Key Ecological Features

[ [Resource Information](#) ]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
<a href="#">Bonney Coast Upwelling</a>	South-east
<a href="#">Upwelling East of Eden</a>	South-east
<a href="#">West Tasmania Canyons</a>	South-east

Biologically Important Areas		
Scientific Name	Behaviour	Presence
Dolphins		
<a href="#">Tursiops aduncus</a>		
Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur
Seabirds		
<a href="#">Ardenna grisea</a>		
Sooty Shearwater [82651]	Foraging	Likely to occur
<a href="#">Ardenna pacifica</a>		
Wedge-tailed Shearwater [84292]	Breeding	Known to occur
<a href="#">Ardenna pacifica</a>		
Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
<a href="#">Ardenna tenuirostris</a>		
Short-tailed Shearwater [82652]	Breeding	Known to occur
<a href="#">Ardenna tenuirostris</a>		
Short-tailed Shearwater [82652]	Foraging	Likely to occur
<a href="#">Ardenna tenuirostris</a>		
Short-tailed Shearwater [82652]	Foraging	Known to occur
<a href="#">Diomedea exulans (sensu lato)</a>		
Wandering Albatross [1073]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
<a href="#">Diomedea exulans antipodensis</a> Antipodean Albatross [82269]	Foraging	Known to occur
<a href="#">Eudyptula minor</a> Little Penguin [1085]	Breeding	Known to occur
<a href="#">Eudyptula minor</a> Little Penguin [1085]	Foraging	Known to occur
<a href="#">Morus serrator</a> Australasian Gannet [1020]	Aggregation	Known to occur
<a href="#">Morus serrator</a> Australasian Gannet [1020]	Foraging	Known to occur
<a href="#">Pelagodroma marina</a> White-faced Storm-petrel [1016]	Breeding	Known to occur
<a href="#">Pelagodroma marina</a> White-faced Storm-petrel [1016]	Foraging	Known to occur
<a href="#">Pelecanoides urinatrix</a> Common Diving-petrel [1018]	Breeding	Known to occur
<a href="#">Pelecanoides urinatrix</a> Common Diving-petrel [1018]	Foraging	Known to occur
<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]	Breeding	Known to occur
<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]	Foraging	Known to occur
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Foraging	Known to occur
<a href="#">Thalassarche bulleri</a> Bullers Albatross [64460]	Foraging	Known to occur
<a href="#">Thalassarche cauta cauta</a> Shy Albatross [82345]	Breeding	Known to occur

Scientific Name	Behaviour	Presence
<a href="#">Thalassarche cauta cauta</a> Shy Albatross [82345]	Foraging likely	Likely to occur
<a href="#">Thalassarche chlororhynchos bassi</a> Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Foraging	Known to occur
<a href="#">Thalassarche melanophris impavida</a> Campbell Albatross [82449]	Foraging	Known to occur
Seals		
<a href="#">Neophoca cinerea</a> Australian Sea Lion [22]	Foraging (male)	Known to occur
Sharks		
<a href="#">Carcharias taurus</a> Grey Nurse Shark [64469]	Foraging	Known to occur
<a href="#">Carcharias taurus</a> Grey Nurse Shark [64469]	Migration	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Breeding (nursery area)	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Distribution	Likely to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Distribution	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Distribution (low density)	Likely to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Foraging	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Known distribution	Known to occur
Whales		
<a href="#">Balaenoptera musculus brevipinna</a> Pygmy Blue Whale [81317]	Distribution	Known to occur

Scientific Name	Behaviour	Presence
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Foraging	Likely to be present
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Foraging (annual high use area)	Known to occur
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Known Foraging Area	Known to occur

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

# Summary

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

<a href="#">World Heritage Properties:</a>	None
<a href="#">National Heritage Places:</a>	4
<a href="#">Wetlands of International Importance (Ramsar</a>	7
<a href="#">Great Barrier Reef Marine Park:</a>	None
<a href="#">Commonwealth Marine Area:</a>	1
<a href="#">Listed Threatened Ecological Communities:</a>	12
<a href="#">Listed Threatened Species:</a>	156
<a href="#">Listed Migratory Species:</a>	81

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

# Details

## Matters of National Environmental Significance

National Heritage Places

[ Resource Information ]

Name	State	Legal Status
Historic		
<a href="#">Great Ocean Road and Scenic Environs</a>	VIC	Listed place
<a href="#">Point Nepean Defence Sites and Quarantine Station Area</a>	VIC	Listed place
<a href="#">Quarantine Station and Surrounds</a>	VIC	Within listed place

Indigenous		
<a href="#">Western Tasmania Aboriginal Cultural Landscape</a>	TAS	Listed place

Wetlands of International Importance (Ramsar Wetlands)

[ Resource Information ]

Ramsar Site Name	Proximity
<a href="#">Corner inlet</a>	Within Ramsar site
<a href="#">Gippsland lakes</a>	Within 10km of Ramsar site
<a href="#">Glenelg estuary and discovery bay wetlands</a>	Within Ramsar site
<a href="#">Lavinia</a>	Within Ramsar site
<a href="#">Piccaninnie ponds karst wetlands</a>	Within Ramsar site
<a href="#">Port phillip bay (western shoreline) and bellarine peninsula</a>	Within Ramsar site
<a href="#">Western port</a>	Within Ramsar site

Commonwealth Marine Area

[ Resource Information ]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
EEZ and Territorial Sea

Listed Threatened Ecological Communities

[ Resource Information ]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
<a href="#">Assemblages of species associated with open-coast salt-wedge estuaries of western and central Victoria ecological community</a>	Endangered	Community likely to occur within area
<a href="#">Giant Kelp Marine Forests of South East Australia</a>	Endangered	Community may occur within area
<a href="#">Grassy Eucalypt Woodland of the Victorian Volcanic Plain</a>	Critically Endangered	Community known to occur within area
<a href="#">Karst springs and associated alkaline fens of the Naracoorte Coastal Plain Bioregion</a>	Endangered	Community likely to occur within area
<a href="#">Lowland Native Grasslands of Tasmania</a>	Critically Endangered	Community likely to occur within area
<a href="#">Natural Damp Grassland of the Victorian Coastal Plains</a>	Critically Endangered	Community likely to occur within area
<a href="#">Natural Temperate Grassland of the Victorian Volcanic Plain</a>	Critically Endangered	Community likely to occur within area
<a href="#">Seasonal Herbaceous Wetlands (Freshwater) of the Temperate Lowland Plains</a>	Critically Endangered	Community likely to occur within area
<a href="#">Subtropical and Temperate Coastal Saltmarsh</a>	Vulnerable	Community likely to occur within area
<a href="#">Tasmanian Forests and Woodlands dominated by black gum or Brookers gum (Eucalyptus ovata / E. brookeriana)</a>	Critically Endangered	Community likely to occur within area
<a href="#">Tasmanian white gum (Eucalyptus viminalis) wet forest</a>	Critically Endangered	Community likely to occur within area
<a href="#">White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland</a>	Critically Endangered	Community likely to occur within area

Listed Threatened Species

[ Resource Information ]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.  
Number is the current name ID.

BIRD		

[Acanthiza pusilla magnirostris listed as Acanthiza pusilla archibaldi](#)

King Island Brown Thornbill, Brown Thornbill (King Island) [91709]	Endangered	Species or species habitat known to occur within area
--	------------	---

Scientific Name	Threatened Category	Presence Text
<a href="#">Acanthornis magna greeniana</a> King Island Scrubtit, Scrubtit (King Island) [82329]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Anthochaera phrygia</a> Regent Honeyeater [82338]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Aphelocephala leucopsis</a> Southern Whiteface [529]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Aquila audax fleayi</a> Tasmanian Wedge-tailed Eagle, Wedge-tailed Eagle (Tasmanian) [64435]	Endangered	Breeding likely to occur within area
<a href="#">Botaurus poiciloptilus</a> Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area
<a href="#">Calidris canutus</a> Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
<a href="#">Calidris ferruginea</a> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Calidris tenuirostris</a> Great Knot [862]	Critically Endangered	Roosting known to occur within area
<a href="#">Callocephalon fimbriatum</a> Gang-gang Cockatoo [768]	Endangered	Species or species habitat known to occur within area
<a href="#">Calyptorhynchus banksii graptogyne</a> South-eastern Red-tailed Black-Cockatoo [25982]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Ceyx azureus diemenensis</a> Tasmanian Azure Kingfisher [25977]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Charadrius leschenaultii</a> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Charadrius mongolus</a> Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
<a href="#">Climacteris picumnus victoriae</a> Brown Treecreeper (south-eastern) [67062]	Vulnerable	Species or species habitat may occur within area
<a href="#">Diomedea antipodensis</a> Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea antipodensis gibsoni</a> Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea epomophora</a> Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea exulans</a> Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea sanfordi</a> Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Falco hypoleucos</a> Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Fregetta grallaria grallaria</a> White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Grantiella picta</a> Painted Honeyeater [470]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Halobaena caerulea</a> Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
<a href="#">Hirundapus caudacutus</a> White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
<a href="#">Lathamus discolor</a> Swift Parrot [744]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Limosa lapponica baueri</a> Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Macronectes giganteus</a> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Macronectes halli</a> Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Melanodryas cucullata cucullata</a> South-eastern Hooded Robin, Hooded Robin (south-eastern) [67093]	Endangered	Species or species habitat may occur within area
<a href="#">Neophema chrysogaster</a> Orange-bellied Parrot [747]	Critically Endangered	Migration route known to occur within area
<a href="#">Neophema chrysostoma</a> Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Pachyptila turtur subantarctica</a> Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pedionomus torquatus</a> Plains-wanderer [906]	Critically Endangered	Species or species habitat likely to occur within area
<a href="#">Pezoporus occidentalis</a> Night Parrot [59350]	Endangered	Species or species habitat may occur within area
<a href="#">Phoebetria fusca</a> Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Platycercus caledonicus brownii</a> Green Rosella (King Island) [67041]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pterodroma leucoptera leucoptera</a> Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Species or species habitat may occur within area
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Pycnoptilus floccosus</a> Pilotbird [525]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Rostratula australis</a> Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area
<a href="#">Stagonopleura guttata</a> Diamond Firetail [59398]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Sternula nereis nereis</a> Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Strepera fuliginosa colei</a> Black Currawong (King Island) [67113]	Vulnerable	Breeding likely to occur within area
<a href="#">Thalassarche bulleri</a> Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche bulleri platei</a> Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche carteri</a> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Thalassarche cauta</a> Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche chrysostoma</a> Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
<a href="#">Thalassarche eremita</a> Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
<a href="#">Thalassarche impavida</a> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche salvini</a> Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Thalassarche steadi</a> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Thinornis cucullatus cucullatus</a> Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Tyto novaehollandiae castanops (Tasmanian population)</a> Masked Owl (Tasmanian) [67051]	Vulnerable	Breeding known to occur within area
CRUSTACEAN		
<a href="#">Astacopsis gouldi</a> Giant Freshwater Crayfish, Tasmanian Giant Freshwater Lobster [64415]	Vulnerable	Species or species habitat may occur within area
<a href="#">Euastacus bispinosus</a> Glenelg Spiny Freshwater Crayfish, Pricklyback [81552]	Endangered	Species or species habitat known to occur within area
FISH		
<a href="#">Galaxiella pusilla</a> Eastern Dwarf Galaxias, Dwarf Galaxias [56790]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Hoplostethus atlanticus</a> Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
<a href="#">Nannoperca obscura</a> Yarra Pygmy Perch [26177]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Nannoperca variegata</a> Variegated Pygmy Perch, Ewens Pygmy Perch, Golden Pygmy Perch [26178]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Prototroctes maraena</a> Australian Grayling [26179]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Rexea solandri (eastern Australian population)</a> Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Seriolella brama</a> Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
<a href="#">Thunnus maccoyii</a> Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area
FROG		
<a href="#">Litoria aurea</a> Green and Golden Bell Frog [1870]	Vulnerable	Species or species habitat may occur within area
<a href="#">Litoria raniformis</a> Growling Grass Frog, Southern Bell Frog, Green and Golden Frog, Warty Swamp Frog, Golden Bell Frog [1828]	Vulnerable	Species or species habitat known to occur within area
INSECT		
<a href="#">Oreisplanus munionga larana</a> Marrawah Skipper, Alpine Sedge Skipper, Alpine Skipper [77747]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Synemon plana</a> Golden Sun Moth [25234]	Vulnerable	Species or species habitat may occur within area
MAMMAL		
<a href="#">Antechinus minimus maritimus</a> Swamp Antechinus (mainland) [83086]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Balaenoptera borealis</a> Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera musculus</a> Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera physalus</a> Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Dasyurus maculatus maculatus (SE mainland population)</a>		
Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area
<a href="#">Dasyurus maculatus maculatus (Tasmanian population)</a>		
Spotted-tail Quoll, Spot-tailed Quoll, Tiger Quoll (Tasmanian population) [75183]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Eubalaena australis</a>		
Southern Right Whale [40]	Endangered	Breeding known to occur within area
<a href="#">Isoodon obesulus obesulus</a>		
Southern Brown Bandicoot (eastern), Southern Brown Bandicoot (south-eastern) [68050]	Endangered	Species or species habitat known to occur within area
<a href="#">Mastacomys fuscus mordicus</a>		
Broad-toothed Rat (mainland), Tooarrana [87617]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Miniopterus orianae bassanii</a>		
Southern Bent-wing Bat [87645]	Critically Endangered	Breeding known to occur within area
<a href="#">Neophoca cinerea</a>		
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
<a href="#">Perameles gunnii gunnii</a>		
Eastern Barred Bandicoot (Tasmania) [66651]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Perameles gunnii Victorian subspecies</a>		
Eastern Barred Bandicoot (Mainland) [88020]	Endangered	Translocated population known to occur within area
<a href="#">Petauroides volans</a>		
Greater Glider (southern and central) [254]	Endangered	Species or species habitat may occur within area
<a href="#">Petaurus australis australis</a>		
Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Potorous tridactylus trisulcatus</a>		
Long-nosed Potoroo (southern mainland) [86367]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Pseudomys fumeus</a> Smoky Mouse, Konoom [88]	Endangered	Species or species habitat may occur within area
<a href="#">Pseudomys novaehollandiae</a> New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pseudomys shortridgei</a> Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat known to occur within area
<a href="#">Pteropus poliocephalus</a> Grey-headed Flying-fox [186]	Vulnerable	Roosting known to occur within area
<a href="#">Sarcophilus harrisii</a> Tasmanian Devil [299]	Endangered	Species or species habitat likely to occur within area
OTHER		
<a href="#">Hyridella glenelgensis</a> Glenelg Freshwater Mussel [82953]	Critically Endangered	Species or species habitat may occur within area
PLANT		
<a href="#">Amphibromus fluitans</a> River Swamp Wallaby-grass, Floating Swamp Wallaby-grass [19215]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Astelia australiana</a> Tall Astelia [10851]	Vulnerable	Species or species habitat may occur within area
<a href="#">Caladenia calcicola</a> Limestone Spider-orchid [10065]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Caladenia colorata</a> Coloured Spider-orchid, Small Western Spider-orchid, Painted Spider-orchid [54999]	Endangered	Species or species habitat known to occur within area
<a href="#">Caladenia dienema</a> Windswept Spider-orchid [64858]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Caladenia hastata</a> Melblom's Spider-orchid [16118]	Endangered	Species or species habitat likely to occur within area
<a href="#">Caladenia insularis</a> French Island Spider-orchid [24372]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Caladenia orientalis</a> Eastern Spider Orchid [83410]	Endangered	Species or species habitat known to occur within area
<a href="#">Caladenia ornata</a> Ornate Pink Fingers [76213]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Caladenia robinsonii</a> Frankston Spider-orchid [24375]	Endangered	Species or species habitat likely to occur within area
<a href="#">Caladenia tensa</a> Greencomb Spider-orchid, Rigid Spider-orchid [24390]	Endangered	Species or species habitat may occur within area
<a href="#">Caladenia tessellata</a> Thick-lipped Spider-orchid, Daddy Long-legs [2119]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Corunastylis brachystachya</a> Short-spiked Midge-orchid, Rocky Cape Midge Orchid [76410]	Endangered	Species or species habitat may occur within area
<a href="#">Craspedia preminghana</a> Preminghana Billybutton [77046]	Endangered	Species or species habitat likely to occur within area
<a href="#">Dianella amoena</a> Matted Flax-lily [64886]	Endangered	Species or species habitat may occur within area
<a href="#">Diuris lanceolata</a> Snake Orchid [10231]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Dodonaea procumbens</a> Trailing Hop-bush [12149]	Vulnerable	Species or species habitat may occur within area
<a href="#">Eucalyptus strzeleckii</a> Strzelecki Gum [55400]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Euphrasia collina subsp. muelleri</a> Purple Eyebright, Mueller's Eyebright [16151]	Endangered	Species or species habitat known to occur within area
<a href="#">Glycine latrobeana</a> Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Grevillea infecunda</a> Anglesea Grevillea [22026]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Haloragis exalata subsp. exalata</a> Wingless Raspwort, Square Raspwort [24636]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Hiya distans listed as Hypolepis distans</a> Scrambling Ground-fern [92548]	Endangered	Species or species habitat known to occur within area
<a href="#">Ixodia achillaeoides subsp. arenicola</a> Sand Ixodia, Ixodia [21474]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Lachnagrostis adamsonii</a> Adamson's Blown-grass, Adamson's Blowngrass [76211]	Endangered	Species or species habitat may occur within area
<a href="#">Leiocarpa gatesii</a> Wrinkled Buttons [76212]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Lepidium aschersonii</a> Spiny Peppercress [10976]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Lepidium hyssopifolium</a> Basalt Pepper-cress, Peppercress, Rubble Pepper-cress, Pepperweed [16542]	Endangered	Species or species habitat known to occur within area
<a href="#">Leucochrysum albicans subsp. tricolor</a> Hoary Sunray, Grassland Paper-daisy [89104]	Endangered	Species or species habitat may occur within area
<a href="#">Pimelea spinescens subsp. spinescens</a> Plains Rice-flower, Spiny Rice-flower, Prickly Pimelea [21980]	Critically Endangered	Species or species habitat likely to occur within area
<a href="#">Pomaderris halmaturina subsp. halmaturina</a> Kangaroo Island Pomaderris [21964]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Prasophyllum diversiflorum</a> Gorae Leek-orchid [13210]	Endangered	Species or species habitat likely to occur within area
<a href="#">Prasophyllum favonium</a> Western Leek-orchid [64949]	Critically Endangered	Species or species habitat likely to occur within area
<a href="#">Prasophyllum frenchii</a> Maroon Leek-orchid, Slaty Leek-orchid, Stout Leek-orchid, French's Leek-orchid, Swamp Leek-orchid [9704]	Endangered	Species or species habitat known to occur within area
<a href="#">Prasophyllum litorale listed as Prasophyllum littorale</a> Coastal Leek Orchid [55234]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Prasophyllum pulchellum</a> Pretty Leek-orchid [64953]	Critically Endangered	Species or species habitat likely to occur within area
<a href="#">Prasophyllum secutum</a> Northern Leek-orchid [64954]	Endangered	Species or species habitat likely to occur within area
<a href="#">Prasophyllum spicatum</a> Dense Leek-orchid [55146]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Pterostylis chlorogramma</a> Green-striped Greenhood [56510]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pterostylis cucullata</a> Leafy Greenhood [15459]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pterostylis tenuissima</a> Swamp Greenhood, Dainty Swamp Orchid [13139]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pterostylis ziegeleri</a> Grassland Greenhood, Cape Portland Greenhood [64971]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Rutidosis leptorhynchoides</a> Button Wrinklewort [67251]	Endangered	Species or species habitat may occur within area
<a href="#">Senecio macrocarpus</a> Large-fruit Fireweed, Large-fruit Groundsel [16333]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Senecio psilocarpus</a> Swamp Fireweed, Smooth-fruited Groundsel [64976]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Taraxacum cygnorum</a> Coast Dandelion, Native Dandelion [2508]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Thelymitra epipactoides</a> Metallic Sun-orchid [11896]	Endangered	Species or species habitat known to occur within area
<a href="#">Thelymitra matthewsii</a> Spiral Sun-orchid [4168]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Thesium australe</a> Austral Toadflax, Toadflax [15202]	Vulnerable	Species or species habitat may occur within area

<a href="#">Diomedea sanfordi</a> Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Hydroprogne caspia</a> Caspian Tern [808]		Breeding known to occur within area
<a href="#">Macronectes giganteus</a> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Macronectes halli</a> Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Phoebetria fusca</a> Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Sternula albifrons</a> Little Tern [82849]		Breeding known to occur within area
<a href="#">Thalassarche bulleri</a> Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche carteri</a> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Thalassarche cauta</a> Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Thalassarche chrysostoma</a> Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
<a href="#">Thalassarche eremita</a> Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
<a href="#">Thalassarche impavida</a> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche salvini</a> Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche steadi</a> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Migratory Marine Species		
<a href="#">Balaenoptera bonaerensis</a> Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera borealis</a> Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera edeni</a> Bryde's Whale [35]		Species or species habitat may occur within area
<a href="#">Balaenoptera musculus</a> Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Balaenoptera physalus</a> Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Caperea marginata</a> Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
<a href="#">Carcharhinus longimanus</a> Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
<a href="#">Carcharodon carcharias</a> White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
<a href="#">Caretta caretta</a> Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Chelonia mydas</a> Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Dermochelys coriacea</a> Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Eretmochelys imbricata</a> Hawksbill Turtle [1766]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Eubalaena australis as Balaena glacialis australis</a> Southern Right Whale [40]	Endangered	Breeding known to occur within area
<a href="#">Isurus oxyrinchus</a> Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
<a href="#">Lagenorhynchus obscurus</a> Dusky Dolphin [43]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Lamna nasus</a> Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
<a href="#">Megaptera novaeangliae</a> Humpback Whale [38]		Species or species habitat known to occur within area
<a href="#">Orcinus orca</a> Killer Whale, Orca [46]		Species or species habitat likely to occur within area
<a href="#">Physeter macrocephalus</a> Sperm Whale [59]		Species or species habitat may occur within area
<a href="#">Rhincodon typus</a> Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
<a href="#">Hirundapus caudacutus</a> White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
<a href="#">Monarcha melanopsis</a> Black-faced Monarch [609]		Species or species habitat known to occur within area
<a href="#">Motacilla flava</a> Yellow Wagtail [644]		Species or species habitat known to occur within area
<a href="#">Myiagra cyanoleuca</a> Satin Flycatcher [612]		Breeding known to occur within area
<a href="#">Rhipidura rufifrons</a> Rufous Fantail [592]		Species or species habitat known to occur within area
Migratory Wetlands Species		
<a href="#">Actitis hypoleucos</a> Common Sandpiper [59309]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Arenaria interpres</a> Ruddy Turnstone [872]		Roosting known to occur within area
<a href="#">Calidris acuminata</a> Sharp-tailed Sandpiper [874]		Roosting known to occur within area
<a href="#">Calidris alba</a> Sanderling [875]		Roosting known to occur within area
<a href="#">Calidris canutus</a> Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
<a href="#">Calidris ferruginea</a> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Calidris melanotos</a> Pectoral Sandpiper [858]		Species or species habitat known to occur within area
<a href="#">Calidris ruficollis</a> Red-necked Stint [860]		Roosting known to occur within area
<a href="#">Calidris tenuirostris</a> Great Knot [862]	Critically Endangered	Roosting known to occur within area
<a href="#">Charadrius bicinctus</a> Double-banded Plover [895]		Roosting known to occur within area
<a href="#">Charadrius leschenaultii</a> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Charadrius mongolus</a> Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
<a href="#">Gallinago hardwickii</a> Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area
<a href="#">Gallinago megala</a> Swinhoe's Snipe [864]		Roosting likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Gallinago stenura</a> Pin-tailed Snipe [841]		Roosting known to occur within area
<a href="#">Limicola falcinellus</a> Broad-billed Sandpiper [842]		Roosting known to occur within area
<a href="#">Limosa lapponica</a> Bar-tailed Godwit [844]		Species or species habitat known to occur within area
<a href="#">Limosa limosa</a> Black-tailed Godwit [845]		Roosting known to occur within area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Numenius minutus</a> Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
<a href="#">Numenius phaeopus</a> Whimbrel [849]		Roosting known to occur within area
<a href="#">Pandion haliaetus</a> Osprey [952]		Species or species habitat known to occur within area
<a href="#">Phalaropus lobatus</a> Red-necked Phalarope [838]		Roosting known to occur within area
<a href="#">Philomachus pugnax</a> Ruff (Reeve) [850]		Roosting known to occur within area
<a href="#">Pluvialis fulva</a> Pacific Golden Plover [25545]		Roosting known to occur within area
<a href="#">Pluvialis squatarola</a> Grey Plover [865]		Roosting known to occur within area
<a href="#">Thalasseus bergii</a> Greater Crested Tern [83000]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Tringa brevipes</a> Grey-tailed Tattler [851]		Roosting known to occur within area
<a href="#">Tringa glareola</a> Wood Sandpiper [829]		Roosting known to occur within area
<a href="#">Tringa incana</a> Wandering Tattler [831]		Roosting known to occur within area
<a href="#">Tringa nebularia</a> Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
<a href="#">Tringa stagnatilis</a> Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area
<a href="#">Xenus cinereus</a> Terek Sandpiper [59300]		Roosting known to occur within area

<a href="#">Larus pacificus</a> Pacific Gull [811]		Breeding known to occur within area
<a href="#">Lathamus discolor</a> Swift Parrot [744]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
<a href="#">Limicola falcinellus</a> Broad-billed Sandpiper [842]		Roosting known to occur within area overfly marine area
<a href="#">Limosa lapponica</a> Bar-tailed Godwit [844]		Species or species habitat known to occur within area
<a href="#">Limosa limosa</a> Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area
<a href="#">Macronectes giganteus</a> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Macronectes halli</a> Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Merops ornatus</a> Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
<a href="#">Monarcha melanopsis</a> Black-faced Monarch [609]		Species or species habitat known to occur within area overfly marine area
<a href="#">Morus capensis</a> Cape Gannet [59569]		Breeding known to occur within area
<a href="#">Morus serrator</a> Australasian Gannet [1020]		Breeding known to occur within area
<a href="#">Motacilla flava</a> Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area
<a href="#">Myiagra cyanoleuca</a> Satin Flycatcher [612]		Breeding known to occur within area overfly marine area
<a href="#">Neophema chrysogaster</a> Orange-bellied Parrot [747]	Critically Endangered	Migration route known to occur within area overfly marine area
<a href="#">Neophema chrysostoma</a> Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area overfly marine area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Numenius minutus</a> Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
<a href="#">Numenius phaeopus</a> Whimbrel [849]		Roosting known to occur within area
<a href="#">Onychoprion fuscatus as Sterna fuscata</a> Sooty Tern [90682]		Breeding known to occur within area
<a href="#">Pachyptila turtur</a> Fairy Prion [1066]		Species or species habitat known to occur within area
<a href="#">Pandion haliaetus</a> Osprey [952]		Species or species habitat known to occur within area
<a href="#">Pelagodroma marina</a> White-faced Storm-Petrel [1016]		Breeding known to occur within area
<a href="#">Pelecanoides urinatrix</a> Common Diving-Petrel [1018]		Breeding known to occur within area
<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]		Breeding known to occur within area
<a href="#">Phalaropus lobatus</a> Red-necked Phalarope [838]		Roosting known to occur within area
<a href="#">Philomachus pugnax</a> Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area
<a href="#">Phoebastria fusca</a> Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Pluvialis fulva</a> Pacific Golden Plover [25545]		Roosting known to occur within area
<a href="#">Pluvialis squatarola</a> Grey Plover [865]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Pterodroma cervicalis</a> White-necked Petrel [59642]		Species or species habitat may occur within area
<a href="#">Pterodroma macroptera</a> Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Recurvirostra novaehollandiae</a> Red-necked Avocet [871]		Roosting known to occur within area overfly marine area
<a href="#">Rhipidura rufifrons</a> Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area
<a href="#">Rostratula australis as Rostratula benghalensis (sensu lato)</a> Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area
<a href="#">Stercorarius antarcticus as Catharacta skua</a> Brown Skua [85039]		Species or species habitat may occur within area
<a href="#">Sterna striata</a> White-fronted Tern [799]		Foraging, feeding or related behaviour likely to occur within area
<a href="#">Sternula albifrons as Sterna albifrons</a> Little Tern [82849]		Breeding known to occur within area
<a href="#">Sternula nereis as Sterna nereis</a> Fairy Tern [82949]		Breeding known to occur within area
<a href="#">Stiltia isabella</a> Australian Pratincole [818]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Thalassarche bulleri</a> Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

# Summary

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

<a href="#">World Heritage Properties:</a>	1
<a href="#">National Heritage Places:</a>	6
<a href="#">Wetlands of International Importance (Ramsar)</a>	12
<a href="#">Great Barrier Reef Marine Park:</a>	None
<a href="#">Commonwealth Marine Area:</a>	2
<a href="#">Listed Threatened Ecological Communities:</a>	24
<a href="#">Listed Threatened Species:</a>	244
<a href="#">Listed Migratory Species:</a>	94

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

<a href="#">Symposiachrus trivirgatus</a> as <a href="#">Monarcha trivirgatus</a> Spectacled Monarch [83946]		Species or species habitat known to occur within area
Migratory Wetlands Species		
<a href="#">Actitis hypoleucos</a> Common Sandpiper [59309]		Species or species habitat known to occur within area
<a href="#">Arenaria interpres</a> Ruddy Turnstone [872]		Roosting known to occur within area
<a href="#">Calidris acuminata</a> Sharp-tailed Sandpiper [874]		Roosting known to occur within area
<a href="#">Calidris alba</a> Sanderling [875]		Roosting known to occur within area
<a href="#">Calidris canutus</a> Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
<a href="#">Calidris ferruginea</a> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Calidris melanotos</a> Pectoral Sandpiper [858]		Species or species habitat known to occur within area
<a href="#">Calidris ruficollis</a> Red-necked Stint [860]		Roosting known to occur within area
<a href="#">Calidris subminuta</a> Long-toed Stint [861]		Roosting known to occur within area
<a href="#">Calidris tenuirostris</a> Great Knot [862]	Critically Endangered	Roosting known to occur within area
<a href="#">Charadrius bicinctus</a> Double-banded Plover [895]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Charadrius leschenaultii</a> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Charadrius mongolus</a> Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
<a href="#">Charadrius veredus</a> Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area
<a href="#">Gallinago hardwickii</a> Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area
<a href="#">Gallinago megala</a> Swinhoe's Snipe [864]		Roosting likely to occur within area
<a href="#">Gallinago stenura</a> Pin-tailed Snipe [841]		Roosting known to occur within area
<a href="#">Limicola falcinellus</a> Broad-billed Sandpiper [842]		Roosting known to occur within area
<a href="#">Limosa lapponica</a> Bar-tailed Godwit [844]		Species or species habitat known to occur within area
<a href="#">Limosa limosa</a> Black-tailed Godwit [845]		Roosting known to occur within area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Numenius minutus</a> Little Curlew, Little Whimbrel [848]		Roosting known to occur within area
<a href="#">Numenius phaeopus</a> Whimbrel [849]		Roosting known to occur within area
<a href="#">Pandion haliaetus</a> Osprey [952]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Phalaropus lobatus</a> Red-necked Phalarope [838]		Roosting known to occur within area
<a href="#">Philomachus pugnax</a> Ruff (Reeve) [850]		Roosting known to occur within area
<a href="#">Pluvialis fulva</a> Pacific Golden Plover [25545]		Roosting known to occur within area
<a href="#">Pluvialis squatarola</a> Grey Plover [865]		Roosting known to occur within area
<a href="#">Thalasseus bergii</a> Greater Crested Tern [83000]		Breeding known to occur within area
<a href="#">Tringa brevipes</a> Grey-tailed Tattler [851]		Roosting known to occur within area
<a href="#">Tringa glareola</a> Wood Sandpiper [829]		Roosting known to occur within area
<a href="#">Tringa incana</a> Wandering Tattler [831]		Roosting known to occur within area
<a href="#">Tringa nebularia</a> Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
<a href="#">Tringa stagnatilis</a> Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area
<a href="#">Xenus cinereus</a> Terek Sandpiper [59300]		Roosting known to occur within area

Scientific Name		[ <a href="#">Resource Information</a> ]
Threatened Category		Presence Text
Bird		

Scientific Name	Threatened Category	Presence Text
<a href="#">Actitis hypoleucos</a> Common Sandpiper [59309]		Species or species habitat known to occur within area
<a href="#">Anous stolidus</a> Common Noddy [825]		Species or species habitat likely to occur within area
<a href="#">Anseranas semipalmata</a> Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
<a href="#">Apus pacificus</a> Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
<a href="#">Ardenna carneipes as Puffinus carneipes</a> Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
<a href="#">Ardenna grisea as Puffinus griseus</a> Sooty Shearwater [82651]		Breeding known to occur within area
<a href="#">Ardenna pacifica as Puffinus pacificus</a> Wedge-tailed Shearwater [84292]		Breeding known to occur within area
<a href="#">Ardenna tenuirostris as Puffinus tenuirostris</a> Short-tailed Shearwater [82652]		Breeding known to occur within area
<a href="#">Arenaria interpres</a> Ruddy Turnstone [872]		Roosting known to occur within area
<a href="#">Bubulcus ibis as Ardea ibis</a> Cattle Egret [66521]		Breeding likely to occur within area overfly marine area
<a href="#">Calidris acuminata</a> Sharp-tailed Sandpiper [874]		Roosting known to occur within area
<a href="#">Calidris alba</a> Sanderling [875]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Calidris canutus</a> Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area overfly marine area
<a href="#">Calidris ferruginea</a> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
<a href="#">Calidris melanotos</a> Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area
<a href="#">Calidris ruficollis</a> Red-necked Stint [860]		Roosting known to occur within area overfly marine area
<a href="#">Calidris subminuta</a> Long-toed Stint [861]		Roosting known to occur within area overfly marine area
<a href="#">Calidris tenuirostris</a> Great Knot [862]	Critically Endangered	Roosting known to occur within area overfly marine area
<a href="#">Calonectris leucomelas</a> Streaked Shearwater [1077]		Species or species habitat likely to occur within area
<a href="#">Chalcites osculans as Chrysococcyx osculans</a> Black-eared Cuckoo [83425]		Species or species habitat known to occur within area overfly marine area
<a href="#">Charadrius bicinctus</a> Double-banded Plover [895]		Roosting known to occur within area overfly marine area
<a href="#">Charadrius leschenaultii</a> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Charadrius mongolus</a> Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Charadrius ruficapillus</a> Red-capped Plover [881]		Roosting known to occur within area overfly marine area
<a href="#">Charadrius veredus</a> Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area overfly marine area
<a href="#">Chroicocephalus novaehollandiae as Larus novaehollandiae</a> Silver Gull [82326]		Breeding known to occur within area
<a href="#">Diomedea antipodensis</a> Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea antipodensis gibsoni as Diomedea gibsoni</a> Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea epomophora</a> Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea exulans</a> Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea sanfordi</a> Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Eudyptula minor</a> Little Penguin [1085]		Breeding known to occur within area
<a href="#">Fregata ariel</a> Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Fregata minor</a> Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
<a href="#">Gallinago hardwickii</a> Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area overfly marine area
<a href="#">Gallinago megala</a> Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
<a href="#">Gallinago stenura</a> Pin-tailed Snipe [841]		Roosting known to occur within area overfly marine area
<a href="#">Haliaeetus leucogaster</a> White-bellied Sea-Eagle [943]		Breeding known to occur within area
<a href="#">Halobaena caerulea</a> Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
<a href="#">Himantopus himantopus</a> Pied Stilt, Black-winged Stilt [870]		Roosting known to occur within area overfly marine area
<a href="#">Hirundapus caudacutus</a> White-throated Needletail [682]	Vulnerable	Roosting known to occur within area overfly marine area
<a href="#">Hydroprogne caspia as Sterna caspia</a> Caspian Tern [808]		Breeding known to occur within area
<a href="#">Larus dominicanus</a> Kelp Gull [809]		Breeding known to occur within area
<a href="#">Larus pacificus</a> Pacific Gull [811]		Breeding known to occur within area
<a href="#">Lathamus discolor</a> Swift Parrot [744]	Critically Endangered	Breeding known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Limicola falcinellus</a> Broad-billed Sandpiper [842]		Roosting known to occur within area overfly marine area
<a href="#">Limosa lapponica</a> Bar-tailed Godwit [844]		Species or species habitat known to occur within area
<a href="#">Limosa limosa</a> Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area
<a href="#">Macronectes giganteus</a> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Macronectes halli</a> Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Merops ornatus</a> Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
<a href="#">Monarcha melanopsis</a> Black-faced Monarch [609]		Species or species habitat known to occur within area overfly marine area
<a href="#">Morus capensis</a> Cape Gannet [59569]		Breeding known to occur within area
<a href="#">Morus serrator</a> Australasian Gannet [1020]		Breeding known to occur within area
<a href="#">Motacilla flava</a> Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area
<a href="#">Myiagra cyanoleuca</a> Satin Flycatcher [612]		Breeding known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Neophema chrysogaster</a> Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area overfly marine area
<a href="#">Neophema chrysostoma</a> Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area overfly marine area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Numenius minutus</a> Little Curlew, Little Whimbrel [848]		Roosting known to occur within area overfly marine area
<a href="#">Numenius phaeopus</a> Whimbrel [849]		Roosting known to occur within area
<a href="#">Onychoprion fuscatus as Sterna fuscata</a> Sooty Tern [90682]		Breeding known to occur within area
<a href="#">Pachyptila turtur</a> Fairy Prion [1066]		Species or species habitat known to occur within area
<a href="#">Pandion haliaetus</a> Osprey [952]		Species or species habitat known to occur within area
<a href="#">Pelagodroma marina</a> White-faced Storm-Petrel [1016]		Breeding known to occur within area
<a href="#">Pelecanoides urinatrix</a> Common Diving-Petrel [1018]		Breeding known to occur within area
<a href="#">Phaethon lepturus</a> White-tailed Tropicbird [1014]		Species or species habitat may occur within area
<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Phalaropus lobatus</a> Red-necked Phalarope [838]		Roosting known to occur within area
<a href="#">Philomachus pugnax</a> Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area
<a href="#">Phoebastria fusca</a> Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Pluvialis fulva</a> Pacific Golden Plover [25545]		Roosting known to occur within area
<a href="#">Pluvialis squatarola</a> Grey Plover [865]		Roosting known to occur within area overfly marine area
<a href="#">Pterodroma cervicalis</a> White-necked Petrel [59642]		Species or species habitat may occur within area
<a href="#">Pterodroma macroptera</a> Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Vulnerable	Breeding known to occur within area
<a href="#">Recurvirostra novaehollandiae</a> Red-necked Avocet [871]		Roosting known to occur within area overfly marine area
<a href="#">Rhipidura rufifrons</a> Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area
<a href="#">Rostratula australis as Rostratula benghalensis (sensu lato)</a> Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Stercorarius antarcticus as Catharacta skua</a> Brown Skua [85039]		Species or species habitat may occur within area
<a href="#">Sterna striata</a> White-fronted Tern [799]		Breeding known to occur within area
<a href="#">Sternula albifrons as Sterna albifrons</a> Little Tern [82849]		Breeding known to occur within area
<a href="#">Sternula nereis as Sterna nereis</a> Fairy Tern [82949]		Breeding known to occur within area
<a href="#">Stiltia isabella</a> Australian Pratincole [818]		Roosting known to occur within area overfly marine area
<a href="#">Symposiachrus trivirgatus as Monarcha trivirgatus</a> Spectacled Monarch [83946]		Species or species habitat known to occur within area overfly marine area
<a href="#">Thalassarche bulleri</a> Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche bulleri platei as Thalassarche sp. nov.</a> Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche carteri</a> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Thalassarche cauta</a> Shy Albatross [89224]	Endangered	Breeding known to occur within area
<a href="#">Thalassarche chrysostoma</a> Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Thalassarche eremita</a> Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
<a href="#">Thalassarche impavida</a> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche salvini</a> Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche steadi</a> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Thalasseus bergii as Sterna bergii</a> Greater Crested Tern [83000]		Breeding known to occur within area
<a href="#">Thinornis cucullatus as Thinornis rubricollis</a> Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area
<a href="#">Thinornis cucullatus cucullatus as Thinornis rubricollis rubricollis</a> Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area overfly marine area
<a href="#">Tringa brevipes as Heteroscelus brevipes</a> Grey-tailed Tattler [851]		Roosting known to occur within area
<a href="#">Tringa glareola</a> Wood Sandpiper [829]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Tringa incana as Heteroscelus incanus</a> Wandering Tattler [831]		Roosting known to occur within area
<a href="#">Tringa nebularia</a> Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area overfly marine area
<a href="#">Tringa stagnatilis</a> Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area
<a href="#">Xenus cinereus</a> Terek Sandpiper [59300]		Roosting known to occur within area overfly marine area
Fish		
<a href="#">Acentronura australe</a> Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area
<a href="#">Acentronura tentaculata</a> Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
<a href="#">Campichthys tryoni</a> Tryon's Pipefish [66193]		Species or species habitat may occur within area
<a href="#">Cosmocampus howensis</a> Lord Howe Pipefish [66208]		Species or species habitat may occur within area
<a href="#">Heraldia nocturna</a> Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
<a href="#">Hippocampus abdominalis</a> Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
<a href="#">Hippocampus breviceps</a> Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Hippocampus minotaur</a> Bullneck Seahorse [66705]		Species or species habitat may occur within area
<a href="#">Hippocampus whitei</a> White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat known to occur within area
<a href="#">Histiogamphelus briggsii</a> Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
<a href="#">Histiogamphelus cristatus</a> Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
<a href="#">Hypselognathus rostratus</a> Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area
<a href="#">Kaupus costatus</a> Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
<a href="#">Kimblaeus bassensis</a> Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
<a href="#">Leptoichthys fistularius</a> Brushtail Pipefish [66248]		Species or species habitat may occur within area
<a href="#">Lissocampus caudalis</a> Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
<a href="#">Lissocampus runa</a> Javelin Pipefish [66251]		Species or species habitat may occur within area
<a href="#">Maroubra perserrata</a> Sawtooth Pipefish [66252]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Mitotichthys mollisoni</a> Mollison's Pipefish [66260]		Species or species habitat may occur within area
<a href="#">Mitotichthys semistriatus</a> Halfbanded Pipefish [66261]		Species or species habitat may occur within area
<a href="#">Mitotichthys tuckeri</a> Tucker's Pipefish [66262]		Species or species habitat may occur within area
<a href="#">Notiocampus ruber</a> Red Pipefish [66265]		Species or species habitat may occur within area
<a href="#">Phycodurus eques</a> Leafy Seadragon [66267]		Species or species habitat may occur within area
<a href="#">Phyllopteryx taeniolatus</a> Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
<a href="#">Pugnaso curtirostris</a> Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
<a href="#">Solegnathus robustus</a> Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
<a href="#">Solegnathus spinosissimus</a> Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
<a href="#">Solenostomus cyanopterus</a> Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
<a href="#">Stigmatopora argus</a> Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Stigmatopora nigra</a> Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
<a href="#">Stipecampus cristatus</a> Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
<a href="#">Syngnathoides biaculeatus</a> Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
<a href="#">Urocampus carinirostris</a> Hairy Pipefish [66282]		Species or species habitat may occur within area
<a href="#">Vanacampus margaritifer</a> Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
<a href="#">Vanacampus phillipi</a> Port Phillip Pipefish [66284]		Species or species habitat may occur within area
<a href="#">Vanacampus poecilolaemus</a> Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
<a href="#">Vanacampus vercoi</a> Verco's Pipefish [66286]		Species or species habitat may occur within area
Mammal		
<a href="#">Arctocephalus forsteri</a> Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding known to occur within area
<a href="#">Arctocephalus pusillus</a> Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area
<a href="#">Dugong dugon</a> Dugong [28]		Species or species habitat may occur within area
<a href="#">Mirounga leonina</a> Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Neophoca cinerea</a> Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Reptile		
<a href="#">Caretta caretta</a> Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Chelonia mydas</a> Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Dermochelys coriacea</a> Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Eretmochelys imbricata</a> Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Natator depressus</a> Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Whales and Other Cetaceans [ Resource Information ]		
Current Scientific Name	Status	Type of Presence
Mammal		
<a href="#">Balaenoptera acutorostrata</a> Minke Whale [33]		Species or species habitat may occur within area
<a href="#">Balaenoptera bonaerensis</a> Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera borealis</a> Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Balaenoptera edeni</a> Bryde's Whale [35]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera musculus</a> Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera physalus</a> Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Berardius arnuxii</a> Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
<a href="#">Caperea marginata</a> Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
<a href="#">Delphinus delphis</a> Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
<a href="#">Eubalaena australis</a> Southern Right Whale [40]	Endangered	Breeding known to occur within area
<a href="#">Globicephala macrorhynchus</a> Short-finned Pilot Whale [62]		Species or species habitat may occur within area
<a href="#">Globicephala melas</a> Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
<a href="#">Grampus griseus</a> Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
<a href="#">Hyperoodon planifrons</a> Southern Bottlenose Whale [71]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Kogia breviceps</a> Pygmy Sperm Whale [57]		Species or species habitat may occur within area
<a href="#">Kogia sima</a> Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
<a href="#">Lagenorhynchus obscurus</a> Dusky Dolphin [43]		Species or species habitat likely to occur within area
<a href="#">Lissodelphis peronii</a> Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
<a href="#">Megaptera novaeangliae</a> Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
<a href="#">Mesoplodon bowdoini</a> Andrew's Beaked Whale [73]		Species or species habitat may occur within area
<a href="#">Mesoplodon densirostris</a> Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
<a href="#">Mesoplodon ginkgodens</a> Ginkgo-toothed Beaked Whale, Ginkgo-toothed Whale, Ginkgo Beaked Whale [59564]		Species or species habitat may occur within area
<a href="#">Mesoplodon grayi</a> Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
<a href="#">Mesoplodon hectori</a> Hector's Beaked Whale [76]		Species or species habitat may occur within area
<a href="#">Mesoplodon layardii</a> Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Mesoplodon mirus</a> True's Beaked Whale [54]		Species or species habitat may occur within area
<a href="#">Orcinus orca</a> Killer Whale, Orca [46]		Species or species habitat likely to occur within area
<a href="#">Phocoena dioptrica</a> Spectacled Porpoise [66728]		Species or species habitat may occur within area
<a href="#">Physeter macrocephalus</a> Sperm Whale [59]		Species or species habitat may occur within area
<a href="#">Pseudorca crassidens</a> False Killer Whale [48]		Species or species habitat likely to occur within area
<a href="#">Tasmacetus shepherdi</a> Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
<a href="#">Tursiops aduncus</a> Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
<a href="#">Tursiops truncatus s. str.</a> Bottlenose Dolphin [68417]		Species or species habitat may occur within area
<a href="#">Ziphius cavirostris</a> Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Critical Habitats		[ Resource Information ]
Name	Type of Presence

Key Ecological Features

[ Resource Information ]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
<a href="#">Big Horseshoe Canyon</a>	South-east
<a href="#">Bonney Coast Upwelling</a>	South-east
<a href="#">Canyons on the eastern continental slope</a>	Temperate east
<a href="#">Seamounts South and east of Tasmania</a>	South-east
<a href="#">Shelf rocky reefs</a>	Temperate east
<a href="#">Upwelling East of Eden</a>	South-east
<a href="#">West Tasmania Canyons</a>	South-east

Biologically Important Areas		
Scientific Name	Behaviour	Presence
Dolphins		
<a href="#">Tursiops aduncus</a>		
Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur

Scientific Name	Behaviour	Presence
<a href="#">Tursiops aduncus</a> Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Known to occur
Seabirds		
<a href="#">Ardena carneipes</a> Flesh-footed Shearwater [82404]	Foraging	Known to occur
<a href="#">Ardena grisea</a> Sooty Shearwater [82651]	Breeding	Known to occur
<a href="#">Ardena grisea</a> Sooty Shearwater [82651]	Foraging	Known to occur
<a href="#">Ardena grisea</a> Sooty Shearwater [82651]	Foraging	Likely to occur
<a href="#">Ardena pacifica</a> Wedge-tailed Shearwater [84292]	Breeding	Known to occur
<a href="#">Ardena pacifica</a> Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
<a href="#">Ardena tenuirostris</a> Short-tailed Shearwater [82652]	Breeding	Known to occur
<a href="#">Ardena tenuirostris</a> Short-tailed Shearwater [82652]	Foraging	Likely to occur
<a href="#">Ardena tenuirostris</a> Short-tailed Shearwater [82652]	Foraging	Known to occur
<a href="#">Diomedea exulans (sensu lato)</a> Wandering Albatross [1073]	Foraging	Likely to occur
<a href="#">Diomedea exulans (sensu lato)</a> Wandering Albatross [1073]	Foraging	Known to occur
<a href="#">Diomedea exulans antipodensis</a> Antipodean Albatross [82269]	Foraging	Known to occur

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

# Summary

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

<a href="#">World Heritage Properties:</a>	1
<a href="#">National Heritage Places:</a>	5
<a href="#">Wetlands of International Importance (Ramsar</a>	8
<a href="#">Great Barrier Reef Marine Park:</a>	None
<a href="#">Commonwealth Marine Area:</a>	2
<a href="#">Listed Threatened Ecological Communities:</a>	24
<a href="#">Listed Threatened Species:</a>	214
<a href="#">Listed Migratory Species:</a>	92

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

<a href="#">Thalassarche carteri</a> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Thalassarche cauta</a> Shy Albatross [89224]	Endangered	Breeding known to occur within area
<a href="#">Thalassarche chrysostoma</a> Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
<a href="#">Thalassarche eremita</a> Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
<a href="#">Thalassarche impavida</a> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche salvini</a> Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Thalassarche steadi</a> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Migratory Marine Species		
<a href="#">Balaenoptera bonaerensis</a> Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera borealis</a> Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera edeni</a> Bryde's Whale [35]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera musculus</a> Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera physalus</a> Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Caperea marginata</a> Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
<a href="#">Carcharhinus longimanus</a> Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
<a href="#">Carcharodon carcharias</a> White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
<a href="#">Caretta caretta</a> Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Chelonia mydas</a> Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Dermochelys coriacea</a> Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Dugong dugon</a> Dugong [28]		Species or species habitat may occur within area
<a href="#">Eretmochelys imbricata</a> Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Eubalaena australis as Balaena glacialis australis</a> Southern Right Whale [40]	Endangered	Breeding known to occur within area
<a href="#">Isurus oxyrinchus</a> Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
<a href="#">Lagenorhynchus obscurus</a> Dusky Dolphin [43]		Species or species habitat likely to occur within area
<a href="#">Lamna nasus</a> Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
<a href="#">Megaptera novaeangliae</a> Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
<a href="#">Mobula birostris as Manta birostris</a> Giant Manta Ray [90034]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Natator depressus</a> Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Orcinus orca</a> Killer Whale, Orca [46]		Species or species habitat likely to occur within area
<a href="#">Physeter macrocephalus</a> Sperm Whale [59]		Species or species habitat may occur within area
<a href="#">Rhincodon typus</a> Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
<a href="#">Cuculus optatus</a> Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat known to occur within area
<a href="#">Hirundapus caudacutus</a> White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
<a href="#">Monarcha melanopsis</a> Black-faced Monarch [609]		Species or species habitat known to occur within area
<a href="#">Motacilla cinerea</a> Grey Wagtail [642]		Species or species habitat known to occur within area
<a href="#">Motacilla flava</a> Yellow Wagtail [644]		Species or species habitat known to occur within area
<a href="#">Myiagra cyanoleuca</a> Satin Flycatcher [612]		Breeding known to occur within area
<a href="#">Rhipidura rufifrons</a> Rufous Fantail [592]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Symposiachrus trivirgatus</a> as <a href="#">Monarcha trivirgatus</a> Spectacled Monarch [83946]		Species or species habitat known to occur within area
Migratory Wetlands Species		
<a href="#">Actitis hypoleucos</a> Common Sandpiper [59309]		Species or species habitat known to occur within area
<a href="#">Arenaria interpres</a> Ruddy Turnstone [872]		Roosting known to occur within area
<a href="#">Calidris acuminata</a> Sharp-tailed Sandpiper [874]		Roosting known to occur within area
<a href="#">Calidris alba</a> Sanderling [875]		Roosting known to occur within area
<a href="#">Calidris canutus</a> Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
<a href="#">Calidris ferruginea</a> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Calidris melanotos</a> Pectoral Sandpiper [858]		Species or species habitat known to occur within area
<a href="#">Calidris ruficollis</a> Red-necked Stint [860]		Roosting known to occur within area
<a href="#">Calidris subminuta</a> Long-toed Stint [861]		Roosting known to occur within area
<a href="#">Calidris tenuirostris</a> Great Knot [862]	Critically Endangered	Roosting known to occur within area
<a href="#">Charadrius bicinctus</a> Double-banded Plover [895]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Charadrius leschenaultii</a> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Charadrius mongolus</a> Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
<a href="#">Charadrius veredus</a> Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area
<a href="#">Gallinago hardwickii</a> Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area
<a href="#">Gallinago megala</a> Swinhoe's Snipe [864]		Roosting likely to occur within area
<a href="#">Gallinago stenura</a> Pin-tailed Snipe [841]		Roosting known to occur within area
<a href="#">Limicola falcinellus</a> Broad-billed Sandpiper [842]		Roosting known to occur within area
<a href="#">Limosa lapponica</a> Bar-tailed Godwit [844]		Species or species habitat known to occur within area
<a href="#">Limosa limosa</a> Black-tailed Godwit [845]		Roosting known to occur within area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Numenius minutus</a> Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
<a href="#">Numenius phaeopus</a> Whimbrel [849]		Roosting known to occur within area
<a href="#">Pandion haliaetus</a> Osprey [952]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Phalaropus lobatus</a> Red-necked Phalarope [838]		Roosting known to occur within area
<a href="#">Philomachus pugnax</a> Ruff (Reeve) [850]		Roosting known to occur within area
<a href="#">Pluvialis fulva</a> Pacific Golden Plover [25545]		Roosting known to occur within area
<a href="#">Pluvialis squatarola</a> Grey Plover [865]		Roosting known to occur within area
<a href="#">Thalasseus bergii</a> Greater Crested Tern [83000]		Breeding known to occur within area
<a href="#">Tringa brevipes</a> Grey-tailed Tattler [851]		Roosting known to occur within area
<a href="#">Tringa glareola</a> Wood Sandpiper [829]		Roosting known to occur within area
<a href="#">Tringa incana</a> Wandering Tattler [831]		Roosting known to occur within area
<a href="#">Tringa nebularia</a> Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
<a href="#">Tringa stagnatilis</a> Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area
<a href="#">Xenus cinereus</a> Terek Sandpiper [59300]		Roosting known to occur within area

Listed Marine Species [ Resource Information ]		
Scientific Name	Threatened Category	Presence Text
Bird		
<a href="#">Actitis hypoleucos</a>		
Common Sandpiper [59309]		Species or species habitat known to occur within area
<a href="#">Anous stolidus</a>		
Common Noddy [825]		Species or species habitat likely to occur within area
<a href="#">Anseranas semipalmata</a>		
Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
<a href="#">Apus pacificus</a>		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Ardenna carneipes as Puffinus carneipes</a> Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
<a href="#">Ardenna grisea as Puffinus griseus</a> Sooty Shearwater [82651]		Breeding known to occur within area
<a href="#">Ardenna pacifica as Puffinus pacificus</a> Wedge-tailed Shearwater [84292]		Breeding known to occur within area
<a href="#">Ardenna tenuirostris as Puffinus tenuirostris</a> Short-tailed Shearwater [82652]		Breeding known to occur within area
<a href="#">Arenaria interpres</a> Ruddy Turnstone [872]		Roosting known to occur within area
<a href="#">Bubulcus ibis as Ardea ibis</a> Cattle Egret [66521]		Breeding likely to occur within area overfly marine area
<a href="#">Calidris acuminata</a> Sharp-tailed Sandpiper [874]		Roosting known to occur within area
<a href="#">Calidris alba</a> Sanderling [875]		Roosting known to occur within area
<a href="#">Calidris canutus</a> Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area overfly marine area
<a href="#">Calidris ferruginea</a> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
<a href="#">Calidris melanotos</a> Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area
<a href="#">Calidris ruficollis</a> Red-necked Stint [860]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Calidris subminuta</a> Long-toed Stint [861]		Roosting known to occur within area overfly marine area
<a href="#">Calidris tenuirostris</a> Great Knot [862]	Critically Endangered	Roosting known to occur within area overfly marine area
<a href="#">Calonectris leucomelas</a> Streaked Shearwater [1077]		Species or species habitat likely to occur within area
<a href="#">Chalcites osculans as Chrysococcyx osculans</a> Black-eared Cuckoo [83425]		Species or species habitat known to occur within area overfly marine area
<a href="#">Charadrius bicinctus</a> Double-banded Plover [895]		Roosting known to occur within area overfly marine area
<a href="#">Charadrius leschenaultii</a> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Charadrius mongolus</a> Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
<a href="#">Charadrius ruficapillus</a> Red-capped Plover [881]		Roosting known to occur within area overfly marine area
<a href="#">Charadrius veredus</a> Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area overfly marine area
<a href="#">Chroicocephalus novaehollandiae as Larus novaehollandiae</a> Silver Gull [82326]		Breeding known to occur within area
<a href="#">Diomedea antipodensis</a> Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Diomedea antipodensis gibsoni</a> as <a href="#">Diomedea gibsoni</a> Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea epomophora</a> Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea exulans</a> Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Diomedea sanfordi</a> Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Eudyptula minor</a> Little Penguin [1085]		Breeding known to occur within area
<a href="#">Gallinago hardwickii</a> Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area overfly marine area
<a href="#">Gallinago megala</a> Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
<a href="#">Gallinago stenura</a> Pin-tailed Snipe [841]		Roosting known to occur within area overfly marine area
<a href="#">Haliaeetus leucogaster</a> White-bellied Sea-Eagle [943]		Breeding known to occur within area
<a href="#">Halobaena caerulea</a> Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
<a href="#">Himantopus himantopus</a> Pied Stilt, Black-winged Stilt [870]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Hirundapus caudacutus</a> White-throated Needletail [682]	Vulnerable	Roosting known to occur within area overfly marine area
<a href="#">Hydroprogne caspia as Sterna caspia</a> Caspian Tern [808]		Breeding known to occur within area
<a href="#">Larus dominicanus</a> Kelp Gull [809]		Breeding known to occur within area
<a href="#">Larus pacificus</a> Pacific Gull [811]		Breeding known to occur within area
<a href="#">Lathamus discolor</a> Swift Parrot [744]	Critically Endangered	Breeding known to occur within area overfly marine area
<a href="#">Limicola falcinellus</a> Broad-billed Sandpiper [842]		Roosting known to occur within area overfly marine area
<a href="#">Limosa lapponica</a> Bar-tailed Godwit [844]		Species or species habitat known to occur within area
<a href="#">Limosa limosa</a> Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area
<a href="#">Macronectes giganteus</a> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Macronectes halli</a> Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Merops ornatus</a> Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Monarcha melanopsis</a> Black-faced Monarch [609]		Species or species habitat known to occur within area overfly marine area
<a href="#">Morus capensis</a> Cape Gannet [59569]		Breeding known to occur within area
<a href="#">Morus serrator</a> Australasian Gannet [1020]		Breeding known to occur within area
<a href="#">Motacilla cinerea</a> Grey Wagtail [642]		Species or species habitat known to occur within area overfly marine area
<a href="#">Motacilla flava</a> Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area
<a href="#">Myiagra cyanoleuca</a> Satin Flycatcher [612]		Breeding known to occur within area overfly marine area
<a href="#">Neophema chrysogaster</a> Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area overfly marine area
<a href="#">Neophema chrysostoma</a> Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area overfly marine area
<a href="#">Numenius madagascariensis</a> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
<a href="#">Numenius minutus</a> Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
<a href="#">Numenius phaeopus</a> Whimbrel [849]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Onychoprion fuscatus as Sterna fuscata</a> Sooty Tern [90682]		Breeding known to occur within area
<a href="#">Pachyptila turtur</a> Fairy Prion [1066]		Species or species habitat known to occur within area
<a href="#">Pandion haliaetus</a> Osprey [952]		Species or species habitat known to occur within area

<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]		Breeding known to occur within area
<a href="#">Phalaropus lobatus</a> Red-necked Phalarope [838]		Roosting known to occur within area
<a href="#">Philomachus pugnax</a> Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area
<a href="#">Phoebetria fusca</a> Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Pluvialis fulva</a> Pacific Golden Plover [25545]		Roosting known to occur within area
<a href="#">Pluvialis squatarola</a> Grey Plover [865]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Pterodroma cervicalis</a> White-necked Petrel [59642]		Species or species habitat may occur within area
<a href="#">Pterodroma macroptera</a> Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Recurvirostra novaehollandiae</a> Red-necked Avocet [871]		Roosting known to occur within area overfly marine area
<a href="#">Rhipidura rufifrons</a> Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area
<a href="#">Rostratula australis as Rostratula benghalensis (sensu lato)</a> Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area
<a href="#">Stercorarius antarcticus as Catharacta skua</a> Brown Skua [85039]		Species or species habitat may occur within area
<a href="#">Sterna striata</a> White-fronted Tern [799]		Breeding likely to occur within area
<a href="#">Sternula albifrons as Sterna albifrons</a> Little Tern [82849]		Breeding known to occur within area
<a href="#">Sternula nereis as Sterna nereis</a> Fairy Tern [82949]		Breeding known to occur within area
<a href="#">Stiltia isabella</a> Australian Pratincole [818]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
<a href="#">Symposiachrus trivirgatus as Monarcha trivirgatus</a> Spectacled Monarch [83946]		Species or species habitat known to occur within area overfly marine area
<a href="#">Thalassarche bulleri</a> Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche bulleri platei as Thalassarche sp. nov.</a> Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche carteri</a> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Thalassarche cauta</a> Shy Albatross [89224]	Endangered	Breeding known to occur within area
<a href="#">Thalassarche chrysostoma</a> Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
<a href="#">Thalassarche eremita</a> Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
<a href="#">Thalassarche impavida</a> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche salvini</a> Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Thalassarche steadi</a> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Thalasseus bergii as Sterna bergii</a> Greater Crested Tern [83000]		Breeding known to occur within area
<a href="#">Thinornis cucullatus as Thinornis rubricollis</a> Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area
<a href="#">Thinornis cucullatus cucullatus as Thinornis rubricollis rubricollis</a> Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area overfly marine area
<a href="#">Tringa brevipes as Heteroscelus brevipes</a> Grey-tailed Tattler [851]		Roosting known to occur within area
<a href="#">Tringa glareola</a> Wood Sandpiper [829]		Roosting known to occur within area overfly marine area
<a href="#">Tringa incana as Heteroscelus incanus</a> Wandering Tattler [831]		Roosting known to occur within area
<a href="#">Tringa nebularia</a> Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area overfly marine area
<a href="#">Tringa stagnatilis</a> Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area
<a href="#">Xenus cinereus</a> Terek Sandpiper [59300]		Roosting known to occur within area overfly marine area
Fish		
<a href="#">Acentronura australe</a> Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Acentronura tentaculata</a> Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
<a href="#">Campichthys tryoni</a> Tryon's Pipefish [66193]		Species or species habitat may occur within area
<a href="#">Cosmocampus howensis</a> Lord Howe Pipefish [66208]		Species or species habitat may occur within area
<a href="#">Heraldia nocturna</a> Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
<a href="#">Hippocampus abdominalis</a> Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
<a href="#">Hippocampus breviceps</a> Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
<a href="#">Hippocampus minotaur</a> Bullneck Seahorse [66705]		Species or species habitat may occur within area
<a href="#">Hippocampus whitei</a> White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat known to occur within area
<a href="#">Histiogamphelus briggsii</a> Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
<a href="#">Histiogamphelus cristatus</a> Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
<a href="#">Hypselognathus rostratus</a> Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Kaupus costatus</a> Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
<a href="#">Kimblaeus bassensis</a> Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
<a href="#">Leptoichthys fistularius</a> Brushtail Pipefish [66248]		Species or species habitat may occur within area
<a href="#">Lissocampus caudalis</a> Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
<a href="#">Lissocampus runa</a> Javelin Pipefish [66251]		Species or species habitat may occur within area
<a href="#">Maroubra perserrata</a> Sawtooth Pipefish [66252]		Species or species habitat may occur within area
<a href="#">Mitotichthys mollisoni</a> Mollison's Pipefish [66260]		Species or species habitat may occur within area
<a href="#">Mitotichthys semistriatus</a> Halfbanded Pipefish [66261]		Species or species habitat may occur within area
<a href="#">Mitotichthys tuckeri</a> Tucker's Pipefish [66262]		Species or species habitat may occur within area
<a href="#">Notiocampus ruber</a> Red Pipefish [66265]		Species or species habitat may occur within area
<a href="#">Phycodurus eques</a> Leafy Seadragon [66267]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Phyllopteryx taeniolatus</a> Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
<a href="#">Pugnaso curtirostris</a> Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
<a href="#">Solegnathus robustus</a> Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
<a href="#">Solegnathus spinosissimus</a> Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
<a href="#">Solenostomus cyanopterus</a> Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
<a href="#">Stigmatopora argus</a> Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
<a href="#">Stigmatopora nigra</a> Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
<a href="#">Stipecampus cristatus</a> Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
<a href="#">Syngnathoides biaculeatus</a> Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
<a href="#">Urocampus carinirostris</a> Hairy Pipefish [66282]		Species or species habitat may occur within area
<a href="#">Vanacampus margaritifer</a> Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Vanacampus phillipi</a> Port Phillip Pipefish [66284]		Species or species habitat may occur within area
<a href="#">Vanacampus poecilolaemus</a> Longsnout Pipefish, Australian Longsnout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
<a href="#">Vanacampus vercoi</a> Verco's Pipefish [66286]		Species or species habitat may occur within area

Mammal		
<a href="#">Arctocephalus forsteri</a> Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat likely to occur within area
<a href="#">Arctocephalus pusillus</a> Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area
<a href="#">Dugong dugon</a> Dugong [28]		Species or species habitat may occur within area
<a href="#">Neophoca cinerea</a> Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area

Reptile		
<a href="#">Caretta caretta</a> Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Chelonia mydas</a> Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Dermochelys coriacea</a> Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Eretmochelys imbricata</a> Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Natator depressus</a> Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Whales and Other Cetaceans	[ Resource Information ]
----------------------------	--------------------------

Current Scientific Name	Status	Type of Presence
Mammal		
<a href="#">Balaenoptera acutorostrata</a> Minke Whale [33]		Species or species habitat may occur within area
<a href="#">Balaenoptera bonaerensis</a> Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera borealis</a> Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera edeni</a> Bryde's Whale [35]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera musculus</a> Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera physalus</a> Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Berardius arnuxii</a> Arnoux's Beaked Whale [70]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Caperea marginata</a> Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
<a href="#">Delphinus delphis</a> Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
<a href="#">Eubalaena australis</a> Southern Right Whale [40]	Endangered	Breeding known to occur within area
<a href="#">Globicephala macrorhynchus</a> Short-finned Pilot Whale [62]		Species or species habitat may occur within area
<a href="#">Globicephala melas</a> Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
<a href="#">Grampus griseus</a> Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
<a href="#">Hyperoodon planifrons</a> Southern Bottlenose Whale [71]		Species or species habitat may occur within area
<a href="#">Kogia breviceps</a> Pygmy Sperm Whale [57]		Species or species habitat may occur within area
<a href="#">Kogia sima</a> Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
<a href="#">Lagenorhynchus obscurus</a> Dusky Dolphin [43]		Species or species habitat likely to occur within area
<a href="#">Lissodelphis peronii</a> Southern Right Whale Dolphin [44]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Megaptera novaeangliae</a> Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
<a href="#">Mesoplodon bowdoini</a> Andrew's Beaked Whale [73]		Species or species habitat may occur within area
<a href="#">Mesoplodon densirostris</a> Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
<a href="#">Mesoplodon ginkgodens</a> Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
<a href="#">Mesoplodon grayi</a> Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
<a href="#">Mesoplodon hectori</a> Hector's Beaked Whale [76]		Species or species habitat may occur within area
<a href="#">Mesoplodon layardii</a> Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
<a href="#">Mesoplodon mirus</a> True's Beaked Whale [54]		Species or species habitat may occur within area
<a href="#">Orcinus orca</a> Killer Whale, Orca [46]		Species or species habitat likely to occur within area
<a href="#">Physeter macrocephalus</a> Sperm Whale [59]		Species or species habitat may occur within area
<a href="#">Pseudorca crassidens</a> False Killer Whale [48]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Tasmacetus shepherdi</a> Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
<a href="#">Tursiops aduncus</a> Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
<a href="#">Tursiops truncatus s. str.</a> Bottlenose Dolphin [68417]		Species or species habitat may occur within area
<a href="#">Ziphius cavirostris</a> Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Critical Habitats	[ Resource Information ]
Name	Type of Presence
<a href="#">Thalassarche cauta (Shy Albatross) - Albatross Island, The Mewstone, Pedra Branca</a>	Listed Critical Habitat

Key Ecological Features

[ [Resource Information](#) ]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
<a href="#">Big Horseshoe Canyon</a>	South-east
<a href="#">Bonney Coast Upwelling</a>	South-east
<a href="#">Canyons on the eastern continental slope</a>	Temperate east
<a href="#">Seamounts South and east of Tasmania</a>	South-east
<a href="#">Shelf rocky reefs</a>	Temperate east
<a href="#">Upwelling East of Eden</a>	South-east
<a href="#">West Tasmania Canyons</a>	South-east

Biologically Important Areas		
Scientific Name	Behaviour	Presence
Dolphins		
<a href="#">Tursiops aduncus</a>		
Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

# Summary

## Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

<a href="#">World Heritage Properties:</a>	1
<a href="#">National Heritage Places:</a>	5
<a href="#">Wetlands of International Importance (Ramsar</a>	8
<a href="#">Great Barrier Reef Marine Park:</a>	None
<a href="#">Commonwealth Marine Area:</a>	2
<a href="#">Listed Threatened Ecological Communities:</a>	22
<a href="#">Listed Threatened Species:</a>	202
<a href="#">Listed Migratory Species:</a>	93

## Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Wetlands of International Importance (Ramsar Wetlands)

[ Resource Information ]

Ramsar Site Name	Proximity
<a href="#">Corner inlet</a>	Within Ramsar site
<a href="#">Edithvale-seafood wetlands</a>	Within 10km of Ramsar site
<a href="#">Gippsland lakes</a>	Within Ramsar site
<a href="#">Glenelg estuary and discovery bay wetlands</a>	Within Ramsar site
<a href="#">Lavinia</a>	Within Ramsar site
<a href="#">Piccaninnie ponds karst wetlands</a>	Within Ramsar site
<a href="#">Port phillip bay (western shoreline) and bellarine peninsula</a>	Within Ramsar site
<a href="#">Western port</a>	Within Ramsar site

Commonwealth Marine Area

[ Resource Information ]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

EEZ and Territorial Sea

Listed Threatened Ecological Communities [ Resource Information ]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
<a href="#">Alpine Sphagnum Bogs and Associated Fens</a>	Endangered	Community may occur within area
<a href="#">Araluen Scarp Grassy Forest</a>	Endangered	Community may occur within area
<a href="#">Assemblages of species associated with open-coast salt-wedge estuaries of western and central Victoria ecological community</a>	Endangered	Community likely to occur within area
<a href="#">Brogo Vine Forest of the South East Corner Bioregion</a>	Endangered	Community likely to occur within area
<a href="#">Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland ecological community</a>	Endangered	Community likely to occur within area
<a href="#">Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland</a>	Endangered	Community likely to occur within area
<a href="#">Giant Kelp Marine Forests of South East Australia</a>	Endangered	Community may occur within area
<a href="#">Gippsland Red Gum (Eucalyptus tereticornis subsp. mediana) Grassy Woodland and Associated Native Grassland</a>	Critically Endangered	Community likely to occur within area
<a href="#">Grassy Eucalypt Woodland of the Victorian Volcanic Plain</a>	Critically Endangered	Community known to occur within area
<a href="#">Illawarra and south coast lowland forest and woodland ecological community</a>	Critically Endangered	Community likely to occur within area
<a href="#">Karst springs and associated alkaline fens of the Naracoorte Coastal Plain Bioregion</a>	Endangered	Community likely to occur within area
<a href="#">Littoral Rainforest and Coastal Vine Thickets of Eastern Australia</a>	Critically Endangered	Community likely to occur within area

Community Name	Threatened Category	Presence Text
<a href="#">Lowland Grassy Woodland in the South East Corner Bioregion</a>	Critically Endangered	Community likely to occur within area
<a href="#">Lowland Native Grasslands of Tasmania</a>	Critically Endangered	Community likely to occur within area
<a href="#">Natural Damp Grassland of the Victorian Coastal Plains</a>	Critically Endangered	Community likely to occur within area
<a href="#">Natural Temperate Grassland of the Victorian Volcanic Plain</a>	Critically Endangered	Community likely to occur within area
<a href="#">River-flat eucalypt forest on coastal floodplains of southern New South Wales and eastern Victoria</a>	Critically Endangered	Community likely to occur within area
<a href="#">Seasonal Herbaceous Wetlands (Freshwater) of the Temperate Lowland Plains</a>	Critically Endangered	Community likely to occur within area
<a href="#">Subtropical and Temperate Coastal Saltmarsh</a>	Vulnerable	Community likely to occur within area
<a href="#">Tasmanian Forests and Woodlands dominated by black gum or Brookers gum (Eucalyptus ovata / E. brookeriana)</a>	Critically Endangered	Community likely to occur within area
<a href="#">Tasmanian white gum (Eucalyptus viminalis) wet forest</a>	Critically Endangered	Community likely to occur within area
<a href="#">White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland</a>	Critically Endangered	Community likely to occur within area

Listed Threatened Species

[ [Resource Information](#) ]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.  
Number is the current name ID.

