Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Bonney Coast Upwelling	South-east
Upwelling East of Eden	South-east
West Tasmania Canyons	South-east

Biologically Important Areas

Scientific Name	Behaviour	Presence
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Breeding	Known to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Diomedea exulans (sensu lato) Wandering Albatross [1073]	Foraging	Known to occur
Diomedea exulans antipodensis Antipodean Albatross [82269]	Foraging	Known to occur
Eudyptula minor Little Penguin [1085]	Breeding	Known to occur
Eudyptula minor Little Penguin [1085]	Foraging	Known to occur
Morus serrator Australasian Gannet [1020]	Aggregation	Known to occur
Morus serrator Australasian Gannet [1020]	Foraging	Known to occur

Scientific Name	Behaviour	Presence
Pelagodroma marina White-faced Storm-petrel [1016]	Breeding	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Breeding	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Foraging	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Breeding	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Known to occur
Pterodroma mollis Soft-plumaged Petrel [1036]	Foraging	Known to occur
Thalassarche bulleri Bullers Albatross [64460]	Foraging	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Foraging likely	Likely to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur
Thalassarche melanophris Black-browed Albatross [66472]	Foraging	Known to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Known to occur
Seals		
Neophoca cinerea Australian Sea Lion [22]	Foraging (male)	Known to occur
Neophoca cinerea Australian Sea Lion [22]	Foraging (male and female)	Known to occur

Scientific Name	Behaviour	Presence
Sharks		
Carcharodon carcharias White Shark [64470]	Breeding (nursery area)	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution	Likely to occur
Carcharodon carcharias White Shark [64470]	Distribution (low density)	Likely to occur
Carcharodon carcharias White Shark [64470]	Foraging	Known to occur
Carcharodon carcharias White Shark [64470]	Known distribution	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging (annual high use area)	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Known Foraging Area	Known to occur

Bioregional Assessments

Gippsland	Gippsland Basin	BA website

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 14-Aug-2023

[Summary](#)
[Details](#)
- [Matters of NES](#)
- [Other Matters Protected by the EPBC Act](#)
- [Extra Information](#)

[Caveat](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	6
Wetlands of International Importance (Ramsar	12
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	24
Listed Threatened Species:	244
Listed Migratory Species:	94

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	173
Commonwealth Heritage Places:	27
Listed Marine Species:	151
Whales and Other Cetaceans:	34
Critical Habitats:	1
Commonwealth Reserves Terrestrial:	2
Australian Marine Parks:	16
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	554
Regional Forest Agreements:	6
Nationally Important Wetlands:	92
EPBC Act Referrals:	435
Key Ecological Features (Marine):	7
Biologically Important Areas:	60
Bioregional Assessments:	2
Geological and Bioregional Assessments:	None

Indigenous		
Western Tasmania Aboriginal Cultural Landscape	TAS	Listed place
Natural		
Tasmanian Wilderness	TAS	Listed place

Wetlands of International Importance (Ramsar Wetlands)	[Resource Information]
Ramsar Site Name	Proximity
Corner inlet	Within Ramsar site
East coast cape barren island lagoons	Within Ramsar site
Edithvale-seaford wetlands	Within 10km of Ramsar site
Flood plain lower ringarooma river	Within Ramsar site
Gippsland lakes	Within Ramsar site
Glenelg estuary and discovery bay wetlands	Within Ramsar site
Lavinia	Within Ramsar site
Little waterhouse lake	Within Ramsar site
Logan lagoon	Within Ramsar site
Piccaninnie ponds karst wetlands	Within 10km of Ramsar site

Ramsar Site Name	Proximity
Port phillip bay (western shoreline) and bellarine peninsula	Within Ramsar site
Western port	Within Ramsar site

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
EEZ and Territorial Sea
EEZ and Territorial Sea

