Maack, who commissioned the research as chief executive and director of the Childhood Dementia Initiative, said grouping the conditions together for the first time would help researchers and policymakers understand the scale of the problem.

"Historically, the hundred-plus conditions that cause childhood

dementia have been understood in isolation, and so the way we research, the way we care, the way we set policy, has been very fragmented," she said. "While the genetic cause is different, the challenges families face are all common, so it makes sense to look at them all together."

Maack, who has two children with childhood dementia caused by Sanfilippo syndrome, said most families received support through the NDIS, but had to fight to receive proper care for their children.

"Getting a diagnosis for one of these conditions is really difficult," she said. "And once they're diagnosed, there are no care pathways, no consistent models of care ... palliative care services aren't set up to care for kids with childhood dementia."

Matthews, from Dulwich Hill in Sydney, said she was proud of the way Australia's medical system had supported their daughter, but the past two years had been a constant search for answers involving dozens of medical specialists and few explanations.

"I'm a lawyer for a living, but I feel like I've never had to advocate as I have had to do, to get Charlotte to stand out and to say this isn't something that she's going to grow out of," Matthews said.

"If there's going to be gene therapies, then early diagnosis and early treatment will be absolutely critical."

## Australian-made cancer drug wins billion-dollar approval

**Liam Mannix**

A drug invented in Australia to treat a lethal bone marrow cancer is set to become a billion-dollar global blockbuster after US regulators on Friday gave it the green light to be sold there.

Momelotinib was invented by an Australian team in Melbourne in the late 1990s, and the drug was bought by pharma giant GSK in 2022 for \$US1.9 billion (\$2.95 billion). It is used to treat myelofibrosis, a rare and devastating disease that leads to bone marrow "burnout".

Getting a drug from lab bench to patients is a long, expensive and usually unsuccessful process. For all the medical discoveries made around the world every day, Australia approves only about 40 new drugs every year.

After winning approval in the US to treat myelofibrosis, GSK expects the drug to generate more than \$US1 billion in sales each year. The company is expected to apply for approval globally.

Both the key underlying cause of myelofibrosis and the treatment were discovered in Melbourne.

"There are few stories that really encapsulate how great Australian science can be better than this one," said Professor Mark Dawson, co-head of the Cancer Biology and Therapeutics Program at the Peter MacCallum Cancer Centre. He was not involved in the drug's development.

Yesterday afternoon, Professor Andrew Wilks was drinking champagne to celebrate an achievement three decades in the making.

Wilks discovered the Janus kinases molecule in 1989. Momelotinib is named after Mel-

bourne, the city where he and chemist Dr Chris Burns first sketched out the molecule.

"How long's that, 35 years? I was young and lovely when I started this thing," Wilks said.

Myelofibrosis is rare, poorly understood and devastating. The disease appears driven by a dysfunction in a family of proteins known as Janus kinases.

These proteins are named after the Roman god of duality because they play key roles in both manufacturing and regulating blood cell production.

In the early 2000s, researchers around the world linked genetic dysfunction in the newly discovered kinases to a pair of diseases in which the proteins go rogue, pumping out far too many blood cells. The bone marrow strains under the demands of excess production, and begins to inflame. Over time, this inflammation scars the sensitive tissue.

Eventually, the marrow reaches what Dawson calls the "burnout phase". Where once they made too many red blood cells, they now make too few, leaving patients anaemic.

HEATWAVES

# Nation urged to prepare for summer's silent killer

Natassia Chrysanthos, Angus Thompson

Heatwaves are a silent killer that lead to more deaths each year than natural disasters and Australians need to be prepared for them, Emergency Management Minister Murray Watt has said ahead of the country's hottest and driest weather since Black Summer.

Sydney, Canberra and Melbourne have all endured heatwaves this month and the Bureau of Meteorology last week declared an El Nino event and a positive Indian Ocean Dipole were in play.

Watt said that would bring a more difficult summer, in terms of hot weather risk, than the country had seen since the Black Summer of 2019-20.

"And while there's been a lot of focus on bushfires, one of the other risks is heatwaves, which are the silent killer," he said. "Actually, we lose more people to heatwaves every year than we do from other forms of natural disasters."

As the federal government convened its first major summit of 2023 for emergency services, different governments and the private sector to get ready for summer, Watt said the elderly and the disabled were at greatest risk.

"Some people will be better positioned than others, depending whether they have airconditioning in their homes," he said. "But we're also working with local governments around public libraries, swimming pools, public facilities that people can use to get relief in those heatwave conditions."

Foodbank chief executive Brianna Casey said she was particularly concerned about the impact on cash-strapped clients who "just don't have the resilience that we need right now".

"We've already got people seeking food relief, bringing in empty containers of water for us to actually freeze on their behalf in lieu of freezers because they can't afford the running costs of keeping fridges and freezers on," she said.

Emergency Management Aus-

Bathers cool off at Bronte. Warnings have been issued about a dangerous summer. Photo: Dion Georgopoulos

tralia director-general Joe Buffone said the agency had been learning from North America and Europe, which battled extreme heat and fires.

"There is a national framework that makes sure there's consistency and warning," he said.

"We're also working with the energy sector and with health sectors to make sure they are acutely aware of the potential impacts of heat."

"The big focus is around people: making sure that they have the information to protect themselves and have support. Look after your neighbours, in particular the elderly, and those that have [mobility issues]. An important part of that is making sure that they get early warning, they're prepared and

they stay cool, they stay hydrated, and they take advice from the warnings from emergency services [and] the health sector."

The Bureau of Meteorology's heatwave warning service provides alerts via its mobile app four days in advance.

The alert provides a warning as well as health messages tailored to particular areas or at-risk communities.

"It's a very powerful way of giving the community insight around a heatwave coming," the bureau's chief executive Andrew Johnson said. Messages would also be issued on social media.

He said his agency was also working with the national energy network to manage supply during extreme heat.

For example, fewer electrons are sent down transmission power connectors during hot weather because energy systems can no longer sustain the same voltages, and power lines sag.

"It's a very, very complex system. There's always a risk from severe weather, right through the power grid," Johnson said.

"As a [former chief executive] once told me: the history of this country is that our power has been run by fossil fuels. But the future of our power in this country will be run by the weather."

"The weather plays an absolutely vital role both on demand and supply side, so we put a very significant effort into working side by side with all the players in the system."

## Nuclear medicine factory at old reactor

Liam Mannix

Hundreds of millions of dollars will be spent building a new radioactive medicine factory at the Lucas Heights nuclear reactor in Sydney, replacing an ageing and accident-prone facility.

The new manufacturing centre will produce the radioactive drugs doctors use to image the heart, lungs, kidney and brain for diagnosing and tracing diseases such as cancer. The current facility has been plagued by safety breaches, including in 2017, when a worker suffered radiation burns.

The government has been tight-lipped on costs ahead of a competitive tender process, but equivalent facilities in other countries have often come with price tags exceeding \$400 million. The factory is expected to open in the mid-2030s.

"ANSTO's [the Australian Nuclear Science and Technology Organisation] nuclear medicine precinct in Sydney will revolutionise the domestic production of nuclear medicines and improve the lives of thousands of Australians," said Science Minister Ed Husic.

The facility will replace Lucas Heights' trouble-plagued Building 23, built in 1959 as a research laboratory and later repurposed to make nuclear medicine.

Building 23 recorded seven "events with safety implications" in 2017 and 2018.

The worst of these occurred in 2017, when a worker dropped a vial of radioactive Molybdenum-99, covering their hands in the liquid.

"Building 23 was designed and built in the 1950s and is scheduled to reach its end of life by the end of the 2030s," said Ian Martin, ANSTO's general manager of nuclear medicine. "It [has] served Australia very well, I think. But it's an ageing facility that this [new] facility will replace."

Like the current facility, the new one will assemble and test nuclear medical products, particularly Molybdenum-99, or Mo-99.

ANSTO supplies about 12,000 doses a week to facilities across Australia and the region.

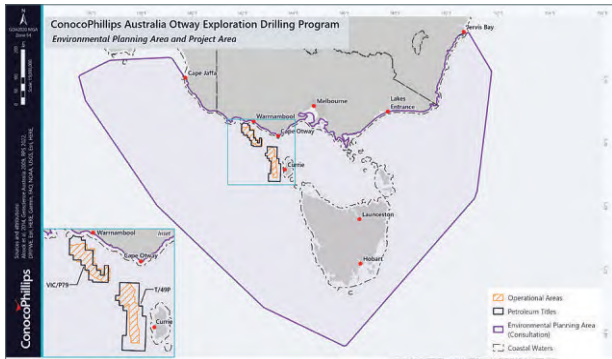

## Relevant Person Consultation:

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

## LEHRMANN CASE

# Ten seeks evidence on intoxication

**Michaela Whitbourn**  
Legal affairs

Network Ten is seeking to rely on expert evidence in Bruce Lehrmann's defamation case about sexual assault victims' typical behaviour and Brittany Higgins' level of intoxication on the night she alleges she was raped by Lehrmann in Parliament House.

The Federal Court trial against the broadcaster is slated to start in Sydney on November 22. Barrister Tim Senior, acting for Ten, yesterday told the court at a preliminary hearing that the network would call 28 witnesses, including Higgins and journalist Lisa Wilkinson.

Senior said Ten also wanted to tender two expert reports, on "the reactions and responses of victims of sexual assault ... and how things like memory may be affected", and a toxicology expert's opinion about Higgins' level of intoxication on the night in question.

Matthew Richardson, SC, acting for Lehrmann, said the first report, written by a clinical psychologist, offered not only an opinion about "the typical behaviour of victims of sexual assault" but "also posits opinions that, for instance, false

complaints are rare". "There certainly will be objection to that evidence, starting from ... whether or not there is a recognised field of expertise and so on, but also the conclusions and the opinions that are expressed, we would say, have no sufficient factual foundation," Richardson said.

"It really appears to be an analysis of academic papers. As to

whether we will object to the toxicology report, we just haven't come to a view yet."

Justice Michael Lee said questions about the admissibility of the first report would be determined before the trial.

Lehrmann filed Federal Court defamation proceedings against Ten in February over an interview Wilkinson conducted with his for-

**Bruce Lehrmann is suing Network Ten over an aired interview conducted with his former colleague Brittany Higgins.** Photos: Alex Ellinghausen

mer colleague Higgins on *The Project*, broadcast on February 15, 2021. Separate proceedings against News Corp, filed at the same time, have since settled.

He alleges the interview conveyed a series of defamatory meanings, including that he raped Higgins in former defence industry minister Linda Reynolds' office on March 23, 2019.

Lehrmann was not named in the broadcast, but his lawyers say he was identified via other means.

If the court finds Lehrmann was identified, Ten and Wilkinson admit they conveyed the defamatory claims alleged, including the central claim of rape, and will seek to rely chiefly on defences of truth and qualified privilege, a defence relating to publications of public interest which requires an outlet to have acted reasonably.

Lehrmann is also suing the ABC for defamation for broadcasting a National Press Club address last year by Grace Tame and Higgins. Lee yesterday said the ABC proceedings would be heard at the same time as the Ten case. The broadcaster proposes to call five witnesses.

Lehrmann was named in the media in August 2021, six months after the Ten interview, when he was charged with sexual intercourse without consent.

He pleaded not guilty to the charge. His trial was aborted in October last year due to juror misconduct. The charge was later dropped amid concerns about Higgins' mental health. Lehrmann has always maintained his innocence.

**Carmen Forward**

Actress Claudia Karvan sold her late father's Bondi Beach estate at auction on Saturday for \$989,000.

The oversized art deco apartment in Francis Street attracted nine buyers, mostly first home buyers.

Buyers were undeterred to hear the property featured non-approved space such as a workshop and laundry accessible below the kitchen and a courtyard, all common property but claimed by the owner during his 20 years living there. The floor plan on the listing labels this area as "not approved common property".

The guide was initially \$950,000, but after the agency received letters from strata in regards to the title it was lowered to \$850,000.

Bidding opened at \$700,000 in front of a curious crowd.

After five \$25,000 bids between five parties, bids of \$5000 were placed until the reserve of \$835,000 was met. Further \$5000, \$2000 and \$1000 bids were placed until it sold for \$989,000 to a first home buyer pair of sisters.

This was one of 736 homes scheduled to go under the hammer in

Sydney on the weekend. By evening, Domain Group recorded a preliminary auction clearance rate of 74 per cent from 440 reported results, while 81 auctions were withdrawn.

Withdrawn auctions are counted as unsold properties when calculating the clearance rate.

**It's been emotional: Claudia Karvan's Bondi property had been in the family for generations.** Karvan photo: Wolter Peeters

Selling agent Brigitte Blackman from Bresic Whitney Inner East, said the property had been in the family for generations so, although happy with the result, it was an emotional outcome for "one of our best actresses". "There was one bedroom and one sunroom. It was a good entry point for someone to get into Bondi Beach," Blackman said.

Auctioneer Thomas McGlynn, CEO of Bresic Whitney, said it was a great experience to call an auction of predominantly first home buyers ready to bid. "They showed a lot of courage to bid in the way that they bid," he said. "A lot of the first home buyers in that particular situation did a really great job to put themselves in a financial position to buy."

A few beaches along, a five-bedroom house located at 62 Sackville Street in Maroubra sold for \$5,475,000 to a family upsizing from a semi in Coogee.

# Is this real? Oh my god, am I going to die?

Emily Jarvis

A man feared he would die after was stabbed at Noarlunga Centre – allegedly at random by a teenager – as he headed home from work on Sunday.

Scott Wimshurst, 25, told 7NEWS on Monday night that it was the scariest moment of his life and that he panicked as he feared he would bleed to death.

He said his body went cold as he felt a warm liquid shoot down his back. Hailing down a bus driver, he then asked paramedics to delay his trip to hospital so he could provide a description of the events.

“Even while it was happening, I was wondering ... is this real?” he said. “Immediately my first thought was ‘I’ve been stabbed – oh my god, am I going to die?’”

He was in a stable condition in the Flinders Medical Centre last night.

Jayden James Spakianos, 18, appeared in the Christies Beach Magistrate Court on Monday charged with aggravated causing serious harm.

“The defendant ... (allegedly) approaches the victim saying ‘I will kill this guy’, before stabbing him in the back,” a prosecutor told the court.

The court also heard Mr Wimshurst was left with a punctured lung and blood in his chest cavity and that Mr Spakianos had allegedly stabbed someone else earlier this year. Mr Spakianos’ defence counsel told the court his client denied the allegations. Bailed was refused.

# ‘Ageism cost Kylie airplay’

THE feel-good hit of the year, Padam Padam, could have been even bigger if Kylie Minogue hadn’t been subjected to sexist ageism by radio gatekeepers, according to the song’s producer.

Lostboy, aka Pete Rycroft, who produced and co-wrote the track alongside Norwegian artist and pop hit maker Ina Wroldsen, took aim at British radio stations for not adding the track to their playlists until fans called them out on social media.

“We were trying to get it played on the radio. It was everywhere, everyone was talking about it and it was at least top two in the charts – but Radio 1 and Capital were refusing to play it, essentially because she’s an older woman,” he told The Independent.

The song gathered swift momentum after its release on May 19 on TikTok because of its earworm hook replicating a heartbeat, and its adoption as an anthem for 2023 Pride celebrations in the US and Europe. The grassroots fan support propelled Minogue to her first UK No.1 in more than a decade.

Kylie Minogue

# Bomb threats global probe

## SA police say no risk to public safety

Shashi Baltutis

Bomb threats made to schools, healthcare facilities and public places across South Australia have been traced to an overseas site after a joint investigation by SA Police and the Australian Federal Police.

SA Police said in a statement investigations into the wave of terrifying threats from a global “origin” would continue.

“South Australia Police continue to work with our federal and overseas counterparts to investigate these incidents,” the statement read.

“We wish to reassure the community that there has been no risk to public safety.”

Joel Lisk, research fellow at Flinders University’s Jeff Bleich Centre, focusing on digital technology and security, said the threats could be “a mix of interference and nuisance.”

“It causes a hassle, it inconveniences people’s lives and it exposes a vulnerability,” Mr Lisk said.

He explained the incidents reveal to the “sender of the threats” how quickly the target

responds. “If you’re looking at other activities that are more nefarious (than threats) you’ll see how quickly the response is,” he said.

“Any information in the right hands can be used for an advantage.”

Mr Lisk also said the threats will assist the senders of the threats in determining the “level of preparedness they’re targeting”.

He said it was “difficult to see the materiality out of it” for the average person.

However, he added the threat’s origin could be “ranging from something really organised, to nuisance calls”.

“It’s hard to speculate the motives,” he said. “It could go right down to how the state government reacts to these threats or it could be kids.”

Last week, defence personnel at the Keswick Army Barracks were forced to evacuate after a bomb threat. It was reportedly made on August 29.

A defence spokesman confirmed an “incident” had taken place at the facility.

“Defence is aware of an inci-

dent at Keswick Barracks resulting in an evacuation,” he said.

“Defence is unable to comment further at this time, please direct all inquiries to South Australian Police.”

On August 22, bomb threats were made to multiple schools across South Australia as well as Flinders Medical Centre – which was also dealing with a power blackout.

East Adelaide School in St Peters was placed into lockdown because of the threat.

During the incident, principal Vicki Stravinski informed parents that students already at school would be evacuated.

Her statement via email said the Education Department had advised all families to keep their children at home while the matter was ongoing.

“We will notify you as soon as possible about children being able to attend,” the letter to parents had read.

“Students who are already at the school for OSHC or sports training will be managed by staff and evacuated off site as per our emergency procedures.”

# Set upon as he tried to stop man from a ‘suicide jump’ Brave ‘lifesaver’ bashed

Rahul Dhakan

A father of five who tried to talk a man out of taking his life was beaten to a pulp by a group of thugs at Mount Gambier’s popular Cave Gardens.

Chef Dali Lee suffered severe brain injuries in the frenzied assault, according to partner Danielle Malseed.

Ms Malseed has revealed the motive behind the attack as Mr Lee recovers from a fractured skull and multiple brain bleeds.

Ms Malseed said Mr Lee was near the Globe Hotel in Mt Gambier when he heard screams from the nearby Cave Garden, where someone was threatening to jump. She said Mr Lee, who lost his best friend to suicide last year, approached the “man in an attempt to talk him down”.

“Some people then came towards him, screaming at him and then attacked him,” Ms Malseed said of the assault last month, which police are probing. Mr Lee said that all he can remember was waking up face down struggling to breathe.

“It’s unimaginable that someone could leave him in that condition, he could have

“Some people then came towards him, screaming at him

**Danielle Malseed**  
Loving partner

died,” she said, adding: “He constantly replays the incident in his mind, trying to make sense of what happened.”

The attack has thrown the “family of seven” into turmoil as they try to cope with the housing crisis. The family has been homeless ‘on and off’ over the past three years.

“After Covid, we lost our rental home and had to live in a caravan parked in my mother’s driveway,” Ms Malseed said.

“We’re living at Dali’s mum’s now and we don’t have our own bedroom.

“He needs to sleep a lot and without a bedroom, that’s kind of not possible.” In a GoFundMe post, Ms Malseed wrote: “He is undoubtedly the strongest man I know, we remain committed to supporting his recovery, but we can’t do it alone.”

## SA firm’s \$875k safety bill

Giuseppe Tauriello

Cement and masonry manufacturer Adbri has agreed to spend more than \$875,000 on safety improvements following a 2021 incident that left a worker with serious head injuries.

The incident occurred in May 2021 at the company’s Klein Point limestone mine on Yorke Peninsula, when the worker fell nearly 4m from a platform onto a concrete floor within the site’s crushing plant.

The worker sustained serious injuries including a fractured skull and ribs, broken vertebrae, hearing loss and amnesia.

He has since returned to work and is on restricted hours.

Under an enforceable undertaking approved by Safe-Work SA earlier this month, Adbri (previously known as Adelaide Brighton) has committed to spend at least \$876,545 on safety improvements including a redesign of the crusher infrastructure at Klein Point and the acquisition of a new specialised rock breaker to assist the injured person’s return to work.

The company will also appoint an additional site supervisor at the site, where workers will be provided with additional training on health and safety.

# Jim's in ore of iron prices

## Commodities bolster Chalmers' budget

Nick Evans

Federal Treasurer Jim Chalmers could be headed for another pleasant budget surprise next year with iron ore prices around \$US120 (\$186.34) a tonne, well ahead of expectations.

Last week's final budget figures show the tax office raked in \$153.16bn in company taxes – \$12.4bn more than expected, mostly off the back of stronger commodity prices in iron ore and coal, with a minor contribution from soaring lithium prices.

That helped deliver a \$22.1bn cash surplus for the fiscal year, \$17.9bn ahead of expectations.

While Dr Chalmers was keen to play down the chances of a repeat performance in the current year, commodity prices suggest the next year's budget will also look a lot better than expected.

Dr Chalmers' May budget tipped iron ore prices to fall to an average \$US60 a tonne by

March 2023, sold at the port, rather than \$US55 a tonne used in the previous budget in October 2021.

But iron ore has sat stubbornly above \$US100 a tonne – delivered to China – for most of the financial year so far, lifting above \$US120 a tonne last week as Chinese steel mills began restocking ahead of week-long holidays at the end of September, traditionally a strong month for iron ore.

Analysts say markets are also potentially pricing in renewed stimulus measures in China, which could hold back Beijing's threatened move to curb steel output in the second half of the year.

Fitch Ratings' BMI forecasting unit last week tipped iron ore prices to average \$US110 in 2023 with "strong risks to the upside", and forecast average prices of \$US100 a tonne throughout 2024.

"Despite the mainland Chinese property sector still being in contraction, positive senti-

ment is stemming from hopes of a turnaround, with some form of stimulus from the mainland Chinese government," Fitch analysts said.

JPMorgan analysts recently upgraded their 2024 expectations to a \$US110 a tonne average price, and BHP noted when delivering its annual financial results that marginal iron ore suppliers were leaving the seaborne market when prices fell below \$US100 a tonne with "any dips below that threshold unable to persist for any meaningful length of time".

All of that suggests that Treasury's iron ore forecasts are again likely to come in wildly below the actual market price.

Even factoring in freight at \$US10 a tonne, delivered to China, most analyst forecasts now suggest iron ore will average around \$US90 for the fiscal year – substantially ahead of the budget forecast.

The May budget forecast a \$13.9bn deficit in 2023-24.

Henry Ninio in his lord mayoral robes at the Adelaide Town Hall in 1993.

## Tributes for former lord mayor

Brad Crouch

Former Adelaide lord mayor Henry Jacques Ninio has died. He was 87.

In a remarkable career spanning perfumery and politics he was elected as the 75th lord mayor of Adelaide in 1993 and served two terms. He was a member of the council from 1983-97.

The loving husband of wife Lynette was a father and grandfather.

Loved ones described him as a "visionary dreamer who gave generously, lived fully and left a lasting impact on all our lives". Tributes included the Hebrew "zikhrono livrakha" – "may his memory be a blessing".

Mr Ninio was born in Cairo and attended Cairo University for two years. He emigrated from Egypt with his family in 1956, completed his degree in pharmacy in 1960 at the University of Adelaide and went on to establish the Piaf Perfumery chain and Simes Australia.

He was a member of Beit Shalom Synagogue and was president in 1983.

The French government has honoured him for his services to perfumery and the French community of Australia.

#### Federal Court of Australia Count Financial Limited Class Action

The Federal Court of Australia has ordered this notice be published. A class action has been commenced in the Federal Court of Australia by R and N Hunter Pty Ltd (ACN 105 163 522) atf the Hunter Family Super Fund (the **Applicant**) against Count Financial Limited (**Count**). You should read this notice carefully as it may affect your rights.

The Applicant alleges that some of Count's financial advisers breached the law by failing to comply with duties to act in their clients' best interests and failing to give priority to their clients' interests. The Applicant alleges that Count as Licensee is liable for the conduct of its financial advisers and that Count itself breached the law by both failing to take reasonable steps to ensure that its financial advisers complied with those duties and by engaging in misleading or deceptive conduct (or conduct that was likely to mislead or deceive). The Applicant alleges that Count and its financial advisers breached fiduciary duties owed to the Applicant and Group Members. The Applicant also alleges that, for some Group Members, Count's financial advisers entered into ongoing services agreements pursuant to which they promised to provide services on an ongoing fee basis, which they did not provide on some or all occasions. Finally the Applicant alleges that Count incorrectly advised its financial advisers that conflicted remuneration could continue to be paid on arrangements entered into between the financial advisers and their clients where the arrangement was entered into prior to 1 July 2014.

Count denies the allegations and is defending the class action. In summary Count defends the class action including on the basis that:

- the receipt and retention of commission payments by Count's financial advisers (including in circumstances expressly permitted by legislation) is not conduct in breach of the law and not contrary to the best interests duty and duty of priority;
- Count took reasonable steps to ensure Count financial advisers complied with their legal obligations described above;
- Count did not engage in the alleged misleading and deceptive conduct;
- the alleged fiduciary duties are not owed by Count, or by each financial adviser, to clients;
- there was no breach of the ongoing service arrangement entered into by the Applicant; and
- Count did not incorrectly advise its financial advisers in relation to the acceptance of conflicted remuneration.

The Federal Court of Australia has set 1 December 2023 as the date by which group members may choose to opt out of the class action.

You may be a group member if you:

- received personal advice from a financial adviser in the Count network;
- acquired, renewed and/or continued to hold insurance, financial or platform products; and
- paid initial and/or trail commissions in respect of those products between 21 August 2014 until 21 August 2020.

If you believe that you may be a group member then you should read the Notice that the Federal Court has ordered be published. The Notice is a very important document which may affect your legal rights. A copy of the Notice and further information about the class action may be viewed at <https://tinyurl.com/CountClassAction> or by contacting the Applicant's lawyers, Piper Alderman, on (02) 9253 9999.

# Bruce & Brittany to front defo trial

Lauren Ferri

Bruce Lehrmann and Brittany Higgins will both give oral evidence at an upcoming defamation trial, a judge has decided, with the four-week trial to simultaneously address cases against Network Ten and the ABC.

Mr Lehrmann launched defamation action in March against Ten and journalist Lisa Wilkinson over the 2021 coverage of Ms Higgins' rape allegation against him. He later also launched proceedings against the ABC over the live broadcast of a National Press Club address by Ms Higgins.

While he was not named in the Ten report or Ms Higgins' speech, Mr Lehrmann claims he was still identified by the media companies and that there were four defamatory meanings in their publication implying he raped Ms Higgins at Parliament House in March 2019. He has strongly denied all allegations.

The case has been travelling through the Federal Court since Justice Michael Lee

granted an extension of time earlier this year. The matter returned to court for a preliminary hearing on Monday, ahead of the trial which has been set down for November 20.

The court heard there had been issues with the preparation of the case in the lead-up to the hearing, as Mr Lehrmann's lawyers had not received an affidavit from Ms Higgins.

But rather than have them provide affidavits to the court, Justice Lee said he wanted to hear Mr Lehrmann and Ms Higgins give evidence "viva voce". This means both parties would be giving their evidence-in-chief orally rather than in written documents to the court.

It will be the first time Mr Lehrmann will give evidence, as he did not take the stand during the criminal trial.

While the defamation trial was originally just going to hear the case between Mr Lehrmann and Ten, Justice Lee on Monday decided he would hear both cases together.

"There's clear battlelines in

this case including a public interest defence in the ABC proceedings," he told the court.

"I do think I'll hear both proceedings together."

The court was told the evidence in the trial would also include expert witnesses who gave evidence on "reaction and responses of victims of sexual assault", and a toxicology expert who analysed Ms Higgins and her "level of intoxication".

Justice Lee said he had the intention of determining whether the reports would be admissible ahead of the trial.

In May, Mr Lehrmann dropped a defamation lawsuit against News Corp's News Life Media and journalist Samantha Maiden.

Mr Lehrmann's Supreme Court trial in the ACT last year was aborted due to juror misconduct. He had pleaded not guilty to sexually assaulting Ms Higgins. The charges were subsequently dropped by the ACT DPP, who declined to pursue a retrial over concerns about Ms Higgins' mental health. Mr Lehrmann has continued to deny the allegations.

“There’s clear battlelines in this case ... I do think I’ll hear both proceedings together”

Justice Michael Lee

## ‘Playful’ hotel for market project

The \$10m Skyline penthouse.

A “playful and fun” brand that “captures the nostalgia of childhood” has been selected to operate the hotel component of the \$400m Market Square development.

Treehouse Hotels will open its first Australian location at the Central Market Arcade site following a competitive selection process undertaken by developer ICD Property and joint venture partner the Adelaide City Council.

Market Square is set to become the brand's first location in Australia and will offer 248 rooms across 10 levels in the development's 39-storey tower. It will also feature a restaurant and bar with outdoor seating, a street-front cafe showcasing local produce, more than 500sq m of indoor and outdoor event space and more than 230sq m of fitness and wellness facilities.

## ‘Gamechanger’ pill for cancer

Robyn Riley

A new once-a-day cancer pill trialled with Aussie patients is being hailed a “gamechanger” by researchers worldwide.

The pill, called divarasib, works by inhibiting the function of a protein called KRAS, one of the most commonly mutated proteins in cancers, that controls how cancer cells divide and survive.

Peter MacCallum Cancer

Centre medical oncologist Professor Jayesh Desai said: “When the protein mutates it is always ‘switched on’ which means cells, including cancer cells, are more likely to divide uncontrollably leading to the development of tumours.”

Prof Desai is the senior author of the global study that included around a dozen Victorians. He helped lead the trial design and the thinking behind how best to use the

powerful new drug. The research has shown divarasib is “highly effective” in treating patients with advanced or metastatic cancer linked to the KRAS-G12C mutation.

“This is precision medicine,” he said. “We do a test, we find the cancer gene that has a mutation in it and we have confidence now we can give patients a pill and there is a high chance it will help control their cancer; not cure it, but it is a big step.”

# Greens to help usher in family law reforms

## EXCLUSIVE

JESS MALCOLM

Labor's push to overhaul the family law system is likely to pass through parliament after the government secured support from the Greens and the crossbench in the upper house.

With the Coalition holding significant concerns and likely to reject the bill, the government has secured crucial support from inde-

pendent senator Lidia Thorpe, the Jacqui Lambie Network and the Greens.

The legislation removes a provision that directs a court to apply the presumption that it is in the best interests of a child for the parents to have equal shared responsibilities.

Domestic violence advocates have welcomed the proposed changes, saying they are long overdue to stop perpetrators using the family law system and parenting arrangements to prolong con-

flict and coercive control over shared decision-making. But the bill has been criticised by some legal experts, who warn the amendments may take Australia back to a time when mothers were granted primacy in court battles.

A spokesman for Attorney-General Mark Dreyfus said the reforms would "better assist Australian families in the family law system and ensure the best interests of children are the focus of decision-making, both inside and outside the court".

**'(The reforms will) ensure the best interests of children are the focus of decision-making'**

SPOKESMAN FOR ATTORNEY-GENERAL MARK DREYFUS

A major 2019 inquiry by the Australian Law Reform Commission did not recommend removal of the presumption of shared re-

sponsibilities but proposed the clause be reworded to allow "joint decision-making about major long-term issues".

Opposition legal affairs spokeswoman Michaela Cash told The Australian the bill contained major flaws and could have significant unintended consequences on families, including adding costs and delays in separations.

Senator Cash said the opposition would consider amendments over the coming weeks.

"In many cases the changes go

much further than was recommended, or have significant unintended consequences," Senator Cash said.

"The committee process has shown many of Labor's changes are poorly thought through, and could add costs and delay for families going through one of the most difficult parts of their lives."

Greens Senate leader Larissa Waters welcomed the reforms but said the party would continue to advocate for more funding for domestic violence services.

"While these reforms are welcome, without more funding to courts and frontline family and domestic violence services, delays, unequal representation and lack of support will continue to put women and children at risk," Senator Waters said.

"If the Attorney-General wants these reforms to work, his government needs to stump up the funding for them to do so."

A spokesman for Senator Thorpe said the bill introduced some "much-needed changes"

and had been welcomed by the sector. "Senator Thorpe will be supporting the bill but is proposing amendments to further increase the consideration of the safety of the child as per concerns expressed by women's legal services," he said.

Tasmanian senator Tammy Tyrrell said she was happy with the bill, which put the focus back on what was best for children.

"There's been a couple of reviews that have all recommended these changes," she said.

# Act now: residents told to prepare for fire season

## EXCLUSIVE

REMY VARGA  
NSW REPORTER

Jon Concannon remembers when the horizon turned red as a wall of fire advanced towards his home in Coolagolite in southern NSW on New Year's Eve in 2019, the blaze emitting a deafening roar as it devoured everything in its path.

"The fire was swallowing grass, it was creating its own wind, it was creating its own storm," said Mr Concannon, a former actor who starred on soap opera A Country Practice. "There was nothing you could have done about it and that's why a lot of people just lost their places because they couldn't do anything."

Then the wind changed, the chance arrival of the north-easterly stopping the fire in its tracks as the world turned yellow and a deep silence descended over the valley.

"There was smoke everywhere and you just couldn't see," said Mr Concannon. "All I knew was that it had just gone to this stillness. It was ominous, it was like 'what the hell does this mean?' Because I don't know. No one does."

The forests around bushfire-ravaged communities along the NSW south coast are thick with young black wattle and eucalyptus trees while the grass in paddocks is turning yellow as the weather becomes hotter and drier.

Only about a quarter of hazard reduction planned in the state by the NSW Rural Fire Service was completed last financial year due to severe flooding and prolonged wet weather caused by three consecutive La Nina events over the past two years.

The Badja Forest fire was ignited by lightning on December 27 in 2019 near the Snowy Mountains town of Cooma before travelling about 70km southeast to the Bega Valley Shire village of Cobargo on New Year's Eve.

The devastating blaze was the deadliest of all the Black Summer bushfires, killing seven people including Wandella dairy farmer Robert Salway and his son Patrick, Richard Steele, Colin Burns, John Smith, Ross Rixon and Michael Clarke.

Fire-resistant agapanthus line the perimeter of retired forester Bruce Leaver's home in Coolagolite and burn marks left from the embers spat out by the Badja Forest fire remain on the awning of his house.

Mr Leaver spent decades working in bushfire suppression and has cleared his own land, as well as clearing leaves from gutters and checking sprinklers will work and keep his property damp if flames again lick his doorstep.

He said the danger this summer would come from grass fires instead of forest and whether an

**Jon Concannon has cut back the bushfire fuel at his property in Coolagolite in southern NSW; retired forester Bruce Leaver prepares his nearby property, left; fire surrounds Mr Concannon's home on New Year's Eve in 2019**

BEN MARDEN  
JON CONCANNON

area had been controlled burned did not entirely eliminate the risk of bushfire.

"The area covered by the Cobargo fire had been extensively control burned in the years preceding it," he said.

"In the words of the manager I spoke to about it, it 'made buggier all difference'."

"Now it (control burning) does make a difference. Commonsense tells you if you reduce the fuel you'll have less intensity. But at those scales the intensity is still murderous, and if you think you're safe - you're not."

About 847 houses were lost

across the Bega Valley and Eurobodalla shires during the Black Summer bushfires in 2019 and 2020 and there are fears NSW isn't prepared for the coming summer after heavy rains thwarted hazard reduction efforts.

A NSW Rural Fire Service spokesman said fire agencies and land managers had conducted 43 hazard reduction burns and treated 6773 hectares in the Bega Valley and Eurobodalla shires, focusing on areas that didn't burn during the 2019 and 2020 season.

Since 2020, retirees and workers from the cities, mainly Canberra and Sydney, have flooded the

south coast along with new age influencers priced out of the hipster mecca of Byron Bay.

Locals who witnessed the savagery of the 2019 and 2020 fires are uneasy about how ill-prepared their new neighbours are for the coming summer and the reality of defending their properties.

A NSW RFS spokesman said it remained the responsibility of landholders to prepare and reduce fuel loads on their properties. "It is every landholder's responsibility to manage the bush fire hazards on their property," he said.

Authorities are not expecting a repeat of the 2019 and 2020 fire

season and the risk this summer lies in the build-up of fine fuels, such as grass, instead of trees.

Up the road from Mr Leaver in Coolagolite, Mr Concannon has been preparing his property for the looming fire season, cutting and burning away a tangle of grass and vines.

"It's hard work and there's not people to do it for you," he said.

NSW Emergency Services Minister Jihad Dib said preparing for the fire season was a responsibility shared by all community members and it was important residents in bushfire-prone areas started preparing now.

# Statue receives stay of execution

## EXCLUSIVE

MATTHEW DENHOLM  
TASMANIA CORRESPONDENT

The first toppling of a statue of an Australian premier is on hold at least until early next year, with the lodgement of a legal challenge backed by a descendant.

Hobart City Council's planning committee last month voted to approve the council's own development application to remove the statue of William Crowther from Franklin Square.

Crowther, a surgeon noted for his work for the poor but also as a bone-hunter, was accused in 1869 of removing and stealing the skull from the corpse of Aboriginal man William Lanne - a claim he denied.

Former alderman Jeff Briscoe on Monday lodged a planning tribunal appeal, along with heritage expert Chris Merridew and Anne Burleigh, a Crowther descendant by marriage.

"It's an appalling heritage decision, outrageous, really," Mr Briscoe said. "In the 28 years I was on council, we would never have, I believe, accepted that removal on heritage grounds."

"It's very political. So we are going to argue on heritage grounds and we have very good grounds about removing the statue from the plinth and removing it from where it's been for 130 years."

"There's also the fact that it was placed there close to the building where Crowther used to work, and it was funded by donations from ordinary people in Hobart."

Mr Briscoe expected the appeal - supported by a GoFundMe campaign - would call a number of expert witnesses.

While a directions hearing and mediation could occur in the short-term, he understood a full hearing before the planning tribunal would not be possible before next year.

Removal of Crowther's statue, erected in 1889 "by a grateful public, and sincere personal friends", is part of a global push to remove statues of controversial historic figures.

Mrs Burleigh said the Crow-

ther statue was a "fantastic piece of art" and was a rare case of such a memorial being erected by public subscription.

"Dr Crowther's introduction and use of the newly discovered ether and chloroform in operations would have benefited Tasmania as a whole," she said.

"The poor were given free medical consultations and operations - many, many citizens benefited from his ministrations. And now some wish to have his statue removed - a man who was instrumental in shaping the new world."

"Removal of his statue is a despicable wanton act and has affected many citizens, friends, colleagues and beneficiaries, now relatives who are living now. I know of many who are angered and bewildered."

However, supporters of the statue's downfall, including the Tasmanian Aboriginal Centre, argue there is little doubt that Crowther was involved in the Lanne mutilation and his statue is a constant, painful reminder of the abuses suffered by Indigenous people.

# Fugitive nabbed after five years on the run

HARRY BRILL

A man on the run for five years has been arrested at Melbourne Airport.

Omer Tok, 46, was arrested disembarking a flight from Doha, Qatar, on Saturday after allegedly spending time in Turkey, Greece, and Bulgaria.

Police allege he fled Australia using a false passport five years ago while on trial over a plot to import 186kg of cocaine in 2017.

That plot was foiled by Operation Barada and resulted in the arrest of 16 men.

Australian Federal Police detective superintendent Jason McArthur said the 2017 seizure had been significant.

"The seizure of the 186kg of cocaine in 2017 prevented those millions of dollars of drug profit from flowing back into a transactional criminal syndicate to fund other illegal ventures," he said.

"The AFP is also working closely with our law enforcement partners around the world to track down and bring to justice anyone involved in this harmful crime."

Mr Tok was charged with seven offences including attempting to import cocaine, dishonestly obtaining an Australian travel document, failing to appear in court and possession of a tablet press. The remaining charges relate to travel documents.

Victoria Police detective superintendent Dave Cowan said people overseas should consider Mr Tok's arrest a warning.

"We do not forget and we do not give up. Victoria Police will continue to work relentlessly with our partners to ensure anyone involved in this criminality is brought to justice no matter how much time has passed," he said.

Mr Tok faced Melbourne Magistrates Court on Monday and will next appear on November 27.

ConocoPhillips

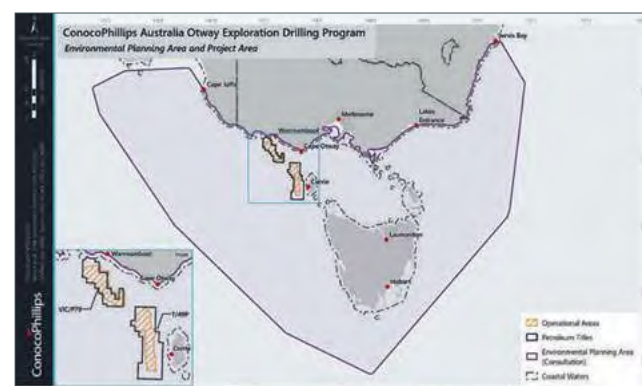

## Relevant Person Consultation:

## ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/499, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

# Fears for future of young diabetes patients

NATASHA ROBINSON  
HEALTH EDITOR

New evidence has emerged that the growing incidence of type 2 diabetes in children is a nationwide trend, with paediatric endocrinologists in western Sydney revealing they are also treating children with the disease and speaking of their fears of the devastating complications that lie ahead for their patients.

Doctors in northern Australia this week issued an urgent plea for national intervention to stem the

rising tide of type 2 diabetes diagnoses in children and young people, warning patients are suffering heart attacks as young as 25 and some are expected to reach end-stage renal failure by the age of 30.

Doctors at Campbelltown Hospital in western Sydney have revealed they are also treating numerous patients with type 2 diabetes aged under the age of 18, and that paediatric clinics are not funded or resourced adequately.

It is a similar story with adult clinics, with a severe lack of public multidisciplinary services for people living with obesity and diabetes

who are unable to access pharmacotherapies and have very limited access to publicly funded bariatric surgery.

The medics have called for a national database to be established to help determine the true proportions of the rising trend of type 2 diabetes.

Lisa Amato, a paediatric endocrinologist at Campbelltown Hospital, told a federal parliamentary committee inquiry into diabetes on Monday that patients under 18 were increasingly being diagnosed with type 2 diabetes in western Sydney.

It comes on the back of evidence presented by clinicians in the Northern Territory and Western Australia of an “exponential trend” of increase in the disease in young people on a scale never been seen before anywhere in the world.

Pediatric endocrinologists in Darwin have reported their list of patients with type 2 diabetes has increased 20-fold in the past five years to over 100 children, with children as young as four being diagnosed.

The increasing prevalence is being driven in particular by high

rates of gestational diabetes. Dr Amato said western Sydney was also seeing such a trend.

“We’re seeing increasing incidence of diagnoses at a younger age,” she told the diabetes inquiry hearing. “We’re probably not screening appropriately so there’s probably a lot of young people who we are not picking up early.”

“Complications of type 2 diabetes on average will occur 15 to 20 years after diagnosis. So we’re talking about a 15-year-old who might be needing dialysis when they’re in their early 30s.”

Western and southwestern

Sydney are among diabetes epicentres in NSW, with very high rates of diabetes incidence and complications. Yet there is a severe shortage of multidisciplinary care services for people with obesity, which is one of the major causes of type 2 diabetes.

Endocrinologist Kathryn Williams, the clinical lead and manager for the Nepean Family Metabolic Health Service, one of the only such multidisciplinary public tertiary services, told the hearing that healthcare for people with obesity was essentially a “user pays” system.

Despite many of the clinic’s patients being housebound with BMIs of 50 and even as high as 80, or struggling to walk 20m down the corridor at the hospital, only 15 public bariatric procedures a year were available. And access to GLP-1 agonists such as Ozempic was extremely limited even for severely obese patients, despite wealthier populations accessing it fairly readily.

“I have only 14 patients approved for (pharmacotherapy) treatment currently,” Dr Williams said. “We’re desperately waiting for the medications to be available

for our patients on the PBS. This group of patients is sick and have a very low quality of life.

“Increasingly effective therapies for obesity become available on a ‘user pays’ basis, with the most at risk for obesity and its complications having the least access.”

Type 2 diabetes affects 15 million Australians and is strongly related to high rates of overweight and obesity. One in three adults in the NT now has type 2 diabetes.

The disease contributes to around one in 10 hospital admissions nationally, and far more in diabetes hotspots.

## Hadley loses his voice in Brisbane

JENNA CLARKE

Ray Hadley has been removed from Brisbane’s airwaves after eight years, in the latest shakeup of Nine Radio’s lineup.

He has been replaced by weekends host Bill McDonald who moved into the coveted role on Monday.

Hadley, now on ratings break, did not mention the change last week.

The Australian’s Media Diary foreshadowed the change in May after Hadley signed a fresh \$3m deal to stick with Nine until the end of 2026. It was understood at the time that Hadley’s Sydney-based show would continue to be syndicated into 4BC until the end of the year.

“Eight years ago Ray added 4BC to his large list of network stations and has made a huge impact in Brisbane and across Queensland. We’re delighted Ray will still be heard across the Brisbane airwaves during the Continuous Call Team, State of Origin, NRL Finals and the 2024 Paris Olympic Games,” 4BC content director Max Dudley said on Monday.

‘Eight years ago Ray added 4BC to his large list of network stations and has made a huge impact in Brisbane and across Queensland’

MAX DUDLEY  
4BC CONTENT DIRECTOR

In the most recent radio ratings last month, Hadley was the top rated show on 4BC – despite the roll out of the new methodology system that he criticised – with more than 7 per cent of the audience and added more listeners. He was also one of the strongest hosts in Brisbane in the new ratings system that captures listeners streaming data.

Monday’s sudden lineup change is apart of Nine’s push toward a “live and local” approach to content.

“4BC is now the only Brisbane radio station with live and local programming from 5.30am to 7pm, five days a week,” a Nine spokeswoman said on Monday.

McDonald has more than 35 years experience in the market and on air across breaking news and sport, winning a Clarion Award for his coverage of the 2008 Gap floods.

He has also called a number of Commonwealth and Olympic Games.

Dudley said McDonald was the ideal candidate for the mornings slot as the station looked toward upcoming local events.

“It’s a big year ahead for Brisbane with council and state elections, not to mention the ongoing build towards the 2032 Games, and I have no doubt Bill will champion the issues that matter most to our listeners,” he said.

## Where there is smoke, there shall no longer be fires

Cool fire burning on Ngurrara Country, left, and on Haasts Bluff land above; Ngurrara ranger Justin Andrews, below right; Ngurrara rangers Regina Thirkall and Sumayah Surprise flank Hannah Cliff from the Indigenous Desert Alliance

EXCLUSIVE

PAUL GARVEY

The world’s biggest Indigenous fires program has already helped mitigate major blazes across northern and central Australia, ahead of what is shaping as a particularly severe fire season.

More than 600 Indigenous participants across 25 Aboriginal desert ranger teams have together carried out controlled burns of more than 2.3 million hectares of spinifex grassland over the past 18 months, across an area of more than four times the size of Britain.

The program, co-ordinated by the Indigenous Desert Alliance, is believed to be the biggest of its kind anywhere in the world.

The fires, which have burned during the cooler northern months, aim to develop mosaic burn patterns across remote stretches of desert in a replication of the Indigenous burn patterns used across much of Australia for thousands of years. The smaller fires are designed to deliver biodiversity benefits, reduce the amount of available fuel and create fire breaks for larger, uncontrolled fires that can sweep through during the hotter months.

There are already signs the

program is working. A massive 150km-long bushfire raged to the east of Tennant Creek last week in an area that had not been actively managed by any ranger groups, while fires that started around the same time in nearby areas that were part of the fire program did not take hold.

The completion of the program is particularly timely, given the forecast for the upcoming fire season. The spring bushfire outlook recently released by the National Council for Fire and Emergency Services said more than three-quarters of the Northern Territory was at an increased risk of fire.

Boyd Elston, a regional land

management co-ordinator at the Central Land Council and co-chair of the Indigenous Desert Alliance, told The Australian that the controlled burns under the latest program were already having a clear impact.

“By looking at the mapping we use to track fires, you can see that these fires have run into the scars that have been created by this project. They are acting as speed bumps to stop the fire from getting out of control and burning through the whole desert,” he said.

While many ranger groups have carried out controlled burns in the past, they have largely been restricted to easy-to-access areas.

The Indigenous Desert Alliance has used a \$3m federal grant to help different ranger groups travel by helicopter and plane to get into deeper country that was otherwise largely inaccessible.

“To get the scale of burning that we’ve been able to get done has been great,” Mr Elston said.

The burn program aims to improve biodiversity by ensuring a mix of old and new vegetation across the deserts.

Many native species thrive where there is a mix of grasses, flowers and seeds from new growth and shelter from old growth, but large-scale uncontrolled fires can ruin that balance.

Gareth Catt, the desert partnerships manager at the Indigenous Desert Alliance, said many native species had disappeared from areas where cultural burning practices had stopped.

“Areas that are consumed by very large fires, the intensity of that can be enough to degrade the seed bank completely and burn through the old growth hollow-bearing trees, which are a really important shelter for wildlife,” he said.

“It has a very destructive effect broadly across the landscape if fire is allowed to run unchecked.”

“By making a choice about putting fire into the landscape and diversifying the landscape, you

increase the diversity but also buffer and mitigate against the impact of broadscale wildfire.”

Mr Catt said he hoped early signs of the program’s benefits would help attract more funding to keep it running. “We’re hopeful we can get some grant funding in but at this stage there’s no single commitment to continue this program at a broad scale,” he said.

“Without that ongoing engagement with the landscape and stewardship of country from Indigenous rangers, we will see the return of some of the largest wildfires in the world across the desert that ... have a huge impact on natural and cultural values.”

## Accused bushfires developer surfaces again

EXCLUSIVE

REMY VARGA  
TAYLA COUCAUD

An unlicensed property entrepreneur who vanished after pocketing the insurance payouts of victims of the Black Summer bushfires is now involved with a company that is attempting to sell critical infrastructure to developing nations.

The Australian can reveal that Atomic 6 founder Andrew Lennox, who owes money in Victoria, NSW and Western Australia, is at Cranium Technology, a start-up that claims to have developed equipment relating to aquaponics and food security, medical facilities, off-grid accommodation, water and wastewater treatments.

“At Cranium, we engage all regions of the brain to bring world-changing holistic outcomes,” the company’s website claims.

“We do not publicly discuss or promote our products or technology. This in part is due to our Innovation and Intellectual Prop-

erty (IP); in part as there is a lot of talk in the world and very little action. Less talk, more action is what is required.”

Mr Lennox appeared on the NSW south coast in the aftermath of the Black Summer bushfires selling prefabricated bushfire resistant homes in the Bega and Eurobodalla shires to people who had just lost everything in the catastrophic fires of 2019 and 2020.

He then disappeared and charity Anglicare is currently assisting 31 people who collectively claim to have given Atomic 6 \$1.65m, some of whom are living in temporary accommodation such as sheds and shipping containers.

Mr Lennox was living in a warehouse in Moruya, near Batemans Bay, around the time he disappeared from the south coast.

Before joining Cranium, he was briefly involved with a cryptocurrency start-up in Perth in WA.

Mr Lennox sold the crypto firm Phaeton Networks, a “Modular Off-grid Data Centre”, for \$150,000 and arranged for it to be trucked from the Moruya ware-

house to Perth. Sources close to the matter said the data centre was glued together and probably worth about \$10,000. Phaeton has been unable to reach Mr Lennox.

A Phaeton press release issued on January 9 in 2022 includes a photo of Mr Lennox in front of the data centre, which is tiled with solar panels and has wind turbines fixed to the roof.

“This type of data centre can be deployed in any remote or regional location, ideal for disaster relief and military requirements,” the press release reads.

Cranium is selling solar wrapped modular pods that are similar in appearance to the data centre Mr Lennox sold Phaeton and the prefabricated homes he sold Atomic 6 clients.

According to the company’s website, the Cranium pods can be used for accommodation, housing, data centres, rapidly deployable command centres, mining camp offices, medical facilities, aquaponics and treating drinking and wastewater.

“Governments have an incred-

ibly hard challenge of providing better living conditions and solutions to their entire nation,” the website reads.

“The cities are easy, as they already have the required infrastructure; however, outside the city is a major resource issue.

“Cranium have the solutions for these governmental challenges. At Cranium, we engage all regions of the brain to bring world-changing holistic outcomes.”

Cranium has addresses in the Philippines, Papua New Guinea, Singapore and Brisbane.

At the Brisbane address is an Australia Post office and a security guard told The Australian the suite number listed on Cranium’s website did not exist.

The Australian did not see any signage relating to Cranium or any sign the company has an office in the building.

Atomic 6 went into liquidation last July over a \$36,000 unpaid debt to engineering firm Stantec for work performed on the houses for the Black Saturday bushfire victims.

## Two female students stabbed in random attack on campus

JOANNA PANAGOPOULOS

Two students have been stabbed at the Australian National University campus in what appears to have been a random attack.

ACT Policing and ACT Ambulance Service were called to the ANU following reports of a stabbing about 2.45pm on Monday.

Two 20-year-old female stu-

dents were taken to hospital with stab wounds. One is in a critical condition and one is in a stable condition.

A 34-year-old man was assaulted and suffered minor injuries.

A 24-year-old man, who is not believed to be a student at the university, was reportedly tasered on scene and taken into police custody. He has not yet been charged.

“No specific motive for the inci-

dent has been identified,” ACT Police said in a statement on Monday afternoon.

The incident is believed to have occurred on Fellows Oval on the Acton campus.

ANU students recently returned from mid-semester break and the oval was relatively busy at the time, The Australian understands.

ANU vice-chancellor Brian

Schmidt notified the ANU community of the incident in an email.

“Let me start by assuring everyone the situation is under control. One person is now in custody in connection with this incident,” Professor Schmidt wrote.

“Three people were injured and taken to hospital and our thoughts are with their friends and families.

“I would like to express my sincere gratitude for the swift and

efficient response from ACT Policing, ACT Ambulance Service and our own ANU security team.

“I understand this incident may have caused distress among members of our community and I want to remind you that support is available. In times like these, it is essential we support one another and stay connected as a community.”

Students were being asked to avoid the area on Monday night.

# Labor ‘silent’ on E Timor pact

AMANDA HODGE  
SOUTHEAST ASIA CORRESPONDENT

The federal opposition has demanded the Albanese government reveal when it first knew China and East Timor were elevating their diplomatic ties to a comprehensive strategic partnership and what the security implications could be for Australia.

Opposition foreign affairs spokesman Simon Birmingham said the weekend agreement between Dili and Beijing in China's eastern city of Huangzhou was a potent “reminder of the intense strategic competition” for influence in the region.

“It is notable that the Albanese government has been silent about the implications of this agreement, in contrast to their pre-election posturing on similar matters,” Senator Birmingham told The Australian, referring to Labor's criticism of the former Morrison government after Solomon Islands signed its 2022 security pact with Beijing. The then Labor opposition claimed the government had “dropped the ball” on the Pacific and has since accused it of diminishing Australia's influence in the region.

Senator Birmingham said it should be a national priority to ensure Australia was “as close a partner as any other nation is to Timor Leste”, referring to East Timor by its Portuguese-language name.

Yet while Australia had comprehensive strategic partnerships with both Indonesia and Papua New Guinea, it did not have one with East Timor.

“The Albanese government should be transparent about when they became aware of this agreement being negotiated and signed, whether they've had any briefings on it and what the implications are for Australia,” he said.

Questions put by The Australian to Foreign Minister Penny Wong on Monday were referred to the Department of Foreign Affairs and Trade, which said in a statement the government was “aware that East Timor and China have announced an agreement to establish a comprehensive strategic partnership”.

“This is a matter for East Timor

and China. Australia respects East Timor's sovereignty and ability to make its own choices,” it said.

In fact, Dili's decision to elevate ties with Beijing is very much an issue for Australia also given East Timor's geographic proximity, and broader concerns over China's push to build influence in the Pacific. The CSP commits the two countries to closer military engagement, and Beijing to greater investment in Timor's infrastructure, healthcare, food security and fishing grounds, which border Australia. That will inevitably lead to a far greater Chinese presence in East Timor – 680km from Darwin.

China's move to strengthen ties with East Timor also comes amid rising anxiety within the impoverished country of 1.4 million people over a looming “fiscal cliff” as the government spends down the petroleum wealth fund, leaving it desperate for investors to help it push its Greater Sunrise oil and gas fields into production.

East Timor President Jose Ramos Horta sought to assuage concerns over its elevated partnership with China on Sunday, telling Turkish television TRT: “We are not aligned with China.”

“We have a very good relationship with China, as we have a great relationship with Japan, South Korea, with the US, Australia, New Zealand and with all the European countries,” he said.

But, he added, it was a “bit silly” of Western nations to look upon China as an enemy.

A joint statement issued by China's Xi Jinping and Timor's Xanana Gusmao at the weekend declared Dili's “firm adherence to the one-China principle”, its acknowledgment that Taiwan was an “an inalienable part of the Chinese territory”, and its opposition to “any form of Taiwan independence”.

Mr Ramos Horta told TRT that while “Taiwan is part of China”, a Chinese invasion of Taiwan “would be extraordinarily detrimental for peace” and a “totally unthinkable scenario”.

Asked if East Timor would cut ties with Beijing if it were to invade Taiwan, however, he said: “No.”

EDITORIAL PIO

## Australia blindsided by Dili's ties with Beijing

AMANDA HODGE  
COMMENT

Australia looks to have been blindsided by East Timor's move to upgrade ties with China at the weekend, leaving Canberra with a new and urgent problem on its doorstep.

How much the Albanese government knew about Dili's decision to elevate its relationship with Beijing to a comprehensive strategic partnership before the announcement was made in China on Saturday is unclear.

Foreign Minister Penny Wong, who was in New York over the weekend for the UN General Assembly, has not yet commented on the agreement, which includes a commitment to enhance “high-level military engagement” between the two countries.

But the fact her 15-month frenzy of Pacific engagement may not have entitled her to a courtesy call from our closest geographic neighbour before the announcement should be cause for concern.

Last year, Wong accused the former Morrison government of having “dropped the ball” in the Pacific over the Solomon Islands decision to sign a security agreement with China. But it was under her watch in July that the two

nations signed their own CSP and law enforcement pact allowing a greater Chinese police presence in the country, one that could potentially see Beijing replace Australia as the Solomons' provider of choice for police training and backup.

Prime Minister Manasseh Sogavare's decision to skip US President Joe Biden's second annual summit for Pacific Island Forum nations at the White House on Monday suggests his controversial pivot to China is complete.

Vanuatu also declined, though

busy elevating ties with key Southeast Asian partners.

Does it matter? That remains to be seen. It depends on how much a more risk-averse China is willing to invest in East Timor's infrastructure ambitions, and what level of economic and diplomatic dependency that leads to for Dili.

Beijing is determined to build a global south alliance that will fall in behind its leadership and vision of a new multilateralism not dominated by the wealthy West, and presumably less troubled by con-

before its Petroleum Wealth Fund is exhausted and it has no way to finance its modest annual budget.

Negotiations with its private partners, Australia's Woodside and Japan's Osaka Gas, have gone nowhere for decades as Dili has struggled to convince them of the feasibility of its ambitions to pipe the liquid natural gas from the Timor Gap and process it onshore.

Can anyone really blame Dili for seeing China – with its BRI infrastructure money – as a possible alternative?

Albanese government critics will no doubt criticise Wong's weekend UNGA attendance as yet another international junket.

That would be a cheap shot.

Australia must be seen to be supporting Pacific Island nations – in particular their climate concerns – in that forum, and to be putting money where its mouth is if it wants to be seen as their partner of choice.

Successive federal governments must share the blame for dropping the ball on East Timor, and the Pacific more broadly.

Dili may have forgiven Canberra for the treaty with Jakarta that divided the oil and gas spoils of the Timor Sea between the two nations; for opting out of a UN maritime boundary jurisdiction tribunal before East Timor gained independence; and for bugging its ministerial offices to gain advantage in negotiations over resources in the Timor Sea.

But it most certainly has not forgotten.

### Like its neighbours in ASEAN, East Timor insists it wants to be friends with everyone

for domestic reasons. Sato Kilman faced a no-confidence vote in parliament on Monday.

Biden expressed disappointment at the Solomons snub after Sogavare used his weekend speech to the UN general assembly in New York to praise China's development co-operation as “less restrictive, more responsive and aligned to our national needs”.

But Beijing's triumphant unveiling of closer ties with Dili less than a day later raises a potentially thornier problem given East Timor's geographic proximity to Australia. Australia is still Timor's largest international donor, and a trusted provider of services there.

But Canberra does not have a comprehensive strategic partnership with Dili, even as it has been

siderations of human rights and democracy.

That includes the Pacific Islands which Australia, the US and New Zealand have for decades seen as their sphere of influence.

The US-led Indo-Pacific partnership, with Australia, Japan, the UK and others, is equally determined to counter Beijing's growing influence – though minus the considerable carrot of China's Belt and Road Initiative.

Like its neighbours in ASEAN – a regional bloc of which it is soon to become a member – East Timor insists it wants to be friends with everyone.

But it is running out of time to find an investor willing to help it develop its last great fossil fuel resource – the Greater Sunrise oil and gas fields in the Timor Sea –

## Aussie MPs meet Taiwan leaders

WILL GLASGOW  
NORTH ASIA CORRESPONDENT

A bipartisan group of Australian politicians has arrived in Taipei for meetings with Taiwanese President Tsai Ing-wen and her top officials amid warnings from Taiwan's Defence Minister that China's ongoing military drills risked “getting out of hand”.

Labor MP Josh Wilson, a member of the parliamentary joint committee on intelligence and security, and Coalition front-bencher Paul Fletcher are leading the eight-member Australian delegation, which began its four-day trip on Monday.

“This visit of cross-party heavyweight parliamentarians to Taiwan shows their support,” said a spokesman for Taiwan's Ministry of Foreign Affairs.

The Taiwan trip – only the second by a group of sitting Australian politicians since 2019 – comes after Taipei expressed concern over the weekend about the People's Liberation Army's activities. Defence Minister Chiu Kuo-cheng warned the PLA's manoeuvring risked “getting out of hand”.

Taipei and its security partners are closely monitoring a round of Chinese military exercises at a bay area in coastal Fujian Province. They followed the swarming by unprecedented numbers of PLA air force fighters, drones and bombers in recent weeks, and the operation of PLA navy warships and Chinese aircraft carrier Shandong in waters around Taiwan.

The eight Australian politicians are expected to meet Ms

Taiwanese special forces demonstrate their skills at an open day in Hsinchu last week

Tsai on Tuesday, followed by briefings with her top security and economic officials, and Foreign Minister Joseph Wu.

Opposition assistant foreign affairs spokeswoman Claire Chandler said it was “an honour to be in Taipei” as part of the cross-party parliamentary delegation. “Many Australian parliamentary delegations have visited Taiwan over the years, and it's important to see these delegations continue with the easing of travel restrictions following the pandemic,” Senator Chandler told The Australian.

“As an incredibly important trading partner in our region, it's only appropriate that parliamentarians continue to regularly engage with Taiwan.”

Before taking over as Labor leader, Anthony Albanese led one of the last Australian delegations before Covid.

This group includes Labor MPs Graham Perrett, David

Smith and David Mulino, Labor senator Catryna Bilyk and Liberal senator Matt O'Sullivan. Their visit comes as Canberra tries to firm up its relations with allies and partners in the region, while continuing to “stabilise” relations with Beijing ahead of a trip to China by Mr Albanese.

Foreign Minister Penny Wong over the weekend met with her counterparts in the Quad, who reiterated their “strong opposition to any unilateral actions that seek to change the status quo by force or coercion” in the South and East China Seas, areas in which Beijing has made assertive claims.

Trade Minister Don Farrell struck a more positive tone on Monday, welcoming the return of Chinese group tours. Chinese visitor arrivals to Australia have surpassed 50 per cent of pre-pandemic levels and are expected to boom over the coming “Golden Week” holiday.

## Hollywood writers in deal to end strike

GEORDIE GRAY  
ENTERTAINMENT REPORTER

After a 146-day strike that effectively shut down Hollywood, a “tentative” deal has been reached between striking screenwriters and major entertainment studios.

The Writers Guild of America announced on Monday that after five consecutive days of negotiations it had reached a deal on a new, three-year contract with entertainment companies.

“We can say, with great pride, that this deal is exceptional – with meaningful gains and protections for writers in every sector of the membership,” the WGA's negotiating committee said in an email to members on Monday.

The strike will still be in effect until the contract is ratified. In coming days, guild members will vote on whether to accept the deal, which includes much of what they had demanded from studios, including increased royalty payments for streaming content and guarantees the use of generative AI in content production will not impinge on writers' compensation.

“To be clear, no one is to return to work until specifically authorised to by the guild. We are still on strike until then,” the message to members stated.

Writers union leaders told members all picketing would now be suspended.

Around 11,500 members of the writers guild walked off the job on May 2, over issues of pay, minimum staffing in writers' rooms for television and concerns over the use of artificial intelligence in the creation of scripts.

The proposed deal comes after talks resumed last Wednesday for the first time in months.

Top Hollywood executives, including Bob Iger of Disney, Donna Langley of Universal Pictures, David Zaslav of Warner Bros Discovery and Ted Sarandos of Netflix, were reportedly in-

volved, joining the Alliance of Motion Picture and Television Producers, which negotiates on behalf of entertainment companies.

Details of the contract agreement will not be released “until the last ‘i’ is dotted”, the WGA said. The writers have been on strike for 146 days. The longest writers' strike was 153 days in 1988.

This does not signal a full return for Hollywood. SAG-AFTRA, the union representing more than 150,000 actors, who joined writers on picket lines on July 14, is striking separately. It marked the first time the writers and actors guilds had been on strike together since 1960.

There are no talks scheduled between the actors union and the studios. As it stands, the only shows that could resume production are those without actors, such as talk shows.

In a statement, SAG-AFTRA wrote that it “congratulates the WGA on reaching a tentative agreement with the AMPTP” after 146 days of incredible strength, resiliency and solidarity on the picket lines. While we look forward to reviewing the WGA and AMPTP's tentative agreement, we remain committed to achieving the necessary terms for our members’.

Several multimillion-dollar film and TV productions in Australia were adversely impacted by the strikes. Apple TV+'s Metropolis, a reimagining of the 1927 Fritz Lang film, and one of the largest productions ever planned for Australia at \$188m, was cancelled in June.

Other casualties included Universal's Apples Never Fall, a series adaptation of Liane Moriarty's novel starring Annette Bening and Sam Neill. It stopped filming in July, when the actors' strike commenced. Production on martial arts film Mortal Combat 2, on the Gold Coast, was also delayed.

## Cancer gets killer Sicilian mafia boss in the end

ROME: Sicilian mafia boss Matteo Messina Denaro, captured in January after three decades on the run, has died in hospital in central Italy.

The 61-year-old had colon cancer, for which he had sought treatment while on the run – a decision that brought him to the attention of the authorities, who arrested him at a clinic in Palermo.

Messina Denaro was one of the most ruthless bosses in Cosa Nostra, the real-life Sicilian crime syndicate depicted in the Godfather movies. He was convicted by the courts of involvement in the murder of anti-Mafia judge Giovanni Falcone in 1992 and in deadly bombings in Rome, Florence and Milan in 1993.

One of his six life sentences was also handed down for the kidnapping and subsequent murder of the 12-year-old son of a witness in the Falcone case.

Messina Denaro disappeared in the summer of 1993, and spent the next 30 years on the run as the Italian state cracked down on the Sicilian mob. But he remained the top name on Italy's most-wanted list and, increasingly, became a figure of legend.

In a stunning swoop, he was arrested on January 16 as he visited a health clinic where he was being treated using a fake identity. He was detained in a high-security jail in L'Aquila, central Italy, where he continued treatment for his cancer in his cell.

In August, Messina Denaro was moved to the inmates' ward of the local hospital, where his condition had declined in recent days. At the weekend, media reports

Messina Denaro

said he was in an “irreversible coma”. Medics had stopped feeding him and he had asked not to be resuscitated, they added.

His arrest may have brought some relief for his victims, but the mob boss always maintained his silence. In interviews in custody since being arrested, Messina Denaro even denied he was a member of the Cosa Nostra.

After Messina Denaro went on the run, there was intense speculation that he had gone abroad – and he likely did. But in the end, he was found to have been staying near his hometown of Castelvetrano in western Sicily.

Investigators had been combing the Sicilian countryside for Messina Denaro for years, searching for hideouts and wiretapping members of his family and his friends. They were heard discussing the medical problems of an unnamed person who suffered from cancer, as well as eye problems – a person who detectives became sure was Messina Denaro. They used a national health system database to search for male patients of the right age and medical history, and eventually closed in.

## Libya orders arrests over flood

TRIPOLI: Libya's prosecutor general on Monday ordered the arrest of eight officials as part of his inquiry into a flood disaster which killed thousands, his office said.

The officials are suspected of “bad management” and negligence, a statement from the prosecutor general's office said, adding that the officials served currently or previously in offices responsible for water resources and dam management.

A total of 3845 people are now confirmed to have died in the flood that devastated the port city of Derna on the night of September 10-11. Mohamed Eljarh, a spokesman for the relief committee set up by the authorities in eastern Libya, said the figure in-

cluded only those whose burial had been recorded by the health ministry, so it is “expected to rise every day unfortunately”. Bodies buried by residents in the first few days after the disaster struck had not been included, he said.

Officials were working with the community to compile a list of unrecorded burials as well as a register of the missing, who international aid organisations say may number 10,000 or more.

Many of the dead are believed to have been swept out to sea, from where their bodies are still washing ashore. Others are thought to be buried beneath the debris that carpets whole neighbourhoods of Derna.

EXPERTS WARN OF POLICY RORTS

# Students ‘to exploit aged care reforms’

EXCLUSIVE

JESS MALCOLM

Leading education and migration experts have warned Labor’s union-linked reforms designed to bring in foreign aged-care workers will be exploited by international students seeking a fast track to permanent residency.

Under the policy, which was first announced in May, people are able to gain access to full work rights after completing a short course in aged care.

The change in the visa system was introduced in a bid to plug critical workforce shortages in the sector, as Labor seeks to implement several sweeping reforms, including mandated care minutes in residential centres.

Immigration expert Abul Rizvi warned the government’s policy would be rorted by international students opting to switch out of longer courses at universities in favour of shorter, aged-care vocational paths in order to gain citizenship.

He said the policy risked attracting “shonky” educational providers who would be incentivised to offer aged-care training programs amid a predicted surge in demand.

“If I was a student and struggling to find a pathway to permanent residency, the very best pathway is to do a certificate three in aged care ... you might be doing a course in business which is hard to get permanent residency and then switch to aged care which is cheaper, easier and faster,” said the former deputy secretary of the Department of Immigration.

“The government needs to manage two risks, including the entry of providers in this space who are interested in the money and not interested in delivering quality aged care courses.”

International Education Association of Australia chief executive Phil Honeywood warned the policy was at risk of being rorted by “unscrupulous” migration agents seeking to profit from vulnerable students desperate for Australian citizenship and work rights.

Mr Honeywood was con-

cerned that the labour agreement would incentivise the wrong type of student to work in aged care.

“Currently, the government is focused on only allowing quality students to enter the country over quantity. Ironically, this sudden aged-care policy could induce the wrong type of student to pragmatically enter into an industry which requires a genuine caring aptitude,” he said.

Opposition immigration spokesman Dan Tehan said the government’s attempt to deliver on its election promise has led to “perverse outcomes”.

He warned “Labor’s shortcut to permanent residency will attract people to aged care with no passion for the profession while also undercutting our international sector”.

“Labor’s desperate attempt to plug the gaping hole in their undelivered election promise to provide round-the-clock aged-care nurses is going to deliver perverse outcomes,” Mr Tehan said.

“This is not a long-term solution. There are no guarantees migrants will continue working in aged once they have gained permanent residency and there are question marks about the quality of some courses.”

A spokesman for Immigration Minister Andrew Giles said Labor’s policy would address critical workforce shortages in aged care while also protecting workers.

“The Aged Care Labour Agreement settings have been designed to strike a balance between the workforce opportunities migration can facilitate to build a while recognising the vulnerabilities faced by workers on temporary sponsored visas,” he said.

“The Liberals had almost a decade to address workforce in aged care and did nothing. We’re working together with businesses and unions to address workforce shortages while protecting temporary migrant workers from exploitation.”

Under the agreement, unions have special access to workers including through inductions that exclude management. The deal also forces providers to ensure workers have time off to attend union meetings.

## Cleric attacks tactics to decriminalise drugs

SARAH ISON

A former senior member of the Catholic Archdiocese of Canberra and Goulburn has criticised the ACT government for the way it passed legislation decriminalising some drugs, calling its tactics “appalling” and raising alarm over whether the same “lack of due process” will be applied to its looming voluntary assisted dying laws.

Former vicar general Tony Percy – who has gone toe to toe with the ACT government in recent months over its forced acquisition of the Calvary Hospital – said he was becoming increasingly concerned over the “total lack of transparency” in how major reforms progressed.

“This just feeds into the Calvary incident where there is a lack of due process and governance, no question at all,” he said.

“And then there’s the questions about risk aversion, which absolutely should be asked. What’s this going to do to the health system and to people?”

ACT Health Minister Rachel Stephen-Smith earlier this month revealed her government took the commitment to decriminalise drugs “quietly” to the 2020 election and purposefully chose to introduce the reforms through a private member’s bill rather than government legislation. “If the government had tried to do it, I tell you what it would have taken two years to develop the legislation ... and we would have had to deal with all this risk aversion and complexity,” she said.

Father Percy said he was personally uncomfortable about the

move to decriminalise the possession of drugs under certain thresholds, including cocaine, heroin and ice.

“I did a funeral a little while ago and the mother of these eight kids ... died of an overdose,” he said. “And here we have a health minister saying ‘go ahead with this sort of thing.’”

The ACT laws will decriminalise the possession of 1.5g or less of amphetamine, cocaine, methamphetamine, MDMA and magic mushrooms and 1g or less of heroin. The possession of 0.001g or less of LSD will also be decriminalised. Those in possession of the drugs under the set thresholds will be given either a \$100 fine or direction to attend an assessment or harm reduction session.

Ms Stephen-Smith has defended her comments revealing the government deliberately went to the election with the policy “quietly”, saying she only meant she hadn’t wanted to “shout it from the rooftops” for fear of stigmatising those using drugs.

But Father Percy said Ms Stephen-Smith’s comments on how the ACT government was able to “quickly” legislate its policy demonstrated the government was being “disingenuous and dishonest” with constituents. “The other issue that’s going to come up now is with voluntary assisted dying laws ... and the government now is a law unto itself,” he said.

The Australian revealed the ACT government was considering allowing people as young as 14 to be eligible for VAD, after the territory was given the power to make such laws by the federal parliament last year.

## Premier’s allies want leader with energy

Labor frontbenchers and future leadership frontrunners Steven Miles and Shannon Fentiman on Monday

SCOTT POWICK/NCA NEWSWIRE

Continued from Page 1

roll a leader. Ms Palaszczuk, Australia’s longest-serving premier behind Victoria’s Daniel Andrews, would have to decide to leave or be convinced to go.

Another member of the Right said Ms Palaszczuk could be stubborn and was becoming less inclined to listen to advice. “If she doesn’t want to go, she won’t go,” the Right member said.

A strong contingent of MPs still support Ms Palaszczuk, believing her personal brand can get Labor over the line while others fear a change in leader will give support to the LNP’s claims of instability and crisis within the government. Once a prevailing force, Labor’s Right faction has been in rapid decline in recent years, thwarting hopes Treasurer Cameron Dick will ever become premier.

In the dominant Left faction – which controls the numbers in cabinet and caucus – Mr Miles and Ms Fentiman would be frontrunners in any leadership ballot to succeed Ms Palaszczuk.

Former Labor minister Robert Schwarten warned that if “gutless” MPs kept undermining Ms Palaszczuk, the government would lose the next election. “These things develop a life of their own ... (and) become a self-fulfilling prophecy,” he said.

“If I was the Premier reading those gutless people, I wouldn’t take them seriously until they had the guts to say it to my face. And you have to question the motivation of those people if they are not prepared to do that.”

The pair served in the Bligh government’s cabinet together. Mr Schwarten said Ms Palaszczuk had been written off too often during her political career.

“She’s pulled it out of the fire on many occasions,” he said. “I don’t ever underestimate her capacity to fight, and neither should anyone else.”

A Labor backbencher acknowledged there was leadership chatter but said there were “always rumblings” sometimes “more intense than others”.

One source said it was unlikely the Premier would want to quit before May next year, because she was desperate to surpass Peter Beattie’s record as the longest-serving post-war Labor Premier in Queensland.

Tatiana Dokhotaru

## Death doesn’t get much worse, say police

MADELEINE ACHENZA  
STEVE ZEMEK

The estranged partner of a woman who was found dead in her Sydney unit has been charged with her murder.

Detective Superintendent Danny Doherty said the alleged murder of Tatiana Dokhotaru, 34, at her Liverpool apartment in May was “domestic violence-

related” and the homicide squad had taken over the case due to the “gravity and severity” of the crime.

Police will allege that Danny Zayat, 28, of Colyton, assaulted Dokhotaru to the point of her death, which occurred after a triple-0 call was made on May 26, the night before her body was found.

“It doesn’t get much worse in relation to a woman being killed in her own unit,” Superintendent Doherty said.

Mr Zayat appeared in Penrith Local Court on Monday, still wearing the same high-vis hoodie in which he was arrested earlier in the morning. Bail was refused and he is expected to appear in Campbelltown Local Court on September 27.

He had been previously charged with 22 domestic violence offences relating to Dokhotaru, including choking without consent, breaching an AVO,

assault occasioning bodily harm, common assault and destroying or damaging property.

Detectives recently returned from Canada where they interviewed the victim’s family and friends.

Last week, Superintendent Doherty said police were still searching for Dokhotaru’s phone in the hope it might possess fresh clues.

# Man who bludgeoned officer with bat ordered to pay \$75k

## Law and order

Jessica Howard  
Warrnambool

A WARRNAMBOOL man who bludgeoned a police officer with a metal bat has been ordered to pay \$75,000 in compensation.

Senior Constable Rowan Baldam was beaten to the ground, attacked and "totally incapacitated" in the foetal position as Warrnambool's Steven Cleary, 50, struck him to the head with a metal bat on October 9, 2021.

The officer and his colleague Constable Will Ringin had attended a routine job at the height of the coronavirus pandemic, stopping a male youth who was not wearing a mask, which was mandated outside at the time.

Cleary, a COVID-19 conspiracy theorist, was contacted via a walkie talkie and he soon arrived at the scene armed with the metal baseball bat.

He struck Senior Constable Baldam to the head with the bat, forcing him to the ground, and then repeatedly hit him as the victim lay in the foetal position in extreme pain.

How can I ever really feel safe doing something routine when it feels as if at any moment it could result in me being nearly killed?

### Rowan Baldam

During the incident, Cleary repeatedly said he was the king and the incident was "an act of war".

In 2022 Cleary was jailed for three years and two months.

On August 31, 2023, Judge Caitlin English ordered Cleary pay \$75,000 in compensation and \$10,000 towards the victim's legal costs.

Cleary has been on the disability support pension since 1997 with the judge saying his earning capacity was "negligible".

But the court heard there was a restraining order on his

Harrowing footage has been released of a violent attack on two Warrnambool police officers in 2021.

Warrnambool home which was believed to have more than \$500,000 in equity.

The judge said Cleary's wife and two of his children lived at that home and the burden of the compensation order was high.

Cleary did not appear in court for the hearing with the judge stating he'd refused to

get on the prison bus or access an online link.

Judge English said the attack had left Senior Constable Baldam with physical and psychological injuries, as well as grief, distress and trauma.

She said Senior Constable Baldam had not worked since January 2023 and his

future in the police force was in doubt.

The officer suffered a fractured left thumb, which required surgery and still causes him pain to this day, as well as a cut to his head which left a visible scar through his hairline.

In his victim impact statement read to the court

in 2022, Senior Constable Baldam said he remembered sitting in the gutter after the attack with his head in his hands and "feeling the volume of blood that was flowing down my face and neck".

"I was very concerned I could lose consciousness at any time and I might not wake up," he said.

He said his sore thumb served as a constant physical reminder of the attack, impacting his mood and "bringing the vivid memory of being assaulted when it hurts".

"I am not sure if the thumb will ever be completely pain free," he said.

Senior Constable Baldam said at the time he often thought about the attack while at work, particularly when conducting routine jobs.

"How can I ever really feel safe doing something routine when it feels as if at any moment it could result in me being nearly killed?," Senior Constable Baldam said.

While once believing he'd be in the police force for life, the officer said upon his return he found the work joyless.

# Police hit the water

## Law and Order

Lillian Altman  
Port Fairy

WATER police are investigating why a man was travelling on a boat without his licence or safety gear in Portland on Saturday.

Williamstown-based water police Acting Sergeant Peter Murphy said he, alongside Senior Constable Daniel Paisley, inspected about 20 boats in Port Fairy and Portland across September 2 and 3.

Acting Sergeant Murphy said police were investigating a boat user in Portland who was reportedly not carrying his licence and was without the appropriate safety gear.

He said the man wasn't wearing a personal flotation device (a life jacket) while on his boat.

"This is classed as a heightened risk," Acting Sergeant Murphy said.

"He also had expired flares that were out of date from 2021."

He said the man also wasn't carrying a licence but claimed a commercial licence was issued 25 years ago.

Acting Sergeant Murphy said police would look into the man's licence status.

Williamstown-based water police Senior Constable Daniel Paisley and Acting Sergeant Peter Murphy at the Port Fairy boat ramp. They conducted 20 inspections of boats and users in Portland and Port Fairy on September 2 and 3. Picture by Lillian Altman

"Outside of that, most of the boaties here and in Portland have been really good in regards to having the correct safety equipment and really proactive about the safety of their vessel and their passengers," he said.

Acting Sergeant Murphy said the blitz kicked off the busy season targeting marine safety and enforcement.

"To get the message across of the master's (the skipper's) responsibility for their vessel and their crew," he said.

Acting Sergeant Murphy said the pair checked whether flares were in-date and the right safety equipment was

on board and that anyone travelling more than two nautical miles off the coast had an EPIRB (emergency position indicating radio-beacons).

The pair also visited the Portland Coast Guard.

Acting Sergeant Murphy said the patrols would ramp up in the south-west as the weather warmed up.

"We'd advise people prior to going out on the water, because their boats have probably been in storage for a good part of the year, to go over their boats and get it checked by a qualified mechanic, if needed," he said.

## Man airlifted after collision

FROM: P1

"He was taken back to the station where he tested positive to methamphetamine. You just throw your hands up in the air. This numbskull was driving at that kind of speed with drugs in his system and the reality is he did delay the police

response." Sergeant Walkley said the man was also found in possession of a taser. He said his car was impounded for 30 days and he would be summonsed to court on charges of excessive speed, drug-driving and weapon offences. Anyone with information on the crash phone 1800 333 000.

# 'I said to myself I have to live'

## Community

Jessica Greenan  
Camperdown

AFTER breaking her arm, shoulder and pelvis in a car rollover, Camperdown's Paige Prout crawled to the side of the road and waited for help.

It was 2.30am on a December morning in 2019 when the 22-year-old crawled to the Hamilton Highway roadside after falling asleep at the wheel and rolling her car about seven times into a nearby paddock. She said a truck drove by, sounding its horn as it passed.

"I thought, 'Did they not see me?' Adrenaline kicked in and I said to myself I have to live," Ms Prout said. "When I first woke up in the paddock, I had wet grass and dirt all through my hair (and) it was fight or flight for me at that time. I couldn't find my phone to call for help.

"I looked up and 100 metres away I saw a car drive past, so I crawled to a fence. I put my foot in the fence and flipped myself over it to get to the road."

Nearly four hours later, a woman travelling from Warrnambool to Ballarat in a taxi saw Ms Prout lying roadside and instructed her driver to pull over.

"The woman helped me into the car," Ms Prout said.

"I wasn't aware of how bad my accident had been. I was three kilometres from home, but my house keys were on my car keys. When the am-

bulance arrived they said I shouldn't be standing.

"She heard me give my details to the ambulance and found my dad on Facebook and messaged him letting my family know I was in severe pain and on the way to Ballarat Base Hospital and needed them.

"The police said I had fallen asleep behind the wheel and my hand had hooked through the wheel and pushed the car off the road."

Ms Prout suffered multiple broken bones and a fractured back and has since had

a metal plate and 10 bolts inserted into her shoulder. She said she was grateful she was alive to warn other young drivers.

"I thank my lucky stars that I'm here today to tell my story and warn other young drivers," she said. "You may think it won't be you that ends up injured in an accident but what happens when it is you? Will you survive or will you not be so lucky?"

"Be careful and alert while driving at night. There aren't as many taxis and Ubers operating in regional areas.

Often when you need a taxi late at night it won't be there for 90 minutes, and you think what is the point of phoning one? We need more taxis and public transport options in regional areas."

In the meantime, Ms Prout had more advice for young motorists.

"I thought because no one else was involved and it was a single vehicle accident that I couldn't get help or financial support," she said.

"In Victoria, the Transport Accident Commission is a no-fault scheme, meaning

that if you have a single vehicle accident and even if you were in the wrong or at fault, you are still able to apply for compensation to assist with medical expenses and with your recovery."

Slater and Gordon senior associate Sarah Elseidy - who is representing Paige in a road injury claim - said single-vehicle accidents were common in regional areas.

"If you have been injured in a crash, it is still worth talking to a lawyer about your legal rights whatever your circumstances are," she said.

Camperdown's Paige Prout rolled her car up to seven times in 2019 after falling asleep at the wheel. Inset, Ms Prout's scar on her arm. Pictures supplied.

The Men's Table is a mental health initiative which encourages men to meet over a conversational meal each month. Picture supplied

## Dinner concept in south-west gets men to dig into their feelings

Every topic will be on the menu when a new mental health initiative for men opens in Warrnambool next month. Demand for a south-west branch has driven not-for-profit organisation Men's Table to host its first meeting at the RSL on October 23. Regional host Dan Ball said the monthly conversational dinners would encourage men to "feel heard" in a safe and private environment. "It gives them a forum to talk about what's going on in their lives and their feelings. We had a couple of men contact us through our website telling us they loved the concept and would love one in Warrnambool, so we decided to follow the demand." Mr Ball said. "It's all about sharing feelings, which men are not generally very good at. This gives them a chance to get things off their chest." South-west men are required to book for the first session at [themenstable.org/attend-an-entree/](https://themenstable.org/attend-an-entree/), which would run from 6.30pm - 9pm.

# Warrnambool rents rise as economic distress grows

## Real estate

Ben Silvester  
Region

RENTAL prices in Warrnambool are trending upwards while vacancy rates hover at 15-year lows, according to the latest data.

The figures from investment research house SQM Research showed Warrnambool's vacancy rate hit a low of 0.3 per cent in September 2020 and hovering about 0.5 per cent since, with fewer than 40 properties available at any one time in the past three years.

The low availability of rental stock offers little hope prices will decline any time soon.

The Standard reported on September 4 that average monthly mortgage repayments in Warrnambool had

Warrnambool rents are on the rise while vacancy rates are stuck at 15-year lows.

jumped more than \$2000 in the same three-year period, making home ownership unaffordable for the majority of locals.

It is possible the increasing inaccessibility of home ownership is pushing more residents into the rental market, putting pressure on prices as flat supply fails to keep pace

with demand. The rental price figures showed steady prices for nearly a decade as weekly rents hovered in the low \$300 per week bracket until about September 2018 when they inched up to \$350 to \$380. But it was in September 2020 they really took off, rising from \$350 per week to more than \$500 per week in August 2023, and the trend line is still pointing higher.

The latest Census data from 2021 showed 28 per cent of Warrnambool residents rented, compared with 32 per cent who owned their home with a mortgage.

The 2021 Census also showed more than 30 per cent of rental households were in rental stress and the latest industry data suggested that had pushed beyond 50 per cent nationwide by mid 2023.

Funding to make land more affordable in regional areas is desperately needed, according to Member for Wannon Dan Tehan.

# Lack of land major problem

## Housing

Monique Patterson  
Region

THE federal government's Housing Australia Future Fund fails to address supply issues in regional areas, according to Member for Wannon Dan Tehan.

He has backed a call from independent politician Helen Haines for the federal government to fund the critical infrastructure needed to get regional housing developments off the ground.

Dr Haines put a proposal to parliament on Monday that would mandate a percentage of the National Housing Infrastructure Facility's funding be directed to the regions to build the roads, electricity and sewerage needed to grow housing supply.

"We have significant issues with the approach the Labor government is taking through its Housing Future Fund," Mr

Tehan said. "Allowing local government in rural and regional areas to make more land available and to make it more affordable would help the situation."

Mr Tehan said the federal government's fund didn't look at providing key infrastructure for housing developments including sewerage, water and high-speed internet.

He said the federal government needed to prioritise funding for rural and regional areas to encourage more people to live outside of metropolitan cities.

State Member for South West Coast Roma Britnell told *The Standard* last month the region's housing crisis would get worse if more land was not made available.

Ms Britnell said the low supply of land was the most critical factor in the housing shortfall.

Dr Haines said the nation was faced with a shortage of infrastructure needed for housing developments.

# 'CRISIS' Region's housing shortage discussed at inquiry Three-month search for Port Fairy rental proves fruitless

## Housing

Monique Patterson  
Region

A PORT Fairy woman has spoken about the challenges of accessing affordable housing at the state government's housing inquiry.

Jillian Warne joined a panel of renters at a hearing in late August.

"My experience is common to many women in their 60s, particularly in outer-regional or rural areas, where secure, well-paid work is rare," she said.

"I needed to find a house to rent.

"Despite contacting every real estate agent in the district and approaching home owners directly, I could not find anything in three months, despite being a desirable tenant: a mature person with no pets, able to care for a house and garden, able to pay rent and bond.

"I am currently house-sitting for a friend while they travel until October, paying rent and paying separately for storage."

Ms Warne said there were a number of barriers to availability and affordability in Port Fairy, including the pro-

portion of homes being used as short-term holiday rentals.

"The housing market in Port Fairy is very strong and expensive - a beachside property recently sold for \$7.2 million," she said.

The vacancy rates are very low for permanent rentals, with high demand for housing for workers across health, tourism and hospitality, and trade and engineering - for

fading of the great Australian dream of home ownership, this is genuinely a crisis," she said.

"There are tens of thousands of people who are homeless.

"Young people will move out of Australia to somewhere where their tasks and skills and their work mean that they can afford a home and a decent standard of living, and older people are going to have to go into aged care sooner because there are no options for independent living in their community."

Mary-Ann Brown, who is a Southern Grampians Shire councillor and chair of Rural Councils Victoria, also spoke about the housing shortage at the inquiry.

"The lack of homes is having a detrimental effect across all sectors of the rural Victorian economy," she said.

"The lack of supply is the main reason for the affordability crisis we are seeing in rural Victoria, and there is also a serious shortage of rental properties for seasonal workers, who are vital to the production of the food that all Australians need."

**This is no longer about the fading of the great Australian dream of home ownership, this is genuinely a crisis.**

Jillian Warne

example, for wind farm developments.

Ms Warne said the state and federal governments needed to take immediate action.

"This is no longer about the

# Large planting to protect species future in our waterways

## Environment

Madeleine McNeil  
Warrnambool

MORE than 15,000 native trees and shrubs have been planted in a mammoth community effort to provide threatened species, including platypuses and fish, with habitat for years to come.

The mass winter planting is part of a Warrnambool-wide waterway health improvement initiative and the last of the shrubs were planted on Wednesday, August 23.

The Glenelg Hopkins CMA plantings have been conducted on public and private land along the banks of the Hopkins and Merri rivers and Brucknell Creek as part of the Rivers of Warrnambool Flagship Waterways Project.

Glenelg Hopkins senior waterways officer Chris Wilson said 15,000 plants had gone in across 15 sites around the Warrnambool waterways.

Community members including landholders, local groups, students and staff from Emmanuel and King's colleges have helped with the project.

Mr Wilson said native

## A real long-term investment

Chris Wilson

plants were necessary along waterways to replace invasive and non-native species, to stabilise the banks and provide shelter and habitat for native animals, in and out of the water.

"This waterway project is a real long-term investment in the waterway health of the rivers of Warrnambool," Mr Wilson said.

"Having the school students involved in the planting of these areas is a really great way for them to gain an understanding of the importance of our waterways and the role native plants play in waterway health and the way they benefit our native species.

"These students are the people who are going to be enjoying these plants once they establish in years to come and it's fantastic to have them involved."

King's College teacher

and school chaplain Marko Wakim said the students loved getting their hands dirty and knowing their actions helped make a difference.

He said the year nine students participated in the Merri River planting as part of the college's community services class and it was

followed by a spot of fishing nearby to demonstrate the various recreation options rivers provided.

It is one of the year level's many volunteering roles with its 19 students often helping out at the Salvation Army op shop and at regular rubbish clean-ups in the city.

Mr Wakim said the subject

highlighted the importance of volunteering in the community and how the teenagers' skills could benefit society.

"Hopefully it's something they remember with fondness that they can take with them into adulthood and maybe they'll be the ones to encourage and inspire other

young people to volunteer later on," Mr Wakim said.

The planting activities are a part of an overall \$1.02 million Victorian government investment in the Rivers of Warrnambool Flagship Project to protect, improve and restore the health of the waterways surrounding Warrnambool.

# Same, but new name

## Community

Madeleine McNeil  
Region

WARRNAMBOOL & District Food Share has outgrown its original service area, launching a new name to reflect its broader reach and strengthen its impact.

Now known as Western District Food Share, the organisation will continue providing emergency food relief to people in need across the south-west. Executive officer Amanda Hennessy said the rebranding, which came into effect Friday, August 25, reflected the organisation's expanding scope and its commitment to serving the broader region, which encompassed the south-west community.

"In 2022 alone, Western District Food Share distributed 164 tonnes of food, providing sustenance to over 55,000 people in our community," she said. "Our new name, Western District Food Share, articulates our determination to reach more individuals across our region who require assistance.

"Our dedication to addressing food insecurity and improving lives remains unchanged. We believe this rebranding will help us con-

Western District Food Share executive officer Amanda Hennessy and volunteers JP Gaston and Darlyne Gerrard with some of the new signage installed as part of a name change and rebranding that came into effect on Friday, August 25. Picture by Eddie Guerrero

nect with a broader audience and strengthen our impact."

Ms Hennessy said the decision to change the name came after careful consideration and was in response to feedback from its partners and stakeholders.

She said the organisation had been "a steadfast pillar of support for individuals and families in our community facing food insecurity" for more than a decade, thanking the community for its "unwavering support". "We extend our heartfelt gratitude to each individual, organisation, and volunteer who has contributed to our

mission of addressing food insecurity in our community."

Ms Hennessy said Western District Food Share would continue to collaborate with local partners, agencies, schools' volunteers and donors to distribute emergency food. The nonprofit works with partners and volunteers to collect, store and distribute emergency food to individuals and families in need.

She said the name change included a refreshed brand with a new logo, updated contact information, social channels and website. Go to [districtfoodshare.org.au](https://districtfoodshare.org.au)

## Wind turbine catches fire

Wind farm operator Pacific Blue is investigating the cause of a fire in a turbine at Yambuk on August 27. The incident happened at the Yambuk wind farm off the Princes Highway about 9.30am. A CFA spokesman said one of the wind turbines caught fire at the top.

He said crews monitored the fire from the ground in case any sparks dropped. The incident was marked under control at 10.09am but emergency services remained in the area to monitor the situation. The spokesman said the last appliance left the scene at 12.40pm and that the cause would be investigated.

# Typsy use helps out

THE Victoria Tourism Industry Council and state government recently announced a cost free option for local tourism and hospitality businesses to manage their staff training using Typsy.

Typsy is an internationally recognised Netflix style micro-credential learning system which uses short videos to deliver skills based training to the tourism hospitality and events industry.

Once a business is connected staff can be invited into the program to learn together with their colleagues via a website or mobile app.

Founded in Melbourne the Typsy platform is now used in more than 100 countries and offers access to over 1000 videos and short courses for staff who earn badges and certificates when completed.

“The announcement is well timed to support businesses at a time of year when they are employing new staff for the summer season,” according to Port Campbell Visitor Information Centre co-ordinator Mark Cuthell.

“I am really pleased that local students and residents, that might be starting their first job or a new job this summer will be provided with tools and support to assist them to feel more comfortable and excel in their roles.

“We look forward to assisting local businesses to implement the program.”

A successful pilot trial in Metropolitan Melbourne lead to the recent announcement which delivers the Typsy platform free of charge to tourism and hospitality businesses in regional Victoria.

# Cars stolen in Simpson

RESIDENTS have been reminded to be extra vigilant with a series of thefts and burglaries in the area.

Cobden Police Sergeant Craig Jenkins said two vehicles were reported stolen in the Simpson area over five days.

He said a Red Holden Utility was reported stolen during the early hours of Thursday, September 21 and a Prado was reported stolen in the early hours of Sunday, September 24.

Sgt Jenkins said the Red Holden Utility had been recovered and the alleged offender remanded on Saturday.

He said the Prado was still yet to be recovered.

Sgt Jenkins said the residents had “detected unusual behaviour and movement” in the area.

“I’d like to remind everyone to be vigilant,” he said.

“It means talking to your neighbours, promote community safety and encouraging the use of security cameras to deter and detect offending.”

Sgt Jenkins said there had also been a number of reports of thefts and burglaries in the area in recent weeks.

“There are obviously some undesirable people in the area at the moment,” he said.

“Police are making a conscious effort to recover outstanding items and apprehend the offenders.”

Sgt Jenkins encouraged community members to contact Crime Stoppers on 1800 333 000 or Cobden Police on 5595 1550 if they have information about a crime or 000 if suspicious or illegal behaviour is observed.

Residents were also encouraged to call into the Cobden Police station or Hewitt and Whitty Cobden to pick up a ‘rural farm crime sign’ for their property.

Keep an eye out: Cobden Police Senior Constable Ash Pitt encourages residents to be on the lookout for farm crime in the area. 2023D

## Outdoor pavers need a spruce-up?

# Voice referendum date set

PRIME Minister Anthony Albanese has announced the 2023 Australian Indigenous Voice Referendum will be held on Saturday, October 14.

The referendum will ask Australians:

A Proposed Law: to alter the Constitution to recognise the First Peoples of Australia by establishing an Aboriginal and Torres Strait Islander Voice. Do you approve this proposed alteration?

If the referendum is successful, the proposed alteration to the constitution will involve one recognition and three ensuing provisions.

In recognition of Aboriginal and Torres Strait Islander peoples as the First Peoples of Australia:

- There shall be a body, to be called the Aboriginal and Torres Strait Islander Voice;
- The Aboriginal and Torres Strait Islander Voice may make

representations to the Parliament and the Executive Government of the Commonwealth on matters relating to Aboriginal and Torres Strait Islander peoples; and

iii. The Parliament shall, subject to this Constitution, have power to make laws with respect to matters relating to the Aboriginal and Torres Strait Islander Voice, including its composition, functions, powers and procedures.

Mr Albanese said the proposed alteration was “pretty clear and pretty straightforward”.

“Recognition. Listening to advice. Parliament continuing as decision-maker,” he said.

“That is the clear, positive and practical request from Indigenous Australians.

“That is the hand out asking us, non-Indigenous Australia, to just grasp that hand of friendship.

“And that’s what we can vote Yes for.”

Mr Albanese said it was time to write the next chapter in Australia’s history, stating the nation was at its best when willing to be progressive.

“In the history of our great nation, the wonderful acts of national progress and the great advances in fairness have always required hard work,” he said.

“There were arguments here, when South Australia, something they are very proud of and should be, led the world in giving women the right to vote.

“There were arguments made against Federation and the minimum wage, Medicare and multiculturalism. And before the 1967 referendum, before Vincent Lingiari, before Mabo, before the Apology.

“But the great story of our country, through the generations, is that Australians come together to answer these calls for change. We rise to the moment.”

# Volunteer awards open now for noms’

Open now: Wannon MP Dan Tehan is calling for nominations for this year’s Sport and Volunteer Awards. 2023E

MEMBER for Wannon Dan Tehan MP is calling for nominations for this year’s Sport and Volunteer Awards.

The Sport and Volunteer Awards recognise our unsung heroes – volunteers who inspire their peers through their generosity of spirit, patience, willingness and have demonstrated passion and made a significant contribution towards their community.

“The Wannon Sport and Volunteer Awards are a highlight on my calendar as I take the opportunity to acknowledge and celebrate the valuable contributions so many local people make to the Wannon community,” Mr Tehan said.

The Sport Awards recognise and highlight outstanding sporting performances, achievements, and contributions made by community members.

Nominators for the Sports Awards are invited to nominate an individual or team in the following categories:

- Primary School - Individual or Team Achievement;
- Secondary School - Individual or Team Achievement;
- Open - Individual or Team Achievement; and
- Member of Parliament.

The Volunteer Awards recognise and celebrate individual and group volunteers who had made outstanding contributions and go above and beyond for their local communities.

Nominators for the Volunteer Awards are invited to nominate an individual or group in the following categories:

- Youth Volunteer;
- Emergency Management;
- Group;
- Inspiring Individual; and
- Member of Parliament Award.

Nomination forms are available at [www.dantehan.com.au](http://www.dantehan.com.au) or by calling 1300 131 692.

# Open day opens up career opportunities

AROUND 70 female secondary students from schools across Timboon, Warrnambool and Mortlake got a unique 'up-close' look at the careers available in the energy industry at Lochard Energy's Student Open Day.

The open day, held earlier this month, was organised in partnership with the Neil Porter Legacy (NPL) and South West TAFE to provide the students with exposure to future career options they students might have not yet considered.

"The NPL believes students need to get out of the classroom and experience different workplaces that match their interests," NPL representative Matt Porter said.

"They must talk to employers and employees, see workplaces, ask questions and understand how their classroom learning can be used in real-life situations," he said.

"We can't thank Lochard Energy enough for opening their doors and giving these female students this opportunity.

"These young ladies will see women working at all levels in this industry and they'll see what's possible and be able to make informed career-based decisions."

The open day included a panel discussion with key experts from Lochard, industry workshops, a tour of the site and a barbecue lunch where students could mix with Lochard employees, ask questions and get a better understanding of the industry.

"There are so many different roles in this industry and the work is interesting, varied and evolving as we look to support the transition to renewables, so it makes a really great career choice for anyone but particularly for those in the South-west region with the Iona Gas Storage Facility right here in Port Campbell," Lochard Energy chief executive officer Anthony Fowler said.

"We have some exceptionally skilled and experienced women in management and technical roles at Lochard but it's no secret that historically there has been fewer women in this industry and we really want to encourage more females to consider it as a career option."

Career options: A group of Timboon P-12 School female students took part in an open day at Lochard Energy on Monday. 2023E

## Fancy a movie night fundraiser?

IF your community group is looking for a fun way to raise funds, entertain the kids, or just have a good night out, Corangamite Shire Council's mobile cinema could be just the ticket.

Council's acting co-ordinator wellbeing economy Tammy Young said the mobile cinema was available from November 2023 until March 2024.

"A movie night is a great way to build social connections in farming communities that don't come together that often," she said.

"Many groups have used screenings to raise funds for their sporting club, hall improvements, charity and other causes."

Ms Young said community groups were welcome to apply.

"There are limited screenings available and community groups will need to purchase the DVD they are showing," she said.

"Council can arrange the booking of the film on behalf of your community group.

"In the past year various groups have screened

kids' movies including 'Sing 2', 'Frozen 2', 'Peter Rabbit' and 'Elvis'."

In collaboration with the Corangamite Film Society, council can arrange a team of volunteers to take the mobile cinema equipment to your venue and show the movie of your choice.

Ms Young said screenings were subject to the availability of volunteers with council arranging the booking on the behalf of community groups

"Film distributors charge a small fee for the screening rights, which ranges between \$150 and \$350," she said.

"Each expression of interest received will be assessed and we expect about 10 screenings will be held during the scheduled months."

If you would like to screen a movie, download an expression of interest form from [www.corangamite.vic.gov.au/Mobile-cinema](http://www.corangamite.vic.gov.au/Mobile-cinema) or contact the council on 5593 7100 for a hard copy.

Expressions of interest close on Friday, October 20.

For more information, please call Ms Young on 5593 7100.

# Lap the Map for diabetes

SIMPSON Lions Club is getting behind a nation-wide Lions initiative, and the community can get involved to.

The club is inviting the wider community to join them for a walk around the Simpson Dam to raise awareness about diabetes.

Club president Russ Davis said on Sunday, September 10 at 10.30am the club will be doing a few laps of the dams.

He invited the community to come along to the day.

“It’s a great cause and good excuse to get out in the Spring air,” Mr Davis said.

More than 1.3 million Australians are currently living with diabetes and Lions volunteers across the country are on a mission to do what they can to reduce the prevalence of diabetes and improve the quality of life for those diagnosed.

In the leadup to World Diabetes Day on November 14, Lions Clubs across Australia will be hosting Lions Lap the Map walks and events in their local communities.

The community walks aim to raise awareness of diabetes and rally communities, healthcare professions, and individuals alike to work towards a healthier and more vibrant future for all Australians.

With the help of communities across Australia, Lions Australia aims to have a combined distance travelled which will exceed Australia’s circumference (25,760 kms) by World Diabetes Day.

Lions national diabetes co-ordinator Pat Mills said diabetes is a key focus for Lions and the organisation is focussed on doing what it can to help reduce the impact of the disease in the community.

“Across Australia 1.3 million people have been diagnosed with diabetes and 283 people are diagnosed every day,” she said.

“The disease can lead to serious health issues affecting the heart and blood vessels, eyes, kidneys, nerves and teeth.

“In most high-income countries, diabetes is a leading cause of cardiovascular disease, blindness, kidney failure and lower limb amputation.

“It’s expected to affect 629 million adults by 2045.”

Ms Mills said early diagnosis, optimal treatment and effective ongoing support and management reduce the risk of diabetes-related complications.

She said in recent years Lions Clubs across Australia have been focused on raising awareness and funds to support more vital research into the diagnoses and treatment.

“Our Lions Lap the Map family friendly walks and campaigns in the community encourage people to get outside and have a walk to promote healthy lifestyle and raise awareness of the diabetes epidemic in Australia,” Ms Mills said.

“From events in shopping centres and gyms, to walks in parks with healthy food, diabetes screenings for attendees and informative health professionals there’s a range of different types of events help as part of the Lap the Map campaign.

“We encourage people to keep an eye out and if your local Lions Club is having an event consider going along.

“They are usually very informative and a great day out for the entire family.”

Works continue: The 12 Apostles Trail is nearing completion with the final lot of works in progress. 2023D

## Final stage for trail

THE Twelve Apostles Trail is in the final stage of works.

In recent weeks contractors have completed a number of components of the project including:

- Construction of Campbells Creek bridge footings;
- Kerb and channel poured on Great Ocean Road, east of Campbells Creek bridge;
- Started fencing works on east side of Campbells Creek bridge, with holes cut for fencing;
- Continued path construction and fencing on the east of the Great Ocean Road lookout;
- Wannon Water sewer pipeline completed and tested; and
- Seating installed at lookout carpark.

The final project pieces to be completed are:

- Offsite fabrication of cantilever boardwalk for north of the lookout;
- Landscaping at Great Ocean Road lookout car park and Desailly Street traffic island;
- Continue path construction works between Great Ocean Road lookout and Campbells Creek;
- Complete underground drain construction near bus shelter;
- Campbells Creek bridge to be erected;
- Finalise shop drawings for boardwalks opposite Port Campbell-Curdievale Road and on Great Ocean Road between cutting and Campbells Creek;
- Drainage improvement works on North South Road; and
- Replace missing trail related road signs.

# Council decides offshore zone stance

CHALPAT SONTI

FOR or against? That's been the question asked of Glenelg Shire Council in relation to the proposed offshore wind farm zone and it has now provided an answer.

Councillors last Tuesday night unanimously endorsed a submission to the federal Climate Change, Energy, the Environment and Water Department on the zone, which takes in the entirety of the waters off the coast of the shire, as well as parts to the west and east.

The council will provide "in principle" support for offshore renewable energy projects but has called on the Commonwealth to considered concerns raised by the community now, and in the future when – if the zone is approved – projects move off the drawing board and closer to reality.

"Glenelg Shire Council strongly supports the need to transition to renewable energy sources, and trusts that the concerns raised by our community, especially regarding environmental protection matters, are duly considered in the assessment of the overall community consultation," the submission says.

"We look forward to working alongside our local community with federal and state governments, developers, industries and business to achieve zero emission targets for the benefit of future generations."

## What the councillors said

The motion to endorse the submission was moved by Karen Stephens, who said that offshore wind power generation was a key part of the federal government's agenda – \$14.5 million this year alone simply for a strategy – and the council had long supported renewable energy.

She also pointed out the proposed wind farms that might eventuate, should the zone be declared, were long term projects that would take up to seven years to finish the feasibility stage – as the *Observer* reported recently one of the three projects, the Cape Winds Offshore Wind Farm, believes it would not be generating power until 2033 at the earliest, with construction starting in 2030.

"There's a long way to go with these projects," Cr Stephens said.

"We've listened to our community, we've understood, we've listened to the Commonwealth consultation process, we've got all this background information and knowledge... and we'll make that submission."

Michael Carr also stressed that the zone declaration process was just one stage before any feasibility licences were approved.

Supporting the zone was also part of the council's plan and its 2040 community plan which called for decarbonisation and supporting renewable energy.

"Each offshore wind project has the potential to contribute thousands of jobs and hundreds of millions of dollars to the local community," Cr Carr said.

"Make no mistake fellow councillors, the Glenelg Shire and its community has the opportunity to be part of a once-in-a-generation economic boom that will last decades should it proceed."

That would be while at the same time decarbonising Australia's energy market and protecting existing local manufacturing jobs "and enabling the region to develop new jobs".

"I believe it would be irresponsible for this council to go against its own plan and community plan and say 'no our community does not want the area declared' during phase one of the process," Cr Carr said.

"We need to be supportive of the Commonwealth Government declaring the area so companies that wish to invest can proceed to phase two of the process, and be confident that the voices of our local communities can be considered."

Gilbert Wilson said offshore wind projects "should be supported for the good of the environment".

"This council supports Australia's renewable energy targets," he said.

"I believe that the effect of these floating turbines will be minimal at best.

"The zone will not overlap our marine parks and protected areas.

"There is no evidence that whales will be affected by the offshore wind farms."

The approvals process would take whale migration and calving patterns into consideration.

"Whale and Dolphin Conservation Australia says climate change... and heating of oceans is the greatest threat to ocean life," Cr Wilson said.

"The floating towers are known to provide great habitats for fish."

The towers would also be inside the Continental Shelf so would avoid the Bonney Upwelling, while the largest land colony of gannets at Point Danger

THOSE opposed to the proposed offshore wind farm zone have been giving like-minded residents a helping hand last week to let the federal government know what they think – here Ashlee Ludeman (right) of Considered Renewables helps Nita Tonkin fill in her survey at Portland Neighbourhood House in Pioneer Plaza on Tuesday last week. "I love wildlife," Ms Tonkin said. "If it was the Great Ocean Road they wouldn't dream of doing it down there and we've got just as much stuff here."

Picture: KAREN HODGE 230822kh01-03

nested near onshore wind towers.

Cr Wilson also questioned the impact on surfers, and the distance towers would be from shore – he said these could be anywhere up to 50km from shore "therefore they would be quite hard to see".

"As most of the towers would be anchored to the sea bed there will be no effect to the surfing beaches," he said.

"I believe not supporting this zone will increase the

**"For me, if we're going to power the country I think a good starting point would be for Glenelg Shire residents to never have an electricity bill again." - Mayor Scott Martin**

time of carbon reduction and will affect the marine life more."

Jayden Smith said the zone was a "great step in the right direction regarding emission reduction".

But he had two concerns – he would rather the wind farms be funded publicly rather than be owned by private companies and he was also concerned how politicised the subject of renewable energy had become in Australia.

The happy-go-lucky and "she'll be right" character of Australians was why "at such a late hour in time" the nation had scrambled to renewable energy production.

Cr Smith said he had been contacted by community members proposing nuclear energy as an alternative "but that's not something that's ever going to be on the table in Australia for a long time if ever given the attitudes around that".

However, the environment also needed to be considered.

"Our local ocean area is perfect for the offshore winds but it's also more than perfect for the current natural environment that it houses," he said.

"There's going to be much work done to make sure that the environment is looked after."

Plenty of people were excited by the economic opportunities offshore wind could bring to the region.

"I personally ask that (Chris Bowen the federal Climate Change and Energy Minister) takes all consultation on board," Cr Smith said.

Chrissy Hawker echoed that.

She said she acknowledged the need to transition to renewable energy.

"But it is critical that our community voices are considered as part of the consultation process," she said.

Mayor Scott Martin was the last to speak.

"The amount of misinformation out on social media has been staggering and quite frankly disturbing," he said.

"Declaring a zone doesn't mean that towers will be put in tomorrow, or at all," he said.

"This could all be for nothing – this is only stage one.

"Stage two is where interested companies put in their expressions of interest, that is where what I'd say the mission impossible starts for those companies regardless of whether they're fixed, floating or other

(types of towers).

"Companies are required to put in a management plan where they are required to show how they can work with all user groups... and that is in the national interest.

"That may require a number of solutions, like monetary compensation."

Cr Martin said the council submission was "a very measured and sensible approach with the facts that

we have on hand right now".

"I can appreciate the 'not in my back yard' mentality," he said.

"Like it or not we have the existing infrastructure, we are right in the Roaring Forties here, this is the ideal spot.

"I see South West Victoria and particularly the Glenelg Shire doing the heavy lifting when it comes

to transitioning our country from fossil fuels to green energy."

"If there will be some negative impacts in our community... then we deserve some sort of compensation.

"For me, if we're going to power the country I think a good starting point would be for Glenelg Shire residents to never have an electricity bill again."

Cr Martin said "climate change is real".

"We need to make some tough decisions," he said.

"A community should be looked after if the burden of those tough decisions should fall on us.

"Recent history has shown from the other declared zones (Hunter in NSW and Gippsland) the Minister does consider submissions.

"If people are genuine about wanting to be heard by the federal government make a practical, logical, evidence based (submission) and the Minister said he will consider that."

## But wait, there's more

Earlier Cr Martin answered questions about the council's stance during public question time.

In response to some from Steve Liddicut, a landowner near Cape Bridgewater, he also pointed to "the amount of misinformation out there, not only in public and... social media" which he said was "not only staggering but disappointing".

"Several zones around Australia were publicly announced late last year," Cr Martin said.

"Really high level information has been available for quite some time.

"While I can appreciate some people may want answers yesterday, the reality is they do take time to come to council and to come to council meetings.

"At no point will the Glenelg Shire Council be doing community consultation on this or any part of the project for offshore wind.

"This is a federal project done in Commonwealth waters, completely outside of local government reach.

"I'm not sure how I can be clearer than that."

Michael Byrne asked how councillors could have considered the issue properly when "one councillor has been on holiday on Thailand, a councillor (has been) holidaying in Noosa and councillor (has been) on leave and just returned from England".

Cr Martin said "that is exactly why we didn't put a submission in straight away".

"We took the required amount of time to get the information to councillors," he said.

"Councillors have had the opportunity to ask questions, to gather information and to learn.

"I think it's pretty disingenuous to say that councillors haven't seen or read the papers, haven't (looked at) social media.

"We see, we do listen... I can assure you every councillor has had the opportunity to receive the information and to digest it."

# A unique insight into the past

CHALPAT SONTI

THOMAS Hannay might have only spent a few weeks in South West Victoria, but seldom can such a short stay have left such a long-lasting legacy.

And now that legacy has been preserved in an easy format for future generations, thanks to the Friends of the Vern McCallum Collection.

The group has published a book, *Thomas Hannay Travelling Photographer in the Colony of Victoria 1858-1859*, which details 123 photographs, beautifully reproduced, that give a unique insight into early European settlement – and correspondingly Aboriginal life – in the late 1850s.

While the photos are from as far away as Beechworth (Hannay was based in Maldon), most of the book is dedicated to a visit Hannay made to Portland in September 1859.

On a horse and cart he travelled here from the goldfields, working along the way as a travelling photographer, advertising his services and seeing great demand for a wide variety of photographs.

When in Portland he took the earliest known photograph of the settlement and the Bay, and even a photo of a sketch he is believed to have done of Portland's earliest building – the post office/police station/Customs house on the corner of Cliff and Charles Sts.

That sketch gives credence to the theory that Hannay passed through Portland in 1858 en route from Adelaide to Melbourne by ship as the building had been demolished by the time he was back here for his tour.

There are also photos of various notable settlers and their homes or properties, both in Portland and the wider district.

Then there are several photographs of Gunditjmarra (and elsewhere other Aboriginal groups), the likes of the Ettrick homestead near Tyrendarra and around Merino, Digby and Hotspur up to Sandford.

After leaving the district Hannay ventured east through Tower Hill, Woodford and Woolthorpe through to Mortlake and Camperdown and eventually Queenscliff.

The book was officially launched at the Julia Street Creative Space on Thursday evening, at a function featuring renowned Age journalist (and keen student of local history) Tony Wright and with invited guests from as far afield as Mortlake and Camperdown.

While it was to be authored by Geoff Corner, the Canberra-based brother-in-law of Vern McCallum, Mr Corner passed away in 2021 after having written the introduction.

So Friends group members Phil Ruge (secretary),

Garry Kerr (chairman) and Mr McCallum (custodian of the collection that bears his name) set about putting it all together.

"What we did is finish off what he (Mr Corner) started," Mr McCallum said.

"I think that's a very important thing."

The start probably goes back a bit beyond that when Mr McCallum received the Hannay collection photos from the widow of the late Joe Wiltshire, longtime Portland historian.

"Vern always had the desire, because of the fact they were taken 25 years after the settlement of the colony of Victoria, to publish them and they had never been published as a book before," Mr Ruge said.

"Geoff Corner volunteered to put it together and after he died we finished it last year."

"We were fortunate in being given some funding towards the cost of publishing the book."

That was through the Gwen and Edna Jones Foundation, Ray and Joyce Uebergang Foundation and the Port of Portland's community grants program.

"They saw the value in the book and in it being produced," Mr Ruge said.

But the Friends group is also hopeful the book might unearth other photographs Hannay took on his trip, as well as more information about those in the first edition – the most the authors had to go on was occasional titles Hannay gave to photos.

Mr McCallum said what made Hannay's photos stand out was that they were not just of settlers – which was standard in those days – but also of properties, surroundings and Aboriginal people.

Mr Ruge said it gave an insight into the life and times of both early settlers and Indigenous people affected by that settlement in the Western Districts.

The beautifully produced hardcover book sells for \$90 – it is limited to 500 copies – and is available from the Julia Street Creative Space.

It can also be posted (\$15 extra) and anyone wanting to buy it that way should email [mccallumcollection@bigpond.com](mailto:mccallumcollection@bigpond.com).

RICHARD Mangan of Ultimate Technology Group installs the warning lights at the Lighthouse Ave/Bentinnck St intersection as Portland Cable Trams volunteers Lou McKay, Don Tapscott and chairman Des Hein, who helped him with the project, watch on. LEFT: PORTLAND Cable Trams chairman Des Hein does some work on the Lighthouse Ave warning lights. Pictures: LEESA COOK 230914lc01/04

# Now you know they're coming

CHALPAT SONTI

THE conductor getting off the tram to warn traffic it is coming is now a thing of the past, thanks to the flow-on from the winding up of Portland WorkSkills – and there's more to come. Portland Cable Trams was one of the groups that received a substantial donation from the winding up last year, and one of its projects was completed on Thursday.

That was the installation of warning lights at the intersections it crosses along Bentinnck St – Lighthouse Ave and Wade St – as well as an electronic sign near Henty Park advising the public if it is open or not.

The warning signs complement the one at Cliff St/Lee Breakwater Rd, the major intersection the trams cross.

Trams chairman Des Hein was one of three volunteers – Lou McKay and Don Tapscott being the others – who helped Kinglake-based Richard Mangan of Ultimate Technology Group install the signs.

"This is all due to the WorkSkills money," Mr Hein said.

"Now we're completely set up with intersections with lights and the conductors don't have to get off at all."

Mr Hein said tram drivers were still getting frustrated with the number of vehicles running the light at the Cliff St/Lee Breakwater Rd intersection.

A police spokeswoman said such behaviour came under the category of failing to stop or give way at a level crossing or unlawfully entering it when devices were operating and was punishable by a

\$962 fine and four demerit points.

Mr Hein said a police patrol nabbed at least one driver recently.

"If the lights come on and they have time to stop and they don't, they will be booked," he said.

"But we don't want people getting fined – we've installed some extra sensors so the light goes off as soon as the tram leaves the road."

"We've spent a lot of extra money to make it user friendly and we just want drivers to obey the rules."

The next big project that Trams will do with WorkSkills money is electrifying its tram, at a cost of about \$90,000, and perhaps even more reason for the warning lights to be installed first.

"They'll run off lithium batteries and will run so quiet they'll sneak up on you," Mr Hein said.

"That will be good, it's just a matter of time

before diesel trams won't be allowed."

The third project courtesy of the WorkSkills money is due to take place in March next year, when a storage building will be erected next to the Trams shed at Henty Park.

"When you think where we've come from, this is great," Mr Hein said.

Meanwhile, Mr Hein said volunteers were disappointed by some recent vandalism of the tram stop on the cliffs overlooking the Maritime Discovery Centre.

The perspex windows in the stop have been smashed about six times in the past six weeks, and are now boarded up waiting for replacements.

"We've been there 21 years and nothing much has ever happened – they're an asset to the town and it's disappointing for the volunteers when this sort of thing happens," Mr Hein said.

WE want you – Hilary Endacott and Les Horovitz are looking for more volunteers to join them at community radio station 3RPC.  
All pictures: LEESA COOK 230921c21-30

# 'To survive, we need new people'

CHALPAT SONTI

COMMUNITY radio station 3RPC has been serving Portland and district for more than 40 years – but warns it won't be around for anywhere near that amount of time in future if it can't find more volunteers.

Like many local community organisations, the station is suffering from being unable to attract people to help out, the pressure on those remaining growing more as they also grow older. From a high of more than 500 members and 50 presenters in its heyday, 3RPC is down to about 100 members and 27 presenters now, run by a committee of five.

"We're in dire need of further people involved as members, volunteers and presenters," said treasurer Les Horovitz.

"And possible sponsors as well – it is difficult to get them at the moment."

And as much as all that, there is one group in particular the station would like to attract in those roles.

"We want the younger generation to join our ranks," Mr Horovitz said.

"We do have a couple of younger presenters who play younger-type music but we need more – but we're looking for anybody, it doesn't matter the age, the wider the variety of music the better"

- Les Horovitz

week herself at one stage.

Ms Endacott said listeners "need to hear a live voice", and those needed to be different ones.

"Quite a lot of us are getting elderly," she said.

"We're not going to go on with it for 30 more years."

"In the early days of the station everybody was 40 years younger and there was a great deal of energy and enthusiasm and we had a lot of support."

"I suppose considering everything (the introduction of the internet and streaming, which 3RPC does through its website) although we're operating on much fewer numbers, we have kept up technologically, but it is tiring."

"We love our station which is why we're here and continuing to be here but we just want more help."

Ms Endacott said 3RPC had a dedicated group of listeners. Apart from local residents, many others have the radio as company – forestry and trawler workers and truck drivers were all regulars.

"We'd love to have someone who could do a late night program for them," she said.

The station has also been a regular at many local events,

broadcasting from the likes of the Upwelling Festival, Christmas Carols and Anzac and Australia Day ceremonies.

"In the past we have broadcast soccer and basketball as well," Mr Horovitz said.

"We could do sport and similar things again – those things are possible if we had a lot more people to help us."

That also includes people to help with 3RPC's major fundraiser – Thursday evening bingo at the Fawthrop Centre which raises about \$20,000 a year to keep the station going – 10 tireless volunteers do that at present.

"If we had enough people we could do a roster," Mr Horovitz said.

Anyone interested in joining 3RPC as a member, presenter, community organisation or sponsor can drop into the office, on the corner of Julia and Richmond Sts, on Mondays between 9am and 1pm, call and leave a message outside those hours on 5523 4333, email 3rpcfm@3rpcfm.org.au or visit 3rpcfm.org.au.

## Relevant Person Consultation:

### ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips Australia is continuing to develop an Environment Plan for the proposed offshore Otway Exploration Drilling Program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters.

ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment. Relevant persons can view the draft Environment Plan chapters and information on how to provide feedback via the consultation hub by scanning the QR code below or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**.

The Environmental Planning Area covers the area assessed within the Environment Plan and encompasses a wide range of habitats and marine species, cultural values and socio-economic activities

## APPENDIX C3 - OTHER DOCUMENTS

**NOPSEMA**

Australia's offshore  
energy regulator

# Consultation on offshore petroleum environment plans

---

## Information for the community

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) is Australia's independent expert regulator for health and safety, structural and well integrity, and environmental management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.

The protection and preservation of the marine environment is best achieved when there are opportunities for the community to participate in the environmental approvals process through consultation.

---

## Who can participate?

Under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (the regulations) there are several ways the community can participate in the environmental approvals process for offshore petroleum activities in Commonwealth waters.

### Public comment for new projects and exploration activities

Offshore project proposals (OPPs) for new offshore petroleum projects and environment plans for offshore petroleum exploration activities are subject to a mandatory public comment period. Public comment must be done before the OPP or environment plan is submitted to NOPSEMA for assessment. Further information about public comment can be found at [nopsema.gov.au](http://nopsema.gov.au).

### Relevant persons consultation

Titleholders must consult with a specific category of people or organisations referred to as 'relevant persons' while preparing an environment plan for any offshore petroleum activity. This consultation must be done before the environment plan is submitted to NOPSEMA.

Some categories of relevant persons are specified in the regulations, such as government departments, however the information in this brochure is for the category of relevant persons who are not specified but who have 'functions, interests or activities' that may be affected by the offshore activity.

### Correspondence directly to the regulator (NOPSEMA)

You can send correspondence directly to NOPSEMA; however, this generally cannot be considered until after the environment plan has been submitted. It is always better to use the public comment and relevant persons consultation processes in the first instance.

## What is 'relevant persons' consultation?

Consultation on offshore petroleum activities is a two-way process where information is shared between titleholders and relevant persons. It is a requirement for titleholders when preparing an environment plan and is an important part of good environmental management.

Consultation provides an opportunity for people or organisations who may be affected by an offshore petroleum activity to raise concerns, including objections or claims, about the potential impacts of the activity, to seek information about how they may be affected, and how the titleholder intends to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

Information provided by relevant persons in consultation may also help titleholders better understand the values and sensitivities of the environment and inform the evaluation of the potential impacts and risks associated with the activity and how to manage them appropriately.

## Am I a relevant person?

You may be a relevant person if you or your organisation have functions, interests, or activities that may be affected by an offshore petroleum activity proposed under an environment plan being prepared or already underway under an environment plan being revised.

The terms 'functions' 'interests' and 'activities' should be read broadly. You do not have to have a legal or financial interest that may be affected by an offshore petroleum activity to be a relevant person.

Interests that may be affected can include things like cultural and spiritual connections to the sea or interests in the protection of specific marine species. However, to be a relevant person your interests should be more than a general interest in the environment and/or offshore petroleum activities.

## If I am a representative body, can I consult on behalf of all my members?

The law recognises that interests may be held communally. In some cases, all members of a community may agree that their representative body can consult on their behalf. However, this may not always be the case. Representative bodies should inform titleholders whether or not they have the authority to consult with titleholders on behalf of all their members.

Representative bodies, such as peak bodies and prescribed body corporates, may be relevant persons in their own right. They may also be an initial point of contact for titleholders to seek information about who else they should approach for consultation.

It is the titleholder's responsibility to provide all members of a community who have a shared interest opportunities to participate in consultation. In some circumstances, representative bodies may offer to assist titleholders with this.

## Do I have to participate?

If you are a relevant person, you have the right to be consulted by titleholders of offshore petroleum activities when they are preparing an environment plan to submit to NOPSEMA.

Titleholders have a duty to provide you an opportunity to be consulted, however there is no obligation on you to participate in consultation. If you do not wish to be consulted, you should advise titleholders of this when they first contact you.

Titleholders must make reasonable efforts to consult with relevant persons, but the regulations do not require them to get a response to their requests. If you want to participate in consultation but need more information or time then it is best to communicate this to titleholders when they contact you. If you do not respond, they might assume you do not wish to be consulted.

If you are an organisation or representative body that is regularly approached for consultation you may consider developing guidance outlining how and when you want to be consulted. You could also consider documenting your functions, interests and activities. Both measures may help with managing regular requests for consultation.

In some instances, the likelihood of you being affected by an activity is very low and/or the impact on your functions, interests or activities may be minor. For example, if you are only going to be affected by the activity in the very unlikely event of an oil spill you may wish to inform titleholders you only want to be consulted if a spill occurs as part of the requirement for ongoing consultation set out in the regulations.

## What if I want to be consulted but the titleholder hasn't contacted me?

Titleholders have a duty to identify who may be a relevant person and provide them opportunities to participate in consultation. However, even with best endeavors, titleholders may miss people or organisations who may be relevant.

If you believe you are a relevant person and you want to be consulted on offshore petroleum activities, then you should contact titleholders directly and identify yourself as a relevant person.

If a titleholder refuses to consult with you, and you believe you are a relevant person, you can write to NOPSEMA. Once an environment plan is submitted to NOPSEMA, this information can be considered in the assessment of whether or not the titleholder has met the requirements for consultation.

It is always better to attempt to resolve issues with the titleholder in the first instance. Relevant persons consultation is carried out before an environment plan is submitted, so NOPSEMA is limited in its ability to require titleholders to consult with a particular person or organisation.

## What is the process for consultation?

There is no detailed process set out for how consultation should be carried out, however there are requirements that must be met under the regulations. These include:

- That you are given sufficient information to make an informed assessment about whether you are likely to be affected by the activity, how you may be affected, and to raise any concerns, including objections or claims, about the potential impacts of the activity.
- That you are given a reasonable period of time to consider the information provided to you and give feedback to the titleholder on the potential impacts of the activity on your functions, interests or activities.

What constitutes sufficient information and a reasonable period of time depends on several factors including the nature of your functions, interests and activities. You should communicate as early as possible in consultation with titleholders about what information and how much time you may need so that they can consider, respond and address these in their planning.

The information provided to you should be in a form that is appropriate and readily accessible to you. Consultation is generally a two-way process where information is shared between titleholders and relevant persons rather than a one-way process of seeking feedback to a fact sheet or high-level information.

## What if I don't have the resources to participate?

If you are a relevant person and you believe you have information that is important to the understanding of the potential impacts of an offshore petroleum activity or you want to raise concerns, including objections or claims, then you should discuss with the titleholder how you can participate in consultation.

This might include requesting information in a different format, asking for more time to consider information or help to understand the information to provide an informed response.

There is no requirement in the law for titleholders to pay the costs incurred by relevant persons to be consulted, however they may choose to provide assistance to relevant persons to ensure consultation is carried out efficiently and is robust. This is a matter between the titleholder and relevant persons.

## How do I make sure my views are considered?

It is important to communicate clearly when participating in consultation with titleholders. You may provide information to titleholders that helps them understand the environment and raise specific concerns, objections or claims about the potential impacts of the activity or the way the titleholder proposes to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

The information you provide to a titleholder during consultation must be considered by that titleholder and addressed in their environment plan for NOPSEMA to consider in its assessment and decision-making.

NOPSEMA publishes environment plans on its website when they are submitted for public comment, for assessment and when they are approved. Relevant persons have the right to request that the information they have provided in consultation is not published and titleholders must ensure they communicate this right to relevant persons.

Relevant persons should be aware that while you are free to respond on any matter and raise any concern, this may not be able to be considered if it is outside the scope or purpose of the environment plan and approval process. Examples of issues that may not be considered under the regulations include statements of fundamental objection to offshore petroleum activities or information containing personal threats or profanities.

## Do titleholders need my consent?

Titleholders are not required by law to obtain agreement or consent from relevant persons for their offshore petroleum activities to proceed; however, they are required to demonstrate in their environment plan how the concerns, objections or claims raised by relevant persons were considered and demonstrate that their response to that information was appropriate.

NOPSEMA's assessment and decision-making will consider if titleholders have adequately demonstrated in the environment plan that genuine consultation has taken place with relevant persons in accordance with regulations.

## Do I need to respond to a request for consultation?

There is no obligation for relevant persons to respond to a request for consultation from a titleholder. However, if you are provided an opportunity to participate in consultation and you do not want to be consulted, or you only want to be consulted on specific offshore petroleum activities or environmental matters, then it is best that you communicate this to titleholders as soon as they contact you. If you do not respond to requests for consultation, titleholders may make many repeated attempts to contact you.

**NOPSEMA can help you understand the requirements for consultation and how to effectively participate in the process. Please contact [communications@nopsema.gov.au](mailto:communications@nopsema.gov.au) for assistance.**

## Executive Summary

# Executive Summary

---

## Introduction to the Research – King Island Residents Survey

US oil and gas company ConocoPhillips has applied to conduct seismic blasting to explore for gas reserves in the sea to the west of King Island. Seismic blasting uses high-pressure sound waves to detect gas under the seabed. The acquisition area is located 27km west of King Island and covers an area of 4,089km<sup>2</sup>, including part of the Zeehan Commonwealth Marine Reserve. This seismic blasting is proposed to take place between August 1 – October 31, 2021.

In order to gain feedback from King Island residents, aged 18 years and over, and determine the level of support for and opposition to the proposed seismic testing, the Wilderness Society instructed EMRS, the independent research firm, to design and implement a survey giving all King Island residents an equal opportunity to have their say about the testing.

EMRS was assigned to undertake the design and conduct of the research, in close consultation with the Wilderness Society, and to provide full analysis and reporting on the data gathered.

### Quantitative Survey of King Island Residents

In order to collect the required information to meet the specified objectives, EMRS adopted a quantitative survey methodology: namely, the approach of an unaddressed mail survey that was delivered to all households on King Island, with a return-paid envelope addressed to EMRS.

Survey packs landed in mailboxes in the week commencing the 19<sup>th</sup> of July 2021, and the completed returns were accepted up until the 27<sup>th</sup> of August 2021. In total, n=537 King Island residents aged 18 years and over participated in the survey.

**The following report presents the findings of the survey. The data gathered and analysis of the results are provided in detail in the body of the report, while this summary presents the key informational insights gained.**

# Executive Summary

## Level of Community Support for Seismic Blasting Gas Exploration

Negative attitudes toward seismic blasting for gas exploration in the sea off King Island were dominant, with 96% of the residents surveyed opposing it to some degree and the great majority of these stating they “definitely oppose” it.

- **96% - TOTAL OPPOSE**
  - 93% “definitely oppose”
  - 3% “somewhat oppose”
- **2% - TOTAL SUPPORT**
- 2% - “unsure”

## Level of Community Awareness of the Seismic Blasting Plans

There was a high level of overall awareness among the surveyed residents of the plans for the seismic blasting to the West of King Island. The majority confirmed they had been aware of it to some degree prior to the survey.

- **85% - TOTAL AWARE**
  - 50% “definitely aware”
  - 35% “somewhat aware”
- **14% - TOTAL UNAWARE**
- 1% - “unsure”

## Whether the King Island Community Should Have a Say in the Proposed Seismic Testing Going Ahead

The residents surveyed expressed a strong call for the community to have a say in whether the proposed seismic blasting goes ahead, with 97% saying yes to some degree and the great majority of these stating “yes, definitely”.

- **97% - TOTAL YES**
  - 93% “yes, definitely”
  - 4% “yes, somewhat”
- **3% - TOTAL NO**
- 0% (n=1) - “unsure”

## Whether the King Island Community Has Had a Say in the Decision-Making Process

In contrast, the majority of surveyed residents felt that “no”, the community had not had a say in the decision-making process on the proposed seismic blasting.

- **77% - TOTAL NO**
- **15% - TOTAL YES**
  - 9% “yes, definitely”
  - 6% “yes, somewhat”
- 8% - “unsure”

# Executive Summary

## Level of Community Support for Oil and Gas Exploration

Negative attitudes toward oil and gas exploration in the sea off King Island more generally were also pronounced, with 94% of the residents surveyed opposing it to some degree and the great majority of these stating “definitely oppose”.

- **94% - TOTAL OPPOSE**
  - 89% “definitely oppose”
  - 5% “somewhat oppose”
- **5% - TOTAL SUPPORT**
- 1% - “unsure”

## Perceived Importance of the Marine Environment

A high degree of importance was attributed to the marine environment, with 99% of the residents confirming it was important to them to some degree and the great majority of these stating “very important”.

- **99% - TOTAL IMPORTANT**
  - 95% “very important”
  - 4% “somewhat important”
- 0% (n=2) - “not very important”
- 0% (n=2) - “unsure”

### In summary:

- ❖ A high level of community opposition was evident to both the seismic blasting for gas exploration, and oil and gas exploration more generally, in the seas off King Island.
- ❖ There was a relatively high level of overall community awareness of the seismic blasting plans.
- ❖ The clear majority of residents felt the community should have a say in whether the seismic blasting goes ahead; and the majority were of the view that the community had not had a say in the decision-making process.
- ❖ Virtually all residents confirmed that the marine environment was important to them to some degree.

# Section Two

## Introduction

# Background, Scope and Aims of the Research

---

## Background to the Research

US oil and gas company ConocoPhillips has applied to conduct seismic blasting to explore for gas reserves in the sea to the west of King Island. Seismic blasting uses high-pressure sound waves to detect gas under the seabed. The acquisition area is located 27km west of King Island and covers an area of 4,089km<sup>2</sup>, including part of the Zeehan Commonwealth Marine Reserve. This seismic blasting is proposed to take place between August 1 – October 31, 2021.

## Scope of the Research

In order to gain feedback from King Island residents, aged 18 years and over, and determine the level of support for and opposition to the proposed seismic testing, the Wilderness Society instructed EMRS, the independent research firm, to design and implement a survey giving all King Island residents an equal opportunity to have their say about the testing.

EMRS was assigned to undertake the design and conduct of the research, in close consultation with the Wilderness Society, and to provide full analysis and reporting on the data gathered.

## Aims of the Research

### ***Quantitative Survey of King Island Residents***

In order to gain feedback from King Island residents on the proposed seismic testing to search for gas reserves, the primary aim of the research was to identify:

- The level of support for and opposition to seismic blasting for gas exploration in the sea off King Island; along with
- Awareness of the proposed testing among the King Island community;
- Perceptions of the community having a say on the testing; and
- The work and recreational uses of the seas around King Island.

# Objectives of the Research

---

## Objectives of the Research

### *Quantitative Survey of King Island Residents*

Specifically, the informational objectives were to evaluate, via a quantitative survey methodology:

- The level of support for and opposition to the seismic blasting for gas exploration in the sea off King Island;
- Awareness prior to the survey of plans by an oil and gas exploration company to undertake seismic blasting to the west of King Island;
- Views on the King island community having a say on the proposal and being involved in the decision-making process on it going ahead;
- The level of support for and opposition to oil and gas exploration in general in the sea off King Island;
- The respondents' perceptions of the importance of the marine environment;
- The extent of their dependence on a marine-based income;
- The sector of the economy in which they work; and
- Their usage of the seas around King Island.

# Research Methodology

---

## The Research Methodology

### *Quantitative Survey of King Island Residents*

In order to collect the required information to meet the specified objectives, EMRS adopted a quantitative survey methodology: namely, the approach of an unaddressed mail survey that was delivered to all households on King Island, with a return-paid envelope addressed to EMRS.