<a href="#">Rostratula australis</a> Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area
<a href="#">Stagonopleura guttata</a> Diamond Firetail [59398]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Sternula nereis nereis</a> Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Strepera fuliginosa colei</a> Black Currawong (King Island) [67113]	Vulnerable	Breeding likely to occur within area
<a href="#">Thalassarche bulleri</a> Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche bulleri platei</a> Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche carteri</a> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Thalassarche cauta</a> Shy Albatross [89224]	Endangered	Breeding known to occur within area
<a href="#">Thalassarche chrysostoma</a> Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
<a href="#">Thalassarche eremita</a> Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
<a href="#">Thalassarche impavida</a> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche salvini</a> Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
<a href="#">Thalassarche steadi</a> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Thinornis cucullatus cucullatus</a> Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Tyto novaehollandiae castanops (Tasmanian population)</a> Masked Owl (Tasmanian) [67051]	Vulnerable	Breeding known to occur within area

CRUSTACEAN		
<a href="#">Astacopsis gouldi</a> Giant Freshwater Crayfish, Tasmanian Giant Freshwater Lobster [64415]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Euastacus bispinosus</a> Glenelg Spiny Freshwater Crayfish, Pricklyback [81552]	Endangered	Species or species habitat known to occur within area

FISH		
<a href="#">Brachiopsilus ziebelli</a> Ziebell's Handfish, Waterfall Bay Handfish [83757]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Epinephelus daemeli</a> Black Rockcod, Black Cod, Saddled Rockcod [68449]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Galaxiella pusilla</a> Eastern Dwarf Galaxias, Dwarf Galaxias [56790]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Hoplostethus atlanticus</a> Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
<a href="#">Nannoperca obscura</a> Yarra Pygmy Perch [26177]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Nannoperca variegata</a> Variegated Pygmy Perch, Ewens Pygmy Perch, Golden Pygmy Perch [26178]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Prototroctes maraena</a> Australian Grayling [26179]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Rexea solandri (eastern Australian population)</a> Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area
<a href="#">Seriolella brama</a> Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
<a href="#">Thunnus maccoyii</a> Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area
<a href="#">Thymichthys politus</a> Red Handfish [83756]	Critically Endangered	Species or species habitat may occur within area
FROG		
<a href="#">Heleioporus australiacus</a> Giant Burrowing Frog [1973]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Litoria aurea</a> Green and Golden Bell Frog [1870]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Litoria raniformis</a> Growling Grass Frog, Southern Bell Frog, Green and Golden Frog, Warty Swamp Frog, Golden Bell Frog [1828]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Litoria watsoni</a> Watson's Tree Frog [91509]	Endangered	Species or species habitat known to occur within area
<a href="#">Mixophyes balbus</a> Stuttering Frog, Southern Barred Frog (in Victoria) [1942]	Vulnerable	Species or species habitat known to occur within area
INSECT		
<a href="#">Oreisplanus munionga larana</a> Marrawah Skipper, Alpine Sedge Skipper, Alpine Skipper [77747]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Synemon plana</a> Golden Sun Moth [25234]	Vulnerable	Species or species habitat may occur within area
MAMMAL		
<a href="#">Antechinus minimus maritimus</a> Swamp Antechinus (mainland) [83086]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Balaenoptera borealis</a> Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera musculus</a> Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera physalus</a> Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Chalinolobus dwyeri</a> Large-eared Pied Bat, Large Pied Bat [183]	Vulnerable	Species or species habitat may occur within area
<a href="#">Dasyurus maculatus maculatus (SE mainland population)</a> Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Dasyurus maculatus maculatus (Tasmanian population)</a> Spotted-tail Quoll, Spot-tailed Quoll, Tiger Quoll (Tasmanian population) [75183]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Eubalaena australis</a> Southern Right Whale [40]	Endangered	Breeding known to occur within area
<a href="#">Isoodon obesulus obesulus</a> Southern Brown Bandicoot (eastern), Southern Brown Bandicoot (south-eastern) [68050]	Endangered	Species or species habitat known to occur within area
<a href="#">Mastacomys fuscus mordicus</a> Broad-toothed Rat (mainland), Tooarrana [87617]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Miniopterus orianae bassanii</a> Southern Bent-wing Bat [87645]	Critically Endangered	Breeding known to occur within area
<a href="#">Mirounga leonina</a> Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area
<a href="#">Neophoca cinerea</a> Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
<a href="#">Perameles gunnii gunnii</a> Eastern Barred Bandicoot (Tasmania) [66651]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Perameles gunnii Victorian subspecies</a> Eastern Barred Bandicoot (Mainland) [88020]	Endangered	Translocated population known to occur within area
<a href="#">Petauroides volans</a> Greater Glider (southern and central) [254]	Endangered	Species or species habitat known to occur within area
<a href="#">Petaurus australis australis</a> Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Phascolarctos cinereus (combined populations of Qld, NSW and the ACT)</a> Koala (combined populations of Queensland, New South Wales and the Australian Capital Territory) [85104]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Potorous longipes</a> Long-footed Potoroo [217]	Endangered	Species or species habitat known to occur within area
<a href="#">Potorous tridactylus trisulcatus</a> Long-nosed Potoroo (southern mainland) [86367]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pseudomys fumeus</a> Smoky Mouse, Konoom [88]	Endangered	Species or species habitat likely to occur within area
<a href="#">Pseudomys novaehollandiae</a> New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Pseudomys shortridgei</a> Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat known to occur within area
<a href="#">Pteropus poliocephalus</a> Grey-headed Flying-fox [186]	Vulnerable	Roosting known to occur within area
<a href="#">Sarcophilus harrisii</a> Tasmanian Devil [299]	Endangered	Species or species habitat likely to occur within area
OTHER		
<a href="#">Hyridella glenelgensis</a> Glenelg Freshwater Mussel [82953]	Critically Endangered	Species or species habitat may occur within area
<a href="#">Megascolides australis</a> Giant Gippsland Earthworm [64420]	Vulnerable	Species or species habitat known to occur within area
PLANT		
<a href="#">Acacia caerulescens</a> Limestone Blue Wattle, Buchan Blue, Buchan Blue Wattle [21883]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Acacia constablei</a> Narrabarba Wattle [10798]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Acacia georgensis</a> Bega Wattle [9848]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Amphibromus fluitans</a> River Swamp Wallaby-grass, Floating Swamp Wallaby-grass [19215]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Astelia australiana</a> Tall Astelia [10851]	Vulnerable	Species or species habitat may occur within area
<a href="#">Astrotricha crassifolia</a> Thick-leaf Star-hair [10352]	Vulnerable	Species or species habitat may occur within area
<a href="#">Caladenia calcicola</a> Limestone Spider-orchid [10065]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Caladenia colorata</a> Coloured Spider-orchid, Small Western Spider-orchid, Painted Spider-orchid [54999]	Endangered	Species or species habitat known to occur within area
<a href="#">Caladenia dienema</a> Windswept Spider-orchid [64858]	Endangered	Species or species habitat known to occur within area
<a href="#">Caladenia hastata</a> Melblom's Spider-orchid [16118]	Endangered	Species or species habitat likely to occur within area
<a href="#">Caladenia insularis</a> French Island Spider-orchid [24372]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Caladenia orientalis</a> Eastern Spider Orchid [83410]	Endangered	Species or species habitat known to occur within area
<a href="#">Caladenia ornata</a> Ornate Pink Fingers [76213]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Caladenia richardsiorum</a> Little Dip Spider-orchid [55018]	Endangered	Species or species habitat likely to occur within area
<a href="#">Caladenia robinsonii</a> Frankston Spider-orchid [24375]	Endangered	Species or species habitat likely to occur within area
<a href="#">Caladenia tensa</a> Greencomb Spider-orchid, Rigid Spider-orchid [24390]	Endangered	Species or species habitat may occur within area
<a href="#">Caladenia tessellata</a> Thick-lipped Spider-orchid, Daddy Long-legs [2119]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Calochilus pulchellus</a> Pretty Beard Orchid, Pretty Beard-orchid [84677]	Endangered	Species or species habitat known to occur within area
<a href="#">Centrolepis pedderensis</a> Pedder Centrolepis, Pedder Bristlewort [12647]	Endangered	Species or species habitat likely to occur within area
<a href="#">Commersonia prostrata</a> Dwarf Kerrawang [87152]	Endangered	Species or species habitat known to occur within area
<a href="#">Correa baeuerlenii</a> Chef's Cap [17007]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Correa lawrenceana var. genoensis</a> Genoa River Correa [66626]	Endangered	Species or species habitat may occur within area
<a href="#">Corunastylis brachystachya</a> Short-spiked Midge-orchid, Rocky Cape Midge Orchid [76410]	Endangered	Species or species habitat known to occur within area
<a href="#">Corunastylis rhyolitica listed as Genoplesium rhyoliticum</a> Pambula Midge-orchid, Rhyolite Midge Orchid [78697]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Corunastylis vernalis listed as Genoplesium vernale</a> East Lynne Midge-orchid [78699]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Craspedia preminghana</a> Preminghana Billybutton [77046]	Endangered	Species or species habitat likely to occur within area
<a href="#">Cryptostylis hunteriana</a> Leafless Tongue-orchid [19533]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Dianella amoena</a> Matted Flax-lily [64886]	Endangered	Species or species habitat known to occur within area
<a href="#">Diuris basaltica</a> Small Golden Moths Orchid, Early Golden Moths [64654]	Endangered	Species or species habitat may occur within area
<a href="#">Diuris lanceolata</a> Snake Orchid [10231]	Endangered	Species or species habitat known to occur within area
<a href="#">Dodonaea procumbens</a> Trailing Hop-bush [12149]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Eucalyptus strzeleckii</a> Strzelecki Gum [55400]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Euphrasia collina subsp. muelleri</a> Purple Eyebright, Mueller's Eyebright [16151]	Endangered	Species or species habitat known to occur within area
<a href="#">Glycine latrobeana</a> Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Grevillea infecunda</a> Anglesea Grevillea [22026]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Haloragis exalata subsp. exalata</a> Wingless Raspwort, Square Raspwort [24636]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Hiya distans listed as Hypolepis distans</a> Scrambling Ground-fern [92548]	Endangered	Species or species habitat known to occur within area
<a href="#">Ixodia achillaeoides subsp. arenicola</a> Sand Ixodia, Ixodia [21474]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Lachnagrostis adamsonii</a> Adamson's Blown-grass, Adamson's Blowngrass [76211]	Endangered	Species or species habitat known to occur within area
<a href="#">Leiocarpa gatesii</a> Wrinkled Buttons [76212]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Leionema ralstonii</a> [64926]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Lepidium aschersonii</a> Spiny Peppercress [10976]	Vulnerable	Species or species habitat known to occur within area
<a href="#">Lepidium hyssopifolium</a> Basalt Pepper-cress, Peppercress, Rubble Pepper-cress, Pepperweed [16542]	Endangered	Species or species habitat known to occur within area
<a href="#">Leucochrysum albicans subsp. tricolor</a> Hoary Sunray, Grassland Paper-daisy [89104]	Endangered	Species or species habitat may occur within area
<a href="#">Lomatia tasmanica</a> King's Lomatia [3745]	Critically Endangered	Species or species habitat likely to occur within area
<a href="#">Persicaria elatior</a> Knotweed, Tall Knotweed [5831]	Vulnerable	Species or species habitat known to occur within area

Commonwealth Lands

[ [Resource Information](#) ]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

<a href="#">Hippocampus breviceps</a> Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
<a href="#">Hippocampus minotaur</a> Bullneck Seahorse [66705]		Species or species habitat may occur within area
<a href="#">Histiogamphelus briggsii</a> Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
<a href="#">Histiogamphelus cristatus</a> Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Hypselognathus horridus</a> Shaggy Pipefish, Prickly Pipefish [66244]		Species or species habitat may occur within area
<a href="#">Hypselognathus rostratus</a> Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area
<a href="#">Kaupus costatus</a> Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
<a href="#">Kimblaeus bassensis</a> Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
<a href="#">Leptoichthys fistularius</a> Brushtail Pipefish [66248]		Species or species habitat may occur within area
<a href="#">Lissocampus caudalis</a> Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
<a href="#">Lissocampus runa</a> Javelin Pipefish [66251]		Species or species habitat may occur within area
<a href="#">Maroubra perserrata</a> Sawtooth Pipefish [66252]		Species or species habitat may occur within area
<a href="#">Mitotichthys mollisoni</a> Mollison's Pipefish [66260]		Species or species habitat may occur within area
<a href="#">Mitotichthys semistriatus</a> Halfbanded Pipefish [66261]		Species or species habitat may occur within area
<a href="#">Mitotichthys tuckeri</a> Tucker's Pipefish [66262]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Notiocampus ruber</a> Red Pipefish [66265]		Species or species habitat may occur within area
<a href="#">Phycodurus eques</a> Leafy Seadragon [66267]		Species or species habitat may occur within area
<a href="#">Phyllopteryx taeniolatus</a> Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
<a href="#">Pugnaso curtirostris</a> Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
<a href="#">Solegnathus robustus</a> Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
<a href="#">Solegnathus spinosissimus</a> Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
<a href="#">Solenostomus cyanopterus</a> Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
<a href="#">Stigmatopora argus</a> Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
<a href="#">Stigmatopora nigra</a> Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
<a href="#">Stipecampus cristatus</a> Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
<a href="#">Syngnathoides biaculeatus</a> Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Urocampus carinirostris</a> Hairy Pipefish [66282]		Species or species habitat may occur within area
<a href="#">Vanacampus margaritifer</a> Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
<a href="#">Vanacampus phillipi</a> Port Phillip Pipefish [66284]		Species or species habitat may occur within area
<a href="#">Vanacampus poecilolaemus</a> Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
<a href="#">Vanacampus vercoi</a> Verco's Pipefish [66286]		Species or species habitat may occur within area
Mammal		
<a href="#">Arctocephalus forsteri</a> Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding known to occur within area
<a href="#">Arctocephalus pusillus</a> Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area
<a href="#">Mirounga leonina</a> Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area
<a href="#">Neophoca cinerea</a> Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Reptile		
<a href="#">Caretta caretta</a> Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Chelonia mydas</a> Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
<a href="#">Dermochelys coriacea</a> Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Eretmochelys imbricata</a> Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Natator depressus</a> Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Whales and Other Cetaceans [ Resource Information ]		
Current Scientific Name	Status	Type of Presence
Mammal		
<a href="#">Balaenoptera acutorostrata</a> Minke Whale [33]		Species or species habitat may occur within area
<a href="#">Balaenoptera bonaerensis</a> Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera borealis</a> Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera edeni</a> Bryde's Whale [35]		Species or species habitat likely to occur within area
<a href="#">Balaenoptera musculus</a> Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
<a href="#">Balaenoptera physalus</a> Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Berardius arnuxii</a> Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
<a href="#">Caperea marginata</a> Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
<a href="#">Delphinus delphis</a> Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
<a href="#">Eubalaena australis</a> Southern Right Whale [40]	Endangered	Breeding known to occur within area
<a href="#">Globicephala macrorhynchus</a> Short-finned Pilot Whale [62]		Species or species habitat may occur within area
<a href="#">Globicephala melas</a> Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
<a href="#">Grampus griseus</a> Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
<a href="#">Hyperoodon planifrons</a> Southern Bottlenose Whale [71]		Species or species habitat may occur within area
<a href="#">Kogia breviceps</a> Pygmy Sperm Whale [57]		Species or species habitat may occur within area
<a href="#">Kogia sima</a> Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
<a href="#">Lagenorhynchus obscurus</a> Dusky Dolphin [43]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Lissodelphis peronii</a> Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
<a href="#">Megaptera novaeangliae</a> Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
<a href="#">Mesoplodon bowdoini</a> Andrew's Beaked Whale [73]		Species or species habitat may occur within area
<a href="#">Mesoplodon densirostris</a> Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
<a href="#">Mesoplodon ginkgodens</a> Ginkgo-toothed Beaked Whale, Ginkgo-toothed Whale, Ginkgo Beaked Whale [59564]		Species or species habitat may occur within area
<a href="#">Mesoplodon grayi</a> Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
<a href="#">Mesoplodon hectori</a> Hector's Beaked Whale [76]		Species or species habitat may occur within area
<a href="#">Mesoplodon layardii</a> Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
<a href="#">Mesoplodon mirus</a> True's Beaked Whale [54]		Species or species habitat may occur within area
<a href="#">Orcinus orca</a> Killer Whale, Orca [46]		Species or species habitat likely to occur within area
<a href="#">Physeter macrocephalus</a> Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area

Current Scientific Name	Status	Type of Presence
<a href="#">Pseudorca crassidens</a> False Killer Whale [48]		Species or species habitat likely to occur within area
<a href="#">Tasmacetus shepherdi</a> Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
<a href="#">Tursiops aduncus</a> Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
<a href="#">Tursiops truncatus s. str.</a> Bottlenose Dolphin [68417]		Species or species habitat may occur within area
<a href="#">Ziphius cavirostris</a> Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Key Ecological Features

[ [Resource Information](#) ]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
<a href="#">Ancient coastline at 90-120m depth</a>	South-west
<a href="#">Big Horseshoe Canyon</a>	South-east
<a href="#">Bonney Coast Upwelling</a>	South-east
<a href="#">Canyons on the eastern continental slope</a>	Temperate east
<a href="#">Kangaroo Island Pool, canyons and adjacent shelf break, and Eyre Peninsula upwellings</a>	South-west
<a href="#">Shelf rocky reefs</a>	Temperate east
<a href="#">Upwelling East of Eden</a>	South-east
<a href="#">West Tasmania Canyons</a>	South-east

Biologically Important Areas		
Scientific Name	Behaviour	Presence
Dolphins		
<a href="#">Tursiops aduncus</a>		
Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur
Seabirds		
<a href="#">Ardenna carneipes</a>		
Flesh-footed Shearwater [82404]	Foraging	Known to occur
<a href="#">Ardenna grisea</a>		
Sooty Shearwater [82651]	Breeding	Known to occur

Scientific Name	Behaviour	Presence
<a href="#">Ardenna grisea</a> Sooty Shearwater [82651]	Foraging	Likely to occur
<a href="#">Ardenna grisea</a> Sooty Shearwater [82651]	Foraging	Known to occur
<a href="#">Ardenna pacifica</a> Wedge-tailed Shearwater [84292]	Breeding	Known to occur
<a href="#">Ardenna pacifica</a> Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
<a href="#">Ardenna tenuirostris</a> Short-tailed Shearwater [82652]	Breeding	Known to occur
<a href="#">Ardenna tenuirostris</a> Short-tailed Shearwater [82652]	Foraging	Likely to occur

<a href="#">Ardenna tenuirostris</a> Short-tailed Shearwater [82652]	Foraging (in high numbers)	Known to occur
<a href="#">Diomedea exulans (sensu lato)</a> Wandering Albatross [1073]	Foraging	Likely to occur
<a href="#">Diomedea exulans (sensu lato)</a> Wandering Albatross [1073]	Foraging	Known to occur
<a href="#">Diomedea exulans antipodensis</a> Antipodean Albatross [82269]	Foraging	Known to occur
<a href="#">Eudyptula minor</a> Little Penguin [1085]	Breeding	Known to occur
<a href="#">Eudyptula minor</a> Little Penguin [1085]	Breeding	Likely to occur
<a href="#">Eudyptula minor</a> Little Penguin [1085]	Foraging	Known to occur
<a href="#">Hydroprogne caspia</a> Caspian Tern [808]	Foraging (provisioning young)	Known to occur

Scientific Name	Behaviour	Presence
<a href="#">Larus pacificus</a> Pacific Gull [811]	Foraging	Known to occur
<a href="#">Macronectes giganteus</a> Southern Giant Petrel [1060]	Foraging	Known to occur
<a href="#">Macronectes halli</a> Northern Giant Petrel [1061]	Foraging	Known to occur
<a href="#">Morus serrator</a> Australasian Gannet [1020]	Aggregation	Known to occur
<a href="#">Morus serrator</a> Australasian Gannet [1020]	Foraging	Known to occur
<a href="#">Oceanites oceanites</a> Wilson's Storm Petrel [1034]	Migration	Known to occur
<a href="#">Pelagodroma marina</a> White-faced Storm-petrel [1016]	Breeding	Known to occur
<a href="#">Pelagodroma marina</a> White-faced Storm-petrel [1016]	Foraging	Known to occur
<a href="#">Pelagodroma marina</a> White-faced Storm petrel [1016]	Foraging (in high numbers)	Known to occur
<a href="#">Pelecanoides urinatrix</a> Common Diving-petrel [1018]	Breeding	Known to occur
<a href="#">Pelecanoides urinatrix</a> Common Diving-petrel [1018]	Foraging	Known to occur
<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]	Breeding	Known to occur
<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]	Foraging	Likely to occur
<a href="#">Phalacrocorax fuscescens</a> Black-faced Cormorant [59660]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
<a href="#">Procellaria parkinsoni</a> Black Petrel [1048]	Foraging	Likely to occur
<a href="#">Pterodroma macroptera</a> Great-winged Petrel [1035]	Foraging	Likely to occur
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Breeding	Known to occur
<a href="#">Pterodroma mollis</a> Soft-plumaged Petrel [1036]	Foraging	Known to occur
<a href="#">Sternula nereis</a> Fairy Tern [82949]	Foraging	Known to occur
<a href="#">Thalassarche bulleri</a> Bullers Albatross [64460]	Foraging	Known to occur
<a href="#">Thalassarche cauta cauta</a> Shy Albatross [82345]	Breeding	Known to occur
<a href="#">Thalassarche cauta cauta</a> Shy Albatross [82345]	Foraging likely	Likely to occur
<a href="#">Thalassarche cauta steadi</a> White-capped Albatross [82344]	Foraging	Known to occur
<a href="#">Thalassarche chlororhynchos bassi</a> Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur
<a href="#">Thalassarche melanophris</a> Black-browed Albatross [66472]	Foraging	Known to occur
<a href="#">Thalassarche melanophris impavida</a> Campbell Albatross [82449]	Foraging	Likely to occur
<a href="#">Thalassarche melanophris impavida</a> Campbell Albatross [82449]	Foraging	Known to occur
<a href="#">Thalasseus bergii</a> Crested Tern [83000]	Breeding	Known to occur
<a href="#">Thalasseus bergii</a> Crested Tern [83000]	Foraging	Likely to occur

Scientific Name	Behaviour	Presence
Seals		
<a href="#">Neophoca cinerea</a> Australian Sea Lion [22]	Foraging (male)	Known to occur
<a href="#">Neophoca cinerea</a> Australian Sea Lion [22]	Foraging (male and female)	Known to occur
Sharks		
<a href="#">Carcharias taurus</a> Grey Nurse Shark [64469]	Foraging	Known to occur
<a href="#">Carcharias taurus</a> Grey Nurse Shark [64469]	Migration	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Breeding (nursery area)	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Distribution	Likely to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Distribution	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Distribution (low density)	Likely to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Foraging	Known to occur
<a href="#">Carcharodon carcharias</a> White Shark [64470]	Known distribution	Known to occur
Whales		
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Distribution	Known to occur
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Foraging	Likely to be present
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Foraging (abundant food source)	Known to occur

Scientific Name	Behaviour	Presence
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Foraging (annual high use area)	Known to occur
<a href="#">Balaenoptera musculus brevicauda</a> Pygmy Blue Whale [81317]	Known Foraging Area	Known to occur
<a href="#">Megaptera novaeangliae</a> Humpback Whale [38]	Foraging	Known to occur

# Caveat

## 1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

## 2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

## 3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

## 4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

## APPENDIX C1 - CONSULTATION REPORT

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
A	7	Director Of National Parks (DNP)	The Director of National Parks is the statutory authority responsible for administration, management and control of Australian marine parks. Under the EPBC Act and subordinate regulations, a range of activities undertaken in an Australian marine park requires approval from the Director of National Parks.
A	8	Australian Maritime Safety Authority (AMSA)	AMSA is the statutory and control authority for maritime safety and vessel emergencies in Commonwealth Waters. The proposed activity is in commonwealth waters.
A	20	Department of Climate Change Energy the Environment and Water (DCCEEW)	<p>DCCEEW administers the Underwater Cultural Heritage Act 2018 (UCH Act). DCCEEW regulates activities in relation to protected underwater cultural heritage (UCH) within Australian waters including the Commonwealth marine area.</p> <p>DCCEEW has responsibility for regulating the loading and dumping of waste at sea in Australian waters (this includes Commonwealth waters). DCCEEW has responsibility for the Environment Protection (Sea Dumping) Act 1981 (Sea Dumping Act), which implements Australia's commitments as a contracting party to the 1996 Protocol to the Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter, 1972.</p>
A	26	Australian Fisheries Management Authority (AFMA)	The Australian Fisheries Management Authority (AFMA) is responsible for the implementation of Commonwealth fisheries policy.

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
A	27	Department of Agriculture Fisheries and Forestry	<p>The Department of Agriculture, Fisheries and Forestry (DAFF) has primary policy responsibility for promoting the biological, economic and social sustainability of Australian fisheries. DAFF provides policy advice to the Australian Government on a range of economic and environmental fisheries issues, including the conservation of marine ecosystems and biodiversity that support commercially valuable fisheries resource.</p> <p>DAFF administers the Biosecurity Act 2015 (Biosecurity Act). The Biosecurity Act has jurisdiction within Australian territory and does not encompass the full extent of the Commonwealth marine area.</p> <p>DAFF has primary policy and regulatory responsibility for managing marine pest biosecurity through administering the Biosecurity Act.</p>

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
A	28	Department of Defence	<p>The Australian Defence Force utilises several maritime exercise areas in Australian waters to perform a unique role in support of Australia's strategic and national security interests. The Australian Defence Force role requires not only naval warfare capabilities but also disaster relief, search and rescue, fisheries protection and border patrol training capabilities.</p> <p>It is important for the Australian Defence Force to continue to utilise its offshore training areas, manage potential conflict between the presence of the resources sector with Australian Defence Force and other defence training and operational requirements and manage the risk of unexploded ordnance in areas where offshore petroleum activities may take place.</p> <p>The Australian Hydrographic Service (AHS) is responsible for the publication and distribution of nautical products and other information required for the safety of ships navigating in Australian waters.</p>
A	29	Department of Industry Science and Resources	Responsibilities include offshore oil and gas development and safety, and greenhouse gas storage.
A	563	Regulatory Services CASA	The Civil Aviation Safety Authority is the Australian national authority for the regulation of civil aviation.

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
A	585	National Native Title Council	The NNTC is an alliance of Native Title Representative Bodies (NTRBs) and Native Title Service Providers (NTSPs) from around Australia, that acts as a medium for the sharing of information amongst its members. It also provides a platform for outside organisations to consult with NTRBs and NTSPs on land and land related matters. The NNTC provides a voice on matters of national significance, including representing the views of NTRBs and NTSPs at various forums, and through the submission process to Government policy development and legislative reforms, advocating on their behalf on land and land related matters. As a peak body, it is a relevant organization.
A	586	National Indigenous Australians Agency	NIAA is responsible for whole-of-government coordination of policy development, program design, and service delivery for Aboriginal Australians and Torres Strait Islander people, who are grouped under the term Indigenous Australians. Created in July 2019, the Agency is responsible to the Minister for Indigenous Australians and works in partnership with community to make sure policies, programs and services meet their unique needs. Under Reg 11A (1) (a) the NIAA is a relevant organisation.
B/C	10	Marine and Safety Tasmania (MAST)	Statutory authority responsible for the safe operation of vessels, provide and manage marine facilities and manage environmental issues relating to vessels within state waters.

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
B/C	14	Department of Natural Resources and Environment Tasmania (NRE TAS)	NRE Tas is responsible for supporting primary industry development, the protection of Tasmania's natural environment, effective land and water management and the protection against pests.
B/C	32	Department of State Growth Tasmania	Mineral Resources Tasmania (MRT) is a Division of the Department of State Growth. The purpose of MRT is to give effect to government policy in relation to minerals and petroleum resources, and the Division provides essential information for land management in Tasmania.
B/C	33	Environment Protection Authority (EPA) Tasmania	EPA Tasmania is the regulatory body for oil and gas in Tasmania. It is also the lead response agency for marine pollution events.
B/C	34	Department of Premier and Cabinet Office (TAS)	The Office provides an Aboriginal voice to guide and advise the Tasmanian Government on policy issues affecting Tasmanian Aboriginal people.
B/C	35	Department of Energy Environment and Climate Action (DEECA)	Administers the Marine and Coastal Act 2018 which manages planning and management of the marine and coastal environment in Victorian waters.
B/C	36	Victorian Fishing Authority (VFA)	Independent Statutory Authority responsible for effectively managing Victoria's fisheries Resources
B/C	37	Department of Transport and Planning (DOT)	Victorian response agency responsible for a marine pollution incident in State coastal waters.

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
B/C	38	Department of Jobs Skills Industry and Regions (DJSIR) Victoria	DJSIR is the department responsible for regulating offshore oil and gas exploration and development activities in State waters.
B/C	39	Maritime Safety Victoria	Responsible for marine safety in state waters
B/C	40	Port Authority of NSW	Port Authority of NSW acts as the harbor master for NSW's six commercial seaports. It manages shipping movements, safety security and emergency response.
B/C	41	Transport NSW	Transport NSW is the lead state agency for an marine pollution response in State waters.
B/C	42	Department of Primary Industries (NSW)	Responsible for effectively managing NSW fisheries
B/C	43	Department for Infrastructure and Transport (DIT)	DTI is the Control Agency for oil pollution in state waters and ensures the South Australian Marine Spill Contingency Action Plan is maintained to deal with oil spills wherever they occur in its territory.
B/C	48	Department of Primary Industries and Regions (SA)	Development agency for SA primary industries and regions including aquaculture industry and commercial fishing.
B/C	74	Department of Energy and Mining SA	The Department is responsible for onshore extractive and energy industries.
B/C	458	Barwon South West Local Aboriginal Networks	
B/C	519	Gippsland Ports	Gippsland Ports is the local port and waterway manager responsible for the five local ports and four waterways within the Environmental Planning Area

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
B/C	546	Environment Protection Authority (SA)	The Environment Protection Authority (EPA) is South Australia's independent environment protection regulator.
B/C	570	Tasmanian Ports Corporation	TasPorts is a state-owned company responsible for eleven Tasmanian ports and the Devonport Airport
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	6	Tuna Australia	Tuna Australia works with commercial tuna fishers and processors to ensure a sustainable and profitable industry.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	11	South East Trawl Fishing Industry Association (SETFIA)	A not-for-profit industry association representing quota owners, fisherman and sellers in the south east trawl fishery
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	25	Apollo Bay Fishermen's Co-Op	Major fishing port and cooperative for fishers utilizing the Environmental Planning Area
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	49	Seafood Industry Victoria (SIV)	Peak Industry Association for Victoria representing fishers and processors
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	50	Tasmanian Seafood Industry Council (TSIC)	Peak Industry Association for Tasmania representing fishers and processors.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	126	Seafood Industry Australia (SIA)	Seafood Industry Australia (SIA) is the national peak-body representing the Australian seafood industry as a whole.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	170	Atlantis Fisheries Consulting Group PTY. LTD.	Atlantis FCG offer a range of professional and advisory services to the Australian fishing industry.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	171	Southern Shark Industry Alliance (SSIA)	Southern Shark Industry Alliance seeks to support members whom rely on the sustainable harvesting of the Southern Shark Fishery.

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	179	Small Pelagic Fishery Industry Association Inc. (SPFIA)	The SPFIA represents the interests of members who hold quota in Australia's small pelagic fishery.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	388	Professional Fishers' Association	The PFA is a not-for-profit representative group providing a voice for members of the professional fishing industry in NSW.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	502	Australian Southern Bluefin Tuna Industry Association (ASBTIA)	ASBTIA is the peak body representing Southern Bluefin Tuna ranching companies in Australia. The Association has 8 member companies, which is 100% of the local industry.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	503	Bass Strait Scallop Industry Association	The Bass Strait Scallop Industry Association Inc. represents the interests of Commonwealth managed scallop fishers, quota holders and processors.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	505	Sydney Fish Market	Is owned equally by the harvest and post-harvest sectors of the NSW seafood industry sourcing product from across Australia
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	506	Great Australian Bight Fishing Industry Association Inc. (GABIA)	GABIA works closely with the Commonwealth and State governments, researchers and other stakeholders, to help shape the sustainable future and controlled use of the clean, pristine waters of the Great Australian Bight.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	507	Women's Industry Network Seafood Community (WINSC)	National Organisation representing women in the seafood industry.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	514	Recreational Fishing Alliance NSW	Peak Body for Recreational Fishing in NSW

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	515	South Australian Aquaculture Council (SAAC)	Peak Industry Association for South Australia aquaculture.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	516	Seafood Industry SA	Peak Industry Association for South Australia representing fishers and processors.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	521	Australian Wildcatch Fishing	Integrated business offering a range of services to the commercial fishing industry, including seafood processing and vessel maintenance.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	536	Tasmanian Association for Recreational Fishing	Peak Body for Recreational Fishing in Tasmania
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	549	Lakes Entrance Fisherman's CoOp	The cooperative is one of the largest fishing cooperatives in Australia.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	574	Victorian Recreational Fishing Peak Body (VR Fish)	Peak Body for Recreational Fishing in Victoria
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	580	Abalone Council Victoria	Abalone Council Victoria is the peak body representing the wild harvest abalone sector in Victoria.
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	583	Peter and Una Seafoods	Seafood business operator within the Environmental Planning Area
D1 - Commercial Fishing Representative Bodies, Co-Ops and Fish processors	588	Western Abalone Divers Association	Representing the functions, interests and activities of commercial abalone divers (members)
D2 - Commercial Fishers and Aquaculture Facilities	13	King Island Marine Research	Aquaculture research facility located on King Island.
D2 - Commercial Fishers and Aquaculture Facilities	119	Sustainable Shark Fishing Inc.	Commercial fisher within the Southern Bluefin Tuna Fishery

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
D2 - Commercial Fishers and Aquaculture Facilities	123	Yumbah Aquaculture Narrawong	Aquaculture facility located on the Victorian Coastline
D2 - Commercial Fishers and Aquaculture Facilities	155	B TUNNAGE FISHING PTY LTD	Commercial Fisher within the Southern and Eastern Scalefish and Shark Fishery
D2 - Commercial Fishers and Aquaculture Facilities	173	G.M.P. NOMINEES PROPRIETARY LIMITED	Commercial Fisher within the Bass Strait Central Zone Scallop Fishery/Southern Bluefin Tuna Fishery
D2 - Commercial Fishers and Aquaculture Facilities	174	KAPLAN EQUITY LIMITED	Commercial fisher within the Southern Bluefin Tuna Fishery
D2 - Commercial Fishers and Aquaculture Facilities	175	MOORE FAMILY NOMINEE PTY LTD	Commercial fisher within the Bass Strait Central Zone Scallop Fishery/Southern Bluefin Tuna Fishery
D2 - Commercial Fishers and Aquaculture Facilities	176	PESCATORE DI MARE PTY LTD	Commercial fisher within the Southern and Eastern Scalefish and Shark Fishery
D2 - Commercial Fishers and Aquaculture Facilities	177	QUOTA POOL PTY LTD	Commercial fisher within the Bass Strait Central Zone Scallop Fishery/Eastern Tuna and Billfish Fishery/Southern Squid Jig Fishery/Western Tuna and Billfish Fishery/Southern and Eastern Scalefish and Shark Fishery
D2 - Commercial Fishers and Aquaculture Facilities	184	CULL FISHERIES PTY LTD	Commercial Fisher within the Southern and Eastern Scalefish and Shark Fishery/Southern Squid Jig Fishery
D2 - Commercial Fishers and Aquaculture Facilities	189	Corporate Alliance Enterprises Pty Ltd	Commercial Fisher within the Southern and Eastern Scalefish and Shark Fishery
D2 - Commercial Fishers and Aquaculture Facilities	190	BEAVER FISHING CO	Commercial Fisher within the Eastern Tuna and Billfish Fishery
D2 - Commercial Fishers and Aquaculture Facilities	192	P & M WILLIAMS ENTERPRISES (N.Q.) PTY. LTD.	Commercial fisher within the Eastern Tuna and Billfish Fishery
D2 - Commercial Fishers and Aquaculture Facilities	205	EMILY KRSTINA (AUSTRALIA) PTY. LTD.	Commercial Fisher within the Southern Bluefin Tuna Fishery

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

Category	Org Id	Name of Organisation	Function, Interest, Activities
D2 - Commercial Fishers and Aquaculture Facilities	208	F.C. & S. CAMPISI PTY LTD	Commercial Fisher within the Eastern Tuna and Billfish Fishery/Southern Bluefin Tuna Fishery
D2 - Commercial Fishers and Aquaculture Facilities	227	GRACIE P PTY LTD	Commercial Fisher within the Eastern Tuna and Billfish Fishery
D2 - Commercial Fishers and Aquaculture Facilities	231	HINCHCLIFF HOLDINGS PTY LTD	Commercial fisher within the Western Tuna and Billfish Fishery
D2 - Commercial Fishers and Aquaculture Facilities	259	LUKIN ENTERPRISES PTY. LTD.	Commercial fisher within the Southern Bluefin Tuna Fishery
D2 - Commercial Fishers and Aquaculture Facilities	260	MARIT ENTERPRISES PTY. LIMITED	Commercial fisher within the Southern Bluefin Tuna Fishery represented by Tuna Australia (Event ID 3900)
D2 - Commercial Fishers and Aquaculture Facilities	261	LUKIN FISHERIES PTY. LTD.	Commercial fisher within the Southern Bluefin Tuna Fishery
D2 - Commercial Fishers and Aquaculture Facilities	271	MARKANE SEAFOODS PTY LTD	Commercial fisher within the Southern Bluefin Tuna Fishery
D2 - Commercial Fishers and Aquaculture Facilities	307	PETER & UNA FISHING CO. PTY LTD	Commercial fisher within the Southern and Eastern Scalefish and Shark Fishery
D2 - Commercial Fishers and Aquaculture Facilities	319	RADAR HOLDINGS PTY LTD	Commercial fisher within the Western Tuna and Billfish Fishery
D2 - Commercial Fishers and Aquaculture Facilities	320	PIKACHU PTY LTD	Commercial fisher within the Southern Bluefin Tuna Fishery being represented by Tuna Australia (Event ID 1966). Event 1966 - Requested not to be consulted but instead consult Tuna Australia
D2 - Commercial Fishers and Aquaculture Facilities	321	SHIP AGENCIES AUSTRALIA PTY. LTD.	Commercial fisher within the Eastern Tuna and Billfish Fishery/Southern Bluefin Tuna Fishery/Southern Squid Jig Fishery represented by Tuna Australia (event ID 1966)

PLEASE NOTE - 96 Entities have been redacted from this list as they have requested the titleholder keep all their information private.

1465	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	14/02/2023 11:50	Called 1300 368 550, Receptionist helped with giving the following numbers for the following people, multiple relevant stakeholder.
1467	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	14/02/2023 14:40	PHONE CALL to stakeholder on their mobile. Stakeholder has received the email but hasn't had time to look at it, will respond later.
1469	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	14/02/2023 14:59	PHONE CALL where it was noted that stakeholder has received many emails from different directions, which is fine according to him. I asked if stakeholder wants to setup a consultation appointment, but the invite was declined because stakeholder will be talking with other people to come up with a response.
1470	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	15/02/2023 8:36	PHONE CALL - Tried calling stakeholder, was unable to leave a message.
1471	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	15/02/2023 8:40	PHONE CALL to Government Department to find out the contact numbers for relevant stakeholders. Receptionist was unable to give their number and email address but sent through an email to the three relevant stakeholders to make sure they have received emails sent to them and to provide contact info if they required more information.
1472	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	15/02/2023 9:15	PHONE CALL - Spoke with Reception. They have received the email and sent to relevant officer. The receptionist will follow up to make sure the appropriate person has received it and if relevant to them ask them to call or email back.

Id	Organisation	Event Type	Start Date	Summary
1475	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	15/02/2023 10:11	INCOMING EMAIL from stakeholder confirming receipt of notice re the proposed Otway Exploration Drilling Program email.
1480	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	15/02/2023 10:40	PHONE CALL from Stakeholder confirming email was received and has been sent to the relevant person.
1518	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	16/02/2023 14:02	PHONE CALL - Stakeholder called back, confirming he had received the email, and it was relevant to them. He doesn't need consultation at this time but will wait for further information from us.
1610	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	7/06/2023 13:40	OUTGOING EMAIL: to stakeholder asking if they have any questions regarding tactical response plans and offer of teams meeting chat
1612	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	5/12/2022 8:29	OUTGOING EMAIL drawing attention to sperm whale sighting as a location anomaly.
1613	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	7/12/2022 7:42	OUTGOING EMAIL to stakeholder requesting specific data on a range of issues to do with fisheries- ConocoPhillips Australia.
1626	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	9/12/2022 13:54	OUTGOING EMAIL to stakeholder regarding the Com Dive Map with attached spreadsheet.
1653	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	12/06/2023 16:21	OUTGOING EMAIL: to stakeholder thanking them for update
1654	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	13/06/2023 8:03	OUTGOING EMAIL: to stakeholder confirming another suggested org will be contacted
1679	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	15/12/2022 15:54	OUTGOING EMAIL to relevant stakeholder thanking them and wishing them well.
1691	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	3/02/2023 14:48	INCOMING EMAIL - Out of Office response to Notice and attachments re ConocoPhillips Australia Otway Exploration Drilling Program
1693	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	3/02/2023 14:51	INCOMING EMAIL from Relevant Stakeholder with Auto Response
1737	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	15/02/2023 12:22	INCOMING EMAIL responding to Notice and stating it had been referred to another agency.
1768	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	10/03/2023 7:01	INCOMING EMAIL to stakeholder to move consultation time
1769	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	10/03/2023 10:46	INCOMING EMAIL from stakeholder agreeing changed meeting arrangements.
1776	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	16/03/2023 9:55	INCOMING EMAIL from stakeholder arranging ZOOM meeting
2591	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	11/05/2023 12:04	INCOMING EMAIL: Automated reply notified of stakeholders travel.
2823	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Telephone call	10/08/2023 11:17	PHONE CALL - left message
3064	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	25/08/2023 9:59	INCOMING EMAIL - Unsubscribe from updates.

Id	Organisation	Event Type	Start Date	Summary
3136	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	29/08/2023 11:37	OUTGOING EMAIL: to stakeholder with project update attached for consideration
3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	Email	5/09/2023 18:34	OUTGOING EMAIL regarding briefing and to provide response to Objections and Claims raised.

4345	ID77:Mornington Peninsula Shire	Email	28/08/2023 18:15	Outgoing email to relevant stakeholder providing more information regarding the ConocoPhillips Australia Otway Exploration Drilling Program

Id	Organisation	Event Type	Start Date	Summary
4346	ID77:Mornington Peninsula Shire	Email	8/08/2023 16:17	Outgoing email to relevant stakeholder regarding potential dates for a team's meeting to discuss ConocoPhillips Australia Otway Exploration Drilling Program
791	ID78:Circular Head Council	Letter	9/02/2023 14:42	NOTICE: ConocoPhillips Australia Otway Exploration Drilling Program
1531	ID78:Circular Head Council	Telephone call	20/02/2023 9:37	OUTGOING TELEPHONE CALL: to stakeholder
1537	ID78:Circular Head Council	Email	20/02/2023 11:20	Email sent to stakeholder with formal letter advising on upcoming Otway drilling program with two fact sheets - Consultation and Project Overview
1723	ID78:Circular Head Council	Email	9/02/2023 15:35	Incoming automatic response email regarding ConocoPhillips Australia Otway Exploration Drilling Program
1729	ID78:Circular Head Council	Email	10/02/2023 7:39	Incoming email from relevant stakeholder stating they have forwarded the information regarding ConocoPhillips Australia Otway Exploration Drilling Program onto relevant persons.
2623	ID78:Circular Head Council	Telephone call	27/07/2023 15:31	OUTGOING TELEPHONE CALL to stakeholder, asked to speak regarding Otway exploration drilling program. Told appropriate person to speak with is in a meeting and they requested that they were the ones to call us back.
3258	ID78:Circular Head Council	Meeting - Virtual	14/08/2023 16:02	MEETING VIRTUAL: Initial briefing provided to organisation regarding the Otway Exploration Drilling Program and potential impacts of drilling exploration within T/49P.
36	ID8:Australian Maritime Safety Authority (AMSA)	Email	15/02/2023 14:14	OUTGOING EMAIL - Response to request for mapping with requested material attached.
105	ID8:Australian Maritime Safety Authority (AMSA)	Email	25/11/2022 8:37	INCOMING EMAIL - Acknowledging email received.
484	ID8:Australian Maritime Safety Authority (AMSA)	Email	21/02/2023 10:24	INCOMING EMAIL providing vessel traffic plot through permits for consideration in EP, together with other issues for following through.
747	ID8:Australian Maritime Safety Authority (AMSA)	Email	3/02/2023 10:54	OUTGOING EMAIL - Notice to Stakeholder re ConocoPhillips Australia Otway Exploration Drilling Program
748	ID8:Australian Maritime Safety Authority (AMSA)	Email	3/02/2023 10:54	OUTGOING EMAIL to stakeholder with attached correspondence and information
750	ID8:Australian Maritime Safety Authority (AMSA)	Email	3/02/2023 10:54	OUTGOING EMAIL to stakeholder with attached correspondence and information re ConocoPhillips Australia Otway Exploration Drilling Program
830	ID8:Australian Maritime Safety Authority (AMSA)	Email	14/02/2023 14:45	OUTGOING EMAIL - Resent initial notice re : ConocoPhillips Australia Otway Exploration Drilling Program with attachments
1273	ID8:Australian Maritime Safety Authority (AMSA)	Email	3/02/2023 16:04	OUTGOING EMAIL sent to stakeholder with formal letter advising on upcoming Otway drilling program with two fact sheets - Consultation and Project Overview
1275	ID8:Australian Maritime Safety Authority (AMSA)	Email	3/02/2023 16:02	OUTGOING EMAIL sent to stakeholder with formal letter advising on upcoming Otway drilling program with two fact sheets - Consultation and Project Overview
1447	ID8:Australian Maritime Safety Authority (AMSA)	Telephone call	13/02/2023 14:45	PHONE CALL. Spoke with receptionist who sent a message to relevant staff member. (Update) Receptionist called to inform the relevant staff member will call the number provided.
1448	ID8:Australian Maritime Safety Authority (AMSA)	Telephone call	14/02/2023 8:22	PHONE CALL. Spoke with Receptionist. Was told we will have to wait for an email reply.
1452	ID8:Australian Maritime Safety Authority (AMSA)	Telephone call	14/02/2023 8:45	PHONE CALL. Called stakeholder on their mobile number, stakeholder was unable to get through in the automated phone when they pressed 1. Error message is "This is not an option". Have resent email to stakeholder's email address, will call back later to make sure stakeholder has received it.
1453	ID8:Australian Maritime Safety Authority (AMSA)	Telephone call	14/02/2023 9:15	PHONE CALL. Spoke with receptionist to make sure email was correct for the group. Email wasn't correct.
1466	ID8:Australian Maritime Safety Authority (AMSA)	Telephone call	14/02/2023 14:32	PHONE CALL. Called back stakeholder. Has received the email and will respond later on today when less busy.
1736	ID8:Australian Maritime Safety Authority (AMSA)	Email	15/02/2023 10:42	INCOMING EMAIL acknowledging receipt of information and requesting ESRI shapefile information.
1739	ID8:Australian Maritime Safety Authority (AMSA)	Email	15/02/2023 14:12	OUTGOING EMAIL: providing information requested by stakeholder following initial notice of ConocoPhillips Australia Otway Exploration Drilling Program [SEC=OFFICIAL]
3089	ID8:Australian Maritime Safety Authority (AMSA)	Email	29/08/2023 10:08	OUTGOING EMAIL with project update and information about further opportunities to give feedback.
3091	ID8:Australian Maritime Safety Authority (AMSA)	Email	29/08/2023 10:12	OUTGOING EMAIL with project update and information as to how to provide further feedback.
3147	ID8:Australian Maritime Safety Authority (AMSA)	Email	29/08/2023 13:12	OUTGOING EMAIL - Project Update with information as to how to make further comment - ConocoPhillips Australia Otway Exploration Drilling Program.
3149	ID8:Australian Maritime Safety Authority (AMSA)	Telephone call	29/08/2023 13:47	OUTGOING TELEPHONE CALL: Person who answered unable to verify email address that bounces back nor whether the stakeholder to whom correspondence is addressed is still in the role.

Id	Organisation	Event Type	Start Date	Summary
3402	ID8:Australian Maritime Safety Authority (AMSA)	Email	4/09/2023 9:13	INCOMING EMAIL outlining request to adhere to rules and contacts for vessels.
538	ID8:Australian Maritime Safety Authority (AMSA), ID28:Department of Defence	Email	2/03/2023 15:51	INCOMING EMAIL: from organisation with cc to stakeholder
2602	ID8:Australian Maritime Safety Authority (AMSA), ID28:Department of Defence	Email	26/07/2023 10:18	OUTGOING EMAIL: Responding to stakeholder re initial objections, claims and requests.
1942	ID85	Letter - Registered Mail	29/06/2023 8:55	Registered letter sent to CEO advising that organisation has been identified as a relevant organisation for the proposed Otway Offshore Exploration Drilling Program and inviting participation in consultation. Three project information sheets included, plus Regulator's brochure about consultation.
2413	ID85	Letter - Registered Mail	12/07/2023 10:21	Australia Post Verified a Delivered
43	ID9:University of Tasmania (UTAS)	Meeting - Virtual	20/02/2023 10:00	VIRTUAL MEETING with individual. Confirmed they have received notice of Drilling EP.
44	ID9:University of Tasmania (UTAS)	Telephone call	20/02/2023 13:12	OUTGOING TELEPHONE CALL to stakeholder. NO answer so left message in response to action from verification calls.
45	ID9:University of Tasmania (UTAS)	Email	20/02/2023 13:19	OUTGOING EMAIL: sent to stakeholder as they were commented as likely having a range of questions. Provided contact details for a discussion, Also flagged that the team would be in their area at the start of march if they wanted an in person meeting.
48	ID9:University of Tasmania (UTAS)	Email	21/02/2023 9:26	OUTGOING EMAIL: sent to stakeholder regarding an answer to correspondence in previous emails. Drilling targets are unchosen as of yet. A meeting can definitely occur in person regarding the drilling program.
71	ID9:University of Tasmania (UTAS)	Email	22/02/2023 12:58	OUTGOING EMAIL: sent to stakeholder thanking them for catch up. Followed up about accessing fishing data or at least providing guidance on gaining access/making the request.
83	ID9:University of Tasmania (UTAS)	Email	20/02/2023 14:14	INCOMING EMAIL: Individual acknowledged receiving email about company commenced preparation of an EP
517	ID9:University of Tasmania (UTAS)	Email	28/02/2023 17:50	OUTGOING EMAIL: sent to stakeholder requesting meeting, asked if stakeholders had a preferred meeting time.
528	ID9:University of Tasmania (UTAS)	Email	2/03/2023 11:19	OUTGOING EMAIL: sent to stakeholder following up on meeting request correspondence providing exact date and time availability for meeting.
560	ID9:University of Tasmania (UTAS)	Telephone call	6/03/2023 15:52	OUTGOING TELEPHONE CALL to stakeholder. No answer. Left message following up on request for meetings.
579	ID9:University of Tasmania (UTAS)	Email	8/03/2023 16:35	OUTGOING EMAIL: sent to stakeholder attempting to reclarify meeting time. Provided an overview of what the team wishes to discuss with the stakeholder.
587	ID9:University of Tasmania (UTAS)	Email	21/03/2023 14:33	OUTGOING EMAIL: sent to stakeholder with meeting request and agenda.
680	ID9:University of Tasmania (UTAS)	Email	21/03/2023 14:58	OUTGOING EMAIL: Sent meeting notes for review and contribution
805	ID9:University of Tasmania (UTAS)	Letter	9/02/2023 15:43	OUTGOING EMAIL: sent to stakeholder with formal letter advising on upcoming Otway drilling program with two fact sheets - Consultation and Project Overview
1209	ID9:University of Tasmania (UTAS)	Social Pinpoint Webinar Registration	15/05/2023 9:56	SOCIAL PINPOINT WEBINAR REGISTRATION Stakeholder registered for future webinars
1237	ID9:University of Tasmania (UTAS)	Social Pinpoint Webinar Registration	18/05/2023 16:01	SOCIAL PINPOINT WEBINAR REGISTRATION Stakeholder registered for future webinars
1410	ID9:University of Tasmania (UTAS)	Email	9/02/2023 15:47	OUTGOING EMAIL: sent to stakeholder with formal letter advising on upcoming Otway drilling program with two fact sheets - Consultation and Project Overview
1534	ID9:University of Tasmania (UTAS)	Telephone call	20/02/2023 10:40	OUTGOING TELEPHONE CALL. no answer. Left voice message to call back.
1535	ID9:University of Tasmania (UTAS)	Telephone call	20/02/2023 10:49	OUTGOING TELEPHONE CALL. Stakeholder is keen to help but also to find out more information. Sent through a request to stakeholder team for return call.
1727	ID9:University of Tasmania (UTAS)	Email	9/02/2023 16:39	INCOMING EMAIL: sent from stakeholder regarding commenced preparation of an environment plan. Stakeholder requested to hear from us and discuss potential engagement in the environmental assessments.

Id	Organisation	Event Type	Start Date	Summary
2692	ID9:University of Tasmania (UTAS)	Email	29/07/2022 9:51	INCOMING EMAIL: Email from individual connecting ConocoPhillips to presenters from previous days presentation.
2693	ID9:University of Tasmania (UTAS)	Email	29/07/2022 14:18	OUTGOING EMAIL: Email to individual thanking University for previous days presentation.
2694	ID9:University of Tasmania (UTAS)	Email	29/07/2022 15:44	INCOMING EMAIL: Received slide deck and research papers from presenter
2695	ID9:University of Tasmania (UTAS)	Email	4/08/2022 8:47	OUTGOING EMAIL: Responded to presenter thanking them for information provided.
2696	ID9:University of Tasmania (UTAS)	Email	29/07/2022 9:54	INCOMING EMAIL: Individual provided presentation
2700	ID9:University of Tasmania (UTAS)	Email	22/08/2022 13:29	OUTGOING EMAIL: Emailed individual to follow-up on release of research.
2701	ID9:University of Tasmania (UTAS)	Email	22/08/2022 13:47	INCOMING EMAIL: Individual responded and advised research was not yet able to be released and provided guidance on realistic timeline for availability.
2704	ID9:University of Tasmania (UTAS)	Email	23/08/2022 7:42	OUTGOING EMAIL: Responded to individual regarding release of research.
3341	ID9:University of Tasmania (UTAS)	Email	12/09/2023 10:12	OUTGOING EMAIL: Emailed individuals enquiring about feedback/ objections and claims on draft EP chapter
3352	ID9:University of Tasmania (UTAS)	Email	12/09/2023 15:00	OUTGOING EMAIL: Provided response to objections and claims made throughout consultation.
3384	ID9:University of Tasmania (UTAS)	Email	18/09/2023 10:17	INCOMING EMAIL: Received IMAS Seismic Octopus & Lobster Research Report from individual
3403	ID9:University of Tasmania (UTAS)	Email	24/08/2023 14:32	INCOMING EMAIL: Received Out of Office
3404	ID9:University of Tasmania (UTAS)	Email	24/09/2023 14:32	INCOMING EMAIL: Received out of office
3415	ID9:University of Tasmania (UTAS)	Email	24/08/2023 14:30	INCOMING EMAIL: Recieved out of office from individual
3488	ID9:University of Tasmania (UTAS)	Email	21/09/2023 8:46	INCOMING EMAIL: Individual declined meeting
3827	ID9:University of Tasmania (UTAS)	Email	27/09/2023 12:44	OUTGOING EMAIL: To stakeholders containing meeting notes for review and contribution.
4458	ID9:University of Tasmania (UTAS)	Email	22/11/2022 16:25	OUTGOING EMAIL: Request sent to individual regarding Tasmanian fishery data for use in future exploration drilling EP, including possibility of fee-for-service arrangement for data provision.
4462	ID9:University of Tasmania (UTAS)	Email	29/11/2022 16:20	INCOMING EMAIL: Received from individual regarding data request advising they had been ill but confirmed they would make enquiries.
4464	ID9:University of Tasmania (UTAS)	Email	30/11/2022 6:26	OUTGOING EMAIL: Sent to individual wishing them speedy recovery and requesting to keep us updated on the fisheries data.
4466	ID9:University of Tasmania (UTAS)	Email	12/12/2022 10:29	INCOMING EMAIL: Received from individual requesting previously scheduled meeting be postponed and providing update on data request.
4469	ID9:University of Tasmania (UTAS)	Email	5/02/2023 11:52	INCOMING EMAIL: received from individual requesting that meeting be rescheduled.
4472	ID9:University of Tasmania (UTAS)	Email	21/02/2023 9:19	INCOMING EMAIL: sent from stakeholder acknowledging missed call, requested information as to the extent of planning progression regarding environmental plan. Stakeholder also interested in mapping information. Stakeholder noted availability for meeting.
4476	ID9:University of Tasmania (UTAS)	Email	1/03/2023 8:16	INCOMING EMAIL: sent from stakeholder noting that they would be free and would be available based around what works for our team in response to previous correspondence.
4477	ID9:University of Tasmania (UTAS)	Email	7/03/2023 9:59	INCOMING EMAIL: sent from stakeholder noting they have quite a few meetings during requested time but that they may be able to move things around to suite if it is the only available time.
4485	ID9:University of Tasmania (UTAS)	Email	7/03/2023 10:29	OUTGOING EMAIL: sent to stakeholder clarifying exact availability for a meeting responding to previous correspondence from stakeholder being unsure of being able to make a meeting time work.
4487	ID9:University of Tasmania (UTAS)	Email	9/03/2023 11:37	INCOMING EMAIL: sent from stakeholder providing another available time for meeting in response to previous correspondence about scheduling an in person meeting.
4488	ID9:University of Tasmania (UTAS)	Email	9/03/2023 12:38	OUTGOING EMAIL: sent to stakeholder confirming meeting time and promised to send through an invite.
4629	ID9:University of Tasmania (UTAS)	Meeting - In-person	28/07/2022 13:19	Attended in-person presentation at University to understand ongoing research focuses and share information about future plans in Otway Basin.
4646	ID9:University of Tasmania (UTAS)	Meeting - Virtual	21/09/2023 10:30	Virtual meeting with individuals to receive feedback on draft EP chapters

Id	Organisation	Event Type	Start Date	Summary
4647	ID9:University of Tasmania (UTAS)	Email	14/09/2023 13:45	INCOMING EMAIL: Individual responded regarding request for meeting.
4648	ID9:University of Tasmania (UTAS)	Email	14/09/2023 14:30	OUTGOING EMAIL: To individual proposing times for meeting.
4649	ID9:University of Tasmania (UTAS)	Email	14/09/2023 14:33	INCOMING EMAIL: From individual preference for meeting day.
4650	ID9:University of Tasmania (UTAS)	Email	14/09/2023 14:33	OUTGOING EMAIL: To individual confirming time of meeting
4651	ID9:University of Tasmania (UTAS)	Email	14/09/2023 14:33	INCOMING EMAIL: Individual confirmed meeting time.
1946	ID90	Letter - Registered Mail	4/07/2023 15:35	<p>Sent Registered Mail –</p> <p>Included with this letter are recent project updates and a copy of the Consultation on offshore petroleum environment plans – information for the community compiled by our regulator The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).</p>
2863	ID90	Letter - Registered Mail	17/07/2023 8:22	Australia Post Verified as Delivered
1934	ID95	Letter - Registered Mail	4/07/2023 15:35	<p>Sent Registered Mail –</p> <p>Included with this letter are recent project updates and a copy of the Consultation on offshore petroleum environment plans – information for the community compiled by our regulator The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).</p>
644	ID98:Corangamite Shire Council	Email	14/03/2023 8:23	Outgoing email to relevant stakeholder requesting a meeting regarding the ConocoPhillips Otway Exploration Drilling Program
892	ID98:Corangamite Shire Council	Email	13/04/2023 16:07	Sent information about Community Information Sessions - ConocoPhillips Australia Otway Exploration Program.
2619	ID98:Corangamite Shire Council	Telephone call	27/07/2023 10:26	OUTGOING TELEPHONE CALL: to stakeholder regarding otway exploration drilling program, they registered their interest in receiving information and consultation.
2638	ID98:Corangamite Shire Council	Email	31/07/2023 9:36	Follow-up email regarding telephone call attempting to confirm interest as a relevant person and in consultation regarding Otway project. Included attached information documents.
142	ID99:District Council of Grant	Email	27/02/2023 14:37	Sent relevant person information regarding the commencement of preparation of an Environment Plan to undertake an exploration drilling program in Commonwealth waters in the offshore Otway Basin. Included project information documents and personalised letter.
500	ID99:District Council of Grant	Email	28/02/2023 10:36	Automated reply to 'Proposed Otway Exploration Drilling Program'
569	ID99:District Council of Grant	Email	6/03/2023 17:03	OUTGOING Email to stakeholder regarding ConocoPhillips Australia Otway Exploration Drilling Program
2624	ID99:District Council of Grant	Telephone call	27/07/2023 15:53	OUTGOING TELEPHONE CALL: to stakeholder, they would like current information re-sent and they will respond confirming whether or not they would like to be consulted as a relevant organisation.
2637	ID99:District Council of Grant	Email	31/07/2023 9:36	Follow-up email regarding telephone call attempting to confirm interest as a relevant person and in consultation regarding Otway project. Included attached information documents.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

## APPENDIX C2: Feedback, Objections and Claims under Reg16(b)

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
509	6	ID:733	ID10	15/02/2023 13:56	Relevant persons requested to be kept informed of when activities will occur to facilitate the issuance of an activity related NtM which may assist in informing fishers who are in the relevant area.	High	ConocoPhillips Australia incorporated this request into CM03: Marine and Coastal Users Consultation and Communication Plan to minimise impacts to other marine users.
509	63	ID:172, ID:733	ID10	28/02/2023 18:40	Relevant person requested that MAST be kept informed regarding the more general nature of when activities will be taking place to support notifications.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and updated CM03: Marine and Coastal Users Consultation and Communication Plan to include a notification requirement for MAST.
2575	119	ID:219, ID:220	ID109	24/03/2023 9:30	Relevant person recommended that advertising occur through the Portland Observer	High	ConocoPhillips Australia reviewed feedback and has since been advertising in the Portland Observer.
23	2	ID:319	ID11	13/02/2023 7:49	Relevant person requested that ConocoPhillips Australia consider a text message campaign prior to and during drilling campaign with suggestions on frequency and content focus areas.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it, and additional information included in the implementation strategy on text messages..
2576	122	ID:319	ID11	25/07/2022 9:00	Relevant person recommended that future project names are simplified.	High	ConocoPhillips Australia reviewed feedback and simplified the name of the activity to reduce confusion.
649	15	ID:415, ID:899	ID110	16/03/2023 9:10	Relevant person stated that on 27 July 2021 the Council passed a motion opposing all new oil and gas exploration, development and seismic testing in the Otway Basin which remains the Council's position and has been communicated with relevant persons and bodies.	Low	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that that no alterations were deemed necessary as no objections to the content of the EP were raised.
649	16	ID:415, ID:899	ID110	16/03/2023 9:13	Relevant person expressed concern regarding the impact oil and gas exploration has on all receptors, including its contribution to climate change.	High	ConocoPhillips Australia provided overview of assessment process.
649	156	ID:415, ID:899	ID110	16/03/2023 12:51	Relevant person requested that the Council's opposition to seismic testing and oil and gas development in the Otway Basin is noted in consultation records.	Low	ConocoPhillips Australia notes that feedback in the EP.
1655	69	ID:823	ID111	4/05/2023 16:28	Relevant person stated that ConocoPhillips Australia is required to tick a box (for consultation) and that they are helping with the operators paperwork.	Low	ConocoPhillips Australia provided a copy of NOPSEMA "Consultation on offshore petroleum environment plans: Information for the community".
2450	70	ID:823	ID111	17/07/2023 15:49	Relevant person provided feedback that the 30-day public comment period is not enough time to provide meaningful consultation.	High	ConocoPhillips Australia extended the consultation on two occasions, including the release of draft environment plans prior to the completeness check submission to NOPSEMA and 30-day public comment period in create an extended consultation timeline.
2450	71	ID:823	ID111	11/05/2023 16:06	Relevant person provided feedback regarding the last-minute addition of another titleholder to attend the ConocoPhillips Australia meeting, and being referred to the other titleholders webpage was not considered to be clear, transparent consultation.	High	ConocoPhillips Australia acknowledged that during the course of agreeing to a meeting time, and subsequent request to change the meeting time, things may have become confusing. Noting, Regia was invited to participate in the briefing on 4 May in response to relevant persons request received via email that same morning. Relevant person had previously been advised that ConocoPhillips Australia was not proposing to conduct a seismic survey and contact details had been provided for other titleholders who were.
2450	72	ID:823	ID111	17/07/2023 16:10	Relevant person inquired about the availability of maps which include the EMBA.	High	ConocoPhillips Australia provided maps with the modelling reports in August 2023.
1992	73	ID:823	ID111	11/05/2023 16:06	Relevant person noted that when they sought information related to operational shutdowns, they were advised to seek this information from the Australian Antarctic Division, and that this was in contradiction to undertaking meaningful consultation and is unsatisfactory.	High	ConocoPhillips Australia advised in the meeting on 4 May 2023 that the organisation has only conducted a single offshore activity and therefore suggested if the relevant person was interested in how the industry performs, the Australian Antarctic Division would have records for all offshore activities. ConocoPhillips further suggested that these records would demonstrate how shutdowns are managed consistently across the industry, which might be more relevant.
1992	74	ID:823	ID111	11/05/2023 16:06	Relevant person requested to be added to the notification list for any incidents or spills.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it.
1992	75	ID:823	ID111	11/05/2023 16:06	Relevant person requested that there is to be clarification provided on time frames of incident occurrence to the notification of relevant persons.	High	ConocoPhillips Australia provided clarification that notification would be in accordance with an accepted Oil Pollution Emergency Plan and requested clarification on notification requirements.
2450	76	ID:823	ID111	17/07/2023 16:22	Relevant person requested access to the EP chapters.	High	ConocoPhillips Australia committed to providing the draft EP chapters (completed August 2023)

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

# APPENDIX C2: Feedback, Objections and Claims under Reg16(b)

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objecction or Claim
1992	77	ID:823	ID111	11/05/2023 16:06	Relevant person requested that ConocoPhillips Australia share the modelling information regarding the impacts of hydrocarbon release/spills, noise emissions and infrastructure.	High	ConocoPhillips Australia committed to providing modelling reports (completed August 2023)
1992	78	ID:823	ID111	11/05/2023 16:06	Relevant person requested that ConocoPhillips Australia share any data/modelling information regarding impacts of spills to Marine Parks, Threatened Species and sensitive receptors.	High	ConocoPhillips Australia committed to providing modelling reports (completed August 2023)
1992	80	ID:823	ID111	11/05/2023 16:06	Relevant person requested to be informed on shutdown occurrences resulting from sightings of marine mammals.	High	ConocoPhillips Australia requested clarification on intended purpose of information.
1992	81	ID:823	ID111	11/05/2023 16:06	Relevant person stated that permit T/49P impacts directly on the Zeehan Marine Park and the VIC/P79 lease abounds the Apollo marine protected areas. Relevant person queried if ConocoPhillips Australia will be sharing daily survey reports of marine species spotted in the areas.	High	ConocoPhillips Australia committed to providing observations to relevant state government departments.
1992	82	ID:823	ID111	11/05/2023 16:06	Relevant person requested information on the location of proposed survey and drill locations in relation to the Apollo and Zeehan marine parks and requested modelling reports.	High	ConocoPhillips Australia provided information on overlap with Zeehan multiple use zone and committed to providing modelling reports (completed August 2023)
1992	83	ID:823	ID111	11/05/2023 16:06	Relevant person queried which biodiversity and critical BIA habitat data was used to inform the EP and asked that this was provided to AMCS.	High	ConocoPhillips Australia provided information on data sources.
3785	354	ID:823	ID111	22/09/2023 16:30	Relevant person provided feedback regarding the assessment of risks as some assessed as 'moderate' are under-represented, and expressed confusion regarding the risk matrix, particularly the likelihood assessment being focused on what has or hasn't happened over a 12 month period.	High	ConocoPhillips Australia provided clarification and determined that no alterations were deemed necessary as the ConocoPhillips impact and risk methodology meets the requirements of the Environment Regulations and is consistent with relevant industry guidelines.
3785	355	ID:823	ID111	22/09/2023 17:15	Relevant person provided feedback that limited consideration of assessments to the past 12 months (for likelihood) is a deliberate effort to work the numbers in favour of approval. Relevant person queried if there is a conflation of impacts and risks.	High	ConocoPhillips Australia provided clarification and determined that no alterations were deemed necessary as the ConocoPhillips impact and risk methodology meets the requirements of the Environment Regulations and is consistent with relevant industry guidelines.
3785	356	ID:823	ID111	22/09/2023 17:17	Relevant person requested confirmation that Conservation Advice was used to assess acceptability; disagreed with the process for comparing predicted impacts with acceptable levels, considered that assessments of acceptability in the draft EP did not consider feedback from relevant persons, and that any and all benefits that can be gained to protect coastal areas around a WHA should not be defined as negligible.	High	ConocoPhillips Australia provided information regarding: Conservation Advice's being included in impact and risk assessments; the impact assessment process which takes into consideration the condition of the existing environment; the intent of providing draft EP chapters to support consultation and generate feedback for consideration in the EP; and an overview of the impact assessment for the coastal section of the TWWHA, with low thresholds represent sub-lethal concentrations of hydrocarbons and are not predicted to result in ecological effects.
3785	357	ID:823	ID111	22/09/2023 17:18	Relevant person provided feedback regarding the lack of drill siting detail prevented them from being able to adequately understand and provide feedback. Further, relevant person provided feedback regarding the potential for drilling activity within Zeehan marine park and requested environmental monitoring mitigation measures be considered, including the collection of baseline data.	High	ConocoPhillips Australia reviewed impact Chapter 6.3 (Seabed Disturbance) and reiterated the importance of existing control measure CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values in the EP. During consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further analysis and has included this requirement in the procurement process for the seabed survey (CM11: Procurement Vetting Process). Previous advice had been provided on the conservative assessment process over the broader operational areas and updates to section 1.4 of the EP to provide clarity.
3785	358	ID:823	ID111	22/09/2023 17:21	Relevant person suggested that Chapter 7.3 (Minor LOC) did not adequately assess the impacts of a minor LOC to the receiving environment. It was requested for additional scientific evidence to be incorporated.	High	ConocoPhillips Australia determined that Minor Loss of Containment impacts (Chapter 7.3) were adequately assessed and supported by recent, relevant research. Therefore no alterations to the EP were deemed necessary.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3785	359	ID:823	ID111	22/09/2023 17:22	Relevant person stated that the EP acknowledges oil pollution as a threat in the marine park management plan however then to go on to simply disagree with the very clear statement as it applies to its proposal. Relevant person stated that they strongly disagree with this assertion and suggest that ConocoPhillips Australia make no material justification for why its proposed activities in Zeehan MP are not inconsistent with this management plan as any drilling programs within the Zeehan marine park are inconsistent with the management plan and therefore have an unacceptable impact.	High	ConocoPhillips Australia determined that impacts related to a Minor Loss of Containment Chapter (7.3), specifically to the Zeehan Marine Park, were adequately assessed and supported by recent, relevant research. Therefore no alterations to the EP were deemed necessary.
3785	360	ID:823	ID111	22/09/2023 17:23	Relevant person considers the introduction of a new minor oil spill risk within the Zeehan MP to be unacceptable and that serious control measures are necessary, such as no drilling within the AMP or including a reasonable buffer area. Further, relevant person stated the absence of drill locations makes it difficult to properly assess impacts across the entire potential impact area.	High	ConocoPhillips Australia conducted a review of controls measures relevant to the mitigation of risks associated with minor spills, specifically in the Zeehan Marine Park, to ensure that risks were adequately considered and updated the EP to ensure this was explicit where relevant. It was determine that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and supported by recent, relevant research. Previous advice had been provided on the conservative assessment process over the broader operational areas and updates to section 1.4 of the EP to provide clarity.
3785	361	ID:823	ID111	22/09/2023 17:24	Relevant person considered activities outside of the petroleum activity be considered in the EP.	High	ConocoPhillips Australia reviewed and confirmed that appropriate control measures are in place within operational areas for petroleum activities, and provided information to relevant person on legislation relevant to other maritime activities.
3785	362	ID:823	ID111	22/09/2023 17:25	Relevant person requested that they are provided with data that has been used to determine presence of cetaceans within the EMBA, including interactions and/or shutdowns that occurred during its recent seismic blasting operation.	High	ConocoPhillips Australia provided information on the collection and use of data on cetacean presence in the operational areas since 2021; that data has been made available to government agencies and research organisations and has been used to inform the development of the Environment Plan, for example see section 4.6.9.2 of the draft Environment Plan.
3785	363	ID:823	ID111	22/09/2023 17:27	Relevant person provided feedback that cetacean presence was underestimated during the previous Sequoia seismic survey and that species were present within the operational area during the survey. Relevant person suggests that additional mitigation measures would provide additional environmental benefits of reducing vessel strike.	High	ConocoPhillips Australia provided reference to ConocoPhillips Australia's data used in the assessment and determined that further alterations to the EP were deemed necessary as appropriate, industry standard, mitigation measures relating to interactions with marine fauna were adopted by the Otway Exploration Drilling Program.
3785	364	ID:823	ID111	22/09/2023 17:28	Relevant person disagreed with ConocoPhillips Australia's assessment that the South-East Commonwealth Marine Reserves Network Management Plan does not (currently) include vessel strike as a pressure on Zeehan Marine Park, and considered this represents a new threat.	High	ConocoPhillips Australia advised that petroleum exploration activities have been conducted in the South-east marine region since the 1960's, well before the 2013 publication of the current MP and that the Director of National Parks had been consulted as a relevant authority for the management of the Zeehan Marine Park.
3785	365	ID:823	ID111	22/09/2023 17:33	Relevant person stated that ConocoPhillips Australia did not provide sufficient data to dismiss vessel strike mitigation measures, particularly that activities only occur outside of environmentally sensitive periods. Relevant person suggested that a detailed assessment be made to determine whether the exclusion of specific biologically important windows would reduce risks to key species. Relevant person stated that not being able to reduce the impact on all species is not a justification for the rejection of this control measure.	High	ConocoPhillips Australia updated Section 6.6.7 in Chapter 6.6 (Non-Impulsive Noise) to provide clarity around the process followed to assess the variability of timing.  Further, ConocoPhillips Australia made commitments to implement a Marine Mammal Adaptive Management Plan that includes whale detection and mitigation measures to minimise anthropogenic noise threats to whales. These measures will effectively reduce the likelihood of vessel strike and have been referred to Table 7-8.
3785	366	ID:823	ID111	22/09/2023 17:30	Relevant person queried whether reporting vessel strike to the NVSD is a mitigation measure and requested confirmation that this is a legal requirement rather than a voluntary mitigation measure. Relevant person requested for ConocoPhillips Australia to explain how reporting strikes mitigates the risk.	High	ConocoPhillips Australia updated Table 7-8 in Chapter 7.4 (Interaction with Marine Fauna) to remove the control measure and refer the reader to the Implementation Strategy (Table 10-8) for information on the reporting of vessel strikes.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3785	367	ID:823	ID111	22/09/2023 17:31	Relevant person requested that all relevant persons are informed of reportable incidents and changes made to the EP, including any identification of new or altered impacts or risks associated with the proposal.	High	ConocoPhillips Australia will act in accordance with the requirements for ongoing consultation as detailed in Table 10.5 of the Implementation Strategy.
3785	368	ID:823	ID111	22/09/2023 17:32	Relevant person provided feedback regarding a lack of connection between the EP and ConocoPhillips Australia's Biodiversity Policy.	High	ConocoPhillips Australia updated section 10.1.2.3 to include information directly relevant to the Otway Exploration Drilling Program.
3785	369	ID:823	ID111	22/09/2023 17:34	Relevant person stated that the timeline for seeking approval is rushed and that the information provided in the draft EP is lacking in details that would provide further insights into impacts and mitigation measures. Relevant person stated that they are of the opinion that approval of the EP should not be sought until drilling locations have been finalised,	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed. Additionally, ConocoPhillips Australia incorporated its position regarding the appropriateness of term of the EP in Section 1.4, and considers that it is essential to include the full scope of the proposed activities in the EP to ensure relevant person are able to make an informed assessment of potential impacts to their function, interests and activities.
3785	370	ID:823	ID111	22/09/2023 17:35	Relevant person considered that drilling within the Zeehan Marine Park would affect benthic habitats, the integrity of the marine park, migratory species, elasmobranch species including the maugean skate and would result in impacts from a spill with more information needed as drill locations were not provided.	High	ConocoPhillips Australia provided an overview of the activities that may be permitted within the multiple use zone of the Zeehan Marine Park and the need to consult with the Director of National Parks; and provided an overview of the assessment of impacts to the Zeehan Marine Park and the selection of modelling locations for assessing the risks associated with a spill.
3785	371	ID:823	ID111	22/09/2023 17:36	Relevant person requested clarification regarding the Tasmanian lease as during consultation it was stated that there was a high likelihood that all 6 wells would occur within the Victorian lease. Relevant person queried if this were true, and if so why it was not indicated in the draft documents for relevant persons to engage with in this consultation phase.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.
3785	372	ID:823	ID111	22/09/2023 17:37	Relevant person advised that ConocoPhillips should consider how selecting different drill sites might mitigate risks to the environment as the current approach of seeking approval for 6 sites anywhere within the OA, without specifying precise location, does not enable relevant persons to fully understand the specific impacts and risks to their functions, interests and activities.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.
3785	373	ID:823	ID111	22/09/2023 17:38	Relevant person stated that the current approach enables unspecific and potentially inaccurate statements made in the draft EP, for example: "The risk to all listed marine fauna cannot be reduced due to variability in timing of environmentally sensitive periods ...". Relevant person provided feedback as these claims are difficult to understand or respond to, as these cannot be properly supported, or interrogated, in the absence of precise drill site location options.	High	ConocoPhillips Australia has reviewed feedback provided by relevant person and updated Section 6.6.7 in Chapter 6.6 (Non-Impulsive Noise) to provide clarity around the process followed to assess the variability of timing. Further, ConocoPhillips Australia made commitments to implement a Marine Mammal Adaptive Management Plan that includes whale detection and management measures to minimise anthropogenic noise threats to whales. These measures effectively reduce the likelihood of vessel strike and have been referred to Table 7-8.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3785	374	ID:823	ID111	22/09/2023 17:39	Relevant person provided feedback regarding the 5 year term of the EP, specifically in consideration of escalating climate change and the impacts this may have on climate sensitive marine receptors.	High	ConocoPhillips Australia incorporated its position regarding the appropriateness of term of the EP in Section 1.4, and considers that it is essential to include the full scope of the proposed activities in the EP to ensure relevant person are able to make an informed assessment of potential impacts to their function, interests and activities. ConocoPhillips Australia has specified the ongoing review process in the Implementation Strategy, particularly section 10.2.7 Management of Change, whereby emerging and escalating issues are required to be taken into consideration for the term of the EP (including changes in legislation, science and associated changes to impact and risk assessments and ongoing consultation) in order to maintain impacts to ALARP and acceptable levels.
3785	375	ID:823	ID111	22/09/2023 17:40	Relevant person considered activities outside of the petroleum activity be considered in the EP.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the EP were deemed necessary.
4153	448	ID:823	ID111	26/10/2023 14:08	Relevant person provided feedback regarding the ability to assess and understand the impacts of the proposed project when there are no projected drill locations and requested information on how drill site locations are selected.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. ConocoPhillips Australia advised that it is not a requirement to have confirmed drilling locations prior to EP acceptance, and provided additional information and updated section 1.4 of the EP to provide clarification on the process for selection of drilling locations and the assessment of impacts and risks across the full range of potential locations.
4153	449	ID:823	ID111	19/10/2023 14:08	Relevant person requested details on the drilling rig being sourced.	High	ConocoPhillips Australia provided information from the August 2023 project update that confirmed the type of rig.
4153	450	ID:823	ID111	26/10/2023 14:10	Relevant person requested information regarding the capping of a well.	High	ConocoPhillips Australia provided an overview of the capping stack feasibility assessment and advised, as stated in the draft EP made available in August 2023, as advised in the August 2023 project update, that a relief well has been determined to be the primary means of source control.
4153	451	ID:823	ID111	19/10/2023 14:11	Relevant person requested details on sourcing arrangements for vessels.	High	ConocoPhillips Australia advised it would go out to the market to source suitable vessels.
4153	452	ID:823	ID111	19/10/2023 14:12	Relevant person provided feedback that they could not assess ALARP without defined drill sites.	High	ConocoPhillips Australia advised that it is not a requirement to have confirmed drilling locations prior to EP acceptance, and provided additional information and updated section 1.4 of the EP to provide clarification on the process for selection of drilling locations and the assessment of impacts and risks across the full range of potential locations.
4153	453	ID:823	ID111	26/10/2023 14:13	Relevant person queried at what point of the consultation process does ConocoPhillips Australia expect to provide drill site locations to relevant persons.	High	ConocoPhillips Australia advised that it is not a requirement to have confirmed drilling locations prior to EP acceptance, and provided additional information and updated section 1.4 of the EP to provide clarification on the process for selection of drilling locations and the assessment of impacts and risks across the full range of potential locations.
4153	454	ID:823	ID111	19/10/2023 14:15	Relevant person queried what mitigation measures were in place to ensure the Tasmanian Wilderness World Heritage Area is not impacted by a spill.	High	ConocoPhillips Australia provided clarification on the EMBA, showing the full range of possible consequences that may occur in an extremely unlikely event, using highly conservative modelling, without mitigations, representing the outer extent of areas that could be affected by low thresholds of hydrocarbons which are below the levels that cause ecological effects; and that mitigation measures and the Oil Pollution Emergency Plan had been made available for consultation since August 2023, as advised in the August 2023 Project update.
4153	455	ID:823	ID111	19/10/2023 14:16	Relevant person queried if there would be a detailed spill response in the EP.	High	Relevant person was advised that ConocoPhillips Australia spill response plans have been available for consultation since 31 August via the consultation hub, as advised in the August 2023 project update.
4153	456	ID:823	ID111	19/10/2023 14:17	Relevant person provided feedback that the impact assessment did not address cumulative impacts across the breadth of the project.	High	Relevant person was advised that Cumulative impacts were assessed in draft EP chapter 8 made available in August 2023, as advised in the August 2023 project update.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
4153	457	ID:823	ID111	26/10/2023 14:19	Relevant person queried a statement made by a consultant during a community information sessions regarding scientific or cultural reasons halting the project.	High	ConocoPhillips Australia believes that the activity can always be adapted and/or modified to respect the scientific, cultural, social, and economic values and sensitivities in order to meet the requirements of the Regulations. We have considered all feedback received through the consultation process to inform the development of the EP.
4153	458	ID:823	ID111	19/10/2023 14:24	Relevant person queried a statement made in regards to no drilling adjacent to King Island.	High	ConocoPhillips Australia provided confirmation that specific locations have yet to be confirmed and updated section 1.4 of the EP to provide clarification on the process for selection of drilling locations and the assessment of impacts and risks across the full range of potential locations.
4153	459	ID:823	ID111	26/10/2023 14:26	Relevant person queried if ConocoPhillips Australia is at risk of breaching any lease title requirements that are time constrained.	High	ConocoPhillips Australia provided general information on time constraints associated with title instruments and extensions.
4153	460	ID:823	ID111	19/10/2023 14:27	Relevant person requested the recording and minutes from their meeting to ensure it was accurately recorded.	High	ConocoPhillips Australia provided the recording of the meeting held on 18/10/2023 and received confirmation of download on 21/10/2023.
4153	461	ID:823	ID111	19/10/2023 14:28	Relevant person requested that all relevant persons are advised of reportable incidents, changes made to the EP (either before or after approval) and the identification of any new or changed impacts or risks.	High	ConocoPhillips Australia has committed to the provision of updates on activity progress, including reportable incidents, etc in Table 10-5 of the Implementation Strategy.
4153	462	ID:823	ID111	19/10/2023 14:30	Relevant person claimed they had not seen significant evidence of mitigation measures to align with the company's Biodiversity Policy.	High	The information in section 10.1.2.3 (Biodiversity Position) of the implementation strategy was updated to include information specific to the Otway Exploration Drilling Program.
4358	465	ID:823	ID111	26/10/2023 17:47	Relevant person suggested it would be appropriate to extend consultation on the basis that a consultant supporting the process had delayed the consultation period for another project they are working on.	Low	ConocoPhillips Australia provided clarification that it has been undertaking its own consultation process and is occasionally supported in this effort by a number of consultants. No change to EP content or consultation process was made as this relevant person has requested extensions of time previously and these have been granted.
4358	466	ID:823	ID111	26/10/2023 17:53	Relevant person requested ConocoPhillips Australia restart the relevant persons consultation process.	Low	ConocoPhillips Australia's view is that consultation in preparation of the EP is complete.
574	26	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:06	Relevant person provided feedback regarding the proximity of the proposed drilling activity to their lobster hatchery (~8 km) posing a risk to their business.	Low	ConocoPhillips Australia provided a map and clarification that the closest distance is 27 km, and updated Table 4-39 Tasmanian Southern Rock Lobster Fishery.
574	27	ID:1027	ID13	3/03/2023 12:08	Relevant person provided feedback regarding the impact activities may have to the purity of water which will subsequently impact their business.	High	ConocoPhillips Australia provided an overview of the impact and risk assessment process regarding how activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level, and updated Table 4-39 Tasmanian Southern Rock Lobster Fishery.
574	28	ID:778, ID:1027, ID:1214, ID:1215	ID13	3/03/2023 12:09	Relevant person claimed that since the seismic survey they have noticed adverse changes to the aquaculture surrounding King Island. Relevant person provided feedback that increased drilling may cause further harm to the fragile ecosystem and contribute to climate change.	Low	ConocoPhillips Australia advised they continue to engage with peak fisheries associations and universities which indicated increasing catch rates within the area and a review of catch data showed that catch in tonnes appears to have remained steady since 2008 for both the Tasmanian and Victorian fishing blocks.
574	29	ID:1027, ID:1214, ID:1215	ID13	3/03/2023 12:10	Relevant person provided feedback regarding the potential impacts (i.e. mortality, displacement) of the proposed activity to the Southern Rock Lobster which is relied on for their commercial viability.	High	ConocoPhillips Australia provided information sheets relevant to the proposed activity including the assessment of impacts to commercial fishers and updated Table 4-39 Tasmanian Southern Rock Lobster Fishery.
574	30	ID:778, ID:1027, ID:1214, ID:1215	ID13	3/03/2023 12:11	Relevant person requested that they are provided with all environmental impact sections including studies associated with the marine environment, specifically around King Island.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that that no alterations were deemed necessary as no objections to the content of the EP were raised.
547	212	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried how far the closest drill hole will be to King Island.	High	ConocoPhillips Australia provided the requested information.
547	213	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried how many km the drilling will occur away from their hatchery.	High	ConocoPhillips Australia provided the requested information.
547	214	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried at what distance the drilling will begin to have an impact.	High	ConocoPhillips Australia provided information from the EP the highly localised and temporary impacts.
547	215	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried how big the scope of the proposed drilling operation is.	High	ConocoPhillips Australia provided information on the full scope of the EP assessment.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

## APPENDIX C2: Feedback, Objections and Claims under Reg16(b)

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
547	216	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person requested information on how heat dissipate during the drilling process.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
547	217	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried whether an assessment of how far heat radiation will extend from the drilling operation.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
547	218	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried what would come into the hatchery as the result of activities.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, as described in section 6.3.5.3.
547	219	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried what the possible effects of heat radiation are, specifically in relation to marine growth and biology.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
547	220	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried how resuspension could affect their water inlet, i.e. could the strength of the water current in the area bring sediment in to their inlet.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, as described in section 6.3.5.3.
547	221	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried how resuspension could affect their water inlet.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, as described in section 6.3.5.3.
547	222	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person requested details for the quantity and type of chemicals to be used during the drilling exploration process.	High	ConocoPhillips Australia provided an overview of CM12: General and Hazardous Chemical Management Procedures.
547	223	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried how ConocoPhillips Australia is planning to test the physical and microbiological parameters of the marine environment.	High	ConocoPhillips Australia conducted a review of control measures relevant to the mitigation of impacts associated with the physical and microbiological parameters of the marine environment to ensure impacts were adequately assessed. Further, section 10.5.4 (Measuring and monitoring) of the Implementation Strategy provides a summary of the environmental monitoring that will be undertaken as part of the Otway Exploration Drilling Program.
547	224	ID:778, ID:1027, ID:1214, ID:1215	ID13	8/03/2023 12:28	Relevant person queried if ConocoPhillips Australia is aware of any potential geological impact.	High	ConocoPhillips Australia advised that drilling has been conducted safely for over 50 years in the offshore environment in the Otway Basin, with all wells in the Otway Exploration Drilling Program being plugged and abandoned as per Australian regulatory requirements, with negligible geological impact at the time of drilling (penetration of the formations at the point of the well) and no predicted short or long-term impacts.
3129	270	ID:1215	ID13	28/08/2023 11:40	Relevant person stated that the drilling program will hamper their operations and the lobsters that inhabit them.	High	ConocoPhillips Australia clarified that the activity presented in the Environment Plan is for short-term, temporary seabed surveys and exploration drilling with no cause-effect pathways identified for impacts to the long-term sustainability of the fishery.
3129	271	ID:1215	ID13	28/08/2023 11:48	Relevant person provided feedback regarding the dependence fisheries have on the local natural environment to collect brood stock.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol).
3129	272	ID:1215	ID13	28/08/2023 11:56	Relevant person stated that gas exploration and drilling, specifically thermal discharges, can affect the physical properties of water by elevating the localised temperature at discharge locations potentially disrupting the thermal balance of the ecosystem.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
3129	275	ID:1215	ID13	28/08/2023 13:13	Relevant person stated that gas exploration and drilling can affect the physical properties of water, including circulation due to the creation of physical barriers that impede water flow and cause changes in currents, impacting the distribution of heat and nutrients in the affected areas, potentially affecting temperature gradients and other parameters.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as impacts to water quality associated with exploration drilling were adequately assessed in Chapters 6.8 and 6.9 of the EP.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3129	276	ID:1215	ID13	28/08/2023 14:19	Relevant person stated that gas exploration and drilling can affect the physical properties of water, including sediment resuspension from the seafloor due to construction and drilling operations, increasing turbidity, impacting parameters related to light availability and photosynthesis.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as described in section 6.3.5.3.
3129	277	ID:1215	ID13	28/08/2023 14:21	Relevant person stated that stated that gas exploration and drilling, specifically from chemical discharges, can affect the physical properties of water, by introducing substances that may alter water chemistry and adversely impact parameters such as pH, salinity and dissolved oxygen levels.		ConocoPhillips Australia assessed the types of chemicals used for drilling and their effects and included CM12: General and Hazardous Chemical Management Procedures.
3129	278	ID:1215	ID13	28/08/2023 14:33	Relevant person provided feedback regarding underwater noise impacting aquatic species, especially lobsters.	High	ConocoPhillips Australia provided an overview of the underwater sound impact assessments relevant to southern rock lobster, with impacts from non-impulsive and impulsive sound restricted to within 10's to 170 metres of the sound source with negligible impacts, as assessed in sections 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors and 6.7.5 Identifying Sound-sensitive Receptors.
3129	279	ID:1215	ID13	28/08/2023 8:25	Relevant person provided feedback regarding the construction of offshore platforms and laying of pipelined resulting in habitat destruction, resulting in the relocation of lobsters impacting survival and reproductive success.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity as no offshore platforms or laying of pipe are being proposed. CM06: Mooring Plan addresses impacts associated with the proposed activity
3129	280	ID:1215	ID13	28/08/2023 8:30	Relevant person provided feedback regarding underwater noise impacting aquatic species, especially lobsters.	High	ConocoPhillips Australia provided an overview of the underwater sound impact assessments relevant to southern rock lobster, with impacts from non-impulsive and impulsive sound restricted to within 10's to 170 metres of the sound source, as assessed in sections 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors and 6.7.5 Identifying Sound-sensitive Receptors.
3129	281	ID:1215	ID13	28/08/2023 8:32	Relevant person stated that gas exploration and drilling can have significant impacts, particularly through water contamination, on marine life (including lobsters) as chemicals released into the marine environment can impact water quality and habitat composition. In particular, lobsters, as filter feeders, are susceptible to ingesting and accumulating pollutants, which may have long-term negative effects on their health, growth, and reproduction.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program and CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment, particularly benthic communities, were adequately assessed.
3129	282	ID:1215	ID13	28/08/2023 8:33	Relevant person stated that gas exploration and drilling can have significant impacts (displacement and disturbance to natural processes) on marine life, including lobsters which can potential leading to population declines.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as there are no predicted changes to lobster populations as the result of the proposed Otway Exploration Drilling Program.
3129	283	ID:1215	ID13	28/08/2023 8:34	Relevant person advised that gas exploration and drilling can have significant impacts, particularly through bioaccumulation, on marine life, including lobsters as heavy metals released could result in long-term damage. Information was cited Nkechi et al., 2019 and Xu et al., 2018.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program and CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment, particularly benthic communities, were adequately assessed.
3129	284	ID:1215	ID13	28/08/2023 8:35	Relevant person advised that hatcheries have been affected by gas exploration and drilling (ex. Queensland coal seam gas extraction raised concerns about the potential to impact nearby hatcheries), with extraction process involving hydraulic fracturing and the extraction of large volumes of ground water. Information was cited Randall, 2015.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.
3129	285	ID:1215	ID13	28/08/2023 8:37	Relevant person advised that hatcheries have been impacted by gas exploration and drilling (ex. Deep water horizon spill had inverse effects on the spawning grounds and larval stages of numerous fish species). Information was cited Sumaila et al., 2012.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09, CM12, CM13, CM14, CM15, CM16, CM17 to ensure impacts to the receiving marine environment were adequately assessed.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3129	286	ID:1215	ID13	28/08/2023 8:37	Relevant person advised that hatcheries have been affected by gas exploration and drilling (ex. Sakhalin Island, in the Sea of Okhotsk an oil and gas project raised concerns about its impact on the critically endangered Western Pacific gray whales. The project involved offshore drilling and pipeline construction, potentially affecting the whales' feeding areas and migration routes. Information was cited Leonov, A. 2000).	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.
3129	287	ID:1215	ID13	28/08/2023 8:38	Relevant person provided feedback regarding cases where hatcheries have been affected by wastewater spills to creeks affecting downstream water quality and environmental health.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.
3129	288	ID:1215	ID13	28/08/2023 8:39	Relevant person provided feedback regarding cases where hatcheries have been affected by wastewater spills to creeks affecting downstream water quality and environmental health.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.
3129	289	ID:1215	ID13	28/08/2023 8:39	Relevant person provided feedback regarding historical incidents associated with ConocoPhillips operations globally.	High	ConocoPhillips Australia identified that the incidents referenced related to onshore and offshore production operations, and provided information specific to exploration drilling activities which show zero incidents resulting an uncontrolled release of formation fluids contributing to a fire, pollution event and/or direct impacts to personnel where regaining control of the well requires a third party well control specialist in the last 10 years.
3129	290	ID:1215	ID13	28/08/2023 8:40	Relevant person stated that subsurface pressure and flow patterns can be altered during drilling and potentially lead to changes in groundwater levels, aquifer depletion, or induce seismic activity. Information was cited Zoback and Gorelick, 2012.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program, CM15: Well Design and Delivery Process and CM17: NOPSEMA accepted Well Operations Management Plan to ensure impacts to the receiving environment were adequately assessed.
3129	291	ID:1215	ID13	28/08/2023 8:47	Relevant person stated that fluids and solids are introduced into geological formations during drilling which can cause damage to the reservoir rock. Information was cited Blasingame and Holditch, 1985.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program, CM15: Well Design and Delivery Process and CM17: NOPSEMA accepted Well Operations Management Plan to ensure impacts to the receiving environment were adequately assessed.
3129	292	ID:1215	ID13	28/08/2023 8:48	Relevant person stated that in areas where significant fluid extraction occurs, land subsidence may occur due to the compaction of reservoir rocks and can have long-term implications for the Otway Basin environment and infrastructure. Information was cited Galloway and Burbey, 2011.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as hydraulically fracturing is not an included activity in the proposed Otway Exploration Drilling Program.
3129	293	ID:1215	ID13	28/08/2023 8:48	Relevant person stated that improper handling of drilling fluids, spills, or leaks from drilling operations can lead to the contamination of groundwater, affecting both water quality and the viability of groundwater resources and its adjacent areas. Information was cited Jackson et al., 2013.	High	ConocoPhillips Australia conducted a review of relevant control measures to ensure that the proper controls associated with the use of drilling fluids was assessed.
3129	294	ID:1215	ID13	28/08/2023 8:49	Relevant person stated that high-intensity drilling activities, particularly hydraulic fracturing have been linked to an increased occurrence of small to moderate earthquakes in some region which can pose a risk to infrastructure and public safety. Information was cited Ellsworth, 2013.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as significant extractions of fluid is not proposed during the Otway Exploration Drilling Program.
3129	295	ID:1215	ID13	28/08/2023 8:50	Relevant person stated that elevated temperatures can increase the metabolic rate of lobsters and potentially lead to initially faster growth, however prolonged exposure to high temperatures can stress the lobsters and affect overall growth rates. Information was cited Ong and Burnett, 1997.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
3129	296	ID:1215	ID13	28/08/2023 8:51	Relevant person stated that warmer temperatures can accelerate moulting and development which might result in softer shells, leaving lobsters more vulnerable to predation and injury. Information was cited Aiken and Waddy, 1993.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
3129	297	ID:1215	ID13	28/08/2023 8:52	Relevant person stated that heat can influence the reproductive behaviour of lobsters (i.e. changes in mating patterns, migration, and spawning times) which can have implications for the reproductive success of populations.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3129	298	ID:1215	ID13	28/08/2023 8:52	Relevant person stated that prolonged exposure to high temperatures can lead to physiological stress in lobsters which can compromise the immune system and result in higher susceptible to disease.	High	ConocoPhillips Australia reviewed 6.9.5.1 Physical Environment which assesses the impact of cooling water on marine water temperature, with localised impacts only.
3129	299	ID:1215	ID13	28/08/2023 8:52	Relevant person stated that increasing water temperatures due to climate change can lead to shifts in the distribution and habitat preferences of lobsters.	Low	The objection or claim is not relevant to the adverse effects of the proposed Otway Exploration Drilling Program to which the Environment Plan relates and is beyond the scope of this assessment.
3129	300	ID:1215	ID13	28/08/2023 8:53	Relevant person stated that changes in lobster populations can have cascading effects on marine ecosystems, and that altered lobster growth and behaviour can impact the food web dynamics of the ecosystem. Information was cited Fogarty et al., 2007.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as there are no predicted changes to lobster populations as the result of the proposed Otway Exploration Drilling Program.
3129	301	ID:1215	ID13	28/08/2023 8:53	Relevant person provided feedback regarding crop yield reductions, disruption of forest ecosystems and melting of permafrost associated with heat stress and global warming	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.
3129	302	ID:1215	ID13	28/08/2023 8:55	Relevant person stated that high ocean temperatures can lead to coral bleaching which weakens the corals and can result in coral death. Information was cited Hughes et al., 2017.	Low	ConocoPhillips Australia determined that no alterations were deemed necessary as GHG emissions have previously been assessed in Chapter 6.5 of the EP.
3129	303	ID:1215	ID13	28/08/2023 8:55	Relevant person stated that elevated temperatures in aquatic ecosystems can lead to shifts in species distributions, changes in predator-prey interactions, and disruptions in nutrient cycling. Information was cited Woodward et al., 2010.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
3129	304	ID:1215	ID13	28/08/2023 8:55	Relevant person provided feedback regarding disturbed sediments carrying contaminants including heavy metals and hydrocarbons affecting water inlet pipes.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in disturbed sediments, as a result of the proposed activity, carrying contaminants including heavy metals and hydrocarbons affecting the water inlet pipes, and included information on heavy metals in section 6.8.5.1 Drill Cuttings and Fluid and a Baraite Standard in Table 6-40: Control measures for planned drilling discharges and ALARP demonstration.
3129	305	ID:1215	ID13	28/08/2023 8:56	Relevant person stated that when drilling involves oil or hydrocarbon extraction, there's a risk of oil spills or leakage which can have severe impacts on water quality and marine life. Information was cited NRC, 2003.	High	ConocoPhillips Australia assessed the impacts of minor and major oil spills in the EP.
3129	306	ID:1215	ID13	28/08/2023 8:56	Relevant person stated that drilling fluids and additives can contain various chemicals, such as biocides, lubricants, and corrosion inhibitors which can enter the water supply. Information was cited NASEM, 2020.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program and CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately assessed.
3129	307	ID:1215	ID13	28/08/2023 8:57	Relevant person stated that cooling water used in drilling processes may carry excess heat, which could affect the temperature and thermal characteristics of the water entering the hatchery. Information was cited Ruddick and Ancil, 2002.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.
3129	308	ID:1215	ID13	28/08/2023 8:57	Relevant person provided feedback regarding heavy metals naturally present in rock formations being mobilised posing a risk to aquatic organisms.	Low	ConocoPhillips Australia provided information on the geological characteristics and lithology of the offshore Otway Basin, being typical of offshore marine sedimentary deposits (with high concentrations of heavy metals not typically associated with these lithologies or the geological processes that form them) and included information on heavy metals in section 6.8.5.1 Drill Cuttings and Fluid and a Baraite Standard in Table 6-40: Control measures for planned drilling discharges and ALARP demonstration
3129	309	ID:1215	ID13	28/08/2023 8:58	Relevant person provided feedback regarding underwater noise and vibrations impacting aquatic species, especially the spiny rock lobster and their habitats.	High	ConocoPhillips Australia provided an overview of the underwater sound impact assessments relevant to southern rock lobster, with impacts from non-impulsive and impulsive sound restricted to within 10's to 170 metres of the sound source with negligible impacts, as addressed in sections 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors, and 6.7.5 Identifying Sound-sensitive Receptors.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3129	310	ID:1215	ID13	28/08/2023 8:59	Relevant person provided feedback regarding resuspended sediments increasing turbidity, and negatively affecting photosynthesis of aquatic plants and phytoplankton.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, and that an increase in sediment intake through the intake inlet was not predicted as described in section 6.3.5.3.
3129	311	ID:1215	ID13	28/08/2023 8:59	Relevant person provided feedback regarding increased sediment loads leading to clogging of filters and impacting the efficiency of hatchery water circulation systems.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, and that an increase in sediment intake through the intake inlet was not predicted as described in section 6.3.5.3
3129	312	ID:1215	ID13	28/08/2023 9:00	Relevant person provided feedback regarding the resuspension of sediments settling and accumulating within hatchery water intake pipes and increasing the frequency of maintenance or cleaning.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, resulting in an increase in the frequency of maintenance of cleaning, as described in section 6.3.5.3.
3129	313	ID:1215	ID13	28/08/2023 9:00	Relevant person provided feedback regarding the resuspension of sediments altering the water chemistry of hatcheries.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet altering the water chemistry of the hatchery. In addition, a Barite quality performance standard was added to CM12: Chemical Selection Process.
3129	314	ID:1215	ID13	28/08/2023 9:01	Relevant person stated that if sediments contain contaminants their resuspension can lead to increased contaminant concentrations in the water. Information was cited Gasiūnaitė and Lubyte, 2006.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.
3129	315	ID:1215	ID13	28/08/2023 9:01	Relevant person stated that increased sediment loads can impact the health of larva and juvenile lobsters in the hatchery by affecting feeding efficiency, respiratory structures, and overall survival.	High	ConocoPhillips Australia conducted a review of relevant control measure CM09: Drilling Program to ensure impacts to benthic communities were adequately assessed.
3129	316	ID:1215	ID13	28/08/2023 9:02	Relevant person stated that chemical residues can alter water quality and potentially affect the properties of seawater and disrupt natural processes. Information was cited Yakimov et al., 2007.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.
3129	317	ID:1215	ID13	28/08/2023 9:02	Relevant person stated that chemical residues can be toxic to various marine organisms, including plankton, fish, and benthic organisms leading to cascading effects throughout the ecosystem. Information was cited Brooker et al., 2001.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to sensitive receptors in the receiving marine environment were adequately considered.
3129	318	ID:1215	ID13	28/08/2023 9:04	Relevant person stated that chemicals can bioaccumulate and biomagnify in the marine food web posing potential risks to both wildlife and human health Information was cited Fisk and Tomy, 2003.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.
3129	319	ID:1215	ID13	28/08/2023 9:04	Relevant person stated that chemical residues can interfere with reproductive and developmental processes in marine organisms. Information was cited Tyler and Sumpter, 1996.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.
3129	320	ID:1215	ID13	28/08/2023 9:05	Relevant person stated that chemical residues can lead to shifts in the composition of marine communities i.e. potential decline of sensitive species and dominance of tolerant species. Information was cited Jackson et al., 2016.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to sensitive receptors in the receiving marine environment were adequately considered.
3129	321	ID:1215	ID13	28/08/2023 9:05	Relevant person stated that the persistence of chemicals could cause long-term ecosystem effects. Information was cited Diaz and Rosenberg, 2008.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.
3129	322	ID:1215	ID13	28/08/2023 9:06	Relevant person provided feedbacks regarding spills to rivers impacting downstream hatcheries.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