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Alpine Sphagnum Bogs and Associated Fens	Endangered	Community likely to occur within area
Araluen Scarp Grassy Forest	Endangered	Community may occur within area
Assemblages of species associated with open-coast salt-wedge estuaries of western and central Victoria ecological community	Endangered	Community likely to occur within area
Brogo Vine Forest of the South East Corner Bioregion	Endangered	Community likely to occur within area
Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland ecological community	Endangered	Community likely to occur within area
Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland	Endangered	Community likely to occur within area
Giant Kelp Marine Forests of South East Australia	Endangered	Community likely to occur within area
Gippsland Red Gum (Eucalyptus tereticornis subsp. mediana) Grassy Woodland and Associated Native Grassland	Critically Endangered	Community likely to occur within area
Grassy Eucalypt Woodland of the Victorian Volcanic Plain	Critically Endangered	Community known to occur within area

Community Name	Threatened Category	Presence Text
Illawarra and south coast lowland forest and woodland ecological community	Critically Endangered	Community likely to occur within area
Illawarra-Shoalhaven Subtropical Rainforest of the Sydney Basin Bioregion	Critically Endangered	Community likely to occur within area
Karst springs and associated alkaline fens of the Naracoorte Coastal Plain Bioregion	Endangered	Community likely to occur within area
Littoral Rainforest and Coastal Vine Thickets of Eastern Australia	Critically Endangered	Community likely to occur within area
Lowland Grassy Woodland in the South East Corner Bioregion	Critically Endangered	Community likely to occur within area
Lowland Native Grasslands of Tasmania	Critically Endangered	Community likely to occur within area
Natural Damp Grassland of the Victorian Coastal Plains	Critically Endangered	Community likely to occur within area
Natural Temperate Grassland of the South Eastern Highlands	Critically Endangered	Community may occur within area
Natural Temperate Grassland of the Victorian Volcanic Plain	Critically Endangered	Community likely to occur within area
River-flat eucalypt forest on coastal floodplains of southern New South Wales and eastern Victoria	Critically Endangered	Community likely to occur within area
Seasonal Herbaceous Wetlands (Freshwater) of the Temperate Lowland Plains	Critically Endangered	Community likely to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area
Tasmanian Forests and Woodlands dominated by black gum or Brookers gum (Eucalyptus ovata / E. brookeriana)	Critically Endangered	Community likely to occur within area
Tasmanian white gum (Eucalyptus viminalis) wet forest	Critically Endangered	Community likely to occur within area
White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland	Critically Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
null		
Mordacia praecox		
Non-parasitic Lamprey, Precocious Lamprey [81530]	Endangered	Species or species habitat likely to occur within area
BIRD		
Acanthiza pusilla magnirostris listed as Acanthiza pusilla archibaldi		
King Island Brown Thornbill, Brown Thornbill (King Island) [91709]	Endangered	Species or species habitat known to occur within area
Acanthornis magna greeniana		
King Island Scrubtit, Scrubtit (King Island) [82329]	Critically Endangered	Species or species habitat known to occur within area
Anthochaera phrygia		
Regent Honeyeater [82338]	Critically Endangered	Species or species habitat known to occur within area
Aphelocephala leucopsis		
Southern Whiteface [529]	Vulnerable	Species or species habitat known to occur within area
Aquila audax fleayi		
Tasmanian Wedge-tailed Eagle, Wedge-tailed Eagle (Tasmanian) [64435]	Endangered	Breeding likely to occur within area
Botaurus poiciloptilus		
Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris tenuirostris		
Great Knot [862]	Critically Endangered	Roosting known to occur within area
Callocephalon fimbriatum		
Gang-gang Cockatoo [768]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Calyptorhynchus banksii graptogyne South-eastern Red-tailed Black-Cockatoo [25982]	Endangered	Species or species habitat known to occur within area
Calyptorhynchus lathami lathami South-eastern Glossy Black-Cockatoo [67036]	Vulnerable	Species or species habitat known to occur within area
Ceyx azureus diemenensis Tasmanian Azure Kingfisher [25977]	Endangered	Breeding known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Climacteris picumnus victoriae Brown Treecreeper (south-eastern) [67062]	Vulnerable	Species or species habitat known to occur within area
Dasyornis brachypterus Eastern Bristlebird [533]	Endangered	Species or species habitat known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea antipodensis gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Fregetta grallaria grallaria White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area
Grantiella picta Painted Honeyeater [470]	Vulnerable	Species or species habitat known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Breeding known to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Vulnerable	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Melanodryas cucullata cucullata South-eastern Hooded Robin, Hooded Robin (south-eastern) [67093]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat known to occur within area
Pardalotus quadragintus Forty-spotted Pardalote [418]	Endangered	Foraging, feeding or related behaviour known to occur within area
Pedionomus torquatus Plains-wanderer [906]	Critically Endangered	Species or species habitat likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Platycercus caledonicus brownii Green Rosella (King Island) [67041]	Vulnerable	Species or species habitat known to occur within area
Pterodroma leucoptera leucoptera Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Breeding known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Breeding known to occur within area
Pterodroma neglecta neglecta Kermadec Petrel (western) [64450]	Vulnerable	Foraging, feeding or related behaviour may occur within area