The survey package sent to each household on King Island included:

- A letter,
- Three copies of the survey – one for each adult in the household (up to 3 adults), and
- One reply-paid envelope.

In order to ensure that additional survey requirements were met, additional polling packs were provided for residents to pick up at the Currie Post Office.

The data was collected by means of EMRS' own research capability, with the progress and content of the data collection being closely monitored throughout to ensure quality control.

Survey packs landed in mailboxes in the week commencing the 19<sup>th</sup> of July 2021, and the completed returns were accepted up until the 27<sup>th</sup> of August 2021. In total, n=537 King Island residents aged 18 years and over participated in the survey.

# Reporting on the Results

---

## Reporting on the Results

Where percentages do not sum to 100, this may be due to rounding or where respondents were able to give multiple responses. Throughout the report, an asterisk<sup>(\*)</sup> denotes the reason for the results not summing to 100 per cent.

The following report presents the findings of the quantitative research, conducted among a cohort of n=537 King Island residents aged 18 years and over, to identify their perceptions of the proposed seismic testing for gas exploration in the seas off King Island, their views on the level of community consultation on the proposal, the value they place on the marine environment, and their use of the seas around King Island for work and recreation.

The research results have been presented predominantly in charts. Any statistically significant variations in the results across the population subgroups have been remarked upon in the analytical commentary accompanying the charts.

## Section Three

# The King Island Residents Survey Results

# Level of Support for Seismic Blasting Gas Exploration

Chart 1 – Level of Support for Seismic Blasting Gas Exploration  
(Percentage of all respondents)

The clear majority of the residents surveyed confirmed that they “definitely oppose” the seismic blasting for gas exploration in the sea off King Island (93%).

Including the 3% who said “somewhat oppose”, a combined total of 96% were in opposition.

By population subgroup, the following finding emerged:

- Respondents who used the seas around King Island for **general recreation** were significantly more likely to “definitely oppose” the seismic blasting (95%).

Q. Do you support or oppose seismic blasting for gas exploration in the sea off King Island?

# Level of Awareness of the Seismic Blasting Plans

Chart 2 – Level of Awareness of the Seismic Blasting Plans  
(Percentage of all respondents)

The majority of residents surveyed confirmed that they were aware to some degree of plans by an oil and gas exploration company to undertake seismic blasting to the west of King Island (85% in total).

Of these, one half said “yes, definitely aware” (50%).

By population subgroup, the following were significantly more likely to be aware of the plans for seismic blasting:

- Those who were **fully dependent on a marine-based income**, 73% of whom said “yes, definitely aware”.
- Those who worked in the **fishing sector**, 68% of whom said “yes, definitely aware”.

As compared to:

- Respondents working in the **manufacturing sector**, who were significantly more likely to report “no”, they were not aware of the plans (60%).

Q. Before today, were you aware of plans by an oil and gas exploration company to undertake seismic blasting to the west of King Island?

# Whether the King Island Community Should Have a Say in the Proposed Seismic Testing Going Ahead

Chart 3 – Whether the King Island Community Should Have a Say in the Proposed Seismic Testing Going Ahead  
(Percentage of all respondents)

The clear majority of the residents surveyed confirmed that the King Island community should have a say in the proposed seismic blasting going ahead (97% in total).

Of these, the most significant proportion by far said “yes, definitely” (93%).

By population subgroup, there were no significant variations to be noted.

Q. Do you think the King Island community should have a say in whether this proposed seismic blasting goes ahead?

# Whether the King Island Community Has Had a Say in the Decision-Making Process

Chart 4 – Whether the King Island Community Has Had a Say in the Decision-Making Process  
(Percentage of all respondents)

In contrast to the previous result, the clear majority of the residents surveyed felt that “no”, the King Island community has not had a say in the decision-making process or were “unsure” (85% in total).

Of these, the most significant proportion by far said a definitive “no” (77%).

Just 15% in total said “yes”.

By population subgroup, the following finding emerged:

- Respondents who were **fully dependent on a marine-based income** were somewhat more likely to state “yes, definitely” (19%) than the other income groups.

Q. Do you feel that the King Island community has had a say in the decision-making process?

# Level of Support for Oil and Gas Exploration

Chart 5 – Level of Support for Oil and Gas Exploration  
(Percentage of all respondents)\*

The clear majority of the residents surveyed opposed oil and gas exploration in the sea off King Island (94% in total).

Of these, the greater proportion by far said “definitely oppose” (89%).

By population subgroup, there were no significant variations to be noted.

\*Percentages may not sum to 100 due to rounding.

Q. Do you support or oppose oil and gas exploration in the sea off King Island?

# Perceived Importance of the Marine Environment

**Chart 6 – Perceived Importance of the Marine Environment**  
(Percentage of all respondents)†

Nearly all of the residents surveyed confirmed that the marine environment was important to them to some degree (99% in total).

Of these, the great majority said it was “very important” (95%).

In total, just n=2 respondents stated it was “not very important” to them.

By population subgroup, there were no significant variations to be noted.

†The “0%” figures in the chart represent n=1 stating “neither important or unimportant”, n=2 stating “not very important”, and n=2 stating “unsure”.

**Q. How important is the marine environment to you?**

# Extent of Dependence on a Marine-Based Income

## Survey Population Subgroups

**Chart 7 – Extent of Dependence on Marine-Based Income**  
(Percentage of all respondents)

Whilst the residents surveyed tended to report that they were “not at all dependent” on a marine-based income (53%), a relatively significant proportion confirmed that they were to some degree (44% in total).

Q. To what extent are you dependent on a marine-based income?

# Employment Categories

## Survey Population Subgroups

**Chart 8 – Employment Categories**  
(Percentage of all respondents)\*

The leading sector of the economy in which the surveyed residents of King Island worked was “agriculture” (27%), followed by “general business owner” (16%), and “fishing” and “tourism” (15% in each case).

\* Percentages do not sum to 100 due to multiple responses being possible.

† “Other” employment sectors, each mentioned by 4% or less, included “education”, “retail/ hospitality”, “health”, “transport/ freight”, “manufacturing”, “kelp industry”, “Government”, and “trades work”.

**Q. What sector of the economy do you work in?**

# Use of the Seas around King Island

## Survey Population Subgroups

**Chart 9 – Use of the Seas around King Island**  
(Percentage of all respondents)\*

\* Percentages do not sum to 100 due to multiple responses being possible.

† “Other” uses, each mentioned by 3% or less, included “spiritual practices/ meditation”, “walking/ beachcombing”, “natural beauty/ nature”, and “exercise/ mental health”.

As the responses indicated, the majority of residents used the seas around King Island for recreational activities.

Most frequently mentioned was “general recreation – e.g. swimming, diving, boating etc.” (74% in total), followed by “recreational fishing” (66%).

“Surfing” and “work” also recorded relatively high rates of mention (23% and 19% respectively).

Just 1% of the respondents (n=3) reported that they made “no use of the seas”.

Respondents significantly more likely to mention using the seas for “work” were:

- Those **fully dependent on a marine-based income** (79%)
- Those employed in **fishing** (80%)

Respondents significantly more likely to mention using the seas for “recreational fishing” were:

- Those employed in **agriculture** (80%)

Respondents somewhat more likely to mention using the seas for “general recreation” were:

- Those employed in **tourism** (88%)
- Those classified as a **general business owner** (88%)

Respondents somewhat more likely to mention using the seas for “surfing” were:

- Those employed in **fishing** (37%)

**Q. How do you use the seas around King Island?**

## Legislative and Other Requirements

### Establishing the Context

The identification of legislative and other environmental requirements that apply to the Otway exploration drilling program provides important context for the evaluation of environmental impacts and risks. ConocoPhillips Australia is required to have regard for all relevant context when defining the acceptable level of impacts and risks, including (among other things) laws, policies, standards, conventions, statutory instruments such as recovery plans for threatened species and plans of management for protected places.

Predictions of environmental impact and risk must be made with legislative and other requirements in place as they represent the minimum level of environmental management required. Control measures are then implemented to ensure that these requirements are complied with.

The primary legislation governing the exploration project is the *Offshore Petroleum and Greenhouse Gas Storage Act 2006* (OPGGs Act) and the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (OPGGs(E) Regulations).

Currently identified 'legislative and other environmental requirements' have been collated below.

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
<b>Commonwealth Legislation and Regulations</b>	
Offshore Petroleum and Greenhouse Gas Storage Act 2006 (OPGGs Act, the Act)	<p>Provides the legislative framework for the exploration and recovery of petroleum and greenhouse gas (GHG) activities in Commonwealth waters (those areas that are more than three nautical miles from the territorial seal baseline). This Act establishes the Joint Authority for each offshore area, the National Offshore Petroleum Titles Administrator (NOPTA) and the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).</p> <p>The Joint Authorities are responsible for key petroleum title decisions in Commonwealth waters including, but not limited to, the release and grant of offshore petroleum exploration areas.</p> <p>NOPTA administers titles and data management for petroleum and greenhouse gas (GHG) titles in Commonwealth waters and provides expert advice, administration, compliance monitoring and data management in accordance with OPGGS Act.</p> <p>NOPSEMA is the Independent regulator for health and safety, structural (well) integrity and environmental management for all offshore petroleum and GHG operations in Commonwealth waters and in coastal waters where regulatory powers and functions have been conferred.</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (OPGGs(E) Regulations, Environment Regulations)	<p>The Environment Regulations provide for the robust regulation of environmental management of petroleum and greenhouse gas storage activities in Commonwealth waters, and aim to ensure that activities in these areas are:</p> <ul style="list-style-type: none"> <li>• Undertaken in a manner that is consistent with ecologically sustainable development</li> <li>• In line with the objective that environmental impacts and risks are reduced to as low as reasonably practicable and are of an acceptable level.</li> </ul> <p>The Regulations require that a NOPSEMA accepted Environment Plan (EP) and Oil Pollution Emergency Plan (OPEP) be place for any petroleum activity prior to commencement. They also establish requirements for consultation in preparing an EP and for public comment.</p>
Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)	<p>The EPBC Act is the Australian Government's central piece of environmental legislation which provides a legal framework to protect and manage nationally and internationally important flora, fauna, ecological communities and heritage places—defined in the EPBC Act as matters of national environmental significance.</p> <p>On 28 February 2014, the NOPSEMA Program, which was endorsed by the Australian Government under the EBPC Act, came into effect. The Program provides for NOPSEMA to assess and make approval decisions for new offshore petroleum development projects and shorter-term activities.</p> <p>NOPSEMA's environmental assessment processes consider all project- and activity-specific environmental impacts and risks, including but not limited to those relevant to matters protected under Part 3 of the EPBC Act. Decision-making under the Program ensures that environmental impacts and risks, including to matters protected under Part 3 of the EPBC Act, will be of an acceptable level and reduced to as low as reasonably practicable (ALARP). The object of the Environment Regulations is also to ensure that any petroleum activity or greenhouse gas storage activity is carried out in a manner consistent with the principles of ecologically sustainable development as set out in section 3A of the EPBC Act.</p> <p>Matters of National Environmental Significance (MNES) include:</p> <ul style="list-style-type: none"> <li>• World heritage properties</li> <li>• National heritage places</li> <li>• Wetlands of international importance (Ramsar wetlands)</li> <li>• Nationally threatened species and ecological communities</li> <li>• Migratory species</li> <li>• Commonwealth marine areas</li> <li>• The Great Barrier Reef Marine Park</li> <li>• Nuclear actions (including uranium mining)</li> <li>• A water resource, in relation to coal seam gas and large coal mining developments.</li> </ul> <p>Example: Under the EPBC Act, all cetaceans (whales, dolphins and porpoises) are protected within the Australian Whale Sanctuary, which includes all Commonwealth waters from the state waters limit out to the boundary of the Exclusive Economic Zone. Section 229 of the EPBC Act makes it an offence to kill, injure or interfere with a cetacean within the Australia Whale Sanctuary.</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
<p>Environment Protection and Biodiversity Conservation Regulations 2000 (EPBC Regulations)</p>	<p>Provides for the listing of threatened species and ecological communities, registration of critical habitats, the development of recovery and threat abatement plans and conservation agreements.</p> <p>Part 8 – Interacting with cetaceans and whale watching provides for the protection and conservation of cetaceans, including:</p> <ul style="list-style-type: none"> <li>• Exclusion and cautions zones around cetaceans and calves</li> <li>• Speed restrictions</li> <li>• Avoidance actions</li> <li>• Posting a lookout</li> <li>• Aircraft heights.</li> </ul> <p>Part 9 provides for the conservation of biodiversity in commonwealth areas, Part 10 provides management principles for protected areas, and Parts 11 and 12 provide for commonwealth reserves and activities within these areas.</p>
<p>Protection of the Sea (Prevention of Pollution from Ships) Act 1983</p> <ul style="list-style-type: none"> <li>• Part III (Prevention of pollution by noxious substances)</li> <li>• Part IIIA (Prevention of pollution by packaged harmful substances)</li> <li>• Part IIIC (Prevention of pollution by garbage)</li> </ul>	<p>Regulates ship-related operational activities and invokes certain requirements of the MARPOL Convention relating to discharge of noxious liquid substances, sewage, garbage, air pollution etc. It requires that ships &gt;400 gross tonnes have pollution emergency plans. Several Marine Orders (MO) are enacted under this Act relating to offshore petroleum activities, including:</p> <ul style="list-style-type: none"> <li>• MO 91: Marine Pollution Prevention – Oil</li> <li>• MO 93: Marine Pollution Prevention – Noxious liquid substances</li> <li>• MO 94: Marine Pollution Prevention – Packaged harmful substances</li> <li>• MO 95: Marine Pollution Prevention – Garbage</li> <li>• MO 96: Marine Pollution Prevention – Sewage</li> <li>• MO 97: Marine Pollution Prevention – Air Pollution</li> <li>• MO 98: Marine Pollution Prevention – Anti- fouling Systems.</li> </ul> <p>The drilling rig and support vessels &gt;400 gross tonnes will adhere to the relevant MOs by having a Shipboard Marine Pollution Emergency Plan (SMPEP), Oil Record Book and Garbage Management Plan in place and implemented, along with international pollution prevention certificates verifying compliance with oil, air pollution and sewage measures.</p>
<p>Australian Maritime Safety Authority Act 1990 (AMSA Act)</p>	<p>Facilitates international cooperation and mutual assistance in preparing for and responding to major oil spill incidents. Encourages development and maintenance of capability to deal with oil pollution emergencies.</p> <p>Requirements are implemented through the Australian Maritime Safety Authority (AMSA), the lead agency for responding to oil spills in the Commonwealth marine environment responsible for implementing the Australian National Plan for Maritime Environmental Emergencies (NatPlan).</p>
<p>AMSA Marine Orders Part 94 (Marine pollution prevention – packaged harmful substances) 2014</p>	<p>Sets out the requirements for preventing harmful substances carried by regulated Australian vessels, domestic commercial vessels and Australian recreation vessels from entering the marine environment, including management of:</p> <ul style="list-style-type: none"> <li>• Harmful substances in packaged form</li> <li>• Washing substances overboard</li> <li>• Notifying and reporting an incident.</li> </ul>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
AMSA Marine Orders Part 95 (Marine pollution prevention – garbage) 2018	<p>Sets out the requirements for management of:</p> <ul style="list-style-type: none"> <li>• Cargo residues</li> <li>• Discharges of animal carcasses</li> <li>• Garbage management plans</li> <li>• Garbage record books.</li> </ul>
Navigation Act 2012 (& Regulations 2013) and various Marine Orders (appropriate to vessel class) enacted under this Act	<p>Regulates ship-related activities in Commonwealth waters including Safety of Life at Sea (SOLAS) and specific requirements for navigational lighting and invokes certain requirements of the International Convention for the Prevention of Pollution from Ships (MARPOL 73/78) relating to equipment and construction of ships.</p> <p>Although the Act does not apply to the operation of petroleum facilities, it may apply to some of the actions of seabed survey and support vessels (seafarers) in Australian waters. Of relevance are:</p> <ul style="list-style-type: none"> <li>• Chapter 6 (Safety of navigation), particularly Part 3 (Prevention of collisions).</li> <li>• AMSA MO 21 Safety of Navigation and Emergency Procedures.</li> <li>• AMSA MO 27 Safety of Navigation and Radio Equipment.</li> <li>• AMSA MO 30 Prevention of Collisions.</li> <li>• AMSA MO 50 Special purpose vessels, such as those used for offshore drilling.</li> <li>• AMSA MO 70 Seafarer certification.</li> </ul>
Biosecurity Act 2015	<p>Biosecurity obligations are administered by the Department of Agriculture, Fisheries and Forestry (DAFF) and include ballast water and biofouling requirements, specifically:</p> <ul style="list-style-type: none"> <li>• Pre-arrival information must be reported through MARS before arriving in Australian waters</li> <li>• Biofouling management plan and record book in place</li> <li>• Offshore Biofouling Risk Assessment Register, which considers biofouling and ballast water related risks, which may lead to IMS inspections by suitably qualified personnel</li> <li>• Antifouling system certification for vessels is current and in accordance with AMSA Marine Order Part 98 (Antifouling systems).</li> </ul>
Biosecurity (Ballast Water and Sediment) Determination 2017 and the Australian Ballast Water Management Requirements Version 8 (DAWE, 2020)	<p>The International Convention on the Control and Management of Ship's Ballast Water and Sediment (Ballast Water Management Convention) applies to waters out to 200 nm and is given effect in Australia through the Biosecurity Act 2015, Biosecurity (Ballast Water and Sediment) Determination 2017 and the Australian Ballast Water Management Requirements.</p> <p>Australian Ballast Water Management Requirements including ballast water treated via a ballast water treatment system (with Type Approval Certificate) and ballast water record system will be maintained with all ballast water discharges to be reported.</p> <p>Vessels moving between Australian ports and offshore installations, within Australian waters, will manage ballast water in accordance with Australia's domestic ballast water requirements. The acceptable area for a ballast water exchange between an installation and an Australian port is in sea areas &gt;500 m from the offshore installation, and &gt;12 nm from the nearest land (as per DAWE, Australian Ballast Water Management Requirements Version 8).</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Fisheries Management Act 1991 (& Regulations 2009)	<p>Administered by the Australian Fisheries Management Authority's (AFMA's) to:</p> <ul style="list-style-type: none"> <li>• Implement efficient and cost-effective fisheries management on behalf of the Commonwealth</li> <li>• Ensure the exploitation of fisheries resources and the carrying on of any related activities are conducted in a manner consistent with the principles of ESD</li> <li>• Maximise the net economic returns to the Australian community from the management of Australian fisheries</li> <li>• Ensure accountability to the fishing industry and to the Australian community in management of fisheries resources, and</li> <li>• Achieve government targets in relation to the recovery of the costs of AFMA.</li> </ul>
Underwater Cultural Heritage Act 2018	<p>Protects the heritage values of shipwrecks, sunken aircraft and relics (older than 75 years) in Australian Territorial waters from the low water mark to the outer edge of the continental shelf (excluding the State's internal waterways). The Act allows for protection through the designation of protection zones. Activities / conduct prohibited within each zone will be specified.</p>
<b>Tasmanian Legislation</b>	
Environmental Management and Pollution Control Act 2004 (EMPCA)	<p>The primary environment protection and pollution control legislation in Tasmania administered by the Environment Protection Authority (EPA-Tas). Fundamental objectives are the prevention, reduction and remediation of environmental harm, focussing on preventing environmental harm from pollution and waste. It defines the EPA's jurisdiction during a spill event, prescribes the fee structure to waste events and environmental protection notices and regulates the management and control of controlled wastes.</p> <p>Relevant regulations under the EMPCA include:</p> <ul style="list-style-type: none"> <li>• Environmental Management and Pollution Control (General) Regulations 2017</li> <li>• Environmental Management and Pollution Control (Waste Management) Regulations 2010</li> <li>• The EPA Division Compliance Policy provides the Director of the EPA powers of compliance.</li> </ul>
Marine-related Incidents (MARPOL Implementation) Act 2020 (& Regulations)	<p>Deals specifically with discharges of oil and other pollutants from ships and gives effect in Tasmania to the MARPOL international convention on marine pollution.</p>
Living Marine Resources Management Act 1995	<p>Administered by Fishing Tasmania to achieve sustainable development of living marine resources having regard to the need to:</p> <ul style="list-style-type: none"> <li>• Increase the community's understanding of the integrity of the ecosystem upon which fisheries depend; and</li> <li>• Provide and maintain sustainability of living marine resources; and</li> <li>• Take account of a corresponding law; and</li> <li>• Take account of the community's needs in respect of living marine resources; and</li> <li>• Take account of the community's interests in living marine resources.</li> </ul>
<b>Victorian Legislation</b>	

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Environment Protection Act 1970 (& various Regulations)	<p>Controls discharges and emissions (air, water) to the environment within Victoria. It gives the Environment Protection Authority (EPA) powers to licence premises discharges to the marine environment, control marine discharges and to undertake prosecutions. Provides for the maintenance and, where necessary, restoration of appropriate environmental quality and is relevant to oil pollution in Victorian state waters.</p> <p>The State Environment Protection Policy (Waters of Victoria) designates:</p> <ul style="list-style-type: none"> <li>• Spill response responsibilities by Victorian Authorities to be undertaken in the event of spills (DPT) with EPA enforcement consistent with the Act and the Pollution of Waters by Oil &amp; Noxious Substances Act 1986.</li> <li>• Requires vessels not to discharge to surface waters sewage, oil, garbage, sediment, litter or other wastes which pose an environmental risk to surface water beneficial uses</li> </ul> <p>Discharge of domestic ballast water from emergency response vessels into Victorian State waters must comply with these requirements:</p> <ul style="list-style-type: none"> <li>• To protect state waters from marine pests introduced via domestic ballast water, ballast water management arrangements applying to all ships in State and territorial waters must be observed as per the Environment Protection (Ships' Ballast Water) Regulations 2006, Waste Management Policy (Ships' Ballast Water) and the Protocol for Environmental Management.</li> <li>• High risk domestic ballast water (ballast water which leachates from an Australian port or within the territorial sea of Australia (to 12 nm)), regardless of the source, must not be discharged into Victorian State waters.</li> <li>• Ship masters must undertake a ballast water risk assessment on a voyage by voyage basis to assess risk level, provide accurate and comprehensive information to the EPA on the status and risk of ballast water contained on their ships, and to manage domestic ballast water discharges with EPA written approval.</li> </ul>
Emergency Management Act 2013 (& Regulations 2003)	<p>Provides for the establishment of governance arrangements for emergency management in Victoria, including the Emergency Management Commissioner and an Inspector-General for Emergency Management. Provides for integrated and comprehensive prevention, response and recovery planning, involving preparedness, operational co-ordination and community participation, in relation to all hazards. These arrangements are outlined in the Emergency Management Manual Victoria.</p> <p>Provides for the emergency response structure for managing emergency incidents within Victorian State waters, triggered in the event of a spill impacting or potentially impacting State waters.</p>
Marine (Drug, Alcohol and Pollution Control) Act 1988	<p>Concerns the registration of vessels, pollution of the sea, and the safe and efficient operation of vessels on State waters.</p>
Flora and Fauna Guarantee Act 1988 (& Regulations 2011)	<p>Purpose is to protect rare and threatened species; and enable and promote the conservation of Victoria's native flora and fauna and to provide for a choice of procedures that can be used for the conservation, management or control of flora and fauna and the management of potentially threatening processes. Where a species has been listed as threatened an Action statement is prepared setting out the actions that have or need to be taken to conserve and manage the species and community. Action Statement controls for threatened species present in the environment that may be affected, as adopted (as relevant) within this EP. Triggered if an incident results in the injury or death of a FFG Act listed species (e.g. collision with a whale).</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Heritage Act 1995	<p>Provides for the protection and conservation of historic places, objects, shipwrecks and archaeological sites in state areas and waters (complementary legislation to Commonwealth legislation), administered by Heritage Victoria. Part 5 of the Act is focused on historic shipwrecks, which are defined as the remains of all ships that have been situated in Victorian State waters for 75 years or more. The Act addresses, among other things, the registration of wrecks, establishment of protected zones, and the prohibition of certain activities in relation to historic shipwrecks.</p> <p>May be triggered in the event of impacts to a known or previously un-located shipwreck in Victorian State waters whilst undertaking emergency response activities.</p>
Marine Safety Act 2010 (& Regulations 2012)	<p>Provides for safe marine operations in Victoria, including imposing safety duties on owners, managers and designers of vessels, marine infrastructure and marine safety equipment; marine safety workers, masters and passengers on vessels; regulation and management of vessel use and navigation in Victorian State waters; and enforcement provisions of Police Officers and the Victorian Director of Transport Safety. Reflects the requirements of international conventions - Convention on the International Regulations for Preventing Collisions at Sea &amp; International Convention for the Safety of Life at Sea.</p> <p>Defines marine incidents and the reporting of such incidents to the Victorian Director of Transport Safety. Applies to vessel masters, owners, crew operating vessels in Victorian State waters.</p>
Fisheries Act 1995 (& Regulations 2009)	<p>Provides a legislative framework for the regulation, management and conservation of Victorian fisheries including aquatic habitats.</p>
Wildlife Act 1975 (& Regulations 2013)	<p>The purpose of this Act is to promote the protection and conservation of wildlife. Prevents wildlife from becoming extinct and prohibits and regulates persons authorised to engage in activities relating to wildlife (including incidents). The Wildlife (Marine Mammal) Regulations 2009 prescribe minimum distances to whales and seals/seal colonies, restrictions on feeding/touching and restriction of noise within a caution zone of a marine mammal (dolphins (150 m), whales (300 m) and seals (50 m). Applies where vessels are within State waters responding to a spill event. Prescribes minimum proximity distances to whales, dolphins and seals will be maintained. Triggered if an incident results in the injury or death of whales, dolphins or seals.</p>
Pollution of Waters by Oil and Noxious Substances Act 1986 (POWBONS) (& Regulations 2002)	<p>Established to protect the sea and other waters from pollution by oil and noxious substances. Implements the MARPOL Convention (the International Convention for the Prevention of Pollution from Ships 1973) in Victorian State waters. Requires mandatory reporting of marine pollution incidents. Within Victorian State waters it restricts the discharge of treated oily bilge water according to vessel classification (&gt;400 tonnes); discharge of cargo substances or mixtures; prohibition of garbage disposal and packaged harmful substances; restrictions on the discharge of sewage; regulator reporting requirements for incidents; ship construction certificates and survey requirements. Section 10 (Duty to report certain incidents involving oil and oily mixtures). Triggered in the event of a spill impacting or potentially impacting State waters.</p>
<b>National and State Plans</b>	

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
National Plan for Maritime Emergencies (NatPlan) (AMSA, 2000)	Implements Australia's obligations under the International Convention Relating to Intervention on the High Seas in Cases of Oil Pollution Casualties, 1969; United Nations Convention on the Law of the Sea, 1982; the International Convention on Oil Pollution Preparedness, Response and Co-operation, 1990; and the Protocol on Preparedness, Response and Co-operation to Pollution Incidents by Hazardous and Noxious Substances, 2000 with respect to the management of maritime environmental emergencies.
State Maritime Emergencies (non-search and rescue) Plan (Victoria) (EMV, 2013)	<p>Applies to Maritime Emergencies (non-search and rescue) including marine pollution which results, or may result, in a prohibited discharge into state waters of oil, an oily mixture, or an undesirable substance.</p> <ul style="list-style-type: none"> <li>• Provides the Victorian Marine Pollution Contingency Plan in accordance with the Marine (Drug, Alcohol and Pollution Control) Act 1988 (the Act).</li> <li>• Gives effect to Victoria's obligations under the National Plan for Maritime Environmental Emergencies and Intergovernmental Agreements.</li> <li>• Provides the State Emergency Response Plan Maritime Emergencies (NSR) Sub-plan in accordance with the Emergency Management Act 2013.</li> <li>• Provides strategic guidance for the effective management of maritime emergencies specifically addressing marine pollution (including oil and hazardous noxious substances) and/or maritime casualty NSR.</li> </ul>
Tasmanian Marine Oil and Chemical Spill Contingency Plan (TasPlan) (EPA-Tas, 2022)	Documents the arrangements and procedures for prevention, preparedness, response, and recovery from a marine pollution event in Tasmanian waters. As a State plan, it sits within the national framework under the National Plan for Maritime Environmental Emergencies (NatPlan) and in accordance with the Intergovernmental Agreement (IGA) on the National Plan to Combat Pollution of the Sea by Oil and other Noxious and Hazardous Substances. It is as an Associated Plan to the Tasmanian Emergency Management Arrangements (TEMA).
<b>Plans and Policy Statements established under the EPBC Act</b>	
South-east Commonwealth Marine Reserves Network Management Plan 2013-23 (DNP, 2013) – <i>expiring June 2023</i>	<p>Outlines management strategies for research and monitoring, assessment and permitting, compliance, community participation, Indigenous involvement and environmental management.</p> <p>Identifies pressures on the conservation values of the South-east Commonwealth Marine Reserves Network including:</p> <ul style="list-style-type: none"> <li>• Noise pollution associated with shipping, other vessels and offshore mining operations and offshore construction.</li> <li>• Oil pollution associated with shipping, other vessels and offshore mining operations.</li> <li>• invasive species and diseases translocated by vessels.</li> <li>• Light pollution associated with offshore mining operations and other offshore activities, and</li> <li>• Marine debris.</li> </ul> <p>Provides management strategies and actions to achieve objectives of the plan.</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Wildlife Conservation Plan for Seabirds (CoA, 2020)	<p>Identifies objective 2: Seabirds and their habitats are protected and managed in Australia.</p> <p>Identifies resource extraction including collision with structures, oiling and incineration by flares; Implementing a comprehensive monitoring program of impacts of these offshore platforms should include nature, timing and extent of bird mortality caused by these structures. This information can then be used to better inform regulators responsible for exploration and extraction proposals; Proposals for oil and mineral exploration and exploitation should be adequately assessed and, as appropriate, conditions imposed to ensure there are no adverse effects on seabirds or their habitats. Acute pollution such as oil spill is explicitly identified as a direct and moderate threat to seabirds.</p> <p>Identifies pollution, including marine debris, lighting and acute pollution (given they spend much of their time on the sea surface, are vulnerable to the hazards of oil or fuel spills and are difficult to rehabilitate) as moderate threats with relevant actions:</p> <ul style="list-style-type: none"> <li>• Manage the effects of anthropogenic disturbance to seabird breeding and roosting areas.</li> <li>• Enhance contingency plans to prevent and/or respond to environmental emergencies that have an impact on seabirds and their habitats.</li> </ul>
Wildlife Conservation Plan for Migratory Shorebirds (DEH, 2006)	<p>The background paper to the plan identifies acute pollution such as oil spill as a moderate threat to migratory shorebirds not due to direct contact but rather through impacting important habitat for many years through catastrophic loss of marine benthic food sources.</p> <p>No explicit relevant objectives or management actions.</p>
Threat Abatement Plan for the Impacts of Marine Debris on Vertebrate wildlife of Australia's coasts and oceans (DoEE, 2018)	<p>Address key threatening processes listed under section 183 of the EBPC Act. Details harmful marine debris impacts on a range of marine life, including protected birds, sharks, turtles) and marine mammals. DoEE (2018) defines harmful marine debris to include all plastics and other types of debris from domestic or international sources that may cause harm to vertebrate marine wildlife. This includes land sourced plastic garbage (e.g. bags, bottles, ropes, fibreglass, piping, insulation, paints and adhesives), derelict fishing gear from recreational and commercial fishing activities and ship-sourced, solid nonbiodegradable floating materials lost or disposed of at sea.</p>
EPBC Act Policy Statement 2.1 – Interactions between Offshore Seismic Exploration and Whales: Industry Guideline	<p>Provides practical standards to minimise the risk of acoustic injury to whales in the vicinity of seismic survey operations and provides a framework that minimises the risk of biological consequences from acoustic disturbance from seismic sources to whales in biologically important habitat areas or during critical behaviours.</p> <p>Although these guidelines are specifically designed for seismic survey interactions with cetaceans, some of the provisions may also afford protection for marine species during survey and drilling activities (DEWHA, 2008).</p>
<p><b>Recovery Plans established under the EPBC Act:</b> Set out the research and management actions necessary to stop the decline of, and support the recovery of, listed threatened species or threatened ecological communities. The aim of a recovery plan is to maximise the long-term survival in the wild of a threatened species or ecological community.</p>	

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Recovery Plan for Marine Turtles in Australia (CoA, 2017)	<p>Identifies marine debris as a threat resulting in entanglement or ingestion, with no directly relevant objectives or management actions.</p> <p>Identifies chemical and terrestrial discharge (including spills from vessels and drilling operations) as a threat. Action Area A.4 Minimise chemical and terrestrial discharge: Note: none of the 22 marine turtle stocks identified have nesting or foraging habitat within the Environmental Planning Area.</p> <p>Identifies light pollution as a threat where it disrupts critical nesting and hatching behaviours. Action Area A.8: Minimise light pollution: Note: none of the 22 marine turtle stocks identified have nesting or foraging habitat within the Environmental Planning Area. from multiple sources of onshore and offshore light pollution.</p> <p>Identifies vessel disturbance as a threat where it disrupts benthic feeding and interesting behaviours, particularly in shallow coastal foraging habitats; and noise interference as a threat (including vessel movements and noise from oil and gas infrastructure) which may lead to avoidance of important habitat for marine turtle stocks. Action Area A.1: Maintain and improve efficacy of legal and management protections. None of the 22 marine turtle stocks identified have nesting or foraging habitat within the Environmental Planning Area.</p>
Conservation Management Plan for the Blue Whale - A Recovery Plan under the Environment Protection and Biodiversity Conservation Act 1999, 2015-2025 (DOE, 2015)	<p>Long-term recovery objective for blue whales is to minimise anthropogenic threats to allow for their conservation status to improve so that they can be removed from the EPBC Act threatened species list.</p> <p>Identifies noise interference as a threat, with industrial and shipping noise rated as minor risks when taking a precautionary approach. Management Action Area A.2: Assessing and addressing anthropogenic noise:</p> <ul style="list-style-type: none"> <li>Assessing the effect of anthropogenic noise on Blue Whale behaviour.</li> <li>Anthropogenic noise in biologically important areas will be managed such that any Blue Whale continues to utilise the area without injury and is not displaced from a foraging area.</li> </ul> <p>Identifies vessel disturbance as a key threat, with vessel collision rated as a high risk. Management Action Area A.4: Minimising vessel collisions:</p> <ul style="list-style-type: none"> <li>Ensure all vessel strike incidents are reported in the National Ship Strike Database.</li> <li>Ensure the risk of vessel strikes is considered when assessing actions that increase vessel traffic in areas where blue whales occur and, if required, appropriate mitigation measures are implemented.</li> </ul> <p>Identifies habitat modification as a threat, with no explicit relevant objectives or management actions identified.</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
<p>Conservation Management Plan for the Southern Right Whale - A Recovery Plan under the Environment Protection and Biodiversity Conservation Act 1999, 2011-2021 (DSEWPC, 2012)</p>	<p>Long-term recovery objective is to minimise anthropogenic threats to allow the conservation status of the southern right whale to improve so that it can be removed from the threatened species list under the EPBC Act.</p> <p>Identifies marine debris resulting in entanglement as a moderate risk threat to the southeast population, with no directly relevant objectives or management actions identified.</p> <p>Identifies vessel disturbance as a high risk threat to the southeast population. Management Action A5: addressing vessel collisions:</p> <ul style="list-style-type: none"> <li>• Develop a national ship strike strategy that quantifies vessel movements within the distribution ranges of southern right whales and outlines appropriate mitigation measures that reduce impacts from vessel collisions.</li> </ul> <p>Identifies noise interference as a high risk threat to the southeast population. Management Action Area A.2: Assessing and addressing anthropogenic noise (shipping, industrial): Improve the understanding of what impact anthropogenic noise may have on southern right whale populations by:</p> <ul style="list-style-type: none"> <li>• Assessing anthropogenic noise in key calving areas.</li> <li>• Assessing responses of southern right whales to anthropogenic noise.</li> <li>• If necessary, developing further mitigation measures for noise impacts.</li> </ul> <p>Identifies habitat modification from acute chemical discharge as a low risk threat, with no explicit relevant objectives or management actions identified.</p>
<p>Recovery Plan for the White Shark (Carcharodon carcharias) (DSEWPC, 2013)</p>	<p>The recovery plan does not identify anthropogenic noise as a threat.</p> <p>Identifies habitat degradation (e.g. through pollution) as a threat with no explicit relevant objectives or management actions.</p>
<p>National Recovery Plan for the Australian Grayling (Prototroctes maraena) (DSE, 2008)</p>	<p>The recovery plan does not identify anthropogenic noise as a threat.</p> <p>Identifies poor water quality as a threatening process however does not explicitly identify pollution as a source of habitat degradation.</p>
<p>National Recovery Plan for Threatened Albatross and Giant Petrels 2011-2016 (DSEWPC, 2011)</p>	<p>Overall objective to ensure the long term survival and recovery of albatross and giant petrel populations breeding and foraging in Australian jurisdiction by reducing or eliminating human related threats at sea and on land.</p> <p>Marine pollution is explicitly identified as a potential threat to long term survival in the wild of Albatross and Giant Petrels identified within this plan. With relevant management actions identified:</p> <ul style="list-style-type: none"> <li>• Where feasible, population monitoring programs also monitor, in a standardised manner, the incidence of <ul style="list-style-type: none"> <li>○ Oiled birds at the nest</li> <li>○ Marine debris egestion/entanglement at the nests</li> <li>○ Eggshell thinning.</li> </ul> </li> </ul>
<p>Recovery Plan for the White Shark (Carcharodon carcharias) (DSEWPAC, 2013)</p>	<p>Sets out research and management actions to stop the decline of, and support the recovery of, listed threatened species or threatened ecological communities, with the aim of maximising long-term survival in the wild.</p> <p>No relevant threats identified to species long term survival.</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
National Recovery Plan for the Orange-bellied Parrot ( <i>Neophema chrysogaster</i> )	<p>Sets out research and management actions to stop the decline of, and support the recovery of, listed threatened species or threatened ecological communities, with the aim of maximising long-term survival in the wild.</p> <p>Identifies threats from barriers to migration and movement, though there is little more than anecdotal evidence for impacts. Individuals may be killed by flying into barriers, or behaviour may be modified by the presence of barriers, leading to avoidance of some habitat. Barriers may include wind energy turbines, powerlines and associated infrastructure, aircraft including small recreational aircraft, illuminated structures and illuminated boats. The impacts of these barriers may be greatest where they occur on migration routes, where a large portion of the population may be exposed to the barrier during a key life stage.</p>
National Recovery Plan for the Dwarf Galaxias ( <i>Galaxiella pusilla</i> )	No relevant threats identified to species long term survival.
Recovery Plan for the Grey Nurse Shark ( <i>Carcharias Taurus</i> )	<p>Identifies habitat degradation (e.g. through coastal development, pollution and introduced species) as a threat to species long-term survival.</p> <p>Relevant management action identified to review and assess the potential threat of introduced species and pollutants.</p>
Recovery Plan for Three Handfish Species	<p>Identifies habitat degradation (from marine and coastal developments and pollution) as a principal threat to the species identified in the plan.</p> <p>No explicit relevant objectives or management actions.</p>
Recovery Plan for the Australian Sea-lion ( <i>Neophoca cinerea</i> )	<p>Identifies factors that may be contributing to the lack of population recovery including pollution and oil spill, and vessel strike.</p> <p>Relevant management action includes implementation of jurisdictional oil spill response strategies as required.</p>
Recovery plan for the Gould's Petrel ( <i>Pterodroma leucoptera leucoptera</i> )	<p>The plan refers to oil spills, stating that oceanic oil spills may pose some risk give in oceanic feeding habits.</p> <p>No explicit relevant objectives or management actions.</p>
Recovery Plans / Conservation Advice for other listed threatened and/or migratory MNES species	Recovery Plans / Conservation Advice for other species that may occur in the relevant EMBA do not identify relevant (e.g. environmental pollution) threats to species long term survival or have any explicit relevant objectives or management actions.
National Recovery Plan for the Australian Fairy Tern ( <i>Sternula nereis nereis</i> )	<p>In the event of an oil spill or ship-related oil spills, the Australian Fairy Tern could be potentially threatened due to the proximity of the species' coastal breeding and inshore feeding habitats to known and potential offshore oil facilities, shipping facilities and sea routes (TSSC 2011).</p> <p>No explicit relevant objectives or management actions provided.</p>
<b>Conservation Advice established under the EPBC Act:</b> provides guidance on immediate recovery and threat abatement activities that can be undertaken to ensure the conservation of a newly listed species or ecological community.	

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
<p>Conservation Advice Balaenoptera borealis Sei Whale (TSSC, 2015)</p>	<p>Provides threat abatement activities that can be undertaken to ensure the conservation of the sei whale</p> <p>Identifies anthropogenic noise and acoustic disturbance as a threat with no explicit relevant objectives. Relevant management action:</p> <ul style="list-style-type: none"> <li>Once the spatial and temporal distribution (including biologically important areas) of Sei Whales is further defined an assessment of the impacts of increasing anthropogenic noise should be undertaken on this species.</li> </ul> <p>Identifies vessel strike as a key threat with no explicit relevant objectives. Management action: Minimising vessel collisions:</p> <ul style="list-style-type: none"> <li>Develop a national vessel strike strategy that investigates the risk of vessel strikes on Sei Whales and also identifies potential mitigation measures.</li> <li>Ensure all vessel strike incidents are reported in the National Vessel Strike Database</li> </ul> <p>Identifies habitat degradation including pollution as a threat with no explicit relevant objectives or management actions.</p>
<p>Conservation Advice Balaenoptera physalus Fin Whale (TSSC, 2015)</p>	<p>Provides threat abatement activities that can be undertaken to ensure the conservation of the fin whale.</p> <p>Identifies anthropogenic noise and acoustic disturbance as a threat with no explicit relevant objectives. Relevant management action:</p> <ul style="list-style-type: none"> <li>Once the spatial and temporal distribution (including biologically important areas) of Fin Whales is further defined an assessment of the impacts of increasing anthropogenic noise (including from seismic surveys, port expansion, and coastal development) should be undertaken on this species.</li> </ul> <p>Identifies vessel collision as a key threat with no explicit relevant objectives. Management action: Minimising vessel collisions:</p> <ul style="list-style-type: none"> <li>Develop a national vessel strike strategy that investigates the risk of vessel strikes on Sei Whales and also identifies potential mitigation measures.</li> <li>Ensure all vessel strike incidents are reported in the National Vessel Strike Database.</li> </ul> <p>Identifies pollution (persistent toxic pollutants) as a threat with no explicit relevant objectives or management actions.</p>
<p>Conservation Advice for Megaptera novaeangliae (Humpback Whale) (TSSC, 2015)</p>	<p>Provides threat abatement activities that can be undertaken to ensure the conservation of the humpback whale.</p> <p>Identifies noise interference as a threat with no explicit relevant objectives. Relevant management actions:</p> <ul style="list-style-type: none"> <li>For actions involving acoustic impacts (example pile driving, explosives) on Humpback Whale calving, resting, feeding areas, or confined migratory pathways site specific acoustic modelling should be undertaken (including cumulative noise impacts).</li> <li>Should acoustic impacts on Humpback calving, resting, foraging areas, or confined migratory pathways be identified a noise management plan should be developed.</li> </ul> <p>Identifies habitat degradation including coastal development and port expansion as a threat with no explicit relevant objectives or management actions.</p>
<p>Conservation Advice Rhincodon typus (Whale Shark) (TSSC, 2015)</p>	<p>Identified marine debris and boat strike from large vessels as significant threats. No explicit relevant objectives or management actions.</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Conservation Advice Megaptera novaeangliae Humpback Whale (TSSC, 2015)	<p>Identifies noise interference (including from industrial noise and shipping noise), entanglement from marine debris and vessel disturbance and strike as threats with no explicit relevant objectives. Management actions:</p> <ul style="list-style-type: none"> <li>• For actions involving acoustic impacts (example pile driving, explosives) on humpback whale calving, resting, feeding areas, or confined migratory pathways site specific acoustic modelling should be undertaken (including cumulative noise impacts).</li> <li>• All collisions with whales in Commonwealth waters are reported to the National Ship Strike Database.</li> <li>• Ensure the risk of vessel strike is considered when assessing actions that increase vessel traffic in areas where humpback whales occur and, if required appropriate mitigation measures are implemented to reduce the risk of vessel strike.</li> </ul>
Conservation Advice for Giant Kelp Marine Forests of South East Australia	No relevant threats identified to species long term survival.
Conservation Advice for the Black rock-cod (Epinephelus daemeli)	No relevant threats identified to species long term survival.
Conservation Advice for the Australian Sea Lion (Neophoca cinerea)	<p>Identifies entanglement in marine debris, habitat degradation from oil spills and noise as threats.</p> <p>Relevant conservation and management priorities include all vessels to have oil spill mitigation measures in place and implement jurisdictional oil spill response strategies as required.</p>
Conservation Advice for the Southern Elephant Seal (Mirounga leonine)	<p>Identifies some potential for entanglement and increasing exposure to chemical pollution that may cause stress or impair health and potentially increase disease risks for individuals.</p> <p>No explicit relevant objectives or management actions.</p>
Conservation Advice for the Subantarctic fur seal (Arctocephalus tropicalis)	<p>Identifies some vulnerability to chemical pollution that can cause stress, impair health and potentially increase disease.</p> <p>No explicit relevant objectives or management actions.</p>
Conservation Advice for the Australian painted-snipe (Rostratula australis)	No relevant threats identified to species long term survival.
Conservation Advice for the Bar-tailed Godwit (northern Siberian) (Limosa lapponica menzbieri)	Identifies habitat loss and habitat degradation (through environmental pollution), pollution/contamination and direct mortality as a consequence of oil spill as a threat.
Conservation Advice for the Blue Petrel (Halobaena caerulea)	No relevant threats identified to species long term survival.

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Conservation Advice <i>Calidris canutus</i> (Red Knot)	Environmental pollution is explicitly identified as a potential threat to Red Knot due to potential impacts on habitat loss and habitat degradation. Further oil spills are identified as a source of direct mortality within this plan. With pollution/contamination identified as a having potential to adversely affected migratory shorebirds, both on passage and in non-breeding areas.  No explicit relevant objectives or management actions provided.
Conservation Advice Curlew Sandpiper ( <i>Calidris ferruginea</i> )	Environmental pollution is explicitly identified as a potential threat to due to potential impacts on habitat loss and habitat degradation. Environmental pollution identified to be of particular concern around settled areas may have reduced the availability of food and at migratory staging sites. Key staging site for Curlew Sandpiper includes the Yellow Sea, China and as such occurs outside of the EMBA.  No explicit relevant objectives or management actions provided.
Conservation Advice for the Great Knot ( <i>Calidris tenuirostris</i> )	Identifies habitat loss and habitat degradation (through environmental pollution), pollution/contamination and direct mortality as a consequence of oil spill as a threat.  No explicit relevant objectives or management actions provided.
Conservation Advice for the Greater Sand Plover ( <i>Charadrius leschenaultii</i> )	Identifies habitat loss and habitat degradation (through environmental pollution), pollution/contamination and direct mortality as a consequence of oil spill as a threat.  No explicit relevant objectives or management actions provided.
Conservation Advice for the Lesser Sand Plover ( <i>Charadrius mongolus</i> )	Identifies habitat loss and habitat degradation (through environmental pollution), pollution/contamination and direct mortality as a consequence of oil spill as a threat.  No explicit relevant objectives or management actions provided.
Conservation Advice for Eastern Curlew ( <i>Numenius madagascariensis</i> )	Environmental pollution is identified as a threat to due to potential impacts on habitat loss and habitat degradation, of particular concern around settled areas may have reduced the availability of food, along migratory routes. Conservation Advice suggest the Yellow Sea to Australia migration leg is usually undertaken in a single direct flight, with many birds arriving in eastern Australia appearing to move down the coast until mid-February, arriving in southern Tasmania mostly around late August to early October; later arrivals, probably of juveniles, occur until December.  No explicit relevant objectives or management actions identified.
Conservation Advice for <i>Pachyptila turtur</i> <i>subantarctica</i> (Fairy Prion Southern)	No relevant threats identified to species long term survival.
Conservation Advice for <i>Pterodroma Mollis</i> (Soft-plumaged Petrel)	No relevant threats identified to species long term survival.
Conservation Advice for the Swift Parrot ( <i>Lathamus discolor</i> )	No relevant threats identified to species long term survival.

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Conservation Advice Thinornis rubricollis rubricollis (Hooded Plover Eastern)	Oil spills, entanglement and injection of marine debris are identified as a threats to Hooded Plover. Management action identified being to prepare oil spill response plans to ensure effective rehabilitation of oiled birds.
<b>Fisheries Plans</b>	
Orange Roughy (Hoplostethus atlanticus) Stock Rebuilding Strategy 2022	Primary objective is to return all orange roughy stocks to levels where they can be harvested in an ecologically sustainable manner consistent with the Commonwealth Fisheries Harvest Strategy Policy and to ultimately maximise the economic returns to the Australian community.  No relevant threats identified to species long term survival.
Blue Warehou (Seriotele brama) Stock Rebuilding Strategy 2014	The strategy aims to rebuild the stocks to their biomass limit reference point (AFMA, 2014).  No relevant threats identified to species long term survival.
Giant Crab Management Plan (Vic) 2010	Sets out arrangements to manage the commercial catch at levels that prevents overfishing, allows stocks to rebuild and reduces the risk of lower stock abundance. Identifies three main management objectives, being: <ul style="list-style-type: none"> <li>• Sustainability of the giant crab resource</li> <li>• Resource access and utilisation</li> <li>• Cost-effective and participatory management.</li> </ul> No relevant threats identified to species long term survival.
Victorian Rock Lobster Fishery Management Plan (Vic) 2017	Identifies five objectives for the rock lobster fishery: <ul style="list-style-type: none"> <li>• Ensure the sustainability of the rock lobster resource.</li> <li>• Ensure a fair and equitable allocation of the rock lobster resource.</li> <li>• Ensure optimal economic utilisation of the rock lobster resource.</li> <li>• Cost-effective and participatory management</li> <li>• Maintain the ecological integrity of the fishery ecosystem.</li> </ul> No relevant threats identified to species long term survival.
<b>Government Guidelines, Guidance Notes and Information Papers</b>	
National Light Pollution Guidelines (CoA, 2020)	Aims to manage artificial light so wildlife is: <ul style="list-style-type: none"> <li>• Not disrupted within, nor displaced from, important habitat</li> <li>• Able to undertake critical behaviours such as foraging, reproduction and dispersal.</li> </ul> Recommend always using best practice lighting design to reduce light pollution and minimise the effect on wildlife and undertaking an environmental impact assessment for effects of artificial light on listed species for which artificial light has been demonstrated to affect behaviour, survivorship or reproduction.
National biofouling management guidelines for the petroleum production and exploration industry (DAFF, 2009)	Includes the following for operators of petroleum industry related vessels, equipment and infrastructure: <ul style="list-style-type: none"> <li>• Evaluation of biofouling risk of types of structures/facilities</li> <li>• Guidance on biofouling management and decommissioning</li> <li>• Recording and reporting.</li> </ul> Aligns with the IMO Biofouling Guidelines.

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
National Strategy for Reducing Vessel Strike on Cetaceans and other Marine Megafauna (DoEE, 2017)	Objectives are to acquire data, determine risks of vessel strike and identify mitigation measures, with the target audience being government agencies responsible for the regulation of marine fauna or vessel activities, industry and those involved in policy development or managing activities in the marine environment.
2011 Guidelines for the Control and Management of Ships Biofouling to Minimise the Transfer of Invasive Aquatic Species (the IMO Biofouling Guidelines) (IMO, 2011)	<p>Provides internationally agreed guidance on how to minimise biofouling on vessels through application of biofouling prevention measures and hull husbandry practices provide a basis upon which operators can develop a vessel-specific biofouling management plan (BFMP) which:</p> <ul style="list-style-type: none"> <li>• Provides specific details of the antifouling technology used, including antifouling paints and MGPS and how and when they are operated where relevant.</li> <li>• Describes the operating conditions suitable for the chosen technology.</li> <li>• Describes the operational profile of the vessel including operating speeds and time spent stationary.</li> <li>• Provides details of the areas of the hull that are particularly susceptible to biofouling, such as niche areas, and how the technology applied addresses this increased risk.</li> <li>• Provides information relating to the schedule of planned inspections, repairs, maintenance, inspection, and renewal of antifouling systems as well as circumstances by which opportunistic inspection to monitor efficacy might occur.</li> <li>• Describes the documentation required to verify any treatments and activities recorded in the biofouling record book.</li> </ul>
Marine Pest Plan 2018-2023: National Strategic Plan for Marine Pest Biosecurity (2018-2023) (CoA, 2018)	<p>Provides Australia's national strategic plan for marine pest biosecurity and outlines a coordinated approach to building Australia's capacity to manage the threat of marine pests over five years.</p> <p>The key relevant objective is to minimise the risk of marine pest introduction, establishment and spread.</p>
Reducing marine pest biosecurity risks through good practice biofouling management (IP1899, NOPSEMA, 2022)	<p>NOPSEMA Information Paper intending to:</p> <ul style="list-style-type: none"> <li>• Clarify biosecurity requirements relevant to offshore activities.</li> <li>• Provide coordinated good practice advice that is consistent with the expectations of all jurisdictions responsible for regulating biofouling management within the Australian marine environment.</li> <li>• Support the industry's contribution to marine pest risk management consistent with Australia's Marine Pest Plan 2018-2023 (CoA 2018).</li> </ul>
Marine Biosecurity Management of Vessels Servicing the Offshore Industry (MIAL, 2020)	<p>Reference case developed by Maritime Industry Australia Ltd (MIAL) for use in the development of Environment Plans by titleholders for offshore resource activities located in Commonwealth waters.</p> <p>Applies to vessels used in the offshore resources industry, and not to offshore installations or trading ships.</p>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Environment plan decision making guideline (NOPSEMA, 2022)	<p>Set out NOPSEMA's considerations in making decisions in accordance with the legislated criteria relevant to EPs. This guideline:</p> <ul style="list-style-type: none"> <li>Communicates the key factors that influence NOPSEMA's decision making in relation to decision making criteria for acceptance criteria for EPs (r 10A).</li> <li>Includes interpretation arising from the Federal Court appeal decision Santos NA Barossa Pty Ltd v Tipakalippa [2022] as it relates to NOPSEMA's decision making under R10A.</li> <li>Provides information for proponents and stakeholders to understand NOPSEMA's regulatory decision making.</li> <li>Imparts transparency on the way in which NOPSEMA's EP regulatory decisions are made.</li> </ul>
Consultation in the course of preparing an Environment Plan guideline (NOPSEMA, 2022)	<p>Support clarity and transparency on the legal requirements, including recent case law, for consultation by titleholders in the course of preparing their Environment Plans prior to submission to NOPSEMA. The guideline will also support clarity and transparency around what NOPSEMA will take into consideration when assessing and deciding whether the consultation requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (the Environment Regulations) have been met.</p>
Responding to public comment on environment plans guidance note (-GN1847, NOPSEMA, 2022)	<p>Provides assistance to titleholders in understanding the public comment process for exploratory drilling EPs. It applies solely to EPs prepared for assessment under the Environment Regulations.</p>
Environment plan content requirements guidance note (N1344, NOPSEMA, 2020)	<p>Interprets the EP content requirements that need to be met and demonstrated under the Environment Regulations and provides advice in relation to EP content requirements, the regulatory intent of content requirements, core concepts that are fundamental to each key content requirement and associated EP content considerations.</p>
Oil pollution risk management (GN1488, NOPSEMA, 2021)	<p>Provides titleholders with clarification on the regulatory requirements for oil pollution risk assessment as well as the content and level of detail required in an oil pollution emergency plan (OPEP).</p>
Source control planning and procedures information paper (IP1979, NOPSEMA, 2021)	<p>Describes NOPSEMA expectations with regards to source control planning content of the Environmental Plan (EP), Well Operating Management Plan (WOMP) and the Source Control Emergency Response Plan (SCERP), and to describe the regulatory assessment focus of the EP and WOMP and the compliance monitoring inspection process and focus of the SCERP.</p>
Operational and scientific monitoring programs information paper (IP1349, NOPSEMA, 2020)	<p>Provides information and general advice to assist titleholders to plan for and implement Operational and Scientific Monitoring Programs (OSMPs) for oil spills from offshore activities. More specifically, this Information Paper:</p> <ul style="list-style-type: none"> <li>Sets out general principles and practical advice to assist titleholders in their planning for, and application of, fit-for-purpose OSMPs.</li> <li>Addresses findings and recommendations of the Montara Commission of Inquiry, and implements the Final Australian Government Response to the Inquiry in relation to environmental monitoring for petroleum activities</li> <li>Incorporates lessons learned from recent marine oil spills, where relevant; and</li> <li>Captures information relevant to matters protected under the EPBC Act.</li> </ul>

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Industry guidelines for avoiding, assessing and mitigating impacts on EPBC Act listed migratory shorebird species (DEE, 2017)	<p>Developed under EPBC Act Policy Statement 3.21 to assist proponents in avoiding, assessing and mitigating significant impacts on migratory shorebirds listed under the EPBC Act, and is a key action under the Wildlife Conservation Plan for Migratory Shorebirds.</p> <p>Identifies that direct mortality of birds may result from a variety of activities including oils spills and actions that introduce risk of mortality in important habitat may result in a significant impact to shorebirds.</p>
Cumulative impact assessment guidelines for state significant projects (NSW, 2022)	Aims to strengthen project-level cumulative impact assessment (CIA) for significant projects (in NSW). Provides general guidance on processes to consider impacts from a proposed project in combination with other future projects that are anticipated or reasonably foreseeable.
Advice Note 17: Cumulative effects assessment relevant to nationally significant infrastructure projects (UK, 2019)	<p>Sets out a staged process for conducting cumulative impact assessment by:</p> <ul style="list-style-type: none"> <li>• Establishing the long list of other existing development and/or approved development</li> <li>• Establishing a short list of other existing development and/or approved development</li> <li>• Gathering information on location, design, program activities and environmental assessments</li> <li>• Conducting the assessment and evaluating significance</li> <li>• Describing mitigation and monitoring measures.</li> </ul>
<b>Industry Guidelines</b>	
Environmental management in the upstream oil and gas industry (IOGP-IPIECA, 2020)	Provides a detailed overview of environmental management practices in the upstream oil and gas industry, with the primary focus on managing risks from potential impacts to the natural environment during exploration and production of oil and gas.
Environmental, Health and Safety Guidelines for Offshore Oil and Gas Development (World Bank Group, 2015)	<p>Includes information relevant to exploratory drilling and ancillary and support operations including industry-specific impacts and management for e.g. air emissions, wastewater discharges, noise generation, spills, etc.</p> <p>They also address potential onshore impacts that may result from offshore oil and gas activities.</p>
Environmental Manual for Worldwide Geophysical Operations (IAGC, 2013)	Provides guidance for all kinds of geophysical surveys (including seabed surveys). Of particular relevance are Section 8.4 (Travel – water travel) – maintain a lookout for, and establish communications with local fishing boats, tourist diving vessels, etc, where possible to minimise interruption with their operations and equipment.
Aerial Observations of Marine Oil Spills Technical Information Paper (ITOPF, 2011)	Presents advice and guidance on conducting effective aerial reconnaissance which are an important element of an effective response to most oil spills, for assessing the location and extent of contamination and verifying predictions of the movement and fate of oil slicks at sea. Aerial surveillance provides information facilitating deployment and control of operations at sea, the timely protection of sites along threatened coastlines and the preparation of resources for shoreline clean-up.

Title	Objectives/Actions relevant to Otway Exploration Drilling Program
Aerial Observations of Oil Spills at Sea Good Practice Guideline (IPIECA/OGP, 2015)	Summarises a consensus of industry and government viewpoints on Aerial Observations of Oil Spills at the time of writing, to detect, characterise and quantify spilled oil that may be present in a range of settings (on-water, in-water and onshore). This enables the incident command to effectively determine the scale and nature of the oil spill incident, make decisions on where and how to respond, control various response operations and, over time, confirm whether or not the response is effective.
In-water Surveillance of Oil Spills at Sea Good Practice Guidelines (IPIECA/ IOGP, 2016)	Summarises current views on good practice for a range of oil spill preparedness and response topics to help align industry practices and activities, inform stakeholders, and serve as a communication tool to promote awareness and education. Topics include surveillance, subsea response, communicating data and information and innovations and future developments.
Contingency Planning for Oil Spills on Water Good Practice Guidelines (IPIECA/IOGP, 2015)	Provides guidance on the contingency planning process for potential oil spills in or on water following an accidental release of oil to a marine or aquatic environment, whether that be during the handling, transport, production or storage of oil products.

# 1 INTRODUCTION

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The ConocoPhillips Australia Otway exploration drilling program (the exploration program, or activity) consists of seabed surveys and the drilling of up to six exploration wells. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs. This preliminary environmental impact and risk assessment (preliminary assessment) has been prepared to support the environmental management of the proposed exploration program and follows a standardised methodology for identifying environmental impacts and risks and determining their relative significance for further assessment.

## 1.1 Purpose

The purpose of this preliminary assessment is to:

- Establish the context within which the assessment of environmental impacts and risks will be undertaken, including:
  - Identifying regulatory and other requirements that apply to the activity;
  - Describing the activity;
  - Describing the existing environment and key environmental values and sensitivities (including people and communities, the heritage value of places, and their social and cultural features) which may be affected by the proposed activity.
- Perform an initial evaluation of environmental impacts and risks associated with the activity.
- Identify any significant environmental impacts and risks, and
- Outline the full environmental assessment approach that will be applied in the Environment Plan (EP).

The findings of this preliminary assessment will be used to inform ongoing EP development and consultation, particularly in relation to the identification of mitigation measures and management strategies. This preliminary assessment forms the basis for the full environmental impact and risk assessment (full environmental assessment), which will be documented in the EP, and informs the need for studies and investigations to improve predictions of impacts and risks.

## 1.2 Environmental Planning Area

An Environmental Planning Area (EPA) has been established to support the identification of:

1. Marine and coastal environmental values and sensitivities, and
2. Persons and organisation with functions, interests and activities.

The EPA has been expanded to be of sufficient size to ensure that all potential interactions between values/sensitivities, functions/interests/activities and exploration activities can be identified. The EPA and ConocoPhillips Australia's offshore petroleum titles (permit areas) VIC/P79 and T/49P are shown in Figure 1-1 (along with the operational areas defined in the Design Envelope section).

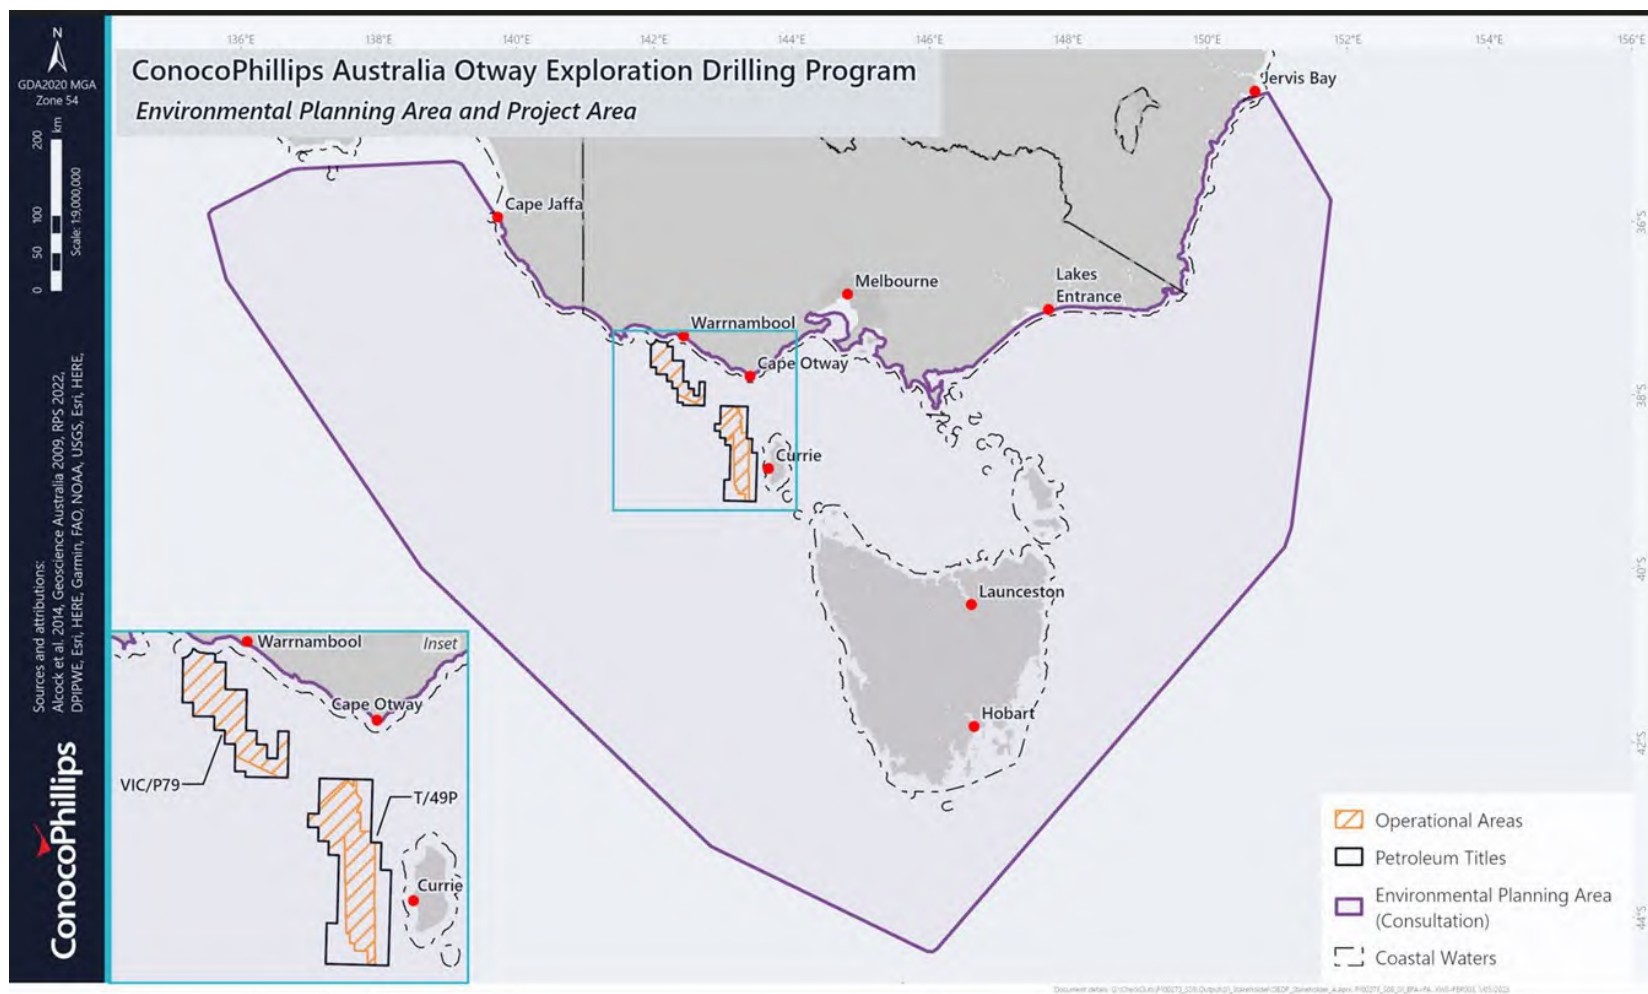

Figure 1-1: Environmental planning area, petroleum titles and operational areas

## 1.2.1 Definitions and Terms

Definitions and terms used through-out the preliminary impact and risk assessment are detailed in Table 1-1.

Table 1-1: Terms and definitions relevant to impact and risk assessment

TERM	DEFINITION
Acceptable level	The specified amount of environmental impact and risk that an activity may have which is tolerable, is consistent with all relevant principles, and does not compromise the management/conservation/protection objectives of the environment.
Activity	Refers to a 'petroleum activity' as defined under the OPGGS(E)R as: petroleum activity means operations or works in an offshore area undertaken for the purpose of exercising a right conferred on a petroleum titleholder under the Act by a petroleum title or discharging an obligation imposed on a petroleum titleholder by the Act or a legislative instrument under the Act. For the Otway Exploration Drilling Program the 'activity' includes seabed surveys and the drilling of up to 6 exploration wells, and the use of a drilling rig, vessels and associated equipment.
As low as reasonably practicable (ALARP)	The ALARP principle refers to reducing impacts and risk to a level that is 'as low as reasonably practicable'. In practice, this means that the titleholder has to show through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce impacts and risks further, i.e. to demonstrate that the cost involved in reducing the impact or risk further would be grossly disproportionate to the benefit gained.
Consequence <i>* Linked to nature and scale</i>	The consequence of an impact or risk is the potential outcome of the event on affected receptors (particular values and sensitivities) and can be positive, neutral or negative.
Control measure	A system, an item of equipment, a person or a procedure, that is used as a basis for managing environmental impacts and risks.
Emergency condition	An unplanned event that has the potential to cause significant environmental damage or harm to matters of national environmental significance (MNES). An environmental emergency condition may, or may not, correspond with a safety incident considered to be a Major Accident Event (MAE).
Environment (Values and Sensitivities) <i>* Linked to receptors</i>	Defined under the OPGGS(E)R as: <ul style="list-style-type: none"> <li>(a) ecosystems and their constituent parts, including people and communities</li> <li>(b) natural and physical resources</li> <li>(c) the qualities and characteristics of locations, places and areas, and</li> <li>(d) the heritage value of places</li> </ul> and includes: <ul style="list-style-type: none"> <li>(e) the social, economic and cultural features of the matters mentioned above.</li> </ul>
Environmental aspect	Element of an activity that interacts or can interact with the environment. Environmental aspects can have a direct impact on the environment, contribute only partially or indirectly to a larger environmental change or create a risk to one or more environmental receptors. Aspects can be planned (inherent part of the activity i.e., light) or unplanned (not part of the activity i.e., spill).
Environmental hazard	A potential source of harm or damage to the environment, human health or safety.
Environmental impact	A change to the environment, whether adverse or beneficial, that wholly or partly results from an activity.

TERM	DEFINITION
Environmental performance	The performance of a titleholder in relation to the Environmental Performance Outcomes (EPO) and Environmental Performance Standards (EPS) in an Environment Plan.
Environmental performance outcome (EPO)	A measurable level of performance required for the management of environmental aspects of an activity to ensure that environmental impacts and risks will be of an acceptable level.
Environmental performance standard (EPS)	A statement of the performance required of a control measure.
Environmental risk	A change which could occur to one or more environmental receptors, that is caused either wholly or partly by one or more environmental aspects associated with an activity. Environmental risks have a degree of likelihood, and are not certain to occur.
Functions, interests and activities	A function refers to a power or duty to do something. Interests are any interest possessed above that of the general public. Activities are things a person or group already does.
Inherent impact and risk	The level of impact or risk with 'legislative and other requirement' controls in place, before the application of additional control measures.
Likelihood	The likelihood is the chance (or probability) of the consequence occurring, and only applies to risks.
Measurement criteria	A clear and objective way to evaluate environmental performance. Define how environmental performance will be measured and determine whether the environmental performance outcomes and environmental performance standards have been met during the activity.
*Nature and scale	The nature and scale of environmental impacts and risks is determined by an assessment of: Extent: the area that will be affected by an impact or may be affected by a risk Severity: the level of environmental impact or risk determined by the consequence category, and Duration: How often (frequency) and how long an impact will, or risk may, interact with the environment.
Residual impact and risk	The impact or risk remaining after additional control measures have been applied (i.e. after treatment of inherent impacts and risks)
*Receptors	Features of the environment that may be affected by impacts and risks.
Significant impact	An impact which is important, notable or of consequence, having regard to its context or intensity. Whether or not an action is likely to have a significant impact depends upon the sensitivity, value, and quality of the environment, which is impacted, and upon the intensity, duration, magnitude, and geographic extent of the impacts (DAWE, 2013).

## 1.3 METHODOLOGY

ConocoPhillips assessment methodology, outlined in Figure 2-1, aims to provide a structured process for identifying, assessing and managing environmental impacts and risks associated with an offshore petroleum activity. The methodology has been designed to align with AS/NZS ISO 31000:2018: Risk Management – Principles and Guidelines, and the requirements of the OPGGS(E) Regulations.

The first few steps in this methodology – Establishing the Context, Identifying and Analysing Impacts and Risks and Evaluating Impacts and Risks (in part) – are outlined in this preliminary assessment report. Information on the remaining steps will be provided as EP development and consultation progress.

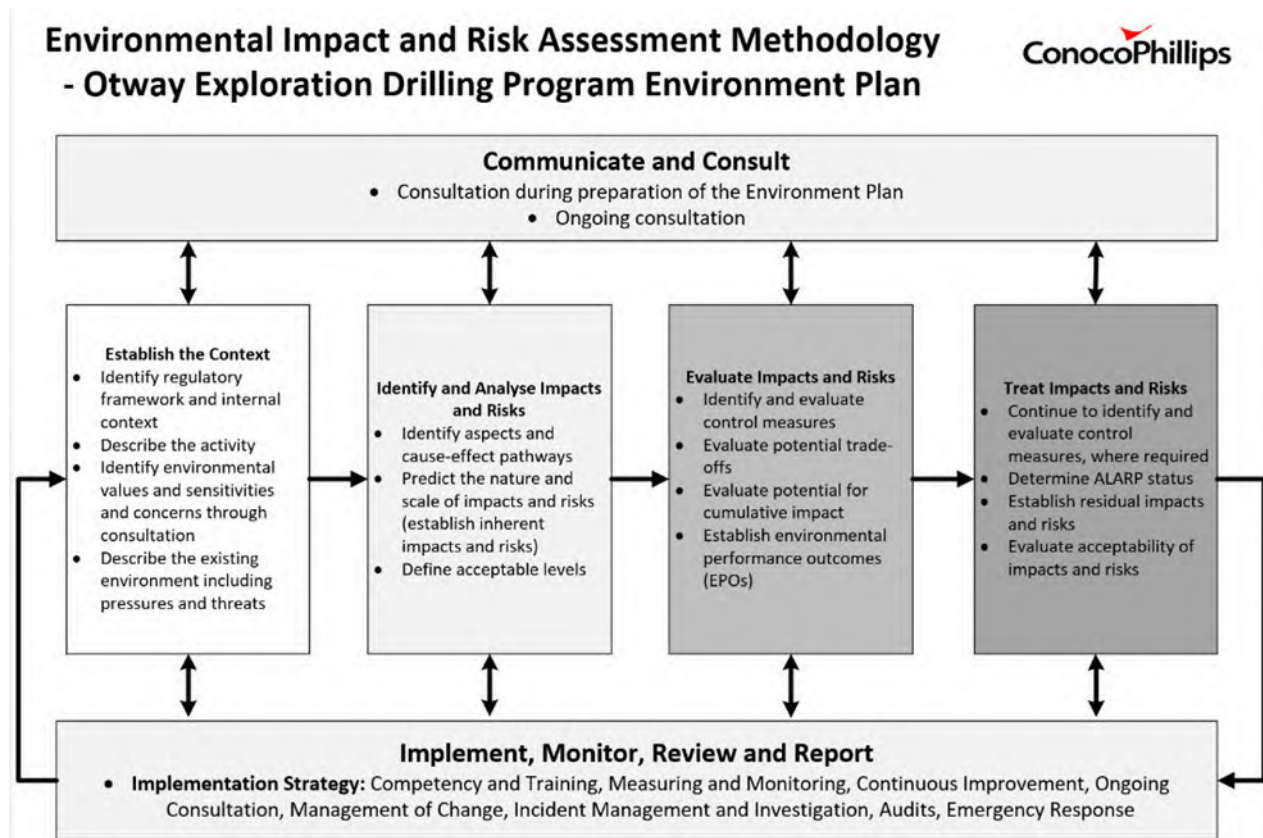

Figure 1-2: Environmental impact and risk assessment methodology (adapted from NOPSEMA (2020))

## 2 ESTABLISHING THE CONTEXT

Context for impact and risk assessment has been established by:

- Understanding the legislative framework within which the activity takes place, and other environmental requirements, to support framing of impact and risk assessments and the establishment of acceptable levels of impact and risk (Section 2.1).
- Developing a description of the activity to allow for the identification of planned and unplanned aspects that may cause impacts and create risks (Section 3).
- Collecting and analysing data to support the identification of environmental values and sensitivities to describe the environment within which the activity will take place, including the existing condition and historical current pressures (Sections 2.2 and 2.4), and
- Inviting feedback through consultation and incorporating this into the understanding of environmental values and sensitivities and the design of the activity, where relevant (Section 2.2).

### 2.1 Environmental Legislation and Other Requirements

Legislative and other environmental requirements that apply to the activity are taken into account, and provide important context for, the evaluation of environmental impacts and risks.

The primary legislation governing the exploration project is the *Offshore Petroleum and Greenhouse Gas Storage Act 2006* (the Act) and the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (OPGGs(E) Regulations (the Regulations)). Other environmental requirements could include laws, codes, standards, agreements, treaties, conventions or practices (in whole or in part), that apply to the jurisdiction in which the activity takes place.

Legislative and other environmental requirements have been collated and will be made available via ConocoPhillips Australia's Otway Consultation Hub. Some of these are discussed within this preliminary assessment, where they are relevant to the management of environmental impacts and risks.

### 2.2 Data Collection and Analysis

Current literature and other published data (including protected matter searches, fisheries data and other government mapping information) have been reviewed to gather information on the Environmental Planning Area, including baseline environmental conditions. Some of the environmental features identified through a review of publicly available data, for example protected matters searches, can be viewed via the Otway Consultation Hub's interactive map.

Consultation for the exploration program has commenced and it is anticipated that additional information on environmental values and sensitivities will be generated through this process. This preliminary assessment will be published to help inform consultation on the environmental aspects of the activity.

## 2.3 Activity Description – Otway Exploration Drilling Program

Since the 1970's, exploration activities in the Otway Basin have resulted in onshore and offshore gas discoveries. Within the Victorian portion of the Otway Basin, all of the commercially viable gas discoveries to-date have been found onshore and offshore around the Peterborough – Port Campbell region. Currently, natural gas is produced from fields in the offshore portion of the Otway Basin, and depleted onshore gas fields near Port Campbell are used for underground gas storage. Natural gas from the offshore Otway Basin services Melbourne, regional centres across Victoria as well as the wider east-coast gas market.

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian East coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as described in the following sections.

### 2.3.1 Design, Location and Timing

The final design of the Otway exploration drilling program will be influenced by exploration objectives, environmental impact and risk assessment findings, and consultation feedback. The program consists of a number of activities which are related to seabed surveys and drilling operations which are described in more detail in Section 3.2.

At this stage, the program design can best be described using two parameters:

- **The design envelope:** being the broadest timeframe and spatial extent of the activity, and
- **The operating envelope:** which will narrow the timing and location of activities to the current best estimates.

These envelopes are expected to change over time during the environmental assessment. The nature of any change and the reasons for it will be communicated through the Otway Consultation Hub (public website) and through consultation, where relevant.

#### Design Envelope

The design envelope is defined by operational areas and maximum durations, as shown in Table 2-1.

**Operational areas** represent the broadest area within which all petroleum activities can occur. Operational areas will be located entirely within the relevant permit areas (T/49P and VIC/P79) and have been selected on the basis of similar constraints around rig selection, well design and environmental impacts and risks. The operational areas for the Otway exploration drilling program are shown in Figure 1-1. Water depths within operational areas range from 35 m to 670 m.

Vessels will traverse from coastal departure locations to the operational areas and may reside outside of the operational areas from time to time. However, vessels moving to or residing outside operational areas are not considered part of the petroleum activity until such time that they enter an operational area.

The initial activity involves completing seabed surveys over a maximum of nine locations, which will commence no earlier than 1 January 2024, subject to relevant approvals being in place. Drilling commencement is also dependent on regulatory approval and rig availability, and will commence no earlier than 1 October 2024. The term of the approval for these activities is proposed to continue until 31 December 2028, to allow for the drilling of a maximum of six exploration wells and to account for rig availability.

Table 2-1: Design envelope

PARAMETER	SEABED SURVEY	DRILLING
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells)
Spatial extent (within which activity can occur)	Operational Areas within T/49P and VIC/P79	Operational Areas within T/49P and VIC/P79

## Operating Envelope

The operating envelope presents a narrowing of the timing and location of activities as shown in Table 2-2.

The seabed survey is predicted to take up to one week at each the nine locations, excluding vessel transit time between locations, and is expected to cover an area of 6 x 6 km around each of the proposed drilling areas.

**Drilling areas** will be established around each exploration well, and will be located entirely within the broader operational area. Each drilling area will be represented by a 2 km radius cautionary zone around the well site, also encompassing the 500 m Petroleum Safety Zone (PSZ). The 2 km radius drilling areas represent the area within which other marine users may be displaced while the drilling rig is on location.

Each well will take a maximum of 90 days to drill but will typically take 30-40 days. The extra time accounts for potential operational delays and environmental constraints like severe weather events. Drilling days may occur back-to-back but are more likely to occur with planned unspecified intervals to allow time for equipment deployment, weather delays, contractor downtime, equipment maintenance and movement between wells. After a well is completed the drilling rig is moved to the next location.

Table 2-2: Operating envelope

PARAMETER	SEABED SURVEY	DRILLING
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km <sup>2</sup> (Nine locations, each 6 x 6 km) within Operational Areas	75 km <sup>2</sup> (Six locations, each a 2 km radius Drilling Area) within Operational Areas

### Process to Select Final Drilling Locations

The process for selecting final drilling locations involves the completion of seismic data processing, interpretation of the data to select targets with a high probability of success, and analysis of the efficiency of the drilling program to confirm resources with the least amount of wells, and the resultant impacts and potential risks associated with each.

The timing for the completion of this process is late 2023, early to mid-2024. Consequently, ConocoPhillips Australia will undertake to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within the broader operational areas defined in the design envelope. This will ensure that the impacts and risks associated with all potential drilling locations are assessed, and actual seabed surveys and drilling activities will only be undertaken within the smaller spatial extents defined in the operating envelope.

## 2.3.2 Operational Details of the Activity

### Seabed Surveys

Seabed surveys will be undertaken to assess the state of the seabed at up to 9 potential drilling and anchoring locations. Survey techniques may consist of multibeam echosounder, side scan sonar, sub-bottom profiling, magnetometry and imagery, as well as limited geotechnical sampling to validate other survey information.

Seabed surveys will be conducted by one or two vessels travelling at slow speeds during data acquisition, or stationery e.g., during geotechnical sampling. There will be a 500 m radius Safe Navigation Area (SNA) in place around survey vessel(s) and any towed equipment for the duration of activity.

In the event of unsafe environmental conditions (e.g., heavy sea state), equipment may be retrieved, and/or survey vessel(s) may transit away from the operational area to a safer location, noting that once a vessel leaves the operational area, it is no longer undertaking a petroleum activity.

Environmentally relevant details for the seabed survey to inform impact and risk assessment are provided in Table 2-3.

Table 2-3: Environmentally relevant details for seabed surveys

PARAMETER	DETAILS	ENVIRONMENTALLY RELEVANT INFORMATION
Exclusion Zone(s) around vessel(s) and any towed equipment	500 m Safe Navigation Area (SNA)	Represents the area within which other marine users will be displaced.
Total crew accommodation	20 people on board (POB)	Informs the volumes of sewage, greywater, brine and putrescible (e.g. food) wastes generated.
Endurance at sea	Varies depending on activities being conducted	Informs the maximum duration at sea, with refuelling and crew transfers occurring in-port.
Largest fuel tank	350 m <sup>3</sup> light fuel	Informs a worse-case credible oil spill risk in event of vessel collision.
Fuel type	Marine Diesel Oil, Marine Gas Oil	
Propulsion – Main engines and dynamic positioning	Source levels from main engines operating at all times, and dynamic positioning operating during specific activities e.g. grab sampling	Informs expected continuous (non-impulsive) sound levels during specific activities.
Propulsion and power – equipment types	Main engines, generators and bow thrusters	Result in discharges of cooling and oily bilge waters and inform the potential for water quality and associated impacts.
Lighting for navigation and safe work	Minimum required for safe operations	Informs the potential for lighting impacts.
Geotechnical survey techniques	Piezocene penetration tests (CPTu) and grab sampling	Informs the area of seabed interaction
Geophysical survey techniques	Sub-bottom profiling (representing the survey technique with the loudest sound source)	Informs a worse-case credible impulsive sound level during geophysical sampling.
Fuel consumption	7 m <sup>3</sup> /day	Informs emissions to atmosphere.

### Drilling Rig and Support Vessel Operations

Exploration wells will be drilled using a single semi-submersible mobile offshore drilling unit (MODU, rig or drilling rig). The rig will be towed into position by anchor handling support vessels (AHSVs) between either a Victorian port or another location within Commonwealth waters and the operational area. The rig will be held in position by moorings typically spread (either 8 or 12 anchors depending on the contracted rig) in a radial pattern extending from the drilling rig within the 2 km radius drilling area, and may be supplemented by a thruster assisted mooring system in heavy sea states.

Drilling involves a number of steps including:

- Movement of the drilling rig within the operational area, including entry to and exit from the area.
- Establishment and recovery of mooring equipment including the deployment and recovery of anchors and mooring lines (including potential for pre-laying anchors before the drilling rig arrives).

- Drilling conductor and surface hole sections, both of which are then cased in steel pipe and cemented in place.
- Installing a blowout preventer (BOP), an assembly of specialised safety valves put in place before drilling into the reservoir, that is used in the unlikely event of an emergency to control well pressure and prevent a loss of well control release.
- Installing a marine riser to return drilling fluids and cuttings to the rig for reconditioning, recirculation and/or discharge while drilling continues towards the target reservoir.
- Drilling and constructing the well to the target gas reservoir, with the installation of cemented casing strings, and then evaluating the geological formations to determine if they contain and can produce hydrocarbons.
- In the event that a gas hydrocarbon reservoir is discovered, the well may be tested by flowing hydrocarbons to the surface for analysis and then flaring through the flare boom.
- Contingency activities such as sidetrack drilling, re-drilling sections and re-spudding of a well.
- General operations associated with the use of a drilling rig, vessels, helicopters and remotely operated vehicles (ROVs) within the operational area.
- Permanently plugging the well with cement barriers and removing all equipment from the seafloor.

Environmentally relevant details for drilling operations, including well evaluation and testing, are provided in Table 2-4, Table 2-5 and Table 2-6 to inform impact and risk assessment. Routine emissions and discharges have been provided based on publicly available data for similar activities.

Table 2-4: Environmentally relevant details for drilling operations

PARAMETER	DETAILS	ENVIRONMENTALLY RELEVANT INFORMATION
Exclusion Zone(s)	500 m radius Petroleum Safety Zone (PSZ) 2 km radius cautionary zone	Represents the area around each drilling location within which other marine users will be displaced.
Total crew accommodation	Rig: up to 200 people on board (POB) Vessels: typically 20, but up to 60 POB each	Informs the volumes of sewage, greywater, brine and putrescible (e.g. food) wastes generated.
Endurance at sea	Varies depending on equipment and materials including bulk transfers of chemicals, wastes and supplies	Informs where activities may take place: <ul style="list-style-type: none"> <li>- Resupply of the rig will occur within the operational area.</li> <li>- Refuelling of the rig will occur within the operational area.</li> </ul>
Largest externally exposed fuel tank	350 m <sup>3</sup> light fuel	Informs a worse-case credible oil spill risk in event of vessel collision.
Fuel type	Marine Diesel Oil, Marine Gas Oil	
Rig operations	Source levels from vibrating equipment and drilling	Informs expected non-impulsive sound levels during specific activities.
Support vessel propulsion	Source levels from main engines operating at all times, and dynamic positioning operating during specific activities e.g. resupply	
Mooring system	Maximum of 12 anchors and chains	Informs the area of seabed interaction

PARAMETER	DETAILS	ENVIRONMENTALLY RELEVANT INFORMATION
	Source levels from thrusters	Informs a worse-case credible non-impulsive sound level during heavy sea states.
Propulsion and power – equipment types	Main engines, generators and bow thrusters	Result in discharges of cooling and oily bilge waters and inform the potential for water quality and associated impacts.
Lighting for navigation and safe Work	Minimum required for safe operations	Informs the potential for lighting impacts.
Flow rates to flare and duration	Maximum of 40 MMscf flow rate 120 hours per well over multiple short-term events	Informs emissions to atmosphere and light emissions.
Well evaluation techniques	Vertical Seismic Profiling (representing the evaluation technique with the loudest sound source)	Informs a worse-case credible impulsive sound level during well evaluation over a maximum 20-hour testing period.

Table 2-5: Routine emissions and discharges from the rig and support vessels

DISCHARGE TYPE	RIG TYPICAL QUANTITIES	VESSEL TYPICAL QUANTITIES (20POB)
Putrescible waste	400 kg/day (2 kg pp/day)	40 kg/day (2 kg pp/day)
Treated sewage and grey water	86 m <sup>3</sup> /day (0.43 m <sup>3</sup> pp/day)	8.6 m <sup>3</sup> /day (0.43 m <sup>3</sup> pp/day)
Treated oily water	80 L/day (combined)	
Treated bilge water	Limited to holding capacity of bilge on vessel and MODU (combined)	
RO brine	170 m <sup>3</sup> /day (combined)	
Cooling water	4,800 m <sup>3</sup> /day (combined)	
Atmospheric emissions (e-CO <sub>2</sub> )	240 ktCO <sub>2</sub> e (combined for seabed survey and drilling activities)	

Table 2-6: Routine drilling discharges within the operational area

DISCHARGE TYPE	TYPICAL QUANTITIES
Drilling cuttings discharged to seabed	420 m <sup>3</sup> per well
Drilling cuttings discharged to sea	300 m <sup>3</sup> per well
Water-based mud discharged to seabed	1750 m <sup>3</sup> per well
Water-based mud discharged to sea	2000 m <sup>3</sup> per well
Cement from testing, spoils and excess volumes discharged to sea	<40 m <sup>3</sup> per well and up to 25 m <sup>3</sup> excess at final well location
Cement from riserless sections discharged to seabed	30 m <sup>3</sup> per well

DISCHARGE TYPE	TYPICAL QUANTITIES
Hydraulic fluids from testing of the blowout preventer (BOP)	220 L of potable water with 3 % water-soluble control fluid every 7-days, and smaller volumes when latching and unlatching the BOP at the start and end of each well

Drilling operations will be supported by up to three vessels which may be present within the operational area at any one time. In addition, at least one remotely operated underwater vehicle (ROV) will be available to provide for underwater surveillance and inspection, tool deployment and emergency response support.

Aircraft, including helicopters, fixed wing planes and drones, may be used to provide support for crew changes, critical supply deliveries, surveillance and emergency response use. Helicopter operations may occur several times per week and are considered part of the petroleum activity once within the drilling area.

## 2.4 Existing Environment Condition

An overview of the condition of the existing environment is provided in the following sections as a reference point to evaluate the impacts and risks of the Otway exploration drilling program. The existing conditions are also used to determine the significance of the impacts and risks identified in this assessment and to identify any necessary mitigation measures, management strategies or additional baseline studies. The descriptions provided in the following sections account for the current condition of the existing environment in relation to the effects of, and threats and pressures exerted by, historical and existing activities.

The marine environment of the offshore Otway Basin, Victoria, Australia, is a diverse and dynamic ecosystem that supports a range of important physical, ecological, socio-economic and cultural activities and values. The Environmental Planning Area (EPA, Figure 1-1) encompasses a wide range of habitats including open ocean, coastal waters, rocky shores, sandy beaches, seagrass beds, and kelp forests. These habitats support a variety of marine species including fish, crustaceans, birds, marine turtles, marine mammals and seaweeds. The marine environment also supports a range of socio-economic activities (including but not limited to commercial fishing, shipping, gas production and recreational activities) and cultural values.

The area is relatively protected from human impacts, with few major industries or coastal communities in the immediate vicinity. However, the area is subject to some environmental pressures, including nutrient runoff, sedimentation and marine debris, as well as emissions and discharges from shipping and other vessel activity.

### 2.4.1 Physical Environment

The physical environment refers to the non-living natural elements of an ecosystem including air, water, soil, minerals and climate. These elements interact with each other and play a crucial role in shaping the biotic components of an ecosystem, influencing the distribution and diversity of plants, animals and microorganisms.

Understanding the physical environment is essential for comprehending the functioning of an ecosystem and for developing sustainable management practices that preserve and enhance the ecological, socio-economic, and

cultural values of the environment. The following components of the physical environment are considered in this preliminary assessment and will be carried through to the full assessment:

- **Water Quality** – Generally well mixed waters influenced by inflows from three primary water masses being the South Australian Current Water, East Australian Current Water and sub-Antarctic Surface Water, which influence local marine ecosystems owing to their different nutrient contents. In nearshore areas, water quality may be negatively affected through the discharge of polluted waters from river catchments.
- **Sediment Quality** – The Otway continental margin is a swell-dominated, open, cool water, carbonate platform with sediment expected to be of high quality, given the limited historical activities in this area.
- **Air Quality** – High air quality (as assessed at Cape Grim, Tasmania which represents one of the cleanest air sources in the world), even considering the effects of historical and existing offshore marine activities.
- **Climate** – A temperate climate with cool, wet winters and warm dry summers. Sea surface temperatures have increased globally over recent decades and are expected to continue to rise with estimates of warming generally in Australia of 0.4 to 1°C by 2030, with potentially much higher changes seen along the east coast of Tasmania in the longer-term projection models (median changes as large as 4°C in 2090)<sup>1</sup>.
- **Ambient Light** – Artificial light emissions within the Otway Basin can be expected from both permanent (e.g. onshore/offshore development and communities) and temporary (e.g. vessel) activities.
- **Ambient Sound** – Natural sea sounds including physical and biological sources are expected to be the dominant source of ambient sound in the Otway Basin. Anthropogenic noise sources known to occur within the region include shipping, commercial fishing and small vessel traffic, petroleum production and exploration-drilling activities and sporadic petroleum seismic surveys.

## 2.4.2 Ecological Environment

The ecological environment refers to the living components of an ecosystem, including plants, animals, and microorganisms, as well as their interactions with each other and with the non-living elements of the environment. These interactions form the food webs and nutrient cycles that sustain life and maintain the stability and resilience of the ecosystem.

The ecological environment is shaped by the physical environment, as well as by historical events, such as natural disasters, evolution and human activities. Biodiversity, or the variety of species and their interactions, is a key feature of the ecological environment providing the essential functions and services that support human well-being such as food, medicine and recreation.

Understanding the ecological environment is important for conserving biodiversity, preserving the integrity and functioning of ecosystems and supporting the livelihoods of communities. The following components of the ecological environment are considered in this preliminary assessment and will be carried through to the full assessment:

- **Benthic Habitats and Communities** – Benthic assemblages including sandy substrates, soft sediment and rocky reefs; marine flora including algae species, seagrasses, mangroves, saltmarsh and marine canyons.

---

<sup>1</sup> McInnes K, Monselesan D, Church J, Lenton A and O'Grady J (2015). *Climate Change in Australia, Technical Report. Chapter 8: Projections (and Recent Trends) Marine and Coasts.*

- **Coastal Habitats and Communities** – Including rocky cliffs, sandy beaches and tidal flats.
- **Plankton** – As the dominant biomass of marine ecosystems and a key component in oceanic food chains, including potential implications to the Bonney and West Tasmania Upwellings.
- **Invertebrates** – Including Porifera (sponges), Cnidaria (e.g. jellyfish, corals, anemones, sea-pens), Bryozoa (filter feeders), Arthropoda (e.g. sea spiders, rock lobster, giant crab, krill), Mollusca (e.g. scallop, octopus, crab, lobster), Echinodermata (e.g. urchins, sea cucumbers, seastar), and Annelida (e.g. polychaete worms).
- **Fish** – Including threatened and commercially valued species of fish, sharks, rays and syngnathids (seahorses, pipefish, etc) and biological important areas.
- **Birds** – Including threatened resident and migratory seabirds, migratory shorebirds, other marine species (e.g. orange-bellied parrot and little penguin) and biological important areas.
- **Marine Reptiles** – including threatened species of marine turtles.
- **Marine Mammals** – Including low-frequency cetaceans (e.g. baleen whales including the blue whale, southern right whale, fin and sei whales and humpback whales – among others), high-frequency cetaceans and pinnipeds (e.g. Australian and New Zealand fur-seals, sea lions and elephant seals) and biological important areas.
- **Conservation Values and Sensitivities** – Including, for example, Australian Marine Parks (AMPs) like the Zeehan Marine Park, marine flora including Threatened Ecological Communities (TECs) like the giant kelp marine forests of southeast Australia, and Key Ecological Features (KEFs) like the Bonney Upwelling and West Tasmania Canyons Upwelling.

### 2.4.3 Socio-economic Environment

The socio-economic environment refers to the social and economic relationships between people and the environment including the physical, psychological and economic elements that shape human well-being. It encompasses the communities and economies that depend on the environment for their livelihoods, health and well-being. In the context of marine areas, the socio-economic environment includes a range of activities that require a close connection to the sea and its resources.

Understanding the socio-economic environment is critical for developing effective and equitable environmental management strategies that balance the needs of people with the conservation of the environment. It involves considering the social and economic values and sensitivities that may be affected by environmental change, and undertaking consultation with relevant government authorities, persons and organisations to ensure their perspectives and needs are incorporated into decision-making processes. The following components of the socio-economic environment are considered in this preliminary assessment and will be carried through to the full assessment:

- **Coastal Communities** – Along the Tasmanian and Victorian coastlines.
- **Offshore Petroleum Activities** – Within the offshore Otway Basin.
- **Offshore Renewable Energy Activities** – Proposed within the Otway Basin along the Victorian coastline.
- **Other Offshore Infrastructure** – Along the Tasmanian and Victorian coastlines.
- **Defence Activities** – Both historical (e.g. munitions dumps) and ongoing activities within the offshore Otway Basin.
- **Shipping** – Within the offshore Otway Basin.
- **Tourism** – Within the offshore Otway Basin and along the Tasmanian and Victorian coastlines.

- **Recreational Diving and Fishing** – Along the Tasmanian and Victorian coastlines.
- **Commercial Fisheries** – Within the offshore Otway Basin and along the Tasmanian and Victorian coastlines.

## 2.4.4 Cultural Environment

The cultural environment refers to both First Nations and European cultures. The relationship between First Nations peoples and the sea often involves a deep cultural, spiritual, and economic connection, of which First Nations Peoples have a unique knowledge and understanding that has been passed down through generations. European culture encompasses historic maritime archaeological heritage.

Understanding the cultural environment is critical for developing effective and equitable environmental management strategies and involves considering cultural values and sensitivities that may be affected by environmental change, and undertaking consultation with First Nations peoples, representative organisations and marine archaeologists to ensure their perspectives and needs are incorporated into decision-making processes. The following components of the cultural environment are considered in this preliminary assessment and will be carried through to the full assessment:

- **First Nations Peoples** – Including consideration of the historical land bridge connecting mainland Australia to Tasmania, sea country, totemic species within the offshore Otway Basin, songlines and important sites and artefacts along the Tasmanian and Victorian coastlines.
- **Native Title** – recognising the rights and interests of Aboriginal and Torres Strait Islander people in land and waters according to their traditional laws and customs.
- **Maritime Archaeological Heritage** – Including shipwrecks within the offshore Otway Basin and along the Tasmanian and Victorian coastlines.

## 3 IDENTIFYING AND ANALYSISING IMPACTS AND RISKS

### 3.1 Cause-Effect Pathways

A cause-effect pathway refers to the chain of events that connects a specific cause to an effect. In the context of environmental impact and risk assessments, cause-effect pathways describe the relationships between environmental aspects of the activity (described in Section 2.3) and the impacts, or consequences, they could have on the existing environment (described in Section 2.4).

A cause-effect pathway typically starts with the identification of a potential hazard, such as the physical presence of an anchored drilling rig, and then examines the potential pathways by which that hazard could result in an impact – such as the generation of underwater sound at levels that can cause harm to marine life; or a risk – such as the accidental release of pollutants into the water affecting water quality.

The identification of cause-effect pathways is an important step in the assessment process, as it allows for a systematic identification of the environmental impacts and risks of a proposed activity. It also provides a basis for developing mitigation and management strategies that are directly relevant to the cause i.e. the hazard.

### 3.2 Aspect Identification

Environmental aspects and the identified cause-effect pathways associated with planned activities are listed in Table 3-1. Where known, at this early stage, the expected maximum spatial extent of each impact has also been identified to support an understanding of the magnitude of impacts and is used to help identify the environment that may be affected (or EMBA) within the broader Environmental Planning Area.

*Table 3-1: Planned Activities – environmental aspects, cause-effect pathways, impacts and extents*

ENVIRONMENTAL ASPECT	CAUSE-EFFECT PATHWAY AND IMPACTS	EXPECTED MAXIMUM SPATIAL EXTENT
Physical presence – Interference with other marine and coastal users	<p>The physical presence of survey vessels, anchors, a drilling rig and support vessels operating in marine waters will interfere with access by other users.</p> <ul style="list-style-type: none"> <li>Seabed surveys are undertaken by vessels over short durations (typically 1-week per location) and cover small areas. A 500 m Safe Navigation Area (SNA) will be in place around the survey vessel and any towed equipment.</li> <li>Drill rigs are stationary while drilling and are attended by support vessels who monitor a 500 m Petroleum Safety Zone and larger (typically 2 km radius) cautionary area to support safe operations. Notice to Mariners are issued and standard maritime safety precautions are in place.</li> </ul> <p>The presence of the drilling rig may affect aesthetic values if visible from coastlines.</p>	<p>Smaller areas within Operational Areas:</p> <ul style="list-style-type: none"> <li>500m SNA</li> <li>500m PSZ and 2 km Cautionary Zone</li> </ul> <p>Visibility distances (to be assessed)</p>

ENVIRONMENTAL ASPECT	CAUSE-EFFECT PATHWAY AND IMPACTS	EXPECTED MAXIMUM SPATIAL EXTENT
Seabed disturbance	The placement of anchors and equipment at the seafloor, the collection of sediment samples and the drilling of the top hole can result in direct and indirect impacts to benthic habitats and assemblages including injury or mortality to fauna, a change in water quality and habitat; and may disturb cultural values.	0.01 km <sup>2</sup> area <sup>2</sup> within a 2km radius around each well.
Artificial light	The presence of survey and support vessels and the rig undertaking night-time operations will result in artificial light emissions into the marine environment which could cause injury or mortality to fauna, affect fauna behaviour, and affect other marine and coastal users and cultural values.	20 km radius around Drilling Areas <sup>3</sup>
	Short-term flaring during well testing at night-time will result in artificial light emissions into the marine environment which could cause injury or mortality to fauna, affect fauna behaviour, and affect other marine and coastal users and cultural values.	>20 km radius around Drilling Areas (to be assessed)
Atmospheric emissions	Vessels, the rig, helicopters, equipment, the transfer of dry bulk materials, flaring and venting will generate atmospheric emissions which could affect ambient air quality and ecological receptors, some of which may be culturally relevant.	Localised airshed <sup>4</sup>
	Vessels, the rig, helicopters, equipment, flaring and venting will generate atmospheric emissions of gaseous greenhouse gas (GHG) emissions such as carbon dioxide (CO <sub>2</sub> ), methane (CH <sub>4</sub> ) and nitrous oxide (N <sub>2</sub> O).	Contributing to global GHG emissions
Underwater sound	Components of the seabed survey and drilling activities will generate continuous sound and other components will generate impulsive sound. Continuous and impulsive sound can cause physiological impacts near the source and behavioural disturbance to marine fauna, some of which may be culturally relevant.	Underwater sound areas (to be assessed by modelling)
Planned discharges	The activity will result in routine discharges from vessels and the rig and drilling discharges during drilling activities. These discharges could affect ambient water quality and sediment quality, and habitat composition.	Operational Areas <sup>4</sup>

Environmental aspects and the identified cause-effect pathways associated with unplanned events are listed in Table 3-2 to support an understanding of environmental risks. The extent of most risks is limited to within the operational areas but some, such as the accidental release of marine fuel or loss of well control, may have effects reaching further into the Environmental Planning Area.

<sup>2</sup> Based on size of typical equipment used for these activities.

<sup>3</sup> Based on recommendations within the National Light Pollution Guidelines for Wildlife Including Marine Turtles, Seabirds and Migratory Shorebirds, Commonwealth of Australia 2020.

<sup>4</sup> Based on publicly available information for similar activities.

Table 3-2: Unplanned Events – environmental aspects, cause-effect pathways and impacts

ENVIRONMENTAL ASPECT	CAUSE-EFFECT PATHWAY AND IMPACTS
Introduction and establishment of invasive marine species	Vessels that transit between ports may harbour invasive marine species that have could be introduced to other areas. Introduction and establishment could result in changes in ecosystem dynamics and changes affecting other marine users.
Interactions with marine fauna	Vessels and the rig have limited manoeuvrability at stages during the activity and may be unable to avoid collisions with marine fauna resulting in injury or mortality to fauna some of which may be culturally relevant, or may result in changes in fauna behaviour.
Loss of materials or waste overboard	Whilst undertaking the activity, unplanned releases of small quantities of waste or other materials may occur with the potential to result in injury or mortality to fauna, some of which may be culturally relevant, a change in water quality or habitat and changes affecting other marine users.
Minor loss of containment	Whilst undertaking the activity, small accidental releases of hydrocarbons or chemicals to the marine environment may occur due to minor operational failures during the activity. These events have the potential to result in injury or mortality to some species of fauna, changes in fauna behaviour, changes in ecosystem dynamics and changes affecting other marine users.
Marine diesel oil release	Whilst undertaking the activity, it is highly unlikely that an unplanned event may occur resulting in a discharge of marine fuel to the marine environment. These events have the potential to result in injury or mortality to fauna, changes in fauna behaviour, changes in ecosystem dynamics and changes affecting other marine users and cultural values.
Loss of well control (LOWC) event	Whilst undertaking the activity, it is highly unlikely that an unplanned LOWC may occur where there are failures across multiple well control barriers. A LOWC event could result in the release of gas condensate to the marine environment with the potential to result in injury or mortality to fauna, changes in fauna behaviour, changes in ecosystem dynamics and changes affecting other marine users and cultural values.
Spill response operations	In the highly unlikely event of a release of fuel or loss of well control, spill response activities would be conducted and have the potential to result in injury or mortality to fauna, changes in fauna behaviour, changes in habitat and ecosystem dynamics and changes affecting other marine users and cultural values.

### 3.3 Aspect-Environment Screening

Not all environmental aspects interact with the receiving environment in the same way. For example, water quality will not be affected by artificial light. Table 3-3 shows the identified interactions between environmental aspects (from Table 3-1 and Table 3-2) and components of the environment. Only identified interactions that are predicted to result in environmental consequences greater than 'negligible' will be carried through the full assessment of impacts and risks in the EP. However, additional interactions may be identified during the full environmental assessment process and/or during consultation.

Table 3-3: Identification of interactions between environmental aspects and environmental components

## 3.4 Predicting Nature and Scale of Impacts

The preliminary impact assessment process consists of a desktop study conducted to evaluate the environmental consequences of planned activities within the Environmental Planning Area. Recommendations for further studies, including modelling, are made where necessary to support the full environmental assessment.

Environmental impacts have been identified based on the cause-effect pathways that arise from aspects of the activity. This preliminary assessment is intended to:

- Support consultation with relevant government authorities, persons and organisations who may have functions, interest and/or activities that may be affected by the proposed activities
- Direct further assessment towards areas of more significant impact
- Inform decision-making during program design, and
- Justify if no further assessment is required aspects with negligible environmental effects.

This preliminary impact assessment is designed to facilitate consultation with relevant government authorities, persons and organisations about the nature and scale of environmental impacts from the activity. This assessment will be published on the Otway Consultation Hub and used to support consultation.

### 3.4.1 Assessment of Potential Significance

A key outcome from this preliminary assessment is the identification of potentially significant impacts and risks, which provides context for additional studies or research and guides the full environmental assessment.

Under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act), an action (activity) will require approval from the Environment Minister if the action has, will have, or is likely to have, a significant impact on a matter of national environmental significance. A 'significant impact' is an impact which is important, notable or of consequence, having regard to its context or intensity. Whether or not an action is likely to have a significant impact depends upon:

- The sensitivity, value and quality of the environment, which is impacted, and
- The intensity, duration, magnitude, and geographic extent of the impacts.

### 3.4.2 Environmental Impact Evaluation

At this preliminary stage, environmental impacts are evaluated on the basis of likely consequence and the level of certainty assigned to that consequence. As planned aspects are expected to occur, the likelihood of their occurrence is not considered during evaluation, and only a consequence level is assigned as presented in Table 3-4.

Preliminary predictions of the consequence of impacts have been made with legislative and other requirements in place and consideration of the existing pressures on receptors.

Table 3-4: Preliminary environmental impact evaluation

ENVIRONMENTAL ASPECT	ENVIRONMENTAL COMPONENT <sup>6</sup>	ENVIRONMENTAL IMPACT	EFFECT (CONSEQUENCE EVALUATION)	PREDICTIVE UNCERTAINTY	RECOMMENDATION FOR FULL ASSESSMENT PROCESS
Physical Presence - Interference	Socio-economic Environment	Short-term changes to the functions, interests and activities of other marine users, i.e. typically through displacement while the activity occurs.	Minor	Low - impacts are well understood	Undertake qualitative assessment of usage and potential impacts, and consult with marine users.
		Short-term changes to visual amenity of coastal locations when the activity occurs near the coast.			Undertake qualitative assessment of visibility impacts for coastal locations, and consult with coastal users.
Seabed Disturbance	Ecological Environment	Localised direct disturbance resulting in injury or mortality to benthic fauna, indirect impacts associated with suspension of sediments decreasing water quality and light penetration to the seafloor affecting benthic habitat and communities, and the values of the Zeehan Marine Park and West Tasmania Canyon key ecological feature.	Minor	Low - impacts are well understood	Undertake qualitative assessment of impacts and usage of operational areas by commercial fisheries, and consult with relevant state and federal government departments, commercial fishers and federal government marine reserve managers.
	Commercial Fisheries	Localised temporary or permanent change in benthic habitats and associated species.			
	Cultural Heritage	Physical disturbance of seabed which may have been part of the historical land bridge connecting mainland Australia to Tasmania, may represent songlines and may contain cultural artifacts. Potential encounter with undiscovered shipwrecks.	Minor	Moderate – impacts are amenable to assessment	Undertake qualitative assessment of impacts, and consult with First Nations peoples and maritime archaeologists.

<sup>6</sup> Where two or more sub-components (e.g. water quality and sediment quality) are impacted, the text refers to the primary Environmental Component (e.g. Physical Environment) for simplicity.

ENVIRONMENTAL ASPECT	ENVIRONMENTAL COMPONENT <sup>6</sup>	ENVIRONMENTAL IMPACT	EFFECT (CONSEQUENCE EVALUATION)	PREDICTIVE UNCERTAINTY	RECOMMENDATION FOR FULL ASSESSMENT PROCESS
Artificial Light (Including routine lighting and flaring)	Ecological Environment	Light emissions from routine operations and short-term flaring may result in injury or mortality to fauna and a change in fauna behaviour (namely seabirds, shorebirds and marine reptiles), some of which may be culturally relevant species (e.g. shearwaters) or critically endangered (orange-bellied parrot). *Illuminated structures and illuminated boats have been identified as a potential barrier to migration and movement of the orange-bellied parrot.	Minor for seabirds and shorebirds <b>Moderate</b> for Orange-bellied parrot	Moderate – impacts are amenable to assessment	Undertake quantitative assessment of impacts using modelling and consult with First Nations Peoples and avifauna specialists within state and federal government departments.
	First Nations Peoples Heritage		Minor		
	Coastal Communities and Tourism	Light emissions from routine operations and short-term flaring may result in a change in the functions, interest and activities of other users and a change in aesthetic values.	Minor	Moderate – impacts are amenable to assessment	Undertake quantitative assessment of impacts using modelling and consult with local government and coastal users.
Atmospheric Emissions	Physical Environment	Emissions to atmosphere from exploration activities will result in a temporary, localised reduction of air quality within the environment immediately surrounding the emission source; and contribute to anthropogenic climate change, which is known to affect ocean acidification and deoxygenation, and the frequency and intensity of extreme weather events.	Minor	Low - impacts are well understood	Undertake quantitative assessment of predicted greenhouse gas emissions and impacts and consult with relevant First Nations Peoples, relevant state and federal government departments, federal government marine reserve managers and commercial fishers.
	Ecological Environment	Emissions to atmosphere contribute to anthropogenic climate change, which is known to affect specific species, environments, and ecosystems, some of which may be associated with conservation values and sensitivities of the Zeehan and Apollo Marine Parks.			

ENVIRONMENTAL ASPECT	ENVIRONMENTAL COMPONENT <sup>6</sup>	ENVIRONMENTAL IMPACT	EFFECT (CONSEQUENCE EVALUATION)	PREDICTIVE UNCERTAINTY	RECOMMENDATION FOR FULL ASSESSMENT PROCESS
	First Nations Peoples Heritage	Emissions to atmosphere contribute to anthropogenic climate change, which may impact cultural heritage sites and places of spiritual relevance in coastal locations due to rising sea levels.			
	Socio-economic Environment	Emissions to atmosphere contribute to anthropogenic climate change, which may affect the functions, interests, or activities to other users who rely on sensitive ecological values, such as fisheries.			
	Ecological Environment	A change in ambient noise has the potential to result in injury (auditory impairment, permanent threshold shift and temporary threshold shift) and mortality to fauna, and changes in fauna behaviour, some of which may be culturally relevant species, and changes to the values of the Zeehan and Apollo Marine Parks and West Tasmania Canyon key ecological feature.	Effects range from <b>Negligible</b> to <b>Moderate</b> (for some whale species)	Moderate – impacts are amenable to assessment	Undertake quantitative assessment of impacts using modelling of continuous and impulsive noise sources for a range of operational activities, and consult with relevant species specialists within state and federal government departments and federal government marine reserve managers.
Underwater Sound	First Nations Peoples Heritage				
	Socio-economic Environment	A change in ambient noise has the potential to result in injury (auditory impairment, permanent threshold shift and temporary threshold shift) and mortality, and changes in behaviour of commercially relevant species, and may result in aversion for divers and other marine users.	Minor	Moderate – impacts are amenable to assessment	Undertake quantitative assessment of predicted impacts and consult with relevant state and federal government departments and commercial fishers.
Planned Discharges – (Including routine and drilling discharges)	Physical Environment	Planned discharges have the potential to alter water, sediment quality and habitat composition within the operational area.	Minor	Low - impacts are well understood	Undertake qualitative assessment of impacts and consult with marine users and federal government marine reserve managers.
	Ecological Environment	Changes to water and sediment quality and habitat composition have the potential to result in injury or mortality to fauna through toxicity or smothering, and changes to the values of the Zeehan Marine Park and West Tasmania Canyon key ecological feature.			

## 3.5 Predicting the Nature and Scale of Risks

The preliminary risk assessment process consists of a desktop study conducted to identify the environmental consequences of unplanned events within the Environmental Planning Area, and to assess the likelihood of their occurrence. The results of the consequence and likelihood analysis is used to characterise the overall risk associated with the activity, and to prioritise mitigation measures and management strategies. Recommendations for further studies, including modelling, have been made where necessary to support the full environmental assessment.

Environmental risks are identified and evaluated based on the cause effect pathways that arise from the activity. This preliminary assessment provides a first pass at evaluating the significance of the environmental risk to:

- Support consultation with relevant government authorities, persons and organisations who may have functions, interest and/or activities that may be affected by the proposed activities
- Direct further assessment towards areas of more significant risk
- Inform decision making during the activity design, and
- Justify if no further assessment is required for negligible effects.

This risk assessment is designed to facilitate consultation with relevant government authorities, persons and organisations about the nature and scale of environmental risks from the activity. This preliminary assessment will be published on the Otway Consultation Hub (public website) and used in consultation with relevant persons.

### 3.5.1 Environmental Risk Evaluation

At this preliminary stage, environmental risks are assessed on the basis of a subjectively estimated level of consequence combined with an estimated likelihood of the hazard occurring – to determine an inherent risk ranking. The inherent risk ranking is indicated using shading to indicate low, medium and high ranked risks, where identified. The outcomes of the evaluation, along with recommendations to support the full assessment process, are presented in Table 3-5.

Preliminary predictions of risk have been made with legislative and other requirements in place and consideration of the existing pressures on receptors.

Table 3-5: Preliminary environmental risk evaluation

ENVIRONMENTAL ASPECT	ENVIRONMENTAL COMPONENT <sup>7</sup>	ENVIRONMENTAL RISK	EFFECT (CONSEQUENCE EVALUATION)*	LIKELIHOOD OF OCCURRENCE*	PREDICTIVE UNCERTAINTY	RECOMMENDATION FOR FULL ASSESSMENT PROCESS
Invasive Marine Species	Ecological Environment	The establishment of IMS can result in changes in ecosystem dynamics in benthic habitats and communities and changes to conservation values of the Zeehan Marine Park and West Tasmania Canyon key ecological feature.	Major	Improbable	Low - impacts are well understood	Undertake qualitative assessment of impacts and consult with commercial fishers, biosecurity specialists within state and federal government departments and federal government marine reserve managers.
	Commercial Fisheries	The establishment of IMS can result in changes in ecosystem dynamics in benthic habitats and communities resulting in a change in the functions, interest and activities of other users.				
Interactions with Marine Fauna	Ecological Environment	Interactions with marine fauna (including fish, sharks, birds, marine mammals and marine reptiles) can result in injury or mortality to fauna or changes in fauna behaviour, some of which may be culturally relevant species, and changes to the conservation values of the Zeehan Marine Park.	Minor	Remote	Low - impacts are well understood	Undertake qualitative assessment of impacts and consult with First Nations Peoples, marine fauna specialists within state and federal government departments and federal government marine reserve managers.
	First Nations Peoples Heritage					
	Water Quality		Minor	Remote		

<sup>7</sup> Where two or more sub-components (e.g. water quality and sediment quality) are at risk, the text refers to the primary Environmental Component (e.g. Physical Environment) for simplicity.

ENVIRONMENTAL ASPECT	ENVIRONMENTAL COMPONENT <sup>7</sup>	ENVIRONMENTAL RISK	EFFECT (CONSEQUENCE EVALUATION)*	LIKELIHOOD OF OCCURRENCE*	PREDICTIVE UNCERTAINTY	RECOMMENDATION FOR FULL ASSESSMENT PROCESS
Loss of Material or Waste	Ecological Environment	A loss of materials or waste overboard can cause a change in water quality, change in benthic habitat, or may lead to injury or mortality to individual marine fauna (namely birds, sharks, marine turtles and marine mammals), some of which may be culturally relevant species, through ingestion or entanglement.			Low - impacts are well understood	Undertake qualitative assessment of impacts and consult with First Nations Peoples and marine fauna specialists within state and federal government departments.
	First Nations Peoples Heritage					
	Socio-economic Environment	In the event an object is accidentally released and cannot be recovered, it may present a navigation or entanglement hazard to commercial fishers and other marine users.	Negligible	Remote		
Minor Loss of Containment	Water Quality	A minor loss of containment can cause a change in water quality that may result in injury or mortality to individual marine fauna (namely plankton including both invertebrate and fish larvae) through chemical toxicity, and changes to the conservation values of the Zeehan Marine Park.	Negligible	Rare	Low - impacts are well understood	Undertake qualitative assessment of impacts and consult with relevant state and federal government departments and federal government marine reserve managers.
	Ecological Environment					
Marine Diesel Oil Release	Physical Environment	A release of marine diesel oil can result in a change in water quality that may result in injury or mortality	Minor for most species	Remote	Moderate – impacts are	Undertake quantitative assessment of potential impacts using modelling of

Low Risk
Medium Risk
High Risk

## 4 EVALUATING IMPACTS AND RISKS

The first few steps in the process of evaluating impacts and risks are described in the following section to support consultation, primarily in the identification of opportunities to improve or better mitigate impact and risk outcomes.

### 4.1 Mitigation and Management

Once impacts and risks have been analysed, the next step in the assessment process involves the identification and evaluation of potential mitigation and management measures. Mitigation and management measures are adopted in the design and implementation of the activity to reduce environment impacts and risks. They are typically specific to the environmental setting of the activity will be informed through consultation, although may not be defined until the final details of the activity are known.

Mitigation and management measures that minimise environmental impacts and risks, or improve the accuracy of predictions, may be identified during the preliminary assessment phase, but are more likely identified through during the detailed environmental assessment phase and during consultation. There are five types of mitigation and management measures as explained below in Figure 4-1.

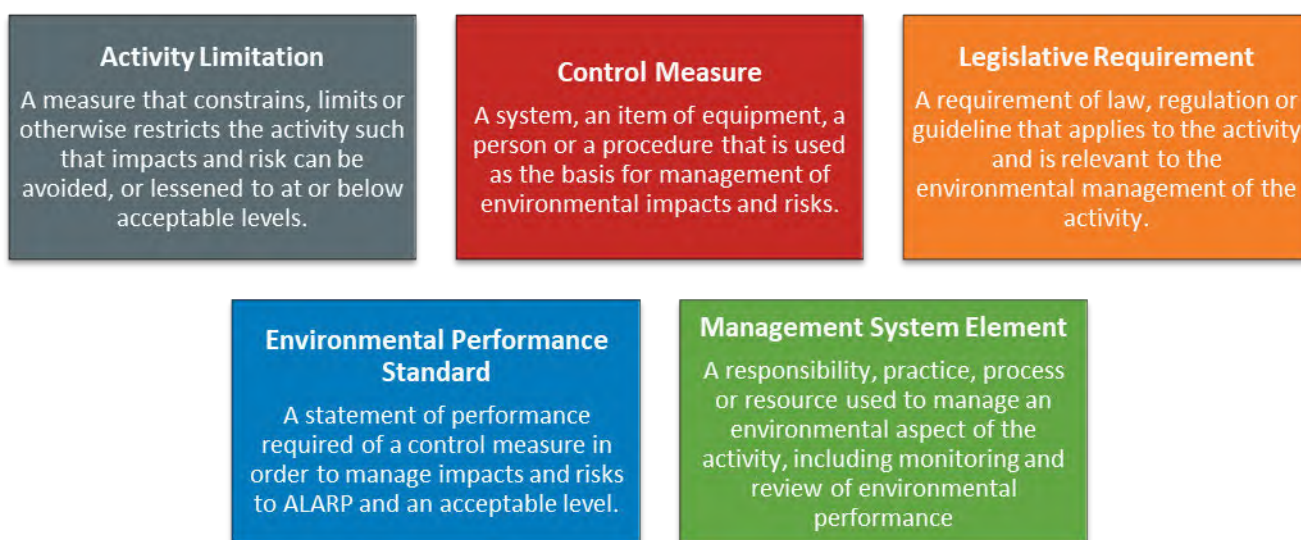

Figure 4-1: Types of mitigation and management measures

## 5 ONGOING EP DEVELOPMENT AND CONSULTATION

This preliminary impact and risk assessment is intended to support consultation regarding ConocoPhillips Australia's proposed Otway exploration drilling program in the offshore Otway Basin, off the coast of Victoria and King Island, Tasmania.

The purpose of consultation is to ensure authorities, persons and organisations that are potentially affected by the proposed activities are engaged and that their input is considered in both the development of the consultation processes and in the EP for this activity.

Consultation provides an avenue to receive information, ask questions, provide feedback, identify additional environmental values and sensitivities, and raise issues and concerns about the activity and its environmental impacts and risks. Consultation informs the identification, assessment and management of environmental impacts and risks during the development of the EP.

Consultation also informs the understanding of the environment within which the activity will take place. ConocoPhillips Australia is particularly interested to hear from individuals and organisations who may be affected by the proposed activity in the context of – people and communities, heritage values, and ecological, social and cultural features. This information provides valuable insight and local context that supports the identification, assessment and effective management of environmental impacts and risks.

This preliminary environmental impact and risk assessment represents one of number of consultation methods and communication tools that ConocoPhillips Australia is using to identify and provide sufficient information for relevant persons to make an informed assessment of the possible consequences of the activity on them.

Information on ConocoPhillips Australia's proposed approach to consultation, and updates on the development of the EP, can be found at the ConocoPhillips Australia Otway Exploration Drilling Program Consultation Hub according to the consultation timeline shown in Figure 5-1.

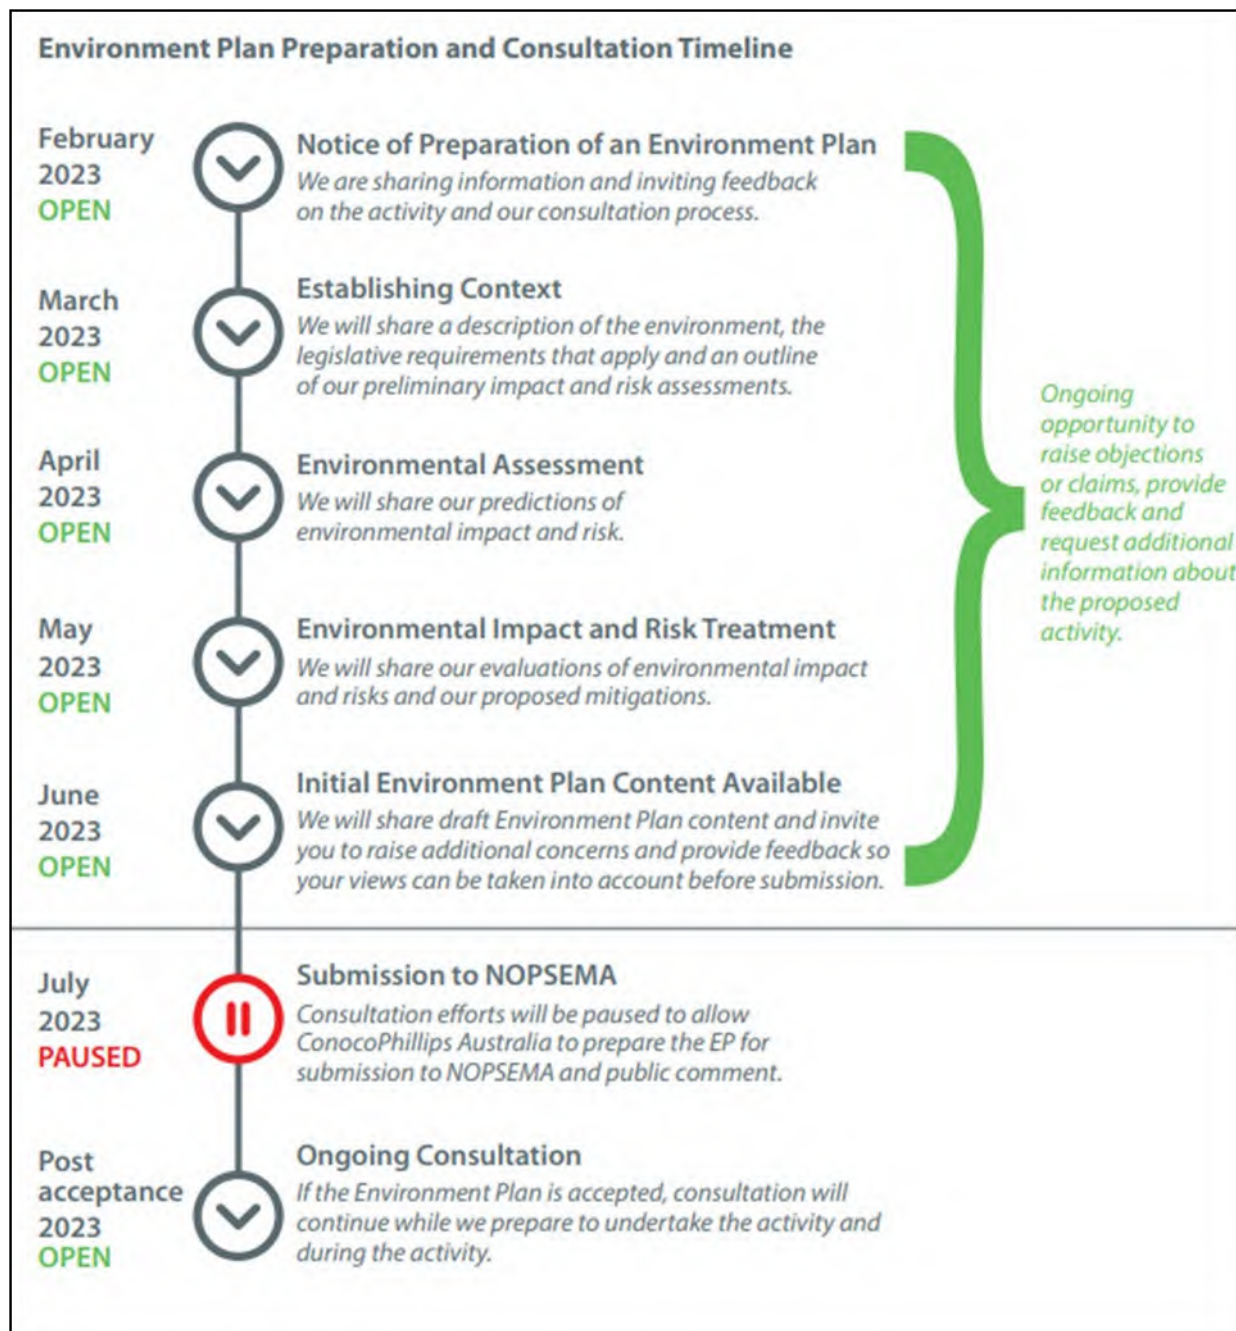

Figure 5-1: ConocoPhillips Australia's environment plan preparation and consultation timeline

## Appendix C4: First Nations Consultation Report

### 1. First Nations Consultation

#### 1.1. Overview of Requirements

First Nations groups, such as land councils and body corporates, may be relevant persons whose functions, interests, or activities could be affected by Otway Exploration Drilling Program activities. These groups may also provide advice on which other First Nations groups or individuals need to be consulted. The Native Title Act 1993 (NT Act) recognises the connection of traditional owners and demonstrates that consultation with First Nations people is possible through the communal interest they hold with their respective groups. Authorities require reasonable notice to group members, but not exhaustive communication with every person (*Tipakalippa*).

To fulfill the First Nations consultation obligation, ConocoPhillips Australia has demonstrated that First Nation groups have been afforded a reasonable opportunity to be consulted with.

#### 1.2. ConocoPhillips Australia's Understanding of First Nations Cultural Heritage

To enhance our knowledge of First Nations cultural heritage, specifically spiritual values and sensitivities, a member of the Otway Exploration Drilling Program team visited significant cultural heritage sites in Tasmania on Peerapper Country, and in Victoria on Gunditjmarra Country. While on Country, our team member was privileged to hear first-hand some of the stories associated with ancestry, song lines, totems, the significance of landscape and the connection of Country with the story of Creation, to name only a few aspects of the knowledge generously shared.

Three key learnings that contextualise the assessment of environment and potential impacts and risks of the proposed activity are:

- Country is both land and sea – there is no separation.
- Aboriginal people use song lines to guide their journeys. A song line in this context was described anecdotally by our First Nations tour guide as 'our sat(ellite) nav(igation)'.
- The story of the spiritual significance of Deen Maar, a First Nations Protected Area, was mentioned by three individual Gunditjmarra people located in Warrnambool (Eastern Maar Country) and Heywood, (Western Maar Country). Our team member learnt that Deen Maar has a strong spiritual and visual connection for Gunditjmarra Peoples as the place where Bunjil, the Creator, left this world, and traditionally, the Gunditjmarra have been buried with their heads pointed in the direction of Deen Maar.

#### 1.3. Application of the ConocoPhillips Australia Consultation Framework

In addition to the consultation approach and methodology outlined at 3.2, ConocoPhillips Australia has tailored the engagement method to the individual needs of First Nations organisations and groups where possible.

ConocoPhillips Australia's targeted approach is guided by the United Nations Declaration on the Rights of First Nations People (UNDRIP) which respects Traditional Custodians by directing consultations through their nominated representative body (referred to in UNDRIP as "their own representative institutions").

The Australian Government supports the United Nations Declaration on the Rights of Indigenous Peoples (2009).

## Appendix C4: First Nations Consultation Report

The Declaration recognises the “importance of consulting with First Nations peoples on decisions affecting them, and that respect for First Nations knowledge, cultures and traditional practices contributes to sustainable and equitable development and proper management of the environment”<sup>1</sup>. This pillar of consultation with First Nations Peoples has been reinforced throughout consultation with Prescribed Body Corporates who have requested that ConocoPhillips Australia engage with them as the representative bodies for that Traditional Custodian group (Event ID: 3788).

### 1.3.1. Understanding what Constitutes a “Reasonable Opportunity” for First Nations Peoples

Engaging with First Nations Peoples requires an understanding of the diversity of their beliefs, customs, traditions, social structures, cultural practices and histories. First Nations people have unique relationships to the land, sea and waterways and their ownership and stewardship of Country is acknowledged by ConocoPhillips Australia.

Australian law recognises that Aboriginal and Torres Strait Islander people have rights and interests in the land and sea under their traditional laws and customs.

To ensure ConocoPhillips Australia engages First Nations Peoples in a respectful and culturally appropriate manner that builds trust, facilitates genuine two-way dialogue, and establishes long-term, meaningful relationships, the following literature review was undertaken to further inform our consultation methodology:

- Sea Country: an Indigenous perspective <sup>2</sup> [Sea Country SE Regional Marine Plan Assessment Reports](#)
- Eastern Maar Meerreengeeye ngakeepoorryeeyt<sup>3</sup> (Country Plan) [EMAC](#)
- Wadawurrung Country Plan <sup>4</sup> [Paleert Tjaara Dja](#)
- First Peoples – State Relations (2022): Guidance on Engaging Traditional Owners <https://www.firstpeoplesrelations.vic.gov.au/engaging-traditional-owners>
- United Nations (2007): United Nations Declaration on the Rights of First Nations People [UN Declaration](#)
- Department of Environment, Land, Water and Planning (2019): Fact sheet 10: Partnerships with Traditional Owners [Traditional Owners Fact Sheet](#)
- Department of Climate Change, Energy, the Environment and Water (2023): *Interim Engaging with First Nations People and Communities on Assessments and Approvals under the Environment Protection and Biodiversity Conservation Act 1999* [Interim Engaging with First Nations People and Communities](#)
- Department of the Environment (2016) *Engage Early Guidance for proponents on best practice First Nations engagement for environmental assessments under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)* [Engage Early](#)
- Victorian Aboriginal Heritage Council (n/d): [Traditional Owners Caring for Country](#)
- Victorian Aboriginal Heritage Council (n/d): [Registered Aboriginal Parties](#)

This research shaped the phased approach below, which afforded First Nations people a reasonable opportunity to engage in consultation. All First Nations representative bodies were consulted in accordance with the *Native Title Act 1993*, where particular reference is made to body corporate’s facilitation functions under Part 11, Division 3.

---

<sup>1</sup> Department of the Environment (2016) *Engage Early Guidance for proponents on best practice First Nations engagement for environmental assessments under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)*

<sup>2</sup> Department of Environment and Heritage (2002): *Sea Country: an First Nations perspective* (The South-east Regional Marine Plan Assessment Reports)

<sup>3</sup> Eastern Maar Aboriginal Corporation (2015): Eastern Maar *Meerreengeeye ngakeepoorryeeyt*

<sup>4</sup> Wadawurrung Aboriginal Corporation (2019): *Paleert Tjaara Dja Let’s make Country good together 2020-2030 - Wadawurrung Country Plan*

## Appendix C4: First Nations Consultation Report

First Nations representative bodies were prompted to notify any person who the representative body is aware holds or may hold native title in relation to the land or waters, of ConocoPhillips Australia's intention to consult them (see for example Event ID 3054 and Document ID 3091). These bodies were also informed directly that ConocoPhillips Australia believes they have functions, interests or activities that may be affected by the potential impacts of the activity and asked about their preferred format of consultation (see for example Event ID 2949, Event ID 1932 and Document ID 2360, Event ID 2817 and Document ID 2944, and Event ID 2778 and Document ID 2875).

### 1.3.2. Adopting a phased approach

ConocoPhillips Australia ran a parallel consultation process for public consultation and consultation with relevant persons (see Figure 3-3 Consultation framework for the Otway Exploration Drilling Program in consultation chapter). First Nations organisations and people had the opportunity to participate in the community-based public awareness-raising activities, which included 15 widely advertised local community information sessions and three webinars. First Nations organisations and people could also choose to participate in the relevant persons consultation process that was further refined to support meaningful dialogue about First Nations cultural heritage and ways to protect environmental values and sensitivities.

To do this, ConocoPhillips Australia first sought to understand the interests, activities and functions that may be affected, as well as expectations and preferences for consultation, in recognition of the right of First Nations people to speak for and manage Sea Country (see for example Event ID's 3054, 1932, 3809 and 2778).

A personal written invitation to participate in the co-design of a consultation process that would achieve mutually beneficial outcomes, including the protection of cultural heritage, was sent to the CEOs of all registered First Nations Corporations at the outset. Key messages included ConocoPhillips Australia's commitment to:

- Engaging early and endeavouring to develop a strong working relationship.
- Ensuring that the intent of consultation (inform/negotiate) was clear from the outset.
- Genuinely seeking input and expertise from the local First Nations community.

The invitation letter was then followed up multiple times and in multiple ways, including an additional follow-up registered letter for primary stakeholders offering to meet on Country, SMS messages to mobile phones (if contact details were known), private messages on online social networking platforms when connection requests were accepted, and physical visits.

A phased approach supports best-practice for engagement, namely, 'engage early and often'<sup>5</sup> throughout the life of the activity. The phased First Nations consultation approach during the development of the Environment Plan is depicted in Figure 1-1 below.