## APPENDIX C2: Feedback, Objections and Claims under Reg16(b)

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3129	323	ID:1215	ID13	28/08/2023 9:07	Relevant person provided feedback regarding the potential for spilled substances to impact water quality which may subsequently affect the health and growth of hatchery organisms.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.
3129	324	ID:1215	ID13	28/08/2023 9:07	Relevant person provided feedback regarding the potential for spilled substances to have toxic effects (i.e. mortality, reduced growth, developmental abnormalities) on aquatic organisms, including those in hatcheries.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.
3129	325	ID:1215	ID13	28/08/2023 9:08	Relevant person provided feedback regarding the potential for spilled substances to impact the reproductive success of hatchery organisms, subsequently affecting the hatchery's ability to replenish its stocks.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.
3129	326	ID:1215	ID13	28/08/2023 9:08	Relevant person provided feedback regarding the potential for spilled substances to bioaccumulate and biomagnify in the food chain leading to higher concentrations of contaminants in hatchery organisms. Subsequently this could pose a risk to the organisms and those that consume them.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.
3129	327	ID:1215	ID13	28/08/2023 9:08	Relevant person provided feedback regarding the potential for spilled substances to impact the physical characteristics of the aquatic environment (i.e. sediment deposition, alteration of substrate composition) subsequently impacting the availability of suitable habitat conditions for hatchery organisms.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.
3129	328	ID:1215	ID13	28/08/2023 9:09	Relevant person provided feedback regarding the impacts of river spills on hatcheries, including closures, reduced production, mortality, all resulting in economic losses for hatchery operators and the communities relying on products.	Low	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the EP were deemed necessary as there is no proposed activities which will occur within river systems.
3129	329	ID:1215	ID13	28/08/2023 9:09	Relevant person provided feedback regarding the potential for spilled substances to cause genetic damage in hatchery organisms, subsequently affecting their overall genetic diversity and fitness.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.
3129	330	ID:1215	ID13	28/08/2023 9:10	Relevant person provided feedback regarding the potential for spilled substances to persist in the environment and result in long-term impacts to the ecosystem, food web dynamics and community structure which the hatchery relies on.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.
3129	331	ID:1215	ID13	28/08/2023 9:10	Relevant person informed that hydraulic fracturing involves the injection of a mixture of water, sand, and chemicals into underground rock formations to release gas. Relevant person stated that if these chemicals migrate through groundwater or surface water pathways, they could potentially contaminate the ocean, affecting marine ecosystems.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.
3129	332	ID:1215	ID13	28/08/2023 9:11	Relevant person stated that chemicals used in fracking fluids, could potentially leach into groundwater, rivers, or estuaries, eventually reaching the ocean which could harm marine life and disrupt marine ecosystems.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.
3129	333	ID:1215	ID13	28/08/2023 9:11	Relevant person provided feedback regarding the production of large quantities of water produced by natural gas extraction. Relevant person stated that the produced water contains fracking chemicals, salts, heavy metals, and radioactive materials and that improper disposal of produced water can lead to ocean contamination and harm marine organisms.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.
3129	334	ID:1215	ID13	28/08/2023 9:12	Relevant person provided feedback regarding gas drilling operations, specifically those involving hydraulic fracturing, and the potential for these to induce seismic activity disturbing the marine environment and coastal areas	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.
3129	335	ID:1215	ID13	28/08/2023 9:12	Relevant person provided feedback regarding the construction and installation of subsea structure and their impacts to marine habitats and ecosystems.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program is purely exploratory with no proposed installation of permanent operating infrastructure.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3129	336	ID:1215	ID13	28/08/2023 9:13	Relevant person provided feedback regarding methane emissions associated with the drilling program and their contribution to climate change, specifically impacts to the marine environment.	High	ConocoPhillips Australia provided information on the assessment of emissions generated as part of the activity which are small when compared to national emissions, insignificant on a global scale and are not predicted to have determinable impacts.
3129	337	ID:1215	ID13	28/08/2023 9:14	Relevant person provided feedback regarding accidental releases of gas, drilling fluids and chemicals which have the potential to negatively impact organisms and systems in the marine environment.	High	ConocoPhillips Australia provided an overview of relevant risk assessments which demonstrated impacts were ALARP and of acceptable levels.
3129	338	ID:1215	ID13	28/08/2023 9:14	Relevant person provided feedback that activities associated with the program which generate underwater noise may disrupt critical behaviours of marine organisms.	High	ConocoPhillips Australia provided an overview of relevant impact assessments which demonstrated impacts were ALARP and of acceptable levels and added feedback to Table 4-29 Victorian Southern Rock Lobster Fishery.
3129	339	ID:1215	ID13	28/08/2023 9:16	Relevant person provided feedback regarding exploration activities hampering the growth and reproduction of the spiny rock lobster and damage to its habitat affecting GDP and long-term sustainability of this resource.	High	ConocoPhillips Australia provided an overview of relevant impact assessments which demonstrated impacts were ALARP and of acceptable levels.
4145	36	ID:782	ID14	17/04/2023 16:05	Relevant person stated that there is international consensus that anthropogenic underwater noise is a pervasive yet relatively transient form of pollution.	High	ConocoPhillips Australia acknowledges feedback provided by the relevant person and reviewed the assessment of underwater sound impacts on sensitive receptors and reflected feedback.
4145	37	ID:782	ID14	17/04/2023 16:09	Relevant person stated that underwater acoustics can pose a risk to marine mammals in the vicinity of operations (i.e. hearing impairment, behavioural changes, stress responses, barotrauma)	High	ConocoPhillips Australia acknowledges feedback provided by the relevant person and reviewed the assessment of underwater sound impacts on sensitive receptors and reflected feedback.
4145	38	ID:782	ID14	17/04/2023 16:11	Relevant person stated that as multiple cetacean species utilise the area it is difficult to identify a time period where activities can occur with minimal impact.	High	ConocoPhillips Australia concurred with this assessment and updated section 6.6.7.1 to reflect this feedback.
4145	39	ID:782	ID14	17/04/2023 16:12	Relevant person stated that the proposal lacks specific information about the frequency and noise values of the proposed activities, but suggests that the equipment planned for seabed surveys may have a lower impact on marine organisms compared to seismic systems.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and determined that no alterations were deemed necessary as noise modelling and impact assessment has been conducted on the technique that is considered to represent the largest acoustic source.
4145	40	ID:782	ID14	17/04/2023 16:12	Relevant person stated that utilising dynamic positioning is likely to be the noisiest activity and suggested that the EP should detail how any potential disturbance to marine mammals from this activity will be mitigated.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. This will be used to inform CM08: Whale Management Plan.
4145	41	ID:782	ID14	17/04/2023 16:19	Relevant person stated that consideration needs to be given to cetacean species with BIAs (southern right whale, pygmy blue whale, dwarf minke whale and humpback whale) within the exploration permits and surrounding areas.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. This will be used to inform CM08: Whale Management Plan. Further, ConocoPhillips Australia incorporated additional information in EP section 4.6.9, 6.6.7 and 6.7.6 on the dwarf minke whale to fill any previous gaps.
4145	42	ID:782	ID14	17/04/2023 16:20	Relevant person emphasised the importance of western Victorian coastline to the southern right whale breeding population and suggested that individuals may migrate through the western Bass Strait, including the proposed exploitation areas.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan. Further, Section 4.6.9.2 has been updated to reflect information provided.
4145	43	ID:782	ID14	17/04/2023 16:21	Relevant person stated that VIC/P79 and T/49P overlap with the high use foraging area for pygmy blue whales in the Bonney Upwelling System of Western Victoria.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

## APPENDIX C2: Feedback, Objections and Claims under Reg16(b)

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
4145	44	ID:782	ID14	17/04/2023 16:22	Relevant person stated that the Bass Strait is a migratory route for the southern right whale, humpback whale and dwarf minke whale.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan.
4145	45	ID:782	ID14	17/04/2023 16:23	Relevant person referenced a diverse cetacean stranding record for King Island and NW Tasmania, stating that it is fair to assumption the proposed exploration areas could be traversed by many cetacean species at any time of year.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and determined that no changes were deemed necessary as the EP has assessed impacts and risks to a range of cetacean species, including low and high frequency cetaceans and those with biologically important areas and behaviours. The level of detail provided in the EP is commensurate to the significance and uncertainty associated with impacts and risks.
4145	46	ID:782	ID14	17/04/2023 16:24	Relevant person recommended that marine mammal monitoring and mitigation actions and procedures should be implemented, similar to those outlined in EPBCA Policy 2.1 and the Underwater Piling Noise Guidelines.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan.
4145	47	ID:782	ID14	17/04/2023 16:24	Relevant person requested that the occurrence of cetaceans, pinnipeds, turtles, and/or penguins within T/49P is reported within 90 days. Further, that those within 500 m of the drilling or survey activity are reported within 24 hours.	High	ConocoPhillips Australia has reviewed feedback provided by relevant person and updated the Implementation Strategy (Table 10-8 and 10-10) to include the provision of marine mammal observations within T/49P to NRE-Tas.
4145	48	ID:782	ID14	17/04/2023 16:25	Relevant person recommended that surveys are conducted to collect baseline information on species presence prior to seabed surveys and exploration drilling ; and that passive acoustic mooring technology may provide a cost-effective and robust option for establishing the occurrence of cetaceans and pinnipeds.	High	ConocoPhillips Australia confirmed that information collected from aerial surveys was used to inform the development of the EP, and that consideration of passive acoustic monitoring was included in the ALARP assessment. CM08: Whale Management Plan
4145	49	ID:782	ID14	17/04/2023 16:26	Relevant person stated that they are aware that ConocoPhillips Australia has conducted monthly aerial marine mammal surveys in the Otway Basin in 2021 and 2022-23 and recommends that they surveys are used to inform the development of the EP.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and confirmed that information collected from aerial surveys is being used to inform the development of the EP.
4145	50	ID:782	ID14	17/04/2023 16:27	Relevant person stated that indirect impacts for other top predators (i.e. fur seals) which feed on pelagic fish and cephalopods during the spring/summer/early autumn which is an energetically important breeding period.	Low	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the EP were deemed necessary as there are no biologically important areas or behaviours identified for Otariid species within the most conservative area (EMBA) that may be affected by sound resulting in behavioural disturbance.
4145	51	ID:782	ID14	17/04/2023 16:28	Relevant person recommended that the impact of lighting on seabird species in line with the National Light Pollution Guidelines is considered in the proposal.	High	ConocoPhillips Australia reviewed relevant impact assessments (specifically light and flaring emissions assessments) to ensure that impacts to seabird species (particularly during the breeding season) were adequately assessed. Further, accepted mitigation measures relevant to these impacts are within CM02: Vessel and MODU Operating Procedures and CM07: Light Management Plan.
4145	52	ID:782	ID14	17/04/2023 16:29	Relevant person recommended that indirect impacts of prey disturbance should be considered for seabirds, particularly during energetically important breeding seasons.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and subsequently reviewed relevant impact assessments (specifically non-impulsive and impulsive noise emission assessments) to ensure that impacts to seabird prey species (fish and invertebrates) were adequately assessed.
4145	53	ID:782	ID14	17/04/2023 16:30	Relevant person stated that the shy albatross, short-tailed shearwater and little penguin are present on off the west coast of Tasmania. Relevant person suggested that acoustic disturbance on these species is considered and that the avoidance of key foraging habitat is avoided during the breeding season.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and updated section 6.6.7 and 6.7.7 to include an assessment of acoustic impacts to bird species which was previously not considered.
4145	54	ID:782	ID14	17/04/2023 16:31	Relevant person informed that the harvesting of short-tailed shearwaters is a cultural, non-commercial, and commercial activity (mutton birding), particularly for the Tasmanian Aboriginal Community, allowed for in reserves (except Nature Reserves) and private land. Relevant person suggested consulting mutton birding stakeholders regarding potential risks and mitigation options.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and has since included information on mutton birding in Section 4.6.7.2 of the EP.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
4145	55	ID:782	ID14	17/04/2023 16:33	Relevant person detailed a list of land tenures, specifically in relation to Tasmania, that should be considered under the EP.	High	ConocoPhillips Australia updated Chapter 4 (Existing Environment) to include the land tenures values and sensitivities. Further, ConocoPhillips Australia has carried these through the risk assessment chapters for Loss of Well Control and Marine Diesel Oil, where relevant to the environment that may be affected by these worst-case credible scenario.
4145	56	ID:782	ID14	17/04/2023 16:34	Relevant person stated that NRE Tas's PWS is responsible for reserves and crown land with each reserve category requiring different management approaches and permit activities as described in Schedule 1 of the NPRMA.	High	ConocoPhillips Australia acknowledges feedback provided by the relevant person and included the National Parks and Reserves Management Act 2022, including the implications of this legislation, in the Legislation and Other Requirements section of the EP.
4145	57	ID:782	ID14	17/04/2023 16:35	Relevant person stated that impacts to cultural and natural values of reserves may be impacted from "worst case scenarios".	High	ConocoPhillips Australia has reviewed feedback provided by relevant person and conducted a review developed relevant control measures (CM01, CM02, CM05, CM06, CM08, CM09, CM013, CM014, CM015, CM016 and CM017) to ensure that potential impacts to cultural and natural reserves are adequately assessed.
4145	58	ID:782	ID14	17/04/2023 16:35	Relevant person requested that all land authorities are consulted if they are at risk from potential risk scenarios.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it.
4145	59	ID:782	ID14	17/04/2023 16:36	Relevant person suggested that the EP should consider the emergency response capabilities and existing framework for different scenarios including King Island and associated emergency management committees, State and regional emergency management committees, land authorities and lead agencies.	High	ConocoPhillips Australia confirmed the Otway Exploration Drilling Program EP and OPEP were developed in consideration of consultation feedback from these groups.
4184	467	ID:307	ID20	16/10/2023 18:18	Relevant person provided clarification on the application of the southern right whale Biologically Important Area (BIA) geospatial data released in September 2023.	High	ConocoPhillips Australia reviewed and amended all references to southern right whale BIAs through-out the Environment Plan and revised the impact assessments to reflect the latest information available regarding the migration and reproductive BIAs for this species, as advised.
540	157	ID:143, ID:753	ID28	2/03/2023 15:21	Relevant person advised that unexploded ordnance (UXO) may be present on and in the sea floor and therefore, ConocoPhillips Australia must assess the risks associated with conducting activities in the area.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and updated Section 6.2.5.1 of the EP to include information provided.
540	158	ID:143, ID:753	ID28	2/03/2023 15:22	Relevant person advised that all activities are conducted at ConocoPhillips Australia's own risk relating to the presence of UXO within the areas.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and updated Section 6.2.4.6 and 6.2.5.1 of the EP to include information provided. Further, ConocoPhillips Australia commissioned RPS Explosives Engineering Services to conduct desktop study and risk assessment (Appendix K) which is incorporated into Section 4.7.3, 6.2.4.6 and 6.2.5.1 of the EP.
540	159	ID:143, ID:753	ID28	2/03/2023 15:47	Relevant person requested that there is continued consultation with the AHS to issue NOTMARs.	High	ConocoPhillips Australia will contact AHO prior to seabed survey, anchor pre-lay and drilling activities as per CM03: Marine and Coastal Users Consultation and Communication Plan.
2521	85	ID:116	ID33	14/03/2023 15:15	Relevant person requested that ConocoPhillips continues to liaise with NRE-Tas regarding the impacts on cetaceans and seabirds, including the identification of seasonal sensitivities.	High	ConocoPhillips Australia committed to ongoing consultation with NRE-Tas during development of Whale Management Plan and Light Management Plan.
2521	86	ID:116	ID33	14/03/2023 15:15	Relevant person recommended validating response actions by ground-truthing to ensure they are fit for purpose.	High	Ground-truthing was conducted by ConocoPhillips Australia and AMOSC personnel from 12-14 July 2023 and Tactical Response Plans updated and provided. CM13: NOPSEMA Accepted Oil Pollution Emergency Plan (OPEP)
1657	88	ID:116	ID33	13/06/2023 10:00	Relevant person stated that some values and sensitivities are not listed in the OPEP (i.e. First Nations cultural heritage, King Island community)	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and confirmed the OPEP includes the listing of First Nations heritage and coastal community values and sensitivities in the NEBAs for MDO and LOWC - Tables 2-11 and 2-12.
1657	89	ID:116	ID33	13/06/2023 10:00	Relevant person stated that they are required to validate the proposed oil wildlife response strategy and initial response actions as outlined in the OPEP.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations were deemed necessary as no objections to the EP or OPEP content were raised.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
1657	91	ID:116	ID33	13/06/2023 10:00	Relevant person requested that ConocoPhillips Australia identifies forward operating base locations on King Island that are key to successful response.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and has since updated the Tactical Response Plans to include potential locations for Forward Operating Base which were identified during a ground-truthing exercise. Further, this was updated in CM13: NOPSEMA Accepted Oil Pollution Emergency Plan.
2574	115	ID:116	ID33	26/04/2023 9:00	Relevant person requested that ConocoPhillips Australia consider pre-emptively stockpiling response equipment on King Island prior to conducting drilling adjacent to King Island.	High	ConocoPhillips Australia has committed to having first strike spill response resources pre-emptively located on King Island in the event that drilling is scheduled to occur within the central zone of the T/49P Operational Area, adjacent to King Island. Table 6-1 of the OPEP has updated to reflect this.
2574	116	ID:116	ID33	28/04/2023 9:00	Relevant person requested that ConocoPhillips Australia consider pre-emptive debris clearance in TRPs and including possible methods to collect waxy materials.	High	ConocoPhillips Australia has included the requirement for pre-emptive debris clearance in the section 7 and 8.6 of the Shoreline Plan and TRPs, and methods for recovery of hydrocarbons, including manual removal of weathered waxy residues, are provided in the Shoreline Plan.
3129	273	ID:1622	ID35	1/09/2023 12:26	Relevant person stated that the information provided regarding the positions of shipwrecks stated in the EP are inaccurate and not the known position of a shipwreck but the centrepoin of an area that the unfound shipwreck may be located based off historic records.	High	ConocoPhillips Australia updated Section 4.8.1 (Marine Archaeological Heritage) to reflect the information provided.
3129	274	ID:1622	ID354	1/09/2023 12:27	Relevant person stated that the risk assessment on marine heritage is much higher than assessed and there is no control measure in place to ensure the project does not impact maritime heritage. Relevant person suggested that survey data should be reviewed by an experienced maritime archaeologist and may need to include multiple survey techniques to determine appropriate mitigation measures.	High	ConocoPhillips Australia conducted a review of the relevant control measure CM05: Cultural Heritage Protection Plan to ensure impacts to the cultural heritage of the receiving environment were adequately assessed. Further,
2522	87	ID:176	ID36	28/11/2022 14:25	Relevant person provided feedback regarding the cumulative impact of offshore exploration activities.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.
1658	144	ID:180, ID:1546	ID37	13/06/2023 12:00	Relevant person suggested that it would be beneficial to see the NEBA criteria in the OPEP.	High	ConocoPhillips Australia included the NEBA criteria into the OPEP.
1658	145	ID:180, ID:1546	ID37	13/06/2023 12:00	Relevant person informed that the Port of Hastings has been left out of the list of ports.	High	ConocoPhillips Australia included the Port of Hastings into the OPEP tables and Appendix 5: Contact Directory.
1658	146	ID:180, ID:1546	ID37	13/06/2023 12:00	Relevant person requested clarification in the OPEP table 3-4 regarding what regulatory notifications are to be made.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the OPEP (Table 3-4) were deemed necessary as required content was provided.
1658	147	ID:180, ID:1546	ID37	13/06/2023 12:00	Relevant person advised that they would be interested in reviewing shoreline document.	High	ConocoPhillips Australia provided these documents.
1658	148	ID:180, ID:1546	ID37	13/06/2023 12:00	Relevant person suggested that the definition of environmental in the OPEP is consistent with the NOPSEMA definition.	High	ConocoPhillips Australia included this definition in the next revision of the OPEP.
2663	134	ID:1526	ID433	31/07/2023 15:49	Relevant person provided feedback regarding the displacement of commercial fishers in the Bass Strait.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program.
2663	135	ID:1526	ID433	31/07/2023 15:56	Relevant person requested compensation for fishers or the chance for employment.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program.
2663	136	ID:1526	ID433	31/07/2023 15:59	Relevant person stated that noise causes behavioural disturbance in fish which result in a change of normal movements.	High	ConocoPhillips Australia update sections 6.6 an 6.7 to address this feedback.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

## APPENDIX C2: Feedback, Objections and Claims under Reg16(b)

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3432	344	ID:1383	ID462	5/09/2023 10:22	Relevant person provided feedback regarding the proximity of the activity to Portland as this is a main fishing ground and displacement would cause increased costs for the fishing business.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol).
2417	123	ID:657	ID470	13/07/2023 11:02	Relevant person stated that they are relevant and entitled to receive and to continue to receive information on the area as it becomes available.	High	ConocoPhillips Australia committed to ongoing provision of information.
2417	124	ID:657	ID470	13/07/2023 11:15	Relevant person suggested that it might make sense to have only one hole drilled at a time to reduce the chance of unknown conditions.	High	ConocoPhillips Australia provided confirmation of only drilling one hole at a time and updated section 2.2.2 Drilling Operations to clarify this.
2417	125	ID:657	ID470	13/07/2023 11:19	Relevant person stated that the map provided shows sharp drop-off to the west/south west, which suggests that these are marine canyons which likely contain recently deposited fine sediment that may be mobilised by shocks and become mobilised into turbidity currents, transferring sediment from near-shore to off-shore/the abyssal plane.	High	ConocoPhillips Australia provided an overview of water quality impact assessment, based on published literature from comparable activities, that predicts that the near shore will not be impacted by routine operational and drilling discharges.
2417	126	ID:657	ID470	13/07/2023 11:19	Relevant person stated that the main effect of the activity will be on water quality.	High	ConocoPhillips Australia provided an overview of water quality impact assessment, based on published literature from comparable activities, that predicts that the near shore will not be impacted by routine operational and drilling discharges.
536	11	ID:263	ID471	2/03/2023 15:45	Relevant person stated that the activity will cause the displacement of fishers and that light produce by the activity will attract squid away from fishing locations resulting in a loss of catch.	High	ConocoPhillips Australia reviewed the EP, specifically Section 6.4.5.3 which assesses light impacts on ecological species and adapted to include an assessment of impacts to squid.
536	12	ID:263	ID471	2/03/2023 15:52	Relevant person requested compensation on the basis that the activity will result in exclusion zones that displace fishing.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.
1823	117	ID:134	ID49	3/04/2023 12:00	Relevant person claimed that information sheets provided for the proposed activity by ConocoPhillips Australia were not easy to read and interpret.	High	ConocoPhillips Australia sought additional feedback.
1823	118	ID:134	ID49	3/04/2023 12:00	Relevant person recommended that the timelines for information and consultation be included in information sheets.	Low	ConocoPhillips Australia outlined proposed timeframes for consultation in February of 2023 and subsequently extended consultation in late July, and again in August 2023.
582	13	ID:211	ID5	3/03/2023 10:37	Relevant person provided feedback regarding the impact an offshore oil and gas facility would have on the pristine tourism value of the Great Ocean Walk.	High	ConocoPhillips Australia conducted a thorough review of controls measures to ensure impacts to Great Ocean based tourism were adequately considered. It was assessed that as the proposed activity is short-term there will be no long-term impacts to aesthetic values.
582	14	ID:211	ID5	3/03/2023 11:07	Relevant person requested compensation on the basis that the activity will result in long-term impacts to fisheries like the SRL.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.
582	121	ID:211, ID:785	ID5	3/03/2023 12:00	Relevant person provided feedback regarding military risk during exploration activities.	High	ConocoPhillips Australia reviewed relevant controls (CM01, CM02, CM05, and CM06) to ensure that the risks associated with UXO encounter are adequately assessed and mitigated.
2665	138	ID:211	ID5	24/07/2023 8:16	Relevant person suggested clarification regarding the 20hr statement (for vertical seismic profiling) which needs further clarification to ensure it reflects 20 hrs x 6 wells.	High	ConocoPhillips Australia reviewed and updated the EP so that each reference relating to VSP clearly states that it will occur for 20 hours per well for a maximum of 6 wells.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
1821	149	ID:205	ID50	2/06/2023 9:00	Relevant person provided feedback regarding the 'marine spatial squeeze' that the fishing industry is feeling due to increase industry activity, market access, regulation and cost of living.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.
1821	150	ID:205	ID50	2/06/2023 9:00	Relevant person stated that the number of activities is causing confusion and disengagement in the fishing community at a time of market uncertainty.	High	ConocoPhillips Australia has committed to collaborative consultation with other titleholders and relevant fishery associations and persons to minimise the potential for cumulative impacts to commercial fishers. This initiative is detailed in CM04: Commercial Marine Operators Adjustment Protocol.
1821	151	ID:205	ID50	2/06/2023 9:00	Relevant person stated that the lack of defined drilling locations is causing unnecessary stress.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.
1821	152	ID:205	ID50	2/06/2023 9:00	Relevant person provided feedback regarding the adjustment protocol and whether it will be flexible with changing market dynamics.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program.
1821	153	ID:205	ID50	2/06/2023 10:08	Relevant person stated that until the drilling locations are decided ConocoPhillips Australia will not know the full impact of the activity.	High	ConocoPhillips Australia updated section 1.4 of the EP to provide clarification on the evaluation of impacts and risks across the wider operational areas.
2536	105	ID:223	ID508	8/05/2023 10:00	Relevant person stated that bottom moored acoustic mooring is the BW industry standard.	High	ConocoPhillips Australia has contacted relevant specialists to support the development of/or peer review of CM08: Whale Management Plan.
3194	239	ID:223, ID:928, ID:1098	ID508	4/09/2023 8:11	Relevant person advised that monitoring equipment has been installed within the VIC/P79 operational area which will need to be avoided.	High	ConocoPhillips Australia added an additional section in Chapter 6.2 (Interference with Other Marine and Coastal Users) relevant to research (6.2.4.1). Further, a new EPS was developed which requires an avoidance area be established around research equipment in VIC/P79, that will be communicated to vessel and MODU operators prior to commencement of the activity.
2617	62	ID:227, ID:1186, ID:1187, ID:1188	ID510	6/03/2023 18:03	Relevant person provided feedback regarding the risk the proposed activity may have on the Melbourne to Hobart yacht race which occurs during December/January each year.	High	ConocoPhillips Australia included a notification to Ocean Racing Club Victoria where activities are planned for late-December to early-January for the 2024-25, 2025-26, 2026-27 and 2027-28 race periods (limited potential for the 2023-24 race) into CM03: Marine and Coastal Users Consultation and Communication Plan. Further, section 4.7.5.2 has been updated to include the information provided.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
1076	21	ID:822	ID523	15/04/2023 12:14	Relevant person queried whether there will be additional consultation as they are away for the proposed meetings. Relevant person provided feedback regarding the time frame for the notice of meetings and how they have been advertised.	High	ConocoPhillips Australia provided notifications for future consultation events.
3480	376	ID:1650	ID524	22/09/2023 21:40	Relevant person provided feedback regarding the timeline ConocoPhillips is seeking approval for the proposed drilling program as approval should not be sought until proposed drilling locations have been determined. Relevant person expressed specific concern regarding the overlap of the project area with Zeehan marine park as drilling would likely impact (benthic habitats, integrity of the marine park, migratory species).	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed. Additionally, ConocoPhillips Australia incorporated its position regarding the appropriateness of term of the EP in Section 1.4, and considers that it is essential to include the full scope of the proposed activities in the EP to ensure relevant person are able to make an informed assessment of potential impacts to their function, interests and activities.
3480	377	ID:1650	ID524	22/09/2023 21:41	Relevant person provided view that it was preferable to specify precise drilling locations.	High	ConocoPhillips Australia provided feedback to the relevant person on the process for selecting drilling locations; the conservative approach taken to ensure impacts and risks associated with all potential survey and drilling locations are assessed; the
3480	378	ID:1650	ID524	22/09/2023 21:43	Relevant person advised that they believe combining a 5-year drilling program into one EP is inappropriate, specifically in the context of escalating impacts of climate change on marine environments and threatened marine species. Relevant person provided feedback that the receiving environment of this proposal could change significantly over the life of the proposed project.	High	ConocoPhillips Australia has incorporated its position regarding the appropriateness of the term of the EP in Section 1.4, and considers that it is essential to include the full scope of the proposed activities in the EP to ensure relevant person are able to make an informed assessment of potential impacts to their function, interests and activities. ConocoPhillips Australia has specified the ongoing review process in the Implementation Strategy, particularly section 10.2.7 Management of Change,
3480	379	ID:1650	ID524	22/09/2023 21:44	Relevant person considered activities outside of the petroleum activity be considered in the EP.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the EP were deemed necessary.
3480	380	ID:1650	ID524	22/09/2023 21:46	Relevant person provided feedback regarding the assessment of risks associated with the proposal as some risks assessed as 'moderate' are under-represented. Relevant person expressed confusion regarding the risk matrix and queried why the likelihood assessment is focused on what has or hasn't happened over a 12 month period.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations were deemed necessary as the ConocoPhillips impact and risk methodology meets the requirements of the Environment Regulations and is consistent with relevant industry guidelines.
3480	381	ID:1650	ID524	22/09/2023 21:51	Relevant person requested confirmation that Conservation Advice was used to assess acceptability; disagreed with the process for comparing predicted impacts with acceptable levels, considered that assessments of acceptability in the draft EP did not consider feedback from relevant persons, and that any and all benefits that can be gained to protect coastal areas around a WHA should not be defined as negligible.	High	ConocoPhillips Australia provided information regarding: Conservation Advice's being included in impact and risk assessments; the impact assessment process which takes into consideration the condition of the existing environment; the intent of providing draft EP chapters to support consultation and generate feedback for consideration in the EP; and an overview of the impact assessment for the coastal section of the Tasmanian Wilderness World Heritage Area (TWWHA), with low thresholds represent

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3480	382	ID:1650	ID524	22/09/2023 21:53	Relevant person expressed dissatisfaction with the lack of drill siting detailed provided in the EP.	High	ConocoPhillips Australia reviewed impact Chapter 6.3 (Seabed Disturbance) and reiterated the importance of existing control measure CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values in the EP. Further, as the result of consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further benthic
3480	383	ID:1650	ID524	22/09/2023 21:54	Relevant person provided feedback regarding inconsistency in Chapter 6.3 (Seabed Disturbance) as it is recognised that drilling may occur on less widespread rocky/coral areas (including potentially in the Zeehan MP), however impacts on these environments are treated similarly to those that may occur in more widespread benthic habitat.	High	ConocoPhillips Australia reviewed impact Chapter 6.3 (Seabed Disturbance) and reiterated the importance of existing control measure CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values in the EP.
3480	384	ID:1650	ID524	22/09/2023 21:55	Relevant person stated that there appears to be insufficient baseline data regarding Tasmanian benthic habitats which do not warrant the assessments made in the EP.	High	As the result of consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further benthic analysis onshore. This requirement will now be include this in the procurement process for the seabed survey and have been adopted in CM11: Procurement Vetting Process.
3480	385	ID:1650	ID524	22/09/2023 21:56	Relevant person stated that benthic impacts, including on the Zeehan MP, are referred to as impacts that ‘may’ occur (i.e. risks), when in fact they should be measurable impacts that will occur.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational areas ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.
3480	386	ID:1650	ID524	22/09/2023 21:57	Relevant person provided feedback regarding the potential for drilling to occur in Zeehan Marine Park and suggested that drilling locations should occur outside the marine park to reduce impacts, specifically cumulative impacts, to the parks integrity. Mitigation measures such as directional drilling were suggested.	High	ConocoPhillips Australia reviewed impact Chapter 6.3 (Seabed Disturbance) and reiterated the importance of existing control measure CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values in the EP.
3480	387	ID:1650	ID524	22/09/2023 21:59	Relevant person requested that ConocoPhillips Australia should reconsider the collection of baseline data control measure (currently rejected) as the monitoring of at least the first and second wells may present significant material information that may affect control measure benefits for later wells specifically as it is an area with an absence of baseline data. Relevant person provided feedback relating to this approach and believes that without this control measure there is an increased likelihood of risks occurring. Relevant	High	As the result of consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further benthic analysis onshore. This requirement will now be include this in the procurement process for the seabed survey and have been adopted in CM11: Procurement Vetting Process.
3480	388	ID:1650	ID524	22/09/2023 22:00	Relevant person suggested that Chapter 7.3 (Minor LOC) did not adequately assess the impacts of a minor LOC to the receiving environment. It was requested for additional scientific evidence to be incorporated.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and supported by recent, relevant research. Therefore no alterations to the EP were deemed necessary.
3480	389	ID:1650	ID524	22/09/2023 22:01	Relevant person stated that ConocoPhillips Australia provided no material justification for why its proposed activities in Zeehan MP are not inconsistent with the SE MP management plan and considers drilling in the Zeehan MP is inconsistent with the management plan and represents an unacceptable	High	ConocoPhillips Australia conducted a thorough review of controls measures relevant to the mitigation of risks associated with minor spills, specifically in the Zeehan Marine Park, to ensure that risks were adequately considered. It was determine that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and
3480	390	ID:1650	ID524	22/09/2023 22:03	Relevant person considers the introduction of a new minor oil spill risk within the Zeehan MP to be unacceptable and that serious control measures are necessary, such as no drilling within the AMP or including a reasonable buffer area. Further, relevant person stated the absence of drill locations makes it difficult to properly assess impacts across the entire potential impact area.	High	ConocoPhillips Australia conducted a review of controls measures relevant to the mitigation of risks associated with minor spills, specifically in the Zeehan Marine Park, to ensure that risks were adequately considered and updated the EP to ensure this was explicit where relevant. It was determine that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and supported by recent, relevant research. Previous advice had been provided on the conservative assessment process

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3480	391	ID:1650	ID524	22/09/2023 22:04	Relevant person considers activities outside of the petroleum activity be considered in the EP.	High	ConocoPhillips Australia reviewed and confirmed that appropriate control measures are in place within operational areas for petroleum activities, and provided information to relevant person on legislation relevant to other maritime activities.
3480	392	ID:1650	ID524	22/09/2023 22:05	Relevant person requested that they are provided with data that has been used to determine presence of cetaceans within the EMBA, including interactions and/or shutdowns that occurred during its recent seismic blasting operation.	High	ConocoPhillips Australia provided information on the collection and use of data on cetacean presence in the operational areas since 2021; that data has been made available to government agencies and research organisations and has been used to inform the development of the Environment Plan, for example see section 4.6.9.2 of the draft Environment Plan.
3480	393	ID:1650	ID524	22/09/2023 22:06	Relevant person provided feedback regarding the potential underestimation of threatened and/or migratory cetaceans in the area where seismic activity was conducted by ConocoPhillips Australia. Relevant person requested that this data should be used to assess the potential impacts and risks of the proposed activity and inform control measures.	High	ConocoPhillips Australia provided information on the collection and use of data on cetacean presence in the operational areas since 2021; that data has been made available to government agencies and research organisations and has been used to inform the development of the Environment Plan, for example see section 7.4.5 of the Environment Plan.
3480	395	ID:1650	ID524	22/09/2023 22:08	Relevant person disagreed with ConocoPhillips Australia's assessment that the South-East Commonwealth Marine Reserves Network Management Plan does not (currently) include vessel strike as a pressure on Zeehan Marine Park, and considered this represents a new threat.	High	ConocoPhillips Australia advised that petroleum exploration activities have been conducted in the South-east marine region since the 1960's, well before the 2013 publication of the current MP and that the Director of National Parks had been consulted as a relevant authority for the management of the Zeehan Marine Park.
3480	396	ID:1650	ID524	22/09/2023 22:10	Relevant person stated that ConocoPhillips Australia did not provide sufficient data to dismiss vessel strike mitigation measures, particularly rejected control measure - activities only occur outside of environmentally sensitive periods. Relevant person suggested that a detailed assessment be made to determine		ConocoPhillips Australia has reviewed feedback provided by relevant person and updated Section 6.6.7 in Chapter 6.6 (Non-Impulsive Noise) to provide clarity around the process followed to assess the variability of timing.
3480	397	ID:1650	ID524	22/09/2023 22:11	Relevant person provided feedback regarding the proposed mitigation measure relating to the reporting of vessel strikes to the NVSD.	High	ConocoPhillips Australia amended Table 7-8 in the Interactions with Marine Fauna Risk Assessment Chapter by removing the control measure and referring readers to Table 10-8 of the Implementation Strategy which defines reporting requirements for
3480	398	ID:1650	ID524	22/09/2023 22:12	Relevant person requested that all relevant persons are informed of reportable incidents and changes made to the EP, including any identification of new or altered impacts or risks associated with the proposal.	High	ConocoPhillips Australia will act in accordance with the requirements for ongoing consultation as detailed in Table 10.5 of the Implementation Strategy.
3480	399	ID:1650	ID524	22/09/2023 22:13	Relevant person provided feedback regarding a lack of connection between the EP and ConocoPhillips Australia's Biodiversity Policy.	High	The information in section 10.1.2.3 (Biodiversity Position) of the implementation strategy was updated to include information specific to the Otway Exploration Drilling Program.
4359	468	ID:1650, ID:1811, ID:1810	ID524	3/10/2023 20:30	Relevant person claimed NOPSEMA's assessment process is inconsistent with EBPC Act.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and determined that no alterations to the EP were deemed necessary as the definition of a petroleum activity in the Environment Regulations is directly related to a title granted under the OPGGS Act and applies to petroleum activities that will be conducted within the boundary of the petroleum title.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
4359	470	ID:1650, ID:1811, ID:1810	ID524	3/10/2023 20:38	Relevant person provided feedback regarding cumulative impacts on the orange-bellied parrot affecting World Heritage values, and the assessment process considering excluding areas/ times.	High	ConocoPhillips Australia provided an overview of the impact assessment for light emissions and the control measures adopted in the EP to reduce impacts to ALARP and acceptable levels, including: CM07: Light Management Plan, CM01: Marine Assurance Process, CM02: Vessel and MODU Operating Procedures, CM10: Well Testing Program
720	17	ID:928	ID528	3/03/2023 9:36	Relevant person stated that since drilling sites are not shown interactions can not currently be determined.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a
1239	64	ID:928	ID528	19/05/2023 10:16	Relevant person informed that the absence of defined drilling and seabed survey locations prior to EP submission is not acceptable.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated
1141	25	ID:799	ID550	3/05/2023 9:52	Relevant person provided feedback that their tourism based (fishing charter) business will be impacted by the seismic testing and drilling operations in the northern half of VICP/79.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and confirmed the acknowledgement (section 4.75) and assessment (section 6.2.4.1) of Victorian tourism operators in the EP. Further, ConocoPhillips Australia has included information provided in section 6.6.7.2 of the EP.
3257	340	ID:1592	ID553	22/08/2023 15:53	Relevant person provided feedback regarding how the GHG emissions for the project were measured by the current project scope and not the complete life of the asset.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as the Otway Exploration Drilling Program is purely exploratory with no proposed installation of permanent operating infrastructure.
3257	341	ID:1592	ID553	22/08/2023 15:54	Relevant person stated that the north-west of Tasmania is a key biodiversity area and suggested that the precautionary principle be applied when assessing potential impacts to biodiversity when considering the development of these areas.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as the EP was developed in consideration of the precautionary principle.
3257	342	ID:1592	ID553	22/08/2023 15:55	Relevant person suggested that the precautionary approach should be applied to light and flaring activities, as there are potential impacts to migratory, critically endangered birds for example the orange-bellied parrot, and the bogong moth.	High	ConocoPhillips Australia reviewed the EP, in particular the control measures associated with light emissions to ensure that any potential impacts to light sensitive species are adequately mitigated and added information at section 4.6.11 Terrestrial Invertebrates and 6.4.4 and 6.4.5.1.
3469	345	ID:897	ID569	20/09/2023 10:59	Relevant person stated that they would like to see the opportunity for compensation extended to other industries as many of the impacts of oil and gas exploration may not be black and white.	High	ConocoPhillips Australia has reviewed feedback provided by relevant person and conducted a review relevant control measures (CM01, CM02, CM03, CM04, CM06 and CM10) to ensure that potential impacts to various industries are adequately assessed. Further, information in section 6.2.4.1 (Table 5-6) of the EP was updated.
3469	346	ID:897	ID569	20/09/2023 11:00	Relevant person stated that the proposed activity has the potential to significantly impact cultural sites and values across north-west Tasmania including seasonal mutton birding, traditional shellfish harvesting, connection to country and traditional cultural practice.	High	ConocoPhillips Australia confirmed that information on the cultural importance of shearwaters is included in section 4.6.7.2. Further, measures to mitigate impacts associated with light emissions, relevant to shearwater and their prey, are detailed in section 6.4. In response to consultation feedback, ConocoPhillips Australia included an additional EPO, including measures (CM05: Cultural Heritage Protection Program) and performance standards, regarding cultural heritage: EPO12: ConocoPhillips Australia will establish and maintain a culturally responsible and legally compliant framework for cultural heritage protection within the project areas to amplify

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
3469	347	ID:897	ID569	20/09/2023 11:01	Relevant person stated that there are a resident population of blue whales and sightings of sperm whales off the western coast of Tasmania in the T/49P permit area (highest October/November). Further, this is a tourism draw for the coastal communities of King Island and NW Tasmania.	High	ConocoPhillips Australia conducted a review of relevant control measures CM08: Whale Management Plan and CM05: Cultural Heritage Protection Plan to ensure impacts to cetacean species, particularly the blue whale and sperm whale, were adequately assessed. Further, Section 4.7.5.1 (Tourism - Tasmania) was updated to reflect the information provided.
3469	348	ID:897	ID569	20/09/2023 11:03	Relevant person considered no impacts are acceptable to the Zeehan Marine Park and emphasised the importance of marine parks for the conservation of biodiversity and for a baseline for environmental studies.	High	ConocoPhillips Australia provided information in the EP (e.g. Section 4.4.1.1) on the multiple use zone and requirements for consultation with the relevant authority, and an overview of the assessments relevant to the marine park which demonstrated impacts to the Zeehan Marine Park from short term seabed survey and exploration drilling activities are acceptable and, through the adoption of control measures as described in the draft EP, as low as reasonably practicable for the proposed Otway Exploration Drilling Program.
3469	349	ID:897	ID569	20/09/2023 11:02	Relevant person provided feedback regarding negative impacts on tourism and the Tasmanian Brand.	High	ConocoPhillips Australia provided an overview of the assessment of impact to aesthetic values and visual amenity and the extent to which coastal recreation and tourism in Tasmania is likely to be affected by the visibility of the derrick and main deck of the drilling rig is short-duration, which is fully recoverable with no long-term
3469	434	ID:897	ID569	20/09/2023 12:30	Relevant person considered no impacts are acceptable to the Zeehan Marine Park and emphasised the importance of marine parks for the conservation of biodiversity and for a baseline for environmental studies.	High	ConocoPhillips Australia provided information on the multiple use zone and requirements for consultation with the relevant authority, and an overview of the assessments relevant to the marine park which demonstrated impacts to the Zeehan
3469	435	ID:897	ID569	20/09/2023 13:08	Relevant person provided feedback regarding potential light impacts to critically endangered migratory species which utilise the project area such as the orange bellied-parrot and bogong moth.	High	ConocoPhillips Australia included information on the bogong moth in the EP and reviewed existing control measures CM01: Marine Assurance Process, CM02: Vessel and MODU Operating Procedures, CM07: Light Management Plan and CM10: Well Testing Program to ensure impacts to light sensitive species are ALARP and of acceptable levels.
3469	436	ID:897	ID569	20/09/2023 13:32	Relevant person advised that the EPBC listing status of the Shy Albatross has been updated to endangered and highlighted the importance of the breeding islands offshore Tasmania.	High	ConocoPhillips Australia updated the listing status of the Shy Albatross to endangered within the EP, specifically in Section 4.6.7.1, Table 4-9 and Section 6.4.5.1.
3469	437	ID:897	ID569	20/09/2023 13:46	Relevant person provided feedback regarding the uncertainty of impacts on an understudied area already under extreme stress from climate change.	High	ConocoPhillips Australia reviewed the feedback provided and considers that the items raised are sufficiently addressed by the impact and risk assessment process described in section 5.6.2.2 Uncertainty of Impacts and Risks of the EP, which includes consideration of uncertainty and the application of the precautionary principle.
2690	143	ID:1394	ID571	1/08/2023 10:52	Relevant person stated that the Middle Island penguin colony are threatened by human resource use and predation by introduced canids.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and included contextual information to Sections 4.4.6 and 4.6.7.5 and an additional impact assessment was included in Section 6.6.7 to ensure that any potential impacts to the little penguin were adequately assessed.
2690	154	ID:1394	ID571	1/08/2023 10:52	Relevant person stated that recent declines in the Middle Island little penguin colony are not necessarily due to canid predation and adding additional threatening processes (i.e. seismic testing) is counterproductive to conservation efforts.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and included contextual information to Sections 4.4.6 and 4.6.7.5 and an additional impact assessment was included in Section 6.6.7 to ensure that any potential impacts to the little penguin were adequately assessed.
2690	155	ID:1394	ID571	1/08/2023 10:52	Relevant person stated that they oppose seismic testing in the Otway Basin due to the potential impacts on the biologically important behaviours of marine fauna species such as the little penguin (foraging), cetaceans	High	ConocoPhillips Australia reviewed feedback provided by relevant person and included contextual information to Sections 4.4.6 and 4.6.7.5 and an additional impact assessment was included in Section 6.6.7 to ensure that any potential impacts to the
3893	417	ID:1744	ID578	3/10/2023 16:47	Relevant person provided feedback that radial limits for underwater sound seem excessive and will cause unnecessary effort.	High	ConocoPhillips Australia provided information regarding the use of a validated model for the Otway region, and acknowledged that the modelling represented a precautionary approach to the assessment process.
3893	418	ID:1744	ID578	3/10/2023 16:47	Relevant person provided a reference to scientific literature and recommended ConocoPhillips Australia review the paper and include relevant	High	The paper was reviewed with ConocoPhillips Australia's acoustic consultant and referenced in relation to invertebrates in the EP.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
4131	444	ID:1760, ID:1764	ID580, ID588	6/10/2023 12:47	Relevant person advised that Greenlip is a smaller, independent fishery with its own TACCs set.	High	EP Table 4-31 Victorian Abalone Fishery, Target species was updated to reflect that greenlip abalone represents a separate stock with its own TACC, and is not just bycatch associated with the blacklip abalone fishery.
4131	445	ID:1760, ID:1764	ID580, ID588	6/10/2023 12:54	Relevant person advised that a map of the Victorian abalone fisheries should be available online for inclusion in the EP.	High	A map showing the Victorian fishery was included in Environment Plan - section 4.7.7.3.
4131	446	ID:1760, ID:1764	ID580, ID588	6/10/2023 13:13	Relevant person advised that there had been historical outbreaks of an abalone virus and provided feedback that outbreaks are related to stress, with impacts to inshore areas of particular concern.	High	ConocoPhillips Australia identified research supporting the link between virus outbreaks and stress and updated Environment Plan sections 4.6.4.4 and 4.7.7.3 (Table 4-31) to reflect the existing condition and pressures on abalone stocks in
4526	474	ID:322	ID6	31/10/2023 11:21	Relevant person requested information on how to access the Commercial Marine Operators Adjustment Protocol.	High	Tuna Australia and its members, including those from the Eastern sector, will be invited to participate in the development of CM04: Commercial Marine Operators Adjustment Protocol.
4526	473	ID:322	ID6	31/10/2023 11:19	Relevant person requested provision of 48-hour lookaheads during active periods.	High	Requirements for a 48-hour lookahead have been added to Table 10 6: Ongoing consultation objectives and CM03: Marine and Coastal Users Consultation and Communication Plan.
4526	472	ID:322	ID6	31/10/2023 11:10	Relevant person advised that although the Australian Skipjack Fishery (ESKJ) is not currently active, there is significant potential in the Eastern sector and this fishery should be included for the purposes of assessing Conoco Phillip's activity impacts.	High	This information was added as a footnote to Table 6 2: Presence of commercial fisheries and fishing activity within the operational areas and, as part of CM03: Adjustment Protocol, Tuna Australia and its members, including those from the Eastern sector, will be invited to participate in the development of the adjustment protocol for this activity.
4526	471	ID:322	ID6	31/10/2023 10:39	Relevant person provided additional resolution of detail on the Eastern Tuna and Billfish Fishery (ETBF) and Southern Bluefin Tuna Fishery (SBTF), including information on recent catch data, emerging trends and future directions.	High	Information in Table 4 21: Eastern Tuna and Billfish Fishery (ETBF) and Table 4 26: Southern Bluefin Tuna Fishery (SBTF) has been updated to reflect finer resolution of data provided.
4174	463	ID:322	ID6	4/10/2023 16:31	Relevant person requested information on historical observations of tuna.	High	ConocoPhillips Australia reviewed historical records and did not locate any recorded observations of Tuna for the period August 2022 to June 2023.
4174	464	ID:322	ID6	4/10/2023 16:46	Relevant person requested 48-hour look ahead be considered for the activity.	High	ConocoPhillips Australia reviewed existing notification requirements and added the requirement to provide a 48-hour look-ahead every 24-hours, prior to and during key
3988	430	ID:1675	ID609	5/10/2023 9:47	Relevant person provided feedback regarding advice to contact politicians and advised they will write to NOPTA so that they are aware some people believe this project is wrong.	Low	ConocoPhillips Australia considered the objection or claim is not relevant to the adverse effects of the proposed Otway Exploration Drilling Program to which the Environment Plan relates and is beyond the scope of this assessment.
3988	431	ID:1675	ID609	5/10/2023 9:51	Relevant person provided feedback regarding no acknowledgement of later extraction and scope 2 and 3 emissions in EP	Low	ConocoPhillips Australia considered the objection or claim is not relevant to the adverse effects of the proposed Otway Exploration Drilling Program to which the Environment Plan relates and is beyond the scope of this assessment.
3988	432	ID:1675	ID609	5/10/2023 9:53	Relevant person provided feedback regarding the process and those managing the process, including politicians and public servants.	Low	ConocoPhillips Australia considered the objection or claim is not relevant to the adverse effects of the proposed Otway Exploration Drilling Program to which the
3988	433	ID:1675	ID609	5/10/2023 9:55	Relevant person quoted the Governor of California regarding climate change being a fossil fuel crisis, and stated that ConocoPhillips Australia's position provided no guarantee or hope for humanity`.	Low	ConocoPhillips Australia considered the objection or claim is not relevant to the adverse effects of the proposed Otway Exploration Drilling Program to which the Environment Plan relates and is beyond the scope of this assessment.
31	23	ID:275	ID615	11/02/2023 12:32	Relevant person provided feedback regarding the proposed activities impacts to the marine environment, particularly to breeding grounds, animals and kelp farming on King Island.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and requested more information on keep farming.
2470	243	ID:930	ID7	21/04/2023 13:42	Relevant person requested that activities which may displace the Pygmy Blue Whale or Southern Right Whale's use of BIAs are avoided.	High	ConocoPhillips Australia updated Section 6.6.7.1 to include more information on this assessment.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

**APPENDIX C2: Feedback, Objections and Claims under Reg16(b)**

Event ID	Reg16b ID	Stakeholder ID	Organisation ID	Date Raised	Summary of Each Response Made by a Relevant Person	Assessment of Merit	Summary of The Titleholders Response, if any, to Feedback, Objection or Claim
2470	244	ID:930	ID7	21/04/2023 13:44	Relevant person requested that activities are timed or managed to avoid species' peak migration and foraging behaviours.	High	ConocoPhillips Australia updated Section 6.6.7.1 to include more information on this assessment.
2470	245	ID:930	ID7	21/04/2023 13:45	Relevant person requested that potential cumulative impacts on species is addressed considering there are two proposed seismic surveys near the proposed Otway Exploration Drilling Program.	High	ConocoPhillips Australia conducted a review of Chapter 8: Cumulative Impact Assessment to ensure the cumulative impacts associated with the proposed activity were adequately assessed.
2470	246	ID:930	ID7	21/04/2023 13:47	Relevant authority advised that Australian Marine Parks and their representativeness (including relevant management plans listed objectives and values) are to be considered in the content of the EP.	High	ConocoPhillips Australia incorporated feedback in to the EP including the existing environment (section 4.4.1) and impact and risk sections 6.3-6.9, 7.3 - 7.8 to demonstrate that the activity will not be inconsistent with relevant AMP management plans.
2470	247	ID:930	ID7	21/04/2023 13:49	Relevant authority requested notification of hydrocarbon pollution incidences that may impact a marine park.	High	ConocoPhillips Australia incorporated the notification requirement into the Implementation Strategy (Table 10-8) and the OPEP.
1366	419	ID:245, ID:339	ID72	18/05/2023 15:06	Relevant person requested that Parks Tasmania is contacted to provide details for 'Jigs' to support ground truthing.	High	ConocoPhillips Australia undertook ground truthing of areas with public access and reviewed access to areas on private land as far a public access would allow from 12 to 15 July 2023.
1366	420	ID:245, ID:339	ID72	18/05/2023 15:08	Relevant person requested that ConocoPhillips Australia identify potential resources and an adequate staging area for first strike response equipment on King Island, including assessing the feasibility of temporary accommodation.	High	ConocoPhillips Australia committed to having first strike spill response resources pre-emptively located on King Island in the event that drilling is scheduled to occur within the central zone of the T/49P Operational Area, adjacent to King Island. The OPEP (Table 6-1) has been updated to reflect this change.
4014	438	ID:214	ID72	29/08/2023 16:51	Relevant person requested for the word 'discernible' to be replaced by 'detectable' when referring to the impact of emissions on King Island.	High	ConocoPhillips Australia updated wording to reflect the feedback provided. EPO8 now states; No detectable change to the air quality of coastal communities.
4014	439	ID:214	ID72	29/09/2023 17:08	Relevant person requested for impacts to the 'King Island brand' to be assessed in the EP.	High	ConocoPhillips Australia conducted a review of Section 4.7.1 (Coastal Settlements) to ensure the King Island Brand was adequately represented. Further, a thorough review
2197	79	ID:1115	ID73	17/07/2023 16:27	Relevant person provided feedback that ConocoPhillips Australia has failed to consider the impact of stage 3 emissions associated with the Otway	Low	The objection or claim is not directly relevant to the adverse effects of the proposed Otway Exploration Drilling Program, to which the Environment Plan relates.
484	8	ID:721	ID8	21/02/2023 16:59	Relevant person requested that AMSA's Rescue Centre is notified 24-48 hours before operations commence.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it. Specifically, ConocoPhillips Australia will be required to contact AMSA's Rescue Centre prior to seabed survey, anchor pre-lay and drilling activities.
484	9	ID:721	ID8	21/02/2023 17:00	Relevant person stated that vessel details, satellite communications details, area of operation and requested clearance from other vessels will need to be	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with
484	10	ID:721	ID8	21/02/2023 17:01	Relevant person requested that the Australian Hydrographic Office is contacted no less that four weeks before operations commence to allow enough time for notice to mariners to be declared.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it. Specifically, ConocoPhillips Australia will be required to contact AHO prior to seabed survey, anchor pre-lay and drilling activities.
43	7	ID:225	ID9	20/02/2023 14:10	Relevant person requested that ConocoPhillips Australia consider additional data sampling whilst vessel is in the region for seabed survey.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and will ensure that the seabed survey contract requires the collection of representative sediment samples to validate the geophysical survey data, with storage and transport onshore for benthic analysis.
1085	440	Information Session	Information Session	15/03/2023 15:03	Relevant person provided feedback regarding drop-in sessions being intimidating and inaccessible and requested town hall information sessions.	High	ConocoPhillips Australia held town hall information sessions beginning May 2023 to provide information regarding the proposed activity to interested community members, to support the identification of relevant persons.

Note: This table excludes information where the relevant person advised that their information not be published (Reg11A(4)(a)(b))

APPENDIX C2: Feedback, Objections and Claims under Reg16(b)

# ConocoPhillips Australia Otway Exploration Activities

25 November 2022

We'd like to provide you with an update on our exploration plans in the offshore Otway Basin.

The purpose of ConocoPhillips Australia's exploration activities is to identify gas reserves to supply into the domestic market and contribute to Australia's energy security.

In 2021 we completed a marine seismic survey over our permit T/49P. We are currently processing the data we obtained which will help inform us of the location of potential gas reserves within that permit.

This year we agreed to acquire an 80 percent interest in permit VIC/P79 which is located northwest of T/49P.

As part of Government requirements for holding exploration permits, we will be progressing plans to drill exploration wells in both of these permit areas.

To be able to do this, we will need to undertake consultation and prepare an Environment Plan (EP), which is then submitted to the offshore regulator (NOPSEMA) for public comment and assessment. No exploration activity can take place without an accepted EP in place.

We will shortly be starting consultation on this work, and we look forward to engaging with you to better understand your interests, views and potential impacts.

***Have we missed anyone? If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.***

**Subject:** PROJECT UPDATE: ConocoPhillips Australia Otway Exploration Drilling Program  
**Attachments:** Project Update MAY23 ABU2 000 EX R01 D 00011.pdf

Good morning,

Please find attached the ConocoPhillips Australia Otway Exploration Drilling Program Project Update. This information sheet summarises the next phase of our Environment Plan development and consultation, where we will be establishing the context of our proposed activity.

We have created an online mapping tool where individuals, organisations and associations can share feedback about locations of environmental values and sensitivities. To view this, visit our [consultation hub](#).

We are also hosting a webinar on Tuesday 23 May, 5-6pm AEST, register to attend via our [consultation hub](#).

If you have any questions or require further information, please don't hesitate to contact us:  
[otway@conocophillips.com](mailto:otway@conocophillips.com) or (07) 3182 7122

Warm regards

ConocoPhillips Australia Community Team

## Otway Exploration Drilling Program

### Community Information Sessions

ConocoPhillips Australia will be hosting information sessions in Victoria to provide an update on the progress of the Environment Plan for the Otway Exploration Drilling Program, which will include information on environmental impacts and risks associated with the proposed activity.

**Warrnambool - Monday 29 May, 6-8pm**

Archie Graham Community Centre  
118 Timor Street, Warrnambool

**Port Fairy - Tuesday 30 May, 6-8pm**

Star of the West Hotel  
76 Sackville Street, Port Fairy

**Portland - Wednesday 31 May, 6-8pm**

Portland Yacht Club  
Lee Breakwater Road, Portland

Please note sessions in other Victorian locations will be communicated at a later date.

---

### Identifying Environmental Values and Sensitivities

To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.

Visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

[Discover our Map](#)

Don't forget to take the consultation survey to let us know if you'd like to be consulted as a relevant person as we continue to develop the Environment Plan.

Can't get to an information session? Register for our online webinar series via our consultation hub.

**Subject:** PROJECT UPDATE: ConocoPhillips Australia Otway Exploration Drilling Program  
**Attachments:** Project Update MAY23 ABU2 000 EX R01 D 00011.pdf

Hello,

Please find attached the ConocoPhillips Australia Otway Exploration Drilling Program Project Update. This information sheet summarises the next phase of our Environment Plan development and consultation, where we will be establishing the context of our proposed activity.

We have created an online mapping tool where individuals, organisations and associations can share feedback about locations of environmental values and sensitivities. To view this, visit our [consultation hub](#).

We are also hosting a webinar on Tuesday 23 May, 5-6pm AEST, register to attend via our [consultation hub](#).

If you have any questions or require further information, please don't hesitate to contact us: [otway@conocophillips.com](mailto:otway@conocophillips.com) or (07) 3182 7122

Warm regards

ConocoPhillips Australia Community Team

## Otway Exploration Drilling Program

### Webinar Details

Please find below the log-in details for the ConocoPhillips Australia Otway Exploration Drilling Program Webinar.

**Date:** Tuesday 23 May 2023

**Time:** 5-6pm AEST

Can't make the webinar? A recording will be loaded to the consultation hub after the event.

---

### Teams Meeting Details

Join on your computer, mobile app or room device.

## Otway Exploration Drilling Program

### Project Update - June 2023

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

---

#### About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of Environment Plan development and consultation, where we will share our evaluations of environmental impacts and risks.

---

#### Key Information

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.

- A range of information sheets providing information on the evaluation of environmental impacts and risks has been developed to support consultation.
  - ConocoPhillips Australia is now looking for feedback on these evaluations.
  - Individuals, organisations and associations continue to be able to share feedback on locations with values and sensitivities through an online interactive map via the [consultation hub](#).
- 

## **How to Participate in the Regulatory Approvals Process**

NOPSEMA has recently published a brochure with information for the community about consultation on offshore petroleum environment plans. The brochure has excellent information to help you or your organisation decide if you are a relevant person and can be found [here](#). We strongly encourage those of you uncertain about whether you are a relevant person to consider this information.

If you believe you are a relevant person, we need to understand your activities or interests so that we can provide the right information to you. When engaging with our team we encourage you to be specific about how you might potentially be affected, so that we can properly consider how we might avoid or lessen those impacts or risks.

## **Upcoming Relevant Persons Information Sessions**

### **Peterborough - Monday 19 June, 12-2 pm**

Peterborough Community Hall  
Macs Street, Peterborough

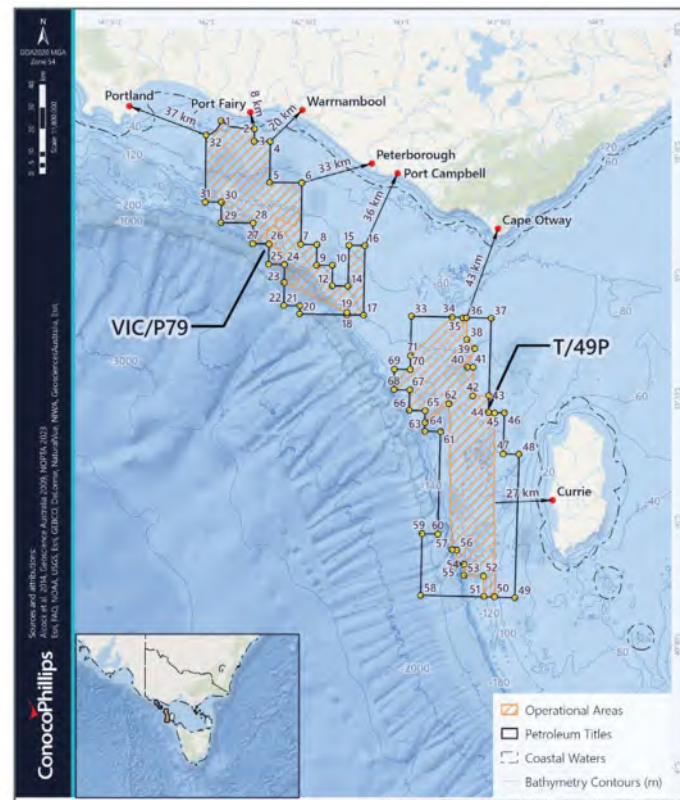

### **Port Campbell - Monday 19 June, 6-8pm**

The Arts Space  
50 Lord Street, Port Campbell

### **Apollo Bay - Tuesday 20 June, 6-8pm**

Apollo Bay Bowls Club  
6 Moore Street, Apollo Bay

### Map of Permit and Operational Areas

### Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and VIC/P79	Operational Areas within T/49P and VIC/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km <sup>2</sup> (Nine locations, each 6 x 6 km) within Operational Areas	75 km <sup>2</sup> (Six locations, each a 2 km radius Drilling Area) within Operational Areas

## Commercial Fishing

The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:

- Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.

- Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10sto 100s of metres and will not affect the long-term sustainability of fisheries.
- Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

The full Commercial Fishing information sheet, including examples of mitigation measures, is available in the [document library](#) of the [consultation hub](#).

## **Marine Mammals**

The EP will include an assessment of potential impacts and risks to marine mammals that might arise from the exploration program.

A preliminary assessment of impacts and risks to marine mammals has identified that:

- Several species of whales, dolphins and seals are typically found in the Otway Basin, many of which exhibit biologically important behaviours such as foraging.
- Marine mammals are particularly sensitive to the effects of underwater noise which has the potential to result in hearing impairment, stress and changes in behaviour at a range of effect distances.
- Where underwater noise has the potential to affect biologically important behaviours of threatened species, effective control measures will need to be in place.

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal).

In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:

- Southern right whales
- Blue whales

- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/spotted bottlenose dolphins, and
- Australian sea lion.

The full Marine Mammals information sheet, including examples of mitigation measures, is available in the [document library](#) of the [consultation hub](#).

### **Seabirds, Penguins and Marine Turtles**

The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.

A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:

- Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
- Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
- A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging ,breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the EPBC Act. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

The following species are known to occur within the Environmental Planning Area and exhibit one or more of these important behaviours:

## Otway Exploration Drilling Program

### Project Update - June 2023

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

---

#### About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of Environment Plan development and consultation, where we will share our evaluations of environmental impacts and risks.

---

#### Key Information

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.

- A range of information sheets providing information on the evaluation of environmental impacts and risks has been developed to support consultation.
  - ConocoPhillips Australia is now looking for feedback on these evaluations.
  - Individuals, organisations and associations continue to be able to share feedback on locations with values and sensitivities through an online interactive map via the [consultation hub](#).
- 

## **How to Participate in the Regulatory Approvals Process**

NOPSEMA has recently published a brochure with information for the community about consultation on offshore petroleum environment plans. The brochure has excellent information to help you or your organisation decide if you are a relevant person and can be found [here](#). We strongly encourage those of you uncertain about whether you are a relevant person to consider this information.

If you believe you are a relevant person, we need to understand your activities or interests so that we can provide the right information to you. When engaging with our team we encourage you to be specific about how you might potentially be affected, so that we can properly consider how we might avoid or lessen those impacts or risks.

## **Upcoming Relevant Persons Information Sessions**

### **Peterborough - Monday 19 June, 12-2 pm**

Peterborough Community Hall  
Macs Street, Peterborough

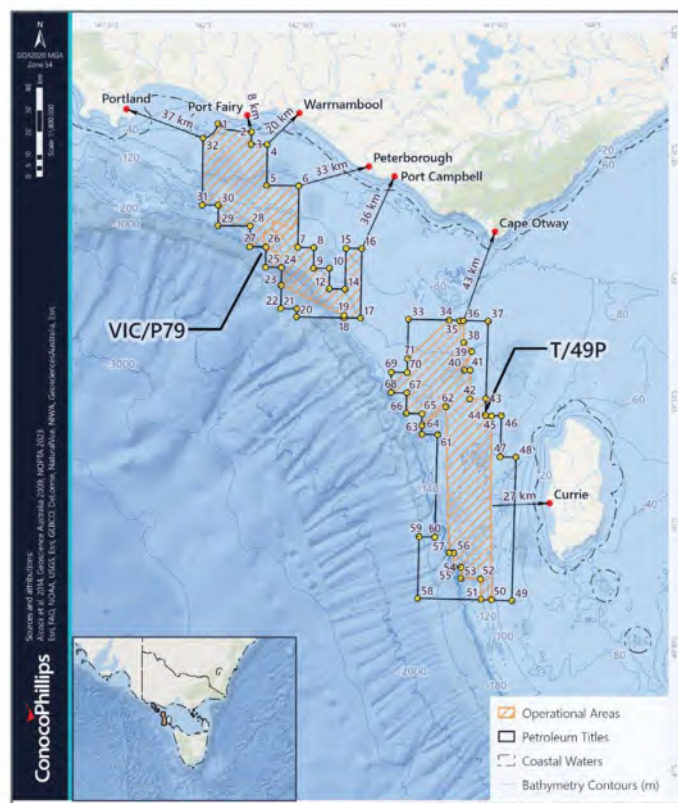

### **Port Campbell - Monday 19 June, 6-8pm**

The Arts Space  
50 Lord Street, Port Campbell

### **Apollo Bay - Tuesday 20 June, 6-8pm**

Apollo Bay Bowls Club  
6 Moore Street, Apollo Bay

### Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and VIC/P79	Operational Areas within T/49P and VIC/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km <sup>2</sup> (Nine locations, each 6 x 6 km) within Operational Areas	75 km <sup>2</sup> (Six locations, each a 2 km radius Drilling Area) within Operational Areas

## Commercial Fishing

The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:

- Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.

- Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10sto 100s of metres and will not affect the long-term sustainability of fisheries.
- Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

The full Commercial Fishing information sheet, including examples of mitigation measures, is available in the [document library](#) of the [consultation hub](#).

## **Marine Mammals**

The EP will include an assessment of potential impacts and risks to marine mammals that might arise from the exploration program.

A preliminary assessment of impacts and risks to marine mammals has identified that:

- Several species of whales, dolphins and seals are typically found in the Otway Basin, many of which exhibit biologically important behaviours such as foraging.
- Marine mammals are particularly sensitive to the effects of underwater noise which has the potential to result in hearing impairment, stress and changes in behaviour at a range of effect distances.
- Where underwater noise has the potential to affect biologically important behaviours of threatened species, effective control measures will need to be in place.

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal).

In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:

- Southern right whales
- Blue whales

- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/spotted bottlenose dolphins, and
- Australian sea lion.

The full Marine Mammals information sheet, including examples of mitigation measures, is available in the [document library](#) of the [consultation hub](#).

### **Seabirds, Penguins and Marine Turtles**

The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.

A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:

- Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
- Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
- A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging ,breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the EPBC Act. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

The following species are known to occur within the Environmental Planning Area and exhibit one or more of these important behaviours:

- |                           |                        |                         |
|---------------------------|------------------------|-------------------------|
| • Caspian tern            | • Common-diving petrel | • Black-faced cormorant |
| • Flesh-footed shearwater | • Great-winged petrel  | • Greater crested tern  |
| • Little penguin          |                        |                         |

- Shy albatross
- Wedge-tailed shearwater
- White-fronted tern
- Pacific gull Soft-plumage petrel
- White-capped albatross
- Short-tailed shearwater
- Sooty shearwater
- White-faced storm petrel

Marine turtles are highly migratory and rely on both marine and terrestrial habitats. Although they may occur within the Environmental Planning Area, no habitat critical to their survival occurs in the waters off southern Australia and they are not known to exhibit any identified biologically important behaviours in this area. The closest biologically important areas for marine turtles are located south of Brisbane, QLD, and at Shark Bay, WA. Even though the presence of individuals within the area is expected to be of a transient nature, the potential impacts of the Otway Exploration Drilling Program on marine turtles has been assessed, as they are listed as Matters of National Environmental Significance and are protected under the EPBC Act.

The full Seabirds, Penguins and Marine Turtles information sheet, including examples of mitigation measures, is available in the [document library](#) of the [consultation hub](#).

### **Other Marine and Coastal Users**

The Environment Plan will include an assessment of potential impacts and risks to other marine and coastal users that may arise from the exploration drilling program. This assessment has currently identified a number of marine and coastal users and values including recreation and tourism, commercial shipping, petroleum activities, renewable energy, defence activities, commercial fishing and cultural heritage.

The Otway Exploration Drilling Program may affect the activities of other marine and coastal users. For example, the physical presence of seabed survey vessels, the drilling rig and support vessels used for the activity, and the establishment of exclusion zones, may result in the displacement of other marine users engaging in activities such as commercial fishing.

Other short-term petroleum activities, for example, Vertical Seismic Profiling (VSP), have the potential to cause additional displacement if conducted in

close proximity to coastal areas, with sound emissions from VSP limited to a maximum of 20 hours per well.

Exclusion zones will be established to support safe operations. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during the drilling program and prevent interactions or collisions with equipment or between vessels.

All potential drilling locations will be confined to water depths between 35 - 670 m. Recreational diving is likely to be restricted to coastal waters in depths <18 m but with more advanced diving possible to 40 m. Water depths within the operational areas are mostly beyond the recognised maximum recreational diving depth of 40 m, which is also an unlikely depth for recreational swimming. The sound generated by the activity has the potential to reach shallower waters if the drilling activity is in the northern portion of permit VIC/P79.

The full Other Marine and Coastal Users information sheet, including examples of mitigation measures is available in the [document library](#) of the [consultation hub](#).

## **Emissions and Discharges**

The EP will include a detailed assessment of potential impacts and risks arising from the air emissions and planned discharges associated with the Otway Exploration Drilling Program. Activities conducted as part of the Otway Exploration Drilling Program will result in emissions to the atmosphere, as well as discharges to the marine environment.

A preliminary assessment of potential impacts associated with emissions and discharges has identified:

- Air emissions from seabed survey vessels, the drilling rig and support vessels have the potential to result in localised changes in air quality.
- Planned discharges from survey vessels, the drilling rig and support vessels have the potential to result in localised changes to water quality that will quickly dissipate in the water column.
- Discharges from drilling operations, including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid from testing

subsea equipment, have the potential to result in localised changes to water and sediment quality.

The full Emissions and Discharges information sheet, including examples of mitigation measures, is available in the [document library](#) of the [consultation hub](#).

### **Historical Military Ordnance Risk(Unexploded Ordnance)**

The EP will include an assessment of impacts and risks associated with historical defence activities in the area, including the potential presence of unexploded ordnance.

Both permit areas overlap a historic air-to-air firing range which the government has classified as having a Slight Potential for unexploded ordnance (UXO) presence, with most ammunition used in this area being considered low risk.

There is no overlap between the permit areas and historic offshore UXO sea dumping sites. The closest sea dumpingsite to either permit area is located 21 km from T/49P.

The full Historical Military Ordnance Risk information sheet, including examples of mitigation measures, is available in the [document library](#) of the [consultation hub](#).

---

### **Identifying Environmental Values and Sensitivities**

To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.

Visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

[Discover our Map](#)

Don't forget to take the consultation survey to let us know if you'd like to be consulted as a relevant person as we continue to develop the Environment Plan.

Can't get to an information session? Register for our online webinar series via our consultation hub.

## Otway Exploration Drilling Program

### Relevant Persons Information Sessions

ConocoPhillips Australia will be hosting information sessions in Victoria to provide an update on the progress of the Environment Plan for the Otway Exploration Drilling Program, which will include information on environmental impacts and risks associated with the proposed activity.

**Peterborough - Monday 19 June, 12-2pm**

Peterborough Community Hall  
Macs Street, Peterborough

**Port Campbell - Monday 19 June, 6-8pm**

The Arts Space  
50 Lord Street, Port Campbell

**Apollo Bay - Tuesday 20 June, 6-8pm**

Apollo Bay Bowls Club  
6 Moore Street, Apollo Bay

---

Otway Exploration Drilling Program

## Community Information Session

**ConocoPhillips is currently developing an Environment Plan for the proposed Otway Exploration Drilling Program and will be hosting two community information sessions on King Island in July.**

Residents and all relevant persons are encouraged to come along to a session to learn more about the progress of the environmental impact and risk assessments and the typical control measures that have been identified to support ongoing consultation. The content will focus on activities specific to King Island, with ample opportunity to ask questions and provide feedback.

### **Session 1**

Thursday 13 July 2023

11am - 1pm

King Island Town Hall

### **Session 2**

Thursday 13 July 2023

6 - 8pm

King Island Town Hall

Light refreshments will be provided.

Can't make either session? Register for the next webinar via the [consultation hub](#).

## Otway Exploration Drilling Program

### Consultation Extended

This email is to advise you that, based on feedback from consultation, ConocoPhillips Australia is extending the consultation period on the proposed Otway Exploration Drilling Program until 3 September 2023.

This ensures all relevant persons have a reasonable period of time to consider the information we have provided during the course of consultation and provide feedback to us on the potential impacts and risks of the activity on their functions, interests and activities.

Consultation and feedback with relevant persons, whose functions, interests or activities may be affected by the exploration program activities, is an important part of developing Environment Plans. More information on the Otway Exploration Drilling Program and how to provide feedback can be found on our [consultation hub](#).

King regards,

ConocoPhillips Australia Community Team

## Otway Exploration Drilling Program

# Project Update - August 2023

[Click here to access the PDF version of this update.](#)

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

### About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than April 2024.

This update summarises the next phase of Environment Plan development and consultation.

### KEY INFORMATION:

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.

- ConocoPhillips Australia has secured a harsh environment semi-submersible rig as part of a rig consortium. Drilling remains dependent on the EP being accepted by NOPSEMA.
- ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until 30 September 2023, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.
- ConocoPhillips Australia is asking relevant persons to provide feedback, including objections or claims, about the potential impacts of the activity.
- Based on the (now identified) operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction in total area. As a result of this refinement, some operational areas now extend outside of the petroleum titles. Additional information on these changes, and a revised map with coordinates, are provided within this information sheet.

### **Changes made to the proposed activity**

**Operational Area:** Based on operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction of total area. As a result of this refinement, some operational areas now extend past title permit boundaries.