Scientific Name	Threatened Category	Presence Text
Pycnoptilus floccosus Pilotbird [525]	Vulnerable	Species or species habitat known to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area
Stagonopleura guttata Diamond Firetail [59398]	Vulnerable	Species or species habitat known to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area
Strepera fuliginosa colei Black Currawong (King Island) [67113]	Vulnerable	Breeding likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thinornis cucullatus cucullatus		
Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area
Tyto novaehollandiae castanops (Tasmanian population)		
Masked Owl (Tasmanian) [67051]	Vulnerable	Breeding known to occur within area
CRUSTACEAN		
Astacopsis gouldi		
Giant Freshwater Crayfish, Tasmanian Giant Freshwater Lobster [64415]	Vulnerable	Species or species habitat known to occur within area
Engaeus granulatus		
Central North Burrowing Crayfish [78959]	Endangered	Species or species habitat known to occur within area
Engaeus martigener		
Furneaux Burrowing Crayfish [67220]	Endangered	Species or species habitat known to occur within area
Engaeus yabbimunna		
Burnie Burrowing Crayfish [66781]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Euastacus bispinosus		
Glenelg Spiny Freshwater Crayfish, Pricklyback [81552]	Endangered	Species or species habitat likely to occur within area
FISH		
Brachionichthys hirsutus		
Spotted Handfish [64418]	Critically Endangered	Species or species habitat may occur within area
Brachiopsilus ziebelli		
Ziebell's Handfish, Waterfall Bay Handfish [83757]	Vulnerable	Species or species habitat likely to occur within area
Epinephelus daemelii		
Black Rockcod, Black Cod, Saddled Rockcod [68449]	Vulnerable	Species or species habitat likely to occur within area
Galaxiella pusilla		
Eastern Dwarf Galaxias, Dwarf Galaxias [56790]	Vulnerable	Species or species habitat known to occur within area
Hippocampus whitei		
White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat known to occur within area
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Nannoperca obscura		
Yarra Pygmy Perch [26177]	Vulnerable	Species or species habitat known to occur within area
Nannoperca variegata		
Variegated Pygmy Perch, Ewens Pygmy Perch, Golden Pygmy Perch [26178]	Vulnerable	Species or species habitat likely to occur within area
Prototroctes maraena		
Australian Grayling [26179]	Vulnerable	Species or species habitat known to occur within area
Rexea solandri (eastern Australian population)		
Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Seriolella brama		
Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
Thunnus maccoyii		
Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area
Thymichthys politus		
Red Handfish [83756]	Critically Endangered	Species or species habitat may occur within area
FROG		
Heleioporus australiacus		
Giant Burrowing Frog [1973]	Vulnerable	Species or species habitat known to occur within area
Litoria aurea		
Green and Golden Bell Frog [1870]	Vulnerable	Species or species habitat known to occur within area
Litoria raniformis		
Growling Grass Frog, Southern Bell Frog, Green and Golden Frog, Warty Swamp Frog, Golden Bell Frog [1828]	Vulnerable	Species or species habitat known to occur within area
Litoria watsoni		
Watson's Tree Frog [91509]	Endangered	Species or species habitat known to occur within area
Mixophyes balbus		
Stuttering Frog, Southern Barred Frog (in Victoria) [1942]	Vulnerable	Species or species habitat known to occur within area
INSECT		
Antipodia chaostola leucophaea		
Tasmanian Chaostola Skipper, Heath-sand Skipper [77672]	Endangered	Species or species habitat known to occur within area
Oreisplanus munionga larana		
Marrawah Skipper, Alpine Sedge Skipper, Alpine Skipper [77747]	Vulnerable	Species or species habitat known to occur within area
Synemon plana		
Golden Sun Moth [25234]	Vulnerable	Species or species habitat likely to occur within area
MAMMAL		