---

# Appendix C4: First Nations Consultation Report

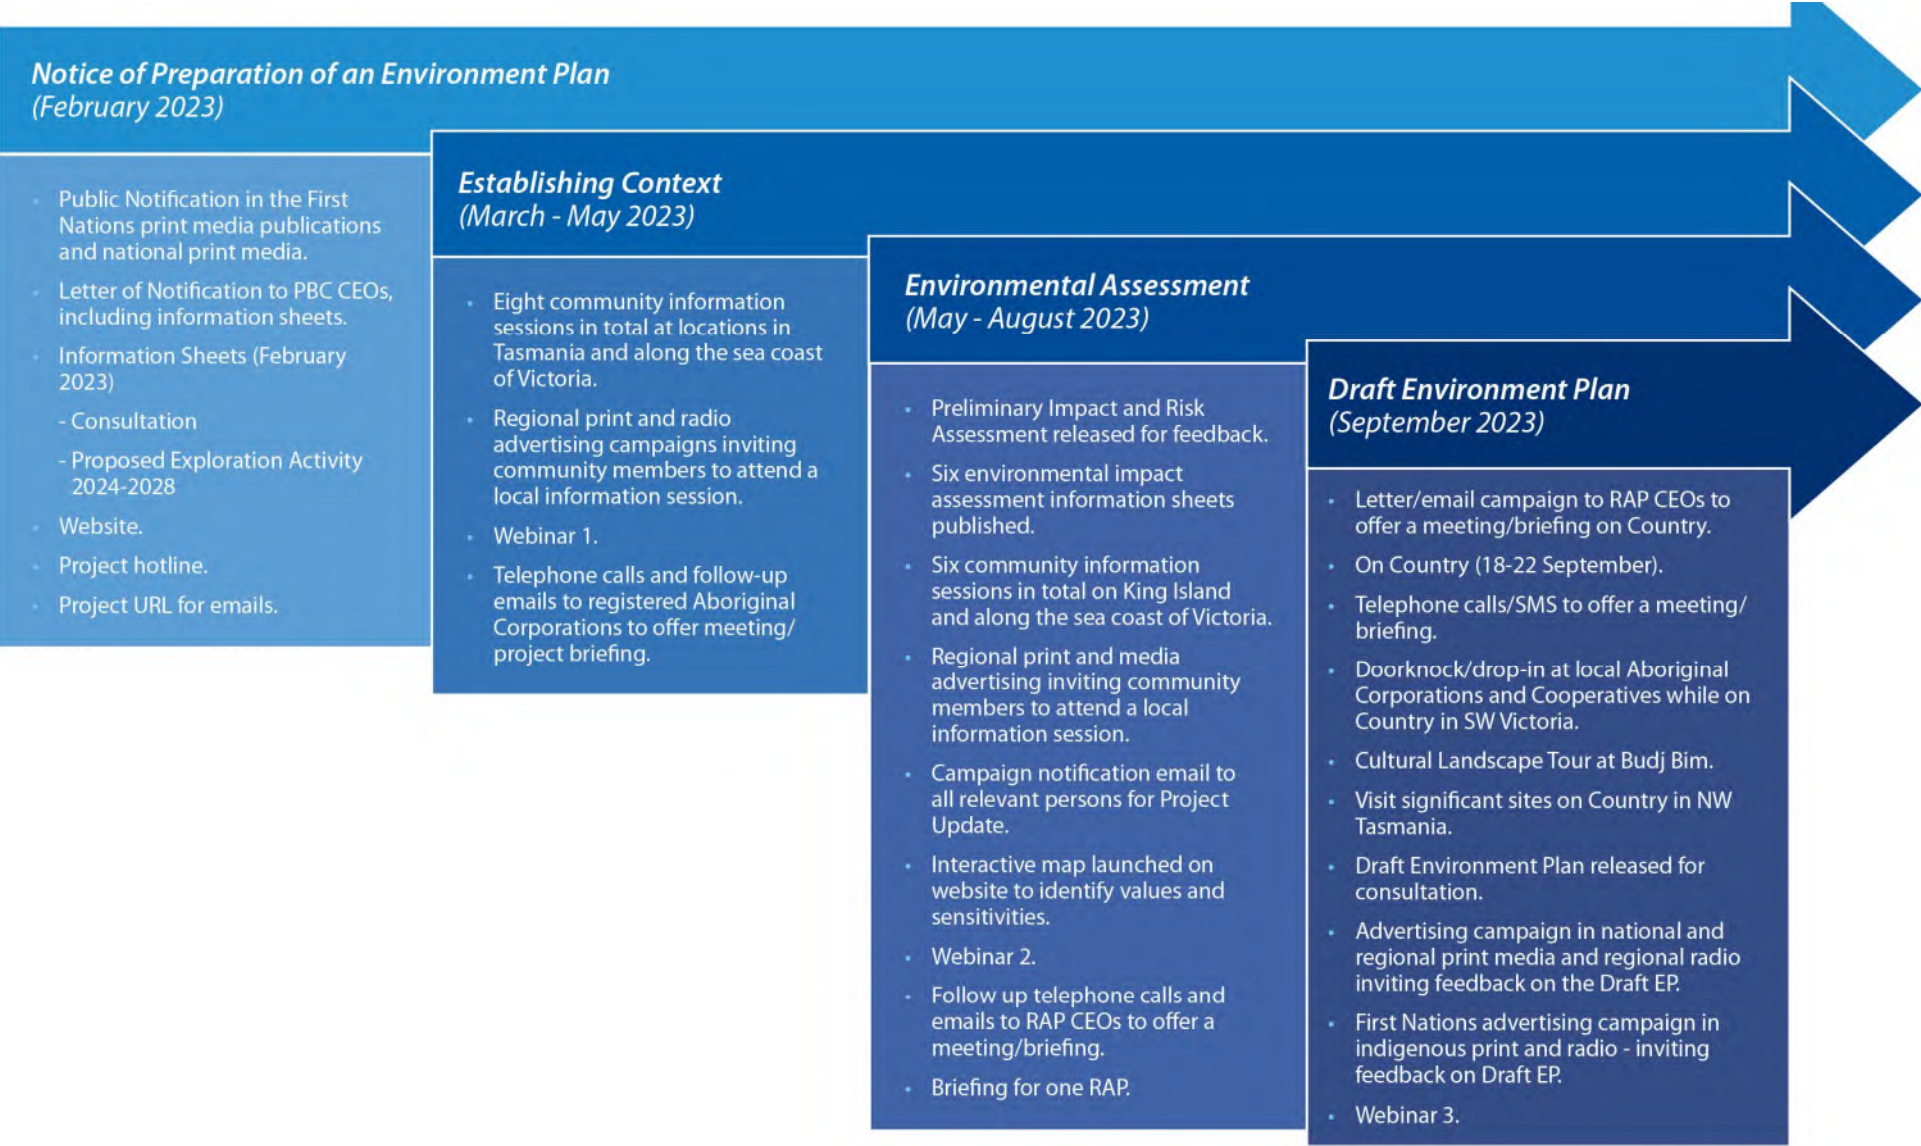

Figure 1-1: Phased consultation approach

## Appendix C4: First Nations Consultation Report

### 1.4. Relevant Person Identification

The tailored, phased approach used by ConocoPhillips Australia allowed for the broad identification of First Nations relevant persons.

#### 1.4.1. Sufficiently Broad Capture of First Nations People and Information

The following desktop research was undertaken to identify First Nations people and information within the primary and secondary stakeholder areas:

- ConocoPhillips Australia commissioned a cultural heritage specialist (Biosis) to explore regional cultural heritage and cultural heritage landscapes to support a grounding in Aboriginal cultural heritage including Country and Sea Country. The intent of the commissioned study, included in Appendix L, was to form the basis for gaining an understanding of cultural values and sensitivities, to inform consultation and support the preparation of the Environment Plan.
- Visited the local government authority websites (the shire or municipal council) who often include acknowledgement of the local traditional owners.
- Searched State government websites for information about Traditional Owners in their jurisdictions, especially in the context of information about local offices.
- Searched online for states' Aboriginal and Torres Strait Islander consultative bodies, which themselves might offer advice.
- Contacted land councils representing the local Aboriginal or Torres Strait Islander communities.
- Conducted online searches for First Nations Prescribed Body Corporates at [Office of the Registrar of First Nations Corporations \(ORIC\)](#).
- Conducted online search for Victoria's Registered Aboriginal Parties at <https://www.aboriginalheritagecouncil.vic.gov.au/victorias-current-registered-aboriginal-parties>
- Identified First Nations Protected Areas (IPA) and relevant IPA Programs for Sea Country by searching online at [https://www.niaa.gov.au/First Nations-affairs/environment/First Nations-protected-areas-ipas](https://www.niaa.gov.au/First-Nations-affairs/environment/First-Nations-protected-areas-ipas)
- Identified contact details for Victoria's Registered Aboriginal Parties by searching online at <https://www.aboriginalheritagecouncil.vic.gov.au/victorian-aboriginal-heritage-council-annual-report-2019-2020-0/victorias-registered-aboriginal>
- Used the interactive mapping tool at <https://achris.vic.gov.au/weave/wca.html> to identify Victoria and South Australia's First Nations Peoples.
- Sought contact details of NSW Aboriginal Land Councils at [https://alc.org.au/land\\_council/](https://alc.org.au/land_council/)
- Searched Aboriginal Heritage Councils in Victoria and Tasmania at <https://www.aboriginalheritagecouncil.vic.gov.au/victorias-current-registered-aboriginal-parties> and [Council Home \(aboriginalheritage.tas.gov.au\)](https://www.aboriginalheritage.tas.gov.au) respectively.
- Searched NSW Aboriginal Land Council for list of Local Aboriginal Land Councils in Southern Zone, and contact details for chairpersons at <https://alc.org.au/>
- Identified First Nations Peoples within the EMBA using the map of First Nations Australia at [https://aiatsis.gov.au/explore/map-First Nations-australia](https://aiatsis.gov.au/explore/map-First-Nations-australia)

Once these people and information were identified, advertising in First Nations media was used to support Public Notices about consultation at the start of consultation in February 2023, and again August and September 2023 (see Appendix C3 tear sheets, for example Aug 23 National Indigenous Times), when the Draft Environment Plan was released for consultation.

#### 1.4.2. Identifying specific First Nations Groups

Local First Nations groups may have specific cultural or spiritual functions, interests and activities that could be affected by the activity proposed within the spatial extent of the environmental planning area.

## Appendix C4: First Nations Consultation Report

A spatial overlay was used to map and identify the First Nations Groups, such as Registered Aboriginal Parties, Aboriginal Corporations and Native Title Land Councils that may have environmental values and sensitivities within the environmental planning area, or have connections to Sea Country (all estuaries, beaches, bays, and marine areas collectively, within a traditional estate).

On this basis, primary stakeholders are those who may be affected by the proposed activity and within physical proximity of it. Secondary stakeholders are those who are located at increased distances from the activity area and are unlikely to be directly impacted by it.

The priority areas for consultation with First Nations were:

- Primary Stakeholder area (Victoria) – the area directly surrounding the proposed permit areas and adjacent coastlines (Table 1-1).
- Secondary Stakeholder area – the wider area affected by the modelling of oil spills (Table 1-2).
- Primary Stakeholder area (Tasmania) – North and Northwest Tasmania and the Bass Strait islands (Table 1-3).

**Table 1-1: Primary stakeholders in Victoria**

Aboriginal Group	Representative Body
<b>Gunditjmara</b>	Gunditj Mirring Traditional Owners Aboriginal Corporation (GMTOAC)
<b>Eastern Maar</b>	Eastern Maar Aboriginal Corporation (EMAC)

**Table 1-2: Secondary stakeholders in Victoria**

Aboriginal Group	Representative Body
<b>Wadawurrung</b>	Wadawurrung Traditional Owners Aboriginal Corporation (Wadawurrung)
<b>Bunurong</b>	Bunurong Land Council Aboriginal Corporation (Bunurong)
<b>Gunaikurnai</b>	Gunaikurnai Land and Waters Aboriginal Corporation (GLAWAC)

In the absence of Registered Aboriginal Parties in Tasmania, ConocoPhillips Australia recognises the coastal language groups listed in Table 3 below. (see full details of this at Event ID: 3431 Meeting on Country and Document ID: 3916 Meeting Notes).

**Table 1-3: Coastal Language Groups in Tasmania in the north and northwest (after AIATSIS)**

Language Group	Heading
<b>Pyemairrener</b>	Northeast Tasmania
<b>Tyerrernotepanner</b>	Central north Tasmania
<b>Tomeginne</b>	
<b>Peerapper</b>	Western Coast Tasmania

### 1.5. First Nations Relevant Persons Identified

Table 1-4 below outlines each identified First Nations relevant person, their relevance to the proposed activity, ConocoPhillips Australia's rationale for engagement (such as referrals from other organisations) and a brief outline of their invitation to participate in the consultation process.

## Appendix C4: First Nations Consultation Report

## Appendix C4: First Nations Consultation Report

First Nations (Orgs)	Relevance to Activity	Rationale for Engagement	Invitation to participate
<b>First Nations Peoples/Groups</b>			
Aboriginal Land Council of Tasmania	The Aboriginal Land Council of Tasmania is the statutory body, established by law to own returned land on behalf of Tasmania's Aboriginal Community. The Aboriginal Lands Act (1995) sets out the establishment, election, and purpose of the Aboriginal Land Council of Tasmania.	The Aboriginal Land Council of Tasmania is governed by a board of eight Aboriginal people, elected in a Tasmanian Electoral Commission election that is open to all people on the Aboriginal electors roll. The Council includes two representatives from each of the South, North and North West regions and one each from truwana/Cape Barren Island and Flinders Island. The Aboriginal Land Council of Tasmania has functions, interests and activities that overlap the OA (Operational Area) and the wider EMBA (Environment that May be Affected) which may be impacted in the unlikely event of a loss of well control.	Registered letter sent to CEO advising that ALCT has been identified as a relevant person (the organisation and Members) and explaining the consultation process. Letter included a statement that ConocoPhillips Australia is seeking to understand their interests, activities and functions relating to the title areas, as well as their expectations and preferences for consultation, in recognition of their right to speak for and manage their own Sea Country. Recent project updates and a copy of the NOPSEMA consultation brochure also included.
Ballawinne Aboriginal Corporation (TAS)	Ballawinne Aboriginal Corporation (BAC) is a not-for-profit community organization based in Huonville, Tasmania, 38kms south of Hobart.	The BAC is an active Indigenous corporation with strong connections to other First Nations groups across Tasmania. While highly unlikely to be impacted, BAC is located within the EMBA. The members identify with Song Lines and BAC have asked to be kept informed.	Outgoing email to CEO with personalised letter attached advising that BAC has been identified as a relevant organisation for the proposed Otway Offshore Exploration Drilling Program. Two information sheets also attached that outline the proposed activity and a proposed consultation approach for BAC to consider.
Batemans Bay Local Aboriginal Land Council (NSW)	Representative First Nations organization located in coastal NSW.	The Batemans Bay Local Aboriginal Land Council (BBLALC) is a registered member of the NSW Aboriginal Land Council and one of 120 similar organisations that comprise a network that cover the NSW landmass. Its functions include the creation of an economic base for the local Aboriginal community, as well as the continued passing and enhancement of Aboriginal culture, identity and heritage through the management of traditional sites and other cultural materials. As such, the BBLALC has functions,	Registered letter sent to CEO advising that Batemans Bay LALC has been identified as a relevant organisation for the proposed Otway Offshore Exploration Drilling Program and inviting participation in consultation. Three project information sheets included, plus Regulator's brochure about consultation.

		interests and activities in the wider EMBA which may be impacted in the unlikely event of a loss of well control.	
Bega Local Aboriginal Land Council (NSW)	Representative First Nations organization located in coastal NSW.	The Bega Local Aboriginal Land Council is a registered member of the NSW Aboriginal Land Council and one of 120 similar organisations that comprise a network that cover the NSW landmass. Its functions include the creation of an economic base for the local Aboriginal community, as well as the continued passing and enhancement of Aboriginal culture, identity and heritage through the management of traditional sites and other cultural materials. As such, the Bega Local Aboriginal Land Council has functions, interests and activities in the wider EMBA which may be impacted in the unlikely event of a loss of well control.	Registered letter sent to CEO advising that Bega LALC has been identified as a relevant organisation for the proposed Otway Offshore Exploration Drilling Program and inviting participation in consultation. Three project information sheets included, plus Regulator's brochure about consultation.
Bodalla Local Aboriginal Land Council (NSW)	Representative First Nations organisation located in coastal NSW.	The Bodalla Local Aboriginal Land Council (BLALC) is a registered member of the NSW Aboriginal Land Council and one of 120 similar organisations that comprise a network that cover the NSW landmass. Its functions include the creation of an economic base for the local Aboriginal community, as well as the continued passing and enhancement of Aboriginal culture, identity and heritage through the management of traditional sites and other cultural materials. As such, the BLALC has functions, interests and activities in the wider EMBA which may be impacted in the unlikely event of a loss of well control.	Registered letter sent to CEO advising that Bodalla LALC has been identified as a relevant organisation for the proposed Otway Offshore Exploration Drilling Program and inviting participation in consultation. Three project information sheets included, plus Regulator's brochure about consultation.
Brumby Hill Aboriginal Corporation (TAS)	First Nations employment organisation located at Smithton in NW Tasmania.	Incorporated on the 13th of January 2017, Brumby Hill Aboriginal Corporation offers a holistic service to meet the employment needs of indigenous people in Tasmania.	Outgoing email with personalised letter to CEO attached advising that BHAC has been identified as a relevant organisation for the proposed Otway Offshore Exploration Drilling Program. Two information sheets

Winda Mara Aboriginal Corporation (VIC)	Registered community-owned Aboriginal Corporation on West Gunditjmara Country.	Winda-Mara Aboriginal Corporation (Winda-Mara) is a community-controlled organisation. Winda-Mara was established in 1991 as a result of members within the community wanting to provide better health, education and employment opportunities for Aboriginal and Torres Strait Islander people living in the area and have a strong membership base. Winda-Mara has functions, interests and activities that overlap the wider EMBA which may be impacted in the unlikely event of a loss of well control.	Meeting with Chairperson of WMAC to provide briefing about OEDP.

## Appendix C4: First Nations Consultation Report

### **1.6. Ongoing Consultation with First Nations Peoples**

ConocoPhillips Australia's methodology for ongoing consultation (see 10.2.5.1 Ongoing Consultation with First Nations Peoples) supports a process of constantly seeking further environmental knowledge to improve our impact assessments over time, including the requirement to adapt our environmental management approach if new information is provided.

Underpinning our commitment to a collaborative process for ongoing consultation that will have mutually beneficial outcomes and recognising that First Nations People hold the solutions for caring for Country, ConocoPhillips Australia will partner with First Nations People to implement a Cultural Heritage Protection Program, which addresses the protection of Sea Country and includes the co-design of measures that will sufficiently protect the cultural features of the environment.

## Appendix C5: Commercial Fishers Consultation Report

### 1. Commercial Fishers Consultation

ConocoPhillips Australia commercial fishing measures were identified and informed through engagement with commercial fishers and their representative organisations who operate in the activity area. The process followed the fundamentals underpinning ConocoPhillips Australia's consultation efforts but allowed for a tailored approach to achieve a broad capture of fishers and fisheries, unique engagement and project planning, and provision of sufficient information specific to the stakeholders needs.

This process also facilitated two-way information sharing between ConocoPhillips Australia and the relevant persons, allowing the activity to be co-designed with measures in place to minimise any potential impacts.

#### 1.1. Application of the ConocoPhillips Australia Consultation Framework & Principles of Guidance framework

In addition to the consultation framework and methodology outlined at 2.2, ConocoPhillips Australia has tailored and co-designed the engagement method to the individual needs of commercial fishers and their relevant organisations. The guidance framework, published by DSIR, NOPSEMA, DAFF and AFMA in February 2023 to help drive improved cooperation between the offshore petroleum industry and the fishing industry, was also considered.

Commercial Fishers, as with all relevant persons, were empowered throughout the process to determine how they were engaged with. This included nominating methods of engagement and requesting their consultation be through a specific representative body.

Other co-design considerations made include holding three dedicated Commercial Fishers round table discussions in the requested fishing ports (King Island, Warrnambool and Portland), postponing the date of a planned communication session due to consultation fatigue, and ensuring new dates were inclusive of representative organisations visits to the area.

Multiple attempts at communication were undertaken, using the contact information held for the fisher. For Commonwealth fishers, if email contact remained unsuccessful a registered letter was sent stating why Conoco Phillips Australia considered they may be a relevant person, enclosing an assessment of the potential environmental impact and risks to their activity, and the control measures identified and implemented (where appropriate). They were informed they would not be included further in relevant persons engagement but could respond and be engaged with if they wished to be. These 246 persons were categorised as 'Methodology Met – not relevant' and therefore are not included in the record of Relevant Persons Consultation.

#### 1.2. Identification and Broad Capture of Commercial Fishers and Information

A methodology allowing broad capture of commercial fishers was implemented at the start of the consultation process, achieved by using both general community and industry specific tools. In the wider community the activity was advertised in print and online media, radio and television, and community information sessions, in which relevant persons were encouraged to self-identify. An activity website was created, containing resources such as an interactive map, document library, survey to establish relevancy, and a Q&A page with a dedicated section on potential impacts on commercial fishers. Key messaging promoted network information sharing and encouraged stakeholders to refer other potentially relevant persons. A comprehensive information sheet (ABU2-000-EX-RO1-D-00012), detailing activity information, a summary of the assessment of commercial fishing, potential effects and interactions on fishing operations, and a Q&A, was distributed in the wider community and during meetings with local fishing co-operatives, to provide a further opportunity for informed assessment of relevancy.

Concurrently, relevant associations for state fisheries were identified, contacted, and engaged on a fee-for-service arrangement, providing project information and updates, and facilitating information exchange with their members. This reduced consultation fatigue and facilitated sharing of activity and Community

## Appendix C5: Commercial Fishers Consultation Report

Information session details with both their members, and within local fishing community's social media pages (Screenshot\_SIV\_FB\_Notice\_230712).

A database of commonwealth fishers contact details were obtained via AFMA, and fishers contacted by email and then if required, registered post. Service organisations related to the commercial fishing industry were also contacted and invited to engage.

This broad, dual approach allowed for identification and information distribution, which promoted self-identification of commercial fishers.

### 1.3. Provision of Sufficient Relevant Information and Time

Following the NOPSEMA guidelines of early and genuine consultation, in-person and online meetings with commercial fishing representative organisations began in November of 2022, to discuss fee-for-service arrangements, provide a project overview and to receive feedback on the planned consultation approach. Following this feedback, industry specific information was provided to commercial fishers during initial stages of consultation in February 2023, to allow for assessment of potential impacts and co-design of engagement and activity. This included the comprehensive Commercial fishing information sheet, which captured the following:

- Summary of activity
- Key Information
- Map and coordinates, with local fishing ports labelled
- Assessment of Commercial Fishing
- Potential Effects on day-to-day Fishing Operations
- Potential interactions with commercial fishing
- Q and A's
- Contact information

Round table and individual meetings with commercial fishers were held to facilitate information sharing. Continued meetings with representative bodies were also organised, providing them and their stakeholders information required, or requested, allowing for informed decision making and feedback.

This process has provided ConocoPhillips Australia the information required to minimise any potential impacts by putting carefully considered, and stakeholder reviewed, measures in place.

---

## APPENDIX D     SENSITIVE INFORMATION REPORT

### Appendix D: Sensitive Information Part (16(b)(iv))

- To comply with sub-regulation 9(8) of the OPGGS(E)R, the full text of all responses by relevant individuals engaged under reg 11A and any other sensitive information (if applicable) must be included in a sensitive information report.
- This report satisfies the remainder of regulation 16 and sub-regulation 9(8) by containing full text responses by relevant persons and any additional sensitive information. This report will not be published.

## Figures

Figure 1.1	T/49P hydrocarbon spill modelling release locations.....	1
Figure 1.2	Examples of four individual spill trajectories (four replicate simulations) predicted by SIMAP for a spill scenario. The frequency of contact with given locations is used to calculate the probability of impacts during a spill. Essentially, all model runs are overlain (shown as the stacked runs on the right) and the number of times that trajectories contact a given location at a concentration is used to calculate the probability. ....	2
Figure 1.3	Example of an individual spill trajectory predicted by SIMAP for a spill scenario. Note, this image represents surface oil as spill and does not take any thresholds into consideration. ....	3
Figure 3.1	HYCOM averaged seasonal surface drift currents during summer (upper image) and winter (lower image). ....	6
Figure 3.2	Sample of the model grid used to generate the tidal currents for the study region. Higher resolution areas are shown by the denser mesh. ....	8
Figure 3.3	Bathymetry defined throughout the tidal model domain. ....	8

## TERMS AND ABBREVIATIONS

Actionable oil	Oil which is thick enough for the effective use of mitigation strategies
AMSA	Australian Maritime Safety Authority
API	American Petroleum Institute gravity. A measure of how heavy or light a petroleum liquid is compared to water.
Bonn Agreement	An agreement for cooperation in dealing with pollution of the North Sea by oil and other harmful substances, 1983, includes: Governments of the Kingdom of Belgium, the Kingdom of Denmark, the French Republic, the Federal Republic of Germany, the Republic of Ireland, the Kingdom of the Netherlands, the Kingdom of Norway, the Kingdom of Sweden, the United Kingdom of Great Britain and Northern Ireland and the European Union.
BP	Boiling point. The temperature at which the vapor pressure of the liquid is equal to the pressure exerted on it by the surrounding atmosphere
BTEX	Benzene, toluene, ethylbenzene, and xylenes
Decay	The process where oil components are changed either chemically or biologically (biodegradation) to another compound. It includes breakdown to simpler organic carbon compounds by bacteria and other organisms, photo-oxidation by solar energy, and other chemical reactions.
Deterministic (single) spill modelling	Oil spill modelling involving a computer simulation of a single hypothetical oil spill event subject to a single sequence of wind, current and other sea conditions over time. Single oil spill modelling, also referred to as “deterministic modelling” provides a simulation of one possible outcome of a given spill scenario, subject to the metocean conditions that are imposed. Single oil spill modelling is commonly used to consider the fate and effects of ‘worst-case’ oil spill scenarios that are carefully selected in consideration of the nature and scale of the offshore petroleum activity and the local environment (NOPSEMA, 2017). Because the outcomes of a single oil spill simulation can only represent the outcome of that scenario under one sequence of metocean conditions, worst-case conditions are often identified from stochastic modelling. It is impossible to calculate the likelihood of any outcome from a single oil spill simulation. Single oil spill modelling is generally used for response planning, preparedness planning and for supporting oil spill response operations in the event of an actual spill
Dynamic viscosity	The dynamic viscosity of a fluid expresses its resistance to shearing flows, where adjacent layers move parallel to each other with different speeds.
Floating oil exposure	Contact by floating oil on the sea surface at concentrations equal to or exceeding defined threshold concentrations. The consequence will vary depending on the threshold and the receptors
GODAE	Global Ocean Data Assimilation Experiment
HYCOM	Hybrid Coordinate Ocean Model. A data-assimilative, three-dimensional ocean model
HYDROMAP	Advanced ocean/coastal tidal model used to predict tidal water levels, current speed and current direction.
ITOPF	International Tanker Owners Pollution Federation Limited
MAHs	Monoaromatic hydrocarbons
MMA	Marine Management Area
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
PAH	Polynuclear aromatic hydrocarbons
Pour point	The pour point of a liquid is the temperature below which the liquid loses its flow characteristics
Ramsar site	A site listed under the Ramsar Convention on wetlands which is an international intergovernmental treaty that provides the framework for the conservation and wise use of wetlands and their resources.

## REPORT

---

Shoreline accumulation	Arrival of oil at or near shorelines at on-water concentrations equal to or exceeding defined threshold concentrations. Shoreline contact is judged for floating oil arriving within a 2 km buffer zone from any shoreline as a conservative measure
SIMAP	Spill Impact Model Application Package. SIMAP is designed to simulate the fate and effects of spilled hydrocarbons for surface or subsea releases
Stochastic (multiple) spill modelling	Stochastic oil spill modelling is created by overlaying and statistically analysing the outcomes of many single oil-spill simulations of a defined spill scenario, where each simulation was subject to a different sequence of metocean conditions, selected objectively (typically by random selection) from a long sequence of historic conditions for the study area. Analysis of this larger set of simulations provides a more accurate indication of the environment that maybe affected (EMBA) and indicates which locations are more likely to be affected (as well as other statistics). Stochastic oil spill modelling avoids biases that affect single oil spill modelling (due to the reliance on only one possible sequence of conditions). However, when interpreting stochastic modelling, which is based on a wide range of potential conditions that might happen to occur, it is essential to understand that calculations will encompass a much larger area than could be affected in any single spill event, where a more limited set of conditions will occur. Consequently, it is misleading to imply that the region derived from stochastic modelling indicate the outcomes expected from a single spill event (NOPSEMA, 2017) Stochastic modelling is generally used for risk assessment and preparedness planning by indicating locations that could be exposed and may require response or subsequent impact assessment
World Ocean Atlas	A collection of objectively analysed quality controlled physicochemical parameters (e.g. temperature, salinity, oxygen, phosphate, silicate, and nitrate) based on profile data from the World Ocean Database established by NOAA's National Centers for Environmental Information (NCEI)

## EXECUTIVE SUMMARY

### Background

ConocoPhillips Australia SH1 Pty Ltd (ConocoPhillips) is considering an exploration drilling campaign in Permit T/49P in Commonwealth waters. The closest points of the permit area are 23.5 km from the west coast of King Island and 26 km from the Victorian coast. Water depths in the permit area range from 70 m to 1,000 m, with approximately 90% of the survey area being in water depths less than 150 m.

To support the environmental approvals, an additional oil spill modelling study was undertaken to assess the potential exposure from a 350 m<sup>3</sup> release of Marine Diesel Oil (MDO) over 6 hours due to a loss of containment following a vessel collision. The oil spill modelling used the same three locations as the recent subsea loss of well control (LOWC) study.

The study assessed the potential risk of exposure to the surrounding waters and shorelines for two seasons, summer months (October to March) and winter conditions (April to September). This approach assists with identifying the environmental values and sensitive regions/receptors that would be at risk of exposure on a seasonal basis, given the dominant winds and water currents that vary among the seasons.

One of the purposes of the modelling is to define the 'outer boundaries' of the environment that may be affected (EMBA) in the unlikely event of a hydrocarbon release scenario. Therefore, the modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill.

The spill modelling was performed using an advanced three-dimensional trajectory and fates model; Spill Impact Model Application Package (SIMAP). The SIMAP model calculates the transport, spreading, entrainment and evaporation of spilled hydrocarbons over time, based on the prevailing wind and current conditions and the physical and chemical properties.

### Methodology

The modelling study was carried out in stages. Firstly, a 10-year current dataset (2010 – 2019) that includes the combined influence of large-scale ocean and nearshore tidal currents were prepared. Secondly, the currents, local winds and detailed hydrocarbon characteristics were used as inputs in the three-dimensional oil spill model (SIMAP) to simulate the drift, spread, weathering and fate of the spilled hydrocarbons.

Modelling was conducted using a stochastic approach, which involved running 100 spills for each season, for each scenario and location with each simulation having the same information (i.e. location volume and oil properties) but randomly selected start times to ensure a range of wind and current conditions were assessed. Once all 100 simulations were run for a given scenario and location, the results were combined to determine the seasonal exposure to the surrounding waters, shorelines and sensitive receptors based on the thresholds outlined in the NOPSEMA Oil Spill Modelling Bulletin (NOPSEMA 2019).

### Hydrocarbon Properties

The MDO used in this study has a density of 829.1 kg/m<sup>3</sup> (API gravity of 37.6) and a dynamic viscosity of 4.0 cP at 25°C. The MDO is characterised by a high percentage of volatile components (95%), which will evaporate when on the sea surface. It also contains 5% persistent hydrocarbons, which will not evaporate, though will decay over time. Additionally, the MDO classified as a Group II light persistent oil. It is important to note that some heavy components contained in MDO have a strong tendency to physically entrain into the upper water column in the presence of moderate winds (i.e. >12 knots) and breaking waves but can re-float to the surface when the winds ease.

## Key Findings

### Location 1

- The maximum distance from the release location to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 49.8 km (winter), 15.5 km (summer) and 4.0 km (summer), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during winter at 12%, while the minimum time before shoreline accumulation at the low threshold was 4.25 days predicted during winter. The maximum total volume of oil ashore was predicted during the winter with 8.2 m<sup>3</sup>.
- The maximum distance from the release location to the low (10 ppb) and moderate (50 ppb) dissolved hydrocarbon exposure thresholds was 92 km (winter) and 12 km (summer), respectively. No exposure at the high (400 ppb) threshold was predicted.
- The maximum distance from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 648 km (winter) and 148 km (winter), respectively.

### Location 2

- The maximum distance from the release location to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 42.7 km (winter), 19.2 km (summer) and 5.2 km (summer), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during winter at 68%, while the minimum time before shoreline accumulation at the low threshold was 1.50 days predicted during winter. The maximum total volume of oil ashore was predicted during the winter with 47.4 m<sup>3</sup>.
- The maximum distance from the release location to the low (10 ppb) and moderate (50 ppb) dissolved hydrocarbon exposure thresholds was 89 km (winter) and 13 km (summer), respectively. No exposure at the high (400 ppb) threshold was predicted.
- The maximum distance from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 356 km (winter) and 150 km (winter), respectively.

### Location 3

- The maximum distance from the release location to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 60.0 km (winter), 28.3 km (winter) and 4.7 km (summer), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during winter at 33%, while the minimum time before shoreline accumulation at the low threshold was 2.29 days predicted during winter. The maximum volume of oil ashore was predicted during the winter with 28.8 m<sup>3</sup>.
- The maximum distance from the release location to the low (10 ppb) and moderate (50 ppb) dissolved hydrocarbon exposure thresholds was 94 km (winter) and 15 km (summer), respectively. No exposure at the high (400 ppb) threshold was predicted.

## REPORT

---

- The maximum distance from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 497 km (winter) and 157 km (winter), respectively.

# 1 BACKGROUND

## 1.1 Introduction

ConocoPhillips Australia SH1 Pty Ltd (ConocoPhillips) is considering an exploration drilling campaign in Permit T/49P, in Commonwealth waters. The closest points from the permit area are the west coast of King Island (23.5 km east) and Victorian coastline (26 km north). Water depths in the permit area range from 70 m to 1,000 m, with approximately 90% of the survey area being in water depths less than 150 m.

To support the environmental approvals, Xodus on behalf of ConocoPhillips had commissioned RPS to undertake an additional oil spill modelling study, which assessed the potential exposure from a 350 m<sup>3</sup> release of Marine Diesel Oil (MDO) over 6 hours due to a loss of containment following a vessel collision.

The oil spill modelling used the same three locations as the recent subsea loss of well control (LOWC) study, and Table 1.1 presents the coordinates of the release locations and Figure 1.1 is the location map.

The potential exposure to the surrounding waters and shorelines were assessed for summer (October to March) and winter (April to September) seasons.

One of the purposes of the modelling is to define the 'outer boundaries' of the environment that may be affected (EMBA) in the unlikely event of a hydrocarbon release scenario. Therefore, the modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill.

The spill modelling was performed using an advanced three-dimensional trajectory and fates model; Spill Impact Model Application Package (SIMAP). The SIMAP model calculates the transport, spreading, entrainment and evaporation of spilled hydrocarbons over time, based on the prevailing wind and current conditions and the physical and chemical properties.

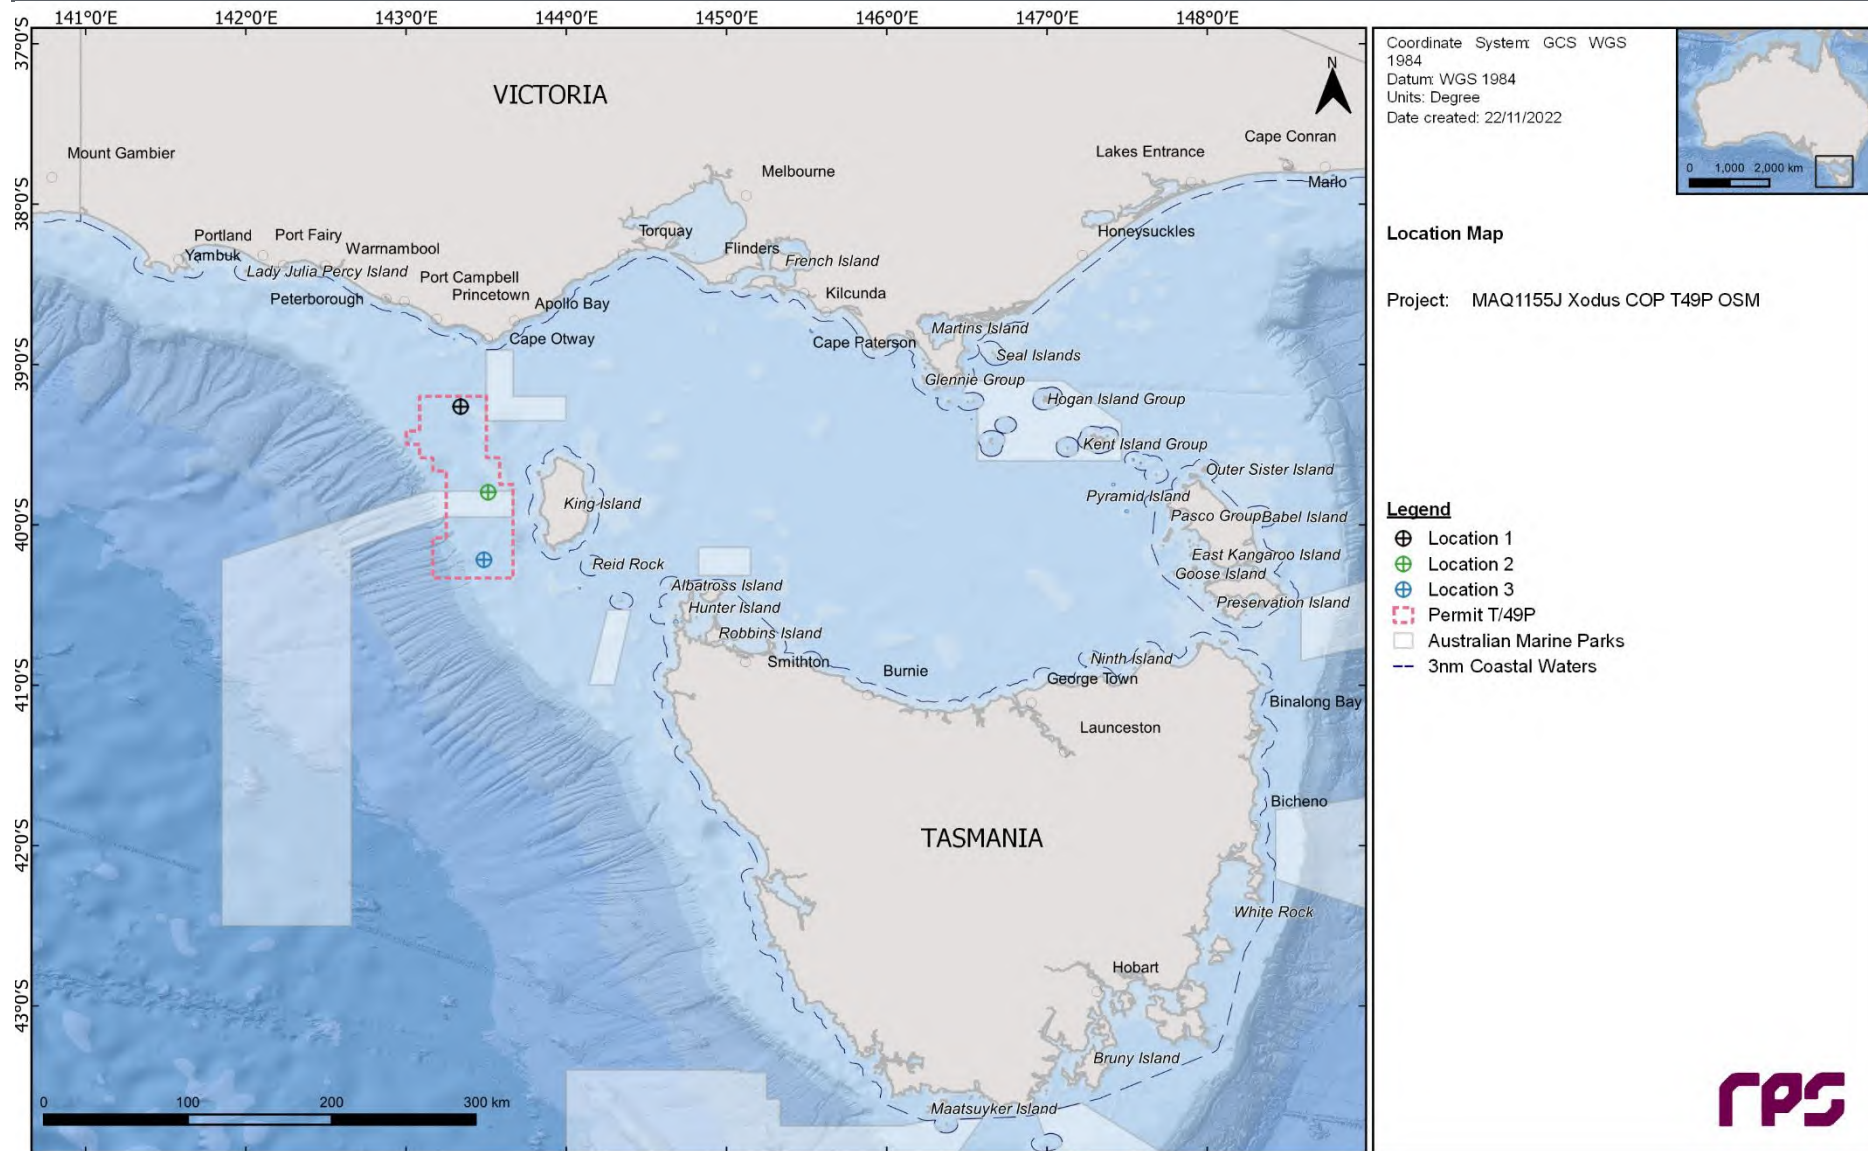

The hydrocarbon spill model, the method and analysis applied herein uses modelling algorithms which have been peer reviewed and published in international journals. Further, RPS warrants that this work meets and exceeds the American Society for Testing and Materials (ASTM) Standard F2067-13 "*Standard Practice for Development and Use of Oil Spill Models*".

**Table 1.1 T/49P hydrocarbon spill modelling release locations.**

Release location	Latitude*	Longitude*	Water depth (m)
Location 1	39° 15' 46.6" S	143° 20' 26.4" E	93
Location 2	39° 47' 49.7" S	143° 30' 46.3" E	100
Location 3	40° 13' 5.3" S	143° 29' 10.9" E	114

\*Datum: WGS 1984

## 1.2 What is Oil Spill Modelling?

Oil spill modelling is a valuable tool widely used for risk assessment, emergency response and contingency planning where it can be particularly helpful to proponents and decision makers. By modelling a series of the most likely oil spill scenarios, decisions concerning suitable response measures and strategic locations for deploying equipment and materials can be made, and the locations at most risk can be identified. The two types of oil spill modelling often used are stochastic (Section 1.2.1) and deterministic (Section 1.2.2) modelling.

### 1.2.1 Stochastic Modelling (Multiple Spill Simulations)

Stochastic oil spill modelling is created by overlaying a great number (often hundreds) of individual, computer-simulated hypothetical spills (NOPSEMA, 2018; Figure 1.2).

Stochastic modelling is a common means of assessing the potential risks from oil spills related to new projects and facilities. Stochastic modelling typically utilises hydrodynamic data for the location in combination with historic wind data. Typically, 100 iterations of the model will be run utilising the data that is most relevant to the season or timing of the project.

The outcomes are often presented as a probability of exposure and is primarily used for risk assessment purposes in view to understand the range of environments that may be affected or impacted by a spill. Elements of the stochastic modelling can also be used in oil spill preparedness and planning.

**Figure 1.2** Examples of four individual spill trajectories (four replicate simulations) predicted by SIMAP for a spill scenario. The frequency of contact with given locations is used to calculate the probability of impacts during a spill. Essentially, all model runs are overlain (shown as the stacked runs on the right) and the number of times that trajectories contact a given location at a concentration is used to calculate the probability.

### 1.2.2 Deterministic Modelling (Single Spill Simulation)

Deterministic modelling is the predictive modelling of a single incident subject to a single sample of wind and weather conditions over time (NOPSEMA, 2018; Figure 1.3).

Deterministic modelling is often paired with stochastic modelling to place the large stochastic footprint into perspective. This deterministic analysis is generally a single run selected from the stochastic analysis and serves as the basis for developing the plans and equipment needs for a realistic spill response. Deterministic spills can be selected on based on parameters such as minimum time to shoreline, largest swept area, maximum volume ashore and longest length of shoreline contacted by hydrocarbons.

**Figure 1.3** Example of an individual spill trajectory predicted by SIMAP for a spill scenario. Note, this image represents surface oil as spill and does not take any thresholds into consideration.

## 2 SCOPE OF WORK

The scope of work included the following components:

1. Generate 10 years (2010 to 2019 (inclusive)) of wind and current data. The three-dimensional current data includes the combined influence of ocean and tidal currents;
2. Include the wind and current data and the hydrocarbon characteristics as input into the three-dimensional oil spill model, SIMAP, to model the movement, spreading, weathering and shoreline accumulation by hydrocarbons over time;
3. Run 100 oil spill simulations per season (200 total per location), with each simulation having the same spill information (i.e. location volume and oil properties) but varying start times. This ensured that each spill trajectory was subjected to a unique set of wind and current conditions;
4. Combine the results from the 100 spill simulations (per season) per location to assess the exposure to waters and shoreline accumulation based upon the NOPSEMA thresholds;
5. Present the combined results from the 200 spill simulations, per location, to assess the low threshold environment that maybe affected (EMBA); and
6. From the 200 simulations modelled for each location identify and present the “worst case” deterministic run resulting in the maximum volume of hydrocarbons ashore. From the results for all three locations, identify and present the deterministic simulations resulting in: a) largest area of floating hydrocarbon exposure; b) minimum time to shoreline exposure; and c) longest length of shoreline accumulation.

### 3 REGIONAL CURRENTS

The Otway Basin lies within the western portion of the Bass Strait, a sea strait separating Tasmania from the southern Australian mainland. The strait is a relatively shallow area of the continental shelf, connecting the southeast Indian Ocean with the Tasman Sea. This region has a reputation for high winds and strong tidal currents (Jones, 1980). Currents are primarily driven by tides, winds and density driven flows. During winter the South Australian current moves dense, salty water eastward from the Great Australian Bight into the western margin of the Bass Strait (Sandery & Kämpf, 2007). In winter and spring, waters within the strait are well mixed with no obvious stratification, while during summer the central regions of the strait become stratified (Baines & Fandry, 1983; Middleton & Black, 1994).

Figure 3.1 displays seasonal current trends within the Otway Basin-Bass Strait region. During winter there is a strong eastward water flow due to the strengthening of the South Australian Current (fed by the Leeuwin Current in the Northwest Shelf), which bifurcates with one extension moving through the Bass Strait, and another forming the Zeehan Current off western Tasmania (Sandery & Kämpf, 2007). During summer, water flow reverses off Tasmania, King Island and the Otway Basin travelling eastward, as the coastal current develops due to south-easterly winds.

Therefore, to accurately account for the movement of an oil spill, which can move between the offshore and near shore region, ocean and tidal currents were combined as part of the study. The following sections provide a summary of the regional current data set.

Figure 3.1 HYCOM averaged seasonal surface drift currents during summer (upper image) and winter (lower image).

### 3.1 Tidal currents

Tidal current data was generated using RPS's advanced ocean/coastal model, HYDROMAP. The HYDROMAP model has been thoroughly tested and verified through field measurements throughout the world for more than 30 years (Isaji & Spaulding, 1984; Isaji, et al., 2001; Zigic, et al., 2003). HYDROMAP tidal current data has been used as input to forecast (in the future) and hindcast (in the past) pollutant spills in Australian waters and forms part of the Australian National Oil Spill Emergency Response System operated by AMSA (Australian Maritime Safety Authority).

HYDROMAP employs a sophisticated sub-gridding strategy, which supports up to six levels of spatial resolution, halving the grid cell size as each level of resolution is employed. The sub-gridding allows for higher resolution of currents within areas of greater bathymetric and coastline complexity, and/or of interest to a study.

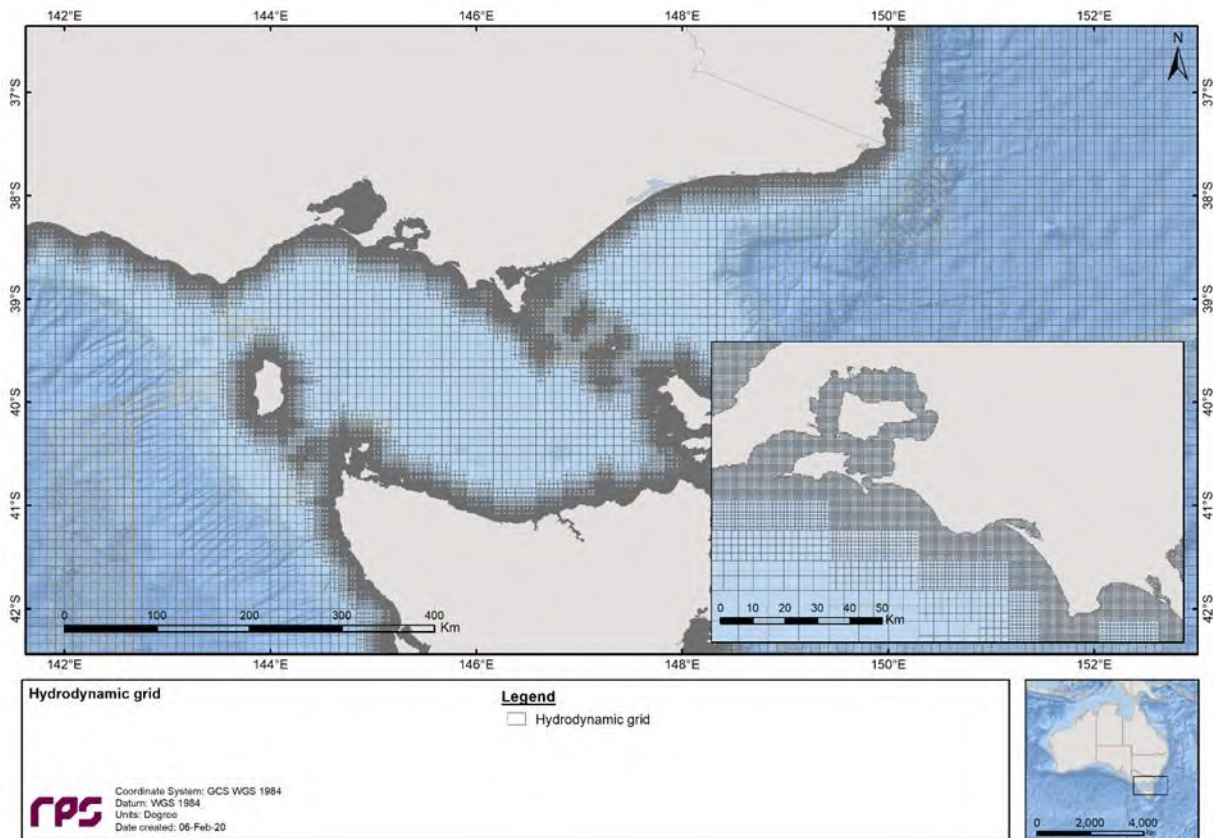

The numerical solution methodology follows that of Davies (1977a 1977b) with further developments for model efficiency by Owen (1980) and Gordon (1982). A more detailed presentation of the model can be found in Isaji & Spaulding (1984) and Isaji et al. (2001).

#### 3.1.1 Grid Setup

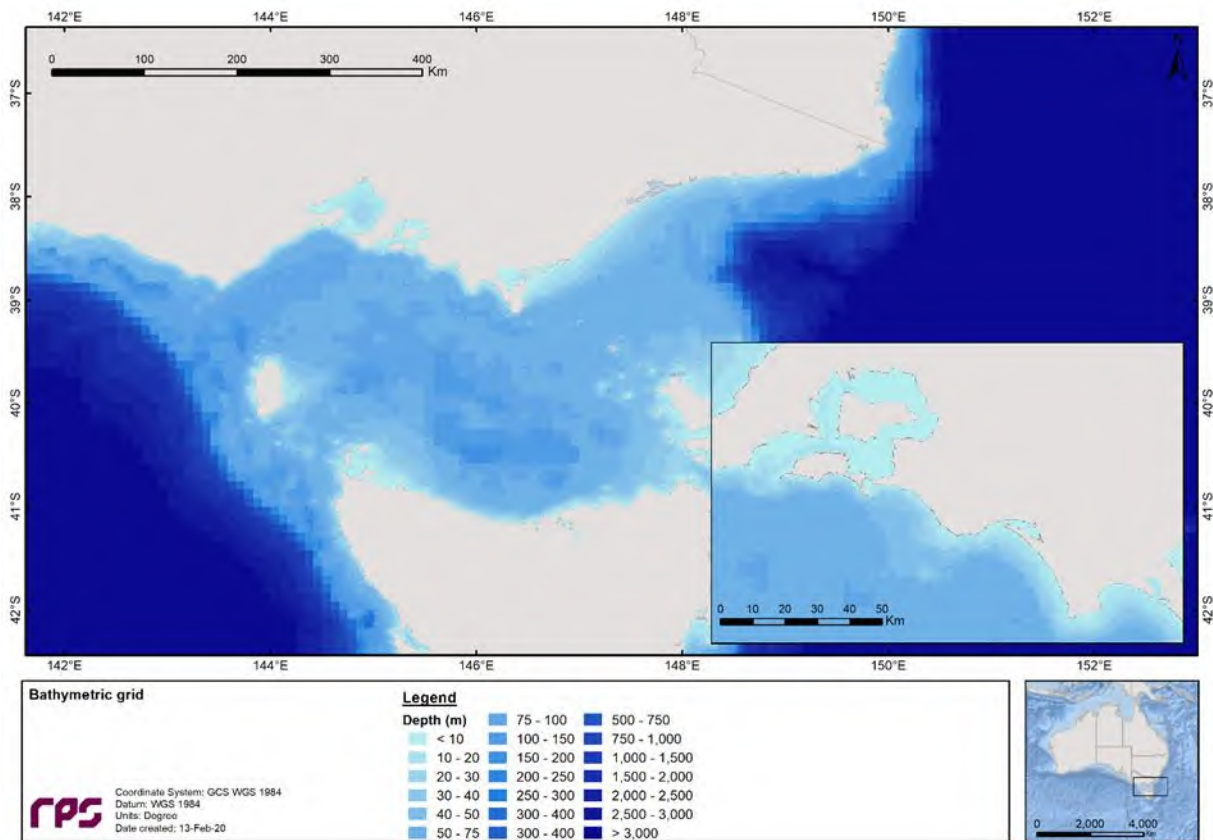

The tidal model domain has been sub-gridded down to a resolution of 500 m for shallow and coastal regions, starting from an offshore (or deep water) resolution of 8 km. The finer grids were allocated in a step-wise fashion to resolve flows more accurately along the coastline, around islands and over regions with more complex bathymetry. Figure 3.2 shows the tidal model grid covering the study domain.

A combination of datasets was used and merged to describe the shape of the seabed within the grid domain (Figure 3.3). These included spot depths and contours which were digitised from nautical charts released by the hydrographic offices as well as Geoscience Australia database and depths extracted from the Shuttle Radar Topography Mission (SRTM30\_PLUS) Plus dataset (see Becker et al., 2009).

**Figure 3.2** Sample of the model grid used to generate the tidal currents for the study region. Higher resolution areas are shown by the denser mesh.

**Figure 3.3** Bathymetry defined throughout the tidal model domain.

### 3.1.2 Tidal Conditions

The ocean boundary data for the regional model was obtained from satellite measured altimetry data (TOPEX/Poseidon 8.0) which provided estimates of the eight dominant tidal constituents at a horizontal scale of approximately 0.25 degrees. The eight major tidal constituents used were  $K_2$ ,  $S_2$ ,  $M_2$ ,  $N_2$ ,  $K_1$ ,  $P_1$ ,  $O_1$  and  $Q_1$ . Using the tidal data, time series surface heights were calculated along the open boundaries for the simulation period.

The Topex/Poseidon satellite data has a resolution of 0.25 degrees globally, with higher resolution in coastal regions, and is produced and quality controlled by NASA (National Aeronautics and Space Administration). The data capturing satellites, equipped with two altimeters capable of taking sea level measurements accurate to less than  $\pm 5$  cm, measured oceanic surface elevations (and the resultant tides) for the period 1992–2005. In total these satellites carried out 62,000 orbits of the planet. The Topex/Poseidon tidal data has been widely used amongst the oceanographic community, being referenced in more than 2,100 research publications (e.g., Andersen, 1995; Ludicone et al., 1998; Matsumoto et al., 2000; Kostianoy et al., 2003; Yaremchuk & Tangdong, 2004; Qiu & Chen, 2010). The Topex/Poseidon tidal data is considered suitably accurate for this study.

## 3.2 Ocean Currents

Data describing the flow of ocean currents was obtained from HYCOM (Hybrid Coordinate Ocean Model, (Chassignet et al., 2007), which is operated by the HYCOM Consortium, sponsored by the Global Ocean Data Assimilation Experiment (GODAE). HYCOM is a data-assimilative, three-dimensional ocean model that is run as a hindcast (for a past period), assimilating time-varying observations of sea surface height, sea surface temperature and in-situ temperature and salinity measurements (Chassignet et al., 2009). The HYCOM predictions for drift currents are produced at a horizontal spatial resolution of approximately 8.25 km ( $1/12^{\text{th}}$  of a degree) over the region, at a frequency of three-times per day. HYCOM uses isopycnal layers in the open, stratified ocean, but uses the layered continuity equation to make a dynamically smooth transition to a terrain-following coordinate in shallow coastal regions, and to z-level coordinates in the mixed layer and/or unstratified seas.

For this study, the HYCOM hindcast currents were obtained for the years 2010 to 2019 (inclusive).

## 3.3 Surface Currents

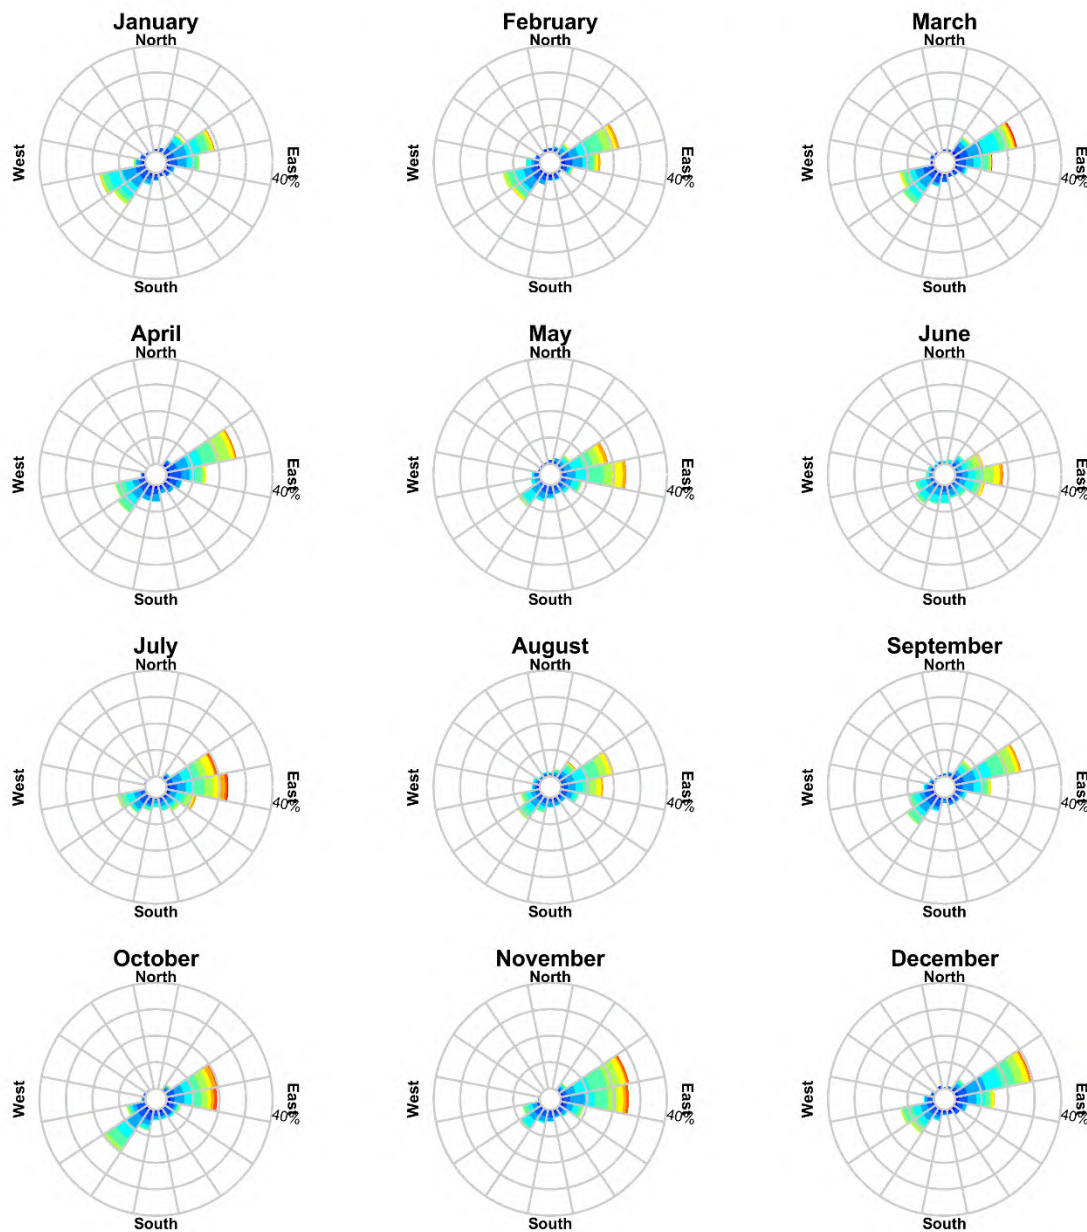

Figure 3.4 to Figure 3.6 show the monthly current rose distributions for the three locations, while Figure 3.7 to Figure 3.9 illustrate the total current rose distributions.

Note the convention for defining current direction is the direction the current flows towards, which is used to reference current direction throughout this report. Each branch of the rose represents the currents flowing to that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent the current speed ranges for each direction. Speed intervals of 0.1 m/s are predominantly used in these current roses. The length of each coloured segment is relative to the proportion of currents flowing within the corresponding speed and direction.

## RPS Data Set Analysis

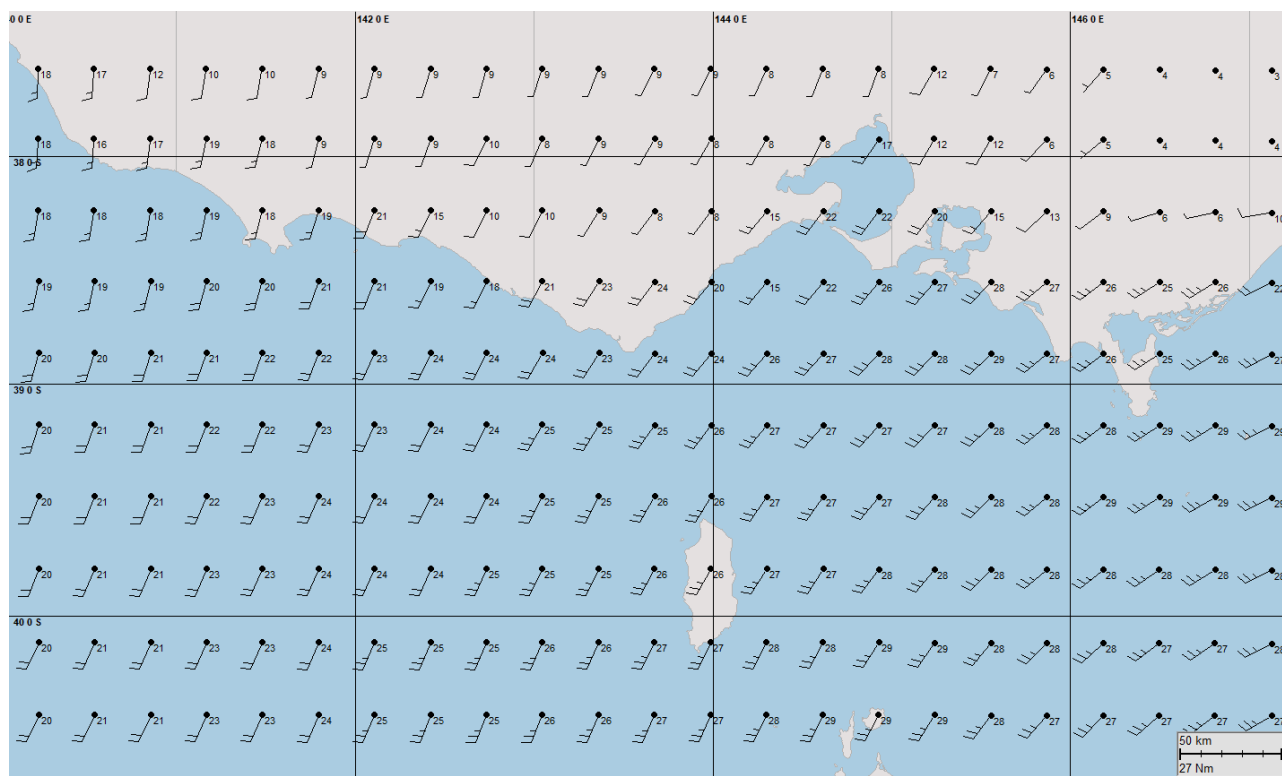

**Figure 3.9** Total surface current rose plots for Location 3. Data is based on modelled conditions between 2010–2019 (inclusive).

## 4 WIND DATA

To account for the influence of the wind on the hydrocarbons floating on the surface, wind data from 2010 to 2019 (inclusive) was sourced from the National Centre for Environmental Prediction (NCEP) Climate Forecast System Reanalysis dataset (CFSR; see Saha et al., 2010). The CFSR wind model includes observations from many data sources: surface observations, upper-atmosphere air balloon observations, aircraft observations and satellite observations. The model is capable of accurately representing the interaction between the earth's oceans, land and atmosphere. The gridded wind data output is available at a horizontal resolution of  $0.25^\circ$  (~33 km) and a temporal resolution of 1 hour.

Figure 4.1 is a screenshot illustrating the spatial resolution of the CFSR modelled wind data.

**Figure 4.1** Spatial resolution of the CFSR modelled wind data used as input into the oil spill model.

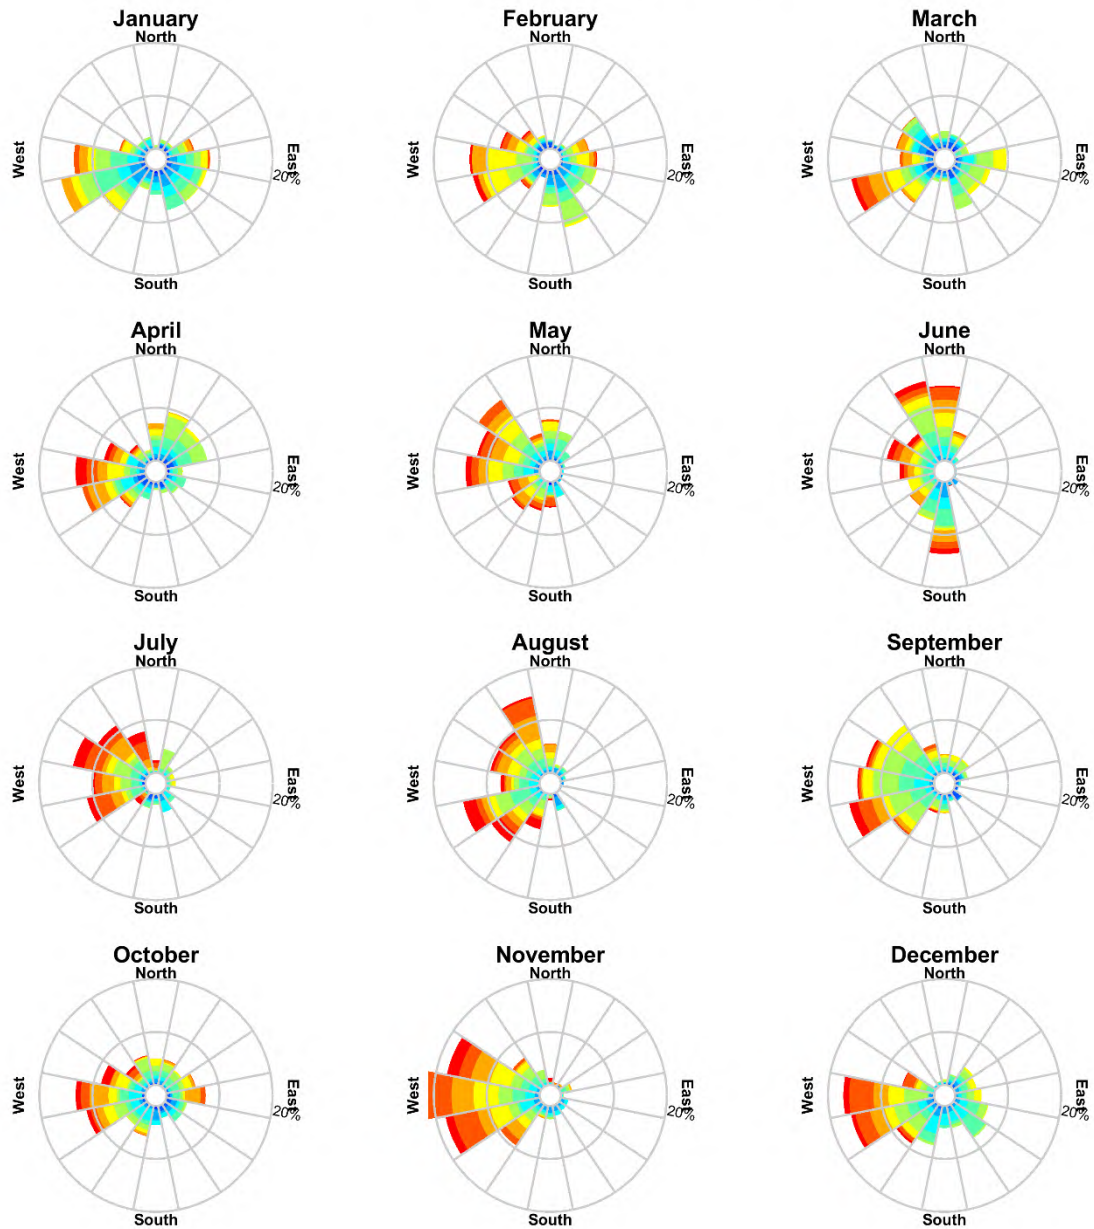

Figure 4.2 to Figure 4.4 shows the monthly wind rose distributions derived from the CFSR nodes closest to the release locations, while Figure 4.5 to Figure 4.7 illustrate the total current rose distribution.

Note that the atmospheric convention for defining wind direction, that is, the direction the wind blows from, is used to reference wind direction throughout this report. Each branch of the rose represents wind coming from that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent wind speed ranges from that direction. Speed ranges of 3 knots are predominantly used in these wind roses. The length of each segment within a branch is proportional to the frequency of winds blowing within the corresponding range of speeds from that direction.

## 5 WATER TEMPERATURE AND SALINITY

Monthly water temperature and salinity data was obtained from the World Ocean Atlas 2013 database produced by the National Oceanographic Data Centre (National Oceanic and Atmospheric Administration) and its co-located World Data Center for Oceanography (Levitus et al. 2013). The data is used as input into oil spill model.

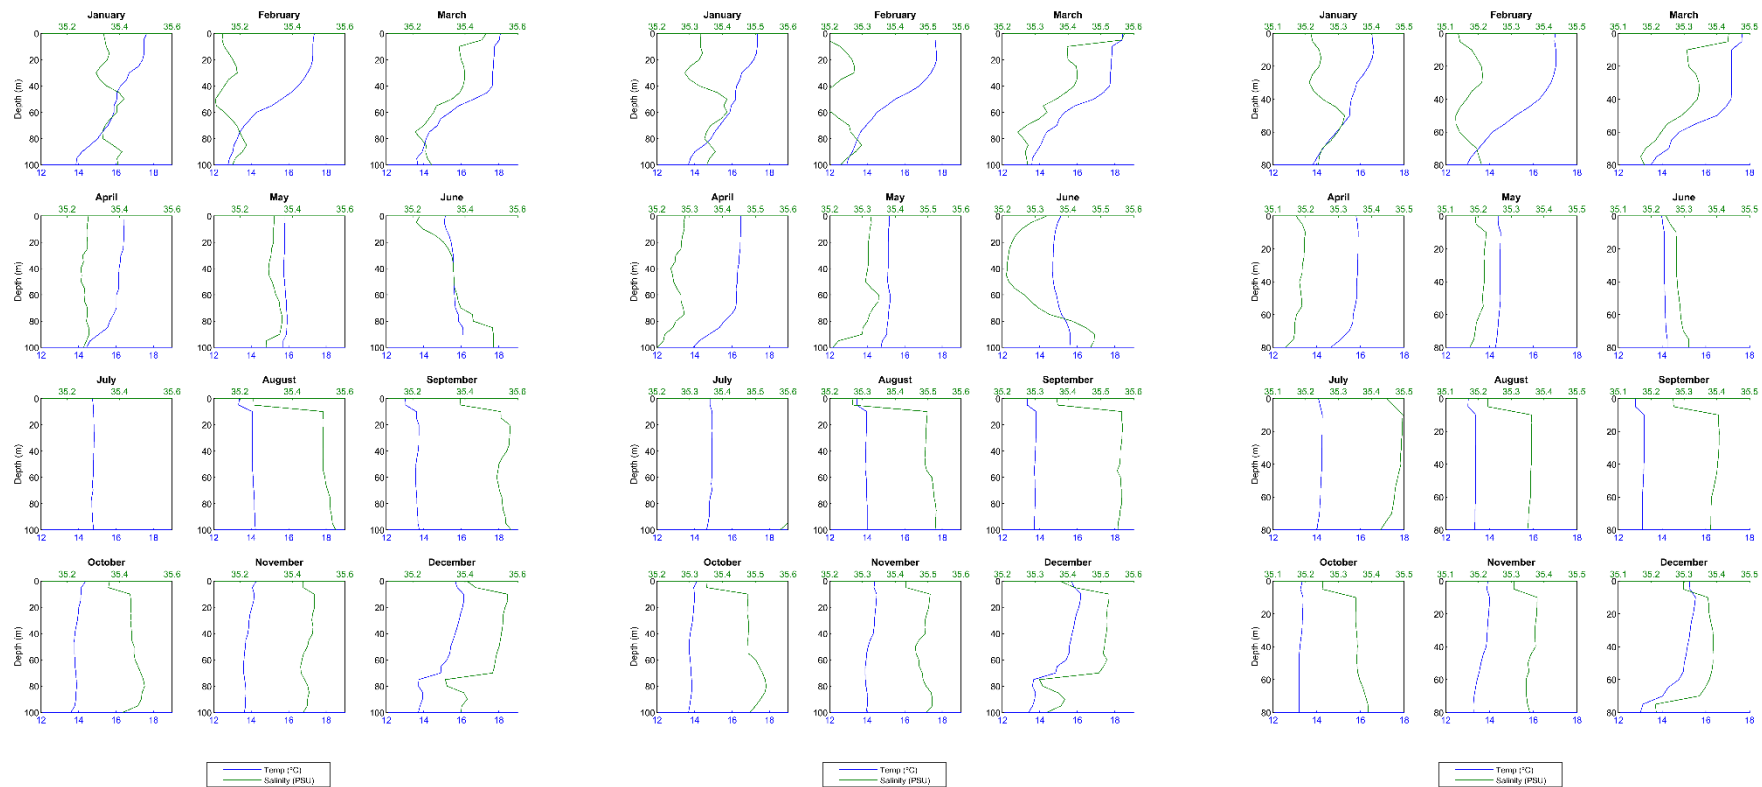

The monthly mean sea surface temperature and salinity values in the 0-5 m depth layer are presented in Table 5-1. The monthly average sea surface temperatures ranged between 12.8°C (September, release location 3) and 18.4°C (March, release location 2). The monthly average salinity values remain relatively consistent ranging between 35.1 psu and 35.6 psu.

Figure 5.1 shows the monthly water temperature and salinity profiles adjacent to the release locations.

**Table 5-1 Monthly average sea surface temperature and salinity adjacent the release locations.**

Release Location		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
1	Temperature (°C)	17.6	17.4	18.1	16.5	15.8	15.1	14.8	13.4	13.0	14.4	14.3	15.7

## 6 OIL SPILL MODEL - SIMAP

The spill modelling was carried out using a purpose-developed oil spill trajectory and fates model, SIMAP (Spill Impact Model Application Package). This model is designed to simulate the transport and weathering processes that affect the outcomes of hydrocarbon spills to the sea, accounting for the specific oil type, spill scenario, and prevailing wind and current circulation patterns.

SIMAP is the evolution of the United States Environmental Protection Agency (US EPA) Natural Resource Damage Assessment model (French & Rines, 1997; French et al., 1999) and is designed to simulate the fate and effects of spilled oils and fuels for both the surface slick and the three-dimensional plume that is generated in the water column. SIMAP includes algorithms to account for both physical transport and weathering processes. The latter are important for accounting for the partitioning of the spilled mass over time between the water surface (surface slick), water column (entrained oil and dissolved compounds), atmosphere (evaporated compounds) and land (stranded oil). The model also accounts for the interaction between weathering and transport processes.

The physical algorithms calculate transport and spreading by physical forces, including surface tension, gravity and wind and current forces for both surface slicks and oil within the water column. The fates algorithms calculate all the weathering processes known to be important for oil spilled to marine waters. These include droplet and slick formation, entrainment by wave action, emulsification, dissolution of soluble components, sedimentation, evaporation, bacterial and photo-chemical decay and shoreline interactions. These algorithms account for the specific oil type being considered.

Entrainment is the physical process where globules of oil are transported from the sea surface into the water column by wind and wave-induced turbulence or be generated subsea by a pressurised discharge at depth. It has been observed that entrained oil is broken into droplets of varying sizes. Small droplets spread and diffuse into the water column, while larger ones rise rapidly back to the surface (Delvigne & Sweeney, 1988; Delvigne, 1991).

Dissolution is the process by which soluble hydrocarbons enter the water from a surface slick or from entrained droplets. The lower molecular weight hydrocarbons tend to be both more volatile and more soluble than those of higher molecular weight.

The formation of water-in-oil emulsions, or mousse, which is termed 'emulsification', depends on oil composition and sea state. Emulsified oil can contain as much as 80% water in the form of micrometre-sized droplets dispersed within a continuous phase of oil (Daling & Brandvik, 1991; Bobra, 1991; Daling et al., 1997; Fingas, 1995).

Evaporation can result in the transfer of large proportions of spilled oil from the sea surface to the atmosphere, depending on the type of oil (Gundlach & Boehm, 1981).

Evaporation rates vary over space and time dependent on the prevailing sea temperatures, wind and current speeds, the surface area of the slick and entrained droplets that are exposed to the atmosphere as well as the state of weathering of the oil. Evaporation rates will decrease over time, depending on the calculated rate of loss of the more volatile compounds. By this process, the model can differentiate between the fates of different oil types.

Decay (degradation) of hydrocarbons may occur as the result of photolysis, which is a chemical process energised by ultraviolet light from the sun, and by biological breakdown, termed biodegradation. Many types of marine organisms ingest, metabolise and utilise oil as a carbon source, producing carbon dioxide and water as by-products.

Entrainment, dissolution and emulsification rates are correlated to wave energy, which is accounted for by estimating wave heights from the sustained wind speed, direction and fetch (i.e. distance downwind from land barriers) at different locations in the domain. Dissolution rates are dependent upon the proportion of soluble, short-chained hydrocarbon compounds, and the surface area at the oil/water interface of slicks. Dissolution rates are also strongly affected by the level of turbulence. For example, dissolution rates will be relatively high at the site of the release for a deep-sea discharge at high pressure.

The SIMAP weathering algorithms include terms to represent these dynamic processes. Technical descriptions of the algorithms used in SIMAP and validations against real spill events are provided in French (1998), French et al. (1999) and French-McCay (2004).

Input specifications for oil types include density, viscosity, pour-point, distillation curve (volume of oil distilled off versus temperature) and the aromatic/aliphatic component ratios within given boiling point ranges. The model calculates a distribution of the oil by mass into the following components:

- Surface-bound or floating oil;
- Entrained oil (non-dissolved oil droplets that are physically entrained by wave action);
- Dissolved hydrocarbons (principally the aromatic and short-chained aliphatic compounds);
- Evaporated hydrocarbons;
- Sedimented hydrocarbons; and
- Decayed hydrocarbons.

## 7 HYDROCARBON PROPERTIES

Table 7.1 and Table 7.2 summarise the physical properties and boiling point ranges for the MDO, respectively.

The MDO has a density of 829.1 kg/m<sup>3</sup> (API of 37.6) and a low pour point of -14°C. The low viscosity (4 cP) indicates that this oil will spread quickly when released and will form a thin to low thickness film on the sea surface, increasing the rate of evaporation.

Generally, about 6.0% of the MDO mass should evaporate within the first 12 hours (Boiling point (BP) < 180°C); a further 34.6% should evaporate within the first 24 hours (180°C < BP < 265°C); and an additional 54.4% should evaporate over several days (265°C < BP < 380°C). Approximately 5% (by mass) of MDO will not evaporate, though will decay slowly over time.

The oil is categorised as a group II oil (light-persistent) according to the International Tankers Owners Pollution Federation (ITOPF, 2014) and US EPA/USCG classifications. The classification is based on the specific gravity of hydrocarbons in combination with relevant boiling point ranges.

It is important to note that some heavy components contained within the MDO will have a strong tendency to physically entrain into the upper water column in the presence of moderate winds (i.e. >12 knots) and breaking waves but can re-float to the surface if these energies abate.

**Table 7.1 Physical properties for the marine diesel oil.**

Characteristic	Marine Diesel Oil (MDO)
Density (kg/m <sup>3</sup> )	829.1 (at 25 °C)
API	37.6
Dynamic viscosity (cP)	4.0 (at 25 °C)
Hydrocarbon property category	Group II
Hydrocarbon property classification	Light persistent oil

**Table 7.2 Boiling point ranges for marine diesel oil.**

Characteristics	Non-Persistent			Persistent
	Volatile (%)	Semi-volatile (%)	Low-volatility (%)	Residual (%)
Boiling point (°C)	<180	180-265	265-380	>380
Marine diesel oil (MDO)	6.0	34.6	54.4	5.0

## 8 THRESHOLDS

The thresholds and their relationship to exposure for the sea surface, shoreline, and water column (entrained and dissolved hydrocarbons) are presented in Sections 8.1 to 8.3. Supporting justifications of the adopted thresholds applied during the study and additional context relating to the area of influence are also provided. It is important to note that the thresholds herein are based on NOPSEMA (2019).

### 8.1 Floating Oil Exposure

The modelling results can be presented to any levels; therefore, thresholds have been specified (based on scientific literature) to record floating oil exposure to the sea-surface at meaningful levels only, described in the following paragraphs.

The low threshold to assess the potential for floating oil exposure, was 1 g/m<sup>2</sup>, which equates approximately to an average thickness of 1 µm, referred to as visible oil. Oil of this thickness is described as rainbow sheen in appearance, according to the Bonn Agreement Oil Appearance Code (Bonn Agreement, 2009; AMSA, 2014). Table 8.1 provides a description of the appearance in relation to exposure zone thresholds used to classify the zones of floating oil exposure. Figure 8.1 shows photographs highlighting the difference in appearance between a rainbow sheen and metallic sheen. The low threshold is considered below levels which would cause environmental harm and it is more indicative of the areas perceived to be affected due to its visibility on the sea surface and potential to trigger temporary closures of areas (i.e., fishing grounds) as a precautionary measure.

Ecological impact has been estimated to occur at 10 g/m<sup>2</sup>, which equates to a film thickness of approximately 10 µm or 0.01 mm (French et al. 1996; French-McCay 2009) as this level of fresh oiling has been observed to mortally impact some birds through adhesion of oil to their feathers, exposing them to secondary effects such as hypothermia. The appearance of oil at this average thickness has been described as a metallic sheen (Bonn Agreement, 2009). Concentrations above 10 g/m<sup>2</sup> is also considered the lower actionable threshold, where oil may be thick enough for containment and recovery as well as dispersant treatment (AMSA, 2015).

Oil concentrations on the sea surface of 25 g/m<sup>2</sup> (or greater), would be harmful for all birds that have landed in an oil film due to potential contamination of their feathers, with secondary effects such as loss of temperature regulation and ingestion of oil through preening (Scholten et al., 1996; Koops et al., 2004). The appearance of oil at this thickness is also described as metallic sheen (Bonn Agreement, 2009). For this study the high exposure threshold was set to 50 g/m<sup>2</sup> and above based on NOPSEMA (2019). This threshold can also be used to inform response planning.

Table 8.2 defines the thresholds used to classify the zones of floating oil exposure reported herein.

**Table 8.1 The Bonn Agreement Oil Appearance Code.**

Code	Description Appearance	Layer Thickness Interval (g/m <sup>2</sup> or µm)	Litres per km <sup>2</sup>
1	Sheen (silvery/grey)	0.04 – 0.30	40 – 300
2	Rainbow	0.30 – 5.0	300 – 5,000
3	Metallic	5.0 – 50	5,000 – 50,000
4	Discontinuous True Oil Colour	50 – 200	50,000 – 200,000
5	Continuous True Oil Colour	≥ 200	≥ 200,000

**Figure 8.1** Photographs showing the difference between oil colour and thickness on the sea surface (source: adapted from Oil Spill Solutions, 2015).

**Table 8.2** Floating oil exposure thresholds used in this report (in alignment with NOPSEMA (2019)).

Threshold level	Floating oil (g/m <sup>2</sup> )	Description
Low	1	Approximates range of socio-economic effects and establishes planning area for scientific monitoring
Moderate	10	Approximates lower limit for harmful exposures to birds and marine mammals
High	50*	Approximates surface oil slick and informs response planning

\* 50 g/m<sup>2</sup> also used to define the threshold for actionable floating oil.

## 8.2 Shoreline Accumulation

There are many different types of shorelines, ranging from cliffs, rocky beaches, sandy beaches, mud flats and mangroves, and each of these influences the volume of oil that can remain stranded ashore and its thickness before the shoreline saturation point occurs. For instance, a sandy beach may allow oil to percolate through the sand, thus increasing its ability to hold more oil ashore over tidal cycles and various wave actions than an equivalent area of water; hence oil can increase in thickness onshore over time. A sandy beach shoreline was assumed as the default shoreline type for the modelling in this study, as it allows for the highest carrying capacity of oil (of the available open/exposed shoreline types). Hence the results are considered conservative (i.e., worst-case) given that a large part of the shoreline in the study area (especially the western part of the Joseph Bonaparte Gulf) is characterised by exposed rocky shorelines, with southern parts characterised by tidal mudflats and mangroves and eastern shorelines containing more sandy beaches.

Previous risk assessment studies, French-McCay et al. (2005a; 2005b) used a threshold of 10 g/m<sup>2</sup> to assess the potential for shoreline accumulation. This is a conservative threshold used to define regions of socio-economic impact, such as triggering temporary closures of adjoining fisheries or the need for shore clean-up on beaches or man-made features/amenities (breakwaters, jetties, marinas, etc.). It would equate to approximately 2 teaspoons of hydrocarbon per square meter of shoreline accumulation. The appearance is described as a stain/film. On that basis, the 10 g/m<sup>2</sup> shoreline accumulation threshold has been selected to define the zone of potential “low shoreline accumulation”.

French et al. (1996) and French-McCay (2009) define a shoreline oil accumulation threshold of 100 g/m<sup>2</sup>, or above, would potentially harm shorebirds and wildlife (fur-bearing aquatic mammals and marine reptiles on or along the shore) based on studies for sub-lethal and lethal impacts. This threshold has been used in previous environmental risk assessment studies (see French-McCay, 2003; French-McCay et al., 2004, French-McCay et al., 2011; 2012; NOAA, 2013). Additionally, a shoreline concentration of 100 g/m<sup>2</sup>, or above, is the minimum concentration that the oil can be effectively cleaned according to AMSA (2015). This threshold equates to approximately ½ a cup of oil per square meter of shoreline accumulation. The

appearance is described as a thin oil coat. Therefore, 100 g/m<sup>2</sup> has been selected to define the zone of potential “moderate shoreline accumulation”.

Observations by Lin & Mendelssohn (1996) demonstrated that loadings of more than 1,000 g/m<sup>2</sup> of hydrocarbon during the growing season would be required to impact marsh plants significantly. Similar thresholds have been found in studies assessing hydrocarbon impacts on mangroves (Grant et al., 1993; Suprayogi & Murray, 1999). This loading equates to approximately 1 litre of hydrocarbon per square meter of shoreline accumulation and the appearance is described as a hydrocarbon cover. A loading of 1,000 g/m<sup>2</sup> has been selected to define the zone of potential “high shoreline accumulation”.

These shoreline accumulation thresholds derived from extensive literature review (outlined in Table 8.3) align with the threshold values for oil spill modelling specified in NOPSEMA (2019).

**Table 8.3** Thresholds used to assess shoreline accumulation.

Threshold level	Shoreline loading (g/m <sup>2</sup> )	Description
Low (socioeconomic/sublethal)	10	Predicts potential for some socio-economic impact
Moderate	100*	Loading predicts area likely to require clean-up effort
High	1,000	Loading predicts area likely to require intensive clean-up effort

\* 100 g/m<sup>2</sup> also used to define the threshold for actionable shoreline oil.

## 8.3 In-water Exposure

Oil is a mixture of thousands of hydrocarbons of varying physical, chemical, and toxicological characteristics, and therefore, demonstrate varying fates and impacts on organisms. As such, for in-water exposure, the SIMAP model provides separate outputs for dissolved and entrained hydrocarbons from oil droplets. The consequences of exposure to dissolved and entrained components will differ because they have different modes and magnitudes of effect.

Entrained hydrocarbon concentrations were calculated based on oil droplets that are suspended in the water column, though not dissolved. The composition of this oil would vary with the state of weathering (oil age) and may contain soluble hydrocarbons when the oil is fresh. Calculations for dissolved hydrocarbons specifically calculates oil components which are dissolved in water, which are known to be the primary source of toxicity exerted by oil.

A complicating factor that should be considered when assessing the consequence of dissolved and entrained oil distributions is that there will be some areas where both physically entrained oil droplets and dissolved hydrocarbons co-exist. Higher concentrations of each will tend to occur close to the source where sea conditions can force mixing of relatively unweathered oil into the water column, resulting in more rapid dissolution of soluble compounds.

### 8.3.1 Dissolved Hydrocarbons

Laboratory studies have shown that dissolved hydrocarbons exert most of the toxic effects of oil on aquatic biota (Carls et al., 2008; Nordtug et al., 2011; Redman, 2015). The mode of action is a narcotic effect, which is positively related to the concentration of soluble hydrocarbons in the body tissues of organisms (French-McCay, 2002). Dissolved hydrocarbons are taken up by organisms directly from the water column by absorption through external surfaces and gills, as well as through the digestive tract. Thus, soluble hydrocarbons are termed “bioavailable”.

Hydrocarbon compounds vary in water-solubility and the toxicity exerted by individual compounds is inversely related to solubility, however bioavailability will be modified by the volatility of individual compounds (Nirmalakhandan & Speece, 1988; Blum & Speece, 1990; McCarty, 1986; McCarty et al., 1992a, 1992b;

McCarty & Mackay, 1993; Verhaar et al., 1992, 1999; Swartz et al., 1995; French-McCay, 2002; McGrath and Di Toro, 2009). Of the soluble compounds, the greatest contributor to toxicity for water-column and benthic organisms are the lower-molecular-weight aromatic compounds, which are both volatile and soluble in water. Although they are not the most water-soluble hydrocarbons within most oil types, the polynuclear aromatic hydrocarbons (PAHs) containing 2-3 aromatic ring structures typically exert the largest narcotic effects because they are semi-soluble and not highly volatile, so they persist in the environment long enough for significant accumulation to occur (Anderson et al., 1974, 1987; Neff & Anderson, 1981; Malins & Hodgins, 1981; McAuliffe, 1987; NRC, 2003). The monoaromatic hydrocarbons (MAHs), including the BTEX compounds (benzene, toluene, ethylbenzene, and xylenes), and the soluble alkanes (straight chain hydrocarbons) also contribute to toxicity, but these compounds are highly volatile, so that their contribution will be low when oil is exposed to evaporation and higher when oil is discharged at depth where volatilisation does not occur (French-McCay, 2002).

French-McCay (2002) reviewed available toxicity data, where marine biota was exposed to dissolved hydrocarbons prepared from oil mixtures, finding that 95% of species and life stages exhibited 50% population mortality (LC<sub>50</sub>) between 6 and 400 ppb total PAH concentration after 96 hrs exposure, with an average of 50 ppb. Hence, concentrations lower than 6 ppb total PAH value should be protective of 97.5% of species and life stages even with exposure periods of days (at least 96 hours). Early life-history stages of fish appear to be more sensitive than older fish stages and invertebrates.

Exceedances of 10, 50 or 400 ppb over a 1 hour timestep (see Table 8.4) were applied in this study to indicate the increasing potential for sub-lethal to lethal toxic effects (or low to high), based on NOPSEMA (2019).

### **8.3.2 Entrained Hydrocarbons**

Entrained hydrocarbons consist of oil droplets that are suspended in the water column and insoluble. Insoluble compounds in oil cannot be absorbed from the water column by aquatic organisms, therefore they are not bioavailable through absorption of compounds from the water. Exposure to these compounds would require routes of uptake other than absorption of soluble compounds. The route of exposure of organisms to whole oil alone include direct contact with tissues of organisms and uptake of oil by direct consumption, with potential for biomagnification through the food chain (NRC, 2003).

The 10 ppb threshold corresponds generally with the lowest trigger levels for chronic exposure for entrained hydrocarbons in the ANZECC & ARMCANZ (2000) water quality guidelines. Due to the requirement for relatively long exposure times (> 24 hours) for these concentrations to accumulate, they are likely to be more meaningful for juvenile fish, larvae and planktonic organisms that might be entrained (or otherwise moving) within the entrained plumes, or when entrained hydrocarbons adhere to organisms or are trapped against a shoreline for periods of several days or more.

This exposure zone is not considered to be of significant biological impact and is therefore outside the adverse exposure zone. This exposure zone represents the area contacted by the spill. This area does not define the area of influence as it is considered that the environment will not be affected by the entrained hydrocarbon at this level.

Thresholds of 10 ppb and 100 ppb were applied over a 1 hour time exposure (Table 8.4), to cover the range of thresholds outlined in ANZECC & ARMCANZ (2000) water quality guidelines and is per NOPSEMA (2019).

**Table 8.4** Dissolved and entrained hydrocarbon exposure values assessed over a 1-hour time step, as per NOPSEMA (2019).

	Exposure level	In-water threshold (ppb)	Description
Dissolved hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	Moderate	50	Approximates potential toxic effects, particularly sublethal effects to sensitive species
	High	400	Approximates toxic effects including lethal effects to sensitive species
Entrained hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	High	100	As appropriate given oil characteristics for informing risk evaluation

## 8.4 Dispersion

A horizontal dispersion coefficient of 10 m<sup>2</sup>/s was used to account for dispersive processes acting at the surface that are below the scale of resolution of the input current field, based on typical values for open waters (Okubo, 1971). Dispersion rates within the water column (applicable for entrained and dissolved plumes of hydrocarbons) were specified at 1 m<sup>2</sup>/s, based on empirical data for the dispersion of hydrocarbon plumes (King & McAllister, 1998).

## 9 RECEPTORS

A range of environmental receptors and shorelines were assessed for floating oil exposure, shoreline contact and water column exposure (entrained and dissolved hydrocarbons) as part of the study (see Figure 9.1 to Figure 9.12). Receptor categories are shown in Table 9.1 which includes coastal and offshore islands grouped as shorelines. All other sensitive receptors other than submerged reefs, shoals and banks (RSB) were sourced from Australian Government Department of Agriculture, Water and the Environment (<http://www.environment.gov.au/>). Probabilities of exposure were separately calculated for each sensitive receptor area and have been tabulated.

**Table 9.1 Summary of receptors assessed for potential oil exposure.**

Receptor Category	Acronym	Hydrocarbon Exposure and Accumulation Assessment		
		Floating oil	Water Column	Shoreline

## 10 MODEL SETTINGS

Table 10.1 provides a summary of the spill modelling inputs and thresholds.

The potential risk of exposure to the surrounding waters and contact to shorelines was assessed for summer (October to March) and winter conditions (April to September).

The simulation length was carefully selected based on extensive sensitivity testing. During the sensitivity testing process, sample spill simulations were run for longer than intended durations. Upon completion of the spill simulations, the results were carefully assessed to examine the persistence of the hydrocarbon (i.e. whether the maximum evaporative loss has been achieved for the period of time modelled; and whether a substantial volume of hydrocarbons remain in the water column (if any)) in conjunction with the extent of floating oil exposure based on reporting thresholds. Once there was agreement between the two factors (i.e. the final fate of hydrocarbon is accounted for, and the full exposure area is identified) the simulation length was deemed appropriate.

**Table 10.1 Summary of the of the oil spill modelling inputs and thresholds.**

Parameter	Vessel collision
Number of release locations	3
Number of randomly selected spill start times per location and per season	100
Model period	Summer (October to March) and winter conditions (April to September)
Oil type	MDO
Total Spill volume (m <sup>3</sup> )	350
Release type	Surface
Release duration	6 hours
Simulation length (days)	30
Floating oil exposure thresholds (g/m <sup>2</sup> )	1 (low exposure) 10 (moderate exposure) 50 (high exposure)
Shoreline accumulation thresholds (g/m <sup>2</sup> )	10 (low potential exposure) 100 (moderate potential exposure) 1,000 (high potential exposure)
Dissolved hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 50 (50 ppb x 1 hr, potential moderate exposure) 400 (400 ppb x 1 hr, potential high exposure)
Entrained hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 100 (100 ppb x 1 hr, potential high exposure)

## 11 CALCULATION OF EXPOSURE RISK

The stochastic sampling approach provides an objective measure of the possible outcomes of a spill because randomly selected environmental conditions with more simulations will tend to use the most commonly occurring conditions, while more unusual conditions will be represented less frequently.

During each simulation, the SIMAP model records the location (by latitude, longitude and depth) of each of the particles (representing a given mass of oil) on or in the water column, at regular time steps. For any particles that contact a shoreline, the model records the accumulation of oil mass that arrives on each section of shoreline over time, less any mass that is lost to evaporation and/or subsequent removal by current and wind forces.

The collective records from all simulations are then analysed by dividing the study region into a three-dimensional grid. For oil particles that are classified as being at the water surface (floating oil), the sum of the mass in all oil particles (including accounting for spreading and dispersion effects) located within a grid cell, divided by the area of the cell provides estimates of the concentration of oil in that grid cell, at each time step. For entrained and dissolved hydrocarbons particles, concentrations are calculated at each time step by summing the mass of particles within a grid cell and dividing by the volume of the grid cell.

The concentrations of oil calculated for each grid cell, at each time step, are then analysed to determine whether concentration estimates exceed defined threshold concentrations over time.

Risks are then summarised as follows:

- The probability of exposure to a location is calculated by dividing the number of spill simulations where any contact occurred above a specified threshold at that location by the total number of replicate spill simulations. For example, if contact occurred at a location (above a specified threshold) during 21 out of 100 simulations, a probability of exposure of 21% is indicated;
- The minimum potential time to a shoreline location is calculated by the shortest time over which oil at a concentration above a threshold was calculated to travel from the source to the location in any of the replicate simulations;
- The maximum potential concentration of oil predicted for each shoreline section is the greatest mass per m<sup>2</sup> of shoreline calculated to strand at any location within that section during any of the replicate simulations; and
- Similar treatments were undertaken for entrained and dissolved hydrocarbon exposures.

Thus, the minimum time to shoreline and the maximum potential concentration estimates indicate the worst potential outcome of the modelled spill scenario for each section of shoreline. However, the average over the replicates presents an average of the potential outcomes, in terms of hydrocarbons that could strand.

Note also that results quoted for sections of shoreline are derived for any individual location within that section, as a conservative estimate. Locations will represent shoreline lengths of the order of ~1 km, while sections or regions will represent shorelines spanning tens to hundreds of kilometres. The maximum potential concentrations quoted will not necessarily occur over the full extent of each section, therefore multiplying the maximum concentration estimates by the full area of the section is not recommended as this will greatly overestimate the total volume expected on that section.

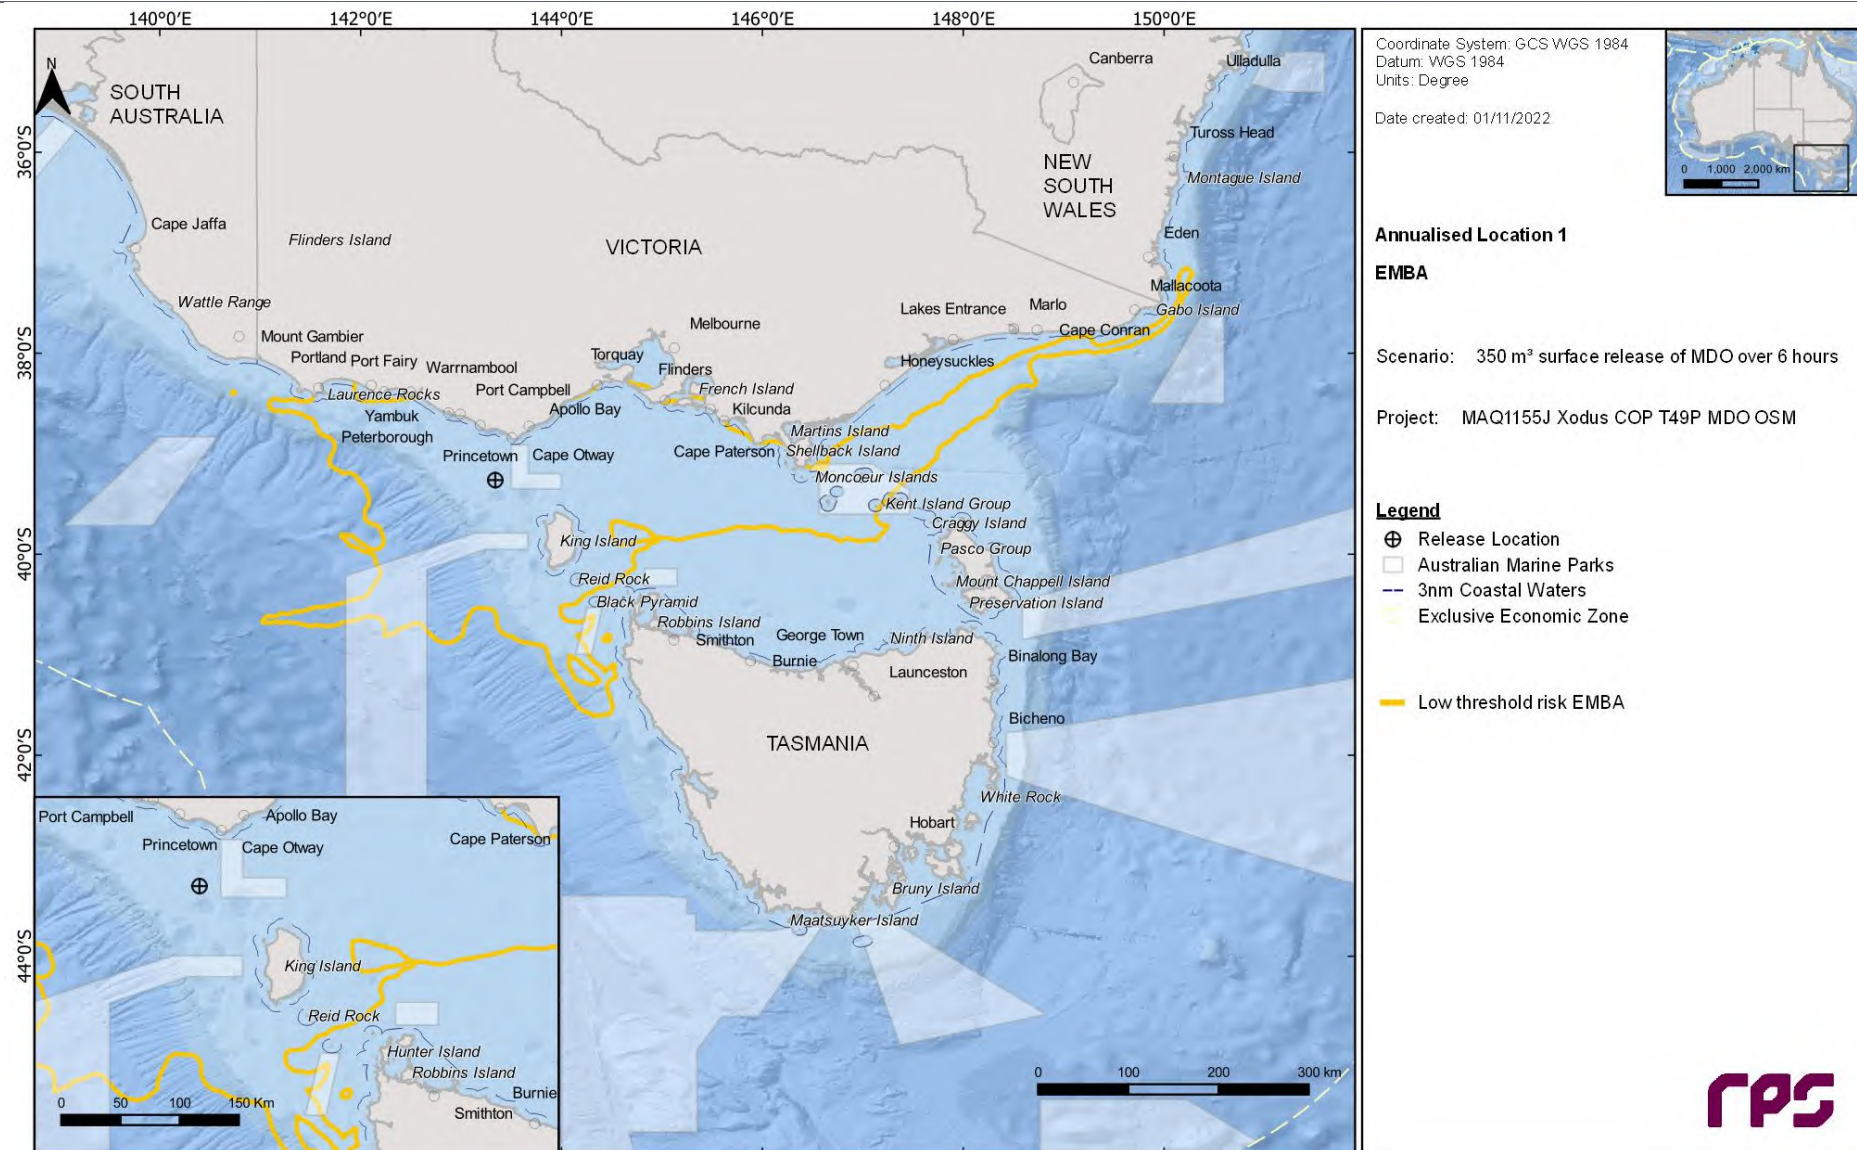

## 12 LOCATION 1 VESSEL COLLISION RESULTS

This scenario examined the potential exposure following a vessel collision at Location 1. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 30 days.

Section 12.1 presents the EMBA, Section 12.2 shows the seasonal (or stochastic) results, while Section 12.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 12.1 EMBA

Figure 12.1 shows the EMBA for Location 1. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

**Figure 12.1** Predicted low threshold EMBA from a vessel collision at Location 1. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 12.2 Stochastic Analysis

### 12.2.1 Floating Oil Exposure

Table 12.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 12.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 12.2 to Figure 12.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer conditions was 129.5 km<sup>2</sup> and 135.0 km<sup>2</sup>, respectively.

**Table 12.1 Maximum distances and directions travelled by floating oil from a vessel collision at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.**

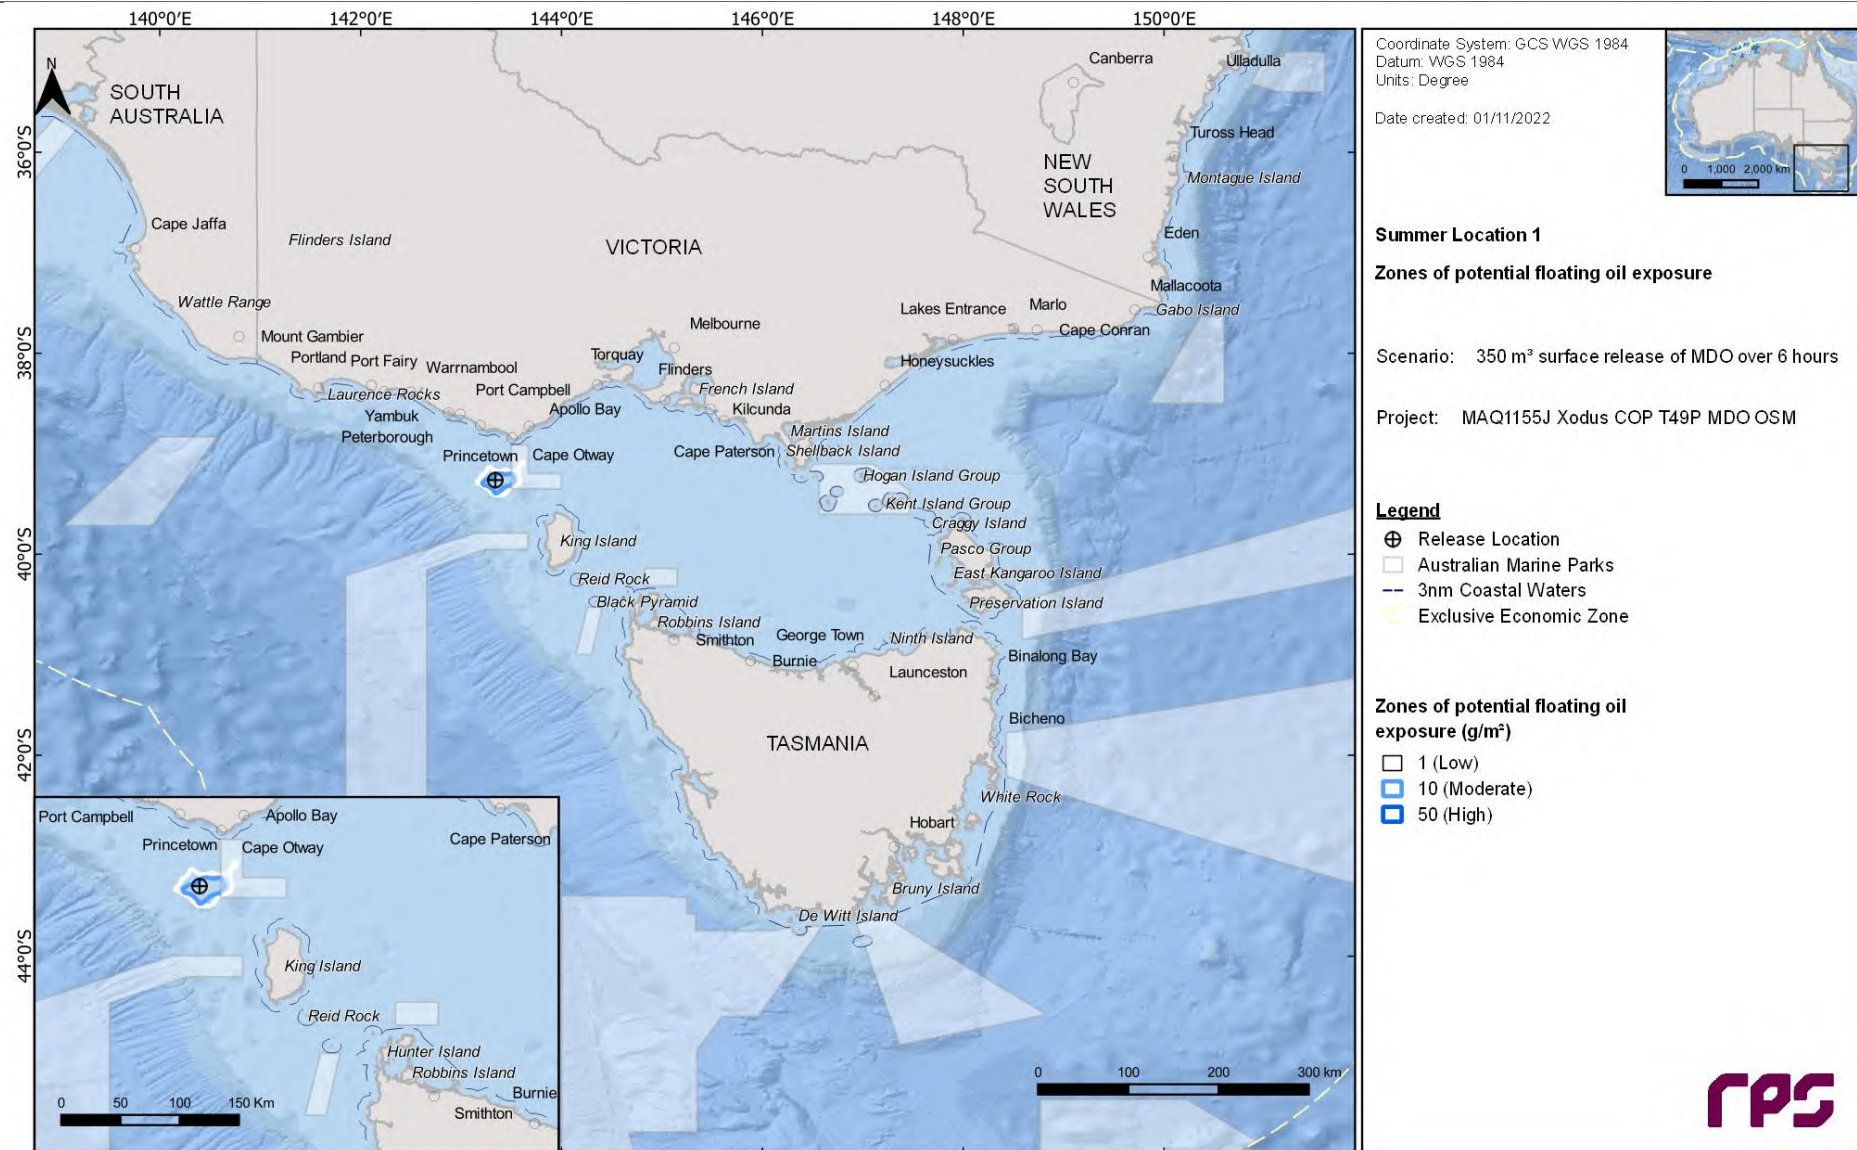

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	29.7	15.5	4.0
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	19.4	14.7	4.0
	Direction	ENE	E	SW
Winter	Maximum distance (km) from release location	49.8	13.4	2.5
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	28.3	12.5	2.5
	Direction	E	S	ENE

## REPORT

## 12.2.3 In-water exposure

### 12.2.3.1 Dissolved Hydrocarbons

Table 12.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 12.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 12.6 and Figure 12.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

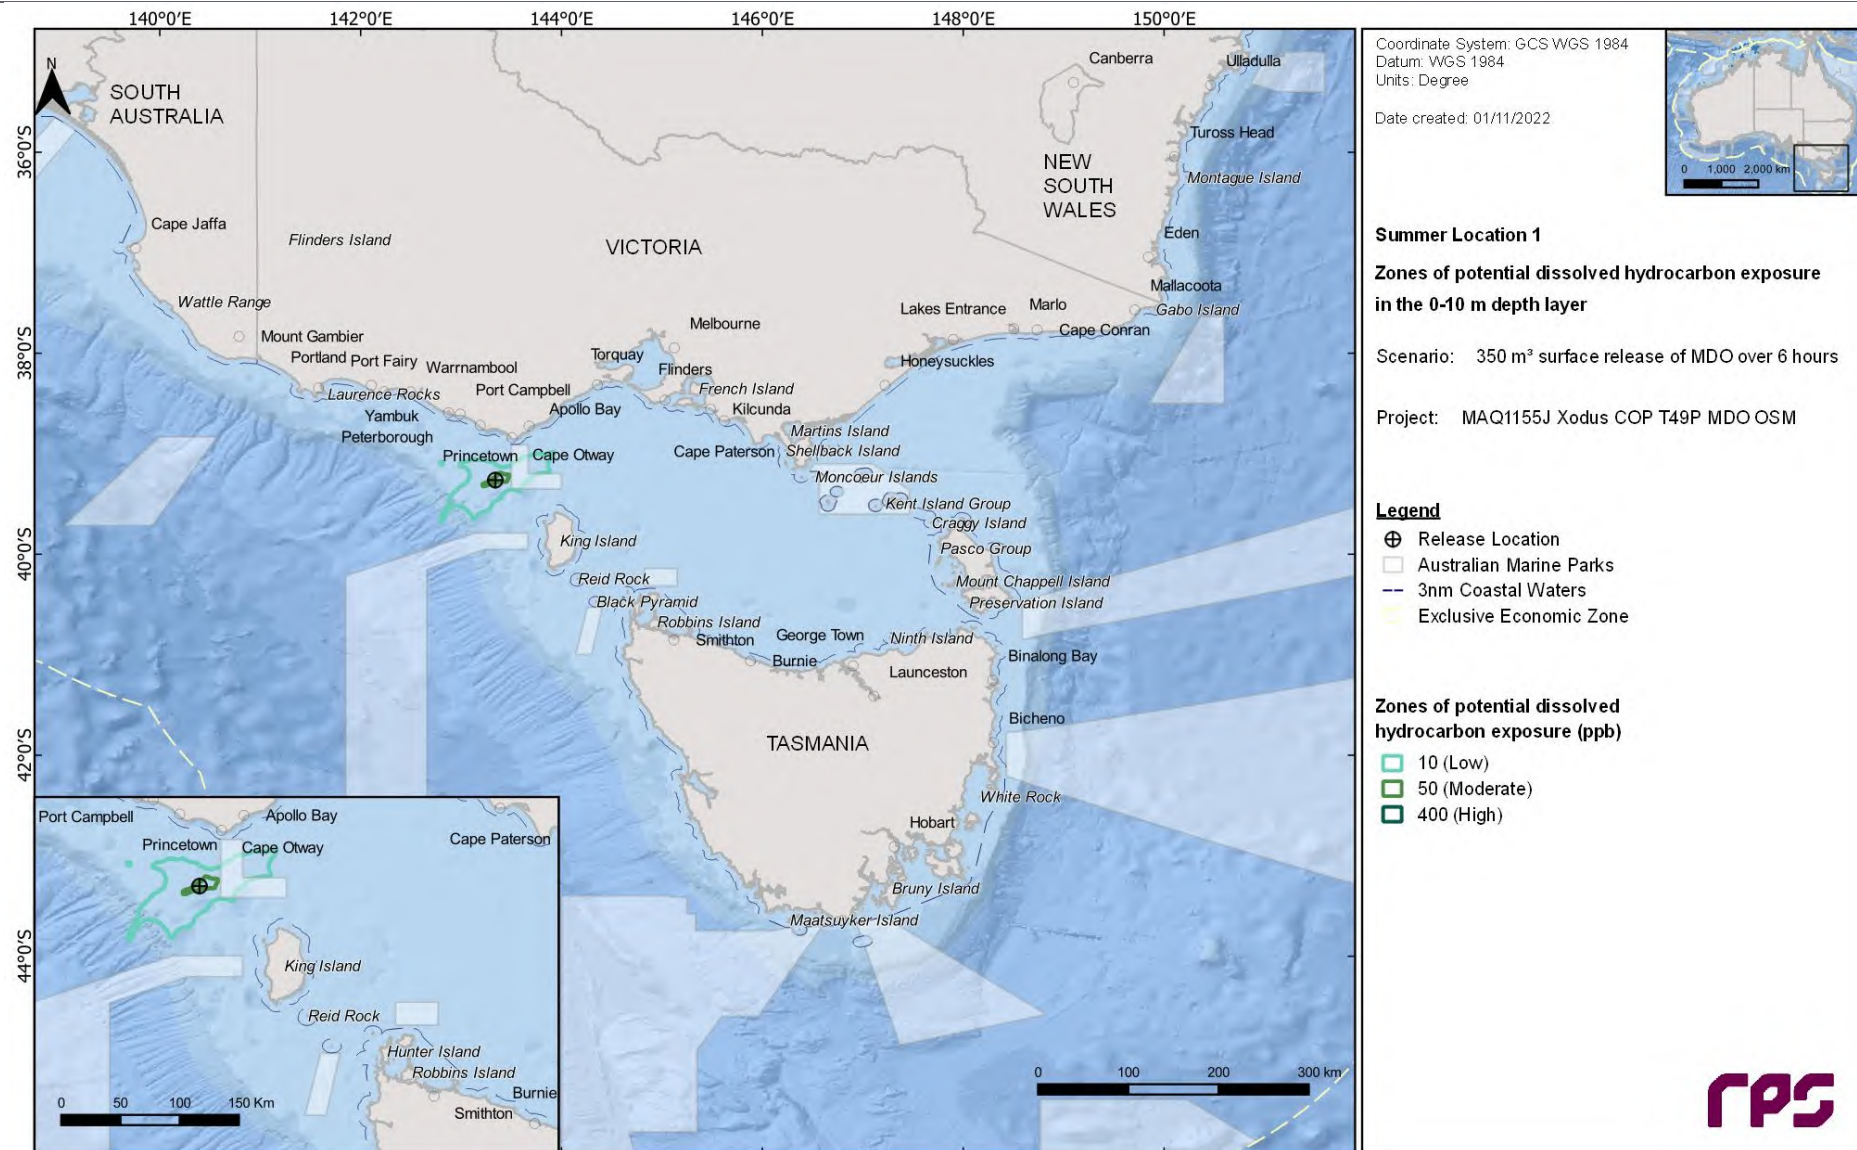

**Table 12.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a vessel collision at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	64	12	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	49	12	-
	Direction	SW	ENE	-
Winter	Maximum distance (km) from release location	92	11	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	71	11	-
	Direction	E	ENE	-

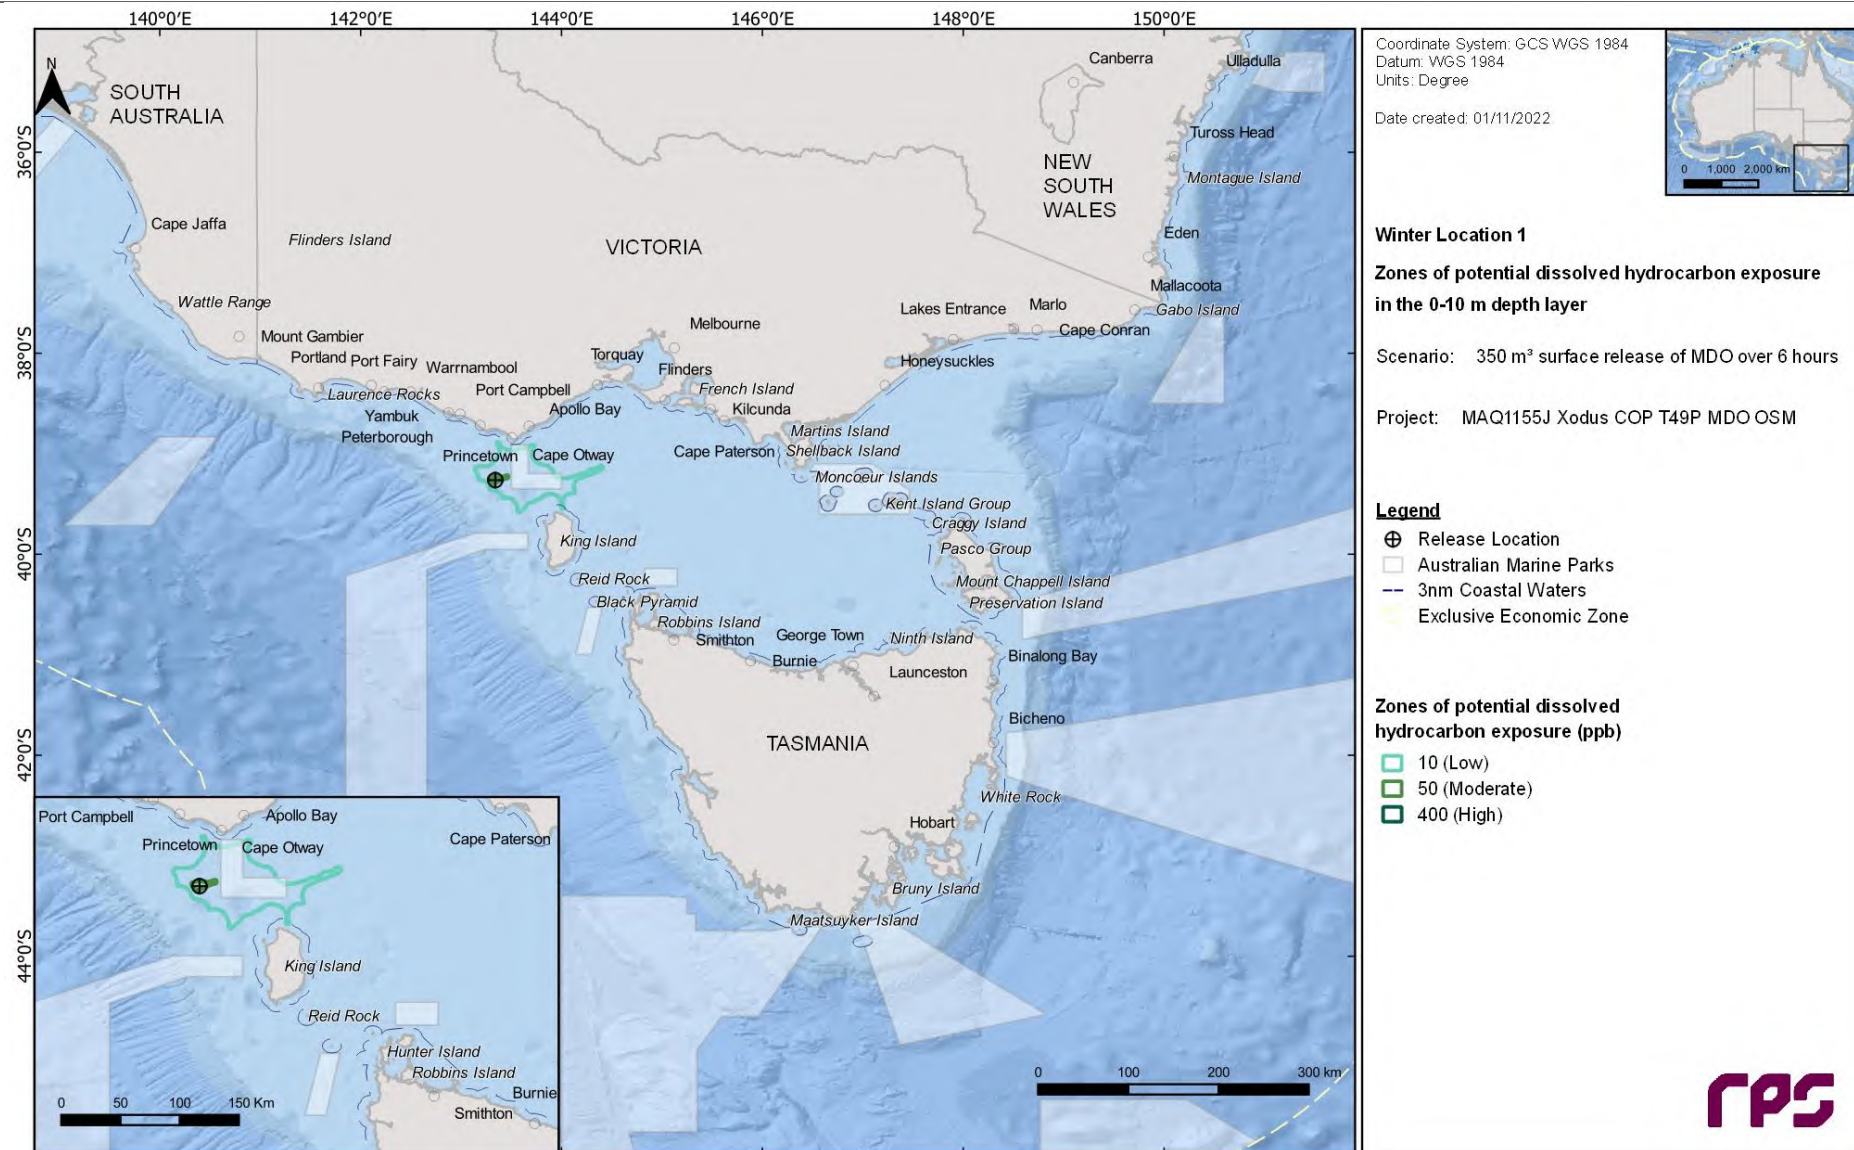

**Table 12.7** Probability of dissolved hydrocarbons exposure to receptors in the 0-10 m depth layer from a vessel collision at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

## 12.3 Deterministic Analysis

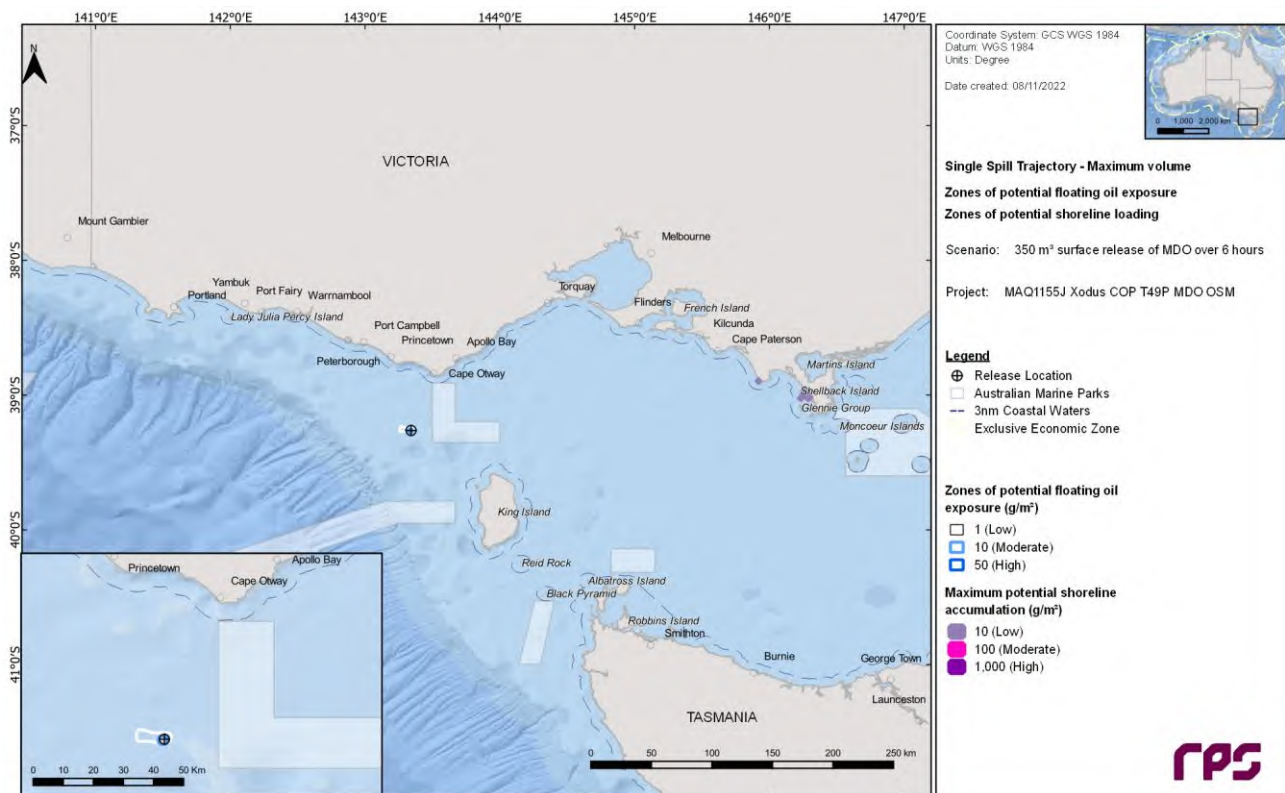

### 12.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of oil ashore was identified as run number 94 and commenced during winter conditions, 6 pm 31<sup>st</sup> August 2013.

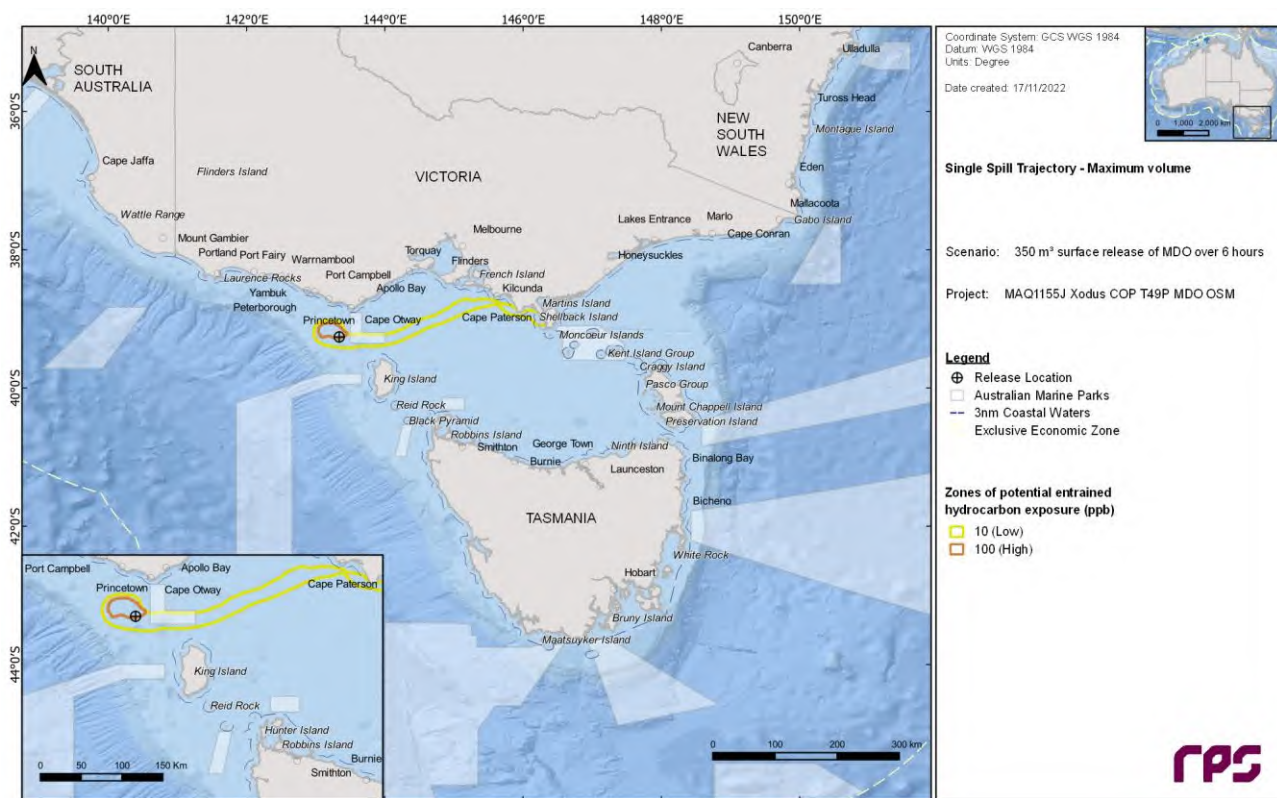

Figure 13.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on day 15.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire simulation period of 30 days are presented in Figure 13.11 and Figure 13.12, respectively.

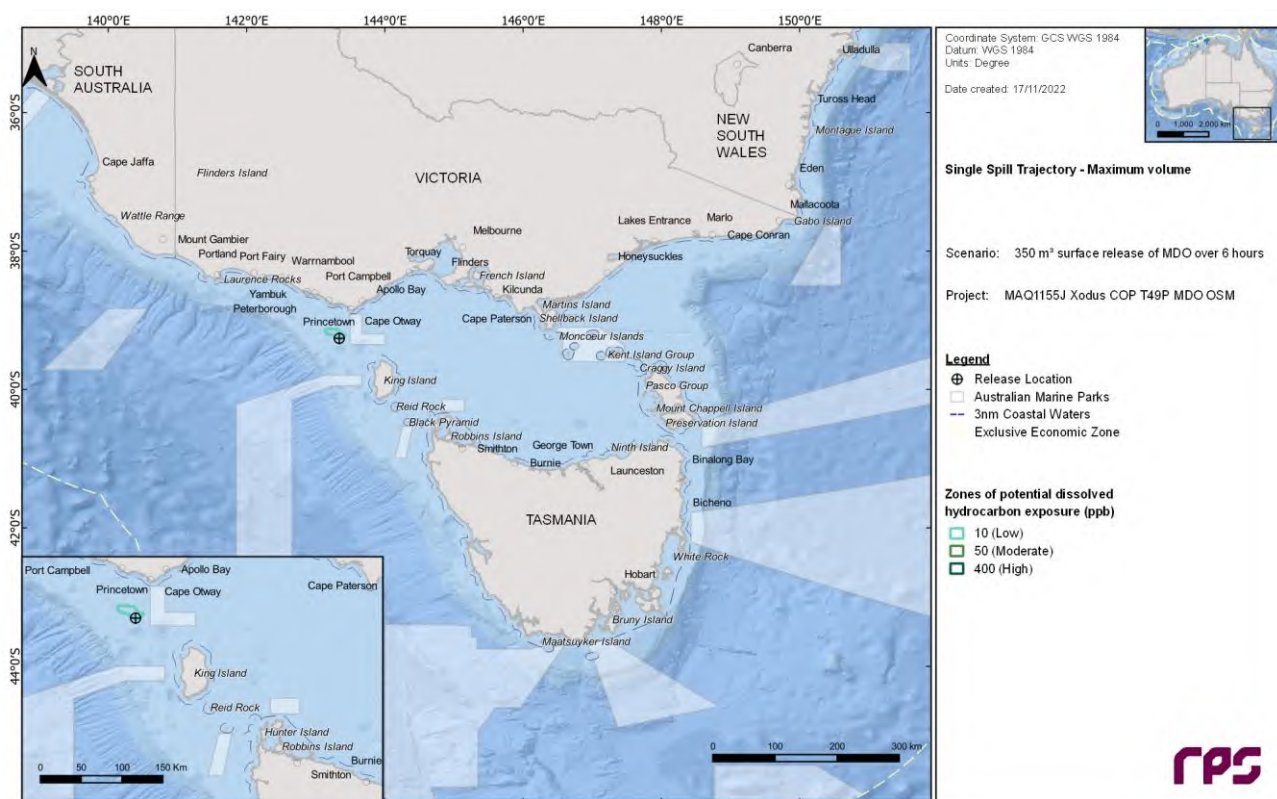

Figure 13.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 191 m<sup>3</sup> (~55%) was lost to the atmosphere through evaporation. Approximately, 100 m<sup>3</sup> (~29%) of the released volume decayed, while approximately 60 m<sup>3</sup> (~17%) was predicted to remain within the water column and approximately 3 m<sup>3</sup> (~1%) was present on the shorelines.