Operational Areas represent the area within which petroleum activities can occur. Operational areas are located predominantly within the relevant petroleum titles (T/49P and VIC/P79) and have been selected based on similar constraints around rig operations and well design. Where operational areas extend outside of a petroleum title, ConocoPhillips Australia will apply for and secure an Access Authority (AA) from NOPTA, prior to the commencement of activities in these areas. Activities in these areas will be 'other than drilling a well' and may include the placement of anchors, the collection of geophysical and geotechnical data, and the operation of vessels.

[Click here to see a map of how the operational areas have changed.](#)

**Design Envelope:** The initial timing provided for the commencement of seabed surveys was 'no earlier than 1 January 2024'. This has now been

extended to 'no earlier than 1 April 2024'. The term of the approval for these activities remains unchanged – at 31 December 2028, to allow for the drilling of a maximum of six exploration wells.

### **Consultation Extended**

Based on relevant person feedback, ConocoPhillips Australia has extended consultation on the proposed activity until 30 September 2023. This ensures all relevant persons have a reasonable period of time to consider the information we have provided during the course of consultation and provide feedback to us on the potential impacts of the activity on their functions, interests and activities.

Consultation with relevant persons is an important part of developing and reviewing Environment Plans. Relevant persons are defined in the regulations as a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the environment plan. Please note, all consultation records will be provided to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) and published with the Environment Plan, unless you advise us that you don't want that information published.

### **Provide feedback on draft Environment Plan chapters**

As part of ongoing consultation, ConocoPhillips Australia is releasing draft EP chapters for review. We are asking relevant persons to raise concerns, including objections or claims, about the potential impacts of the activity. We are also seeking information about how relevant persons may be affected and feedback about how we intend to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

By providing the draft EP chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

Relevant persons can view the draft EP chapters and information on how to provide feedback via the consultation hub by scanning the QR code or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by 30 September 2023, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.

[View available draft Environment Plan chapters](#)

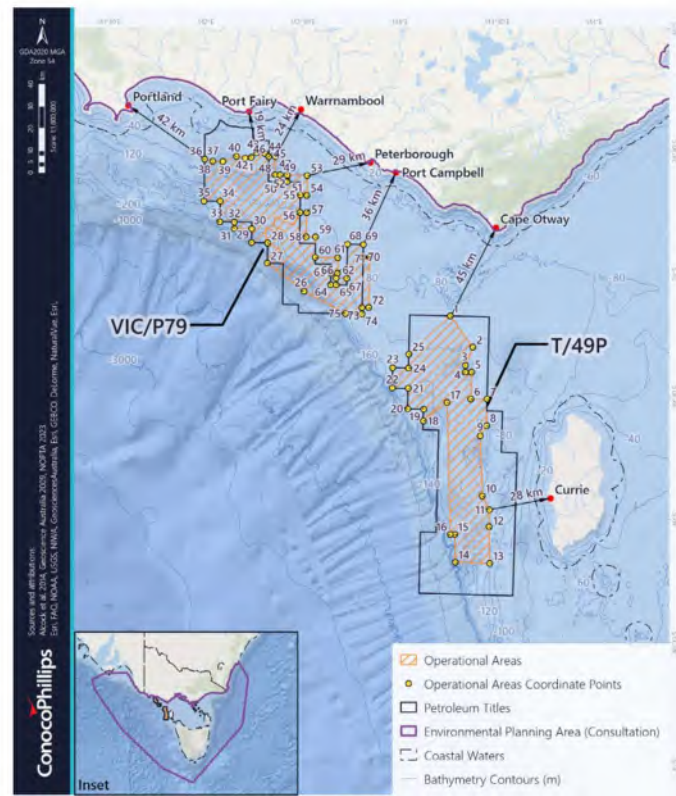

### **How to provide feedback on the draft Environment Plan chapters**

There are three ways to provide feedback on the draft EP chapters:

- Fill out the feedback form. This form is ideal for short-form feedback, objections or claims and is located on the [consultation hub](#).
- Send detailed feedback, including your assessment of the possible consequences of the proposed activity on your functions, interests or activities and any objections or claims to [otway@conocophillips.com](mailto:otway@conocophillips.com) or PO BOX 1243, MILTON, QLD, 4064.
- Request specific information and/or an opportunity to discuss the proposed activity and provided information with a member of the ConocoPhillips Australia's Otway Exploration Drilling Program team by emailing [otway@conocophillips.com](mailto:otway@conocophillips.com) or calling 07 3182 7122.

Please note, PDF versions of EP chapters can be made available for relevant persons on request. In addition, excerpts or a summary of EP information, e.g. specific to particular aspects or receptors, can also be provided on request.

### Revised Operational Area and Permit Area Map with Coordinates

## Draft EP Chapters Available for Consultation

ConocoPhillips Australia is planning to undertake exploration activities in operational areas associated with offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

### **Provide feedback on draft Environment Plan chapters**

As part of ongoing consultation, ConocoPhillips Australia has released draft EP chapters for review. We are asking relevant persons to raise concerns, including objections or claims, about the potential impacts of the activity. We are also seeking information about how relevant persons may be affected and feedback about how we intend to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

By providing the draft EP chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

Relevant persons can view the draft EP chapters and information on how to provide feedback via the consultation hub by scanning the QR code or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by 30 September 2023, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.

### **How to provide feedback on the draft Environment Plan chapters**

There are three ways to provide feedback on the draft EP chapters:

- Fill out the feedback form. This form is ideal for short-form feedback, objections or claims and is located on the [consultation hub](#).
- Send detailed feedback, including your assessment of the possible consequences of the proposed activity on your functions, interests or activities and any objections or claims to [otway@conocophillips.com](mailto:otway@conocophillips.com) or PO BOX 1243, MILTON, QLD, 4064.
- Request specific information and/or an opportunity to discuss the proposed activity and provided information with a member of the ConocoPhillips Australia's Otway Exploration Drilling Program team by emailing [otway@conocophillips.com](mailto:otway@conocophillips.com) or calling 07 3182 7122.

Please note, PDF versions of EP chapters can be made available for relevant persons on request. In addition, excerpts or a summary of EP information, e.g. specific to particular aspects or receptors, can also be provided on request.

**Have we missed anyone?**

If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.

## Draft Environment Plan Chapters Now Available

ConocoPhillips Australia is seeking your insights, experience, and expertise as we look to refine the impact and risk assessments for the Otway Exploration Drilling Program Environment Plan.

These chapters have been compiled using careful research, analysis, and the dedicated pursuit of informed decision-making. Any environmental assessment process is improved by thoughtful critique, suggestions, and feedback to ensure these assessments are as comprehensive, robust, and accurate as possible. Your unique perspectives and areas of expertise could shed light on facets that we might have overlooked or underestimated. The available Environment Plan (EP) chapters have been prepared as a draft for consultation. They form the basis of the EP that will be submitted to NOPSEMA. They will be amended based on feedback received and any subsequent research required.

By providing the draft chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

## Otway Exploration Drilling Program

### **Notification of Consultation Pause**

In line with our consultation approach for the Otway Exploration Drilling Program, ConocoPhillips Australia is briefly pausing consultation during October while we compile the Environment Plan for submission to NOPSEMA for formal public comment.

During this time we will also respond to all individuals and organisations who provided feedback or raised objections and claims on the draft Environment Plan content that was made available from 31 August 2023 via our online consultation hub. These chapters remain available on the consultation hub.

***Please note that during this time our responses may be delayed but we will get back to you.***

[Visit the consultation hub](#)

## Otway Exploration Drilling Program

### Pre-submission Consultation Complete

ConocoPhillips Australia has completed pre-submission consultation on the Otway Exploration Drilling Environment Plan. ConocoPhillips Australia will shortly submit the EP and NOPSEMA will check the EP before publishing it for public comment. ConocoPhillips will continue consultation throughout public comment and the life of the project, and we encourage people with feedback to contact us as detailed below. We thank everybody who has participated in the consultation process over the past year.

### Sensitive Information

As a reminder, you may request that information you provide to us not be published in the Environment Plan. Correspondence between us will be provided in full to NOPSEMA in a part of the Environment Plan which is marked as 'sensitive information' and will not be published.

To make this request please notify us by October 31st.

### NOPSEMA - Information for the Community

The National Offshore Petroleum and Environmental Management Authority (NOPSEMA) has produced a brochure that provides information to the community regarding consultation on offshore petroleum environment plans. The brochure can be found in the Resource Library [here](#).

### What we've heard

Through our consultation activities, we have received and considered information unique to the activity area and put environmental protection measures in place where appropriate. We have produced a table, which can be found [here](#), showing what we've heard, how we have assessed it and any measures adopted because of the consultations. The table is a thematic representation of the feedback we've heard. If you do not see your specific feedback, objection, or claim shown here it may be due to our thematic approach. Noting, all feedback received during consultation is provided unchanged to NOPSEMA.

### Webinar

The next activity update webinar will be on Wednesday 15<sup>th</sup> November, please register for the webinar via the [consultation hub](#).

## APPENDIX C3 - COMMUNITY INFORMATION SESSION PRESENTATIONS

## Recording Notice

This public information session will be recorded (video, audio and content) and photographs may be taken. The recording and any photographs may be used and distributed by ConocoPhillips Australia as part of its stakeholder engagement/consultation and associated purposes. By attending this session, you consent to this.

ConocoPhillips Australia collects and deals with personal information in accordance with our privacy policy, available at <https://www.conocophillips.com.au/privacy-policy/legal-privacy-australia/>.

## Overview

- Welcome and introductions.
- Why we're here.
- About ConocoPhillips Australia.
- Proposed exploration drilling program and activities.
- Offshore exploration regulations overview.
- Offshore drilling – explained.
- Environmental impacts and risks explained
  - Our methodology
  - Preliminary assessment.
- Panel session – questions, answers and feedback.

### Seeking Relevant Persons

ConocoPhillips Australia is seeking to understand functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program.

This information, along with the assessment of impacts and risks, determines if an individual or organisation is a 'relevant person'.

A relevant person is a mandatory consultee under the Regulations.

4

4

## ConocoPhillips Australia

**ConocoPhillips Australia was established almost two decades ago.**

- We are a shareholder in Australia Pacific LNG (APLNG) and operate the APLNG facility on Curtis Island, in Queensland.
- We are headquartered in Brisbane, QLD.
- We have more than 50 years offshore experience globally (starting in the North Sea off UK and Norway and including offshore between northern Australia and Timor Leste).

### Current exploration portfolio

Two permits in the offshore Otway Basin:

- T/49P
- VIC/P79

ConocoPhillips  
11/9/2023

5

## Otway Exploration Drilling Program

### Areas:

- VIC/P79 and T/49P
- ConocoPhillips Australia holds an 80% interest and operatorship of both permits.

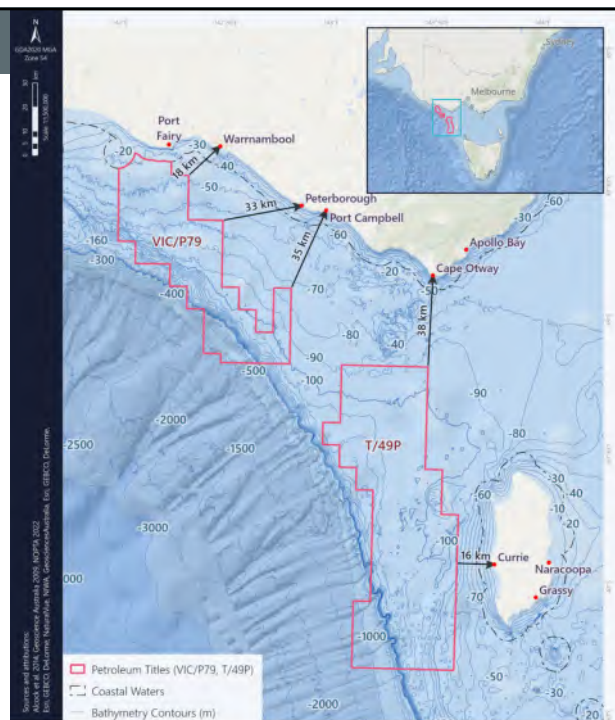

### Key Permit Prospects Characteristics:

- Offshore Otway Basin
- Water depth range 35-1400m, predominantly ~100m
- Adjacent to producing Thylacine, Geographe, Casino, and Henry gas fields.

### Existing permit commitments:

- T/49P commitment of one exploration well.
- VIC/P79 commitment of one exploration well.

ConocoPhillips

6

## Otway Exploration Drilling Activities

1. Seabed Hazard Survey involves:
  - ~6 km<sup>2</sup> per site area at up to 9 locations
  - Vessel operations
  - Geophysical survey
  - Geotechnical sampling
  - Imagery
2. Exploration Drilling involves:
  - Marine offshore drilling unit operations
  - Support vessels, remote operated vehicle, aircraft
  - Anchor placement/removal
  - Evaluation and testing (flaring)
  - Plug and Abandon all wells

Environment Plan and associated impact and risk assessment based on maximum of 6 wells over 5yrs.

ConocoPhillips

ConocoPhillips

## Offshore Regulation Overview

The Basics

8

## The Environment Regulations

### The Regulations place the burden of proof on the titleholder:

Recognises environments are all different  
 Titleholder must do the work to justify its environmental standards  
 Our propositions are independently scrutinized by Government

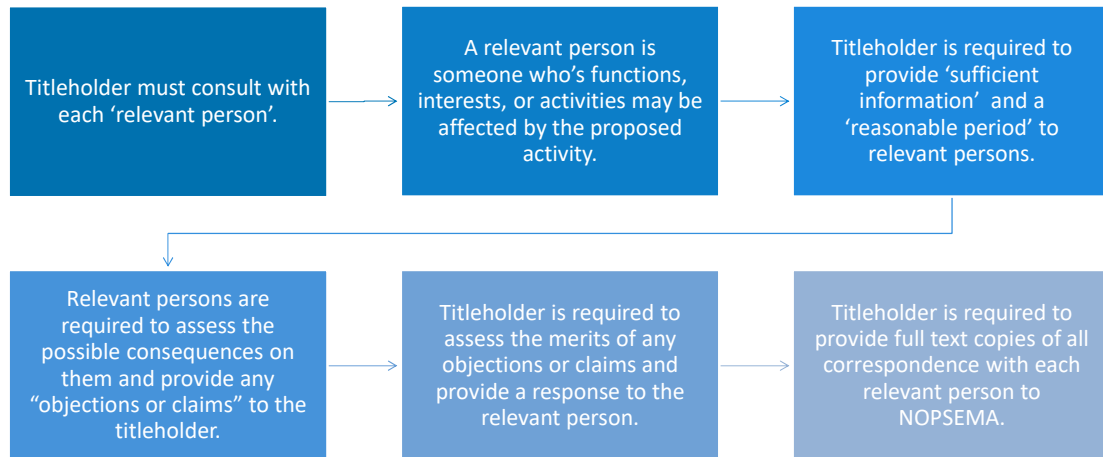

### The Regulations have three foundational concepts:

Principles of ecologically sustainable development.  
 Environmental impacts and risks must be of an acceptable level.  
 Environmental impacts and risks must be managed to as low as reasonably practicable.

## Activity Planning Process

## The Consultation Process

# Offshore Drilling

The Basics

## Drilling Terms

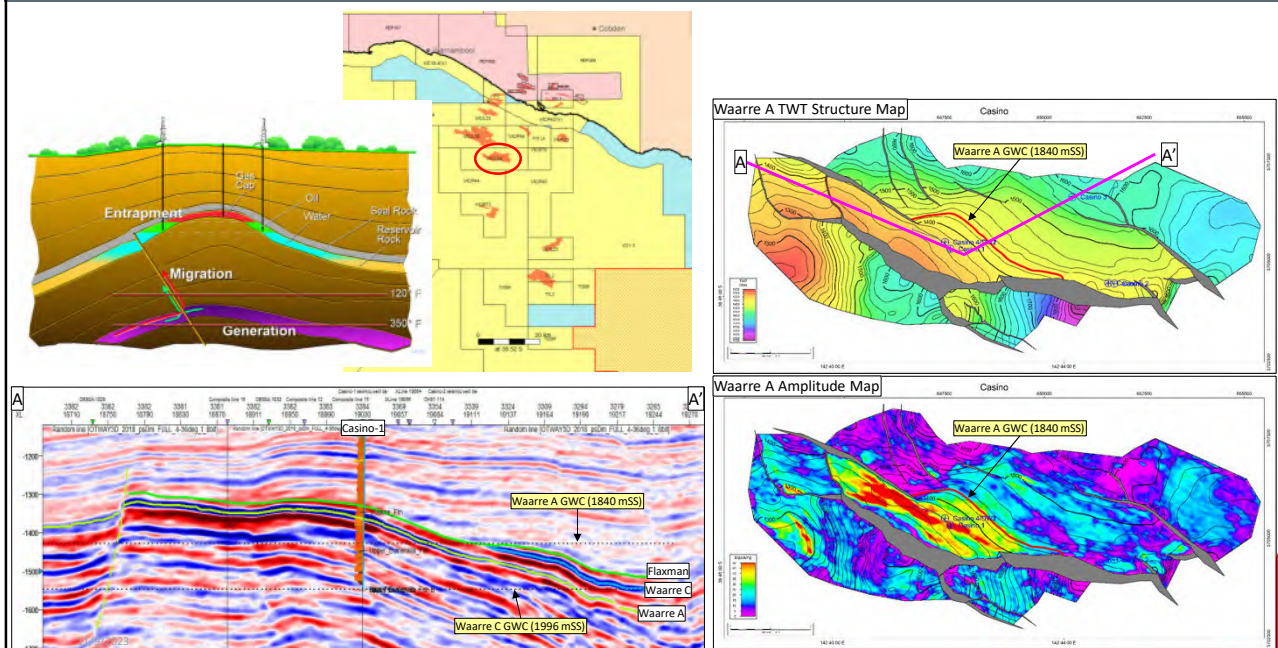

MODU	Mobile Offshore Drilling Unit (Rig)
AHSV	Anchor Handling Supply Vessel (Boat)
Exploration Well	A well drilled to investigate an exploration prospect – usually the first well drilled in a field or area
Appraisal Well	The wells drilled following the initial discovery well – usually drilled to identify the extent of a discovery or to gather more information
Production Well	A well drilled for the purpose of producing hydrocarbons
BOP	Blowout Preventer – a series of high pressure valves that prevent the flow of formation fluids to the environment
MWD/LWD	Measurement While Drilling and Logging While Drilling – drilling tools that contain measurement sensors that transmit data to surface real time.

ConocoPhillips  
11/9/2023

13

13

## We are looking for Gas

14

## Common Offshore Rig Types

Jack-up  
6-100m Water Depth

Semi-Submersible  
50-1000+m Water Depth

Drill Ship  
600-3000+m Water Depth

16

## Drilling Process - Mooring

### Anchors

Anchors are ~ 20 metric ton with an additional 9 metric ton ballast

8-12 anchors required to hold rig on location

17

## Drilling Process - Mooring

### Anchor Installation – Pre-laid mooring

18

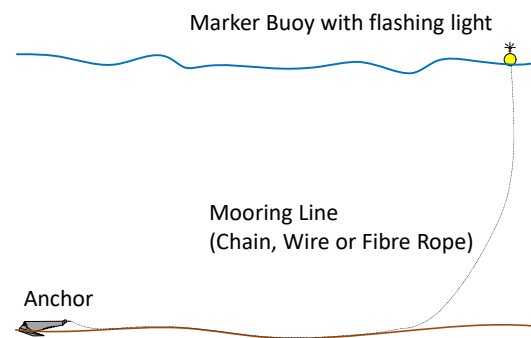

## Drilling Process - Mooring

### Anchor Installation – Pre-laid mooring

- Anchors may be pre-laid a few weeks before the rig arrives on location
- Rigs have between 8 and 12 anchors
- Navigation warnings will be in place via Notice to Mariners

ConocoPhillips  
11/9/2023

19

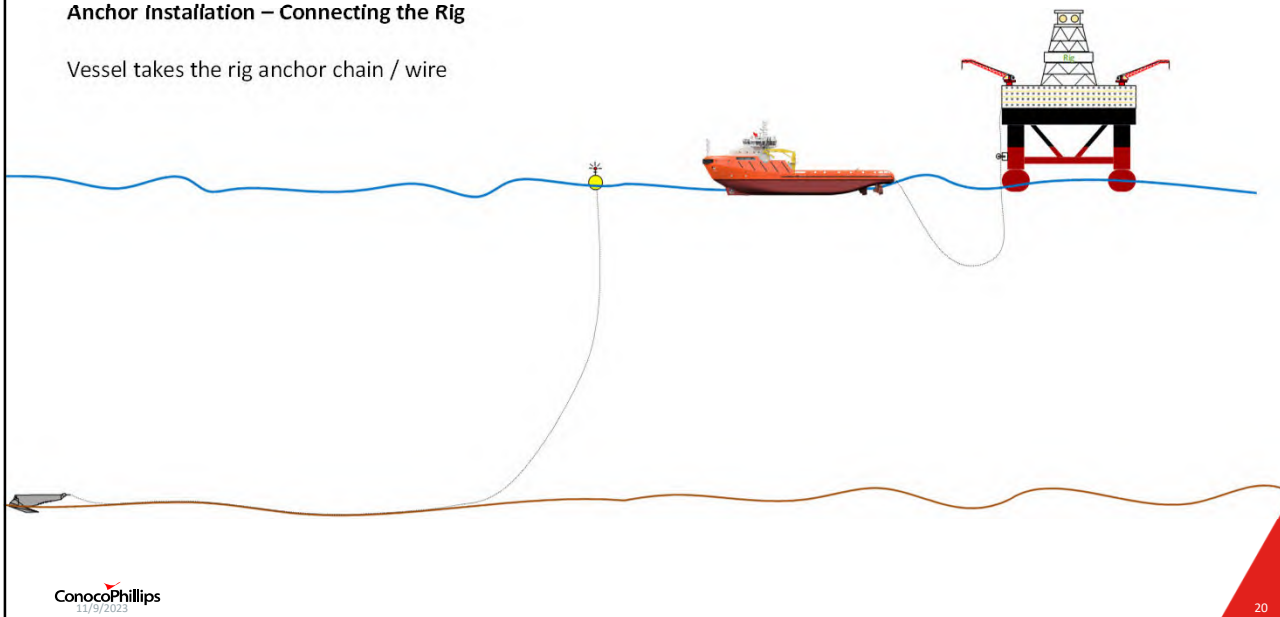

19

## Drilling Process - Mooring

### Anchor Installation – Connecting the Rig

Vessel takes the rig anchor chain / wire

20

## Drilling Process - Mooring

### Anchor Installation – Connecting the Rig

Vessel connects rig anchor chain/wire to the pre-laid mooring and removes the marker buoy

21

## Drilling Process - Mooring

### Anchor Installation – Connecting the Rig

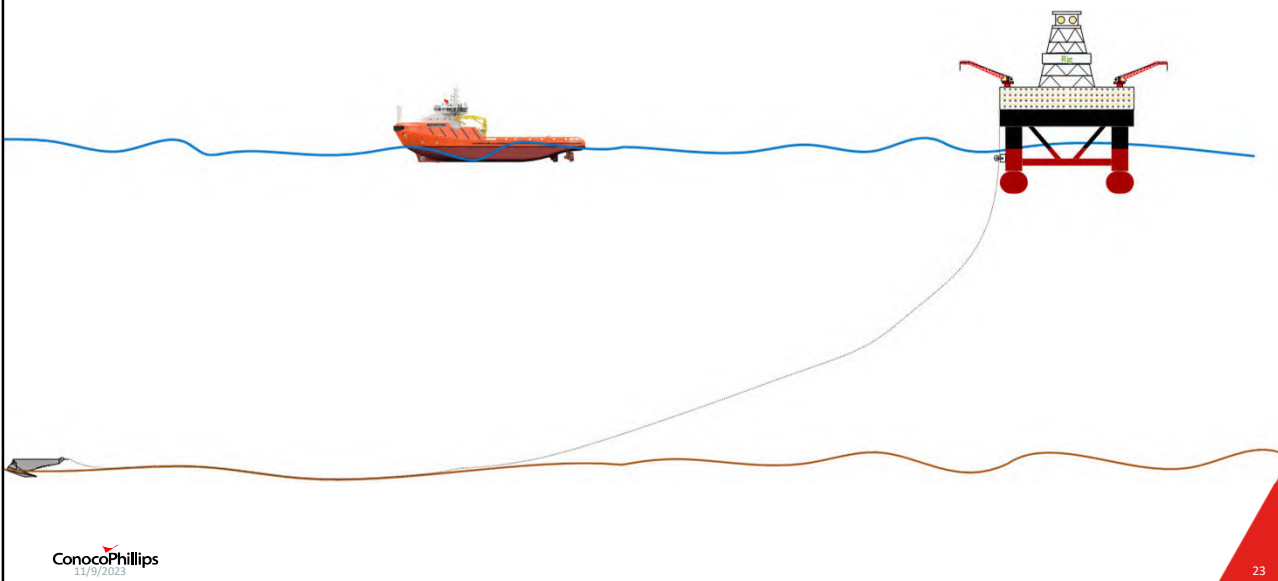

Rig takes tension on the mooring line

22

## Drilling Process - Mooring

Once anchors are connected – rig ballasts down to drilling draft

23

## Drilling Process – Drilling the well

### Spudding the well

- Drilling the foundation hole
- Typically 42" hole
- Drilled 60-100m below seabed

Drill bit and Hole Opener

ConocoPhillips  
11/9/2023

24

24

## Drilling Process – Drilling the well

### Installing the First Part of the Wellhead

- 36" conductor pipe
- Stage 1 wellhead housing installed
- The conductor is cemented in place

Conductor Pipe

Subsea Wellhead System

ConocoPhillips  
11/9/2023

25

25

## Drilling Process – Drilling the well

### Drilling Surface Hole

- Drill 26" hole
- 20" Surface Casing
- Stage-2 wellhead housing installed
- Casing is cemented in place

Well Casing

Stage-2

Subsea Wellhead System

ConocoPhillips  
11/9/2023

26

26

## Drilling Process – Drilling the well

### Installing the BOP and Riser

Well Casing

Subsea Wellhead System

ConocoPhillips  
11/9/2023

27

27

## Drilling Process – Drilling the well

### Drilling the Intermediate Hole

#### A. Primary Barrier

- Used to maintain “overbalance” to the pressure in the formation.
- The static hydrostatic pressure of the drilling fluid must be more than the pressure WITHIN the rock.

#### B. Using the drilling fluids

- Used to cool the drill bit and the wellbore.
- Transports cuttings to the surface.
- Water based muds contain barite and bentonite (natural minerals).
- Chemicals added as required.
- MUST go through chemical selection process per the Environment Plan.

Drilling Fluids

ConocoPhillips  
11/9/2023

28

28

## Drilling Process – Drilling the well

### Drilling the Reservoir Hole and Evaluate Well

- Reservoir / Formation Evaluation
  - Used to establish key subsurface information
    - Formation type
    - Formation fluid type
    - Formation porosity and permeability
    - Formation pressure and flow characteristics
    - Sample reservoir fluids
  - MWD/LWD – performed whilst drilling
  - Wireline logging – after hole is drilled

Pictures from SLB, Paniz Energy & ANOG  
ConocoPhillips  
11/9/2023

29

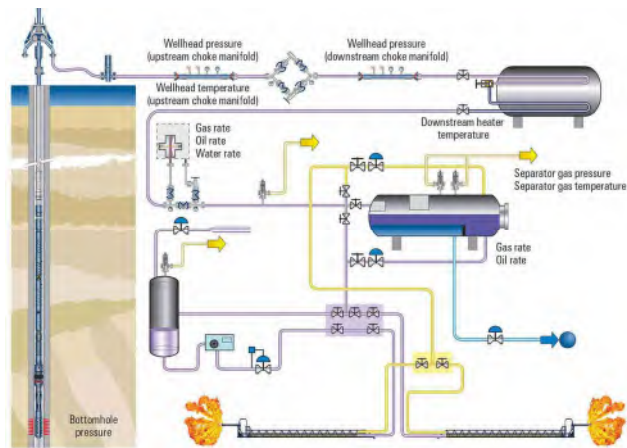

29

## Drilling Process – Well Testing

**Well Testing determines the reservoir delivers hydrocarbons**

- Not every well is tested.
- Typical to test “appraisal wells”.
- Typical used to fill the well with hydrocarbons for preparation of new production wells.

ConocoPhillips  
11/9/2023

Pictures from SLB

30

30

## Drilling Process – Well Abandonment

Following the drilling of exploration wells or at the end of a wells production life – wells are plugged and abandoned

- Set cement plugs to prevent the movement of formation fluids either to surface or into shallower formations.
- Removal of the wellhead at below seabed floor level.

Picture from Ateon

ConocoPhillips  
11/9/2023

31

31

## Drilling Process – Equipment Used

ConocoPhillips  
11/9/2023

32

32

## Drilling Process – Life Offshore

- Rosters are either 3 weeks on, 3 weeks off or 4 weeks on, 4 weeks off
- 12 hour shifts
- No alcohol.

ConocoPhillips  
11/9/2023

33

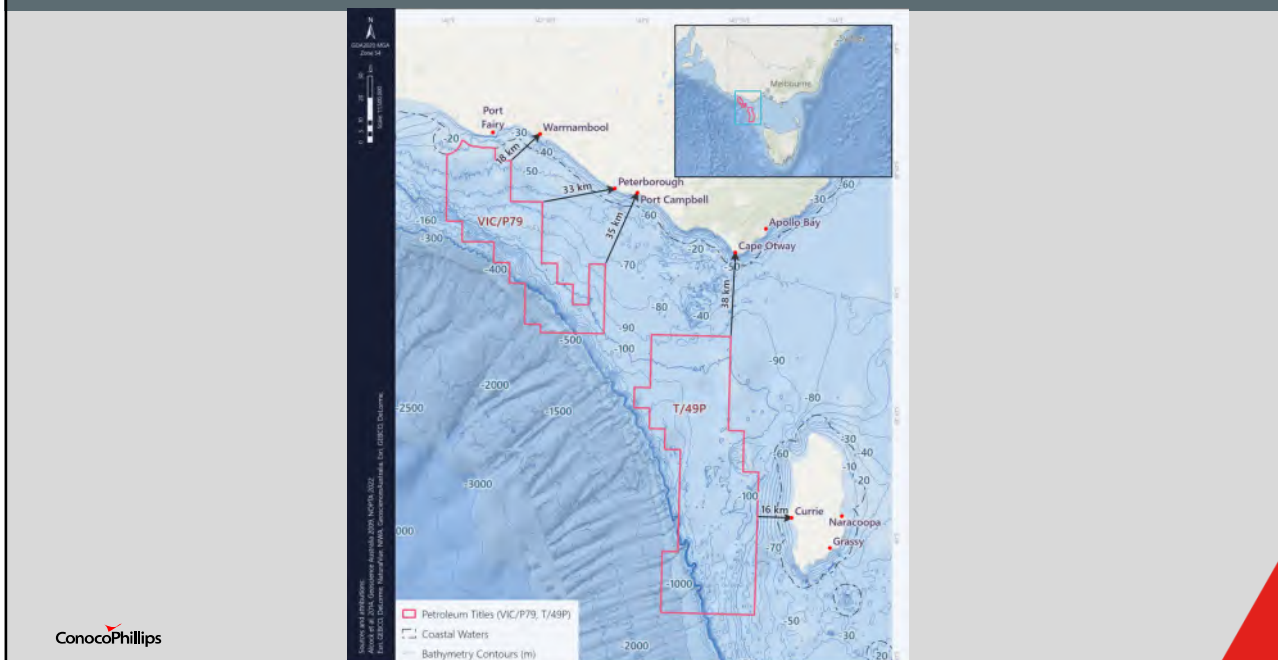

# Environmental Impacts and Risks

Preliminary Assessment

34

## Understanding the proposed activity

35

## Proposed Activity

Parameter	Seabed Survey	Drilling
<b>Design Envelope – the broadest timeframe and spatial extent of the activity</b>		
<b>Earliest start date</b>	1 January 2024	1 October 2024
<b>Latest finish date</b>	31 December 2028	31 December 2028
<b>Maximum number of locations</b>	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
<b>Spatial extent (within which activity can occur)</b>	Operational Areas within T/49P and Vic/P79	Operational Areas within T/49P and Vic/P79
<b>Operating Envelope – narrowing the timing and location of the activities to the current best estimates</b>		
<b>Maximum duration</b>	1 week per seabed survey location	Up to 90 days of drilling per location
<b>Spatial extent (within which activity can occur)</b>	324 km <sup>2</sup> (Nine locations, each 6 x 6 km) within Operational Areas	75 km <sup>2</sup> (Six locations, each a 2 km radius Drilling Area) within Operational Areas

36

Questions

Feedback

Where to from here?

ConocoPhillips

41

41

## Exploration Terms

NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority Independent expert regulator responsible for health and safety, structural (well) integrity and environmental management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.
NOPTA	National Offshore Petroleum Titles Administrator They are responsible for the day-to-day administration of petroleum & greenhouse gas titles in Commonwealth waters in Australia.
EP	Environment Plan A document submitted to NOPSEMA for assessment prior to the commencement of an activity, which contains information on environmental assessment, implementation of environmental management, details of the titleholder and other information specified in the Environment Regulations
Exploration Well	A well drilled to investigate an exploration prospect – usually the first well drilled in a field or area.
Seabed Survey	Seabed surveys are an important safety and environmental measure undertaken ahead of drilling activities. They typically involve geophysical and geotechnical sampling techniques that identify possible hazards and seafloor habitat to inform exploration well and drilling rig anchor placement.

# Otway Exploration Drilling Program

King Island: 13 July 2023

1

ConocoPhillips Australia acknowledges the Aboriginal and Torres Strait Islander peoples as the First Nations Peoples and Traditional Custodians of this land, and we pay our respects to Elders past and present. We celebrate the Aboriginal and Torres Strait Islander peoples' long histories, rich cultures and connection to the land, water and air.

11/9/2023

## Otway Exploration Drilling Program

### Areas:

- VIC/P79 and T/49P
- ConocoPhillips Australia holds an 80% interest and operatorship of both permits.

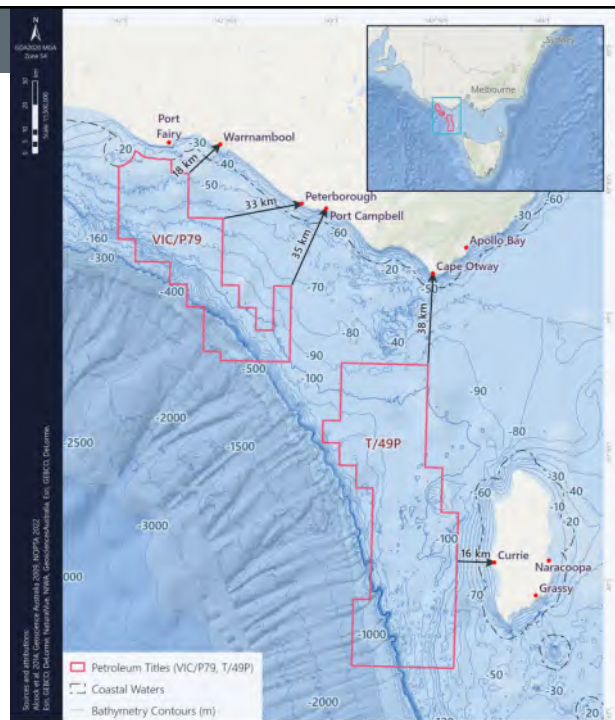

### Key Permit Prospects Characteristics:

- Offshore Otway Basin
- Water depth range 35-1400m, predominantly ~100m
- Adjacent to producing Thylacine, Geographe, Casino, and Henry gas fields.

### Existing permit commitments:

- T/49P commitment of one exploration well.
- VIC/P79 commitment of one exploration well.

ConocoPhillips

3

## Otway Exploration Drilling Activities

1. Seabed Hazard Survey involves:
  - ~6 km<sup>2</sup> per site area at up to 9 locations
  - Vessel operations
  - Geophysical survey
  - Geotechnical sampling
  - Imagery
2. Exploration Drilling involves:
  - Marine offshore drilling unit operations
  - Support vessels, remote operated vehicle, aircraft
  - Anchor placement/removal
  - Evaluation and testing (flaring)
  - Plug and Abandon all wells

Environment Plan and associated impact and risk assessment based on maximum of 6 wells over 5yrs.

ConocoPhillips

4

# Offshore Regulation Overview

The Basics

5

## The Environment Regulations

### **The Regulations place the burden of proof on the titleholder:**

Recognises environments are all different  
 Titleholder must do the work to justify its environmental standards  
 Our propositions are independently scrutinized by Government

### **The Regulations have three foundational concepts:**

Principles of ecologically sustainable development.  
 Environmental impacts and risks must be of an acceptable level.  
 Environmental impacts and risks must be managed to as low as reasonably practicable.

27

ConocoPhillips

Feedback received  
from commercial  
fishing industry

28

Activity		
Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
<b>Activities may impact commercial fishing operators ability to undertake regular activities.</b>	ConocoPhillips Australia is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement.	Exclusion zones will be put in place prior to the commencement of seabed survey and drilling activities. These will be communicated via notices to mariners.  ConocoPhillips Australia is committed to having a commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.
<b>There is already seismic over these areas, you shouldn't have to do this again.</b>	The Otway Exploration Drilling Program is not proposing seismic acquisition as part of its activity.	Clarifying proposed activity with all individuals that make this claim, including providing information for current titleholders and proponents proposing to undertake seismic acquisition in the region.
<b>Catch and effort data from relevant fishing authorities (VFA, NRE TAS, AFMA) is not the only indication of productivity in commercial fisheries.</b>	ConocoPhillips Australia has used historic catch and effort data as part of its analysis of Coastal and other marine users chapter.  We also look at the stock status of key fished species and assess impacts to these species.	Requesting feedback from fishers in relation to potential interactions over the larger operational areas, and the broader Environmental Planning Area, to ensure that we can address any concerns you may have.

29

Activity contd.		
Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
<b>Exploration drilling impacts the recruitment to and long-term sustainability of fisheries.</b>	Although exploration drilling activities do not operate to a no-impact standard, impacts are required to be as low as reasonably practicable (ALARP) and of an acceptable level. Long-term impacts to the sustainability of fisheries are not acceptable.	Requesting feedback from fishers in relation to key values and sensitivities within fisheries (fishing areas) that ConocoPhillips Australia should consider for exclusion.
<b>Commercial fishing industry has experienced ongoing financial impacts in the past 3-5 years (COVID, Trade Embargos, low prices) and this [drilling activity] is an additional impact that puts livelihoods at risk</b>	ConocoPhillips Australia is conscious of the ongoing constraints faced by many in the commercial fishing industry and is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement which has a flow-on affect to income.	ConocoPhillips Australia is committed to having an evidence based commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.

30

## Consultation

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
<b>Fishers are unable to make an informed assessment as there are no defined drilling locations.</b>	<p>ConocoPhillips Australia is currently analysing seismic data obtained during the Sequoia 3D Marine Seismic Survey in permit T/49P, in 2021, and is reprocessing historic seismic data for parts of permit VIC/P79, to support the identification of drilling locations.</p> <p>ConocoPhillips Australia is developing an Environment Plan that assesses the potential impacts and risks associated with exploration activities over larger operational areas within each of permit areas. We understand that this may result in an overestimation of impacts and risks that are specific to functions, interests and activities.</p>	<p>Provided map with latitude and longitude coordinates to support ongoing consultation with commercial fishing industry.</p> <p>Requesting feedback from fishers in relation to potential interactions over the larger operational areas, and the broader Environmental Planning Area, to ensure that we can address any concerns you may have.</p>

ConocoPhillips

31

31

## Adjustment protocol

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
<b>ConocoPhillips Australia's Adjustment protocol for the Sequoia Seismic Survey was still too hard to apply for.</b>	ConocoPhillips Australia worked with peak fishing industry associations and made best attempts to ensure the Sequoia Seismic Adjustment Protocol was as simple as possible to apply to, including allowing for a payment of \$2500 in administrative costs for fishers regardless of assessment outcome.	ConocoPhillips Australia is seeking feedback from the commercial fishing industry on how applications to an evidence-based adjustment protocol can be simplified for ease of application.
<b>A displacement based compensation approach is not an adequate compensation approach</b>	<p>ConocoPhillips Australia is aware that there is not a one-size-fits all approach to adjustment and compensation of commercial fishers.</p> <p>ConocoPhillips Australia is committed to the principle that no fisher will be worse off financially as a result of our activity.</p>	ConocoPhillips Australia is seeking feedback from the commercial fishing industry on how best to assess impact to commercial fishers through an evidence based adjustment protocol.

ConocoPhillips

32

32

## Adjustment protocols contd.

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
<b>Any compensation/ adjustment should be paid to those doing the actual fishing</b>	ConocoPhillips Australia is committed to the principle that no fisher will be worse off financially as a result of our activity.	ConocoPhillips Australia is committed to having an evidence based commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.
<b>ConocoPhillips Australia should retire the SRL fishing quota for the entire season they are planning to be active.</b>	ConocoPhillips Australia does not believe a full retirement of quota is an appropriate response to a short-term, recoverable activity.	ConocoPhillips Australia is committed to having an evidence based commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.

## Questions and Discussion

# Otway Exploration Drilling Program

June 2023

1

ConocoPhillips Australia acknowledges the Aboriginal and Torres Strait Islander peoples as the First Nations Peoples and Traditional Custodians of this land, and we pay our respects to Elders past and present. We celebrate the Aboriginal and Torres Strait Islander peoples' long histories, rich cultures and connection to the land, water and air.

11/9/2023

2

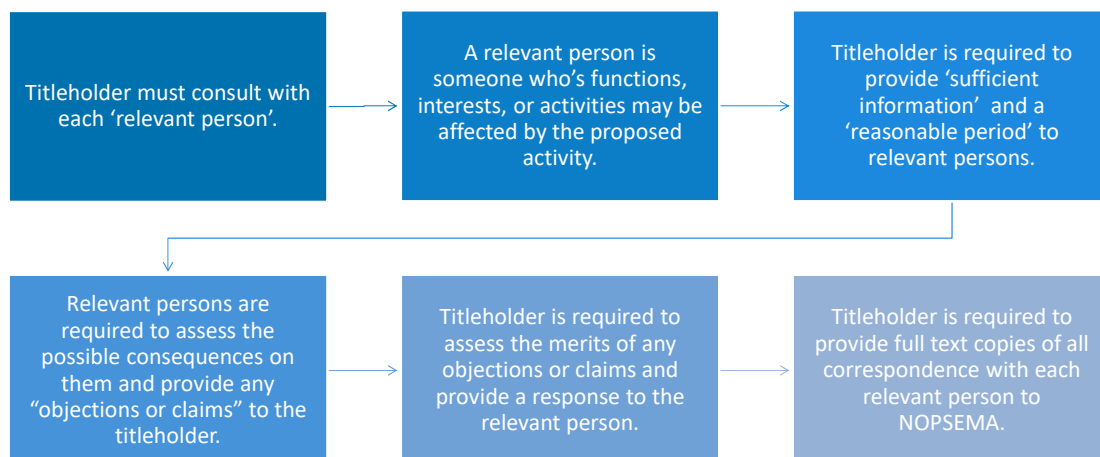

## Seeking Relevant Persons

- ConocoPhillips Australia is seeking to understand functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program.
- This information, along with the assessment of impacts and risks, determines if an individual or organisation is a 'relevant person'.
- A relevant person is a mandatory consultee under the Regulations.
- This is an information session to provide you information as an individual, about whether you are a Relevant Person under the process and regulations.

**ACTION REQUIRED:** Register as a relevant person via the consultation hub by advising ConocoPhillips Australia of your functions, interests or activities.

## The Consultation Process

## ConocoPhillips Australia

ConocoPhillips Australia was established almost two decades ago.

- We are a shareholder in Australia Pacific LNG (APLNG) and operate the APLNG facility on Curtis Island, in Queensland.
- We are headquartered in Brisbane, QLD.
- We have more than 50 years offshore experience globally (starting in the North Sea off UK and Norway and including offshore between northern Australia and Timor Leste).

### Current exploration portfolio

Two permits in the offshore Otway Basin:

- T/49P
- VIC/P79

ConocoPhillips  
11/9/2023

5

## Otway Exploration Drilling Program

### Areas:

- VIC/P79 and T/49P
- ConocoPhillips Australia holds an 80% interest and operatorship of both permits.

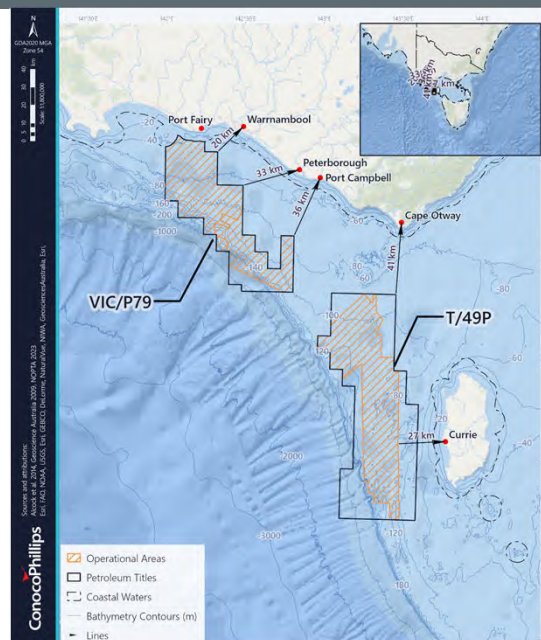

### Key Permit Prospects Characteristics:

- Offshore Otway Basin
- Water depth range 35-1400m, predominantly ~100m
- Adjacent to producing Thylacine, Geographe, Casino, and Henry gas fields.

### Existing permit commitments:

- T/49P commitment of one exploration well.
- VIC/P79 commitment of one exploration well.

ConocoPhillips

6

## Otway Exploration Drilling Activities

1. Seabed Hazard Survey involves:
  - ~6 km<sup>2</sup> per site area at up to 9 locations
  - Vessel operations
  - Geophysical survey
  - Geotechnical sampling
  - Imagery
2. Exploration Drilling involves:
  - Mobile offshore drilling unit operations
  - Support vessels, remote operated vehicle, aircraft
  - Anchor placement/removal
  - Evaluation and testing (flaring)
  - Plug and Abandon all wells

Environment Plan and associated impact and risk assessment based on maximum of 6 wells over 5yrs.

## APPENDIX C3 - INFORMATION SHEETS

### Commercial Fishing

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

#### About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

We are committed to ensuring that commercial fishers and offshore petroleum activities can sustainably coexist, that impacts are limited to interference to no greater extent than is necessary and that commercial fishers are no worse off as a result of the Otway Exploration Drilling Program.

This information sheet summarises the ongoing assessment of potential impacts and risks to the commercial fishing industry arising from ConocoPhillips Australia's Otway Exploration Drilling Program.

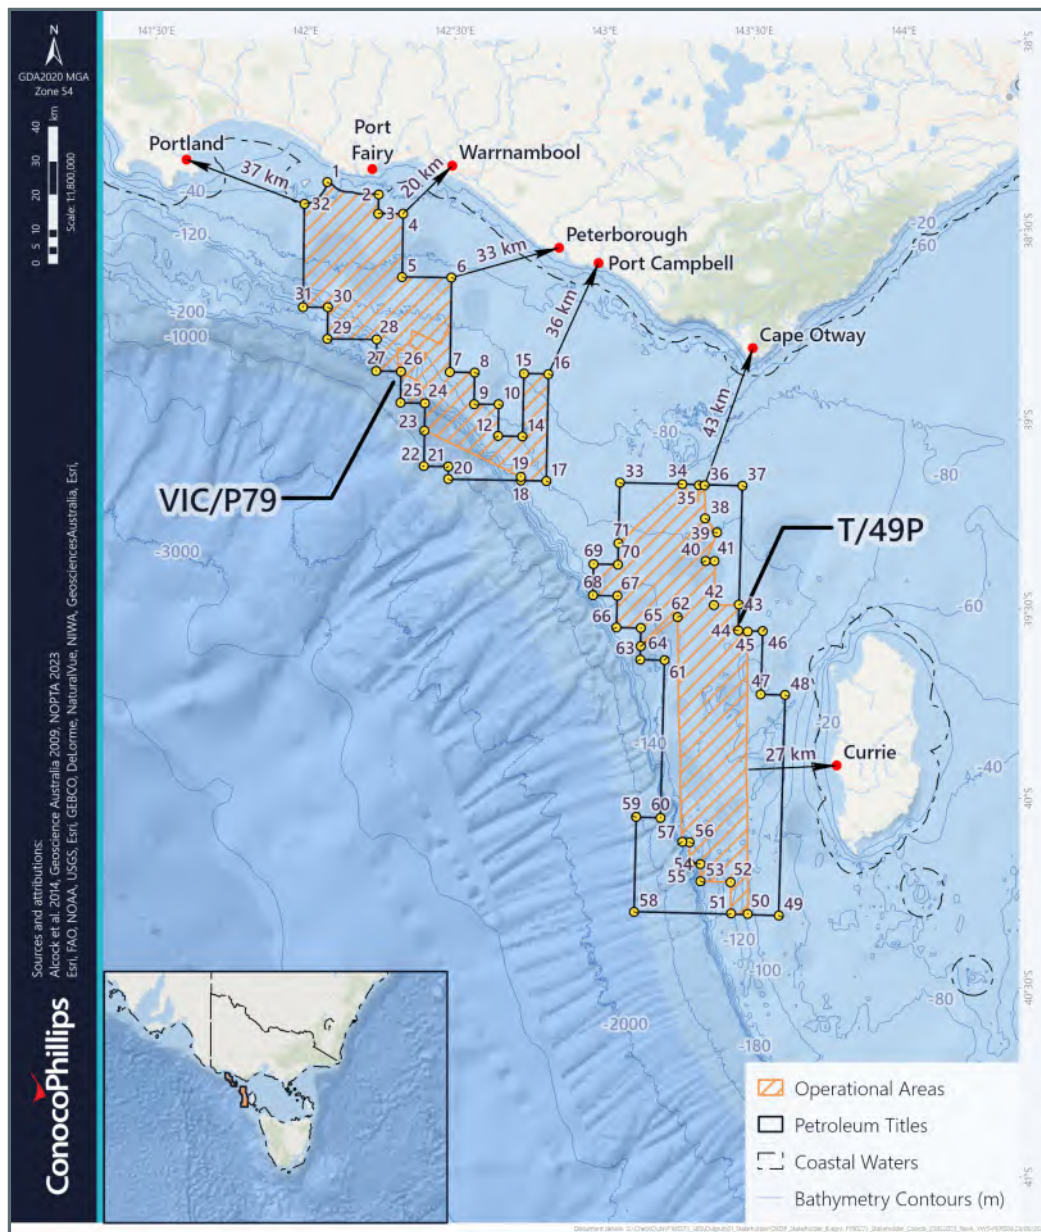

Figure 1 shows the permit areas and operational areas, within which exploration activities may occur.

#### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.
- Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.
- A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:
  - Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.
  - Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10s to 100s of meters and will not affect the long-term sustainability of fisheries.
  - Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

## Map of Permit Areas

Assessment of Commercial Fishing

Several Commonwealth and State fisheries (with recorded activity in the last five years) have been identified within the Otway Exploration Drilling Program’s permit areas.

Commonwealth Fisheries	State Fisheries	
	Victoria	Tasmania
Southern and Eastern Scalefish and Shark Fishery <ul style="list-style-type: none"><li>Commonwealth Trawl Sector</li><li>Scalefish Hook Sector</li><li>Gillnet Hook Trap Sector Shark Gillnet sub-sector</li><li>Gillnet Hook Trap Sector Shark Hook sub-sector</li></ul>	Giant Crab Fishery	Giant Crab Fishery
Bass Strait Central Zone Scallop Fishery	Rock Lobster Fishery	Rock Lobster Fishery
Southern Squid Jig Fishery	Wrasse (Ocean) Fishery	
	Octopus Fishery	
Eastern Tuna Billfish	Multi-species Ocean Fisheries	

## Potential Effects on day-to-day Fishing Operations

ConocoPhillips Australia is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement. There are three key aspects to potential displacement:

### 1. Location

Drilling will be undertaken at up to a maximum of six locations that are yet to be determined, but will be entirely within the permit areas. Once prioritised drilling locations are identified, seabed surveys will be conducted to identify possible hazards and natural features which may impact operations. Up to a maximum of six exploration wells will be drilled over both permit areas, with each taking typically between 30 to 40 days to complete. Specific seabed survey and drilling locations will be communicated with commercial fisheries prior to commencement.

### 2. Exclusion Zones

Exclusion zones are in place as a safety precaution for fishing vessels and crew as well as drilling equipment and crew. These zones allow anchors and mooring equipment to be placed within the operational area during the drilling program and prevent interactions or collisions with equipment or between vessels. Exclusion zones will be communicated via a 'Notice to Mariners' by the Australian Hydrographic Office. Three types of exclusion zones will be in place at set times and locations during the program:

- **Safe Navigation Area** – A 500 m radius safe navigation area will be established around seabed survey vessels and any towed equipment when conducting seabed surveys.
- **Cautionary zone** – a 2 km radius cautionary zone will be established around the drilling rig and once in position. This zone will cover the area of seabed anchors and mooring equipment and will be maintained by support vessels.
- **Petroleum Safety Zone** – A 500 m radius petroleum safety zone will be enforced around the drilling rig once in position at each drilling location.

### 3. Timing and Duration

Up to nine seabed surveys may be completed, each expected to take approximately 1 week to complete. Surveys will commence no earlier than January 2024.

For drilling, each well will typically take between 30 to 40 days, and a maximum of 90 days to complete accounting for operational delays and weather events.

## Potential interactions with commercial fishing

ConocoPhillips Australia has assessed the potential for interactions between our planned activities and unplanned events that could affect commercially targeted fish and marine invertebrates such as the southern rock lobster.

The following table describes these events.

Aspect	Activity	Commercially relevant species	Assessment
<b>Planned</b>			
Underwater sound (Impulsive)	Seabed survey operations	<ul style="list-style-type: none"> <li>• Marine invertebrates</li> <li>• Fish</li> </ul>	Seabed surveys involve a range of geophysical assessment techniques with the most potentially environmentally impactful method being Sub-bottom Profiling (SBP). SBP uses an impulsive acoustic source to penetrate typically less than 100 metres into the seafloor to identify shallow geological hazards prior to drilling. The sound levels emitted during SBP do not reach or exceed any of the relevant thresholds for effects on fish, fish eggs and larvae or marine invertebrates.
	Well evaluation operations (during drilling)		<p>An evaluation will be performed on all drilled wells to determine the well's ability to produce hydrocarbons. This may include a range of tests, with the most potentially environmentally impactful being Vertical Seismic Profiling (VSP).</p> <p>Fish and benthic invertebrates may be sensitive to the impulsive sound emitted from this activity, however, the short duration (maximum 20 hours per well), along with the likelihood of negative affect being restricted to within a few hundred metres of the source, reduce the potential for impacts to these species.</p> <p>Further, fish are expected to exhibit avoidance behaviour and swim away when sound reaches levels which may cause physiological effects<sup>1</sup>.</p>
Underwater Sound (Continuous)	Drilling rig and support vessel operations	<ul style="list-style-type: none"> <li>• Marine invertebrates</li> <li>• Fish</li> </ul>	<p>Drilling and support vessel operations are expected to occur 24 hours a day for typically 30-40 days per well. Sound produced by these activities is predicted to reach the levels associated with physiological effects, recoverable injury and temporary threshold shift (TTS or temporary injury) for some fish species within 10 metres to the sound sources. For effect thresholds to be exceeded, fish would have to remain continuously at those distances for either 12 hours (temporary injury threshold) or 48 hours (recoverable injury threshold).</p> <p>Although there are no threshold criteria relevant to marine invertebrates for continuous sound, there is the potential for sub-lethal impacts<sup>2</sup>.</p>
Routine Operational Discharges	Seabed survey vessel, drilling rig and support vessel operations	<ul style="list-style-type: none"> <li>• Marine invertebrates</li> <li>• Fish</li> </ul>	Discharges from seabed survey vessels, the drilling rig and support vessels will be of low toxicity and dilute rapidly within the marine environment. These discharges are typical of marine vessels and are treated to meet relevant standards.
Routine Drilling Discharges	Drilling rig operations	<ul style="list-style-type: none"> <li>• Marine invertebrates</li> <li>• Fish</li> </ul>	Cement, cuttings and drilling fluid discharges occur during drilling activities, resulting in localised and temporary changes in water quality, but will dilute rapidly within the marine environment.

## Potential Effects on day-to-day Fishing Operations *continued*

Aspect	Activity	Commercially relevant species	Assessment
<b>Unplanned Events</b>			
Introduction of Invasive Marine Species	Seabed survey vessel, drilling rig and support vessel operations	<ul style="list-style-type: none"> <li>• Marine invertebrates</li> <li>• Fish</li> </ul>	Drilling will occur in deep, well mixed waters which are unfavourable conditions for most invasive marine species. ConocoPhillips Australia will implement its Marine Assurance System and Invasive Marine Species Risk Assessment process to mitigate the risk of introduction, and vessels operating within permit areas will comply with Australian requirements for ballast water and biofouling management.
Accidental hydrocarbon release	Seabed survey vessel, drilling rig and support vessel operations	<ul style="list-style-type: none"> <li>• Marine invertebrates</li> <li>• Fish</li> </ul>	<p>In the unlikely event of an accidental hydrocarbon release, an exclusion zone will be put in place resulting in the displacement of fishing activities.</p> <p>ConocoPhillips Australia and their contractors will have tested plans in place to support an effective and timely response to minimise the duration of any effects, including:</p> <ul style="list-style-type: none"> <li>• A Shipboard Oil Pollution Emergency Plan or Shipboard Marine Pollution Emergency Plan, depending on the class of vessel.</li> <li>• An Oil Pollution Emergency Plan.</li> <li>• A Source Control Emergency Response Plan.</li> </ul> <p>In addition, an Operational and Scientific Monitoring Program will be implemented to ensure that potential impacts to commercial fisheries are assessed and monitored to recovery.</p> <p>Impacts to fisheries from a hydrocarbon spill are expected to be limited to small numbers of juvenile fish, larvae and plankton, and are not expected to affect population viability or recruitment, or the long-term sustainability of the fisheries.</p>
Interaction with Marine Fauna	Seabed survey vessel, drilling rig and support vessel operations	<ul style="list-style-type: none"> <li>• Fish</li> </ul>	<p>Given the underwater sound emitted during exploration activities, fish are expected to exhibit avoidance behaviours resulting in a low likelihood of interaction. ConocoPhillips Australia will implement additional measures to minimise the risk of interaction, including:</p> <ul style="list-style-type: none"> <li>• Reducing vessel speeds within operational areas.</li> <li>• Minimising the number of vessels within operational areas at any one time; and</li> <li>• Implementing procedures to detect and protect marine fauna.</li> </ul>

<sup>1</sup> As accepted by McCauley (1994) in *Environmental Implications of Offshore Oil and Gas Developments in Australia: Seismic Surveys*.

<sup>2</sup> Day et al (2020), *Lobsters with pre-existing damage to their mechanosensory statocyst organs do not incur further damage to exposure to seismic air gun signals (Lobsters with pre-existing damage to their mechanosensory statocyst organs do not incur further damage from exposure to seismic air gun signals - ScienceDirect)*

# Questions

## and Answers

### **How is ConocoPhillips Australia consulting commercial fishers for the Otway Exploration Drilling Program?**

The proposed exploration activities will occur in designated Commonwealth and State fishery management areas. The seabed survey and drilling activities require access to relatively small areas for short periods of time, however, these activities may displace commercial fishing activities and other commercial marine users.

ConocoPhillips Australia has arrangements in place with Seafood Industry Victoria (SIV), the Tasmanian Seafood Industry Council (TSIC) and Tuna Australia to be the primary point for consultation with their members. All members may choose to engage directly with ConocoPhillips Australia at any point to represent their individual interests. To do this, contact ConocoPhillips Australia on the details below.

All other commercial fishers will be consulted individually by ConocoPhillips Australia unless directed otherwise.

We encourage commercial fishers to provide feedback, request a meeting and ask questions on the proposed activity by contacting us via the Otway Consultation Hub or email or telephone.

### **Will seismic surveys be used as part of the Otway Exploration Drilling Program?**

No, seismic survey is not part of the Otway Exploration Drilling Program.

The sound emitted by vessel operations and exploration drilling is a continuous sound. Whereas, the sound emitted during a marine seismic survey is a non-continuous or impulsive sound. A number of studies predict that, for a range of species exposed to impulsive sounds, impacts occur at lower sound levels than for exposure to continuous sounds.

*- Vertical seismic profiling (VSP) may be conducted over a maximum of 20 hours at each well, and may not be conducted at all depending on specific well appraisal objectives. The sound generated during VSP is significantly lower in intensity and duration than sound produced from a seismic array.*

Seabed surveys are designed specifically to map the seabed and directly below the seabed (up to ~100 m), whereas seismic surveys are designed to image the subsurface up to several kilometres below the seabed. Sound generated from sub-bottom profiling during the seabed survey is significantly lower in intensity and duration than sound produced from a seismic array.

### **What is well evaluation and Vertical Seismic Profiling (VSP)?**

Well evaluation is a process of assessing the potential of an oil or gas reservoir by drilling a well and conducting tests to measure its characteristics such as pressure, temperature and fluid properties.

One of the techniques used in well evaluation is called Vertical Seismic Profiling (VSP).

VSP involves measuring the seismic response of the rock formations surrounding the well by sending sound waves into the ground and recording the reflections. The data collected from the VSP can be used to create a picture of the rock formations and determine the location and size of potential hydrocarbon reservoirs.

Fish and benthic invertebrates may be sensitive to the impulsive sound emitted during VSP. However, the short duration (maximum of 20 hours per well), along with the likelihood of negative effects being restricted to within a few hundred meters of the source, reduce the potential for impacts to these species.

VSP sound levels are not predicted to result in permanent or temporary threshold shift to marine mammals and only localised behavioural disturbance, and are significantly lower than those produced during 3-dimensional (3D) marine seismic surveys.

### **Will ConocoPhillips Australia compensate commercial fishers if economically impacted?**

Yes, ConocoPhillips Australia is committed to having a commercial fishing adjustment protocol in place prior to the commencement of the drilling program. ConocoPhillips Australia will work in consultation with identified peak fishing industry associations to develop this protocol.

# Questions

## and Answers

*continued*

### **Will light impact commercial fishing species?**

The National Light Pollution Guidelines (CoA 2020) do not provide specific guidance for the assessment of impacts to plankton, marine invertebrates or fish and, it is considered that impacts to these species are not likely to be significant.

### **Will dive-based fisheries be impacted?**

Commercial divers have the potential to be impacted by underwater sound where certain exploration activities occur in close proximity to the shoreline and shallow waters. If vertical seismic profiling was to occur near the northern border of permit VIC/P79, Victorian dive-based fisheries would be impacted. Sound emissions from VSP will occur only once per well (maximum of six) for no longer than 20 hours. This activity has the potential to result in displacement for a maximum of 6 days over the entire exploration program for these fisheries, assuming all wells are drilled in the northern extent of VIC/P79, which is highly unlikely.

### **How will ConocoPhillips Australia determine when and where drilling will occur?**

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader

operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

The process for selecting drilling locations involves several steps, including the acquisition and processing of seismic data, interpretation of the data to select high probability of success targets, and efficiency of the program to prove up resources with the least amount of wells. A summary of current activities to support this effort are described below:

1. Interpretation of seismic data: Skilled geoscientists analyse the processed data to identify potential drilling locations. They look for features such as faults, folds and stratigraphic traps that could indicate the presence of hydrocarbons.
2. Selection of high probability targets: After identifying potential drilling locations, geoscientists prioritise them based on their likelihood of success. They consider factors such as the quality and quantity of the reservoir, the geologic complexity of the area and the cost of drilling.
3. Efficiency of the program: The goal is to prove up resources with the least number of wells, which involves optimising the drilling program whilst maximising the chance of success.

Overall, the process for selecting drilling locations is a complex and multidisciplinary effort that requires skilled professionals and advanced technology. It involves a careful balance of science, economics and risk management to ensure that drilling efforts are successful and efficient.

## Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

**E:** [otway@conocophillips.com](mailto:otway@conocophillips.com)

## Emissions and Discharges

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

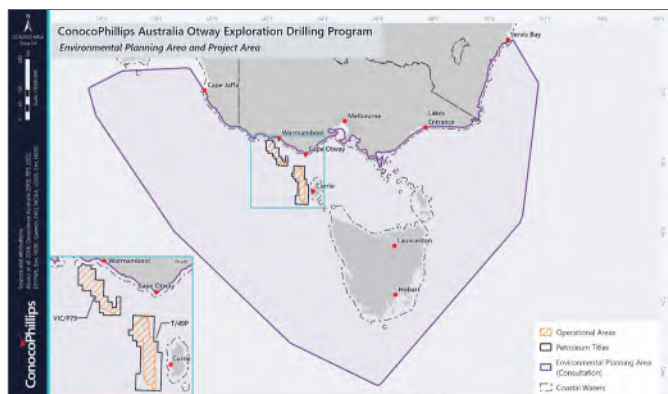

### About the Otway Exploration Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

This information sheet summarises the ongoing assessment of potential impacts and risks arising from air emissions and planned discharges associated with the Otway exploration drilling program. Figure 1 below shows the permit areas, within which exploration activities may occur, and the Environmental Planning Area that has been applied to ensure that far ranging environmental values and sensitivities are appropriately identified and considered.

### Environmental Planning Area Map

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The EP will include a detailed assessment of potential impacts and risks arising from the air emissions and planned discharges associated with the Otway exploration drilling program.
- A preliminary assessment of potential impacts associated with emissions and discharges has identified:
  - Air emissions from seabed survey vessels, the drilling rig and support vessels have the potential to result in localised changes in air quality.
  - Planned discharges from survey vessels, the drilling rig and support vessels have the potential to result in localised changes to water quality that will quickly dissipate in the water column.
  - Discharges from drilling operations, including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid from testing subsea equipment, have the potential to result in localised changes to water and sediment quality.
- If you would like to ask questions or give feedback, see the contact details at the end of the document.

## Emissions and Discharges Assessment

Activities conducted as part of the Otway Exploration Drilling Program will result in emissions to the atmosphere, as well as discharges to the marine environment. The detailed Emissions and Discharges Assessment will be available online in the Impact and Risk Assessment report which is currently being finalised.

### Air Emissions

Air emissions are generated from the combustion of fuels to power the drilling rig, vessels and onboard equipment. Emissions are generally made up of a variety of different gases, some of which are classified as greenhouse gases (GHG). In the event that exploration drilling activities result in the discovery of hydrocarbons, well testing may be conducted which results in additional air emissions associated with short duration flaring.

Type	Potential impact	Assessment
Air Emissions	<p>Operational activities and flaring involve the combustion of fuel which will primarily emit nitrogen dioxide, sulphur dioxide and carbon dioxide.</p> <p>These emissions will result in a localised reduction in air quality around the emission source and represent a source of greenhouse gases (GHGs).</p>	<p>These emissions are predicted to be small on a state, national and global scale, representing a minute contribution to the local airshed and overall GHG emissions, and will dissipate rapidly.</p> <p>Impacts from a reduction in air quality are expected to be short-term and limited to the immediate vicinity of the emission source, well within 2 km of each drilling area or vessel.</p> <p>Long-term impacts from the increase of GHGs in the atmosphere have been shown to contribute to the global impacts of climate change which has numerous direct and indirect impacts on various sensitive receptors.</p>

### Discharges

Operational activities conducted during the **Otway Exploration Drilling Program** will result in discharges to the marine environment including:

- Planned discharges from survey vessels, the drilling rig and support vessels which include (but are not limited to) treated sewage, grey water, oily water, food waste, bilge water, water treatment brine and cooling water.
- Drilling discharges to the seabed and sea surface including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid diluted in potable water from testing subsea equipment.

Type	Potential impact	Assessment
Planned Discharges	<p>Planned discharges will cause temporary and localised changes in water quality in the immediate environment surrounding the source. This change has the potential to affect fauna behaviour (e.g. increase scavenging behaviour) but is unlikely to cause injury or mortality to fauna.</p>	<p>Routine discharges are required to be treated to meet the International Convention for the Prevention of Pollution from Ships (known as MARPOL).</p> <p>Consequently, impacts will be highly localised and temporary, as the treated discharges are quickly broken down by microbial activity and dispersed by wave action and local ocean currents.</p>
Drilling Discharges	<p>The release of drilling discharges to the seabed and sea surface will result in localised changes in water quality, sediment quality and habitat composition. These changes may cause injury or mortality to marine species through toxicity or smothering.</p>	<p>Drilling discharges will be of low toxicity and will quickly dissipate in the water column or disperse on the seafloor.</p> <p>Impacts are expected to be short-term and restricted to smaller areas within 2 km of each well.</p>

## Reducing Impact

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to the protection of the marine environment and marine ecosystems from negative impacts associated with offshore petroleum activities. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and marine ecosystems. This involves establishing acceptable environmental standards and thresholds for specific activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts to protected species, particularly during periods of peak biological importance. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

Examples of mitigation measures and activity limitations that will be implemented are listed below:

- Vessels will comply with Marine Order 97: Marine Pollution Prevention – Air Pollution for emissions from combustion of fuel, including:
  - Holding a valid Air Pollution Prevention (APP) certification or equivalent in accordance with MARPOL Annex VI.
  - Using low sulphur fuel in accordance with Marine Order 97: Marine Pollution Prevention – Air Pollution (Division 7).
  - Complying with National (AMSA) and International (IMO / MARPOL) Emissions and Discharge Standards for vessels.
- Fuel use and flaring volumes will be recorded and reported in alignment with the National Greenhouse and Energy Reporting Act 2007.
- ConocoPhillips Australia will implement a chemical selections procedure which requires all chemicals used and discharged to the sea to be environmentally acceptable by national and international standards, including the World Bank (2015) Environmental, Health and Safety Guidelines for Offshore Oil and Gas Development.
- ConocoPhillips Australia will implement a cuttings management system which reduces the volume of discharges that are released into the marine environment. The cuttings management system will be developed with adherence to international best practice standards, including the World Bank (2015) Environmental, Health and Safety Guidelines for Offshore Oil and Gas Development.
- Vessels will comply with Marine Orders 91, 95 and 96 which all deal with marine pollution prevention of different discharges i.e. oil, garbage and waste.
- Further, ConocoPhillips Australia has contracted a greenhouse gas (GHG) specialist to calculate the amount of GHG emissions that may be released from the various activities of the Otway exploration drilling program, so that these can be accounted for in both internal and external reporting.

# Questions

## and Answers

### ***How will ConocoPhillips Australia determine when and where drilling will occur?***

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

### ***Why can't drilling discharges be collected and disposed of onshore?***

The process of collecting and transporting discharges to shore introduces a safety risk and would result in an increased offshore environmental impact due to additional vessel movements and their associated emissions.

### ***Why do you need to flare?***

The purpose of exploration drilling is to identify commercially viable natural gas reserves. To know whether a reservoir is suitable for development, the contents of the reservoir are tested onboard the drilling rig. Flaring is a high-temperature process used to burn waste gases containing combustible components such as natural gas. Flaring occurs from a remote and elevated location, using a specifically designed burner to promote clean and safe disposal of the combustible components. Flaring is the safest method to dispose of combustible components during a well test. In the event that a well test is conducted, flaring will occur up to a maximum flow rate of 40 MMscf for 120 hours per well over multiple short-term events and may be visible from shore depending on the drilling rig's location.

### ***Will the air emissions or discharges impact wildlife?***

Impacts from emissions and discharges produced during the activities are expected to cause short-term and localised reductions in air and water quality, which will be limited to the immediate vicinity of the release. The majority of the wildlife found within the area (e.g., seabirds, marine turtles, fish and marine mammals) are highly mobile and are not expected to remain near the source for long enough to be impacted. Impacts to plankton are expected to be localised and short-term and are not expected to result in impacts to foraging marine species, given the overall abundance of food resources within the region.

### ***Can air emissions or discharges be harmful to humans?***

The use of fuel to power drilling rig and vessel engines, generators and mobile and fixed plant will primarily result in emissions of carbon dioxide, nitrogen dioxide and sulphur dioxide. The inhalation of air emissions from the combustion of fuel could be harmful if a person was standing immediately downwind of the source or in a poorly ventilated area. However, emissions from the drilling rig and vessels are relatively small and will be emitted from well-ventilated areas to the environment, whereby they will be rapidly dispersed by moderate-strong winds typical of the Otway Basin. Petroleum activities are not expected to have any adverse impacts on the air quality of nearby coastal towns.

Discharges, such as drill cuttings (rock from the seabed) and drilling fluids from the drilling process, will be localised and will not reach the coastline. The extent of impact is predicted to be within 2 km of each well. The closest shoreline to the Otway exploration drilling program is 5.6 km away and therefore there is no predicted impact to coastal communities.

# Questions

## and Answers

*continued*

### ***What type of air emissions will the activities create?***

Operation of the drilling rig and vessel engines, helicopters, generators and other equipment will release emissions to the atmosphere which include greenhouse gases (GHG) such as carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>) and nitrous oxide (N<sub>2</sub>O), along with non-GHG, such as sulphur oxides (SO<sub>x</sub>) and nitrogen oxides (NO<sub>x</sub>). These emissions are typical for marine vessels when combusting hydrocarbons for power and will be short-term, for the duration of the activities.

### ***Are drilling fluids harmful to the marine environment?***

Drilling fluids that are discharged to the environment are considered to pose little or no risk to the environment, as assessed by the Oslo and Paris Conventions (OSPAR) and Offshore Chemical Notification Scheme (OCNS).

The OSPAR commission has identified substances considered to pose little or no risk to the environment based on their toxicity, biodegradation and potential to bioaccumulate. Drilling fluids are selected based on their low potential for toxic effects or bioaccumulation, and high biodegradation within the marine environment.

## Seabirds, Penguins and Marine Turtles

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activity is a continuation of ConocoPhillips Australia's exploration activities in the offshore Otway basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

### About the Otway Exploration Program

#### About the Otway Exploration Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than January 2024.

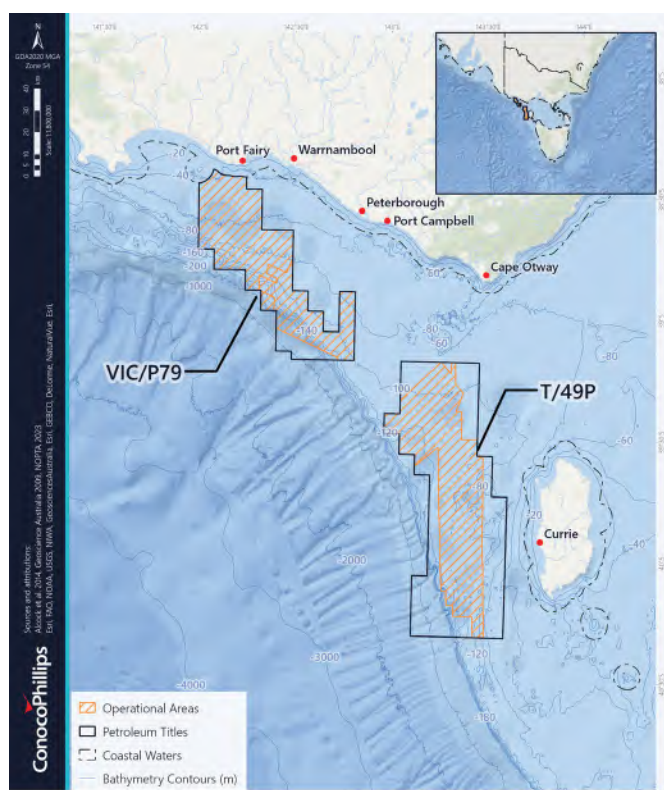

We are committed to ensuring that seabirds, penguins and marine turtles continue to undertake biologically important behaviours in the offshore environment, with no unacceptable impacts to critical life-cycles stages or population characteristics because of the Otway exploration drilling program.

This information sheet summarises the ongoing assessment of potential impacts and risks to seabirds, penguins and marine turtles arising from exploration activities.

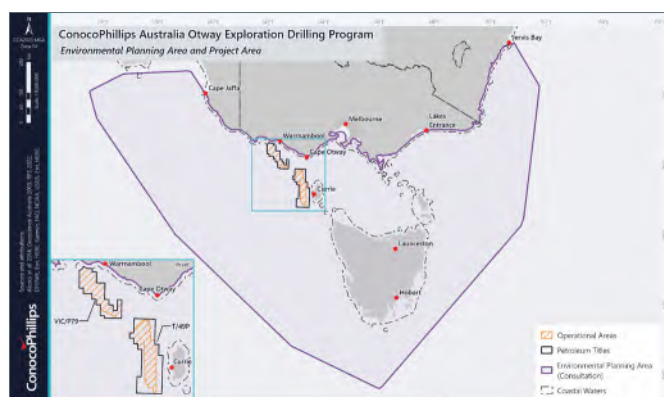

Figure 1 opposite shows the permit areas, the operational areas within which exploration activities may occur, and the Environmental Planning Area that has been applied to ensure that far ranging environmental values and sensitivities are appropriately identified and considered.

### Map of Permit Areas

Figure 1

### Environmental Planning Area Map

## KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.
- A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:
  - Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
  - Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
  - A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging, breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.
- The purpose of this information sheet is to provide details of potential impacts and risks that have been identified, as well as the measures proposed to reduce those impacts and risks, to support consultation prior to the submission of the Environment Plan.
- If you would like to ask questions or provide feedback, see the contact details at the end of the information sheet.

## Seabirds, Penguins and Marine Turtles in the Area

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the Environment Protection and Biodiversity Conservation Act 1999. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

**The following species are known to occur within the environmental Planning Area and exhibit one or more of these important behaviours:**

- Caspian tern
- Common-diving petrel
- Black-faced cormorant
- Flesh-footed shearwater
- Great-winged petrel
- Greater crested tern
- Little penguin
- Pacific gull
- Short-tailed shearwater

- Shy albatross
- Soft-plumage petrel
- Sooty shearwater
- Wedge-tailed shearwater
- White-capped albatross
- White-faced storm petrel
- White-fronted tern

Marine turtles are highly migratory and rely on both marine and terrestrial habitats. Although they may occur within the Environmental Planning Area, no habitat critical to their survival occurs in the waters off southern Australia and they are not known to exhibit any identified biologically important behaviours in this area. The closest biologically important areas for marine turtles are located south of Brisbane, QLD, and at Shark Bay, WA. Even though the presence of individuals within the area is expected to be of a transient nature, the potential impacts of the Otway Exploration Drilling Program on marine turtles has been assessed as they are listed as Matters of National Environmental Significance and are protected under the Environment Protection and Biodiversity Conservation Act 1999.

## Potential interactions with seabirds and marine turtles

The preliminary environmental impact and risk assessment has identified aspects of exploration activities that have the potential to impact, or pose a risk to, seabirds, penguins and marine turtles, as shown below.

Aspect	Potential for impacts to seabirds, penguins and turtles
Artificial Light	Minor consequences for seabirds, penguins and turtles
Underwater Sound	Minor consequence for marine turtles. Negligible consequences for seabirds and penguins
Interactions with Marine Fauna	Low risk to seabirds, penguins and marine turtles
Loss of Material or Waste Overboard	Low risk to seabirds, penguins and marine turtles
Accidental Release of Hydrocarbon	Low risk to seabirds and marine turtles.
	Medium risk to penguins.

Impacts and risks vary for different species. More detail is provided below for impacts and risks associated with light, underwater sound and accidental hydrocarbon releases.

### Light

Routine operational lighting on survey vessels, the drilling rig and support vessels is a critical safety requirement for offshore activities and supports safe navigation. In addition, if hydrocarbons are found during exploration, a well test may be conducted involving short periods of flaring for the safe disposal of hydrocarbons.

The impact of routine operational and flaring-related light on marine fauna is highly dependent on the species' vulnerability and behaviours that occur within the area. As animals perceive light differently from humans, an understanding of the type of lights used and the nature of a species vision is required for assessment. Species of concern identified by the National Light Pollution Guidelines (2020)<sup>1</sup> include both seabirds and marine turtles.

Seabirds are most impacted by the intensity and colour of artificial lights. They are particularly sensitive to violet – blue wavelengths, long wavelengths when using their "daylight" adapted vision and short wavelengths when using their "dark" adapted vision. Seabirds may be attracted to the light glow of the drilling rig or vessels which increases the likelihood of injury through collision and may disrupt migration or foraging at sea. Disorientation due to artificial light is especially evident in nocturnal seabird species who migrate,

forage, or return to their colonies at night. However, this is typically associated with areas closer to the coast. Artificial light is not identified as a threat in the National Recovery Plan for Threatened Albatrosses and Giant Petrels 2011-2016 (2011)<sup>2</sup>. Given the large areas typically covered by foraging birds and the transient nature of these species in the area, artificial light is not expected to cause significant impacts to foraging behaviours.

Light emissions have the potential to impact little penguins as this species is known to occur within 20 km of the operational area. Typically, penguins are most impacted by light when it is directly illuminating nesting areas, as this may prevent individuals from returning to shore at dusk. Potential increases in light levels, particularly along coastline areas where little penguins are known to breed, are not expected to inhibit biologically important behaviours, as the light emissions at 20 km are equivalent to the ambient light on a night with a quarter moon.

Artificial light has been shown to impact critical nesting and hatching behaviours of marine turtles and is listed as a key threat in the Recovery Plan for Marine Turtles in Australia (2017)<sup>3</sup>. Although species may be present, there are no biologically important behaviours, like nesting and hatching, or critical habitat essential to marine turtles identified within southern Australia.

<sup>1</sup> National Light Pollution Guidelines for Wildlife Including marine turtles, seabirds and migratory shorebirds (2020) by the Department of Environment and Energy. <sup>2</sup> National Recovery Plan for Threatened Albatrosses and Giant Petrels 2011-2016 (2011) by the Department of Environment and Energy. <sup>3</sup> Recovery Plan for Marine Turtles in Australia 2017-2027 (2017) by the Department of Environment and Energy

## Underwater Sound

Much like humans, hearing plays an important role in communication for many animal species. For marine species, it is often also an essential tool for navigation and hunting. Additional noise emissions in the marine environment during the Otway Exploration Drilling Program will be caused by vessel and drilling rig movement and drilling. Marine species of concern include those who spend a significant portion of their time under water, like marine turtles. Each species will typically display different sensitivities to underwater noise.

There is potential for seabirds and penguins who spend time foraging at sea to be impacted by noise emissions. However, the majority of seabirds, such as albatrosses and petrels, are not anticipated to remain within the water column for an extended period of time, and penguins are highly mobile and are not expected to remain within relevant effect distances. Noise impacts

are assessed over 12, 24 or 48-hour intervals, as the time exposed to the sound is related to the severity of impact. These intervals are typically longer than any seabird species would spend in the water column at one time, or any penguin would remain in the area, and therefore, seabirds and penguins are not expected to be impacted.

Currently, underwater noise impacts to marine turtles are not well understood. These species do not possess external ears. However, it is thought that sounds could potentially be used for navigational and hunting purposes. There is some evidence to support marine turtles' avoidance of areas where noise emissions are occurring. Although species may be temporarily displaced due to noise emissions, any individuals in the area are expected to be transient due to the absence of biologically important behaviours or critical habitat within southern Australia.

*Shy Albatross*

## Reducing Impact and Risk

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to the protection of the marine environment and marine ecosystems from negative impacts associated with offshore petroleum activities. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and marine ecosystems. This involves establishing acceptable environmental standards and thresholds for specific activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts to protected species, particularly during periods of peak biological importance. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

### **Examples of mitigation measures and activity limitations that will be implemented are listed below:**

- ConocoPhillips Australia will develop and implement a Seabird Management Plan as per the National Light Pollution Guidelines for the activity. This plan will ensure that the light emissions are minimised to protect seabirds and other species in the area, and that procedures are in place to support grounded birds.
- Flaring will be restricted to a maximum of 120 hours per well and will only be conducted in the event that hydrocarbons are discovered to ensure safe disposal.
- Activity-specific emergency preparedness and response plans and capability will be in place prior to activity commencement. Wildlife response procedures will be incorporated into ConocoPhillips Australia's Oil Pollution Emergency Plan to be activated in the highly unlikely event of an accidental hydrocarbon release. These will include protection priorities relevant to seabirds and penguins, contacts for trained and specialist personnel, species collection and handling procedures and equipment requirements, and nearby veterinary and rehabilitation resources.

# Questions

## and Answers

### **How will ConocoPhillips Australia determine when and where drilling will occur?**

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

### **Why is lighting needed?**

The use of navigational and deck lighting is required by Commonwealth law to ensure safe operating conditions for personnel onboard survey vessels, the drilling rig and support vessels, and for other users in marine waters.

### **What is flaring and why is it needed?**

The purpose of exploration drilling is to identify commercially viable natural gas reserves. To know whether a reservoir is suitable for development, the contents of the reservoir are tested onboard the drilling rig. Flaring is a high-temperature process used to burn the waste gases containing combustible components such as natural gas. Flaring occurs from a remote and elevated location, using a specifically designed burner to promote clean and safe disposal of the combustible components.

Flaring is the safest method to dispose of combustible components during a well test. If a well test is conducted, flaring will occur up to a maximum flow rate of 40 MMscf for 120 hours per well over multiple short-term events and may be visible from shore depending on the drilling rig's location.