Scientific Name	Threatened Category	Presence Text
Antechinus minimus maritimus Swamp Antechinus (mainland) [83086]	Vulnerable	Species or species habitat known to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Chalinolobus dwyeri Large-eared Pied Bat, Large Pied Bat [183]	Vulnerable	Species or species habitat known to occur within area
Dasyurus maculatus maculatus (SE mainland population) Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area
Dasyurus maculatus maculatus (Tasmanian population) Spotted-tail Quoll, Spot-tailed Quoll, Tiger Quoll (Tasmanian population) [75183]	Vulnerable	Species or species habitat known to occur within area
Dasyurus viverrinus Eastern Quoll, Luaner [333]	Endangered	Species or species habitat known to occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isoodon obesulus obesulus Southern Brown Bandicoot (eastern), Southern Brown Bandicoot (south-eastern) [68050]	Endangered	Species or species habitat known to occur within area
Mastacomys fuscus mordicus Broad-toothed Rat (mainland), Tooarrana [87617]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Miniopterus orianae bassanii Southern Bent-wing Bat [87645]	Critically Endangered	Breeding known to occur within area
Mirounga leonina Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Perameles gunnii gunnii Eastern Barred Bandicoot (Tasmania) [66651]	Vulnerable	Species or species habitat known to occur within area
Perameles gunnii Victorian subspecies Eastern Barred Bandicoot (Mainland) [88020]	Endangered	Translocated population known to occur within area
Petauroides volans Greater Glider (southern and central) [254]	Endangered	Species or species habitat known to occur within area
Petaurus australis australis Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area
Phascolarctos cinereus (combined populations of Qld, NSW and the ACT) Koala (combined populations of Queensland, New South Wales and the Australian Capital Territory) [85104]	Endangered	Species or species habitat known to occur within area
Potorous longipes Long-footed Potoroo [217]	Endangered	Species or species habitat known to occur within area
Potorous tridactylus trisulcatus Long-nosed Potoroo (southern mainland) [86367]	Vulnerable	Species or species habitat known to occur within area
Pseudomys fumeus Smoky Mouse, Konoom [88]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pseudomys novaehollandiae New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat known to occur within area
Pseudomys shortridgei Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat known to occur within area
Pteropus poliocephalus Grey-headed Flying-fox [186]	Vulnerable	Roosting known to occur within area
Sarcophilus harrisii Tasmanian Devil [299]	Endangered	Species or species habitat likely to occur within area
OTHER		
Dendronephthya australis Cauliflower Soft Coral [90325]	Endangered	Species or species habitat known to occur within area
Hyridella glenelgensis Glenelg Freshwater Mussel [82953]	Critically Endangered	Species or species habitat may occur within area
Megascolides australis Giant Gippsland Earthworm [64420]	Vulnerable	Species or species habitat may occur within area
PLANT		
Acacia caerulescens Limestone Blue Wattle, Buchan Blue, Buchan Blue Wattle [21883]	Vulnerable	Species or species habitat known to occur within area
Acacia constablei Narrabarba Wattle [10798]	Critically Endangered	Species or species habitat known to occur within area
Acacia georgensis Bega Wattle [9848]	Vulnerable	Species or species habitat known to occur within area
Amphibromus fluitans River Swamp Wallaby-grass, Floating Swamp Wallaby-grass [19215]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Astelia australiana Tall Astelia [10851]	Vulnerable	Species or species habitat may occur within area
Astrotricha crassifolia Thick-leaf Star-hair [10352]	Vulnerable	Species or species habitat may occur within area
Banksia vincentia [88276]	Critically Endangered	Species or species habitat known to occur within area