**Figure 12.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.**

**Figure 12.11** Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.

**Figure 12.12** Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.

**Figure 12.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.**

## 13 LOCATION 2 VESSEL COLLISION RESULTS

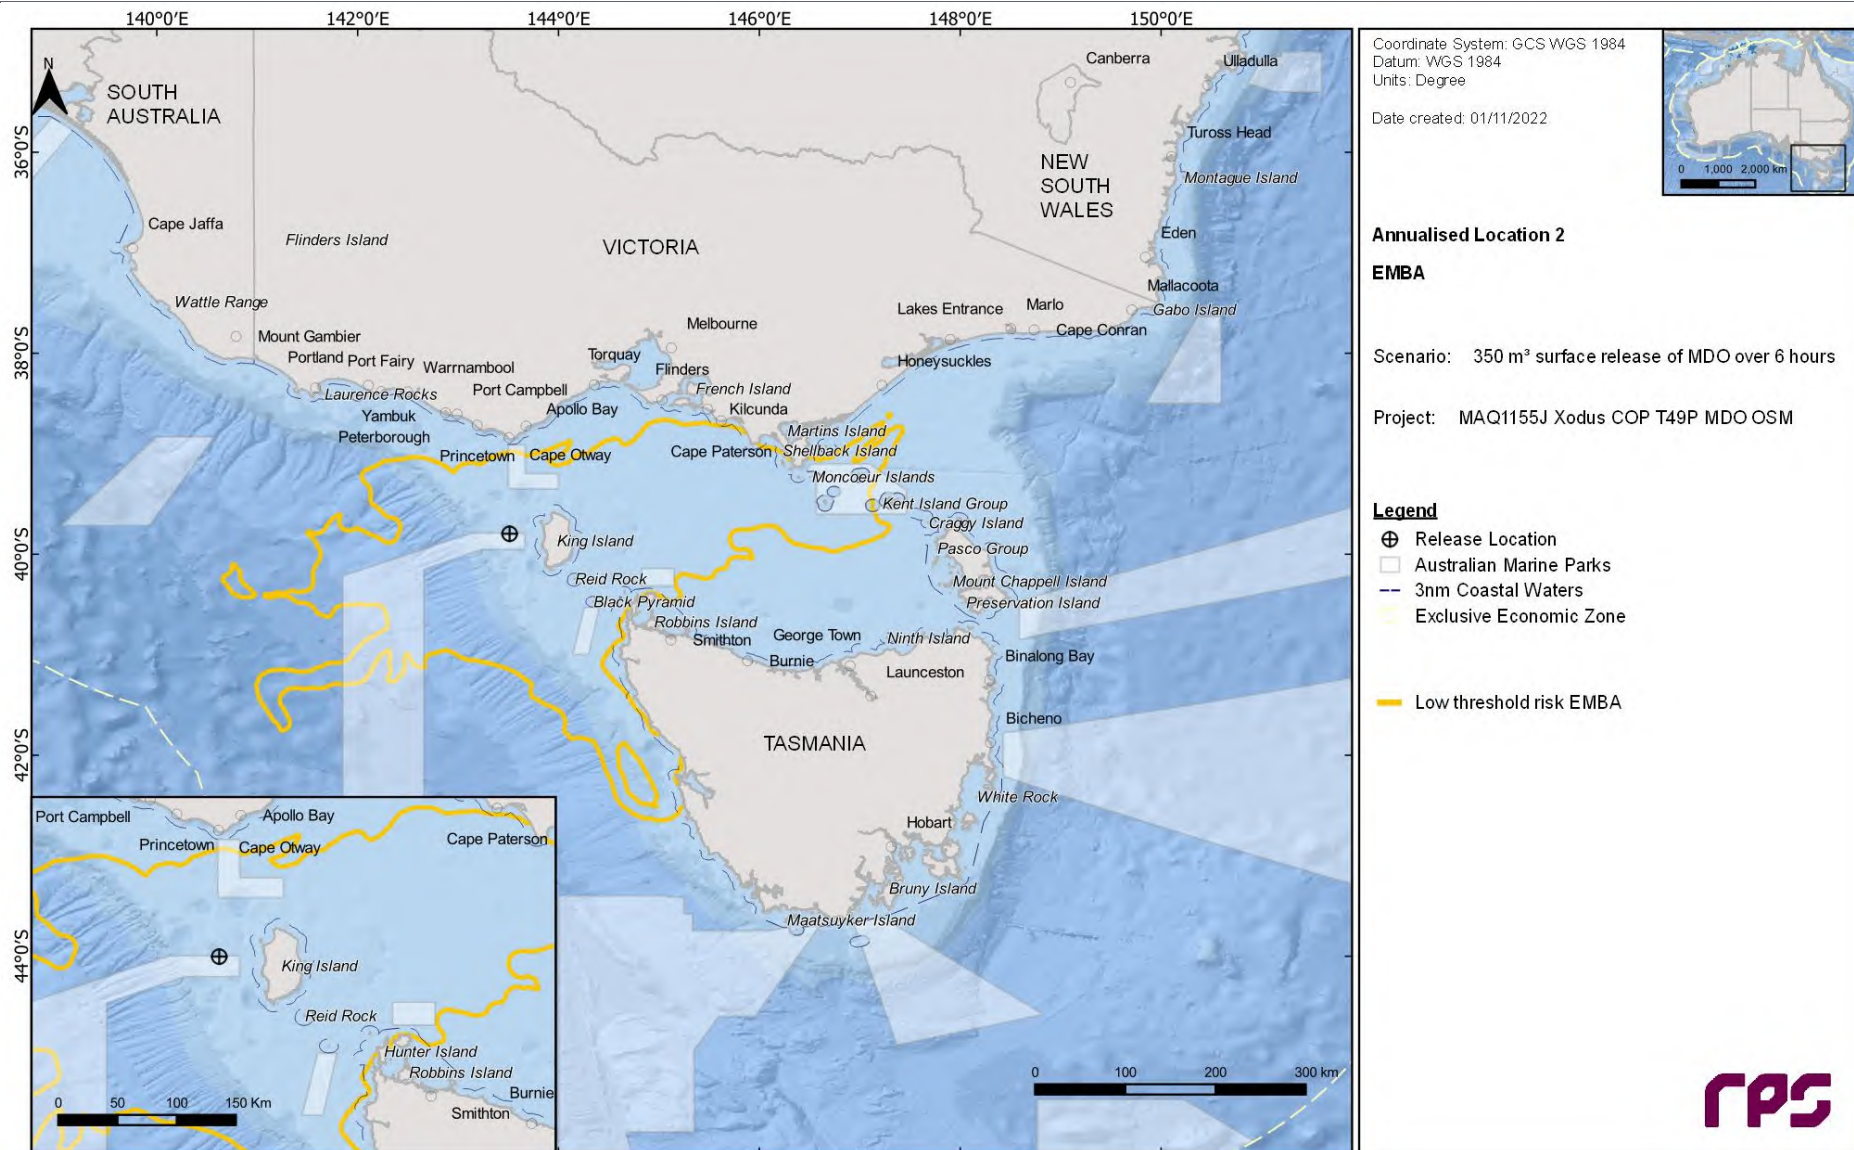

This scenario examined the potential exposure following a vessel collision at Location 2. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 30 days.

Section 13.1 presents the EMBA, Section 13.2 shows the seasonal (or stochastic) results, while Section 13.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 13.1 EMBA

Figure 13.1 shows the EMBA for Location 2. The EMBA encompasses the outer extent of all 200 l spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

**Figure 13.1** Predicted low threshold EMBA from a vessel collision at Location 2. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 13.2 Stochastic Analysis

### 13.2.1 Floating Oil Exposure

Table 13.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 13.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 13.2 to Figure 13.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 154.1 km<sup>2</sup> and 116.7 km<sup>2</sup>, respectively.

**Table 13.1 Maximum distances and directions travelled by floating oil from a vessel collision at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.**

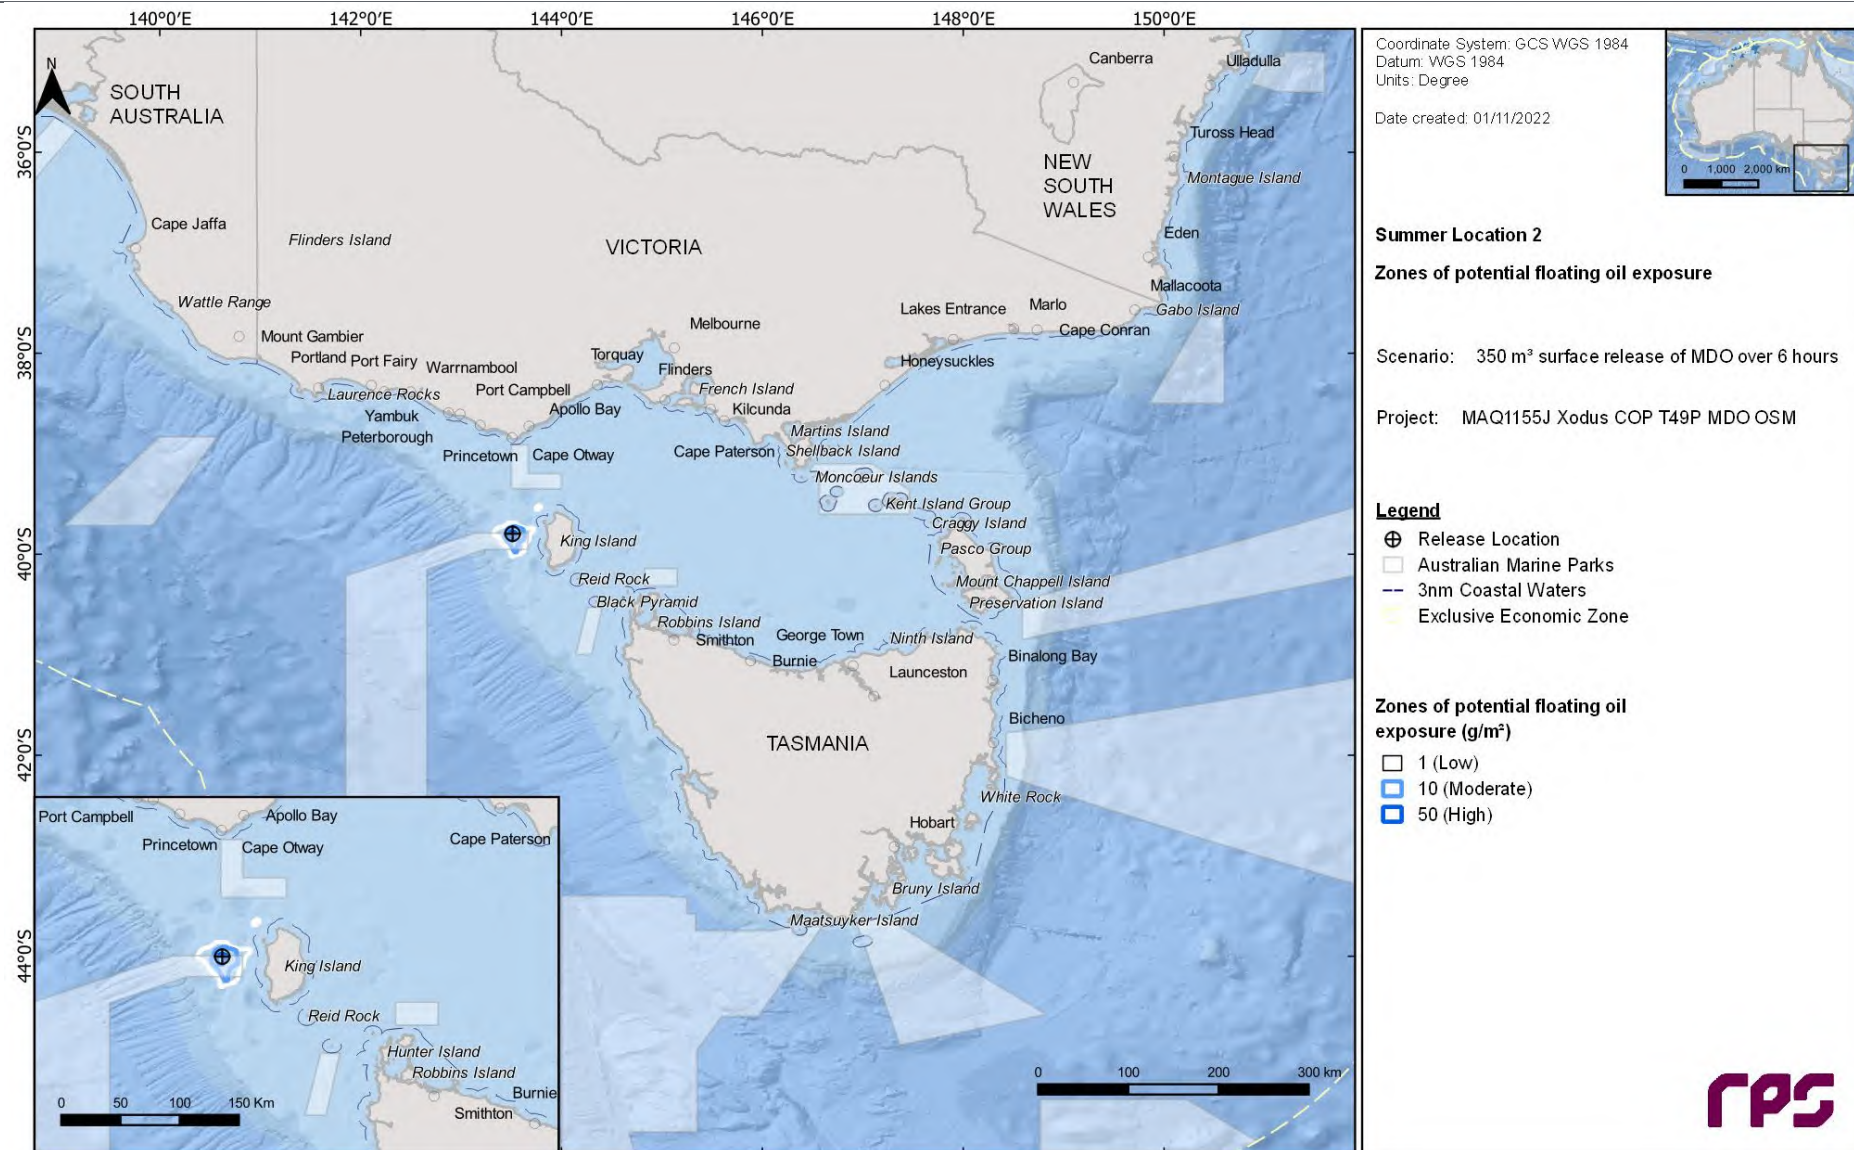

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	37.8	19.2	5.2
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	23	17.9	5.2
	Direction	NE	S	SSW
Winter	Maximum distance (km) from release location	42.7	15.6	3.2
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	22.3	15.2	3.2
	Direction	SE	ESE	ESE

## REPORT

**Table 13.2** Summary of the potential exposure by floating oil to individual receptors from a vessel collision at Location 2 for each season. Results were calculated from 100 spill simulations per season.

### 13.2.2 Shoreline Accumulation

Table 13.3 Table 12.3 summarises the predicted oil accumulation on any shoreline during each season.

Table 13.4 to Table 13.5 summarises the oil accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 13.4 and Figure 13.5.

**Table 13.3 Summary of oil accumulation on any shoreline from a vessel collision at Location 2 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	35	68
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	2.33	1.50
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	35.2	47.4
Average volume of hydrocarbons ashore (m <sup>3</sup> )	5.1	8.3
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	27	35
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	9.2	11.9
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	11	14
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	3.5	4.1
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	2
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	2

## REPORT

## 13.3 Deterministic Analysis

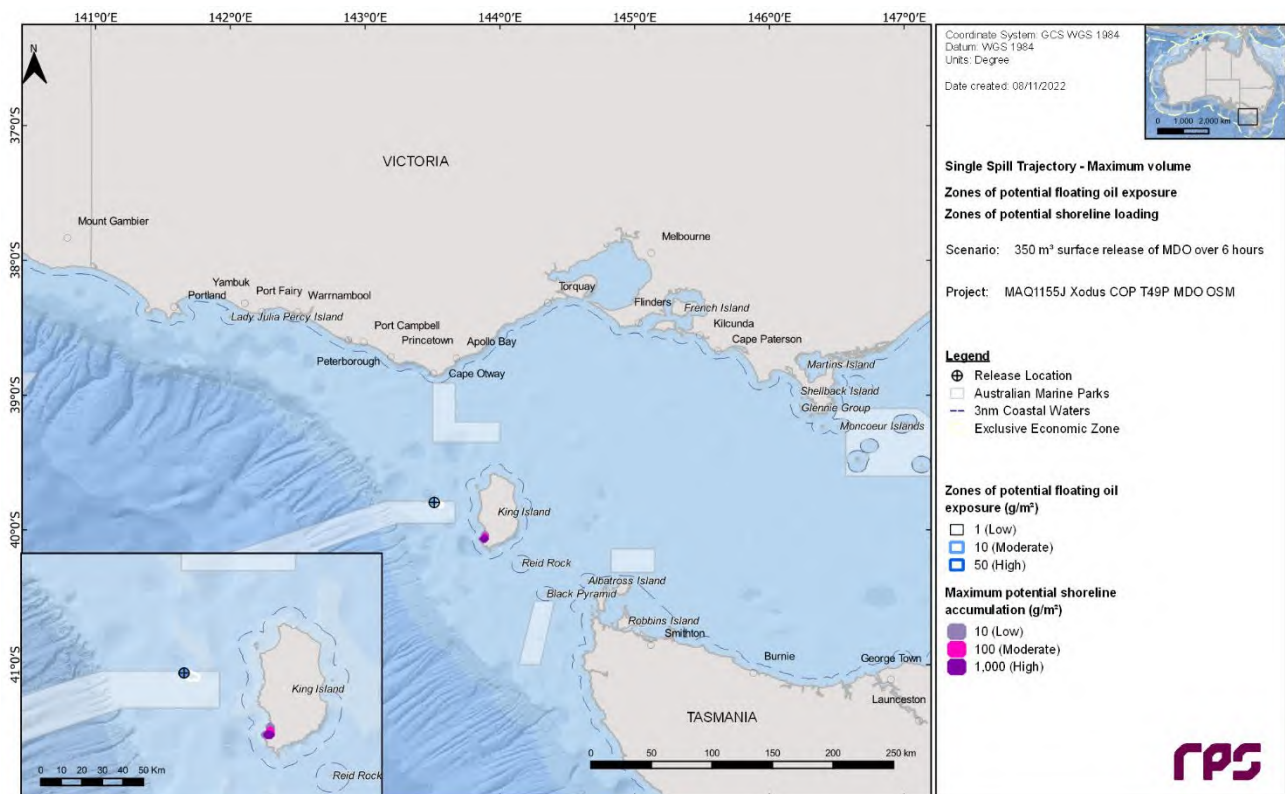

### 13.3.1 Largest Volume of Hydrocarbons Ashore & Minimum time to Shoreline Accumulation

The simulation that resulted in the largest volume of hydrocarbons ashore of 47.4 m<sup>3</sup> and minimum time to hydrocarbons ashore of 1.50 days was identified as run number 15 and commenced during winter conditions, 2 am 5<sup>th</sup> September 2012.

Figure 13.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred 1 day and 6 hours into the simulation.

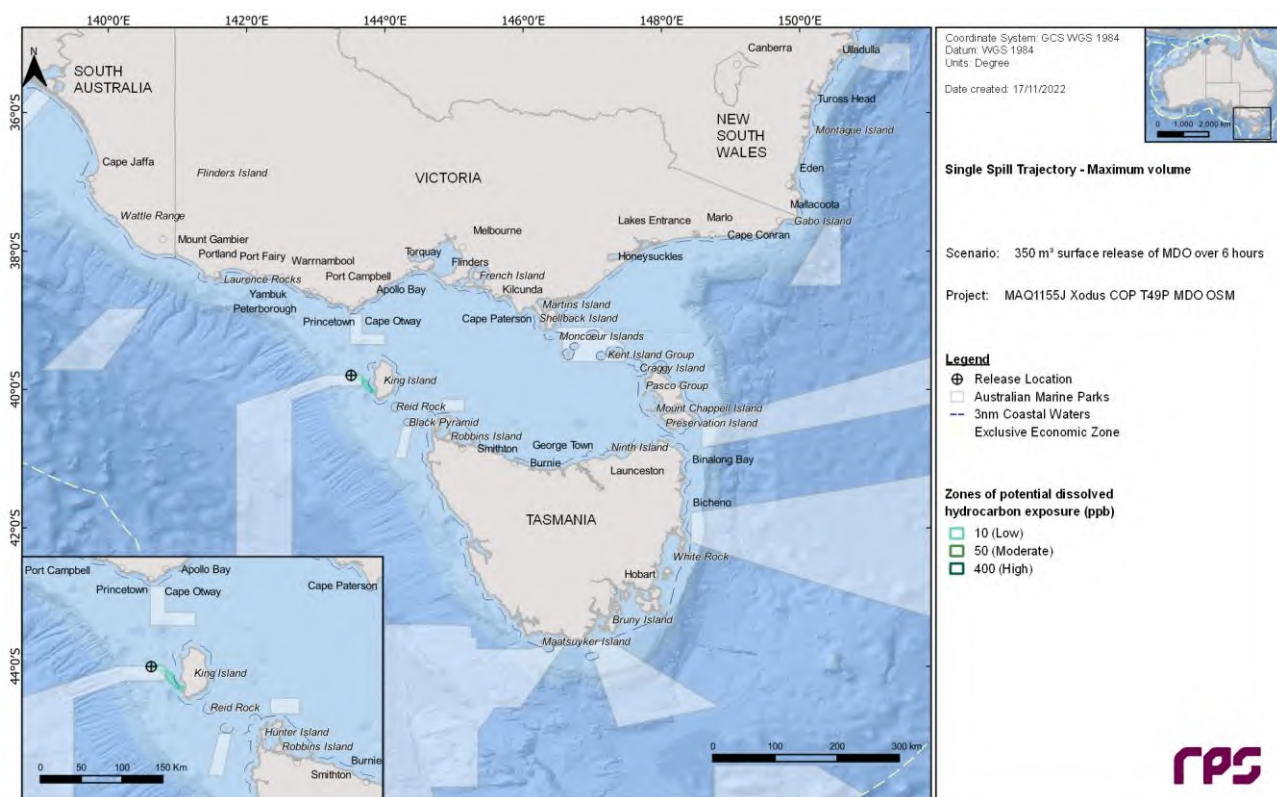

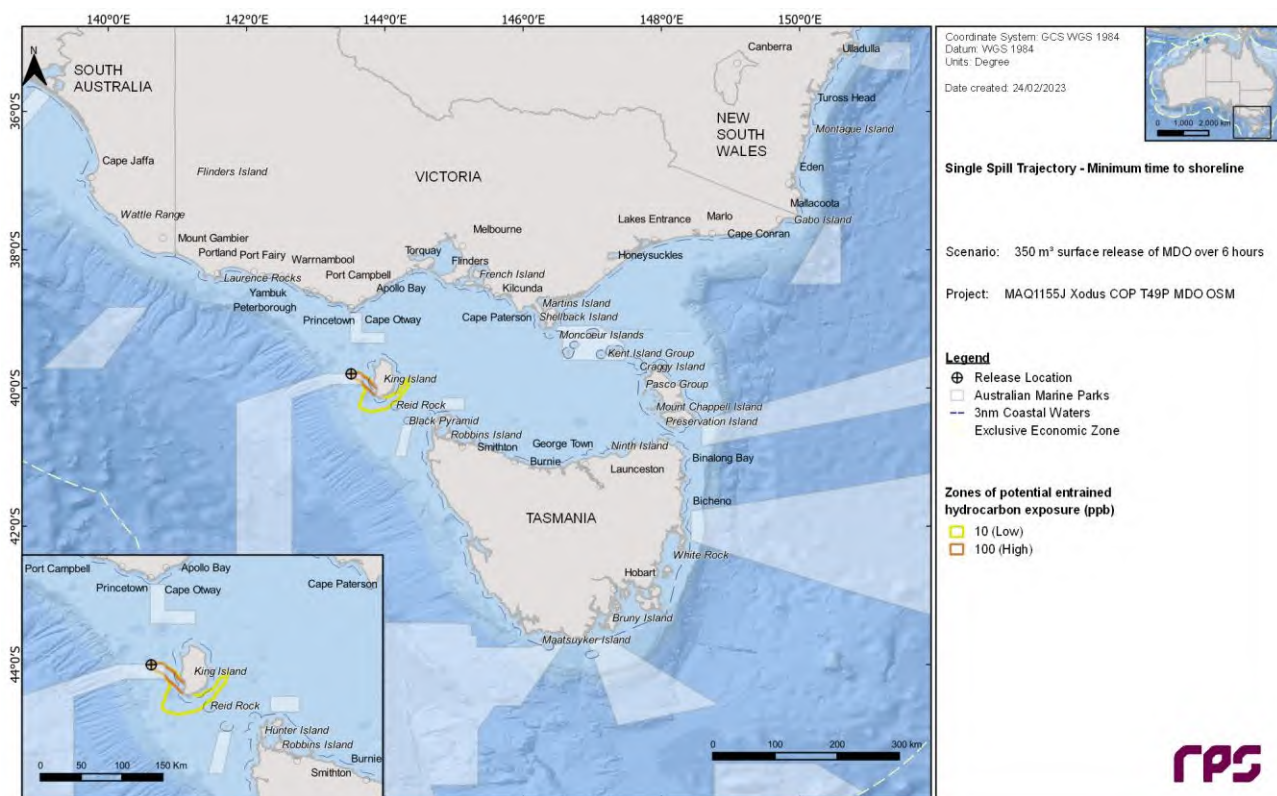

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire simulation period of 30 days are presented in Figure 13.11 and Figure 13.12, respectively.

Figure 13.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 178 m<sup>3</sup> (~51%) was lost to the atmosphere through evaporation. Approximately, 88 m<sup>3</sup> (~25%) of the released volume decayed, while approximately 43 m<sup>3</sup> (~12%) was predicted to remain within the water column and approximately 44 m<sup>3</sup> (~12.5%) was present on the shorelines.

**Figure 13.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 2.**

**Figure 13.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 2.**

### 13.3.2 Longest Length of Shoreline Accumulation

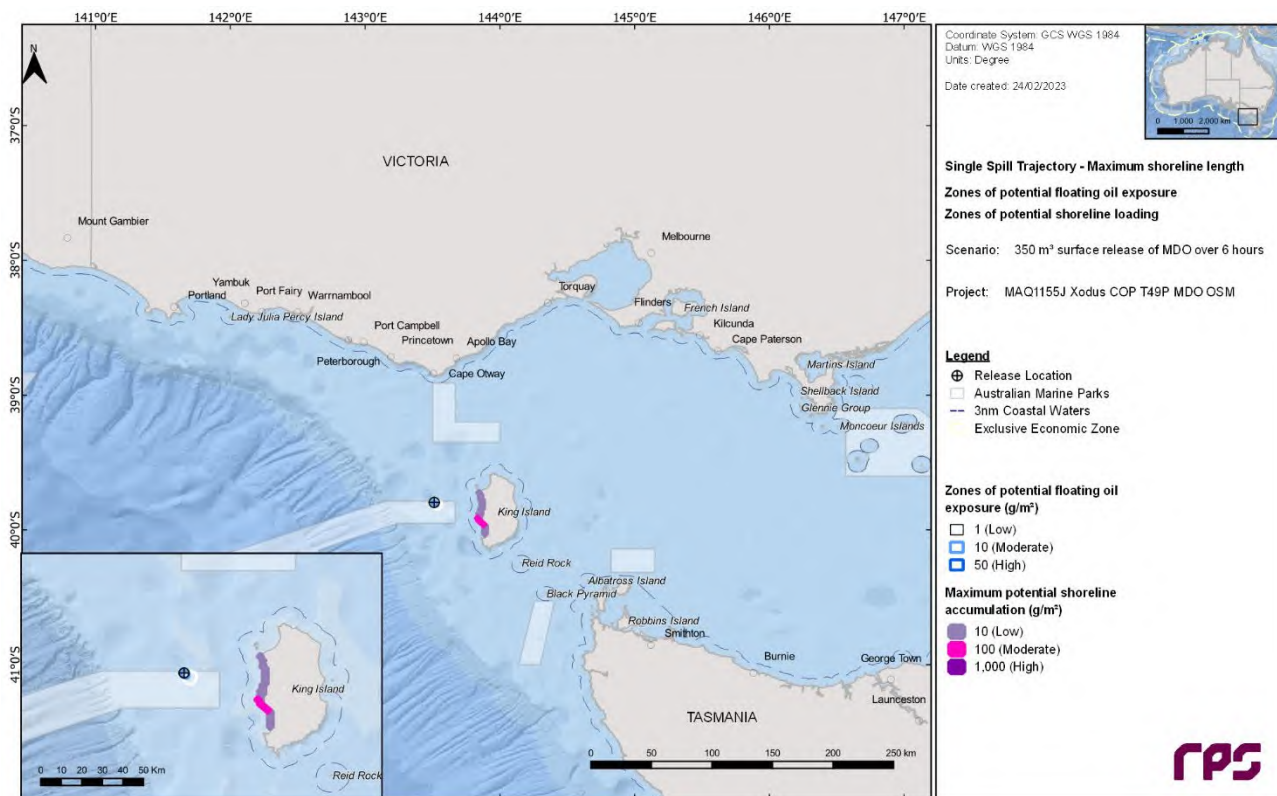

The simulation that resulted in the longest length of hydrocarbons ashore of 35.2 km was identified as run number 95 which commenced during winter conditions, 7 am 16<sup>th</sup> July 2010.

Figure 13.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on day 3 of the simulation.

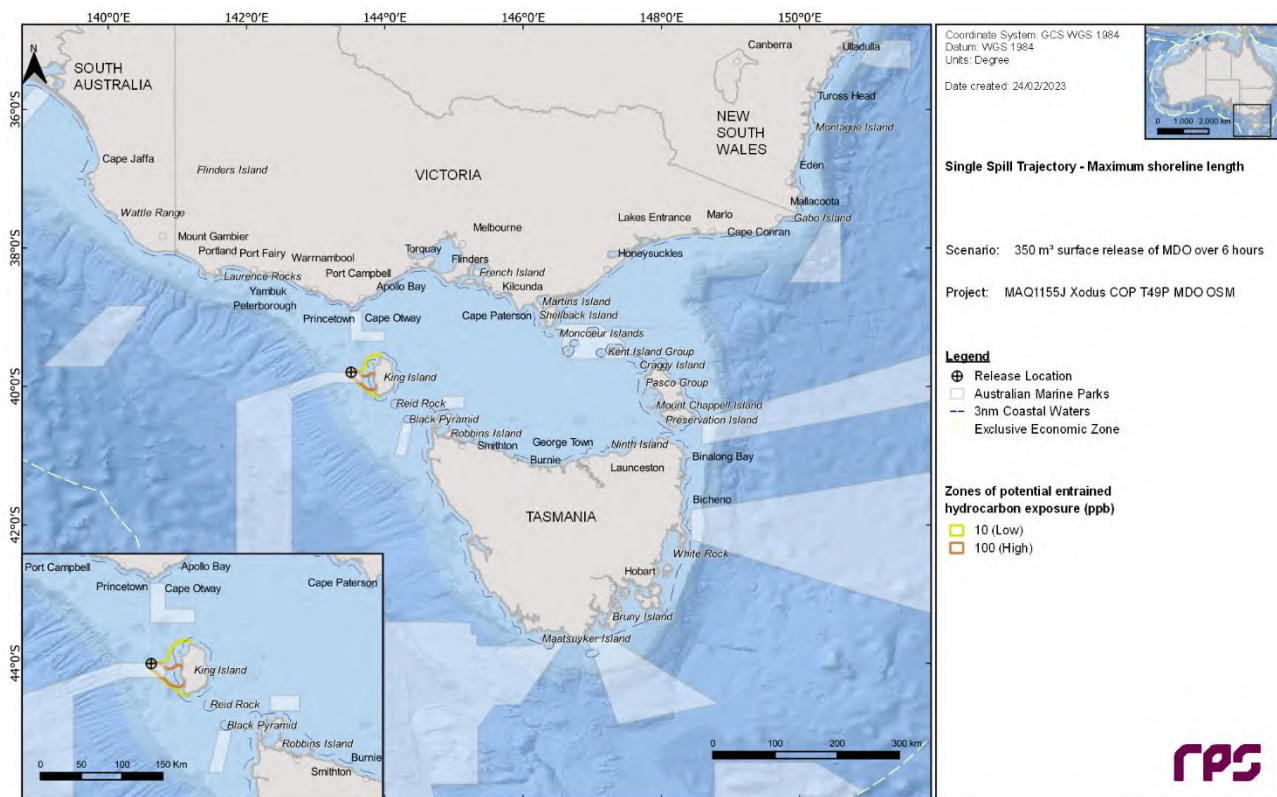

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 13.15 and Figure 13.16, respectively.

Figure 13.17 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 180 m<sup>3</sup> (~51%) was lost to the atmosphere through evaporation. Approximately, 95 m<sup>3</sup> (~28%) of the released volume decayed, while approximately 70 m<sup>3</sup> (~19%) was predicted to remain within the water column and approximately 10 m<sup>3</sup> (3%) remained on shorelines.

**Figure 13.14 Predicted extent of the floating hydrocarbon exposure and shoreline loading over the entire 30 days for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.**

**Figure 13.15 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.**

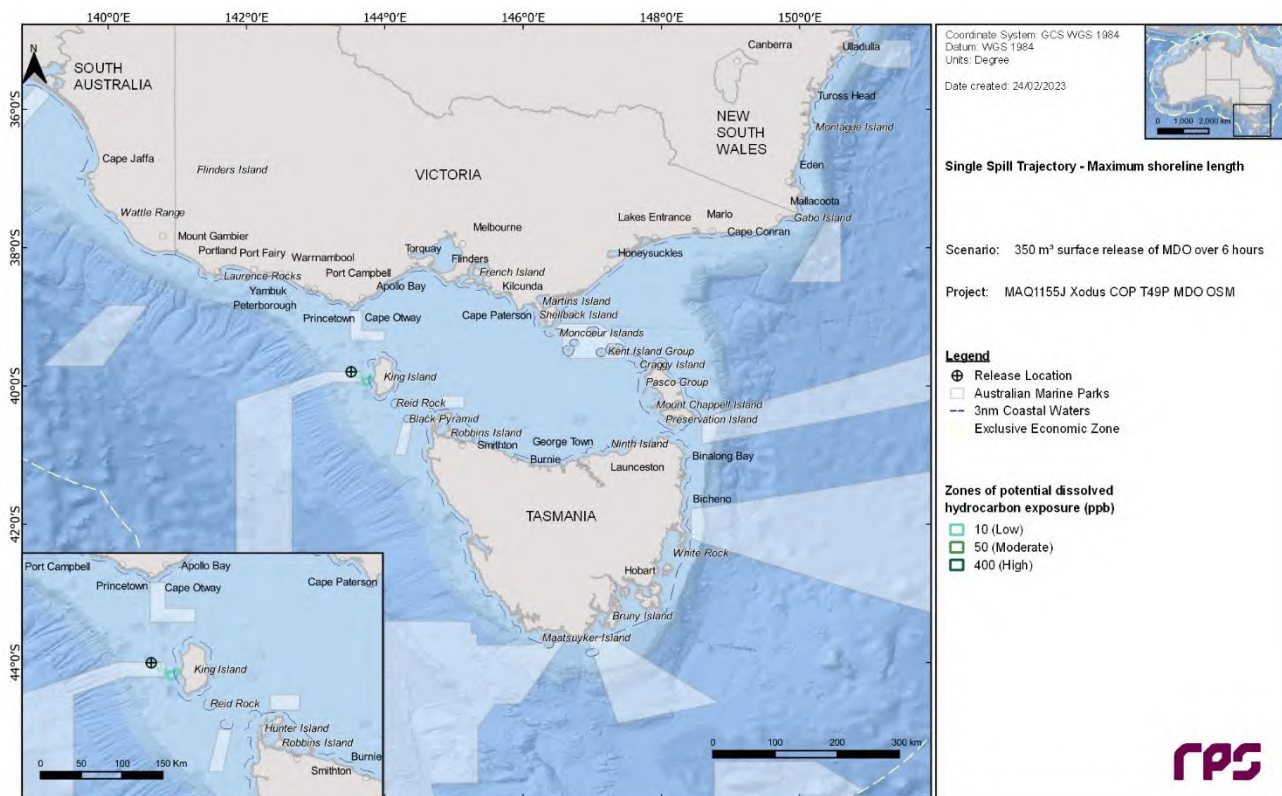

Figure 13.16 Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.

Figure 13.17 Predicted weathering and fates for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.

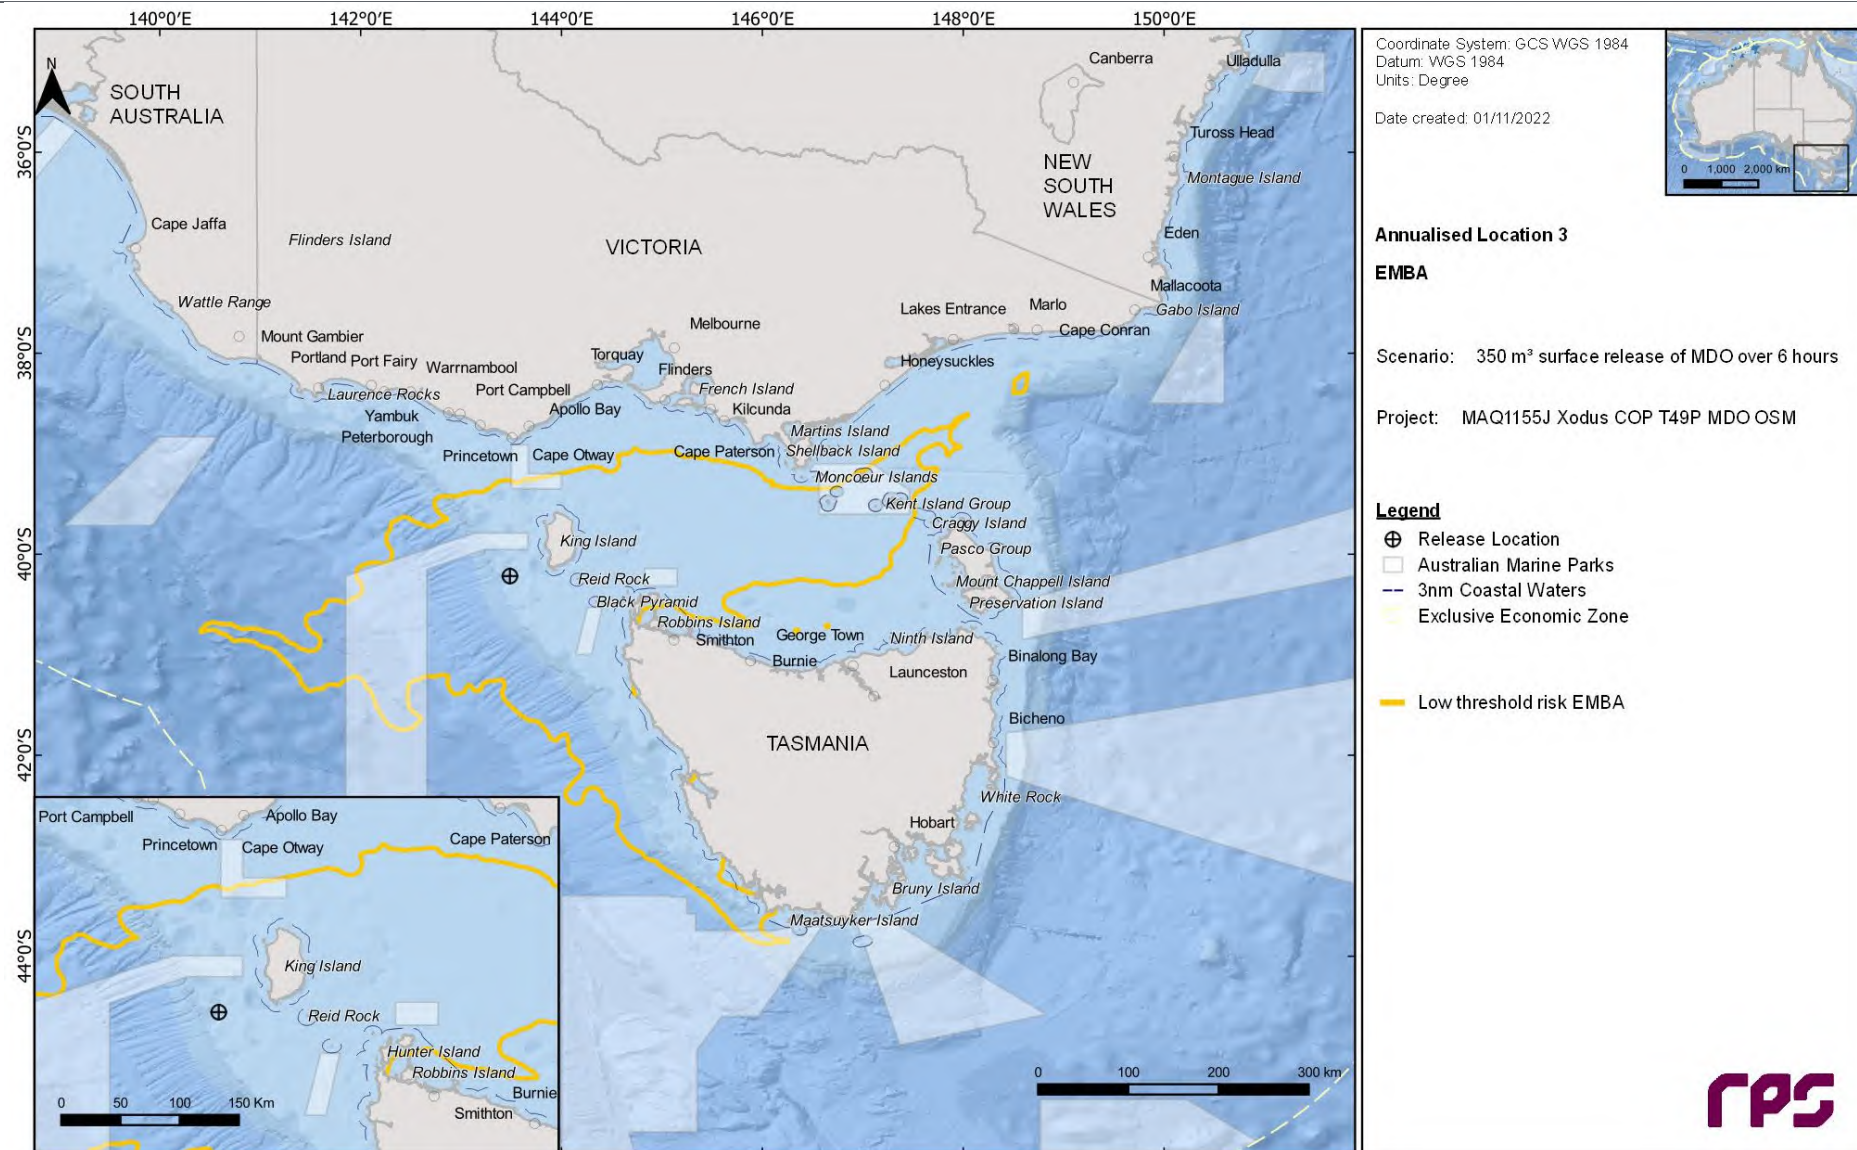

## 14 LOCATION 3 VESSEL COLLISION RESULTS

This scenario examined the potential exposure following a vessel collision at Location 3. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 30 days.

Section 14.1 presents the low threshold EMBA, Section 14.2 shows the seasonal (or stochastic) analysis results, while Section 14.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 14.1 EMBA

Figure 14.1 shows the EMBA for Location 3. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

**Figure 14.1** Predicted low threshold EMBA from a vessel collision at Location 3. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 14.2 Stochastic Analysis

### 14.2.1 Floating Oil Exposure

Table 14.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 14.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 14.2 to Figure 14.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 170.6 km<sup>2</sup> and 158.7 km<sup>2</sup>, respectively.

**Table 14.1 Maximum distances and directions travelled by floating oil from a vessel collision at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

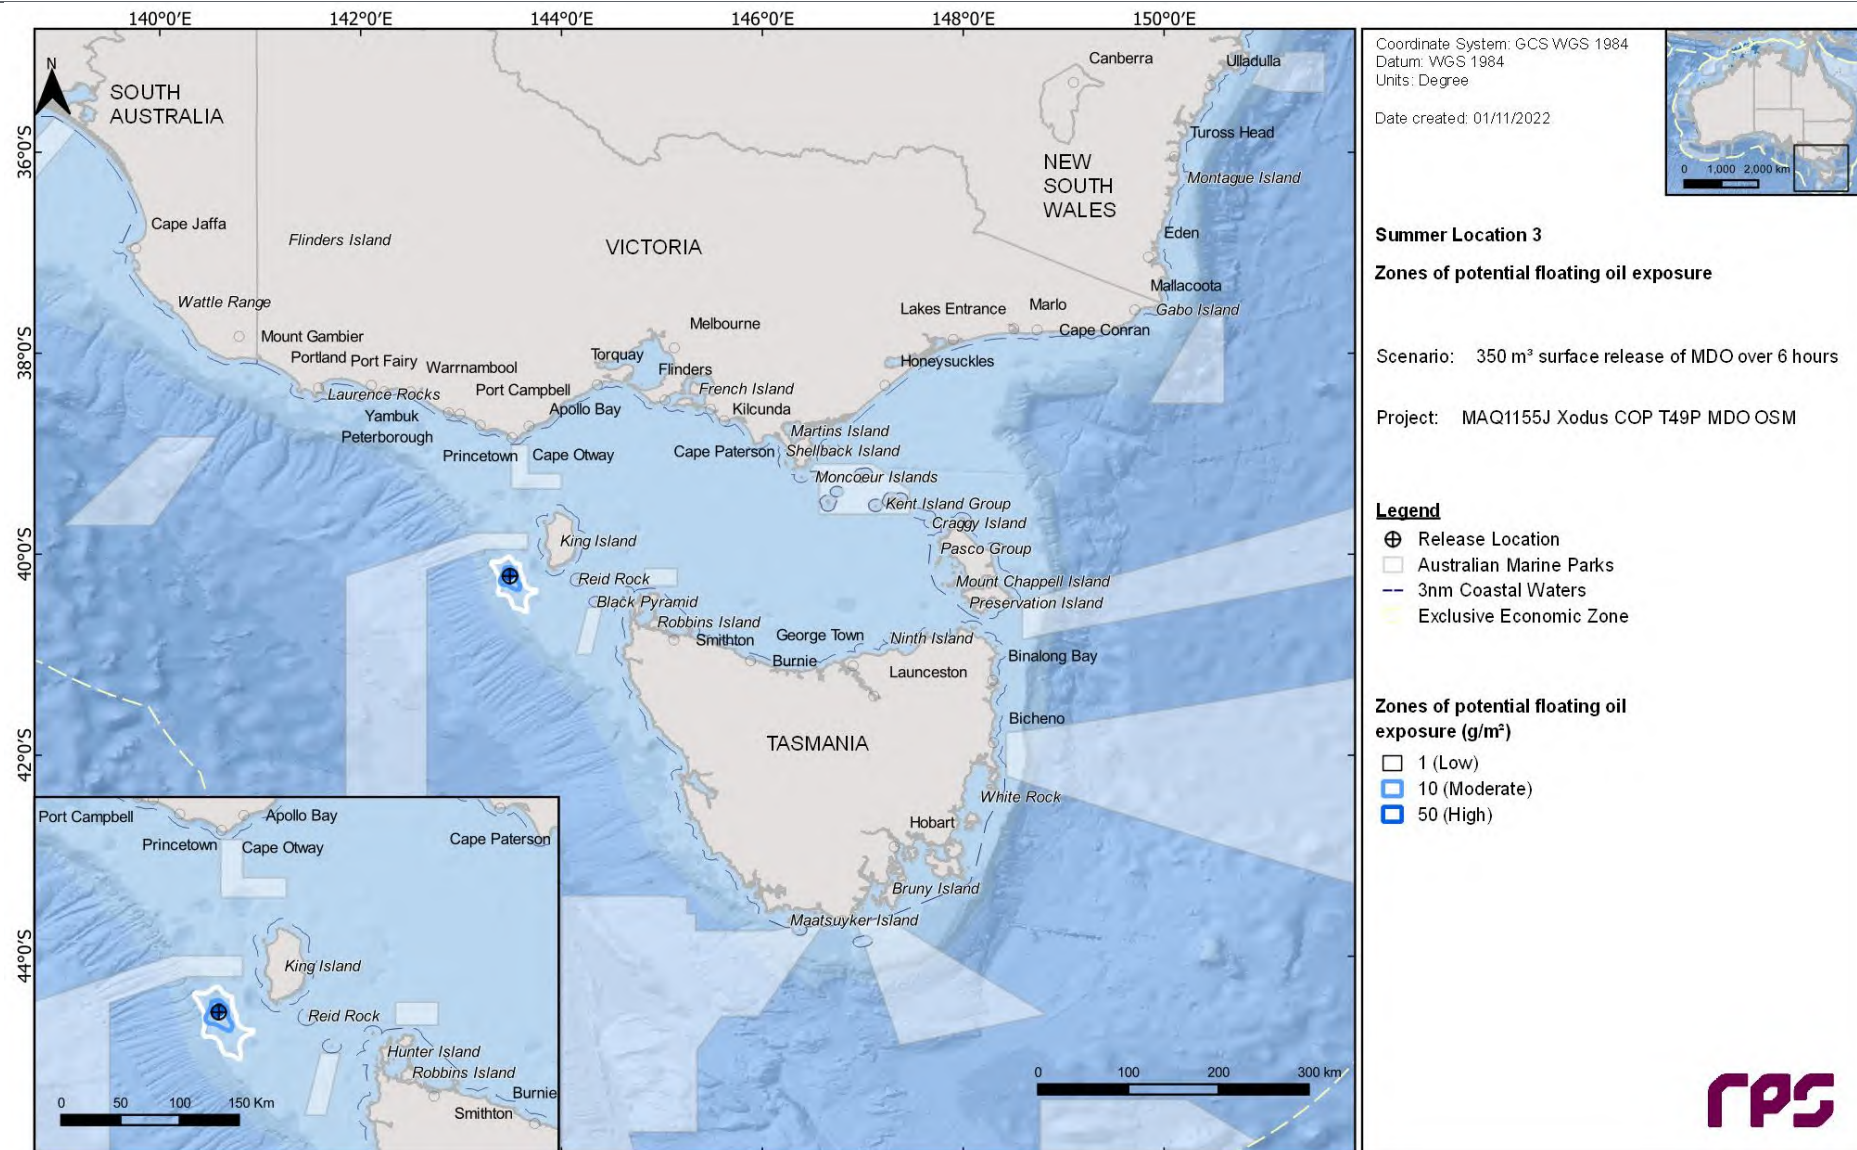

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	40.5	15.8	4.7
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	35	14.7	4.7
	Direction	SSE	SSE	N
Winter	Maximum distance (km) from release location	60.0	28.3	4.4
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	56.8	26.9	4.4
	Direction	SSE	S	SSE

## REPORT

## 14.2.2 Shoreline Accumulation

Table 14.3 summarises the predicted oil accumulation on any shoreline during each season.

Table 14.4 and Table 14.5 summarises the oil accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 14.4 and Figure 14.5.

**Table 14.3 Summary of oil accumulation on any shoreline from a vessel collision at Location 3 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	26	33
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	2.96	2.29
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	7.3	28.8
Average volume of hydrocarbons ashore (m <sup>3</sup> )	2.1	3
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	24	20
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	5.1	5.1
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	2	9
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	1.3	5
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	-
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	-

## REPORT

### 14.2.3 In-water exposure

#### 14.2.3.1 Dissolved Hydrocarbons

Table 14.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 14.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 14.6 and Figure 14.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

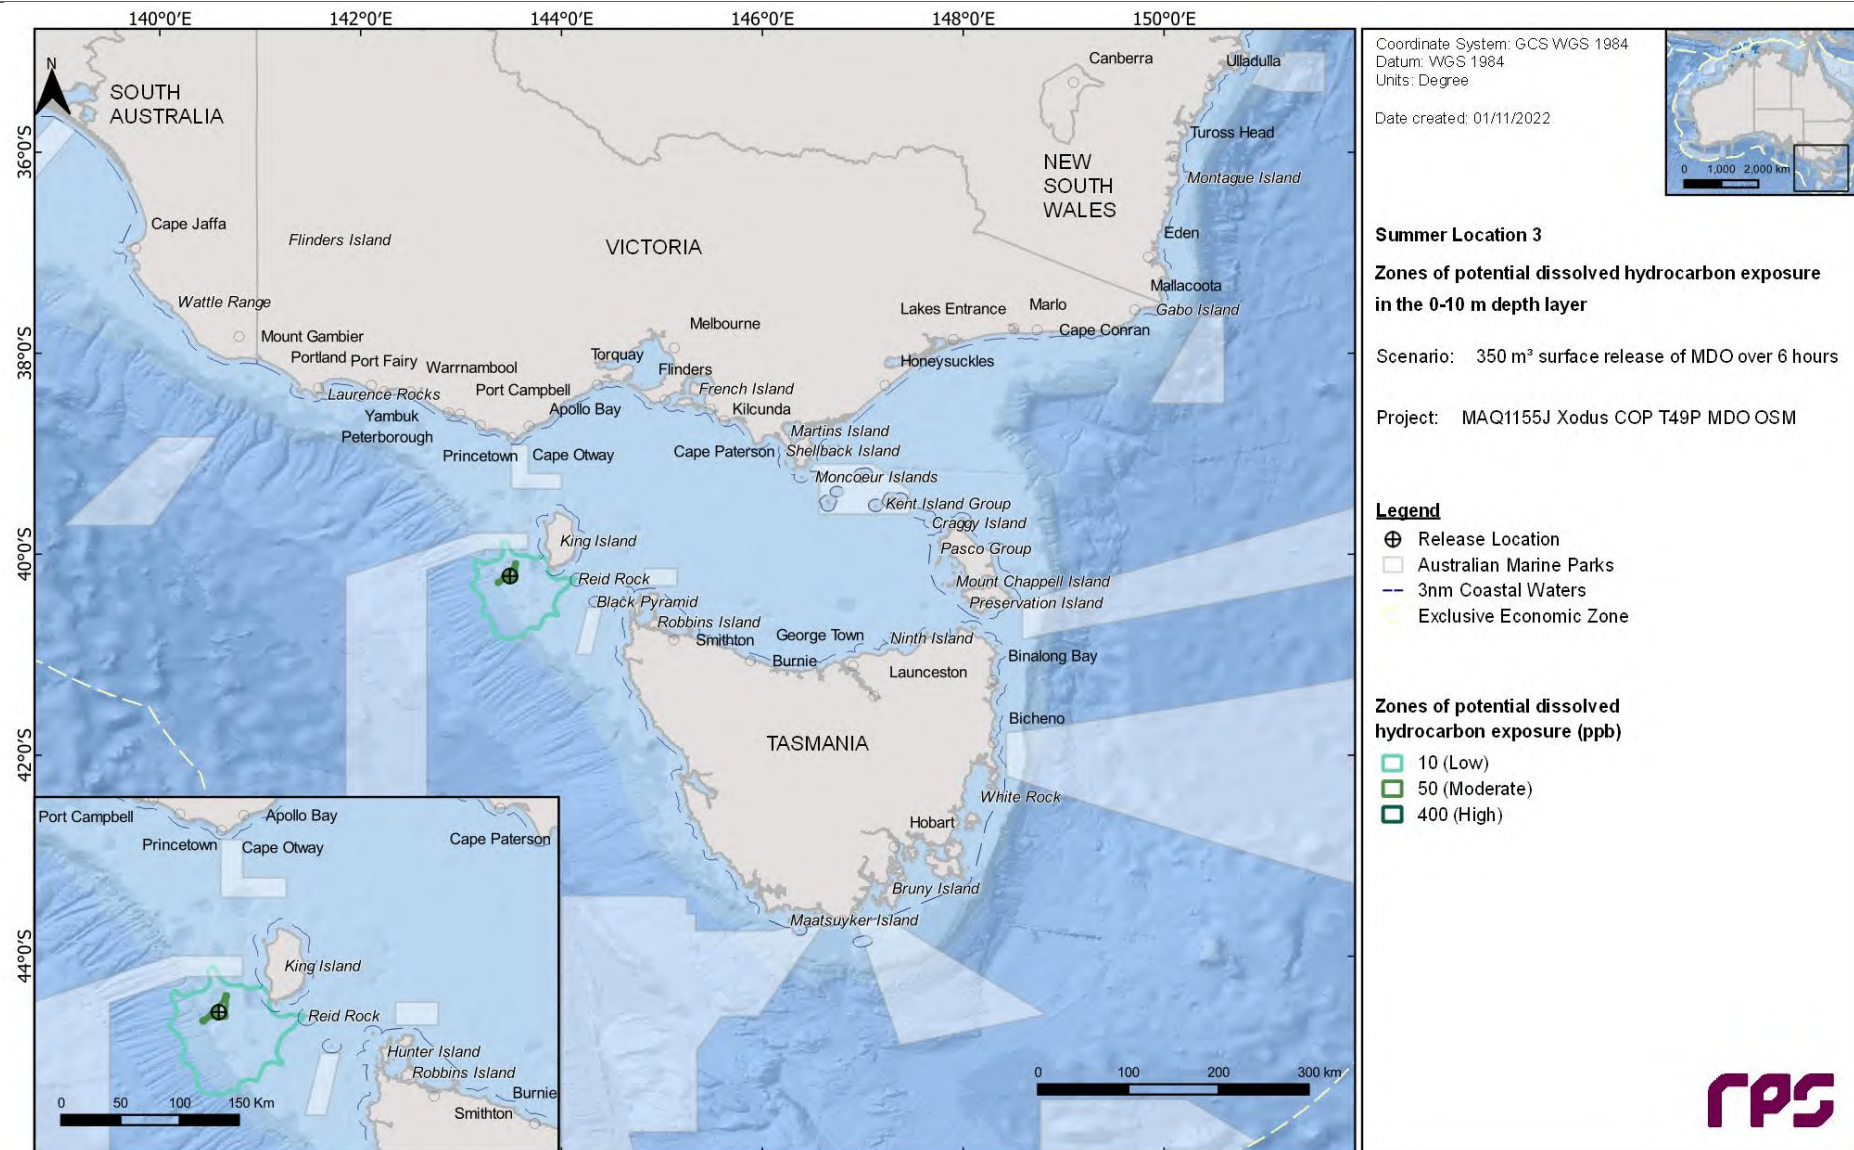

**Table 14.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a vessel collision at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	68	15	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	58	15	-
	Direction	S	NNE	-

## 14.3 Deterministic Analysis

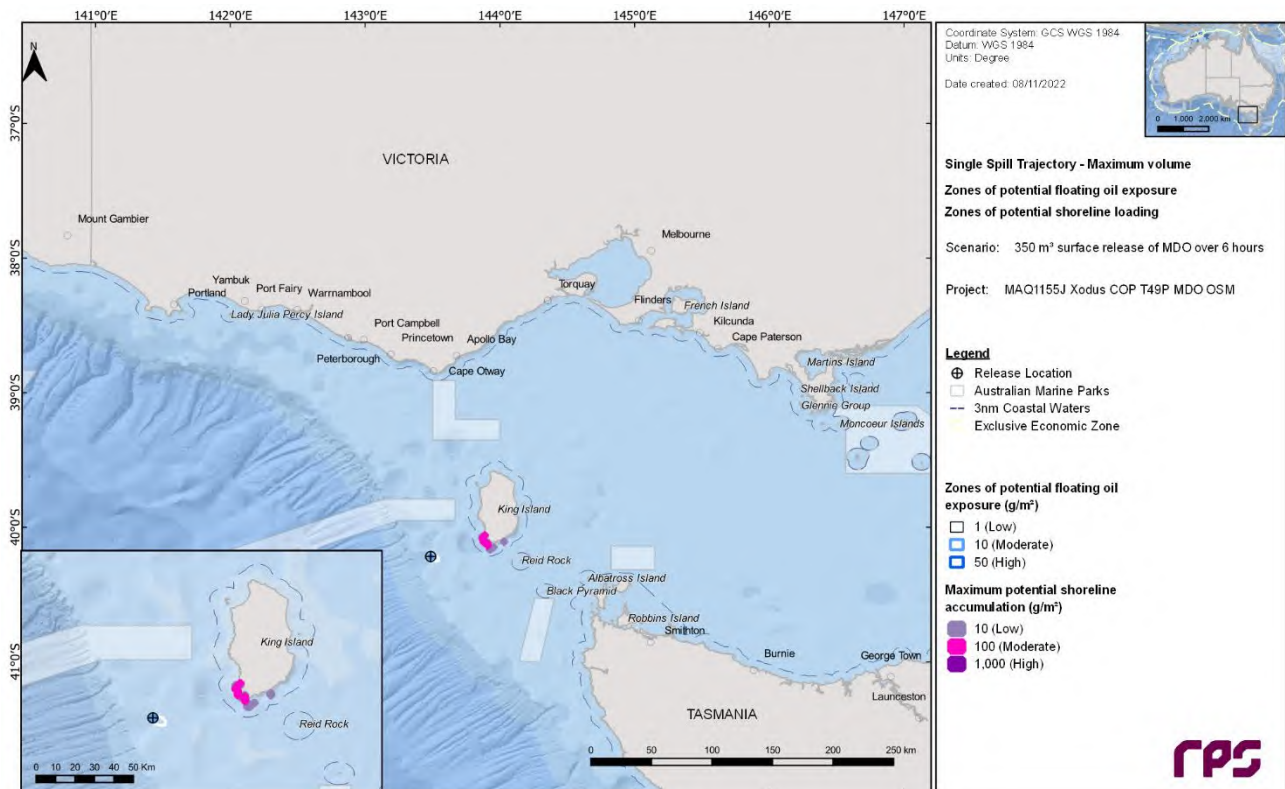

### 14.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of oil ashore was identified as run number 83 and commenced during winter conditions, 9 pm 20<sup>th</sup> August 2013.

Figure 14.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on day 2.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire simulation period of 30 days are presented in Figure 14.11 and Figure 14.12, respectively.

Figure 14.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 156 m<sup>3</sup> (~45%) was lost to the atmosphere through evaporation. Approximately, 110 m<sup>3</sup> (~31%) of the released volume decayed, while approximately 66 m<sup>3</sup> (~19%) was predicted to remain within the water column and approximately 18 m<sup>3</sup> (~5%) was present on the shorelines.

**Figure 14.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.**

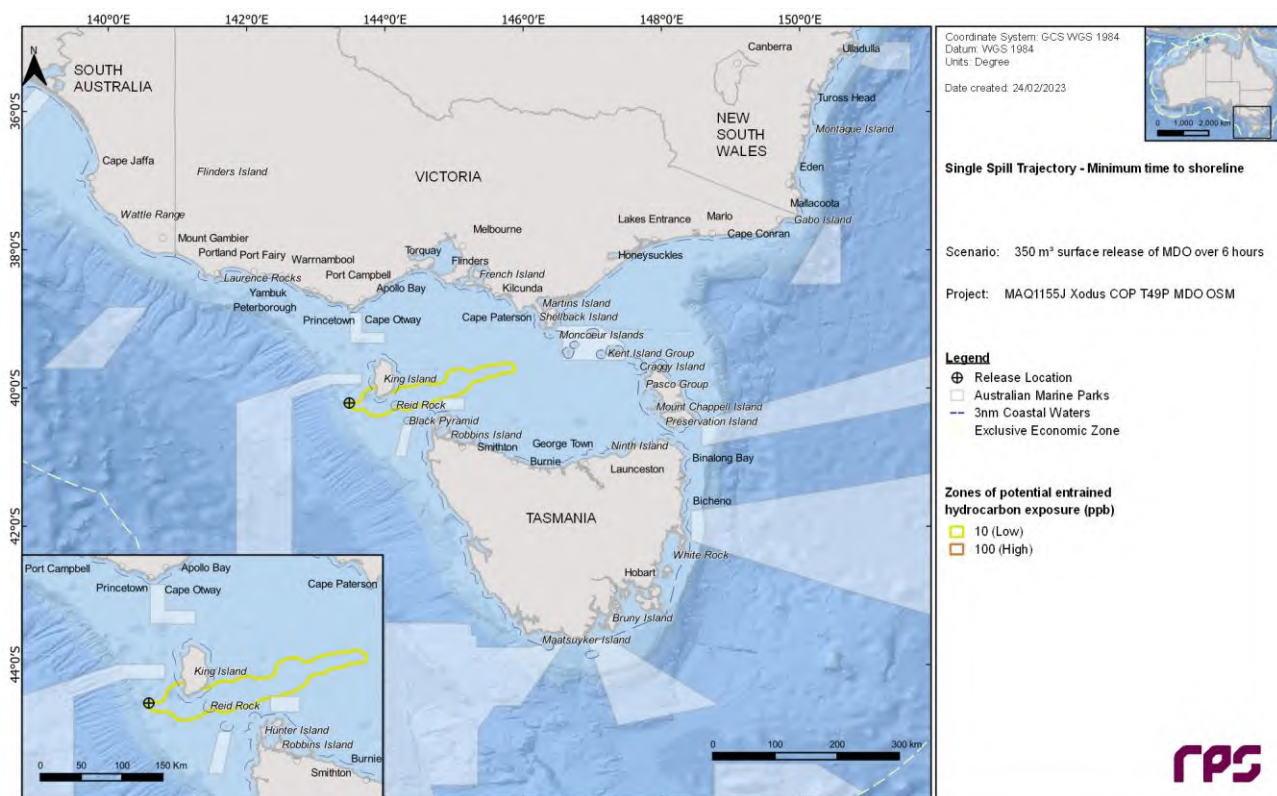

Figure 14.11 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.

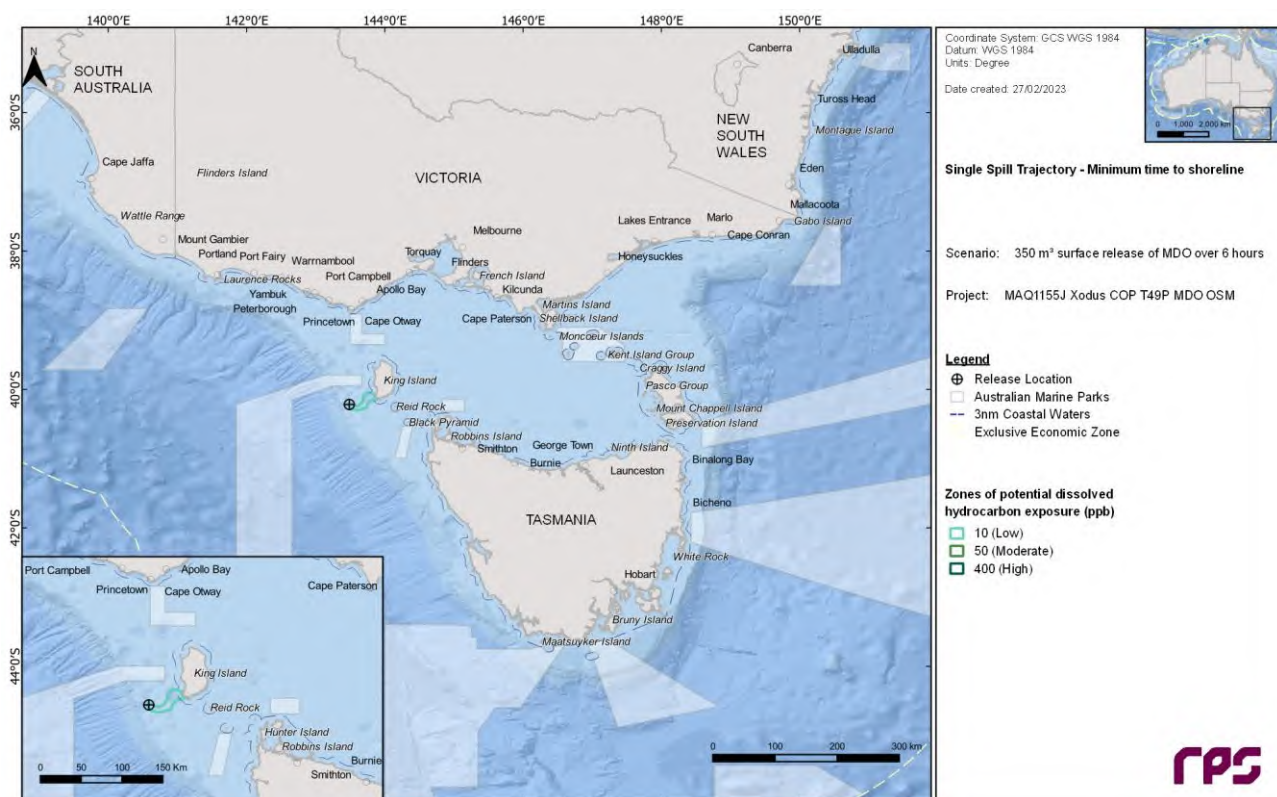

Figure 14.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.

**Figure 14.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.**

### 14.3.2 Largest Area of Floating Oil Exposure

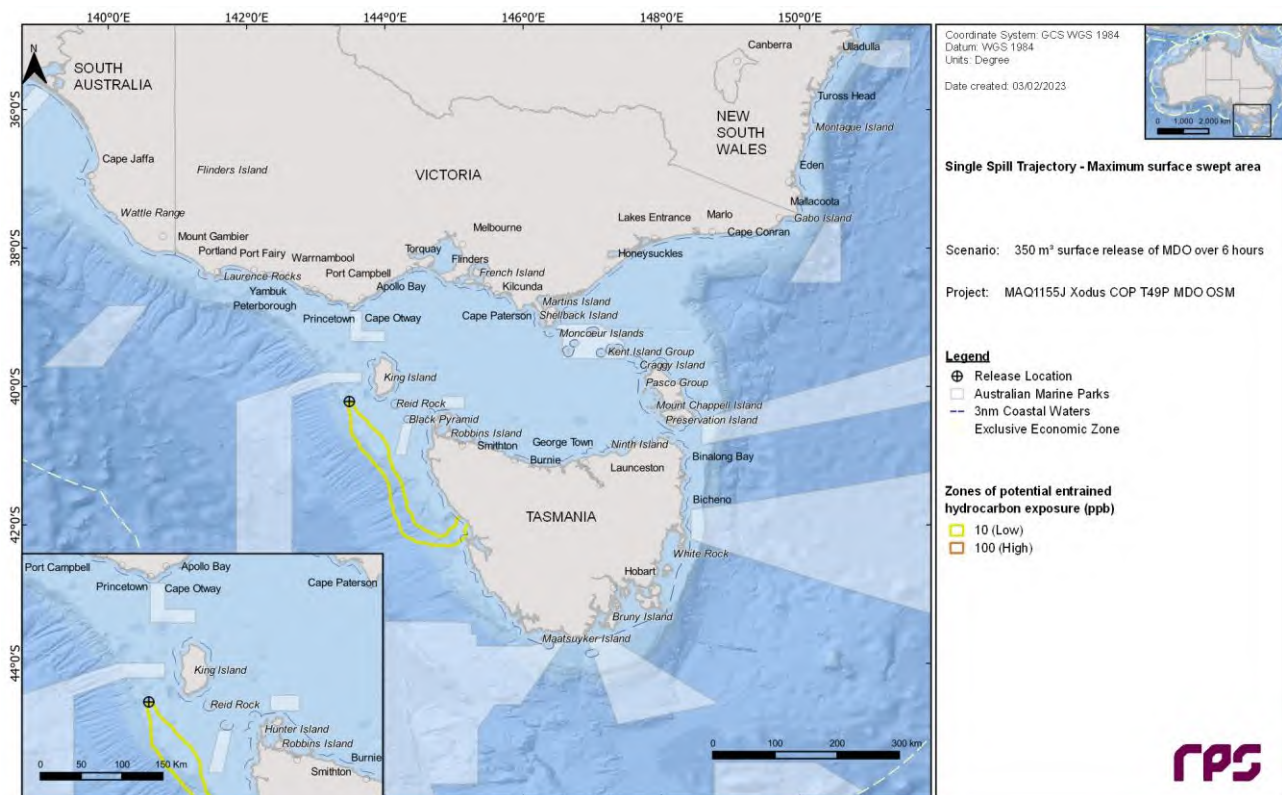

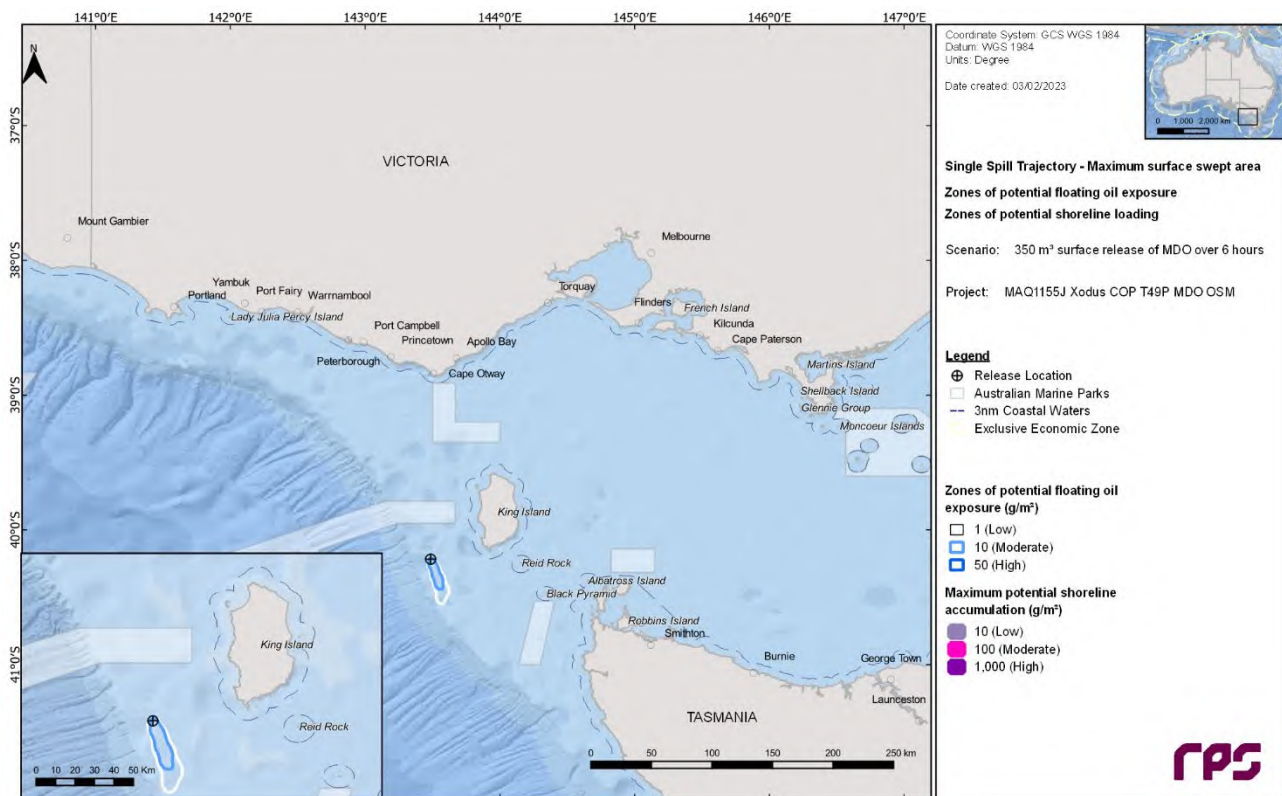

The simulation that resulted in the largest swept area of floating hydrocarbon exposure at or above the low exposure threshold of 170.6 km<sup>2</sup> was identified as run number 60 and commenced during winter conditions, 3 pm 27<sup>th</sup> August 2014.

Figure 14.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). No shoreline accumulation was predicted during the simulation.

The extent of the predicted entrained hydrocarbon exposure zones in the 0–10 m depth layer over the entire simulation period of 30 days is presented in Figure 14.15. No zones of dissolved hydrocarbon exposure were predicted for the simulation.

Figure 14.16 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 194 m<sup>3</sup> (~55%) was lost to the atmosphere through evaporation. Approximately, 87 m<sup>3</sup> (~25%) of the released volume decayed, while approximately 71 m<sup>3</sup> (~20%) was predicted to remain within the water column.

**Figure 14.16 Predicted weathering and fates for the simulation that led to the largest area of floating hydrocarbon exposure from a vessel collision at Location 3.**

<b>TERMS AND ABBREVIATIONS .....</b>	<b>XII</b>
<b>EXECUTIVE SUMMARY .....</b>	<b>1</b>
Background .....	1
Methodology .....	1
Condensate Properties.....	2
Key Findings.....	2
Location 1 .....	2
Location 2.....	2
Location 3.....	3
<b>1 BACKGROUND .....</b>	<b>4</b>
1.1 Introduction.....	4
1.2 What is Oil Spill Modelling?.....	2
1.2.1 Stochastic Modelling (Multiple Spill Simulations) .....	2
1.2.2 Deterministic Modelling (Single Spill Simulation) .....	3
<b>2 SCOPE OF WORK.....</b>	<b>4</b>
<b>3 REGIONAL CURRENTS .....</b>	<b>5</b>
3.1 Tidal currents.....	7
3.1.1 Grid Setup.....	7
3.1.2 Tidal Conditions .....	9
3.2 Ocean Currents.....	9
3.3 Surface Currents .....	9
<b>4 WIND DATA .....</b>	<b>16</b>
<b>5 WATER TEMPERATURE AND SALINITY.....</b>	<b>23</b>
<b>6 NEAR-FIELD MODEL – OILMAP DEEP .....</b>	<b>25</b>
<b>7 OIL SPILL MODEL - SIMAP.....</b>	<b>27</b>
<b>8 CONDENSATE PROPERTIES .....</b>	<b>29</b>
<b>9 THRESHOLDS.....</b>	<b>30</b>
9.1 Floating Exposure Thresholds .....	30
9.2 Shoreline Accumulation Thresholds .....	31
9.3 In-water Exposure Thresholds .....	32
9.3.1 Dissolved Hydrocarbons.....	32
9.3.2 Entrained Hydrocarbons .....	33
9.4 Dispersion .....	34
<b>10 RECEPTORS .....</b>	<b>35</b>
<b>11 MODEL SETTINGS.....</b>	<b>48</b>
<b>12 CALCULATION OF EXPOSURE RISK.....</b>	<b>49</b>
<b>13 LOCATION 1 LOWC RESULTS.....</b>	<b>50</b>
13.1 EMBA .....	50
13.2 Stochastic Analysis .....	52
13.2.1 Floating Oil Exposure .....	52
13.2.2 Shoreline Accumulation .....	56
13.2.3 In-water exposure .....	65
13.3 Deterministic Analysis .....	78
13.3.1 Largest Volume of Hydrocarbons Ashore.....	78
<b>14 LOCATION 2 LOWC RESULTS.....</b>	<b>81</b>

14.1	EMBA .....	81

## Figures

Figure 1.1	T/49P hydrocarbon spill modelling release locations.....	1
Figure 1.2	Examples of four individual spill trajectories (four replicate simulations) predicted by SIMAP for a spill scenario. The frequency of contact with given locations is used to calculate the probability of impacts during a spill. Essentially, all model runs are overlain (shown as the stacked runs on the right) and the number of times that trajectories contact a given location at a concentration is used to calculate the probability. ....	2
Figure 1.3	Example of an individual spill trajectory predicted by SIMAP for a spill scenario. Note, this image represents surface oil as spill and does not take any thresholds into consideration. ....	3

## TERMS AND ABBREVIATIONS

°	Degrees
'	Minutes
"	Seconds
µm	Micrometre (unit of length; 1 µm = 0.001 mm)
Actionable oil	Oil which is thick enough for the effective use of mitigation strategies
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
AMOP	Arctic and Marine Oil Spill Program
ANZECC	Australian and New Zealand Environment and Conservation Council
API	American Petroleum Institute gravity. A measure of how heavy or light a petroleum liquid is compared to water.
ARMCANZ	Agriculture and Resource Management Council of Australia and New Zealand
ASTM	American Society for Testing and Materials
BMSL	Below mean sea level
Bonn Agreement	An agreement for cooperation in dealing with pollution of the North Sea by oil and other harmful substances, 1983, includes: Governments of the Kingdom of Belgium, the Kingdom of Denmark, the French Republic, the Federal Republic of Germany, the Republic of Ireland, the Kingdom of the Netherlands, the Kingdom of Norway, the Kingdom of Sweden, the United Kingdom of Great Britain and Northern Ireland and the European Union.
BP	Boiling point. The temperature at which the vapor pressure of the liquid is equal to the pressure exerted on it by the surrounding atmosphere
BTEX	Benzene, toluene, ethylbenzene, and xylenes
°C	Degree Celsius (unit of temperature)
CFSR	Climate Forecast System Reanalysis
cm	Centimetre (unit of length)
ConocoPhillips	ConocoPhillips Australia SH1 Pty Ltd
cP	Centipoise (unit of dynamic viscosity)
Decay	The process where oil components are changed either chemically or biologically (biodegradation) to another compound. It includes breakdown to simpler organic carbon compounds by bacteria and other organisms, photo-oxidation by solar energy, and other chemical reactions.
Dynamic viscosity	The dynamic viscosity of a fluid expresses its resistance to shearing flows, where adjacent layers move parallel to each other with different speeds.
Floating oil exposure	Contact by floating oil on the sea surface at concentrations equal to or exceeding defined threshold concentrations. The consequence will vary depending on the threshold and the receptors
g/m <sup>2</sup>	Grams per square meter (unit of surface area density)
GEP	Gas export pipeline
GODAE	Global Ocean Data Assimilation Experiment
HYCOM	Hybrid Coordinate Ocean Model. A data-assimilative, three-dimensional ocean model

## REPORT

HYDROMAP	Advanced ocean/coastal tidal model used to predict tidal water levels, current speed and current direction.
IBRA	Interim Biogeographic Regionalisation for Australia
IMCRA	Integrated Marine and Coastal Regionalisation of Australia
ITOPF	International Tanker Owners Pollution Federation Limited
KEF	Key Ecological Feature
km	Kilometre (unit of length)
km <sup>2</sup>	Square kilometres (unit of area)
Knots	Unit of speed (1 knot = 0.514 m/s)
LOWC	Loss of well control
m	Meter (unit of length)
m <sup>3</sup>	Cubic meter (unit of volume)
m/s	Meter per second (unit of speed)
MAHs	Monoaromatic hydrocarbons
MMA	Marine Management Area
MP	Marine Park
NASA	National Aeronautics and Space Administration (USA)
NCEP	National Centres for Environmental Prediction (USA)
nm	Nautical mile
NOAA	National Oceanic and Atmospheric Administration (USA)
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NP	National Park
NR	Nature Reserve
NRC	National Research Council
PAH	Polynuclear aromatic hydrocarbons
Pour point	The pour point of a liquid is the temperature below which the liquid loses its flow characteristics
ppb	Parts per billion (concentration)
psu	Practical salinity units
psia	Pounds per square inch (absolute)
Ramsar site	A site listed under the Ramsar Convention on wetlands which is an international intergovernmental treaty that provides the framework for the conservation and wise use of wetlands and their resources.
RSB	Reefs, Shoals and Banks
scf/bbl	Standard cubic feet of gas per barrel of oil
Shoreline accumulation	Arrival of oil at or near shorelines at on-water concentrations equal to or exceeding defined threshold concentrations. Shoreline contact is judged for floating oil arriving within a 2 km buffer zone from any shoreline as a conservative measure
SIMAP	Spill Impact Model Application Package. SIMAP is designed to simulate the fate and effects of spilled hydrocarbons for surface or subsea releases

Single Oil spill modelling	Oil spill modelling involving a computer simulation of a single hypothetical oil spill event subject to a single sequence of wind, current and other sea conditions over time. Single oil spill modelling, also referred to as “deterministic modelling” provides a simulation of one possible outcome of a given spill scenario, subject to the metocean conditions that are imposed. Single oil spill modelling is commonly used to consider the fate and effects of ‘worst-case’ oil spill scenarios that are carefully selected in consideration of the nature and scale of the offshore petroleum activity and the local environment (NOPSEMA, 2017). Because the outcomes of a single oil spill simulation can only represent the outcome of that scenario under one sequence of metocean conditions, worst-case conditions are often identified from stochastic modelling. It is impossible to calculate the likelihood of any outcome from a single oil spill simulation. Single oil spill modelling is generally used for response planning, preparedness planning and for supporting oil spill response operations in the event of an actual spill
SRTM	Shuttle Radar Topography Mission
Stochastic oil spill modelling	Stochastic oil spill modelling is created by overlaying and statistically analysing the outcomes of many single oil-spill simulations of a defined spill scenario, where each simulation was subject to a different sequence of metocean conditions, selected objectively (typically by random selection) from a long sequence of historic conditions for the study area. Analysis of this larger set of simulations provides a more accurate indication of the environment that maybe affected (EMBA) and indicates which locations are more likely to be affected (as well as other statistics). Stochastic oil spill modelling avoids biases that affect single oil spill modelling (due to the reliance on only one possible sequence of conditions). However, when interpreting stochastic modelling, which is based on a wide range of potential conditions that might happen to occur, it is essential to understand that calculations will encompass a much larger area than could be affected in any single spill event, where a more limited set of conditions will occur. Consequently, it is misleading to imply that the region derived from stochastic modelling indicate the outcomes expected from a single spill event (NOPSEMA, 2017) Stochastic modelling is generally used for risk assessment and preparedness planning by indicating locations that could be exposed and may require response or subsequent impact assessment
Summer	October to March
TOPEX/Poseidon	A joint satellite mission between NASA and CNES to map ocean surface topography using an array of satellites equipped with detailed altimeters
USA	United States of America
Winter	April to September
WGS 1984	World Geodetic System 1984 (WGS84); reference coordinate system
World Ocean Atlas	A collection of objectively analysed quality controlled physicochemical parameters (e.g. temperature, salinity, oxygen, phosphate, silicate, and nitrate) based on profile data from the World Ocean Database established by NOAA’s National Centers for Environmental Information (NCEI)

## EXECUTIVE SUMMARY

### Background

ConocoPhillips Australia SH1 Pty Ltd (ConocoPhillips) is considering an exploration drilling campaign in Permit T/49P, in Commonwealth waters. The closest points of the permit area is 23.5 km from the west coast of King Island and 26 km from the Victorian coast. Water depths in the permit area range from 70 m to 1,000 m, with approximately 90% of the survey area being in water depths less than 150 m.

An oil spill modelling study was undertaken to assess the potential exposure from a subsea loss of well control (LOWC) from 3 worst case target locations due to the extent of the permit area. Specifically, the scenario assessed was a 139,400 m<sup>3</sup> subsea release of condensate over 90 days (1,549 m<sup>3</sup>/day).

The study assessed the potential risk of exposure to the surrounding waters and shorelines for two seasons, summer months (October to March) and winter conditions (April to September). This approach assists with identifying the environmental values and sensitive regions/receptors that would be at risk of exposure on a seasonal basis, given the dominant winds and water currents that vary among the seasons.

The purpose of the modelling is to provide an understanding of the conservative 'outer envelope' of the potential area that may be affected in the unlikely event of a vessel based spill. Since, the modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill, the results presented herein are conservative.

The spill modelling was performed using an advanced three-dimensional trajectory and fates model; Spill Impact Model Application Program (SIMAP). The SIMAP model calculates the transport, spreading, entrainment and evaporation of spilled hydrocarbons over time, based on the prevailing wind and current conditions and the physical and chemical properties.

### Methodology

The modelling study was carried out in stages. Firstly, a 10-year current dataset (2010 – 2019) that includes the combined influence of large-scale ocean and nearshore tidal currents was developed. Secondly, the currents, local winds and detailed hydrocarbon characteristics were used as inputs in the three-dimensional oil spill model (SIMAP) to simulate the drift, spread, weathering and fate of the spilled hydrocarbons.

As spills can occur during any set of wind and current conditions, modelling was conducted using a stochastic (or statistical) approach, which involved running 100 spills modelled for each scenario, per season, with each simulation having the same information (i.e. location volume and condensate properties) and randomly selected start times. This ensured that each simulation was subjected to different wind and current conditions and, in turn, movement and weathering of the condensate. The results were combined to determine the potential exposure to the surrounding waters, shorelines and sensitive receptors based on the NOPSEMA thresholds.

The SIMAP system, methods and analysis presented herein, use modelling algorithms which have been anonymously peer reviewed and published in international journals. Further, RPS warrants that this work meets and exceeds the ASTM Standard F2067-13 "*Standard Practice for Development and Use of Oil Spill Models*".

## Condensate Properties

Thylacine condensate was used as a proxy, which has an API of 44.3, a density of 805 kg/m<sup>3</sup> (at 15°C) and a low viscosity value of 0.875 cP. The volatile to semi-volatile components (boiling point (BP) < 265 °C), which represent approximately 83% of the whole condensate is likely to evaporate over the first day if exposed to the atmosphere at local temperatures, leaving the less volatile portion (16%) to progressively evaporate more slowly. Only 1% of the condensate is considered persistent.

Thylacine condensate is categorised as a group I oil (non – persistent oil) according to the International Tankers Owners Pollution Federation (ITOPF, 2014) and US EPA/USCG classifications. The classification is based on the specific gravity of hydrocarbons in combination with relevant boiling point ranges. The heavier components (i.e low volatile portion) of the condensate will tend to entrain into the upper water column during the presence of moderate winds (> 10 knots) and can potentially remain entrained for as long as the winds persist. But can subsequently resurface when the winds ease, and waves abate.

## Key Findings

### Location 1

- The maximum distance from the release location to the low (1 g/m<sup>2</sup>) and moderate (10 g/m<sup>2</sup>) floating oil exposure thresholds was 275.0 km (summer), 13.6 km (summer and winter), respectively. No floating oil exposure at the high (50 g/m<sup>2</sup>) threshold was predicted.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during winter at 100%, while the minimum time before shoreline accumulation at the low threshold was 8.29 days predicted during winter. The maximum total volume of oil ashore was predicted during the winter with 20.0 m<sup>3</sup>.
- The maximum distance from the release location to the low (10 ppb), moderate (50 ppb) and high (400 ppb) dissolved hydrocarbon exposure thresholds was 769 km (winter), 722 km (winter) and 452 km (winter), respectively.
- The maximum distance from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 833 km (winter) and 666 km (summer), respectively.

### Location 2

- The maximum distance from the release location to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 147.4 km (winter), 42.7 km (summer and winter) and 0.3 km (summer and winter), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was 100% during both summer and winter, while the minimum time before shoreline accumulation at the low threshold was 3.21 days predicted during winter. The maximum total volume of oil ashore was predicted during the winter with 196.6 m<sup>3</sup> (over the duration of the simulation).
- Maximum distance from the release location to the low (10 ppb), moderate (50 ppb) and high (400 ppb) dissolved hydrocarbon exposure thresholds was 703 km (winter), 483 km (winter) and 313 km (winter), respectively.
- The maximum distance from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 831 km (summer and winter) and 583 km (summer), respectively.

### Location 3

- The maximum distance from the release location to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 196.2 km (winter), 15.4 km (summer) and 1.3 km (winter), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was 100% during both summer and winter, while the minimum time before shoreline accumulation at the low threshold was 4.00 days predicted during winter conditions. The maximum volume of oil ashore was predicted during the winter with 58.7 m<sup>3</sup>.
- Maximum distance from the release location to the low (10 ppb), moderate (50 ppb) and high (400 ppb) dissolved hydrocarbon exposure thresholds was 773 km (winter), 492 km (summer) and 308 km (summer), respectively.
- The maximum distance from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 846 km (winter) and 430 km (winter), respectively.

# 1 BACKGROUND

## 1.1 Introduction

ConocoPhillips Australia SH1 Pty Ltd (ConocoPhillips) is considering an exploration drilling campaign in Permit T/49P, in Commonwealth waters. The closest points from the permit area are the west coast of King Island (23.5 km east) and Victorian coastline (26 km north). Water depths in the permit area range from 70 m to 1,000 m, with approximately 90% of the survey area being in water depths less than 150 m.

Xodus on behalf of ConocoPhillips had commissioned RPS to undertake an oil spill modelling study to assess the potential exposure from a subsea loss of well control (LOWC) from 3 worst case target locations due to the extent of the permit area. The LOWC scenario was based on a 139,400 m<sup>3</sup> subsea release of condensate over 90 days (1,549 m<sup>3</sup>/day). Table 1-1 presents the coordinates of the three release locations and Figure 1.1 is the location map.

The study assessed the potential risk of exposure to the surrounding waters and shorelines for two seasons, summer months (October to March) and winter conditions (April to September). This approach assists with identifying the environmental values and sensitive regions/receptors that would be at risk of exposure on a seasonal basis, given the dominant winds and water currents that vary among the seasons.

The purpose of the modelling is to further improve understanding of a conservative 'outer envelope' of the potential area that may be affected in the unlikely event of hydrocarbon release. The modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill. Therefore, the modelling results represent the maximum extent that the released hydrocarbons may influence.

The spill modelling was performed using an advanced three-dimensional trajectory and fates model; Spill Impact Model Application Program (SIMAP). The SIMAP model calculates the transport, spreading, entrainment and evaporation of spilled hydrocarbons over time, based on the prevailing wind and current conditions and the physical and chemical properties.

Note that the oil spill model, the method, and analysis presented herein uses modelling algorithms which have been anonymously peer reviewed and published in international journals. Furthermore, RPS warrants that this work meets and exceeds the American Society for Testing and Materials (ASTM) Standard F2067-13 "Standard Practice for Development and Use of Oil Spill Models".

**Table 1-1 T/49P hydrocarbon spill modelling release locations.**

Release location	Latitude*	Longitude*	Water depth (m)

## REPORT

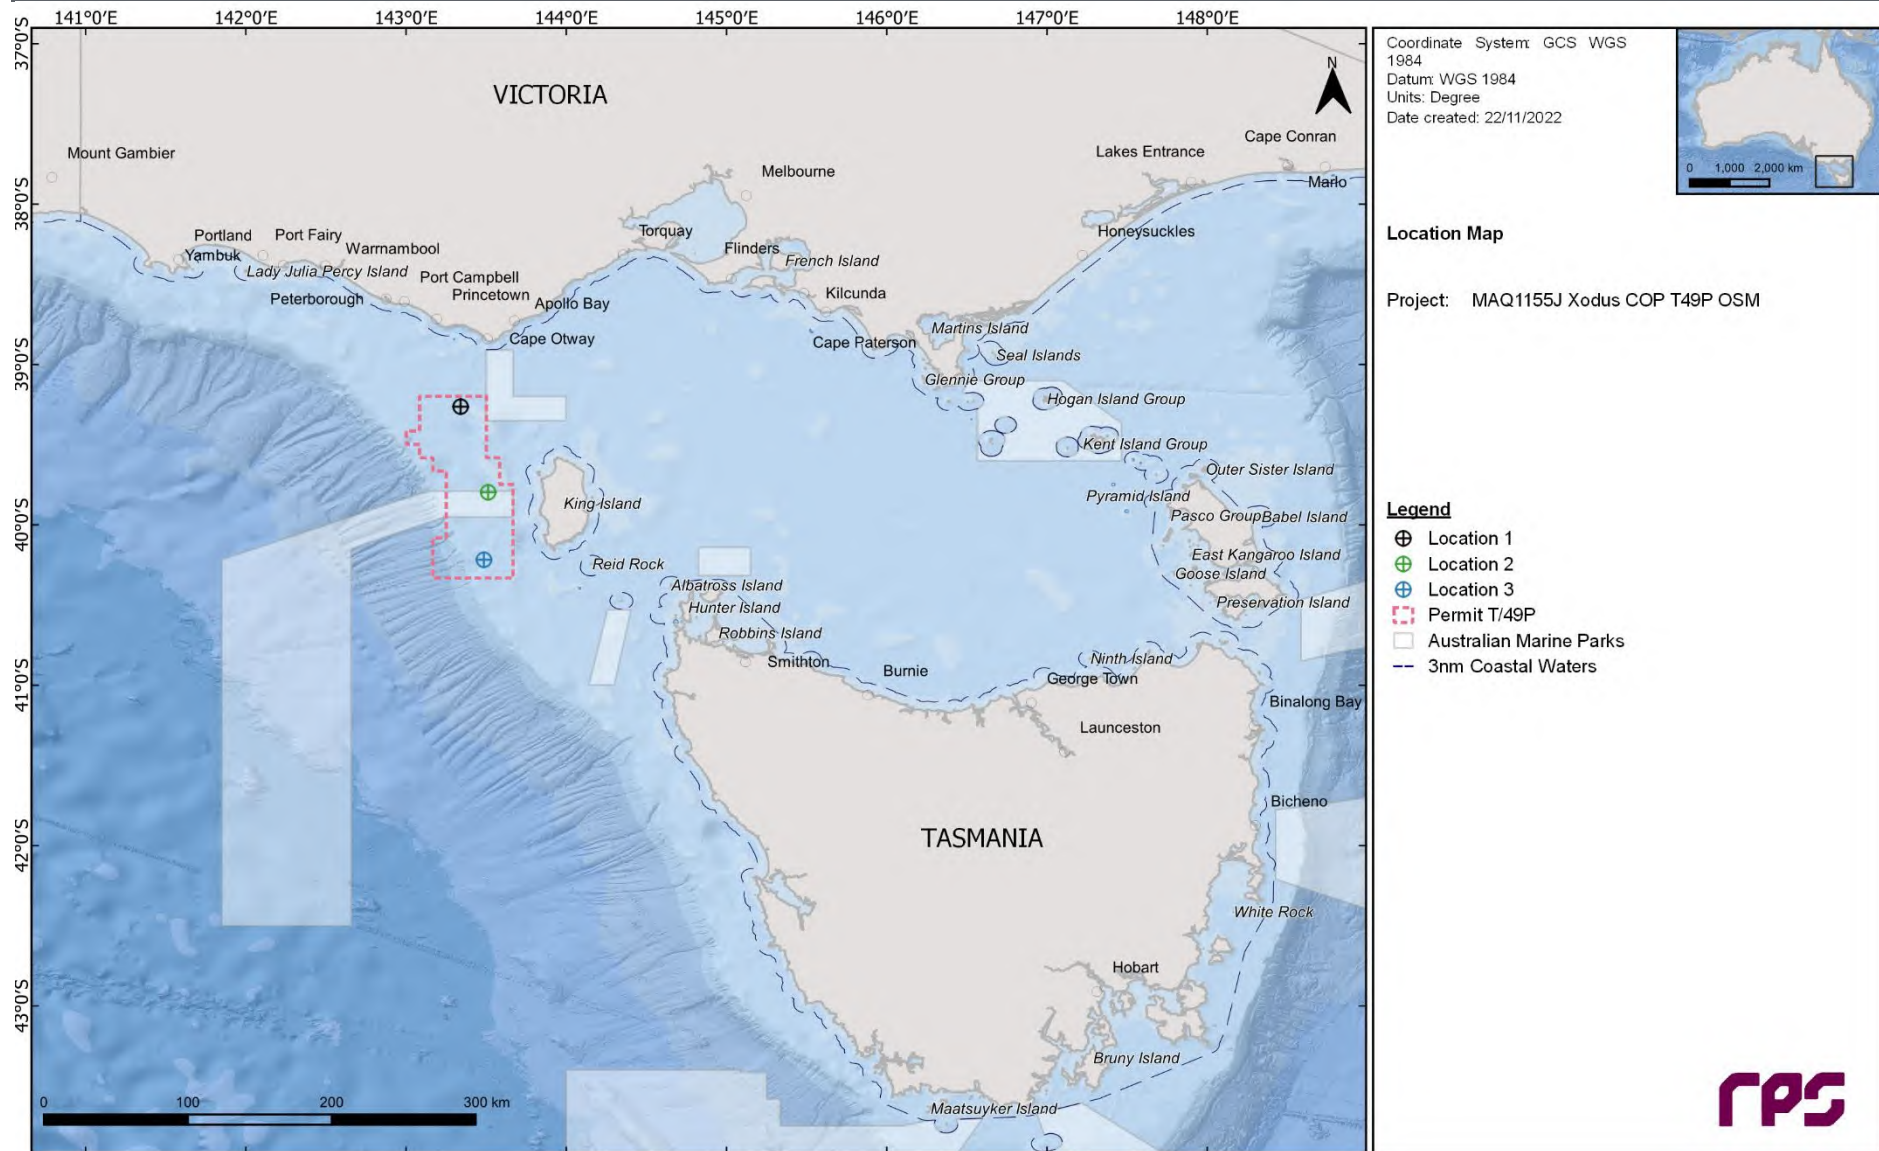

Figure 1.1 T/49P hydrocarbon spill modelling release locations.

## 1.2 What is Oil Spill Modelling?

Oil spill modelling is a valuable tool widely used for risk assessment, emergency response and contingency planning where it can be particularly helpful to proponents and decision makers. By modelling a series of the most likely oil spill scenarios, decisions concerning suitable response measures and strategic locations for deploying equipment and materials can be made, and the locations at most risk can be identified. The two types of oil spill modelling often used are stochastic (Section 1.2.1) and deterministic (Section 1.2.2) modelling.

### 1.2.1 Stochastic Modelling (Multiple Spill Simulations)

Stochastic oil spill modelling is created by overlaying a great number (often hundreds) of individual, computer-simulated hypothetical spills (NOPSEMA, 2018; Figure 1.2).

Stochastic modelling is a common means of assessing the potential risks from oil spills related to new projects and facilities. Stochastic modelling typically utilises hydrodynamic data for the location in combination with historic wind data. Typically, 100 iterations of the model will be run utilising the data that is most relevant to the season or timing of the project.

The outcomes are often presented as a probability of exposure and is primarily used for risk assessment purposes in view to understand the range of environments that may be affected or impacted by a spill. Elements of the stochastic modelling can also be used in oil spill preparedness and planning.

**Figure 1.2** Examples of four individual spill trajectories (four replicate simulations) predicted by SIMAP for a spill scenario. The frequency of contact with given locations is used to calculate the probability of impacts during a spill. Essentially, all model runs are overlain (shown as the stacked runs on the right) and the number of times that trajectories contact a given location at a concentration is used to calculate the probability.

### 1.2.2 Deterministic Modelling (Single Spill Simulation)

Deterministic modelling is the predictive modelling of a single incident subject to a single sample of wind and weather conditions over time (NOPSEMA, 2018; Figure 1.3).

Deterministic modelling is often paired with stochastic modelling to place the large stochastic footprint into perspective. This deterministic analysis is generally a single run selected from the stochastic analysis and serves as the basis for developing the plans and equipment needs for a realistic spill response. Deterministic spills can be selected on based on parameters such as minimum time to shoreline, largest swept area, maximum volume ashore and longest length of shoreline contacted by hydrocarbons.

**Figure 1.3** Example of an individual spill trajectory predicted by SIMAP for a spill scenario. Note, this image represents surface oil as spill and does not take any thresholds into consideration.

## 2 SCOPE OF WORK

The scope of work included the following components:

1. Generate ten years (2010 to 2019 (inclusive)) of wind and current data. The three-dimensional current data includes the combined influence of ocean and tidal currents;
2. Include the wind and current data and the condensate characteristics as input into the three-dimensional oil spill model, SIMAP, to model the movement, spreading, weathering and shoreline accumulation by hydrocarbons over time;
3. For each scenario, run 100 oil spill simulations per season (200 total per scenario), with each simulation having the same spill information (i.e. location, volume and condensate properties) but varying start times. This ensured that each spill trajectory was subjected to a unique set of wind and current conditions;
4. Combine the results from the 100 spill simulations (per season) to assess the exposure to waters and shoreline accumulation based upon the NOPSEMA thresholds;
5. Present the combined results from the 200 spill simulations, per scenario, to assess the low threshold environment that maybe affected (EMBA); and
6. From the 200 simulations modelled for each location identify and present the “worst case” deterministic run resulting in the maximum volume of hydrocarbons ashore. From the results for all three locations, identify and present the deterministic simulations resulting in: a) largest area of floating hydrocarbon exposure; b) minimum time to shoreline exposure; and c) longest length of shoreline accumulation.

### 3 REGIONAL CURRENTS

The Otway Basin lies within the western portion of the Bass Strait, a sea strait separating Tasmania from the southern Australian mainland. The strait is a relatively shallow area of the continental shelf, connecting the southeast Indian Ocean with the Tasman Sea. This region has a reputation for high winds and strong tidal currents (Jones, 1980). Currents are primarily driven by tides, winds and density driven flows. During winter the South Australian current moves dense, salty water eastward from the Great Australian Bight into the western margin of the Bass Strait (Sandery & Kämpf, 2007). In winter and spring, waters within the strait are well mixed with no obvious stratification, while during summer the central regions of the strait become stratified (Baines & Fandry, 1983; Middleton & Black, 1994).

Figure 3.1 displays seasonal current trends within the Otway Basin-Bass Strait region. During winter there is a strong eastward water flow due to the strengthening of the South Australian Current (fed by the Leeuwin Current in the Northwest Shelf), which bifurcates with one extension moving through the Bass Strait, and another forming the Zeehan Current off western Tasmania (Sandery & Kämpf, 2007). During summer, water flow reverses off Tasmania, King Island and the Otway Basin travelling eastward, as the coastal current develops due to south-easterly winds.

Therefore, to accurately account for the movement of an oil spill, which can move between the offshore and near shore region, ocean and tidal currents were combined as part of the study. The following sections provide a summary of the regional current data set.

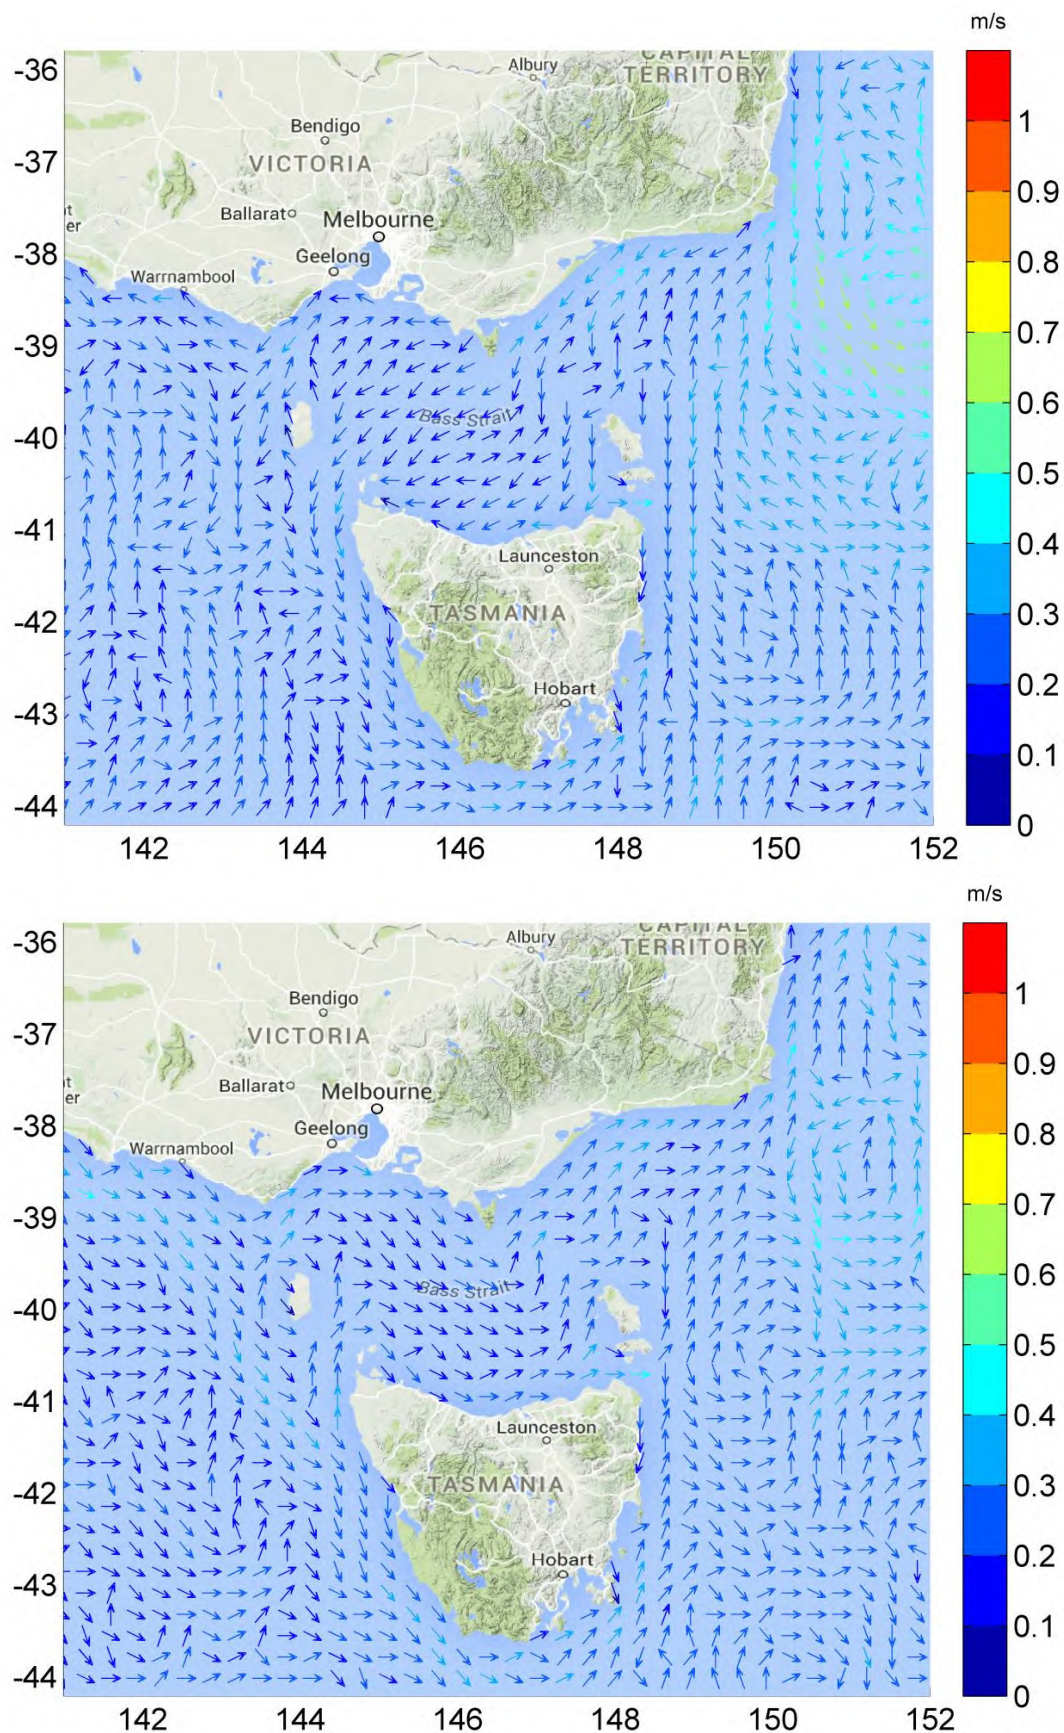

Figure 3.1 HYCOM averaged seasonal surface drift currents during summer (upper image) and winter (lower image).

## 3.1 Tidal currents

Tidal current data was generated using RPS's advanced ocean/coastal model, HYDROMAP. The HYDROMAP model has been thoroughly tested and verified through field measurements throughout the world for more than 30 years (Isaji & Spaulding, 1984; Isaji, et al., 2001; Zigic, et al., 2003). HYDROMAP tidal current data has been used as input to forecast (in the future) and hindcast (in the past) pollutant spills in Australian waters and forms part of the Australian National Oil Spill Emergency Response System operated by AMSA (Australian Maritime Safety Authority).

HYDROMAP employs a sophisticated sub-gridding strategy, which supports up to six levels of spatial resolution, halving the grid cell size as each level of resolution is employed. The sub-gridding allows for higher resolution of currents within areas of greater bathymetric and coastline complexity, and/or of interest to a study.

The numerical solution methodology follows that of Davies (1977a 1977b) with further developments for model efficiency by Owen (1980) and Gordon (1982). A more detailed presentation of the model can be found in Isaji & Spaulding (1984) and Isaji et al. (2001).

### 3.1.1 Grid Setup

The tidal model domain has been sub-gridded down to a resolution of 500 m for shallow and coastal regions, starting from an offshore (or deep water) resolution of 8 km. The finer grids were allocated in a step-wise fashion to resolve flows more accurately along the coastline, around islands and over regions with more complex bathymetry. Figure 3.2 shows the tidal model grid covering the study domain.

A combination of datasets was used and merged to describe the shape of the seabed within the grid domain (Figure 3.3). These included spot depths and contours which were digitised from nautical charts released by the hydrographic offices as well as Geoscience Australia database and depths extracted from the Shuttle Radar Topography Mission (SRTM30\_PLUS) Plus dataset (see Becker et al., 2009).

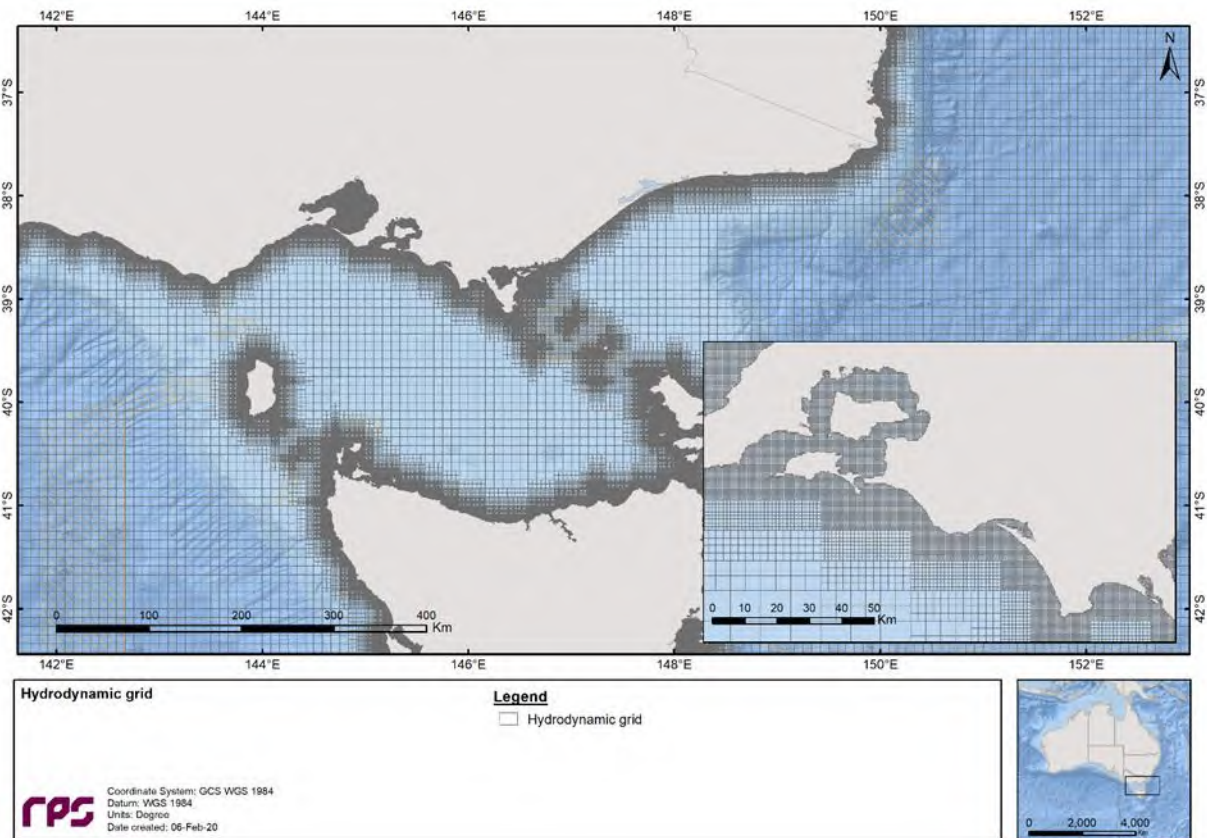

Figure 3.2 Sample of the model grid used to generate the tidal currents for the study region. Higher resolution areas are shown by the denser mesh.

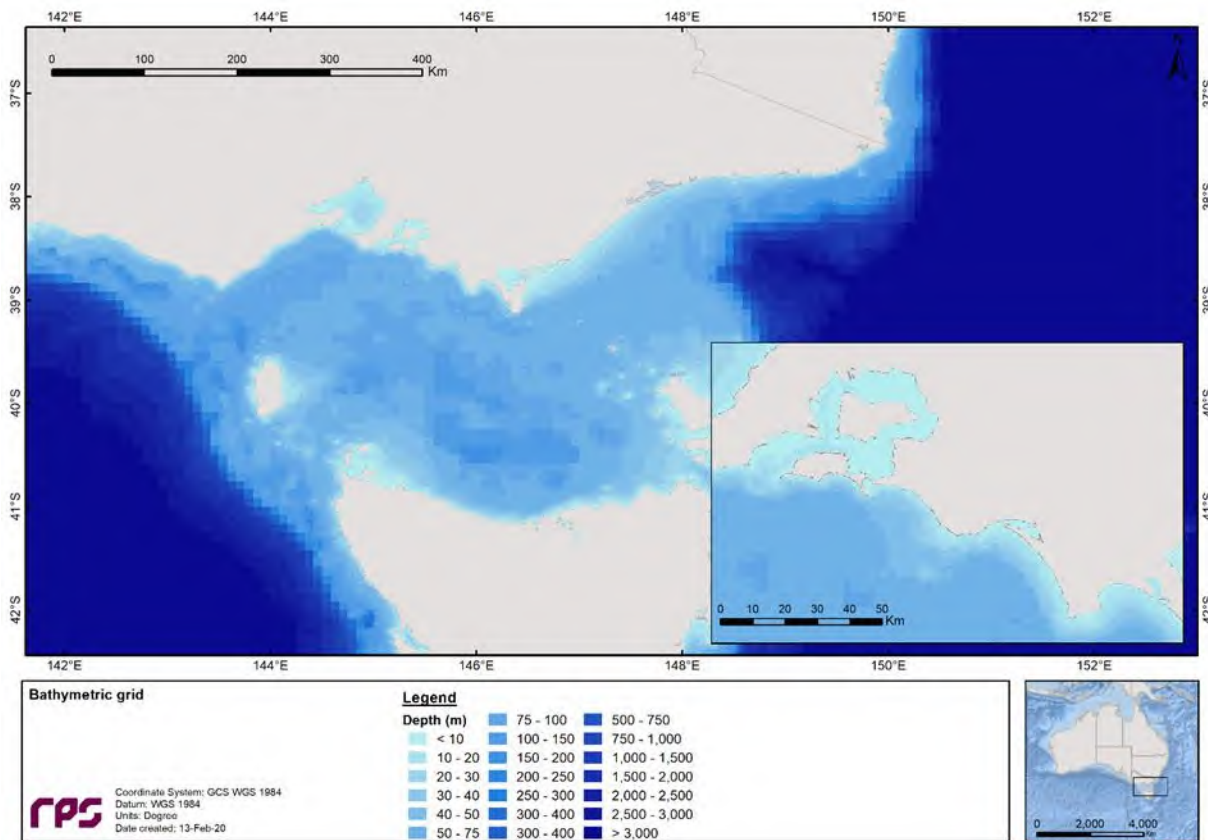

Figure 3.3 Bathymetry defined throughout the tidal model domain.

### 3.1.2 Tidal Conditions

The ocean boundary data for the regional model was obtained from satellite measured altimetry data (TOPEX/Poseidon 8.0) which provided estimates of the eight dominant tidal constituents at a horizontal scale of approximately 0.25 degrees. The eight major tidal constituents used were  $K_2$ ,  $S_2$ ,  $M_2$ ,  $N_2$ ,  $K_1$ ,  $P_1$ ,  $O_1$  and  $Q_1$ . Using the tidal data, time series surface heights were calculated along the open boundaries for the simulation period.

The Topex/Poseidon satellite data has a resolution of 0.25 degrees globally, with higher resolution in coastal regions, and is produced and quality controlled by NASA (National Aeronautics and Space Administration). The data capturing satellites, equipped with two altimeters capable of taking sea level measurements accurate to less than  $\pm 5$  cm, measured oceanic surface elevations (and the resultant tides) for the period 1992–2005. In total these satellites carried out 62,000 orbits of the planet. The Topex/Poseidon tidal data has been widely used amongst the oceanographic community, being referenced in more than 2,100 research publications (e.g., Andersen, 1995; Ludicone et al., 1998; Matsumoto et al., 2000; Kostianoy et al., 2003; Yaremchuk & Tangdong, 2004; Qiu & Chen, 2010). The Topex/Poseidon tidal data is considered suitably accurate for this study.

## 3.2 Ocean Currents

Data describing the flow of ocean currents was obtained from HYCOM (Hybrid Coordinate Ocean Model, (Chassignet et al., 2007), which is operated by the HYCOM Consortium, sponsored by the Global Ocean Data Assimilation Experiment (GODAE). HYCOM is a data-assimilative, three-dimensional ocean model that is run as a hindcast (for a past period), assimilating time-varying observations of sea surface height, sea surface temperature and in-situ temperature and salinity measurements (Chassignet et al., 2009). The HYCOM predictions for drift currents are produced at a horizontal spatial resolution of approximately 8.25 km ( $1/12^{\text{th}}$  of a degree) over the region, at a frequency of three-times per day. HYCOM uses isopycnal layers in the open, stratified ocean, but uses the layered continuity equation to make a dynamically smooth transition to a terrain-following coordinate in shallow coastal regions, and to z-level coordinates in the mixed layer and/or unstratified seas.

For this study, the HYCOM hindcast currents were obtained for the years 2010 to 2019 (inclusive).

## 3.3 Surface Currents

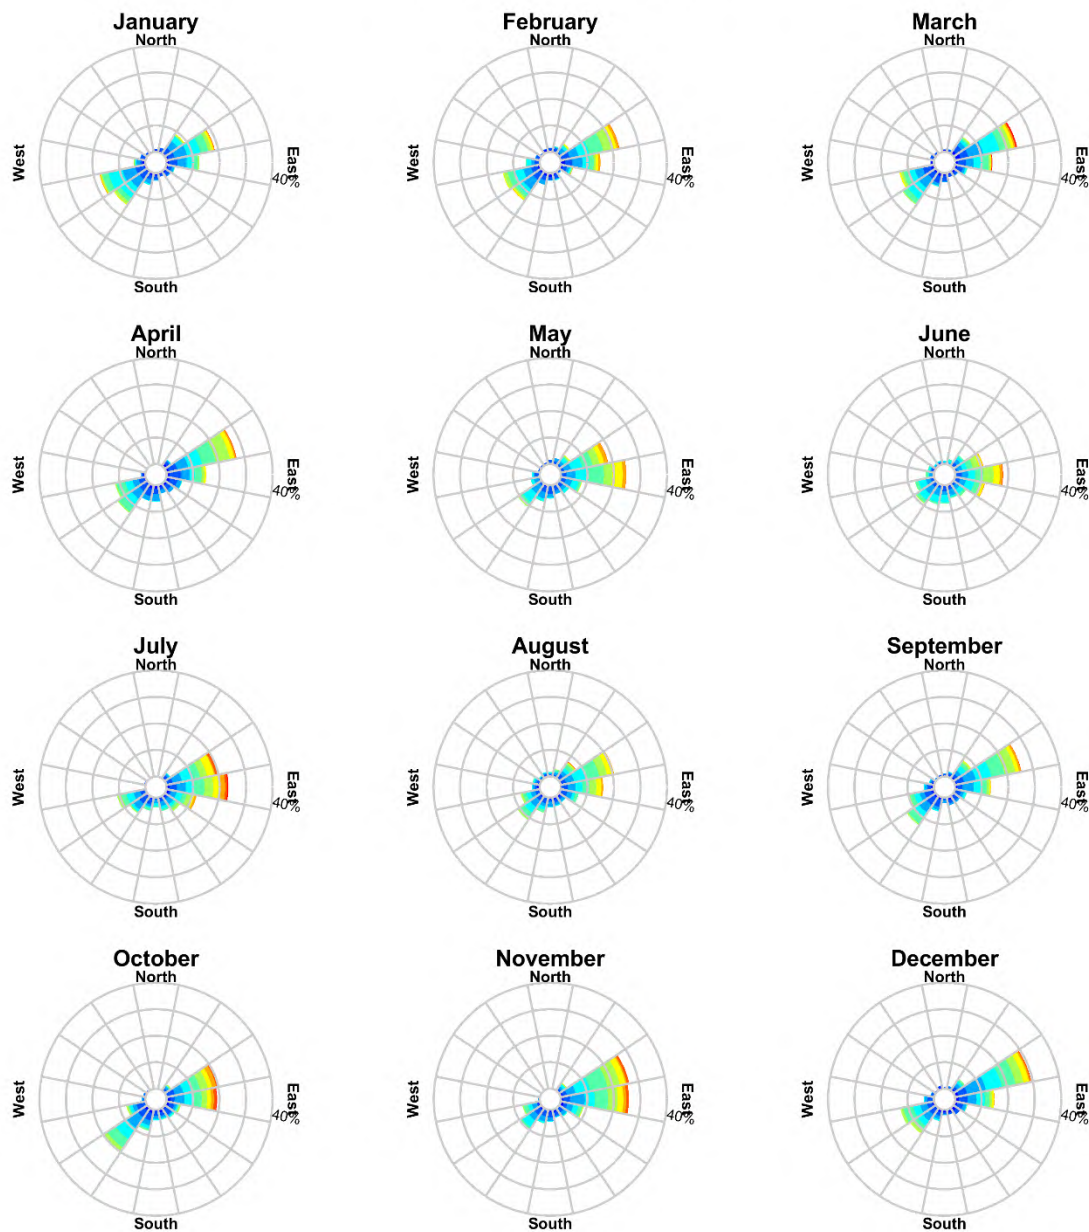

Figure 3.4 to Figure 3.6 show the monthly current rose distributions for the three locations, while Figure 3.7 to Figure 3.9 illustrate the total current rose distributions.

Note the convention for defining current direction is the direction the current flows towards, which is used to reference current direction throughout this report. Each branch of the rose represents the currents flowing to that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent the current speed ranges for each direction. Speed intervals of 0.1 m/s are predominantly used in these current roses. The length of each coloured segment is relative to the proportion of currents flowing within the corresponding speed and direction.

**Figure 3.9** Total surface current rose plots for Location 3. Data is based on modelled conditions between 2010–2019 (inclusive).

## 4 WIND DATA

To account for the influence of the wind on the hydrocarbons floating on the surface, wind data from 2010 to 2019 (inclusive) was sourced from the National Centre for Environmental Prediction (NCEP) Climate Forecast System Reanalysis dataset (CFSR; see Saha et al., 2010). The CFSR wind model includes observations from many data sources: surface observations, upper-atmosphere air balloon observations, aircraft observations and satellite observations. The model is capable of accurately representing the interaction between the earth's oceans, land and atmosphere. The gridded wind data output is available at a horizontal resolution of  $0.25^\circ$  (~33 km) and a temporal resolution of 1 hour.

Figure 4.1 is a screenshot illustrating the spatial resolution of the CFSR modelled wind data.

**Figure 4.1** Spatial resolution of the CFSR modelled wind data used as input into the oil spill model.

Figure 4.2 to Figure 4.4 shows the monthly wind rose distributions derived from the CFSR nodes closest to the release locations while Figure 4.5 to Figure 4.7 illustrate the total current rose distribution.

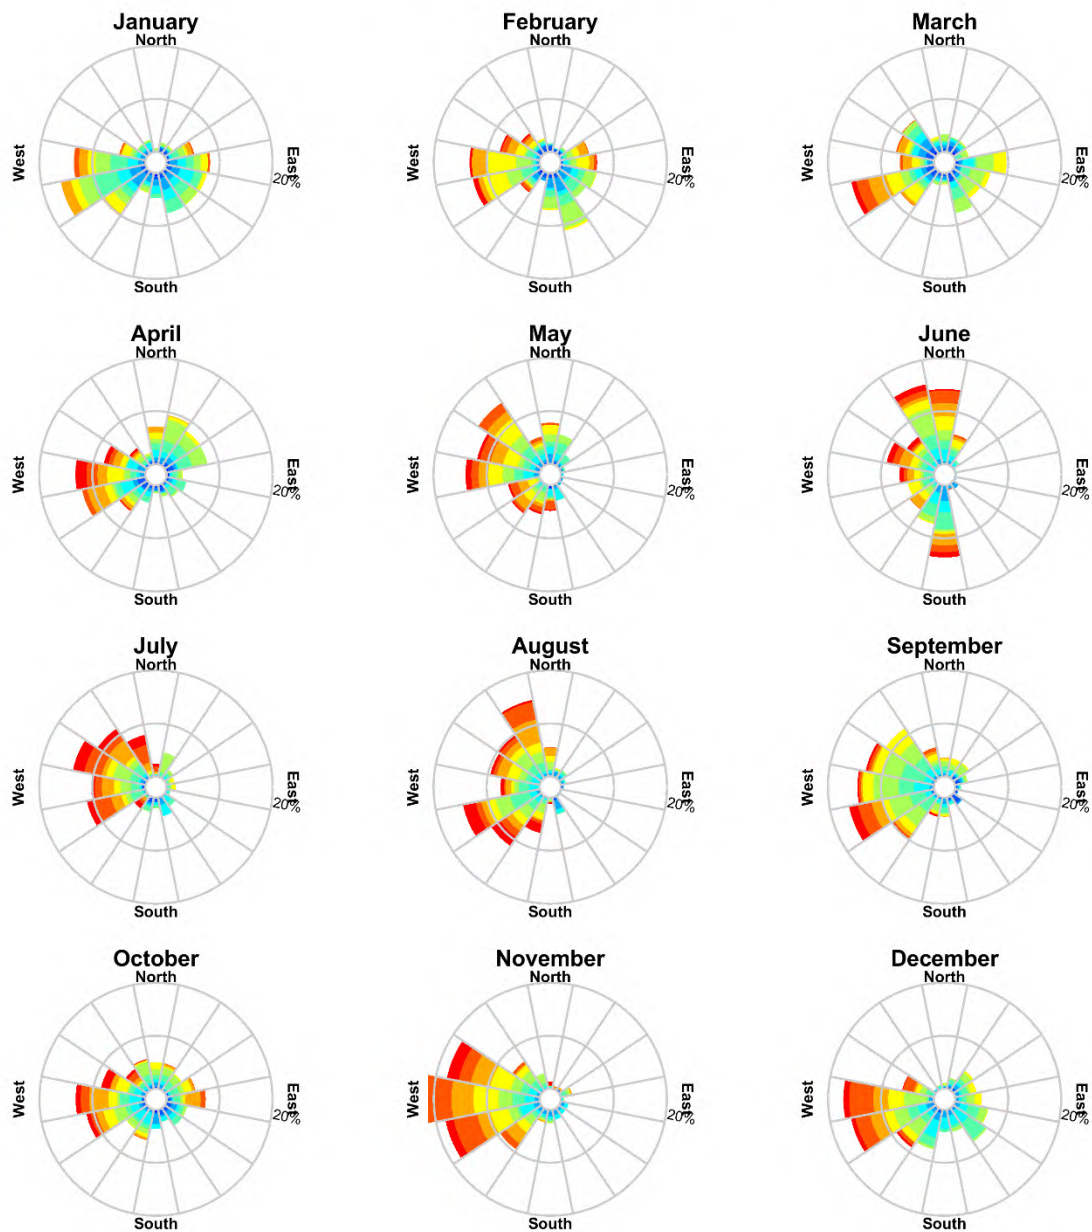

Note that the atmospheric convention for defining wind direction, that is, the direction the wind blows from, is used to reference wind direction throughout this report. Each branch of the rose represents wind coming from that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent wind speed ranges from that direction. Speed ranges of 3 knots are predominantly used in these wind roses. The length of each segment within a branch is proportional to the frequency of winds blowing within the corresponding range of speeds from that direction.

## 5 WATER TEMPERATURE AND SALINITY

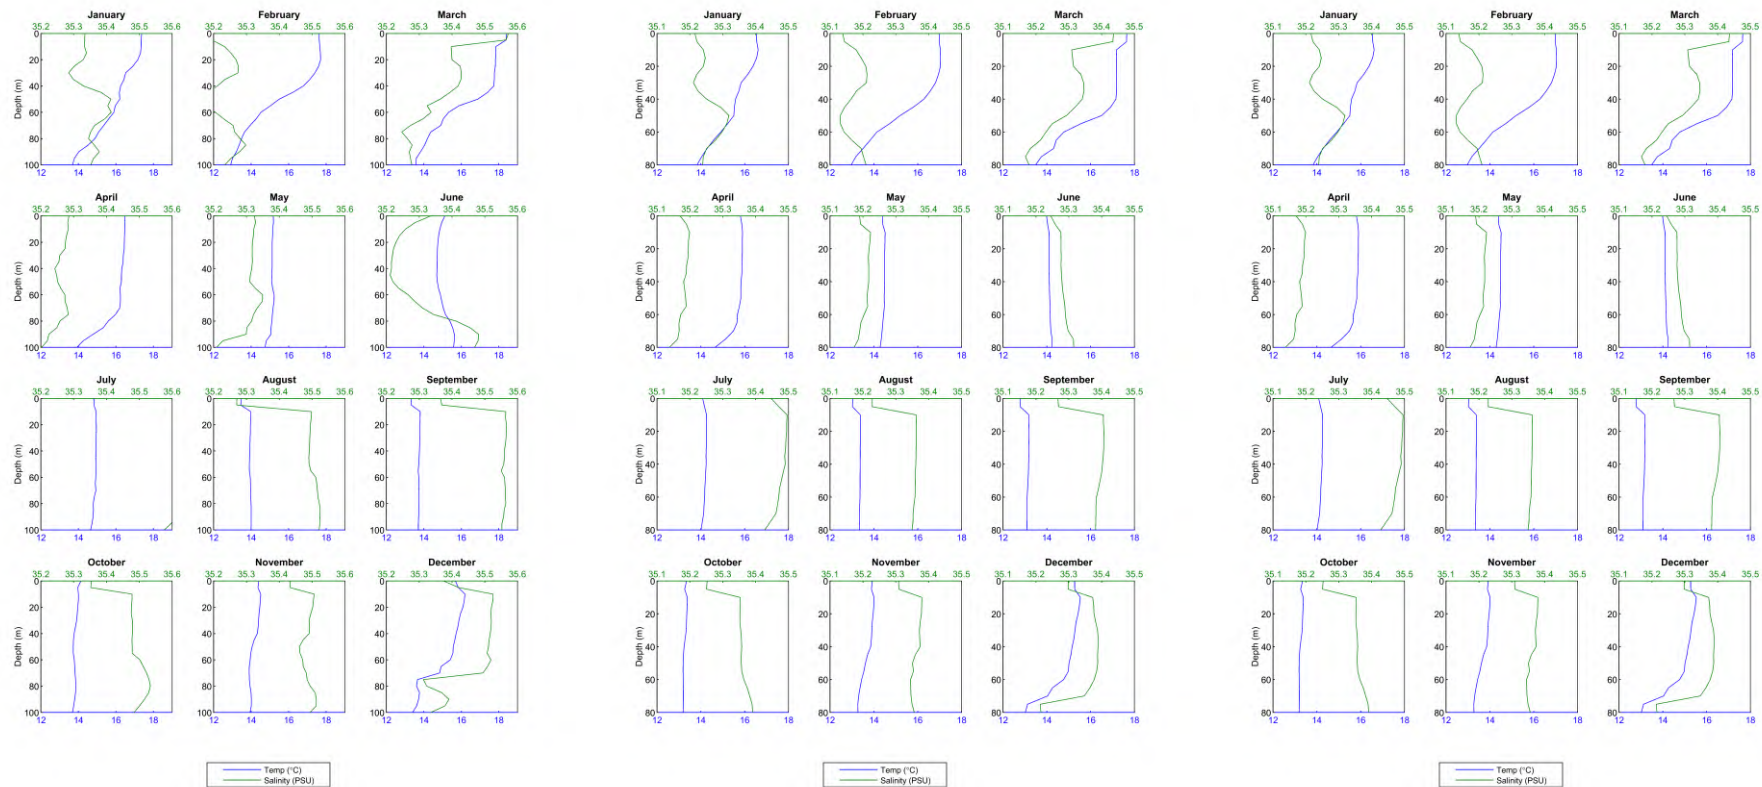

Monthly water temperature and salinity data was obtained from the World Ocean Atlas 2013 database produced by the National Oceanographic Data Centre (National Oceanic and Atmospheric Administration) and its co-located World Data Center for Oceanography (Levitus et al. 2013). The data is used as input into oil spill model.

The monthly mean sea surface temperature and salinity values in the 0-5 m depth layer are presented in Table 5-1. The monthly average sea surface temperatures ranged between 12.8°C (September, release location 3) and 18.4°C (March, release location 2). The monthly average salinity values remain relatively consistent ranging between 35.1 psu and 35.6 psu.

Figure 5.1 shows the monthly water temperature and salinity profiles adjacent to the release locations.

**Table 5-1 Monthly average sea surface temperature and salinity adjacent the release locations.**

Release Location		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

## 6 NEAR-FIELD MODEL – OILMAP DEEP

The LOWC scenario is a high-pressure release of mostly gas, condensate and small volume of condensed water. Where gas is released with condensate, the buoyancy of the expanding gas cloud will entrain ambient seawater and propel the droplets towards the surface at a faster rate than would occur from the relative buoyancy of the oil alone. Furthermore, The turbulence generated by such an intense discharge will tend to break the condensate up into droplets of various sizes.

To define the near-field plume dynamics, the subsea blowout model, OILMAP-DEEP, was applied. The model simulates the plume rise dynamics in two phases, the initial jet phase and the buoyant plume phase. The initial jet phase governs the plume dynamics directly above the subsurface release location and is predominately driven by the exit velocity. During this phase, the hydrocarbon droplet size and distribution is calculated. Next, the rise dynamics are dominated by the buoyant nature of the plume until the termination of the plume phase (known as the trapping depth). At this point, the results from OILMAP-DEEP (including plume trapping depth, plume diameter and droplet size distribution) are integrated into the far-field model SIMAP to simulate the rise and dispersion of the condensate droplets.

More details on the OILMAP-DEEP model, can be found in Spaulding et al. (2015). The model has been validated against observations from Deepwater Horizon as well as small and large-scale laboratory studies on subsurface oil releases (Brandvik et al., 2013, 2014; Belore, 2014; Spaulding et al., 2015; Li et al., 2017). Figure 6.1 illustrates the various stages of an example blowout plume.

Table 6-1 presents the input parameters for the OILMAP-DEEP model and key results related to the near-field plume dynamics. Inputs to the model included specification of the condensate density, viscosity and the discharge rate of the fluids: the diameter of the exit hole and the gas to oil ratio. The local temperature and salinity profiles of the water column were also specified to define the vertical density profile.

The subsea near-field modelling indicated that this pressurised discharge would cause the plume to breach the surface waters and the oil droplets would surface in less than a few minutes. The condensate droplets sizes were near identical at the three locations and range from 35 µm to 186 µm.

**Table 6-1 Input data for the near field subsea modelling and key results for each location from the high-pressure LOWC release.**

Input Variable	Location 1	Location 2	Location 3
Water depth (m)	93	100	114
Exit hole diameter (inch)		8.53	
Condensate release rate (m <sup>3</sup> /day)		1,549

## 7 OIL SPILL MODEL - SIMAP

The spill modelling was carried out using a purpose-developed oil spill trajectory and fates model, SIMAP (Spill Impact Mapping and Assessment Program). This model is designed to simulate the transport and weathering processes that affect the outcomes of hydrocarbon spills to the sea, accounting for the specific oil type, spill scenario, and prevailing wind and current circulation patterns.