### **How far do light impacts extend from the activity?**

The National Light Pollution Guidelines (2020) recommend that a 20 km distance is used for the assessment of impacts to sensitive species as it provides a precautionary limit based on observed effects of sky glow on marine turtle hatchlings demonstrated to occur at 15-18 km and fledgling seabirds grounded in response to artificial light 15 km away. Further, a 50 km threshold has been adopted to account for the combination of operational lighting and short-term flaring from the drilling rig.

The light emissions at this distance are equivalent to ambient light on a moonless clear night sky/new moon. Any listed species sensitive to light that may occur within 50 km of the light source will undergo an impact assessment in the Environment Plan.

- If you would like to ask questions or provide feedback, see the contact details at the end of the information sheet.

## Marine Mammals in the Area

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal). In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:

- Southern right whales
- Blue whales
- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/  
spotted bottlenose dolphins, and
- Australian sea lion

## Potential Interactions with Marine Mammals

The preliminary environmental impact and risk assessment has identified aspects of exploration activities that have the potential to impact, or pose a risk to, marine mammals as shown below.

Aspect	Potential for impact to marine mammals
Underwater Sound	Moderate consequence to some whale species
Interactions with Marine Fauna	Low risk of vessel collision with marine mammals
Loss of Material or Waste Overboard	Low risk of entanglement from loss of material overboard
Accidental Release of Hydrocarbons	Medium risk rating to marine mammals

Impacts and risks vary for different species. Impacts that have the potential to result in moderate consequences, and risks that have an inherent risk rating of medium, are discussed in more detail below.

## Underwater Sound

Marine mammals, particularly cetaceans (i.e., whales and dolphins) rely on hearing as their principal sense for navigation, communication and/or hunting and can be extremely vulnerable to noise created by humans. The effects of underwater sound can include hearing impairment, stress and changes in behaviour from sounds that mask environmental noise. Each species of marine mammal has a different sensitivity to underwater noise and whales and dolphins can be classified into low, high and very high frequency cetaceans based on their hearing (Note: No species of very-high frequency cetaceans are expected to be present within the Environmental Planning Area).

The occurrence and significance of a change in behaviour varies by individual, species and circumstances. Some sounds may not cause any response, while others may result in minor to significant

changes in a variety of behaviours, such as diving, surfacing, vocalizing, feeding or mating.

To assess the potential effects of a sound-producing activity, it is necessary to first establish the sound levels that may affect marine mammals. Due to the variety of species considered, sound levels are analysed and evaluated against effects including mortality, injury, temporary reduction in hearing sensitivity and behavioural disturbance.

The temporary loss of sensitivity is called a temporary threshold shift (or TTS). As the sound exposure increases, threshold shift will eventually become permanent, and this effect is called a permanent threshold shift (or PTS). Permanent threshold shift can occur because of repeated occurrences of temporary threshold shift, or because of a single exposure to a very intense sound.

## Noise Modelling

ConocoPhillips Australia has commissioned a modelling study of underwater sound levels associated with the Otway exploration drilling program to inform the impact assessment process. The study predicts the distances over which exploration activities have the potential to impact marine mammals, known as the 'effect distance'. The sound from a range of activities is typically assessed, including those with the most significant predicted impacts. The preliminary results from the impact assessment are presented in Table 1.

**Table 1: Predicted impacts of underwater noise to marine mammals**

Species	Worst-case predicted impacts for currently identified activities
Low frequency cetaceans (e.g., Humpback whales, Blue whales and Southern right whales)	<ul style="list-style-type: none"><li>• Short-term behavioural changes within 12.6 km from the noise source during resupply whilst drilling and vessel on standby at locations on the continental shelf. This distance is predicted to increase in the offshore direction when activities occur close to the shelf break.</li><li>• Temporary threshold shift within 3.6 km and permanent threshold shift within 320 m of the noise source for the short duration of mooring activities.</li><li>• No mortality.</li></ul>
High frequency cetaceans (e.g., Pygmy sperm whale and Dwarf sperm whale)	<ul style="list-style-type: none"><li>• Short-term behaviour changes within 12.6 km from the noise source for specific activities.</li><li>• Temporary threshold shift within 160 m and permanent threshold shift within 60 m from the noise sources during resupply whilst drilling and vessel on standby.</li><li>• No mortality.</li></ul>
Pinnipeds (e.g. Australian sea lion)	<ul style="list-style-type: none"><li>• Short-term behaviour changes within 12.6 km from the noise source for specific activities.</li><li>• Temporary threshold shift within 100 m and permanent threshold shift within 60 m from the noise source during drilling with resupply and vessel on standby.</li><li>• No mortality.</li></ul>

## Hydrocarbon Release

Although an accidental hydrocarbon release has been determined to be highly unlikely to occur, the potential impacts are assessed to ensure appropriate mitigation measures and response plans are in place. In the event of an accidental release, hydrocarbons may be found on the surface of the water, at various water depths through the water column and eventually on the shoreline, meaning that a range of marine species may be affected in the highly unlikely event that this occurs. Potential impacts may occur from external as well as internal exposure to hydrocarbons. The severity of impacts would be highly dependent on the hydrocarbon characteristics as well as the species lifestyle characteristics.

An accidental release of hydrocarbons can result in a change in water quality that may result in injury

or mortality to marine mammals and changes in behaviour. If an incident occurred, impacts would largely be restricted to the upper water column and are expected to be restricted to individual fauna and unlikely to impede the recovery of a protected species.

As the risk of an accidental release of hydrocarbons cannot be completely eliminated, detailed response plans for credible spills are required to be developed to demonstrate preparedness in the extremely unlikely event a spill occurs. These plans are reviewed with state control agencies and must be accepted by the independent regulator, NOPSEMA. In the highly unlikely event of a spill, the response will include integration with local, national and international response organisations to mobilise resources including experts and specialist equipment.

## Reducing impact

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the EPBC Act. Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to the protection of the marine environment and marine ecosystems from negative impacts associated with offshore petroleum activities. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and marine ecosystems. This involves establishing acceptable environmental standards and thresholds for specific

activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts to protected species, particularly during periods of peak biological importance. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

### Examples of mitigation measures that will be implemented are listed below:

- Vessels will comply with EPBC Regulations 2000 – Part 8 Division 8.1 interacting with cetaceans which requires vessels to adhere to an increased caution zone of 500 m between whales and vessels.
- All activities will comply with a Marine Mammal Adaptive Management Procedure outlining specific actions to minimise impacts from anthropogenic noise in accordance with:
  - Conservation Management Plan for the Blue Whale, and
  - Conservation Management Plan for the Southern Right Whale.
- Activity-specific emergency preparedness and response plans and capability will be in place prior to activity commencement.

# Questions

## and Answers

### ***How will ConocoPhillips Australia determine when and where drilling will occur?***

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

### ***How is ConocoPhillips Australia ensuring the ongoing protection of endangered species?***

ConocoPhillips Australia has been conducting marine mammal surveys since 2021 to produce contemporary data that supports effective decision-making in the Otway Basin. This research continues to improve knowledge on the presence/absence, distribution and behaviours of key species during and outside of known peak seasons. Data is made available to government agencies and research organisations and can be made available to other commercial operators in the region through a memorandum of understanding.

ConocoPhillips Australia is an advocate for community-based research programs with the Dolphin Research Institute, who are expanding their Two Bays Whale Program. We also support research, through the Arthur Rylah Institute, in expanding their southern right whale aerial monitoring program along the Victorian coastline.

### ***Will ConocoPhillips Australia restrict activity for seasonally important behaviours?***

ConocoPhillips Australia recognises the importance of the offshore Otway Basin and nearby coastlines for a number of species including blue whales who forage through the area in summer, and southern right whales who calve and aggregate along the Victorian coastline in winter.

Our approach is to ensure that activities are scheduled to minimise potential interactions with protected species, particularly during peak biologically important times. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

The Environment Plan must demonstrate that, in all cases, the activity is undertaken in a manner that continually reduces environmental impacts and risks to a level that is as low as reasonably practicable (ALARP) and that any residual impacts or risks are at an acceptable level. This will require the implementation of effective control measures that mitigate impact to whichever species is likely to be present.

### ***Does ConocoPhillips Australia know that the proposed activity is close to and overlaps Biologically Important Areas (BIA's) for whales?***

Yes, ConocoPhillips Australia recognises the biological importance of the offshore Otway Basin and nearby coastlines for a number of species including blue whales who forage through the area in summer, and southern right whales who calve and aggregate along the Victorian coastline in winter.

## Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

**E:** [otway@conocophillips.com](mailto:otway@conocophillips.com)

Australia

## Historical Military Ordnance Risks

### (Unexploded Ordnance)

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

### About the Otway Exploration Program

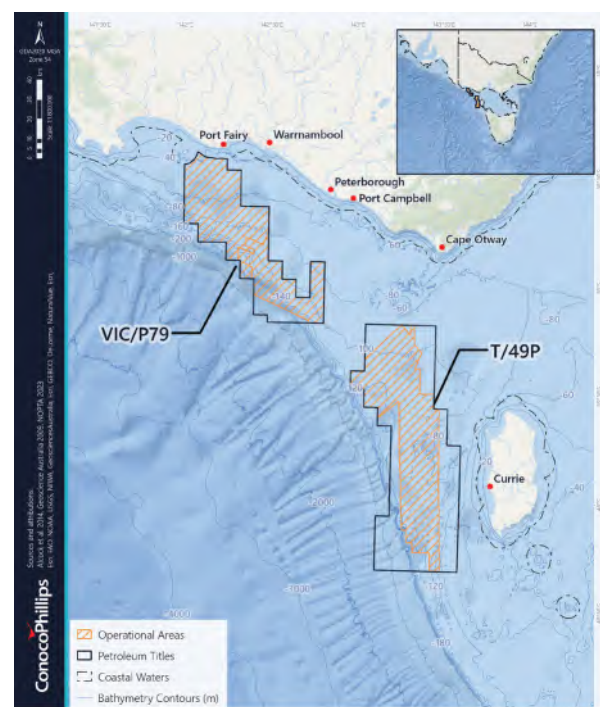

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

This information sheet summarises the ongoing assessment of the risk of interaction between vessels or equipment associated with the Otway exploration drilling program and any historic defence activities in the operational area. Figure 1 shows the proposed location of the program.

**Map of Permit Areas** Figure 1

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The EP will include an assessment of impacts and risks associated with historical defence activities in the area, including the potential presence of unexploded ordnance.
- Both permit areas overlap a historic air-to-air firing range which the government has classified as having a Slight Potential for unexploded ordinance (UXO) presence, with most ammunition used in this area being considered low risk.
- There is no overlap between the permit areas and historic offshore UXO sea dumping sites. The closest sea dumping site to either permit area is located 21 km from T/49P.

## Unexploded Ordnance Explained

Unexploded ordnance (UXO) is ammunition which has been previously fired but was defective and did not function correctly at the time of use. These objects still have the potential to explode and therefore pose a risk to any person or object that comes into contact with them. UXO presence in offshore areas of Australia is a result of past military training activities that used live ammunition or the disposal (sea dumping) of waste materials into the marine environment.

The Federal Government Department of Defence classify offshore areas based on their potential to contain UXO. Both permit areas within the Otway exploration drilling program overlap with a historic air-to-air firing range which is now classified by the government as having a Slight Potential for UXO presence. Most ammunition used in this area are not highly explosive and considered low risk. Further, there is no overlap between the permit areas and offshore UXO sea dumping sites. The closest sea dumping site to either permit area is located 21 km from T/49P.

## Risk Assessment

The risks associated with UXO were assessed to establish a 'UXO Risk Profile' for the permit areas. This risk profile considers the probability of encountering UXO, the probability of UXO detonation, and the consequence of detonation.

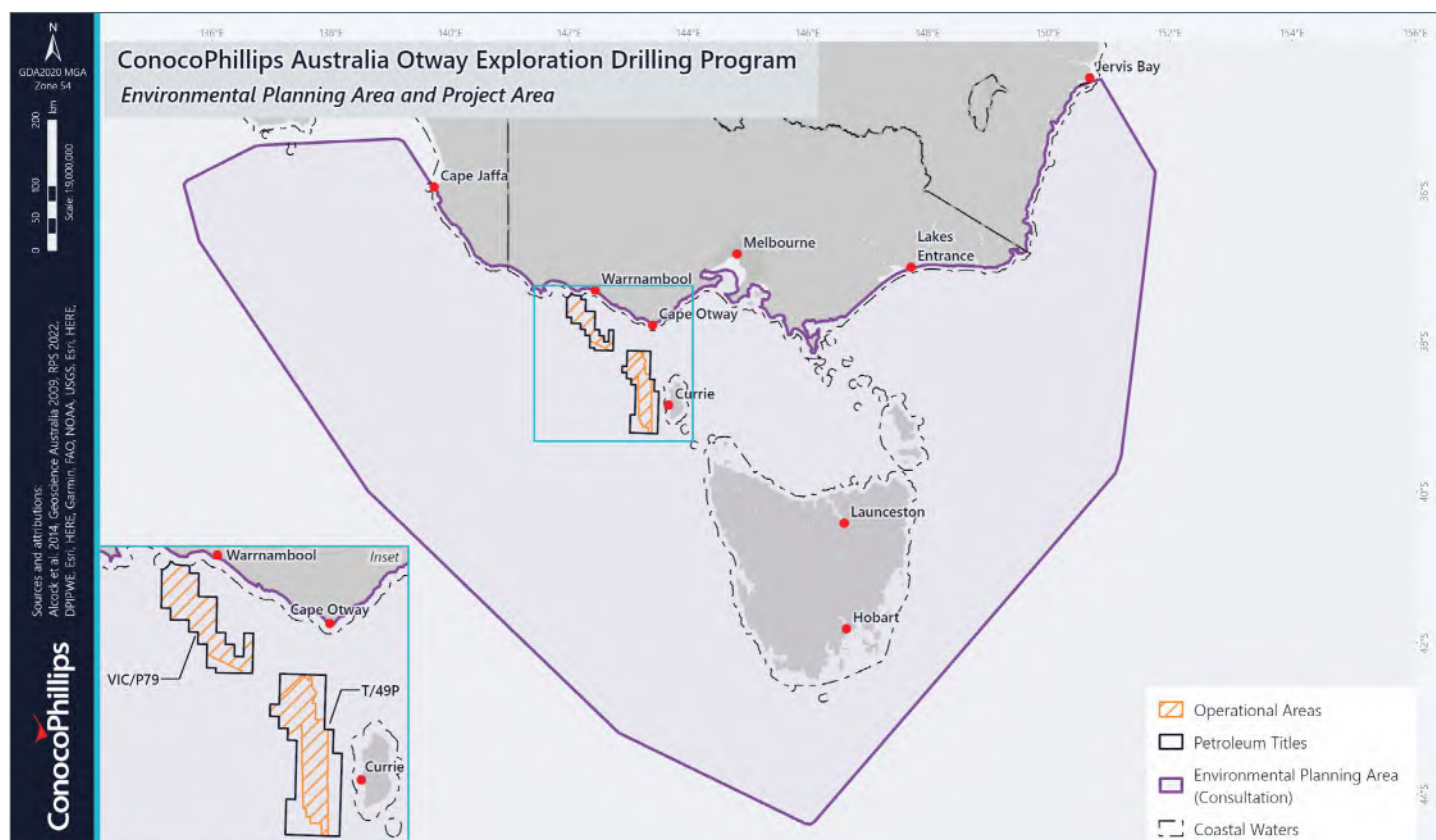

Encountering UXOs within the permit areas is considered low risk for all activities, except for some activities involving subsea equipment. The risk of a UXO being snagged by equipment, for example when collecting seabed samples, and subsequently being brought onto a vessel was assessed as Moderate.

## Reducing Impact and Risk

ConocoPhillips Australia is taking action to reduce the risk of encountering UXOs and to minimise any impact in the unlikely event of interaction. Mitigation measures which will be evaluated in the Environment Plan include:

- Conducting seabed surveys using speciality equipment to detect the presence of metals and collect seabed images, to inform activities that interact with the seafloor or sediments.
- Delivering an explosives safety awareness briefing to personnel carrying out seabed survey and exploration drilling activities, and
- Maintaining on-call access to an explosives engineer to provide specialist advice in the unlikely event of UXO encounter.

## Environmental Planning Area Map

# Questions

## and Answers

### ***How will ConocoPhillips Australia determine when and where drilling will occur?***

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

### ***What happens if ConocoPhillips Australia finds a UXO during the seabed surveys?***

Prior to commencing work, ConocoPhillips Australia will ensure that an explosives safety and awareness briefing is provided to personnel carrying out seabed survey and exploration drilling activities. The briefings will allow the project team to plan the proposed works and deal with a suspicious item or UXO discovery incident.

In addition, ConocoPhillips Australia will maintain on-call access to explosives engineer who can provide real time assistance to drilling rig and vessel personnel in dealing with a potential UXO encounter.

### ***What happens to marine life if a UXO is detonated?***

The Department of Defence has advised that most of the ammunition used in this area are not highly explosive and the risk from this ammunition is negligible.

### ***How does ConocoPhillips Australia work with the Department of Defence to ensure the safety of other marine users?***

The Department of Defence has been identified as a relevant authority for the purposes of consultation during Environment Plan development. ConocoPhillips provides information on the type of activity and the locations and requests advice from the Department to inform their risk assessment process. This information has been supported by an additional military and UXO desktop study and risk assessment conducted for ConocoPhillips Australia by RPS Explosives Engineering Services in 2022, which assessed the risk associated with each type of munition that may be present and each pathway to exposure and confirmed a low risk of encountering UXOs within the operational areas.

## Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

# Otway Exploration Drilling Program

## Proposed Exploration Activity Overview

### 2024 - 2028

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

### About the Otway Exploration Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the offshore Otway Basin, off the coast of Victoria and King Island, Tasmania subject to EP acceptance and rig availability. Any decision to proceed to development will be dependent on a conducive investment environment.
- The proposed exploration program will involve seabed surveys and drilling up to a maximum of six exploration wells.
- The exploration program will commence no earlier than January 2024, subject to an accepted EP being in place.
- ConocoPhillips Australia is currently preparing an EP for these activities and will undertake consultation prior to submitting the EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment.

### Have we missed anyone?

If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.

**E:** [otway@conocophillips.com](mailto:otway@conocophillips.com)

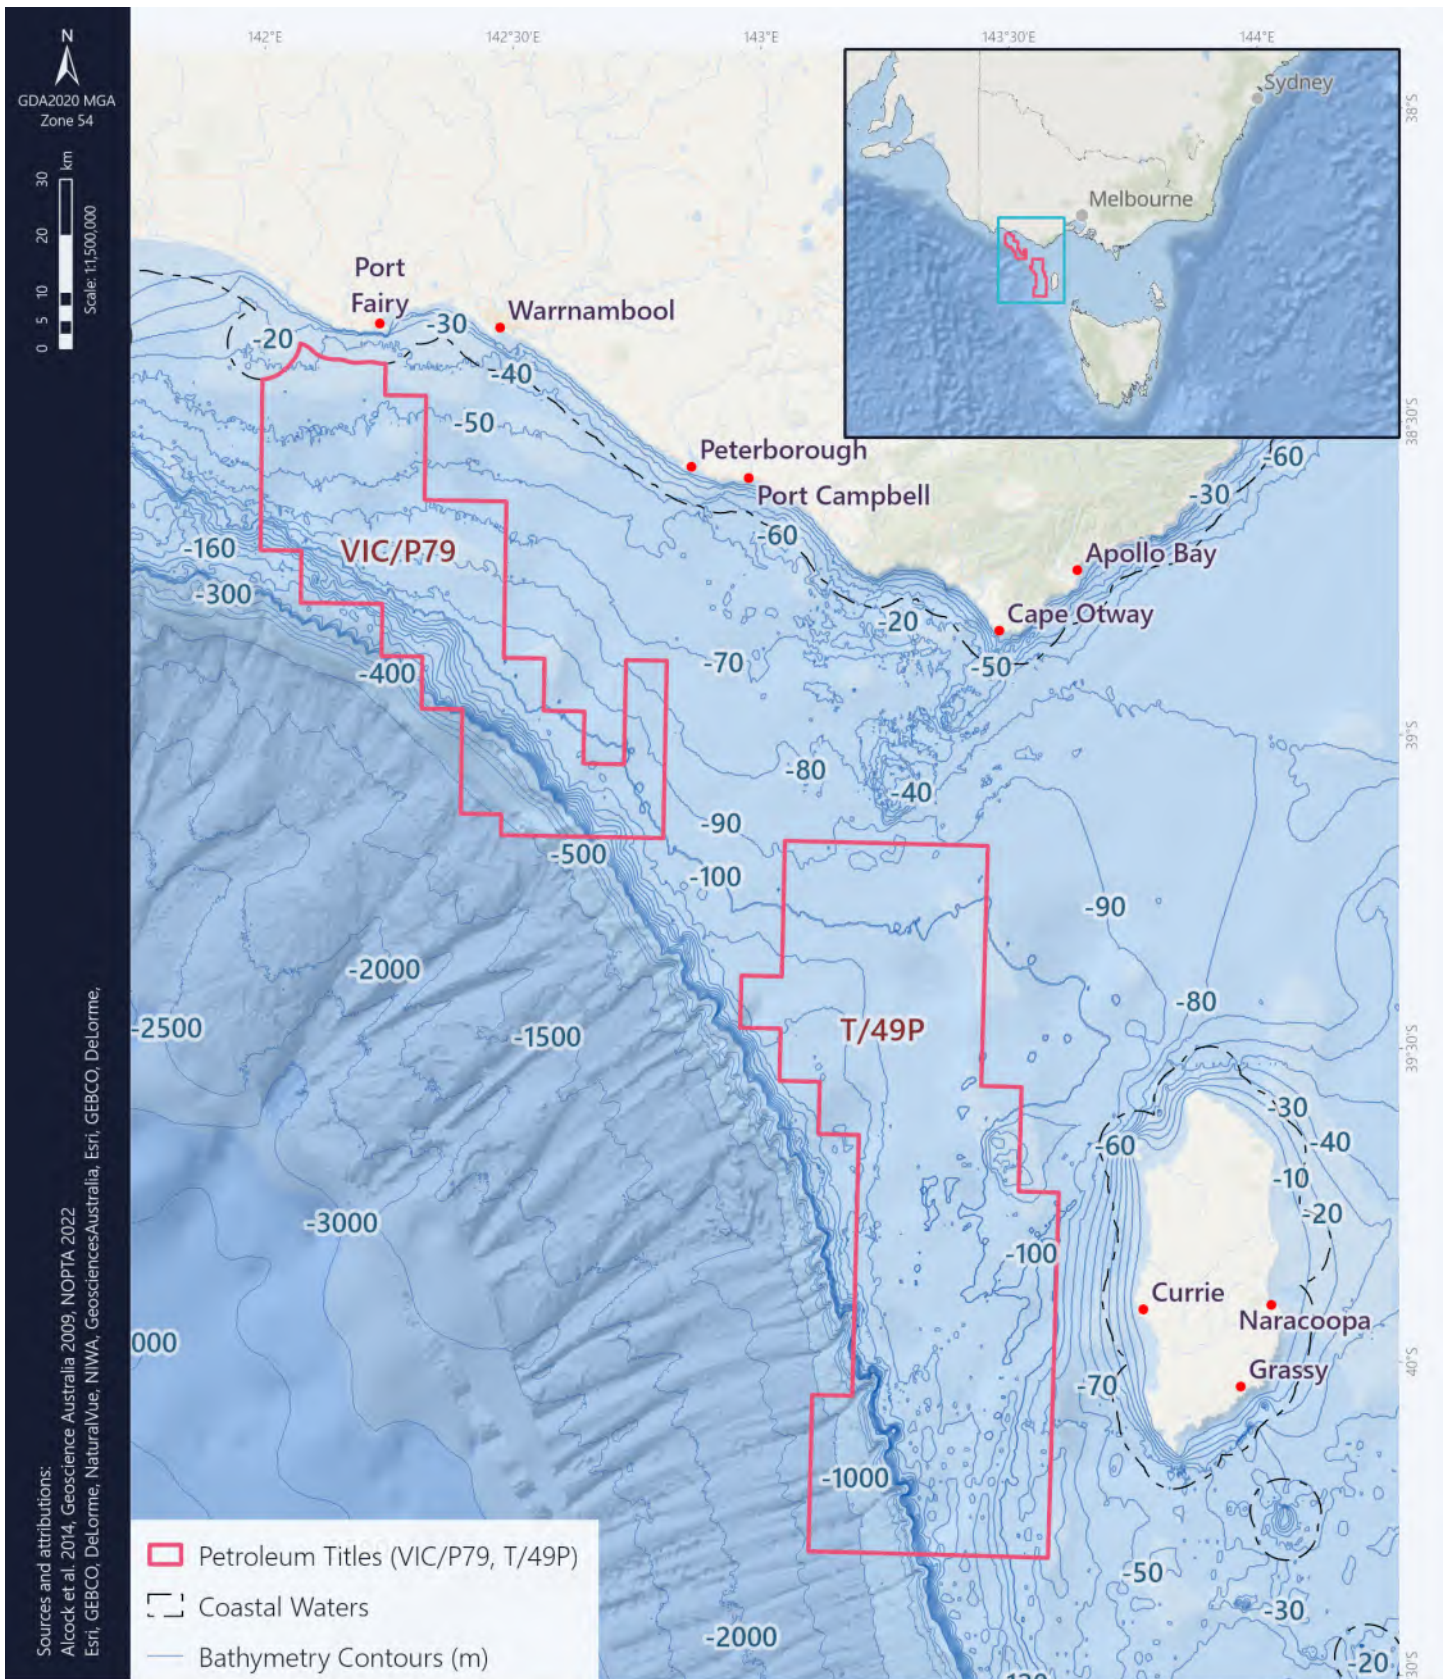

**T:** 07 3182 7122

PO BOX 1243, MILTON, QLD, 4064

[conocophillips.com.au](http://conocophillips.com.au)

## Map of Permit Areas

## Activity Phases

An overview of the activity phases involved in drilling an exploration well is provided below.

A seabed survey is undertaken across all drilling locations to identify possible hazards and natural features which may impact anchoring. Common seabed survey equipment includes: multi-beam echosounders, side scan sonars, subbottom profilers and magnetometers.

Each well will take a maximum of 90 days to drill but typically takes 30-40 days. The extra time accounts for potential operational delays and environmental constraints like severe weather events. After a well is completed the drilling rig is moved to the next location.

## Seabed Survey

### 1. Rig towed to site

A drilling rig is towed to the drilling location.

### 2. Anchors laid on seabed

Anchors are laid on the seabed and can be laid prior to or on arrival of the drilling rig.

### 3. Top hole constructed

The top hole is drilled and then cased with cement and steel. The top hole is approximately 1m in diameter.

Supply boats will regularly service the rig throughout the drilling process.

### 4. Marine riser and blow-out preventer (BOP) installed

The marine riser returns drilling fluids and cuttings to the drilling rig for reconditioning, recirculation and/or discharge. The BOP is an assembly of specialised safety valves put in place before drilling into the reservoir and is used in the unlikely event of an emergency to control well pressure and prevent a loss of well control release.

### 5. Drill and construct well to gas reservoir

In the event that a gas reservoir is discovered, the well may be tested by flowing gas to the surface for analysis and then flaring through the flare boom.

### 6. Well permanently plugged and abandoned

Cement plugs are placed within the well as part of a process called plug and abandonment. The marine riser, BOP and wellhead are removed so no equipment is protruding from the seabed. The anchors are then removed so the drilling rig can be towed to the next drilling location or demobilised from the area on completion of the program.

## Regulatory Framework

Offshore petroleum activities are regulated under the Offshore Petroleum and Greenhouse Gas Storage Act 2006 (OPGGGS Act) which requires an accepted EP to be in place for the proposed exploration program.

An EP is a comprehensive document that provides information on the proposed activities and interactions with the marine, socio-economic and cultural heritage environment. The EP will describe and assess the environmental impacts and risks associated with the proposed activities. It also outlines control measures to avoid, minimise and mitigate environmental impacts and risks.

## Consultation

As part of EP development ConocoPhillips Australia will undertake consultation in line with a prescribed regulatory process. Information will be provided to authorities, individuals and organisations so that they can understand the potential consequences of the exploration drilling program on things that they value and/or activities they undertake. Feedback provided to ConocoPhillips will be considered in the design and conduct of our activities.

Under the OPGGS Act all records of consultation including emails, phone calls and meetings, are required to be submitted to NOPSEMA with the EP for assessment.

## About ConocoPhillips:

ConocoPhillips is the one of the world's largest independent exploration and production companies and has operated in the offshore environment for more than 75 years. We are committed to our role in responsibly accessing, developing and producing oil and natural gas to help meet the world's energy needs.

ConocoPhillips Australia was established almost two decades ago. Headquartered in Brisbane, Queensland, we are a 47.5 percent shareholder in Australia Pacific LNG and operate the LNG facility on Curtis Island. We are also pursuing exploration opportunities in Australia. In Australia we have a proud track record of safety, environmental and social performance and are an active and valued member of the communities in which we operate.

*Australia Pacific LNG Facility on Curtis Island.*

# Questions

## and Answers

### ***What is a seabed survey?***

Seabed surveys are an important safety and environmental measure undertaken ahead of drilling activities. They typically involve geophysical and geotechnical sampling techniques that identify possible hazards and benthic habitat to inform exploration well and drilling rig anchor placement.

Seabed surveys typically take about a week to complete at each drilling location.

### ***How is a seabed survey different from a seismic survey?***

Seabed surveys are designed specifically to map the seabed and directly below the seabed (up to ~100 m), whereas seismic surveys are designed to image the subsurface up to several kilometres below the seabed.

Sound generated from seabed survey sampling techniques is significantly lower in intensity and duration than sound produced from a seismic array.

### ***How will environmental impacts be assessed in the EP?***

Exploration activities do not operate to a no-impact standard. Instead, ConocoPhillips Australia is required to define the acceptable level of impact and work below that level. Acceptable levels of impact are established based on relevant up-to-date technical and scientific studies, government advice, and are considerate of the information gathered through the consultation process.

ConocoPhillips Australia will utilise this information to make predictions of the levels of impact we expect to occur and compare those to the previously defined acceptable levels. Our assessment is then scrutinised by NOPSEMA who will determine if the EP demonstrates that the environmental impacts and risks of the activity will be of an acceptable level and that the EP meets all of the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009.

### ***How will impacts to commercial fishing and commercial marine users be managed?***

The proposed exploration activities will occur in designated Commonwealth and state fishery management areas. The seabed survey and drilling activities require access to relatively small areas for short periods of time. However, these activities may displace commercial fishing activities and other commercial marine users. ConocoPhillips Australia will consult with commercial fishers and other marine users to ensure impacts from displacement are assessed and mitigated.

### ***Will there be exclusion zones?***

Yes, two types of exclusion zones will be in place at set times and locations.

**Exclusion zone** – All vessels will be required to abide by a cautionary zone which covers a 2 km radius around the drilling rig once in position. This zone is to allow for anchors, mooring chains and wire to be placed within the operational area during the drilling program.

**Petroleum Safety Zone (PSZ)** – The PSZ is a formal 500 m radius safety exclusion zone around each drilling location and will be communicated via a 'Notice to Mariners' by the Australian Hydrographic Office (AHO).

### ***How will impacts to the marine environment be managed?***

During preparation of the EP, ConocoPhillips Australia will build on our knowledge and identify current, peer reviewed literature and research on the impacts of our activities to the marine environment, particularly in relation to impacts to marine mammals and commercially fished species. Through relevant persons engagement we will aim to gain a deeper understanding of potential concerns and use this knowledge to help us minimise our impacts and protect ecological, social, economic and cultural values and sensitivities.

### ***What are the typical environmental impacts associated with an exploration program?***

Typical impacts associated with exploration activities are provided in the table below. ConocoPhillips Australia will conduct a detailed assessment of impacts specific to the proposed exploration program and unique operating environment. We will present these in the EP along with information on how these impacts will be managed and mitigated.

Aspect	Activity	Impacts
Seabed Disturbance	<ul style="list-style-type: none"> <li>• Seabed Survey</li> <li>• Drilling</li> </ul>	<ul style="list-style-type: none"> <li>• Seabed samples may be collected during seabed surveys, resulting in localised disturbance of the seabed.</li> <li>• Anchor placement and drilling activities will result in localised seabed smothering and increased turbidity.</li> <li>• Impacts are expected to affect localised areas within a 2 km radius of each well.</li> </ul>
Underwater Sound Emissions	<ul style="list-style-type: none"> <li>• Seabed Survey</li> <li>• Drilling</li> </ul>	<ul style="list-style-type: none"> <li>• Seabed survey activities typically emit levels of sound similar to other vessel activities for short durations (typically ~1 week per drilling location.).</li> <li>• Underwater sound from drilling and support vessel activities has the potential to cause physiological impacts near the source and behavioural impacts to marine fauna within tens of kilometres depending on operations and location.</li> </ul>
Atmospheric Emissions	<ul style="list-style-type: none"> <li>• Seabed Survey</li> <li>• Drilling</li> </ul>	<ul style="list-style-type: none"> <li>• Atmospheric emissions from survey and drilling activities are localised and rapidly disperse in the vicinity of the vessels and rig.</li> </ul>
Planned Vessel/Rig Discharges	<ul style="list-style-type: none"> <li>• Seabed Survey</li> <li>• Drilling</li> </ul>	<ul style="list-style-type: none"> <li>• Routine discharges from support vessels and drilling rigs are similar to passing ships and other vessel discharges, which are managed to relevant standards and expected to disperse rapidly.</li> </ul>
Planned Drilling Discharges	<ul style="list-style-type: none"> <li>• Drilling</li> </ul>	<ul style="list-style-type: none"> <li>• Cement, cuttings and drilling fluid discharges occur during drilling activities resulting in temporary environmental effects out to tens of metres from each well.</li> </ul>
Interference with Other Marine Users	<ul style="list-style-type: none"> <li>• Seabed Survey</li> <li>• Drilling</li> </ul>	<ul style="list-style-type: none"> <li>• Seabed surveys are undertaken by vessels over short durations (typically 1-week per drilling location) and cover small areas.</li> <li>• Drilling rigs are stationary while drilling and are attended by support vessels who monitor a 500 m Petroleum Safety Zone and larger (typically 2 km radius) cautionary area to support safe operations. Notice to Mariners are issued and standard maritime safety precautions are in place.</li> </ul>
Light and Visual Amenity	<ul style="list-style-type: none"> <li>• Drilling</li> </ul>	<ul style="list-style-type: none"> <li>• The drilling rig may be visible from nearby coastlines while in transit and during drilling.</li> <li>• Flaring may be required over a few days at each drilling location and may also be visible from nearby coastlines.</li> </ul>

### ***What are the typical environmental risks considered in an EP?***

**Typical environmental risks that could occur and are assessed in exploration EPs include:**

#### **Vessel based risks, which include:**

- Loss of material or waste overboard
- Interactions with marine fauna
- Introduction and establishment of invasive marine species

#### **Hydrocarbon related risks, which include:**

- Minor loss of containment
- Marine diesel oil releases
- Loss of well control releases

### ***How are oil spill risks managed?***

An Oil Pollution Emergency Plan (OPEP) is required to be submitted with the EP to NOPSEMA. The OPEP details the arrangements in place for responding to, monitoring and managing the highly unlikely release of hydrocarbons during the exploration program. The OPEP is based on the most conservative (i.e. worst-case) credible scenarios to ensure that the arrangements in place are adequate for any event.

### ***Why is ConocoPhillips Australia continuing to explore for natural gas?***

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market.

As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

### ***What happens if ConocoPhillips Australia finds natural gas?***

Exploration wells are drilled to confirm the presence or absence of natural gas reserves. Further drilling may be required to determine if commercial quantities of natural gas are present. If it is feasible to develop the discovered gas resource ConocoPhillips Australia would prepare an Offshore Project Proposal (OPP) detailing future development plans that may lead to production of natural gas. The development of the OPP would involve consultation and public comment prior to assessment by NOPSEMA. If an OPP is accepted, individual EPs, including relevant persons consultation, would still be required for subsequent development and production activities.

## **Contact us**

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

# Otway Exploration Drilling Program

## Consultation

**ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.**

The proposed exploration program will consist of seabed surveys and the drilling of up to six exploration wells.

This is a continuation of our exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek acceptance from the regulator for this exploration program. As part of EP development we will undertake consultation in line with a prescribed regulatory process.

This information sheet outlines a consultation process we are proposing to undertake and we are inviting feedback on this process.

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the offshore Otway Basin, off the coast of Victoria and King Island, Tasmania subject to EP acceptance and rig availability. Any decision to proceed to development will be dependent on a conducive investment environment.
- Consultation will inform the identification, assessment and management of environmental impacts and risks during the development of the EP.
- ConocoPhillips Australia is seeking to identify authorities, individuals and organisations who may have functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program that would like to be consulted as part of this process.

### Have we missed anyone?

**If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.**

**E:** [otway@conocophillips.com](mailto:otway@conocophillips.com)

**T:** 07 3182 7122

PO BOX 1243, MILTON, QLD, 4064

[conocophillips.com.au](http://conocophillips.com.au)

## Our Approach

**The purpose of consultation is to ensure authorities, individuals and organisations that are potentially affected by the proposed Otway Exploration Drilling Program are consulted and that their input is considered in both the development of the consultation processes and in the EP for this activity.**

Consultation provides an avenue to receive information, ask questions, provide feedback, identify additional environmental values and sensitivities, and raise issues and concerns about the activity and its environmental impacts and risks.

Consultation informs our understanding of the environment in which our activity will take place. We are particularly interested to hear from individuals and organisations who may be affected by the proposed activity in areas including: people and communities, heritage values, and ecological, social and cultural features. This information provides valuable insight and local context that supports us identifying, assessing and effectively managing environmental impacts and risks.

ConocoPhillips Australia is proposing to use various consultation methods and communication tools to identify and provide sufficient information for relevant persons to make an informed assessment of the possible consequences of the activity on them.

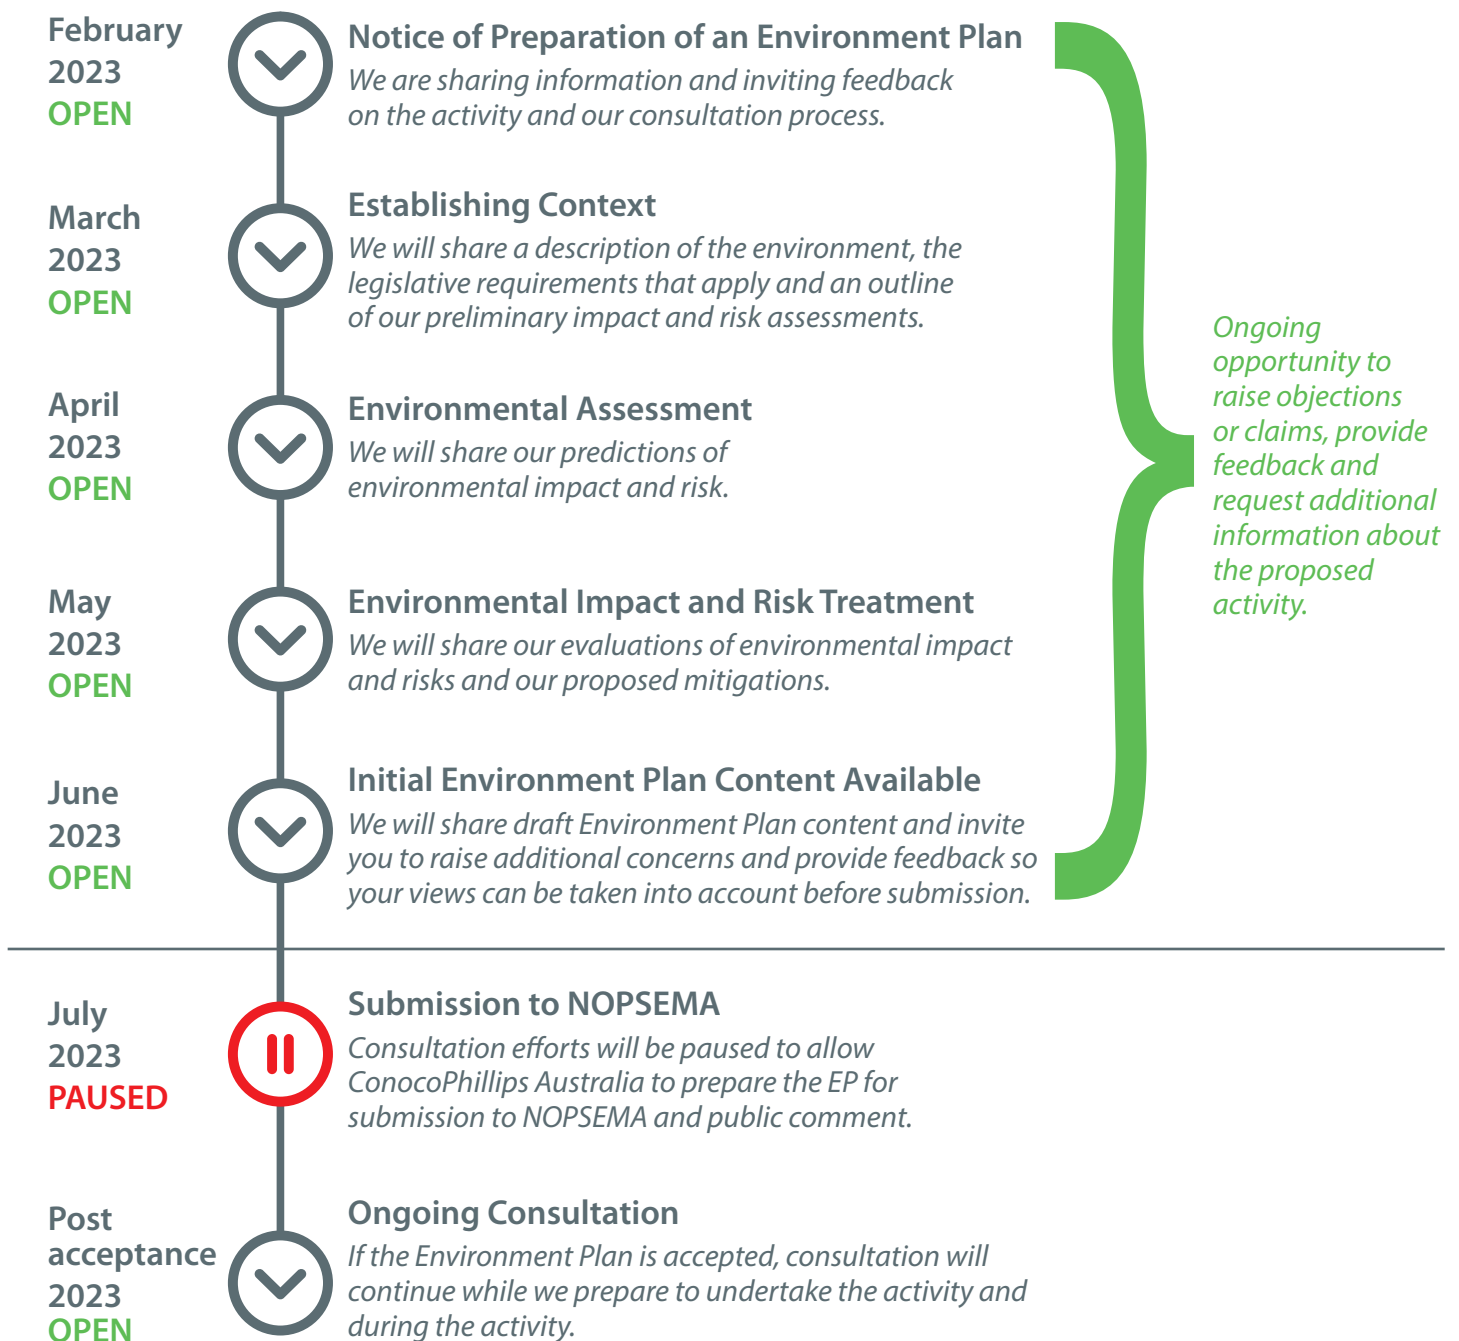

**Our Approach** *continued***These consultation methods may include:**

- Community pop-ups and drop in sessions
- Workshops
- Technical committees/ groups
- Meetings and briefings (in person and/or online)
- Interactive forums
- Information sheets
- Telephone conversations
- Email and letters
- Website content
- Advertising

The way we plan to consult is outlined below. We welcome and invite feedback on the proposed approach.

Throughout EP development and consultation ConocoPhillips Australia will continue to identify and consult potentially affected authorities, individuals and organisations.

**Environment Plan Preparation and Consultation Timeline**

## Understanding the environment

**During the development of the EP for the Otway Exploration Drilling Program, we will undertake to identify environmental values and sensitivities and how these may be affected by the proposed activity.**

We will be seeking input through the consultation process to validate and better understand the environment we are proposing to work in. This will improve our predictions of impacts and risks and help to identify any additional measures that could be considered for adoption to manage environmental impacts and risks more effectively.

Environmental values and sensitivities typically include rare, important and/or sensitive physical, biological, ecological, social, economic and/or cultural features of the environment.

**Examples that are often referred to in EPs for offshore activities include:**

- Benthic (sea floor) communities and habitats, marine fauna and the quality of the water, sediment and biota (animal and plant life of a region or habitat)
- World Heritage Values, National Heritage Values, the ecological character of declared RAMSAR wetlands, listed threatened species and ecological communities, listed migratory species and Marine Parks, and
- Social and economic features of the environment including the rights of other users.

Other examples may include biologically important areas, habitats critical to the survival of listed species, key ecological features, marine and coastal industries, marine tourism and recreation, Commonwealth and State managed commercial fisheries, and cultural heritage features and values.

## Understanding your functions, interests and activities

**ConocoPhillips Australia is seeking to understand functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program. This information, along with the assessment of impacts and risks, determines if an individual or organisation is a 'relevant person'. A relevant person is a mandatory consultee under the Regulations and this information guides:**

- the degree to which a relevant person may be affected.
- the type and form of information that should be provided to a relevant person to support their assessment of the possible consequences of the activity on them.
- an assessment of the level of participation in the consultation process required.

**To assist you determining if you are a relevant person, we have adopted the following definitions of functions, interests, and activities:**

- A function refers to a power or duty to do something.
- Interests are any interest possessed above that of the general public.
- Activities are things a person or group already does.

The level of participation required in the consultation process will vary (depending on, for example, the extent of the affect) and will be appropriate for the relevant person and the type of function, activity or interest.

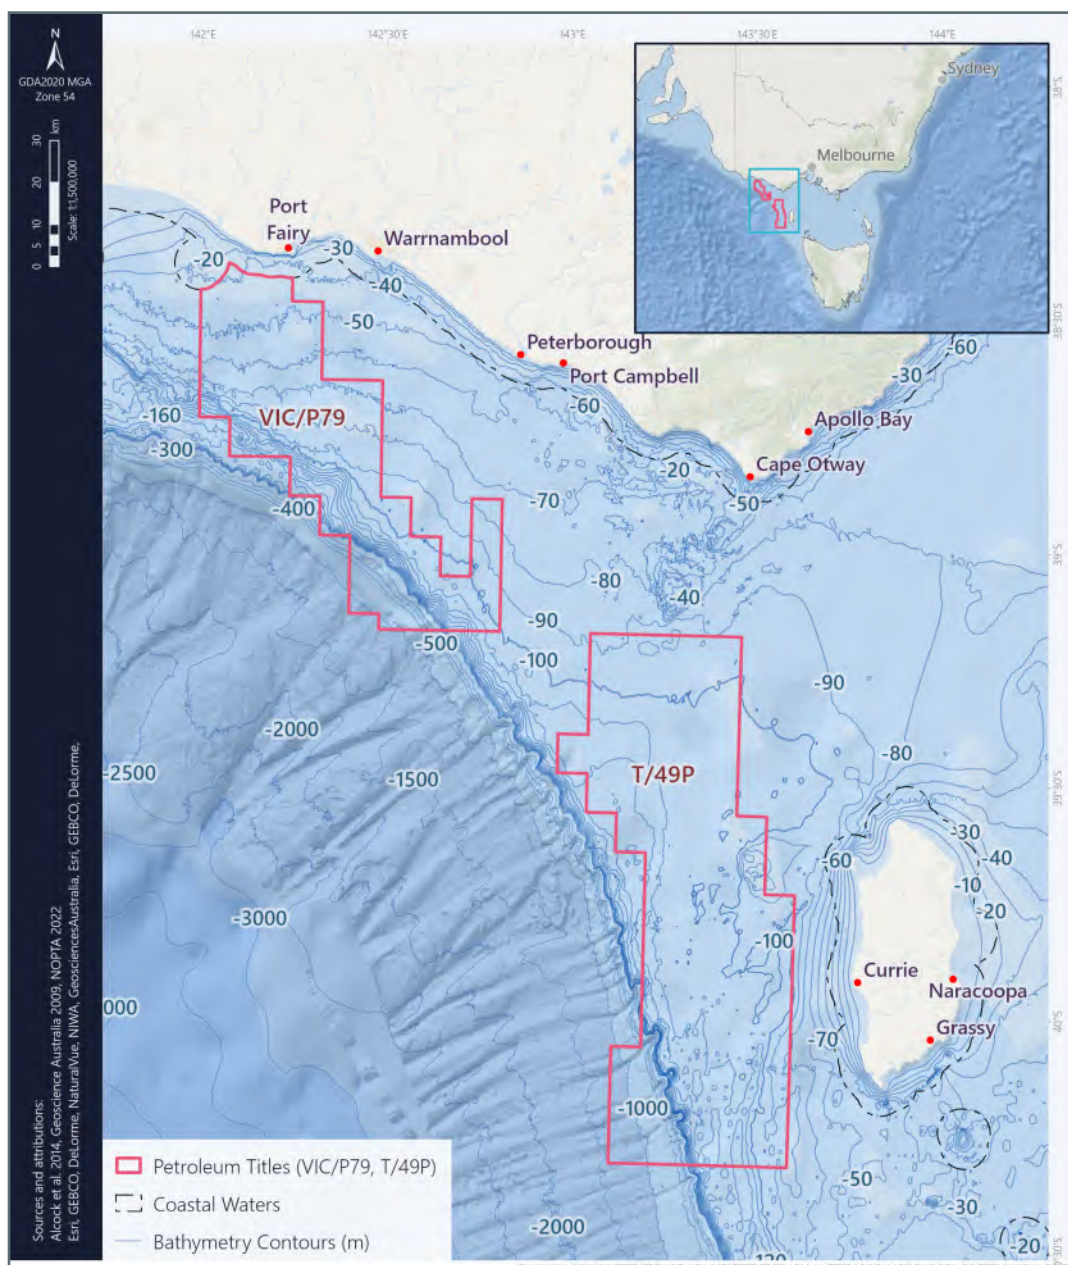

### Are you a relevant person?

Take our consultation survey to determine if you may be a relevant person.

You can also use the QR code to provide instant feedback

## Map of Permit Areas

## Preparation of the EP

**ConocoPhillips Australia has a regulatory requirement to consult potentially affected authorities, individuals and organisations as part of the development of an EP.**

In preparing the EP, ConocoPhillips Australia is required to keep all records of all interactions and correspondence which includes but is not limited to letters, emails, phone calls and records of meetings. This is submitted to NOPSEMA with the EP for assessment but is not available for public review as part of public comment.

Within the EP ConocoPhillips Australia may choose to include a log of all interactions to demonstrate the extent of consultation undertaken in preparation of the EP. In this instance, key identifying information of individuals participating in consultation is removed and only a summary of the interaction is provided.

In addition, a relevant person may request that information they provide throughout consultation not be published in the EP and ConocoPhillips Australia must comply with this request.

# Questions

## and Answers

### ***Why have I been sent this information sheet?***

You are receiving this information sheet because ConocoPhillips Australia identified you or your organisation as potentially having a function, interest or activity that may be affected by our proposed Otway Exploration Drilling Program. We have a regulatory requirement to consult relevant persons as part of the development of an EP.

### ***How did ConocoPhillips Australia identify me?***

ConocoPhillips Australia undertook a global search for relevant persons to find authorities, organisations, or persons that may have functions, interests and activities potentially affected by the proposed activity. Increased efforts have been made closer to the activity location where the largest possible geographical area exposed to risks from the activity was searched through desktop investigation, database queries, online research, and other targeted search methods.

We will also place paid advertisements throughout the development of the EP across a range of media platforms to encourage potentially affected authorities, individuals and organisations to self-identify.

### ***What should I do if I want to be included in consultation?***

If you want to be consulted, you will need to provide us with contact details and an indication of your functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program. Through the course of EP development, we will work with you to ensure the provision of sufficient information so you can make an informed assessment of the potential consequences of the activity to you. You will then need to provide ConocoPhillips Australia with feedback on the information provided.

### ***What happens if I don't respond to the information provided to me throughout the consultation process?***

ConocoPhillips Australia will attempt to contact you multiple times using multiple methods to gather your feedback. Your feedback is important to us, this is why we ask you to provide a number of contact methods.

### ***I think someone I know should be a relevant person, what should I do?***

Please share this information sheet with them and encourage them to contact us.

### ***What should I do if I don't want to be consulted?***

If you don't want to be consulted as part of EP development, please contact us. It's important to note that you can opt out of consultation by telling us that you no longer wish to be consulted for the EP. This decision can be reversed at any time by opting back into the consultation process by advising us.

### ***How do I arrange a meeting with ConocoPhillips Australia?***

Contact us using any of the contact points listed below.

#### **Contact us**

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

**E:** [otway@conocophillips.com](mailto:otway@conocophillips.com)

**T:** 07 3182 7122

PO BOX 1243, MILTON, QLD, 4064

**ConocoPhillips**  
Australia

# Otway Exploration Drilling Program

## Project Update

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

### About the Otway Exploration Drilling Program

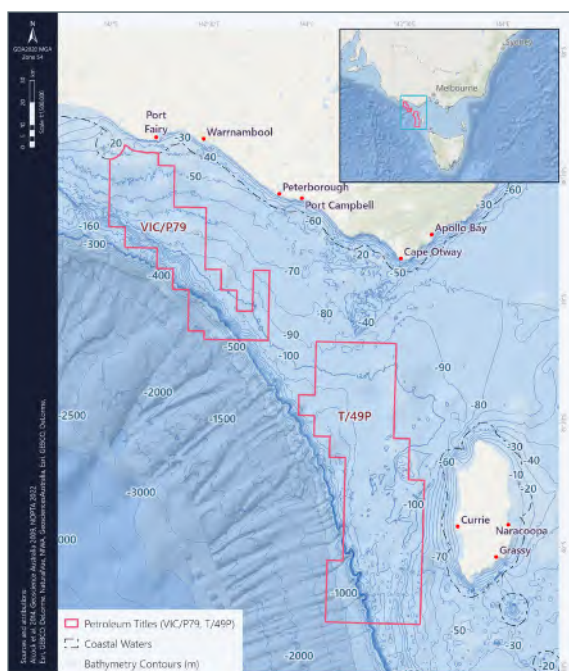

ConocoPhillips Australia is proposing to undertake an exploration drilling program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of our Environment Plan development and consultation, where we will be establishing the context of our proposed activity. We are now able to share a more detailed description of our activity and the existing environment, and a preliminary environmental impact and risk assessment, as well as information on the legislative requirements that apply to our activity.

We have also created an online mapping tool where individuals, organisations and associations can share feedback about locations of environmental values and sensitivities.

### Permit Areas

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- A preliminary environmental impact and risk assessment has been developed to inform ongoing EP development and to support consultation.
- ConocoPhillips Australia is now looking for feedback on values and sensitivities within the environmental planning area to help inform our assessments.
- Individuals, organisations and associations are invited to share feedback on locations with values and sensitivities through an online interactive map via the consultation hub.

## Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and Vic/P79	Operational Areas within T/49P and Vic/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km <sup>2</sup> (Nine locations, each 6 x 6 km) within Operational Areas	75 km <sup>2</sup> (Six locations, each a 2 km radius Drilling Area) within Operational Areas

## Exclusion Zones

During drilling, three types of exclusion zones will be in place at set times and locations:

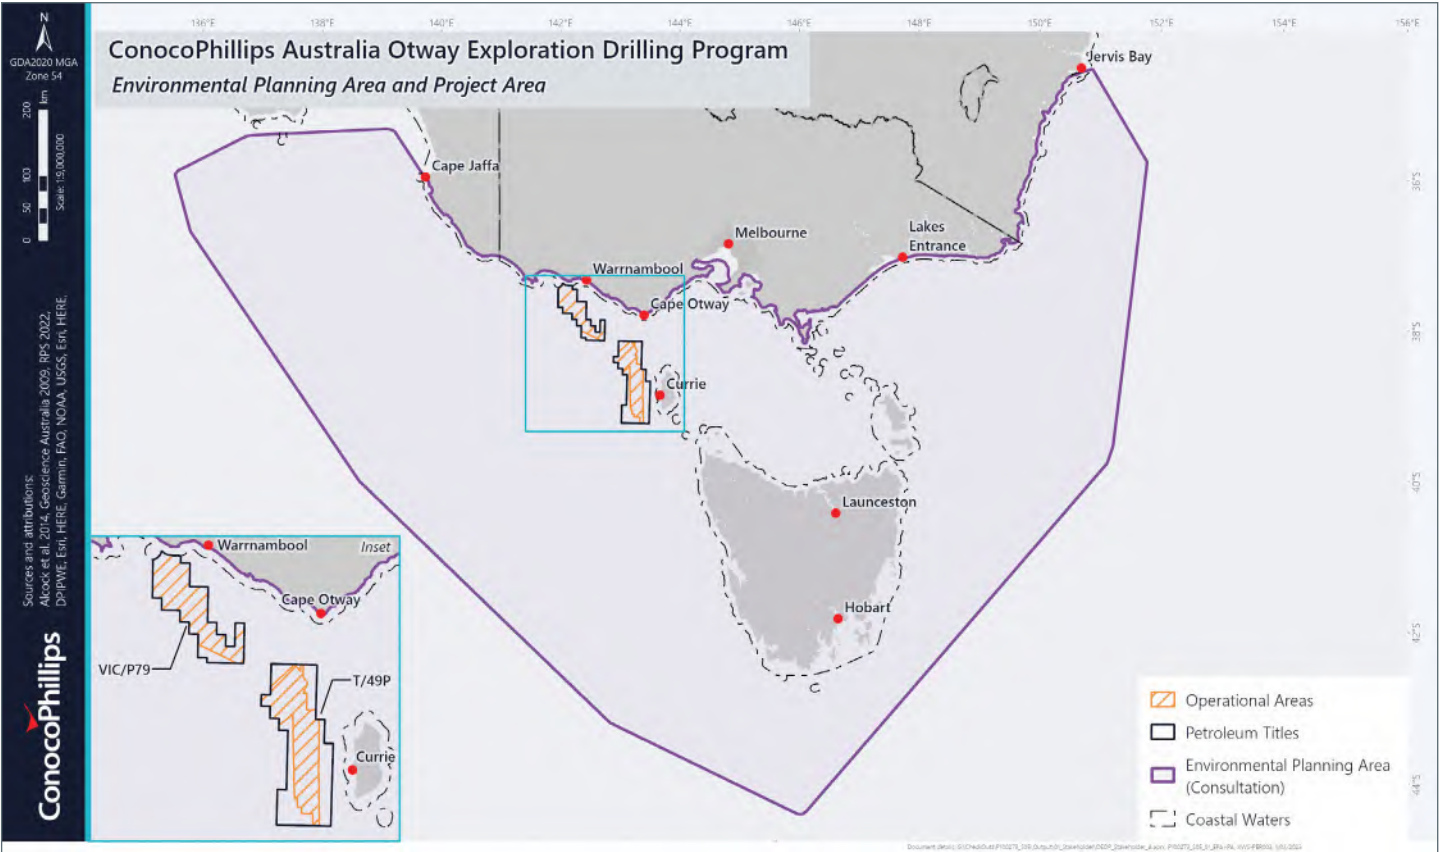

- **Safe Navigation Area** – A 500 m radius safe navigation area will be established around seabed survey vessels and any towed equipment when conducting seabed surveys.
- **Petroleum Safety Zone** – A 500 m radius petroleum safety zone will be enforced around each drilling location once the drilling rig is in position.
- **Cautionary Zone** – A 2 km radius cautionary zone will be established around the drilling rig once in position. This zone will cover the area of seabed anchors and mooring equipment and will be maintained by support vessels.

Environmental Planning Area Map

The Environmental Planning Area has been established as the largest physical area ConocoPhillips Australia will use for planning the proposed Otway Exploration Drilling Program and includes the marine environment and a 1 km buffer into coastal areas. This area has been established to support the identification of marine and coastal environmental values and sensitivities, and relevant persons and organisations with functions, interests and activities that may be affected by the proposed activity.

Environmental Planning Area Map

Understanding the Existing Environment

The marine environment of the offshore Otway Basin, Victoria is a diverse and dynamic ecosystem that supports a range of important physical, ecological, socio-economic and cultural activities and values. Understanding the existing environment creates a reference point from where we can evaluate the impacts and risks of the proposed Otway Exploration Drilling Program. The existing conditions are also used to determine the significance of the impacts and risks and to identify any necessary mitigation measures, management strategies or additional baseline studies.

The Environmental Planning Area encompasses a wide range of habitats and marine species including fish, crustaceans, birds, marine turtles, marine mammals and kelp forests. The marine environment also supports a range of cultural values and socio-economic activities including, but not limited to, commercial fishing, shipping, gas production and recreational activities.

The table below provides an overview of environmental considerations and why they are assessed in an Environment Plan.

Table 1 Environmental Considerations

Environmental Component		Understanding Required	Sub-components Considered
Physical Environment	The physical environment refers to the non-living natural elements of an ecosystem	Understanding the physical environment is essential for comprehending the functioning of an ecosystem and for developing sustainable management practices that preserve and enhance the ecological, socio-economic and cultural values of the environment.	<ul style="list-style-type: none"> <li>• Water quality.</li> <li>• Sediment quality.</li> <li>• Air quality.</li> <li>• Climate.</li> <li>• Ambient light.</li> <li>• Ambient sound.</li> </ul>
Ecological Environment	The ecological environment refers to the living components of an ecosystem, as well as their interactions with each other and with the nonliving elements of the environment.	Understanding the ecological environment is important for conserving biodiversity, preserving the integrity and functioning of ecosystems and supporting the livelihoods of communities.	<ul style="list-style-type: none"> <li>• Benthic habitats and communities.</li> <li>• Coastal habitats and communities.</li> <li>• Plankton invertebrates.</li> <li>• Fish.</li> <li>• Birds.</li> <li>• Marine reptiles</li> <li>• Marine mammals</li> <li>• Conservation values and sensitivities.</li> </ul>
Socio-economic Environment	The socio-economic environment refers to the social and economic relationships between people and the environment including the physical, psychological and economic elements that shape human well-being.	Understanding the socio-economic environment is critical for developing effective and equitable environmental management strategies that balance the needs of people with the conservation of the environment.	<ul style="list-style-type: none"> <li>• Coastal communities.</li> <li>• Commercial fisheries.</li> <li>• Defence activities.</li> <li>• Offshore petroleum activities.</li> <li>• Offshore renewable energy activities.</li> <li>• Other offshore infrastructure.</li> <li>• Tourism.</li> <li>• Recreational diving and fishing.</li> <li>• Shipping.</li> </ul>
Cultural Environment	The cultural environment refers to both First Nations and European cultures.	Understanding the cultural environment is critical for developing effective and equitable management strategies that consider cultural values and sensitivities that may be affected by environmental change.	<ul style="list-style-type: none"> <li>• First Nations Peoples.</li> <li>• Native Title.</li> <li>• Maritime archaeological heritage (including shipwrecks).</li> </ul>

## Identifying Environmental Values and Sensitivities

To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.

Individuals, organisations and associations are encouraged to visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

## Questions

### and Answers

#### ***What is an environmental value and sensitivity?***

Environmental values and sensitivities include rare, important and/or sensitive physical, ecological, socio-economic and/or cultural features of the environment. Examples from NOPSEMA are provided below:

- The values and sensitivities of the marine environment may include benthic communities and habitats, marine fauna and the quality of the water, sediment and biota.
- The values and sensitivities that exist in relation to Protected Matters (Part 3 EPBC Act) may include World Heritage Values, National Heritage Values, the ecological character of declared RAMSAR wetlands, listed threatened species and ecological communities, listed migratory species and Marine Parks.
- The values and sensitivities of socio-economic features of the environment including the rights of other users which are to be managed responsibly.

Other examples may include biologically important areas, habitats critical to the survival of threatened species, key ecological features, marine and coastal industries (i.e., commercial shipping, Defence, petroleum exploration and production), marine tourism and recreation, and Commonwealth and State managed commercial fisheries, and cultural heritage features and values.

#### ***Will ConocoPhillips Australia only assess the Environmental Components and Sub-components listed above?***

Through the feedback that we receive during consultation, we will continue building on our understanding and learnings of the environmental values and sensitivities during our Environment Plan process. Those learnings that are predicted to cross-over with our proposed activities will be carried through to the full assessment of impacts and risks which will be detailed in our EP and sent to the regulator for assessment.

#### ***How will environmental impacts and risks be assessed in the EP?***

Exploration activities do not operate to a zero-impact standard. Instead, ConocoPhillips Australia is required to define the acceptable level of impact, and work below that level. Acceptable levels of impact are established based on relevant up-to-date technical and scientific studies, government advice, and are considerate of the information gathered through the consultation process.

The predicted levels of impact and risk expected to occur are then compared to the previously defined acceptable levels. This assessment is then scrutinised by the independent regulator, NOPSEMA, who will determine if the EP demonstrates that the environmental impacts and risks of the activity will be of an acceptable level and meets all the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009.

## Preliminary Environmental Impact and Risk Assessment and Relevant Legislative Requirements

Our Preliminary Environmental Impacts and Risk Assessment report and a list of currently identified legislative requirements are available online from the Consultation Hub Document Library.

## Meet the Project Team

We will be visiting Victorian and Tasmanian coastal communities throughout May and June to meet with local businesses and community groups and to host information sessions. If you would like to be informed of upcoming information sessions to be held near you, please get in touch with us on [otway@conocophillips.com](mailto:otway@conocophillips.com)

*Contact us*

## Webinar

Can't get to an information session? Register for our online webinar series via our consultation hub. The next Webinar will be held on Wednesday 23 May 2023 commencing at 5pm AEST.

*Register here*

### Have we missed anyone?

If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.

# Otway Exploration Drilling Program

## Project Update

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

### About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of Environment Plan development and consultation, where we will share our evaluations of environmental impacts and risks.

We also have an online mapping tool where individuals, organisations and associations can continue to share feedback about environmental values and sensitivities.

### How to Participate in the Regulatory Approvals Process

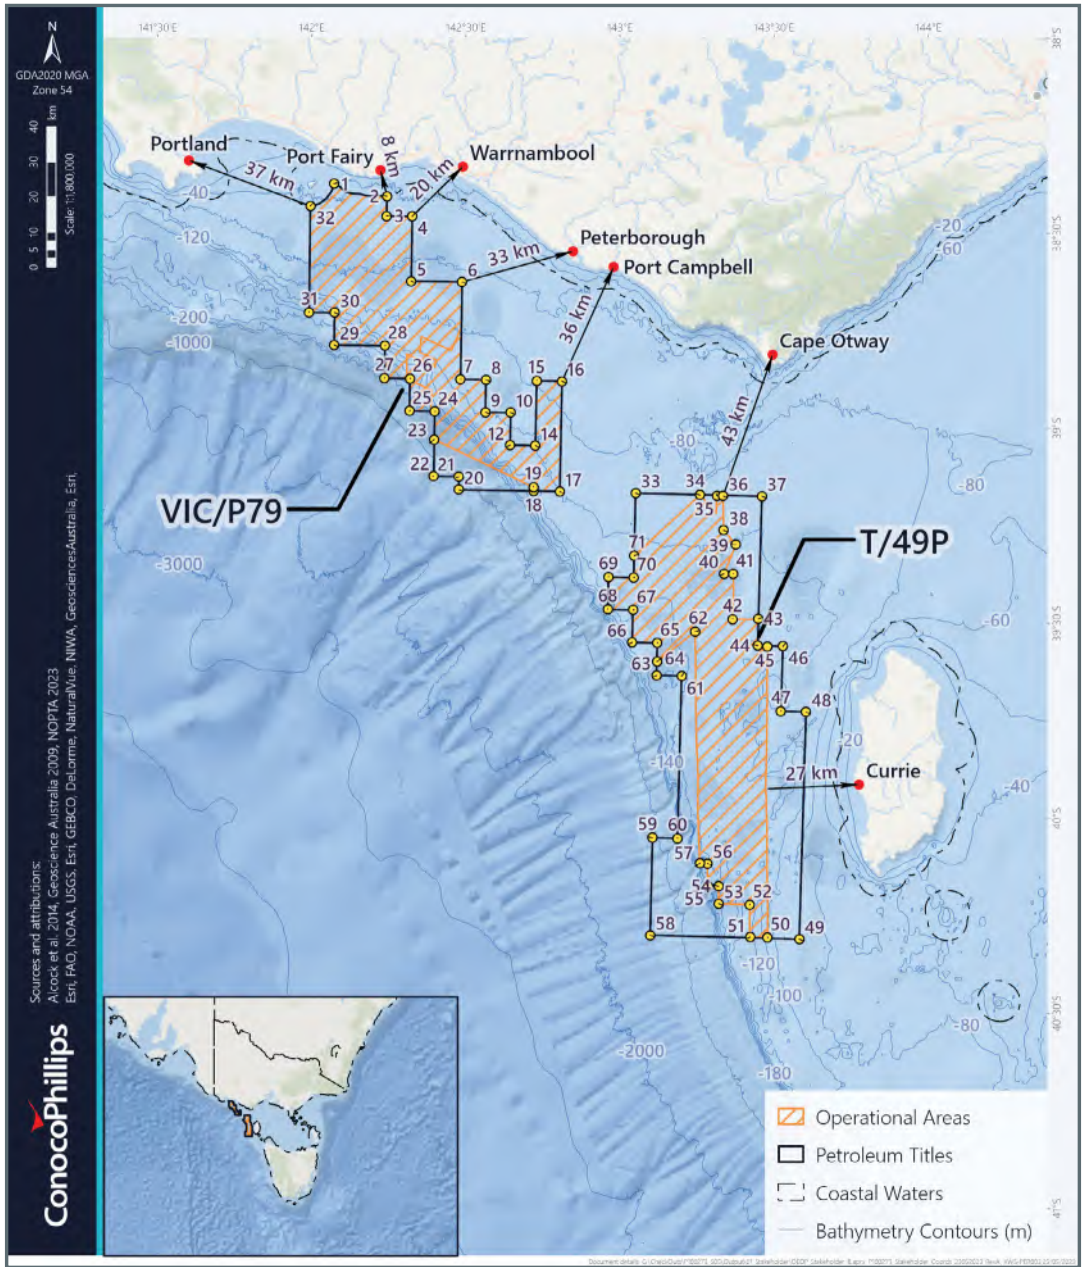

NOPSEMA has recently published a brochure with information for the community about consultation on offshore petroleum environment plans. The brochure has excellent information to help you or your organisation decide if you are a relevant person and can be found [here](#). We strongly encourage those of you uncertain about whether you are a relevant person to consider this information.

If you believe you are a relevant person, we need to understand your activities or interests so that we can provide the right information to you. When engaging with our team we encourage you to be specific about how you might potentially be affected, so that we can properly consider how we might avoid or lessen those impacts or risks.

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- A range of information sheets providing information on the evaluation of environmental impacts and risks has been developed to support consultation.
- ConocoPhillips Australia is now looking for feedback on these evaluations.
- Individuals, organisations and associations continue to be able to share feedback on locations with values and sensitivities through an online interactive map via the consultation hub.

## Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and VIC/P79	Operational Areas within T/49P and VIC/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km <sup>2</sup> (Nine locations, each 6 x 6 km) within Operational Areas	75 km <sup>2</sup> (Six locations, each a 2 km radius Drilling Area) within Operational Areas

## Identifying Environmental Values and Sensitivities

**To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.**

Individuals, organisations and associations are encouraged to visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

## Commercial Fishing

The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

### **A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:**

- Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.
- Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10s to 100s of metres and will not affect the long-term sustainability of fisheries.
- Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

The full Commercial Fishing information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

## Marine Mammals

The EP will include an assessment of potential impacts and risks to marine mammals that might arise from the exploration program.

### **A preliminary assessment of impacts and risks to marine mammals has identified that:**

- Several species of whales, dolphins and seals are typically found in the Otway Basin, many of which exhibit biologically important behaviours such as foraging.
- Marine mammals are particularly sensitive to the effects of underwater noise which has the potential to result in hearing impairment, stress and changes in behaviour at a range of effect distances.
- Where underwater noise has the potential to affect biologically important behaviours of threatened species, effective control measures will need to be in place.

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal).

### **In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:**

- Southern right whales
- Blue whales
- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/spotted bottlenose dolphins, and
- Australian sea lion

The full Marine Mammals information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

## Seabirds, Penguins and Marine Turtles

The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.

A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:

- Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
- Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
- A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging, breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the EPBC Act. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

**The following species are known to occur within the Environmental Planning Area and exhibit one or more of these important behaviours:**

- |                           |                          |                            |
|---------------------------|--------------------------|----------------------------|
| • Caspian tern            | • Common-diving petrel   | • Greater crested tern     |
| • Flesh-footed shearwater | • Great-winged petrel    | • Short-tailed shearwater  |
| • Little penguin          | • Pacific gull           | • Sooty shearwater         |
| • Shy albatross           | • Soft-plumage petrel    | • White-faced storm petrel |
| • Wedge-tailed shearwater | • White-capped albatross |                            |
| • White-fronted tern      | • Black-faced cormorant  |                            |

Marine turtles are highly migratory and rely on both marine and terrestrial habitats. Although they may occur within the Environmental Planning Area, no habitat critical to their survival occurs in the waters off southern Australia and they are not known to exhibit any identified biologically important behaviours in this area. The closest biologically important areas for marine turtles are located south of Brisbane, QLD, and at Shark Bay, WA. Even though the presence of individuals within the area is expected to be of a transient nature, the potential impacts of the Otway Exploration Drilling Program on marine turtles has been assessed, as they are listed as Matters of National Environmental Significance and are protected under the EPBC Act.

The full Seabirds, Penguins and Marine Turtles information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

## Other Marine and Coastal Users

The Environment Plan will include an assessment of potential impacts and risks to other marine and coastal users that may arise from the exploration drilling program. This assessment has currently identified a number of marine and coastal users and values including recreation and tourism, commercial shipping, petroleum activities, renewable energy, defence activities, commercial fishing and cultural heritage.

The Otway Exploration Drilling Program may affect the activities of other marine and coastal users. For example, the physical presence of seabed survey vessels, the drilling rig and support vessels used for the activity, and the establishment of exclusion zones, may result in the displacement of other marine users engaging in activities such as commercial fishing.

Other short-term petroleum activities, for example, Vertical Seismic Profiling (VSP), have the potential to cause additional displacement if conducted in close proximity to coastal areas, with sound emissions from VSP limited to a maximum of 20 hours per well.

Exclusion zones will be established to support safe operations. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during the drilling program and prevent interactions or collisions with equipment or between vessels.

All potential drilling locations will be confined to water depths between 35 - 670 m. Recreational diving is likely to be restricted to coastal waters in depths <18 m but with more advanced diving possible to 40 m. Water depths within the operational areas are mostly beyond the recognised maximum recreational diving depth of 40 m, which is also an unlikely depth for recreational swimming. The sound generated by the activity has the potential to reach shallower waters if the drilling activity is in the northern portion of permit VIC/P79.

The full Other Marine and Coastal Users information sheet, including examples of mitigation measures is available in the document library of the consultation hub.

## Emissions and Discharges

The EP will include a detailed assessment of potential impacts and risks arising from the air emissions and planned discharges associated with the Otway Exploration Drilling Program. Activities conducted as part of the Otway Exploration Drilling Program will result in emissions to the atmosphere, as well as discharges to the marine environment.

### A preliminary assessment of potential impacts associated with emissions and discharges has identified:

- Air emissions from seabed survey vessels, the drilling rig and support vessels have the potential to result in localised changes in air quality.
- Planned discharges from survey vessels, the drilling rig and support vessels have the potential to result in localised changes to water quality that will quickly dissipate in the water column.
- Discharges from drilling operations, including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid from testing subsea equipment, have the potential to result in localised changes to water and sediment quality.

## Historical Military Ordnance Risk (Unexploded Ordnance)

The EP will include an assessment of impacts and risks associated with historical defence activities in the area, including the potential presence of unexploded ordnance.

Both permit areas overlap a historic air-to-air firing range which the government has classified as having a Slight Potential for unexploded ordnance (UXO) presence, with most ammunition used in this area being considered low risk.

There is no overlap between the permit areas and historic offshore UXO sea dumping sites. The closest sea dumping site to either permit area is located 21 km from T/49P.

The full Historical Military Ordnance Risk information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

## Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

# Otway Exploration Drilling Program

## Other Marine and Coastal Users

**ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activity is a continuation of ConocoPhillips Australia's exploration activities in the offshore Otway basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.**

### About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than January 2024.

We are committed to sustainably co-existing with other marine and coastal users, and carrying out our offshore activities in a manner which does not interfere with other marine users' drilling rights to a greater extent than is necessary.

Figure 1 (overleaf) shows the proposed operational areas and provides coordinates for corner points and distances to nearby coastal communities.

This information sheet summarises the ongoing assessment of potential impacts and risks to other marine and coastal users arising from the Otway Exploration Drilling Program.

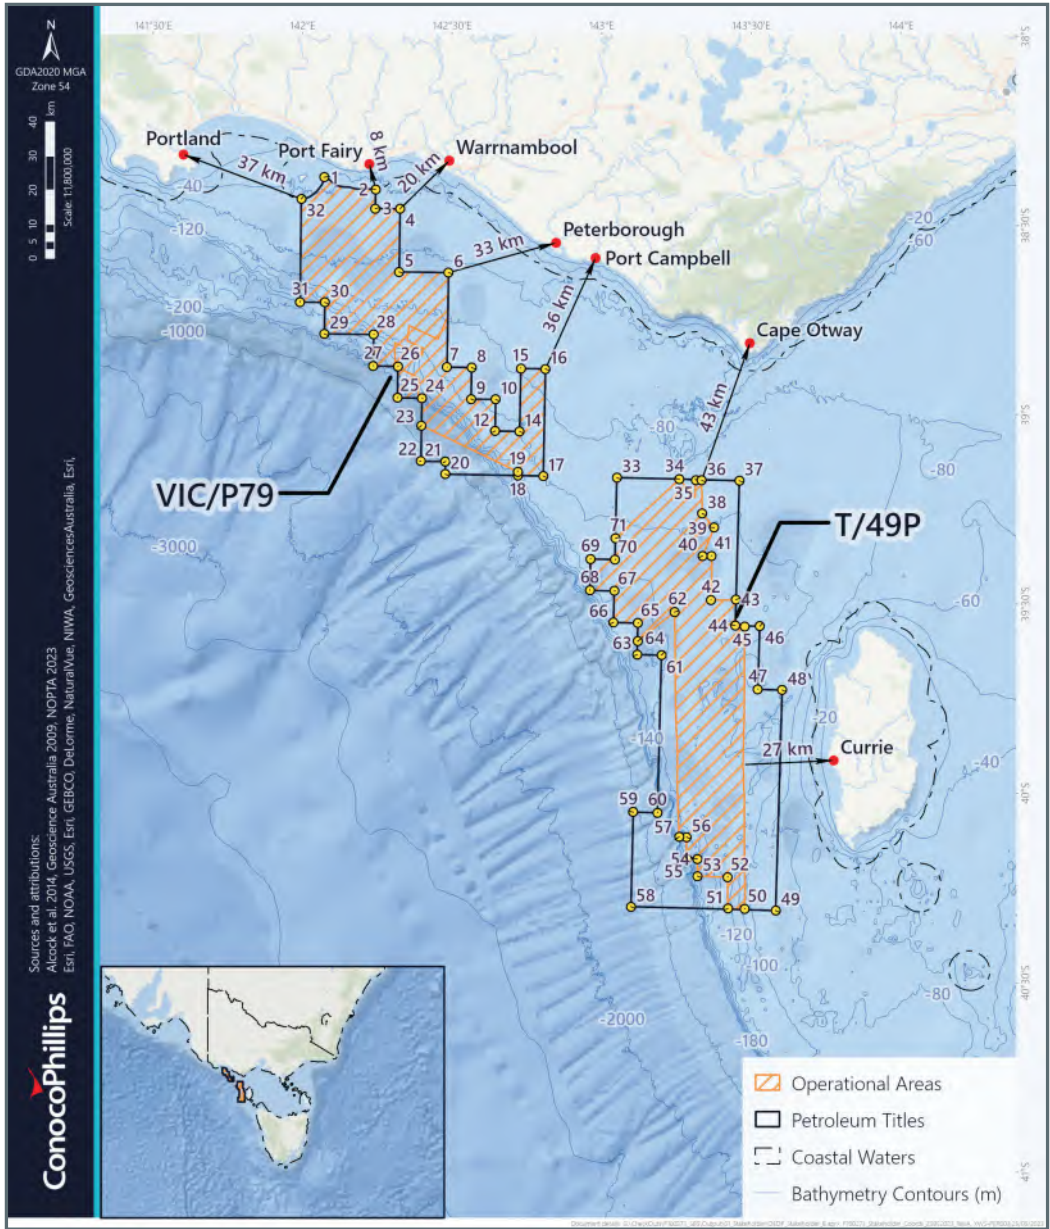

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The Environment Plan will include an assessment of potential impacts and risks to other marine and coastal users that may arise from the exploration drilling program. This assessment has currently identified a number of marine and coastal users and values including recreation and tourism, commercial shipping, petroleum activities, renewable energy, defence activities, commercial fishing and cultural heritage.
- Exclusion zones will be established to support safe operations. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during the drilling program and prevent interactions or collisions with equipment or between vessels.
- Recreational diving is likely to be restricted to coastal waters in depths <18 m but with more advanced diving possible to 40 m. Water depths within the operational areas range between 35 and 670 m, which is mostly beyond the recognised maximum recreational diving depth of 40 m, and also an unlikely depth for recreational swimming. The sound generated by the activity has the potential to reach shallower waters if the drilling activity is in the northern portion of permit VIC/P79.

## Overview

The Otway Exploration Drilling Program may affect the activities of other marine and coastal users. For example, the physical presence of seabed survey vessels, the drilling rig and support vessels used for the activity, and the establishment of exclusion zones, may result in the displacement of other marine users engaging in activities such as recreational and commercial fishing.

Other short-term petroleum activities, for example Vertical Seismic Profiling (VSP), have the potential to cause additional displacement if conducted in close proximity to coastal areas, with sound emissions from VSP limited to a maximum of 20 hours per well.

Figure 2 opposite shows the environmental planning area that has been applied to ensure that far ranging environmental values and sensitivities are appropriately identified and considered.

## Potential Effects on Day-to-Day Activities

**Potential displacement of other marine and coastal users will be determined by the following aspects:**

### 1. Location

Up to six exploration wells will be drilled across both permit areas. The exact location of the wells is still to be determined.

### 2. Exclusion Zones

Exclusion zones are put in place as a safety precaution. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during seabed surveys and the drilling program and prevent interactions or collisions with equipment or between vessels. Three types of exclusion zones will be in place at set times and locations during the program.

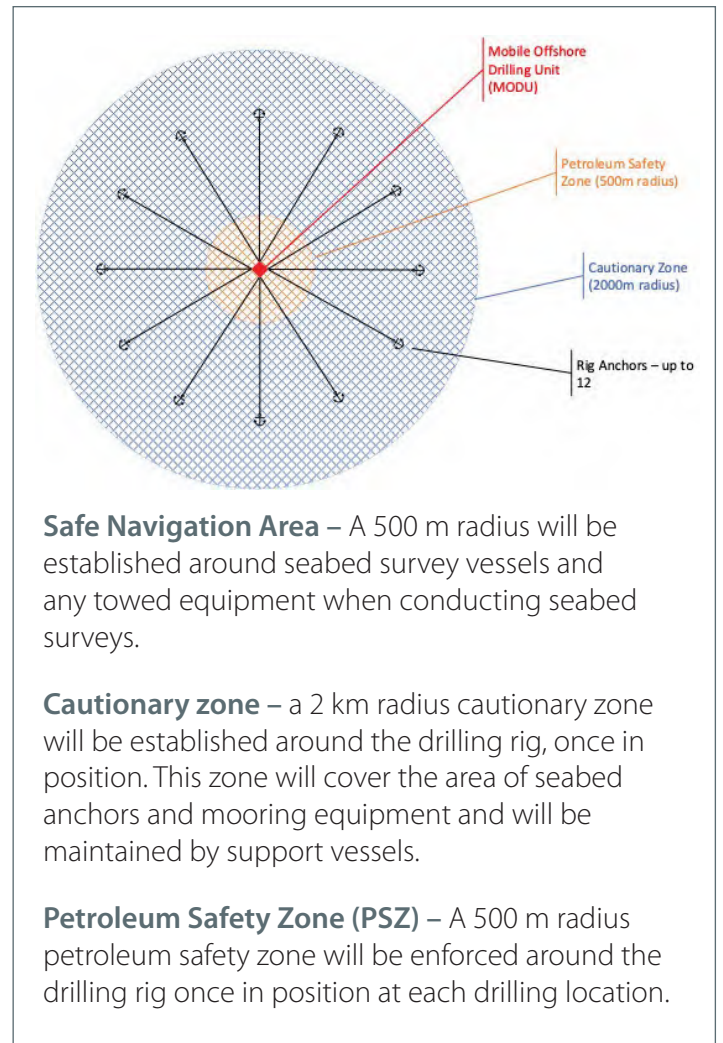

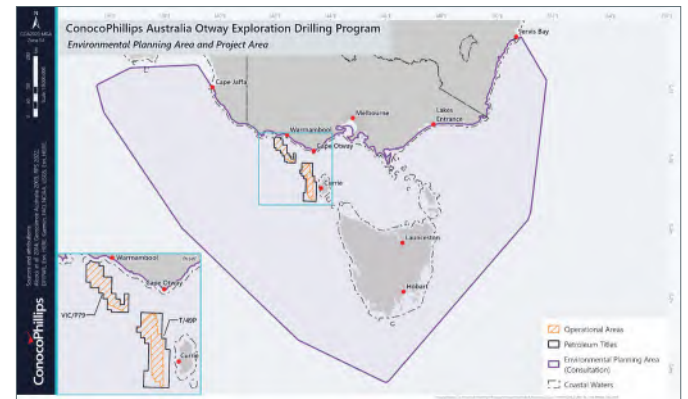

### 3. Timing and Duration

ConocoPhillips Australia will undertake seabed surveys in up to nine locations, with the survey at each location expected to take approximately one week. Surveys will commence no earlier than January 2024.