Caladenia calcicola Limestone Spider-orchid [10065]	Vulnerable	Species or species habitat likely to occur within area
Caladenia campbellii Thick-stem Caladenia, Thick-stem Fairy Fingers [64857]	Critically Endangered	Species or species habitat known to occur within area
Caladenia caudata Tailed Spider-orchid [17067]	Vulnerable	Species or species habitat known to occur within area
Caladenia colorata Coloured Spider-orchid, Small Western Spider-orchid, Painted Spider-orchid [54999]	Endangered	Species or species habitat known to occur within area
Caladenia dienema Windswept Spider-orchid [64858]	Endangered	Species or species habitat known to occur within area
Caladenia hastata Melblom's Spider-orchid [16118]	Endangered	Species or species habitat likely to occur within area
Caladenia insularis French Island Spider-orchid [24372]	Vulnerable	Species or species habitat known to occur within area
Caladenia lindleyana Lindley's Spider-orchid [9305]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Caladenia orientalis Eastern Spider Orchid [83410]	Endangered	Species or species habitat known to occur within area
Caladenia ornata Ornate Pink Fingers [76213]	Vulnerable	Species or species habitat likely to occur within area
Caladenia pallida Rosy Spider Orchid, Pale Spider-orchid, Summer Spider-orchid [9604]	Critically Endangered	Species or species habitat likely to occur within area
Caladenia pumila Dwarf Spider-orchid [4155]	Critically Endangered	Species or species habitat likely to occur within area
Caladenia robinsonii Frankston Spider-orchid [24375]	Endangered	Species or species habitat likely to occur within area
Caladenia tessellata Thick-lipped Spider-orchid, Daddy Long-legs [2119]	Vulnerable	Species or species habitat known to occur within area
Caladenia tonellii Robust Fingers [64861]	Critically Endangered	Species or species habitat known to occur within area
Calochilus pulchellus Pretty Beard Orchid, Pretty Beard-orchid [84677]	Endangered	Species or species habitat known to occur within area
Cassinia rugata Wrinkled Cassinia, Wrinkled Dollybush [21885]	Vulnerable	Species or species habitat may occur within area
Centrolepis pedderensis Pedder Centrolepis, Pedder Bristlewort [12647]	Endangered	Species or species habitat likely to occur within area
Colobanthus curtisiae Curtis' Colobanth [23961]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Commersonia prostrata Dwarf Kerrawang [87152]	Endangered	Species or species habitat known to occur within area
Conospermum hookeri Variable Smoke-bush [68161]	Vulnerable	Species or species habitat likely to occur within area
Correa baeuerlenii Chef's Cap [17007]	Vulnerable	Species or species habitat known to occur within area
Correa lawrenceana var. genoensis Genoa River Correa [66626]	Endangered	Species or species habitat may occur within area
Corunastylis brachystachya Short-spiked Midge-orchid, Rocky Cape Midge Orchid [76410]	Endangered	Species or species habitat known to occur within area
Corunastylis rhyolitica listed as Genoplesium rhyoliticum Pambula Midge-orchid, Rhyolite Midge Orchid [78697]	Endangered	Species or species habitat likely to occur within area
Corunastylis vernalis listed as Genoplesium vernale East Lynne Midge-orchid [78699]	Vulnerable	Species or species habitat known to occur within area
Craspedia preminghana Preminghana Billybutton [77046]	Endangered	Species or species habitat likely to occur within area
Cryptostylis hunteriana Leafless Tongue-orchid [19533]	Vulnerable	Species or species habitat known to occur within area
Cynanchum elegans White-flowered Wax Plant [12533]	Endangered	Species or species habitat likely to occur within area
Dianella amoena Matted Flax-lily [64886]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Diuris basaltica Small Golden Moths Orchid, Early Golden Moths [64654]	Endangered	Species or species habitat may occur within area