SIMAP is the evolution of the United States Environmental Protection Agency (US EPA) Natural Resource Damage Assessment model (French & Rines, 1997; French et al., 1999) and is designed to simulate the fate and effects of spilled oils and fuels for both the surface slick and the three-dimensional plume that is generated in the water column. SIMAP includes algorithms to account for both physical transport and weathering processes. The latter are important for accounting for the partitioning of the spilled mass over time between the water surface (surface slick), water column (entrained oil and dissolved compounds), atmosphere (evaporated compounds) and land (stranded oil). The model also accounts for the interaction between weathering and transport processes.

The physical algorithms calculate transport and spreading by physical forces, including surface tension, gravity and wind and current forces for both surface slicks and oil within the water column. The fates algorithms calculate all the weathering processes known to be important for oil spilled to marine waters. These include droplet and slick formation, entrainment by wave action, emulsification, dissolution of soluble components, sedimentation, evaporation, bacterial and photo-chemical decay and shoreline interactions. These algorithms account for the specific oil type being considered.

Entrainment is the physical process where globules of oil are transported from the sea surface into the water column by wind and wave-induced turbulence or be generated subsea by a pressurised discharge at depth. It has been observed that entrained oil is broken into droplets of varying sizes. Small droplets spread and diffuse into the water column, while larger ones rise rapidly back to the surface (Delvigne & Sweeney, 1988; Delvigne, 1991).

Dissolution is the process by which soluble hydrocarbons enter the water from a surface slick or from entrained droplets. The lower molecular weight hydrocarbons tend to be both more volatile and more soluble than those of higher molecular weight.

The formation of water-in-oil emulsions, or mousse, which is termed 'emulsification', depends on oil composition and sea state. Emulsified oil can contain as much as 80% water in the form of micrometre-sized droplets dispersed within a continuous phase of oil (Daling & Brandvik, 1991; Bobra, 1991; Daling et al., 1997; Fingas, 1995).

Evaporation can result in the transfer of large proportions of spilled oil from the sea surface to the atmosphere, depending on the type of oil (Gundlach & Boehm, 1981).

Evaporation rates vary over space and time dependent on the prevailing sea temperatures, wind and current speeds, the surface area of the slick and entrained droplets that are exposed to the atmosphere as well as the state of weathering of the oil. Evaporation rates will decrease over time, depending on the calculated rate of loss of the more volatile compounds. By this process, the model can differentiate between the fates of different oil types.

Decay (degradation) of hydrocarbons may occur as the result of photolysis, which is a chemical process energised by ultraviolet light from the sun, and by biological breakdown, termed biodegradation. Many types of marine organisms ingest, metabolise and utilise oil as a carbon source, producing carbon dioxide and water as by-products.

Entrainment, dissolution and emulsification rates are correlated to wave energy, which is accounted for by estimating wave heights from the sustained wind speed, direction and fetch (i.e. distance downwind from land barriers) at different locations in the domain. Dissolution rates are dependent upon the proportion of soluble, short-chained hydrocarbon compounds, and the surface area at the oil/water interface of slicks. Dissolution rates are also strongly affected by the level of turbulence. For example, dissolution rates will be relatively high at the site of the release for a deep-sea discharge at high pressure.

The SIMAP weathering algorithms include terms to represent these dynamic processes. Technical descriptions of the algorithms used in SIMAP and validations against real spill events are provided in French (1998), French et al. (1999) and French-McCay (2004).

Input specifications for oil types include density, viscosity, pour-point, distillation curve (volume of oil distilled off versus temperature) and the aromatic/aliphatic component ratios within given boiling point ranges. The model calculates a distribution of the oil by mass into the following components:

- Surface-bound or floating oil;
- Entrained oil (non-dissolved oil droplets that are physically entrained by wave action);
- Dissolved hydrocarbons (principally the aromatic and short-chained aliphatic compounds);
- Evaporated hydrocarbons;
- Sedimented hydrocarbons; and
- Decayed hydrocarbons.

## 8 CONDENSATE PROPERTIES

The characteristics for Thylacine condensate were based on a detailed assay, which was used as a proxy. Table 8-1 and Table 8-2 summarise the physical properties and boiling point ranges, respectively. Thylacine condensate has an API of 44.3, a density of 805 kg/m<sup>3</sup> (at 15°C) and a low viscosity value of 0.875 cP.

The volatile to semi-volatile components (boiling point (BP) < 265 °C), which represent approximately 83% of the whole condensate is likely to evaporate over the first day if exposed to the atmosphere at local temperatures, leaving the less volatile portion (16%) to progressively evaporate more slowly. Only 1% of the condensate is considered persistent.

Thylacine condensate is categorised as a group I oil (non – persistent oil) according to the International Tankers Owners Pollution Federation (ITOPF, 2014) and US EPA/USCG classifications. The classification is based on the specific gravity of hydrocarbons in combination with relevant boiling point ranges.

The heavier components (i.e low volatile portion) of the condensate will tend to entrain into the upper water column during the presence of moderate winds (> 10 knots) and can potentially remain entrained for as long as the winds persist. But can subsequently resurface when the winds ease, and waves abate.

**Table 8-1 Physical properties for Thylacine condensate.**

Characteristic	Thylacine condensate
Density (kg/m <sup>3</sup> )	805 (at 15°C)
API	44.3
Dynamic viscosity (cP)	9.95 (at 50°C)
Hydrocarbon property category	Group I
Hydrocarbon property classification	Non-persistent oil

**Table 8-2 Boiling point ranges for Thylacine condensate.**

Characteristics	Non-Persistent			Persistent
	Volatile (%)	Semi-volatile (%)	Low-volatility (%)	Residual (%)
Boiling point (°C)	<180	180-265	265-380	>380
Thylacine condensate	64.0	19.0	16.0	1.0

## 9 THRESHOLDS

The thresholds and their relationship to exposure for the sea surface, shoreline, and water column (entrained and dissolved hydrocarbons) are presented in Sections 9.1 to 9.3. Supporting justifications of the adopted thresholds applied during the study and additional context relating to the area of influence are also provided. It is important to note that the thresholds herein are based on NOPSEMA (2019).

### 9.1 Floating Exposure Thresholds

The modelling results can be presented to any levels; therefore, thresholds have been specified (based on scientific literature) to record floating oil exposure to the sea-surface at meaningful levels only, described in the following paragraphs.

The low threshold to assess the potential for floating oil exposure, was 1 g/m<sup>2</sup>, which equates approximately to an average thickness of 1 µm, referred to as visible oil. Oil of this thickness is described as rainbow sheen in appearance, according to the Bonn Agreement Oil Appearance Code (Bonn Agreement, 2009; AMSA, 2014). Table 9-1 provides a description of the appearance in relation to exposure zone thresholds used to classify the zones of floating oil exposure. Figure 9.1 shows photographs highlighting the difference in appearance between a rainbow sheen and metallic sheen. The low threshold is considered below levels which would cause environmental harm and it is more indicative of the areas perceived to be affected due to its visibility on the sea surface and potential to trigger temporary closures of areas (i.e., fishing grounds) as a precautionary measure.

Ecological impact has been estimated to occur at 10 g/m<sup>2</sup>, which equates to a film thickness of approximately 10 µm or 0.01 mm (French et al. 1996; French-McCay 2009) as this level of fresh oiling has been observed to mortally impact some birds through adhesion of oil to their feathers, exposing them to secondary effects such as hypothermia. The appearance of oil at this average thickness has been described as a metallic sheen (Bonn Agreement, 2009). Concentrations above 10 g/m<sup>2</sup> is also considered the lower actionable threshold, where oil may be thick enough for containment and recovery as well as dispersant treatment (AMSA, 2015).

Oil concentrations on the sea surface of 25 g/m<sup>2</sup> (or greater), would be harmful for all birds that have landed in an oil film due to potential contamination of their feathers, with secondary effects such as loss of temperature regulation and ingestion of oil through preening (Scholten et al., 1996; Koops et al., 2004). The appearance of oil at this thickness is also described as metallic sheen (Bonn Agreement, 2009). For this study the high exposure threshold was set to 50 g/m<sup>2</sup> and above based on NOPSEMA (2019). This threshold can also be used to inform response planning.

Table 9-2 defines the thresholds used to classify the zones of floating oil exposure reported herein.

**Table 9-1 The Bonn Agreement Oil Appearance Code.**

Code	Description Appearance	Layer Thickness Interval (g/m <sup>2</sup> or µm)	Litres per km <sup>2</sup>
1	Sheen (silvery/grey)	0.04 – 0.30	40 – 300
2	Rainbow	0.30 – 5.0	300 – 5,000
3	Metallic	5.0 – 50	5,000 – 50,000
4	Discontinuous True Oil Colour	50 – 200	50,000 – 200,000
5	Continuous True Oil Colour	≥ 200	≥ 200,000

**Figure 9.1** Photographs showing the difference between oil colour and thickness on the sea surface (source: adapted from Oil Spill Solutions, 2015).

**Table 9-2** Floating oil exposure thresholds used in this report (in alignment with NOPSEMA (2019)).

Threshold level	Floating oil (g/m <sup>2</sup> )	Description
Low	1	Approximates range of socio-economic effects and establishes planning area for scientific monitoring
Moderate	10	Approximates lower limit for harmful exposures to birds and marine mammals
High	50*	Approximates surface oil slick and informs response planning

\* 50 g/m<sup>2</sup> also used to define the threshold for actionable floating oil.

## 9.2 Shoreline Accumulation Thresholds

There are many different types of shorelines, ranging from cliffs, rocky beaches, sandy beaches, mud flats and mangroves, and each of these influences the volume of oil that can remain stranded ashore and its thickness before the shoreline saturation point occurs. For instance, a sandy beach may allow oil to percolate through the sand, thus increasing its ability to hold more oil ashore over tidal cycles and various wave actions than an equivalent area of water; hence oil can increase in thickness onshore over time. A sandy beach shoreline was assumed as the default shoreline type for the modelling in this study, as it allows for the highest carrying capacity of oil (of the available open/exposed shoreline types). Hence the results are considered conservative (i.e., worst-case) given that a large part of the shoreline in the study area (especially the western part of the Joseph Bonaparte Gulf) is characterised by exposed rocky shorelines, with southern parts characterised by tidal mudflats and mangroves and eastern shorelines containing more sandy beaches.

Previous risk assessment studies, French-McCay et al. (2005a; 2005b) used a threshold of 10 g/m<sup>2</sup> to assess the potential for shoreline accumulation. This is a conservative threshold used to define regions of socio-economic impact, such as triggering temporary closures of adjoining fisheries or the need for shore clean-up on beaches or man-made features/amenities (breakwaters, jetties, marinas, etc.). It would equate to approximately 2 teaspoons of hydrocarbon per square meter of shoreline accumulation. The appearance is described as a stain/film. On that basis, the 10 g/m<sup>2</sup> shoreline accumulation threshold has been selected to define the zone of potential “low shoreline accumulation”.

French et al. (1996) and French-McCay (2009) define a shoreline oil accumulation threshold of 100 g/m<sup>2</sup>, or above, would potentially harm shorebirds and wildlife (fur-bearing aquatic mammals and marine reptiles on or along the shore) based on studies for sub-lethal and lethal impacts. This threshold has been used in previous environmental risk assessment studies (see French-McCay, 2003; French-McCay et al., 2004, French-McCay et al., 2011; 2012; NOAA, 2013). Additionally, a shoreline concentration of 100 g/m<sup>2</sup>, or above, is the minimum concentration that the oil can be effectively cleaned according to AMSA (2015). This threshold equates to approximately ½ a cup of oil per square meter of shoreline accumulation. The

appearance is described as a thin oil coat. Therefore, 100 g/m<sup>2</sup> has been selected to define the zone of potential “moderate shoreline accumulation”.

Observations by Lin & Mendelssohn (1996) demonstrated that loadings of more than 1,000 g/m<sup>2</sup> of hydrocarbon during the growing season would be required to impact marsh plants significantly. Similar thresholds have been found in studies assessing hydrocarbon impacts on mangroves (Grant et al., 1993; Suprayogi & Murray, 1999). This loading equates to approximately 1 litre of hydrocarbon per square meter of shoreline accumulation and the appearance is described as a hydrocarbon cover. A loading of 1,000 g/m<sup>2</sup> has been selected to define the zone of potential “high shoreline accumulation”.

These shoreline accumulation thresholds derived from extensive literature review (outlined in Table 9-3) align with the threshold values for oil spill modelling specified in NOPSEMA (2019).

**Table 9-3 Thresholds used to assess shoreline accumulation.**

Threshold level	Shoreline loading (g/m <sup>2</sup> )	Description
Low (socioeconomic/sublethal)	10	Predicts potential for some socio-economic impact
Moderate	100*	Loading predicts area likely to require clean-up effort
High	1,000	Loading predicts area likely to require intensive clean-up effort

\* 100 g/m<sup>2</sup> also used to define the threshold for actionable shoreline oil.

## 9.3 In-water Exposure Thresholds

Oil is a mixture of thousands of hydrocarbons of varying physical, chemical, and toxicological characteristics, and therefore, demonstrate varying fates and impacts on organisms. As such, for in-water exposure, the SIMAP model provides separate outputs for dissolved and entrained hydrocarbons from oil droplets. The consequences of exposure to dissolved and entrained components will differ because they have different modes and magnitudes of effect.

Entrained hydrocarbon concentrations were calculated based on oil droplets that are suspended in the water column, though not dissolved. The composition of this oil would vary with the state of weathering (oil age) and may contain soluble hydrocarbons when the oil is fresh. Calculations for dissolved hydrocarbons specifically calculates oil components which are dissolved in water, which are known to be the primary source of toxicity exerted by oil.

A complicating factor that should be considered when assessing the consequence of dissolved and entrained oil distributions is that there will be some areas where both physically entrained oil droplets and dissolved hydrocarbons co-exist. Higher concentrations of each will tend to occur close to the source where sea conditions can force mixing of relatively unweathered oil into the water column, resulting in more rapid dissolution of soluble compounds.

### 9.3.1 Dissolved Hydrocarbons

Laboratory studies have shown that dissolved hydrocarbons exert most of the toxic effects of oil on aquatic biota (Carls et al., 2008; Nordtug et al., 2011; Redman, 2015). The mode of action is a narcotic effect, which is positively related to the concentration of soluble hydrocarbons in the body tissues of organisms (French-McCay, 2002). Dissolved hydrocarbons are taken up by organisms directly from the water column by absorption through external surfaces and gills, as well as through the digestive tract. Thus, soluble hydrocarbons are termed “bioavailable”.

Hydrocarbon compounds vary in water-solubility and the toxicity exerted by individual compounds is inversely related to solubility, however bioavailability will be modified by the volatility of individual compounds (Nirmalakhandan & Speece, 1988; Blum & Speece, 1990; McCarty, 1986; McCarty et al., 1992a, 1992b;

McCarty & Mackay, 1993; Verhaar et al., 1992, 1999; Swartz et al., 1995; French-McCay, 2002; McGrath and Di Toro, 2009). Of the soluble compounds, the greatest contributor to toxicity for water-column and benthic organisms are the lower-molecular-weight aromatic compounds, which are both volatile and soluble in water. Although they are not the most water-soluble hydrocarbons within most oil types, the polynuclear aromatic hydrocarbons (PAHs) containing 2-3 aromatic ring structures typically exert the largest narcotic effects because they are semi-soluble and not highly volatile, so they persist in the environment long enough for significant accumulation to occur (Anderson et al., 1974, 1987; Neff & Anderson, 1981; Malins & Hodgins, 1981; McAuliffe, 1987; NRC, 2003). The monoaromatic hydrocarbons (MAHs), including the BTEX compounds (benzene, toluene, ethylbenzene, and xylenes), and the soluble alkanes (straight chain hydrocarbons) also contribute to toxicity, but these compounds are highly volatile, so that their contribution will be low when oil is exposed to evaporation and higher when oil is discharged at depth where volatilisation does not occur (French-McCay, 2002).

French-McCay (2002) reviewed available toxicity data, where marine biota was exposed to dissolved hydrocarbons prepared from oil mixtures, finding that 95% of species and life stages exhibited 50% population mortality (LC<sub>50</sub>) between 6 and 400 ppb total PAH concentration after 96 hrs exposure, with an average of 50 ppb. Hence, concentrations lower than 6 ppb total PAH value should be protective of 97.5% of species and life stages even with exposure periods of days (at least 96 hours). Early life-history stages of fish appear to be more sensitive than older fish stages and invertebrates.

Exceedances of 10, 50 or 400 ppb over a 1 hour timestep (see Table 9-4) were applied in this study to indicate the increasing potential for sub-lethal to lethal toxic effects (or low to high), based on NOPSEMA (2019).

### **9.3.2 Entrained Hydrocarbons**

Entrained hydrocarbons consist of oil droplets that are suspended in the water column and insoluble. Insoluble compounds in oil cannot be absorbed from the water column by aquatic organisms, therefore they are not bioavailable through absorption of compounds from the water. Exposure to these compounds would require routes of uptake other than absorption of soluble compounds. The route of exposure of organisms to whole oil alone include direct contact with tissues of organisms and uptake of oil by direct consumption, with potential for biomagnification through the food chain (NRC, 2003).

The 10 ppb threshold corresponds generally with the lowest trigger levels for chronic exposure for entrained hydrocarbons in the ANZECC & ARMCANZ (2000) water quality guidelines. Due to the requirement for relatively long exposure times (> 24 hours) for these concentrations to accumulate, they are likely to be more meaningful for juvenile fish, larvae and planktonic organisms that might be entrained (or otherwise moving) within the entrained plumes, or when entrained hydrocarbons adhere to organisms or are trapped against a shoreline for periods of several days or more.

This exposure zone is not considered to be of significant biological impact and is therefore outside the adverse exposure zone. This exposure zone represents the area contacted by the spill. This area does not define the area of influence as it is considered that the environment will not be affected by the entrained hydrocarbon at this level.

Thresholds of 10 ppb and 100 ppb were applied over a 1 hour time exposure (Table 9-4), to cover the range of thresholds outlined in ANZECC & ARMCANZ (2000) water quality guidelines and is per NOPSEMA (2019).

**Table 9-4** Dissolved and entrained hydrocarbon exposure values assessed over a 1-hour time step, as per NOPSEMA (2019).

	Exposure level	In-water threshold (ppb)	Description
Dissolved hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	Moderate	50	Approximates potential toxic effects, particularly sublethal effects to sensitive species
	High	400	Approximates toxic effects including lethal effects to sensitive species
Entrained hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	High	100	As appropriate given oil characteristics for informing risk evaluation

## 9.4 Dispersion

A horizontal dispersion coefficient of 10 m<sup>2</sup>/s was used to account for dispersive processes acting at the surface that are below the scale of resolution of the input current field, based on typical values for open waters (Okubo, 1971). Dispersion rates within the water column (applicable for entrained and dissolved plumes of hydrocarbons) were specified at 1 m<sup>2</sup>/s, based on empirical data for the dispersion of hydrocarbon plumes (King & McAllister, 1998).

## 10 RECEPTORS

A range of environmental receptors and shorelines were assessed for floating oil exposure, shoreline contact and water column exposure (entrained and dissolved hydrocarbons) as part of the study (see Figure 10.1 to Figure 10.12). Receptor categories are shown in Table 10-1 which includes coastal and offshore islands grouped as shorelines. All other sensitive receptors other than submerged reefs, shoals and banks (RSB) were sourced from Australian Government Department of Agriculture, Water and the Environment (<http://www.environment.gov.au/>). Probabilities of exposure were separately calculated for each sensitive receptor area and have been tabulated.

**Table 10-1 Summary of receptors assessed for potential oil exposure.**

Receptor Category	Acronym	Hydrocarbon Exposure and Accumulation Assessment		
		Floating oil	Water Column	Shoreline
Australian Marine Park	AMP	✓	✓	✗

## 11 MODEL SETTINGS

Table 11-1 provides a summary of the spill modelling inputs and thresholds.

The potential risk of exposure to the surrounding waters and contact to shorelines was assessed for summer (October to March) and winter conditions (April to September).

The simulation length was carefully selected based on extensive sensitivity testing. During the sensitivity testing process, sample spill simulations were run for longer than intended durations. Upon completion of the spill simulations, the results were carefully assessed to examine the persistence of the hydrocarbon (i.e. whether the maximum evaporative loss has been achieved for the period of time modelled; and whether a substantial volume of hydrocarbons remain in the water column (if any)) in conjunction with the extent of floating oil exposure based on reporting thresholds. Once there was agreement between the two factors (i.e. the final fate of hydrocarbon is accounted for, and the full exposure area is identified) the simulation length was deemed appropriate.

**Table 11-1 Summary of the of the oil spill modelling inputs and thresholds.**

Parameter	Locations 1 - 3
Number of randomly selected spill start times per season	100
Model period	Summer (October to March) and winter conditions (April to September)
Oil type	Thylacine condensate
Spill release rate (m <sup>3</sup> /day)	1,549
Spill volume (m <sup>3</sup> )	139,400
Release type	Subsea
Release duration (days)	90
Simulation length (days)	120
Floating oil exposure thresholds (g/m <sup>2</sup> )	1 (low exposure) 10 (moderate exposure) 50 (high exposure)
Shoreline accumulation thresholds (g/m <sup>2</sup> )	10 (low potential exposure) 100 (moderate potential exposure) 1,000 (high potential exposure)
Dissolved hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 50 (50 ppb x 1 hr, potential moderate exposure) 400 (400 ppb x 1 hr, potential high exposure)
Entrained hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 100 (100 ppb x 1 hr, potential high exposure)

## 12 CALCULATION OF EXPOSURE RISK

The stochastic sampling approach provides an objective measure of the possible outcomes of a spill because randomly selected environmental conditions with more simulations will tend to use the most commonly occurring conditions, while more unusual conditions will be represented less frequently.

During each simulation, the SIMAP model records the location (by latitude, longitude and depth) of each of the particles (representing a given mass of oil) on or in the water column, at regular time steps. For any particles that contact a shoreline, the model records the accumulation of oil mass that arrives on each section of shoreline over time, less any mass that is lost to evaporation and/or subsequent removal by current and wind forces.

The collective records from all simulations are then analysed by dividing the study region into a three-dimensional grid. For oil particles that are classified as being at the water surface (floating oil), the sum of the mass in all oil particles (including accounting for spreading and dispersion effects) located within a grid cell, divided by the area of the cell provides estimates of the concentration of oil in that grid cell, at each time step. For entrained and dissolved hydrocarbons particles, concentrations are calculated at each time step by summing the mass of particles within a grid cell and dividing by the volume of the grid cell.

The concentrations of oil calculated for each grid cell, at each time step, are then analysed to determine whether concentration estimates exceed defined threshold concentrations over time.

Risks are then summarised as follows:

- The probability of exposure to a location is calculated by dividing the number of spill simulations where any contact occurred above a specified threshold at that location by the total number of replicate spill simulations. For example, if contact occurred at a location (above a specified threshold) during 21 out of 100 simulations, a probability of exposure of 21% is indicated;
- The minimum potential time to a shoreline location is calculated by the shortest time over which oil at a concentration above a threshold was calculated to travel from the source to the location in any of the replicate simulations;
- The maximum potential concentration of oil predicted for each shoreline section is the greatest mass per m<sup>2</sup> of shoreline calculated to strand at any location within that section during any of the replicate simulations; and
- Similar treatments were undertaken for entrained and dissolved hydrocarbon exposures.

Thus, the minimum time to shoreline and the maximum potential concentration estimates indicate the worst potential outcome of the modelled spill scenario for each section of shoreline. However, the average over the replicates presents an average of the potential outcomes, in terms of hydrocarbons that could strand.

Note also that results quoted for sections of shoreline are derived for any individual location within that section, as a conservative estimate. Locations will represent shoreline lengths of the order of ~1 km, while sections or regions will represent shorelines spanning tens to hundreds of kilometres. The maximum potential concentrations quoted will not necessarily occur over the full extent of each section, therefore multiplying the maximum concentration estimates by the full area of the section is not recommended as this will greatly overestimate the total volume expected on that section.

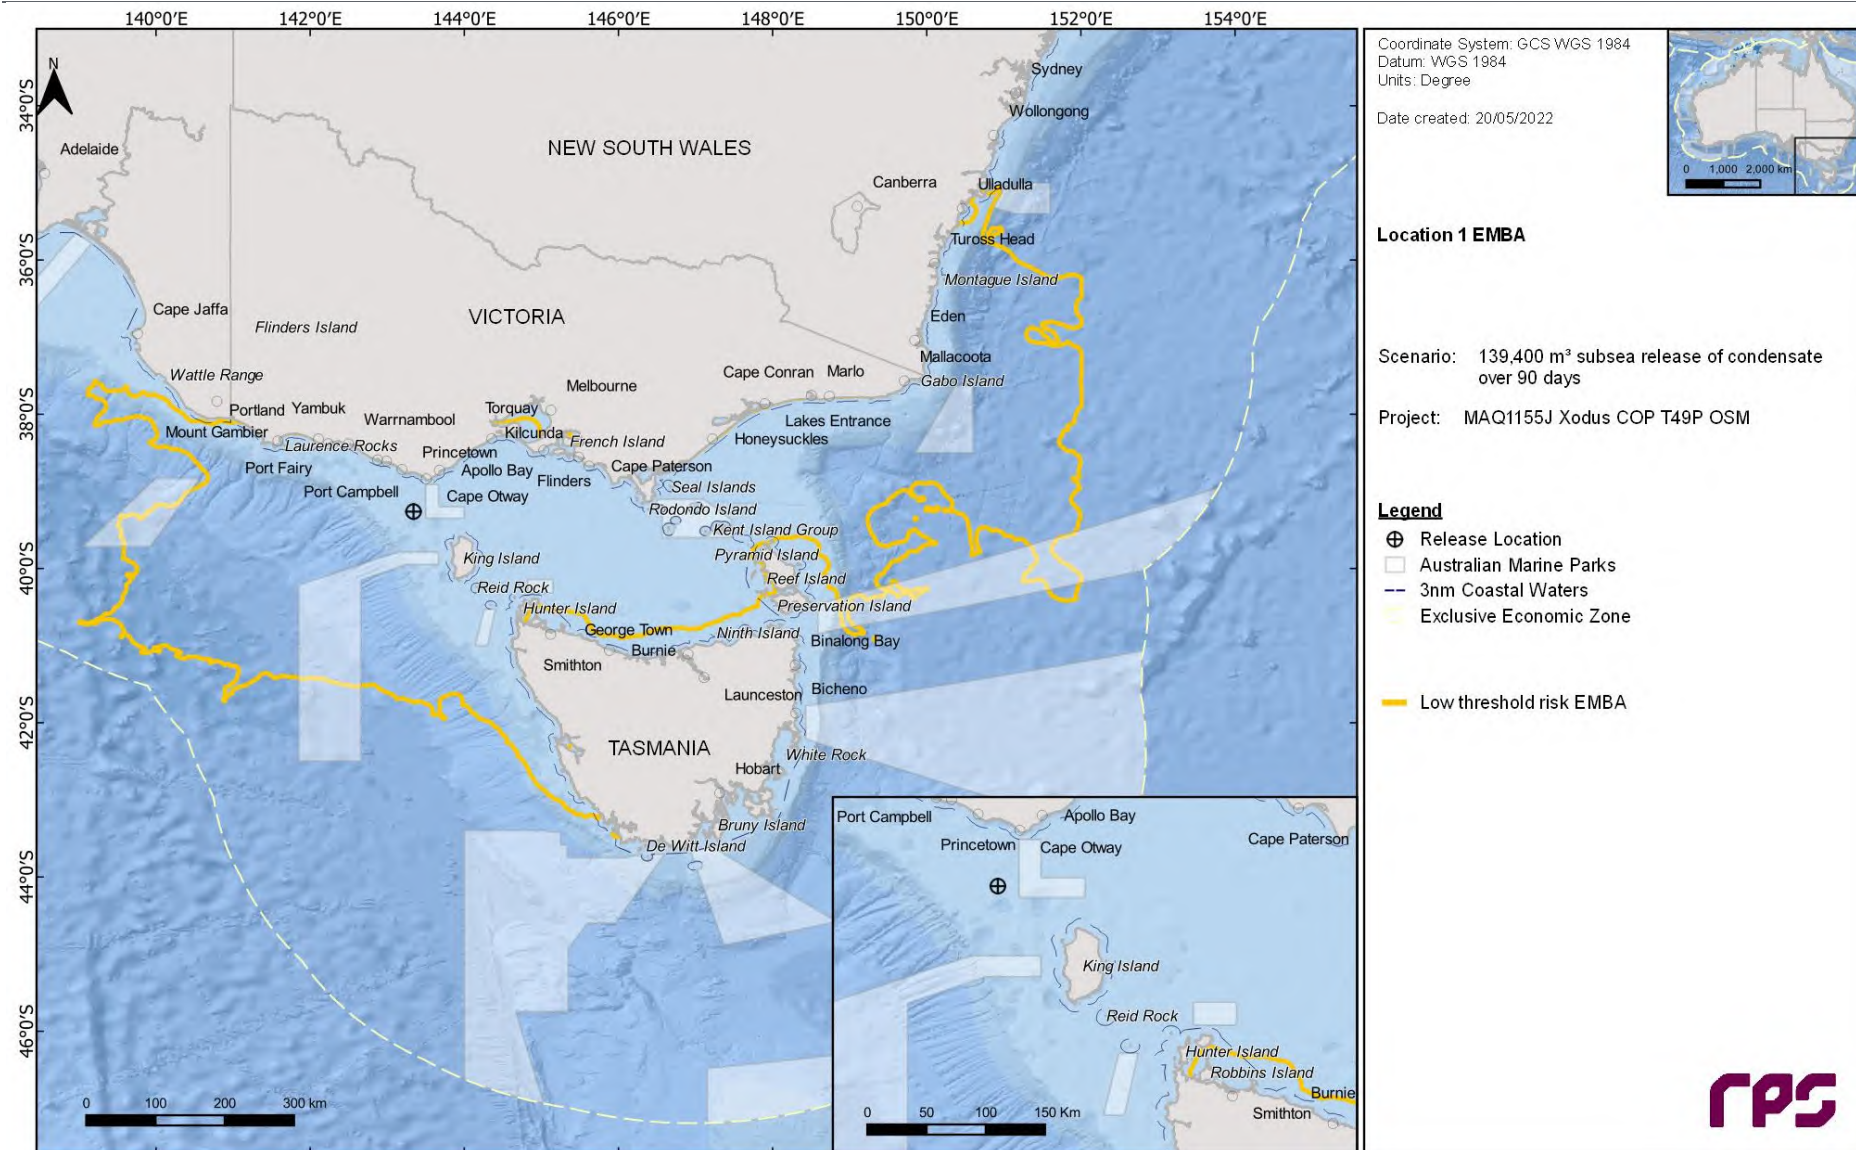

## 13 LOCATION 1 LOWC RESULTS

This scenario examined the potential exposure following a subsea LOWC at Location 1. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 13.1 presents the low threshold EMBA, Section 13.2 shows the seasonal (or stochastic) analysis results, while Section 13.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 13.1 EMBA

Figure 13.1 shows the EMBA for Location 1. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

**Figure 13.1** Predicted low threshold EMBA from a subsea LOWC at Location 1. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 13.2 Stochastic Analysis

### 13.2.1 Floating Oil Exposure

Table 13-1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 13-2 summarises the potential floating oil exposure to individual receptors for each season. The exposure by floating oil to BIAs can be found in Appendix A.

Figure 13.2 to Figure 13.3 illustrate the extent of floating oil exposure for each season.

The largest swept area of floating oil exposure at or above the low threshold during winter and summer conditions for a single simulation was 1,357 km<sup>2</sup> and 1,112 km<sup>2</sup>, respectively.

**Table 13-1 Maximum distances and directions travelled by floating oil from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.**

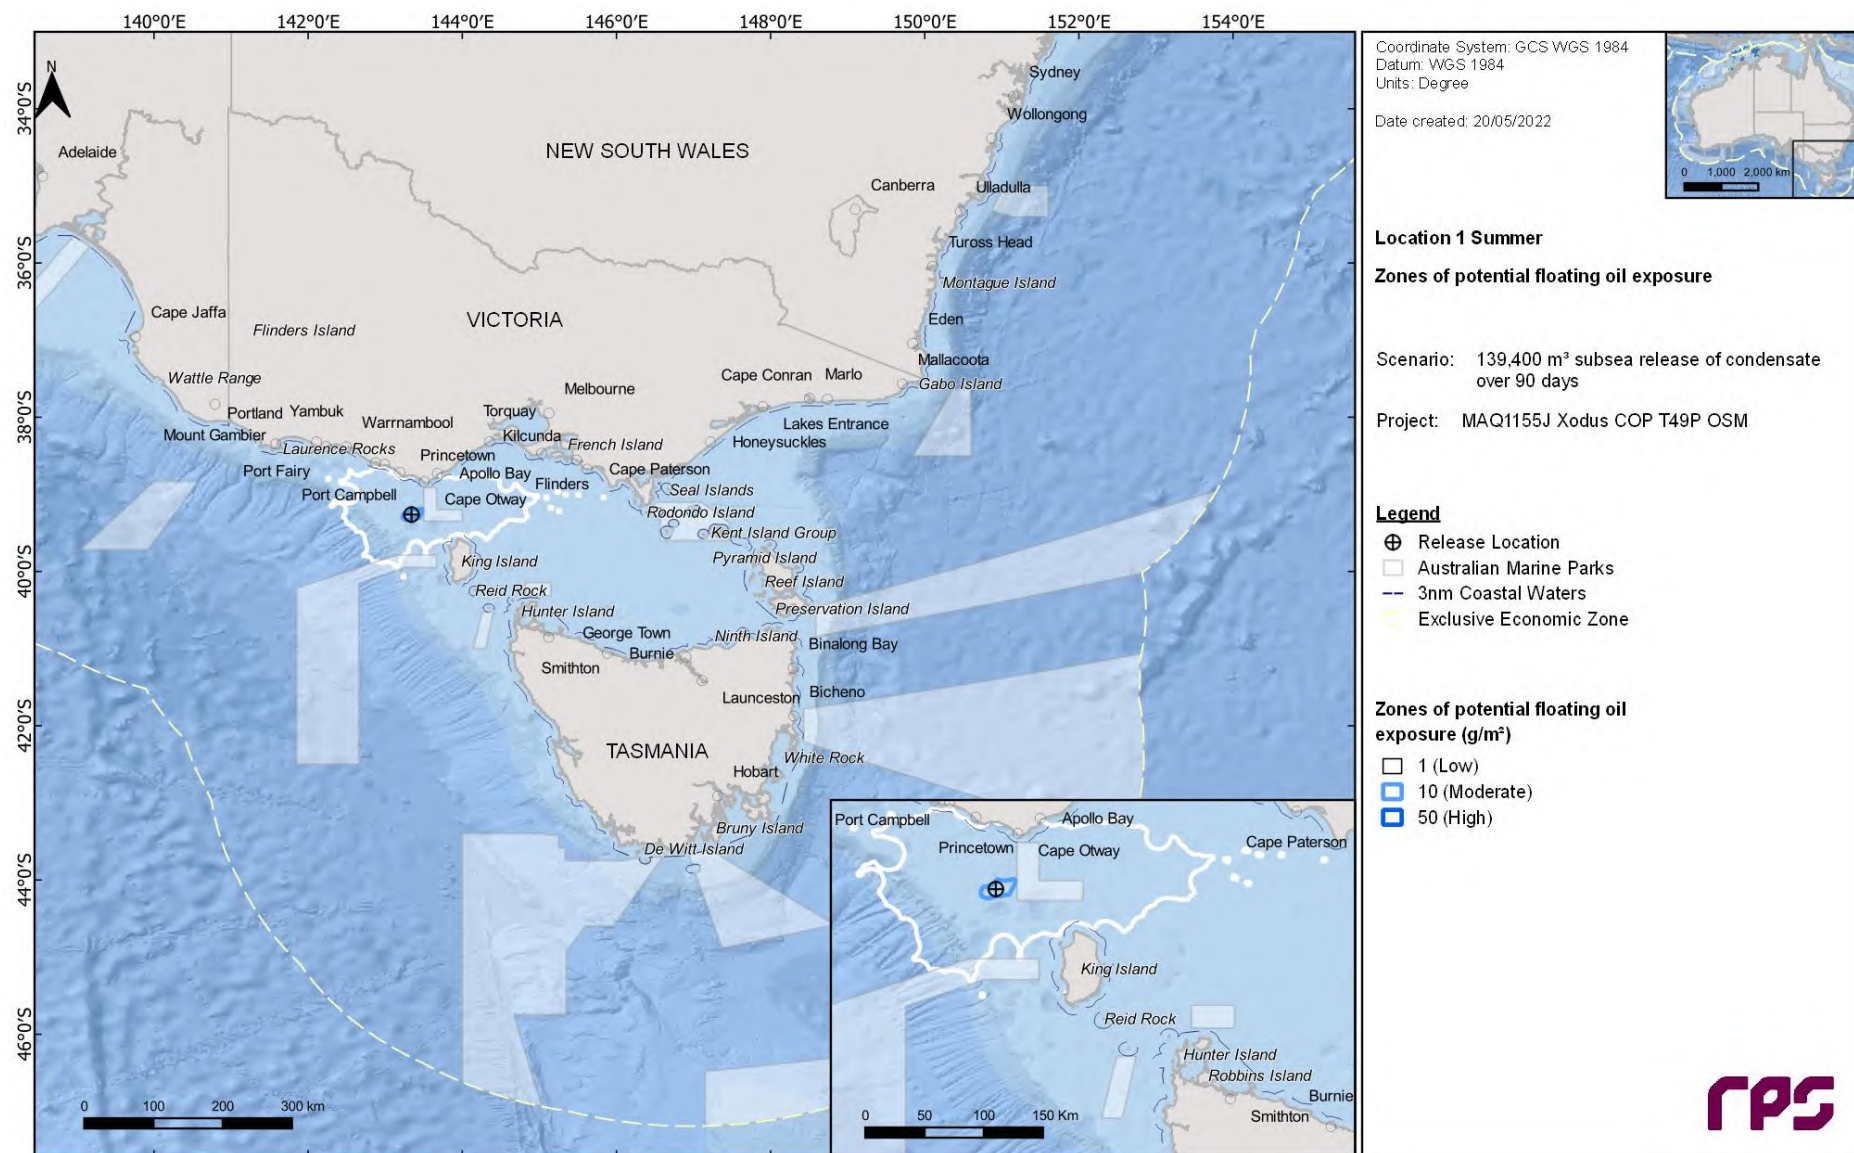

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	275.0	13.6	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	101.4	12.4	-
	Direction	E	ENE	-
Winter	Maximum distance (km) from release location	256.8	13.6	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	152.1	12.9	-
	Direction	E	ENE	-

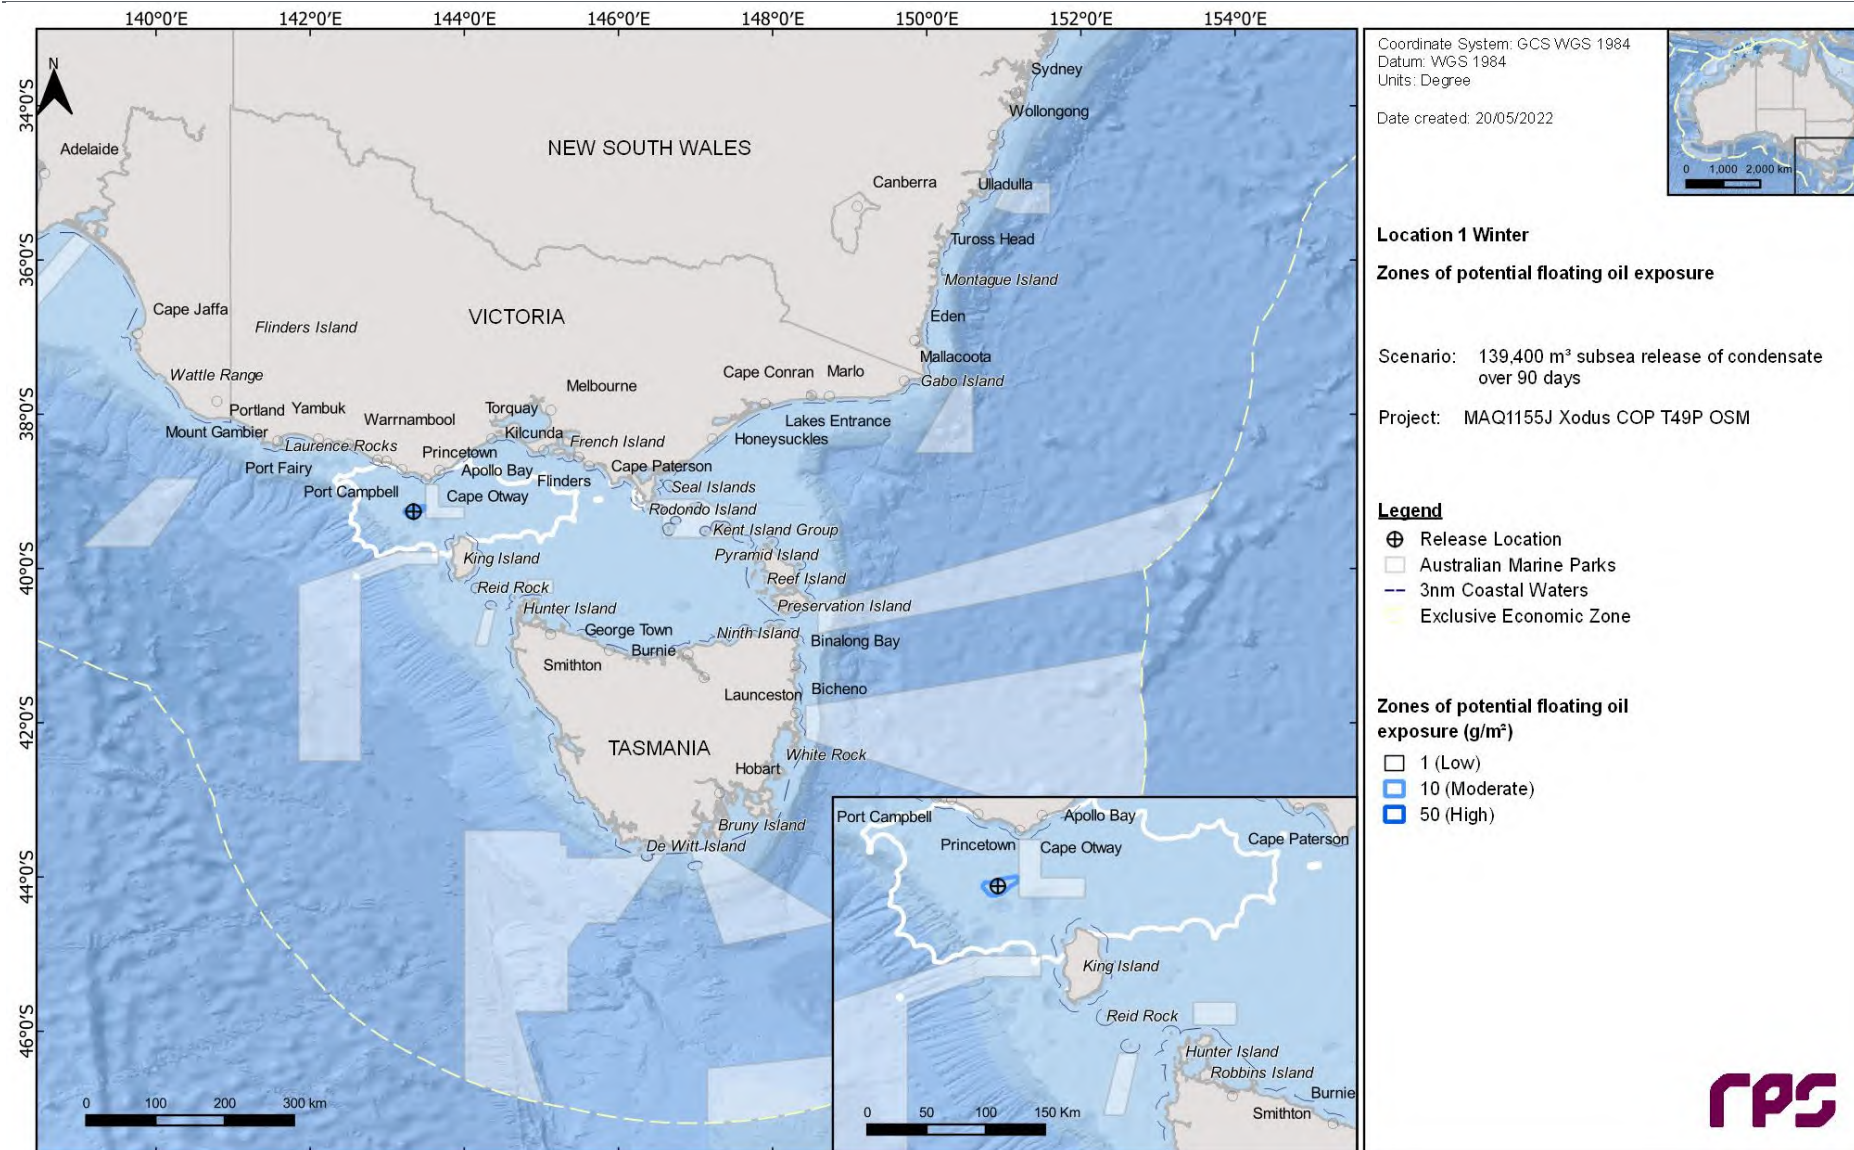

## REPORT

**Table 13-2 Summary of the potential exposure by floating oil to individual receptors from a subsea LOWC at Location 1 for each season. Results were calculated from 100 spill simulations per season.**

Receptor		Summer						Winter					
		Probability of floating oil exposure (%)			Minimum time before floating oil exposure (days)			Probability of floating oil exposure (%)			Minimum time before floating oil exposure (days)

### 13.2.2 Shoreline Accumulation

Table 13-3 summarises the predicted oil accumulation on any shoreline during each season.

Table 13-4 to Table 13-5 summarises the accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 13.4 and Figure 13.5.

**Table 13-3 Summary of accumulation on any shoreline from a subsea LOWC at Location 1 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	98	100
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	10	8.29
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	6.1	20.0
Average volume of hydrocarbons ashore (m <sup>3</sup> )	0.6	1.6
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	83	121
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	19.3	41.6
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	7	8
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	2.9	2.9
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	-
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	-

## REPORT

**Table 13-4** Summary of accumulation on individual shoreline sectors from a subsea LOWC at Location 1 during summer conditions. Results were calculated from 100 spill simulations per season.

**Figure 13.4** Maximum potential shoreline loading from a subsea LOWC at Location 1 during summer conditions. The results were calculated from 100 spill simulations.

**Figure 13.5** Maximum potential shoreline loading from a subsea LOWC at Location 1 during winter conditions. The results were calculated from 100 spill simulations.

### 13.2.3 In-water exposure

#### 13.2.3.1 Dissolved Hydrocarbons

Table 13-6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 13-7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m depth layer for each threshold and season.

Figure 13.6 and Figure 13.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers. Figures showing the extent of dissolved hydrocarbon exposure in the 10-20 m, 20 – 30 m and 30 – 50 m depth layers for each season are presented in Appendix A.

**Table 13-6 Maximum distance and direction by dissolved hydrocarbon exposure (0-10m) from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	661	656	359
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	631	560	179
	Direction	ENE	ENE	E
Winter	Maximum distance (km) from release location	769	722	452
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	681	463	327
	Direction	ENE	ENE	ENE

## REPORT

**Table 13-7 Probability of dissolved hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.**

**Figure 13.6** Zones of potential dissolved hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 1 during summer conditions. The results were calculated from 100 spill simulations.

**Figure 13.7** Zones of potential dissolved hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 1 during winter conditions. The results were calculated from 100 spill simulations.

### 13.2.3.2 Entrained Hydrocarbons

Table 13-8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

Table 13-9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layer, for each season.

Figure 13.8 to Figure 13.7 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer. Extent of the entrained hydrocarbon exposure for each season in the 10 -20 m and 20 – 30 m depth layers is presented in Appendix A.

**Table 13-8 Maximum distance and direction by entrained hydrocarbon exposure (0-10m) from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential entrained hydrocarbon exposure	
		Low	High
Summer	Maximum distance (km) from release location	822	666
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	735	650
	Direction	ENE	ENE
Winter	Maximum distance (km) from release location	833	665
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	783	649
	Direction	ENE	ENE

**Table 13-9** Probability of entrained hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

**Figure 13.8** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 1 during summer conditions. The results were calculated from 100 spill simulations.

**Figure 13.9** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 1 during winter conditions. The results were calculated from 100 spill simulations.

## 13.3 Deterministic Analysis

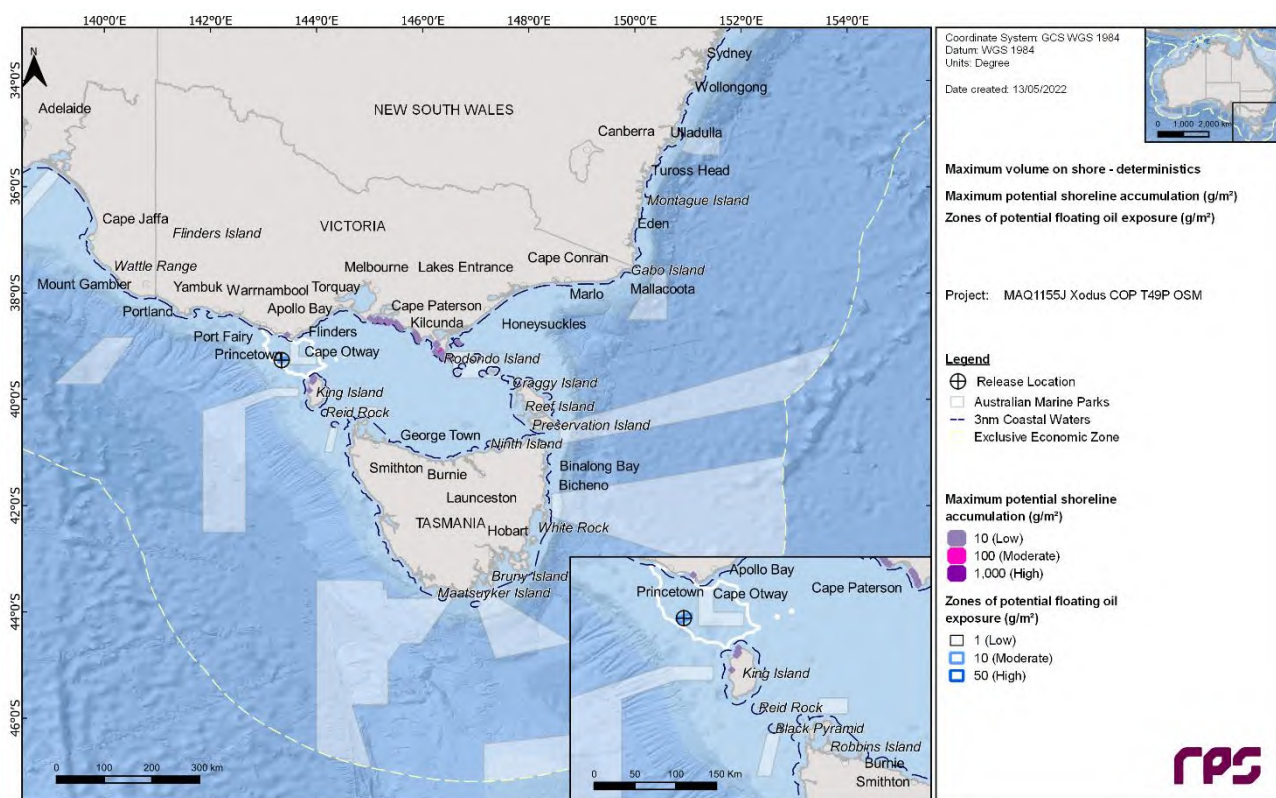

### 13.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore of 20 m<sup>3</sup> was identified as run number 43 which commenced during winter conditions, 1 am 23<sup>rd</sup> June 2010.

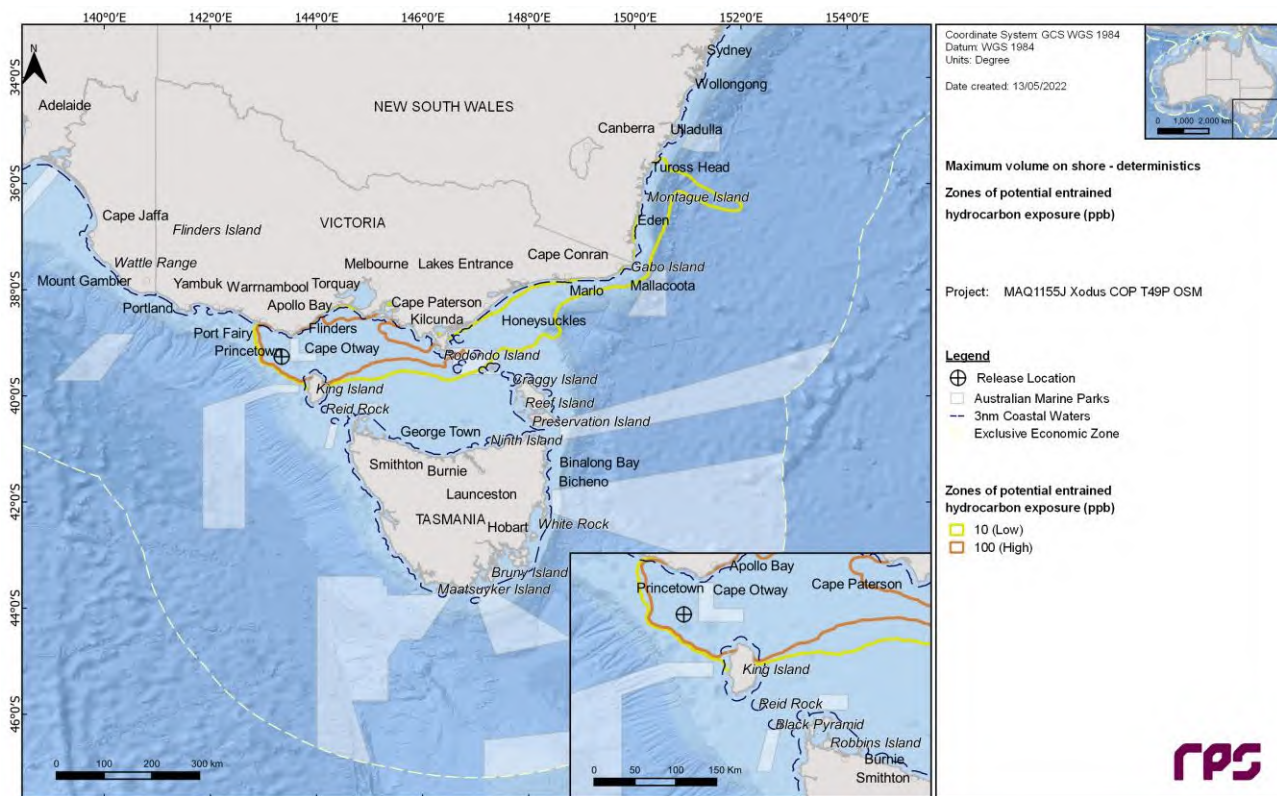

Figure 13.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 19.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire simulation period of 120 days are presented in Figure 13.11 and Figure 13.12, respectively.

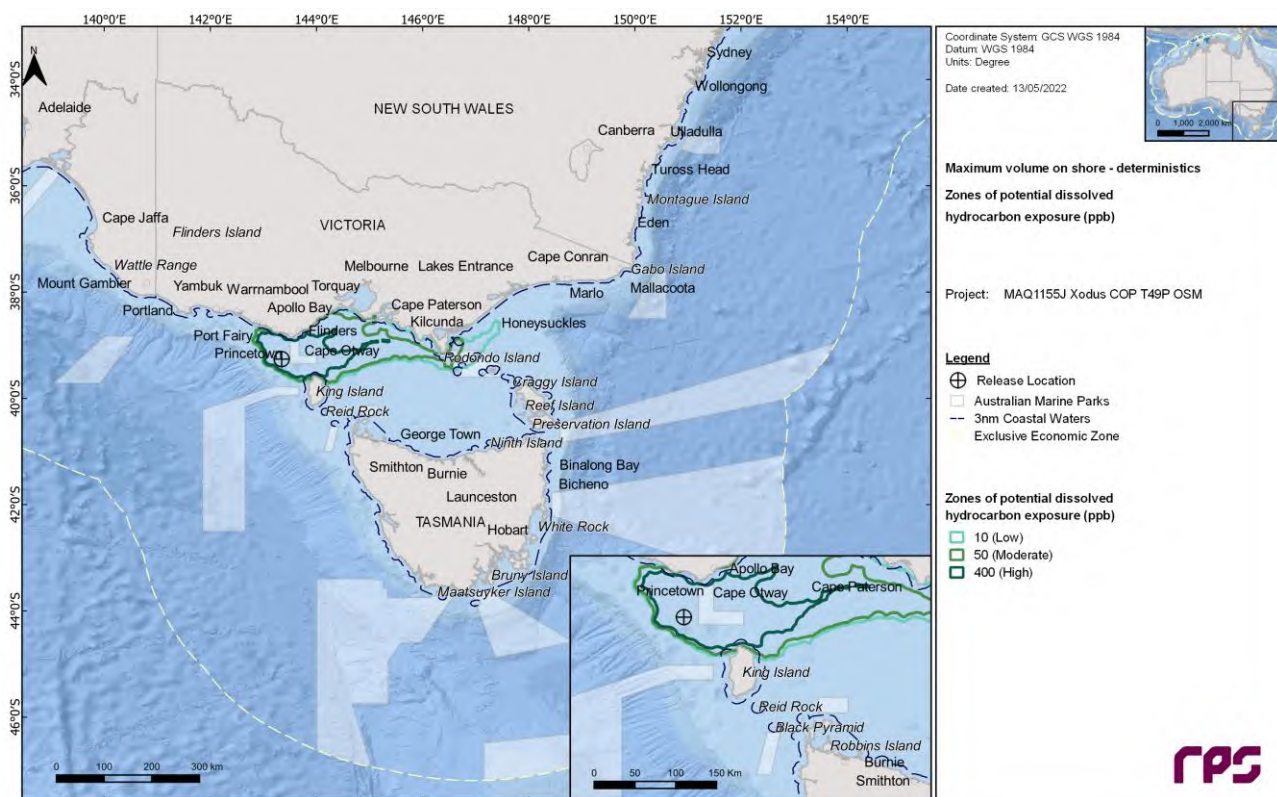

Figure 13.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 76,470 m<sup>3</sup> (~55%) was lost to the atmosphere through evaporation. Approximately, 61,145 m<sup>3</sup> (~44%) of the released volume decayed, while approximately 1,740 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 10 m<sup>3</sup> (<0.01%) was present on the shorelines.

**Figure 13.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 1.**

**Figure 13.11 Predicted extent of the entrained hydrocarbons exposure over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 1.**

**Figure 13.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 1.**

**Figure 13.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 1.**

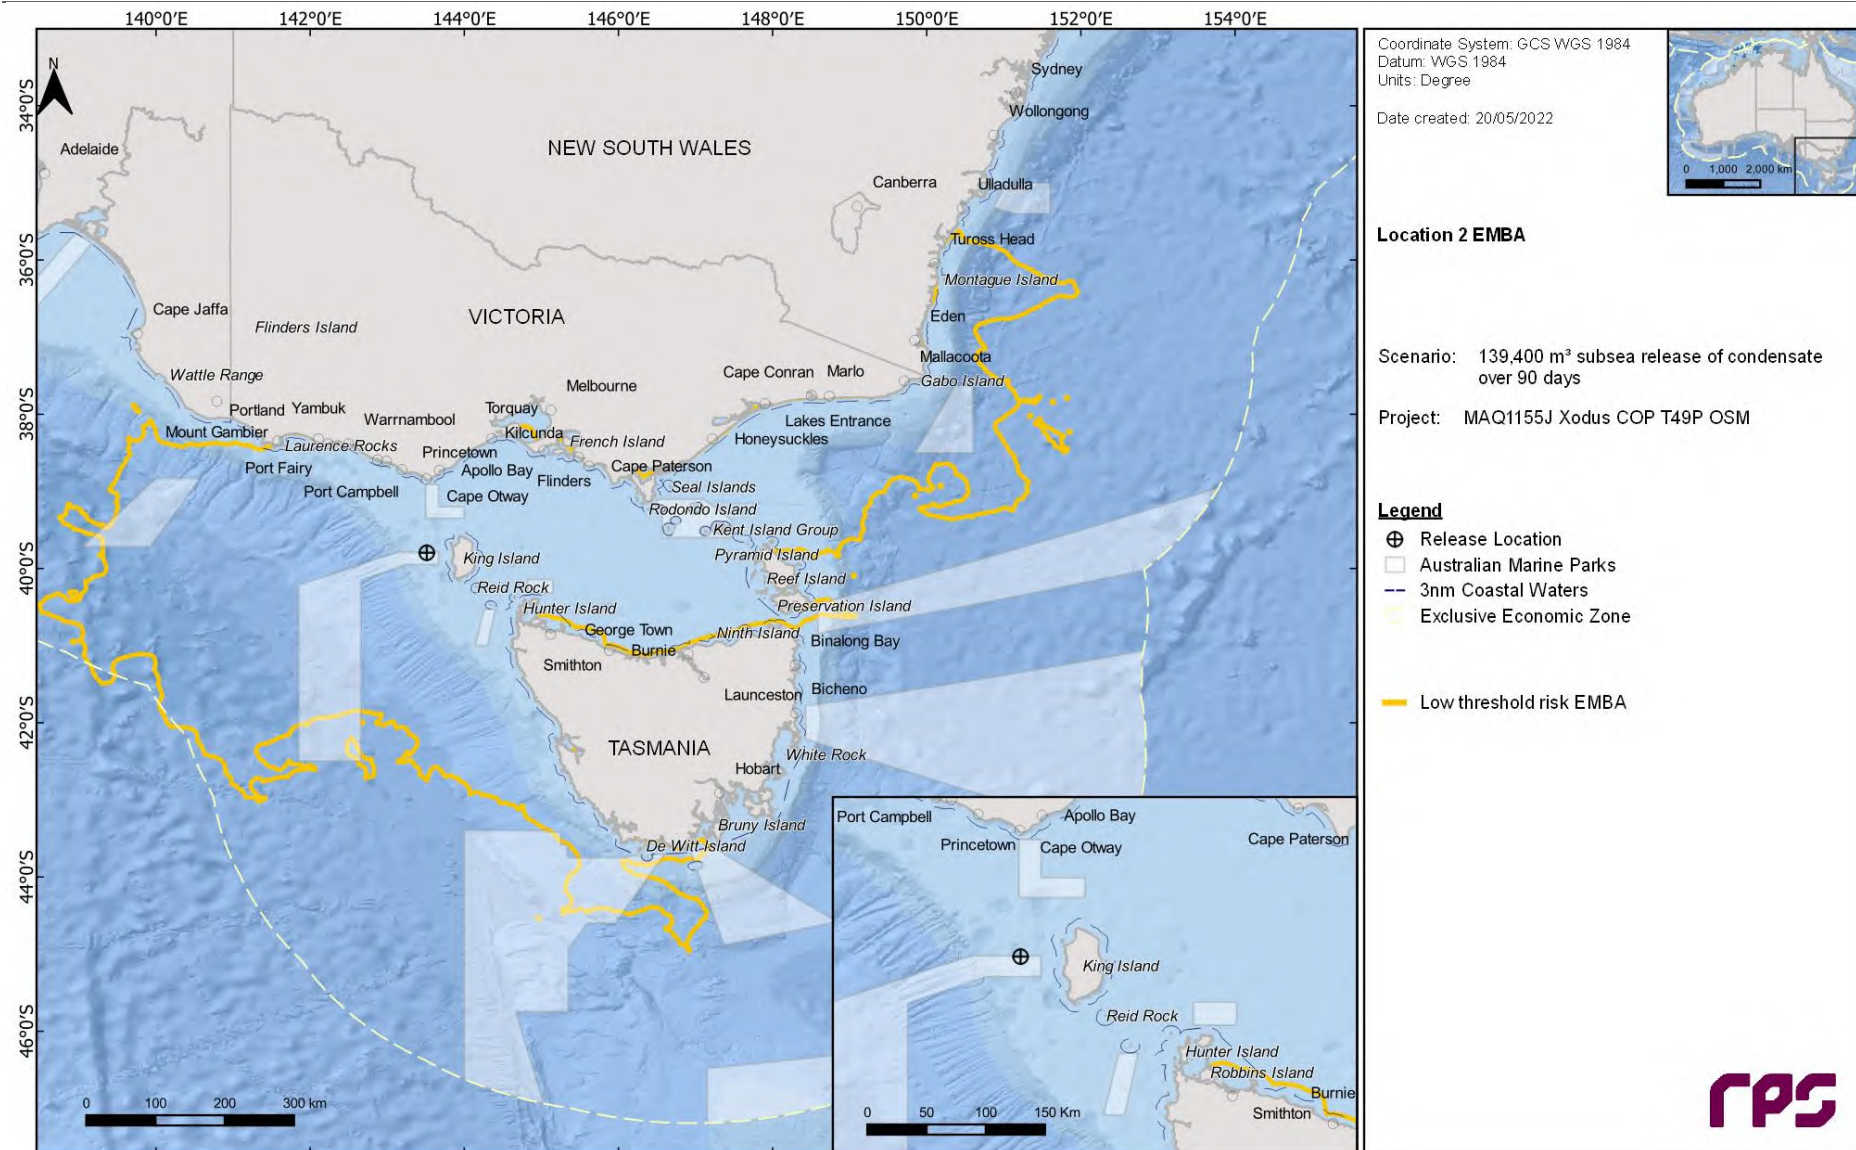

## 14 LOCATION 2 LOWC RESULTS

This scenario examined the potential exposure following a subsea LOWC at Location 2. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 14.1 presents the low threshold EMBA, Section 14.2 shows the seasonal (or stochastic) analysis results, while Section 14.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 14.1 EMBA

Figure 14.1 shows the EMBA for Location 2. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

## 14.2 Stochastic Analysis

### 14.2.1 Floating Oil Exposure

Table 14-1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 14-2 summarises the potential floating oil exposure to individual receptors for each season. The exposure by floating oil to BIAs can be found in Appendix A.

Figure 14.2 to Figure 14.3 illustrate the extent of floating oil exposure for each season.

The largest swept area of floating oil exposure at or above the low threshold during winter and summer conditions for a single simulation was 1,278 km<sup>2</sup> and 1,035 km<sup>2</sup>, respectively.

**Table 14-1 Maximum distances and directions travelled by floating oil from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.**

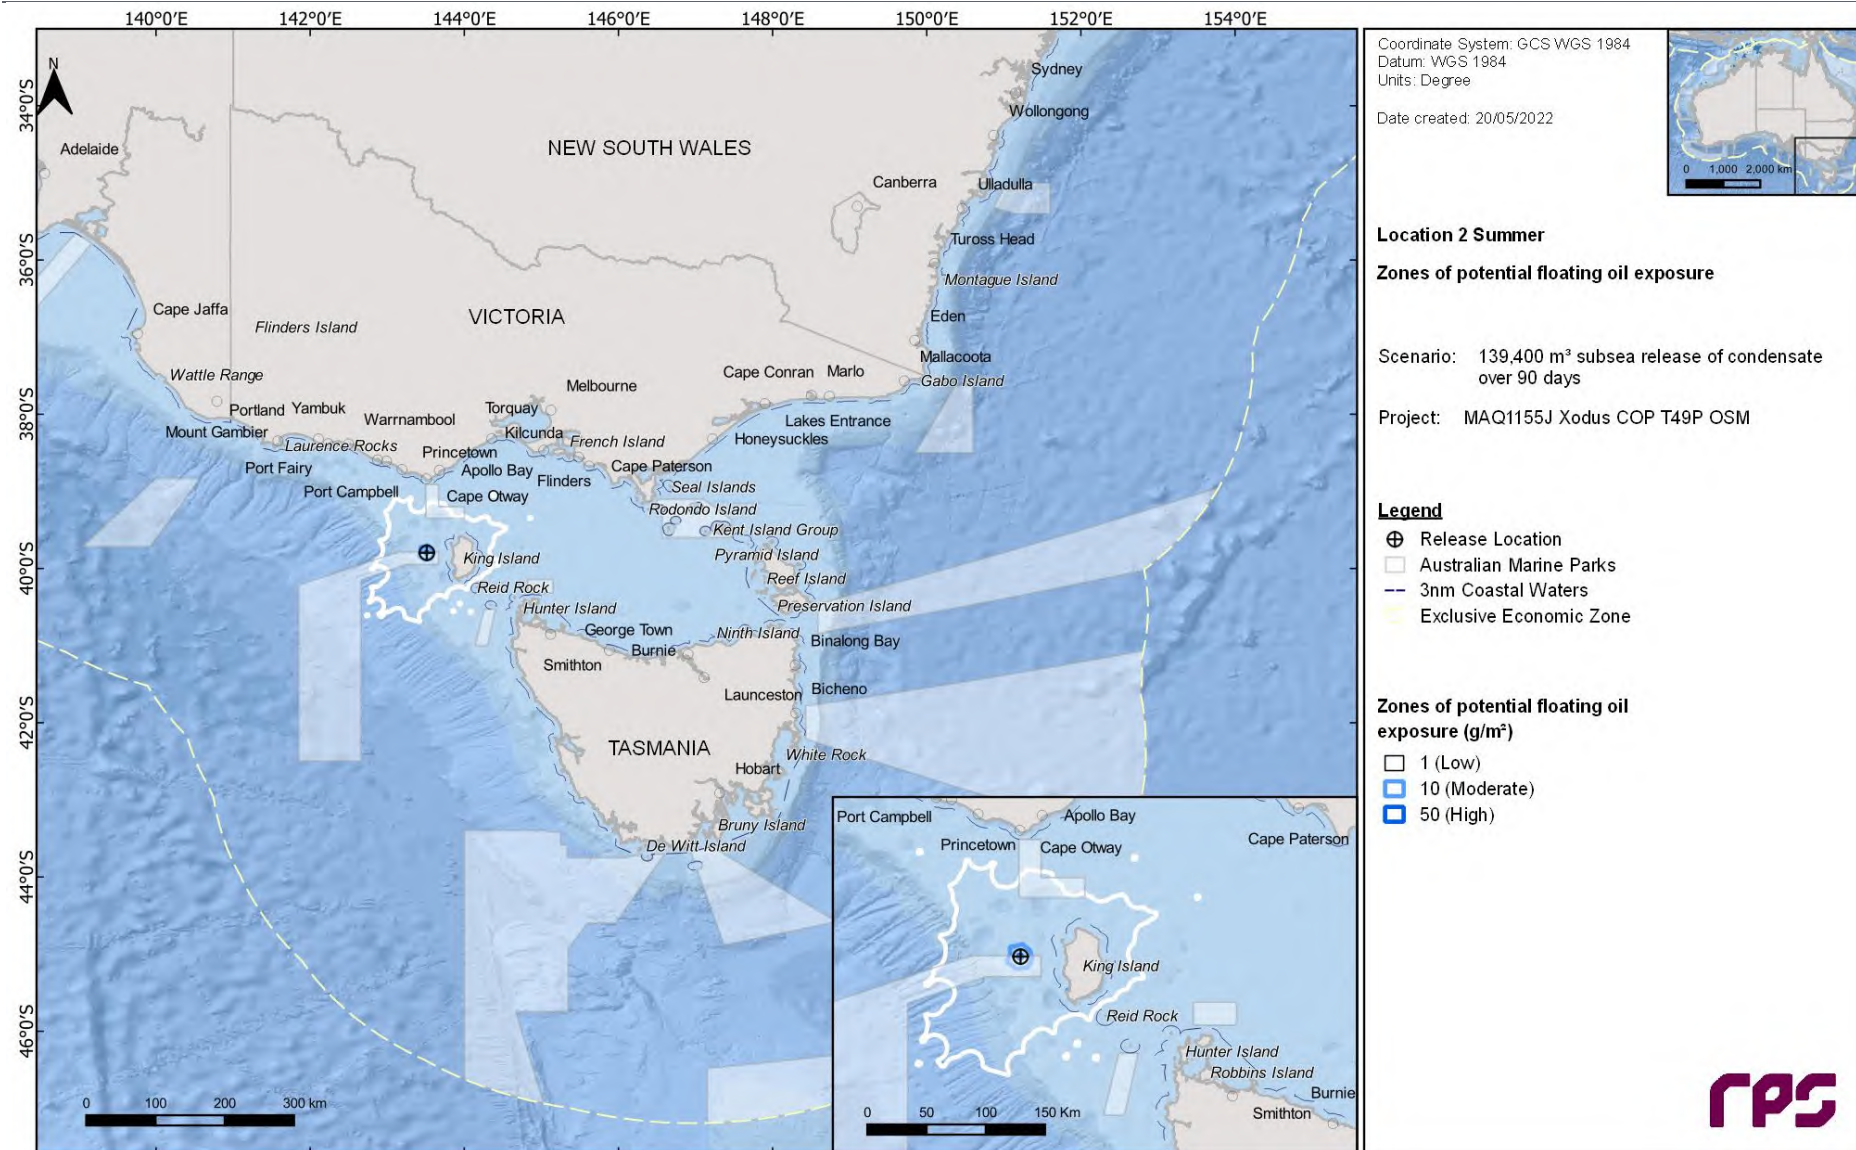

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	125.7	42.7	0.3
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	79.8	9.2	0.3
	Direction	ENE	SE	W
Winter	Maximum distance (km) from release location	147.4	42.7	0.3
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	93.2	12.7	0.3
	Direction	NE	SE	W

## REPORT

## 14.2.2 Shoreline Accumulation

Table 14-3 summarises the predicted accumulation on any shoreline during each season.

Table 14-4 to Table 14-6 summarises the accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 14.4 and Figure 14.5.

**Table 14-3 Summary of accumulation on any shoreline from a subsea LOWC at Location 2 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	100	100
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	3.88	3.21
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	71.7	196.6
Average volume of hydrocarbons ashore (m <sup>3</sup> )	17.8	73.9
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	112	131
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	64.9	90
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	35	50
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	12.3	28.9
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	1	4
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	1	1.5

## REPORT

**Figure 14.5** Maximum potential shoreline loading from a subsea LOWC at Location 2 during winter conditions. The results were calculated from 100 spill simulations.

### 14.2.3 In-water exposure

#### 14.2.3.1 Dissolved Hydrocarbons

Table 14-6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 14-7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m depth layer for each threshold and season.

Figure 14.6 and Figure 14.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers. Figures showing the extent of dissolved hydrocarbon exposure in the 10-20 m, 20 – 30 m and 30 – 50 m depth layers for each season are presented in Appendix A.

**Table 14-6 Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	590	461	229
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	435	304	146
	Direction	ENE	ENE	ENE
Winter	Maximum distance (km) from release location	703	483	313
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	530	337	163
	Direction	ENE	ENE	ENE

## REPORT

### 14.2.3.2 Entrained Hydrocarbons

Table 14-8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

Table 14-9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layer, for each season.

Figure 14.8 and Figure 14.9 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer. Extent of the entrained hydrocarbon exposure for each season in the 10 -20 m and 20 – 30 m depth layers is presented in Appendix A.

**Table 14-8 Maximum distance and direction by entrained hydrocarbon exposure (0-10m) from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.**

**Figure 14.8** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 2 during summer conditions. The results were calculated from 100 spill simulations.

**Figure 14.9** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 2 during winter conditions. The results were calculated from 100 spill simulations.

## 14.3 Deterministic Analysis

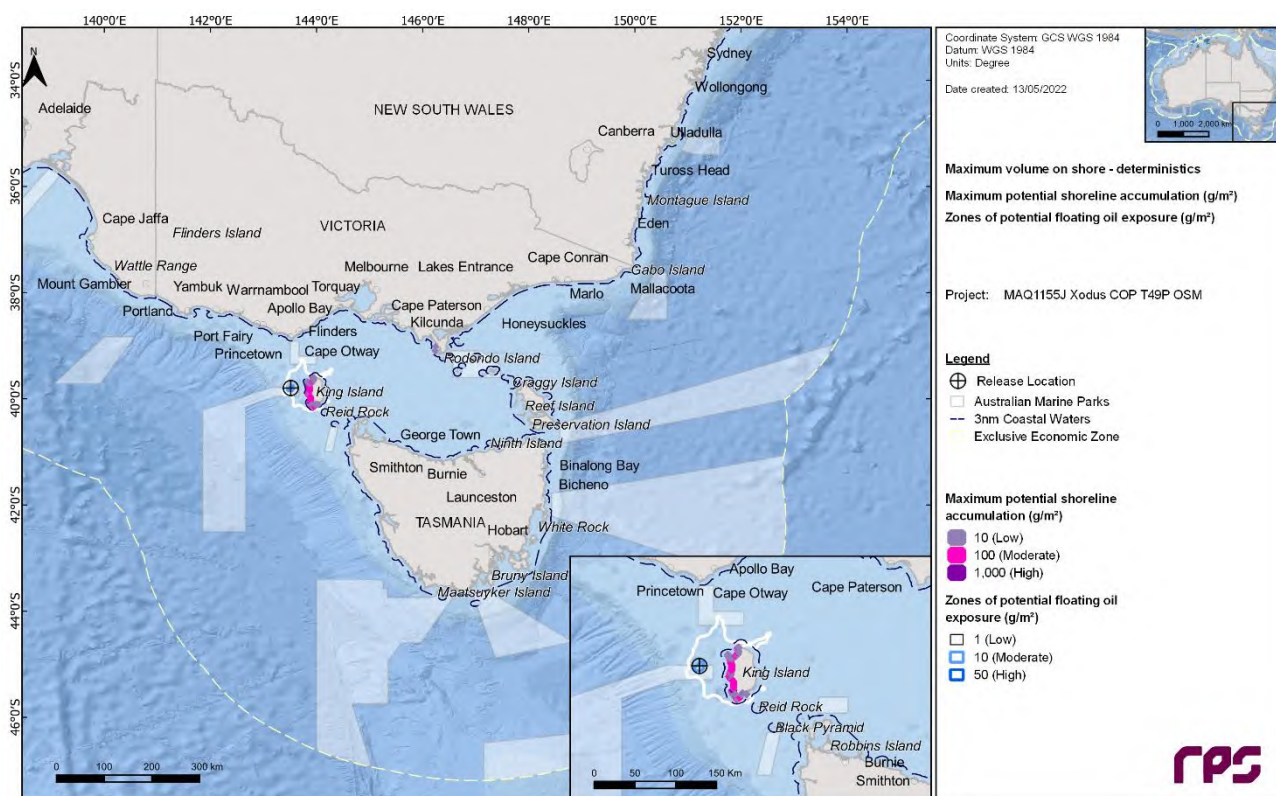

### 14.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore of 196.6 m<sup>3</sup> was identified as run number 79 which commenced during winter conditions, 4 pm 23<sup>rd</sup> June 2012.

Figure 14.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). The initial shoreline accumulation occurred on day 6 of the simulation.

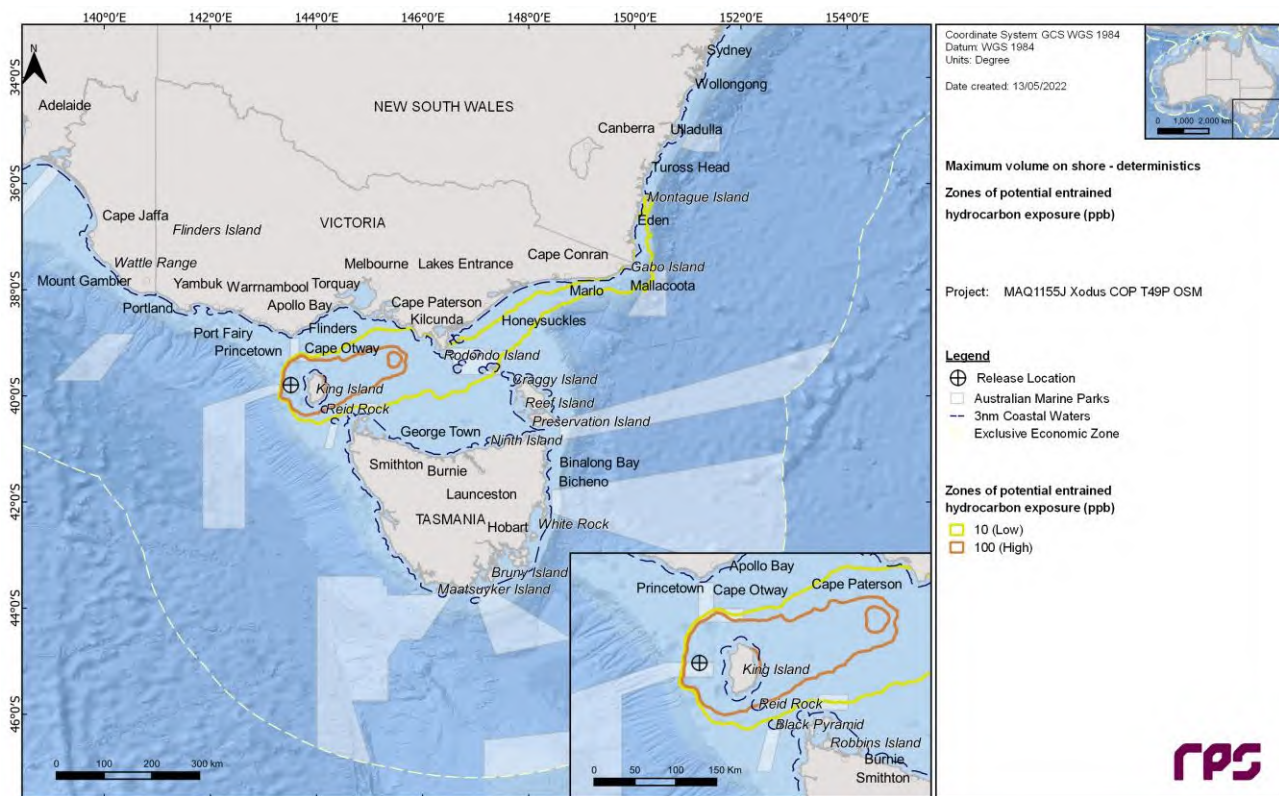

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 14.11 and Figure 14.12, respectively.

Figure 14.13 presents the fates and weathering graph for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 78,400 m<sup>3</sup> (~56%) was lost to the atmosphere through evaporation. Approximately, 59,000 m<sup>3</sup> (~42%) of the released volume decayed, while approximately 1,800 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 194 m<sup>3</sup> (<1%) remained on shorelines.

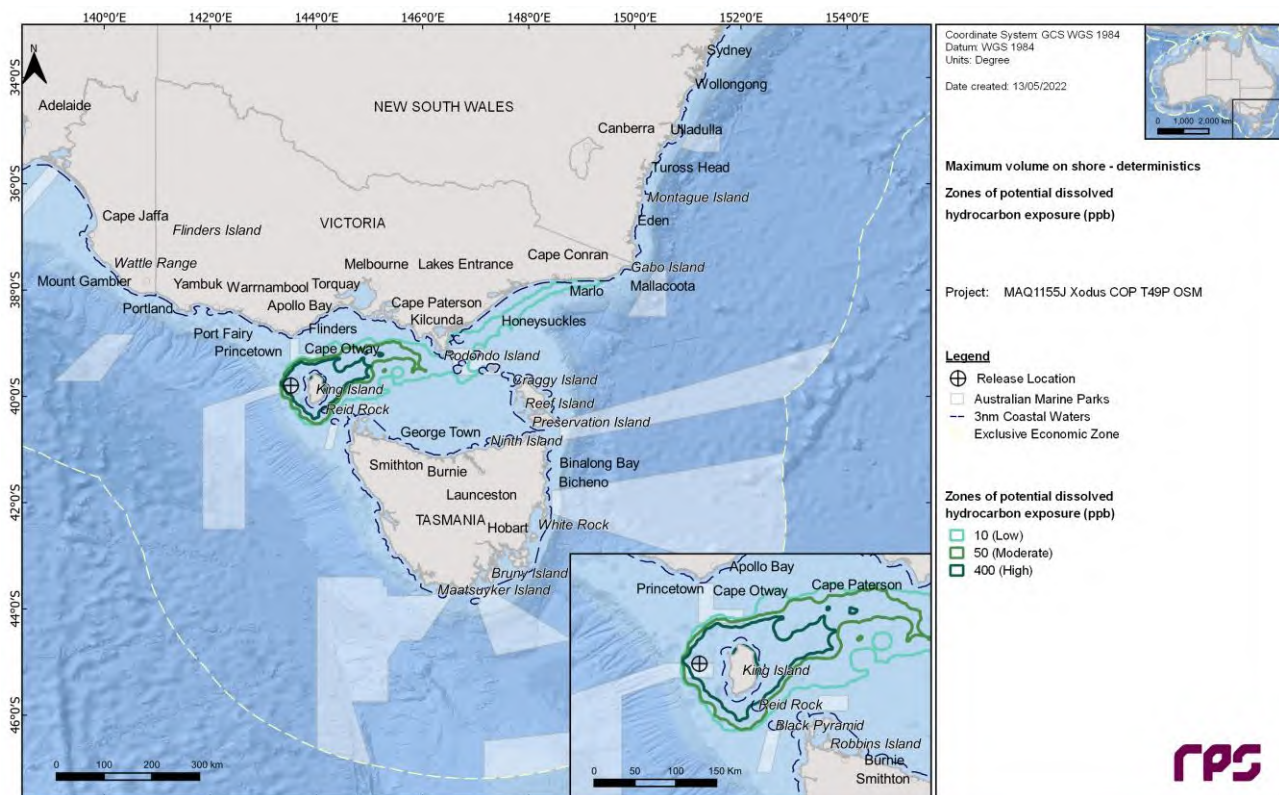

**Figure 14.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 2.**

**Figure 14.11 Predicted extent of the entrained hydrocarbons exposure over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 2.**

**Figure 14.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 2.**

**Figure 14.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 2.**

### 14.3.2 Minimum time to Shoreline Accumulation

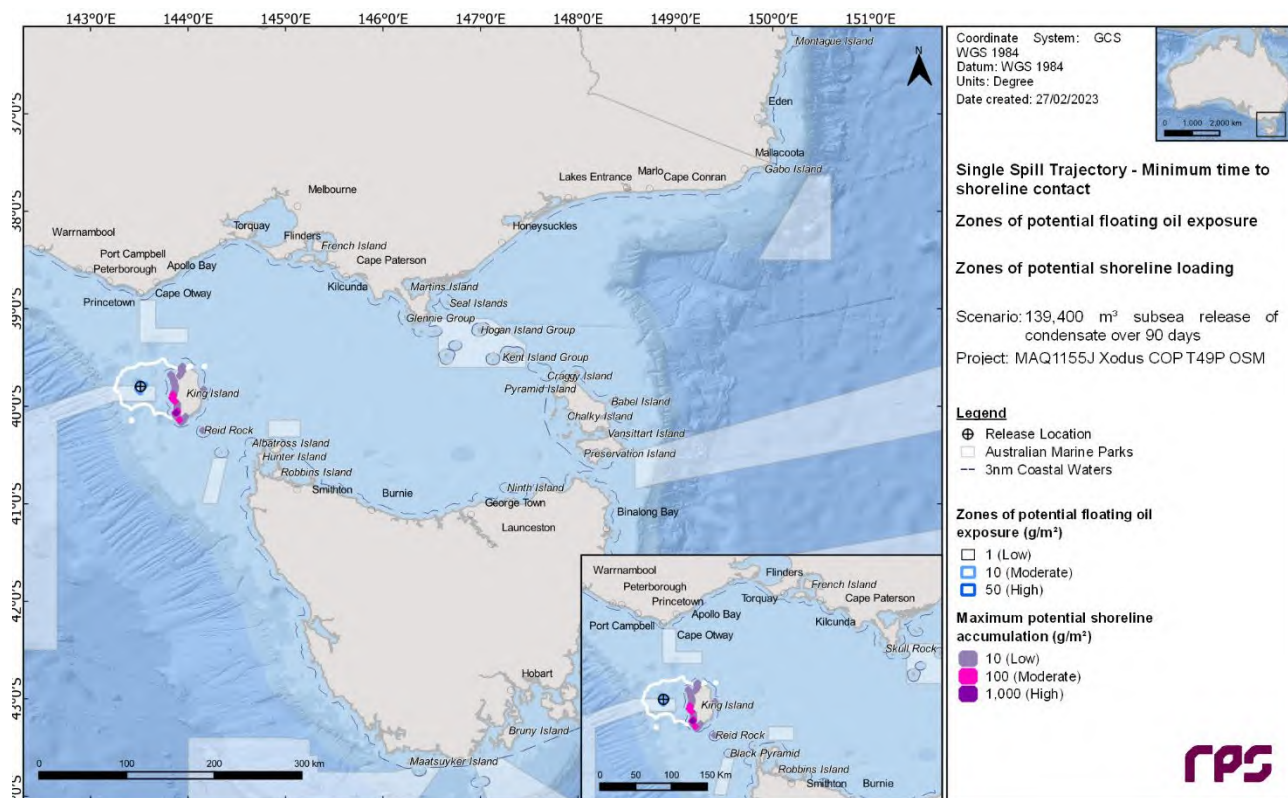

The simulation that resulted in the minimum time to hydrocarbons ashore of 3.21 days was identified as run number 42 which commenced during winter conditions, 1 pm 8<sup>th</sup> September 2014.

Figure 14.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days).

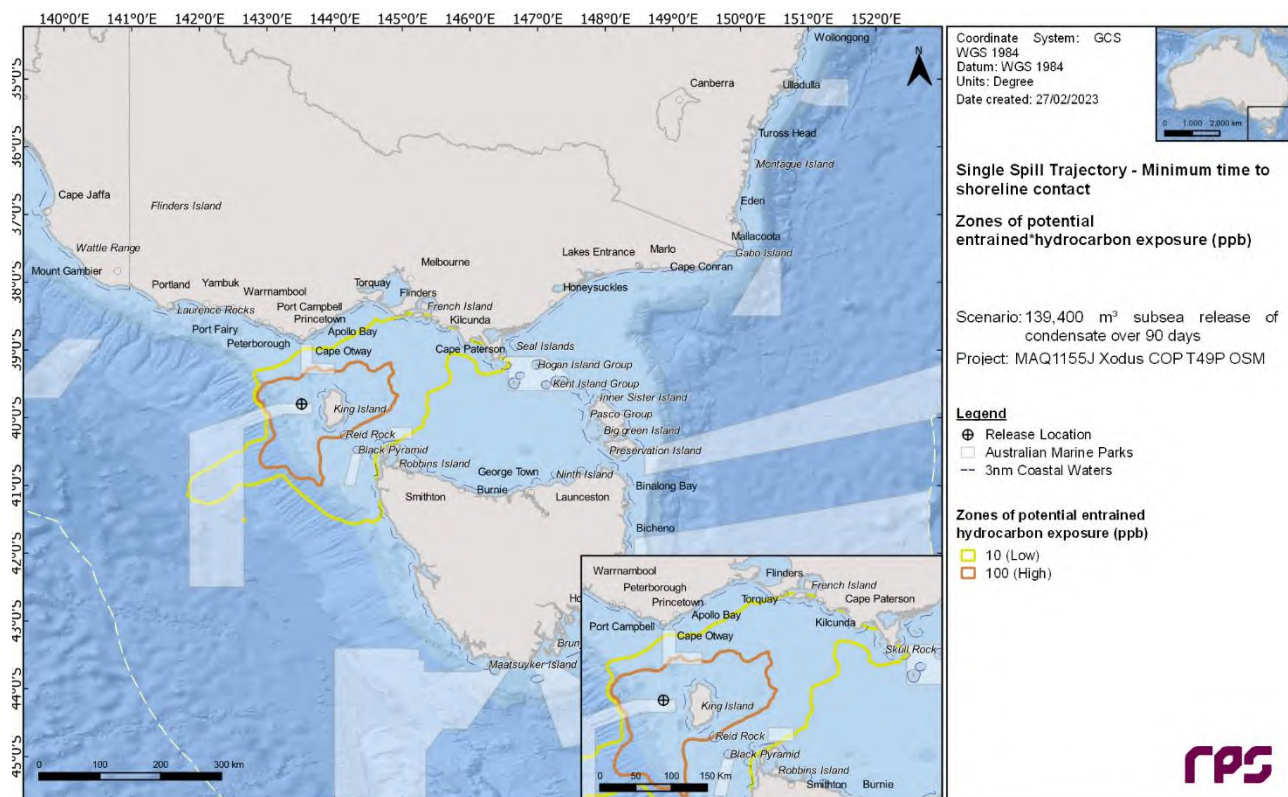

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 14.15 and Figure 14.16, respectively.

Figure 14.17 presents the fates and weathering graph for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 77,200 m<sup>3</sup> (~55%) was lost to the atmosphere through evaporation. Approximately, 60,150 m<sup>3</sup> (~43%) of the released volume decayed, while approximately 2,180 m<sup>3</sup> (~2%) was predicted to remain within the water column and approximately 24 m<sup>3</sup> (<1%) remained on shorelines.

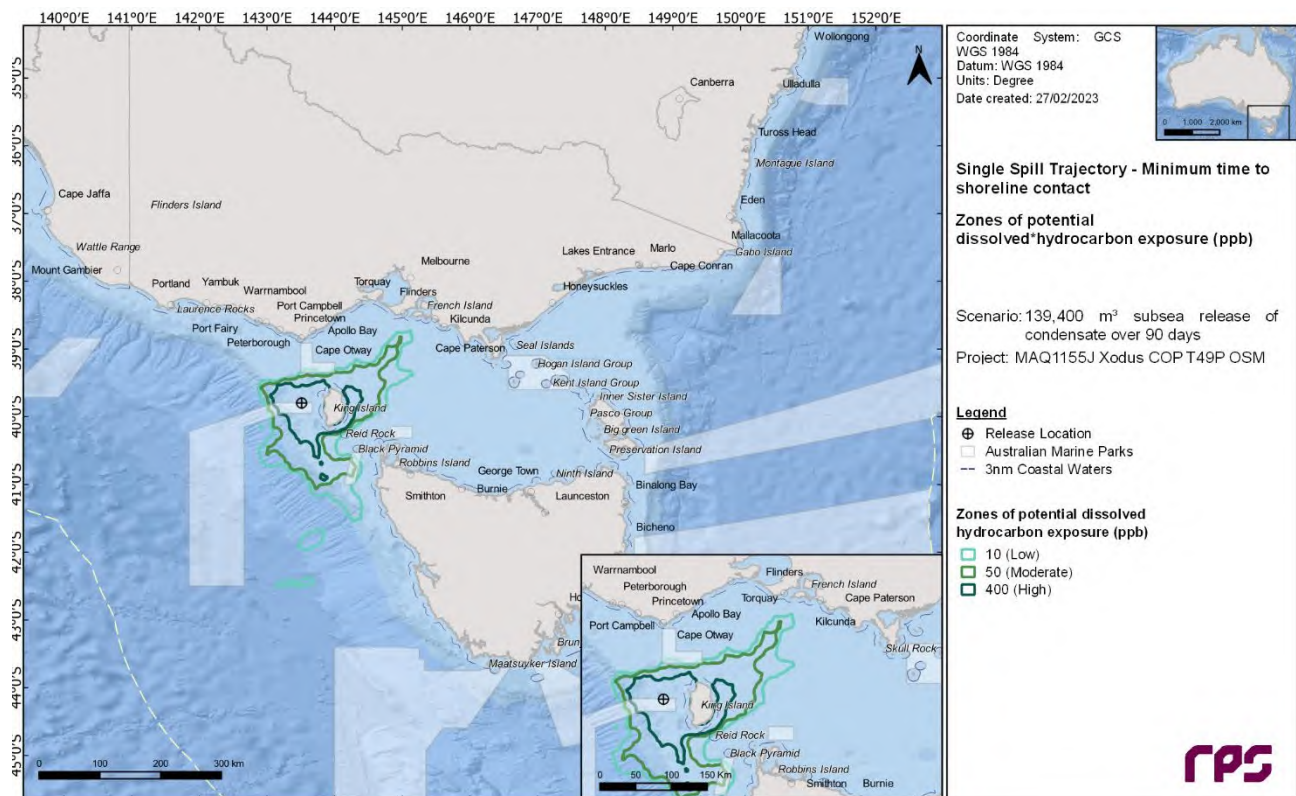

**Figure 14.14** Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days for the simulation that led to the minimum time to shoreline accumulation from a subsea LOWC at Location 2.

**Figure 14.15** Predicted extent of the entrained hydrocarbons exposure over the entire 120 days for the simulation that led to the minimum time to shoreline accumulation from a subsea LOWC at Location 2.

**Figure 14.16 Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days for the simulation that led to the minimum time to shoreline accumulation from a subsea LOWC at Location 2.**

**Figure 14.17 Predicted weathering and fates for the simulation that led to the minimum time to shoreline accumulation a subsea LOWC at Location 2.**

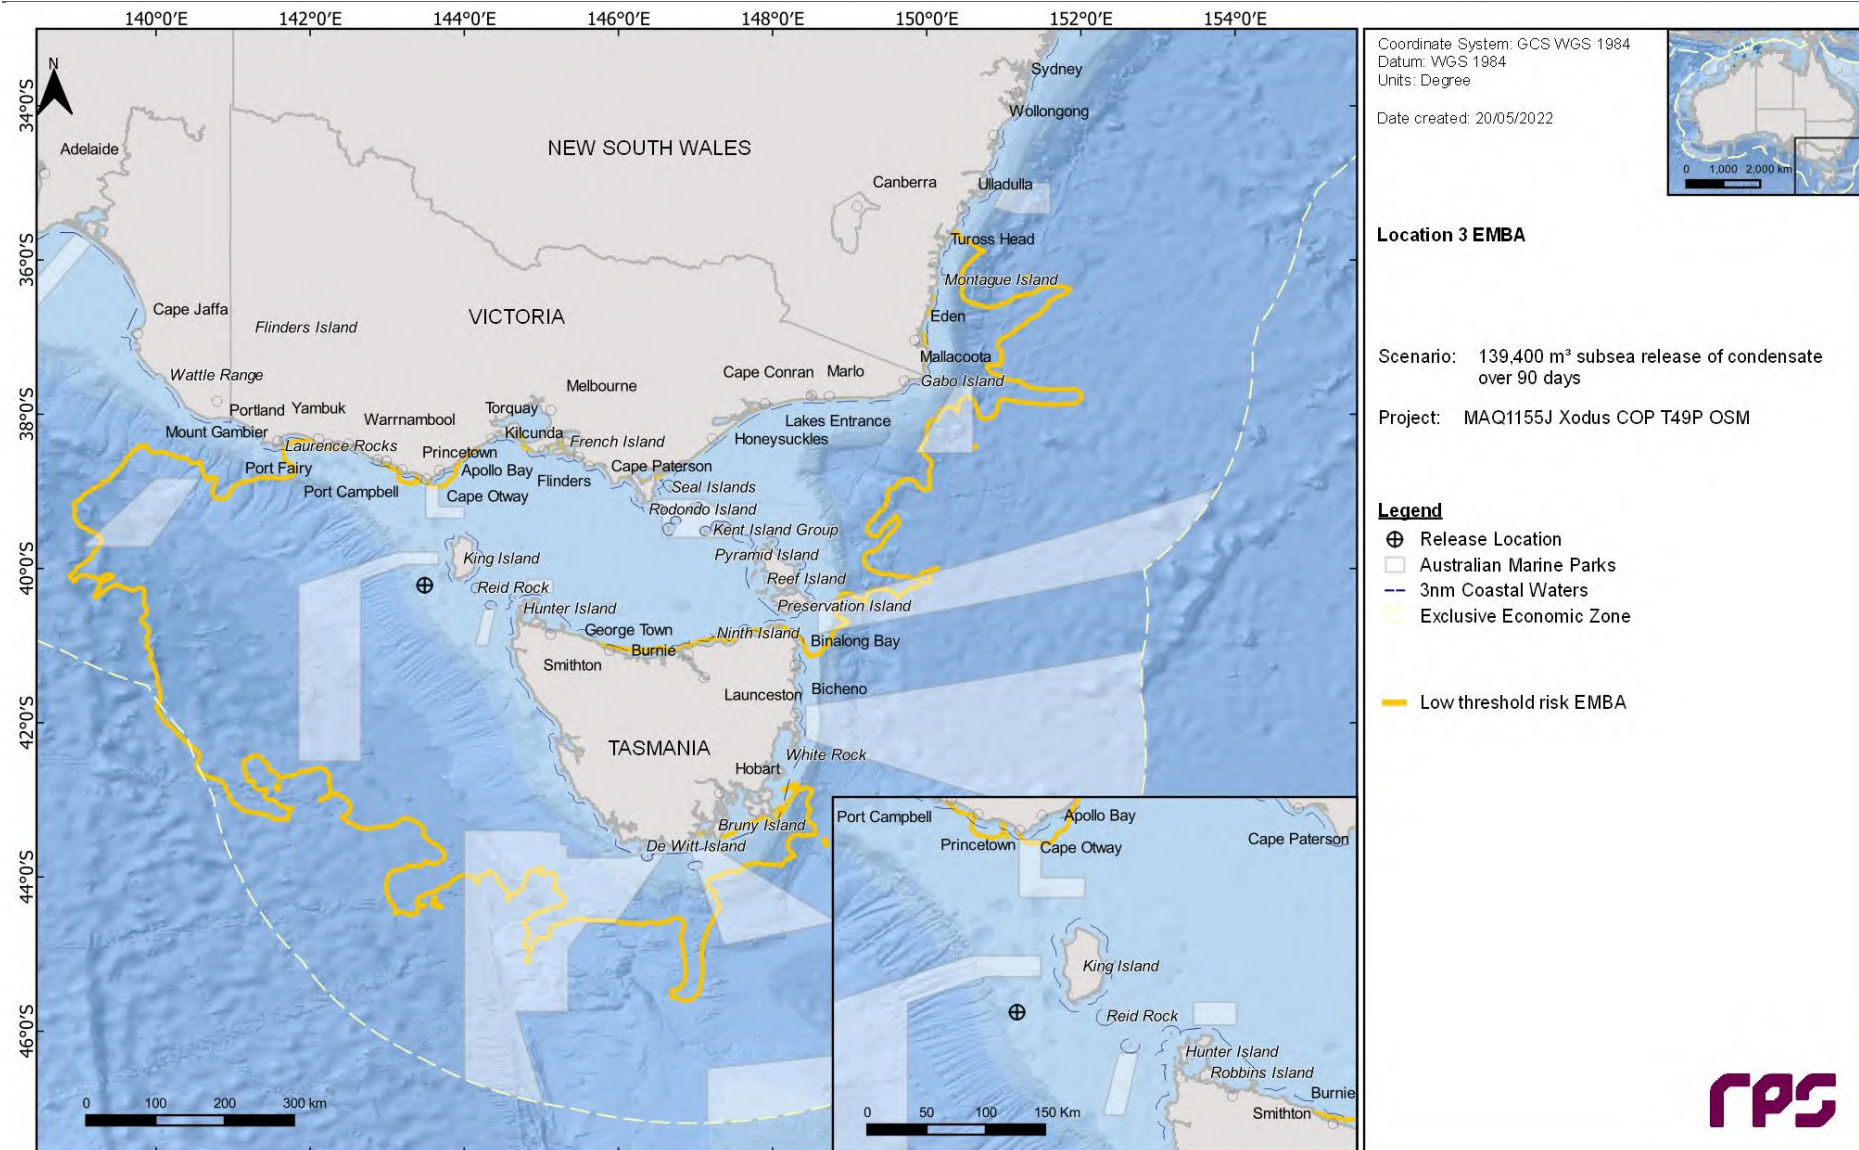

## 15 LOCATION 3 LOWC RESULTS

This scenario examined the potential exposure following a LOWC at Location 3. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 15.1 presents the low threshold EMBA, Section 15.2 shows the seasonal (or stochastic) analysis results, while Section 15.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 15.1 EMBA

Figure 15.1 shows the EMBA for Location 3. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

**Figure 15.1** Predicted low threshold EMBA from a subsea LOWC at Location 3. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 15.2 Stochastic Analysis

### 15.2.1 Floating Oil Exposure

Table 15-1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 15-2 summarises the potential floating oil exposure to individual receptors for each season. The exposure by floating oil to BIAs can be found in Appendix A.

Figure 15.2 to Figure 15.3 illustrate the extent of floating oil exposure for each season.

The largest swept area of floating oil exposure at or above the low threshold during winter and summer conditions for a single simulation was 1,405 km<sup>2</sup> and 1,270 km<sup>2</sup>, respectively.

**Table 15-1 Maximum distances and directions travelled by floating oil from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

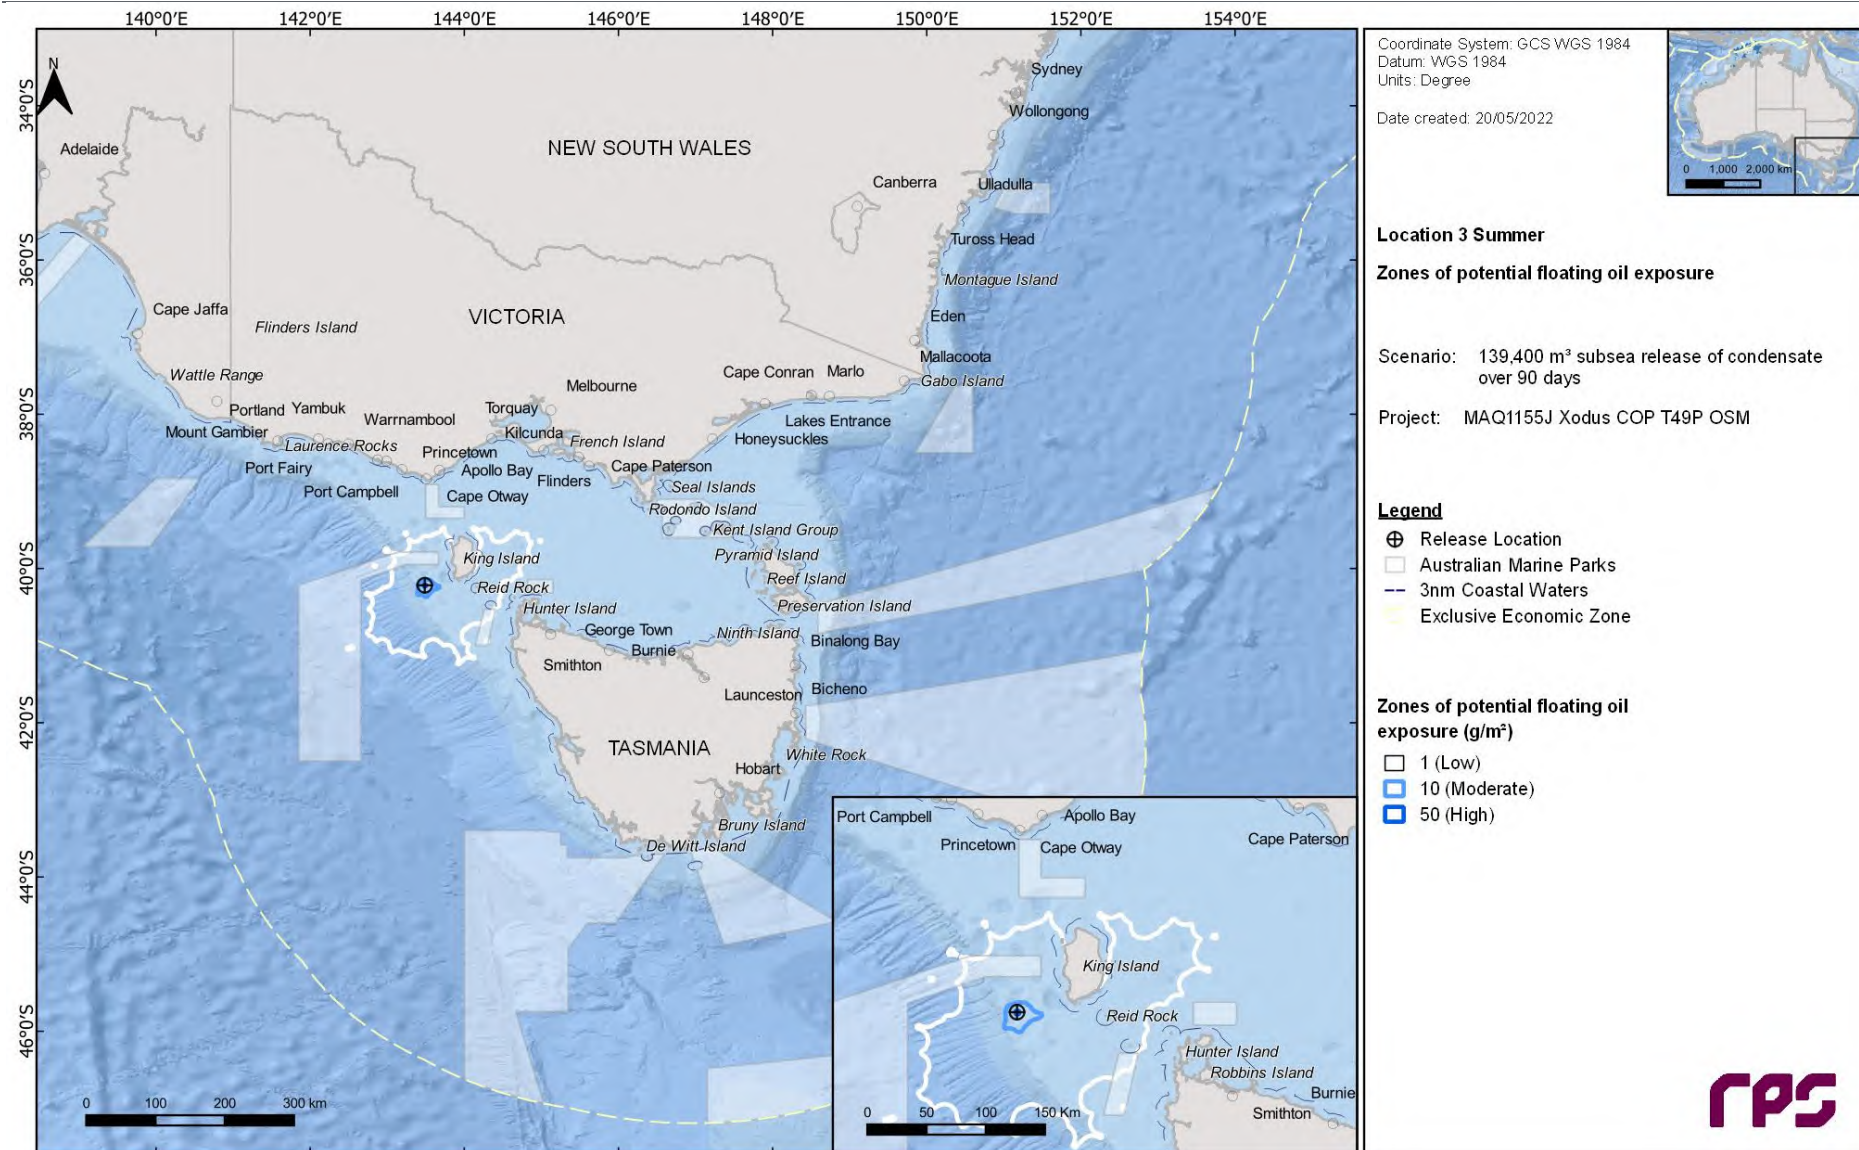

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	143.1	15.4	0.3
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	99.8	15.1	0.3
	Direction	ENE	S	SE
Winter	Maximum distance (km) from release location	196.2	14.3	1.3
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	126.8	13.5	1.3
	Direction	E	SW	ENE

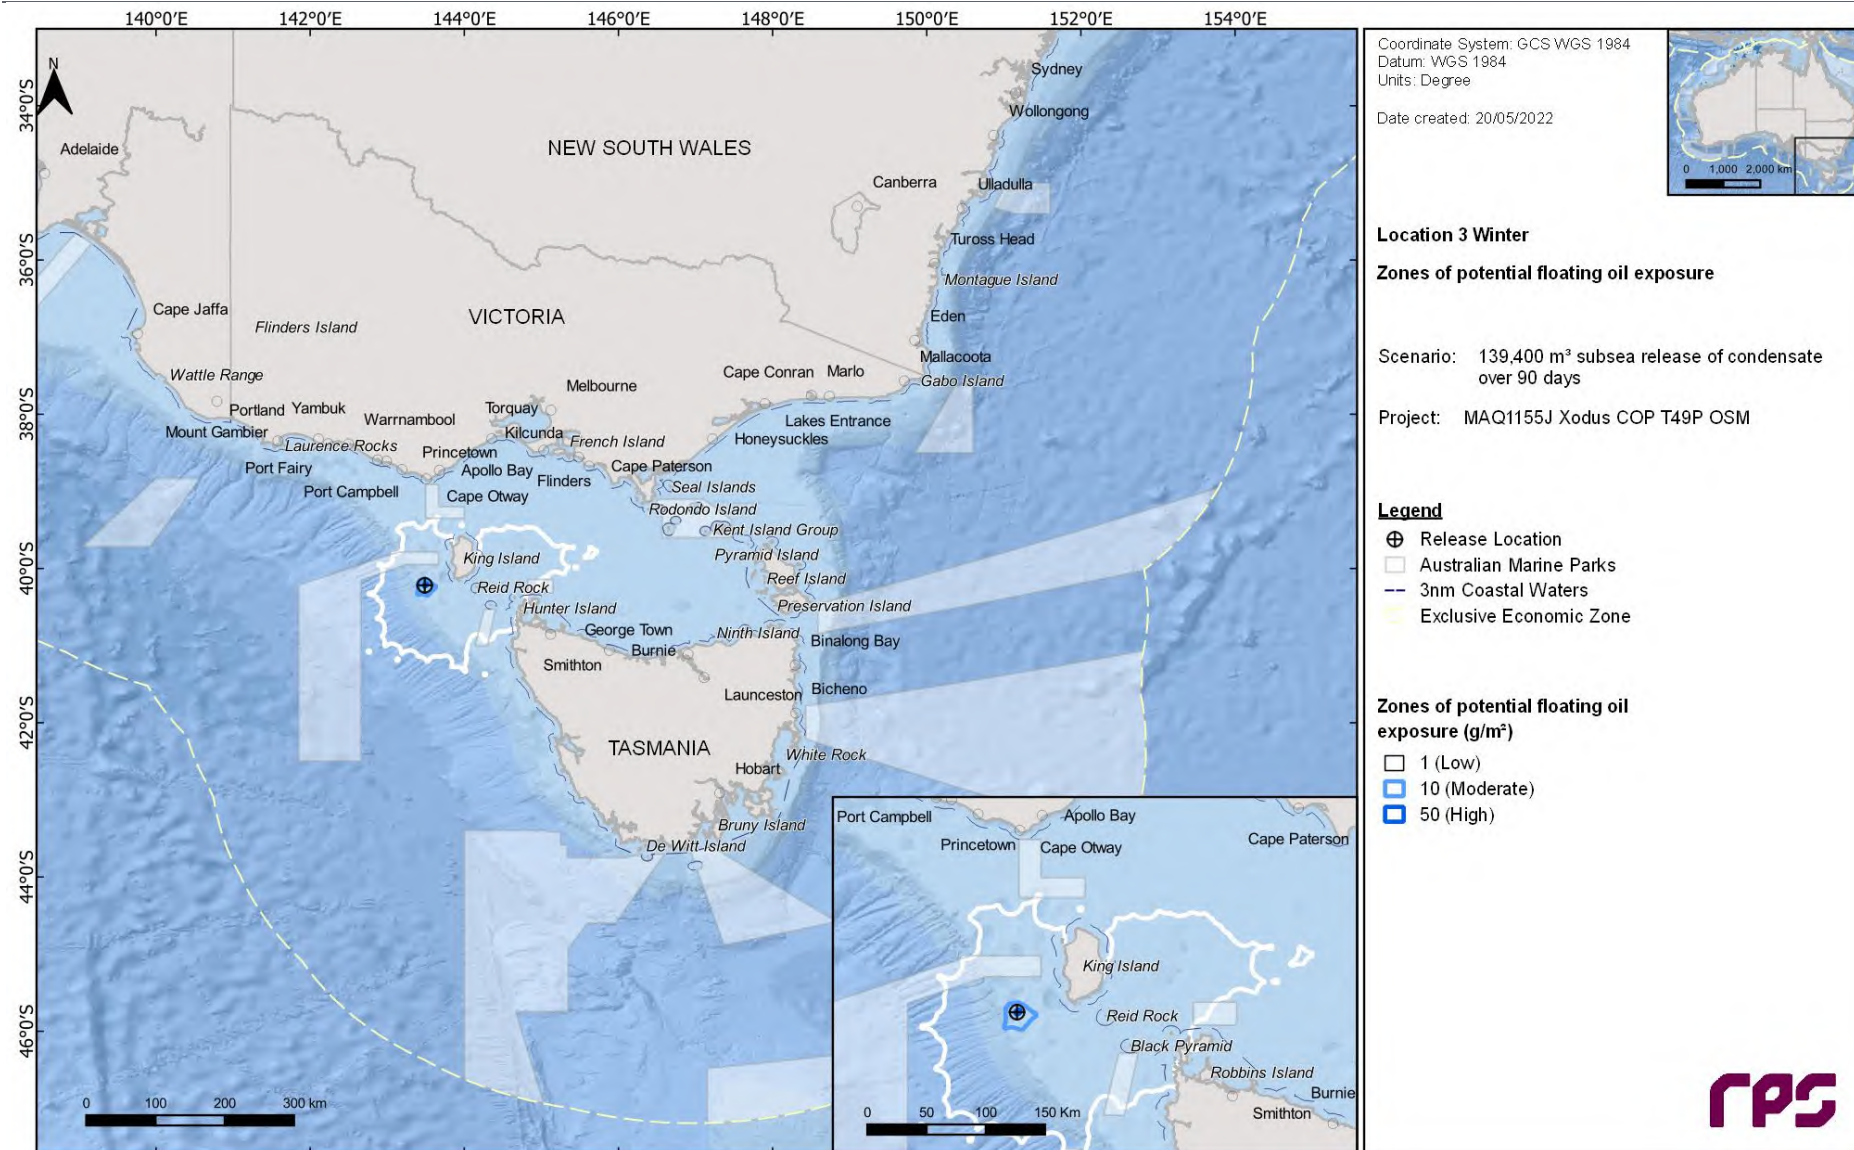

## REPORT

## 15.2.2 Shoreline Accumulation

Table 15-3 summarises the predicted accumulation on any shoreline during each season.

Table 15-4 to Table 15-5 summarises the accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 15.4 and Figure 15.5.

**Table 15-3 Summary of accumulation on any shoreline from a subsea LOWC at Location 3 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	100	100
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	4.58	4.00
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	26.5	58.7
Average volume of hydrocarbons ashore (m <sup>3</sup> )	2.7	11.1
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	113	133
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	44.6	71.5
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	16	23
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	4.1	7.2
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	1	1
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	1	1

## REPORT

## 15.2.3 In-water exposure

### 15.2.3.1 Dissolved Hydrocarbons

Table 15-6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 15-7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m depth layer for each threshold and season.

Figure 15.6 and Figure 15.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers. Figures showing the extent of dissolved hydrocarbon exposure in the 10-20 m, 20 – 30 m and 30 – 50 m depth layers for each season are presented in Appendix A.

**Table 15-6 Maximum distance and direction by dissolved hydrocarbon exposure (0-10m) from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	642	492	308
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	455	371	166
	Direction	ENE	SE	ENE
Winter	Maximum distance (km) from release location	773	456	257
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	502	334	169
	Direction	ENE	SSE	SSE

**Table 15-7 Probability of dissolved hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

### 15.2.3.2 Entrained Hydrocarbons

Table 15-8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

Table 15-9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layer, for each season.

Figure 15.8 and Figure 15.9 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer. Extent of the entrained hydrocarbon exposure for each season in the 10 -20 m and 20 – 30 m depth layers is presented in Appendix A.

**Table 15-8 Maximum distance and direction by entrained hydrocarbon exposure (0-10m) from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential entrained hydrocarbon exposure	
		Low	High
Summer	Maximum distance (km) from release location	845	340
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	725	294
	Direction	ENE	SE
Winter	Maximum distance (km) from release location	846	430
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	756	265
	Direction	ENE	SE

**Table 15-9 Probability of entrained hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

☐ 100 (High)

MAQ1155J | ConocoPhillips Exploration Permit T/49P Oil Spill Modelling | Final | 28 August 2023

**Figure 15.9** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 3 during winter conditions. The results were calculated from 100 spill simulations.

## 15.3 Deterministic Analysis

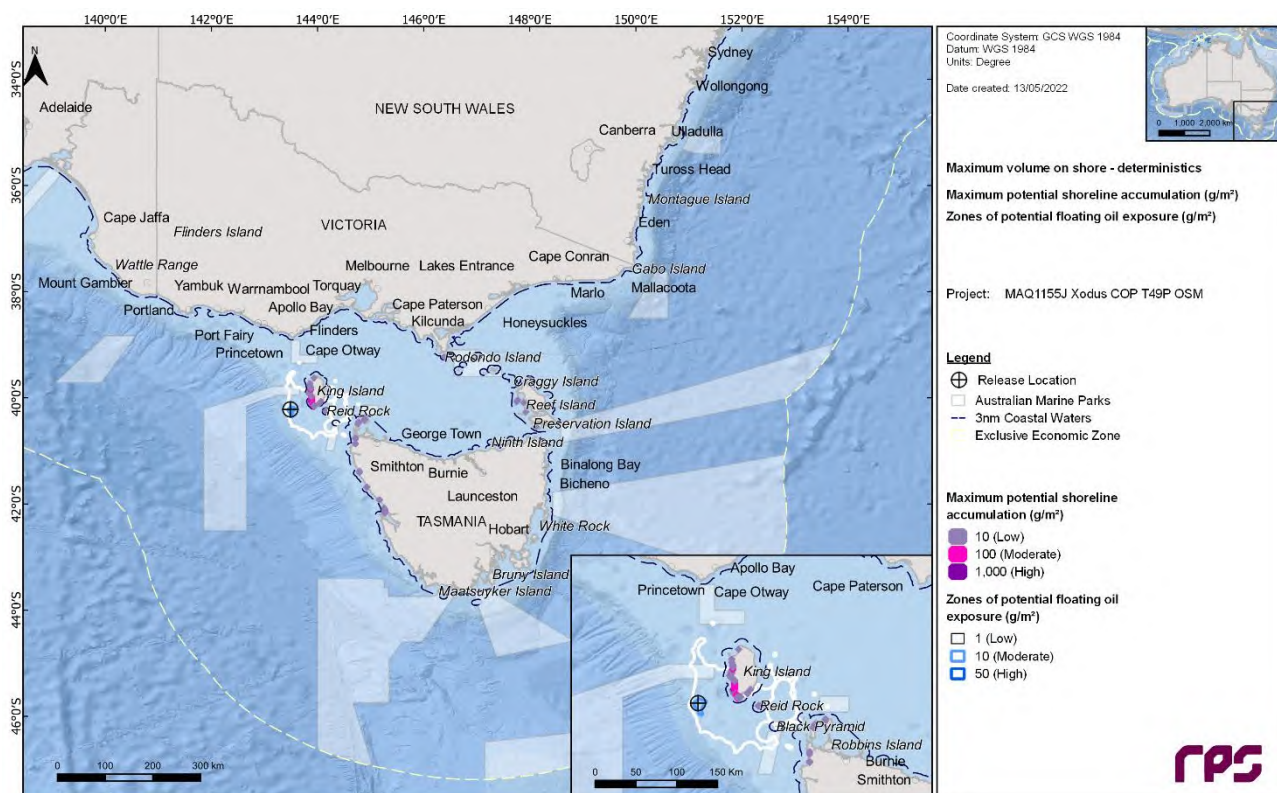

### 15.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore of 58.7 m<sup>3</sup> was identified as run number 98 which commenced during winter conditions, 1 pm 12<sup>th</sup> June 2019.

Figure 15.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 9 of the simulation.

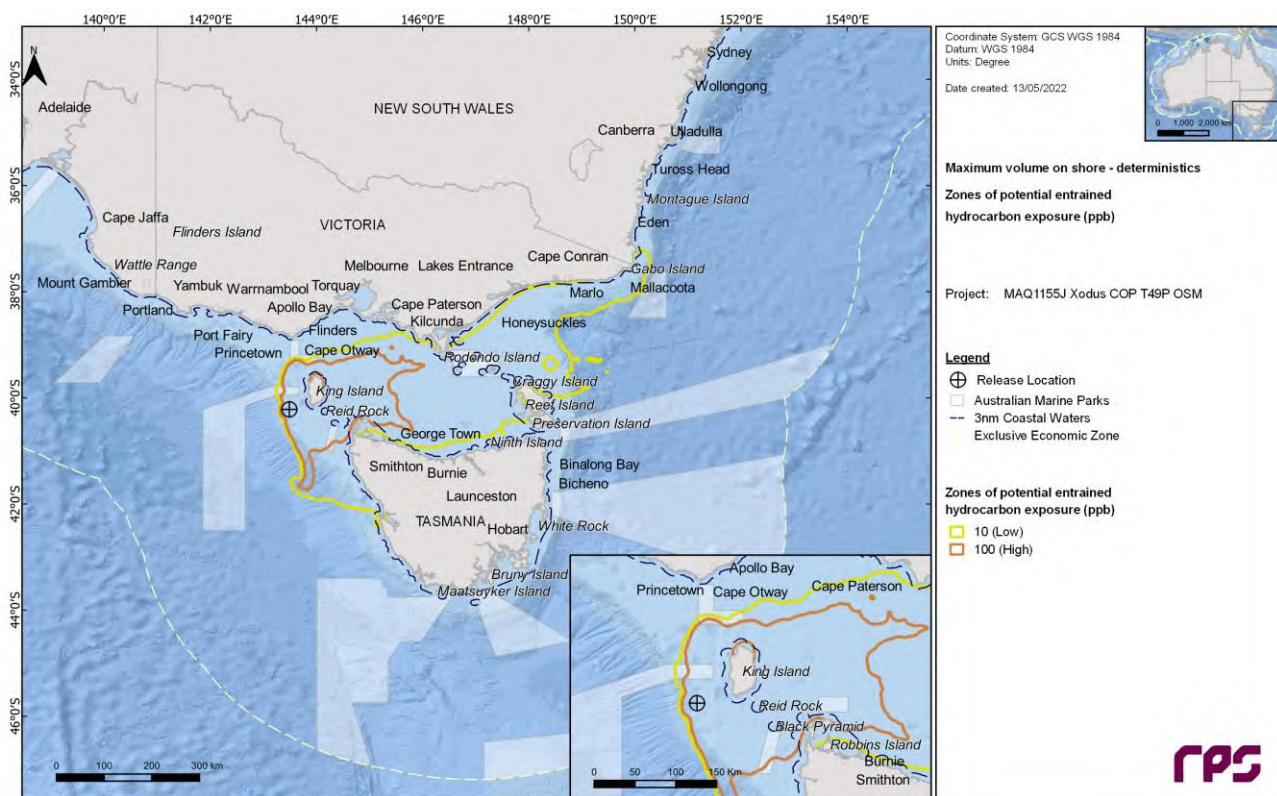

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 15.11 and Figure 15.12, respectively.

Figure 15.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 87,500 m<sup>3</sup> (~63%) was lost to the atmosphere through evaporation. Approximately, 50,000 m<sup>3</sup> (~36%) of the released volume decayed, while approximately 1,800 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 55 m<sup>3</sup> (<0.1%) remained on shorelines.

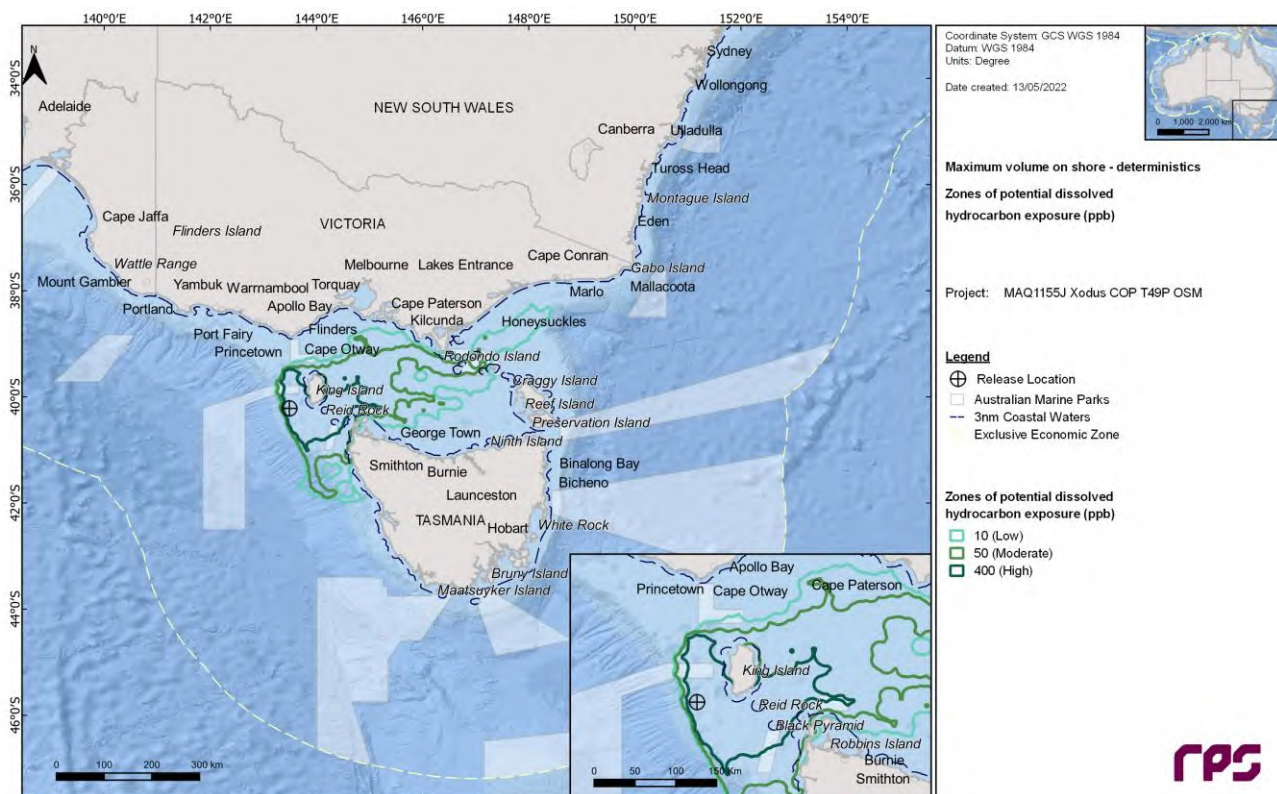

**Figure 15.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 3.**

**Figure 15.11 Predicted extent of the entrained hydrocarbons exposure over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 3.**

**Figure 15.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 3.**

**Figure 15.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 3.**

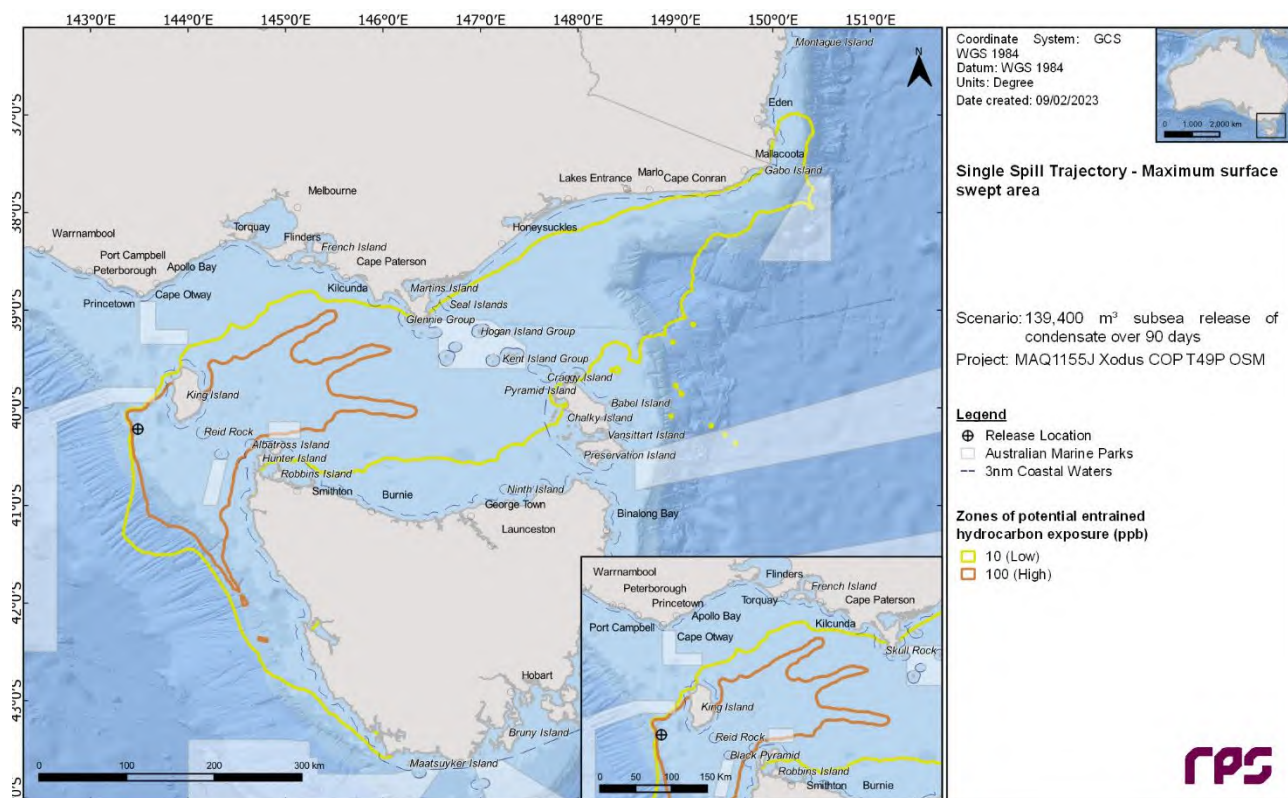

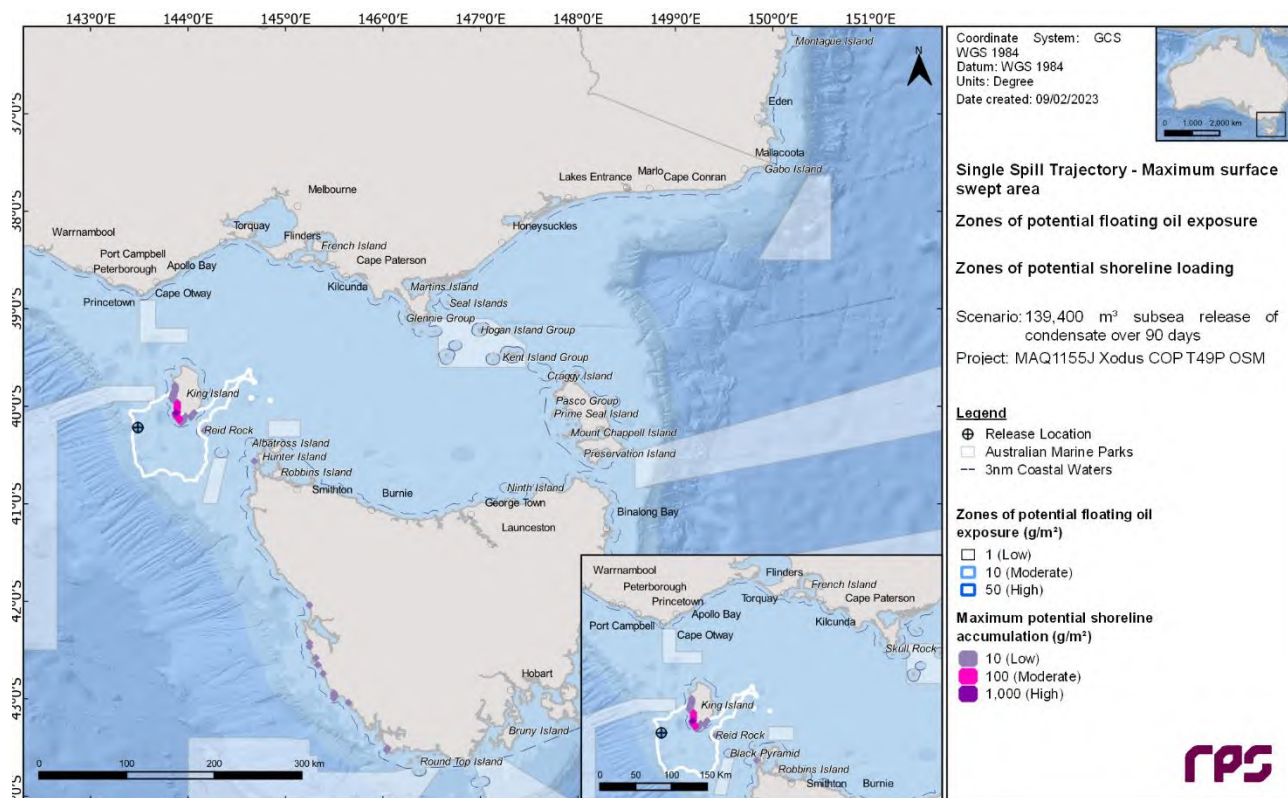

### 15.3.2 Largest Area of Floating Oil Exposure

The simulation that resulted in the largest swept area of floating oil exposure at or above the low exposure threshold of 1,405 km<sup>2</sup> was identified as run number 25 which commenced during winter conditions, 8 pm 4<sup>th</sup> July 2017.

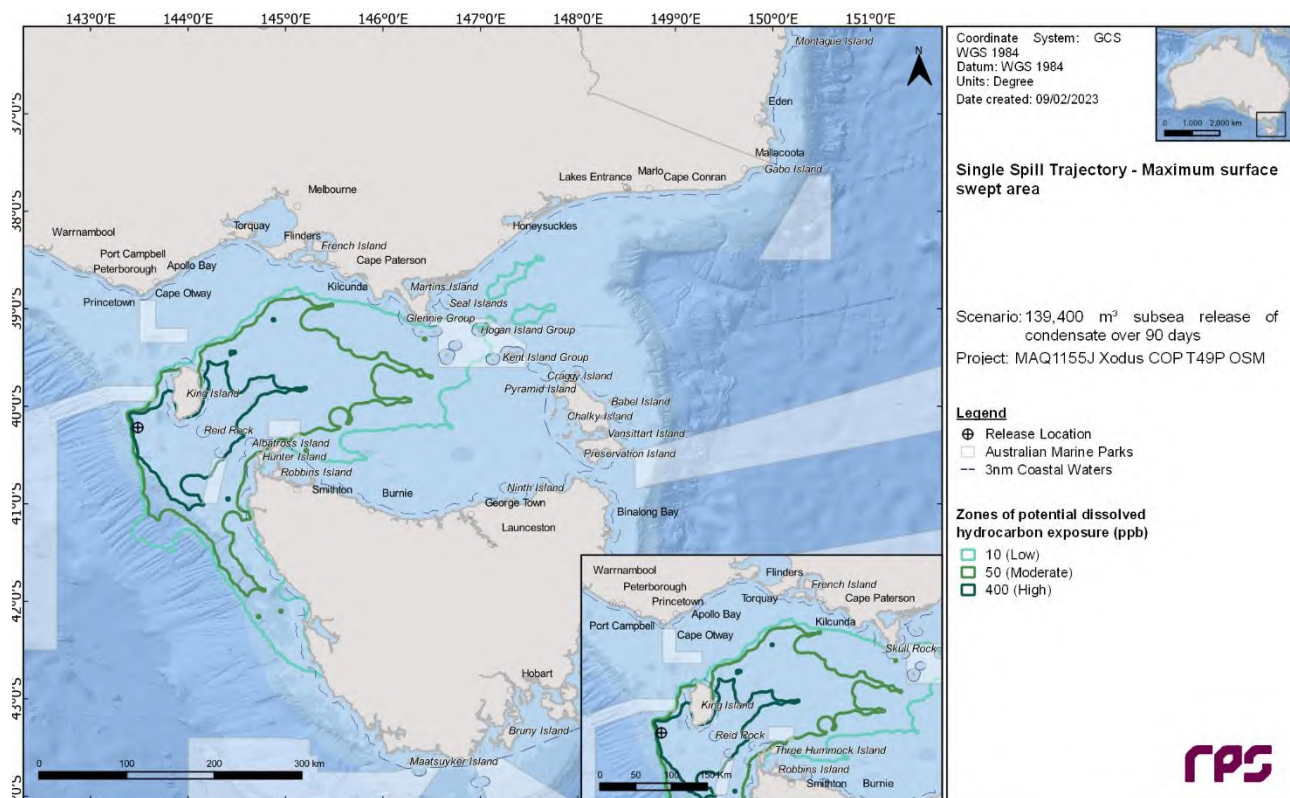

Figure 15.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days).