For drilling, each well will typically take between 30 to 40 days but could take up to 90 days to complete, accounting for operational delays and weather events. Drilling will commence no earlier than October 2024.

## Environmental Planning Area Map

Figure 2

## Reducing Impact and Risk

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to minimising impacts and risks to the marine environment as well as other marine and coastal users. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and the activities, functions and interests of other marine and coastal users. This involves establishing acceptable environmental standards and thresholds for specific activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts and risks.

### Examples of mitigation and management measures that will be implemented are listed below:

- Exclusion zones will be put in place prior to the commencement of seabed survey and drilling activities. These will be communicated via notices to mariners. Vessel and drilling rig operating procedures will establish:
  - A 500 m radius Safe Navigation Area (SNA) will be monitored around the seabed survey vessels to minimise interactions with other vessels.
  - A mandatory 500 m Petroleum Safety Zone (PSZ) around each drilling location while the drilling rig is in position. This prohibits unauthorised vessels from entering or being present within the PSZ.
  - A 2 km cautionary zone will be in place around the drilling rig while on location. To avoid entanglement and safety risks, fishing nets, lines or pots should not be placed within the cautionary zone.
  - Vessel speeds will also be limited within the 2 km cautionary zone, known as the drilling area.
- A Communication Plan will be prepared to ensure that relevant persons are aware and informed of the activity. Specific notifications will be provided to:
  - Australian Maritime Safety Authority (AMSA) Rescue Coordination Centre (RCC)
  - Australian Hydrographic Office (AHO)
  - Other relevant Authorities, and
  - Relevant Persons.
- ConocoPhillips Marine Assurance System ensures that project vessels meet all maritime laws and includes pre-commencement vessel inspections of class certification requirements under the Navigation Act 2012 and Marine Order 27 (Safety of Navigation and Radio Equipment) 2016; and Marine Order 30 (Prevention of Collisions) 2009.
- ConocoPhillips Australia will monitor the implementation and effectiveness of control measures for the duration of the activity and is required to report on environmental performance, including recordable incidents and non-compliances, to the independent regulator the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) at specified intervals during the exploration program. In addition, NOPSEMA typically conducts compliance inspections prior to and during the activity

# Questions

## and Answers

### **How will ConocoPhillips Australia determine when and where drilling will occur?**

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

### **Will it be safe to swim and dive?**

All potential drilling locations will be confined to water depths between 35 - 670 m. Although the recognised maximum recreational diving depth of 40 m and an unlikely depth for recreational swimming, the sound generated by the activity has the potential to reach the shallower waters.

In particular, the northern portion of permit VIC/P79 is located within close proximity to the shoreline of Victoria. If drilling occurs near the northern border of the permit area, commercial dive-fisheries and recreational water-based activities may be affected by aversion during some short-term activities.

### **Will I still be able to fish?**

Fishing within the permit area will be allowed, but not within established safe navigation areas, cautionary zones or the petroleum safety zone.

### **How will we know vessels and facilities are out there?**

There will be a 'Notice to Mariners' provided by the Australian Hydrographic Office to inform other marine users of the activity taking place and of the exclusion zones in place, as regulated by the AMSA.

The drilling rig will also be equipped with an Automatic Identification System (AIS) installed to ensure the facility is detected at sea by other vessels or operators. Further, additional lighting as per Commonwealth required guidelines will be installed on the drilling rig and support vessels, which will allow easy identification.

### **Where can I find information on exclusion zones relevant to me?**

PSZ notices will be published in the Gazette on the NOPSEMA website. A description of the activity, location and the time frame of exclusion will also be available at:

<https://www.nopsema.gov.au/offshore-industry/directions-notices-alerts/gazetted-notices>

## Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

# Consultation on offshore petroleum environment plans

---

## Information for the community

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) is Australia's independent expert regulator for health and safety, structural and well integrity, and environmental management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.

The protection and preservation of the marine environment is best achieved when there are opportunities for the community to participate in the environmental approvals process through consultation.

---

## Who can participate?

Under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (the regulations) there are several ways the community can participate in the environmental approvals process for offshore petroleum activities in Commonwealth waters.

### Public comment for new projects and exploration activities

Offshore project proposals (OPPs) for new offshore petroleum projects and environment plans for offshore petroleum exploration activities are subject to a mandatory public comment period. Public comment must be done before the OPP or environment plan is submitted to NOPSEMA for assessment. Further information about public comment can be found at [nopsema.gov.au](http://nopsema.gov.au).

### Relevant persons consultation

Titleholders must consult with a specific category of people or organisations referred to as 'relevant persons' while preparing an environment plan for any offshore petroleum activity. This consultation must be done before the environment plan is submitted to NOPSEMA.

Some categories of relevant persons are specified in the regulations, such as government departments, however the information in this brochure is for the category of relevant persons who are not specified but who have 'functions, interests or activities' that may be affected by the offshore activity.

### Correspondence directly to the regulator (NOPSEMA)

You can send correspondence directly to NOPSEMA; however, this generally cannot be considered until after the environment plan has been submitted. It is always better to use the public comment and relevant persons consultation processes in the first instance.

## What is 'relevant persons' consultation?

Consultation on offshore petroleum activities is a two-way process where information is shared between titleholders and relevant persons. It is a requirement for titleholders when preparing an environment plan and is an important part of good environmental management.

Consultation provides an opportunity for people or organisations who may be affected by an offshore petroleum activity to raise concerns, including objections or claims, about the potential impacts of the activity, to seek information about how they may be affected, and how the titleholder intends to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

Information provided by relevant persons in consultation may also help titleholders better understand the values and sensitivities of the environment and inform the evaluation of the potential impacts and risks associated with the activity and how to manage them appropriately.

## Am I a relevant person?

You may be a relevant person if you or your organisation have functions, interests, or activities that may be affected by an offshore petroleum activity proposed under an environment plan being prepared or already underway under an environment plan being revised.

The terms 'functions' 'interests' and 'activities' should be read broadly. You do not have to have a legal or financial interest that may be affected by an offshore petroleum activity to be a relevant person.

Interests that may be affected can include things like cultural and spiritual connections to the sea or interests in the protection of specific marine species. However, to be a relevant person your interests should be more than a general interest in the environment and/or offshore petroleum activities.

## If I am a representative body, can I consult on behalf of all my members?

The law recognises that interests may be held communally. In some cases, all members of a community may agree that their representative body can consult on their behalf. However, this may not always be the case. Representative bodies should inform titleholders whether or not they have the authority to consult with titleholders on behalf of all their members.

Representative bodies, such as peak bodies and prescribed body corporates, may be relevant persons in their own right. They may also be an initial point of contact for titleholders to seek information about who else they should approach for consultation.

It is the titleholder's responsibility to provide all members of a community who have a shared interest opportunities to participate in consultation. In some circumstances, representative bodies may offer to assist titleholders with this.

## Do I have to participate?

If you are a relevant person, you have the right to be consulted by titleholders of offshore petroleum activities when they are preparing an environment plan to submit to NOPSEMA.

Titleholders have a duty to provide you an opportunity to be consulted, however there is no obligation on you to participate in consultation. If you do not wish to be consulted, you should advise titleholders of this when they first contact you.

Titleholders must make reasonable efforts to consult with relevant persons, but the regulations do not require them to get a response to their requests. If you want to participate in consultation but need more information or time then it is best to communicate this to titleholders when they contact you. If you do not respond, they might assume you do not wish to be consulted.

If you are an organisation or representative body that is regularly approached for consultation you may consider developing guidance outlining how and when you want to be consulted. You could also consider documenting your functions, interests and activities. Both measures may help with managing regular requests for consultation.

In some instances, the likelihood of you being affected by an activity is very low and/or the impact on your functions, interests or activities may be minor. For example, if you are only going to be affected by the activity in the very unlikely event of an oil spill you may wish to inform titleholders you only want to be consulted if a spill occurs as part of the requirement for ongoing consultation set out in the regulations.

## What if I want to be consulted but the titleholder hasn't contacted me?

Titleholders have a duty to identify who may be a relevant person and provide them opportunities to participate in consultation. However, even with best endeavors, titleholders may miss people or organisations who may be relevant.

If you believe you are a relevant person and you want to be consulted on offshore petroleum activities, then you should contact titleholders directly and identify yourself as a relevant person.

If a titleholder refuses to consult with you, and you believe you are a relevant person, you can write to NOPSEMA. Once an environment plan is submitted to NOPSEMA, this information can be considered in the assessment of whether or not the titleholder has met the requirements for consultation.

It is always better to attempt to resolve issues with the titleholder in the first instance. Relevant persons consultation is carried out before an environment plan is submitted, so NOPSEMA is limited in its ability to require titleholders to consult with a particular person or organisation.

## What is the process for consultation?

There is no detailed process set out for how consultation should be carried out, however there are requirements that must be met under the regulations. These include:

- That you are given sufficient information to make an informed assessment about whether you are likely to be affected by the activity, how you may be affected, and to raise any concerns, including objections or claims, about the potential impacts of the activity.
- That you are given a reasonable period of time to consider the information provided to you and give feedback to the titleholder on the potential impacts of the activity on your functions, interests or activities.

What constitutes sufficient information and a reasonable period of time depends on several factors including the nature of your functions, interests and activities. You should communicate as early as possible in consultation with titleholders about what information and how much time you may need so that they can consider, respond and address these in their planning.

The information provided to you should be in a form that is appropriate and readily accessible to you. Consultation is generally a two-way process where information is shared between titleholders and relevant persons rather than a one-way process of seeking feedback to a fact sheet or high-level information.

## What if I don't have the resources to participate?

If you are a relevant person and you believe you have information that is important to the understanding of the potential impacts of an offshore petroleum activity or you want to raise concerns, including objections or claims, then you should discuss with the titleholder how you can participate in consultation.

This might include requesting information in a different format, asking for more time to consider information or help to understand the information to provide an informed response.

There is no requirement in the law for titleholders to pay the costs incurred by relevant persons to be consulted, however they may choose to provide assistance to relevant persons to ensure consultation is carried out efficiently and is robust. This is a matter between the titleholder and relevant persons.

## How do I make sure my views are considered?

It is important to communicate clearly when participating in consultation with titleholders. You may provide information to titleholders that helps them understand the environment and raise specific concerns, objections or claims about the potential impacts of the activity or the way the titleholder proposes to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

The information you provide to a titleholder during consultation must be considered by that titleholder and addressed in their environment plan for NOPSEMA to consider in its assessment and decision-making.

NOPSEMA publishes environment plans on its website when they are submitted for public comment, for assessment and when they are approved. Relevant persons have the right to request that the information they have provided in consultation is not published and titleholders must ensure they communicate this right to relevant persons.

Relevant persons should be aware that while you are free to respond on any matter and raise any concern, this may not be able to be considered if it is outside the scope or purpose of the environment plan and approval process. Examples of issues that may not be considered under the regulations include statements of fundamental objection to offshore petroleum activities or information containing personal threats or profanities.

## Do titleholders need my consent?

Titleholders are not required by law to obtain agreement or consent from relevant persons for their offshore petroleum activities to proceed; however, they are required to demonstrate in their environment plan how the concerns, objections or claims raised by relevant persons were considered and demonstrate that their response to that information was appropriate.

NOPSEMA's assessment and decision-making will consider if titleholders have adequately demonstrated in the environment plan that genuine consultation has taken place with relevant persons in accordance with regulations.

## Do I need to respond to a request for consultation?

There is no obligation for relevant persons to respond to a request for consultation from a titleholder. However, if you are provided an opportunity to participate in consultation and you do not want to be consulted, or you only want to be consulted on specific offshore petroleum activities or environmental matters, then it is best that you communicate this to titleholders as soon as they contact you. If you do not respond to requests for consultation, titleholders may make many repeated attempts to contact you.

**NOPSEMA can help you understand the requirements for consultation and how to effectively participate in the process. Please contact [communications@nopsema.gov.au](mailto:communications@nopsema.gov.au) for assistance.**

# Otway Exploration Drilling Program

**ConocoPhillips**  
Australia

## Project Update

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

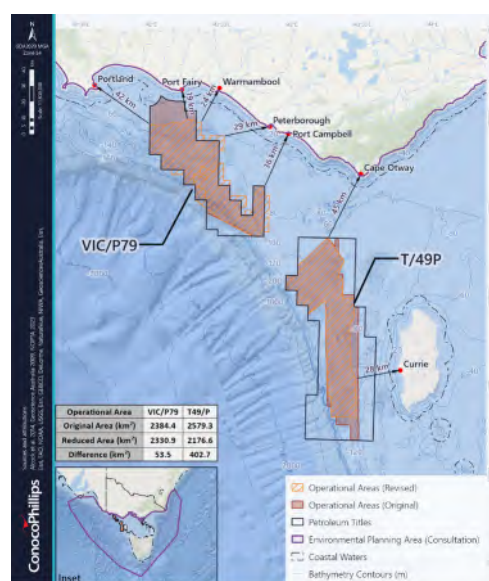

### About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than April 2024.

This information sheet summarises the next phase of Environment Plan development and consultation.

### Revised Permit and Operational Areas Map

### KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- ConocoPhillips Australia has secured a harsh environment semi-submersible rig as part of a rig consortium. Drilling remains dependent on the EP being accepted by NOPSEMA.
- ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.
- ConocoPhillips Australia is asking relevant persons to provide feedback, including objections or claims, about the potential impacts of the activity.
- Based on the (now identified) operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction in total area. As a result of this refinement, some operational areas now extend outside of the petroleum titles. Additional information on these changes, and a revised map with coordinates, are provided within this information sheet.

## Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

## Changes made to the proposed activity

**Operational Area:** Based on operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction of total area. As a result of this refinement, some operational areas now extend past title permit boundaries.

Operational Area	Original Area (km2)	Reduced Area (km2)	Overall reduction (km2)
VIC/P79	2384.4	2330.9	53.5
T/49P	2579.3	2176.6	402.7

*Operational Areas represent the area within which petroleum activities can occur. Operational areas are located predominantly within the relevant petroleum titles (T/49P and VIC/P79) and have been selected based on similar constraints around rig operations and well design. Where operational areas extend outside of a petroleum title, ConocoPhillips Australia will apply for and secure an Access Authority (AA) from NOPTA, prior to the commencement of activities in these areas. Activities in these areas will be 'other than drilling a well' and may include the placement of anchors, the collection of geophysical and geotechnical data, and the operation of vessels.*

**Design Envelope:** The initial timing provided for the commencement of seabed surveys was 'no earlier than 1 January 2024'. This has now been extended to 'no earlier than 1 April 2024'. The term of the approval for these activities remains unchanged – at 31 December 2028, to allow for the drilling of a maximum of six exploration wells.

Parameter	Seabed Survey	Drilling
Earliest Start Date	1 April 2024	1 October 2024
Latest Start Date	31 December 2028	31 December 2028
Maximum Number of Locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells)
Spatial Extent (within which activity can occur)	Operational Areas associated with T/49P and VIC/P79	Operational Areas associated with T/49P and VIC/P79

## Consultation Extended

Based on relevant person feedback, ConocoPhillips Australia has extended consultation on the proposed activity until **30 September 2023**. This ensures all relevant persons have a reasonable period of time to consider the information we have provided during the course of consultation and provide feedback to us on the potential impacts of the activity on their functions, interests and activities.

Consultation with relevant persons is an important part of developing and reviewing Environment Plans. Relevant persons are defined in the regulations as *a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the environment plan*. Please note, all consultation records will be provided to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) and published with the Environment Plan, unless you advise us that you don't want that information published.

## Provide feedback on draft Environment Plan chapters

As part of ongoing consultation, ConocoPhillips Australia is releasing draft EP chapters for review. We are asking relevant persons to raise concerns, including objections or claims, about the potential impacts of the activity. We are also seeking information about how relevant persons may be affected and feedback about how we intend to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

By providing the draft EP chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

Relevant persons can view the draft EP chapters and information on how to provide feedback via the consultation hub by scanning the QR code or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.

## How to provide feedback on the draft Environment Plan chapters

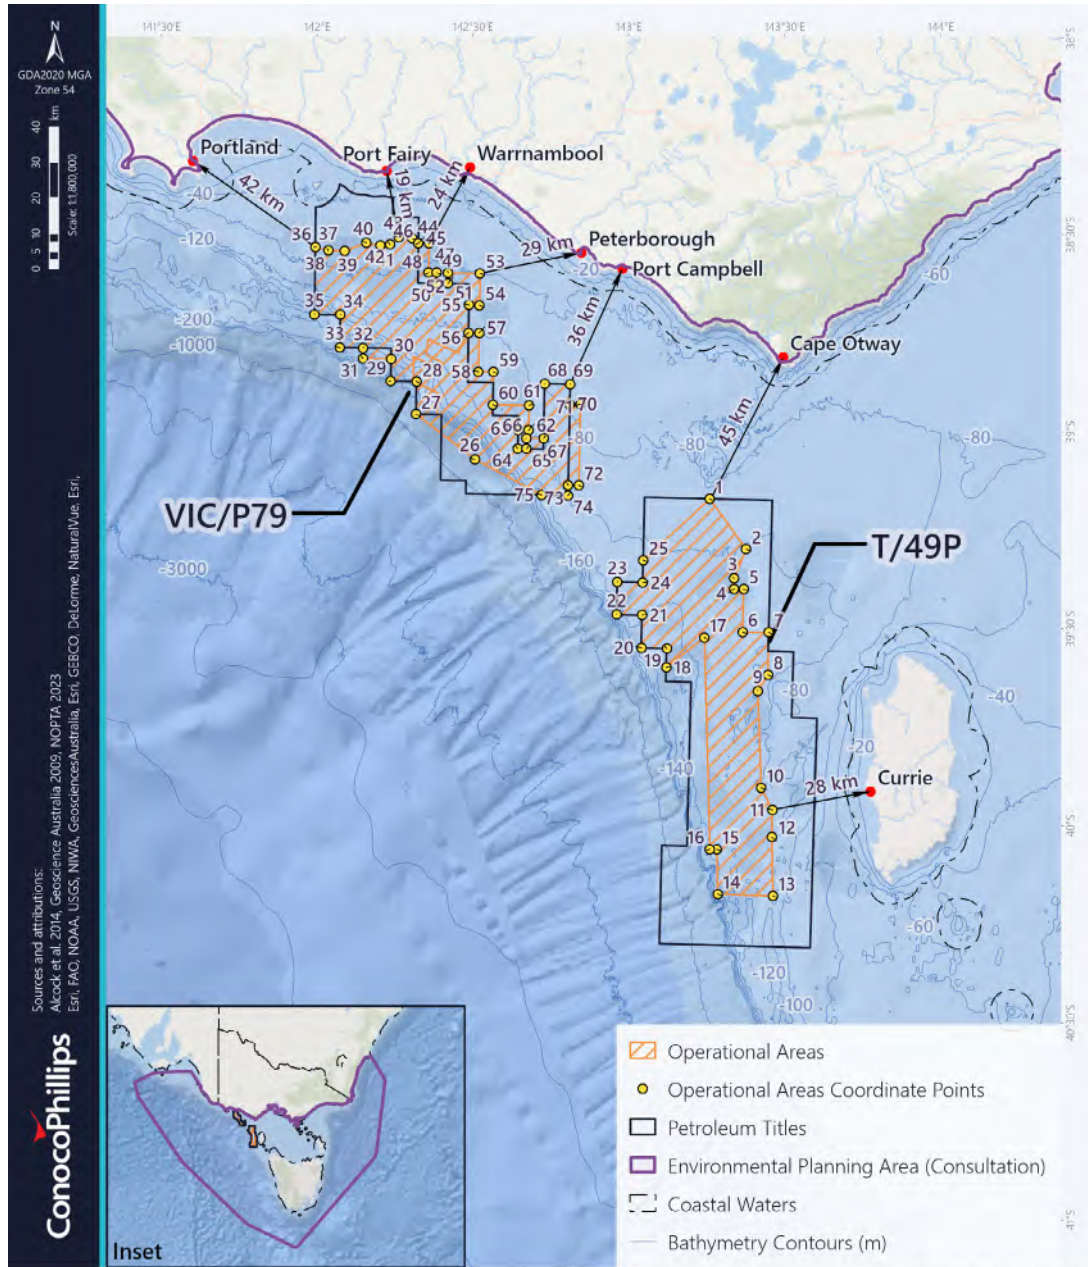

**There are three ways to provide feedback on the draft EP chapters:**

- Fill out the feedback form. This form is ideal for short-form feedback, objections or claims and is located on the consultation hub.
- Send detailed feedback, including your assessment of the possible consequences of the proposed activity on your functions, interests or activities and any objections or claims to [otway@conocophillips.com](mailto:otway@conocophillips.com) or PO BOX 1243, MILTON, QLD, 4064.
- Request specific information and/or an opportunity to discuss the proposed activity and provided information with a member of the ConocoPhillips Australia's Otway Exploration Drilling Program team by emailing [otway@conocophillips.com](mailto:otway@conocophillips.com) or calling 07 3182 7122.

*Please note, PDF versions of EP chapters can be made available for relevant persons on request. In addition, excerpts or a summary of EP information, e.g. specific to particular aspects or receptors, can also be provided on request.*

## and Answers

### ***Why does the new operational area in VIC/P79 now extend beyond the boundary of the permit?***

Based on the (now identified) operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction in total area. As a result of this refinement, some operational areas now extend outside of the petroleum titles. Additional information on these changes, and a revised map with coordinates, are provided within this information sheet.

Operational Areas represent the area within which petroleum activities can occur. Operational areas are located predominantly within the relevant petroleum titles (T/49P and VIC/P79) and have been selected based on similar constraints around rig operations and well design. Where operational areas extend outside of a petroleum title, ConocoPhillips Australia will apply for and secure an Access Authority (AA) from NOPTA, prior to the commencement of activities in these areas. Activities in these areas will be 'other than drilling a well' and may include the placement of anchors, the collection of geophysical and geotechnical data, and the operation of vessels.

### ***If I don't want to be consulted as a relevant person, can I still provide feedback on the draft EP chapters?***

Yes, the best way for individuals not undertaking consultation through the relevant person consultation process is to complete the online feedback form on the consultation hub.

### ***Why have you signed a contract for a drilling rig when you don't have an approved EP?***

It is important to know that no activity can occur prior to the acceptance of the EP by NOPSEMA. ConocoPhillips Australia has secured a harsh environment semi-submersible rig as part of a rig consortium. Securing the services of a drilling rig and mobilising it to the Otway Basin is a considerable logistical and commercial undertaking. To ensure availability of a drilling rig, this process is often undertaken at the same time as EP development and relevant person consultation.

### ***What is a semi-submersible drilling rig?***

A semi-submersible drilling rig is a rig that can float like a ship while moving under its own power, or when being towed into position, but is then partially submerged using ballast water to enhance stability on location prior to drilling. Once drilling is completed, the rig is refloated before moving on to the next location.

### ***Why do you keep asking people to add to your online map?***

The Environmental Planning Area covers the broader area within which environmental values and sensitivities and functions, interests and activities are identified for consideration in the Environment Plan. It encompasses a wide range of habitats and marine species including fish, crustaceans, birds, marine turtles, marine mammals and kelp forests. The marine environment also supports a range of functions, interests and activities such as cultural values and socio-economic activities like commercial fishing, shipping, gas production, tourism and recreational activities.

The Environmental Planning Area also encompasses the modelled area that could be impacted at low thresholds in the extremely unlikely event there was a loss of well control or marine diesel oil release. The Environmental Planning Area in no way represents the actual extent of any single spill, but rather, it establishes the area within which ConocoPhillips Australia needs to be prepared and able to respond to an incident. ConocoPhillips Australia is also required to submit an Oil Pollution Emergency Plan (OPEP) to NOPSEMA with the EP for assessment.

The interactive map of the Environmental Planning Area is available via our online consultation hub.

## and Answers *continued*

### **Have you finished processing the seismic data for T/49P yet?**

Yes, the processing of the seismic data acquired over T/49P as part of the Sequoia 3D marine seismic survey acquired in 2021 has been completed. ConocoPhillips Australia has commenced assessing and interpreting the seismic data as part of identifying potential prospects for the Otway Exploration Drilling Campaign.

### **How will ConocoPhillips Australia determine when and where drilling will occur?**

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than April 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

**The process for selecting drilling locations involves several steps, including the acquisition and processing of seismic data, interpretation of the data to select high probability of success targets, and efficiency of the program to prove up resources with the least amount of wells. A summary of current activities to support this effort are described below:**

1. Interpretation of seismic data: Skilled geoscientists analyse the processed data to identify potential drilling locations. They look for features such as faults, folds and stratigraphic traps that could indicate the presence of hydrocarbons.
2. Selection of high probability targets: After identifying potential drilling locations, geoscientists prioritise them based on their likelihood of success. They consider factors such as the quality and quantity of the reservoir, the geologic complexity of the area and the cost of drilling.
3. Efficiency of the program: The goal is to prove up resources with the least number of wells, which involves optimising the drilling program whilst maximising the chance of success.

Overall, the process for selecting drilling locations is a complex and multidisciplinary effort that requires skilled professionals and advanced technology. It involves a careful balance of science, economics and risk management to ensure that drilling efforts are successful and efficient.

\$1.50

Part of the crowd celebrating the premier annual event, Festival of King Island, and, inset, performer Kim Churchill jammed the mosh pit.

## ISLAND PARTY TIME

**PAM ROLLEY**

AS THE sun rose Sunday morning and the weary FOKI crew started the breakdown of the festival site at Currie Harbour the call (or maybe a whisper) was “the best FOKI ever” – even from those who would not see the light of day for many hours, Every performer repeated the phrase that organisers hear year after year ... “FOKI is like no other festival; it is unique;

the place is beautiful, the families, the kids, the scenery, the cheese....” The Smokin Elmores/Skooterz from Tasmania had all ages on the hill to down at front stage rocking with two completely different styles of music. “We have loved every minute,” they said. “As musicians you don’t get the opportunity to sit and mix with other musicians. “You are working; other festivals have you in a time slot to play, and then you leave.

“We have made some great new connections.” The mosh pit was jammed packed when Kim Churchill hit the stage. Many were young children when Churchill played his first FOKI. He was joined on stage by Boo Seeka, and together they mixed their melodic styles and Boo with his high tempo drum beat grabbed the crowd by the throat. Churchill was able to get in some surfing and Boo kicked

back in the green room and shared stories. Flynn Gurry and Medanhit couldn’t have more different music styles, but as story-tellers drew both younger and older into their webs. Sumner’s electronic vibe shook the Currie

“Best ever” FOKI: Pages 4&5

# Fiver drops new King

AUSTRALIA is removing the British monarchy from its bank notes.

Australia's Reserve Bank announced last week that the new \$5 bill would feature an indigenous design rather than an image of King Charles III.

It is the only note that features an image of the monarch.

The King is expected to appear on Australian coins that currently bear the image of the late Queen Elizabeth II later this year.

Australia's Reserve Bank said the new \$5 bill would feature a design to replace the portrait of the late queen.

The bank said the move would honour "the culture and history of the First Australians".

"The other side of the \$5 banknote will continue to feature the Australian parliament," a statement said.

The Queen appeared on the £1 note in 1953-1954 and all Australian banknotes had an image of the ruling monarch printed on them. When Australia moved to decimal currency the monarch appeared on the lowest denomination polymer note.

In 1992 Queen Elizabeth was added to the \$5 note. The decision was not popular politically or socially according to the Reserve Bank Museum's website, as the image replaced Caroline Chisholm, who had been celebrated for her work improving the lives of immigrants.

# Boat crew in high seas transfer

THE Wave Swell Energy crew last week responded to a call for help to transport an offshore oil and gas construction ship crew member who was onboard a vessel 3 km off Naracoopa.

Mustafa Bhatti, who lives in Currie, is regularly trotting the globe as an oil rig crane operator. He spoke to his friend of 10 years, Steve Phillips from MMA Offshore and heard that a crew member needed to leave the ship on compassionate grounds.

The Wave Swell crew Mustafa, Cody Rooks and Kane Denny in the company's ex-police, rigid inflatable zodiac left Naracoopa in rough conditions, completed the ship transfer and returned the crewman to shore.

"We cannot thank Wave Swell Energy enough for the assistance they provided with transporting one of our crew members, helping with accommodation and feeding him," Mr Phillips said.

"Our man was even driven to the airport the following day to catch a flight from King Island home because of a family medical emergency.

"The kind people on King Island did everything within their ability to assist us, even though there were some delays at our end waiting for approvals for the transfer plan.

"We changed the location for the boat transfer due to weather conditions and Wave Swell Energy moved to this location without hesitation. We are so impressed with the kindness and hospitality of the tight knit community on King Island.

"My good mate Mustafa could not do enough to help us out with arranging the logistics on King Island and even delivered us some beautiful King Island cheese when the transfer took place.

"We have heard from our crew member, and he is beyond grateful for the effort everyone went to carrying out this operation. He is now back where he needs to be. Thanks again to Wave Swell Energy, Mustafa and all those that made this a safe and successful operation. Thank you, King Island. We could not have carried this out without your help."

The MMS Crewman, left, returns to shore with oil rig crane operator Mustafa Bhatti.

# Trainers develop ag career program

TWO of Tasmania's most well-known agricultural organisations are joining forces to provide a unique career development opportunity for people working in the state's agriculture sector.

The Tasmanian Institute of Agriculture and Rural Business Tasmania are working together to create eNABLE, a new training program that brings together TIA's Extension Accelerator Program and RBT's Cultivating Rural Excellence Program.

The aim is to create a high-impact training program that is relevant for farm owners and managers, and agricultural extension professionals and consultants.

TIA director Michael Rose said eNABLE would provide a valuable opportunity for early and mid-career extension professionals to learn hand-in-hand with farm managers and owners to the benefit of the

**TIA director Michael Rose and Rural Business Tasmania CEO Elizabeth Skirving announce the eNABLE training.**

Tasmanian agriculture sector.

"TIA's mission is to enable Tasmania's agriculture sector to accelerate primary sector productivity while maintaining land and water quality for future generations," Professor Rose said.

"Supporting the training and development of our agricultural leaders and innovators is a critical part of this and we welcome the opportunity to work alongside industry to deliver this training program."

RBT chief executive officer Elizabeth Skirving said

eNABLE would provide an opportunity for agricultural professionals to interact and learn from each other while developing important leadership skills and resilience.

"We are delighted to partner with Tasmanian Institute of Agriculture to deliver the eNABLE program," she said.

"Collaboration on this project has allowed us to understand the important role of TIA and to look at the role of research, development and extension."

Ms Skirving said a valuable

part of the program was the cross pollination that occurred between experienced extension officers, newly appointed extension officers and agricultural leaders, offering extension and adoption as an everyday part of future farm management.

"Participants will build long-term connections by working together in workshops and exploring topics including business management, communication skills and human relations," she said.

eNABLE is a part-time program and will be delivered from April until October 2023.

The study commitments will include one full-day workshop and one two-hour online session each month.

The program is funded by the Australian Government Department of Agriculture, Fisheries and Forestry through the AgUp Program.

Applications are open until March 1.

Farm dogs will be at the show in an effort to break the hay bale jumping record.

# Show back after Covid

**KING ISLAND AGRICULTURAL, HORTICULTURAL AND PASTORAL SHOW**

AFTER last year’s cancellation, the 67th annual King Island Agricultural, Horticultural and Pastoral Show returns next month on Tuesday, March 7.

Show society secretary Claire Perry said the small group of dedicated volunteers had been working behind the scenes to get organised for a day full of family fun.

“We hope the island community will join us by supporting our local show tradition by exhibiting or entering our show day competitions.

“The show schedule is available now online at [www.kingislandshow.com](http://www.kingislandshow.com) or printed copies are available at Elders and IGA. There has been a considerable increase in Junior prize money placed throughout sections to encourage and reward participation.

“New exhibitors are always welcome and all the details of how

to go about entering are listed in the schedule,” Claire said.

Children’s entertainment is a high priority and a new act, CJ’s Puppet Show, was made possible with funds from Group 6 Metals. There will be a side show alley with games such as hook-a-duck and mini golf being made by King Island locals.

The committee has also been able to purchase two traditional amusement

# Material shortage Solar farm delay

HIGH demand and material shortages in the global supply chain have pushed back the construction schedule of King Island’s new Solar Farm. The \$4.5M project, announced late last year for the Huxley Hill Wind Farm site, is intended to increase the amount of renewable energy produced on King Island and replace 300,000 litres of diesel on the island every year. The 1.5MW solar installation will also offset an additional 800 tonnes of CO2 per annum.

Simon van der Aa, Specialist Electrical Engineer at Hydro Tasmania, said the project team had recently learned that a key piece of infrastructure could not be delivered on time.

“Unfortunately, due to material shortages and high demand, the kiosk substation ordered to connect the solar farm to the King Island 11kV network

won’t likely be delivered until August/September 2023,” Mr van der Aa said.

“This will result in site work likely stopping around April/May and then recommencing for a short period around September/October 2023, despite the original goal of finishing this financial year.”

Hydro Tasmania is committed to working with stakeholders about the revised construction timeline. The solar project will form part of the existing King Island Renewable Integration Project (KIREIP), a world-leading, hybrid, off-grid power system. It is expected to remain in operation for at least 20 years.

To find out more around the King Island Renewable Energy Integration Project and to see the island’s real-time energy demand and contribution download the free app on apple and android (search hydrokireip).

# Planning begins to better

DESPITE predicted bad weather that all week threatened the Festival of King Island, record numbers attended both Friday and Saturday festival days and nights.

Families, younger and older King Islanders sat on the hill overlooking Currie Harbour, or positioned themselves under the numerous marquees protected by giant hay bale walls which were created as wind breaks in case the weather turned foul.

The bar served local Brewhouse beers on tap. The mammoth task of keeping the crowds fed and watered throughout the festival was taken up by the K&K Food truck, Murphy Summers with King Island Fresh, Mandy Potter in the Lions Food Van, Holey Donuts all needing to engage teams to keep the food lines moving quickly and at prices festival goers could afford.

The annual festival pie eating competition, sponsored by King Island Bakehouse was once again Saturday afternoon highlight. Tom Graham was simply too good for the gutsy field. Later, when seen eating a steak sandwich, and having consumed further beverages he said that he has an advantage in that “there’s a lot of me to fill.”

The kayak race, which was to replace the traditional home-built raft race, was cancelled due to the rough sea conditions.

“If people start building their rafts now, they will consider bigger cash prize incentives for FOKI2024,” one sponsor said.

The sun shone, the littlest kids to the biggest danced and played and a great weekend was had by all (even if some will need a week to recover.)

As the hoodies and tshirts said, ‘a fokin’ good time’.

Christine Lincoln and Rachael Jordon.

The FOKI crew takes time out for a snapshot.

Sarah Ashley in the Green Room.

## Show back after Covid break

From page 3

games including a high striker sponsored by TRT Pastoral Group and laughing clowns sponsored by Greenham Tasmania.

The Hoof-to-a-Hook competition for beef producers had a successful re-launch last show after many years of absence.

Ms Perry said Proway Livestock Equipment had sponsored the prize money for this year's competition and a barbecue sponsored by JBS Australia would be held for entrants post show day to review the carcasses and hear the judge's feedback.

"There is also an equivalent carcass competition for fat lambs and show goers can take up the opportunity to bid on some locally grown prime lamb at a public auction on show day," she said.

"Also returning to show day is the whip cracking competition, with both open and junior sections. We encourage members of the community to participate in the event and we look forward to seeing their skills."

Dog jumping for small and large dogs is a crowd favourite and there are cash prizes for both whip cracking and dog jumping both sponsored by Waverly

Station.

Since the last show day there have been showground improvements which include an electrical upgrade to allow stall holders more functionality and supported by a grant from the Tasmanian Government's Community, Sports, and Recreation Fund. Funding from TasPorts and the King Island Council enabled the purchase of new trestle tables and chairs for use in the pavilion and for stall holders.

While the show is organised by a small committee, the actual running of show day involves many more people.

"To thank existing show

volunteers and encourage new people to join, we are holding a volunteer draw of two return air tickets at the end of show day.

"The tickets have been supplied by Sharp Airlines and King Island Airlines."

"To be included in this volunteer draw the show committee will place names of all who have helped in a designated job for a minimum of two hours."

Contact details for the show committee are listed in the schedule and website or to help, contact Claire directly 0438 017 860 / kishow.secretary@outlook.com.

night skies and introduced a modern alternative excitement that many would not have heard before. All three have asked if they could be considered for FOKI 2024.

The big voices of Donna Fisk, Andrew Swift and Greta Ziller exuded confidence and showed why they are master and mistresses of their art.

The local bands Rusty Falcon Band and The Rick Munday band enjoyed sharing the stage with seasoned troopers and having the opportunity to showcase their talent in front of a large King Island crowd.

Bi de Way, with relocated islanders, Di de Rooy, Phil Smith, and Launceston musicians Duncan and Oliver were happy to 'be back home.' Di said that coming to play at FOKI reminded them of what they don't have.

The standout for them was the completely family friendly nature of the festival. Donna Fisk also said her highlight and what she will take away from FOKI, is the memory of young children wanting to meet her and being excited.

"The kids. They were so excited by the music. I really appreciate that. It's this experience I'll remember. One might take up music, they will be in audiences, they are the future of music and as a performer, I loved that."

Festival of King Island president Kim George thanked everyone for their support.

"On behalf of the many involved in bringing FOKI 2023 together, thank you very much for everyone's support!

"We really do feel a great level of support

for FOKI within the community, tourism, from the commercial operators and sponsors.

"Each FOKI is a year in the making," he said.

"King Island Council operations have been very supportive, and our compliments to the punctual and effective delivery of materials (toilets, signage, rubbish bins, marquees) for our infrastructure build and the rapid turn-around on the Saturday morning and pickup on Monday after our site breakdown and cleanup.

"Everyone from artists to patrons, are being very complimentary about the festival, and the general theme is clearly "best FOKI ever"... so we will lock that one in ... and take up the mayor's challenge of "a hard act to beat" for FOKI 2024.

"As with each year, we have a long list of big improvement points that we intend to implement next year... and we aim to repeat "Best FOKI ever!"

Mayor Marcus Blackie said FOKI was an amazing event and - in his humble opinion - your best lineup of music acts ever.

"Please accept and pass on to all of the team our congratulations on a fantastically successful FOKI for 2023.

"It will be a hard act to beat in the years ahead. Everyone I have spoken to had a ball, all ages were able to enjoy themselves in total safety. You handled the weather challenges very well and the venue continues to be brilliant for such concerts and what a plug for King Island.

As the sun goes down on FOKI 2023, the last site inspection completed, the planning for FOKI 2024 begins.

Reunion for

GG, Mayor

Stewie prepares on grass

AUSTRALIA's Governor-General General David Hurley and Mrs Linda Hurley will visit King Island on May 19.

Last year King Island was declared National Keep Australia Beautiful (KAB) overall winner and the island will be hosting the National Keep Australia Awards.

As Patrons of KAB, the Governor-General of Australia, His Excellency, General David Hurley and Mrs Linda Hurley will visit King Island to attend the Awards.

"Depending on the time we have available we will design a program to show them some of the sights of King Island as well as meet our great people, prior to officiating as Patrons of the Keep Australia Beautiful Awards," Mayor Marcus Blackie said.

"It is a great honour for King Island to host the Governor-General and I know they are very excited to visit us.

"As far as we can ascertain this will be only the third time a Governor-General has visited King Island, the most recent being Quentin Bryce about 10 years ago.

By contrast King Island has only been visited by two prime ministers over the years, Robert Menzies and Julia Gillard.

"The Governor-General and I also have a personal connection. I served as his military personal assistant in Darwin in 1999.

"It turned out to be a huge year for the both of us because East Timor exploded on our doorstep," Cr Blackie said. The official visit program will be announced closer to the time.

The Governor-General and Mayor serving together in the Army, Darwin 1999.

LAST weekend King Island born, Tokyo Olympic finalist in 1500m, current world Number 3, Stewart McSweyn returned to Victoria to avenge his close second in his last Beachside Gift run.

The Gift is one of Australia's preeminent athletic events.

McSweyn started from scratch in the handicapped 3200m race as part of preparation for the World Cross Country Championships in Bathurst on February 18.

McSweyn's preparation – handicapped races on grass – is in contrast with other members of Australia's 28-strong team for the World Cross Country Championships, who have lined up to compete on the road in the Maragum half marathon in Japan.

The William Buck 2 Mile Championship for Men at the Gift was run just inside the boundary line of the AFL ground at Mentone Reserve – an undulating surface that was not fast underfoot.

McSweyn picked up the rest of the field and had a sprint finish with rising distant talent Jude Thomas, and finished four seconds behind the winner. Logan Janetzki who was running off a generous mark of 220m to took second.

McSweyn headlines Australia's 4x2km relay team in Bathurst and Janetzki will take on the world's best junior distance runners at the World Cross Country Championships.

Stewart McSweyn competes in the 3200metre-2 Mile Championship for Men at the Beachside Gift in Mentone Victoria last weekend. Picture: INSIDE ATHLETICS

NO ORDINARY ISLAND.

NO ORDINARY CHEESE.

# Sweet win for beekeepers

NEW Zealand's long running campaign to trademark and claim ownership of the name "Manuka honey" has hit a brick wall as they withdraw their appeal on earlier rulings in the UK and European union.

It is a major win for Tasmanian and King Island manuka honey producers.

Federal Liberal Member for Brad-don, Gavin Pearce said that for five years, the Australian Manuka Honey Association has been battling New Zealand and their attempts to trademark the term "Manuka" as exclusively their own.

"For years, I've been supporting our local manuka honey industry to shut down this ridiculous and greedy legal battle.

"Manuka honey originates from bees that collect the nectar from the Leptospermum genus. Australia is home to 85 of the 87 known Leptospermum species worldwide and we have produced manuka honey since European honeybees were introduced in the 1820s."

"This was simply a greedy attempt by New Zealand to monopolise the term 'Manuka' honey for their own commercial gain.

"Quite rightly, it's failed.

"Thank you to all of Tassie's manuka honey producers for the heavy lifting you've done to shut down this absurd legal claim," Mr Pearce said.

By the 1920s and 30s King Island exported honey to Melbourne markets weekly.

The ability to produce a high grade monofloral manuka honey puts the brand King Island Pure Manuka in

King Island Pure Manuka owner Rob Skellet with some of the company's hives.

a unique and advantageous position.

King Island Pure Manuka owner Rob Skellet says the benefit that King Island has over much of the manuka forests in New Zealand, is that there are no floral alternatives available to bees on King Island.

"The manuka is the only floral source available to the bee colonies, and as such they have no choice but to harvest the nectar from the manuka tree when it is in flower from late

October through to early January.

"This ensures that King Island manuka honey is a pure monofloral manuka honey, that is not tainted by other floral sources."

The literature says that manuka honey contains methylglyoxal, and it is an antibacterial ingredient capable of stimulating collagen, has healing capabilities, and works like an antibiotic and much more.

It is clear from New Zealand's

long drawn out battle to trademark and claim ownership of the name "Manuka honey" it is big business.

The market value of this sticky special golden liquid is \$500 a kilo. A 230gm jar of New Zealand 'rare harvest' honey sells for more than \$3,700 a jar at Harrods in London and the demand for manuka honey surged during the pandemic as the world searched for elixirs.

A January 27 report published by

Allied Market Research "Manuka Honey Market by Type" said the global manuka honey industry size was valued at \$455.4 million in 2021, and is projected to reach \$776.4 million by 2031.

Then there is additional value in sprays, syrups, eczema and cosmetic creams, soothers and healers, lozenges - 'with added manuka honey.' Research may yet reveal more applications and usage.

Mr Skellet, graduated in Agricultural Science then entered the finance sector.

In 2012 he established King Island Pure Manuka, in Nugara, with hives and extraction facility.

In January 2020, the first manuka honey was harvested and sent to the University of Sunshine Coast, the pre-eminent body for honey and nectar testing in Australia.

Drawing on these results, the company is accelerating their business plan.

"It's my intention to develop a vertically integrated Manuka Honey operation," he said.

With four leases covering 10,000ha of wild manuka forest, King Island Pure intends to start small and slowly build into a substantial manuka honey producer."

## E-waste collection

I AM collecting e-waste to take off island in my car, for recycling at Officeworks. The types of things I will take are electronic products, computers, and computer related, mobile phones, batteries, and printers that

are no longer wanted or working.

I've already collected close to 100 kilos of toxic junk that won't end up in King Island landfill, so let's keep up the good work.

Cut off date is the end of

February, so message me on Facebook to arrange collection or you can drop your ewaste at the Currie op-shop (unless it's huge) and I'll do regular pick ups from there.

- TRACEY COLLYER

## Works on South Road

THE King Island Council started works on the South Road Widening Project on Monday, February 6.

The council acknowledges and appreciates the concern expressed about the condition of the road by regular users

and residents. This project has been impacted by supply difficulties, weather conditions, and staff availability.

Workers will be working on the west (UHT) side of the road at this stage. Using traffic lights and zoning off one

side of the road means a single lane can be kept open for the duration of these works.

Our intention is to improve the condition of the road, while progressing towards having the road widening completed.

### PHOENIX COMMUNITY HOUSE Inc GENERAL MEETING

Date: 22nd February 2023

"Legs" - 3.45pm Meeting

All members and interested persons welcome.

Program Coordinators please bring reports.

Light Afternoon Tea provided - Drinks at own expense.

RSVP 6462 1746 or 0499 984 411

## Otway Exploration Drilling Program

### Consultation

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed exploration program will consist of seabed surveys and the drilling of up to six exploration wells.

This is a continuation of our exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek acceptance from the regulator for this exploration program. As part of EP development we will undertake consultation in line with a prescribed regulatory process.

If you would like more information or think you may be affected by the proposed activities, please use our QR code or contact us using the details below.

# Scam alert for online lovers

THE Australian Competition and Consumer Commission (ACCC) Scamwatch is warning people to be vigilant for scams online, in social media and dating apps as Valentine's Day approaches.

They say that scammers are becoming more sophisticated and broadening their targets and methods of scamming.

Scamwatch provides information to consumers and small businesses about how to recognise, avoid and report scams.

Farmers and small businesses in rural and regional areas are urged to be cautious, particularly when buying heavy machinery, following a spike in scams targeting the agricultural sector late last year.

The most common scam targeting farmers involved the sale of tractors and heavy machinery.

"Unfortunately, we have seen a concerning rise in agricultural scams in recent years, as farm businesses increasingly purchase machinery online.

"These scams are causing substantial financial losses and emotional devastation," the ACCC said.

The scammers use legitimate platforms, have fake websites, and offer good online deals.

The ACCC advises to search the business and address and call a nearby business to check they exist, and request live video of the equipment.

It's a red flag if they make excuses or will not accept a personal inspection.

Scamwatch says that losses to scams are likely to be much higher than reported. Their research shows that of all scam victims, only around 13%

report to Scamwatch.

With Valentine's Day approaching they warn that romance scammers play on emotional triggers to take advantage of victims.

"They often use 'love bombing' techniques, such as professing love and affection very quickly, to try to influence victims to send money, gifts or financial information."

While King Islanders may think they would not fall victim, there have been on-island cases in recent years where either the police have been advised or others have intervened and stopped large financial transfers.

The ACCC says a variation is romance baiting, where once a connection has been established, the offer is to show the victim how to invest in cryptocurrency or bitcoin.

The romance scam turns into an investment scam.

According to the ACCC, people aged over 55 made up close to half the losses to romance scams.

A red flag is when the scammer makes excuses as to why they cannot use their video function when asked or ask for money (or cryptocurrency) for pay for airfares, gifts, bills, or finance a meetup.

Scammers make use of SMS, Messenger, similar texting apps, phone calls, emails, and letters.

Scamwatch is currently warning of fake social media accounts which impersonate Government organisations.

The mygov scam is doing the rounds again via email and SMS, advising that the recipient is eligible for a rebate.

The modern, well-equipped King Island Childcare and Early Learning Centre.

## Centre looks to future

THE King Island Childcare and Early Learning Centre Inc has had to lift fees to create more childcare positions and to increase staff.

The centre committee has called for donations to support their services and programs.

"The committee is very proud to be continuing the tradition of over 50 years continuous provision of childcare on the island," centre leader Diane Rawlings said.

"As our community has grown so has the requirement to provide more facilities to support families on the island.

"The centre provides an essential service enabling local businesses on the island to encourage working families to come into the community.

"Many families call the centre to check childcare availability before accepting employment on King Island.

"As a committee run organisation,

KICC&ELC Inc is a not-for-profit association, which is quite unique nowadays for such facilities.

"The centre is licensed for 65 positions from the ages of 0-12 years under the auspices of the National Childcare Regulations including the guidelines for staff: children ratios.

"Our current level of staffing inhibits our ability to make all these positions available.

"Presently on any given day we can have about 45 children at the centre. We are actively engaged in recruiting new staff to join our team," Ms Rawlings said.

"To support our educational programmes, we are calling for suitable donations to continue our provision of our services.

"Currently, we are funded through childcare fees and support from CCCF Sustainability Fund and Capital Funding.

"We have been recently advised by

CCCF that we need to increase our childcare fees to remain financially viable. We have been successful in applying for a wide number of grants to enhance our learning environments and Educational Programmes.

"Our business is run with passion and dedication to support families in our unique community, to ensure the well-being, education, and development of all children - who are our future.

"The saying goes 'It takes a village to raise a child' and we continue to assist all families on King Island.

"I would like to thank everyone for all your help and support and to let you know that - we will not be closing."

**If any further details are required regarding fees, employment and donations to support our programs, please contact the Centre on 03 64621268 or email manager@kingislandchildcare.com**

# Try advertising that readers trust.

Local newspapers are the most-trusted source of news and advertising in Australia.

Over 60% of respondents trust local newspapers more than any other media channel, including of radio, TV, social media, and metropolitan newspapers.

# Course in ordinary state

## BUGGY

THE JBS King Island Beef Monthly medal was played in very windy conditions. Despite good rain during the week the course a bit ordinary at the moment.

No doubt conditions will improve after such an extended dry spell. A good field of 23 players turned out for the stroke event.

The scores were a bit ordinary as well with three players on 75 nett. The computer gave the winner to Roger the saint Clemons on a count back from Jim retired Cooper and the early bird Freddy Tatawaga. The winner was rather surprised as a 75 nett doesn't usually take out the day.

Nearest the Pin 3/12 Richard Collins  
18th Tim Barnes  
Money Hole – no-one

Other scores of some note Tim Barnes 77 nett and several players 78 nett – Alan Muir, Richard Collins, Tony Scrivenor. The rest of the field in the 80s.

## AROUND THE TRAPS

A comedy of errors on the par 4 second hole saw two players each reach double figures. The position of the pin caused a few issues. Putting from the side of the green resulted in the ball ending up in the bunker- three times in a row for Mick Lincoln. Not to be outdone, Gerry Noble, despite years of experience, managed to repeat the performance.

One unnamed 'A' Grade golfer managed to return to distant cricket memories recording a ton.

One of our regular members who rarely missed a Saturday game and helped on the course at times has departed the island. Dallas Shanker Ryan. He will be missed with his colourful dress attire and ha very good low handicapper.

Next week will be a Three Person Ambrose. Players are encouraged to invite someone to make up a team.

ABOVE: Captain Chris Richards displays all the Moose Award winners.

RIGHT: KIGBC bids farewell to member Dallas Ryan.

# Clay shooters enjoy the get-together

KING Island Clay Target Shooting Association competed in the Tasmanian state trap titles at Evandale and was represented by Nico Monro Pruis, Josh Munn, Matthew Archer, Ron Johnson, James Hill and Rudolf Britz.

Former King Islander Sean Johnson made the top 15 for badge awards and in the top 5 to represent Tasmania. His father Ron won the double barrel event.

Matthew Archer won Day 1 C Grade Champion of Champions, Day 3 C Grade State Single Barrel Championships and Day 4 Overall C Grade High Gun competition. After the event Matthew said, "It's just fun for us all. We all had a great weekend and we are already looking forward to next year. This is not a sport you do just for the wins it's very much a social get together of likeminded mates from all over Australia."

Matthew Archer after he cleaned up in C Grade at Evandale.

Ron Johnson with son well known King Islanders Sean Johnson and partner Sarah Mott.

Tyrendarra - between Portland and Port Fairy on the Princes Highway

## Free TAFE expands with changes to eligibility

MORE south-west Victorians will be able to access free TAFE courses after the State Government expanded eligibility for the program.

Potential students at the Portland campus of South West TAFE no longer have to meet specific age, upskilling or reskilling requirements, meaning most people are now eligible to study selected courses under Free TAFE.

Under the changes, more people can enrol in their first Free TAFE course regardless of their prior skills and qualifications, and the once-in-a-lifetime limit for Free TAFE has been removed for occupations such as nursing, community services, building and construction and early childcare.

Students can now access free priority courses under the Free TAFE Pathways Program, a group of courses that complement each other and allow students to continue to train for their career.

South West TAFE is offering more than 30 Free TAFE courses in 2023, including community services, mental health, personal services, individual support, disability, nursing, accounting and bookkeeping, agriculture, building and construction, civil construction, information technology, and early childhood education and care.

Free TAFE covers tuition fees for priority courses. South West TAFE chief executive, Mark Fidge said Free TAFE reduces the financial barrier for students wanting to train in courses that lead to in-demand jobs.

"These changes make it easier for people to access a Free TAFE course," he said.

"Being able to complete any other course within the same pathways program tuition fee-free through the Free TAFE Pathways program will be a big advantage for many people."

"Expanding eligibility for Free TAFE means there are more opportunities for local people to access high-quality training that will lead to identified job opportunities," he said.

Mr Fidge said South West TAFE was closely connected and responsive to the employment and training needs of local industry.

The new opportunities arise as South West TAFE continues to record outstanding results in student, staff and employer surveys.

According to government surveys released in late 2022, South West TAFE is number one among Victoria's 12 TAFEs for student satisfaction with a ranking of 85.6 per cent, employer satisfaction with 87.9 per cent, and for the number of students who would recommend South West TAFE as a registered training organisation at 86 per cent.

JO Jo Spook is the judge of this year's Portland Art Show.

## Jo Jo's back to judge

**CHALPAT SONTI**

SHE'S been here, she's won and she's coming back to judge.

Robe artist Jo Jo Spook will be the judge of this year's Portland Art Show, to be hosted by the Rotary Club of Portland and held at the Civic Hall from March 31 to April 2.

Entries for the show are open until February 24, with successful artists notified on March 2.

Ms Spook is no stranger to Portland,

winning the People's Choice Award at the 2021 Sculpture TRAILS exhibition and returning last year to not only exhibit but host a beach rope basket making workshop.

Rope gathered from beaches was transformed into exotic colourful pieces by the 20 enthusiastic participants.

This time around Ms Spook will also be hosting a jewellery making workshop as part of Arts April, as well as entering more sculptures at the TRAILS exhibition.

She has exhibited around Australia over the past 20 years.

NEW PROFICIENCY RATINGS

# Ministers toughen NAPLAN standards

NATASHA BITA  
EDUCATION EDITOR

Higher pass marks for reading, writing and maths tests in schools will be set this year after education ministers vetoed plans for politically correct report cards.

Stronger minimum standards for the National Assessment Program – Literacy and Numeracy were ordered by federal Education Minister Jason Clare and his state and territory counterparts on Friday.

“We are creating strong and appropriate standards that are higher than the current minimum standards, following consultation with families and teachers,” Mr Clare said.

Ministers agreed the new proficiency levels – to be drawn up by a panel of expert teachers before reports are issued in July – will be set at a “challenging but reasonable standard of literacy and numeracy expected for the child at the time of testing”.

They shot down a controversial proposal by the Australian Curriculum, Assessment and Reporting Authority to describe failing students as “developing” the so-called three Rs of reading, writing and arithmetic.

ACARA had wanted to describe student achievement as “developing, approaching proficient, proficient or highly proficient”, as revealed in The Australian on Friday.

But ministers voted instead to describe the lowest-performing students as “Needs Additional support”, with below-average students “Developing” their skills, those who meet the standards rated “Strong” and the top performers “Exceeding”.

“These new standards will give teachers and parents better information about what a student can do,” the ministers stated.

“They will simplify reporting, replacing the current 10 NAPLAN bands and national minimum standard, allowing parents and carers to know at a glance whether their child is where they need to be in literacy and numeracy,” Mr Clare said.

acy, which are skills that underpin all other learning.

“These updates to NAPLAN mean that students who need it can get more targeted support.”

NAPLAN, which for the past 14 years has been conducted in May with pen-and-paper testing of every student in years 3, 5, 7 and 9, will be brought forward to March this year. And for the first time, all tests will be online and interactive, so questions are adjusted to each child’s ability.

But the new system means student performance this year – the first without major disruptions from Covid and natural disasters – cannot be directly compared to past years of NAPLAN results.

Education ministers agreed that individual states and territories can ask ACARA to find a way of comparing results.

Literacy specialist Jennifer Buckingham warned the changes would “create a new Year Zero for NAPLAN, making it difficult if not impossible to track changes in system and school performance over time, and assess the impact of changes to policy and practice”.

“The description of the lowest group as Needs Additional Support has some merit, but there is a big qualitative leap between the next two categories of Developing and Strong,” she said.

“It is difficult to see how the changes add clarity and precision to the reporting.”

ACARA chief David de Carvalho said the Strong and Exceeding categories would mean students’ literacy or numeracy skills are where they should be.

“If your child has not yet achieved proficiency, then they will either be in the Developing Category or the Needs Additional Support category,” he said.

Mr de Carvalho said the new standards would be set “using the professional judgment of panels of expert teachers”.

Centre for Independent Studies education program director Glenn Fahey argued the descriptions were too vague, and the gradings should be “well below proficient, below proficient, proficient and well above proficient”.

## ‘Casuals underpaid and uni managers knew it’

EWIN HANNAN  
WORKPLACE EDITOR

The University of Melbourne has been accused of underpaying casual staff and making false or misleading records over a period of almost three years.

The Fair Work Ombudsman announced on Friday that it had launched Federal Court action against the university, alleging it failed to pay 14 casual academics for all hours of marking work at the hourly rates required under its enterprise agreements.

According to the FWO, the Faculty of Arts staff at the university’s Parkville campus were paid based on “benchmarks”, leading to them being collectively underpaid \$154,424.

Examples of the “benchmarks”, which varied depending on the school in the faculty, included payment for marking at a rate based on “4000 words per hour” and at one school on “one hour per student”.

Individual underpayments ranged from \$927 to \$30,140 and occurred between February 2017 and December 2019.

Staff allegedly had to enter their hours worked into the university’s human resources information system according to the benchmarks, rather than according to the actual hours worked.

The FWO alleged the university failed to record all hours worked by the casual academics, and that the university made and kept records known to some managers within the faculty to be false or misleading.

The regulator alleges the enterprise agreement breaches are “serious contraventions”

under the Fair Work Act, which means the potential maximum penalties are 10 times higher than the penalties that would otherwise apply.

In addition to penalties for the alleged serious contraventions of up to \$630,000 per breach, the university faces up to \$63,000 per breach for the other allegations.

The FWO alleges the university expressly, tacitly or impliedly authorised the contraventions because of a corporate culture involving the use of marking benchmarks.

It is also alleged that a number of specific senior leaders in the faculty knew of the benchmarking practices and that they resulted in employees not being paid for all time spent marking. Fair Work Ombudsman Sandra Parker said allegations of “universities underpaying their employees by systematically failing to follow their own enterprise agreements are of great concern”.

Three of the academics held a PhD for at least part of their employment, which entitled them to higher hourly rates under the enterprise agreements. At least 12 of the employees have been fully back paid.

It is the second FWO action taken against the university. The regulator alleges the university coerced and took adverse action against two casual academics to stop them from claiming payment for work performed.

In a statement on Friday, the university said the legal proceedings related to a “historical issue” of underpayment of casual staff, and they had been back paid.

But the FWO said the conduct occurred up to the end of 2019, a little over three years ago.

## Dressing for recession, it’s all the fashion

A-listers have read the room and they’re toning it down

GEORDIE GRAY

Y2k maximalism, jewellery, high-maintenance hair, gone-in-a-flash microtrends, logomania, and dopamine dressing – it’s all out. TikTokers are predicting that we’re moving away from luxury and embracing dressing for a recession.

“Recession-core” has entered the lexicon after being coined by TikTok trend forecasters during the awards season when they saw that celebrities en masse were ditching jewellery.

On the red carpet, Margot Robbie, Daisy Edgar Jones and Ana De Armas all opted for exposed decollateges where statement necklaces ought to be. The dresses got more austere, and the beauty was pared-down.

Opulence gave way to a sombre correctness.

Ainsley Cootes, a 20-year-old brand manager from Melbourne and an amateur TikTok trend forecaster at @melbgirlambassador, says “recession dressing is a response to having less money circulating”.

It’s not that the A-listers are feeling the pinch, she says, rather, they’re reading the room.

“People who have more money don’t want to flex as hard,” Cootes says.

We’ve seen it happen before. In the early-noughties blinged-out, bedazzled and logo-tastic style reigned supreme. Then the Great Recession hit (the global financial crisis), and while the wealthier shoppers still bought luxury, they moved away from obvious logos and status-signaling pieces and on to under-the-radar design.

Take The Evelyn Bag from French luxury house Hermes, which features a canvas strap and

subtle perforated “H” logo. The understated piece was originally designed to hold horse-grooming equipment and was carried exclusively in the brand’s riding department until its popularity

‘The aesthetics of consumer products are linked to the economy they were created during’

AINSLEY COOTES  
BRAND MANAGER

surged during the recession, and that demand moved it to the main floor. “The aesthetics of consumer products are linked to the economy they were created during,” says Cootes. “They are designed to speak to people’s relationship with money.”

Simply put, when the economy

is in the gutter, it’s naff to flaunt wealth.

Delaney Bryant, another TikTok trend forecaster, predicts that celebrities adopting this low-key style will trickle down to consumers. “Everything in fashion is connected to everything,” she says, citing the famous cerulean blue explainer scene from The Devil Wears Prada.

The autumn 2023 menswear shows in Paris and Milan were remarkably minimalist. Full of spare, understated looks, “reductionist” tailoring, utilitarian bags, and muted colours like black, grey, nude and oatmeal. Gucci, with Alessandro Michele no longer at the helm, presented its quietest collection in years.

Vtmnts offered “a collection that reflects the current times”, with clean-cut statement pieces, both genderless and trendless. The press release for the collection, hash-tagged #FightTheInflation, promised “sustainability” and “fair prices”.

Cootes suggests people will adopt simpler, more functional clothing. “If you fill your wardrobe with really plain clothes, you can just wear them a lot more.”

Ashley Vallis, director and designer of Yamba-based label Summi Summi, says there’s growing demand for monochromatic, simple pieces. “With the cost of living on the rise, people are looking for pieces with longevity that bring more versatility to their wardrobe,” she says.

With the Great Recession, “recession roots” and the embrace of ombre hair replaced the hemline theory as a harbinger of our economic woes.

This time, Edwards and Co founder and colourist Jaye Edwards says that with the cost of living on the rise, more clients are opting for low maintenance, future-proof colours and cuts.

“Clients are after something that will stand the test of time, increase the longevity of each colour service,” he says.

## Industry ‘won’t hit’ Heritage List bid

PAUL GARVEY

A looming wave of major industrial development on Western Australia’s Burrup Peninsula will not jeopardise a proposed World Heritage listing for the region’s rock art, the WA government says.

Speaking as a formal application for the rock art-rich Burrup Peninsula, or Murujuga, to be added to the UNESCO World Heritage List was confirmed on Friday, WA Environment Minister Reece Whitby said he was confident the industry expansion on the doorstep of the area could be appropriately managed.

“They (UNESCO) will understand we’ve got the balance right,” he said.

“There’s an enormous amount of work to ensure the balance between industry, which has existed here for many decades, and local environment and cultural values are protected.”

The Burrup Peninsula is home to the world’s largest rock art collection, with more than 1 million petroglyphs – many of which date back tens of thousands of years. The Burrup is also the site of some of Australia’s largest industrial projects, including Woodside Energy’s North West Shelf and Pluto liquefied natural gas plants.

Woodside is poised to double the capacity of Pluto and extend the life of the North West Shelf out to 2070, raising concerns among conservationists and archaeologists who believe emissions from the plants are accelerating the erosion of the rock art. Private company Perdanman is also poised to begin construction of a new \$4.5bn urea plant, with several pieces of rock art set to be disturbed as part of that plan.

Numerous pieces of rock art were damaged, destroyed or relocated after the Burrup was first identified as heavy industry site in the late 1960s. While Woodside itself has acknowledged the shortcomings in its practices from that era, Mr Whitby said industry had existed there for decades “and we’ve managed that very well in the past”.

An archaeology study last year, comparing photos of rock art from the 1960s with contemporary images, argued that petroglyphs closer to the Burrup chemical and gas plants appeared to have suffered more erosion than those further away.

One of the first archaeologists to study the area, Robert Bednarik, has also argued that acidity levels in rainfall have increased sharply since the arrival of industry and were damaging the patina of the rock art.

## Otway Exploration Drilling Program

### Consultation

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed exploration program will consist of seabed surveys and the drilling of up to six exploration wells.

This is a continuation of our exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia’s energy needs.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek acceptance from the regulator for this exploration program. As part of EP development we will undertake consultation in line with a prescribed regulatory process.

If you would like more information or think you may be affected by the proposed activities, please use our QR code or contact us using the details below.

New Norfolk High School has removed toilets to stop kids smoking and vaping. Inset: One of the cubicles with its toilet removed.

“  
The students  
that don’t  
smoke or  
vape are  
getting  
punished and  
it’s not fair

PARENT OF A YEAR 8 STUDENT

plain. “This is worse than prison,” one parent commented online.

“Prison people don’t have to wait for a toilet and I bet the staff have doors on their toilets and they don’t have to wait in line to do their business ... absolutely disgraceful and against all human rights.”

Another mother said it was “ridiculous” that students were “lining up to use the bathroom instead of eating lunch” in between classes.

“As a parent we pay school fees for the education and care of our children. The Education Department have a duty of

care to look after our children’s wellbeing and education,” she said.

“Does one bathroom mean that teachers will not be monitoring bathrooms? What happens if a student is in distress, self-harming, seeking refuge from bullying, or in need of assistance?”

Labor education spokesperson Josh Willie believed staff shortages may have contributed to the problem.

“Schools are under stress because of staff shortages and it may be they don’t have the staff to supervise the toilets,” he said.

“But as the video shows they have pulled toilets out which is just not appropriate.”

A Department of Education spokesperson said they were working with the school to “increase access to student toilets by Tuesday”.

“The department has closely monitored operations at the school today and will continue to do so until the situation is rectified.

“The department apologises to the students and families of New Norfolk High School.”

One parent told the Mercury that “quite a few parents”

had, like her, contacted the Education Department after students returned from holidays to find “one toilet per gender per grade”.

“The doors were all completely removed. Not even a door was left on the single cubicle that actually has a toilet. Because of all the hype today, a door has been put back on apparently.”

Another parent of a year 8 student said her son brought it to her attention on Thursday, saying “it was not right”.

“The students that don’t smoke or vape are getting punished and it’s not fair,” she

said. “Then he said what about the girls that have their monthlies (periods)?

“He said it’s disgusting as they wouldn’t be able to have any privacy and they wouldn’t be comfortable. It’s not fair for any student to have their toilet privilege taken away.

“Smoking has been around schools for I don’t know how long. There is a better way around this.”

Asked whether it was acceptable for students to wait up to 30 minutes to use a toilet Mr Rockliff said: “There are challenges.

“We’ll work with the school

communities to ensure that our young people are not experiencing delays in terms of accessing important amenities.”

He shared concerns about students vaping.

“I can understand parents’ and schools’ concern about vaping and I take that very seriously as well,” he said.

“We have got a program right across Tasmania of upgrading important amenities for our schools and that remains part of our focus of ensuring that we have 21st century infrastructure to support student learning.”

## We’re working together, no matter what nature throws at us.

As fires and floods increase, we need to increase our capability to protect ourselves. The first step is to make sure we’re all working together. That’s why the Tasmania Fire Service and the SES are formally uniting as the Tasmania Fire and Emergency Service.

By working together, our emergency services will be stronger together. Plus, it’ll mean our invaluable emergency service volunteers will benefit from greater protections. It’s good news for all Tasmanians.

# STRONGER TOGETHER

# FEEDING TUBE COMES WITH ADJUSTMENTS FOR FAMILY

Mum Miriam and Brock Van der Woude, 11, of Loxton, are raising awareness of the issues around tube feeding. Picture: Roy VanDerVegt

EVANGELINE POLYMENEAS

BROCK Van der Woude has had a feeding tube for seven years after he was diagnosed with a severe cold when he was three.

When he developed a respiratory syncytial virus, it led to an aversion to eating food orally.

Brock, who is autistic and non-verbal and must take lifesaving anti-epileptic medication, would refuse not only his food but his medication, too.

"It was a dangerous place to be in," Ms Van der Woude said. Now, with the feeding tube, Brock, 11, receives his nutrients and medication.

However, dietitian Andrea McCall said while tube feeding was beneficial, it could have a psychosocial impact on the family as feeding and parenting went hand-in-hand.

"Feeding our children, and the family sharing a meal together, is how we nurture and connect," she said.

For Brock being fitted with the tube caused "significant regression" and kindergarten "became difficult".

He eventually benefited from joining a peer support group through the Women's and Children's Hospital.

This week is Feeding Tube Awareness Week.

# I could have been clearer

## Medic's admission during death inquest

BRINLEY DUGGAN

THE pathologist who carried out a diagnostic report on a cancer-free man, who had part of his lung wrongly removed, conceded that her conclusion could have been clearer.

The admission came during the inquest into the death of 67-year-old Dennis Charles Jackson, from Broken Hill.

Mr Jackson died in 2019, from hospital-acquired pneumonia not long after he was misdiagnosed as having cancer and had part of his lung removed.

He spent several months in hospital, including 63 days in ICU.

In a sworn affidavit, pathologist Dr Caroline Lindsay Smith offered an alternate wording of her 2018 report in which her conclusion would have been more explicit.

"There was a fragment of carcinoma without surrounding tissues such that a distinction between invasive and in situ disease cannot be made," the revised report would have

Dr Caroline Lindsay Smith

read. Instead, the conclusion produced in 2018 did not use the words "in situ" (not extending beyond the focus or level of origin). The the court previously heard if those words had been used, it could have resulted in a vastly different outcome. Dr Smith's alternate report would have also seen wording about the biopsy of Mr Jackson's lung changed to reflect ambiguities in a sample she had viewed.

That wording – to use "frag-

ment" instead of "free-floating" – had previously come under scrutiny during the inquest.

On Wednesday, Dr Smith's 2018 report was subject to expert evidence which concluded it could have been written more clearly, which Dr Smith conceded on Friday.

She said there was "risk" in the way the report was written, which asked readers to "refer to the body" in which she wrote "(cancerous) invasion was not proved".

Dr Smith's report, however, was complicated by a 1.2mm piece of tissue on a microscopic slide that didn't belong to Mr Jackson. The piece of tissue, a contaminant from somebody else's body, present through no fault of Dr Smith, had made its way into a biopsy sample taken from Mr Jackson's lung during investigations into whether or not he had cancer.

With Mr Jackson's specimen alone on the slide, Dr Smith said, she would have concluded further testing may have needed to be undertaken.

# Sushant paid \$78,000 to start his dream home. The block is empty

Charlotte Grieve

Sushant and Anamica Chakravarty transferred more than \$78,000 last year to build their dream home in Officer, an emerging suburb in Melbourne's south-east.

Ten years after arriving in Australia from India, the construction of this five-bedroom property was going to be a symbol of their family's success.

To construct the \$1.5 million property, they chose Hallbury Homes, a small company branded as a luxury builder with an impressive display home in Langwarrin.

"I thought we'd picked the best," Sushant says.

But less than five weeks after the final payment was transferred, the company went into voluntary administration, leaving the Chakravartys with only a grassy block and no sense of what would come next.

The couple were one of at least 40 would-be home owners left "high and dry" when the company appointed administrators on January 5.

Corporate filings show the company owes \$8 million to 401 creditors, including contractors and home owners around Melbourne who have been left with partially built properties, some riddled with defects including cracked walls, uneven surfaces and mould.

The collapse of Hallbury Homes highlights pressures in the construction industry, following crises at major firms ProBuild and Metricon, but it raises questions about the effectiveness of the Victorian Building Authority (VBA).

"I called up the VBA months ago and told them something was not right," says another home owner, Terry Conder, who has been working with Hallbury for six years. "They did an inspection, but then nothing. It's been a nightmare."

During a three-hour meeting on Thursday that became "heated", according to those in attendance,

Sushant and Anamica Chakravarty paid more than \$78,000 to build a home but have been left with a vacant lot. Below: Terry and Andrea Conder's house was never finished. Photos: Simon Schluter, Joe Armao

creditors voted to push the company into liquidation. Menzies Advisory principal Michael Caspaney will have greater powers to investigate a range of issues, including whether the company traded while insolvent.

"I've always had a problem with builders who are trying to do business beyond their means," Caspaney said. "The government of the day doesn't want to be seen to stifling builders, so there's very few financial checkpoints. Now the creditors have put it into liquidation, that gives me the full power to investigate."

According to corporate filings, Caspaney estimated that any claim for insolvent trading might be worth \$6 million.

Hallbury director Glenn Smith denies these allegations. He says the investigation will clear him of wrongdoing. While he concedes problems were mounting for more than a year, he contends it was a change in a critical concrete contract that tipped the company over the edge after he and business partner Cliff Hall put everything

into keeping the operation afloat, including borrowing from friends and family.

"With every building collapse, the directors are turned into villains," Smith says. "There's a lot of people with heat, making up crazy allegations that are frankly offensive."

With many of its building contracts fixed, Smith says his company was unable to keep up with the rising cost of materials.

"We ran out of money. We've put blood, sweat, everything [into it], and it just wasn't enough," he says.

For the home owners, the reasons for the collapse do not change the losses they are facing. Two of those home owners, Adam Van Haeften and his partner, signed a contract with Hallbury in February 2020 but soon noticed a high turnover of contractors and requiring payment for works before the couple were able to

inspect the site. "At the end of the day, we feel they have short-changed us. They asked us to pay for work they hadn't completed."

Van Haeften hired building consultant Darbecca to examine whether the Balwyn North site complied with building standards. Its report listed "items that, in our judgment, do not reach an acceptable standard of quality, level of building practice or have not been built in a proper or workmanlike manner."

Van Haeften estimates it will now cost about \$550,000 to complete the works, and his builders' insurance is set to expire within weeks, so the race is on.

As for the Chakravartys, they feel let down by the system that allowed this to happen.

"We have struggled to save this money for 10 years. We feel so cheated, it's really taking a toll on us," Sushant says.

"We never thought that in Australia, in a country where ... [there are] regulators, this can happen. This has happened in this country."

NEWS

# Earthquake hits close to home for family

WORLD NEWS

BY LILLIAN ALTMAN

Warrnambool

THE earthquake in Turkey has hit close to home for Turkish expat Kadir Zehir, with the deaths of several of his family members.

The Turkish town of Kahramanmaraş was hit by a magnitude 7.8 earthquake on Monday, badly impacting parts of neighbouring Syria as well.

The death toll following the earthquake has risen to more than 20,000 people in both countries.

"If I wasn't working, I'd definitely go and help out," Mr Zehir, who now lives in Warrnambool with his wife Alison, said. "But, on the other hand, I watch all the channels on cable television and the government is saying we have enough help."

Mr Zehir said his second cousin, who he grew up with for about 15 years, lived in Kahramanmaraş.

He said his cousin's wife and 20-year-old daughter died in the earthquake but their son, who was in the same building at the time, survived.

Mr Zehir's uncle was also impacted by the earthquake.

"My uncle went to visit his son, daughter-in-law and grandson in Gaziantep in a high-rise building and they

Some of Alison and Kadir Zehir's family in Turkey have survived the Kahramanmaraş earthquake, while others have died. Picture by Eddie Guerrero

were on the 19th floor and all survived," he said.

"They are living in their cars and haven't been back in the house yet.

"I don't know what will happen, if they will go back to Ankara or not, I haven't heard from them."

Mr Zehir said his mother and brother lived in Ankara, 450 kilometres away from the epicentre of the earthquake.

They felt the aftershock just hours after the initial incident.

"Immediately I started to try and connect with them but because it destroyed the telecommunications towers and internet connection and all that, it took me two days to get some news from my family," he said.

Mr Zehir said he finally heard from others that one of

his cousins who lived in the town of Hatay was fine two days after the quake.

"The rest of my family who live in Turkey were fine because they live hundreds of kilometres away in Ankara and Istanbul," he said.

Mr Zehir said so many people had been caught up in the earthquake with no chance to escape.

"The scary part is when

you look at the aerial shot of the region, I'm thinking that the death toll will reach 60,000," he said.

Mr and Mrs Zehir were living in Turkey in 1999 when the most deadly earthquake at the time killed 17,500 people. The couple conduct tours and said they would be back supporting the country in May.

## Man allegedly drives at a mum

LAW AND ORDER Region

A MOYNE Shire district man is in custody after being charged with allegedly driving at a mother and son, causing the teen to take evasive action to avoid being injured.

A police spokesman said the 38-year-old man was arrested this week and charged with reckless conduct endangering life, reckless conduct endangering serious injury and driving in a manner dangerous.

He said on Monday the man attended his former partner's Warrnambool home after a heated phone call about 6pm.

It's alleged there was a verbal altercation before the accused man drove onto the front lawn and toward the front door at fast speed.

"That resulted in the 16-year-old son having to take evasive action to avoid being hit by that car," the spokesman said.

"The man kept yelling and then reversed and drove away."

The accused man appeared briefly in Warrnambool Magistrates Court on Wednesday, did not apply for bail and was remanded in custody. He was directed to appear in court again on February 27.

## RENEWABLE ENERGY

## Joyce has swing at big wind

Nick O'Malley

National environment and climate editor

Doug Landfear, the Californian-born local boss of Danish renewable energy giant Vestas confesses he does not know exactly what federal Nationals MP Barnaby Joyce meant when he described the company's environmental impact statement for a NSW wind farm proposal as "nothing but a pack of poo-tickets", but he guessed it was not good, and says he is not entirely surprised.

"Barnaby has a certain way of speaking," Landfear says.

At issue is a plan to build a massive wind farm to the north and east of Walcha, a village of 3000 or so on the crossroads of Thunderbolts Way and the Oxley Highway in the NSW Northern Tablelands.

The project could have serious implications on whether the state – and the nation – might achieve the goal of shifting rapidly to renewable energy.

Walcha lies within the NSW government's New England Renewable Energy Zone.

In such zones, renewable energy projects will be supported and linked to the grid to replace ageing coal plants as they are decommissioned.

The policy is causing divisions in some communities where there are disagreements over whether the income generated by new renewables is worth the impact on the landscape.

And Vestas is offering the people of Walcha a staggering amount of money.

Should the so-called Winterbourne Wind project go ahead, about 55 landholders stand to earn about \$30,000 a year per turbine hosted on their land. Some could have up to 10 turbines. Vestas is in negotiations with some neighbours who would be in sight of the towers for further payments.

Total investment in the region would be about \$1 billion.

The towers would stand about 149 metres high at their hub and 230 metres at the tips of their blades.

In all, 119 towers would be built, making the project the largest in the nation, generating enough electricity to power 375,000 NSW homes.

The local council stands to benefit too, as Vestas is offering to pay \$1 million up front and \$750,000 a year, indexed to the CPI, for the life of the project.

Joyce's colourful line against the environmental impact statement

A Tasmanian wind farm; Walcha, in the northern tablelands; Barnaby Joyce. Photos: Alex Ellinghausen, Dallas Kilponen

provided by Vestas was made during a public meeting held by opponents of the project at Walcha's bowling club last month. He dismisses the payment.

"That wouldn't even pay for a roundabout," he told the *Herald*.

He said the community should oppose the wind turbines and that state and federal governments should co-operate to extend the life of the coal power stations until a new wave of nuclear energy technology, known as small modular reactors, is available.

Proponents of these machines say they will provide abundant clean and cheap power. Sceptics say they do not yet exist commercially and that nuclear power remains the most expensive source of energy on earth, while solar and wind are cheap and declining in cost.

The benefits of the Winterbourne scheme have convinced grazier Ted Fenwicke, whose family has farmed in the region for five generations.

He describes a reliable stream of income insulated from drought and flood as the "holy grail" that would help his family build and improve their core businesses. He rejects the argument of some of his neighbours that the turbines would spoil prime productive land, because, he says, the turbines would be built on rocky ridge-lines.

He believes the roads Vestas would build to install and maintain the

turbines would be to his family's benefit as well. "If they can get a 100 tonne truck up there, it is going to be better than anything we can build," he says.

But he is aware of the tension the project is causing. His children, who will inherit the land, have embraced the project. His brother does so with far more reservation.

"The first time you look at a picture [of a turbine] you think, 'Wow, that's a pretty wild piece of equipment'," Fenwicke says. "But I'm sure people were pretty confronted the first time they saw a big powerline too."

By Landfear's count of the 948 public submissions made regarding the Winterbourne project, 498 are in support and 438 are opposed. Another 12 are simply comments.

Joyce remains unrepentant for opposing the project and the potential windfall for his community.

"We would end up with more man-made structures over 230 metres in height than Sydney CBD," he says.

Besides, he says, many of those who support projects like this live in the inner suburbs of Sydney and Melbourne.

"Well, if you support them, why don't you support building them in your area rather than in ours?" he says.

"This idea that we can just have wind towers built everywhere and that is going to be the solution is patently absurd."

His position puts him at odds not only with some of his constituents, but with his colleague, NSW Treasurer Matt Kean, whose policy on climate and energy depends on such development.

Asked if he was concerned about tension in Walcha, Kean said in a statement that renewable energy plans were expected to attract at least \$32 billion in private investment and support more than 9100 jobs in regional NSW and provide \$1.5 billion in lease payments to farmers.

"This is a once-in-a-generation opportunity to diversify local economies, create jobs and create new, stable revenue streams for farmers."

"Local communities will see a range of benefits from being part of a renewable energy zone. This includes a requirement for all developers to contribute up to \$1700 per megawatt of their project to a new community benefit fund."

## Ancient rock art put forward for World Heritage status

Mike Foley, Peter Milne

A peninsula in north-west Western Australia has been nominated for World Heritage status by federal Environment Minister Tanya Plibersek in recognition of the estimated 1 million to 2 million sacred rock engravings there dating back 50,000 years.

If accepted by the United Nations Educational, Scientific and Cultural Organisation (UNESCO), the nomination would cover an area of 100,000 hectares on the Burrup Peninsula – or Murujuga to its traditional custodians – in WA's Pilbara region.

Murujuga would become the second of Australia's 20 World Heritage sites accepted for its First Nations cultural heritage, along with the Budj Bim cultural landscape and ancient aquaculture system in south-west Victoria.

The announcement was welcomed by the traditional custodians, although some reiterated warnings that emissions from nearby gas processing plants are damaging one of the world's longest unbroken sequences of rock carvings, or petroglyphs. They are demanding a contentious ban on further industrial development in the area, where gas giant Woodside plans a massive expansion to an existing gas plant.

The early engravings were made by removing a patina – a brown outer layer on the peninsula's rocks as thin as one-thousandth of a millimetre – to reveal the contrasting underlying orange colour.

Industrial emissions including nitrogen oxides and sulphur oxides make rainfall more acidic, and some traditional custodians say this will damage the patina and damage the engravings.

Plibersek said in Karratha yesterday that she was humbled to announce the nomination given the thousands of years of Indigenous care of Murujuga, adding that it was crucial to ensure the management and protection of the globally significant site.