Diuris lanceolata Snake Orchid [10231]	Endangered	Species or species habitat known to occur within area
Dodonaea procumbens Trailing Hop-bush [12149]	Vulnerable	Species or species habitat known to occur within area
Epacris stuartii Stuart's Heath, Southport Heath [10348]	Critically Endangered	Species or species habitat known to occur within area
Epacris virgata Pretty Heath, Dan Hill Heath [20375]	Endangered	Species or species habitat known to occur within area
Eucalyptus strzeleckii Strzelecki Gum [55400]	Vulnerable	Species or species habitat known to occur within area
Euphrasia amphisysepala Shiny Cliff Eyebright [4534]	Vulnerable	Species or species habitat known to occur within area
Euphrasia collina subsp. muelleri Purple Eyebright, Mueller's Eyebright [16151]	Endangered	Species or species habitat known to occur within area
Euphrasia fragosa Shy Eyebright, Southport Eyebright [64901]	Critically Endangered	Species or species habitat known to occur within area
Euphrasia gibbsiae subsp. psilantherea Swamp Eyebright [21507]	Critically Endangered	Species or species habitat known to occur within area
Euphrasia phragmostoma Buftons Eyebright, Hairy Cliff Eyebright [7720]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Euphrasia semipicta Peninsula Eyebright [9986]	Endangered	Species or species habitat known to occur within area
Euphrasia sp. Bivouac Bay (W.R.Barker 7626 et al.) Masked Eyebright, Masked Cliff Eyebright [82044]	Endangered	Species or species habitat known to occur within area
Genoplesium baueri Yellow Gnat-orchid, Bauer's Midge Orchid, Brittle Midge Orchid [7528]	Endangered	Species or species habitat known to occur within area
Glycine latrobeana Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat known to occur within area
Grevillea infecunda Anglesea Grevillea [22026]	Vulnerable	Species or species habitat known to occur within area
Haloragis exalata subsp. exalata Wingless Raspwort, Square Raspwort [24636]	Vulnerable	Species or species habitat known to occur within area
Hiya distans listed as Hypolepis distans Scrambling Ground-fern [92548]	Endangered	Species or species habitat known to occur within area
Ixodia achillaeoides subsp. arenicola Sand Ixodia, Ixodia [21474]	Vulnerable	Species or species habitat known to occur within area
Lachnagrostis adamsonii Adamson's Blown-grass, Adamson's Blowngrass [76211]	Endangered	Species or species habitat known to occur within area
Leiocarpa gatesii Wrinkled Buttons [76212]	Vulnerable	Species or species habitat likely to occur within area
Leionema ralstonii [64926]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Lepidium aschersonii Spiny Peppercress [10976]	Vulnerable	Species or species habitat known to occur within area
Lepidium hyssopifolium Basalt Pepper-cress, Peppercress, Rubble Pepper-cress, Pepperweed [16542]	Endangered	Species or species habitat known to occur within area
Leucochrysum albicans subsp. tricolor Hoary Sunray, Grassland Paper-daisy [89104]	Endangered	Species or species habitat known to occur within area
Lomatia tasmanica King's Lomatia [3745]	Critically Endangered	Species or species habitat known to occur within area
Melaleuca biconvexa Biconvex Paperbark [5583]	Vulnerable	Species or species habitat known to occur within area
Persicaria elatior Knotweed, Tall Knotweed [5831]	Vulnerable	Species or species habitat known to occur within area
Phaius australis Lesser Swamp-orchid [5872]	Endangered	Species or species habitat may occur within area
Pimelea spinescens subsp. spinescens Plains Rice-flower, Spiny Rice-flower, Prickly Pimelea [21980]	Critically Endangered	Species or species habitat likely to occur within area
Pomaderris brunnea Rufous Pomaderris, Brown Pomaderris [16845]	Vulnerable	Species or species habitat may occur within area
Pomaderris cotoneaster Cotoneaster Pomaderris [2043]	Endangered	Species or species habitat may occur within area