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 15.11 and Figure 15.12, respectively.

Figure 15.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 88,450 m<sup>3</sup> (~63%) was lost to the atmosphere through evaporation. Approximately, 49,200 m<sup>3</sup> (~35%) of the released volume decayed, while approximately 1,700 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 27 m<sup>3</sup> (<0.1%) remained on shorelines.

**Figure 15.16 Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days for the simulation that led to the largest area of floating hydrocarbon exposure from a subsea LOWC at Location 3.**

**Figure 15.17 Predicted weathering and fates for the simulation that led to the largest area of floating hydrocarbon exposure from a subsea LOWC at Location 3.**

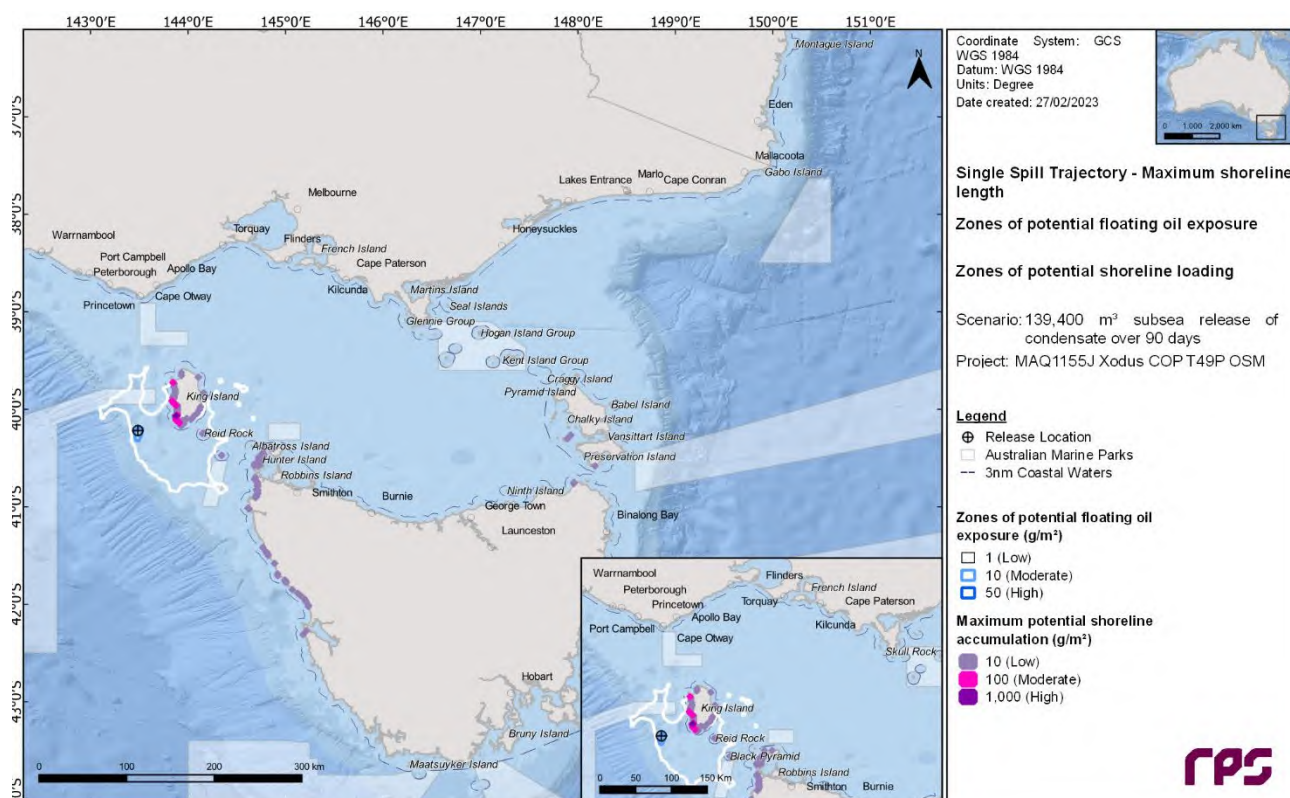

### 15.3.3 Longest Length of Shoreline Accumulation

The simulation that resulted in the longest length of hydrocarbons ashore of 133 km was identified as run number 99 which commenced during winter conditions, 8 pm 26<sup>th</sup> April 2018.

Figure 15.18 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 10 of the simulation.

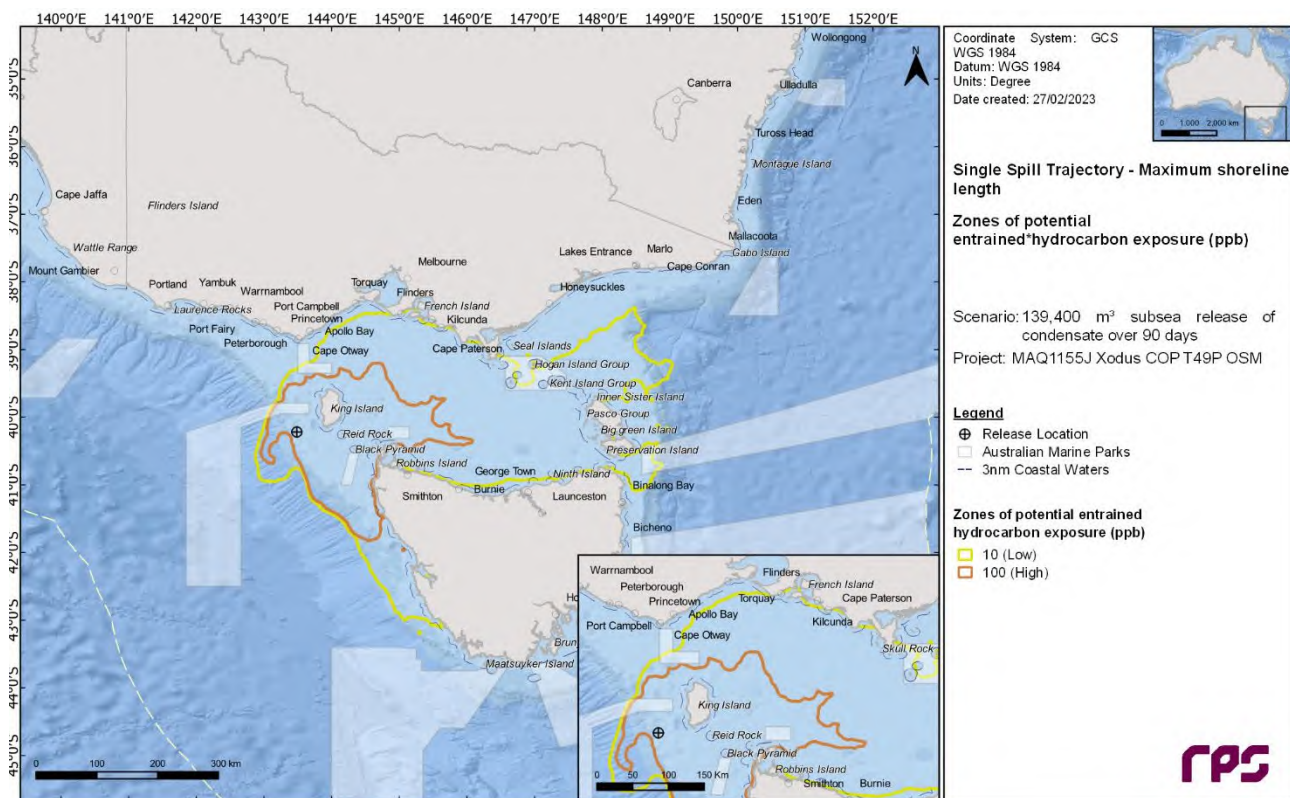

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 15.19 and Figure 15.20, respectively.

Figure 15.21 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 88,250 m<sup>3</sup> (~63%) was lost to the atmosphere through evaporation. Approximately, 48,700 m<sup>3</sup> (~35%) of the released volume decayed, while approximately 2,200 m<sup>3</sup> (~2%) was predicted to remain within the water column and approximately 30 m<sup>3</sup> (<0.1%) remained on shorelines.

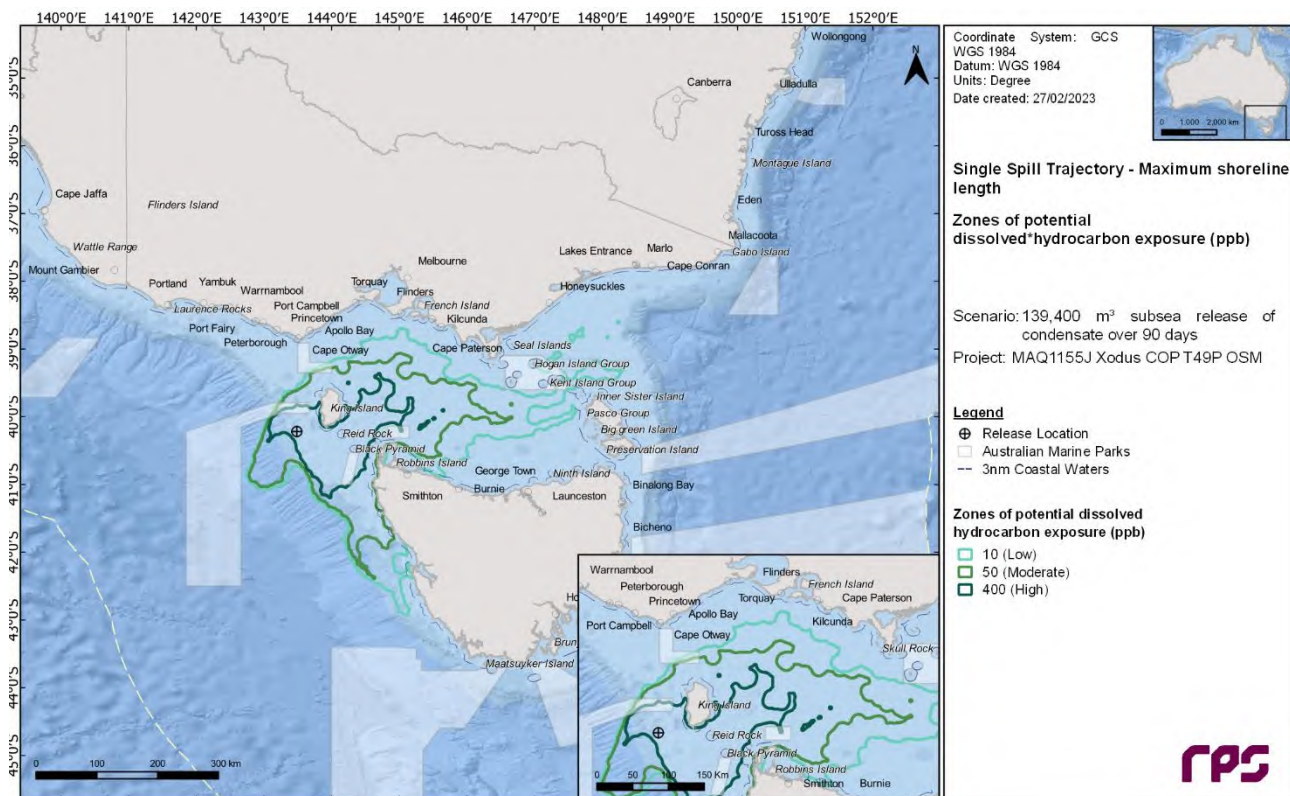

**Figure 15.18 Predicted extent of the floating hydrocarbon exposure and shoreline loading over the entire 120 days for the simulation that led to the longest length of shoreline accumulation from a subsea LOWC at Location 3.**

## 17.3.2 In-water exposure

### 17.3.2.1 Dissolved Hydrocarbons

Table 17-8 summarises the potential exposure to BIAs from dissolved hydrocarbons in the 0 – 10 m depth layer for each threshold and season.

Figure 17.21 to Figure 17.26 illustrate the extent of dissolved hydrocarbon exposure in the 10-20 m, 20 – 30 m and 30 – 50 m depth layers for each season.

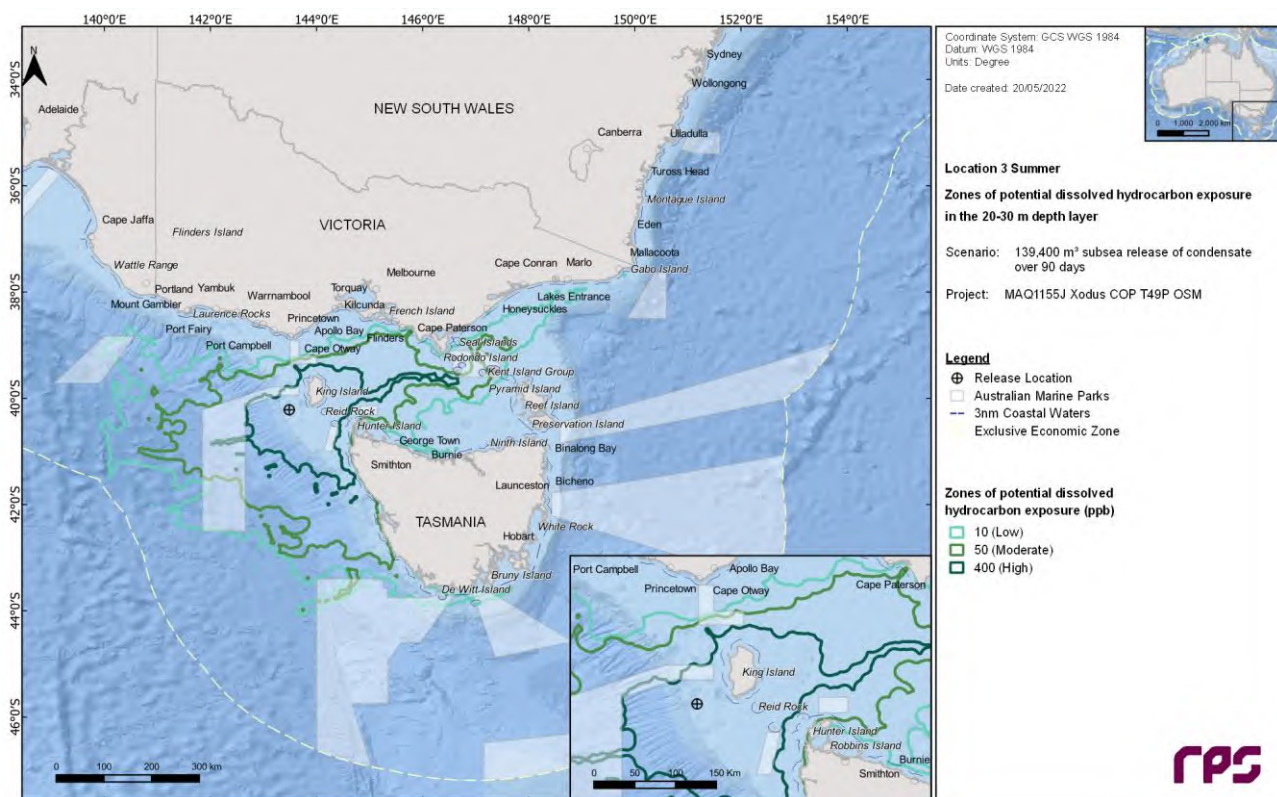

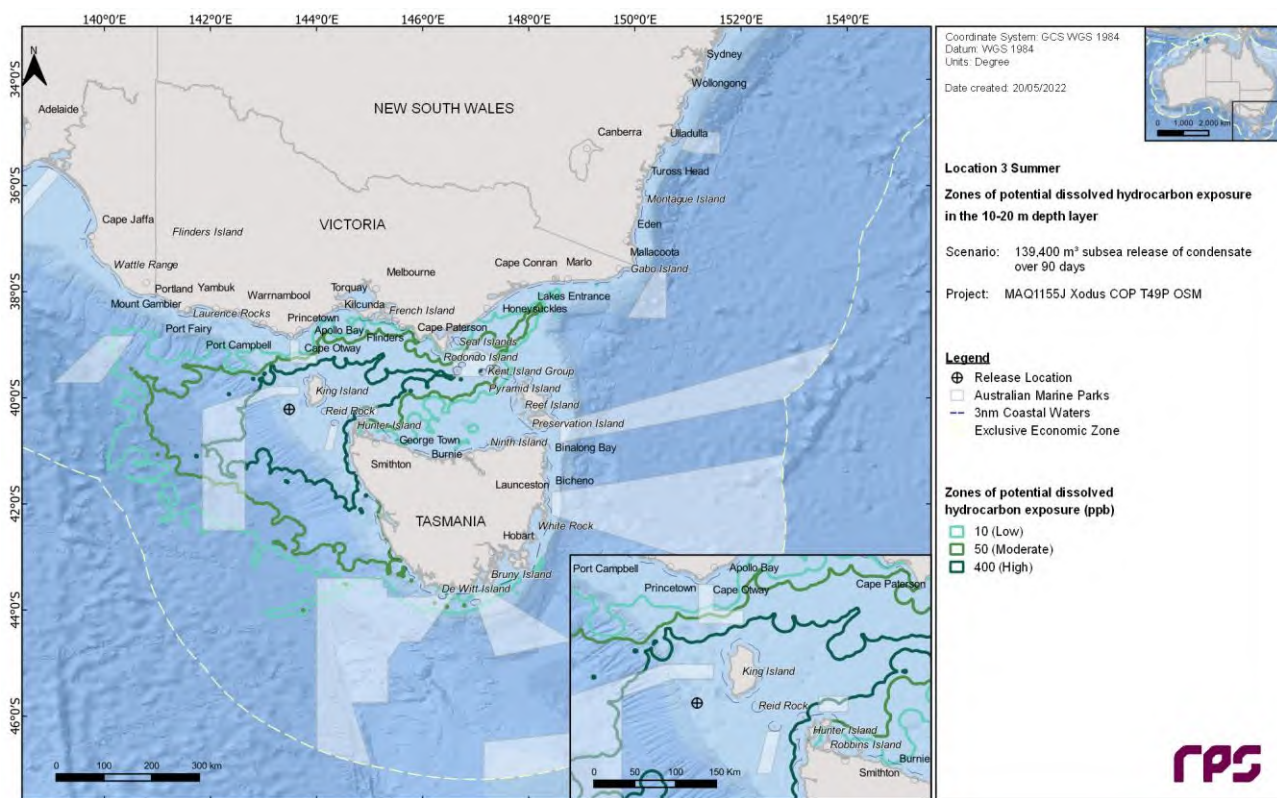

**Table 17-8 Probability of dissolved hydrocarbons exposure to BIAs in the 0-10 m depth layer from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

## Figures

Figure 1.1	VIC/P79 hydrocarbon spill modelling release locations. ....	1
Figure 1.2	Examples of four individual spill trajectories (four replicate simulations) predicted by SIMAP for a spill scenario. The frequency of contact with given locations is used to calculate the probability of impacts during a spill. Essentially, all model runs are overlain (shown as the stacked runs on the right) and the number of times that trajectories contact a given location at a concentration is used to calculate the probability. ....	2
Figure 1.3	Example of an individual spill trajectory predicted by SIMAP for a spill scenario. Note, this image represents surface oil as spill and does not take any thresholds into consideration. ....	3
Figure 3.1	HYCOM averaged seasonal surface drift currents during summer (upper image) and winter (lower image). ....	6
Figure 3.2	Sample of the model grid used to generate the tidal currents for the study region. Higher resolution areas are shown by the denser mesh. ....	8
Figure 3.3	Bathymetry defined throughout the tidal model domain. ....	8

## TERMS AND ABBREVIATIONS

Actionable oil	Oil which is thick enough for the effective use of mitigation strategies
AMSA	Australian Maritime Safety Authority
API	American Petroleum Institute gravity. A measure of how heavy or light a petroleum liquid is compared to water.
Bonn Agreement	An agreement for cooperation in dealing with pollution of the North Sea by oil and other harmful substances, 1983, includes: Governments of the Kingdom of Belgium, the Kingdom of Denmark, the French Republic, the Federal Republic of Germany, the Republic of Ireland, the Kingdom of the Netherlands, the Kingdom of Norway, the Kingdom of Sweden, the United Kingdom of Great Britain and Northern Ireland and the European Union.
BP	Boiling point. The temperature at which the vapor pressure of the liquid is equal to the pressure exerted on it by the surrounding atmosphere
BTEX	Benzene, toluene, ethylbenzene, and xylenes
Decay	The process where oil components are changed either chemically or biologically (biodegradation) to another compound. It includes breakdown to simpler organic carbon compounds by bacteria and other organisms, photo-oxidation by solar energy, and other chemical reactions.
Deterministic (single) spill modelling	Oil spill modelling involving a computer simulation of a single hypothetical oil spill event subject to a single sequence of wind, current and other sea conditions over time. Single oil spill modelling, also referred to as “deterministic modelling” provides a simulation of one possible outcome of a given spill scenario, subject to the metocean conditions that are imposed. Single oil spill modelling is commonly used to consider the fate and effects of ‘worst-case’ oil spill scenarios that are carefully selected in consideration of the nature and scale of the offshore petroleum activity and the local environment (NOPSEMA, 2017). Because the outcomes of a single oil spill simulation can only represent the outcome of that scenario under one sequence of metocean conditions, worst-case conditions are often identified from stochastic modelling. It is impossible to calculate the likelihood of any outcome from a single oil spill simulation. Single oil spill modelling is generally used for response planning, preparedness planning and for supporting oil spill response operations in the event of an actual spill
Dynamic viscosity	The dynamic viscosity of a fluid expresses its resistance to shearing flows, where adjacent layers move parallel to each other with different speeds.
Floating oil exposure	Contact by floating oil on the sea surface at concentrations equal to or exceeding defined threshold concentrations. The consequence will vary depending on the threshold and the receptors
GODAE	Global Ocean Data Assimilation Experiment
HYCOM	Hybrid Coordinate Ocean Model. A data-assimilative, three-dimensional ocean model
HYDROMAP	Advanced ocean/coastal tidal model used to predict tidal water levels, current speed and current direction.
ITOPF	International Tanker Owners Pollution Federation Limited
MAHs	Monoaromatic hydrocarbons
MMA	Marine Management Area
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
PAH	Polynuclear aromatic hydrocarbons
Pour point	The pour point of a liquid is the temperature below which the liquid loses its flow characteristics
Ramsar site	A site listed under the Ramsar Convention on wetlands which is an international intergovernmental treaty that provides the framework for the conservation and wise use of wetlands and their resources.

## REPORT

---

Shoreline accumulation	Arrival of oil at or near shorelines at on-water concentrations equal to or exceeding defined threshold concentrations. Shoreline contact is judged for floating oil arriving within a 2 km buffer zone from any shoreline as a conservative measure
SIMAP	Spill Impact Model Application Package. SIMAP is designed to simulate the fate and effects of spilled hydrocarbons for surface or subsea releases
Stochastic (multiple) spill modelling	Stochastic oil spill modelling is created by overlaying and statistically analysing the outcomes of many single oil-spill simulations of a defined spill scenario, where each simulation was subject to a different sequence of metocean conditions, selected objectively (typically by random selection) from a long sequence of historic conditions for the study area. Analysis of this larger set of simulations provides a more accurate indication of the environment that maybe affected (EMBA) and indicates which locations are more likely to be affected (as well as other statistics). Stochastic oil spill modelling avoids biases that affect single oil spill modelling (due to the reliance on only one possible sequence of conditions). However, when interpreting stochastic modelling, which is based on a wide range of potential conditions that might happen to occur, it is essential to understand that calculations will encompass a much larger area than could be affected in any single spill event, where a more limited set of conditions will occur. Consequently, it is misleading to imply that the region derived from stochastic modelling indicate the outcomes expected from a single spill event (NOPSEMA, 2017) Stochastic modelling is generally used for risk assessment and preparedness planning by indicating locations that could be exposed and may require response or subsequent impact assessment
World Ocean Atlas	A collection of objectively analysed quality controlled physicochemical parameters (e.g., temperature, salinity, oxygen, phosphate, silicate, and nitrate) based on profile data from the World Ocean Database established by NOAA's National Centers for Environmental Information (NCEI)

## EXECUTIVE SUMMARY

### Background

ConocoPhillips Australia SH1 Pty Ltd (ConocoPhillips) is considering an exploration drilling campaign in Permit VIC/P79 in the Otway Basin. To support environmental approvals, an oil spill modelling study was undertaken to assess the potential exposure for the following scenarios:

- **Scenario 1** – An uncontrolled subsea loss of well control (LOWC) releasing a total of 139,400 m<sup>3</sup> of condensate over 90 days (1,549 m<sup>3</sup>/day); and
- **Scenario 2** – A 350 m<sup>3</sup> release of Marine Diesel Oil (MDO) over 6 hours from a loss of containment following a vessel collision.

Both scenarios were modelled from four worst case target locations due to the extent of the permit area.

The potential exposure to the surrounding waters and shorelines were assessed for summer (October to March) and winter (April to September) seasons.

One of the purposes of the modelling is to define the 'outer boundaries' of the environment that may be affected (EMBA) in the unlikely event of a hydrocarbon release scenario. Therefore, the modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill.

The spill modelling was performed using an advanced three-dimensional trajectory and fates model; Spill Impact Model Application Package (SIMAP). The SIMAP model calculates the transport, spreading, entrainment and evaporation of spilled hydrocarbons over time, based on the prevailing wind and current conditions and the physical and chemical properties.

### Methodology

The modelling study was carried out in stages. Firstly, a 10-year current dataset (2010 – 2019) that includes the combined influence of large-scale ocean and nearshore tidal currents were prepared. Secondly, the currents, local winds and detailed hydrocarbon characteristics were used as inputs in the three-dimensional oil spill model (SIMAP) to simulate the drift, spread, weathering and fate of the spilled hydrocarbons.

Modelling was conducted using a stochastic approach, which involved running 100 spills for each season, for each scenario and location with each simulation having the same information (i.e., location volume and oil properties) but randomly selected start times to ensure a range of wind and current conditions were assessed. Once all 100 simulations were run for a given scenario and location, the results were combined to determine the seasonal exposure to the surrounding waters, shorelines and sensitive receptors based on the thresholds outlined in the NOPSEMA Oil Spill Modelling Bulletin (NOPSEMA 2019).

### Hydrocarbon Properties

Thylacine condensate was used as a proxy for the LOWC scenario (Scenario 1), which has an API of 44.3, a density of 805 kg/m<sup>3</sup> (at 15°C) and a low viscosity value of 0.875 cP. The volatile to semi-volatile components (boiling point (BP) < 265 °C), which represent approximately 83% of the whole condensate is likely to evaporate over the first day if exposed to the atmosphere at local temperatures, leaving the less volatile portion (16%) to progressively evaporate more slowly. Only 1% of the condensate is considered persistent.

Thylacine condensate is categorised as a Group I oil (non – persistent oil) according to the International Tankers Owners Pollution Federation (ITOPF, 2014) and US EPA/USCG classifications. The classification is based on the specific gravity of hydrocarbons in combination with relevant boiling point ranges. The heavier components (i.e., low volatile portion) of the condensate will tend to entrain into the upper water column

during the presence of moderate winds (> 10 knots) and can potentially remain entrained for as long as the winds persist. But can subsequently resurface when the winds ease, and waves abate.

The MDO used as model input for Scenario 2 has a density of 829.1 kg/m<sup>3</sup> (API gravity of 37.6) and a dynamic viscosity of 4.0 cP at 25°C. The MDO is characterised by a high percentage of volatile components (95%), which will evaporate when on the sea surface. It also contains 5% persistent hydrocarbons, which will not evaporate, though will decay over time. Additionally, the MDO classified as a Group II light persistent oil. It is important to note that some heavy components contained in MDO have a strong tendency to physically entrain into the upper water column in the presence of moderate winds (i.e., >12 knots) and breaking waves, but can re-float to the surface when the winds ease.

## Key Findings

### Location 1 LOWC

- The maximum distances to the low (1 g/m<sup>2</sup>) and moderate (10 g/m<sup>2</sup>) floating oil exposure thresholds was 306.7 km (winter) and 11.6 km (summer), respectively. No floating oil exposure at the high (50 g/m<sup>2</sup>) threshold was predicted.
- The highest probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) occurred during winter (100%), while the minimum time before shoreline accumulation was 4.08 days also during winter. The maximum volume of oil ashore was predicted during the winter with 51.9 m<sup>3</sup>.
- The maximum distances from the release location to the low (10 ppb), moderate (50 ppb) and high (400 ppb) dissolved hydrocarbon exposure thresholds was 748 km (winter), 625 km (summer) and 367 km (summer), respectively.
- The maximum distances from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 868 km (summer) and 699 km (summer), respectively.

### Location 2 LOWC

- The maximum distances of floating oil exposure to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) thresholds was 179.2 km (summer), 11.1 km (summer) and 0.4 km (winter), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was 100% during both summer and winter, while the minimum time before shoreline accumulation at the low threshold was 3.63 days predicted during winter. The maximum total volume of oil ashore was predicted during the winter with 139.7 m<sup>3</sup> (over the duration of the simulation).
- Maximum distances from the release location to the low (10 ppb), moderate (50 ppb) and high (400 ppb) dissolved hydrocarbon exposure thresholds was 758 km (summer), 584 km (winter) and 338 km (winter), respectively.
- The maximum distances of entrained hydrocarbons to the low (10 ppb) and high (100 ppb) thresholds was 879 km (summer) and 477 km (winter), respectively.

### Location 3 LOWC

- The maximum distances to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 175.7 km (winter), 10.1 km (summer and winter) and 0.4 km (summer and winter), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was 100% during summer and winter, while the minimum time before shoreline accumulation at the low threshold was 3.79 days predicted during summer. The maximum volume of oil ashore was predicted during the winter with 140.0 m<sup>3</sup>.
- Maximum distances from the release location to the low (10 ppb), moderate (50 ppb) and high (400 ppb) dissolved hydrocarbon exposure thresholds was 804 km (summer), 451 km (winter) and 319 (summer), respectively.
- The maximum distances on to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 897 km (summer) and 450 km (winter), respectively.

### Location 4 LOWC

- The maximum distances from the release location to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 363.4 km (winter), 12.3 km (winter) and 0.2 km (summer and winter), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was 100% during summer and winter, while the minimum time before shoreline accumulation was 1.92 days predicted during winter. The maximum volume of oil ashore was predicted during the winter with 318.9 m<sup>3</sup>.
- Maximum distances from the release location to the low (10 ppb), moderate (50 ppb) and high (400 ppb) dissolved hydrocarbon exposure thresholds was 686 km (winter), 456 km (summer) and 264 km (summer), respectively.
- The maximum distances from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 902 km (summer) and 426 km (summer), respectively.

### Location 1 Vessel Collision

- The maximum distances to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 52.8 km (winter), 15.9 km (winter) and 4.3 km (summer), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during winter at 29%, while the minimum time before shoreline accumulation was 4.83 days predicted during summer. The maximum volume of oil ashore was predicted during the winter with 16.6 m<sup>3</sup>.
- Maximum distances from the release location to the low (10 ppb) and moderate (50 ppb) dissolved hydrocarbon exposure thresholds was 125 km (winter) and 13 km (summer), respectively. No exposure at the high (400 ppb) dissolved hydrocarbon exposure threshold was predicted.
- The maximum distances from the release location to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 700 km (winter) and 158 km (winter), respectively.

## **Location 2 Vessel Collision**

- The maximum distances to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 59.9 km (winter), 21.2 km (summer) and 5.5 km (summer), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during summer at 45%, while the minimum time before shoreline accumulation occurred 1.83 days after the initial release for a spill during winter. The maximum volume of oil ashore was predicted during the winter with 28.9 m<sup>3</sup>.
- Maximum distances from the release location to the low (10 ppb) and moderate (50 ppb) dissolved hydrocarbon exposure thresholds was 159 km (winter) and 6 km (summer and winter), respectively. No exposure at the high (400 ppb) threshold was predicted.
- The maximum distances to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 446 km (winter) and 185 km (winter), respectively.

## **Location 3 Vessel Collision**

- The maximum distances to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 51.8 km (summer), 19.8 km (winter) and 8.0 km (summer), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during summer at 41%, while the minimum time before accumulation was 3.17 days predicted during winter. The maximum volume of oil ashore was predicted during the winter with 18.0 m<sup>3</sup>.
- The maximum distances from the release location to the low (10 ppb) and moderate (50 ppb) dissolved hydrocarbon exposure thresholds was 121 km (winter) and 3 km (summer), respectively. No exposure at the high (400 ppb) threshold was predicted.
- The maximum distances to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 489 km (winter) and 187 km (winter), respectively.

## **Location 4 Vessel Collision**

- The maximum distances from the release location to the low (1 g/m<sup>2</sup>), moderate (10 g/m<sup>2</sup>) and high (50 g/m<sup>2</sup>) floating oil exposure thresholds was 62.3 km (winter), 20.7 km (winter) and 5.7 km (summer), respectively.
- The probability of accumulation on any shoreline at, or above, the low threshold (10 g/m<sup>2</sup>) was greatest during summer at 85%, while the minimum time for the accumulation was 1.08 days during winter. The maximum volume of oil ashore was predicted during the winter with 43.0 m<sup>3</sup>.
- The maximum distances from the release location to the low (10 ppb) and moderate (50 ppb) dissolved hydrocarbon exposure thresholds was 119 km (winter) and 24 km (winter), respectively. No exposure at the high (400 ppb) threshold was predicted.
- The maximum distances to the low (10 ppb) and high (100 ppb) entrained hydrocarbon thresholds was 598 km (winter) and 206 km (winter), respectively.

# 1 BACKGROUND

## 1.1 Introduction

ConocoPhillips Australia SH1 Pty Ltd (ConocoPhillips) is considering an exploration drilling campaign in Permit VIC/P79 in the Otway Basin. To support environmental approvals, Xodus on behalf of ConocoPhillips had commissioned RPS to undertake an oil spill modelling study to assess the potential exposure for the following scenarios:

- **Scenario 1** – An uncontrolled subsea loss of well control (LOWC) releasing a total of 139,400 m<sup>3</sup> of condensate over 90 days (1,549 m<sup>3</sup>/day); and
- **Scenario 2** – A 350 m<sup>3</sup> release of Marine Diesel Oil (MDO) over 6 hours from a loss of containment following a vessel collision.

Both scenarios were modelled from 4 worst case target locations due to the extent of the permit area, Table 1.1 presents the coordinates of the release locations and Figure 1.1 is the location map.

The potential exposure to the surrounding waters and shorelines were assessed for summer (October to March) and winter (April to September) seasons.

One of the purposes of the modelling is to define the 'outer boundaries' of the environment that may be affected (EMBA) in the unlikely event of a hydrocarbon release scenario. Therefore, the modelling does not take into consideration any of the spill prevention, mitigation and response capabilities that would be implemented in response to the spill.

The spill modelling was performed using an advanced three-dimensional trajectory and fates model; Spill Impact Model Application Package (SIMAP). The SIMAP model calculates the transport, spreading, entrainment and evaporation of spilled hydrocarbons over time, based on the prevailing wind and current conditions and the physical and chemical properties.

The hydrocarbon spill model, the method and analysis applied herein uses modelling algorithms which have been peer reviewed and published in international journals. Further, RPS warrants that this work meets and exceeds the American Society for Testing and Materials (ASTM) Standard F2067-13 "*Standard Practice for Development and Use of Oil Spill Models*".

**Table 1.1 VIC/P79 hydrocarbon spill modelling release locations.**

Release location	Name	Latitude*	Longitude*	Water depth (m)

## 1.2 What is Oil Spill Modelling?

Oil spill modelling is a valuable tool widely used for risk assessment, emergency response and contingency planning where it can be particularly helpful to proponents and decision makers. By modelling a series of the most likely oil spill scenarios, decisions concerning suitable response measures and strategic locations for deploying equipment and materials can be made, and the locations at most risk can be identified. The two types of oil spill modelling often used are stochastic (Section 1.2.1) and deterministic (Section 1.2.2) modelling.

### 1.2.1 Stochastic Modelling (Multiple Spill Simulations)

Stochastic oil spill modelling is created by overlaying a great number (often hundreds) of individual, computer-simulated hypothetical spills (NOPSEMA, 2018; Figure 1.2).

Stochastic modelling is a common means of assessing the potential risks from oil spills related to new projects and facilities. Stochastic modelling typically utilises hydrodynamic data for the location in combination with historic wind data. Typically, 100 iterations of the model will be run utilising the data that is most relevant to the season or timing of the project.

The outcomes are often presented as a probability of exposure and is primarily used for risk assessment purposes in view to understand the range of environments that may be affected or impacted by a spill. Elements of the stochastic modelling can also be used in oil spill preparedness and planning.

**Figure 1.2** Examples of four individual spill trajectories (four replicate simulations) predicted by SIMAP for a spill scenario. The frequency of contact with given locations is used to calculate the probability of impacts during a spill. Essentially, all model runs are overlain (shown as the stacked runs on the right) and the number of times that trajectories contact a given location at a concentration is used to calculate the probability.

### 1.2.2 Deterministic Modelling (Single Spill Simulation)

Deterministic modelling is the predictive modelling of a single incident subject to a single sample of wind and weather conditions over time (NOPSEMA, 2018; Figure 1.3).

Deterministic modelling is often paired with stochastic modelling to place the large stochastic footprint into perspective. This deterministic analysis is generally a single run selected from the stochastic analysis and serves as the basis for developing the plans and equipment needs for a realistic spill response. Deterministic spills can be selected on based on parameters such as minimum time to shoreline, largest swept area, maximum volume ashore and longest length of shoreline contacted by hydrocarbons.

**Figure 1.3** Example of an individual spill trajectory predicted by SIMAP for a spill scenario. Note, this image represents surface oil as spill and does not take any thresholds into consideration.

## 2 SCOPE OF WORK

The scope of work included the following components:

1. Generate 10 years (2010 to 2019 (inclusive)) of wind and current data. The three-dimensional current data includes the combined influence of ocean and tidal currents;
2. Include the wind and current data and the hydrocarbon characteristics as input into the three-dimensional oil spill model, SIMAP, to model the movement, spreading, weathering and shoreline accumulation by hydrocarbons over time;
3. Run 100 oil spill simulations per season (200 total per location for each scenario), with each simulation having the same spill information (i.e., location volume and condensate properties) but varying start times. This ensured that each spill trajectory was subjected to a unique set of wind and current conditions;
4. Combine the results from the 100 spill simulations (per season) per location for each scenario to assess the exposure to waters and shoreline accumulation based upon the NOPSEMA thresholds;
5. Present the combined results from the 200 spill simulations, per location for each scenario, to assess the low threshold environment that maybe affected (EMBA); and
6. From the 200 simulations modelled for each location, identify and present the “worst case” deterministic run resulting in the maximum volume of hydrocarbons ashore. For each scenario and all the deterministic simulations resulting in: a) largest area of floating hydrocarbon exposure; b) minimum time to shoreline exposure; and c) longest length of shoreline accumulation were also identified for each scenario and presented.

### 3 REGIONAL CURRENTS

The Otway Basin lies within the western portion of the Bass Strait, a sea strait separating Tasmania from the southern Australian mainland. The strait is a relatively shallow area of the continental shelf, connecting the southeast Indian Ocean with the Tasman Sea. This region has a reputation for high winds and strong tidal currents (Jones, 1980). Currents are primarily driven by tides, winds and density driven flows. During winter the South Australian current moves dense, salty water eastward from the Great Australian Bight into the western margin of the Bass Strait (Sandery & Kämpf, 2007). In winter and spring, waters within the strait are well mixed with no obvious stratification, while during summer the central regions of the strait become stratified (Baines & Fandry, 1983; Middleton & Black, 1994).

Figure 3.1 displays seasonal current trends within the Otway Basin-Bass Strait region. During winter there is a strong eastward water flow due to the strengthening of the South Australian Current (fed by the Leeuwin Current in the Northwest Shelf), which bifurcates with one extension moving through the Bass Strait, and another forming the Zeehan Current off western Tasmania (Sandery & Kämpf, 2007). During summer, water flow reverses off Tasmania, King Island and the Otway Basin travelling eastward, as the coastal current develops due to south-easterly winds.

Therefore, to accurately account for the movement of an oil spill, which can move between the offshore and near shore region, ocean and tidal currents were combined as part of the study. The following sections provide a summary of the regional current data set.

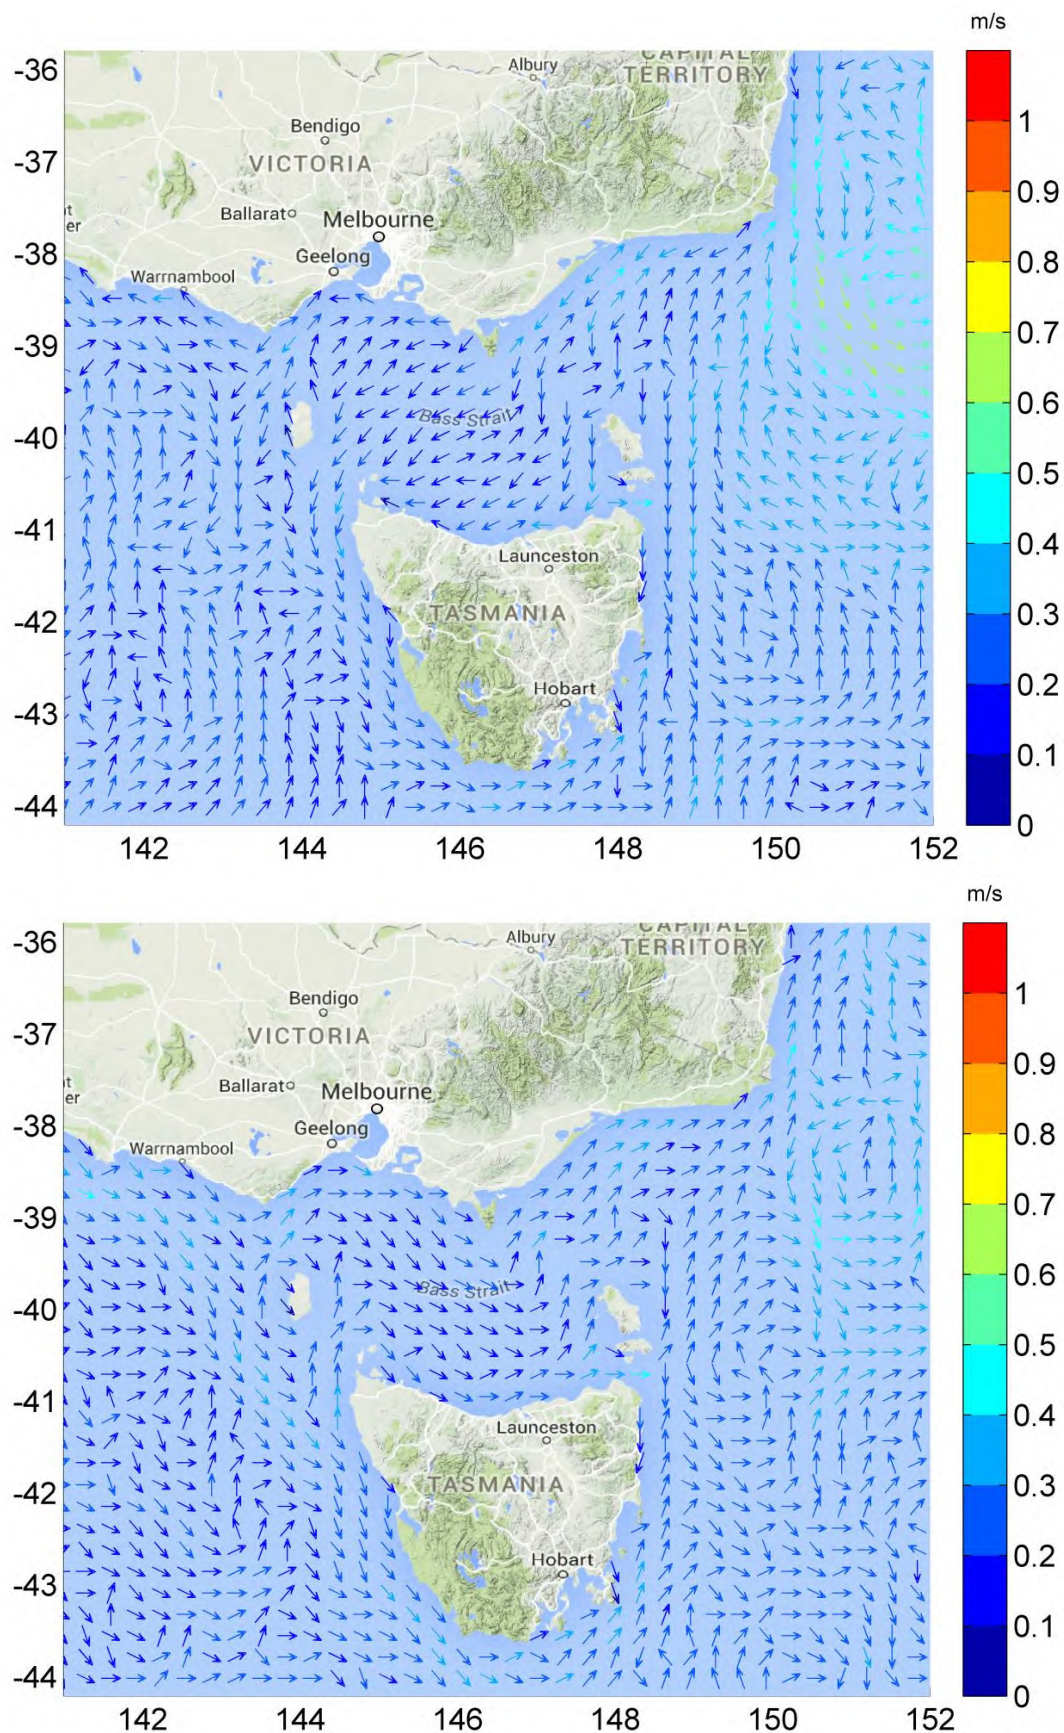

Figure 3.1 HYCOM averaged seasonal surface drift currents during summer (upper image) and winter (lower image).

### 3.1 Tidal currents

Tidal current data was generated using RPS's advanced ocean/coastal model, HYDROMAP. The HYDROMAP model has been thoroughly tested and verified through field measurements throughout the world for more than 30 years (Isaji & Spaulding, 1984; Isaji, et al., 2001; Zigic, et al., 2003). HYDROMAP tidal current data has been used as input to forecast (in the future) and hindcast (in the past) pollutant spills in Australian waters and forms part of the Australian National Oil Spill Emergency Response System operated by AMSA (Australian Maritime Safety Authority).

HYDROMAP employs a sophisticated sub-gridding strategy, which supports up to six levels of spatial resolution, halving the grid cell size as each level of resolution is employed. The sub-gridding allows for higher resolution of currents within areas of greater bathymetric and coastline complexity, and/or of interest to a study.

The numerical solution methodology follows that of Davies (1977a 1977b) with further developments for model efficiency by Owen (1980) and Gordon (1982). A more detailed presentation of the model can be found in Isaji & Spaulding (1984) and Isaji et al. (2001).

#### 3.1.1 Grid Setup

The tidal model domain has been sub-gridded down to a resolution of 500 m for shallow and coastal regions, starting from an offshore (or deep water) resolution of 8 km. The finer grids were allocated in a step-wise fashion to resolve flows more accurately along the coastline, around islands and over regions with more complex bathymetry. Figure 3.2 shows the tidal model grid covering the study domain.

A combination of datasets was used and merged to describe the shape of the seabed within the grid domain (Figure 3.3). These included spot depths and contours which were digitised from nautical charts released by the hydrographic offices as well as Geoscience Australia database and depths extracted from the Shuttle Radar Topography Mission (SRTM30\_PLUS) Plus dataset (see Becker et al., 2009).

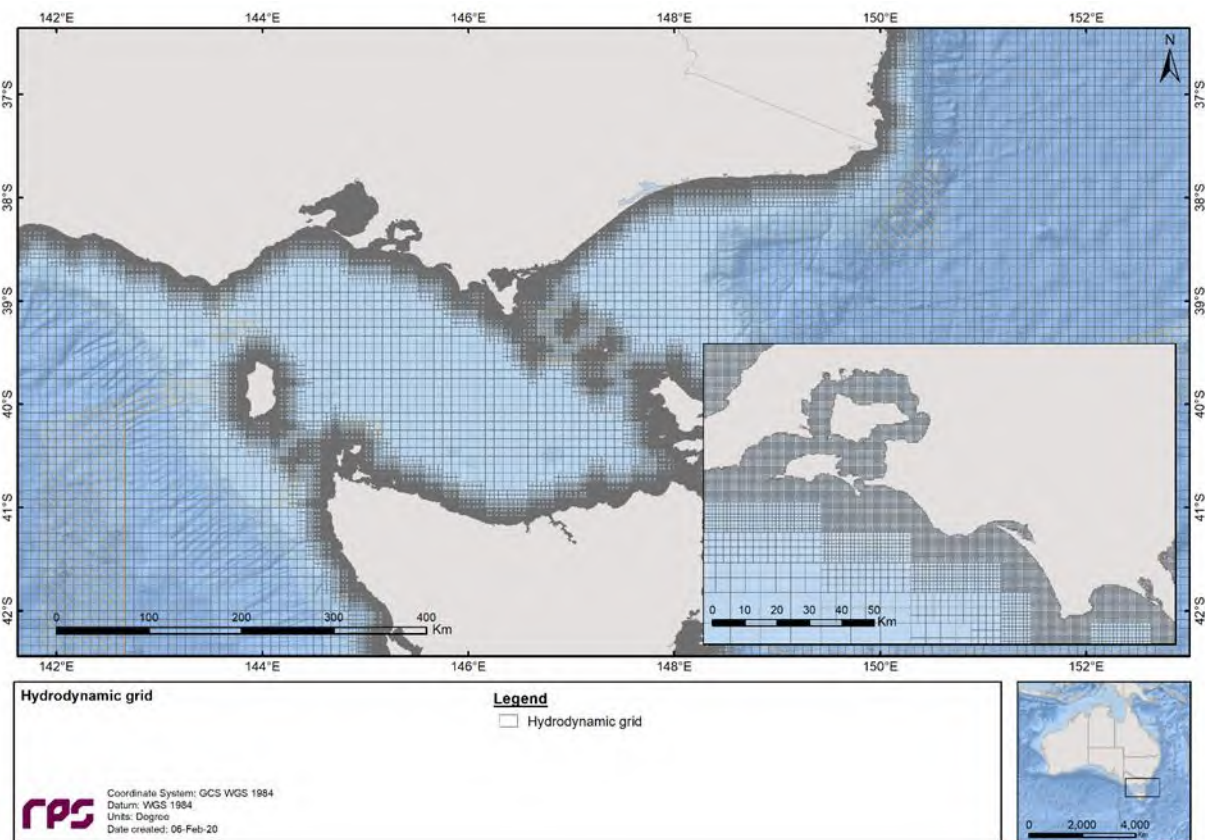

Figure 3.2 Sample of the model grid used to generate the tidal currents for the study region. Higher resolution areas are shown by the denser mesh.

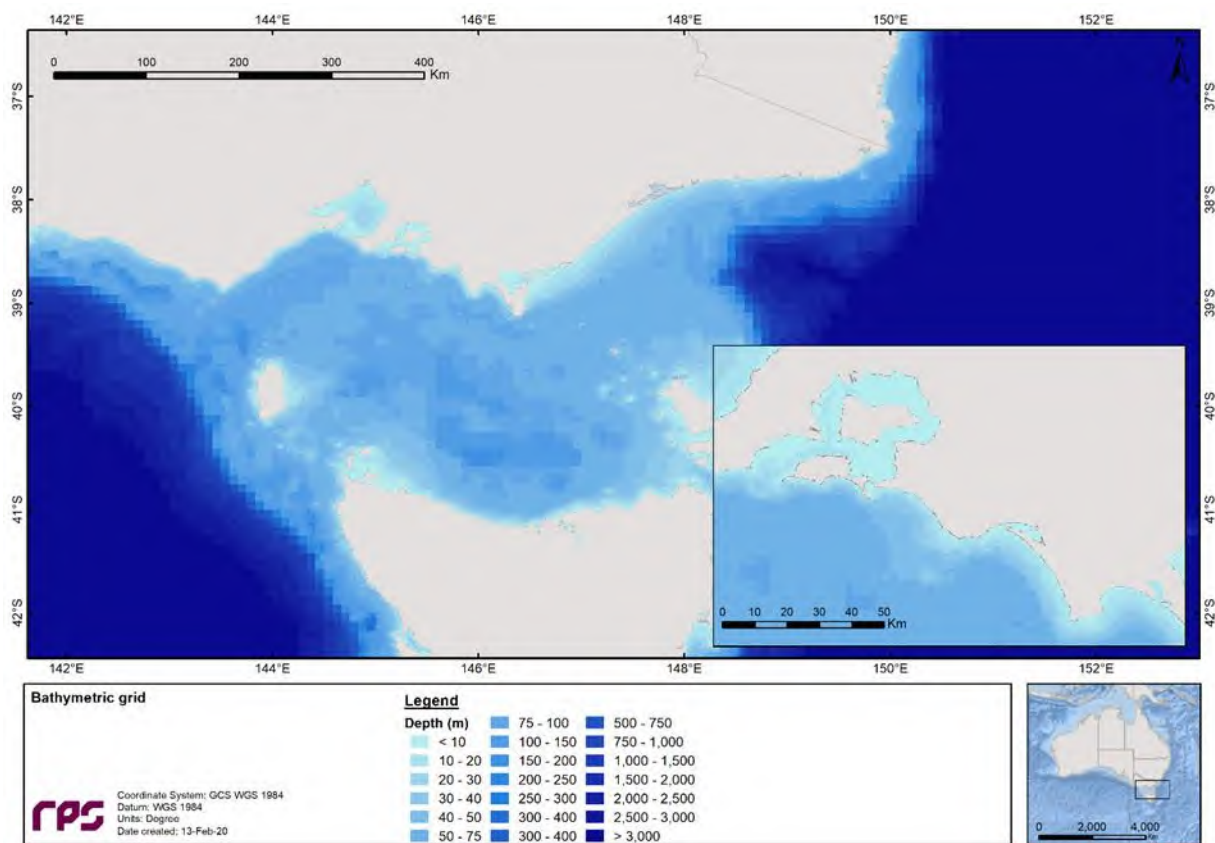

Figure 3.3 Bathymetry defined throughout the tidal model domain.

### 3.1.2 Tidal Conditions

The ocean boundary data for the regional model was obtained from satellite measured altimetry data (TOPEX/Poseidon 8.0) which provided estimates of the eight dominant tidal constituents at a horizontal scale of approximately 0.25 degrees. The eight major tidal constituents used were  $K_2$ ,  $S_2$ ,  $M_2$ ,  $N_2$ ,  $K_1$ ,  $P_1$ ,  $O_1$  and  $Q_1$ . Using the tidal data, time series surface heights were calculated along the open boundaries for the simulation period.

The Topex/Poseidon satellite data has a resolution of 0.25 degrees globally, with higher resolution in coastal regions, and is produced and quality controlled by NASA (National Aeronautics and Space Administration). The data capturing satellites, equipped with two altimeters capable of taking sea level measurements accurate to less than  $\pm 5$  cm, measured oceanic surface elevations (and the resultant tides) for the period 1992–2005. In total these satellites carried out 62,000 orbits of the planet. The Topex/Poseidon tidal data has been widely used amongst the oceanographic community, being referenced in more than 2,100 research publications (e.g., Andersen, 1995; Ludicone et al., 1998; Matsumoto et al., 2000; Kostianoy et al., 2003; Yaremchuk & Tangdong, 2004; Qiu & Chen, 2010). The Topex/Poseidon tidal data is considered suitably accurate for this study.

## 3.2 Ocean Currents

Data describing the flow of ocean currents was obtained from HYCOM (Hybrid Coordinate Ocean Model, (Chassignet et al., 2007), which is operated by the HYCOM Consortium, sponsored by the Global Ocean Data Assimilation Experiment (GODAE). HYCOM is a data-assimilative, three-dimensional ocean model that is run as a hindcast (for a past period), assimilating time-varying observations of sea surface height, sea surface temperature and in-situ temperature and salinity measurements (Chassignet et al., 2009). The HYCOM predictions for drift currents are produced at a horizontal spatial resolution of approximately 8.25 km ( $1/12^{\text{th}}$  of a degree) over the region, at a frequency of three-times per day. HYCOM uses isopycnal layers in the open, stratified ocean, but uses the layered continuity equation to make a dynamically smooth transition to a terrain-following coordinate in shallow coastal regions, and to z-level coordinates in the mixed layer and/or unstratified seas.

For this study, the HYCOM hindcast currents were obtained for the years 2010 to 2019 (inclusive).

## 3.3 Surface Currents

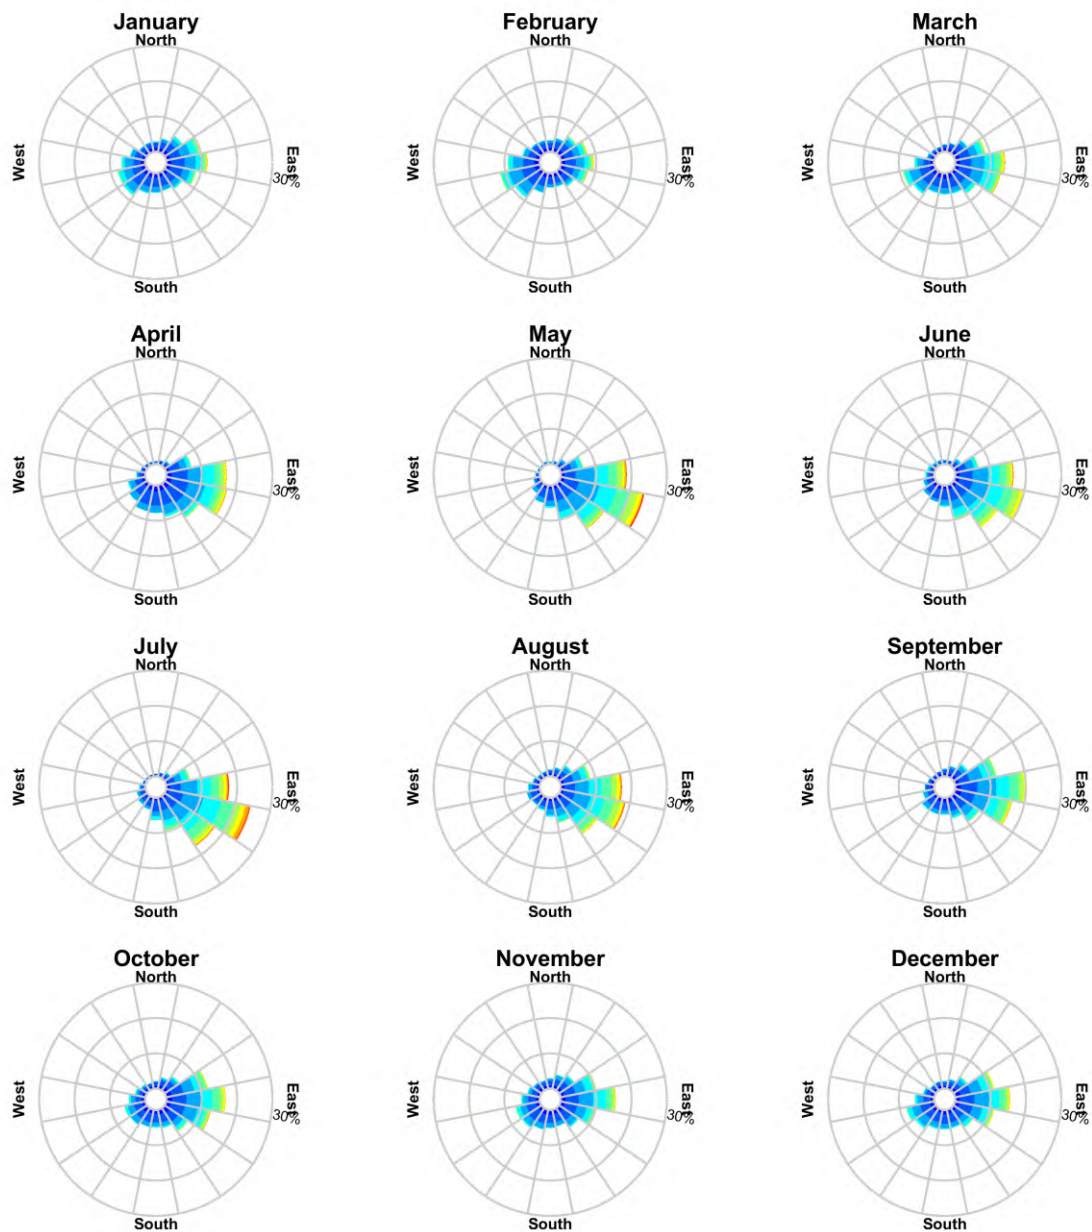

Figure 3.4 to Figure 3.7 show the monthly current rose distributions for the four locations, while Figure 3.8 to Figure 3.11 illustrate the total current rose distributions for the four locations.

Note the convention for defining current direction is the direction the current flows towards, which is used to reference current direction throughout this report. Each branch of the rose represents the currents flowing to that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent the current speed ranges for each direction. Speed intervals of 0.1 m/s are predominantly used in these current roses. The length of each coloured segment is relative to the proportion of currents flowing within the corresponding speed and direction.

## 4 WIND DATA

To account for the influence of the wind on the hydrocarbons floating on the surface, wind data from 2010 to 2019 (inclusive) was sourced from the National Centre for Environmental Prediction (NCEP) Climate Forecast System Reanalysis dataset (CFSR; see Saha et al., 2010). The CFSR wind model includes observations from many data sources: surface observations, upper-atmosphere air balloon observations, aircraft observations and satellite observations. The model is capable of accurately representing the interaction between the earth's oceans, land and atmosphere. The gridded wind data output is available at a horizontal resolution of  $0.25^\circ$  (~33 km) and a temporal resolution of 1 hour.

Figure 4.1 is a screenshot illustrating the spatial resolution of the CFSR modelled wind data.

**Figure 4.1** Spatial resolution of the CFSR modelled wind data used as input into the oil spill model.

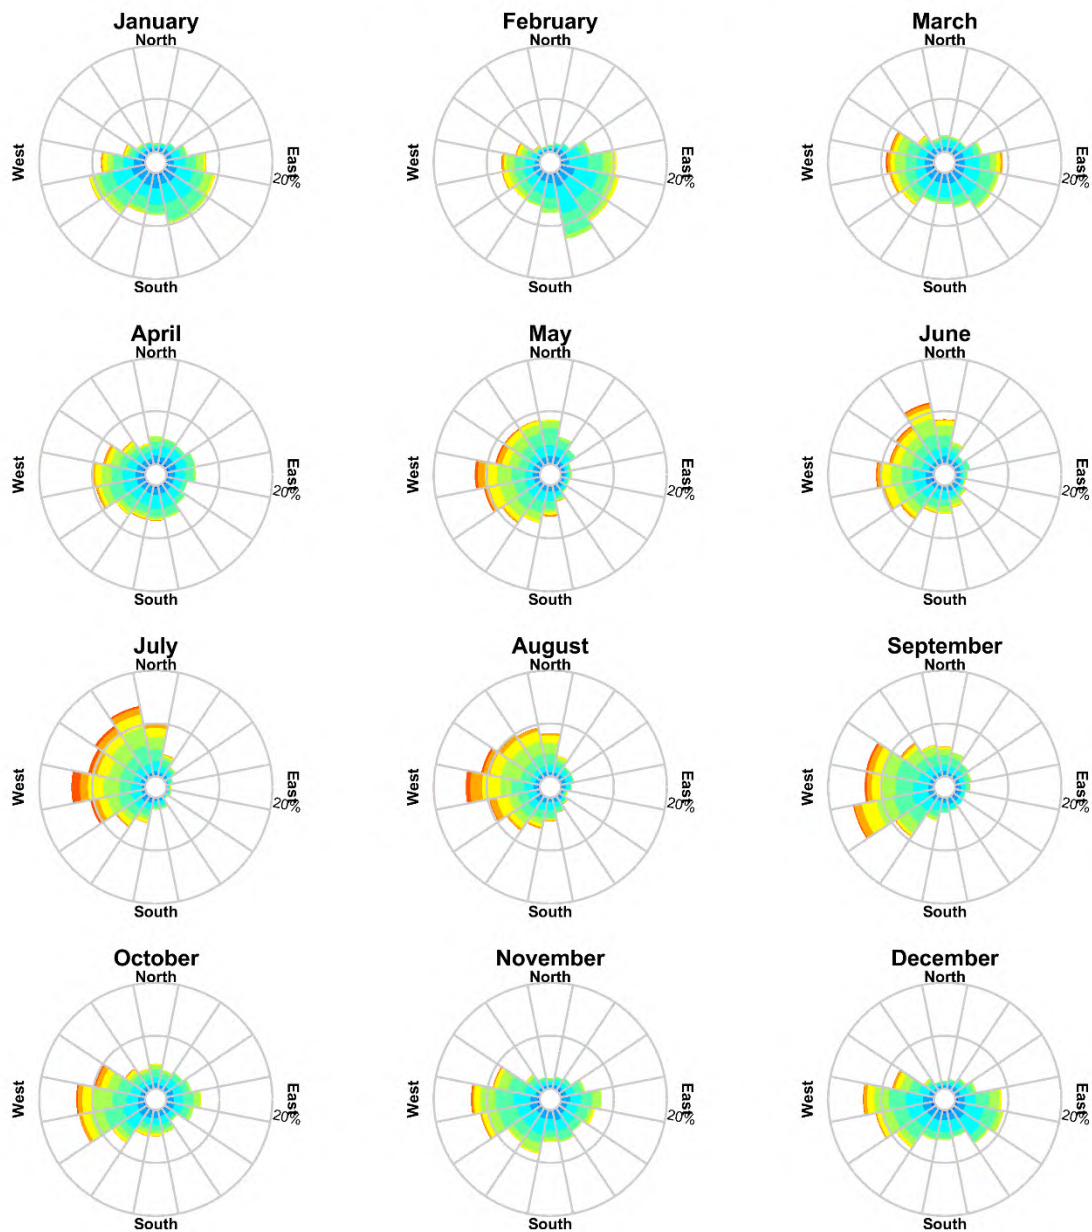

Figure 4.2 to Figure 4.5 and Figure 4.6 to Figure 4.9 shows the monthly and total wind rose distributions derived from the CFSR nodes closest to the release locations, respectively.

Note that the atmospheric convention for defining wind direction, that is, the direction the wind blows from, is used to reference wind direction throughout this report. Each branch of the rose represents wind coming from that direction, with north to the top of the diagram. Sixteen directions are used. The branches are divided into segments of different colour, which represent wind speed ranges from that direction. Speed ranges of 3 knots are predominantly used in these wind roses. The length of each segment within a branch is proportional to the frequency of winds blowing within the corresponding range of speeds from that direction.

## 5 WATER TEMPERATURE AND SALINITY

Monthly water temperature and salinity data was obtained from the World Ocean Atlas 2013 database produced by the National Oceanographic Data Centre (National Oceanic and Atmospheric Administration) and its co-located World Data Center for Oceanography (Levitus et al. 2013). The data is used as input into oil spill model.

The monthly mean sea surface temperature and salinity values in the 0-5 m depth layer are presented in Table 5.1. The monthly average sea surface temperatures ranged between 13.2°C (September, release location 1) and 18.0°C (March, release locations 2, 3 and 4; and January, release location 2). The monthly average salinity values remain relatively consistent ranging between 35.1 psu and 35.6 psu.

Figure 5.1 and Figure 5.2 present the monthly water temperature and salinity profiles adjacent to release locations 1 and 2, and 3 and 4, respectively.

**Table 5.1 Monthly average sea surface temperature and salinity adjacent to release locations 1–4.**

Release Location		Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
1	Temperature (°C)	17.7	17.2	17.8	16.3	16.0	16.0	14.8	13.5	13.2	14.3	14.3	15.9

## 6 NEAR-FIELD MODEL – OILMAP DEEP

The LOWC scenario is a high-pressure release of mostly gas, condensate and small volume of condensed water. Where gas is released with condensate, the buoyancy of the expanding gas cloud will entrain ambient seawater and propel the droplets towards the surface at a faster rate than would occur from the relative buoyancy of the oil alone. Furthermore, the turbulence generated by such an intense discharge will tend to break the condensate up into droplets of various sizes.

To define the near-field plume dynamics, the subsea blowout model, OILMAP-DEEP, was applied. The model simulates the plume rise dynamics in two phases, the initial jet phase and the buoyant plume phase. The initial jet phase governs the plume dynamics directly above the subsurface release location and is predominately driven by the exit velocity. During this phase, the hydrocarbon droplet size and distribution is calculated. Next, the rise dynamics are dominated by the buoyant nature of the plume until the termination of the plume phase (known as the trapping depth). At this point, the results from OILMAP-DEEP (including plume trapping depth, plume diameter and droplet size distribution) are integrated into the far-field model SIMAP to simulate the rise and dispersion of the condensate droplets.

More details on the OILMAP-DEEP model, can be found in Spaulding et al. (2015). The model has been validated against observations from Deepwater Horizon as well as small and large-scale laboratory studies on subsurface oil releases (Brandvik et al., 2013, 2014; Belore, 2014; Spaulding et al., 2015; Li et al., 2017). Figure 6.1 illustrates the various stages of an example blowout plume.

Table 6.1 presents the input parameters for the OILMAP-DEEP model and key results related to the near-field plume dynamics. Inputs to the model included specification of the condensate density, viscosity and the discharge rate of the fluids: the diameter of the exit hole and the gas to oil ratio. The local temperature and salinity profiles of the water column were also specified to define the vertical density profile.

The subsea near-field modelling indicated that this pressurised discharge would cause the plume to breach the surface waters and the condensate droplets would surface in less than a few minutes. The condensate droplets sizes were near identical at the four locations and range from 34 µm to 153 µm.

**Table 6.1 Input data for the near field subsea modelling and key results for each location from the high-pressure LOWC release.**

Input Variable	Location 1	Location 2	Location 3	Location 4
Water depth (m)	93	74	66	45
Exit hole diameter (inch)		8.53		
Condensate release rate (m <sup>3</sup> /day)		1,549		
Gas to condensate ratio (scf/bbl)		50,000		
Formation water flow rate (stb/day)		974		
Reservoir Temperature (°C)		130		
Well pressure at seafloor (psia)	136 psia (day 1) constant pressure	108 psia (day 1) constant pressure	96 psia (day 1) constant pressure	65 psia (day 1) constant pressure
<b>Key results</b>				
Plume execution depth (m BMSL)		0 (breach surface waters)		
Droplet sizes (µm)	35 - 153	34 - 148	34 - 149	34 - 146
Final plume diameter (m)	14.6	10.3	10.7	8.3

## 7 OIL SPILL MODEL - SIMAP

The spill modelling was carried out using a purpose-developed oil spill trajectory and fates model, SIMAP (Spill Impact Model Application Package). This model is designed to simulate the transport and weathering processes that affect the outcomes of hydrocarbon spills to the sea, accounting for the specific oil type, spill scenario, and prevailing wind and current circulation patterns.

SIMAP is the evolution of the United States Environmental Protection Agency (US EPA) Natural Resource Damage Assessment model (French & Rines, 1997; French et al., 1999) and is designed to simulate the fate and effects of spilled oils and fuels for both the surface slick and the three-dimensional plume that is generated in the water column. SIMAP includes algorithms to account for both physical transport and weathering processes. The latter are important for accounting for the partitioning of the spilled mass over time between the water surface (surface slick), water column (entrained oil and dissolved compounds), atmosphere (evaporated compounds) and land (stranded oil). The model also accounts for the interaction between weathering and transport processes.

The physical algorithms calculate transport and spreading by physical forces, including surface tension, gravity and wind and current forces for both surface slicks and oil within the water column. The fates algorithms calculate all the weathering processes known to be important for oil spilled to marine waters. These include droplet and slick formation, entrainment by wave action, emulsification, dissolution of soluble components, sedimentation, evaporation, bacterial and photo-chemical decay and shoreline interactions. These algorithms account for the specific oil type being considered.

Entrainment is the physical process where globules of oil are transported from the sea surface into the water column by wind and wave-induced turbulence or be generated subsea by a pressurised discharge at depth. It has been observed that entrained oil is broken into droplets of varying sizes. Small droplets spread and diffuse into the water column, while larger ones rise rapidly back to the surface (Delvigne & Sweeney, 1988; Delvigne, 1991).

Dissolution is the process by which soluble hydrocarbons enter the water from a surface slick or from entrained droplets. The lower molecular weight hydrocarbons tend to be both more volatile and more soluble than those of higher molecular weight.

The formation of water-in-oil emulsions, or mousse, which is termed 'emulsification', depends on oil composition and sea state. Emulsified oil can contain as much as 80% water in the form of micrometre-sized droplets dispersed within a continuous phase of oil (Daling & Brandvik, 1991; Bobra, 1991; Daling et al., 1997; Fingas, 1995).

Evaporation can result in the transfer of large proportions of spilled oil from the sea surface to the atmosphere, depending on the type of oil (Gundlach & Boehm, 1981).

Evaporation rates vary over space and time dependent on the prevailing sea temperatures, wind and current speeds, the surface area of the slick and entrained droplets that are exposed to the atmosphere as well as the state of weathering of the oil. Evaporation rates will decrease over time, depending on the calculated rate of loss of the more volatile compounds. By this process, the model can differentiate between the fates of different oil types.

Decay (degradation) of hydrocarbons may occur as the result of photolysis, which is a chemical process energised by ultraviolet light from the sun, and by biological breakdown, termed biodegradation. Many types of marine organisms ingest, metabolise and utilise oil as a carbon source, producing carbon dioxide and water as by-products.

Entrainment, dissolution and emulsification rates are correlated to wave energy, which is accounted for by estimating wave heights from the sustained wind speed, direction and fetch (i.e. distance downwind from land barriers) at different locations in the domain. Dissolution rates are dependent upon the proportion of soluble, short-chained hydrocarbon compounds, and the surface area at the oil/water interface of slicks. Dissolution rates are also strongly affected by the level of turbulence. For example, dissolution rates will be relatively high at the site of the release for a deep-sea discharge at high pressure.

The SIMAP weathering algorithms include terms to represent these dynamic processes. Technical descriptions of the algorithms used in SIMAP and validations against real spill events are provided in French (1998), French et al. (1999) and French-McCay (2004).

Input specifications for oil types include density, viscosity, pour-point, distillation curve (volume of oil distilled off versus temperature) and the aromatic/aliphatic component ratios within given boiling point ranges. The model calculates a distribution of the oil by mass into the following components:

- Surface-bound or floating oil;
- Entrained oil (non-dissolved oil droplets that are physically entrained by wave action);
- Dissolved hydrocarbons (principally the aromatic and short-chained aliphatic compounds);
- Evaporated hydrocarbons;
- Sedimented hydrocarbons; and
- Decayed hydrocarbons.

## 8 HYDROCARBON PROPERTIES

Table 8.1 and Table 8.2 summarise the physical properties and boiling point ranges for the condensate and MDO, respectively.

The characteristics for Thylacine condensate used as a proxy for the LOWC were based on a detailed assay. Thylacine condensate has an API of 44.3, a density of 805 kg/m<sup>3</sup> (at 15°C) and a low viscosity value of 0.875 cP.

The volatile to semi-volatile components (boiling point (BP) < 265 °C), which represent approximately 83% of the whole condensate is likely to evaporate over the first day if exposed to the atmosphere at local temperatures, leaving the less volatile portion (16%) to progressively evaporate more slowly. Only 1% of the condensate is considered persistent.

Thylacine condensate is categorised as a Group I oil (non – persistent oil) according to the International Tankers Owners Pollution Federation (ITOPF, 2014) and US EPA/USCG classifications. The classification is based on the specific gravity of hydrocarbons in combination with relevant boiling point ranges.

The heavier components (i.e low volatile portion) of the condensate will tend to entrain into the upper water column during the presence of moderate winds (> 10 knots) and can potentially remain entrained for as long as the winds persist. But can subsequently resurface when the winds ease, and waves abate.

The MDO has a density of 829.1 kg/m<sup>3</sup> (API of 37.6) and a low pour point of -14°C. The low viscosity (4 cP) indicates that this oil will spread quickly when released and will form a thin to low thickness film on the sea surface, increasing the rate of evaporation.

Generally, about 6.0% of the MDO mass should evaporate within the first 12 hours (Boiling point (BP) < 180°C); a further 34.6% should evaporate within the first 24 hours (180°C < BP < 265°C); and an additional 54.4% should evaporate over several days (265°C < BP < 380°C). Approximately 5% (by mass) of MDO will not evaporate, though will decay slowly over time.

The oil is categorised as a group II oil (light-persistent) according to the International Tankers Owners Pollution Federation (ITOPF, 2014) and US EPA/USCG classifications. The classification is based on the specific gravity of hydrocarbons in combination with relevant boiling point ranges.

It is important to note that some heavy components contained the condensate and MDO will have a strong tendency to physically entrain into the upper water column in the presence of moderate winds (i.e. >12 knots) and breaking waves but can re-float to the surface if these energies abate.

**Table 8.1 Physical properties for Thylacine condensate and MDO.**

Characteristic	Thylacine condensate	Marine Diesel Oil (MDO)
Density (kg/m <sup>3</sup> )	805 (at 15°C)	829.1 (at 25 °C)
API	44.3	37.6
Dynamic viscosity (cP)	9.95 (at 50°C)	4.0 (at 25 °C)
Hydrocarbon property category	Group I	Group II
Hydrocarbon property classification	Non-persistent oil	Light-persistent oil

**Table 8.2 Boiling point ranges for Thylacine condensate and MDO.**

Characteristics	Non-Persistent			Persistent
	Volatile (%)	Semi-volatile (%)	Low-volatility (%)	Residual (%)
Boiling point (°C)	<180	180-265	265-380	>380
Thylacine condensate	64.0	19.0	16.0	1.0
Marine diesel oil (MDO)	6.0	34.6	54.4	5.0

## 9 THRESHOLDS

The thresholds and their relationship to exposure for the sea surface, shoreline, and water column (entrained and dissolved hydrocarbons) are presented in Sections 9.1 to 9.3. Supporting justifications of the adopted thresholds applied during the study and additional context relating to the area of influence are also provided. It is important to note that the thresholds herein are based on NOPSEMA (2019).

### 9.1 Floating Oil Exposure

The modelling results can be presented to any levels; therefore, thresholds have been specified (based on scientific literature) to record floating oil exposure to the sea-surface at meaningful levels only, described in the following paragraphs.

The low threshold to assess the potential for floating oil exposure, was 1 g/m<sup>2</sup>, which equates approximately to an average thickness of 1 µm, referred to as visible oil. Oil of this thickness is described as rainbow sheen in appearance, according to the Bonn Agreement Oil Appearance Code (Bonn Agreement, 2009; AMSA, 2014). Table 9.1 provides a description of the appearance in relation to exposure zone thresholds used to classify the zones of floating oil exposure. Figure 9.1 shows photographs highlighting the difference in appearance between a rainbow sheen and metallic sheen. The low threshold is considered below levels which would cause environmental harm and it is more indicative of the areas perceived to be affected due to its visibility on the sea surface and potential to trigger temporary closures of areas (i.e., fishing grounds) as a precautionary measure.

Ecological impact has been estimated to occur at 10 g/m<sup>2</sup>, which equates to a film thickness of approximately 10 µm or 0.01 mm (French et al. 1996; French-McCay 2009) as this level of fresh oiling has been observed to mortally impact some birds through adhesion of oil to their feathers, exposing them to secondary effects such as hypothermia. The appearance of oil at this average thickness has been described as a metallic sheen (Bonn Agreement, 2009). Concentrations above 10 g/m<sup>2</sup> is also considered the lower actionable threshold, where oil may be thick enough for containment and recovery as well as dispersant treatment (AMSA, 2015).

Oil concentrations on the sea surface of 25 g/m<sup>2</sup> (or greater), would be harmful for all birds that have landed in an oil film due to potential contamination of their feathers, with secondary effects such as loss of temperature regulation and ingestion of oil through preening (Scholten et al., 1996; Koops et al., 2004). The appearance of oil at this thickness is also described as metallic sheen (Bonn Agreement, 2009). For this study the high exposure threshold was set to 50 g/m<sup>2</sup> and above based on NOPSEMA (2019). This threshold can also be used to inform response planning.

Table 9.2 defines the thresholds used to classify the zones of floating oil exposure reported herein.

**Table 9.1 The Bonn Agreement Oil Appearance Code.**

Code	Description Appearance	Layer Thickness Interval (g/m <sup>2</sup> or µm)	Litres per km <sup>2</sup>
1	Sheen (silvery/grey)	0.04 – 0.30	40 – 300
2	Rainbow	0.30 – 5.0	300 – 5,000
3	Metallic	5.0 – 50	5,000 – 50,000
4	Discontinuous True Oil Colour	50 – 200	50,000 – 200,000
5	Continuous True Oil Colour	≥ 200	≥ 200,000

**Figure 9.1** Photographs showing the difference between oil colour and thickness on the sea surface (source: adapted from Oil Spill Solutions, 2015).

**Table 9.2** Floating oil exposure thresholds used in this report (in alignment with NOPSEMA (2019)).

Threshold level	Floating oil (g/m <sup>2</sup> )	Description
Low	1	Approximates range of socio-economic effects and establishes planning area for scientific monitoring
Moderate	10	Approximates lower limit for harmful exposures to birds and marine mammals
High	50*	Approximates surface oil slick and informs response planning

\* 50 g/m<sup>2</sup> also used to define the threshold for actionable floating oil.

## 9.2 Shoreline Accumulation

There are many different types of shorelines, ranging from cliffs, rocky beaches, sandy beaches, mud flats and mangroves, and each of these influences the volume of oil that can remain stranded ashore and its thickness before the shoreline saturation point occurs. For instance, a sandy beach may allow oil to percolate through the sand, thus increasing its ability to hold more oil ashore over tidal cycles and various wave actions than an equivalent area of water; hence oil can increase in thickness onshore over time. A sandy beach shoreline was assumed as the default shoreline type for the modelling in this study, as it allows for the highest carrying capacity of oil (of the available open/exposed shoreline types). Hence the results are considered conservative (i.e., worst-case) given that a large part of the shoreline in the study area (especially the western part of the Joseph Bonaparte Gulf) is characterised by exposed rocky shorelines, with southern parts characterised by tidal mudflats and mangroves and eastern shorelines containing more sandy beaches.

Previous risk assessment studies, French-McCay et al. (2005a; 2005b) used a threshold of 10 g/m<sup>2</sup> to assess the potential for shoreline accumulation. This is a conservative threshold used to define regions of socio-economic impact, such as triggering temporary closures of adjoining fisheries or the need for shore clean-up on beaches or man-made features/amenities (breakwaters, jetties, marinas, etc.). It would equate to approximately 2 teaspoons of hydrocarbon per square meter of shoreline accumulation. The appearance is described as a stain/film. On that basis, the 10 g/m<sup>2</sup> shoreline accumulation threshold has been selected to define the zone of potential “low shoreline accumulation”.

French et al. (1996) and French-McCay (2009) define a shoreline oil accumulation threshold of 100 g/m<sup>2</sup>, or above, would potentially harm shorebirds and wildlife (fur-bearing aquatic mammals and marine reptiles on or along the shore) based on studies for sub-lethal and lethal impacts. This threshold has been used in previous environmental risk assessment studies (see French-McCay, 2003; French-McCay et al., 2004, French-McCay et al., 2011; 2012; NOAA, 2013). Additionally, a shoreline concentration of 100 g/m<sup>2</sup>, or above, is the minimum concentration that the oil can be effectively cleaned according to AMSA (2015). This threshold equates to approximately ½ a cup of oil per square meter of shoreline accumulation. The

appearance is described as a thin oil coat. Therefore, 100 g/m<sup>2</sup> has been selected to define the zone of potential “moderate shoreline accumulation”.

Observations by Lin & Mendelssohn (1996) demonstrated that loadings of more than 1,000 g/m<sup>2</sup> of hydrocarbon during the growing season would be required to impact marsh plants significantly. Similar thresholds have been found in studies assessing hydrocarbon impacts on mangroves (Grant et al., 1993; Suprayogi & Murray, 1999). This loading equates to approximately 1 litre of hydrocarbon per square meter of shoreline accumulation and the appearance is described as a hydrocarbon cover. A loading of 1,000 g/m<sup>2</sup> has been selected to define the zone of potential “high shoreline accumulation”.

These shoreline accumulation thresholds derived from extensive literature review (outlined in Table 9.3) align with the threshold values for oil spill modelling specified in NOPSEMA (2019).

**Table 9.3 Thresholds used to assess shoreline accumulation.**

Threshold level	Shoreline loading (g/m <sup>2</sup> )	Description
Low (socioeconomic/sublethal)	10	Predicts potential for some socio-economic impact
Moderate	100*	Loading predicts area likely to require clean-up effort
High	1,000	Loading predicts area likely to require intensive clean-up effort

\* 100 g/m<sup>2</sup> also used to define the threshold for actionable shoreline oil.

## 9.3 In-water Exposure

Oil is a mixture of thousands of hydrocarbons of varying physical, chemical, and toxicological characteristics, and therefore, demonstrate varying fates and impacts on organisms. As such, for in-water exposure, the SIMAP model provides separate outputs for dissolved and entrained hydrocarbons from oil droplets. The consequences of exposure to dissolved and entrained components will differ because they have different modes and magnitudes of effect.

Entrained hydrocarbon concentrations were calculated based on oil droplets that are suspended in the water column, though not dissolved. The composition of this oil would vary with the state of weathering (oil age) and may contain soluble hydrocarbons when the oil is fresh. Calculations for dissolved hydrocarbons specifically calculates oil components which are dissolved in water, which are known to be the primary source of toxicity exerted by oil.

A complicating factor that should be considered when assessing the consequence of dissolved and entrained oil distributions is that there will be some areas where both physically entrained oil droplets and dissolved hydrocarbons co-exist. Higher concentrations of each will tend to occur close to the source where sea conditions can force mixing of relatively unweathered oil into the water column, resulting in more rapid dissolution of soluble compounds.

### 9.3.1 Dissolved Hydrocarbons

Laboratory studies have shown that dissolved hydrocarbons exert most of the toxic effects of oil on aquatic biota (Carls et al., 2008; Nordtug et al., 2011; Redman, 2015). The mode of action is a narcotic effect, which is positively related to the concentration of soluble hydrocarbons in the body tissues of organisms (French-McCay, 2002). Dissolved hydrocarbons are taken up by organisms directly from the water column by absorption through external surfaces and gills, as well as through the digestive tract. Thus, soluble hydrocarbons are termed “bioavailable”.

Hydrocarbon compounds vary in water-solubility and the toxicity exerted by individual compounds is inversely related to solubility, however bioavailability will be modified by the volatility of individual compounds (Nirmalakhandan & Speece, 1988; Blum & Speece, 1990; McCarty, 1986; McCarty et al., 1992a, 1992b;

McCarty & Mackay, 1993; Verhaar et al., 1992, 1999; Swartz et al., 1995; French-McCay, 2002; McGrath and Di Toro, 2009). Of the soluble compounds, the greatest contributor to toxicity for water-column and benthic organisms are the lower-molecular-weight aromatic compounds, which are both volatile and soluble in water. Although they are not the most water-soluble hydrocarbons within most oil types, the polynuclear aromatic hydrocarbons (PAHs) containing 2-3 aromatic ring structures typically exert the largest narcotic effects because they are semi-soluble and not highly volatile, so they persist in the environment long enough for significant accumulation to occur (Anderson et al., 1974, 1987; Neff & Anderson, 1981; Malins & Hodgins, 1981; McAuliffe, 1987; NRC, 2003). The monoaromatic hydrocarbons (MAHs), including the BTEX compounds (benzene, toluene, ethylbenzene, and xylenes), and the soluble alkanes (straight chain hydrocarbons) also contribute to toxicity, but these compounds are highly volatile, so that their contribution will be low when oil is exposed to evaporation and higher when oil is discharged at depth where volatilisation does not occur (French-McCay, 2002).

French-McCay (2002) reviewed available toxicity data, where marine biota was exposed to dissolved hydrocarbons prepared from oil mixtures, finding that 95% of species and life stages exhibited 50% population mortality (LC<sub>50</sub>) between 6 and 400 ppb total PAH concentration after 96 hrs exposure, with an average of 50 ppb. Hence, concentrations lower than 6 ppb total PAH value should be protective of 97.5% of species and life stages even with exposure periods of days (at least 96 hours). Early life-history stages of fish appear to be more sensitive than older fish stages and invertebrates.

Exceedances of 10, 50 or 400 ppb over a 1 hour timestep (see Table 9.4) were applied in this study to indicate the increasing potential for sub-lethal to lethal toxic effects (or low to high), based on NOPSEMA (2019).

### 9.3.2 Entrained Hydrocarbons

Entrained hydrocarbons consist of oil droplets that are suspended in the water column and insoluble. Insoluble compounds in oil cannot be absorbed from the water column by aquatic organisms, therefore they are not bioavailable through absorption of compounds from the water. Exposure to these compounds would require routes of uptake other than absorption of soluble compounds. The route of exposure of organisms to whole oil alone include direct contact with tissues of organisms and uptake of oil by direct consumption, with potential for biomagnification through the food chain (NRC, 2003).

The 10 ppb threshold corresponds generally with the lowest trigger levels for chronic exposure for entrained hydrocarbons in the ANZECC & ARMCANZ (2000) water quality guidelines. Due to the requirement for relatively long exposure times (> 24 hours) for these concentrations to accumulate, they are likely to be more meaningful for juvenile fish, larvae and planktonic organisms that might be entrained (or otherwise moving) within the entrained plumes, or when entrained hydrocarbons adhere to organisms or are trapped against a shoreline for periods of several days or more.

This exposure zone is not considered to be of significant biological impact and is therefore outside the adverse exposure zone. This exposure zone represents the area contacted by the spill. This area does not define the area of influence as it is considered that the environment will not be affected by the entrained hydrocarbon at this level.

Thresholds of 10 ppb and 100 ppb were applied over a 1 hour time exposure (Table 9.4), to cover the range of thresholds outlined in ANZECC & ARMCANZ (2000) water quality guidelines and is per NOPSEMA (2019).

**Table 9.4** Dissolved and entrained hydrocarbon exposure values assessed over a 1-hour time step, as per NOPSEMA (2019).

	Exposure level	In-water threshold (ppb)	Description
Dissolved hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	Moderate	50	Approximates potential toxic effects, particularly sublethal effects to sensitive species
	High	400	Approximates toxic effects including lethal effects to sensitive species
Entrained hydrocarbons	Low	10	Establishes planning area for scientific monitoring based on potential for exceedance of water quality triggers
	High	100	As appropriate given oil characteristics for informing risk evaluation

## 9.4 Dispersion

A horizontal dispersion coefficient of 10 m<sup>2</sup>/s was used to account for dispersive processes acting at the surface that are below the scale of resolution of the input current field, based on typical values for open waters (Okubo, 1971). Dispersion rates within the water column (applicable for entrained and dissolved plumes of hydrocarbons) were specified at 1 m<sup>2</sup>/s, based on empirical data for the dispersion of hydrocarbon plumes (King & McAllister, 1998).

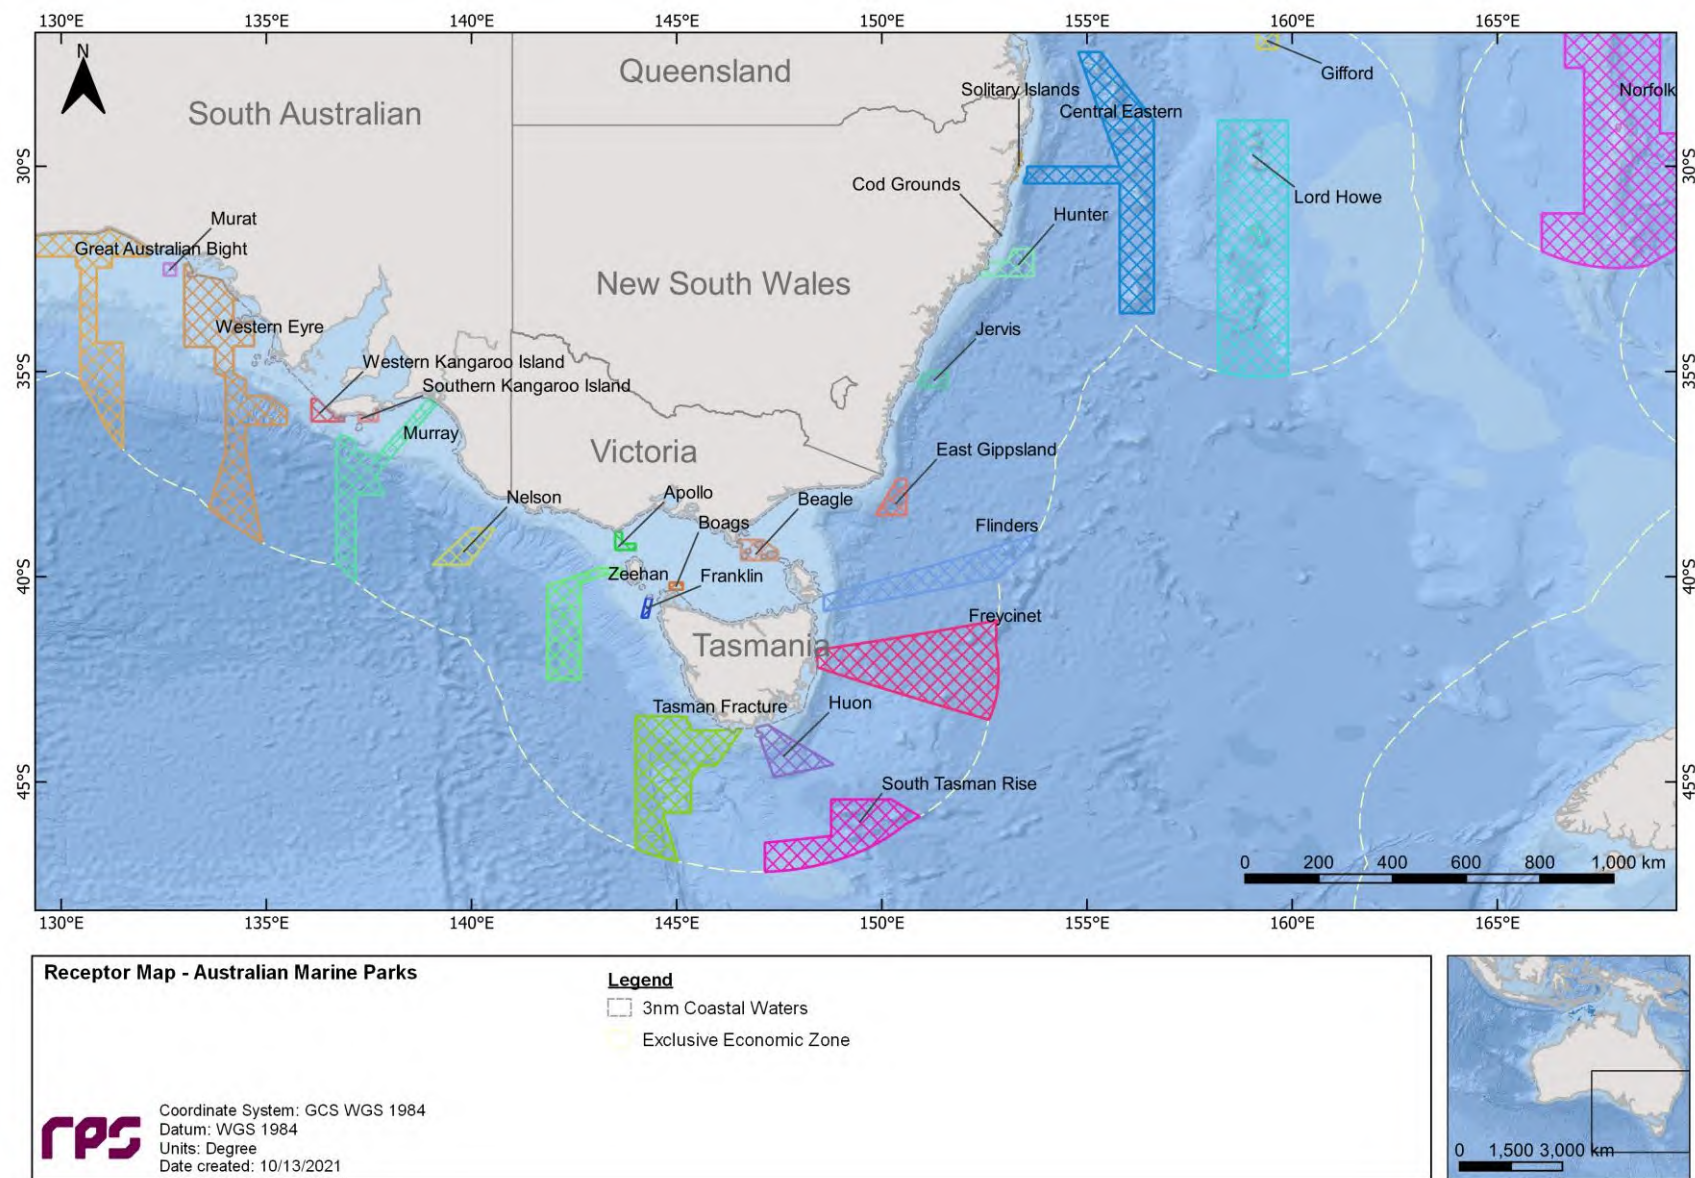

## 10 RECEPTORS

A range of environmental receptors and shorelines were assessed for floating oil exposure, shoreline contact and water column exposure (entrained and dissolved hydrocarbons) as part of the study (see Figure 10.1 to Figure 10.12). Receptor categories are shown in Table 10.1 which includes coastal and offshore islands grouped as shorelines. All other sensitive receptors other than submerged reefs, shoals and banks (RSB) were sourced from Australian Government Department of Agriculture, Water and the Environment (<http://www.environment.gov.au/>). Probabilities of exposure were separately calculated for each sensitive receptor area and have been tabulated.

**Table 10.1 Summary of receptors assessed for potential oil exposure.**

Receptor Category	Acronym	Hydrocarbon Exposure and Accumulation Assessment		
		Floating oil	Water Column	Shoreline

## 11 MODEL SETTINGS

Table 11.1 provides a summary of the spill modelling inputs and thresholds.

The potential risk of exposure to the surrounding waters and contact to shorelines was assessed for summer (October to March) and winter conditions (April to September).

The simulation length was carefully selected based on extensive sensitivity testing. During the sensitivity testing process, sample spill simulations were run for longer than intended durations. Upon completion of the spill simulations, the results were carefully assessed to examine the persistence of the hydrocarbon (i.e. whether the maximum evaporative loss has been achieved for the period modelled; and whether a substantial volume of hydrocarbons remain in the water column (if any)) in conjunction with the extent of floating oil exposure based on reporting thresholds. Once there was agreement between the two factors (i.e. the final fate of hydrocarbon is accounted for, and the full exposure area is identified) the simulation length was deemed appropriate.

**Table 11.1 Summary of the of the oil spill modelling inputs and thresholds.**

Parameter	Scenario 1 – Subsea LOWC	Scenario 2 – Vessel collision
Number of release locations	4	4
Number of randomly selected spill start times per location and per season	100	
Model period	Summer (October to March) and winter conditions (April to September)	
Oil type	Thylacine condensate	MDO
Spill release rate (m <sup>3</sup> /day)	1,549	-
Total Spill volume (m <sup>3</sup> )	139,400	350
Release type	Subsea	Surface
Release duration	90 days	6 hours
Simulation length (days)	120	30
Floating oil exposure thresholds (g/m <sup>2</sup> )	1 (low exposure) 10 (moderate exposure) 50 (high exposure)	
Shoreline accumulation thresholds (g/m <sup>2</sup> )	10 (low potential exposure) 100 (moderate potential exposure) 1,000 (high potential exposure)	
Dissolved hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 50 (50 ppb x 1 hr, potential moderate exposure) 400 (400 ppb x 1 hr, potential high exposure)	
Entrained hydrocarbon exposure thresholds (ppb)	10 (10 ppb x 1 hr, potential low exposure) 100 (100 ppb x 1 hr, potential high exposure)	

## 12 CALCULATION OF EXPOSURE RISK

The stochastic sampling approach provides an objective measure of the possible outcomes of a spill because randomly selected environmental conditions with more simulations will tend to use the most commonly occurring conditions, while more unusual conditions will be represented less frequently.

During each simulation, the SIMAP model records the location (by latitude, longitude and depth) of each of the particles (representing a given mass of oil) on or in the water column, at regular time steps. For any particles that contact a shoreline, the model records the accumulation of oil mass that arrives on each section of shoreline over time, less any mass that is lost to evaporation and/or subsequent removal by current and wind forces.

The collective records from all simulations are then analysed by dividing the study region into a three-dimensional grid. For oil particles that are classified as being at the water surface (floating oil), the sum of the mass in all oil particles (including accounting for spreading and dispersion effects) located within a grid cell, divided by the area of the cell provides estimates of the concentration of oil in that grid cell, at each time step. For entrained and dissolved hydrocarbons particles, concentrations are calculated at each time step by summing the mass of particles within a grid cell and dividing by the volume of the grid cell.

The concentrations of oil calculated for each grid cell, at each time step, are then analysed to determine whether concentration estimates exceed defined threshold concentrations over time.

Risks are then summarised as follows:

- The probability of exposure to a location is calculated by dividing the number of spill simulations where any contact occurred above a specified threshold at that location by the total number of replicate spill simulations. For example, if contact occurred at a location (above a specified threshold) during 21 out of 100 simulations, a probability of exposure of 21% is indicated;
- The minimum potential time to a shoreline location is calculated by the shortest time over which oil at a concentration above a threshold was calculated to travel from the source to the location in any of the replicate simulations;
- The maximum potential concentration of oil predicted for each shoreline section is the greatest mass per m<sup>2</sup> of shoreline calculated to strand at any location within that section during any of the replicate simulations; and
- Similar treatments were undertaken for entrained and dissolved hydrocarbon exposures.

Thus, the minimum time to shoreline and the maximum potential concentration estimates indicate the worst potential outcome of the modelled spill scenario for each section of shoreline. However, the average over the replicates presents an average of the potential outcomes, in terms of hydrocarbons that could strand.

Note also that results quoted for sections of shoreline are derived for any individual location within that section, as a conservative estimate. Locations will represent shoreline lengths of the order of ~1 km, while sections or regions will represent shorelines spanning tens to hundreds of kilometres. The maximum potential concentrations quoted will not necessarily occur over the full extent of each section, therefore multiplying the maximum concentration estimates by the full area of the section is not recommended as this will greatly overestimate the total volume expected on that section.

## 13 LOCATION 1 LOWC RESULTS

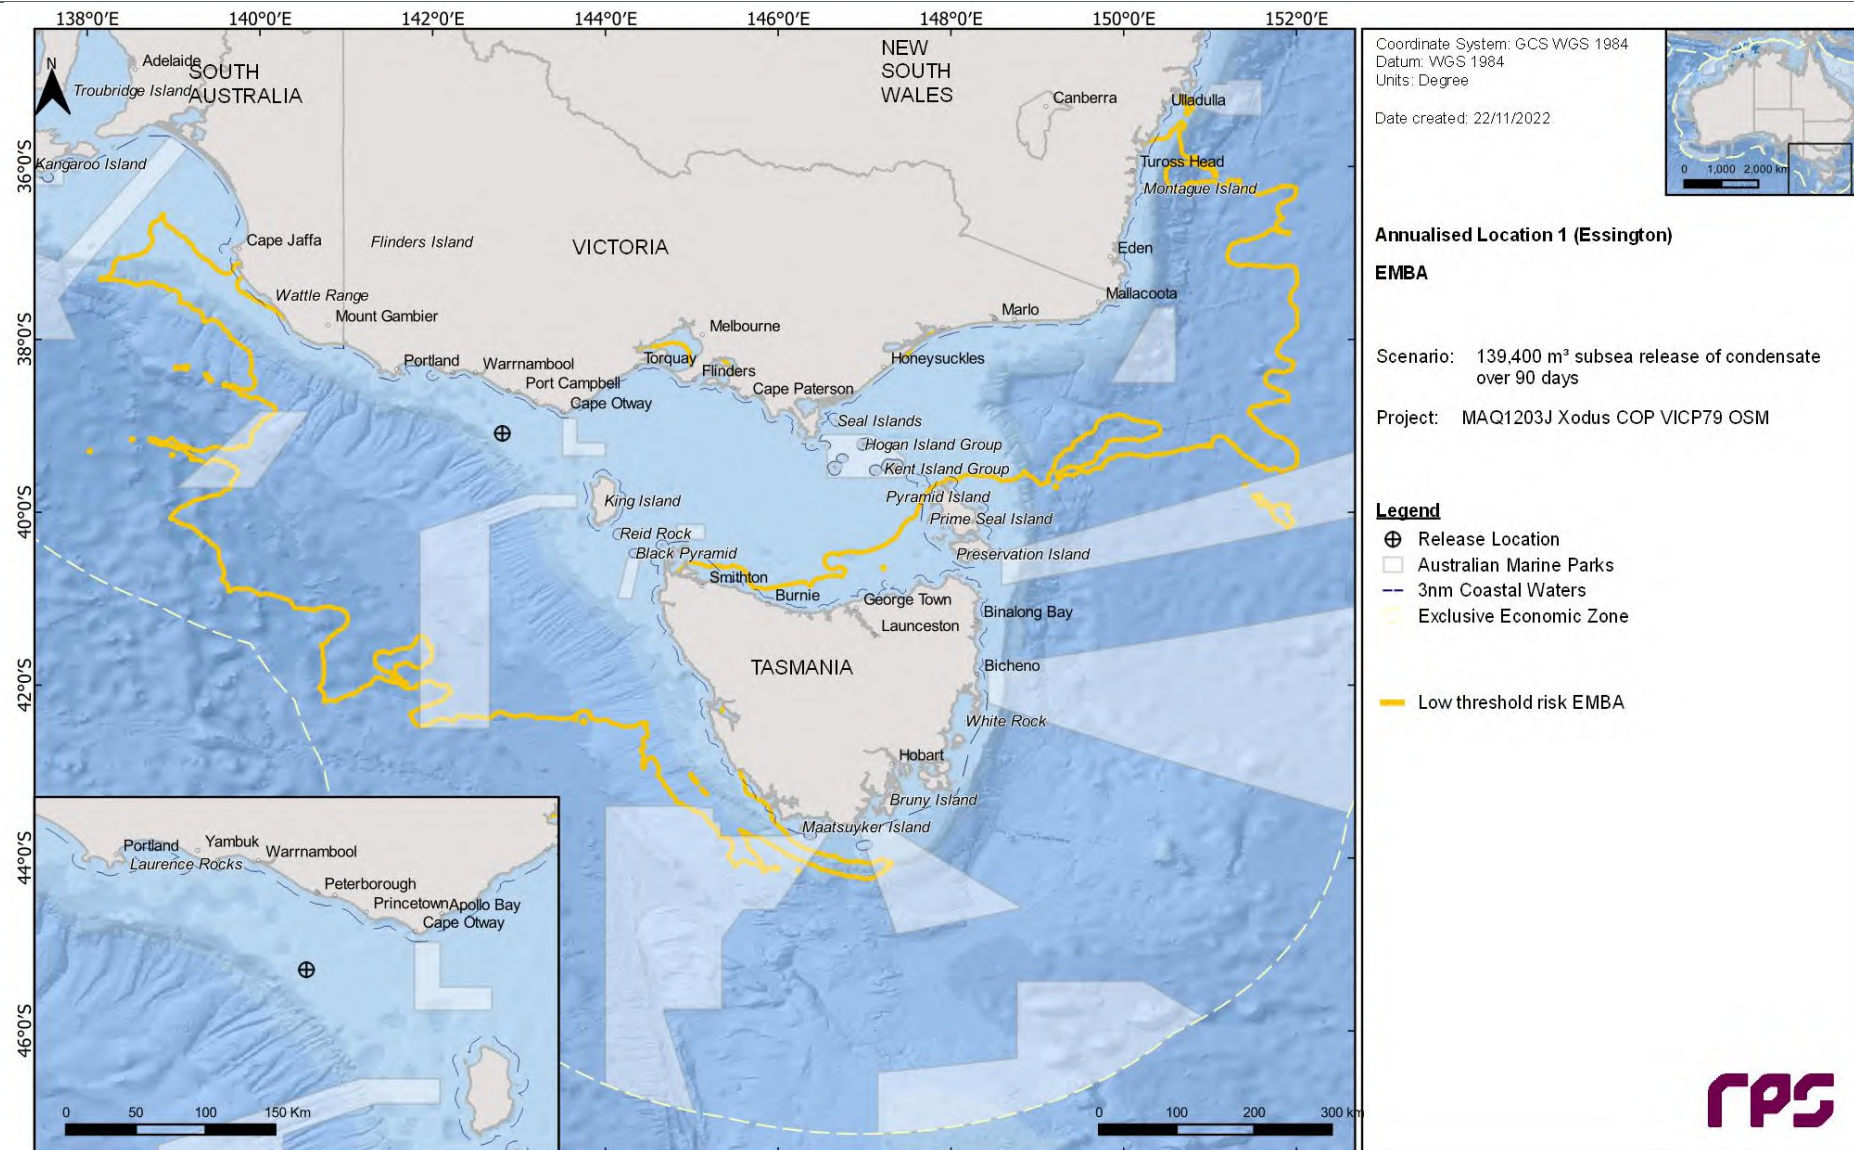

This scenario examined the potential exposure following a subsea LOWC at Location 1. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 13.1 presents the EMBA, Section 13.2 shows the seasonal (or stochastic) results, while Section 13.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 13.1 EMBA

Figure 13.1 shows the EMBA for Location 1. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

## REPORT

**Figure 13.1** Predicted low threshold EMBA from a subsea LOWC at Location 1. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 13.2 Stochastic Analysis

### 13.2.1 Floating Oil Exposure

Table 13.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 13.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 13.2 to Figure 13.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 1,323 km<sup>2</sup> and 1,072 km<sup>2</sup>, respectively.

**Table 13.1** Maximum distances and directions travelled by floating oil from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

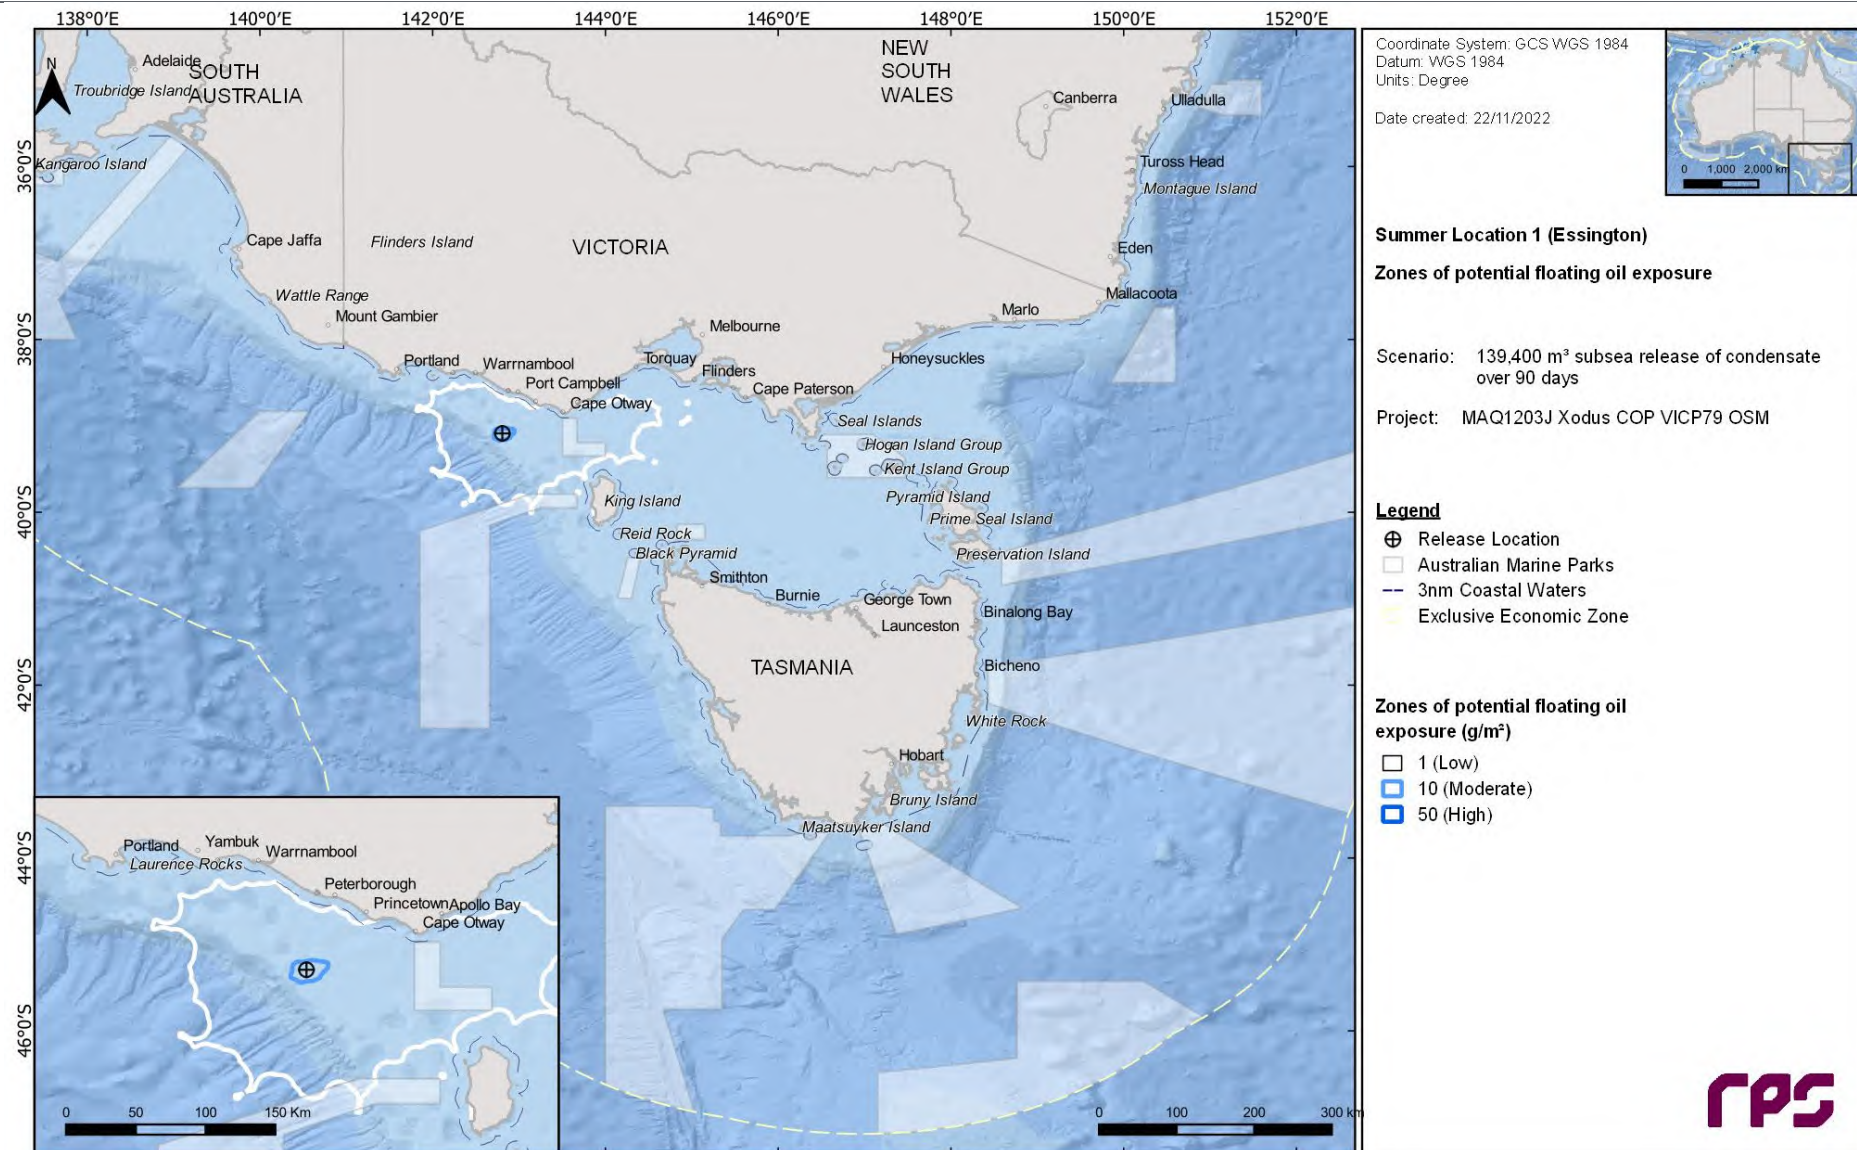

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	190.3	11.6	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	116.1	11.1	-
	Direction	E	ENE	-
Winter	Maximum distance (km) from release location	306.7	9.3	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	133.5	9.3	-
	Direction	E	ESE	-

### 13.2.2 Shoreline Accumulation

Table 13.3 summarises the predicted accumulation on any shoreline during each season.

Table 13.4 and Table 13.5 summarises the accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 13.4 and Figure 13.5.

**Table 13.3 Summary of accumulation on any shoreline from a subsea LOWC at Location 1 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	91	100
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	6.00	4.08
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	38.6	51.9
Average volume of hydrocarbons ashore (m <sup>3</sup> )	7.1	13
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	105	158
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	23.4	53.1
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	6	11
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	2.7	3.7
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	-
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	-

## REPORT

**Table 13.4** Summary of accumulation on individual shoreline sectors from a subsea LOWC at Location 1 during summer conditions. Results were calculated from 100 spill simulations per season.

Shoreline sector	Maximum probability of shoreline accumulation (%)			Minimum time before shoreline accumulation (days)			Load on shoreline (g/m <sup>2</sup> )		Volume on shoreline (m <sup>3</sup> )		Mean length of shoreline accumulation (km)			Maximum length of shoreline accumulation (km)

## REPORT

## REPORT

**Figure 13.5** Maximum potential shoreline loading from a subsea LOWC at Location 1 during winter conditions. The results were calculated from 100 spill simulations.

### 13.2.3 In-water exposure

#### 13.2.3.1 Dissolved Hydrocarbons

Table 13.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 13.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 13.6 and Figure 13.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

**Table 13.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	743	625	367
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	546	386	175
	Direction	ENE	E	E
Winter	Maximum distance (km) from release location	748	608	293
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	619	396	226
	Direction	ENE	E	E

**Table 13.7** Probability of dissolved hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

		Summer				Winter

## REPORT

**Figure 13.6** Zones of potential dissolved hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 1 during summer conditions. The results were calculated from 100 spill simulations.

## REPORT

### 13.2.3.2 Entrained Hydrocarbons

Table 13.8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

Table 13.9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layers, for each season.

Figure 13.8 to Figure 13.9 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer.

**Table 13.8** Maximum distance and direction by entrained hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential entrained hydrocarbon exposure	
		Low	High
Summer	Maximum distance (km) from release location	868	699
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	773	412
	Direction	ENE	ENE
Winter	Maximum distance (km) from release location	867	440
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	799	350
	Direction	ENE	N

**Table 13.9** Probability of entrained hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.

## REPORT

**Figure 13.8** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 1 during summer conditions. The results were calculated from 100 spill simulations.

## REPORT

**Figure 13.9** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 1 during winter conditions. The results were calculated from 100 spill simulations.

## 13.3 Deterministic Analysis

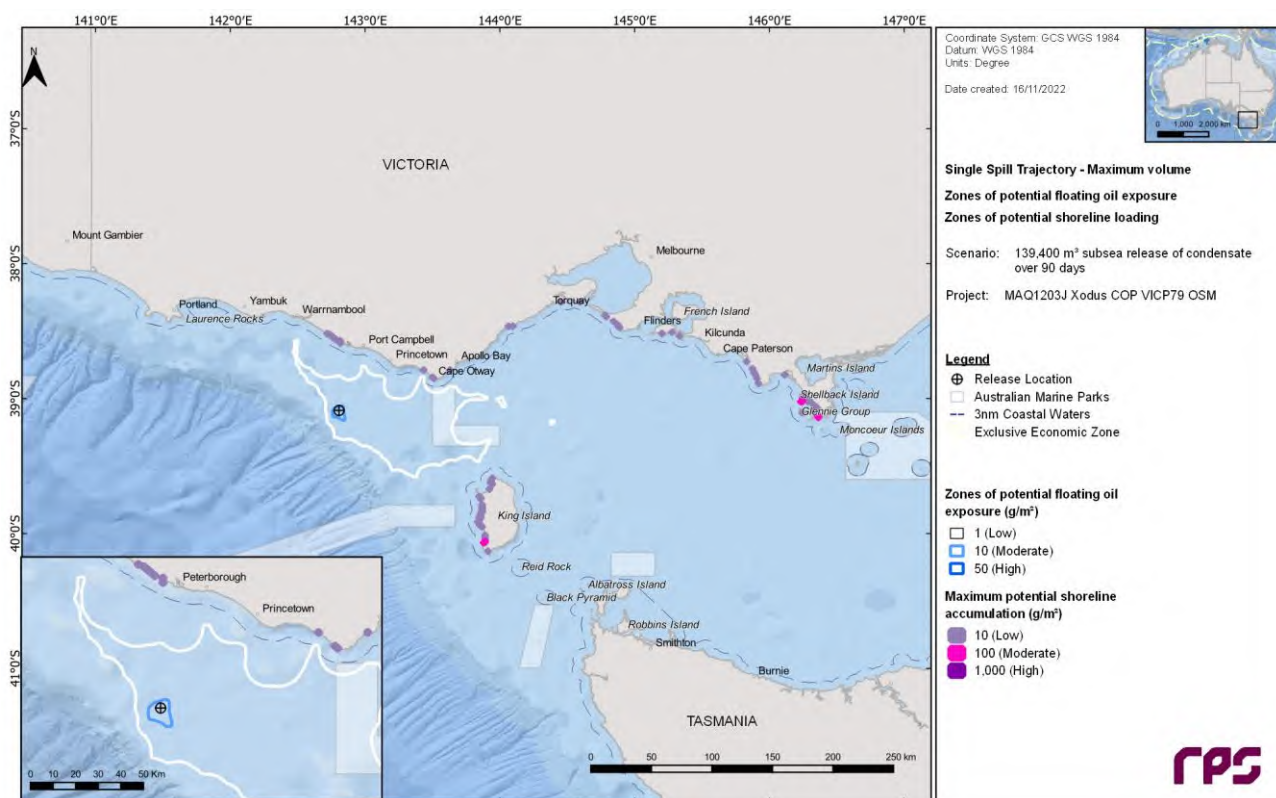

### 13.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 84 and commenced during winter conditions, 5 pm 9<sup>th</sup> April 2019.

Figure 13.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 16.

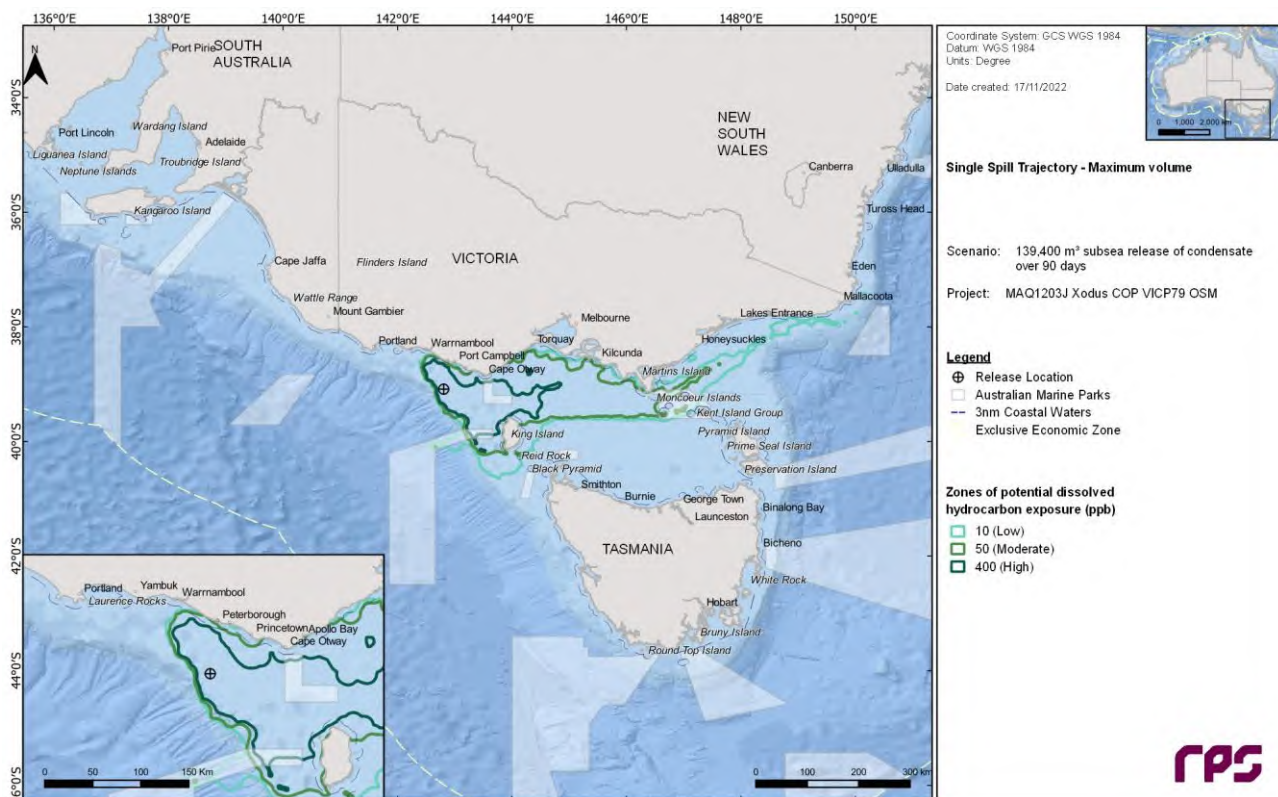

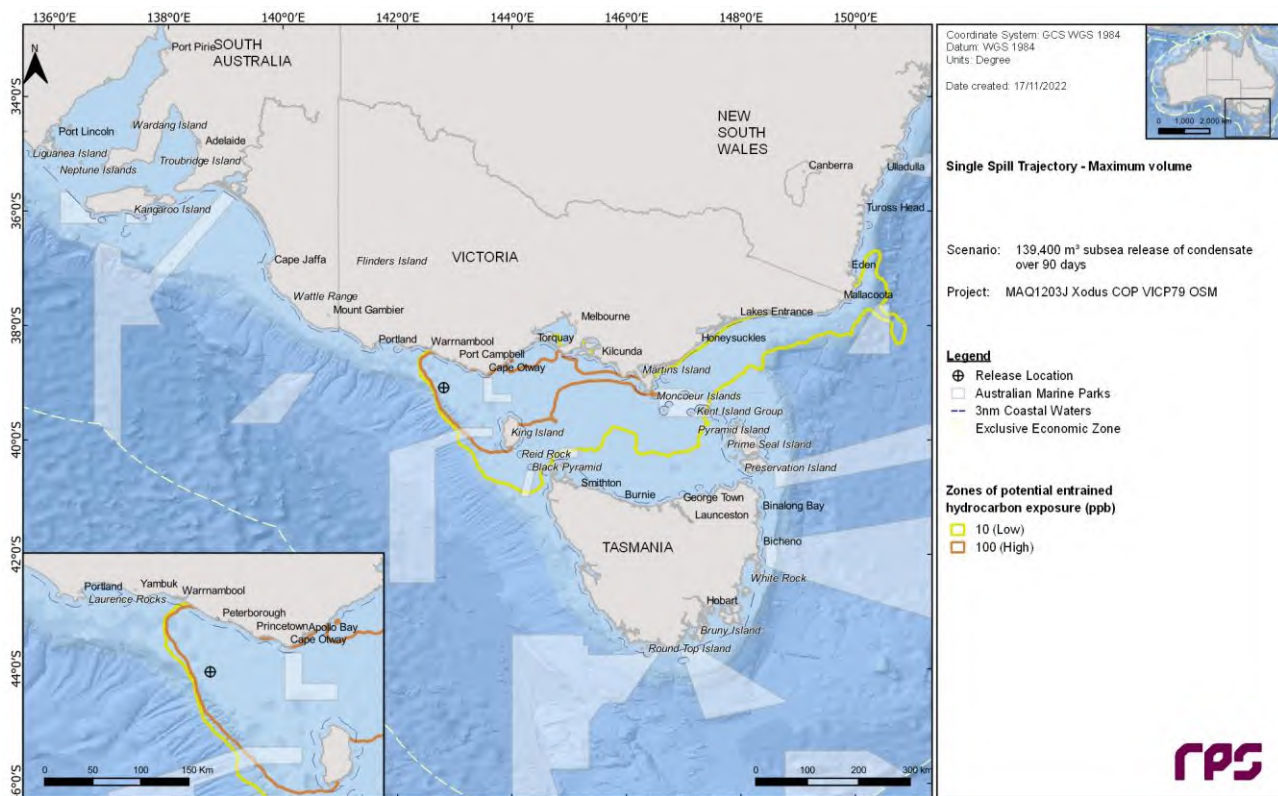

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 13.11 and Figure 13.12, respectively.

Figure 13.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 78,140 m<sup>3</sup> (~56%) was lost to the atmosphere through evaporation. Approximately, 59,630 m<sup>3</sup> (~43%) of the released volume decayed, while approximately 1,430 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 20 m<sup>3</sup> (~0.1%) was present on the shorelines.

**Figure 13.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days of the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 1.**

**Figure 13.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 1.**

## 14 LOCATION 2 LOWC RESULTS

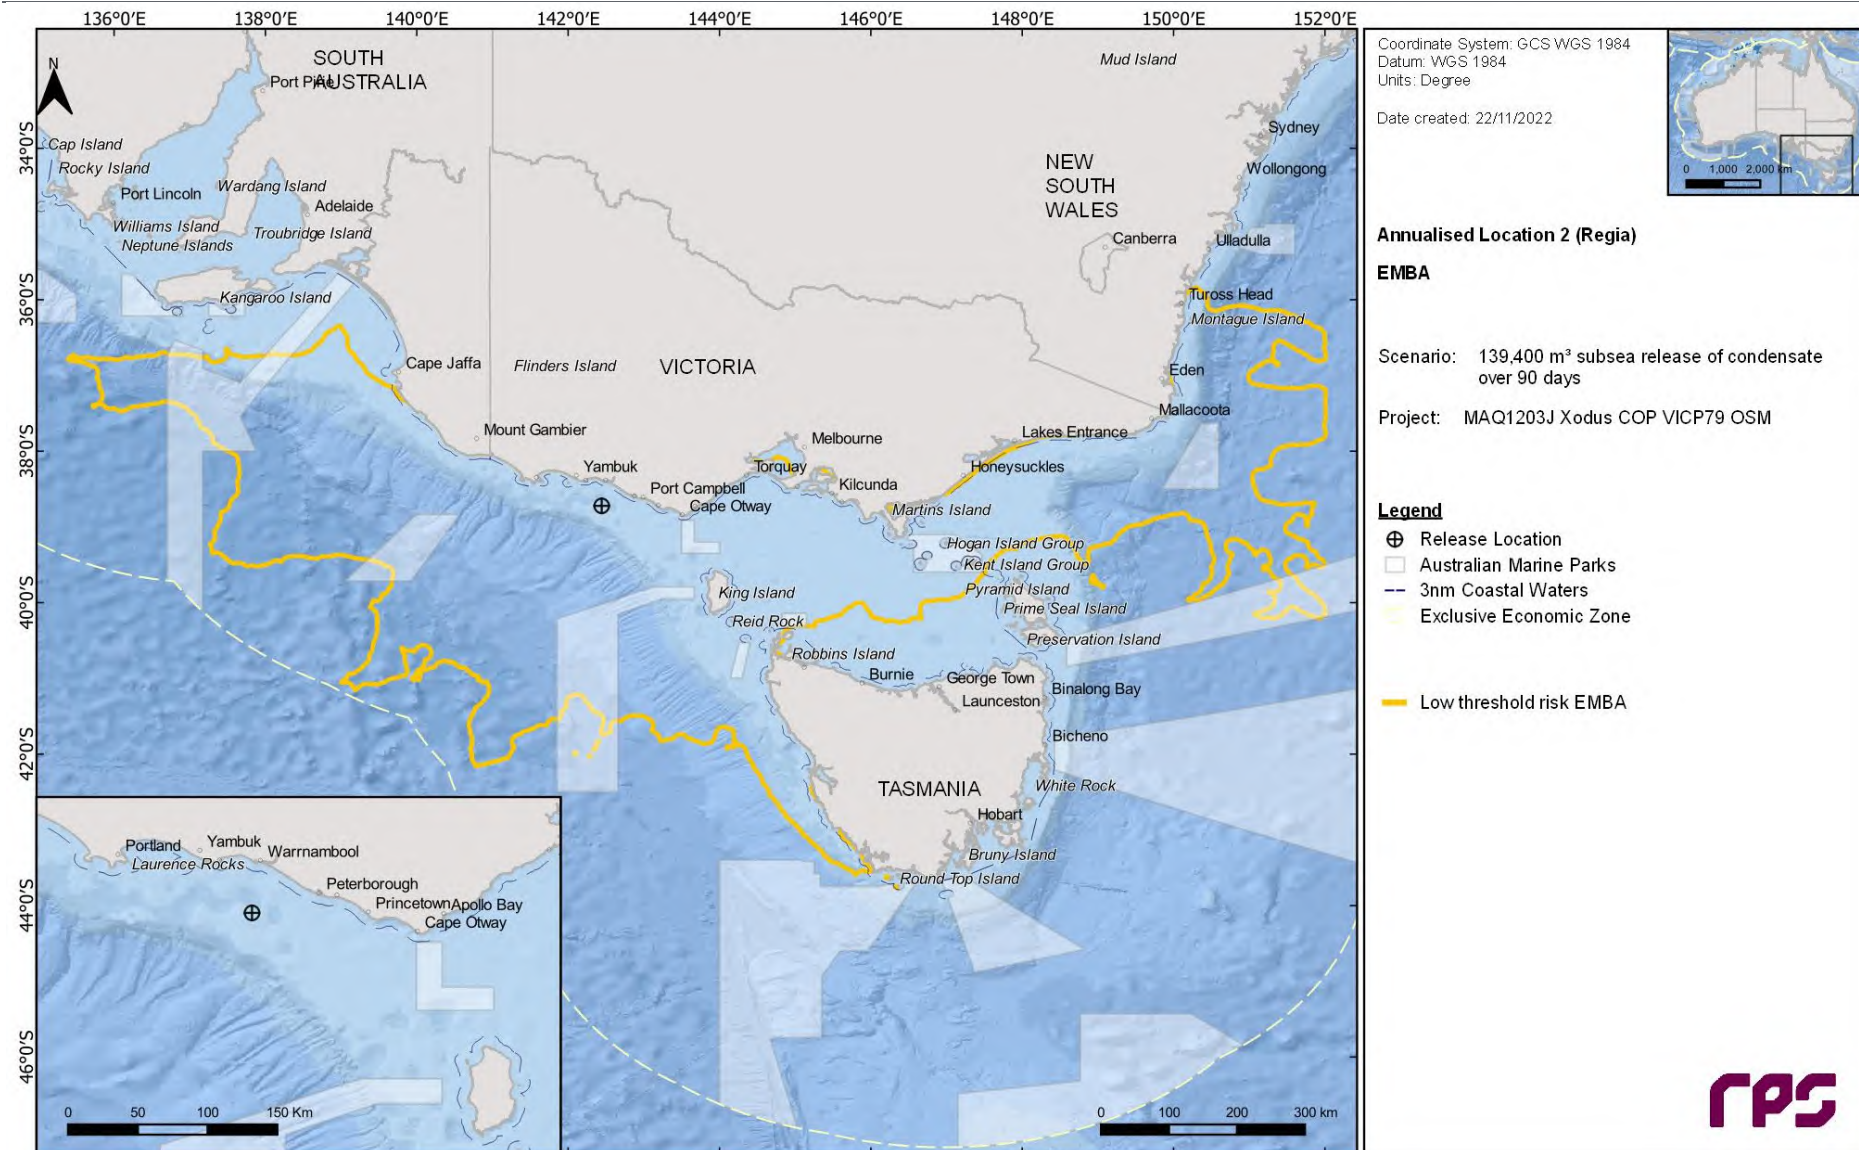

This scenario examined the potential exposure following a subsea LOWC at Location 2. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 14.1 presents the EMBA, Section 14.2 shows the seasonal (or stochastic) results, while Section 14.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 14.1 EMBA

Figure 14.1 shows the EMBA for Location 2. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

## REPORT

**Figure 14.1** Predicted low threshold EMBA from a subsea LOWC at Location 2. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 14.2 Stochastic Analysis

### 14.2.1 Floating Oil Exposure

Table 14.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 14.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 14.2 to Figure 14.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 1,229 km<sup>2</sup> and 980 km<sup>2</sup>, respectively.

**Table 14.1 Maximum distances and directions travelled by floating oil from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	179.2	11.1	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	112.6	10.1	-
	Direction	ESE	N	-
Winter	Maximum distance (km) from release location	342.1	10.1	0.4
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	151.9	9.5	0.4
	Direction	W	W	SE

## REPORT

**Table 14.2** Summary of the potential exposure by floating oil to individual receptors from a subsea LOWC at Location 2 for each season. Results were calculated from 100 spill simulations per season.