"This has very obvious benefits for this landscape and the people who are so connected to the land, for future generations who will grow up strong on this land," she said. "But it also has real significance for the whole world ... that's why we're here today."

Murujuga Aboriginal Corporation CEO Peter Jeffries said Ngarda-Ngarli traditional owners had aspired to World Heritage status for more than 20 years.

## Otway Exploration Drilling Program

## Consultation

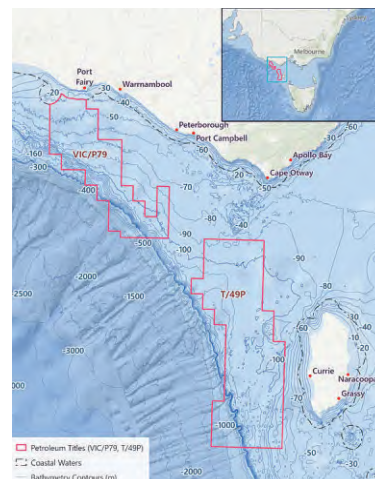

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed exploration program will consist of seabed surveys and the drilling of up to six exploration wells.

This is a continuation of our exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek acceptance from the regulator for this exploration program. As part of EP development we will undertake consultation in line with a prescribed regulatory process.

If you would like more information or think you may be affected by the proposed activities, please use our QR code or contact us using the details below.

# Fire leads to drug haul

A GOOD samaritan was airlifted to hospital last week after attending a fire at a neighbouring property in Camperdown.

The fire at a Manifold Street property broke out at about 6.15pm on Tuesday.

A large amount of cannabis plants was located at the property, with police investigating the hydroponic set-up within the vacant house.

Warrnambool CIU detective acting sergeant Derek Verity said the house had been divided into three growing rooms and a drying room.

He said 70 to 80 cannabis plants were located at the property with an estimated value of \$30,000 to \$50,000.

Det. Act Sgt Verity said enquiries were ongoing into the operation.

“There will be multiple different enquiries,” he said.

“It would take multiple people and skills to set it up.

“It is very unusual for this area.”

The hydroponic set-up included a lights and watering system, with the offenders bypassing the electrical system to steal power.

District 6 commander Dan Condon commended the quick response of CFA units who attended the blaze.

“The crews responded brilliantly, they were on scene in minutes,” he said.

“They extinguished the fire quickly.

“A good samaritan who lives next door has tried to help out and suffered a cardiac arrest. The crews did CPR on scene.

“They did an unbelievably good job putting the fire out and administering CPR.”

Commander Condon said multiple units were called to the fire including Camperdown and Weerite.

“I can’t sing the praises enough of the quick response of incident controller Andrew Smith and all of the crews,” he said.

The man was transferred via road ambulance to the Camperdown Showgrounds

**Plants found:** Warrnambool CIU members process more than 70 cannabis plants of varying sizes seized at a Camperdown property following a fire. 2023D

before being transported to hospital via air ambulance.

An Ambulance Victoria media spokesperson said Ambulance Victoria was called to a report of an incident in Camperdown just before 6.25pm.

“Paramedics treated a man in his 60s at the scene for a medical episode,” the spokesperson said.

“He was flown by air ambulance to Geelong Hospital in a stable condition.”

Camperdown Police Senior Sergeant Bill Caldow said police were at the property processing the scene last Wednesday.

“There is a very large number of cannabis plants of varying maturity,” he said.

“The property was empty at the time.”

Snr Sgt Caldow called on members of the public who might be suspicious of a property in their neighbourhood to make contact with

police or CrimeStoppers.

He said all calls can be made anonymously by contacting CrimeStoppers on 1800 333 000.

# Road safety questioned

VICTORIANS need safer roads now, according to Shadow Minister for Roads and Road Safety Danny O’Brien.

He said the state had seen a horror start to 2023, with 42 lives lost on Victorian roads to date.

Mr O’Brien said there was no easy solution to road safety.

He said a parliamentary road safety committee could play a big role in providing solutions to drive the road toll down, yet the Andrews Labor Government voted down the motion in Parliament.

Mr O’Brien said in the past the committee had made Victoria a leader in road safety.

“This committee was responsible for inquiries from its very inception in 1967 that resulted in Victoria’s then world-leading road safety initiatives,” he said.

“These initiatives were associated with significant reductions in injury and fatality on

Victorian roads, including the introduction of mandatory seatbelt wearing, the demerit point system, random breath testing, the list goes on.

“It is disappointing that Labor, having axed the committee in 2015, has refused to bring it back and keep Victoria at the cutting edge of life-saving technology and initiatives.”

Mr O’Brien said the decision comes at a time when Victorians faced some of the “most unsafe road conditions”.

“Rural and regional Victorians especially know the state of our roads is abysmal,” he said.

“Long-term investment means safer roads, but it’s also about driving down the road toll with intervention initiatives and research into the latest technology.

“This disregard for a committee that has driven so much change over decades leaves Victorian motorists at a disadvantage.”

Minister for Road and Road Safety Melissa Horne was contacted for comment but failed to respond before publication.

## Otway Exploration Drilling Program Consultation

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed exploration program will consist of seabed surveys and the drilling of up to six exploration wells.

This is a continuation of our exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia’s energy needs.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek acceptance from the regulator for this exploration program. As part of EP development we will undertake consultation in line with a prescribed regulatory process.

If you would like more information or think you may be affected by the proposed activities, please use our QR code or contact us using the details below.

## Program Officer – Aboriginal Community Engagement Hepatitis NSW

35 hours per week

SCHADS Award Level 4 plus superannuation and annual leave loading.

Full salary packaging is available

As Program Officer – Aboriginal Community Engagement you will:

- Lead, plan, deliver, and develop hepatitis B and C outreach health promotion activities that engage Aboriginal communities across NSW.
- Contribute to activities that improve the health and wellbeing of Aboriginal people living with or at risk of hepatitis B and C in NSW.
- Contribute to reducing stigma and discrimination experienced by Aboriginal people in relation to living with hepatitis B and C.
- Build strong relationships and partnerships with key stakeholders to increase access to health services for Aboriginal people.

*This is an Aboriginal identified position and is open to Aboriginal and/or Torres Strait Islander people only. Hepatitis NSW considers that being Aboriginal or Torres Strait Islander is a genuine occupational qualification under s 14 of the Anti-Discrimination Act 1977 (NSW).*

Hepatitis NSW is a member-based, health promotion charity funded by the NSW Ministry of Health. There are 17 permanent staff members and 35 casual staff and volunteer workers.

Our vision is "A World Free of Viral Hepatitis". We provide information, support, referral, and advocacy for people affected by viral hepatitis in NSW. We work to prevent the transmission of hepatitis B and hepatitis C and to improve the health and well-being of affected people and communities.

Our offices are in Surry Hills, Sydney, co-located with like-minded organisations and are wheelchair accessible. Learn more about us and what we do on our website: [hep.org.au](http://hep.org.au)

**A job pack containing full job description, selection criteria and terms and conditions of employment must be obtained before applying.**

## Notice of intention to consult with and seek the consent of Yirendali common law holders to enter into a Community Benefits Agreement

North Queensland Renewable Energy Zone Pty Ltd (**NQREZ**) and the Yirendali Aboriginal Corporation (ICN: 8398) (**Yirendali AC**) are proposing to enter into a Community Benefits Agreement (the **Agreement**) in relation to the proposed Mount James Wind Farm, located 80km north of Hughenden (the **Project**) as shown on the map below.

Under the proposed Agreement, in return for the benefits provided by NQREZ, Yirendali AC acknowledge:

1. that the parties consulted and cooperated in good faith and obtained the free, prior and informed consent of the Yirendali people in relation to the Project; and
2. that any public entity's decision to grant a Project Right will be a decision that is not incompatible with the Yirendali People's Cultural Rights.

### Yirendali Consultation

The Yirendali AC seek to consult with and seek the consent of the Yirendali People to enter into the Agreement.

The members of the **Yirendali People** are described as descendants of the following apical ancestors:

- (a) Albert Hill;
- (b) Henry Major Luco;
- (c) Phillip and Ida Lammermoor;
- (d) Polly and Kiara (Kyra) (Kara) Christison; or
- (e) Maggie Chermiside.

These persons are invited to attend the meeting as set out below:

**Friday, 17 March 2023 10:00AM Mercure Inn Townsville  
166 – 194 Woolcock Street, Townsville QLD 4812**

Videoconference facilities will be available for those unable to attend in person. Please contact [yirendaliac@gmail.com](mailto:yirendaliac@gmail.com) for further details.

There will be no travel assistance offered however light refreshments will be provided at the meeting.

## Progress update on the decommissioning of Esso's Bass Strait offshore facilities

As operator of some of Australia's oldest oil and gas fields, Esso Australia is committed to decommissioning our Bass Strait offshore facilities safely and effectively.

We have substantial experience in safely and effectively decommissioning facilities to achieve positive outcomes across the globe, and we are excited to be part of Australia's growing decommissioning industry.

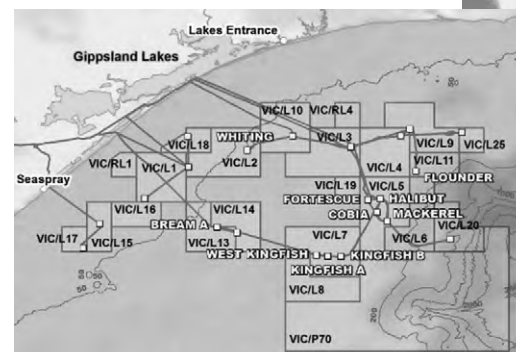

For our steel piled jackets, we have identified a number of decommissioning options and assessed each one in order to determine which approach balances the needs of other users of the sea by ensuring the safety of navigation and delivers an equal or better environmental outcome by retaining the marine ecosystems which have developed around the jackets.

All of the options for decommissioning the steel piled jackets include full removal of the upper sections of the platform including the accommodation and processing facilities, known as the topsides for disposal onshore. The overall demand for a skilled workforce to support the decommissioning program will vary minimally regardless of which option is pursued for the cut off depth of the steel piled jackets.

More information on these options and how we are assessing them are available here: <https://exxonmobil.co/3R6U8E8>.

Prior to commencing and throughout our decommissioning activities, we continue to identify and actively engage with key stakeholders across the Gippsland region. We have also undertaken a national public consultation process facilitated by the National Offshore Petroleum Safety and Environment Agency. This and our ongoing consultation play an essential role in how we align our approach and ensure the essential work that we are undertaking meets the community's needs and expectations.

If you would like to learn more about our decommissioning process and the approach we are considering for the removal of steel pile jackets and platform topsides, or feel that you are a relevant person as per the Offshore Petroleum and Greenhouse Gas Storage Act 2006, we welcome you to reach out via [consultation@exxonmobil.com](mailto:consultation@exxonmobil.com).

# Councillor to make appeal

BY SHERYL LOWE

Continued from front

Later in the day he confirmed a councillor with the Naracoorte Lucindale Council had been stood down.

Cr McGuire said he made several attempts to lodge his campaign returns prior to the election in November 2022, with no success. After his third attempt he was

blocked from the ECSA portal, he sought the assistance of council staff in November 2022, who sat with him in Chambers to try to assist him lodging the forms.

Cr McGuire said he made several attempts to lodge his campaign returns prior to the election in November 2022, with no success. After his third attempt he was blocked from the ECSA por-

tal, he sought the assistance of council staff in November 2022, who sat with him in Chambers to try to assist him lodging the forms.

On January 27 2023, Cr McGuire received a call from ECSA relating to the issue and he repeated his story to them.

"They (ECSA) agreed to post me a hard copy of the form, which I completed and

returned to ECSA. The form didn't have a deadline on it."

"I am disappointed in the system and will appeal the decision. I have good grounds for my appeal and believe I will be successful."

Cr McGuire was re-elected to the Naracoorte Lucindale Council in the November 2022 elections after a long career in local government including eight years as Dep-

uty Mayor.

This is the latest issue in a chaotic start to the new four-year term of local government. Several councils began the term without a mayor and some without a full council. Changes in legislation in local government elections have been blamed.

Councils affected, bore the brunt of the cost of a supplementary election.

## High winds and hot days: CFS callouts

Hynam grassfire aftermath after being attended to by volunteers and air support. Picture by Neave Moore

A GRASSFIRE was alerted by Country Fire Service operatives in Hynam around 3:30pm on Friday February 10.

CFS responders from Naracoorte, Kybybolite, Hynam, the Wattle Range, Cadgee, Joanna, Lucindale, Stewarts Range, Frances, Comaum, Maaoupe, Penola and Coonawarra responded to the original call out.

There was a concern given a high wind speed in the area, but the fire was taken under control by Friday evening.

An aircrew was dispatched to assist ground volunteers with putting out the blaze, and the intersection off Biggins Road, west of the Naracoorte Teys facilities was closed off, with an alert put out to limit drivers in the west Hynam area.

The fire was able to jump across Biggins Road but was taken under control by the present firefighters, with the Threat Reduced alert first put

out at 6:48pm that evening.

### Naracoorte Grassfire

Naracoorte CFS volunteers were called to a Level 1 fire at the Train Yard in town, near Lot 31 on Cameron St.

The alarm was pulled at 3:20pm on Monday February 13, and locals were urged to keep away as volunteers took control of the scene.

### Binnun Grassfire

Lower Tatiara, crossborder and Naracoorte CFS volunteers were called to a grassfire off Tarcas Road in Binnun.

Originally alerted at 3:20pm as a Level 3 incident, the fire was soon upgraded to a Level 4, but aircraft responders were released from the incident at 3:27pm.

The CFS issued a notice to residents reminding those in fire danger areas to revise their evacuation plan and make sure they are on top of the alerts as winds speeds pick up this summer.

— NEAVE MOORE

Naracoorte Lucindale Council  
Better by Nature

The Northern Limestone Coast Regional Assessment Panel wishes to advise that the following applicants have been appointed as panel members:

- Mayor Jeff Pope (Panel Member)
- Mr Mark Teakle (Panel Member)

These appointments have been made on behalf of the Naracoorte Lucindale, Tatiara and Kingston Councils.

# Action on prominent corner site

WORK has begun on the site of a new service station just north of Heywood, at the corner of the Princes and Henty Hwys.

As previously reported in the *Observer* the proposed \$1.5 million service station is being developed by the Werribee-based Dislis Group, which got approval in 2020 from Glenelg Shire Council to build one of its Pegasus Pitstop branded stations at the site. The servo would be open round-the-clock and feature a diner and convenience store, with fuel and lubricants supplied through Mobil.

Picture: KAREN HODGE 230405kh07

## MAGISTRATES' COURT

### Accident turns up drink driving charge

A HEYWOOD man has lost his licence, after bloodwork done in hospital after a crash came back positive for alcohol.

Barry Morton was driving down the Henty Hwy on his way home from the pub on January 11 last year when he missed a bend and collided with an embankment on the side of the road.

Damage from the crash trapped the 66-year-old and his passenger in the car, both with significant injuries.

Emergency services rescued them from the wreck, and took them to hospital in Hamilton, where a blood sample was taken from Morton, later returning a result of 0.086 alcohol content.

In court, Morton's lawyer said he had had a seizure as a side effect to medication just prior to getting in the car, and should not have been driving.

Magistrate Franz Holzer suspended Morton's licence for six months.

### Truck's log load too wide

A TRUCK driver has been fined, after being caught last year driving with a 68-ton load of logs that was wider than legally allowed.

Jason Berger, who now lives in Melbourne, appeared in the Portland Magistrates' Court on Tuesday last week to plead guilty to the single charge of failing to comply with dimension requirements for a heavy vehicle. The charge carries a maximum penalty of \$11,820.

Berger, who was living locally at the time, was driving a fully loaded prime mover truck on Woolsthorpe-Heywood Rd on December 28 when he was stopped for an inspection.

In court, the National Heavy Vehicle Regulator prosecutor Iain McDonald alleged that Berger's load was 0.28 metres wider than the 2.5m maximum allowed width.

Mr McDonald said the logs that Berger was carrying were also longer than allowed, which was dealt with by an on-the-spot fine.

Overall, the prosecutor said the overload presented a "severe risk".

In court, Mr Berger said that he had been present when the truck was loaded, and as the driver took responsibility for the breach of requirements.

Magistrate Franz Holzer fined Berger \$1000.

### Text threats frighten woman

A PORTLAND man has been placed on a community corrections order, for sending threatening texts to a former partner and abusing her daughter.

The man pleaded guilty to breaching a family violence safety notice and using a carriage service to harass in the Portland Magistrates' Court on Tuesday last week, and cannot be named as it might identify a victim of family violence.

The notice was taken out by police against the 51-year-old in March last year, naming both his partner and her daughter as protected people.

Late last year the man had been living in a caravan in the victims' driveway, and the prosecutor told the court that on December 27 at around 9pm, the man was drunk and became verbally abusive and aggressive to the younger woman.

Police were called and removed the man from the property, and later that night he sent texts to one of the victims telling her that she was dead.

The texts were reported to police, the

victim telling them that she had been unable to sleep from fear.

The man was arrested the following day, making partial admissions when interviewed but said he did not have a clear memory of sending the texts.

In court, the man admitted to previously having issues with alcohol and being a daily drinker but had now been off the drink for a week and was "feeling good about it."

Magistrate Franz Holzer described the offending as demeaning, but said "on first blush" the man did not seem to be a high risk of re-offending and sent him for a community corrections assessment.

The report that came to court was a contrast to this, describing the man as "high risk" for reoffending, but still suitable to serve his penalty outside of prison.

Mr Holzer sentenced him to an 18-month community corrections order with drug, alcohol and medical treatment recommendations to be complied with, as well as judicial monitoring throughout.

### Corrections order for assorted crimes

A MAN has been placed on a 12-month community corrections order with 75 hours of community work attached, for a number of criminal offences, dating back as far as 2018.

The 51-year-old from Portland pleaded

guilty in the Portland Magistrates' Court on Tuesday last week, to contravening a family violence order, unlawful assault, unlicensed driving and cultivating cannabis.

He cannot be named as it might identify a victim of family violence.

### Christmas Eve fence carnage

A PORTLAND man last week faced the Portland Magistrates' Court after losing control of his car and destroying a front fence.

John Knalfec pleaded guilty to careless driving and failing to properly have control of his vehicle for the incident dating back to December 24 last year.

The prosecution alleged that witnesses heard Knalfec "hooning" near the corner of Wellington Rd and Edgar St in Portland immediately before the crash.

At around 7.45pm, the 32-year-old lost control of his car as he was headed north on Wellington Rd just near the intersection,

and collided with a brick fence on Edgar St, before hitting the median strip, mounting the footpath and then ploughing through eight metres of paling fence.

In total, police say he travelled 45 metres out of control, and was helped out of his car by witnesses.

Police attended and Knalfec admitted to being the driver and walked through the crash with them, but said he did not think he had been going too quickly.

As well as paying for the repair work for the fences, Knalfec was placed on a 12-month good behaviour bond and ordered to take safe driving and road trauma programs.

**SHOWCASE:** Co-ordinator Lynne Richardson said she was excited for all the Colac Otway Arts Trail events around the region after hearing great feedback from the first weekend of events during Easter.

# Artists plan big weekend across Colac

BY NAOMI NEWCOMBE

**Art is taking over Colac this weekend with the Colac Otway Arts Trail focusing in on Colac and its artists.**

Artists will display more than 300 pieces of art at the Colac Primary School stadium for Colac's art showcase and exhibition tomorrow and Sunday.

Fifteen artists will showcase their artistic talents throughout the weekend with textiles, sculpture, painting, drawing, glass blowing and quilting demonstrations.

There will be coffee and food available at the primary school, a special performance by WildHoney Performing Arts for the kids at 2pm on Sunday and music performances, weather permitting.

Co-ordinator Lynne Richardson said the showcase and exhibition was looking great already and she was excited for all the events around the region.

"We'll also have the announcement of the awards at around 2pm on Sunday as well," she said.

Awards include best in show, judged category

for painting, photography, 3D work and mixed media, as well as people's choice.

Just a short walk from the art showcase and exhibition at the Colac Primary School is the Hidden Small Art Treasures interactive exhibition at the Colac Botanic Gardens.

"Get down there and see those before all the artwork is gone – they're beautiful down there," Lynne said.

"We've had lots of reports of families enjoying it – when the weather has been fine – and finding the treasures with their little ones.

"It's been a lovely family event."

The Colac Woodcrafters Guild will be open the whole weekend at the Colac Showgrounds as well as the new Colac Makers Space annexe with a family painting workshop.

There will be exhibitions in Colac at the Murray Street Market, COPACC, the Colac Makers' Space and Studio 92.

Colac Primary School, St Mary's Primary School, South West Primary School and Colac West Primary School also have art

displays on their fences for people to discover as they make their way around Colac and the different events.

Lynne said she had already heard great feedback about the first weekend of events for the Colac Otway Arts Trail.

"The rain was a little bit of a deterrent maybe but apart from that lots of good feedback, Birregurra had theirs on with the market and they had lots of visitors and sales," she said.

"The Paper Cloth on the Hills Hoist, the open air one, was great and the paper deteriorated in the weather which was lovely to watch because that was what it was designed to do."

Tomorrow is the final day for art lovers to visit the Apollo Bay Art Show and see artwork from coastal and Otways artists.

The Gellibrand gallery, Alda Hubbard's studio at Gellibrand, The Project Space in Apollo Bay and Ziibo will also be open this weekend.

Check out the Colac Otway Arts Trail website and Facebook for more information about all the events happening across the region.

230413JK0170-2

**SCULPTOR:** Artist Clive Murray-White will demonstrate his marble sculpting at the arts showcase and exhibition at the Colac Primary School stadium this weekend as part of the Colac Otway Arts Trail.

# Environment conserved at sanctuary

**Apollo Bay students have had a first-hand look at the importance of habitat conservation.**

The Trust for Nature hosted 11 Year Seven and Eight students from Apollo Bay P-12 College to view restoration work and a new trail at the Trust's Henriksen Sanctuary Reserve, near Marriners Lookout.

The Trust for Nature has used funding from the Federal Government's Wild Otways Initiative to create a small access track within Henriksen Sanctuary and to control weeds within the sanctuary and along Marriners Lookout track.

The secondary school students learnt about land conservation, ecological significance, ecosystem services, weeds and weed management, and discussed weed-management alternatives to chemical control, like using trained weed-eating goats.

Trust for Nature's Corangamite regional manager Jo Day said that

controlling large infestations of weeds in the sanctuary helped to protect the intact high-quality areas from degradation.

"We hope local community will visit the Sanctuary, connect with nature, and hopefully begin to form a sense of custodianship," Ms Day said.

"By investing in weed control along Marriners Lookout track, we are fostering the visitor's appreciation of native habitat," she said.

Corangamite Catchment Management Authority chief John Riddiford said Henriksen Sanctuary was a refuge for endangered species like the rufous bristlebird and black Otway snail.

"Engaging and educating school students on this project is wonderful to see, who better to take care of our environment than the next generation of environmental stewards," Mr Riddiford said.

# Side-swipe driver enters guilty plea

BY NAOMI NEWCOMBE

**A South Australian man must be on his best behaviour for the next year after failing to stop after side-swiping a car on the Princes Highway.**

The 65-year-old man pleaded guilty in Colac Magistrates Court this week.

The court heard the victim was driving on Birregurra-Warncoort Road towards Colac on October 15.

The victim merged onto the Princes Highway at 90kmh and saw the accused driving up behind him.

The accused attempted to overtake the man and side-swiped the victim's car.

The accused stopped in the left-hand lane of the highway and the victim overtook

the accused.

The accused then hit the victim's car again before overtaking him in the emergency stopping lane.

The victim continued driving into the Colac CBD while calling police and turning right into Queen Street, before stopping out the front of the Colac Police Station.

The accused followed the victim into Queen Street, parking on the opposite side of the road, before driving off via Pollack Street.

The court heard police intercepted the man at 9am on October 15 and interviewed him about the incident.

The man told officers that the victim put on his brakes and that was why he side-swiped the car.

He said he didn't

realise he had to provide his details to the victim, and the incident didn't warrant stopping.

The total cost of the damage to the victim's car was \$6049.92, which the offender paid before attending court.

The man told the court that the incident happened during the Victorian floods last year and he had been driving all night trying to get back to South Australia.

Magistrate Michelle Hodgson imposed a 12-month good behaviour bond, with the condition that he continues his bipolar treatment.

"Can you stay out of trouble for 12 months?" Ms Hodgson asked the man.

"You only get once chance for a non-conviction."

# Brother fined for breach of court order

**A magistrate has told a 56-year-old man his attitude must change after persistently breaching intervention orders.**

The man pleaded guilty in Colac Magistrates Court to charges of breaching an intervention order.

The intervention order began on October 24, preventing the man from going to or remaining within 50 metres of his sister.

The court heard that on November 8 the man parked his vehicle outside his sister's house and stood in her yard yelling that he was there to collect his trailer.

The sister told the man he shouldn't be there and called triple zero, as the man left.

Police arrived and spoke with the sister about what happened and where the man lived, before attending the man's house the next day to interview him.

He told officers that his sister had told him to come pick his stuff up.

The court heard of another incident on October 20 at 8.20pm when the accused and the victim were at the Colac Woolworths and an argument started in the car park.

The woman attended the Colac Police Station to report what had happened.

Police interviewed the man at the police station where he admit-

ted to arguing in the carpark.

The man had previously persistently breached intervention orders in relation to the victim dating back to 2020.

The man's lawyer said the man had been at the pub before the Woolworths incident and his sister had come over to him and pulled him off his chair.

When the man left the pub to go to the Woolworths, he said his sister followed him.

"You contact her when you want to, in disregard of the orders," Magistrate Michelle Hodgson told the man.

Ms Hodgson said the incident was very serious and that she could impose up to two years in prison for each of the breaches.

"You haven't articulated remorse and continue to blame the victim in these matters," she said.

She sentenced the man to a 12-month community correction order with supervision and to engage in an alcohol treatment program.

Ms Hodgson also imposed a \$500 fine.

If you are affected by this story and want to seek assistance, contact 1800RESPECT or 1800 737 732, the national sexual assault, domestic and family violence counselling service for people living in Australia.

## Drink driver risks job

**A split-second decision to skull his friend's drink has cost a 27-year-old man \$555, his licence, and possibly his job.**

The man pleaded guilty to a drink driving charge in Colac Magistrates Court this week.

The court heard police observed a black Toyota driving along Costin Street at Apollo Bay at 10.50pm on August 13.

The man presented his licence to police and underwent a preliminary breath test, with officers determining alcohol was present.

The man accompanied officers to the Apollo Bay Police Sta-

tion for a second test at 11.10pm.

The man registered a blood alcohol reading of 0.077.

Officers issued an infringement notice, but the man objected and opted to face the charge in court.

When police asked why he was driving while over the legal limit, he said, "no good reason".

The man told the court he had been at an event and was the designated driver for his group of friends.

He said when exiting the venue, he made the "split-second decision" to take his friend's drink and drink it because they weren't allowed

to take the glass outside.

The man said he worked in construction and would lose his job if he was unable to drive.

He said he was a law-abiding citizen, didn't usually drink and didn't think he would be over the legal limit.

"The legal limit is 0.05 for a very good reason," Magistrate Michelle Hodgson said.

Magistrate Hodgson imposed a six-month loss of licence and a \$555 fine without conviction.

"You need to be careful you don't get behind the wheel in the next six months," she told the man.

## Prison time for breach

**A former Colac man will spend three months in prison after breaching his community correction order.**

The man faced Geelong Magistrates Court this week on a charge of breaching a community correction order.

The court heard the man breached the order by further offending.

The *Colac Herald* understands that the further offending relates to multiple charges of theft and burglary.

The man appeared via video link from custody for indictable matters set to head to court in July.

Corrections recommended the

community correction order be cancelled and for the accused to be resentenced.

The man's lawyer and Magistrate Ann McGarvie agreed.

The man's lawyer said a period of imprisonment was the only appropriate outcome.

Magistrate McGarvie said the man completed some of the community correction order work in residential rehabilitation but didn't seem to have done anything else.

She convicted the man and sentenced him to three months in prison, taking into account 29 days served as pre-sentence detention.

He also received a \$300 fine.

OUT AND ABOUT: Apollo Bay kinder's Alinta Sabbo, Aditya Darmawan and Avery Collier walked to the library to share story time and sing songs with Leon Cox.

IMPORTANT MESSAGE: Apollo Bay kinder pupils Mason Collier, Charlotte Heng and Molly Evans are learning the importance of road safety by hitting the streets at the coastal town.

# Safety lessons for kinder kids

BY ALEX BAIRD

**Apollo Bay kinder kids have been out in force pounding the pavement learning the importance of road safety.**

Apollo Bay Kindergarten teacher Eliza Lee said the early learning centre had organised a range of activities to teach children about safety measures and things to remember when out and about.

They even had a visit from local police officer Margaret Anderson

to share her knowledge on the issue.

"We have had Senior Constable Margaret come to talk about road safety and walked around town to participate in road safety," Ms Lee said.

"We're planning a bike and scooter day to wear helmet and trying to organise a bus trip to Wildlife Wonders to wear a seatbelt."

Pupils this week braved the cold weather and walked to the Apollo Bay library for a visit.

It's part of a grant Apollo Bay Kinder earned from Early Learning Association Australia on behalf of the Transport Accident Commission for road safety education for early childhood.

Ms Lee said they had a host of topics to cover, including physical safety, traffic awareness, developing good habits and safety as passengers.

Bicycle and scooter safety was also a key focus beyond pedestrian skills.

"Educating kinder children

about road safety instils in them an understanding of traffic rules, signals, and signs," Ms Lee said.

"This awareness helps them become more cautious pedestrians and develop essential skills for navigating the road safely as they grow older.

"Introducing road safety habits at an early age lays the foundation for responsible behaviour."

Ms Lee said the program was also a timely reminder for

adults to be good role models for children behind the wheel and when using footpaths and crossing roads.

"Kinder children tend to imitate adults and older peers," she said.

"By setting a good example and following road safety practices ourselves, we encourage them to do the same.

"Being responsible road users ourselves contributes to their understanding and adoption of safe behaviours."

## Quarterly surveys

BY LIAM MCCULLAGH

**Corangamite Shire Council will check in with its residents more often, by moving to quarterly satisfaction surveys.**

The council has confirmed changes to the process of measuring residents' satisfaction levels.

The council previously surveyed 400 people once a year but will now have quarterly surveys of 100 people each.

The four survey periods are June 1 to July 2, August 17 to September 17, November 1 to December 3, and February to March 2024.

Mayor Ruth Gstrein said National Field Services would randomly select residents for the community satisfaction survey.

"The survey has been designed to assess council's performance across a range of measures.

"Residents' opinions about council

will be gathered, then compared against performances in previous years. The responses will identify ways we can improve our service to our community.

"We appreciate participants taking the time to help us with their valuable feedback," she said.

Cr Gstrein said that all personal information shared by residents would remain private.

"Only the overall results are shared with council.

"This is a very important piece of work that is done every year and lets us know what we're getting right and where we need to improve," she said.

To show legitimacy, researchers will identify as National Field Services, never ask people by their name and state how long they expect the survey to take.

No calls will come from a mobile number.

## Park track closures

**More than 40 tracks in the Great Otway National Park will close on Thursday for the rest of winter and part of spring.**

Parks Victoria has released the list of track closures across the state for winter.

The closures aim to protect tracks from damage. Local conditions and weather can affect the timing and locations of these seasonal road closures.

Closures in the Great Otway National park start on June 15 and end in November.

The region's tracks to close for winter are: Big Hill Track, Bird Track, Boggy Creek Track, Brown Town Track, Bunker Hill

Track, Coalmine Track, Coopers No 2 Road, Curtis Track, Delaneys Track, Denham Track, Dunse Track, Five Mile Track, Garvey Track, Gentle Annie Track, Godfrey Track, Grey River Road, H P Track, Halls Ridge Road, Jamieson Track, Junction Track, Kennett Road, Kennett-Wye Jeep Track, King Creek No 2 Track, King Creek No 3 Track, King Track, Link Track, Loves Track, Moggs Creek Track, Mt Cowley Track, Newcombe Spur Track, Old Carlisle Track, Peppermint Parade, Rapier Ridge Track, Sharps Road, Sheepyard Track, Skinners Creek Track, Thomp-

sons Track, Unnamed, Upper Sheepy Track, Whites Track, and Youngs Creek Track.

Meanwhile, Locks Road in the Port Campbell National Park will also close from June 15 to November 2.

Conservation Regulator officers regularly patrol over the winter months and will hand out penalties to anyone ignoring the closures, and the public can illegal vehicle use and gate breaches on public land to 136 186.

Visit [www.parks.vic.gov.au/get-into-nature/safety-in-nature/seasonal-road-closures](http://www.parks.vic.gov.au/get-into-nature/safety-in-nature/seasonal-road-closures) for information on road closures in national parks.

# Four years' jail for sex offence

A Colac man will spend more than four years in prison for trading drugs for sex with a 15-year-old girl.

The man faced County Court on Friday for sentencing of charges of trafficking a drug of dependence to a child, sexual penetration of a child under 16, possessing cocaine, possessing MDMA and possessing a drug of dependence, ketamine.

The court heard the crimes took place on January 26, 2020, when a 15-year-old girl was staying at her friend's house at Warrnambool. The man was 25 at the time.

The group of three girls had been drinking and the victim said she wanted to try drugs.

She messaged the man – who had previously been in a relationship with her sister – and asked if he had any MDMA capsules and how much they cost.

The man, who was at a party, said they were \$20 each and they arranged to meet in Warrnambool's Lava Street.

The girl bought three capsules for herself and her two friends, went home and consumed the drugs, before reaching out to the man for more.

At this time, the man offered the girl six capsules for sexual acts, before increasing it to eight when he grew impatient.

In the early hours of January 27, the man met with the three girls in the park, giving the friends one MDMA capsule each to get them to go away.

The man decided the park was not dark enough for them to engage in sex and they climbed a fence into a kindergarten.

While at the kindergarten, multiple sexual acts occurred.

The man gave the girl four MDMA cap-

sules and walked away, leaving the girl alone and crying in the dark.

The victim reported the crime to the police soon after.

Police executed a search of the man's house on March 5, 2020, finding seven grams of MDMA in capsules, 0.5 grams of cocaine and one gram of Ketamine.

He told police officers that the drugs were his and that he thought the girl was 17 years old, despite denying having a relationship or conversation with her.

Judge Amanda Chambers said the girl was 10 years younger than the man at the time of the crimes.

"You were aware of how young she was, she even told you," Judge Chambers told the man.

The court heard the man was intoxicated at the time of the incident, consuming alcohol and MDMA at a party.

Judge Chambers said the court heard of the man's childhood where his father was abusive, and he developed selective mutism as well as an anxiety disorder.

The man had stable employment since age 18, despite consuming MDMA, Ketamine and cocaine on the weekends.

The man told doctors he "went stupid" after breaking up with the victim's older sister.

Judge Chambers said the man had no prior criminal history, was "otherwise a person of good character" and had good rehabilitation prospects.

She imposed a total sentence of four years and four months in prison with a non-parole period of two years and six months.

Judge Chambers also fined him \$600 and put him on the sex offenders list for 15 years.

MISSING: Police are investigating the theft of quad bike, pictured, and farming equipment from a property at Warrion.

PHOTO SUPPLIED

## Farm equipment stolen

BY GRETA LANNEN

**Police are appealing for information about the theft of a quad bike and farming equipment from a property at Warrion.**

Colac's Detective Leading Senior Constable Mick

Palmer said the burglary happened between Friday afternoon and Monday morning at a paddock on Iletts Road.

He said the theft included one quad bike and farming equipment including

star pickets, fence drainers, chemical drums and an electric fence tester.

People with any information about the theft should call Colac Police Station on 5232 8200 or Crime Stoppers on 1800 333 000.

# New TAFE manager keen to get involved

BY LIAM MCCULLAGH

**The new leader of Colac's TAFE campus says she's committed to expanding the courses on offer at the campus.**

Naomi Harris is South West TAFE's new regional manager for Colac, and says she loves the idea of "being involved in her community."

The born and bred Colac local previously worked as a hairdresser, a product handler and production facilitator at Bulla but says education is something she has always been passionate about.

"I was looking for a change," Naomi said.

"The education sector has always been an interest to me, and I liked the idea of helping local people to obtain certificates here rather than travelling," she said.

Naomi said community involvement was a key reason she had taken on the role.

"I love the idea of being more involved in the community and the challenge that this role is going to bring.

"We will continue to look at ways to grow the local offers, so people don't have to travel out of town. I think Colac is big

PHOTO SUPPLIED

**LEADER: Naomi Harris is enjoying the challenge of leading Colac's South West TAFE campus.**

enough to be able to do that," she said.

The Colac campus offers courses in agriculture, horticulture, individual support, disability and health services for high school students.

"It's a good selection and we will continue to work with the local

community, industry and agriculture to support them with courses they need.

"The Colac campus has been gradually growing and there are now 123 students on campus and in local traineeships and apprenticeships," she said.

# Shutterbugs converge on Colac

BY GRETA LANNEN

The Colac Camera Club will host a prestigious state-wide event showcasing the amazing work of Victoria's amateur photographers, while giving them a chance to capture the beauty of the Colac district.

The Victorian Association of Photographic Societies' annual convention is in Colac from this afternoon until Monday.

The convention allows members of different camera clubs to come together to learn more about photography and socialise with other photographers, with presentations by guest speakers, workshops, an awards dinner and photographic excursions.

Colac Camera Club president Linda Reinen and member Mark Murray said they were excited to be hosting the prestigious event which will predominantly be at COPACC.

The club worked hard to apply for the host position and is relishing the opportunity after VAPS selected it as host.

"There'll be a lot of professional photographers and different workshops taking place for the people who have registered," Linda said.

"All of the camera clubs throughout the state send a certain number of images

**PRESTIGIOUS PHOTOGRAPHERS:** The Colac Camera Club is hosting the Victorian Association of Photographic Societies' prestigious annual convention at COPACC this weekend, drawing camera club members from across the state. Pictured are Gail Maddern, president Linda Reinen, Wayne Alexander, Kerrie Anderson, Murray Howard-Brooks, Lynn Sargeant and Mark Murray.

per club and then they're judged as an overall winner for the state for the year."

About 90 clubs will be represented over the weekend, with about 700 pho-

tographic entries on show, both prints and electronic digital images.

"It's just a buzz for it to be state-wide and have them all come to Colac, and they're pretty darn good

photographers," Mark said.

Photographers are sure to have plenty to work with behind the camera when they travel around the region including to Lake Colac and the Colac Botanic

Gardens for a dawn shoot, Red Rock, Tarndwarncoort for a farm walk, and Cressy Aerodrome where there'll be some action in the sky.

"They are really promot-

ing the district," Linda said.

People must be a member of an affiliated camera club to attend the convention's events, but the photography display is open to the public.

## Motorist crashes into downed tree

BY GRETA LANNEN

A man escaped without serious injuries after his car struck a fallen tree between Colac and Carlisle River.

Colac SES unit controller Steve Tevelein said the motorist had been travelling along Carlisle Road at about 6am on Wednesday when his car hit the fallen tree.

He said it happened about a kilometre past the Irrewillipe Road intersection.

"He's just not seen the tree," Mr Tevelein said.

"He's done some damage to his vehicle. It's going to be off the road for a little bit."

Mr Tevelein said the driver did not suffer any serious injuries, and that SES crews were on the scene for about 20 minutes to clear the tree off the road.

Victoria Police also attended the scene.

**BLOCKED:** Colac SES officers clear a fallen tree at Carlisle River this week.

## Pub manager clarifies Cobden crime details

A Cobden pub manager has provided clarifications related to an incident involving an Irish farm worker who torched a car last week.

Police previously told the *Colac Herald* it was alleged that a 25-year-old Cobden man had been involved in an altercation at Thommo's Hotel and made threats to kill inside the pub. It was alleged he then set a car alight some hours later.

The incident happened on Friday

night, not Saturday, as previously reported.

"There were no threats to kill inside the hotel, nor was there any physical altercation in the hotel," pub manager Dennis Torpy told the *Colac Herald*.

The man later torched a car, but the car was not owned by the pub.

Police have charged the man with threats to kill, carrying a dangerous article and causing criminal damage by fire.

# Volunteers make a difference

Annual appeal: Good Friday volunteers like Stacey Harper and Myka Beaton helped raise a significant amount of funds for the Good Friday Appeal 2023D

COMMUNITIES across the region dug deep on Friday, sending more than \$60,000 to the Royal Children's Hospital Good Friday Appeal.

Timboon and District Good Friday Appeal area manager Lee Edge thanked the community for its "overwhelming support".

"To all of our local CFA units, you all do a fantastic job year after year," she said.

"Thank you again for your support."

Ms Edge thanked the wider community for its ongoing support in helping to make a difference in the lives of children across Victoria.

"Thank you to everyone who donates, sponsors and collects on the day, every little bit helps," she said.

"The day went very smoothly overall with the community supporting the day.

"The annual golf day saw more than 20 teams play on the day. It was an absolutely great day."

Timboon and district supported the cause to the tune of \$46,990 with district fire brigades rallying to bring in a large portion of the final total with Brucknell-Ayrford collecting \$3893.50, Ecklin \$814.95, Kennedy's Creek \$1523.60, Lower Heytesbury \$1734.95,

Nirranda South \$737.10, Nullawarre \$4076.40, Peterborough \$1940, Princetown \$859.65, Port Campbell \$1021.15, Simpson \$2565.40 and Timboon \$4548.70.

In addition to the CFA collection, the annual Eddie's Corner fundraiser raised \$1462.35.

Cobden Quota Friends of Rotary appeal raised \$13,500 for the cause, according to Cobden appeal manager Fran Warden.

"We went really well," she said.

"Cobden has been collecting for the Royal Children's Hospital for 50 years now.

"I'd like to thank the community for their support, not only this year, but for the past 50 years."

Mrs Warden thanked all those who volunteered to collect this year.

"We had quite a few families who went out door knocking," she said.

"We also had Easter Bunny who went out collecting.

"I'd like to really thank the Cobden under 18 footballers who came out and collected; they covered quite a bit of the town."

Mrs Warden thanked Cobden businesses and in particular the Cobden Golf Club and Ritchies IGA for their support throughout the year.

## A day for all generations

King Island District High School students broke their school holidays and attended Anzac Day commemorations in Currie. STORY, PICTURES: PAGE 9

## MAYOR SEEKING MERGER DETAIL

THE King Island Council wants more information before deciding its stand on possible council amalgamations.

A possible forcible merger with the West Coast, Circular Head, Waratah-Wynyard, and Burnie 'catchment area' is one proposal from the State Government's "Future of Local Government" review.

Mayor Marcus Blackie is in Northern Tasmania this week and will

Continued page 2

DAWN OF NEW INDUSTRY – Page 3

# Big weekend for island visitors

THE Anzac Day public holiday provided the opportunity for many on and off the island to take a four-day break. Visitors flew in for some pre-winter R&R and enjoyed bright sunny, even summery days for touring, golf and a bit of fishing and a lot of music listening.

The Moonbird Festival musical experience continued throughout the weekend. An evening Recital of 'Nocturne' for solo guitar performed by Andrew Blanch at the Brewhouse attracted a mixed audience who enjoyed pizza and beer; soirees at Red Hut, Waterwings Gallery in Currie, at Andrew and Di Blake's Whalehouse at Yellow Rock mixed local cuisine and performance and the old sheds at Currie Harbour treated and challenged the audience with 'new sounds' produced using violins made from eel and kelp. The inaugural festival closed on Sunday night with the Bowerbird final concert in the Currie Town Hall.

Ex-residents and musicians Charles and Ros Pearce returned to the island and travelled straight down south to Seal Rocks. They surprised tourism operator Ian Johnston and his off-road King Island Tours group with a memorable 'pop

up' saxophone serenade during their paddock-to-plate experience. Charles performed later at the fully booked Wild Harvest restaurant and on Sunday at Legs wine bar and café in Currie.

King Island is becoming known as the destination to make a memorable experience. A group of friends from around Australia chose this four-day break to celebrate this year's significant birthday. The group, predominately from NSW and Queensland meet up every couple of years and celebrate a group birthday and on significant dates will create memories travelling somewhere special. This year King Island was chosen for the year's 50th birthday celebration. It was four days of golf, fishing around the island, and local dining. On Sunday, after having fishing success on the Naracoopa Jetty in the morning, they were excited to find the trevally running at the Currie Wharf. After the catch and release they were off to watch the footy, find a crayfish and have dinner at the King Island Club.

Dave said, "This is great, this is what making memories is about."

**CLOCKWISE FROM TOP LEFT: A 50th full of golf fishing and footy makes memories for interstate visitors. • Classical guitarist Andrew Blanch performed the premiere of Nocturne at the Brewhouse.**

• Roger Banfield, left, Ros Pearce, Sue Brooks, Sonia Louis and well-known horn player (ex) King Islander, Charles Pearce on sax entertained at Legs wine bar and cafe in Currie.

# Mayor seeks merge detail

From page 1

speak with other mayors to gain their insights and prevailing sentiments.

The review proposes that Tasmania's 29 councils be merged into nine "super-councils" based around "communities of interest" and include "any proposed consolidation or alteration of existing Tasmanian council boundaries."

The review places King Island in the "Western Community Catchment" and states that "the LGAs making up this region are actually considerably more closely connected than their geographical separation would suggest."

Local Government Minister Nic Street said that the Government intended to bring forward legislation to force council mergers and agreed to extend the review's final reporting date by three months, to September 30 to provide time for the community and the sector to meaningfully engage on reform proposals.

"Interestingly, Tasmania had 40+ Councils up until 1993 when we downsized to the current 29," Mr Blackie said.

"So, the current structure has had 30 years to establish and mature, during which time the Tasmanian population has increased by a third.

"So conversely you could argue we maybe need more councils again.

"Tasmania's councils are certainly not perfect and could always be improved but I would argue they do a pretty good job, all things considered, our streets are not like Venezuela or Afghanistan. Furthermore, did we the voters and ratepayers ask for this or vote for this reform agenda?

"At 115 years old King Island Council remains one of the oldest continuous councils in Tasmania.

"King Island Council is historic, successful and financially sound.

"Our isolation has honed our self-sufficiency and we provide the only layer of Government representation to King Islanders."

**The Western Consultation Group as outlined in the Future of Local Government Review.**

**Western Consultation Group**

# Dawn of new industry

GROUP 6 Metals (G6M) executives and senior management hosted raw materials sourcing, logistics, financing and marketing services firm Traxys for a site visit at the Dolphin Tungsten Mine on King Island this week.

Construction at Dolphin is nearing completion, with the first concentrate on target for Q2.

G6M entered a non-binding memorandum of understanding (MOU) with Fortescue Future Industries (FFI) to explore opportunities for providing renewable energy to the Dolphin Tungsten Mine.

Following the announcement earlier this month of the MOU, FFI Director East Coast and New Zealand Eva Hanly said FFI is working to help develop a new green energy and green hydrogen industry in Tasmania as well as deliver the local jobs and economic opportunity that can follow.

“This partnership with Group 6 Metals to look into powering its existing mine site with renewable energy is a really exciting prospect for us, as is the potential to use surplus power to produce green hydrogen and its derivatives and kickstart the local industry.”

**Helga, Tora, Inga and Ursa standing tall in a perfect sunrise on the Island.**

# Fishy favorite all but off the menu

Familiar to fishers, a Southern Sand Flathead.

KING Islanders will be limited to a daily bag-limit of just five Sand Flathead, with a minimum size of 35 centimetres under changes announced by the State Government to commence on 1 November.

Several other popular species such as southern calamari, striped and bastard trumpeter, blue warehou, southern garfish and jackass morwon are also the subject of consultation for proposed new conditions from 1 November. It is anticipated there will be further bag and size limits.

Last week, the Government announced immediate changes to the size and bag limit for flathead with the further proposed big

changes to commence from November 1.

This is despite the Government saying just three months ago there would be no changes.

Immediate interim measures for Sand Flathead have been introduced which came into effect on April 20. These include: minimum size and limit for flathead being increased from 32 to 35 centimetres, and a new statewide daily bag limit of 10 flathead (was 20).

From 1 November, (subject to consultation) it is proposed to limit the daily bag limit to just two fish in the south, and five fish for the remainder of the state, with a

maximum size of 38 centimetres in the south, and 40 centimetres for the remainder of the state (no size limit on Bass Strait Islands).

People can have their say at <https://fishing.tas.gov.au/community/fisheries-management/management-changes/scalefish-fishery-rule-changes>.

The new measures come after an assessment late last year conducted by the Institute for Marine and Antarctic Studies on a number of scalefish species to being marked as either depleted or depleting.

Flathead is the most popular recreational fish in Tasmania and has been labelled as 'depleted'.

## Protecting future of our fisheries

**JO PALMER**  
Minister for Primary Industries and Water

FROM enjoying fish and chips with the family to heading out on the boat to catch a few "flaties", fishing plays an important role in the lives of so many Tasmanians living in the North West and West.

Growing up on the doorstep of waterways from Strahan to Burnie creates a special connection to our fisheries and I want to ensure we protect this way of life for our children and grandchildren.

A recent report from the Institute for Marine and Antarctic Studies found a number of Tasmania's scalefish species are depleting or depleted. This includes southern calamari, striped trumpeter, bastard trumpeter, blue warehou, southern garfish and jackass morwong.

Of particular concern is the depleted status of the sand flathead, which is our most important recreational fish. It accounts for 70 per cent of all recreational fish caught in the State.

The science tells us we must make decisions now that will help our fishery tomorrow and that is why

I have introduced interim measures on sand flathead.

Coming into effect on April 20, these interim measures include an increase to the minimum size limit

of sand flathead from 32 to 35 centimetres and a new statewide bag limit of 10 sand flathead for recreational fishers.

The commercial take of sand flathead from Frederick Henry and Norfolk Bays [Tasmania] has also been prohibited as precautionary measure.

These interim measures will be in place until 1 November 2023 and are an important step towards protecting the future of our fishery for our children and grandchildren.

I want to ensure Tasmanians can continue fishing for generations to come and that is why we are also consulting on a range of proposed scalefish rule changes for recreational and commercial fishers.

These rules include reviewing fish size and bag limits for depleted species; introducing two new limited commercial calamari licence types; reviewing recreational gillnetting arrangements; and introducing registration of charter fishing operation and reporting requirements.

I encourage all Tasmanians to attend the public information sessions on the proposed rule changes being held across the State during April and May.

This will be a chance to learn more about the proposed changes and to have your say. Consultation is open until May 29.

## TASMANIAN FREIGHT TO KING ISLAND

**FREIGHT CONNECTIONS PTY LTD**  
DEPOT: 1-3 ANGLESEA STREET, WIVENHOE (BURNIE)  
PHONE: 03 6432 4362 or 0403 540 633

Freight Connections will commence receiving freight for King Island Wednesday 19/4/23 at the above depot in Wivenhoe.

**NOTE:** Initially, receipt days for delivering freight into the depot will be Wednesdays and Thursdays, 8:30am - 3pm.

Freight Connections will pick up freight Monday - Friday (5 days a week) statewide.

## Footy up for 111th

KING Island Football is 110 years old, is the only three-team competition in Australia and it is fully volunteer-run.

The 111th-year season starts next Saturday 29 April 2023, and all games are at the Currie Oval in Netherby Road.

Auskick 5 - 12 years boys and girls start at 10.30 am.

Players need to be registered before attending play. All Enter 'King Island Auskick Centre' as the club/centre. For information, questions and offers of help, contact Stacy Martin call on 0429 611 019.

Start times Juniors 12.30 pm

Seniors 2.30 pm  
Umpires are in short supply again, and KIFA is calling for people to step up and get in touch.

With help from AFL Tasmania, the KIFA has interchange agreements in place with all the leagues in Tasmania to help to make it easier for players who come to the island for work and would like to play while they are here.

The first game of the 2023 season is a replay of last year's Grand Final between Grassy Hawks and North Bulldogs.

# Long-awaited work to start on slipway

Repair works to commence on the closed Currie Wharf slipway in June.

TASPORTS has engaged Tasmanian-based contractor BridgePro Engineering to undertake repairs to damaged sections of the slipway at the Port of Currie which was closed to fishers late last year just prior to the opening of the cray season.

TasPorts Chief Operating Officer Stephen Casey said the works would begin at the start of June this year and are expected to be completed within a month.

Despite the King Island Slip taking

bookings and providing six months of assurances to boat owners and fishers, TasPorts closed the slip just days away from the fishers' peak trading period and suggested that they tow their boats elsewhere for work.

While the King Island slipway was closed, the Port of Stanley slipway was identified as the most suitable alternative to meet the needs of the Currie-based fishing vessel operators.

"TasPorts closed the slipway at the port late last year because of the poor condition of

submerged sections of the slipway given its age and exposure to the marine environment over many years," Mr Casey said.

"It was not a decision taken lightly and was taken in the context of ensuring the safety of King Island's fishing fleet operators, and TasPorts' personnel, and the wider community," he said.

Mr Casey thanked Port of Currie slipway users for their cooperation during the closure, in particular King Island fishing representatives who worked closely with TasPorts.

# Island bonds survives p

IT WAS 1988 and the King Island District High School Year 10 kids left the island to continue their schooling, take on jobs and explore the world.

Over the weekend, the '88 tribe came together once again. They came from far and wide and met up on King Island to celebrate Monique Daniel's 50th birthday. Some old schoolmates still live on the island, some have visited their families since leaving and others have never been back to the island since leaving for life in other places. Monique's birthday was just the reason to have a long-awaited get-together and reunion.

Monique's brother Paul and wife Cynthia Daniel hosted the big bash at their Pegarah Road property shed. Some second names have changed, in some cases more than once, but it was a good year producing some well-known island identities and partnerships.

Then there were the families and locals who were not in the 1988 cohort but are part of the King Island tapestry. Bergin through Bowling to Eelman, Fitzpatrick, on through the island alphabet of names reaching Summers, Whitehouse and Wishnact.

Monique has her album of pictures and said reminiscing with old friends and making new memories was wonderful. "All my friends from both my King Island home and from away kept saying, 'You've got really good friends, and I'd just say, that's because we are all connected by the same thread. It runs through us all because... you are my friends.'"

ABOVE: Away friend Megan Lowerson and Monique get into the country party vibe.

# Medals to those who step up

LAST Saturday four King Island firefighters volunteer personnel were recognized and awarded at the Tasmanian Emergency Services North West Region medal National and State presentations in Penguin.

Robert Payne Boyd Hoare and Chris Crouch were recognised with TFS National Medal First Clasp and David McKerrow Peter Constable received the National Medal. Robert Payne Boyd Hoare both also received 30-year Service awards in line with the National Medal.

In 2021 David McKerrow (who recently left King Island) and Jan van Ruiswyk were acknowledged with a National Medal and Rod McGarvie, who has received previous Awards, was recognised then for his 50 years of long service.

The National Medal was established on 14 February 1975 as one of the original elements of the distinctive Australian system of honours and awards. It recognises long and diligent service by members of recognised government and voluntary organisations that risk their lives or safety to protect or assist the community in the enforcement of the law or in times of emergency or natural disaster.

“The National Medal: For Service” is worn on the left breast on all occasions when Australian full-size orders, decorations and medals are worn.

Last week many King Islanders witnessed firsthand the critical role our volunteer emergency services play when Darren Brandenburg went missing and fortunately was safely located.

The visual for many in Currie and surrounds was the arrival of a Tasmanian search and rescue helicopter as it swept the township and surrounds in the search, and it made the situation real. On the ground, Tasmanian Police briefed the volunteer emergency services and they were deployed. While the helicopter was heard and seen, the King Island emergency services were on the frontline with the challenges of being in a small community, knowing the players they were helping and not knowing what outcomes they would face.

The recent awards honoured our emergency service volunteers. The awards highlighted the proportion of people who are active island volunteer officers who have received National Honour awards this year and in previous years.

They do grow old as we grow old, age does weary them, and the end horizon is quickly approaching when predictably a core number across the island’s emergency essential services will end their duty and obligation to the community. Others need to step up now and join the island’s emergency brigades so that in the not-too-distant future the next lost child, man or dog will be found; that fire will be stopped from getting out of control and life and property is saved and that life-saving breath or getting to the hospital happens.

**SES Volunteer Dennis Beveridge with police helicopter in the background searching for the missing man.**

Picture: Vinnie Holthouse

## Local data tuneup

EARLIER this year, the King Island Council monthly meeting minutes recorded that the council planned to implement a standard review of its cybersecurity and data protection and security and was proceeding with this action.

The proactive, protective, local action to review internal processes is considered sound practice, particularly given the national corporate data breaches (Medicare, Optus, Latitude and others) that have increasingly occurred and impacted residents on the island and elsewhere.

The King Island data risk management decisions were made prior to the recent ransomware gang C10p exploiting a vulnerability in the third-party file transfer site GoAnywhere MFT and the subsequent release of state government-controlled documents on the dark web which revealed Tasmanian residents’ personal details.

The mayor advised the Courier that a technical specialist was due on the island and would be undertaking the planned review of data security and systems.

## Support for small business

THE State Government is bolstering the provision of business advice to entrepreneurs with the release of the New Business Support Pilot Program.

This program will support those looking to launch a new small business and new businesses, providing them with the information and resources needed to take the first steps to see their ideas through to fruition.

Under the New Business Support Pilot Program, participants will receive up to two hours of free advice from qualified business advisors.

The New Business Support Pilot Program will begin on 1 July 2023 and will complement the advice services offered to more established businesses through the Tasmanian Business Advice Service.

A grant program to fund the delivery of services by up to four service providers across four regions opened on 17 April 2023 and closes on 12 May 2023.

The Program will be delivered for an initial 12-months from July 1 to June 30, 2024.

# Anzac traditions live on

**Speaker Ryan Cooke, grandson of King Island soldier settlers Bob and Hazel Cooke and son of Ira and Rosemary Cooke, nephew of Coralyn and Gahey. He read *Our Sarge* a poem written about his great uncle Allan Cooke who with his brother Bob served in the Royal Australian Artillery 234 Australian Light Anti-Aircraft Battery in New Guinea.**

## Numbers dwindling

ABOUT 100 King Islanders gathered in the dark at the Cenotaph in Currie for this year's Anzac Dawn Service.

They spoke in whispers and then stood somberly in silence to honour the generations from the past to the present who selflessly served the country.

The first rays of light began colouring the horizon and the momentary strokes illuminated King Island RSL Subbranch president Tom Shaw as he spoke of the defining moments and commonalities between each generational Australian war or conflict and what underpins the spirit of Anzac.

AnzacDay 2023 marked 50 years since Australia's involvement in Vietnam. King Island RSL Subbranch vice president and Vietnam veteran Gary Barker spoke of the contentious issues that surrounded Australia's involvement and the refusal to acknowledge returning soldiers' Vietnam service, the overall lack of support including within the RSL.

Until 2021 only one King Island Vietnam veteran was recognised, Ian Lynch.

President Tom Shaw

recalled the names of the 35 King Islanders who served in Vietnam at the Dawn Service.

Their names are now remembered on the Honour Board roll in the RSL Club rooms.

Numbers were noticeably lower this year, but still following tradition, people lined Main Street and gathered at the Cenotaph for the march and Main Service.

In bright sunshine members of service organisations, the community and King Island District students (who broke school holidays to attend) marched behind the Honour and service organisation flags to the town hall and cenotaph to reflect on the legacy of those who have served the nation, their values and the challenges.

This year's guest was Sergeant Ryan Cooke, an ADF veteran with operational service. His grandparents Bob and Hazel were King Island soldier settlers, his father and mother are Cr Ira and Rosemary Cooke, nephew of Corralyn and Gahey. The family arrived on King Island around 1958 and settled on Contention Road, now called Lancaster Road.

**TOP: King Island Anzac Day 2023 commemoration at the Cenotaph in front of the Currie Town Hall. ABOVE: The Anzac Day service began with a parade to the cenotaph following the Honour and Service organisation flags. BELOW: King Island RSL Subbranch president Tom Shaw at the Anzac Day commemoration service in Currie.**

# Three cheers for veg

Jackie Goodwin with Christian Robertson and members cleared and prepped the Community Garden beds for planting at the recent working bee.

Phoenix House project coordinator Katey Griffiths and members celebrated Vege Month with vegetarian lunch that included brocomole and vege sticks.

It's garlic bulb planting time and Janet Hamilton cleaned and separated bulbs ready for planting out in the ground.

THE King Island Community Garden members braved the weather last week during the Working Bee Day and gave a much-needed helping hand to clear out existing beds and ready them for the new season and prepared garlic for planting.

Phoenix House is active in the Eat Well Tasmania program which champions healthy eating and promotes opportunities to eat healthy Tasmanian-grown produce and value-added food. April was 'Vege Month' and was celebrated with a lunch of Brocomole and Vege Sticks, Garlic Potatoes and Cheesy Vege Bake.

This week's 'Veg it Up in the Garden' cooking classes used the Community Garden organic vegetables to make BBQ Cauliflower steaks, Sweet Potato fries and Tromboncino fritters. Siripa Day is back today with her popular Thai cooking class, with recipes

that are designed seasonally and what is grown and available in the garden.

Phoenix House is hopeful that it will be successful with grant applications and will be able to replace more of the existing old pallet beds with double sleeper height raised beds. We will have more outside beds available come July and will inform members when they are ready for planting.

Phoenix Community House in partnership with King Island Lions Club is now a drop-off point for can recycling. The red and yellow bins are at the back of the complex, near the Men's Shed, 25 Meech Street Currie.

Tickets are on sale at the House and at the Grassy Op Shop for the Phoenix House Mother's Day raffle which will be drawn 10 May. This year's basket of goodies includes bath items, face and body pampering products and winter comfort treats.

Action last year ... Emerald Kaylie Smith contests the ball with Topaz Stella Smith.

## Netball part of island fabric

### ON COURT STEPH ELLIS

NETBALL is an integral part of our island's community's fabric and wellbeing.

Sport provides our community with mental, social, educational and physical benefits and brings people together, on and off the court. Pleasingly, King Island Netball returns in May with three winter competitions - Under 12's (Grades 3-5), Under 16's (Grades 6-10) and an Open Women's competition.

The 2023 executive committee is comprised of Lauren Harvey (President), Tegan Hennessy (Vice President), Paige Williams (Secretary) and Steph Ellis (Treasurer).

Vying for the 2023 Open

Premiership are the North Bulldogs, Currie FNC, Salty Muttonbirds and the Grassy Netball team. The competition will be played on a Tuesday evening in the school gym.

Competing for the jewels in the Under 12's competition are Rubies (coached by Emma Hutchinson, Abbey Jones and Mel Shaw), Topaz (coached by Claire Perry and Paige Williams) and Emeralds (coached by Petrina Clemons).

Playing for the Under 16's Premiers title will be Netherby (coached by Tegan Hennessy, Nicole Vasta, Sarah McRae), Neva (coached by Naomi Holmequest and Jess Bell) and Shannon (coached by Rikki Smitheran and Tegan Harris).

This year, the Under 12 and Under 16 competitions will be

played on a Saturday morning.

Net-Set-Go will commence on July 10th, running for 12 weeks between 3.10 pm and 4 pm. The later season start date is to allow as many kids as possible the opportunity to try Auskick and Net-Set-Go (which previously ran at the same time of year).

The Netball Association is pleased to welcome on board a wide range of sponsors this year. The association is also unveiling a new logo, website and merchandise line to celebrate its 65th year of netball on King Island.

There are still playing and umpiring opportunities available. Anyone interested should reach out to the executive via [kinetballassoc@gmail.com](mailto:kinetballassoc@gmail.com). Happy netballing,

# One champ round to go

BUGGY

ONE more round to go in the Club Championships. It's still a two-player race to take out this year's Championship.

A good field of twenty, in near-perfect conditions took part in the third round and scores reflected it.

It would appear Tim Barnes has made the most of the conditions to record an excellent 74 off the stick. His challenger Sukma Bowling is 84 and now 10 shots behind. However, it's best 3 of 4 rounds so it still could be very close.

The winner for the week was Lance Anderson with a nett 68, 88 off the stick. Runner up was the veteran Jim the Saint McFadzean on 70 nett. Life member and oldest player Golfer Saint Noble 73 nett.

The current leaders in each grade

A Grade

Tim Barnes 227

Sukma Bowling 237

B Grade

James Jakowenko 269

Nathan Melville 279

C Grade

Lance Anderson 286

Greg Barratt 304

All three grade leaders have good leads over their rivals.

Next week's round will not be a draw so turn up and play your weekly game with whomever you would like to play with. Players will wait with bated breath on the final outcome of Club Champions.

Nearest the Pin 3/12 Phil Noble

18th No-one

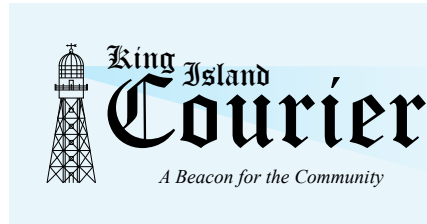

Money Hole Lance Anderson

Overall nett leaders are Tim Barnes and Lance Anderson on 224 and Geoff Watts on 230. The next best is James Jakowenko 233 and several players on 238.

Two players succeeded in recording a Moose – 10 on one hole. No names this week, but if repeated headlines next week.

Good day for golf on the classic third hole.

# Illegal fish haul at Basin

LAW AND ORDER

BY JESSICA HOWARD

Warrnambool

A VIETNAMESE national was caught with more than 20 times the legal catch limit of abalone from a Killarney beach.

Dieu Van Nguyen, 60, pleaded guilty in Warrnambool Magistrates Court to Fisheries Act charges relating to exceeding the catch and size limit of abalone.

The court heard he was observed by Killarney resi-

dents taking a large amount of abalone from The Basin on January 3 this year.

Victorian Fisheries Authority were called and authorised officers attended the scene at 5.35pm.

Nguyen and another male were seen wearing camouflage-print wet suits and walking towards a Toyota RAV4.

A female and a young male were in the car.

When asked if they had any fish, the young male retrieved 14 abalone, of which

10 were undersized, from the boot of the car.

The daily catch limit of abalone is five and they must measure at least 13 centimetres in the Port Fairy coastal reserve area.

The officers took the abalone and when returning them to the water, they were approached by three community members who said they had seen two of the men with a three-quarter-full bag of abalone.

One witness said they confronted Nguyen who

Man exceeds catch limit.

didn't respond.

The officers were taken to the location the group had been diving at and they found a homemade green catch

bag with 73 live abalone, of which 70 were undersize. A further search two days later found an almost identical green catch bag containing another 23 abalone, which were in the process of decay.

The court heard a total of 110 abalone were taken by Nguyen - 22 times the legal limit.

A lawyer for Nguyen said the man had moved to Australia from Vietnam in November last year and knew nothing about the nation's laws.

Magistrate Simon Guthrie said he considered the offending serious, particularly when laws were in place to protect the nation's marine industries.

The court heard co-accused Thi Nguyen and Anh Duong Do would plead not guilty to the offending.

Mr Guthrie said he would prefer to wait to see what happened in their matters before handing down his sentence.

Nguyen will appear in court again on June 19.

## Residents urged to get flu shot ahead of 'perfect storm'

HEALTH  
Region

SOUTH-WEST residents are being urged to get a flu shot, with predictions a range of flu-like viruses could create a "perfect storm" this winter.

In Warrnambool, there have been 34 confirmed influenza cases this year, while there have been 12 in Moynes Shire.

This is higher than the number of cases in Glenelg Shire, which has had four and Southern Grampians

Shire, which has had six. There have been three cases reported in Corangamite Shire.

Chemist Warehouse Warrnambool's Jason Yacoub said flu shots had been available since late March.

"There have been a lot of people booking appointments," he said.

Mr Yacoub said the flu shots were available at the Gateway Plaza chemist and people could book online.

He said the chemist had

a good supply of the flu vaccinations. Bupa Health Insurance chief medical officer Tony MacDermott said modelling from the northern hemisphere winter indicated the flu season would arrive earlier than expected in Australia and be worse than last year, with more hospitalisations likely.

Dr MacDermott encouraged people to get vaccinated before the end of May to ensure they were protected.

"We're anticipating a per-

fect storm of flu, COVID-19 and other flu-like viruses to come together this winter," he said.

"The best protection will always be prevention, and our advice to people who are due for their COVID booster is to get their flu shot together with their COVID booster ahead of the winter season."

Dr MacDermott said flu trends in the US, where hospitalisation rates were significantly higher than the year before, would likely be

mirrored in Australia.

"The higher risk of being hospitalised with the flu this year means it's even more important to get vaccinated, especially for high-risk groups," he said.

Australian Medical Association vice-president Danielle McMullen said those most at risk from the flu were people under five and over 65, as well as those with serious health conditions.

"Getting a flu vaccination will provide protection

against the more serious effects of influenza and help us protect loved ones," she said.

Royal Australian College of General Practitioners president Nicole Higgins said Australia had already recorded more than 21,000 cases of flu this year - far higher than during the pandemic.

"People have been travelling more and we've stopped measures like wearing masks and washing our hands which allows flu to spread," she said.

# Swap your old hat for a new one

**BUSINESS**  
BY MADELEINE MCNEIL  
Warrnambool

PRE-LOVED hats and fascinators gathering dust are getting a new lease on life with a Warrnambool boutique helping pass them on to new owners in time for the May Racing Carnival.

With less than a week until the popular carnival, Warrnambool boutique Phinc is stocking and selling people's pre-loved headwear with the original owner receiving a store credit once it is purchased.

Phinc owner Tracey Togni said the credit could go towards purchasing a new item such as clothing or shoes or another pre-loved hat from the selection.

She said some women purchased a pre-loved hat to wear to the carnival and then resold it the next year.

"It means people can change up their hat," Ms Togni said. "You'll buy a hat

Warrnambool's Phinc is stocking and selling people's pre-loved headwear in the lead-up to the May Racing Carnival. Any unsold items are returned to the original owner. Pictured is owner Tracey Togni with one of the hats for sale. Picture by Sean McKenna

but you're not going to wear it every season, you might share it, but sometimes they sit in your wardrobe so you're better off to change them over and you can pick up another one."

The headwear is used to create new looks for a

fraction of the hat's original price, with some new owners tweaking it to suit their chosen outfit or colour palette.

The sustainable initiative ensured the items were being used and loved by someone else rather than sitting unused at home, she said.

Ms Togni said the initiative was in its third year and had proven popular. "One woman brought in five hats and she's sold three of them," she said. "At the end of it we'll total it all up. She might have \$150 to buy a new pair of shoes."

# Cannon Hill not new idea for gallery

## LOCAL GOVERNMENT

BY KATRINA LOVELL

## Warrnambool

IN A case of history repeating itself, it seems building an art gallery at Cannon Hill is not a new concept with the idea first mooted for the city in the 1970s.

The proposed move could have seen an art gallery incorporated into a 1000-seat performing arts centre on the prominent site.

But the idea didn't take off after the mayor of the day used his casting vote which saw the town hall renovated and expand into what is now known as the Lighthouse Theatre rather than move to a new facility.

The current Warrnambool City Council is investigating the possibility of building a new art gallery on the top of

Cannon Hill with a business case into the site under way.

The 4-3 vote of council to do a \$100,000-plus business case on the Cannon Hill site caused backlash from the community with multiple petitions attracting thousands of signatures and a 'Hands off Cannon Hill' bumper sticker campaign. A petition in support of the idea attracted 500 signatures.

According to the book detailing Warrnambool's history, *By These We Flourish*, the authors wrote in the late 1970s the search for a site for a new art complex considered 20 locations including Caramut Road, Sherwood Park and Cannon Hill.

But the suggestion of Cannon Hill, the book says, was opposed by a vocal councillor, as well as then-Member for Warrnambool Ian Smith

and a "considerable body of public opinion" including a petition signed by 500 people.

Mr Smith, now 83, said he no longer recalled much of the debate but as a local member would have been lobbying for it not to be on Cannon Hill. "It's quite an iconic site ... you wouldn't want to pollute it much further," he said.

"You don't want to have sprawling asphalt all over the place to provide car parking."

Former town clerk Vern Robson said one of the suggestions was to build a 1000-seat performing arts centre on the top of Cannon Hill which incorporated an art gallery and underground car park. "That was all part of the debate at the time," he said.

The need for a conference

Vern Robson

facility, upgraded performance space and bigger art gallery were all on the agenda. At the time the gallery was outgrowing the former bank building on the corner of Kepler and Timor streets.

And the town hall was in dire need of an upgrade with performers having to change in tents erected at the side of the venue and there were

no proper toilet facilities. "It was really a disgrace. You couldn't describe it any other way," Mr Robson said.

When, in about 1977, the town hall was declared unsafe, councillors' focus turned to preserving the old town hall's ornate ceiling which was more than 100 years old. "A lot of people loved the old town hall and

they loved the old ceiling," Mr Robson said.

The mayor's casting vote sealed the future of a new performing arts centre on the current site and saved the ornate ceiling. "It was a very controversial debate," Mr Robson said.

But the biggest focus for ratepayers' groups was the cost of having a new facility

# Irish spirit flows through the streets of Koroit

COMMUNITY  
BY LILLIAN ALTMAN  
Koroit

MORE than a year ago, the Consul General of the United States of America was driving along the Great Ocean Road when she spotted a Koroit Irish Festival sign.

The Melbourne-based Kathleen Lively took it as a sign to attend the festival in 2023.

"I came back to the consulate and I said 'they've got an Irish festival, have you ever been?' They said no and I said 'we're going to go next year,'" she told *The Standard*. Ms Lively said Koroit was a tight-knit and welcoming community. "They're so happy to have guests and talk to people from near and far," she said.

The festival held a book club session on Thursday before its opening night on Friday, with festivities including Irish sports and music and competitions across the rest of the weekend.

It has become a gathering not just for people from the south-west and interstate, but Irish expats.

Lorraine Monaghan, who lives in Adelaide, attended with a group of disability carers, and her sister, Sinead, who travelled from Dublin.

"When I was over here last year at the festival I got so emotional in the pub one night I had to leave," Lorraine said. "I was crying because the songs reminded me of home."

Greta Murphy, 7, from Melbourne proudly wearing an Irish for a day sash.

Jameson, 14, Dylan, Leanne and Bradley Wood took part in the street procession. Jameson won the Australia's most Irish name competition.

# Accused brothers in court

LAW AND ORDER

BY JESSICA HOWARD

Warrnambool

WARRNAMBOOL brothers charged over their alleged involvement in a string of ram raids and burglaries across the south-west have now been charged with trafficking methamphetamine.

Luke and Kaine Moon were arrested in March and subsequently charged with 19 offences, including burglary, theft, criminal damage, and theft from mo-

tor vehicles.

The charges relate to an alleged crime spree spanning two months and involving multiple burglaries, including the theft of more than \$70,000 cash from a residential property and a ram raid at the BP IGA Express on Mortlake Road.

The brothers, aged 38 and 36, faced Warrnambool Magistrates Court on Monday for a mention hearing.

An additional charge of trafficking the drug ice was laid against them three

days earlier.

The court heard the charge relied on alleged evidence recorded on a dash cam, as well as mobile phone records.

Tim Hancock, representing Kaine, said the prosecution had agreed all charges could be heard in the magistrates court, and not a higher court, despite the amount of damage allegedly caused to local businesses exceeding \$100,000.

He admitted his client was also accused of stealing the large quantity of cash as well

as vehicles of "significant value".

Police allege the brothers stole vehicles in burglaries at two Warrnambool businesses before using them in the alleged ram raid at the BP service station and retail store Cheap As Chips.

It is alleged the two bal-clava-clad men reversed into the Mortlake Road service station just after midnight on February 22 and failed to steal an ATM.

The brothers are also charged in relation to bur-

glaries at the Warrnambool Football Netball Club and Cobden Golf Club on February 27, an attempted burglary at a Dennington service station on March 8, a burglary and theft at residential property in Allansford's Station Street on March 16, and attempted burglaries at a Mortlake Road laundromat on March 18 and 29.

Lawyers for both men asked magistrate Peter Mellas on Monday for an adjournment, which was granted.

The brothers, who remain in custody on remand, will appear in the same court on May 29 for a further mention hearing.

Warrnambool police Detective Sergeant Andy Raven previously told *The Standard* the alleged offending caused havoc in the middle of the night and while innocent victims were asleep.

"This has cost a lot of business owners their livelihood with cars being stolen and extensive amounts of damage caused," he said.

# Medication reform will lead to 'astronomical shortages'

HEALTH  
Camperdown

A MAJOR pharmacy reform allowing residents to buy twice as many medications for the price of one script has Camperdown pharmacists fearing a medicine shortage in the south-west.

Health minister Mark Butler last month said a 60-day supply of 320 medications, rather than the current 30-day supply, would be made available from September.

He said the changes would effectively halve the cost of medications treating chronic conditions such as heart disease, cholesterol, Crohn's disease and hypertension.

But Sarah Venn and Sarah Baker, who own Camperdown Pharmacy and The Little Pharmacy & Shoe Shop, said the changes would decrease regional patients' access to healthcare.

"To implement something like this so quickly, you have to get all of these medicines

into Australia. The whole supply chain is not cracked up for 300-plus medicines and the shortages will be gigantic," Ms Venn said.

She said there were already about 400 medications listed as being in short supply. "We already spend hours each week trying to ensure our pharmacy has enough medication for our customers," Ms Venn said. "Sixty-day dispensing means there could be astronomical shortages."

Ms Venn said keeping larger quantities of medications at home could also cause confusion and was a risk to "everyone, especially children".

"Accidental overdoses can lead to hospital admissions and we don't want to be part of that problem," she said.

Ms Baker said the proposed changes would also inevitably reduce revenue to pharmacies.

"A cut to healthcare is the last thing we need in country

healthcare and will lead to an increase in costs to services pharmacies provide for free or at a reduced cost, like home delivery, blood pressure management, vaccinations and services to nursing homes," she said.

"It will also result in job losses unfortunately."

The health minister has denied the changes would affect medication supply, stating only seven of the proposed medications to be listed had any supply issues.

ConocoPhillips

Community Information Session

ConocoPhillips Australia is currently developing an Environment Plan for the proposed Otway Exploration Drilling Program and is hosting a community information session to outline the proposed exploration activities and the decision-making process.

Residents and all relevant persons are encouraged to come along to meet the project team, learn more about the proposed activity, ask questions and provide feedback.

Date: Tuesday 2nd May 2023

Location: Port Fairy Community House at Railway Place

Time: 6-8pm

Light refreshments will be provided.

## ACTION STATIONS AT DOLPHIN MINE

GROUP 6 Metals will be ready to start production as early as next week.

The company this week told the Australian Stock Exchange (ASX) that construction of the Grassy process plant was nearing completion.

The first sale of concentrate is planned for June.

The company is optimistic as there are strong market conditions and an increase in tungsten demand.

**Continued page 2**

# Kids branch out for new school term

STUDENTS returned to school on April 26 for the start of Term 2 at King Island District High School. Student well-being and school improvement continue to be priorities. It will be a busy term marked by extended learning program opportunities, and camps that complement core curriculum areas.

"Term 2 has started off very productively. Students have reconnected with staff and peers and have all engaged in their learning programs. We are looking forward to a busy and rewarding term," principal Denise Bryant said.

"A number of school camps will be held as well as the Speak Up Stay ChatTy schools' program, First Aid in Schools, NAIDOC Week and Walk Safely to a School Day. Reading and Student Well-being continue to be our School Improvement priorities.

"Timetabled opportunities for student engagement are the Grade 3-6 Enrichment program that includes Drama, Music, Sport, Digital Technologies, Stop Motion and Book Club.

"The offerings for

Grades 7-10 are MDT, Cooking, Music, Art, Study and Outdoor Education. These programs complement our core curriculum areas of English, Maths, Science, History, Geography, Civics, Health and PE. The Garden program continues to be of interest to our students," Ms Bryant said.

At the start of the new Tasmanian government schools term, Minister for Education, Children and Youth, Roger Jaensch said, "Education is the most powerful tool we can give young people to take control of their future lives and opportunities. Active participation in learning is essential for all young people.

"Earlier this year, the 'Every school day matters' campaign launched and the start of Term 2 is a great time to remind our school communities about the importance of attending school every day."

**KIDHS Grade 3 Enrichment Program urges kids to branch out, go out on a limb and find the fruit.**

# Miner at the starting line

From page 1

A significant stockpile of ore recovered from previous mine operations is sufficient to operate the plant at nameplate production for the first two months and is ready and available to be processed with the first sale of concentrate planned for June 2023.

The high-grade tungsten concentrate will be exported to G6M's major offtake partners in Europe and the US.

With the delivery of four CAT 777s during the quarter, pre-strip mining activities were significantly advanced, and the first order of blasting materials is scheduled for delivery in late May, prior to the commencement of blasting in early June.

The company acquired land adjacent to the mine to allow a larger volume of Ammonium Nitrate Emulsion (ANE) to be stored which the company says will negate any risk to mining operation from late delivery of ANE to King Island.

Construction activities for magazines are progressing and expected to be completed by the end of May in time to receive the first delivery of blasting materials.

**Pre-stripping activities on the eastern side of Dolphin Pit.**

near completion. The company anticipates site office administration building civils work will be completed before the end of June.

G6M said that the market conditions look strong for the remainder of 2023 with growth in demand expected to continue from the defence, construction, mining and energy sectors and supply continuing to look subdued with Dolphin being one of the only new significant suppliers entering the market in 2023.

Group 6 Metals announced to the Australian Stock Exchange a trading halt on Monday.

Last Monday, at the request of Group 6 Metals Ltd, it was placed in an ASX securities trading halt and yesterday the company announced a voluntary suspension in the trading of the company's ordinary shares to allow the company further time to complete a material capital raise in an orderly manner.

The company expects to make a further announcement on or before Wednesday 10 May.

A Memorandum of Understanding entered with Fortescue Future Industries Pty Ltd ("FFI"), enables the parties to explore opportunities for the potential development of a wind farm, hydrogen plant and fertiliser production plant by FFI.

Exploration drilling recommenced at the Investigator Prospect, located 6km west of the Dolphin Tungsten Mine, with assay results expected in early Q3.

Ammonium Paratungstate (APT) prices have remained stable for the past 12 months, with current prices US\$320-\$335 per mtu.

The company has \$3.2

million in cash, and \$5.4 million in undrawn debt facilities as of 31 March 2023 and \$1.64 million was received after the quarter end from the Tasmanian State Government power supply grant, which is to be applied towards implementing a dedicated interim on-site power station and completing a feasibility study for the integration of renewable energy.

The Tailings Storage Facility is expected to be available to accept tailings in line for processing of the first ore in early May.

Ancillary mine infrastructure such as workshops, warehouse, fuel storage, water supply and mine equipment go-bay are

# Island's world of workers

A MAJOR Federal Government review released last week called for a complete rewrite of Australia's immigration system, with almost every visa category subject to change.

The review found the immigration system was "complex, inefficient and inflexible".

Working holiday makers (backpackers) come to King Island to work across many of our local businesses.

Currently, the island has people from Spain, Sri Lanka, The Netherlands, Taiwan, Germany, Scotland, Ireland, Indonesia, Japan, Argentina, France, Canada, India, Poland, Israel, and England.

They stay three to 12 months, sometimes longer if they extend their visa.

Working holiday visa holders can extend their visa for an additional year (up to three years maximum) if they do three months/six months of work in critical industries such as agriculture or mining and during Covid this was extended to hospitality in some regions too.

They can be seen working on King Island in dairy and beef farms, cheese production, mining, and hospitality, but they can work in any industry if they choose to. There are between 30-50 backpackers on the island at any time.

Because of King Island's

Backpackers mix with locals at the King Island Club. Front row, left to right: Hallie Kent, Indira Casto de Leon, Carlos Martin Carnal. Second row, left to right: Liang Chen, I-an Tsai, Ola Zwawiak. Third row, left to right: Oliver Brunsch, Rois Supriyono, Charles Nari. Fourth row, left to right: Michael Laskey, Leo Watkins and Shane Freeman.

remoteness and because backpackers are often working and living with locals and other travellers, they will often form strong friendships and continue these friendships after they leave the island.

Some backpackers have formed partnerships, married,

started families, and become Australian citizens and part of the King Island resident community.

There are more than 100 visa sub-classes, and the government says the system must be simplified, making it easier and faster for people

to be processed. King Island is also home to Business and Investment program, Family Reunion, and temporary visa holders.

Home Affairs Minister Clare O'Neil said the system was not up to the task to solve the greatest labour shortage

Australia has faced since World War II and last week told the National Press Club that administrative problems were "central" to Australia's immigration woes.

"We ask an overseas-trained nurse to pay up to \$20,000 and wait up to 35 months to get their

qualifications recognised and their visa granted," she said.

The changes include an immediate lift to the decade-old minimum wage threshold for skilled workers; the establishment of a pathway to permanency for about 17,000 temporary workers; tightening rules and more support for international graduates to help get into skilled employment; providing exploitation protections and removing bureaucratic delays and outdated occupation codes. The skilled list has not been added to since 2013 and does not reflect contemporary skills or changed skilled labour needs.

The government said the "points test" for skilled visas, which helps determine which applicants are most desirable for improved productivity, must be rewritten and "recalibrated."

# School role praise

King Island District School Prep students Bella Reed and Harrison Forrest hold Anzac Bears.