Pomaderris parrisiae Parris' Pomaderris [22119]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Prasophyllum affine Jervis Bay Leek Orchid, Culburra Leek-orchid, Kinghorn Point Leek-orchid [2210]	Endangered	Species or species habitat known to occur within area
Prasophyllum apoxychilum Tapered Leek-orchid [64947]	Endangered	Species or species habitat known to occur within area
Prasophyllum atratum Three Hummock Leek-orchid [82677]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum castaneum Chestnut Leek-orchid [64948]	Critically Endangered	Species or species habitat likely to occur within area
Prasophyllum diversiflorum Gorae Leek-orchid [13210]	Endangered	Species or species habitat likely to occur within area
Prasophyllum favonium Western Leek-orchid [64949]	Critically Endangered	Species or species habitat likely to occur within area
Prasophyllum frenchii Maroon Leek-orchid, Slaty Leek-orchid, Stout Leek-orchid, French's Leek-orchid, Swamp Leek-orchid [9704]	Endangered	Species or species habitat known to occur within area
Prasophyllum litorale listed as Prasophyllum littorale Coastal Leek Orchid [55234]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum pulchellum Pretty Leek-orchid [64953]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum robustum Robust Leek-orchid [12499]	Critically Endangered	Species or species habitat may occur within area
Prasophyllum secutum Northern Leek-orchid [64954]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Prasophyllum spicatum Dense Leek-orchid [55146]	Vulnerable	Species or species habitat known to occur within area
Prostanthera densa Villous Mintbush [12233]	Vulnerable	Species or species habitat known to occur within area
Prostanthera galbraithiae Wellington Mintbush [64959]	Vulnerable	Species or species habitat known to occur within area
Pseudocephalozia paludicola Alpine Leafy Liverwort [66441]	Vulnerable	Species or species habitat likely to occur within area
Pterostylis chlorogramma Green-striped Greenhood [56510]	Vulnerable	Species or species habitat known to occur within area
Pterostylis cucullata Leafy Greenhood [15459]	Vulnerable	Species or species habitat known to occur within area
Pterostylis gibbosa Illawarra Greenhood, Rufa Greenhood, Pouched Greenhood [4562]	Endangered	Species or species habitat may occur within area
Pterostylis rubenachii Arthur River Greenhood [64536]	Endangered	Species or species habitat known to occur within area
Pterostylis tenuissima Swamp Greenhood, Dainty Swamp Orchid [13139]	Vulnerable	Species or species habitat known to occur within area
Pterostylis ziegeleri Grassland Greenhood, Cape Portland Greenhood [64971]	Vulnerable	Species or species habitat likely to occur within area
Rhizanthella slateri Eastern Underground Orchid [11768]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rhodamnia rubescens Scrub Turpentine, Brown Malletwood [15763]	Critically Endangered	Species or species habitat known to occur within area
Rhodomyrtus psidioides Native Guava [19162]	Critically Endangered	Species or species habitat may occur within area
Rutidosis leptorhynchoides Button Wrinklewort [67251]	Endangered	Species or species habitat likely to occur within area
Senecio macrocarpus Large-fruit Fireweed, Large-fruit Groundsel [16333]	Vulnerable	Species or species habitat likely to occur within area
Senecio psilocarpus Swamp Fireweed, Smooth-fruited Groundsel [64976]	Vulnerable	Species or species habitat known to occur within area
Spyridium obcordatum Creeping Dusty Miller [17447]	Vulnerable	Species or species habitat known to occur within area
Syzygium paniculatum Magenta Lilly Pilly, Magenta Cherry, Daguba, Scrub Cherry, Creek Lilly Pilly, Brush Cherry [20307]	Vulnerable	Species or species habitat known to occur within area
Taraxacum cygnorum Coast Dandelion, Native Dandelion [2508]	Vulnerable	Species or species habitat may occur within area
Thelymitra epipactoides Metallic Sun-orchid [11896]	Endangered	Species or species habitat known to occur within area