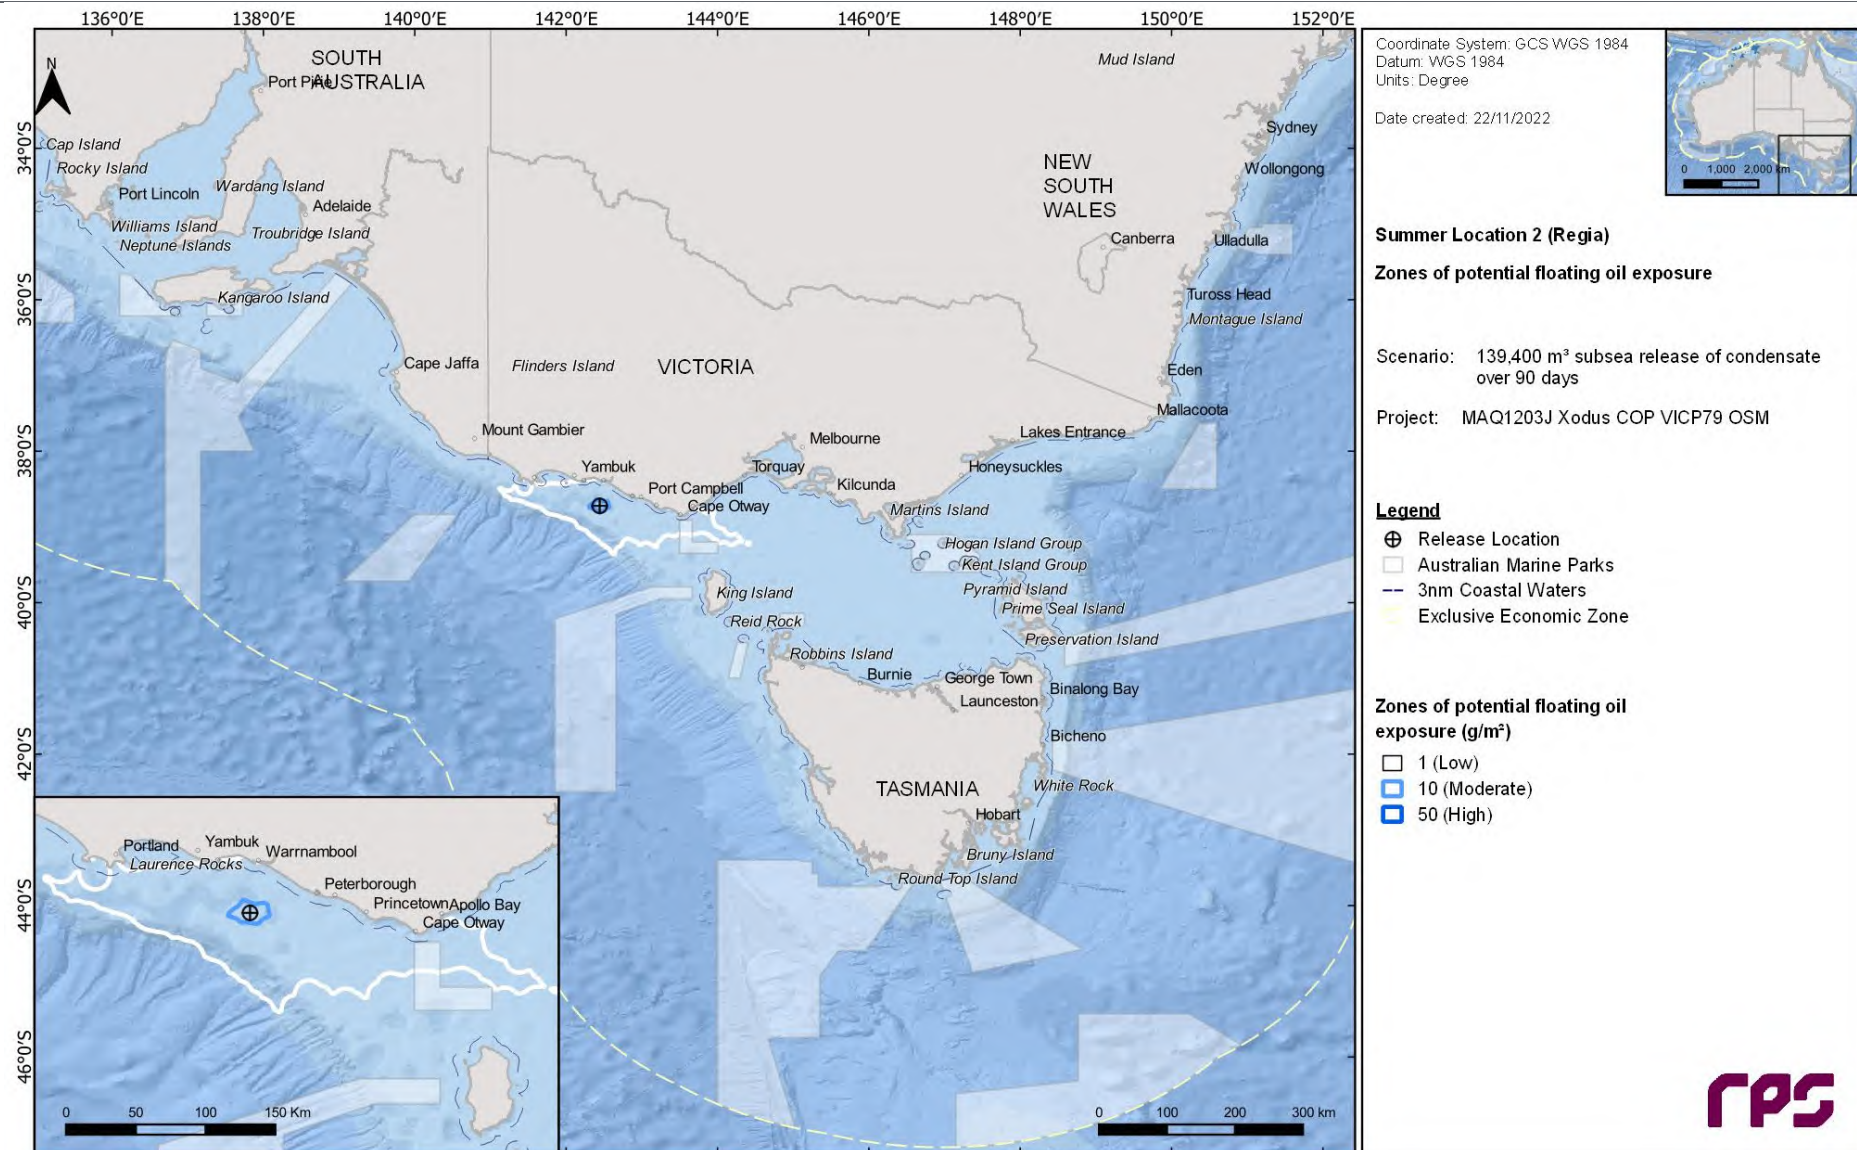

Receptor		Summer						Winter					
		Probability of floating oil exposure (%)			Minimum time before floating oil exposure (days)			Probability of floating oil exposure (%)			Minimum time before floating oil exposure (days)

## 14.2.2 Shoreline Accumulation

Table 14.3 summarises the predicted accumulation on any shoreline during each season.

Table 14.4 and Table 14.5 summarises the accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 14.4 and Figure 14.5.

**Table 14.3 Summary of accumulation on any shoreline from a subsea LOWC at Location 2 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	100	100
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	4.21	3.63
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	121.3	139.7
Average volume of hydrocarbons ashore (m <sup>3</sup> )	26.9	47.1
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	201	222
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	70.8	101.4
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	47	35
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	8.4	15.4
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	3
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	3

## REPORT

**Table 14.4** Summary of accumulation on individual shoreline sectors from a subsea LOWC at Location 2 during summer conditions. Results were calculated from 100 spill simulations per season.

## REPORT

**Figure 14.4** Maximum potential shoreline loading from a subsea LOWC at Location 2 during summer conditions. The results were calculated from 100 spill simulations.

## REPORT

### 14.2.3 In-water exposure

#### 14.2.3.1 Dissolved Hydrocarbons

Table 14.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 14.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 14.6 and Figure 14.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

**Table 14.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	758	458	265
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	507	337	207
	Direction	ENE	E	E
Winter	Maximum distance (km) from release location	711	584	338
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	570	369	304
	Direction	ENE	E	E

**Table 14.7** Probability of dissolved hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.

### 14.2.3.2 Entrained Hydrocarbons

Table 14.8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

Table 14.9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layers, for each season.

Figure 14.8 and Figure 14.9 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer.

**Table 14.8** Maximum distance and direction by entrained hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential entrained hydrocarbon exposure	
		Low	High
Summer	Maximum distance (km) from release location	879	437
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	819	375
	Direction	ENE	E
Winter	Maximum distance (km) from release location	856	477
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	822	396
	Direction	E	E

**Table 14.9** Probability of entrained hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.

# REPORT

**Figure 14.8** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 2 during summer conditions. The results were calculated from 100 spill simulations.

**Figure 14.9** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 2 during winter conditions. The results were calculated from 100 spill simulations.

## 14.3 Deterministic Analysis

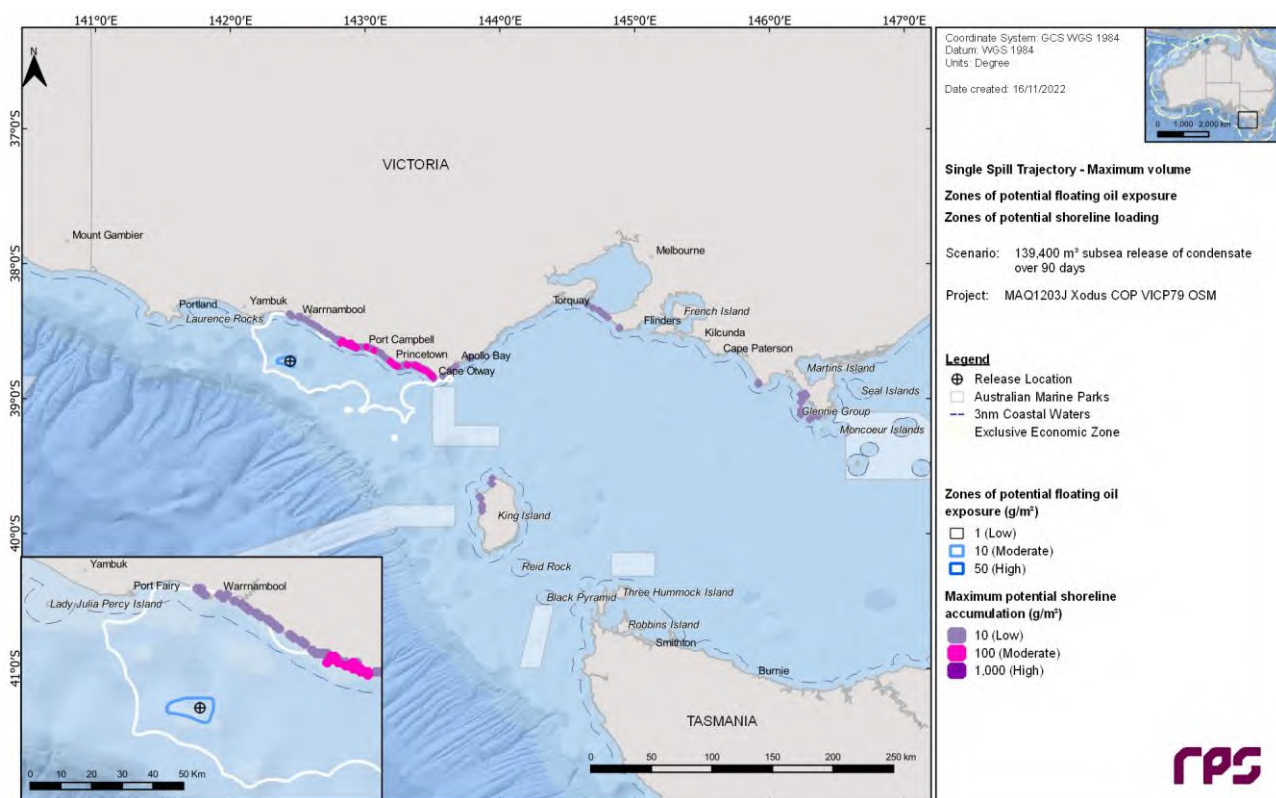

### 14.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 94 and commenced during winter conditions, 2 pm 5<sup>th</sup> July 2010.

Figure 14.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 11.

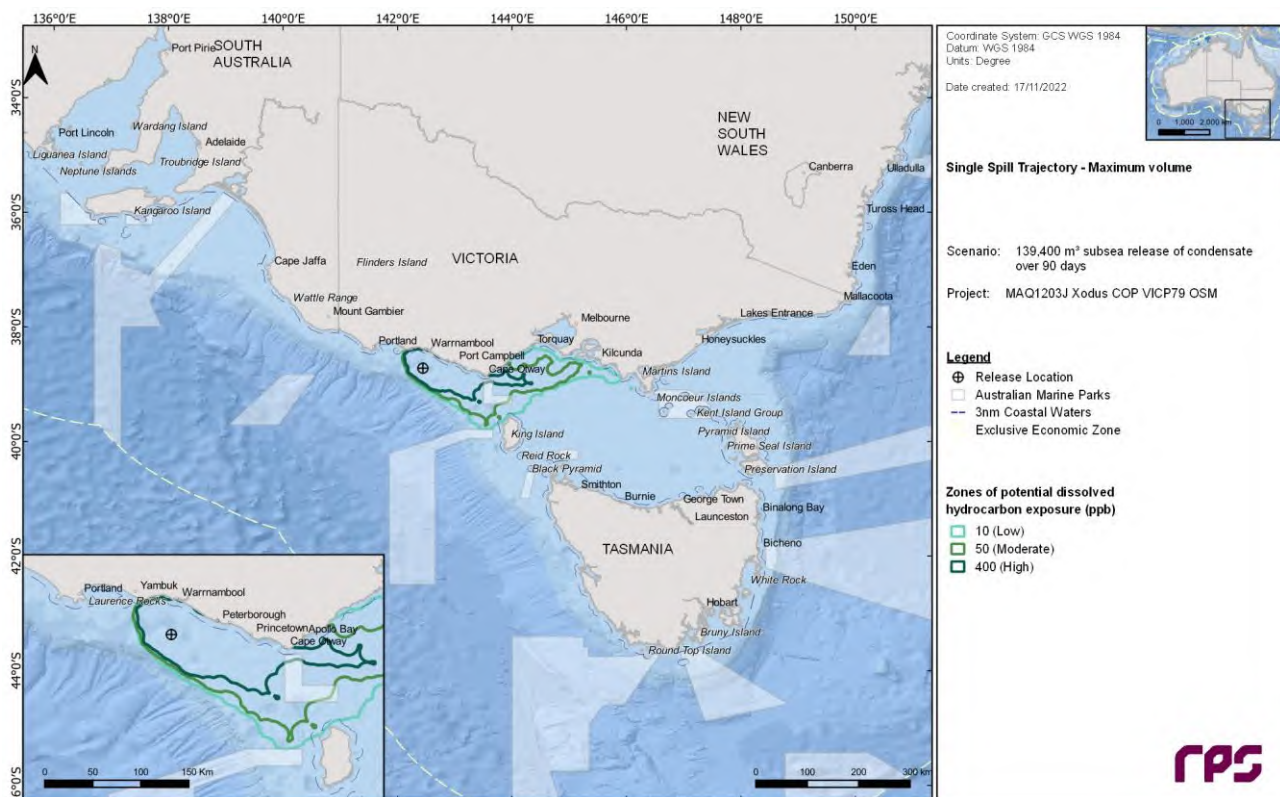

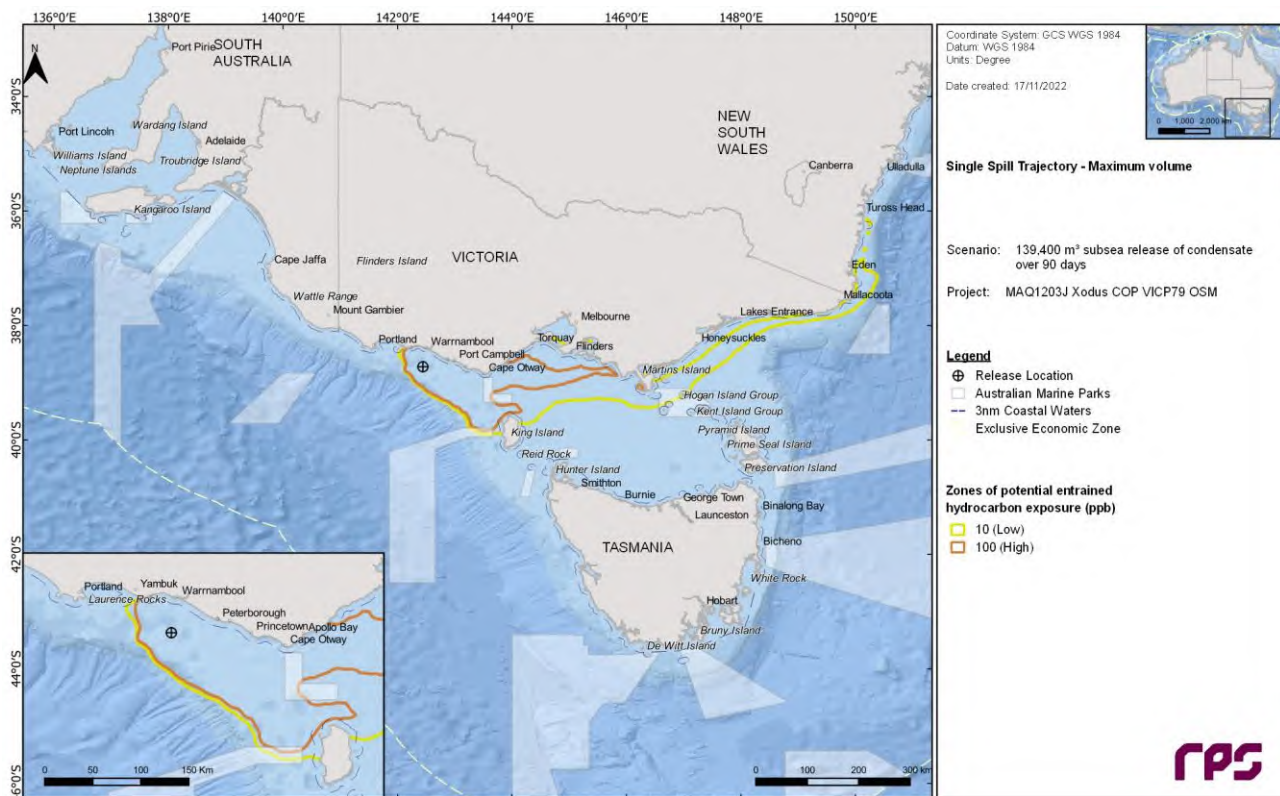

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 14.11 and Figure 14.12, respectively.

Figure 14.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 75,660 m<sup>3</sup> (~54%) was lost to the atmosphere through evaporation. Approximately, 61,600 m<sup>3</sup> (~44%) of the released volume decayed, while approximately 2,055 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 97 m<sup>3</sup> (<0.1%) was present on the shorelines.

**Figure 14.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days of the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 2.**

**Figure 14.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 2.**

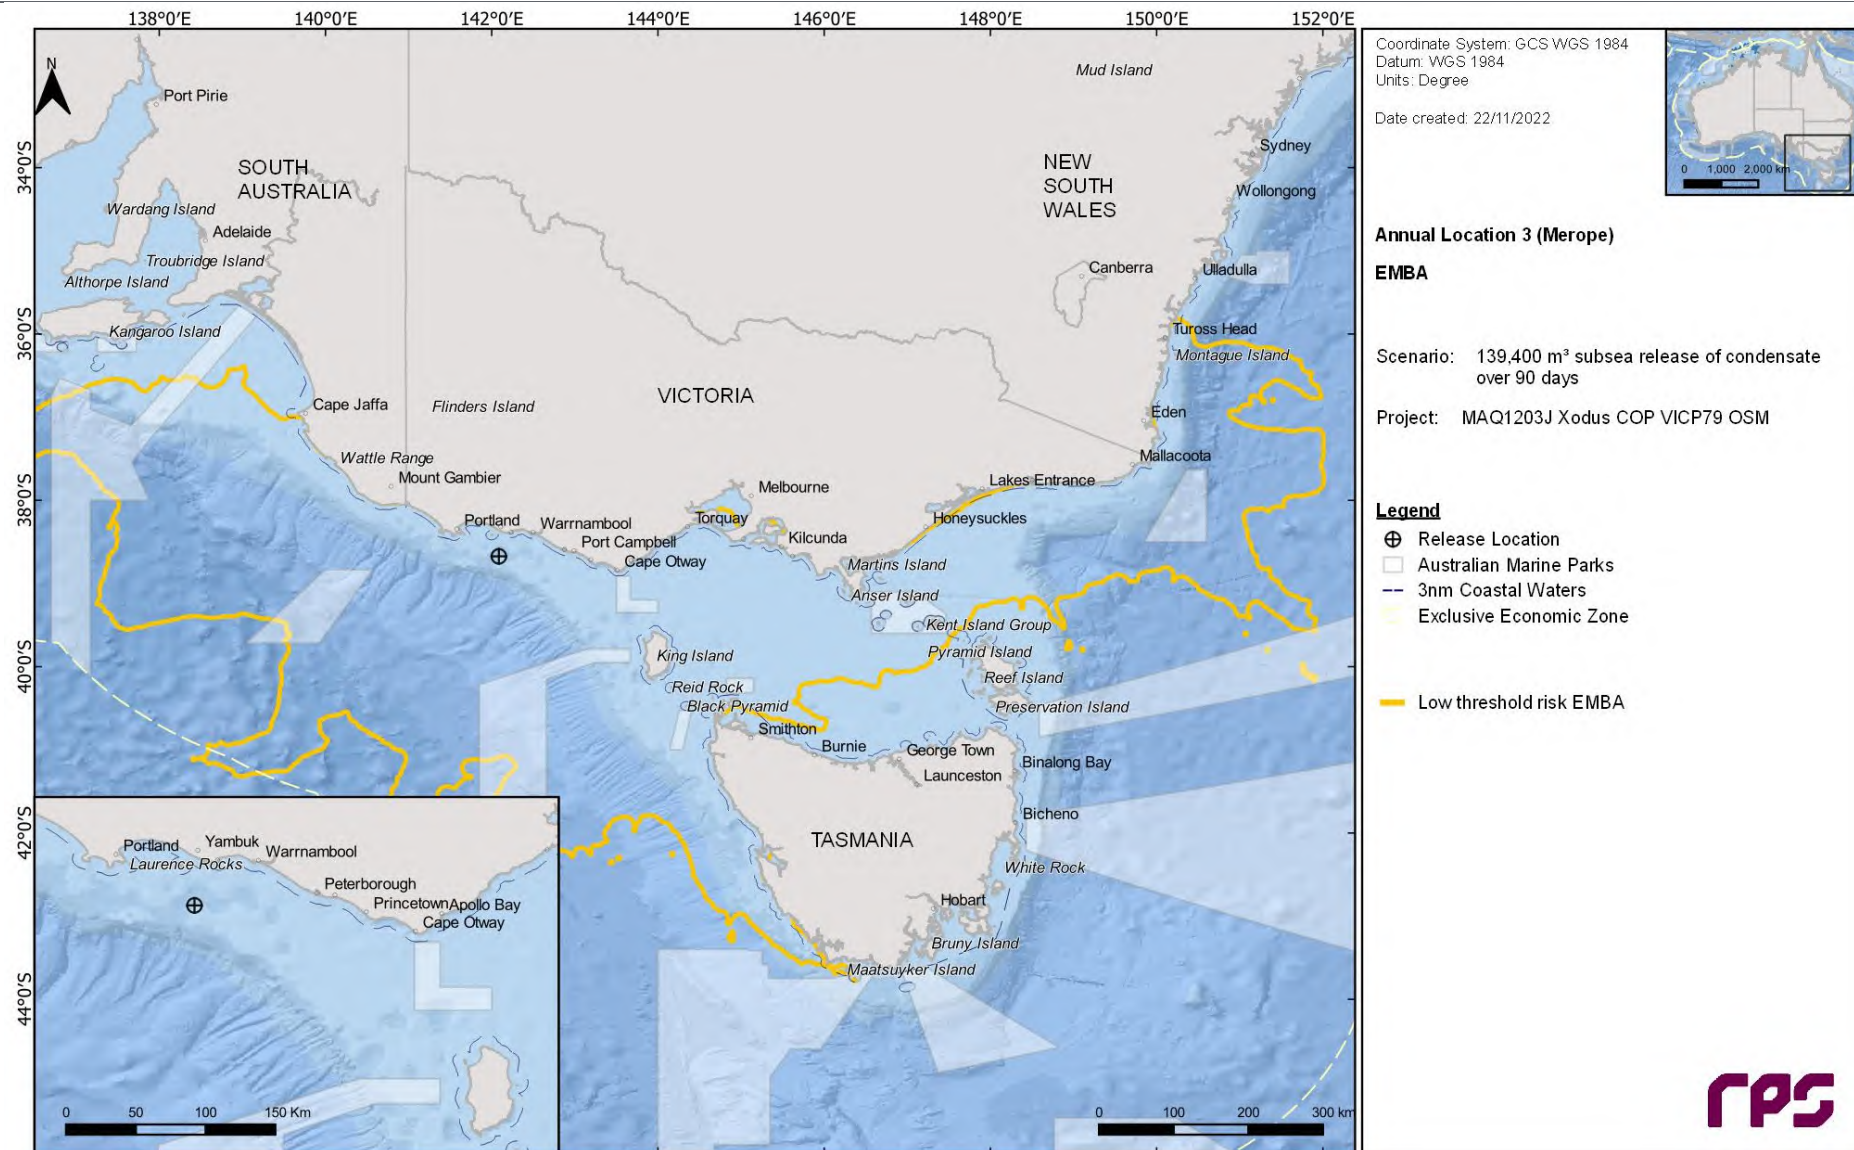

## 15 LOCATION 3 LOWC RESULTS

This scenario examined the potential exposure following a LOWC at Location 3. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 15.1 presents the EMBA, Section 15.2 shows the seasonal (or stochastic) results, while Section 15.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 15.1 EMBA

Figure 15.1 shows the EMBA for Location 3. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

**Figure 15.1** Predicted low threshold EMBA from a subsea LOWC at Location 3. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 15.2 Stochastic Analysis

### 15.2.1 Floating Oil Exposure

Table 15.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 15.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 15.2 to Figure 15.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 1,325 km<sup>2</sup> and 1,070 km<sup>2</sup>, respectively.

**Table 15.1 Maximum distances and directions travelled by floating oil from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	175.7	10.1	0.4
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	118.8	9.7	0.4
	Direction	E	ENE	NE
Winter	Maximum distance (km) from release location	165.2	10.1	0.4
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	124.9	8.7	0.3
	Direction	E	E	E

## REPORT

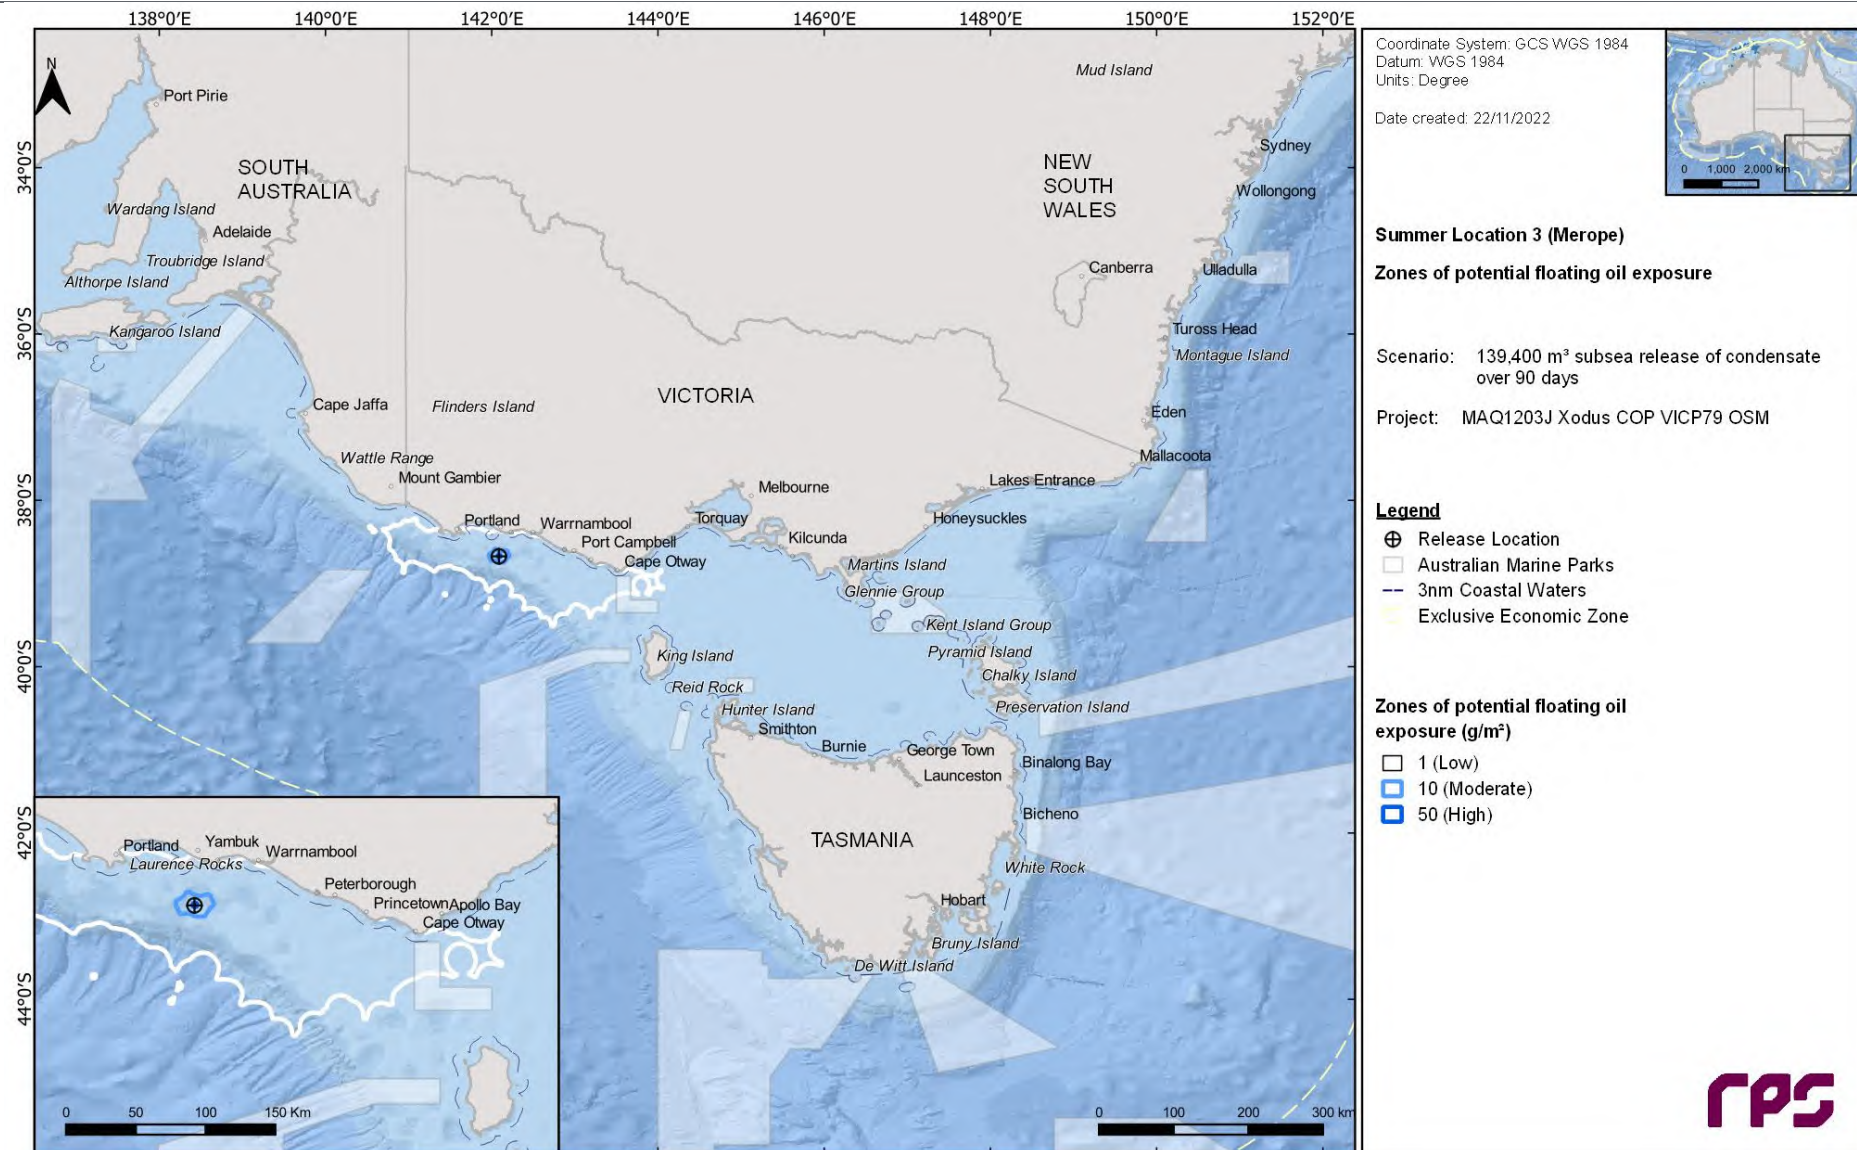

**Table 15.2** Summary of the potential exposure by floating oil to individual receptors from a subsea LOWC at Location 3 for each season. Results were calculated from 100 spill simulations per season.

## 15.2.2 Shoreline Accumulation

Table 15.3 summarises the predicted accumulation on any shoreline during each season.

Table 15.4 and Table 15.5 summarises the accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 15.4 and Figure 15.5.

**Table 15.3 Summary of accumulation on any shoreline from a subsea LOWC at Location 3 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	100	100
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	3.79	4.04
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	66.6	140.0
Average volume of hydrocarbons ashore (m <sup>3</sup> )	13.7	33.7
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	192	231
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	65.6	86.6
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	20	42
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	5.4	10.7
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	-
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	-

## REPORT

## 15.2.3 In-water exposure

### 15.2.3.1 Dissolved Hydrocarbons

Table 15.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 15.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 15.6 and Figure 15.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

**Table 15.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	804	427	319
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	431	358	204
	Direction	ENE	E	E
Winter	Maximum distance (km) from release location	731	451	295
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	516	339	188
	Direction	ENE	E	WNW

**Table 15.7** Probability of dissolved hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

### 15.2.3.2 Entrained Hydrocarbons

Table 15.8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

DRAFT

Table 15.9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layers, for each season.

Figure 15.8 and Figure 15.9 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer.

**Table 15.8** Maximum distance and direction by entrained hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential entrained hydrocarbon exposure	
		Low	High
Summer	Maximum distance (km) from release location	897	409
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	819	348
	Direction	ENE	E
Winter	Maximum distance (km) from release location	831	450
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	792	370
	Direction	ENE	E

**Table 15.9** Probability of entrained hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

## 15.3 Deterministic Analysis

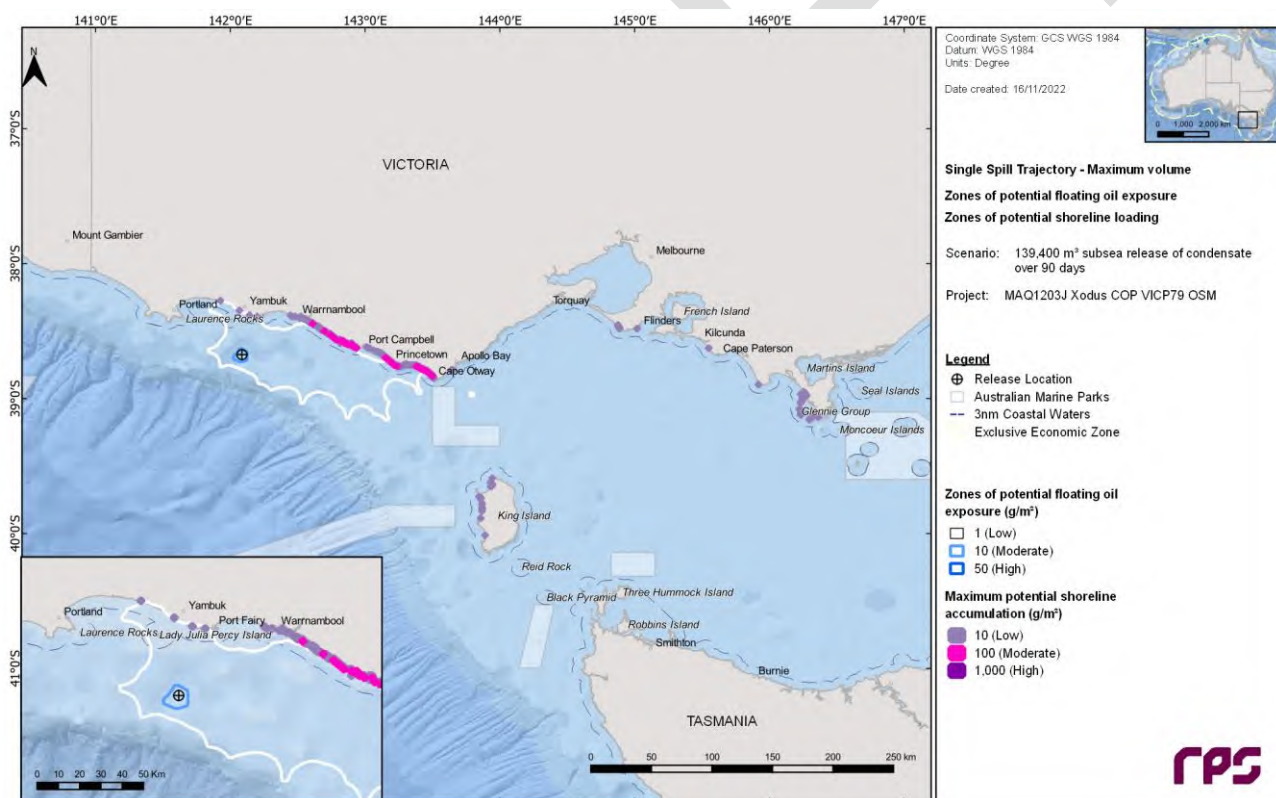

### 15.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 94 and commenced during winter conditions, 8 pm 2<sup>nd</sup> July 2010.

Figure 15.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 12.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 15.11 and Figure 15.12, respectively.

Figure 15.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 75,390 m<sup>3</sup> (~54%) was lost to the atmosphere through evaporation. Approximately, 62,030 m<sup>3</sup> (~45%) of the released volume decayed, while approximately 1,980 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 8 m<sup>3</sup> (<0.01%) was present on the shorelines.

**Figure 15.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days of the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 3.**

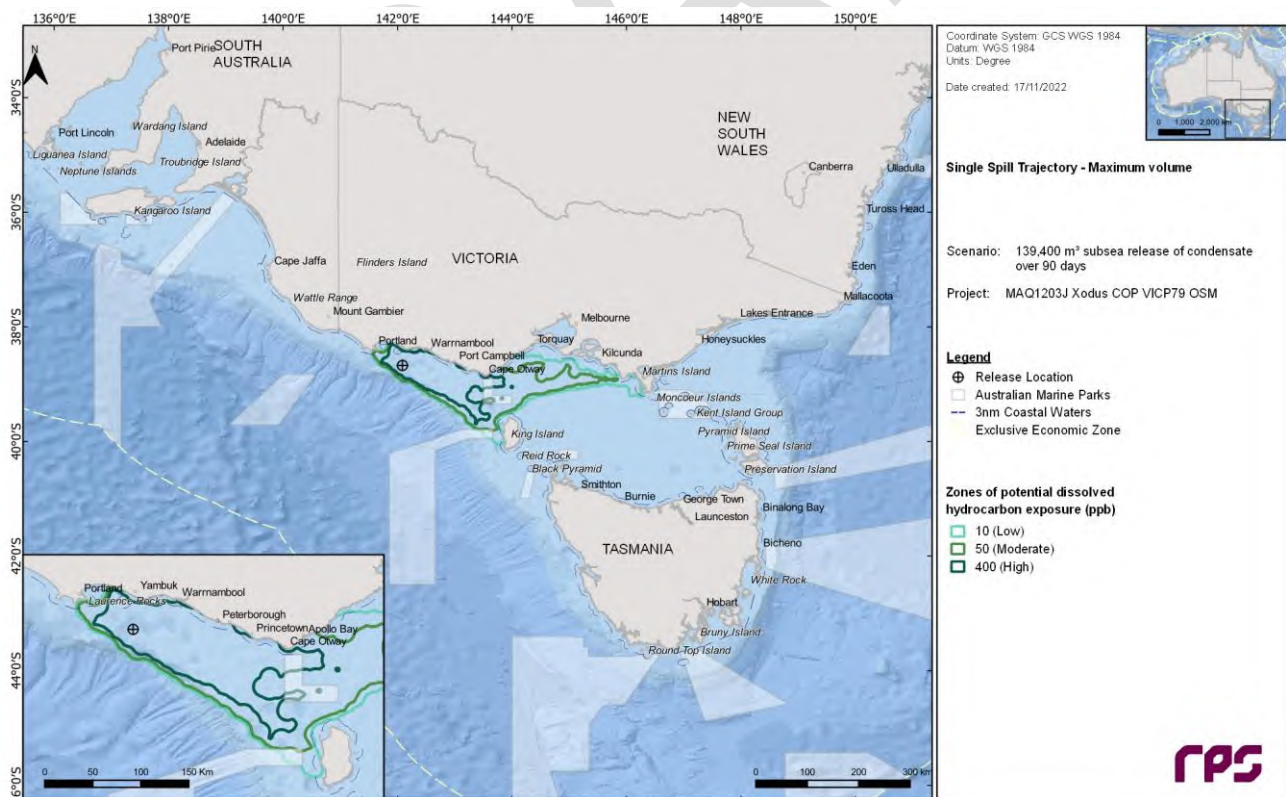

Figure 15.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days of the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 3.

**Figure 15.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 3.**

### 15.3.2 Largest Area of Floating Hydrocarbons Exposure

The simulation that resulted in the largest swept area of floating hydrocarbon exposure at or above the low threshold of 1,325 km<sup>2</sup> was identified as run number 34 and commenced during winter conditions, 2 pm 4<sup>th</sup> June 2013.

Figure 15.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days).

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire simulation period of 120 days is presented in Figure 15.15 and Figure 15.16, respectively.

Figure 15.17 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 73,940 m<sup>3</sup> (~53%) was lost to the atmosphere through evaporation. Approximately, 59,700 m<sup>3</sup> (~43%) of the released volume decayed, while approximately 1,520 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 1 m<sup>3</sup> (<0.01%) was present on the shorelines.

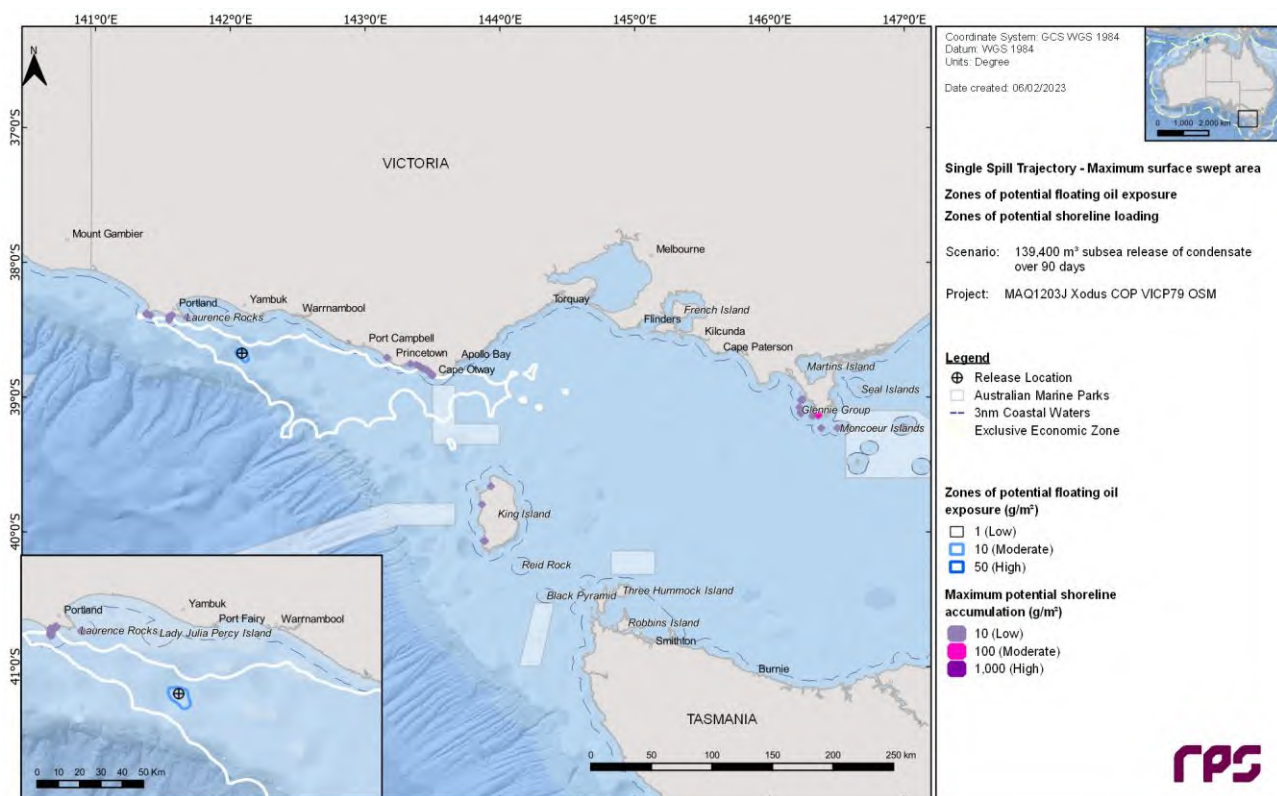

Figure 15.14 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days of the simulation that led to the largest area of floating hydrocarbon exposure from a subsea LOWC at Location 3.

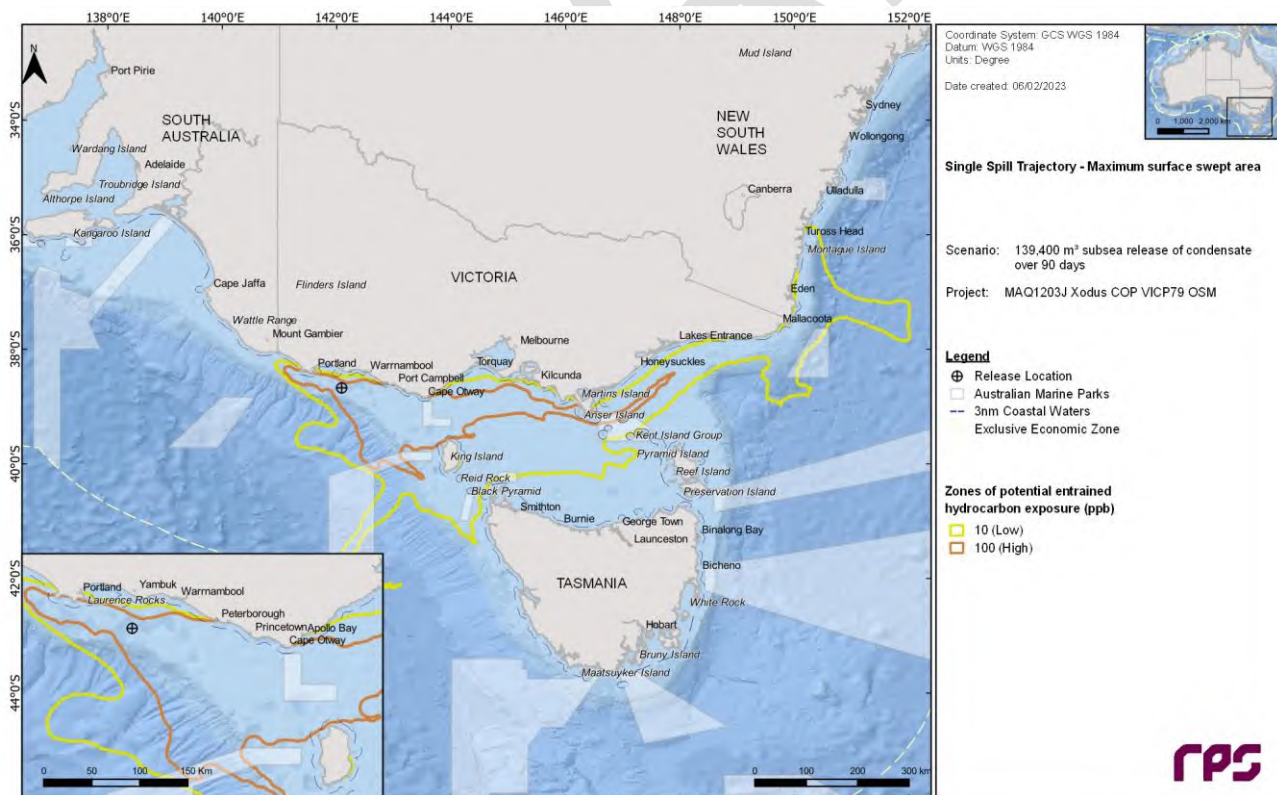

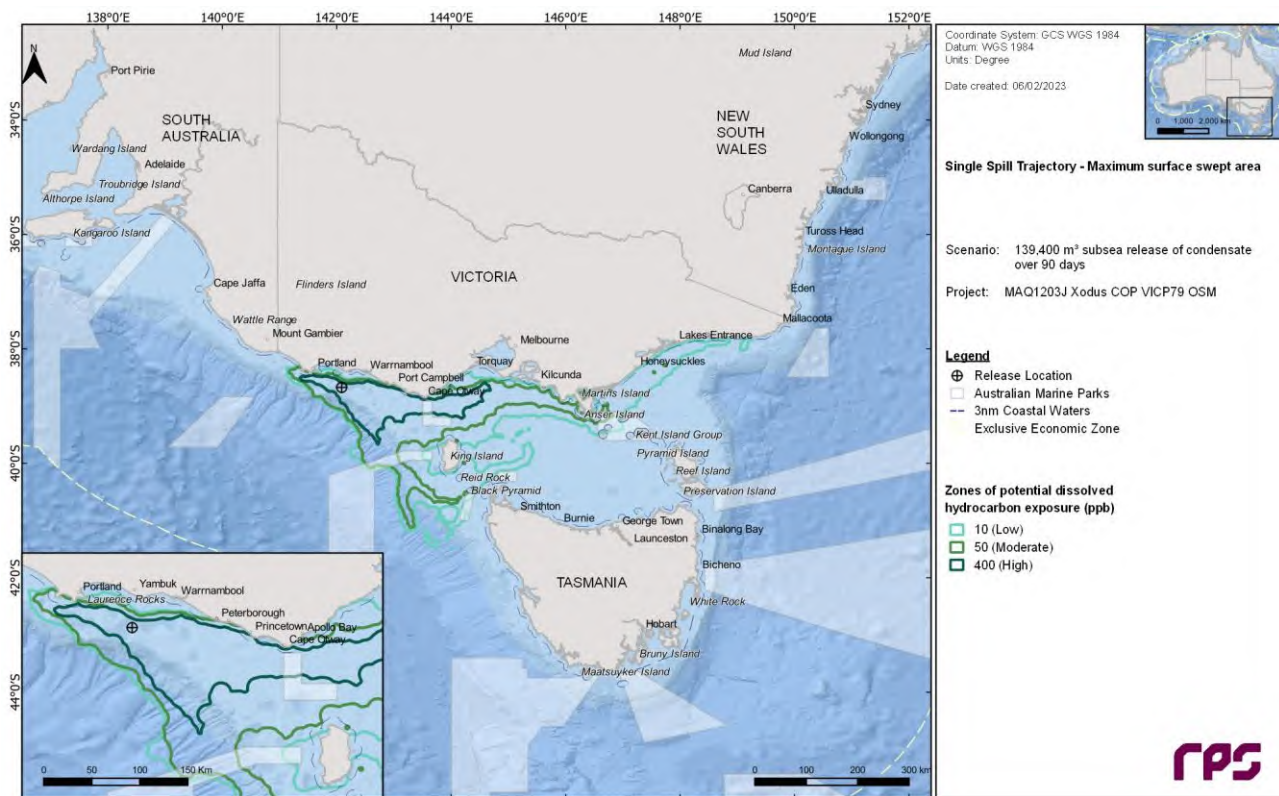

Figure 15.15 Predicted extent of the entrained hydrocarbons exposure over the entire 120 days of the simulation that led to the largest area of floating hydrocarbon exposure from a subsea LOWC at Location 3.

**Figure 15.17 Predicted weathering and fates for the simulation that led to the area of floating oil exposure from a subsea LOWC at Location 3.**

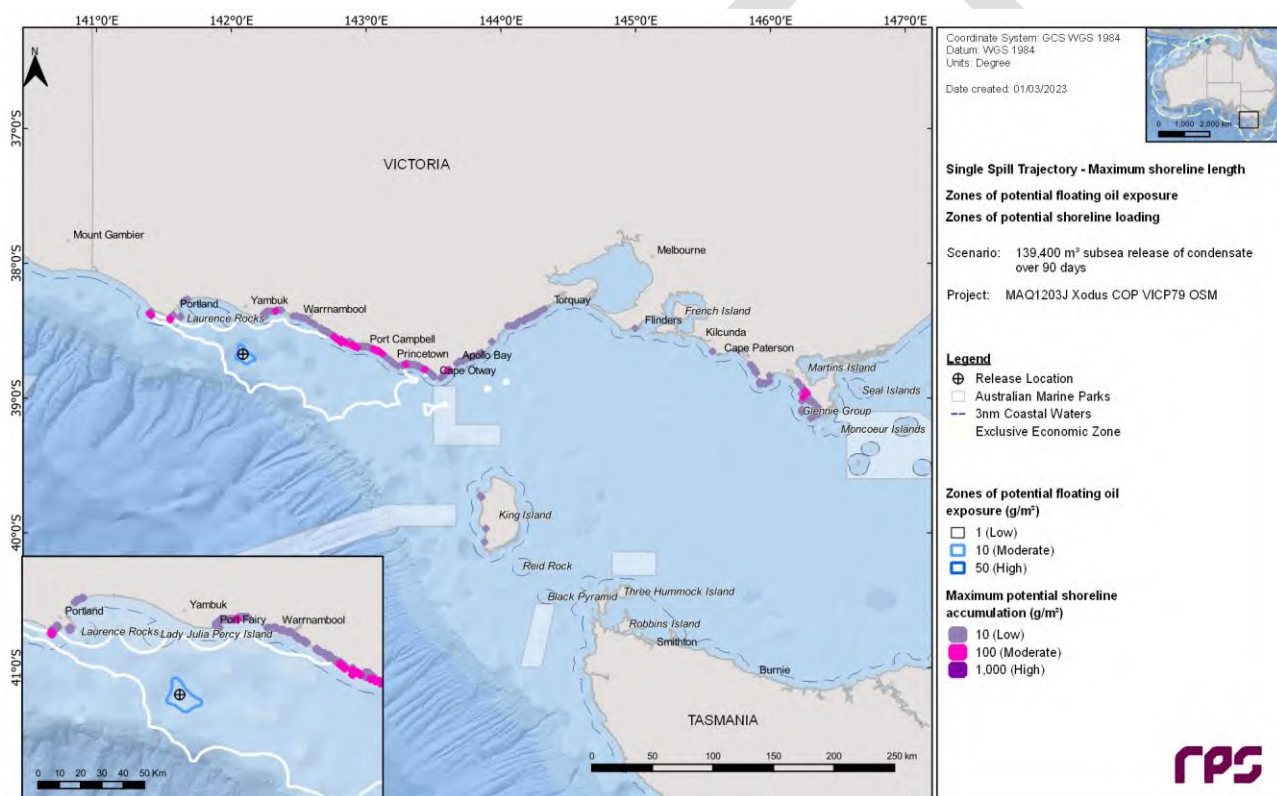

### 15.3.3 Longest Length of Shoreline Accumulation

The simulation that resulted in the longest length of hydrocarbons ashore of 231 km was identified as run number 11, which commenced during winter conditions, 6 pm 15<sup>th</sup> April 2011.

Figure 15.18 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 27 of the simulation.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 15.19 and Figure 15.20, respectively.

Figure 15.21 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 74,390 m<sup>3</sup> (~53%) was lost to the atmosphere through evaporation. Approximately, 59,100 m<sup>3</sup> (~42%) of the released volume decayed, while approximately 1,610 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 9 m<sup>3</sup> (<0.1%) remained on shorelines.

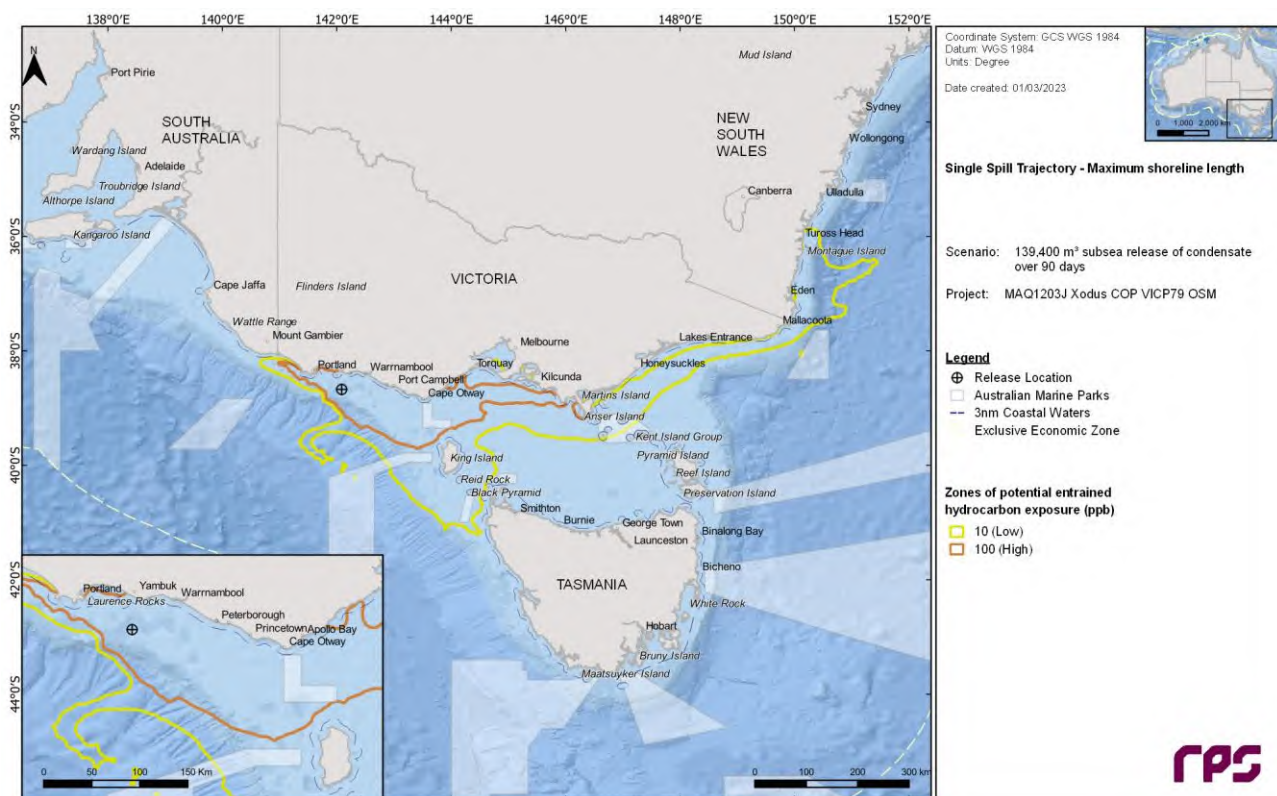

Figure 15.19 Predicted extent of the entrained hydrocarbons exposure over the entire 120 days for the simulation that led to the longest length of shoreline accumulation from a subsea LOWC at Location 3.

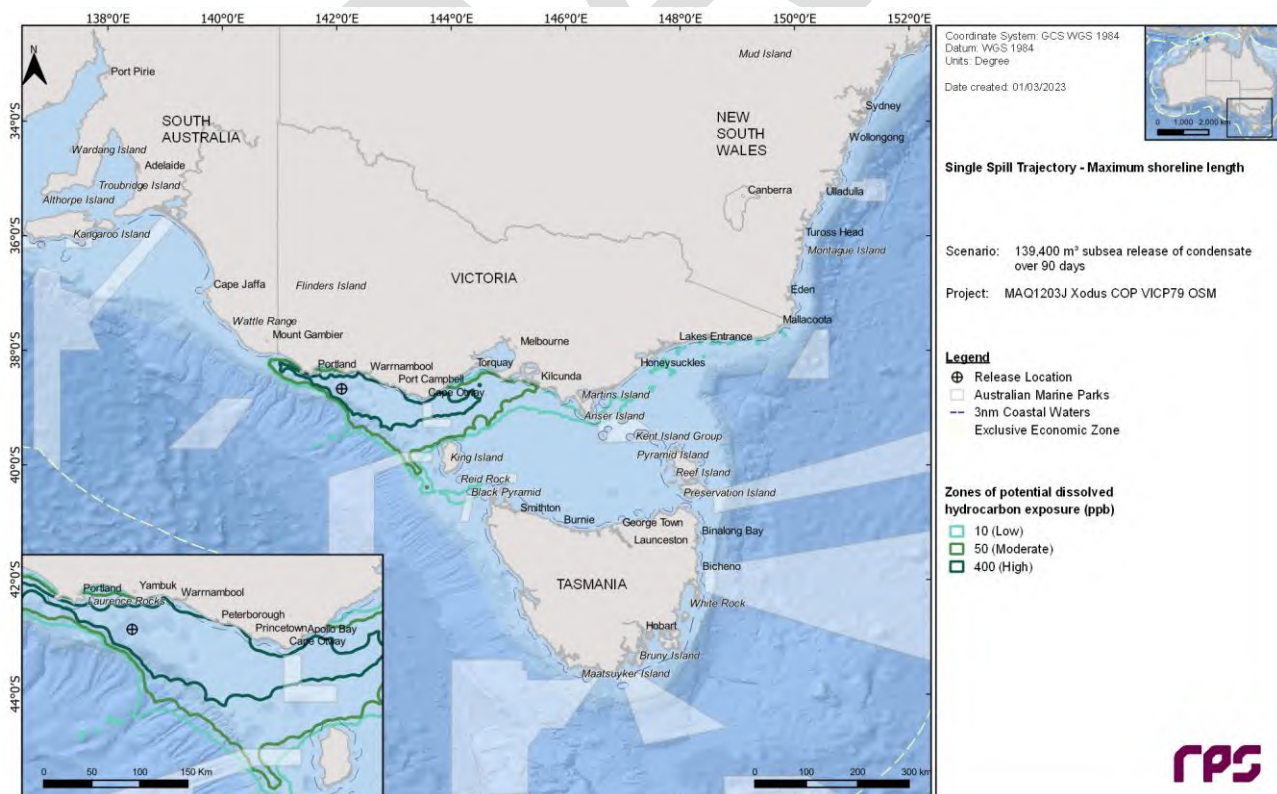

Figure 15.20 Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days for the simulation that led to the longest length of shoreline accumulation from a subsea LOWC at Location 3.

**Figure 15.21 Predicted weathering and fates for the simulation that led to the longest length of shoreline accumulation from a subsea LOWC at Location 3.**

## 16 LOCATION 4 LOWC RESULTS

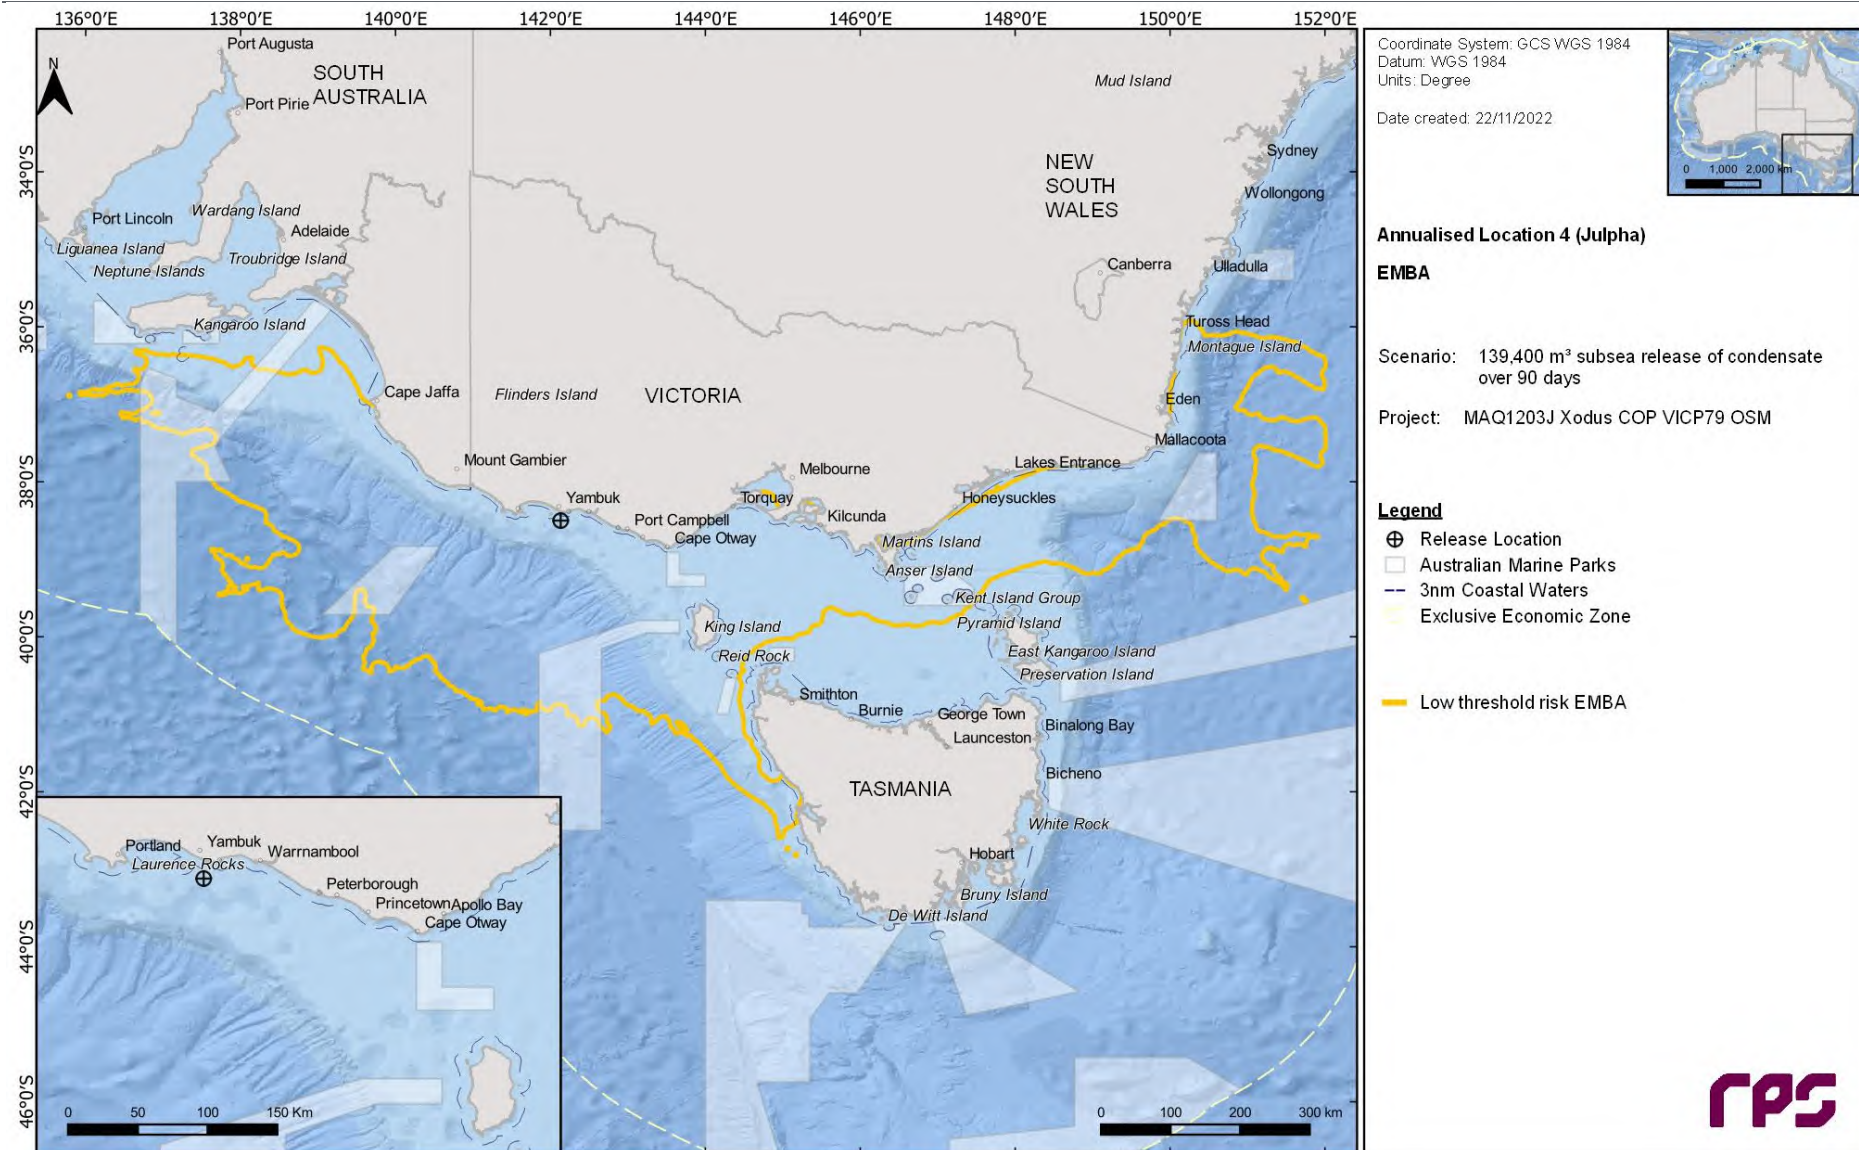

This scenario examined the potential exposure following a LOWC at Location 4. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 16.1 presents the EMBA, Section 16.2 shows the seasonal (or stochastic) results, while Section 16.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 16.1 EMBA

Figure 16.1 shows the EMBA for Location 4. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

# REPORT

**Figure 16.1** Predicted low threshold EMBA from a subsea LOWC at Location 4. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 16.2 Stochastic Analysis

### 16.2.1 Floating Oil Exposure

Table 16.2 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 16.3 summarises the potential floating oil exposure to individual receptors for each season.

Figure 16.2 to Figure 16.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating hydrocarbon exposure at or above the low exposure threshold of 1,240 km<sup>2</sup> was identified as run number 50 and commenced during winter conditions, 3 pm 10<sup>th</sup> May 2018. In comparison the largest swept area of floating hydrocarbon at or above the low exposure threshold occurring during summer was 967 km<sup>2</sup>.

**Table 16.1** Maximum distances and directions travelled by floating oil from a subsea LOWC at Location 4 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	180.9	11.6	0.2
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	110.8	11.4	0.2
	Direction	ESE	E	N
Winter	Maximum distance (km) from release location	363.4	12.3	0.2
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	121.7	11.7	0.2
	Direction	E	W	N

## 16.2.2 Shoreline Accumulation

Table 16.3 summarises the predicted accumulation on any shoreline during each season.

Table 16.4 and Table 16.5 summarises the accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 16.4 and Figure 16.5.

**Table 16.3 Summary of accumulation on any shoreline from a subsea LOWC at Location 4 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	100	100
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	2.17	1.92
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	236.2	318.9
Average volume of hydrocarbons ashore (m <sup>3</sup> )	90.8	126.9
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	216	226
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	132.6	153.5
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	65	76
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	29	38.4
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	3	4
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	1.8	1.8

## 16.2.3 In-water exposure

### 16.2.3.1 Dissolved Hydrocarbons

Table 16.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 16.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 16.6 and Figure 16.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

**Table 16.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 4 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	626	456	264
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	457	339	200
	Direction	E	E	WNW
Winter	Maximum distance (km) from release location	686	403	221
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	433	281	188
	Direction	E	E	E

## REPORT

**Figure 16.6** Zones of potential dissolved hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 4 during summer conditions. The results were calculated from 100 spill simulations.

## REPORT

**Figure 16.7** Zones of potential dissolved hydrocarbon exposure at 0-10 m below the sea surface from a subsea LOWC at Location 4 during winter conditions. The results were calculated from 100 spill simulations.

### 16.2.3.2 Entrained Hydrocarbons

Table 16.8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

Table 16.9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layers, for each season.

Figure 16.8 and Figure 16.9 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer.

**Table 16.8** Maximum distance and direction by entrained hydrocarbon exposure (0-10 m) from a subsea LOWC at Location 4 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential entrained hydrocarbon exposure	
		Low	High
Summer	Maximum distance (km) from release location	902	426
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	851	328
	Direction	ENE	E
Winter	Maximum distance (km) from release location	877	408
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	832	367
	Direction	E	E

**Table 16.9** Probability of entrained hydrocarbons exposure to receptors in the 0-10 m depth layer from a subsea LOWC at Location 4 for each threshold and season. Results were calculated from 100 spill simulations per season.

Receptor		Summer			Winter		
		Maximum concentration (ppb)	Probability of instantaneous entrained hydrocarbon exposure		Maximum concentration (ppb)	Probability of instantaneous entrained hydrocarbon exposure

## 16.3 Deterministic Analysis

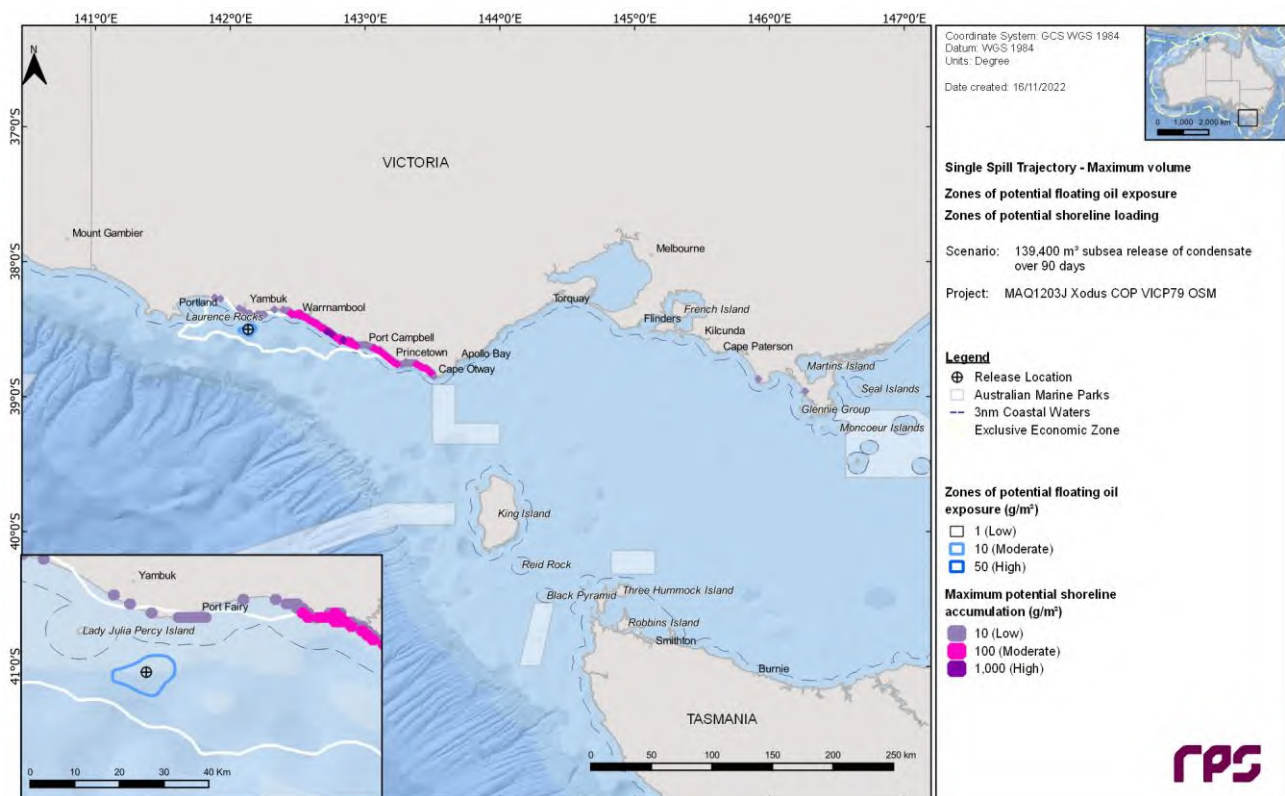

### 16.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 94 and commenced during winter conditions, 4 pm 6<sup>th</sup> August 2010.

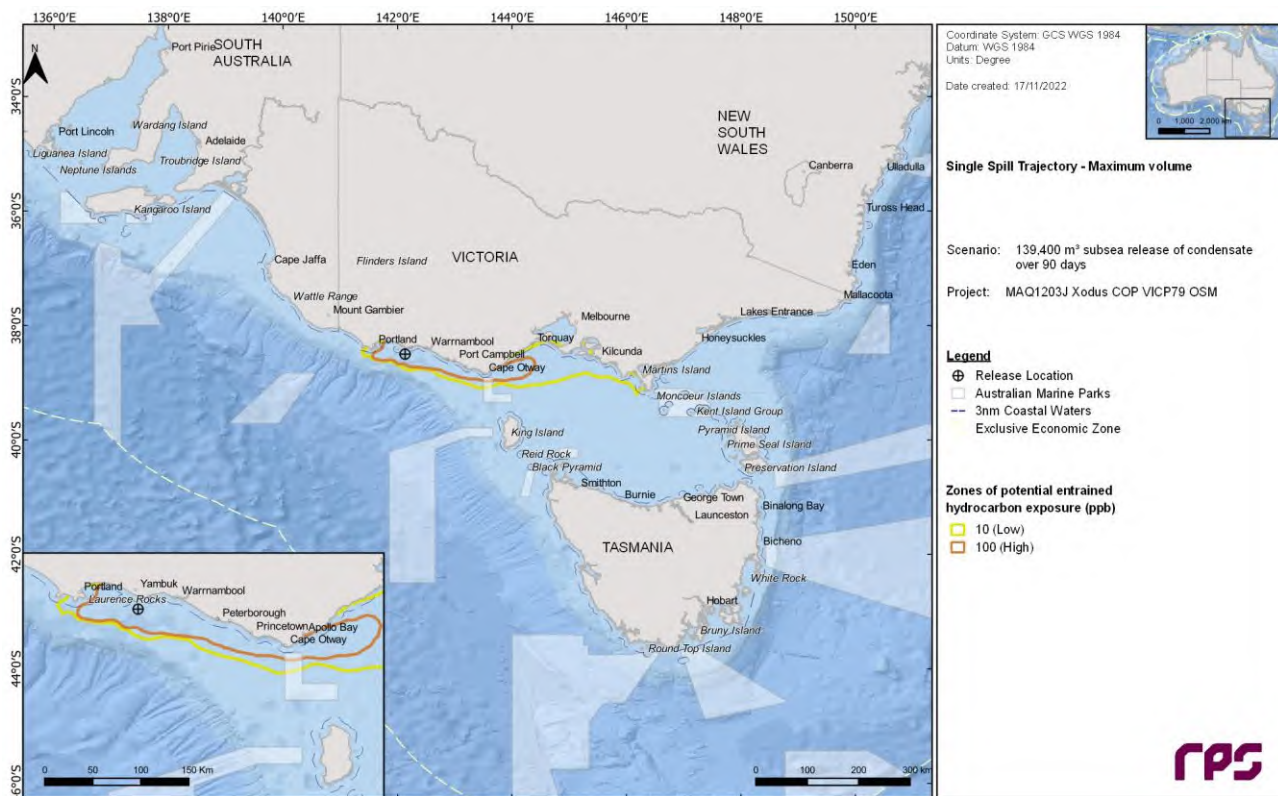

Figure 16.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days). Initial shoreline accumulation occurred on day 5.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 16.11 and Figure 16.12, respectively.

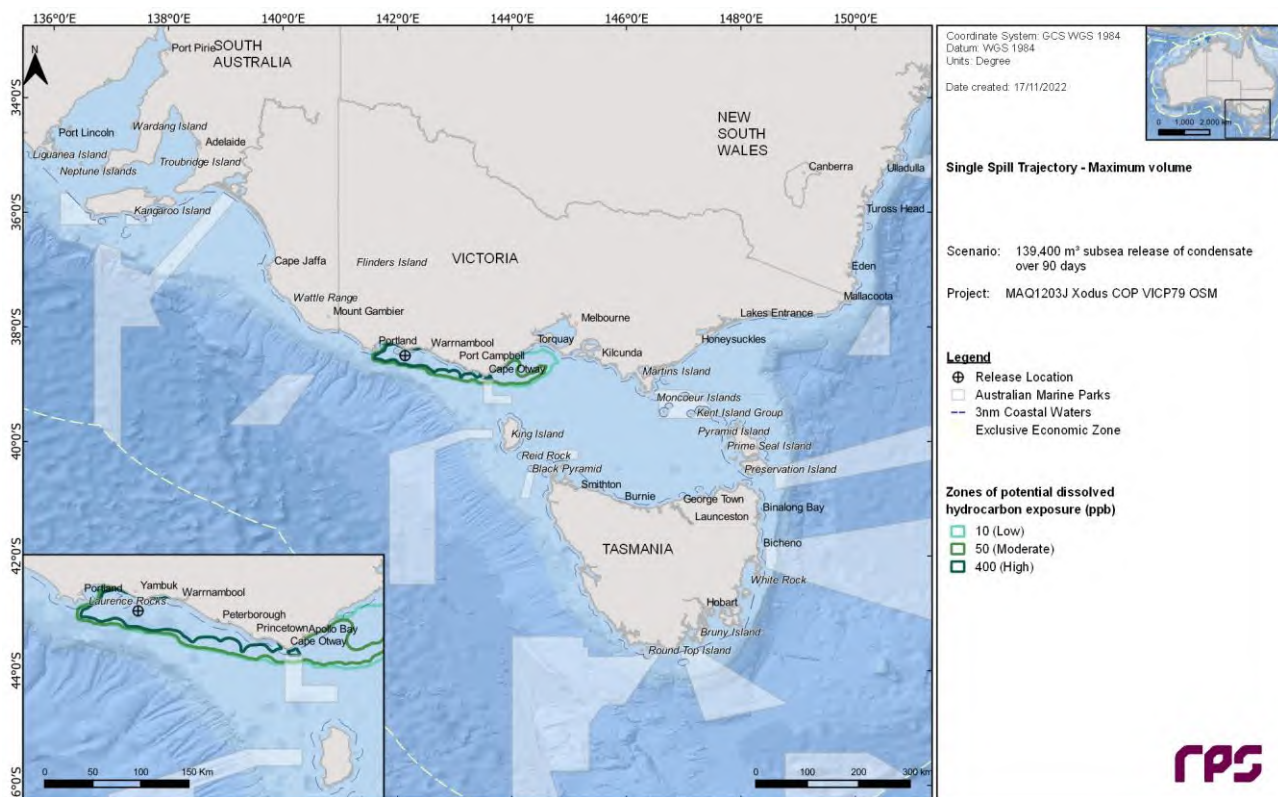

Figure 16.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 76,490 m<sup>3</sup> (~55%) was lost to the atmosphere through evaporation. Approximately, 60,720 m<sup>3</sup> (~44%) of the released volume decayed, while approximately 2,030 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 250 m<sup>3</sup> (~0.2%) was present on the shorelines.

**Figure 16.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days of the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 4.**

**Figure 16.11** Predicted extent of the entrained hydrocarbons exposure over the entire 120 days of the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 4.

**Figure 16.12** Predicted extent of the dissolved hydrocarbons exposure over the entire 120 days of the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 4.

**Figure 16.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a subsea LOWC at Location 4.**

### 16.3.2 Minimum time to Shoreline Accumulation

The simulation that resulted in the minimum time to hydrocarbons ashore of 1.92 days was identified as run number 23 which commenced during winter conditions, 12 pm 16<sup>th</sup> July 2014.

Figure 16.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (120 days).

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 120 day simulation are presented in Figure 16.15 and Figure 16.16, respectively.

Figure 16.17 presents the fates and weathering graph for the corresponding simulation. At the conclusion of the simulation (day-120), approximately 75,180 m<sup>3</sup> (~54%) was lost to the atmosphere through evaporation. Approximately, 58,100 m<sup>3</sup> (~42%) of the released volume decayed, while approximately 1,940 m<sup>3</sup> (~1%) was predicted to remain within the water column and approximately 105 m<sup>3</sup> (<0.1%) remained on shorelines.

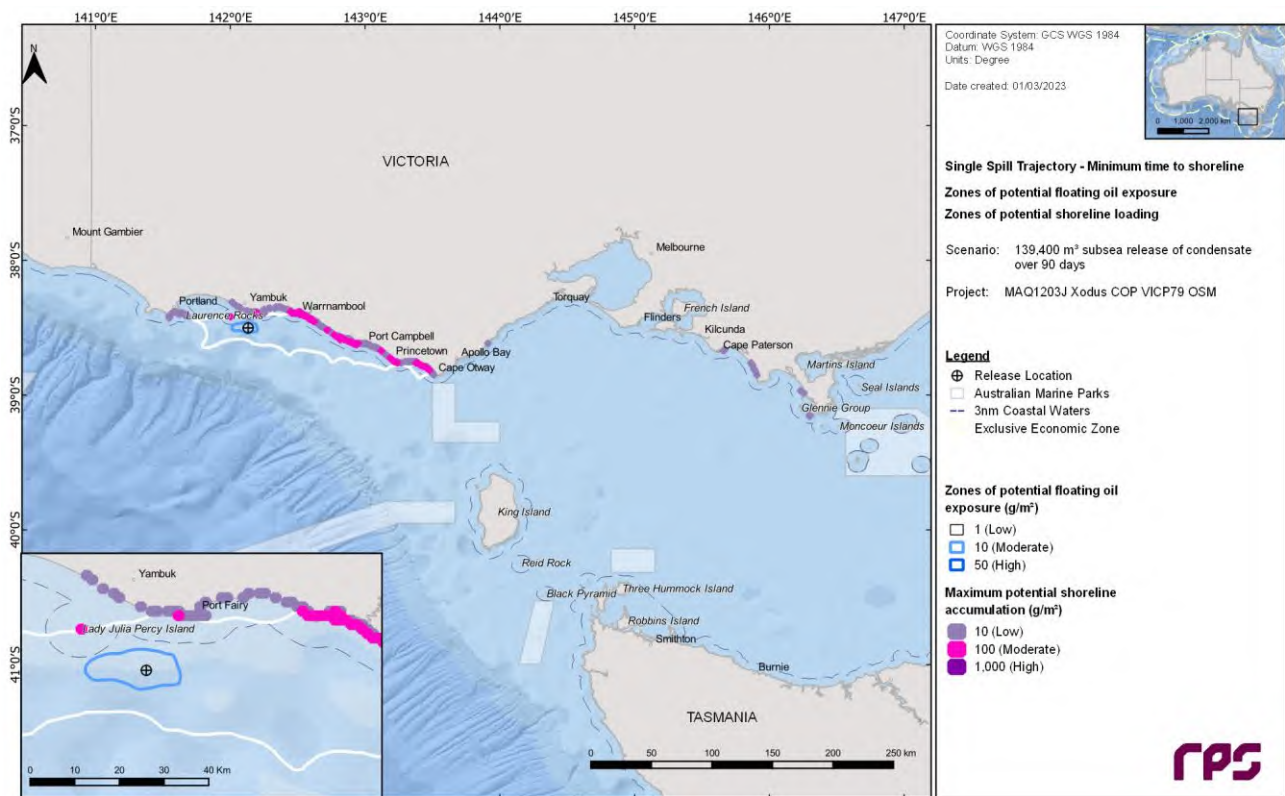

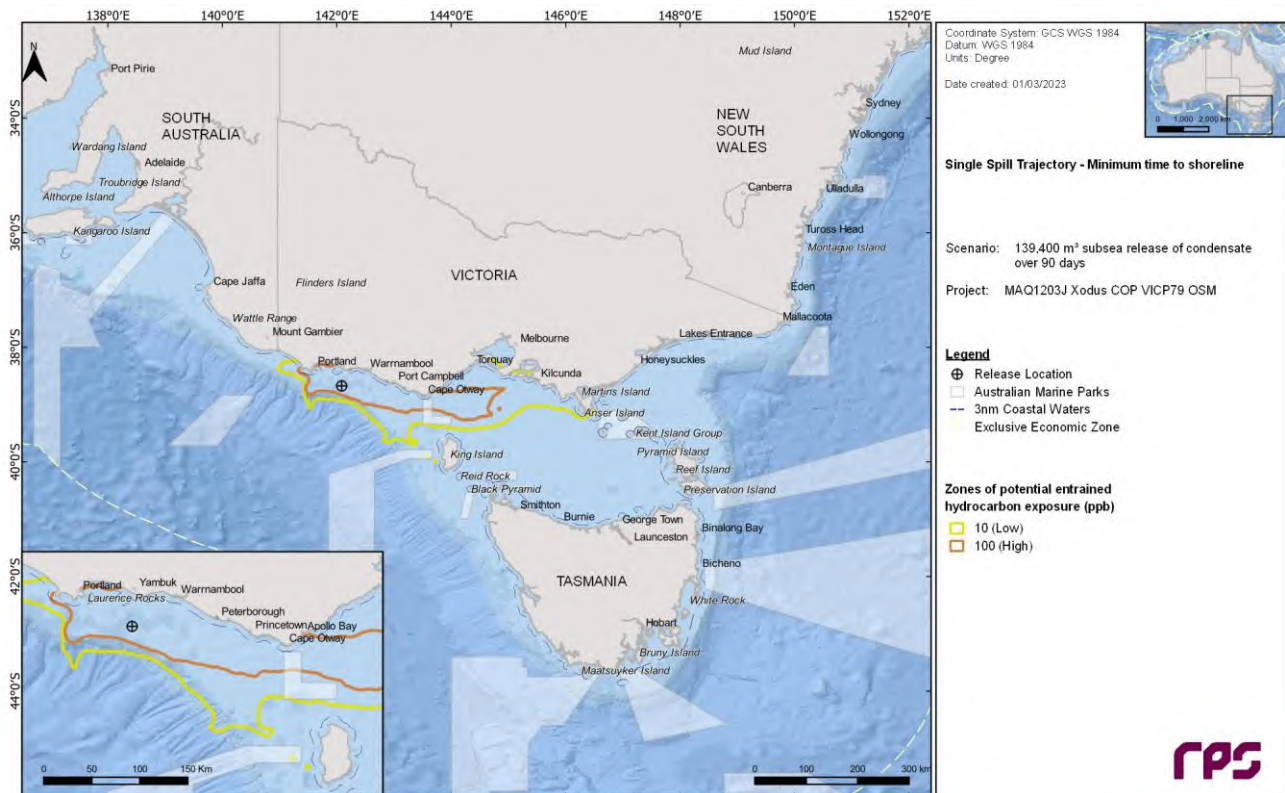

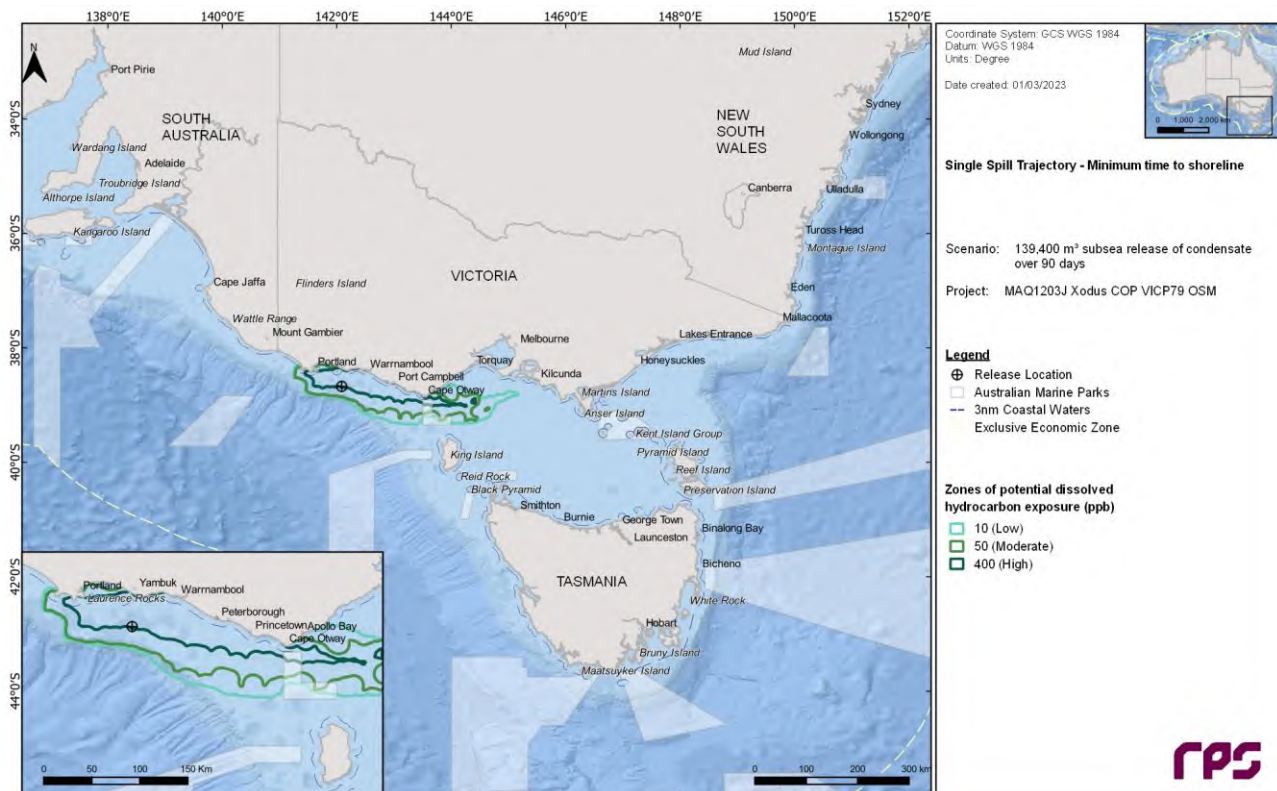

Figure 16.14 Predicted extent of the floating oil exposure and shoreline loading over the entire 120 days for the simulation that led to the minimum time to shoreline accumulation from a subsea LOWC at Location 4.

**Figure 16.15 Predicted extent of the entrained hydrocarbons exposure over the entire 120 days for the simulation that led to the minimum time to shoreline accumulation from a subsea LOWC at Location 4.**

**Figure 16.17 Predicted weathering and fates for the simulation that led to the minimum time to shoreline accumulation from a subsea LOWC at Location 4.**

## 17 LOCATION 1 VESSEL COLLISION RESULTS

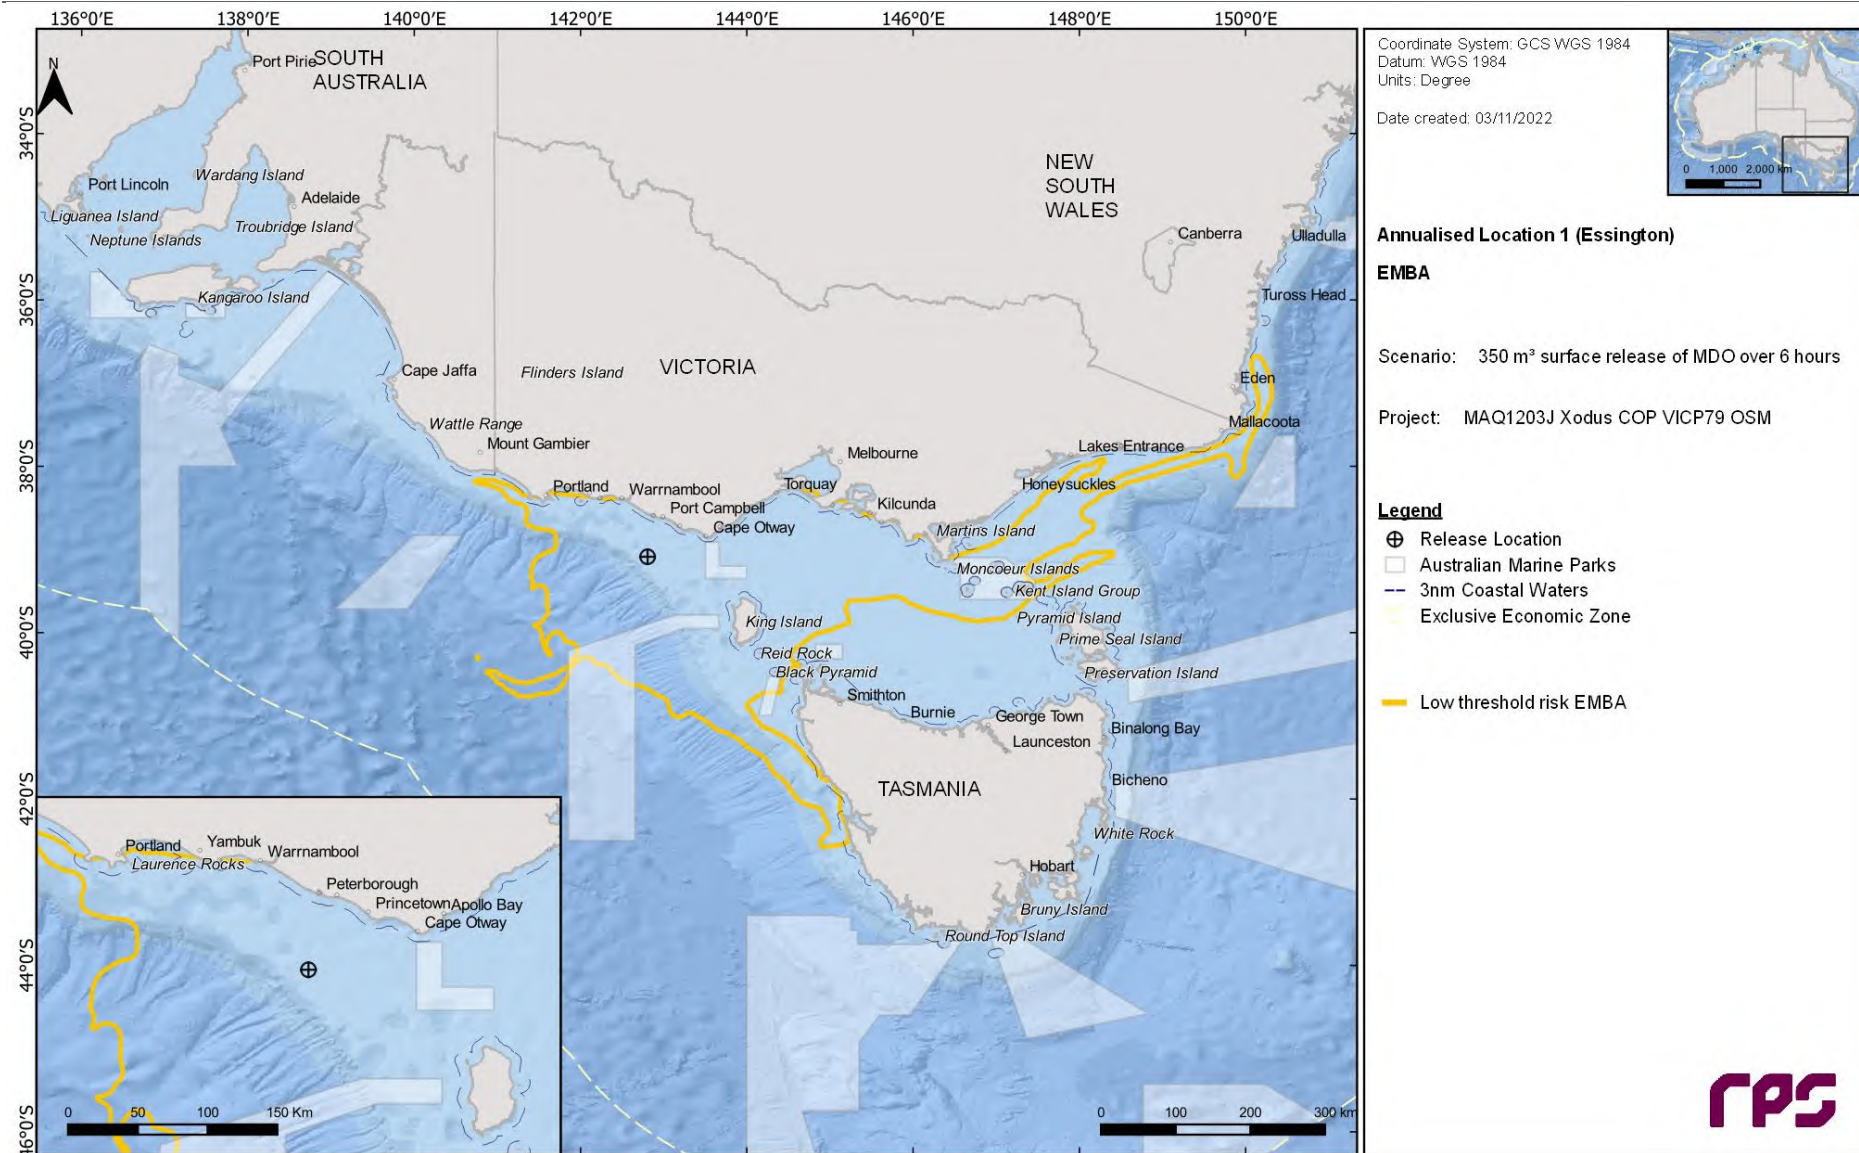

This scenario examined the potential exposure following a vessel collision at Location 1. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 17.1 presents the EMBA, Section 17.2 shows the seasonal (or stochastic) results, while Section 17.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 17.1 EMBA

Figure 17.1 shows the EMBA for Location 1. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

## REPORT

**Figure 17.1** Predicted low threshold EMBA from a vessel collision at Location 1. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 17.2 Stochastic Analysis

### 17.2.1 Floating Oil Exposure

Table 17.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 17.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 17.2 to Figure 17.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 201.6 km<sup>2</sup> and 122.2 km<sup>2</sup>, respectively.

**Table 17.1 Maximum distances and directions travelled by floating oil from a vessel collision at Location 1 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	27.9	12.6	4.3
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	24.5	12.2	4.3
	Direction	W	ESE	ENE
Winter	Maximum distance (km) from release location	52.8	15.9	3.5
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	46.1	15.3	3.5
	Direction	E	SSE	NE

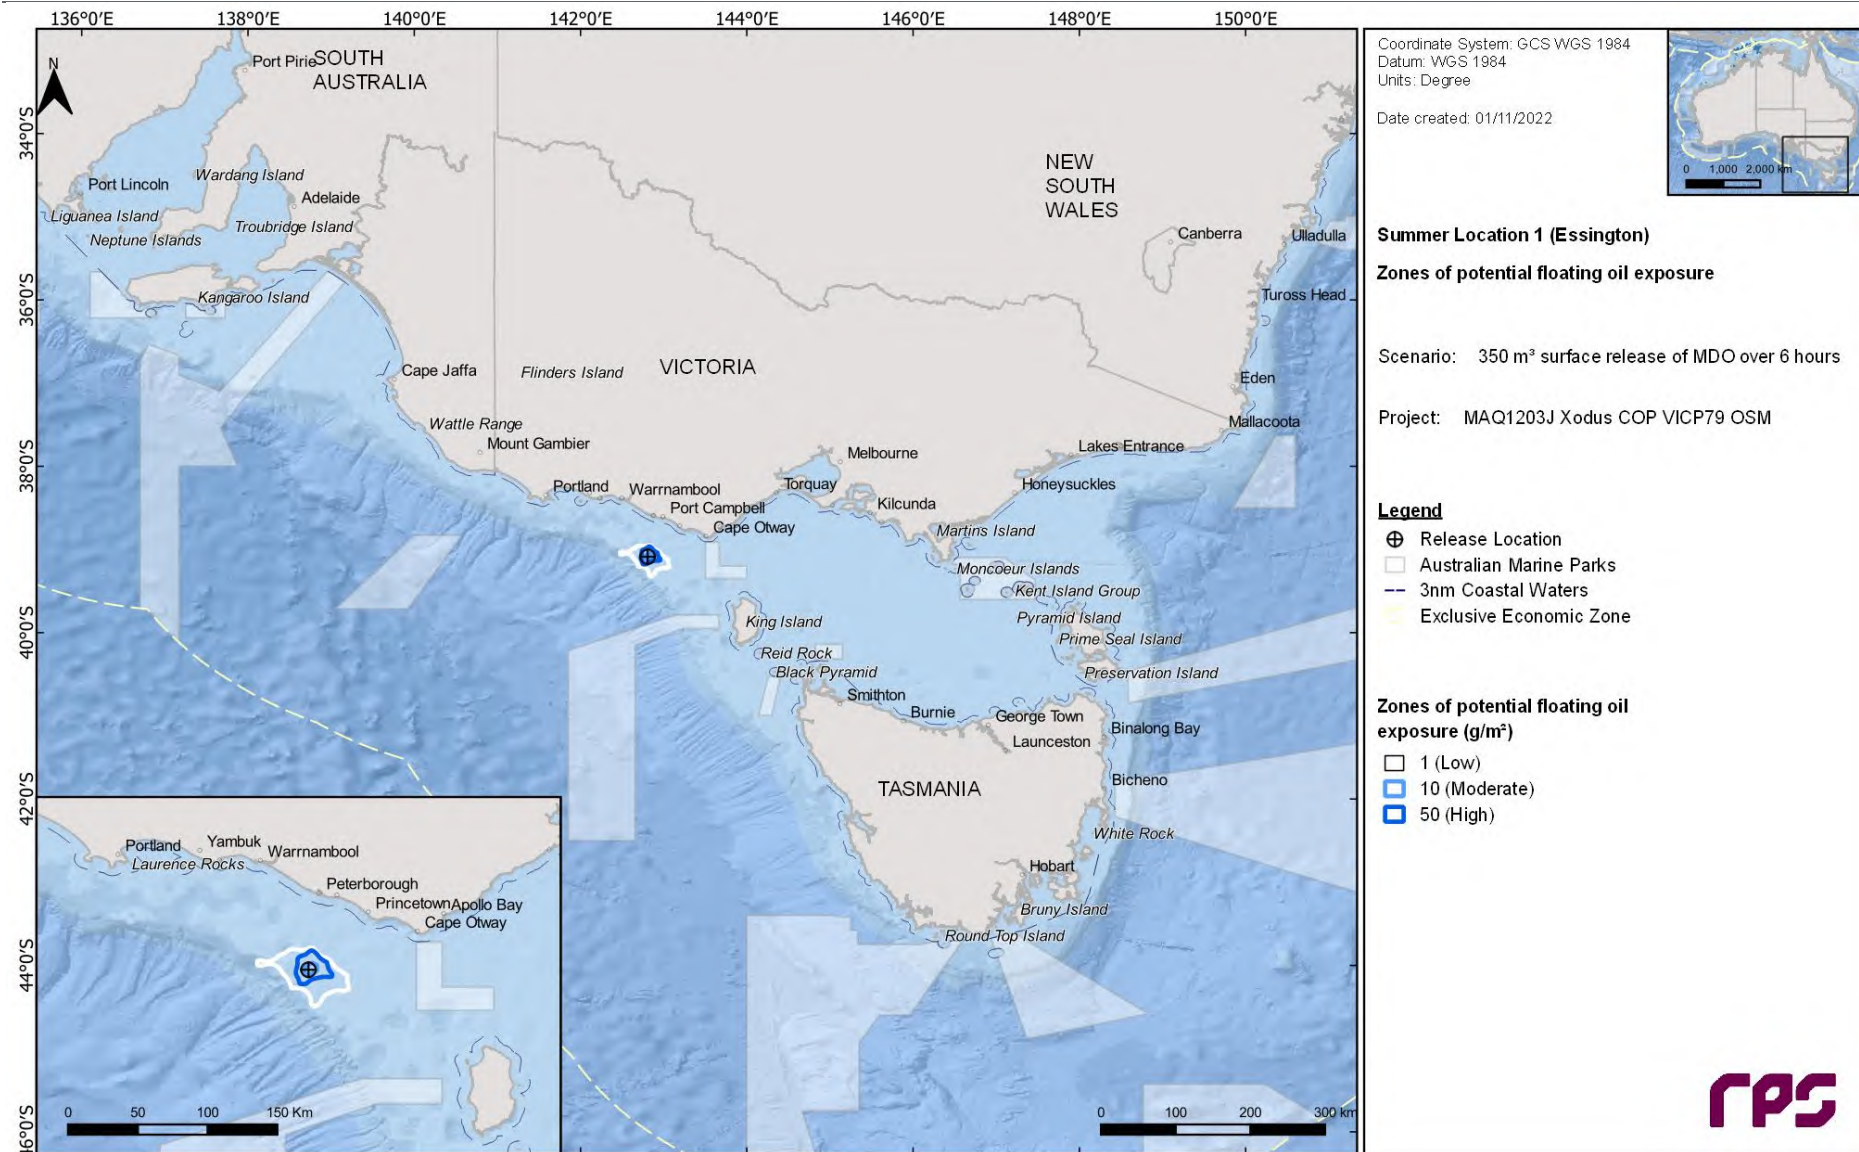

REPORT

**Table 17.2** Summary of the potential exposure by floating oil to individual receptors from a vessel collision at Location 1 for each season. Results were calculated from 100 spill simulations per season.

## 17.2.2 Shoreline Accumulation

Table 17.3 summarises the predicted oil accumulation on any shoreline during each season.

Table 17.4 and Table 17.5 summarises the oil accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 17.4 and Figure 17.5.

**Table 17.3 Summary of oil accumulation on any shoreline from a vessel collision at Location 1 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	17	29
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	4.83	5.00
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	6.1	16.6
Average volume of hydrocarbons ashore (m <sup>3</sup> )	2.3	3
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	14	30
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	5.9	7
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	1	3
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	1	1.5
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	-
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	-

## REPORT

**Table 17.4** Summary of oil accumulation on individual shoreline sectors from a vessel collision at Location 1 during summer conditions. Results were calculated from 100 spill simulations per season.

# REPORT

## REPORT

**Figure 17.9** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a vessel collision at Location 1 during winter conditions. The results were calculated from 100 spill simulations.

## 17.3 Deterministic Analysis

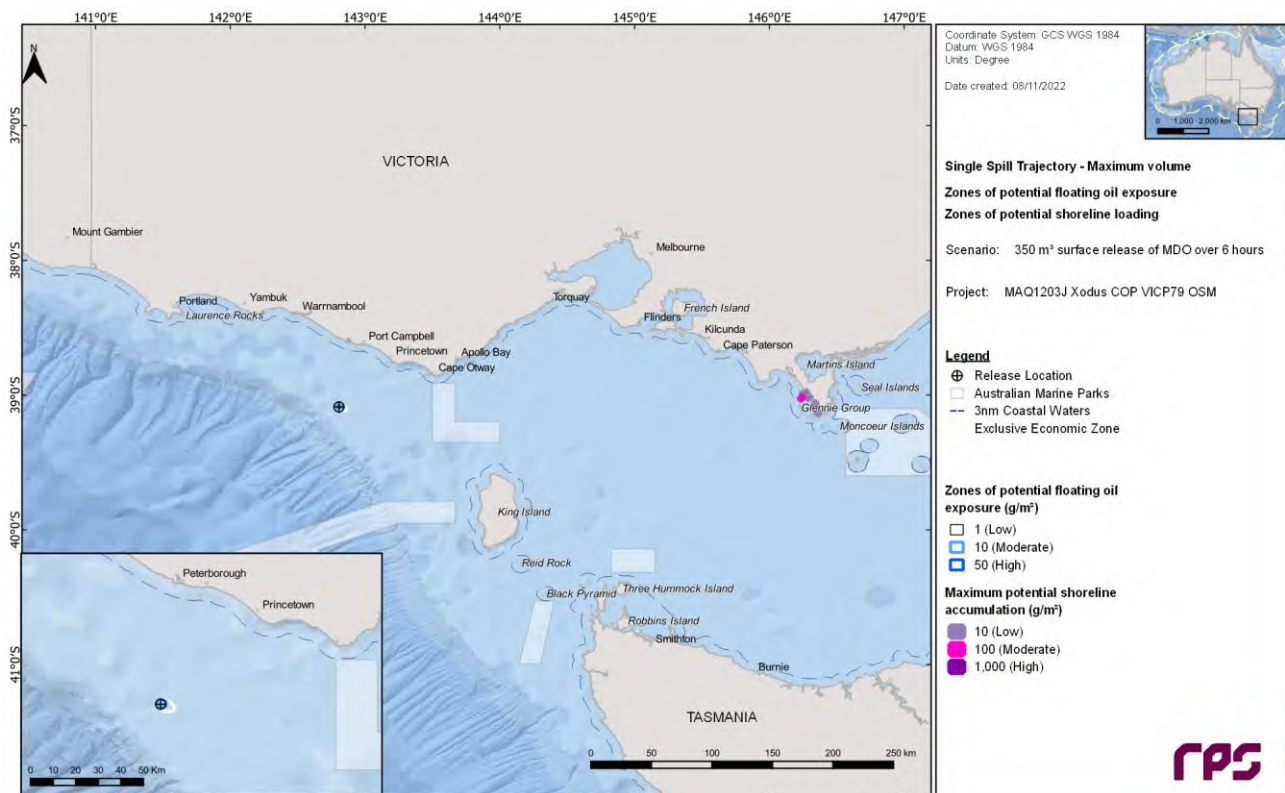

### 17.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 94 and commenced during winter conditions, 1 pm 8<sup>th</sup> July 2019.

Figure 17.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on day 8.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 17.11 and Figure 17.12, respectively.

Figure 17.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 164 m<sup>3</sup> (~47%) was lost to the atmosphere through evaporation. Approximately, 115 m<sup>3</sup> (~33%) of the released volume decayed, while approximately 60 m<sup>3</sup> (~17%) was predicted to remain within the water column and approximately 14 m<sup>3</sup> (~4%) was present on the shorelines.

**Figure 17.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.**

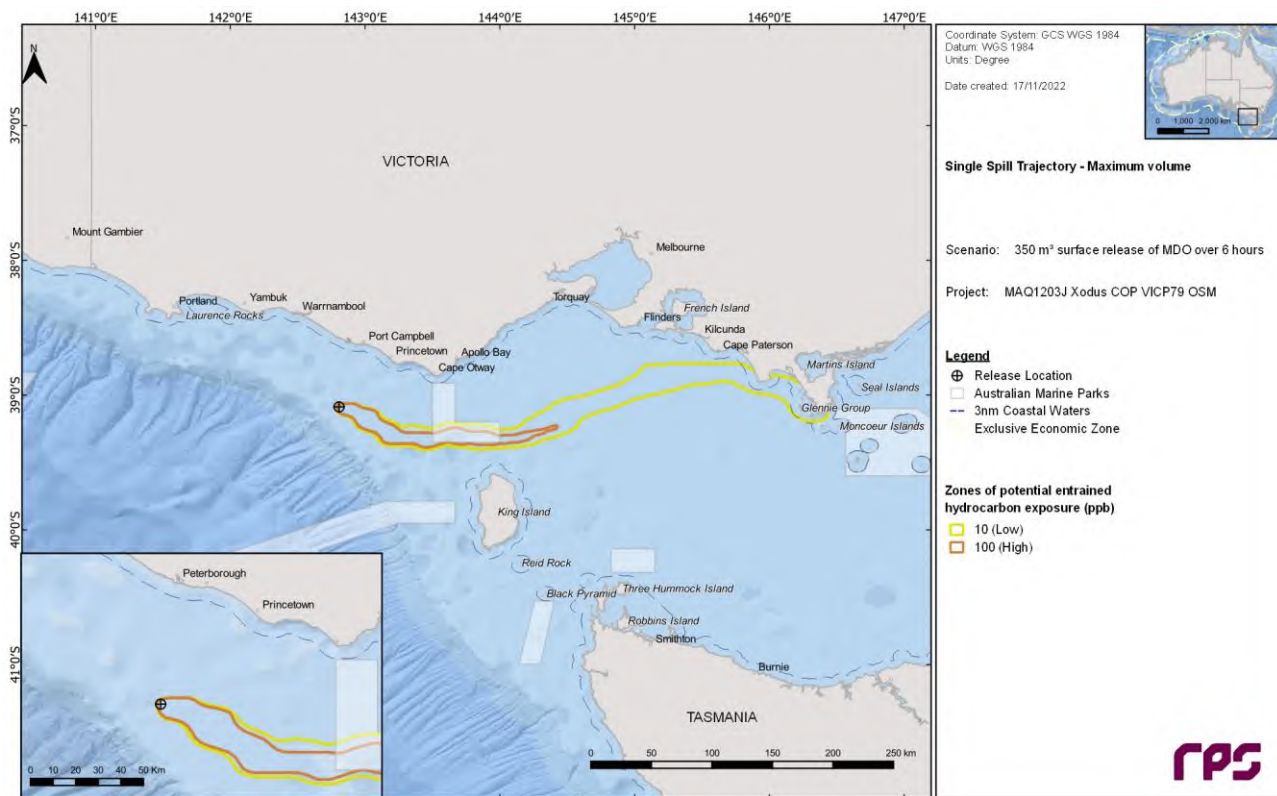

Figure 17.11 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.

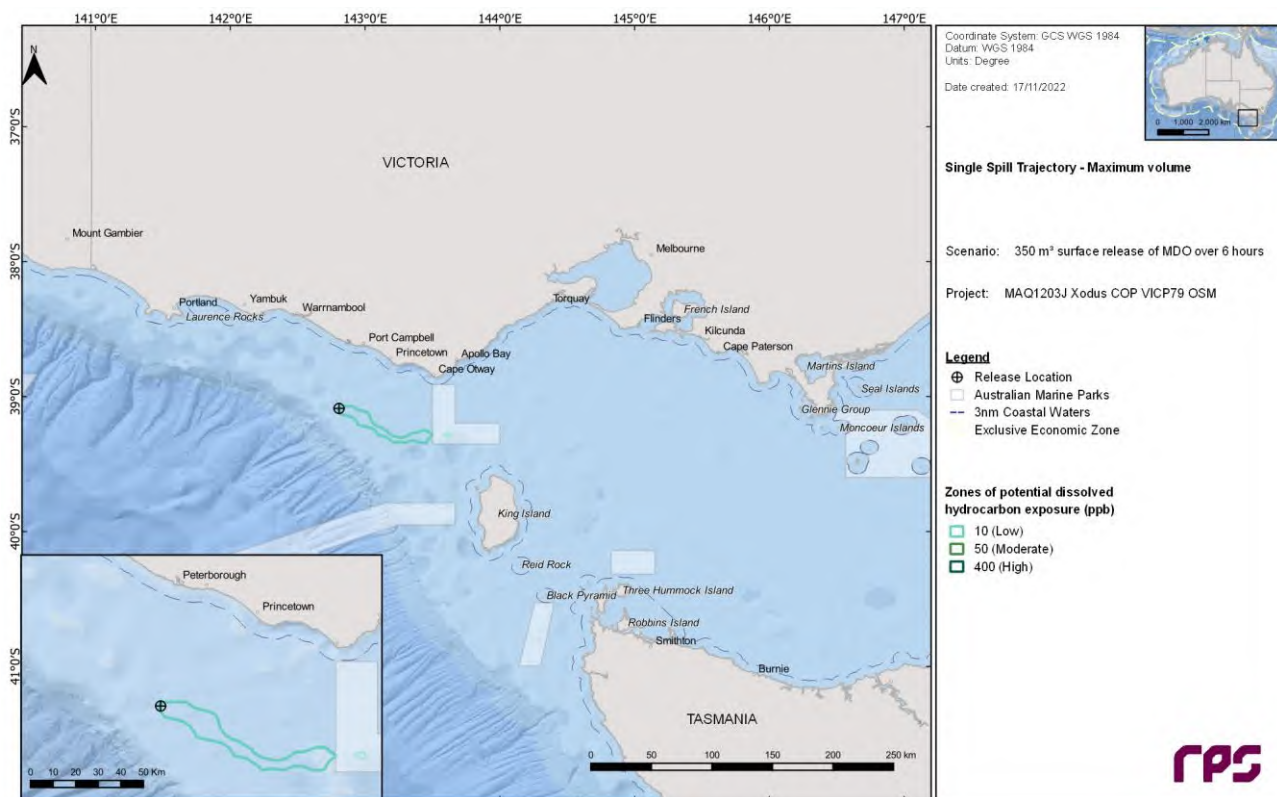

Figure 17.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.

**Figure 17.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 1.**

### 17.3.2 Largest Area of Floating Hydrocarbon Exposure

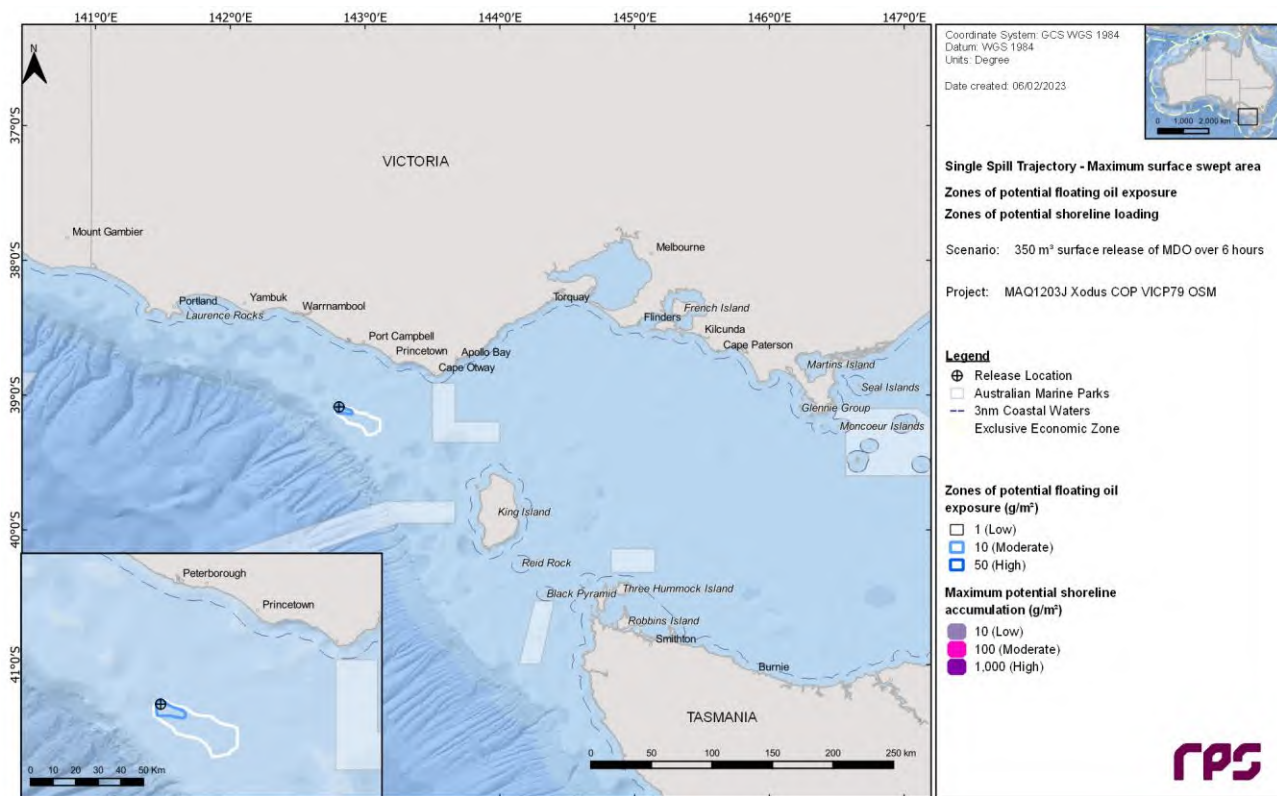

The simulation that resulted in the largest swept area of floating hydrocarbon exposure at or above the low exposure threshold of 201.6 km<sup>2</sup> was identified as run number 38 and commenced during winter conditions, 6 pm 5<sup>th</sup> August 2011.

Figure 17.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). No shoreline accumulation was predicted during the simulation.

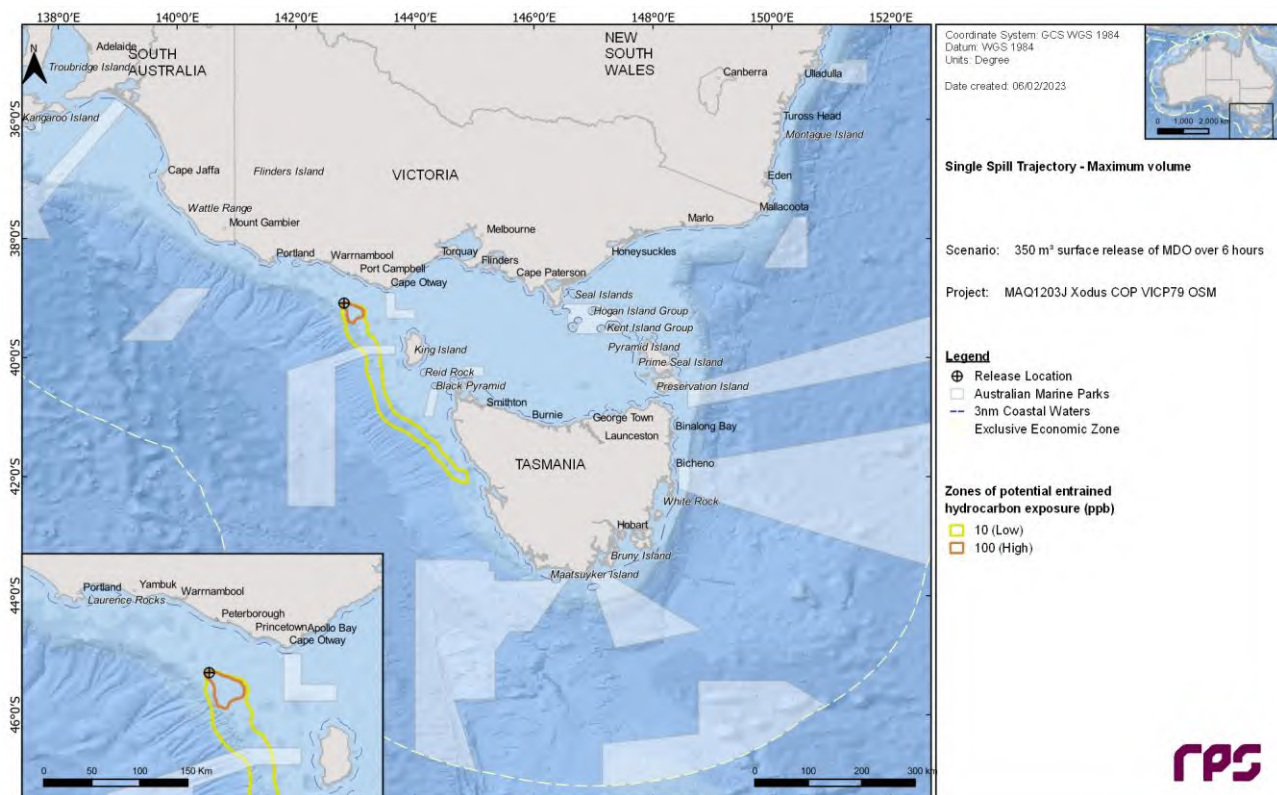

The extent of the predicted entrained hydrocarbon exposure zones in the 0–10 m depth layer over the entire simulation period of 30 days is presented in Figure 17.15. No zones of dissolved hydrocarbon exposure was predicted for the simulation.

Figure 17.16 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 176 m<sup>3</sup> (~50%) was lost to the atmosphere through evaporation. Approximately, 100 m<sup>3</sup> (~28%) of the released volume decayed, while approximately 77 m<sup>3</sup> (~22%) was predicted to remain within the water column.

**Figure 17.14** Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest area of floating hydrocarbon exposure from a vessel collision at Location 1.

**Figure 17.15** Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the largest area of floating hydrocarbon exposure from a vessel collision at Location 1.

**Figure 17.16 Predicted weathering and fates for the simulation that led to the largest area of floating hydrocarbons exposure from a vessel collision at Location 1.**

## 18 LOCATION 2 VESSEL COLLISION RESULTS

This scenario examined the potential exposure following a vessel collision at Location 2. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

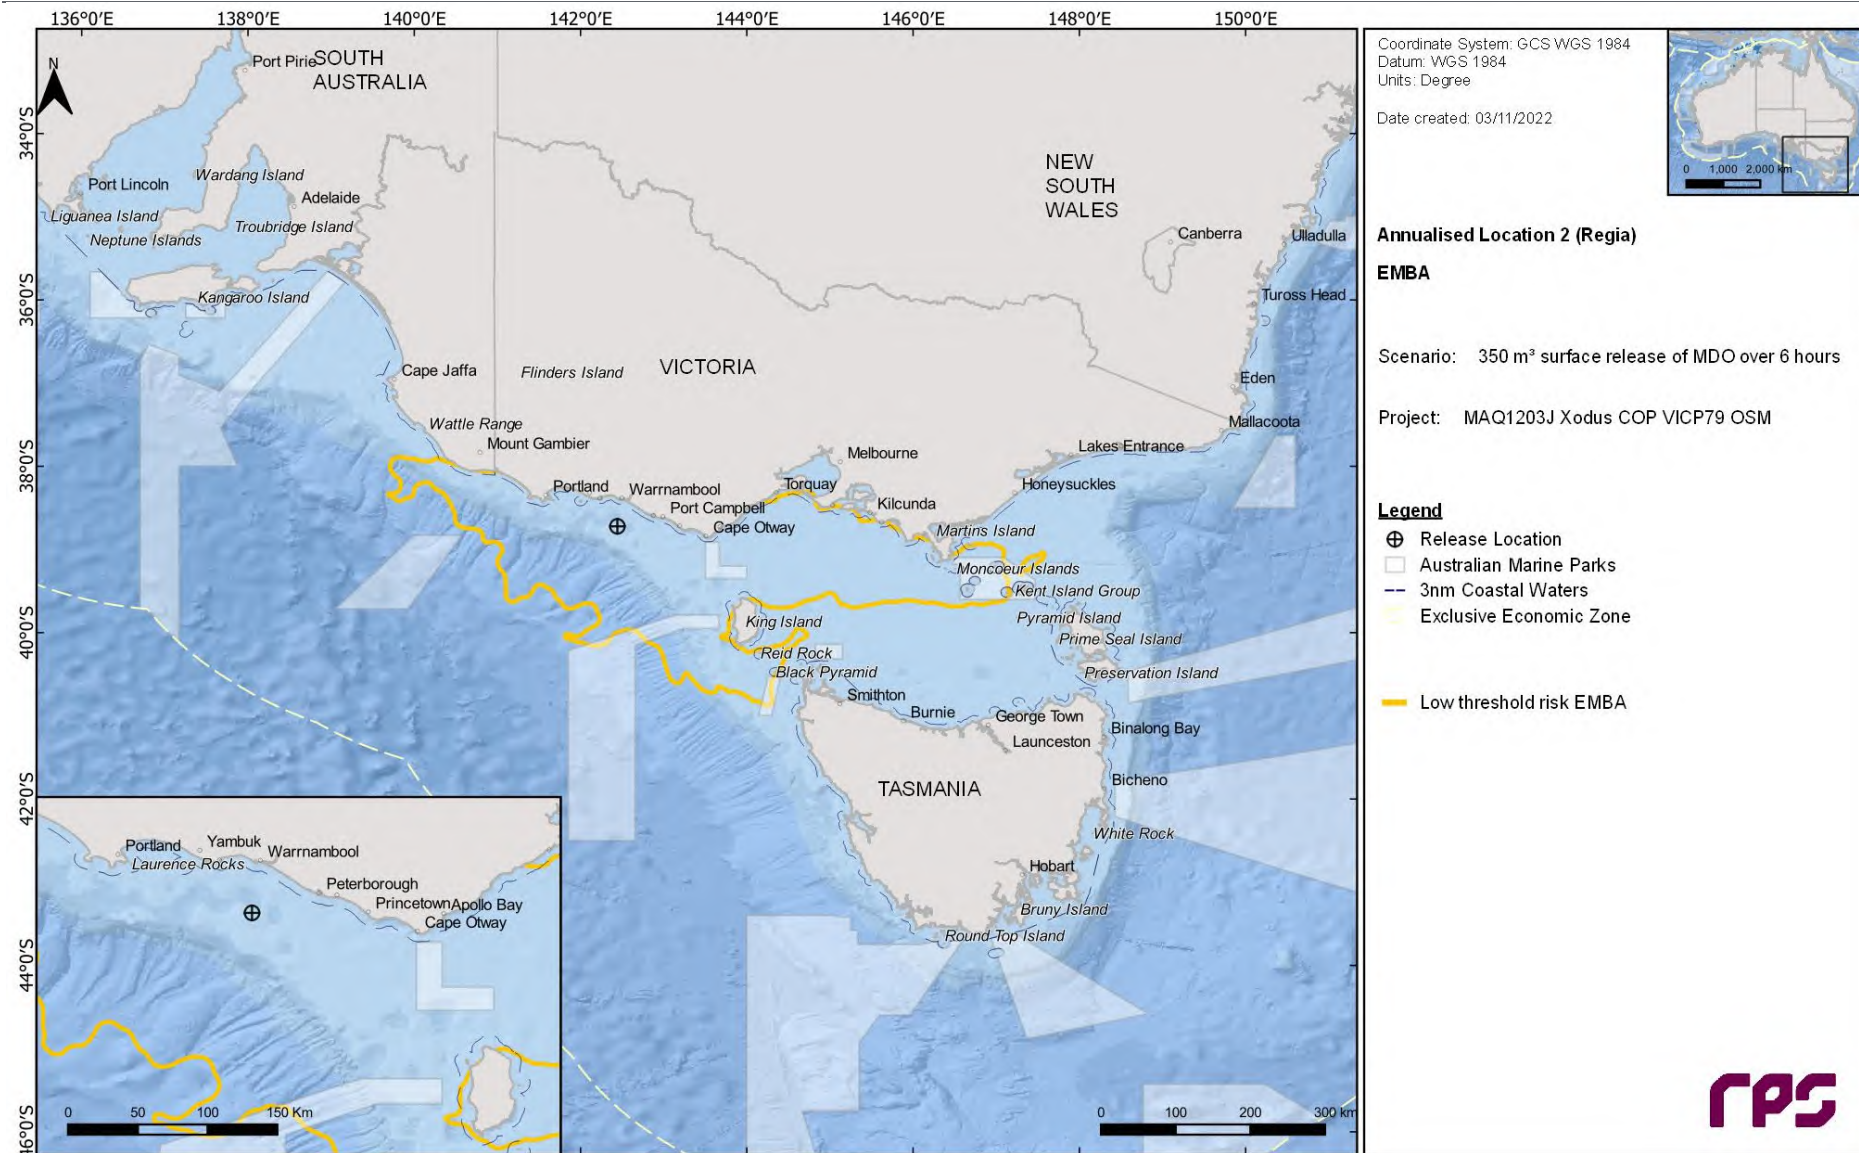

Section 18.1 presents the EMBA, Section 18.2 shows the seasonal (or stochastic) results, while Section 18.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 18.1 EMBA

Figure 18.1 shows the EMBA for Location 2. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

## REPORT

**Figure 18.1** Predicted low threshold EMBA from a vessel collision at Location 2. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 18.2 Stochastic Analysis

### 18.2.1 Floating Oil Exposure

Table 18.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 18.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 18.2 to Figure 18.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 188.8 km<sup>2</sup> and 154.1 km<sup>2</sup>, respectively.

**Table 18.1** Maximum distances and directions travelled by floating oil from a vessel collision at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.