FOLLOWING ANZAC Day's commemoration, Vice President, King Island RSL Subbranch Gary Barker thanked KIDHS principal Denise Bryant, Jenny Holbrook, KIDHS staff and students for their support of the main service on Anzac Day.

Mr Barker acknowledged Grade 9 student Seth Bowling who was MC during the Main Service and Chase Osbourne and the other senior

students who helped with the flags.

"Standing in front of a group of people is not an easy task and we thank Seth for his courage and performance. The involvement of the school is something RSL president Tom Shaw has been working on with the school for several years. Without the school's support, the [RSL] interaction with the next generation could not happen," he said.

Many on and off the island were unable to attend the Anzac Day commemorations.

King Island TV live-streamed the main service and messages were received from ex-islanders and relatives around the world. It will remain on YouTube so those who wish to watch or rewatch search - King Island TV.

Anzac Day addresses, page 9

Lunchtime for King Island Leos with Lions Linda Payne and Ricci Bishop in the Snodgrass Park barbeque and shelter.

## Leos holiday help

GREAT work over the school holidays by our King Island Leos. One session at Snodgrass Park assisted residents by cleaning their units' windows and car washing and the second session involved moving rocks to define the new walking track at Netherby Bay. Both sessions were followed by a scrumptious picnic lunch.

# Royal event a jewel in broadcast crown

Newly minted King Charles III and Queen Consort Camilla.

GOD Save the King. This is not a plea for King Island (named after Philip Gidley King, third Governor of NSW), but it will be the Archbishop of Canterbury's final declaration at the King Charles III coronation Saturday, May 6.

Whether pro-Republic or Monarchist, the first British coronation in 70 years and in most people's lives, will be watched by Australians, on TV, or via global multiple platforms that are streaming the live coverage. If you're watching from Australia, you can expect the action to kick off on Saturday at 5 pm AEST on ABC and ABC News, Foxtel, UK streaming services and 7plus channel.

The scaled-down, simplified, one-hour ceremony in Westminster Abbey, will have British pageantry and ritual, in its most regal, opulent form. One of the more controversial changes is that members of the public in Britain and its territories, which include Australian audiences, will be invited to swear allegiance to the King, out loud, in the

first-ever Homage of the People. This has attracted widespread criticism as Australia plans a referendum on the monarchy.

There will be a gold coach, that's only used on this type of royal occasion, fanfare played by herald trumpeters, ceremonial and celebratory flags adorning the Abbey and roadways.

The coronation is a religious service. King Charles III is head of the Church of England (Anglican) and the supreme governor. It is expected that other faith prayers will be incorporated for the first time, and he will take an oath to defend Christianity.

The ceremony has retained a similar structure for over 1,000 years. While there has been some modernisation, the rituals such as anointing with Jerusalem made and blessed oils, the King's blessing, oaths, orbs, sceptres, regalia and the crowning of King Charles and Queen Camilla remain.

It is expected that the coronation will be the most-watched event in Australian history exceeding Princess Diana's funeral in 1997 (8m viewers) and Queen Elizabeth II's funeral (metro and regional 5.17m) and that does not include viewers using other technologies. In the UK Republic UK spokesperson Graham Smith said that analysis suggests global viewing figures are expected to be between one 100 and 300 million or more, which he says will mean 7.7bn and 7.8bn will "ignore the event." King Charles is Australia's head of state and his representative, His Excellency General the Honourable David Hurley AC DSC (Retd) Governor-General of the Commonwealth of Australia, will be attending the coronation and as patron of the Keep Australia Beautiful organisation will be on King Island on May 19 to present this year's National Awards.

# Footy kicks off under v

## KING ISLAND FOOTBALL ASSOCIATION

WE were blessed with a blazin' hot Autumn Saturday to kick off the 2023 KIFA season.

This was a grand final replay with Grassy at home to North with a packed crowd around the ground. Both teams looked to have a fairly solid card with some fresh faces on both sides playing for the first time.

North got the first clearance, but it was quickly smothered and Grassy gained the first forward entry at the Netball court end and an early goal to Brandon Blomfield. Early on it looked a bit like an under 12's match with a large pack following the ball as it ping-ponged across the field.

North found their first through Ned Hunter who got off a quick kick from the centre which went the full measure for a nice goal. A second comes shortly after through Justin Summers.

Some good positioning and nice defensive marks came from both sides with most of the play in and around the centre until Jye Summers awarded a free and a 50-metre penalty for North's third.

Grassy found their second through Tyler Rhodes kicking off the flank. Taylor Cook marked strongly in defence but couldn't get it out and Grassy found their third to bring the score line back to a point.

Grassy saw two rushed behinds go through before the term is out and went into quarter-time with a two-point lead. Momentum has swung a few times and has been a determining factor in the first quarter.

Brandon is making a habit of opening

goals and opened the second with a goal for Grassy, followed quickly by a Justin Summers point. North had some momentum at their end and new coach Dale Ellis goals from the pocket, shortly followed by a Ned goal from a 50-metre free.

North scored another goal through Justin Summers again - are we in the matrix because the second quarter looks spookily like the first quarter.

The score stays close when Tristan scored on the run from the pocket and Grassy gained some momentum back. The play opened more in the second quarter, but things became a little woolly when Jeremy Summers (Jez) pants' tackled Craig Constable's shorts down to his knees, who played on regardless, albeit with more of a shuffle.

Tristan Forrest took a shot on goal from 40 out close to halftime, which falls a bit short with Tyler Rhodes nearly taking a nice grab on the line, but it is rushed through for a behind. Grassy entered the halftime break 8 points up having the momentum in the final part of the second quarter, however, both teams look to be evenly matched.

Grassy is the first to go forward in the third quarter and Tyler Rhodes nabbed a behind from the north pocket. Jackson Taylor intercepted a kick out and delivered it to Jacob Flood for a point.

It's back and forth in the Grassy forward line until Charlie Warner intercepted to centre it, aimed for Jackson Taylor who ran to an open goal to succeed in hitting the post for a point.

Jye Summers quickly took the ball out of a throw-in and through to Taylor Cook

who ran out of the Grassy backline with a paddock ahead of him but passed off into a contested ball and Grassy found their way forward again. Most of the play of the third quarter was in the Grassy forward area and when North found their opportunities couldn't get clean hands and looked a little lost. North's new recruit Luke Graham got amongst the contested and found a goal at the Netherby Road end which marked a momentum switch and North began to see more play in their forward line but struggled to take full advantage.

Alex Goldsmith and Tristan Forrest showed a good bit of athleticism in the centre for both sides and are both rewarded with goals. Tyler Hudson took a contested mark against Dale Ellis in North's forward line, and Grassy used it to enter their forward line and had a shot on goal via Tyler Rhodes 40 out.

He played on through the mark and found the goal. Grassy finished the quarter with a Tyler Rhodes pass-off to Freddy Tatawaqa for a nice goal to see them 10 points up at lemons.

The final quarter started with Umpire Mark Ennis flattened on the centre square, but he was able to get up and the game continued. Shortly into the fourth quarter, Grassy requests a player number on the ground count and the game is stopped for appraisal.

It is discovered that North indeed had an extra number on the ground and is penalised a free kick awarded to Dale Reed in the centre, who doesn't muck around and thumped it through the goalposts.

A battle of the big rig's Jye Summers

v Dale Reed in the Grassy goal square competed for an incoming ball, with a stalemate ensuing and eventually, the ball spills out for a behind.

Accuracy has gone begging for both sides today, which we'll chalk up to round-one jitters and a lack of match-day practice for the season opener.

Grassy threatened to run away with the quarter, pre-season fitness tested and the play opened up with a lot less running and a lot more passing off short kicks and fumbles. Tyler Rhodes lined up again from a free and banged it through. Grassy recruit Samuel Reeves is solid, in the back line and pushed the ball up into the centre on a regular basis.

The afternoon cooled off with a little autumn chill coming in on the breeze, but the sun was still bright and the few clouds around were not enough to be threatening. Jackson Taylor got the ball up straight to Tristan Forrest who sent it forward for another goal. Grassy took a commanding lead of 35 points. Grassy's 'fine wine' Arnie Stellmaker is on the field debuting his 150th season with Grassy Seniors.

The man doesn't age.

Ned still had some legs left but so did Jackson Taylor and it was a solid tussle between those two. Craig Constable's shorts gave up and were around his knees yet again.

The final siren went after Grassy put on a convincing final quarter, although with 19 behinds they might be on target practice this week while they leave North with a few things to think about heading into their bye round next week.

## Community Information

### Session

ConocoPhillips Australia is currently developing an Environment Plan for the proposed Otway Exploration Drilling Program and is hosting a community information session to outline the proposed exploration activities and the decision-making process.

Residents and all relevant persons are encouraged to come along to meet the project team, learn more about the proposed activity, ask questions and provide feedback.

Date: **Thursday 18 May 2023**

Location: **King Island Town Hall**

Time: **6-8pm**

Light refreshments will be provided.

# Footy faces dark days

**KING ISLAND FOOTBALL ASSOCIATION  
TROY SMITH**

WITH the commencement of the King Island Football season 2023, KIFA resumes the history of King Island football.

After the struggles with low player numbers and poor crowds the game had endured in the previous seasons the great Australian game was under serious threat in the 1930s.

The KIFA for a short time was declared defunct by the KIFA president Mr L C Ross a brave move indeed by a man clearly immersed in the best interest of King Island football. A shakeup was badly needed. To quote the King Island news of the

day, "For some years interest in football has languished, engendered in the first place perhaps by unpleasantness which fortunately has now practically ceased, and also by the selection of players."

The emphasis was now back on district football, which given the previous dramas was not a forward step. A public meeting brought the supporters out and a motion to reform the KIFA was carried.

Mr L Birch became the president of the KIFA and Mr Thomas Hogarth, the KIFA secretary. There was some consternation over monies that in the circumstance seemed trivial and ill-advised. Mr R (Coad) Morrison was the central umpire for the season.

The North, Currie and Loorana clubs all held poorly attended annual meetings and despite the bravado, it wasn't certain a roster would even be established. The Loorana FC had a new secretary, Mr Stanley Hicks and even better a new highly credentialed captain/player Mr V T (Ted

**Vincent Trevor (Ted) Ranson, is one of the greatest full backs in Tasmanian football history. Inducted into the AFL Tasmania Hall of Fame 2005.**

or Trevor) Ranson from the Launceston football club.

Ern Morrison was reappointed as Currie FC and Len Morrison, captain, and a new secretary in Mr J Stewart. After an extraordinary meeting North reformed with a new executive and a 13-person committee with Fred Summers as president, and Messrs. J Keating and R Quinn as joint secretaries. Mr Ashleigh Last was clearly a stalwart of the club and the new captain.

The Summers name would flourish for the North football club over the next 87 years and is still stronger than ever today! The North club passed a motion that all football would be played in Currie, saving travel and costs.

Football resumed on May 9, 1936, with Currie meeting Loorana. Currie convincingly won by 42 points in great weather with a smallish crowd in attendance.

North beat Loorana by 2 points and then beat Currie by 16 points. Loorana opened their account with a 38-point victory over Currie with Ted Ranson starting to hit his straps. Loorana then trounced North by 57 points with Ron Clemons joining the KIFA most goals and record with 7 goals. A joint carnival and ball aimed to lift interest in the clubs was held by the Currie and Loorana football clubs at the town hall and was termed an unqualified success. The door raised £12 pounds and invigorated the game.

The weekly results saw-sawed throughout the season. The weather played its weekly role in the island game and caused game times to be cut and players forced from the oval. North wanted the semi-final to be played at Yambacoon after not wanting home games and the request was denied.

Ted Ranson backed up his scores of 6 goals in games for Loorana with a 7-goal game and it looked like he was nudging towards breaking the long-held 7 goals game record.

The first semi-final started, and the players were driven from the field by "torrents of rain." The captains conferred and it was decided to take to the field for North to kick the 1 point needed to make the match a draw rather than replay. This caught the ire of the KIFA who promptly fined the two clubs 2 pounds each for taking matters into their own hands.

The semi-final was

replayed the following week in good conditions but North only had 16 men and lost Ashleigh Last and Terry McHugh who were two of their best players. Despite this, North worked hard and to an extent was kept in the match by Currie's inaccuracy. Currie, however, ran an easy 30 points winner on the scoreboard despite the tough match. Currie 7-19-61 d North 4-7-31. Bob Keating was again picked as one of the best players on the ground followed by Phil Farrell, Don, Len & Coad Morrison. Phil Farrell kicked 3 goals, Bob Keating 3 & Don Morrison 1. North was best served by Cyril Williams, Ern Youl, Ron Stillman, Anthony McHugh and Mick Scott. Goals were kicked by Max McHugh, Ern Youl, Anthony McHugh & Ron Stillman.

The Grand Final was sunny with a fresh south-easterly. The gate was said to be by far the best of the season and the sense was that Loorana was in with a real shot of taking the cup home.

The game was "a torrid tight affair with congested play being a feature." Currie booted 5 in the opening quarter to lead by 28 points at the first change. Ted Ranson inspired Loorana and kicked 5 goals for the quarter. Aubrey Soden and Ron Clemons kicked the others whilst Currie were kept in the game by Phil Farrell, Jim Allen, and Ted Curbishley. Loorana booted 7 goals 8 points to lead at the main break by 14 points and looked the goods.

Good team play and goals to William Groom, Phil Farrell, R Morrison, and L Morrison had Currie back in the lead at lemons by 24 points. The final quarter was a very willing one. Don Morrison and Bob Keating were conspicuous, but the breeze was more useful at the beginning of the game with Loorana having 12 scoring shots. With 5 minutes to go Loorana were now one point ahead. Bob Thompson, Jack Marshall and the Morrisons were doing their bit for Currie, but Ted Ranson and Ron Clemons were the match winners with 2 important goals each in the final run home.

The Loorana football club had won their first premiership by 11 points! Loorana 13-15-93 d Currie 12-10-82 in a wonderful contest. Best on the ground was Ted Ranson with 10 goals, Jack Kain, J Meaghan, Ron Clemons, Dick

Cooper, and Aubrey Soden were the pick of the Loorana team with many others pitching in. Goals kicked by: T Ranson 10, Ron Clemons 2, & Charlie Lott 1. Currie's goals came courtesy of Phil Farrell 4, William Groom 3, R Morrison 1, Bob Keating & Len Morrison.

The Loorana club held a celebration dinner where a specially inscribed match ball was presented to their captain Ranson. Presentations were also made to the best junior player; Henry Youl, the most unselfish; J Meaghan, the most improved; Len Barnes and the most improved junior player Jim Graham. Central umpire Albert Kyatt commented that the KIFA should endeavour to secure 4 teams in a 14-a-side format in the next season.

The KIFA held a wind-up dance which was postponed several times due to the Scarlett Fever outbreak. The pennant was presented to Loorana and Mr Phil Farrell named the CFC best and fairest. No mention was made of KIFA best and fairest or goal kickers. Loorana remains the only club outside of the big 3 (North, Currie and Grassy) to have won a KIFA premiership. Ron Clemons (LFC) booted 28 goals, Phil Farrell (CFC) booted 18 for the year. North's best were Max McHugh, Terry McHugh, and R Quinn. R Quinn had 8 confirmed goals leading by one confirmed in the home and away games but in one final round game 2 goals were attributed simply to 'McHugh' and North had 4 of the McHugh's in the ranks, so we don't know at this point whom to attribute those goals.

In 1936, Loorana captain V T (Ted) Ranson had booted a then-record 45 goals in the home and away games and a record 10 goals in the Grand Final to be the first KIFA player to kick 10 goals in a match and over 50 goals (55) in a season. Ted averaged 5 goals per game, which for that time are great stats. He was clearly the best on the ground in the Grand Final.

Ted Ranson has a great football resume and is amongst the most accomplished players to have played King Island football. All be it for one season only. He played with Launceston in the NTFL playing in 5 premierships and represented Tasmania in 1933. He played for St Kilda in 1934 and then went back to Tasmania in 1937 and won the Launceston best and fairest. Ted captain coached Launceston to a premiership in 1945. By 1948 he was coaching Scottsdale and he umpired in the NTFL for multiple seasons. In 2003, out of 18000 who had played football in Tasmania over the previous 100 years, Ranson was nominated for the Tasmanian Team of the Century and was inducted into the AFL Tasmania Hall of Fame in 2005.

# The Anzac Day addresses

## ANZAC DAY ADDRESS PRESIDENT KING ISLAND RSL SUBBRANCH - THOMAS SHAW

ON Anzac Day we are drawn to memorials, marches, to moments of reflection – both in groups and privately.

We remember those who have served, those who have sacrificed and the contribution they have made to our country.

On one hand, we do not need to question ‘why’ we do this. It is obvious – to honour those who have served and continue to serve our nation, and to acknowledge the debt we will always owe them.

On the other hand, considering why we pause to reflect and remember tells us much about who we were, who we are and who we aspire to be.

This Year marks 50 years since the end of Australia’s involvement In The Vietnam War - a War in which Sixty-one thousand Australian men and women served. Five hundred and twenty-one were killed. Two thousand and fifty were wounded.

This morning at the dawn Service I had the honour to read out and Pay Tribute to the 35 King Islanders that served in the Vietnam War.

Although I wasn’t even born when the names, I read out served, it is clear to see a connection between the way they speak of service, and the way veterans of my era speak of service. There is mutual respect, a bond, and a selfless dedication to proudly serve our country when required.

I reflected on the continuation of the Anzac legacy and the characteristics we attribute to arise from it – mateship, courage, sacrifice and endurance. I asked myself, are similar examples readily identifiable across our military history? Do the characteristics still matter? I am firmly of the opinion that the answer to both questions is: Yes!

To the first question: pick a conflict, operation or mission and you’ll be able to find similar examples.

We saw it in The Gallipoli landings, Beersheba, The trenches of the western front, Tobruk, Kokoda, Kapyong, Long Tan, and the dust of Oruzgan.

Mateship – that’s a key part of the Anzac legacy.

To the second of my questions – do these characteristics still matter?

They do.

We see them in those still serving. They have inherited the Anzac legacy and, through their service, have added to it and will hand it forward.

We are proud of them, and we will always be there for them. It is critical that we continue to look after our veterans – caring for mates is also part of the Anzac legacy. To that end, we recognise the support of their families and their contribution.

These characteristics are not confined to our people in uniform. They are evident today in the actions of [every day] Australians. Countless acts of bravery have occurred, most

**KIDHS Grade 9 student Seth Bowling MC for the ANZAC Day 2023 Main Service with RSL King Island Subbranch president Tom Shaw.**

anchored in mateship in its many forms and exemplified by courage and endurance.

Who we were - Many families on this Island, with its strong history in enlistment and soldier settlers have these values ingrained in them and all have their own story.

In the sum of the stories, we see common characteristics and values.

We see a continuous line from diggers who landed at Anzac Cove, through to those who served in the Second World War, in Korea, Vietnam, on peacekeeping operations around the world and more recently in Iraq and Afghanistan.

Who we are – we see the Anzac legacy in today’s serving men and women, their families and, indeed, writ large in the island community around us.

Those common characteristics and values – mateship, endurance, courage and sacrifice – are not unique to military service. Our forebears took them into uniform. But their service, experiences and sacrifices have forever embedded them in our nation’s DNA.

And, who we aspire to be – if we learn from the Anzac legacy and we continue to live up to it, history tells us that we can overcome any challenge.

The Anzac legacy is not reflected in a single individual or a single event. Instead, it is the sum of thousands of stories. Of ordinary Australians who, when given a job to do, got it done, did it in a way that made us proud and looked after each other during and after.

Finally, the characteristics that we take from the Anzac legacy to define us – mateship, endurance, courage and sacrifice – are inherent in Australia. They always have been. They’ve been strengthened and reinforced in conflict and

on peacekeeping operations, but they have always been at our core.

We shouldn’t shy away from these characteristics over any concern that they are viewed as ‘derogatory’ – they are real in us. They speak to our past, our present and our future; To who we were, who we are and who we aspire to be. And that should make us all optimistic for our future. LEST WE FORGET

## VICE PRESIDENT, KING ISLAND RSL SUBBRANCH GARY BARKER

I WAS 19 in 1970 when I unwittingly volunteered for National Service and, while I trained to go there, the December 1972 Federal Election result confirmed the end of Australia’s involvement.

Over the next 36 years, I worked with Vietnam Veterans, and many remain as friends. Early on, like many, I did not recognise their pain resulting from a nation blaming them for the decisions of politicians, along with massive national discontent.

This year commemorates 50 years since the end of Australia’s involvement – in my opinion the most divisive in the nation’s history.

Australia entered the war in July 1962 and ended in January 1973. Almost 60,000 Australians, Navy, Army and Air Force personnel, served in Vietnam. 521 died and over 3000 were wounded. The war saw the reintroduction of conscription and National Service has become synonymous with Vietnam.

Between 1965 and 1972, just over 800 000 twenty-year-old males registered for National Service, and nearly 64 000 were called up for service in the Army. Approximately one in four National Servicemen

went to Vietnam, also around a quarter of the total force number. Their toll was 200 killed and 1279 wounded.

This morning I will be speaking about the involvement of a King Islander who was a National Serviceman. These are his memories.

“I was born in the Cottage Hospital on 23 February 1945 and my parents were Joe and Jean Lynch. My first name is Hugh, but I have always been called John. I grew up on the family dairy farm at Loorana, along with Brenda, Jim, Alma and Faye.

“I caught the school bus each day to the Area School in Currie, but when I was in Grade 7 and just turned 13, I went milking cows. I was not fussed about doing National Service and my number came up in the first ballot of 1965 along with Geoff Smith and Henry Bennett. The three of us were flown out on an Ansett DC3 to Launceston for our medical; Henry was pretty sick, and we knew he wouldn’t get in.

“Geoff and I passed the tests and were called up in the second half of 1965. After 12 weeks or so in the freezing cold of Pucka, I was sent to the School of Infantry in Ingleburn near Sydney, to be trained as a rifleman. Later I was told, ‘You’re off to Vietnam’, so I came home for a quick leave and arrived in Nui Dat on 19 November 1966. It didn’t worry me about going there as there were a few advantages.

“Nui Dat was where the Australian Task Force was located, and I was put in the Quartermaster’s Store. So, I ended up with a cushy job and only had to go out on patrol once. Plus, the old Quartermaster was a pretty good bloke. We were near the hospital, and I can still vividly remember the Huey choppers bringing the wounded in.

“For the ten months I was there, the only other King Islander I met was ‘Spratty’. Wayne was in a platoon in one of the battalions on the edge of the base. Barry Misson and Alan Wilson, my cousins born on King Island, also served in Vietnam.

“When my time was up in August 1967 I was sent back to Australia and discharged. One day in a war zone and a few days later back home.”

John’s final words of ‘one day in a war zone and a few days later back home’ was a situation that led many ex-service personnel to break down. They could not readily adapt back into civilian life, and when they were eventually helped it was too late for many of them.

Many RSL Subbranches refused to let Vietnam Veterans join and, in some cases, barred their entry. King Island is not immune from this criticism as until 2021 there was only one name on a Board – that of John Lynch.

As a Sub-branch, we have stepped up and we remember the 35 Islanders listed on our Vietnam Honour Board in the RSL Club rooms.

One of the events being planned in commemoration of the 50th anniversary of the end of Australia’s involvement in the Vietnam War is a Vigil to be held at gravesites and memorials throughout Australia and overseas on 3 August 2023. We do not believe any Vietnam Veterans have graves here, but we know of islanders who have relatives resting elsewhere. We will commemorate this special occasion.

The 35 Vietnam Veterans on the King Island honour board: Serving in the Royal Australian Navy

HMAS Derwent - Acting Leading Writer Garry Bourke and Chief Petty Officer Writer Frederick Curbishley.

HMAS Parramatta, and HMAS Yarra, Able seaman Radar Plotter Peter Banfield.

HMAS Melbourne - Able Seaman John Hudson.

HMAS Sydney and HMAS Yarra - Leading Tactical Operator John Curbishley.

HMAS Sydney - Junior Recruit Engineering Mechanic Richard Gale and Engineering Mechanic Timothy Robertson.

HMAS Vampire - Engineering Mechanic Malcolm Cross.

HMAS Vampire and HMAS Yarra - Leading Airman Meteorological Observer Noel McKay.

HMAS Vendetta, HMAS Yarra and HMAS Vampire - Able Seaman Quartermaster Gunner Alan Wilson.

Serving with the Australian Army

Headquarters First Australian Task Force - Colonel Ian Barr and Private Hugh Lynch.

Royal Regiment of Australian Artillery: 1st Field Regiment - Sergeant Clifford Woodard.

12th Field Regiment - Captain David Ezzy.

1 Field Squadron, Royal Australian Engineers - Corporal Harold Bell and Sappers Peter Birch, George Lynch and Anthony Marroitt.

110 Signal Squadron, Royal Australian Corps of Signals - Signalman Barry Misson. and Greg Kruska

709 Signal Troop - Signalman Stan Misson

Royal Australian Regiment: First Battalion - Private Richard O’Shea.

Third Battalion - Lance Corporal Colin Knowles and Private Ross Murie. Fourth Battalion - Privates Karl Curtis and Howard Mariom.

Fifth Battalion - Privates Terence Leo and Michael Massie.

Seventh and First Battalion - Lance Corporal Wayne Spratt.

Ninth Battalion - Private Maurice Ladlow.

5 Company Royal Australian Army Service Corps - Private Robin Fairchild.

1 Field Squadron Workshop, Royal Australian Electrical and Mechanical Engineers - Craftsman James Saddington.

Serving in the Royal Australian Air Force

Number 2 and 9 Squadrons - Leading Aircraftman William Colgrave.

Number 2 and 37 Squadron - Pilot Officer Paul Goodwin.

Number 1 Operational Support Unit - Leading Aircraftman Brian Gayle.

21 veterans were born on King Island, the oldest in 1920, the youngest in 1950; 10 served in the Navy; 22 in the Army; three in the Air Force; and 10 were National Servicemen.

I would also like to acknowledge two soldiers who died as a result of the Vietnam War, and although they never lived here, their relatives came here. They are Sapper Peter Penneyston (1 Field Squadron, Royal Australian Engineers) brother of Joy Crack, and Trooper Russell Copeman (3rd Special Air Service Squadron). His parents were the late Jim and Pearl Copeman. In addition, Captain Norman Hunter, the father of Kathleen, was attached to an Armoured Squadron.

# Let them eat quiche

**KING Charles III and Queen Camilla last week announced a vegetarian quiche as the official coronation dish. It is a dish fit for Royalists, Republicans – or even Real Men. Hang your crown on a convenient hook and get cooking ... if you can afford the ingredients**

DEvised by a Buckingham Palace chef and released across the Palace’s official social media platforms with a ‘how to make’ video, timed to coincide with King Charles III and Queen Camilla’s coronation on May 6. The idea is that people will cook it at home and it’s sharable. The recipe features a traditional shortcrust pastry with added lard, encasing a cream-and-egg filling of spinach, broad beans, and cheddar, spiked with tarragon.

The recipe is not without criticism as it was initially said to be cost-effective in an anti-monarchy swinging UK. People are facing a cost-of-living crisis and many ingredients are out of the price range for English commoners. The global bird flu (Avian influenza H5N1) pandemic has wiped out millions of birds in the UK, and egg prices skyrocketed to become a luxury item, as have cream and fresh vegetables.

A quiche is not just a quiche when it’s a Royal Quiche and when it’s attached to an event like a coronation, however as it has the ‘Royal’ stamp and its creation was personally requested by their Majesties, it is infused with symbolism and ‘fit for a king.’

Eggs are often associated with new beginnings and fertility, rebirth, and renewal. Cheese is linked to nourishment, comfort, and abundance. It also symbolises tradition and cultural heritage and cream represents richness, indulgence, and luxury. It is sometimes associated with femininity and sensuality.

Historically broad beans represented fertility, abundance, and hope, as they produce many seeds. They are transformation or growth, and sustenance through difficult times.

In ancient Greece and Egypt, broad beans were associated with the souls of the dead and were sometimes used as a ballot in elections or to choose a sacrificial victim. They were placed in Pharaoh’s tombs to provide sustenance to the soul in the afterlife. Persian wedding rituals (the coronation rituals include a symbolic wedding) use broad beans as a message of fertility and unity.

Spinach is symbolic of health, vitality, strength, regeneration, and rejuvenation. Tarragon is an herb that is often found in French cuisine, is associated with refinement, and in traditional medicine, in which the King has an active interest, is used for healing and wellness. In some cultures, it symbolises creativity and inspiration and it was an ingredient in Medieval love spells and potions, and it is traditionally incorporated in food and drink at Russian celebrations and special events.

Like Queen Elizabeth’s 1953 coronation chicken, it reveals multiculturalism in the kitchen, King Charles’s personal connection to farm-grown produce, and historical lineage and symbolically reflects coronation ceremonial elements.

Who would’ve thought that a quiche could mean so much more than simply being an eggy cheesy tart?

Recipe substitutes can easily be made - store-bought shortcrust pastry, vegan, gluten and dairy-free alternatives, herbs like basil or parsley and peas instead of broad beans. The quiche can be served hot or cold.

## CORONATION QUICHE

x1 20cm Flan Tin  
Serves 6

### INGREDIENTS

**Pastry**  
125g plain flour  
Pinch of salt  
25g cold butter, diced.  
25g lard (or substitute with margarine or butter)  
2 tablespoons milk  
Or 1 x 250g block of ready-made shortcrust pastry

**Filling**  
125ml milk  
175ml double cream  
2 medium eggs  
1 tablespoon chopped fresh tarragon,  
Salt and pepper  
100g grated cheddar cheese,  
180g cooked spinach, lightly chopped.  
60g cooked broad beans or soya beans.

### METHOD

To make the pastry...  
Sieve the flour and salt into a bowl; add the fats and rub the mixture together using your fingertips until you get a sandy, breadcrumb-

like texture.  
Add the milk a little at a time and bring the ingredients together into a dough.  
Cover and allow to rest in the fridge for 30-45 minutes.  
Lightly flour the work surface and roll out the pastry to a circle a little larger than the top of the tin and approximately 5mm thick.  
Line the tin with the pastry, taking care not to have any holes or the mixture could leak. Cover and rest for a further 30 minutes in the fridge.  
Preheat the oven to 190°C.  
Line the pastry case with greaseproof paper, add baking beans and bake blind for 15 minutes, before removing the greaseproof paper and baking beans.  
Reduce the oven temperature to 160°C.  
Beat together the milk, cream, eggs, herbs, and seasoning.  
Scatter 1/2 of the grated cheese in the blind-baked base, top with the chopped spinach and beans and herbs, then pour over the liquid mixture.  
If required gently give the mixture a delicate stir to ensure the filling is evenly dispersed but be careful not to damage the pastry case.  
Sprinkle over the remaining cheese. Place into the oven and bake for 20-25 minutes until set and lightly golden.

# Barnes is champ again

## BUGGY

KING Island Golf Club Champion for 2023 is Tim Barnes, in a superb final round of three under the card 69.

Tim’s back-to-back championship win is truly deserved. His only challenger was young Sukma Bowling and his final round of 75 was a good effort.

The shot of the day belonged to Captain Chris Richards – a hole-in-one on the iconic par three third hole.

In absolutely perfect conditions 24 players turned up for the final round of the annual championship.

Some excellent scores were recorded with Tim Barnes taking out the nett result 68 nett. Pud Watts runner-up with 69 nett. Other good scores were Conner Rush 70 nett and Chris Richards 71 nett.

Nearest the Pin Chris Richards hole in one 18th Brendan Strickland

## FINAL RESULTS

A Grade  
Tim Barnes 217  
Sukma Bowling 234  
B Grade  
James Jakowenko 258  
Brendan Strickland 267  
C Grade  
Lance Anderson 279  
Greg Barratt 290

## NETT WINNERS

Tim Barnes 214  
Lance Anderson 216

## AROUND THE TRAPS

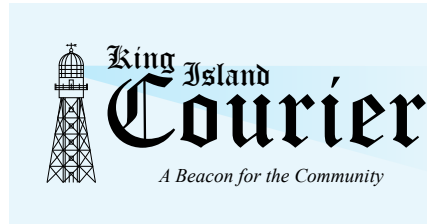

A couple of seasoned golfers performed some incredible shots. According to a couple of young guns Rod Graham needs help or religion. A moose which included 6 shot putts on one hole. Rod reckons playing with them puts him off his game because they are so good. Adam Hely, to avoid the water, on the around-the-bay 5th hole, performed a safety shot. His drive ended up at right angles over the fourth green, over the dam, and in the rough. Never has anyone seen such a shot on that hole and he recorded a 5 on the par 4.

## NEXT WEEK

A single stableford Cape Wickham sponsored 18-hole event.

Golf Captain Cliff Richards celebrates his hole-in-one with King Island Golf Club Champion 2023 Tim Barnes.

## LANDSLIDE VOTE RETURNS RUTH

A PLEDGE to represent King Island's interests in Parliament has seen independent Murchison MLC Ruth Forrest return with a record vote.

In the Upper House elections at the weekend Ms Forrest was elected for a fourth term and her record vote puts her in the history books.

"I'm so deeply grateful to the whole electorate, but particularly the people of King Island," she said.

**Historic win: Page 2**

**GRASSY THE TEAM TO BEAT – Page 6&7**

# Miner cashed up for production

MINER Group 6 Metals has raised about \$27m equity and \$3m in underwriting for a Share Purchase Plan to raise a minimum of \$30 million, providing the runway to progress operations towards positive cash flow.

In a statement to the Australian Stock Exchange, the company said, "Funds were raised at \$0.14c per share, representing a 15.2% discount to the last traded price on 28 April 2023 and a 16.6% discount to the five-day VWAP.

The placement received strong support from major shareholders, with the company's top four shareholders committing to subscribe for 69% (about \$21m) of the total raising.

"G6M is also embarking on a partially underwritten Share Purchase Plan to allow existing eligible shareholders to participate on the same terms to raise up to an additional \$5 million, subject to shareholder approval. Eligible shareholders can subscribe for up to \$50,000 of new shares in the SPP without incurring brokerage or transaction costs.

"Proceeds from the Placement and SPP will be used to progress construction, commissioning and ramp-up towards steady state production at the Dolphin Tungsten Mine ahead of the first concentrate

shipment planned for June 2023.

"Participants in the Placement and SPP will receive two free options for every three new shares subscribed for, with an exercise price of \$0.21 and an expiration date of 30 June 2025.

"MD and CEO Keith McKnight, Chairman Johann Jacobs and Executive Director Chris Ellis are to participate in the Placement, subject to shareholder approval."

G6M managing director and CEO, Keith McKnight, said: "Securing the backing of our existing and new investors, who have participated in this minimum \$30m equity raise, assists the company in fulfilling the commitment to recommence tungsten production at the Dolphin Mine.

"We are grateful for the commitments from investors, which underscores the progress achieved at the project and its imminent restart of operations. We also appreciate the ongoing support of our major shareholders who subscribed for the majority of this raising."

"As we move into the production phase at Dolphin, this equity raising provides a funding runway to progress operations through to positive cash flow at a critical time.

**Anatomy of a modern mine, page 12**

Ruth Forrest enjoys a democracy sausage during Murchison Legislative Council voting day and is ready for her next six-year term.

# Upper House historic win

INDEPENDENT MLC Ruth Forrest had a massive win last weekend in the Upper House elections to retain the seat of Murchison.

It will be her fourth term and her record vote puts her into the history books.

The indications of how big Ms Forrest's win over her three challengers would be emerged not long after counting got under way.

With postal votes still to be finalised after May 16, Ms Forrest's Saturday night at the close of counting 71.89% against three other candidates return in Murchison beat the previous record of Peter McKay in 1976 with 66.4% of the vote.

The King Island vote reinforced her standing in the island community with 77.2% of the vote.

The King Island result indicates her ongoing, relentless

advocacy on behalf of the island in parliament.

It also indicates her understanding of the issues that impact the island as a whole and at the individual level.

"I'm so deeply grateful to the whole electorate, but particularly the people of King Island who have shown me enormous support," Ms Forrest said.

"I could say over 75 per cent of the vote on King Island gave me number one.

"That is so amazing and so wonderful.

"I really appreciate the support of the island.

"I will continue to serve King Island as I've tried to over the last 18 years – and even more so, particularly as I get even more familiar with the actual circumstances that continue to emerge on King Island.

"The challenges come up, almost on a regular basis at the moment.

"It is a record-breaking win and I'm really excited about that.

"But that was across the whole region, not just King Island."

Ms Forrest received 573 first preference votes out of 742 formal votes (43 informal votes).

She said that face-to-face interaction, supported by technology, in any electorate, not only King Island was important.

"[Murchison] is the largest, if not the largest geographic electorate. It does take an effort to get out and about. It's not cheap

"As an elected member, you do get funding, you get a vehicle so you can drive, and obviously flying to King Island... you must, you must spend time in the regions.

"You can't just pop over and come back on the same day and think you're going to meet enough people to actually

really get a sense of what's happening on the island. You've got to be, available to people."

During her campaign and meeting with people across the electorate, Ms Forrest said there were common and key issues to those faced by King Island – the cost of living, energy prices that impact individuals and families, farming and small businesses and a need for access to housing.

"We know there is a drastic shortage on King Island, not just for people who live there but also for any additional workers."

Ms Forrest will be sworn in on May 22 and will serve in the Legislative Council for six years.

When Parliament resumes Ms Forrest will be involved in the Budget session and will continue her work with the Public Accounts Committee and chair of other committees.

# Dog's life for lucky pups

LANA BEST

STANDING beside a stump under the gum trees at Quercus Park, Carrick, King Island beef farmer John Bramich patted his dogs. Snake, Rattler, Tiger and Snakey, let off their chains for a run around the log heaps, were winding down following the final event on the Tasmanian Working Sheepdog Association trials calendar at Agfest last weekend.

Dozens of the best working dogs in the state had been thoroughly tested – replicating work on the farm in round four of the CopRice Champion of Champion Series.

“Well we competed,” was all John could say with a wry grin.

“No luck for us this time, but I won the Open two years ago with Jamieson’s Nate and I’m still happy with that.”

The variables in trialling means every dog can have its day, and this year that all important finals day went to Lee Jamieson in the Open with Shannandoah Steel (178 pts) and his second dog Glennmurray Toby who was runner up (165) and also runner up in the Novice and Improver sections.

Improver winner was Al Hort with Glennmurray Lucy

John Bramich at Agfest with Border Collie Snake who is more accustomed to working with cattle.

(82) and Novice winner was Rowan Carter with Karana Leo (154).

Fresh mobs of sheep brought in for the dogs to work proved challenging for allcomers, and some dogs seems to work better in the wet and others in the dry as the typical Agfest weather constantly changed.

For John’s Border Collies just working sheep was a good test of versatility, having grown used to cattle.

John’s property at Egg Lagoon is heaven for the herds of Angus, Hereford, Murray Grey, Speckle Park and Red Devon that are fattened on the lush grass ready for market.

After the winter break John will continue to trial his dogs, saying it gives him something to do in his spare time while he’s on the Tassie mainland visiting his dad in Wynyard.

“They’re pretty strong working dogs, they don’t get to work sheep very often, and never a mob,” John said.

“But they do pretty well in the trials, and I think that all comes down to control and their ability to read body language.

“They tend to work off your body language.

As he said the words Snake moved in behind his boss, having picked up on a shift in position.

An eager face just waiting and hoping for a silent command to round something up.

# Couple share their big day

**ABOVE:** Best man Jaiden Rainbow with newlyweds Patrick Johnson and Hayley Smith and Matron of Honour Beth Rosser. **RIGHT:** Hayley Smith and Patrick Johnson marry at Winston Park, Ben Lomond NSW.

PATRICK Johnson and Hayley Smith would like to share their special day with their King Island family and friends.

Patrick and Hayley married at the property known as Winston Park, Ben Lomond, NSW on the 22nd of April 2023.

Patrick is the son of Gary Johnson and Deanne Lee, the grandson of Robbie and Sue Lee, and brother of Gemma and uncle of Ava.

Hayley is the youngest daughter of Dugald and Denise Smith of Toowoomba QLD and sister to Elizabeth (Beth) and Nichol and sister-in-law to Anthony Rosser.

Jaiden Rainbow was Patrick's best man partnering with Beth as matron of honour. The Rosser children Fergus, Lachie and Arlie along with Nellie Johnson and Ava Smith made up the bridal party.

Winston Park is in some of the

New England region's very best rainfall and grass-fattening country and provided the most perfect setting for the 'house paddock' autumn wedding with a perfect display of oak trees providing a park-like setting for such a happy occasion.

Guests were exceptionally well catered for by family and friends. Patrick and Hayley thank all their friends for their good wishes.

**JIM MCKENZIE AGENCIES: 6462 1415**

## Truck wash a reality

AFTER lengthy delays, the King Island Council and the Cradle Coast Authority have signed documents that will enable the construction of a truck wash-down facility at the Grassy Port.

Four years ago, the then federal government announced a \$4m investment in the construction of a series of state-of-the-art truck washdown and effluent dumping facilities in King Island, Smithton, Devonport and Burnie.

This was to improve Biosecurity and requirements, a reduction in the spread of disease and weeds during transport and improved welfare outcomes for livestock.

The Cradle Coast Authority is the project facilitator and has been working with the King Island Council over the past month. The design of the cattle truck, vehicle and machinery washdown facility is approaching completion and the grant funding deeds have been signed.

The council is working with TasPorts as there are still some matters to be finalised regarding ownership, operating and maintenance responsibilities.

"There are still a few things to iron out, but it's a win-win and I am appreciative of TasPorts leaning forward on this. I will be able to share with the community the designs, location and pictures over the next future months," Mayor Marcus Blackie said.

# Big boys play in childcare sandpit

Big boys shared their big toys and played and worked together in the sandpit at King Island Childcare and Creche.

IT was buzzing at the King Island Childcare and creche working bee. Washing, painting, repairing and sprucing. A major undertaking was the sandpit, but the big toys came in to make the excavation easier.

The Childcare posted on social media, "Thank you so much to everyone that turned up to help work on the tasks set out for the creche working bee! There were familiar faces and NEW faces as well!"

"Thank you to the volunteers who donated their time and effort to

bringing the centre back into shape and fixed any issues we had! It was greatly appreciated!"

"Thank you also to Dale and Steph Ellis King Island Meat Providore for donating the snags for our hardworking volunteers and again a big thank you to everyone that brought in the tools and manpower and motivation to get the job done."

"Thank you to King Island Council for donating the sand to fill in our sand pit and thanks to Brad Gregory for assisting with our excavations."

# Grassy once again loc

## KING ISLAND FOOTBALL ASSOCIATION

THE weather is crisp but clear and significantly better than forecast, it's time for Grassy to take on Currie and both teams have good looking team sheets, perfect conditions for a fierce and contested match.

Grassy begins quickly with Tristan Forrest opening the account and Tyler Rhodes shortly after with their second. Jack Warrall and Jack Noseda in a body on body contest, that Noseda benefits from and pushes Grassy forward.

Currie finds their first score of the year with a rushed behind, but in time James Jakowenko chips it to Doug Cox who finds Currie's first goal. Grassy responds quickly with another one of their own.

Currie's defence is a hot mess this first quarter, looking for some structure with Jak Youd is doing his all in defense for Currie. Grassy is making them pay with a goal to Tyler Rhodes. For Currie, Cox, Josh Bellchambers and Tom Graham, go forward for Currie to no reward. Grassy gets another. The play on field is evening up as the quarter progresses, while it's not reflected in the scoreboard yet, the play is more contested all over the field.

Currie show promising signs by quarters' end when Graham shrugs off a Noseda tackle and Campbell Keeler goals for Currie. Tyler Rhodes marks on the siren for quarter time and is going for an ambitious goal from in front of the Currie bench and has a decent crack but falls achingly short for

no score to see Grassy up by 12 points at quarter time.

Dale Reed gets a free early in the second quarter but hasn't warmed up the hamy and sprays the kick across the face, there is some contested play in Grassy's forward line before Reed find the goals.

The Currie's backline are finding their feet with Ben Doherty to Micheal Laskey sees them go forward but Marty Monson tidy's up in defence. Currie get another entry with Jakowenko into Boze Williams for a shot from the pocket, for a behind, and later Jackwenko marks going back with the flight of the ball 20 out and goals it.

Aaron Wardlaw v Graham contest sees Wardlaw give a free to Graham, on taking his kick Graham ploughs the ball into Wardlaw to see Jackson Taylor rove and dodges a Doherty tackle and gets a quick one off for another Grassy goal.

The second quarter has seen a much more contested, even match up, perhaps the morning dew lingers as there are some sloppy hands and misfired kicks, but it's a fast moving ball with some really handsome match ups which see Currie go in at half time just 13 points down.

Grassy start the third with Taylor taking the ball quickly from the centre into Reed who is inaccurate, but Grassy have locked it in their forward zone.

Tristan Forrest to Tyler Rhodes in close who has no problem with the tight angle and gets the goal. Jackson

is just trawling unopposed in the centre and is dangerous. Currie find a forward entry to Doherty, to Keeler, who either has a shot on or tries to chip it to Jackwenko but misses both with a behind. Back at Grassy's end Freddy Tatawaqa has a shot, goals.

Brady Rhodes gets one away before being tackled for a goal and Grassy has a surge of momentum to start the second half.

A handy and versatile Noseda makes his presence known in the forward and backline today, tackles down Bellchambers and comes away with the free. Grassy backline between Samuel Reeve, Hudson & Wardlaw put together some pretty handy intercepts & quick movement out of the backline.

Jakowenko is flattened in Currie's forward and takes a while to stand, you can almost see him thinking about a future retirement.

The inflating scoreline looks to subdue the match, there is little in the way of ferocity, intensity or tackling pressure that the team sheets hinted there might be.

Keeler in a good contest with Noseda and gets a rushed kick away which bounces through for a Currie goal, at the end of the third. Grassy have kicked away to see them 42 points up at three quarter time, but not without some good contests.

The final quarter starts as the afternoon temperature drops and Currie are three men down with injury.

Grassy get a free straight from the center bounce and soon after Tyler

Rhodes is going for goal from 50 out, which falls short and Reed rescues it into play from the point post to turn on his heel and kick a behind.

Reed in the pocket centres to Tyler Rhodes who kicks a little dribble through for a goal.

Back at Currie's end, Reeves marks it on the goal line preventing a certain Currie goal. Reed who has come alive in the last half gets it to Hudson who kicks on the fly for another Grassy goal.

Promising signs for Currie with Tyler Smith who has been solid in their ruck, but Reed clears for Grassy and the umpires head back after another Grassy goal to push them past a 100 points.

There is a promising passage late for Currie when Laskey goes to Beecroft into Graham with accurate kicking and clean hands. Currie coming into their first match in nine months look a little short on speed and endurance in the legs which they'll have a season to work on.

Jackson Taylor continues unperturbed navigating the entire field and gets one into Forrest who finishes it with accuracy. Noseda runs along the south side of the oval to Forrest, back to Noseda, Tyler Rhodes to a Craig Constable x Brady Rhodes contest when it spills out the back. Brady gives chase and kicks it off the ground for a goal. While Grassy run off with the margin of 67 points and take the first two wins of the season, there are definitely promising signs for the Currie side, while Grassy are establishing themselves as once again as the team to beat this year.

One in six Australians experience hearing loss.  
Having a hearing test helps to detect the early signs of hearing loss, so we can keep our hearing healthy for longer.

Book a hearing check, talk to a health professional, or visit [health.gov.au/hearing](https://health.gov.au/hearing) for more information.

# Dairy farmers cheesed off at name game

THE Tasmanian Farmers and Graziers Association is concerned about recent demands from the EU to implement a Geographical Indications (GI) regime requiring Australian dairy producers to stop using traditional names such as brie, parmesan, and cheddar.

“The TFGA supports the Australia-European Union Free Trade Agreement in principle,” the association said.

“The negotiations for this agreement have been underway since June 2018 and are now in the final stages.

“The TFGA recognises the tremendous potential of the EU market, which boasts a population of nearly 450 million and a Gross Domestic Product of \$23 trillion.

“However, the TFGA is concerned about recent demands from the EU to implement a GI regime requiring Australian dairy producers to stop using traditional names such as brie, parmesan, and cheddar.

TFGA CEO, Hugh Christie, who visited King Island in March, said the renaming of

TFGA CEO Hugh Christie.

these products would make it harder for consumers to understand what they are buying, and cost producers millions in rebranding and marketing efforts.

“The EU is simply attempting to impose its market power on Australians,” he said.

“If the EU wants us to adopt

alternative cheese names, they should be prepared to cover the costs of renaming, repackaging, and redesigning,” he said.

“This decision could have devastating consequences for Tasmanian dairy farmers and cheese producers, putting jobs at risk, and it’s only fair that the government advocate for everyday Australians.”

According to Australian Dairy Farmers, the implementation of a GI scheme could result in a decrease of gross regional production by more than \$220 million and job losses ranging from 650 to 1000.

“The Australian Government must ensure that EU does not impose an overly restrictive and anti-competitive Geographical Indication regime on Australia.”

“The TFGA does not want to see Tasmanian farmers and producers negatively impacted by a poor decision made in Brussels. Common sense, as well as the well-being of the industry and its employees, must prevail” he said.

A venomous copperhead snake caught on camera cannibalising another snake  
Picture: BEN MORLEY

## Snake snack-attack

CITY-dwelling and overseas golfers visiting King Island are taken aback when they hit the island golf courses and see the signs “Watch out for Snakes,” and warnings to leave the snakes alone and they’ll leave you alone, and don’t touch the snakes.

Tiger, copperhead and white lip venomous snakes are endemic to King Island... and they are known to engage in cannibalism.

It is a relatively rare behaviour and local resident Ben Morley not only witnessed a copperhead cannibalising another of its kind but calmly captured the sight on camera.

Copperheads are known to be opportunistic feeders, and they will eat a variety of prey including small mammals, birds, amphibians, insects, lizards and other snakes. In some cases, when prey

is scarce, or when they are unable to find other suitable food sources, they may turn to cannibalism as a means of survival.

Additionally, juvenile copperheads are known to be more likely to engage in cannibalism than adults, as they are still developing their hunting skills and may have a hard time finding their prey.

In addition to competition for food, cannibalism among Copperheads may also be driven by territoriality and reproductive behaviour. Adult males may cannibalise younger males to eliminate competition for mates, and females may cannibalise their own young if resources are scarce or if the offspring are deformed or sick.

Cannibalism is a natural behaviour in many animal species, and it serves to regulate population size and ensure survival in times of scarcity.

# King Island Soils Day

**Date:** Friday 19 May  
**Time:** 9:30am-4:00pm  
**Location:** King Island Brewhouse - 36 Lancaster Road, Pegasus, TAS 7256  
**Catering:** BBQ lunch will be provided  
**Cost:** No charge  
**To register:** Contact Nick Jamson

You are invited to a King Island focused soil health and fertility day.

Hear from Jason Lynch, Senior Consultant Agronomy, Pinion Advisory.

The morning session will focus on soil fertility and health with the aim of developing a farm-specific nutrient budget.

The afternoon will involve examining two different soil pits with a discussion on various topics including soil structure, remediating soil compaction, cultivation options, soil drainage and managing soil biological health.

**Registration closes Tuesday 16 May**

**To Register:**

For more information and to register, contact:  
Nick Jamson  
Soil Extension Officer

This project is supported by Cradle Coast Authority, through funding from the Australian Government's National Landcare Program.

### Carbon impact tool

LOCAL landowners are being encouraged to learn how they can estimate their carbon impact.

A new online service has been launched to help.

Resources Minister Felix Ellis said the Farm Forestry Carbon Tool and Workforce Development Portal was supporting the future growth of forestry.

“The Tasmanian Government has invested \$300,000 to support the development of a range of tools as part of the Forest Industry Workforce Development and Implementation Plan which aims to ensure a skilled forest and wood processing workforce into the future,” Mr Ellis said.

“Developed collaboratively by the Tasmania Forestry Hub and Private Forests Tasmania, the Carbon Farm Forestry Tool enables farmers to estimate their carbon impact and potential tree offset opportunities, with the hope that it will encourage landowners to plant more trees on their properties.

“The Carbon Farm Forestry Tool supports the Tasmanian Government’s vision to mitigate long-term climate change impacts nationally and internally and is designed to provide estimates to support farmers as they start conversations and planning about carbon neutrality on their farms.”

The tool is a world first and was developed by Tasmanian tech company Indicum Dynamics, and is now available online.

## CHEESE STORE

**Trading Hours:**  
Open MON, TUE, WED, FRI & SUN  
10:30 AM - 4:30 PM

### SPECIALS

Endeavour Blue 150g	\$ 6.00
Phoques Cove Camembert 200g	\$ 7.00

# More to soil than dirt on the boots

CRADLE Coast NRM is running a King Island Soils Day on Friday, May 19. The statewide Soil Extension Program delivers soil extension activities that focus on the importance of soil health and improved soil management, as well as supporting farmers and land managers to utilise the knowledge gained through soil testing. Central to the program is working alongside industry and other soil extension activities to value add to soil health management work rather than duplicate efforts.

The King Island Day will be led by Nick Jamson, soil extension officer for Cradle Coast NRM. Nick is an environmental scientist with experience in the fields of soil science, land rehabilitation and natural resource management.

The day will involve a field and shed session covering topics like soil fertility, pH, nutrients, biology, fertilisers, and soil biology amendments. Jason Lynch from Pinion Advisory, a national Agribusiness consulting group will also be presenting.

The event commences at 9.30 am at the Brewhouse, 36 Lancaster Road Pegasus and then the afternoon session will be nearby out in the field.

All producers, agribusiness and those interested in soil health, increased productivity and environment are invited to attend.

Cradle Coast NRM Soil Extension Program officer Nick Jamson gets down and dirty.

# Tourism app launch

TOURISM Tasmania has developed an app to help visitors get the most out of their stay and understand the breadth of tourism offerings available. The Discover Tasmania App displays events, activities, accommodation, places to see, and things to eat and drink throughout the state.

Tourism operators are encouraged to register their businesses on the ATDW database which will allow operators to easily promote their business and events on numerous digital platforms including Discover Tasmania and Tourism Australia Australia.com and the new app. Go to [tourismtasmania.com.au](http://tourismtasmania.com.au) and follow the links Australian Tourism Data Warehouse.

Premier Jeremy Rockliff said it would help travellers and locals discover products and experiences, as well as connect visitors direct with businesses.

The Discover Tasmania App is available to download for free on Google Play or the Apple App Store. Tourism Tasmania will drive awareness and encourage travellers to download the app, with a campaign commencing in May and aligning with the Off Season.

The Tourism Tasmania's Off Season winter marketing campaign is now launched interstate.

# Pharmacies slam change

FROM September Australians will be able to fill two months' supply at the local pharmacy, rather than one, for 325 prescription medicines.

This is expected to halve the cost of prescriptions.

Peak body representing pharmacy owners, the Pharmacy Guild of Australia has been vocal in criticising the measure and said that this policy change will create medicine shortages and that pharmacies will suffer financial loss.

King Island has a large older and pensioner population and local pharmacist Mariam Melville explained that the government's rationale was to ease the cost of medications.

"Locally PBS medications cost \$7.30 and with the changes, essentially you could get two boxes for \$7.30 for medications that are on the list. A doctor can write a prescription how they want, but the change will say a 60-day supply with however many repeats they decide.

"I was looking through the list, and most of the drugs I dispense are on the list...Some people will get two boxes, and possibly some will get none.

"We don't want to be put in a position where we decide who gets medication and who doesn't," she said.

Covid has impacted the supply of some medications and the island has the additional barrier of needing to order stocks to come in from off-island and having them within use-by date, or special orders.

"Supply has gotten better over the last two months. Some items are out of stock but since the announcement, a lot has been out of stock. I think a lot of pharmacies might be worried that they won't be carrying enough stock for their customers. I reckon they are or will try and stock up."

A pharmacy gets paid after they have dispensed a PBS medication.

"So, a pharmacy will be paying out extra to get in extra shelf stock and then not getting compensated for it and then you get compensated at the end of the month, or when you submit a claim," Ms Melville said.

She also expressed concern that if a patient stockpiled that increases the risk of overmedication or misuse.

Another consequence is the customer will have less reason to visit the chemist shop.

Patients with chronic diseases may reduce their pharmacy visits by half which means the opportunity to sell other products sitting on shelves is also halved.

"A pharmacy is a business that sits with healthcare."

The government has said the change is to reduce the pressure on GPs and shortages as well as reduce the cost of medications.

The Federal Government has assured the Pharmacy Guild that the \$1.2 billion savings from allowing patients to fill two months' supply of medicines will be invested directly back into pharmacies.

The scope of pharmacy practice is under review in 2023 and substantial healthcare reform is on the federal agenda.

Community pharmacists are increasingly providing services traditionally delivered by GPs, however, this push to expand pharmacy practice is meeting resistance from medical practices and their peak bodies.

King Island pharmacy does not administer Covid, flu and traveller vaccines which are provided in off-island chemists and trials in other states including allowing pharmacists to dispense oral contraception and antibiotics over the counter. Overseas nurse practitioners are employed within pharmacies and provide routine procedures and services.

## Community Information

### Session

ConocoPhillips Australia is currently developing an Environment Plan for the proposed Otway Exploration Drilling Program and is hosting a community information session to outline the proposed exploration activities and the decision-making process.

Residents and all relevant persons are encouraged to come along to meet the project team, learn more about the proposed activity, ask questions and provide feedback.

Date: **Thursday 18 May 2023**

Location: **King Island Town Hall**

Time: **6-8pm**

Light refreshments will be provided.

# Hamstring hampers Stewie

THE men's 3000m was one of the most anticipated events at last Saturday's Seashore Group Doha Diamond League Meeting in Qatar.

World-ranked runner and King Islander Stewart McSweyn, slipped on his spikes to compete against a field that World Athletics described as "breathtaking."

It was tough racing for the Australian in the field of world champions and record holders, and McSweyn who was in the front running huddle, suddenly stepped off the track at 800m.

After the race, he told Wide World of Sports: "Been dealing with a hamstring last week or so. Just wasn't ready to go, unfortunately."

The final result in the men's 3000m was Ethiopia 1,2,3. Ethiopia's Lamecha Girma, the Olympic and world 3000m steeplechase silver medallist, clocked 7:26.18 for a meeting record and world-leading time. Olympic champion, Selemon Barega finished second in a lifetime best of 7:27.16, with Aregawi in third 7.27.61.

The event in Doha was the athletics season opener. The World Athletics 2023 Diamond League has 14 meetings on four continents and athletes accrue points based on their finishing position. The athletes with the most points are invited to the Diamond League final. This year it will be in Eugene, USA, in mid-September.

This week, the 2023 Stewart McSweyn Athletics Scholarship, named in his honour, was awarded to Ashley Fehlberg and Tom Winkel from the North West Athletic Club.

The 3000M Men event at the 2023 Doha Diamond League meet was regarded by many as the best event... the top two 3000m runners in El Bakkal and Girma; 2 of the best three 1500m runners in Cheruiyot and McSweyn, and the 5k/10k specialist Barega went head-to-head.

## Imperial 20 says thanks

THE Imperial 20 committee presented Terry Perry with a locally crafted signature cheese board thanking Terry and Dorothy Perry for their 30 years of continuous support of the Imperial 20 which commenced at the first Imperial 20 in 1994.

The congratulations celebrated the couple's and family's generosity and lifetime support of King Island activities and events ranging from football and other sports through ongoing assistance to fundraisers and making contributions to the many island activities.

Terry Perry holds his Imperial 20 commemorative cheeseboard thanking Terry, Dorothy (dec) and family for their ongoing island support.

# The real game begins

## STANSFIELD says

with Brad Stansfield

MAKE no mistake about it, Premier Jeremy Rockliff has indeed scored a major political victory and lasting legacy by finally securing Tasmania our own AFL team.

But in doing so I am reminded of words reputedly uttered by King Pyrrhus of Epirus following the battle of Asculum in 297BC "If we are victorious in one more battle with the Romans, we shall be utterly ruined". While reportedly victorious in the battle, Pyrrhus lost a large part of his force and most of his commanders, and ultimately was forced to retreat from Italy.

The question is, is the price paid (both in dollars and political terms) by Premier Rockliff for this stunning Stadium and AFL victory similarly too high, and something he will come to regret at the next election?

There's no doubt securing a Tasmanian AFL team is popular (at a taxpayer price of \$12 million a year for 12 years, it must be noted), but the truth is the billion-dollar Macquarie Point stadium is as popular as syphilis at a sex party.

By pumping so much money into the South Premier Rockliff is also going against the iron-clad rule of Tasmanian politics that state elections are "won in the north" (Braddon, Bass and Lyons).

The \$130 million upgrade of UTAS stadium in Launceston will help offset the pain somewhat, but with the new 35-seat parliament requiring that the Liberals win 50 per cent of the primary vote in each of those seats to have even a hope of retaining government, you've got to ask if anyone in the Government has actually done the electoral maths on this thing.

This is not to take anything away from the Premier and his Sports Minister Nic Street. They have held the line against strong opposition to funding the Macquarie Point stadium (including from this columnist) and have succeeded in persuading the Federal Labor Prime Minister Anthony Albanese to cough up \$300 million to help make it happen. No mean feat.

Since the VFL officially became the AFL in 1990, most Tasmanian Premiers have had a crack at

securing Tasmania our own team and ended up holding only a deflated Sherrin.

For example, who could forget former ALP Premier Paul Lennon going cap-in-hand to AFL headquarters to lobby then league chief Andrew Demetriou in 2008, only to reportedly be "dismissed as if he were unimportant" (the ultimate insult to Premier Lennon) and made to wait in the glass-walled lobby for

Premier Rockliff is going against the iron-clad rule of Tasmanian politics that state elections are "won in the North".

15 minutes – all the while the media filmed his obvious discomfort from outside.

But where Lennon, Bacon and Barlett failed, Jeremy Rockliff has succeeded – although it must be said his ultimate success is built on the efforts of both Will Hodgman, who commissioned the Godfrey Taskforce in 2019, and then Peter Gutwein who first announced the (then floating, now Mac Point) stadium in 2022.

It's a salient reminder of Federal-State relations and one of the number one rules of politics I learned during my time as Chief of Staff to then Premier Will Hodgman. It's a lot easier to get money out of Governments of the opposite political colour in Canberra, than one of your own side.

Does anyone really think that a re-elected Scott Morrison would have provided \$300 million to a state that he allegedly called "mendicant" in 2018?

This is a lesson which Labor Leader Rebecca White also learned – to her detriment.

After boldly taking a strong position against the stadium, Prime Minister Albanese's preparedness to ignore Ms White's political positioning has left her as political roadkill and raises serious questions about her influence within the Labor Party, and future as State Labor Leader.

If Ms White can't convince even her own Federal Leader of the merits of her position, how can she possibly retain the confidence of own party-room? Even exiled Labor Leader

and future contender David O'Byrne - who backed the stadium - appears to have had more influence with the Prime Minister. At the very least, he read the green better.

Labor's Federal Member for Lyons Brian Mitchell, as well as potential Labor contenders for Bass and Braddon, must also be wondering whether Anthony Albanese is serious about Tasmania at the next federal election after stumping up for Macquarie Point. Perhaps the PM doesn't think he needs Tasmanian

The big men fly, left, but will the billion dollar cost of the Premier's win in getting a Tassie team – the Macquarie Point stadium – above, end up being a major disaster.

seats given the state of political play on the mainland.

Finally, this whole saga is a salutary lesson in how to negotiate with Governments. Like Larry Kestelman a couple of years ago with his outrageous Jack Jumpers deal, the AFL has learned that when the Tasmanian Government wants something, negotiating with them can be like taking candy from a baby.

As much as politicians seek to get the best possible deal, at the end of their day it's not their own money they are negotiating with. Rather than the real money that families or business deal in, it's just numbers on a piece of paper.

And the bureaucrats who "negotiate" on behalf of the Government usually have no real-world business experience, and generally lack the ability to call out a bad business deal when they see it.

In 2019 I wrote a column about Tasmania's AFL team travails saying that "the AFL are playing us for fools" by denying us a team.

Four years later, we've now got our own team, but nothing much else has changed.

The AFL may not have played us for fools, but they're certainly laughing all the way to the bank.

# Modern mine update

THE last year has seen Group 6 Metals' Scheelite Processing Plant growing from a clean sand pad overlooking Grassy Harbour.

Today, it is an array of bins, walls, spirals, conveyor arms and sheds, linked by yellow-handled walkways, to form the essential processing component of the new Group 6 Metals mine.

Metallurgical manager Alvin Johns conducted a tour of the mill, explaining the extraction process to recover the maximum portion of the contained scheelite concentration.

Alvin has over 30 years of experience and has been involved in designing, building, commissioning and operating a number of processing facilities around the world. Since 2010 he has been with G6M and said the mine emergence from the drawing board is immensely gratifying, he said.

If you picture an 1850s gold miner sluicing water and sand around a mining pan, using the ridged rim to catch and sort heavy grains of gold; it's basically the same principal employed at G6M, with water and gravity playing pivotal roles.

Alvin said the progressive reduction in size and concentration of the ore is a 'gentle' one because surprisingly, tungsten in its scheelite mineral form is quite soft, so the processing aims to consistently reduce the ore particle size without pulverising it and losing mineral.

"Older plants had two or three mostly compression-type crushers with shaker tables. G6M incorporates multiple crushing and extraction methods resulting in a much higher recovery of tungsten," said Alvin.

"At full production G6M will be able to process 60 tonnes per hour, using between 3-400 cubic metres of water per hour, 90% of which is recycled back into the process," he said.

"Firstly large rocks of around 600mm are brought from the open pit to the primary crusher, and crushed to allow them to be fed to the secondary crusher. From there the ore is fed to the Vertical

Shaft Impactor and after that it's basically water and gravity that does all the work, using different sluicing and sorting mechanisms," explained Alvin.

"The primary crusher is the largest single piece of infrastructure, perched high on a gabion wall where haul trucks dump the ore to be loaded into the primary crusher with its vibrating bell tower lined with manganese steel. This crusher will squeeze and smash the rock, which then falls through screens, onto a conveyor belt to more screens and a magnet to remove any tramp metal.

"At this stage, the ore is around 25-100mm and still huge compared to the finished product, said Alvin.

"From here it's conveyed to the secondary cone crusher, which works like an upside-down mortar and pestle.

"The next stages are substantially quieter and will work much longer hours. Firstly the tertiary screen, and vertical shaft impactor which works like a ferocious wet spin dryer, its centrifugal force throwing the ore against its outer anvil wall, breaking the rock along natural faults and crystal boundaries and reducing the 25mm particles down to 1.2mm", Alvin said.

"The next stage is gravity and water sluicing the now sand-like rock through spirals.

"We have a forest of double helix spirals, with modular, movable internal guides to allow heavy minerals to separate from lighter, gently working along grooves, around and downwards, around and around, constantly sorting, sifting and extracting the tungsten concentrate at one tonne per hour.

"From the spirals, ore will move through a grinding process, before heading into the shed, where 18 shaker tables, double stacked, vibrate and concentrate the ore through 75-micron screens, further increasing the grade.

"However, at this stage, it's only a middling concentrate at 150 microns, with several colours visible; Scheelite, various host rocks and garnet (not the type used in sandblasting) and sulphide.

"From here, in a slurry form, the sulphides are floated

**Metallurgical manager Alvin Johns at Group 6 Metals' scheelite processing plant that he has seen develop from the drawing board to high-tech reality.**

out and a high strength magnet working at a flux density of 12,000 gauss, extracts the paramagnetic garnet.

"This is where it gets really exciting, with G6M employing a world first in tungsten mining, with 12 bright orange multi-gravity separators," Alvin said.

"The MGS are next-generation mining with an unsurpassed ability to recover ultra-fine material, again using just water and gravity; its centrifugal force pushes heavy materials to its outer wall, which are then dragged forward by blades. It's a simple system, just rotation and shaking, economical and clean.

"The MGS machines take the "waste" from other gravity streams at around 0.5% tungsten and concentrate it to around 5% while eliminating more than 90% of the problematic mineral Calcite.

Here, Alvin's tour ended, as the final milled concentrate section is still under construction.

**Next time the tour will take us to the tailings dam.**

# G-G special guest for beaut party

KING Island will host the National Keep Australia Awards on May 19 with finalists coming from around Australia – and KAB patrons Governor General David Hurley and Mrs Linda Hurley.

Last year King Island was declared National KAB overall winner.

A program has been designed to show them some King Island sights and to meet local islanders.

The Governor General and Mayor Marcus Blackie have a personal connection.

Mr Blackie served as his personal assistant when the Governor General commanded the 1st Brigade from 1999-2000 in Darwin, supporting Australian-led operations in East Timor.

The Governor-General visit program is confirmed as follows:

10.50am: Arrive at King Island via RAAF jet.

11:30 am - Noon: Reunion with Mayor Marcus Blackie.

Noon -1.30pm: Civic Reception at Council Chambers. (invitation only).

1.30pm - 3pm: Visit to

King Island Dairy

3pm- 4.30pm: Meet the King Island public @ The Boathouse. (public, visitors and school students are invited to attend - please park at the Harbour and walk around via the grass track or park at the top of the boathouse hill and walk down).

4.30pm - 6pm: Rest

6pm -9 pm: Keep Australia Beautiful National Awards Dinner at King Island Golf Club. (invitation only).

9:20pm: Depart King Island via RAAF jet.

ABOVE: Governor General David Hurley and his wife Mrs Linda Hurley.

INSET: The Governor-General and King Island Mayor Marcus Blackie serving together in the Army, Darwin 1999.

## 'Bio-tax' slammed

From page 1

The levy will be charged at a rate equivalent to 10 per cent of the industry-led agriculture levies of 2020-21, netting the Federal Government a total of \$153 million in just three years and will start from July 1, 2024.

Tasmanian Farmers and Graziers Association president Ian Sauer said that the government has forgotten that farmers are always wearing the cost of biosecurity incursions and that the new levy will add unnecessary complexity.

"Farmers wear an economic cost, a social cost and sometimes it's an environmental cost," Mr Sauer said.

"This biosecurity levy is being levied on the whole agricultural chain at the farm gate through cents per cattle or per chicken.

"I don't know how this is

going to be administered, it's going to be a joke."

Mr Sauer fully supports Australia's current investments in border control but said there has been no discussion between the government and agricultural sector on the new levy.

"The fundamental principal of making sure biosecurity is recognized internationally as first class is essential but it's how we get there and pay for it we've got concerns with.

"I see it as a very costly and complex thing to administer. How are you going to count up how many chickens were sold?"

"Governments' role is to create an environment that allows industry to flourish and grow to be effective and efficient – we are not there to do the paperwork for the government."

Primary Industries and Water Minister Jo Palmer said Australia's biosecurity system was the

industry's first line of defence.

"While the State Government welcomes the additional funding for biosecurity measures, we are closely reviewing the impact of the Federal Government's tax on farmers to pay for these initiatives," Ms Palmer said.

A lack of consultation and major increases to biosecurity levies in the Federal Budget has also been criticised by Tasmania's peak fruit grower body.

Fruit Growers Tasmania chief executive officer Peter Cornish said it was disappointing the Federal Government had not consulted industry about the changes, which will see growers forced to pay for a significant increase in biosecurity charges.

Because the increase is being applied to total levy producers currently pay, which includes funding for other industry activities like research and development and marketing, Mr Cornish

said the increase to the actual biosecurity component is huge.

With apples for example, the biosecurity component of the current per kilogram levy is 0.07 cents, however this will increase to 0.26 cents, a jump of more than 200 per cent.

By applying the 10 per cent increase to overall levies, not just the biosecurity component, Mr Cornish said some producers would be hit harder than others.

"For any of the ones that have a high level of research and development as a component or marketing as a component of their levy, it's going to cost them relatively even more because the 10 per cent is a misnomer," he said.

Importers are also expected to contribute to biosecurity costs with increased fees on clearance costs expected to take their total contribution to \$350 million next year.

Choreographer Kyall Shanks' Tasdance Influencer will tour King Island in 2024 and is on the island on May 27 for a community workshop. Picture: MELANIE KATE PHOTOGRAPHY

# Troupe's dance influence

TASDANCE fuses outstanding dance artists with innovative artists from other disciplines to create multifaceted contemporary dance. The group will visit King Island on May 27.

Influencer is a new professional work that explores our relationship to social media and influencer culture through dance. The work is choreographed by Kyall Shanks and will tour King Island in 2024. Alongside the tour, Tasdance is undertaking some community development in each region across 2023. This includes free workshops and engagements with the professional artists making the work. For those who are keen, there is also the possibility to perform as part of the event in a new community performance which will debut alongside the show in each community. This is their first visit to King Island for this project and Tasdance would love to meet islanders at the Influencer information session 1-3 pm May 27 in the King Island Town Hall. They will also be visiting King Island District High School and talking to students. They will talk about Tasdance, what the project is and how you can be involved. This session will end with some movement (totally optional). For more information, please contact Emma Porteus at [emma@tasdance.com.au](mailto:emma@tasdance.com.au)

# Farmers fear hung parliament

KAROLIN MACGREGOR

TASMANIA'S peak farming body says it is deeply concerned about political upheaval within the Tasmanian Government and the possible impacts on agribusiness confidence. The Tasmanian Farmers and Graziers has voiced its concerns after the shock resignation of two Liberal MPs from the party, which now means the State Liberal Government has been plunged into minority. Liberal MPs Lara Alexander and John Tucker announced their decision to resign from the party and become independents late last week, citing concerns over the proposed new \$715 million AFL stadium in Hobart and a lack of transparency around the project. TFGA president Ian Sauer said while agriculture across the state enjoyed bipartisan support, a minority Government could have a significant impact on business confidence in the sector. "Some of the TFGA members and farmers that I've spoken to have concerns about the football stadium and the cost and everything else," he said. "However, those concerns are dwarfed with the concerns about there

being a legislative paralysis in parliament and so that's the bigger concern that I've been picking up."

Mr Sauer said many are concerned about the broader economic impacts of a minority government. "What farmers and other business leaders are talking about is that past history shows that when you get a hung parliament everything gets slow right down," he said. "When you've got to rely on other parties, everything gets diluted and everything slows down, there's a high degree of frustration and it's the economy that misses out."

Mr Sauer said agriculture is a major pillar of the economic and social fabric of Tasmania, so any loss in confidence that impacts agribusiness due to political instability in this state should be a concern for every Tasmanian. In recent years the Tasmanian economy has been leading the nation on certain indicators and Mr Sauer said agriculture in the state had enjoyed a period of stability and confidence, something the sector would like to see continue. "A big part of the economy doing so well comes down the confidence," he said.

# on a special day

LEFT: Bert and Lorraine Nievaart enjoy Mother's Day lunch at Wild Harvest restaurant.

BELOW: Zooming into the Netherlands with Suze Roskam.

ABOVE: Grandma Ann Tarleton has her first cuddles with newborn Angus.

LEFT: Island visitor Ros Pearce Facetimeed her daughter Seona Ritchie in Melbourne and chatted with grandchildren.

MUMMIES, mums, mamas, nannas, grans, grannies grandmas, nonnas, and omas, were celebrated in many ways last Sunday.

King Island mums received children's handmade gifts and cards, and maybe breakfast in bed and a day of leisure.

Some families held a beach barbecue others breakfasted or lunched in Currie at the Larder, the King Island Hotel, had a leisurely wine at Legs, or made their way to Grassy for lunch or dinner at the Grassy Tavern and Wild Harvest with

dining entertainment provided by past resident Charles Pearce who flew back to the island, with his wife Ros for the weekend.

Some took a weekend escape and for others it was a day just like all others.

Social media reflected a broader conversation. Posts shared a day of recognition, gratitude and support.

Posts also reminded us that it can be a day of sorrow and loss. Mums of all ages were remembered for being forces of love, care and protection but

in a rapidly changing world mothers and mothering included newer and broader thoughts about mothers and acknowledged leadership, strength, softness, survival and choices.

Facetime, Messenger, Zoom and other video technologies are now commonplace and are regularly replacing the telephone and over the weekend linked older, younger and new mums to their mums located not only around Australia but also around the world.

# Unions hit 'weasel words'

## 'Buyer beware' advice

MARTINE HALEY

THE Tasmanian Government has been accused of betrayal and using weasel words over local government reform.

The Australian Services Union, which represents many local government employees said imposing forced amalgamations and centralised services would solve nothing.

ASU branch secretary of Tasmania Lisa Darmanin said Tasmanian ratepayers were being played for fools.

"The lengthy Future of Local Government Review Interim Report leaves many questions unanswered; dangerously it creates more questions than it answers," Ms Darmanin said.

"The Government has betrayed their commitment of not forcing amalgamations onto Tasmanian communities.

"They are telling Tasmanians we can't be trusted to understand what is best for our own communities.

"When we talk to workers and community members, we hear them say the government's decision to force mergers is a predetermined outcome."

She said the Government thought it could fool Tasmanians by using words

like 'boundary re-draw' or 'consolidation', but these phrases are weasel words.

"The Government is determined to force amalgamation, jamming council regions together to make bigger councils. And Tasmanians are awake to it.

"Local Government Board Chair Sue Smith says the areas are not a predetermined outcome, but the report itself states the maps are the "beginnings of a set of principles (the board) think will make for robust councils."

"Ratepayers are not fools; they will know this is barely hidden code for amalgamation.

"Forgive us for our cynicism, but the whole point of local democracy is being able to approach your local member of council and have your voice heard."

Previously Local Government Minister Nic Street has refused to rule out forced amalgamations.

"I understand the interest in this but I won't be drawn into a 'rule in-rule out' game," Mr Street said.

"I will respect the review process and am waiting to see what the board has to say about the options."

PETER HOPKINS

MAST General Manager  
Recreational Boating & Safety

MAST will soon be introducing new legislation to better manage the transfer and registration process for recreational vessels. The changes are centred around ensuring the vessel is not an unsafe vessel.

Many older vessels may have been modified since their construction, which could affect the safety of the boat itself.

Common modifications include – new engines, brackets and fixtures being screwed into the vessel, additional weight being added with pot haulers, larger fuel tanks etc. The way a vessel has been stored, maintained and used also affects its condition.

Under new legislation to be implemented, you will be required to declare –that your boat is not unsafe when registering or selling a vessel.

In addition, the person buying the boat must also declare that they are satisfied the vessel being transferred to them is not unsafe. Both the seller and purchaser will have 14 days to notify MAST of the transfer.

This is an important change to Tasmanian legislation, which is designed to better manage transfers and registrations of vessels and improve safety outcomes.

For the purposes of registration and transfer, an unsafe vessel is a

(d) the absence of, or condition of, materials or items comprising the reserve buoyancy, or part of the reserve buoyancy, of the vessel

Many vessels are advertised for cheap prices on various platforms. There is no such thing as a cheap boat!

Often once you start digging you can find a lot more

problems than first meet the eye.

The best advice MAST can give any prospective buyer of a second-hand boat – whether as a first boat or if you are downsizing or upgrading – is to take someone who knows about boats when you are viewing the boat.

The old maxim of "buyer beware" is especially important when you are buying a second-hand boat.

MAST will update its website with regard to the the implementation of this new legislation at: [www.mast.gov.tas.au](http://www.mast.gov.tas.au) over the coming months to ensure sellers and buyers understand their obligations.

## Walking together towards a healthier heart

Walking is a fun, free and easy way to feel happy and healthy. Why not start a walking group in your local area? It's a great way to meet new friends and boost your health.

NO ORDINARY ISLAND.  
NO ORDINARY CHEESE.

# Blythe Star mystery put to rest

AN investigation by CSIRO research vessel (RV) Investigator has confirmed the location of the wreck of the MV Blythe Star.

"The 44-metre motor vessel (MV) Blythe Star was a coastal freighter that disappeared off Tasmania nearly 50 years ago," the CSIRO said.

"The vessel was travelling from Hobart to Grassy King Island when, on 13 October 1973, it suddenly capsized and sank off the southwest coast of Tasmania.

"All 10 crew members were able to escape the sinking vessel into an inflatable life raft.

"Three crew members died before the survivors were rescued 12 days later on 24 October 1973."

The disappearance of the MV Blythe Star sparked the largest maritime search ever conducted in Australia to that time. No trace of the vessel was ever found by the searchers.

The King Island News reported in 1973, "The Blythe Star, built at Le Havre France in 1947 for Norwegian owners, her original name the Tandik, was brought to Australian waters in 1959 and renamed the Blythe Star to replace a vessel of the same name which burned out."

The ship was formerly an explosives carrier and did not carry livestock. It was initially chartered for three months by

**MV Blythe Star docked in Hobart.**

Picture: QUEEN VICTORIA MUSEUM, AUCHD.

key features to confirm the wreck was the MV Blythe Star. This included identifying part of the vessel name – 'STAR' – on the ship's bow.

"The wreck was covered with a minimal growth of algae and seaweed, and some structures showed signs of damage, particularly on the stern. Most notably, the vessel's wheelhouse is no longer present. Various marine life was observed on and around the wreck including crayfish, schools of fish and several fur seals, which were filmed swimming around the wreck.

"The data from the project have been provided to state and national maritime heritage agencies as part of the reporting process for the Australasian Underwater Cultural Heritage Database (AUCHD). It's hoped that the mapping and video footage gathered may provide additional information to help answer questions about what caused the vessel to sink.

"The outcomes of the project have been shared with key stakeholders including members of the Blythe Star Memorial Group, which will hold an event in Hobart during October this year to commemorate the 50th anniversary of the tragedy.

fertiliser and explosives for the scheelite mine unloading at both Naracoopa and Grassy and was from time to time chartered by King Island Dairy and linked the island to Melbourne and Tasmanian ports.

When she was three days overdue on her voyage from Hobart, the search included a massive RAAF sweep over waters south of King Island then northeast and west. A RAAF Dakota and Hawker - Siddley Navigation Trainer were sent from Sale and an Orion from South Australia.

A CSIRO release said, "The location of the MV Blythe Star was confirmed by

RV Investigator on 12 April 2023 during a 38-day research voyage to study a submarine landslide off the west coast of Tasmania. This voyage, which was led by the University of Tasmania, included a piggyback project to investigate an unidentified shipwreck that had been pinpointed by fishing vessels and previous seafloor surveys in the region.

"Piggyback projects use resources already allocated to a voyage to collect additional useful or important data for national benefit.

"The investigation by RV Investigator involved the systematic mapping of the

unidentified shipwreck using multibeam echo sounders and then a visual inspection using two underwater camera systems. The mapping data and video imagery collected by RV Investigator was able to confirm that the shipwreck was the MV Blythe Star.

"The wreck of the MV Blythe Star is located approximately 10.5 kilometres west of South West Cape, Tasmania and lies in 150 metres of water. The investigation showed the vessel is intact and sitting upright on the seafloor, with its bow pointing northwest. The visual inspection using the underwater cameras was able to identify

## Dung beetle boost

OVER the past few months a program to increase dung beetle numbers in Tasmania's grazing regions has been underway.

A monitoring and redistribution program run by Cradle Coast Authority Natural Resource Management is aiming to help re-establish dung beetles in areas where numbers have declined.

Peak activity for the Blue Bomber or Geotrupes spiniger tunnelling dung beetles has come and gone for this year.

While there are still a few late emerging beetles flying at dawn and dusk, the advent of cooler weather, particularly night time minimum temperatures, has heralded their retreat for the wetter months.

From monitoring their numbers at one site near Ridgley in North West Tasmania from December 2022 through to late April this year, emergence of G. spiniger in summer appeared to be a few weeks later than usual, which resulted in them persevering a little later into autumn.

Slightly cooler than average temperatures through November and December last year likely played a role in this, as larval development of beetles in the soil profile is in part driven by soil temperatures.

A program by the Cradle Coast Authority NRM around the region is aiming to identify grazing districts where this vigorous species of tunnelling dung beetle has declined.

# How to beat cyber criminals

CYBER-crime is on the rise, as evidenced by the recent data breach which has impacted at least a quarter of all Tasmanians, following the hacking of a third party provider to the Education Department and TasTafe.

As a result, a new campaign has been launched to raise awareness among locals.

The campaign is aimed at encouraging all Tasmanians to defend their data as cyber threats from criminals become more frequent and more sophisticated.

"Whether at home or in our workplaces, our reliance on technology is increasing, making us all potential targets for cyber-crime," a campaign spokesperson said.

"Recent high-profile cyberattacks have shown that even being a client (or former client) of an organisation can put us at risk.

"Key to the campaign is raising awareness of how to detect a scam, what you can do to protect yourself online and knowledge of what to do if you are the victim of a scam."

A new website – [defendyourdata.tas.gov.au](https://defendyourdata.tas.gov.au) – has been established to provide information on how to defend your data.

The site contains three videos to

explain how to screen for scams, shield yourself and be ready to react if you need to.

Anyone can be vulnerable to a scam, so it is timely that everyone refreshes their knowledge of best practice data protection both at home and at work.

## Screen for scams

BE wary of unexpected contact, even from someone you know.

Be cautious of communication that demands you to act quickly or provide personal information.

If you feel unsure about a message, don't send a reply, open attachments, or click on any links.

## Shield yourself

REGULARLY update the apps and software on your devices.

Never use the same password more than once. Make them unpredictable, unique, and long.

Set-up two-factor or multi-factor authentication whenever possible.

Immediately close any website your browser identifies as unsafe.

## Be ready to react

BLOCK all further contact from the scammer.

Contact your bank if money is involved and inform them of what happened. Report the scam.