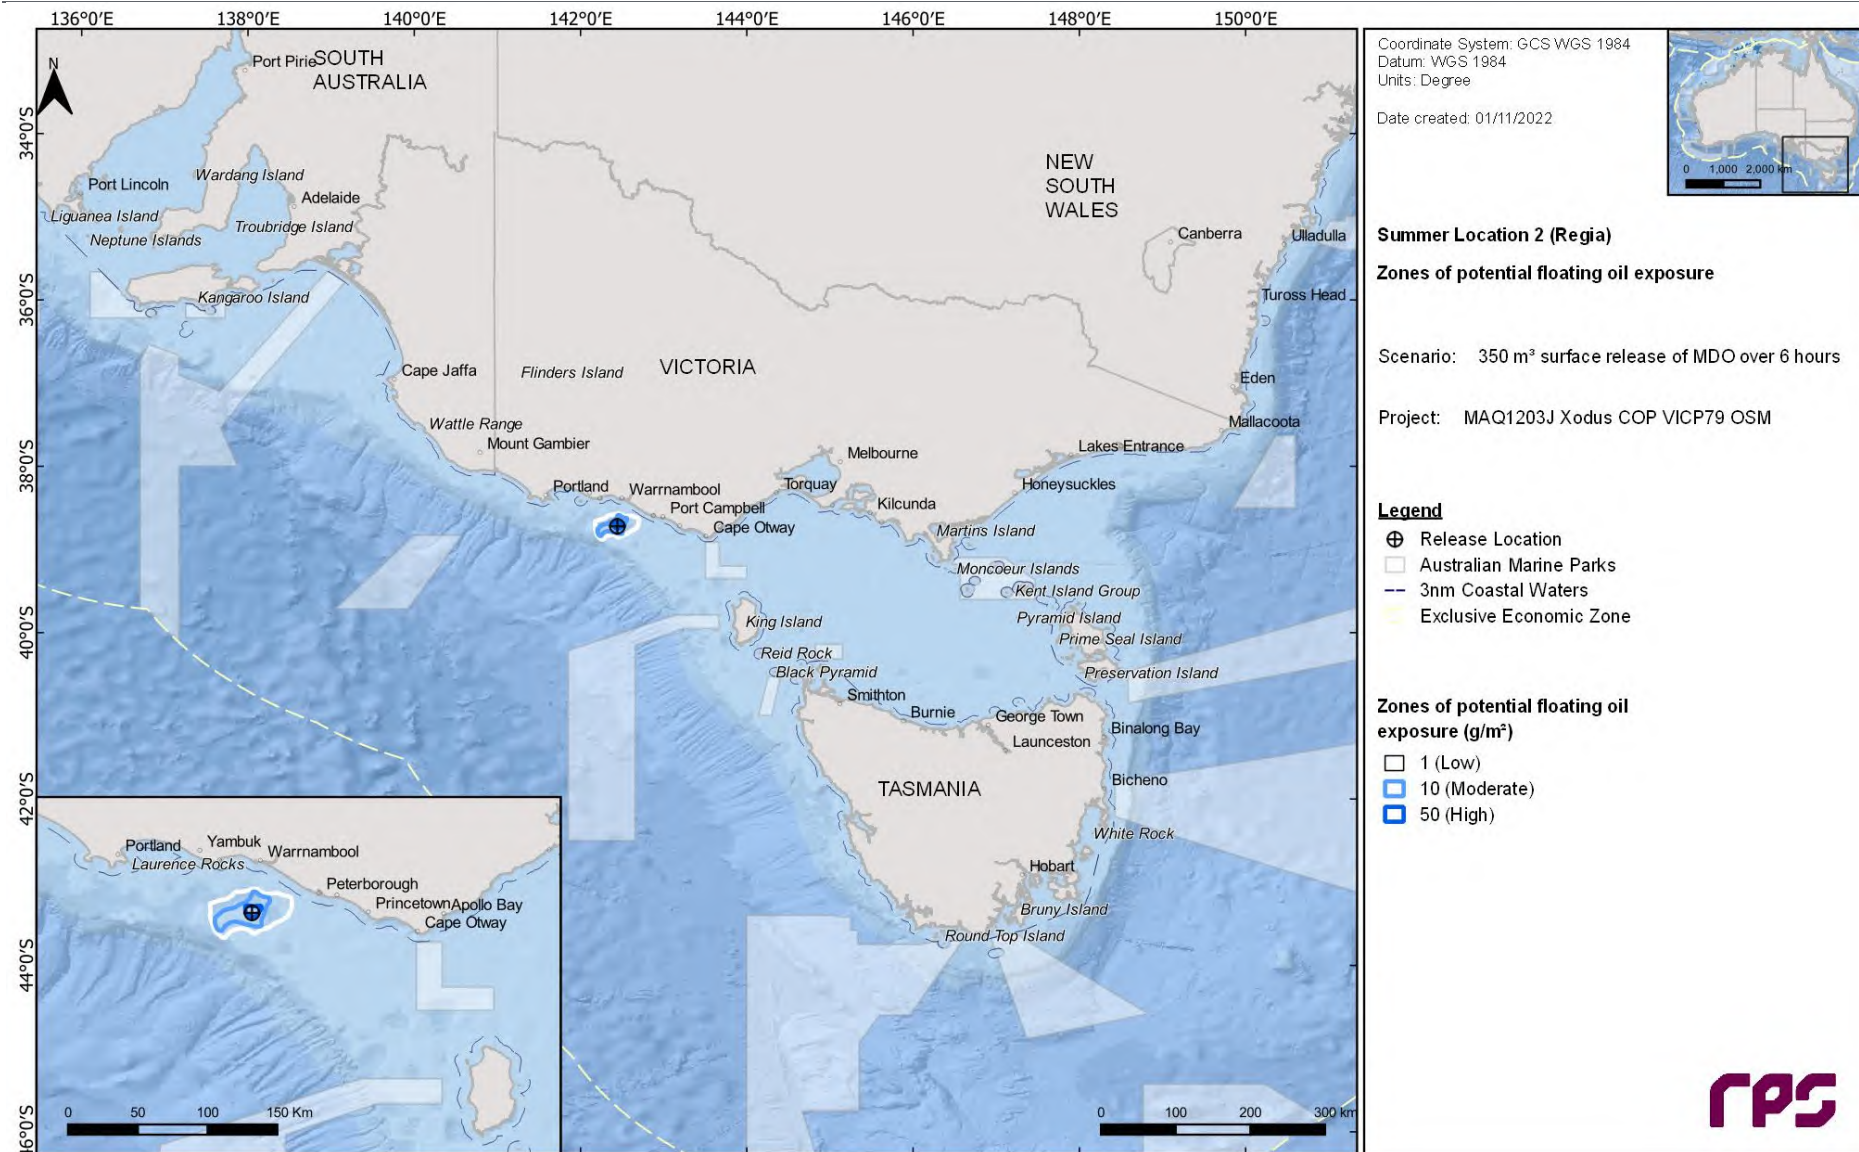

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	23.2	21.2	5.5
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	22.6	20.8	5.5
	Direction	ENE	WSW	NE
Winter	Maximum distance (km) from release location	59.9	20.1	3.4
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	28.2	18.9	3.4
	Direction	E	ESE	SW

## REPORT

**Table 18.2** Summary of the potential exposure by floating oil to individual receptors from a vessel collision at Location 2 for each season. Results were calculated from 100 spill simulations per season.

## 18.2.2 Shoreline Accumulation

Table 18.3 summarises the predicted oil accumulation on any shoreline during each season.

Table 18.4 to Table 18.5 summarises the oil accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 18.4 and Figure 18.5.

**Table 18.3 Summary of oil accumulation on any shoreline from a vessel collision at Location 2 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	45	41
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	2.88	1.83
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	20.3	28.9
Average volume of hydrocarbons ashore (m <sup>3</sup> )	4.4	5.4
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	22	32
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	9	10.3
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	5	5

## REPORT

**Figure 18.4** Maximum potential shoreline loading from a vessel collision at Location 2 during summer conditions. The results were calculated from 100 spill simulations.

## 18.2.3 In-water exposure

### 18.2.3.1 Dissolved Hydrocarbons

Table 18.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 18.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 18.6 and Figure 18.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

**Table 18.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a vessel collision at Location 2 for each threshold and season. Results were calculated from 100 spill simulations per season.

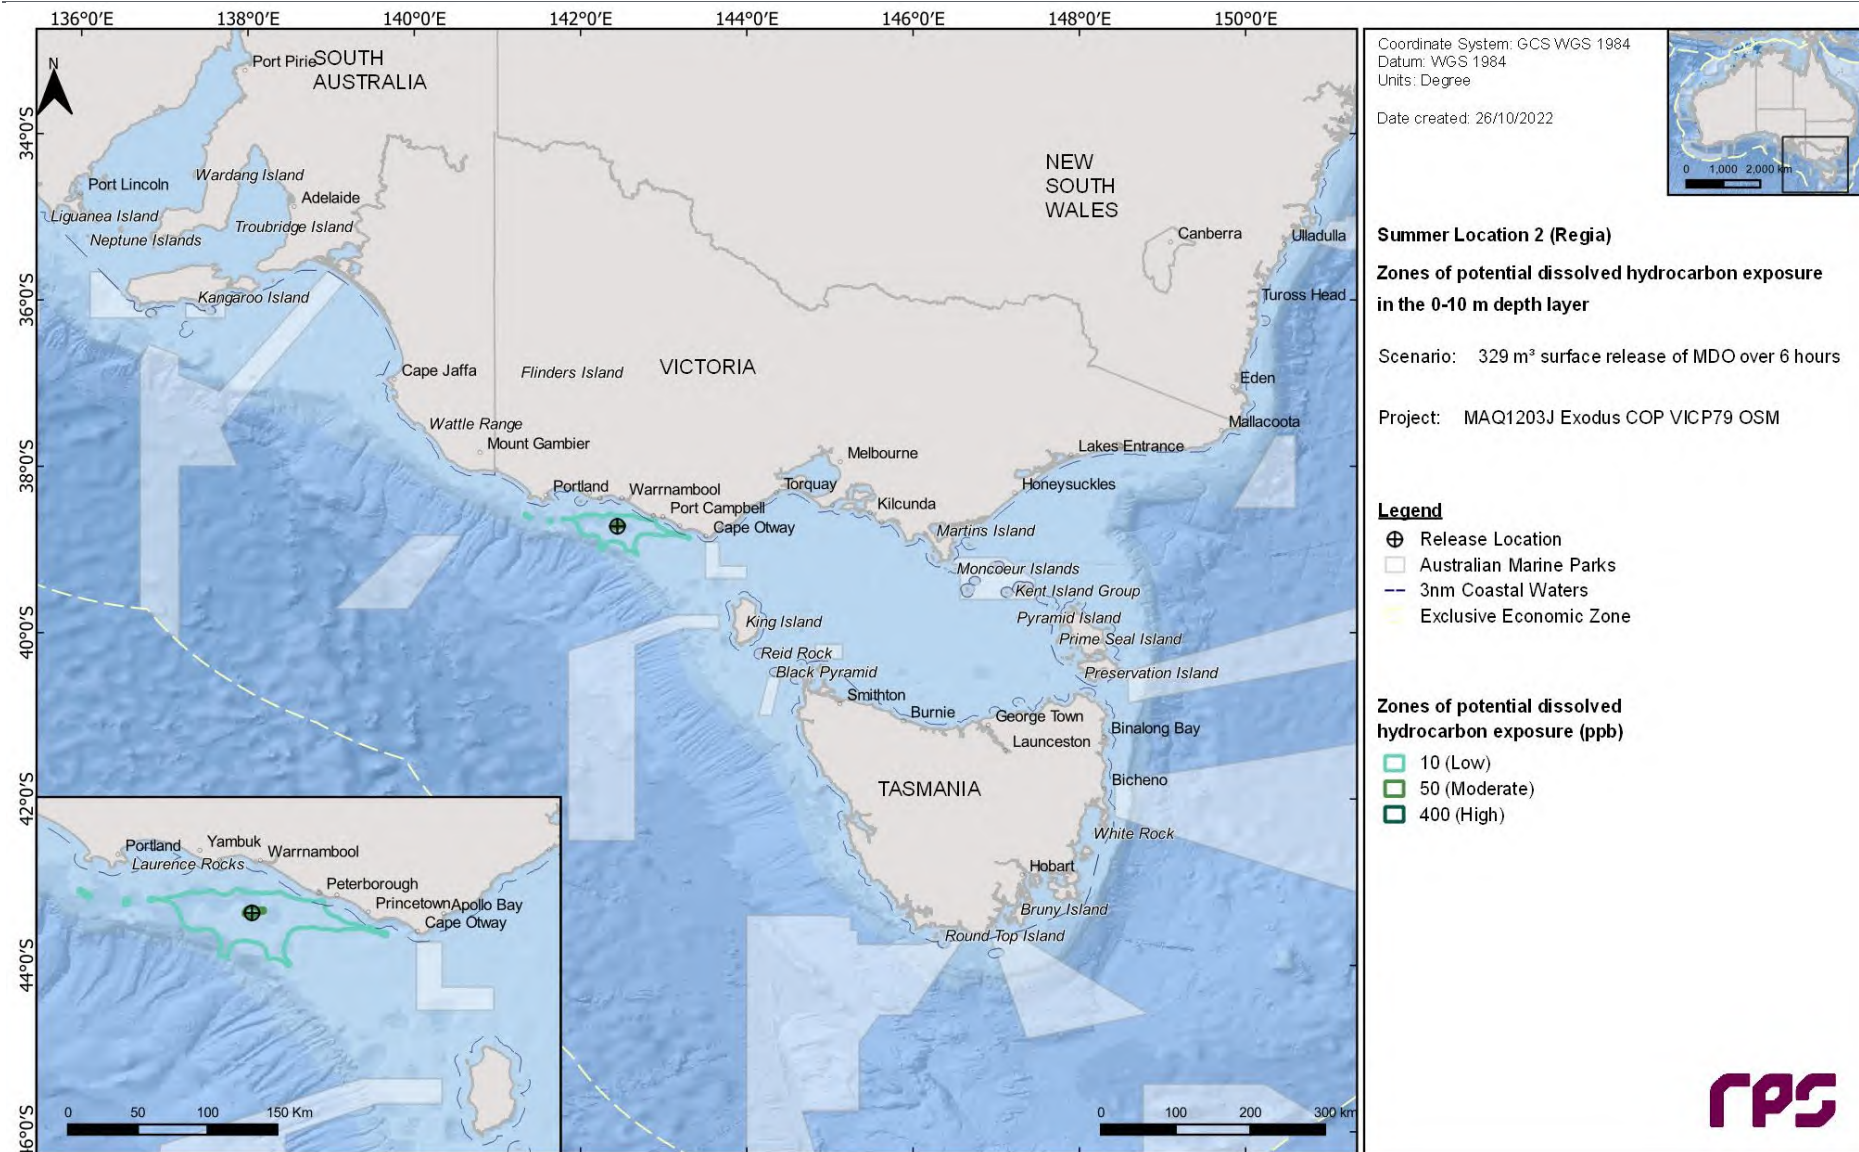

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	97	6	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	55	6	-
	Direction	W	ENE	-
Winter	Maximum distance (km) from release location	159	6	-

## 18.3 Deterministic Analysis

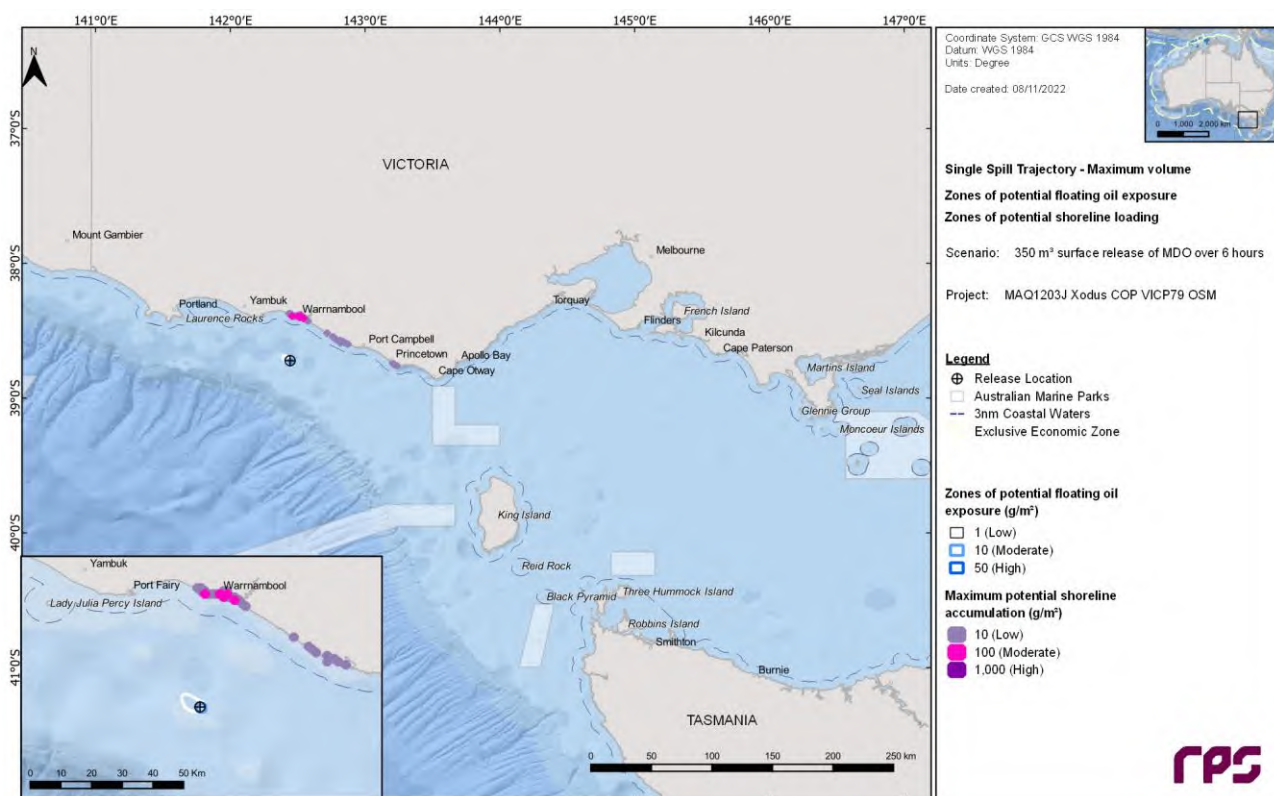

### 18.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 94 and commenced during winter conditions, 6 pm 9<sup>th</sup> August 2010.

Figure 18.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on within 2 days of the release event.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 18.11 and Figure 18.12, respectively.

Figure 18.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 167 m<sup>3</sup> (~48%) was lost to the atmosphere through evaporation. Approximately, 103 m<sup>3</sup> (~29%) of the released volume decayed, while approximately 64 m<sup>3</sup> (~18%) was predicted to remain within the water column and approximately 20 m<sup>3</sup> (~6%) was present on the shorelines.

**Figure 18.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 2.**

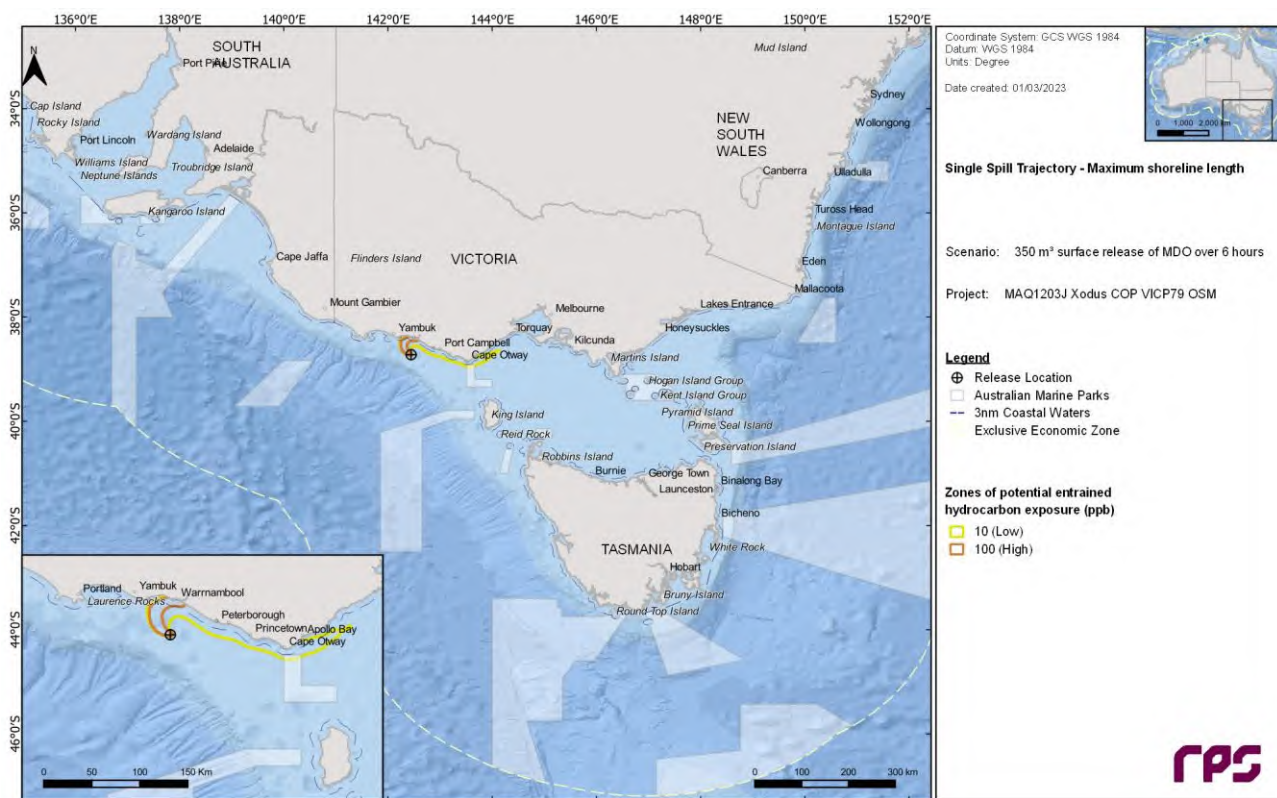

Figure 18.11 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 2.

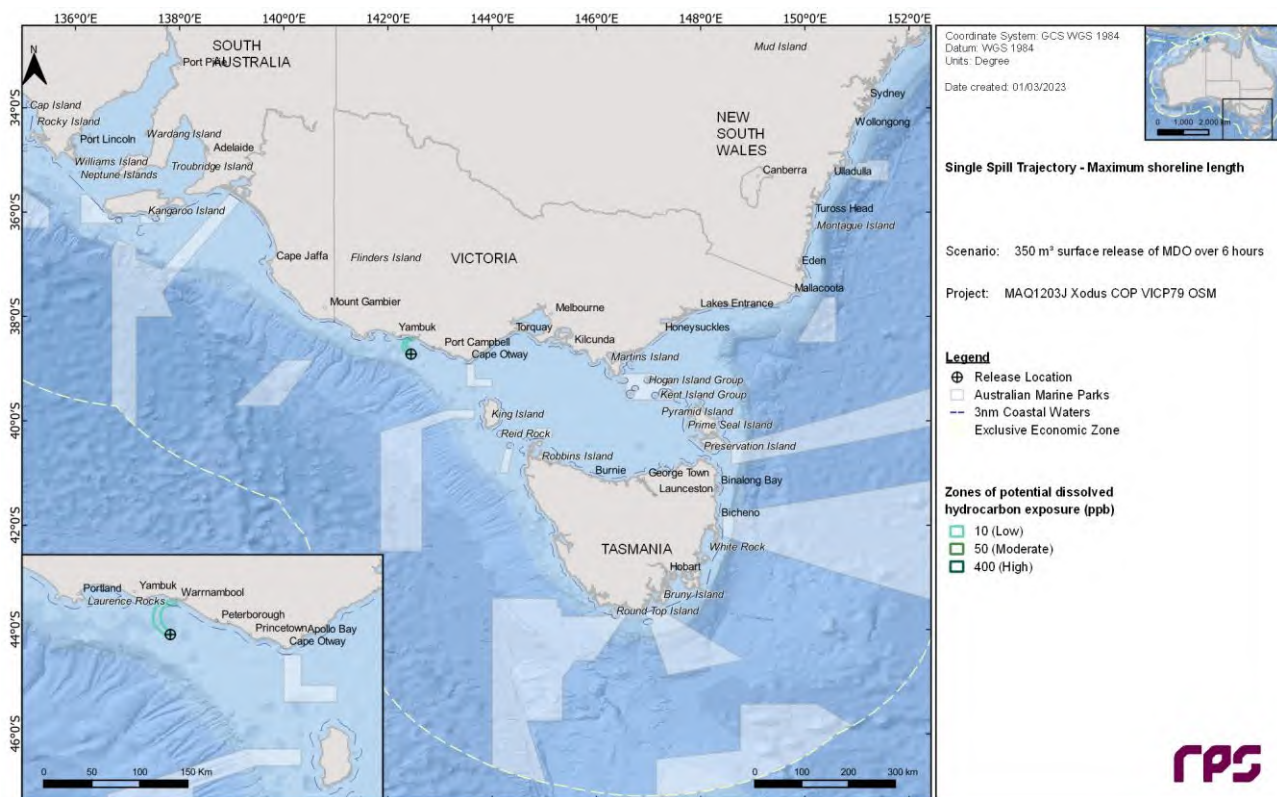

Figure 18.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 2.

**Figure 18.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 2.**

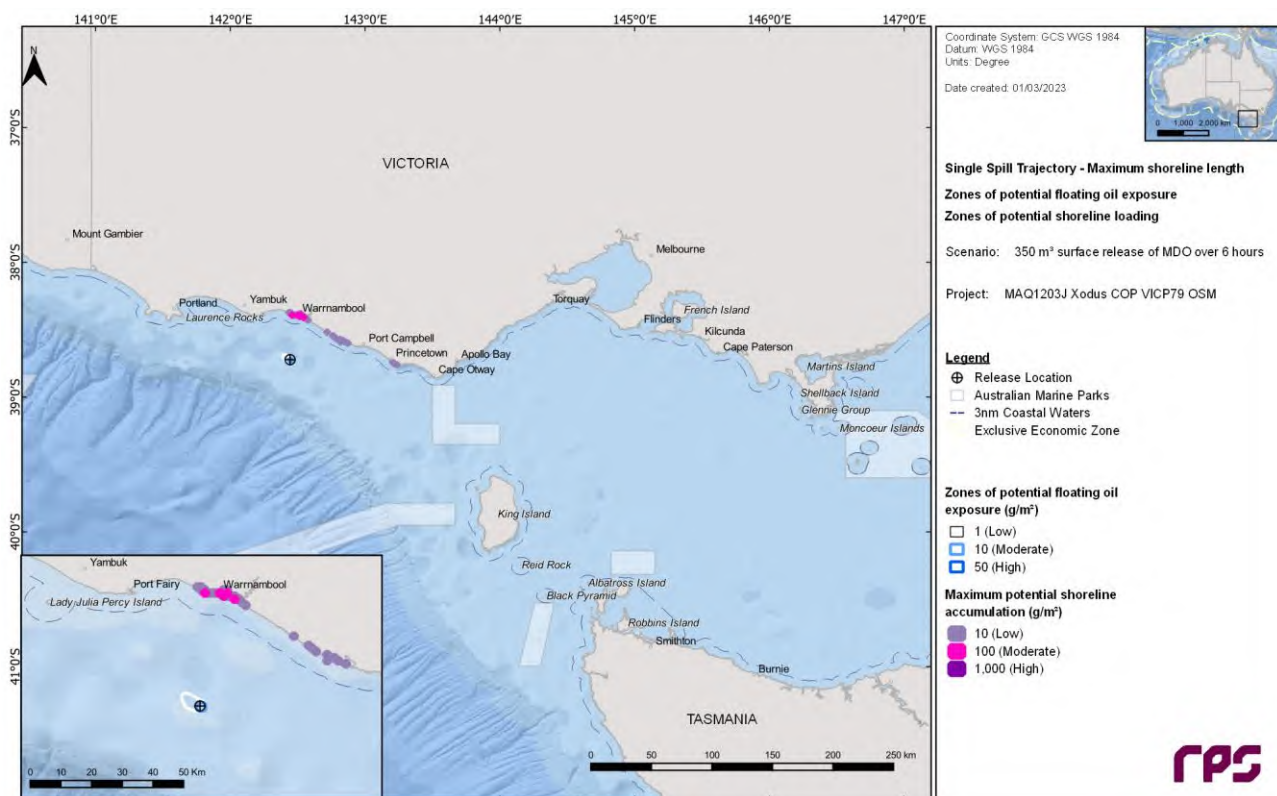

### 18.3.2 Longest Length of Shoreline Accumulation

The simulation that resulted in the longest length of hydrocarbons ashore of 32 km was identified as run number 12 which commenced during winter conditions, 2 pm 1<sup>st</sup> August 2018.

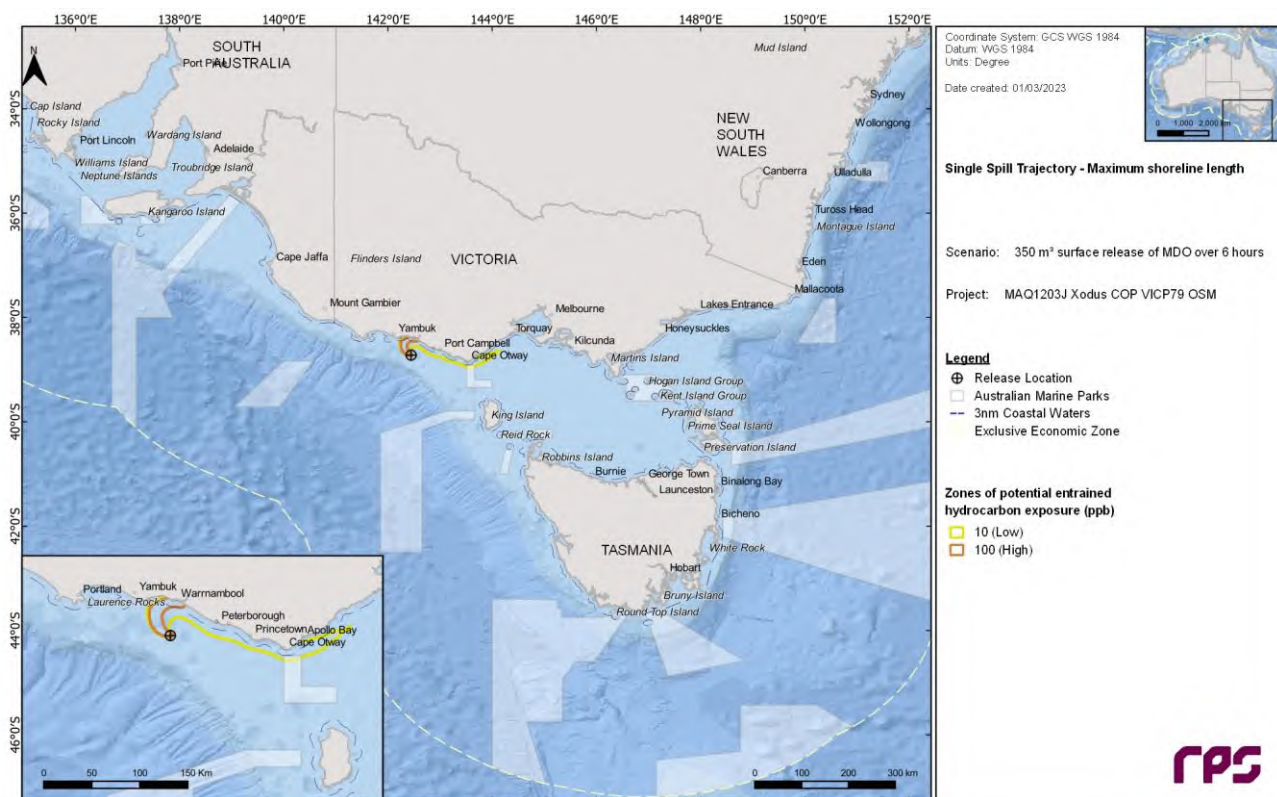

Figure 18.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on day 2 of the simulation.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 18.15 and Figure 18.16, respectively.

Figure 18.17 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 170 m<sup>3</sup> (~48%) was lost to the atmosphere through evaporation. Approximately, 102 m<sup>3</sup> (~29%) of the released volume decayed, while approximately 64 m<sup>3</sup> (~18%) was predicted to remain within the water column and approximately 20 m<sup>3</sup> (6%) remained on shorelines.

**Figure 18.14 Predicted extent of the floating hydrocarbon exposure and shoreline loading over the entire 30 days for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.**

**Figure 18.15 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.**

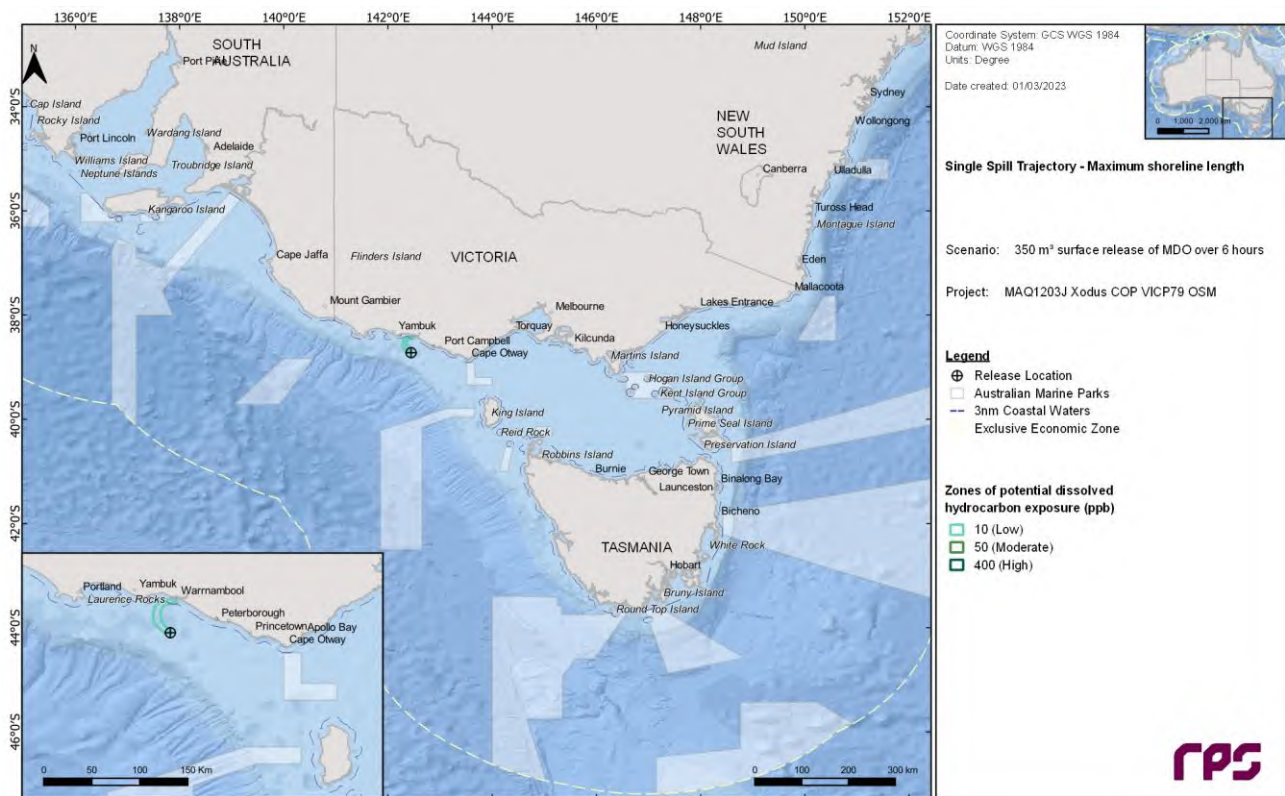

Figure 18.16 Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.

Figure 18.17 Predicted weathering and fates for the simulation that led to the longest length of shoreline accumulation from a vessel collision at Location 2.

## 19 LOCATION 3 VESSEL COLLISION RESULTS

This scenario examined the potential exposure following a vessel collision at Location 3. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

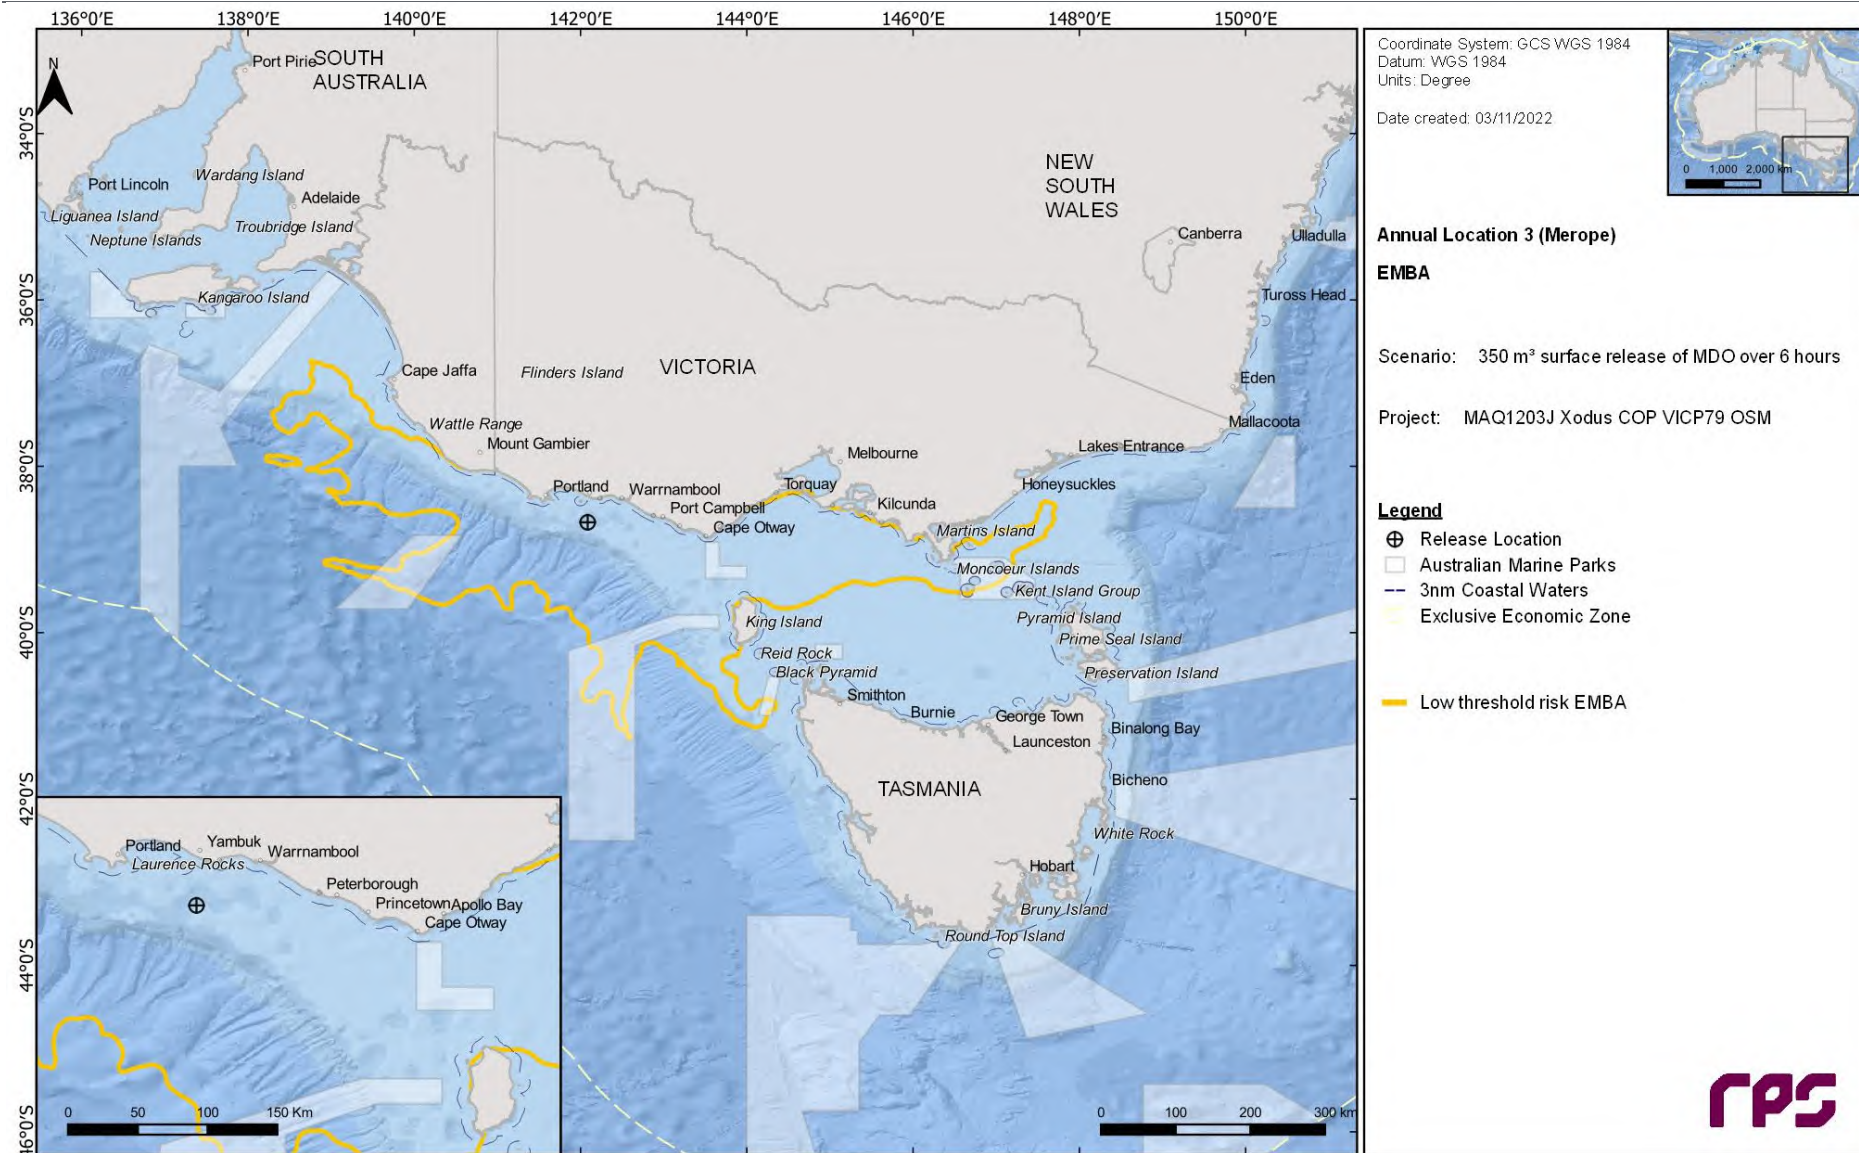

Section 19.1 presents the EMBA, Section 19.2 shows the seasonal (or stochastic) results, while Section 19.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 19.1 EMBA

Figure 19.1 shows the EMBA for Location 3. The EMBA encompasses the outer extent of all 200 seasonal spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

## REPORT

**Figure 19.1** Predicted low threshold EMBA from a vessel collision at Location 3. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 19.2 Stochastic Analysis

### 19.2.1 Floating Oil Exposure

Table 19.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 19.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 19.2 to Figure 19.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating hydrocarbon exposure at or above the low exposure threshold of 139.5 km<sup>2</sup> was identified as run number 3 and commenced during summer conditions, 9 am 31<sup>st</sup> March 2010. In comparison the largest swept area of floating hydrocarbon at or above the low exposure threshold occurring during winter was 125.0 km<sup>2</sup>.

**Table 19.1 Maximum distances and directions travelled by floating oil from a vessel collision at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.**

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	51.8	12.8	8.0
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	35.6	12.4	8.0
	Direction	ENE	NE	NE
Winter	Maximum distance (km) from release location	29.1	19.8	4.2
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	28.1	18.7	4.2
	Direction	ESE	ESE	WNW

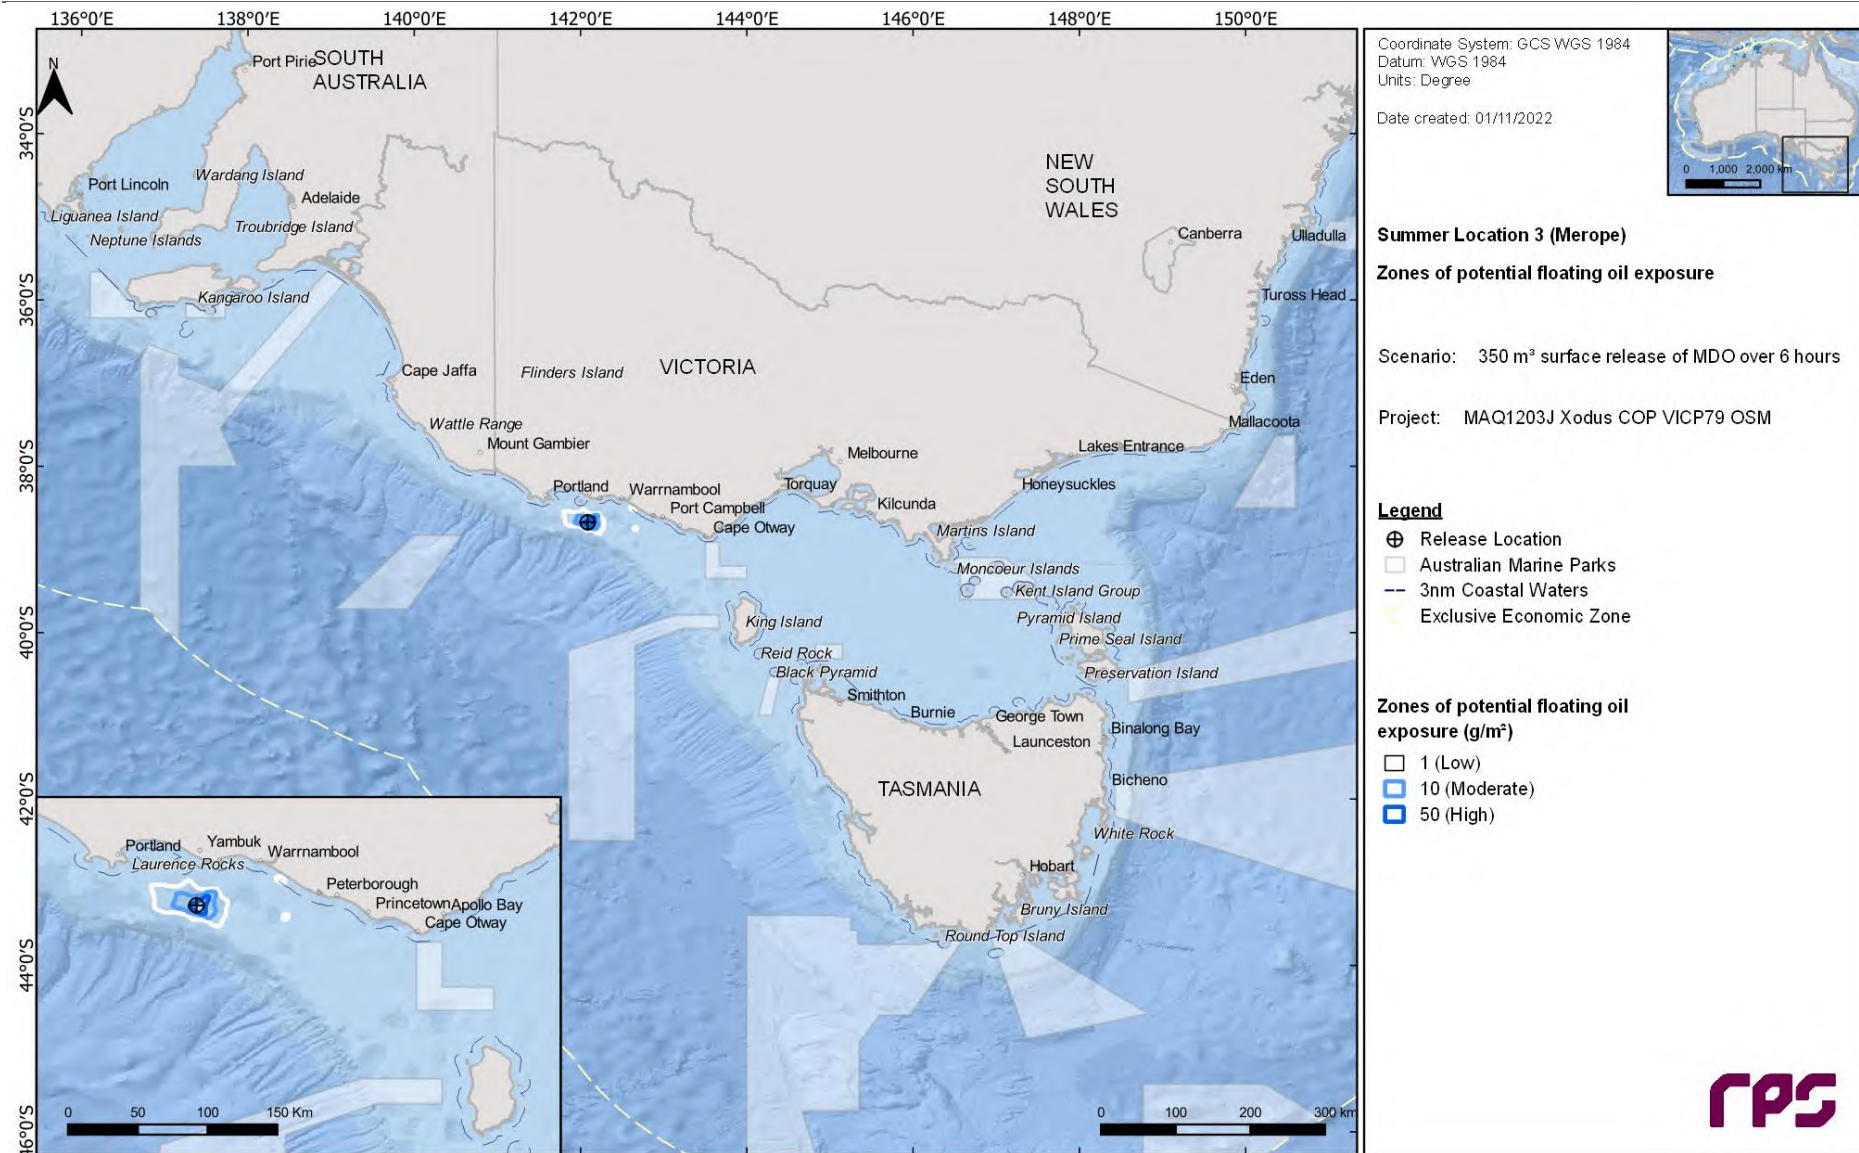

## REPORT

**Table 19.2** Summary of the potential exposure by floating oil to individual receptors from a vessel collision at Location 3 for each season. Results were calculated from 100 spill simulations per season.

### 19.2.3.1 Dissolved Hydrocarbons

Table 19.6 summarises the maximum distances and directions travelled by dissolved hydrocarbons from the release location to each threshold, in the 0 – 10 m depth layer.

Table 19.7 summarises the potential exposure to receptors from dissolved hydrocarbons in the 0 – 10 m for each threshold and season.

Figure 19.6 and Figure 19.7 illustrate the extent of dissolved hydrocarbon exposure during summer and winter, respectively, in the 0-10 m depth layers.

**Table 19.6** Maximum distance and direction by dissolved hydrocarbon exposure (0-10 m) from a vessel collision at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential dissolved hydrocarbon exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	98	2	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	56	2	-
	Direction	WNW	NE	-
Winter	Maximum distance (km) from release location	121	3	-
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	108	3	-
	Direction	SE	E	-

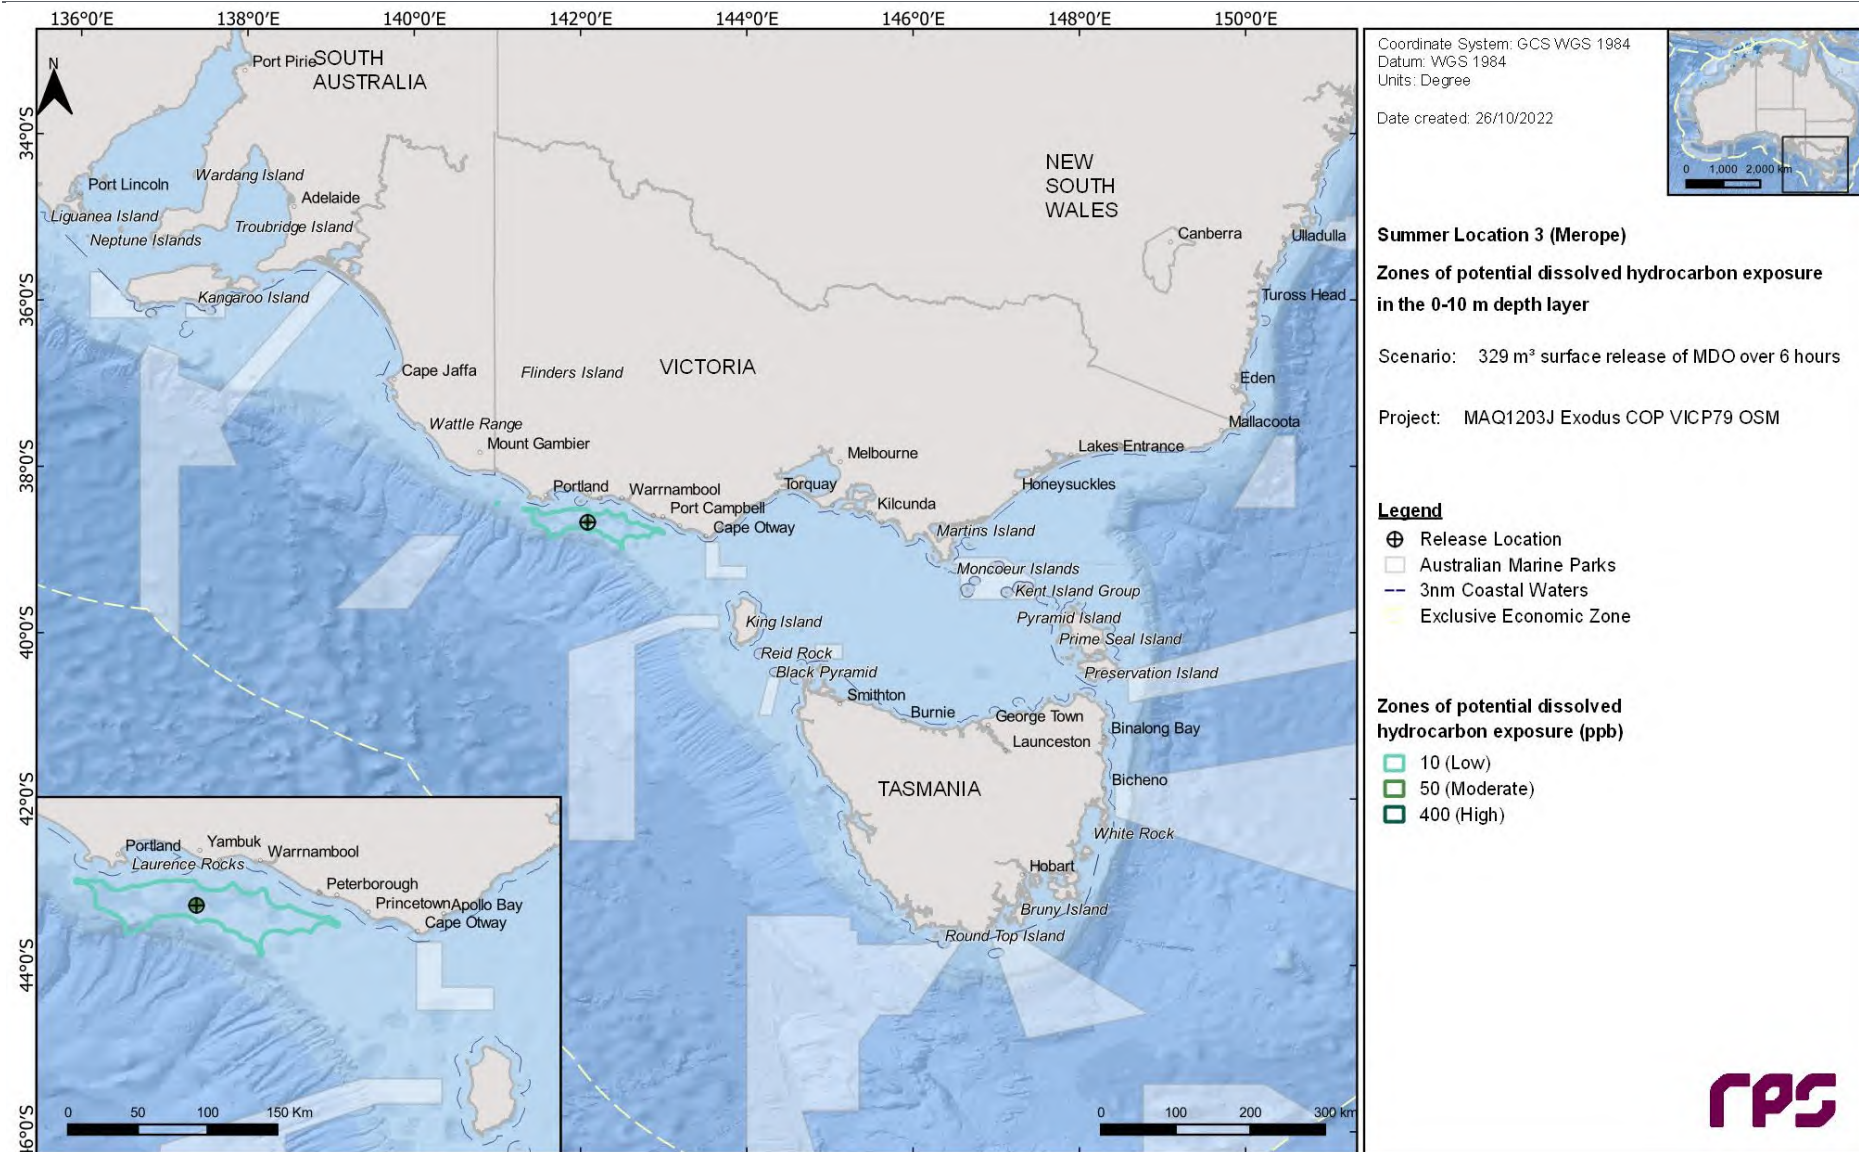

**Table 19.7** Probability of dissolved hydrocarbons exposure to receptors in the 0-10 m depth layer from a vessel collision at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

### 19.2.3.2 Entrained Hydrocarbons

Table 19.8 summarises the maximum distances and directions travelled by entrained hydrocarbons within the 0-10 m depth layer.

Table 19.9 summarises the potential exposure to receptors from entrained hydrocarbons in the 0-10 m depth layers, for each season.

Figure 19.8 and Figure 19.9 illustrate extent of entrained hydrocarbon exposure for each season in the 0-10 m depth layer.

**Table 19.8** Maximum distance and direction by entrained hydrocarbon exposure (0-10 m) from a vessel collision at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

Season	Distance and direction travelled	Zones of potential entrained hydrocarbon exposure	
		Low	High
Summer	Maximum distance (km) from release location	379	134
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	351	121
	Direction	E	ESE
Winter	Maximum distance (km) from release location	489	187
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	450	172
	Direction	E	E

**Table 19.9** Probability of entrained hydrocarbons exposure to receptors in the 0-10 m depth layer from a vessel collision at Location 3 for each threshold and season. Results were calculated from 100 spill simulations per season.

## REPORT

**Figure 19.8** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a vessel collision at Location 3 during summer conditions. The results were calculated from 100 spill simulations.

## REPORT

**Figure 19.9** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a vessel collision at Location 3 during winter conditions. The results were calculated from 100 spill simulations.

## 19.3 Deterministic Analysis

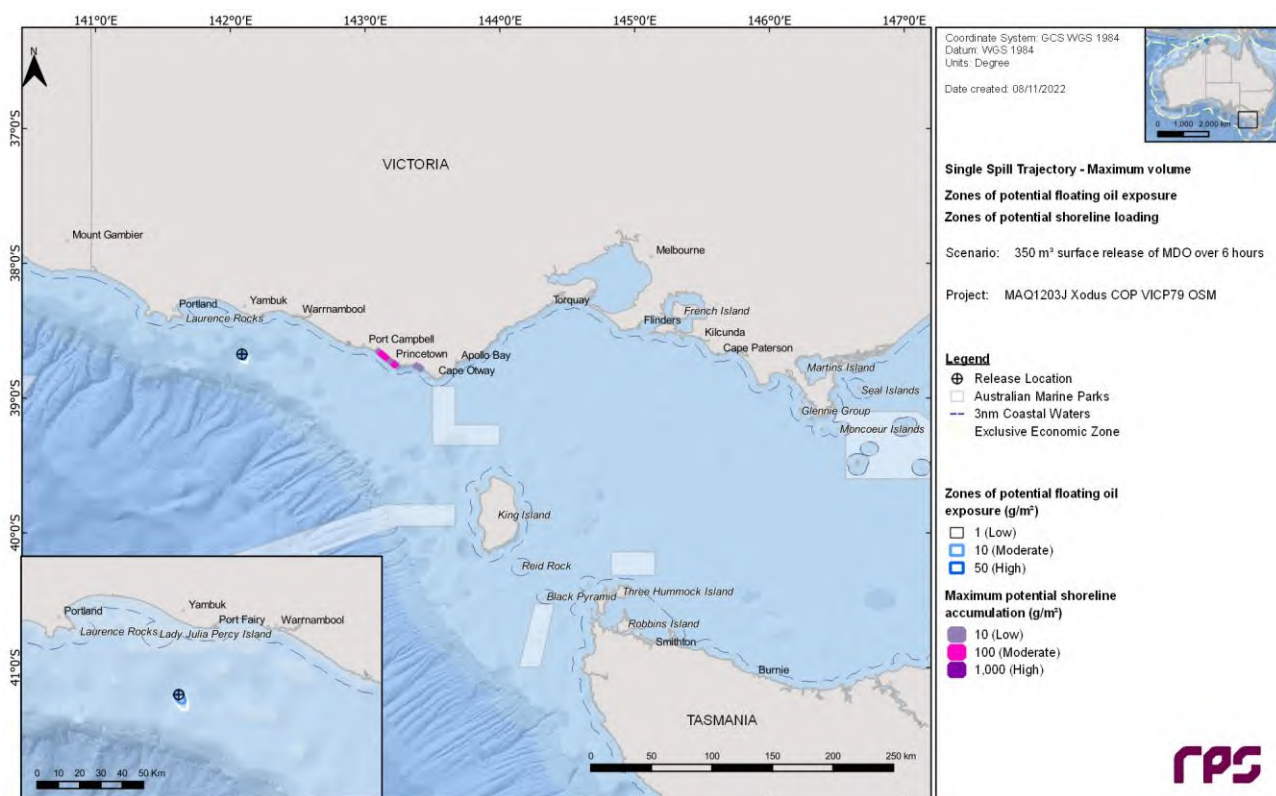

### 19.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 94 and commenced during winter conditions, 4 am 17<sup>th</sup> August 2019.

Figure 19.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on day 3.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 19.11 and Figure 19.12, respectively.

Figure 19.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 152 m<sup>3</sup> (~44%) was lost to the atmosphere through evaporation. Approximately, 105 m<sup>3</sup> (~31%) of the released volume decayed, while approximately 80 m<sup>3</sup> (~22%) was predicted to remain within the water column and approximately 13 m<sup>3</sup> (~4%) was present on the shorelines.

**Figure 19.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.**

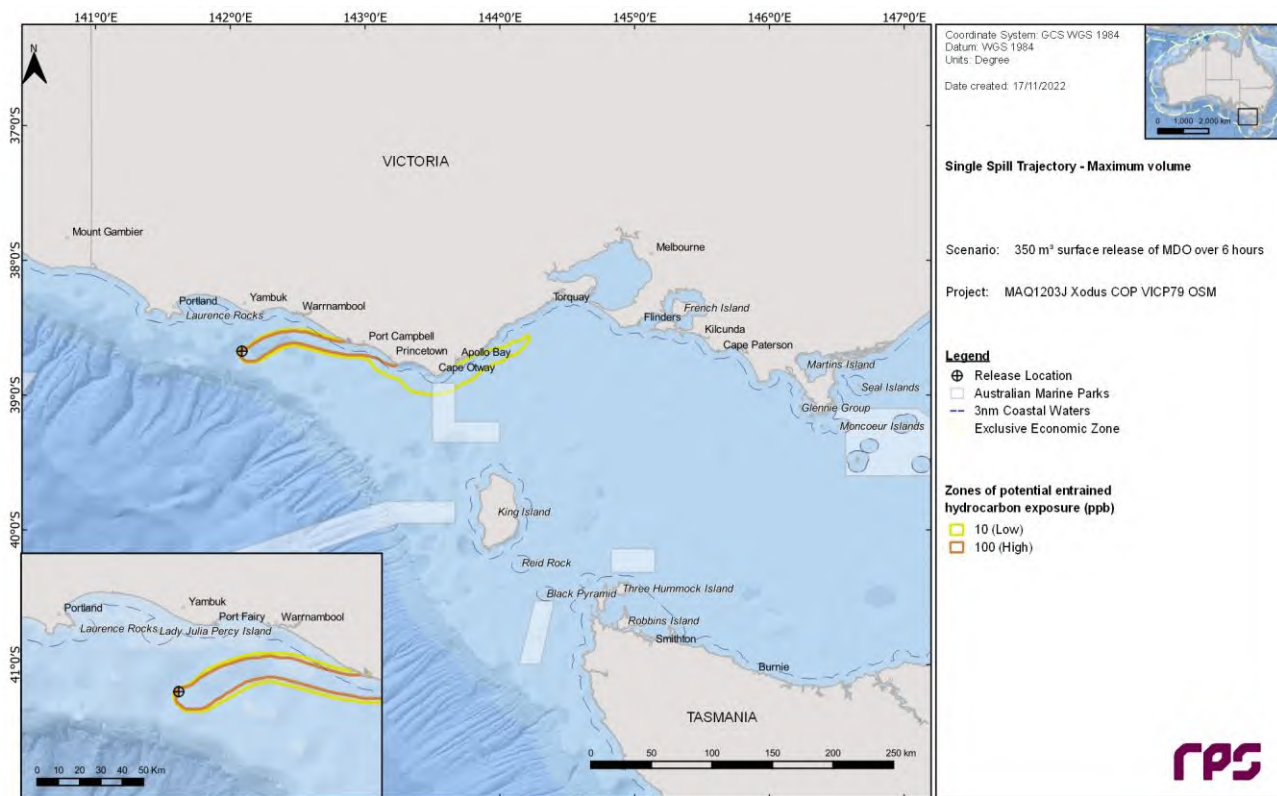

Figure 19.11 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.

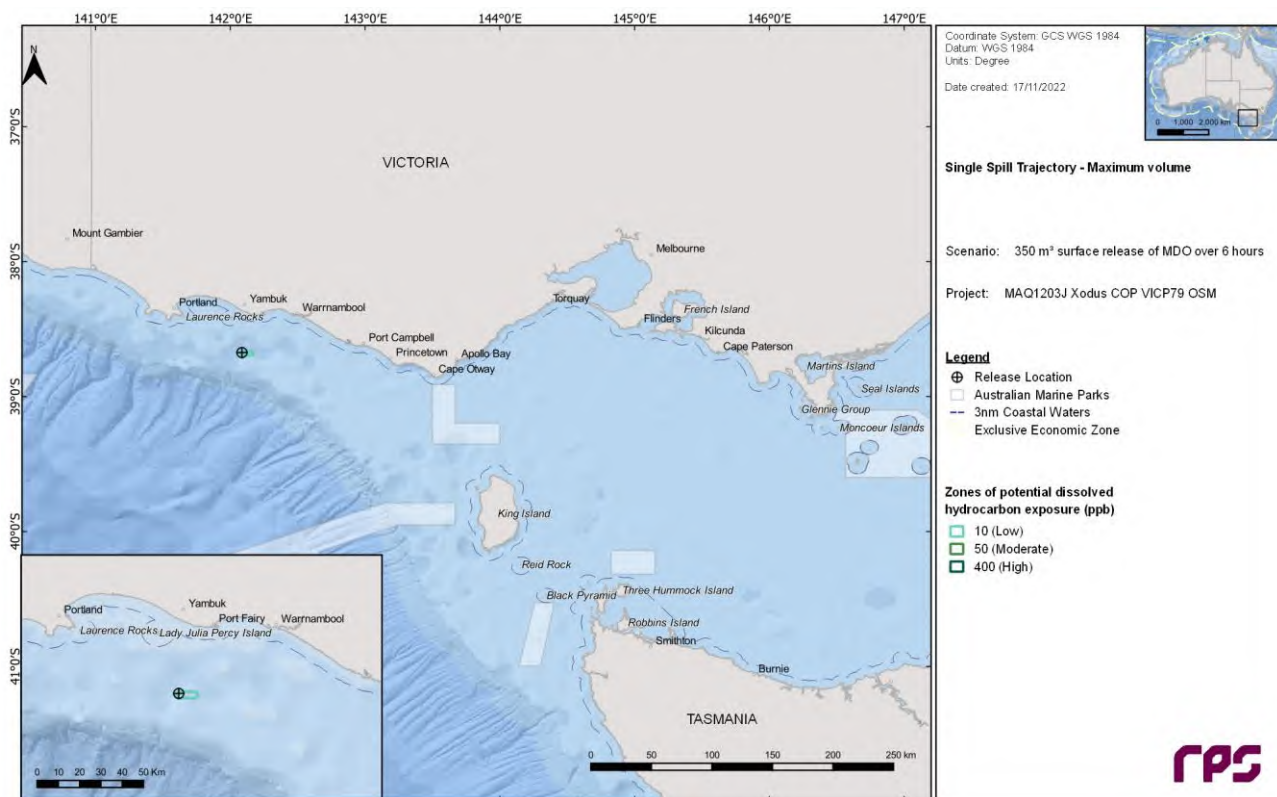

Figure 19.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.

**Figure 19.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 3.**

## 20 LOCATION 4 VESSEL COLLISION RESULTS

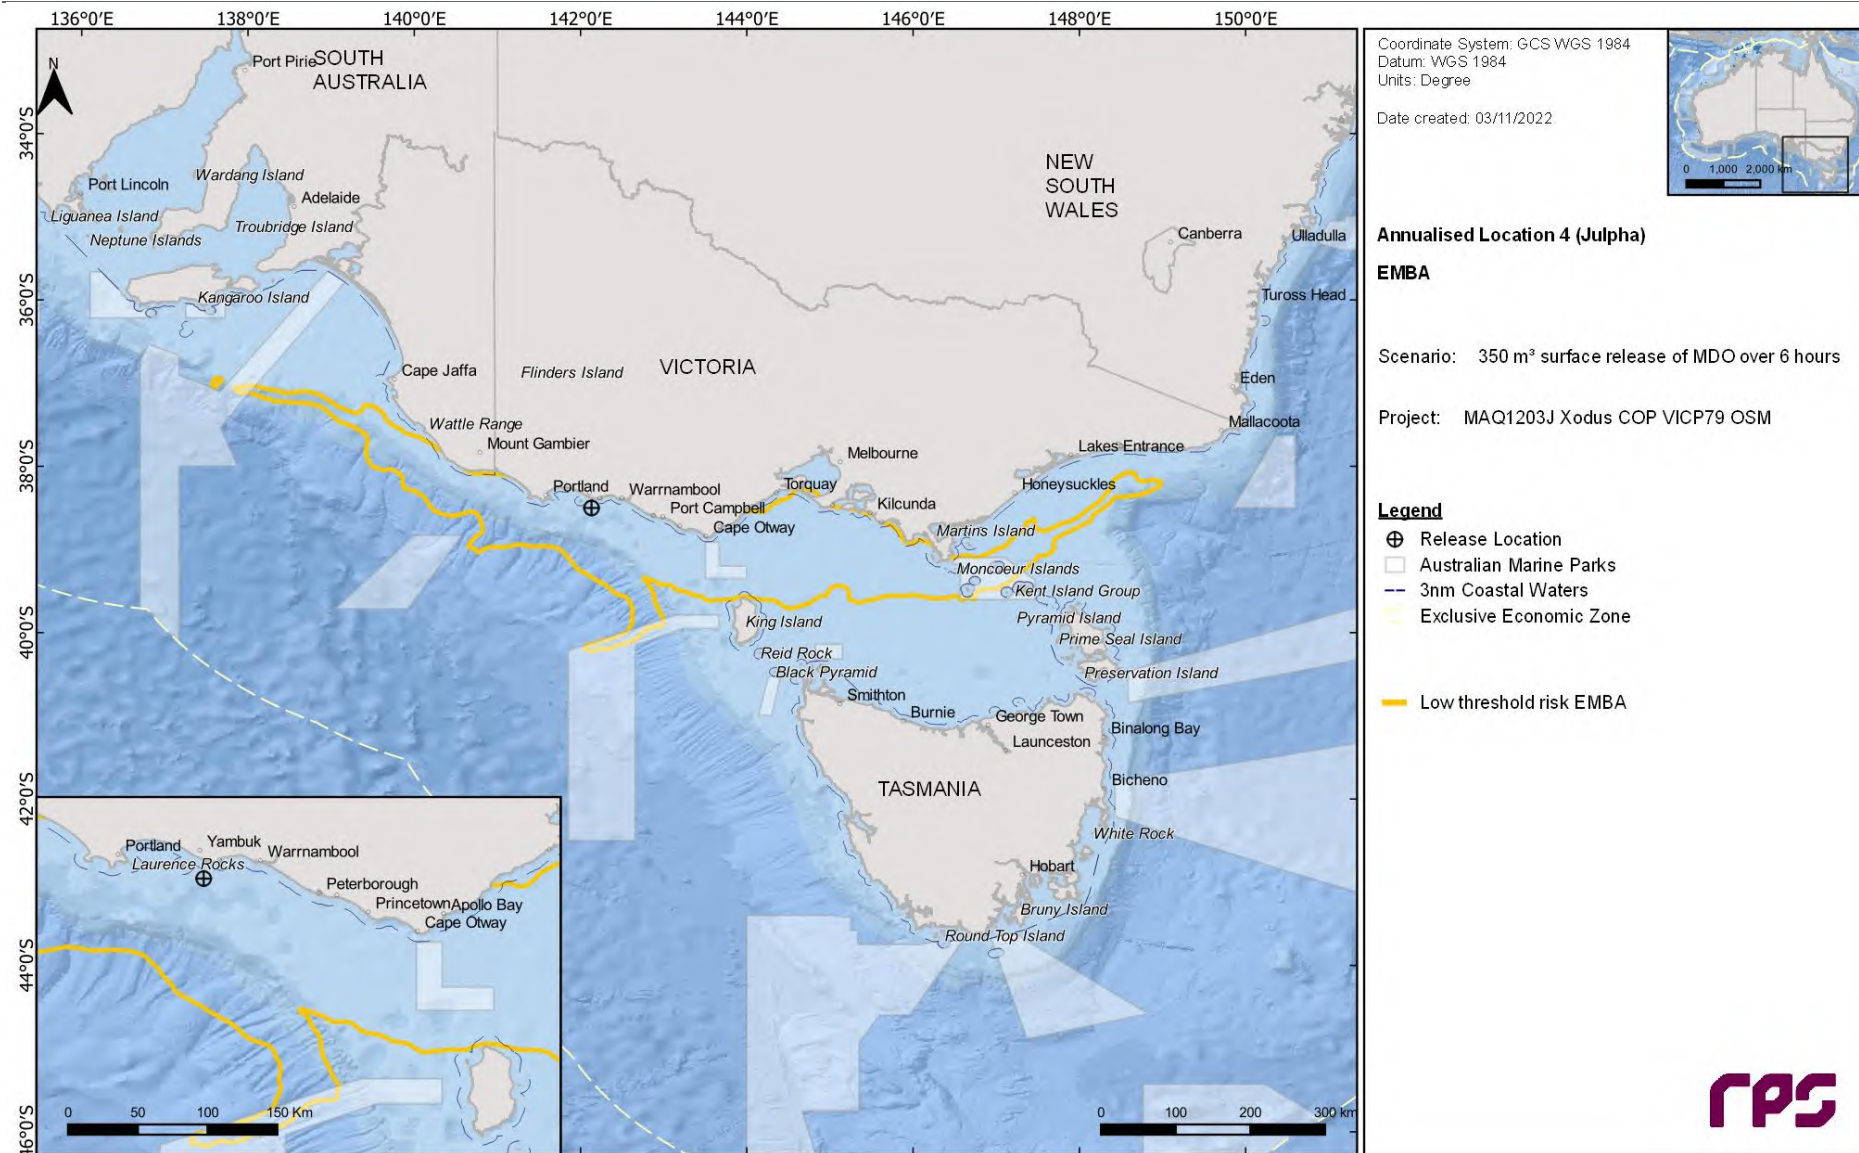

This scenario examined the potential exposure following a vessel collision at Location 4. A total of 200 spill trajectories were simulated (i.e. 100 spills per season) and tracked for 120 days.

Section 20.1 presents the EMBA, Section 20.2 shows the seasonal (or stochastic) results, while Section 20.3 presents in more detail the results for the simulation resulting in the largest volume of hydrocarbons ashore.

### 20.1 EMBA

Figure 20.1 shows the EMBA for Location 4. The EMBA encompasses the outer extent of all 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components (1 g/m<sup>2</sup> floating, 10 ppb dissolved and entrained, 10 g/m<sup>2</sup> shoreline) and includes all probabilities of exposure. The EMBA does not represent the reach of an individual spill event.

## REPORT

**Figure 20.1** Predicted low threshold EMBA from a vessel collision at Location 4. The annualised results were calculated from 200 spill simulations using the 'low' threshold exposure values for each of the modelled oil components.

## 20.2 Stochastic Analysis

### 20.2.1 Floating Oil Exposure

Table 20.1 summarises the maximum distances and directions travelled by the floating oil from the release location at each threshold for each season.

Table 20.2 summarises the potential floating oil exposure to individual receptors for each season.

Figure 20.2 to Figure 20.3 illustrate the extent of floating oil exposure for each season.

The simulation that resulted in the largest swept area of floating oil exposure at or above the low threshold during winter and summer was 187.0 km<sup>2</sup> and 151.4 km<sup>2</sup>, respectively.

**Table 20.1** Maximum distances and directions travelled by floating oil from a vessel collision at Location 4 for each threshold and season. Results were calculated from 100 spill simulations per season.

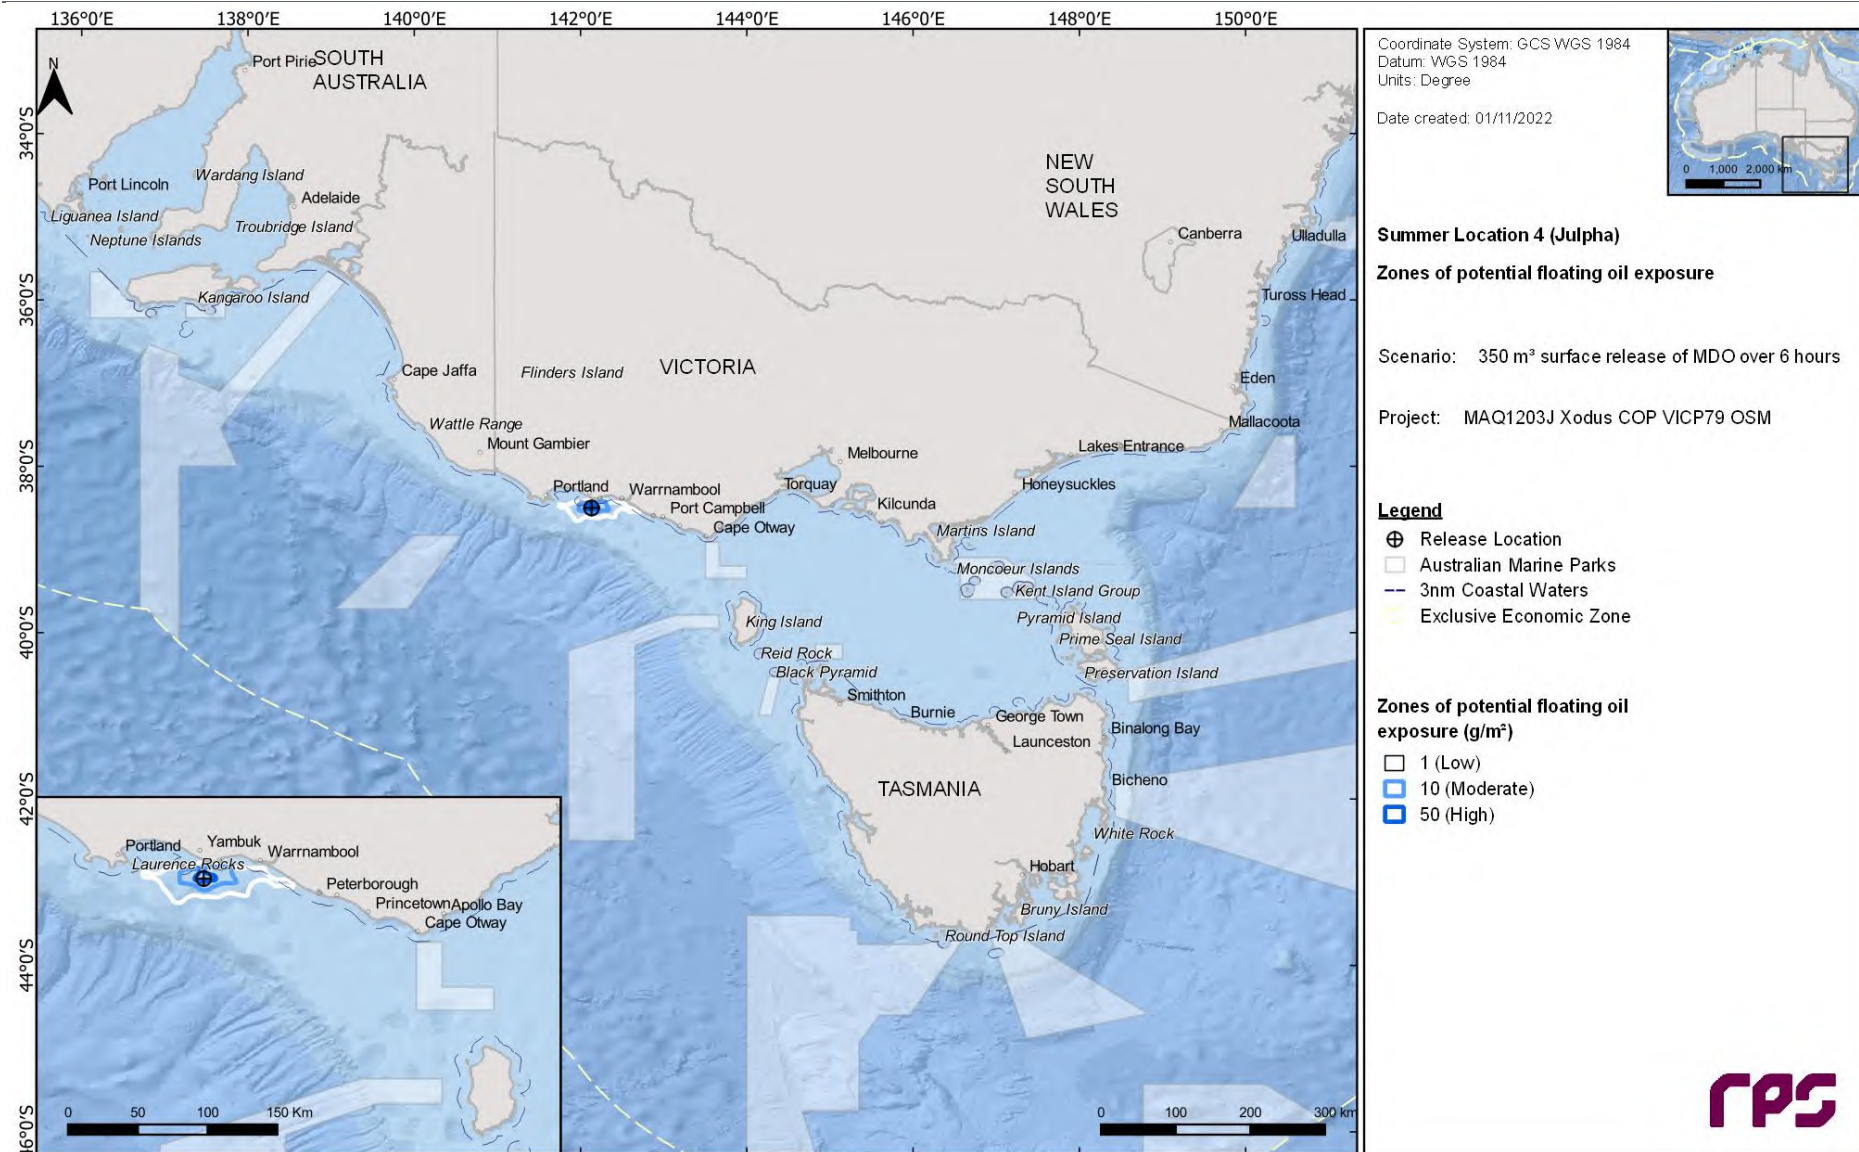

Season	Distance and direction travelled	Zones of potential floating oil exposure		
		Low	Moderate	High
Summer	Maximum distance (km) from release location	49.4	17.1	5.7
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	39.8	16.1	5.7
	Direction	E	E	E
Winter	Maximum distance (km) from release location	62.3	20.7	3.0
	Maximum distance (km) from release location (99 <sup>th</sup> percentile)	42.9	19.6	3.0
	Direction	E	ESE	SSW

## REPORT

**Table 20.2** Summary of the potential exposure by floating oil to individual receptors from a vessel collision at Location 4 for each season. Results were calculated from 100 spill simulations per season.

Receptor		Summer						Winter

## 20.2.2 Shoreline Accumulation

Table 20.3 summarises the predicted oil accumulation on any shoreline during each season.

Table 20.4 and Table 20.5 summarises the oil accumulation on individual shoreline receptors for each season.

The maximum potential shoreline loading for the specified thresholds for each season are presented in Figure 20.4 and Figure 20.5.

**Table 20.3 Summary of oil accumulation on any shoreline from a vessel collision at Location 4 during each season. Results were calculated from 100 spill simulations per season.**

Shoreline Statistics	Summer	Winter
Probability of accumulation on any shoreline (%) at or above the low threshold (10 g/m <sup>2</sup> )	85	68
Absolute minimum time before oil ashore (days) at or above the low threshold (10 g/m <sup>2</sup> )	1.33	1.08
Maximum volume of hydrocarbons ashore (m <sup>3</sup> )	34.1	43.0
Average volume of hydrocarbons ashore (m <sup>3</sup> )	5.4	9.5
Maximum length of the shoreline at <b>10 g/m<sup>2</sup></b> (km)	21	30
Average shoreline length (km) at <b>10 g/m<sup>2</sup></b> (km)	9.5	11.4
Maximum length of the shoreline at <b>100 g/m<sup>2</sup></b> (km)	11	10
Average shoreline length (km) at <b>100 g/m<sup>2</sup></b> (km)	2.5	4.5
Maximum length of the shoreline at <b>1,000 g/m<sup>2</sup></b> (km)	-	-
Average shoreline length (km) at <b>1,000 g/m<sup>2</sup></b> (km)	-	-

## REPORT

## REPORT

**Figure 20.8** Zones of potential entrained hydrocarbon exposure at 0-10 m below the sea surface from a vessel collision at Location 4 during summer conditions. The results were calculated from 100 spill simulations.

# REPORT

## 20.3 Deterministic Analysis

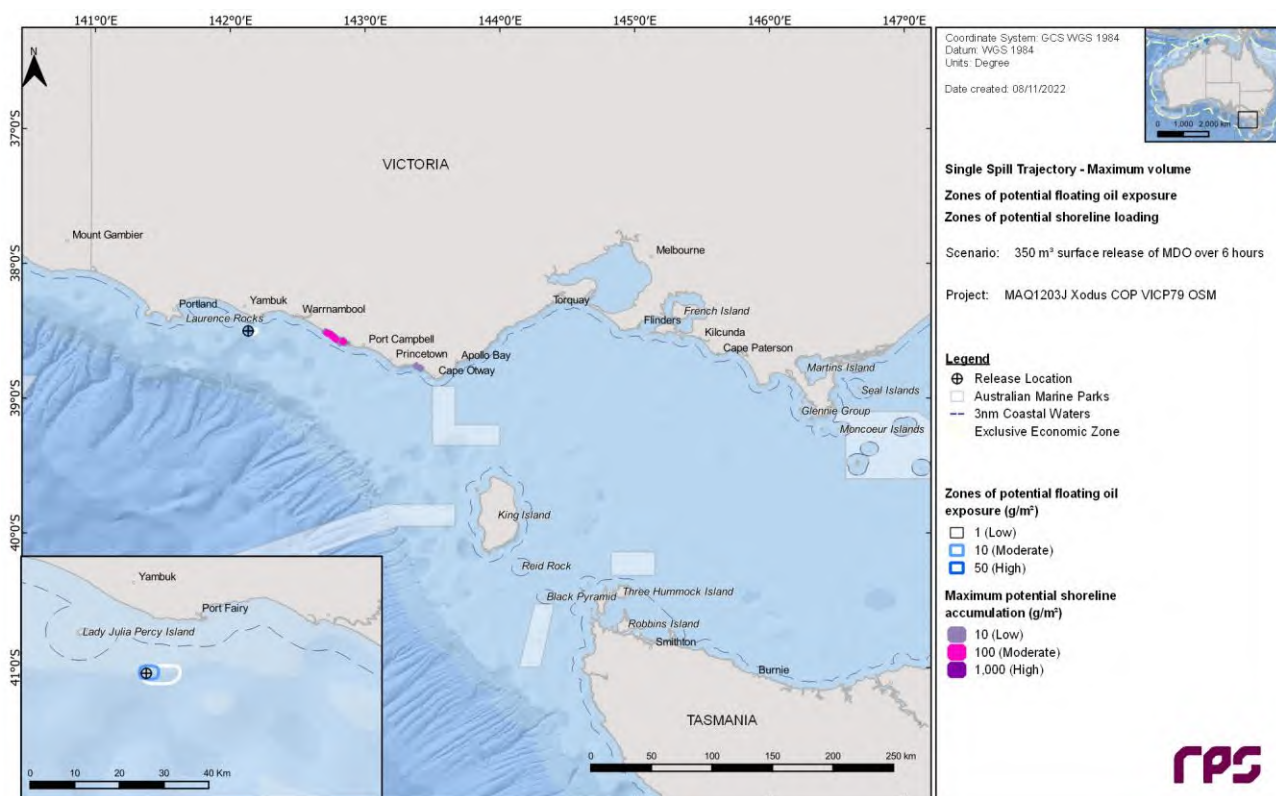

### 20.3.1 Largest Volume of Hydrocarbons Ashore

The simulation that resulted in the largest volume of hydrocarbons ashore was identified as run number 94 and commenced during winter conditions, 1 pm 1<sup>st</sup> August 2015.

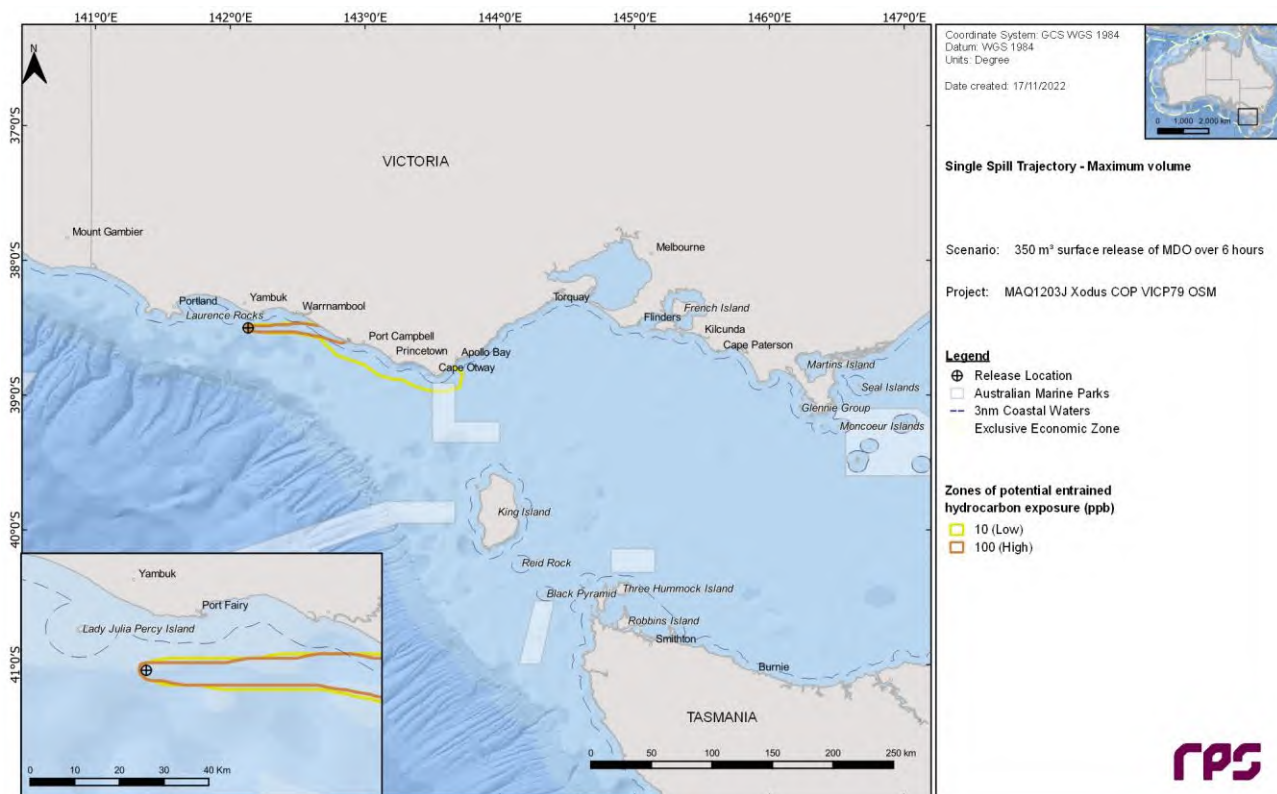

Figure 20.10 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days). Initial shoreline accumulation occurred on day 2.

The extent of the predicted entrained and dissolved hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 20.11 and Figure 20.12, respectively.

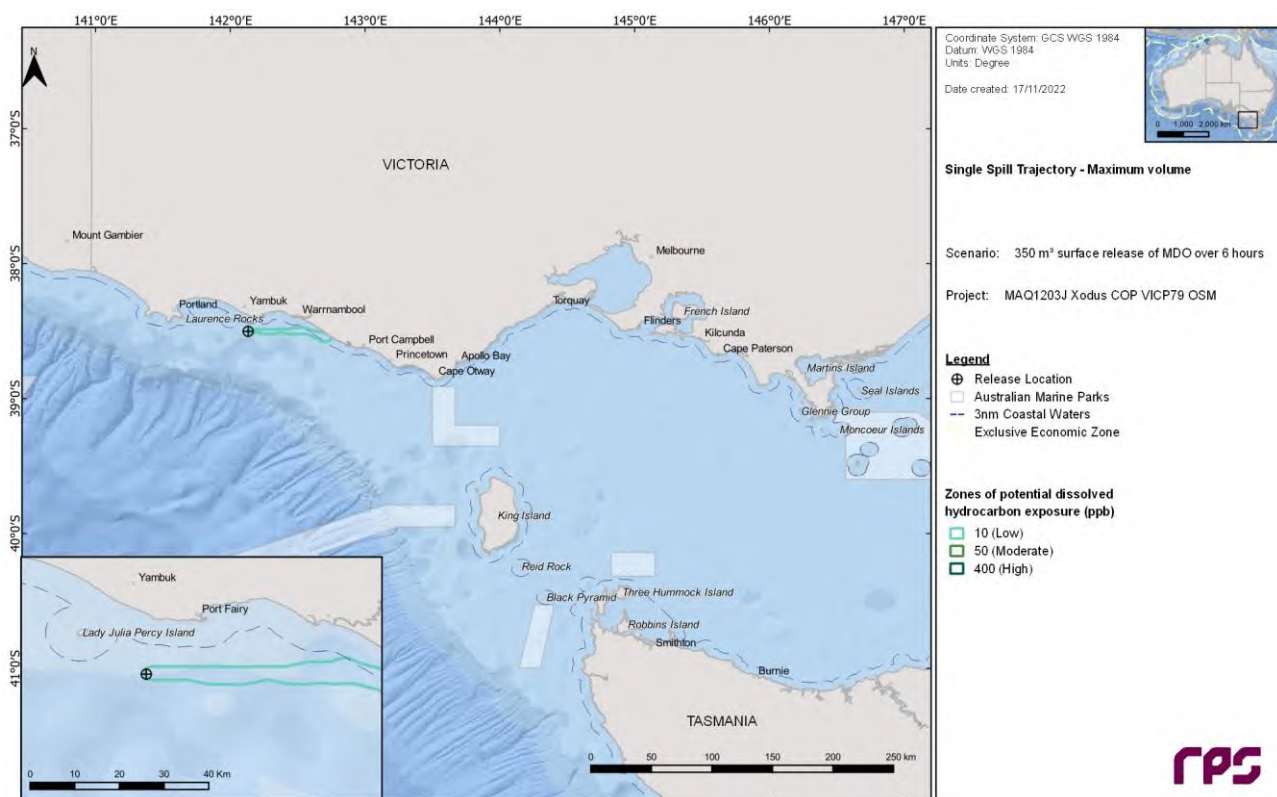

Figure 20.13 presents the fates and weathering for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 155 m<sup>3</sup> (~44%) was lost to the atmosphere through evaporation. Approximately, 100 m<sup>3</sup> (~29%) of the released volume decayed, while approximately 60 m<sup>3</sup> (~17%) was predicted to remain within the water column and approximately 35 m<sup>3</sup> (~10%) was present on the shorelines.

**Figure 20.10 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 4.**

**Figure 20.11 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 4.**

**Figure 20.12 Predicted extent of the dissolved hydrocarbons exposure over the entire 30 days for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 4.**

**Figure 20.13 Predicted weathering and fates for the simulation that led to the largest volume of hydrocarbons ashore from a vessel collision at Location 4.**

### 20.3.2 Minimum time to Shoreline Accumulation

The simulation that resulted in the minimum time to hydrocarbons ashore of 1.08 days was identified as run number 11 which commenced during winter conditions, 6 am 7<sup>th</sup> June 2014.

Figure 20.14 presents the extent of the predicted floating oil exposure zones on the sea surface (swept area) and the shoreline loading over the entire simulation (30 days).

The extent of the predicted entrained hydrocarbon exposure zones in the 0–10 m depth layer over the entire 30 day simulation are presented in Figure 20.15. No dissolved hydrocarbon exposure was predicted above the low threshold.

Figure 20.16 presents the fates and weathering graph for the corresponding simulation. At the conclusion of the simulation (day-30), approximately 155 m<sup>3</sup> (~45%) was lost to the atmosphere through evaporation. Approximately, 110 m<sup>3</sup> (~32%) of the released volume decayed, while approximately 80 m<sup>3</sup> (~23%) was predicted to remain within the water column and approximately 3 m<sup>3</sup> (~1%) remained on shorelines.

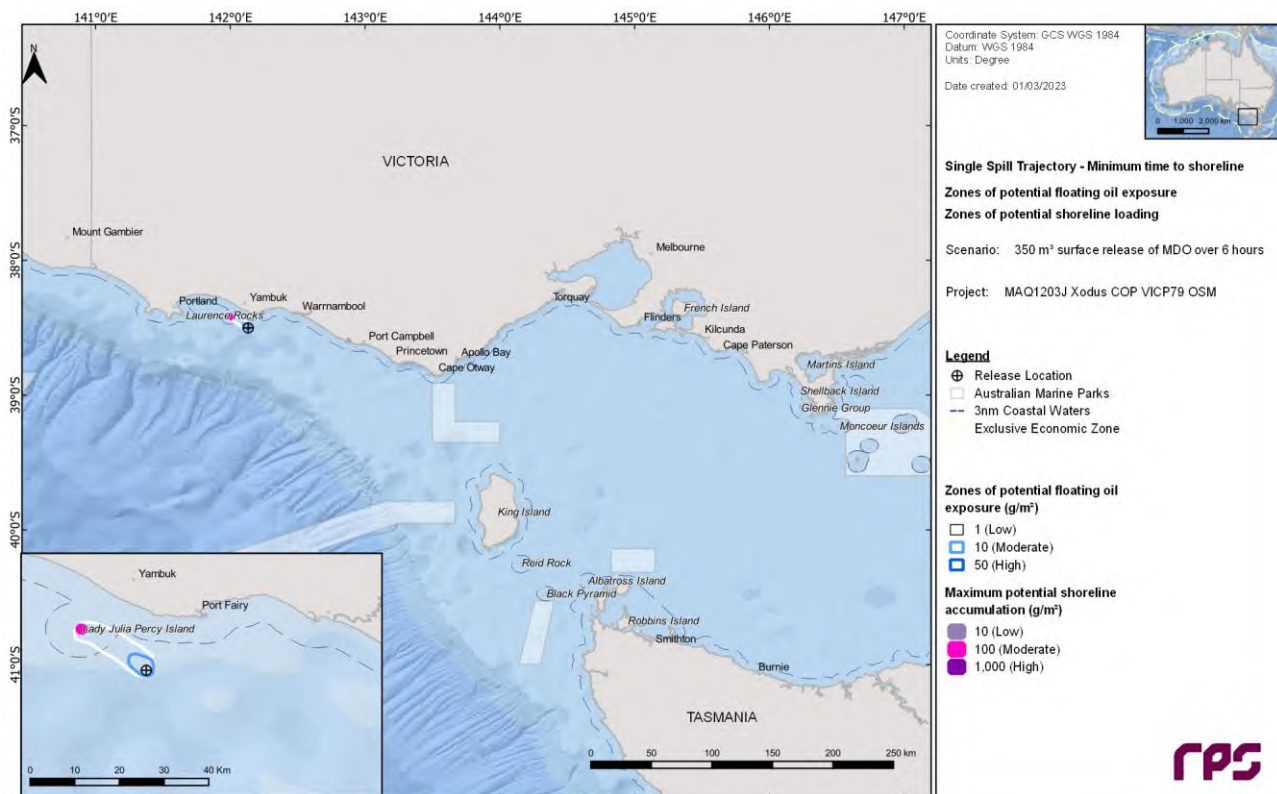

Figure 20.14 Predicted extent of the floating oil exposure and shoreline loading over the entire 30 days for the simulation that led to the minimum time to shoreline accumulation from a vessel collision at Location 4.

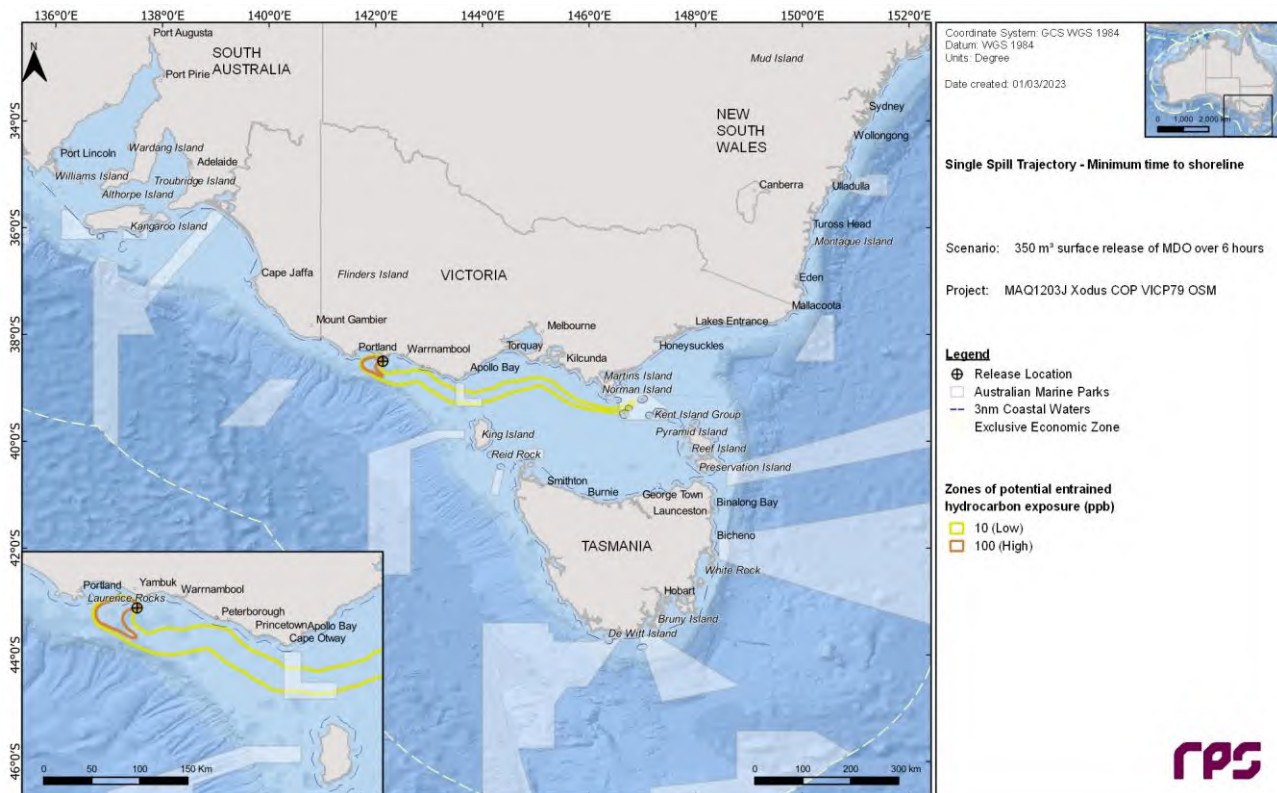

Figure 20.15 Predicted extent of the entrained hydrocarbons exposure over the entire 30 days for the simulation that led to the minimum time to shoreline accumulation from a vessel collision at Location 4.

**Figure 20.16 Predicted weathering and fates for the simulation that led to the minimum time to shoreline accumulation from a vessel collision at Location 4.**

## EXECUTIVE SUMMARY

This technical report presents the results of the visible line of sight and light intensity (illuminance) assessments for ConocoPhillips Australia's (ConocoPhillips) Otway Exploration Drilling Campaign (Exploration Campaign). This light modelling study was conducted for the Exploration Campaign within the northern part of petroleum title VIC/P79 (VIC/P79N). The sources of light emissions considered were the lights and flare from the mobile offshore drilling unit (MODU). The lights on the MODU facility include the main deck light, process module lights, lighting on the drill rig and the navigation lights on the derrick. The light that come from the flaring during well testing was considered at a maximum flare rate of 40 MMscfd.

The threshold for the spatial extent of visible light that is predicted to occur from the Exploration Campaign was defined as whether any part of the facility is visible as a dot on the horizon (visible line of sight assessment). The threshold for the spatial extent of a measurable change in ambient light that is predicted to occur from the Exploration Campaign was defined as an illuminance equivalent to ambient light on a moonless clear night sky/new moon (<0.001 lux). The area within these thresholds is considered relevant to the impact assessment for planned light emissions from the Exploration Campaign.

The results of visible line of sight assessment conclude that the MODU lights and flare will be visible from a distance of 45 km from receptors at sea level while, due to elevations on the mainland, the MODU will be visible from the Victorian mainland adjacent to the project area.

Light intensity (illuminance) assessment indicates that during flaring, a measurable change will occur up to 49 km from the expected position of the MODU and reduces to 9 km from the MODU when not flaring. The light intensity results also show that the light intensity levels of the MODU at Yambuk Nature Conservation Reserve (6 km) and its nearby towns are comparable to the ambient light levels less than a full moon (< 0.1 lux) when flaring and less than a quarter moon (<0.01 lux) when not flaring.

At other selected receptor locations of Mepunga Coastal Reserve (24 km), Yambuk Coastal Reserve (24 km), Discovery Bay Marine National Park (40 km), Twelve Apostles Marine National Park (53 km), and the nearby towns, the light intensity levels are comparable to the ambient light levels less than a quarter moon (<0.01 lux) when flaring, and less than a moonless clear night sky (<0.001 lux) when not flaring. A Zone of Theoretical Visibility analysis is thus recommended to quantify the visual impact and provide a communication tool to the relevant stakeholders.

# 1 INTRODUCTION

## 1.1 Project Overview

The Otway Exploration Drilling Campaign is located adjacent to the largest gas fields in the offshore Otway Basin, Thylacine and Geographe. ConocoPhillips Australia (ConocoPhillips) plan to execute an exploration well drilling campaign within the northern part of VIC/P79 (denoted as Vic/P79N), as shown in Figure 1-1. This report presents the light modelling study for the Exploration Campaign within VIC/P79N.

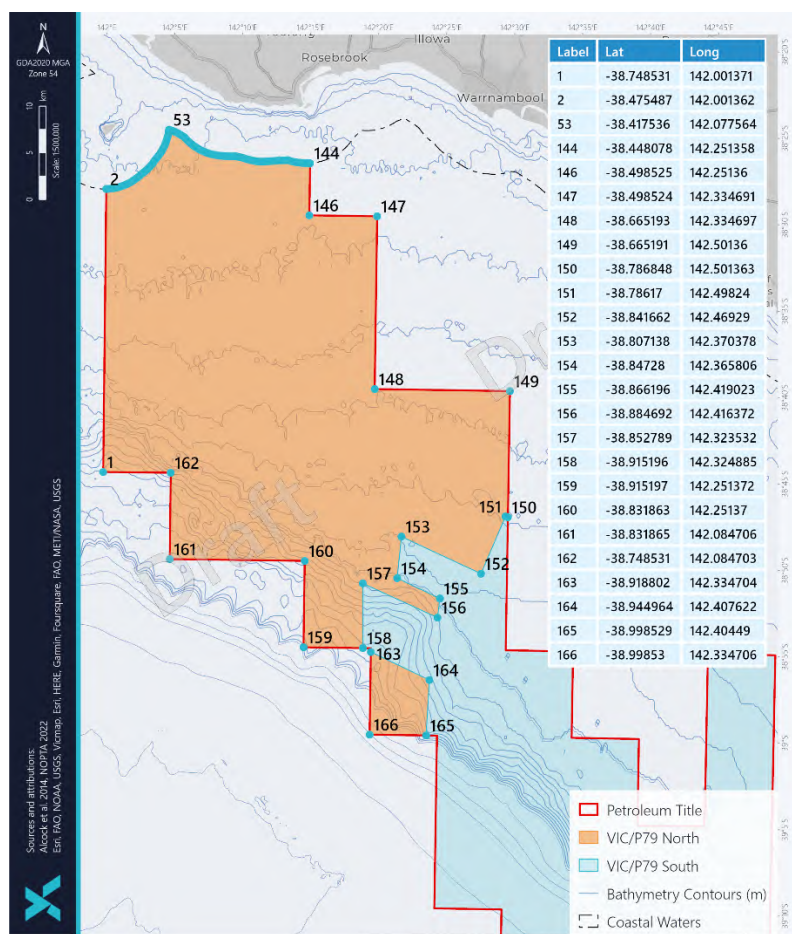

Figure 1-1: Otway drilling light modelling scope for VIC/P79N.

## 1.2 Aim and Objectives

The purpose of this technical report is to present the assessment undertaken to estimate the artificial light emissions from the Exploration Campaign within VIC/P79N to inform environmental impact assessment and management planning of the Exploration Campaign. This study considered and assessed:

- the distances of receptors from the mobile offshore drilling unit (MODU),
- light sources and flaring from the MODU, and
- the light levels received at various receptor locations from facility lighting and well test flaring.

## 1.3 Scope

The sources of light emissions include:

- external facility lighting on MODU and vessels for safe navigation and working conditions, and
- flaring of excess associated gas which will be from a horizontal boom flare and will occur up to approximately 42 hours per event.

Both sources of light emissions are quantified and discussed in this technical report. The exact well locations are yet to be determined or may be subject to change. Therefore, all potential locations in VIC/P79N were considered for modelling (Figure 1-1).

The assessment included two sets of modelling:

- visible line of sight estimates, and
- light intensity (illuminance) modelling.

Line of sight estimates have been used as an indication of the distance that the facility and its lights may be visible while light intensity (illuminance) modelling has been used as an indication of the measurable change in ambient light conditions. These quantifications have been used to develop two types of area used for subsequent environmental impact analysis (Table 1-1).

*Table 1-1: Predicted artificial light exposure and impact areas for the Exploration Campaign.*

ARTIFICIAL LIGHT ASSESSMENT AREAS	DESCRIPTION
<b>Visible Light Exposure Area</b>	The spatial extent of visible light that is predicted to occur from the Exploration Campaign. The threshold for this area is whether any part of the facility is visible as a dot on the horizon.
<b>Potential Impact Area</b>	The spatial extent of a measurable change in ambient light that is predicted to occur from the Exploration Campaign. The threshold for this area is an illuminance equivalent to ambient light on a moonless clear night sky/new moon (<0.001 lux). This is the area relevant to the impact assessment for planned light emissions from the Exploration Campaign.

The modelling utilises the MODU as the basis for modelling as it will be the largest and tallest piece of infrastructure that will be in field for the Exploration Campaign. The light intensity modelling utilises the two major sources of light emissions as the basis for the model – the MODU lighting and flaring from the MODU for well testing. Artificial light emissions from vessels (e.g. support vessels) associated with the Exploration Campaign were not included in the assessment due to their much smaller scale and/or temporary and transient nature.

## 2 BASIS OF LIGHT ASSESSMENT

### 2.1 Light and its Measurement

Light is a form of energy that is emitted over a particular band of frequencies and wavelengths of the electromagnetic spectrum, and includes ultraviolet, visible (to humans) light and infrared light. As illustrated in Figure 2-1, the visible range for humans is approximately 400–700 nm. Fauna perceive light differently to humans, and their visible spectrum can vary between ~300 nm and >700 nm depending on the species (Commonwealth of Australia, 2020).

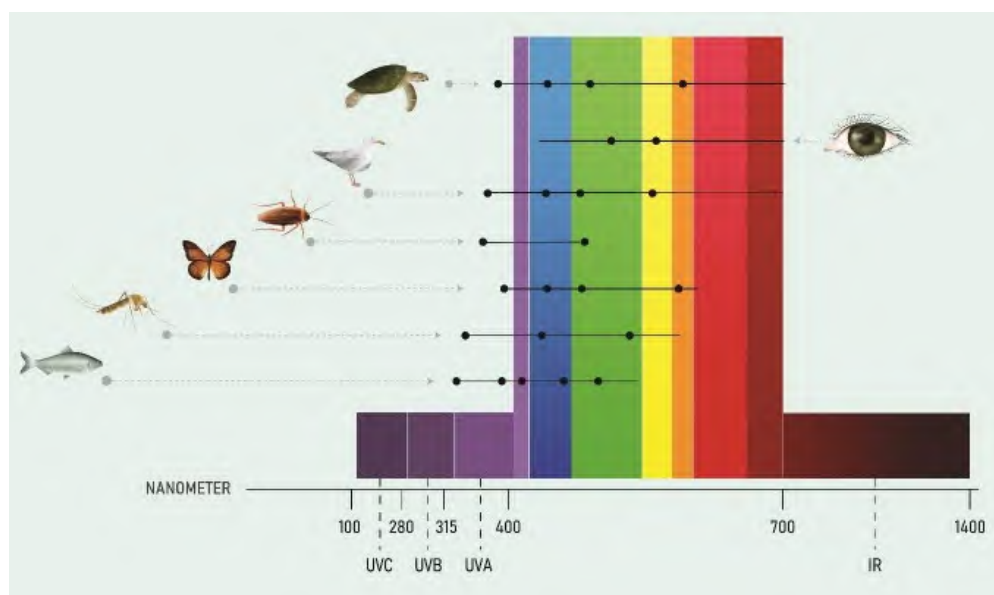

Figure 2-1: Ability to perceive different wavelengths of light in humans and wildlife is shown by horizontal lines. Black dots represent reported peak sensitivity. Note the common sensitivity to short wavelength light across all wildlife (Campos, 2017; Commonwealth of Australia, 2020).

Humans and fauna use photoreceptor cells (cones and rods) in the eye to detect light. Photopic vision, which occurs in bright conditions, activates the cones and allow the eye to see colour. Scotopic vision, which occurs in low light conditions, activates rods and allow the eye to see in shades of grey. Scotopic vision is more sensitive to shorter wavelength light than photopic visions (Commonwealth of Australia, 2020). Nocturnal species rely on scotopic vision and can therefore be sensitive to changes in light at high-energy, short-wavelength end of the spectrum (e.g. ultraviolet, violet and blue light).

Radiometry is the detection and measurement of electromagnetic radiation. With respect to optics, radiometry refers to the detection and measurement of radiant energy within the light (ultraviolet, violet, infrared) portion of the electromagnetic spectrum. Photometry is a subset of radiometry that applies to the visible light spectrum and measured values are also weighted to the typical response of a human eye. As humans and fauna perceive light differently, radiometric measurements are more biologically relevant, as they account for the energy emitted across all light wavelengths (Commonwealth of Australia, 2020). Common quantities used to describe light in radiometric and photometric terms are provided in Table 2-1.

Table 2-1: Typical radiometric and photometric quantities.

RADIOMETRIC			PHOTOMETRIC		
Quantity	Symbol	Units	Quantity	Symbol	Units
Radiant power	$\Phi_E$	W	Luminous flux	$\Phi_V$	lm
Radiant intensity	$I_E$	W/sr	Luminous intensity	$I_V$	lm/sr (or cd)
Irradiance	$E_E$	W/m <sup>2</sup>	Illuminance	$E_V$	lm/m <sup>2</sup> (or lux)
Radiance	$L_E$	W/m <sup>2</sup> sr	Luminance	$L_V$	lm/m <sup>2</sup> sr

$E$  = energetic;  $V$  = visual;  $W$  = watt;  $sr$  = steradian;  $lm$  = lumen;  $cd$  = candela

The conversion between radiometric and photometric units is dependent on the photopic spectral luminous efficiency function,  $V(\lambda)$ , as defined by the Commission International de l'Eclairage (CIE) in 1924, and the spectral radiant power curve,  $\Phi_E(\lambda)$ , of the light source. The conversion is provided by the following relationship:

$$\Phi_V = K_m \int_{\lambda=380}^{\lambda=830} \Phi_E(\lambda) V(\lambda) d\lambda$$

Where:

- $\Phi_V$  is the luminous flux (lumens),
- $K_m$  is a scaling factor equivalent to 683 lm/W,
- $\Phi_E(\lambda)$  is the spectral radiant power (W/nm), and
- $V(\lambda)$  is the photopic spectral luminous efficiency function.

The photopic spectral luminous efficiency function,  $V(\lambda)$ , is a function of wavelength and relates to how a human eye responds to that wavelength of light. In humans the photoreceptor cells are more responsive to green/yellow wavelength light compared to red or violet.  $V(\lambda)$  can be approximated by the following non-linear regression:

$$V(\lambda) = 1.019e^{-285.4(\lambda-0.559)^2}$$

Empirical data shows that the function has a maximum value at a wavelength of 555 nm (Figure 2-2), which is the wavelength at which the human eye is most responsive. Spectral luminous efficiency varies across different animal species this is discussed further in Section 2.2.

Figure 2-2: Spectral luminous efficiency function.

The spectral radiant power of a light source ( $\Phi_E$ ) is also related to wavelength, however, will also change depending on the type of light (Figure 2-3). The significance of a spectral power curve becomes apparent when using a photometric measurement to describe light for a source that is, for example, high in blue light emissions (such as cool LED or metal halide; Figure 2-3), or high in infrared emissions (such as a gas flare; Figure 2-4), as a photopic measurement may be underestimating the amount of light present as the photopic curve puts a higher weighting on light emitted in the green/yellow range compared to the blue or red (Figure 2-2).

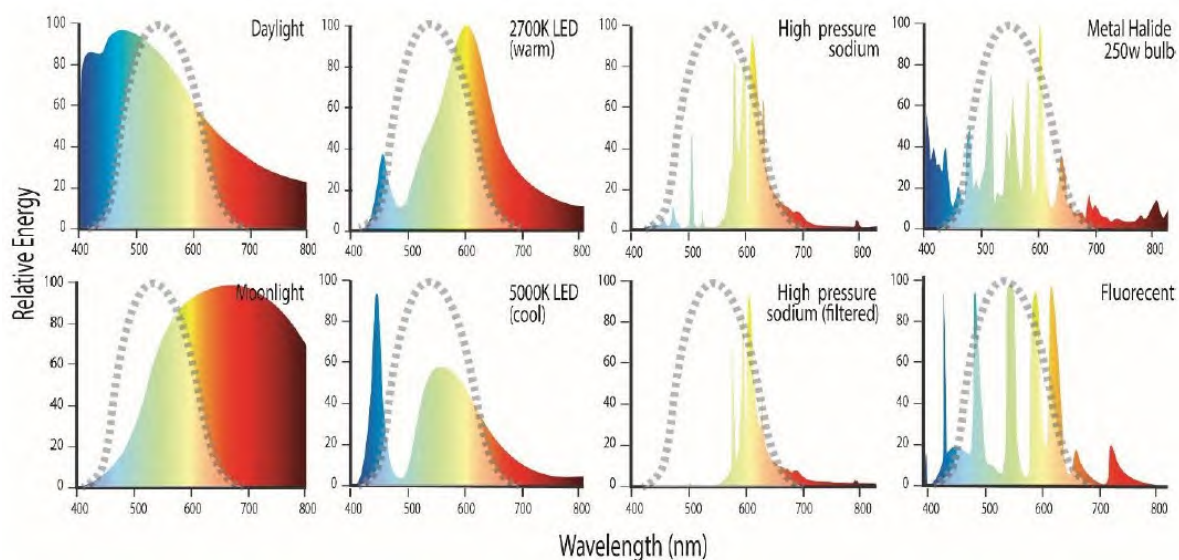

Figure 2-3: Relative spectral radiant power curves for common natural and artificial light sources (shown in colour) with photopic response curve (grey dashed line) (Commonwealth of Australia, 2020).

Figure 2-4: Predicted spectral radiance curve for a natural gas flare (based on 2,000 K blackbody emission).

## 2.2 Artificial Light Assessment

To date, light monitoring equipment has predominantly used photopic measurements. Few light measurement techniques that are appropriate for capturing biologically relevant light and are commercially available exist (Table 1 in Commonwealth of Australia (2020)). As described in Section 2.1, due to the photopic spectral luminous efficiency function being based on a human eye response, there is lower sensitivity in photometric measurements to shorter wavelength light (ultraviolet, violet, blue) that is important to nocturnally active marine fauna. For example, most wildlife is sensitive to short wavelength violet and blue light (Figure 2-1), but little or none of this light is measured by commercial instruments and thus not accounted for in current light models (Commonwealth of Australia, 2020). However, as noted within the National Light Pollution Guidelines (Commonwealth of Australia, 2020), photometric measures can be used in impact assessment on wildlife, but limitations should be acknowledged and considered.

For the light intensity (illuminance) modelling component of the artificial light emissions assessment for the Exploration Campaign (refer to Section 4), photometric measurements have been used. This decision was based on the type of published measured light data that was available to identify analogues and to use as input to the light modelling calculations.

As shown in Table 2-1, photometric light can be described in terms of luminous flux, luminous intensity and illuminance:

- Luminous flux ( $\Phi_v$ ) is a measure of the amount of light from a source emitted in total regardless of direction (unit of measurement: lumens),
- Luminous intensity ( $I_v$ ) is the amount of light emitted in a particular direction; the direction is typically stated in steradians (unit of measurement: candelas), and
- Illuminance ( $E_v$ ) is the amount of light reaching an area (unit of measurement: lux; where 1 lux is equivalent to 1 lumen/m<sup>2</sup>).

These terms are graphically depicted in Figure 2-5.

Illuminance (also referred to as light intensity) is the term of interest for environmental impact assessment for the Exploration Campaign. Typical light illuminance values from natural light sources are described in *Table 2-2* and these are considered representative of ambient light levels in the vicinity of the Exploration Campaign in Victoria and King Island.

There are currently no published or accepted thresholds at which artificial light may impact fauna. Consequently, the minimum threshold used to describe a change in ambient light conditions within this artificial light assessment is an illuminance equivalent to a new moon / moonless clear night sky (0.001 lux). Beyond this threshold no impact to light sensitive fauna is assumed. This threshold (0.001 lux) was selected on the basis that fauna undertake nocturnal activities under the natural range of full moon (0.1 lux) to new moon (0.001 lux) without known adverse impacts.

In recognition that the photopic curve is biased towards a human eye response to light, and to remove some of the scientific uncertainty associated with the way light is measured, the 'Potential Impact Area' (i.e. the area relevant for impact assessment of planned light emissions; Table 1-1 conservatively uses an initial luminous intensity value 20% higher than the measured/modelled analogue value. This increase in luminous intensity increases the estimated distance of the Potential Impact Area and provides conservatism to the modelling and subsequent impact assessment.

Figure 2-5 Photopic light terminology.

Table 2-2: Summary of natural light illuminance (Environmental Resources Management, 2010).

NATURAL LIGHT SOURCE	LIGHT ILLUMINANCE (LUX)
Direct sunlight	100,00–130,000
Full daylight, indirect sunlight	10,000–20,000
Overcast day	1,000
Very dark day	100
Twilight	10
Deep twilight	1
Full moon	0.1
Quarter moon	0.01
Moonless clear night sky (new moon) <sup>1</sup>	0.001
Moonless overcast night sky	0.0001

<sup>1</sup> Impact threshold utilised in this report is 0.001 lux, beyond this threshold no impact to light sensitive fauna is assumed.

## 3 VISIBLE LINE OF SIGHT ASSESSMENT

### 3.1 Methodology

Visible line of sight assessment was conducted using the methodology described in Stallings (2005) for the MODU to determine the worst-case potential extent of visible light for ConocoPhillips. Line of sight and viewshed analysis is typically used in environmental impact assessment for the assessment of impact to visual amenity where an impact may alter a perceived sense of place or inherent value. The visibility of an artificial light does not imply a measurable change in ambient light (and therefore a potential environmental impact), this is estimated through change to illuminance as discussed in Section 4).

Line of sight assessment utilises the following equation to estimate the total line of sight ( $d$ ):

$$d = \left( 2 \cdot \frac{4}{3} R h_1 + h_1^2 \right)^{0.5} + \left( 2 \cdot \frac{4}{3} R h_2 + h_2^2 \right)^{0.5}$$

Where

$d$  = total line of sight ( $d_1 + d_2$ ),

$h_1$  = height of object,

$h_2$  = height of receptor, and

$R$  = radius of earth.

The analysis was completed using assumed heights of an analogue MODU for the Exploration Campaign as shown in Table 3-1, with final designs being confirmed during front end engineering (FEED). Receptor heights modelled included a receptor at sea level, and varying elevations (from 5 to 525 m) of the adjacent mainland.

Table 3-1: Assumed heights of the MODU facility infrastructure involved in the exploration campaign.

EXPLORATION CAMPAIGN FACILITY INFRASTRUCTURE	HEIGHT OF FACILITY / LIGHTING / FLARE (m) ABOVE SEA LEVEL
Main deck lights	40
Process module lights	50
Lighting on the drill rig	80
Derrick (navigation lights)	120
Boom flare flame height (horizontal boom)	53

## 3.2 Results and Recommendations

The line of sight assessment results for the different heights of the MODU facilities and receptors are outlined in Table 3-2. The assessment shows that at sea level, the maximum distance the tip of the MODU derrick (navigation lights) would be visible above the horizon is 45 km. The flare and equipment above main deck level would be visible from 30 km from the MODU location.

Figure 3-1 and Figure 3-2 show the extent of visibility for the MODU derrick (navigation lights) and the deck flare respectively, including the total line of sight distances and the Environment that May Be Affected (EMBA) which is within 20 km for light.

The line of sight assessment indicates that lights on the derrick and light associated with flaring may be visible as a dot on the horizon from the adjacent mainland, extending inland up to 140 km for elevated receptor locations. However, this line of sight distance was estimated without considering the atmospheric interactions/disturbances, and thus is a conservative estimation. Considering the luminance range of human vision, the extent of potential visibility is more likely up to only 49 km when the light intensity reaches 0.001 lux, equivalent to an ambient light intensity level of a moonless clear night sky (which will be shown further in the light intensity (illuminance) Section 4). It is recommended to conduct a Zone of Theoretical Visibility analysis to quantify the visual impact and provide a communication tool to the relevant stakeholders.

King Island is 107 km away from the operational area with a maximum receptor height of 165 m, as such, it is not affected by the light emissions from VIC/P79N (not shown in figures).

Table 3-2: Exploration campaign facility visual line of sight distances.

EXPLORATION CAMPAIGN INFRASTRUCTURE	HEIGHT OF FACILITY / LIGHTING / FLARE (m)	HEIGHT OF RECEPTOR (m)	TOTAL LINE OF SIGHT (km)
Visibility of MODU infrastructure at sea level			
Main deck light	32	0	23.3
Process module lights	50	0	29.1
Lighting on the drill rig	80	0	36.9
Derrick (navigation lights)	120	0	45.2
Flare flame height (horizontal boom)	53	0	30.0
Visibility of MODU derrick at various receptor heights			
Derrick (navigation lights)	120	5	54.4
	120	10	58.2
	120	50	74.3
	120	100	86.4
	120	300	116.5
	120	525	139.6

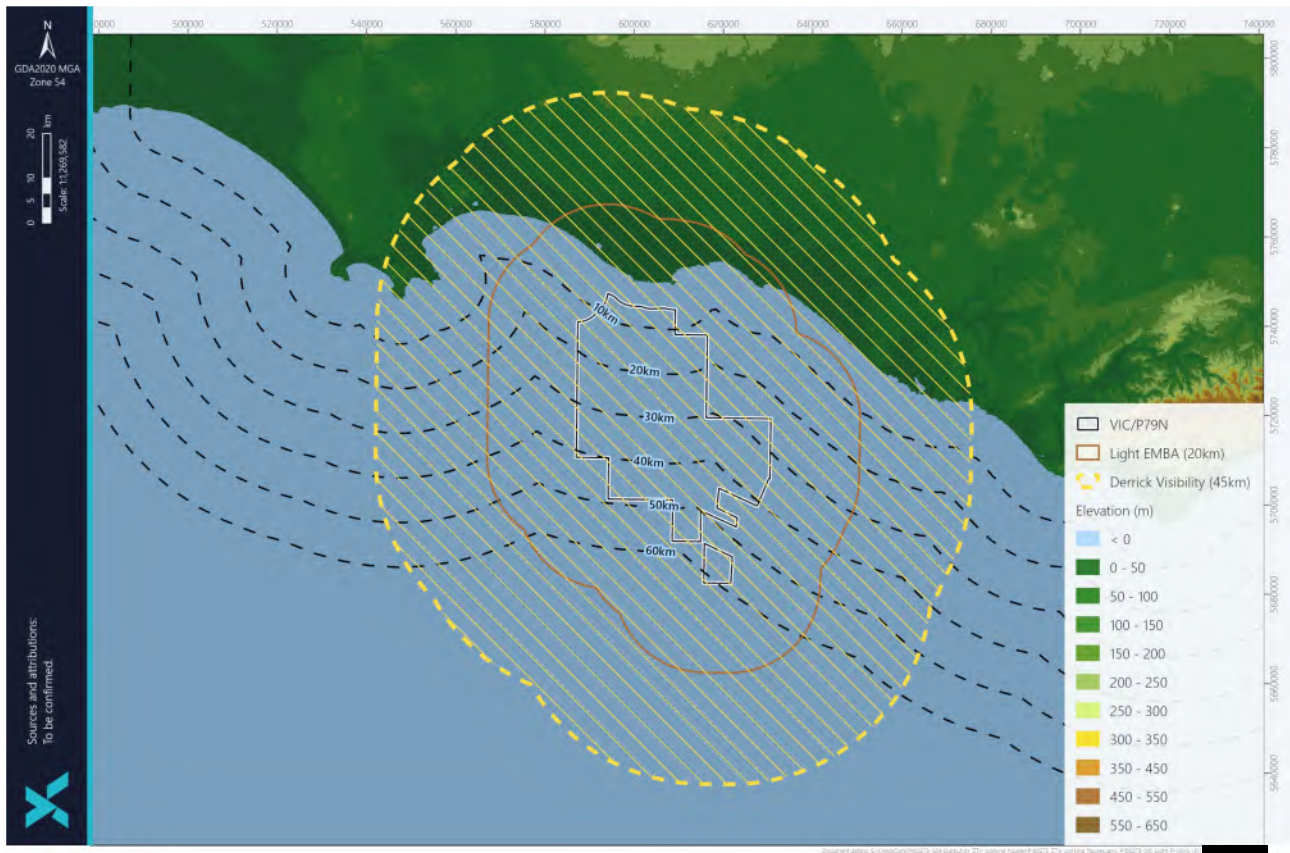

Figure 3-1: Light EMBA and area of visibility (derrick navigation lights).

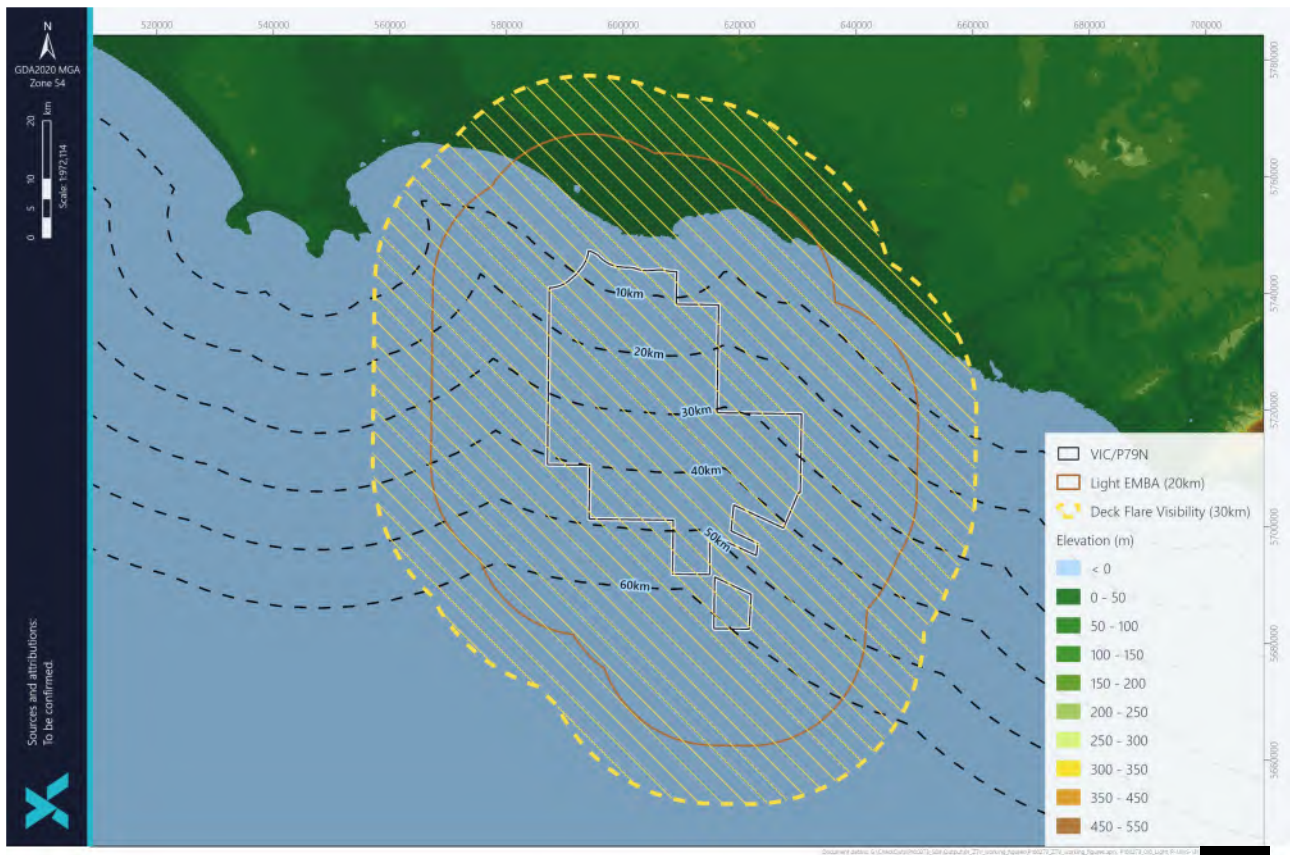

Figure 3-2: Light EMBA and area of visibility (light associated with flaring).

## 4 LIGHT INTENSITY (ILLUMINANCE) ASSESSMENT

The two sources of artificial lighting (facility and flaring) for the Exploration Campaign were assessed separately, using published modelled and measured data as analogues.

It is noted that most commercial light modelling software requires the input of a number of factors, such as the light fitting type, quantity, and location of light sources – information which is not available at this preliminary stage. As such, the use of analogues was adopted, as this provided a real-world analogue on which to base the artificial light emissions assessment. It is also considered a conservative approach as it does not include any best practice or additional mitigation measures that may be adopted by ConocoPhillips during the FEED of the project.

### 4.1 Facility Lighting

It is expected that the MODU for the Exploration Campaign will have a similar lit surface area as the drill rig utilised for the Woodside Torosa drilling campaign on Browse reef for which published data is available. The MODU utilised for the Exploration Campaign will be similar with similar lighting required for safe operations of the facility. Therefore the MODU facility light emissions would also be comparable to that of the Torosa wells used during a previous light intensity modelling and associated measured data completed by Environmental Resources Management (2010). Light characteristics and modelling of light sources for the Torosa assessment are based on measured lighting data (lux levels and wavelength) obtained whilst drilling the Torosa South-1 appraisal well on the edge of the South Reef lagoon and ambient data when no activities were occurring at Scott Reef (Environmental Resources Management, 2010). The drill rig used is a suitable analogue for the drill rig expected to be used for the VIC/P79N Exploration Campaign.

The light intensity values derived from the measured Torosa South 1 well campaign were utilised to represent the MODU facility lighting for the Exploration Campaign modelling.

### 4.2 Flare Light Emissions

The Exploration Campaign will require a MODU flare to dispose of the gas generated from well testing. The gas is produced and flared to allow for testing of the produced gas and oil as well as to calculate the size of the oil and gas reservoir and reservoir characteristics. The excess oil and gas is sent to the flare disposal system to be burnt. The flare for the MODU will be a horizontal boom flare extending out horizontally of the MODU deck. Flaring will occur for a duration of approximately 42 hours per well.

To inform the environmental impact assessment for the Exploration Campaign, light intensity from a flare flow rate of 40 MMscfd was modelled. This represents a peak flaring rate from the well test systems.

Based on Gas Processors Suppliers Association (2004), it has been calculated that this expected rate of flaring will result in a flare flame length of up to approximately 22 m. This flame will generate light. Analogues are utilised to determine the likely amount of light emitted from the flame. This is discussed in Section 4.3.2.

## 4.3 Methodology

### 4.3.1 Inverse Law

The light intensity modelling used the inverse square law of illuminance which states that *a doubling of distance results in a reduction in illuminance by four times*, i.e. as a surface that is illuminated by a light source moves away from the light source, the surface appears dimmer. Light emitted becomes dimmer in an inverse square relationship to distance as represented in Figure 4-1 and in the mathematical equation below:

$$E = \frac{I}{D^2}$$

Where

- E = illuminance (in lux),
- I = luminous intensity (in candela), and
- D = the distance from the light source in meters.

Figure 4-1: Inverse square law.

### 4.3.2 Analogues

As flares are not designed to be luminous, there is some uncertainty in calculating luminous intensity from a flare. To reduce the uncertainty, light measurements from an analogue, existing flares have been utilised to calculate likely light emissions from the flare. These analogues are documented within publicly available literature on light emissions from flares.

The analogues for gas flares were identified and are detailed in Table 4-1.

Table 4-1: Details of potential analogue natural gas flares.

ANALOGUE SITE	FACILITY TYPE	FLARE RATE	LUMINANCE INTENSITY	ILLUMINANCE METHOD	REFERENCE
<b>Galoc FPSO – Philippines</b>	Tamarind operated FPSO oil facility: Continuous gas flare	~15 MMscfd, 18–20 m high flame	Not specified	N/A (Flame height provided only)	Tamarind (2019)
<b>Wheatstone LNG Plant – Onslow, WA</b>	Chevron-operated onshore LNG facility: Safety flare	Not specified	Not specified	Modelled Illuminance (lux)	URS Australia (2010)
<b>Narrabri Gas Project – Bibblewindi, NSW</b>	Proposed Santos-operated onshore gas production facility: Safety flare	244 MMscfd, 30 m high flame	Not specified	Modelled Illuminance (lux) based on measured and calculated source data	Imbricata Environmental (2018)
<b>Obigbo Oil Production Facility – Nigeria</b>	Shell-operated oil production facility: Continuous flaring of associated gas	30 MMscfd	~1,805,000 cd	Measured Illuminance (lux)	Isichei and Sanford (1976) Nwaobi (2005) European Commission (2014)

The four analogues were compared to the expected flare characteristics (rates, flame heights) for the Exploration Campaign to determine if they were appropriate for use in this light emissions assessment.

The Galoc FPSO has a continuous flare which operates at a flare rate of ~15 MMscfd. However, it has not had light intensity levels or illuminance levels measured or modelled, and is therefore not considered further within this light intensity assessment.

The Wheatstone LNG flare has modelled illuminance information, but no details on flare rate are publicly available. As this information is unknown, the Wheatstone LNG flare was not carried through to the next stage of assessment as a potential analogue.

Despite the similar flame height (30 m for Narrabri compared to the 22 m from the exploration campaign MODU), the Narrabri gas flare rate is >200 MMscfd, which is an order of magnitude higher than that for the Exploration Campaign, and as such was not considered an appropriate analogue and is not discussed further in this assessment.