Thelymitra jonesii Sky-blue Sun-orchid [76352]	Endangered	Species or species habitat known to occur within area
Thelymitra matthewsii Spiral Sun-orchid [4168]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Thesium australe Austral Toadflax, Toadflax [15202]	Vulnerable	Species or species habitat known to occur within area
Triplarina nowraensis Nowra Heath-myrtle [64544]	Endangered	Species or species habitat known to occur within area
Westringia davidii [19079]	Vulnerable	Species or species habitat may occur within area
Xanthorrhoea arenaria Sand Grasstree [21603]	Vulnerable	Species or species habitat likely to occur within area
Xanthorrhoea bracteata Shiny Grasstree [7950]	Endangered	Species or species habitat known to occur within area
Xerochrysum palustre Swamp Everlasting, Swamp Paper Daisy [76215]	Vulnerable	Species or species habitat known to occur within area
Zieria tuberculata Warty Zieria [56736]	Vulnerable	Species or species habitat known to occur within area
REPTILE		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Carinascincus palfreymani Pedra Branca Skink, Pedra Branca Cool-skink, Red-throated Skink [90203]	Vulnerable	Species or species habitat known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Delma impar Striped Legless Lizard, Striped Snake-lizard [1649]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Hoplocephalus bungaroides		
Broad-headed Snake [1182]	Vulnerable	Species or species habitat may occur within area
Lissolepis coventryi		
Swamp Skink, Eastern Mourning Skink [84053]	Endangered	Species or species habitat known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Tympanocryptis pinguicolla		
Victorian Grassland Earless Dragon [66727]	Critically Endangered	Species or species habitat likely to occur within area
SEASTAR		
Parvulastra vivipara		
Tasmanian Live-bearing Seastar [85451]	Vulnerable	Species or species habitat known to occur within area
SHARK		
Carcharias taurus (east coast population)		
Grey Nurse Shark (east coast population) [68751]	Critically Endangered	Species or species habitat known to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Centrophorus harrissoni		
Harrisson's Dogfish, Endeavour Dogfish, Dumb Gulper Shark, Harrison's Deepsea Dogfish [68444]	Conservation Dependent	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Centrophorus uyato listed as Centrophorus zeehaani		
Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus		
School Shark, Eastern School Shark, Snapper Shark, Tope, Soupfin Shark [68453]	Conservation Dependent	Species or species habitat likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Zearaja maugeana		
Maugean Skate, Port Davey Skate [83504]	Endangered	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea		
Sooty Shearwater [82651]		Breeding known to occur within area
Ardenna pacifica		
Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Ardenna tenuirostris		
Short-tailed Shearwater [82652]		Breeding known to occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]		Breeding known to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Migratory Marine Species		
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Caperea marginata		
Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus		
Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Dugong dugon Dugong [28]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Phocoena dioptrica Spectacled Porpoise [66728]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
Cuculus optatus Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat known to occur within area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
Monarcha melanopsis Black-faced Monarch [609]		Species or species habitat known to occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat known to occur within area
Myiagra cyanoleuca Satin Flycatcher [612]		Breeding known to occur within area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
[Symposiachrus trivirgatus as Monarcha trivirgatus](#) Spectacled Monarch [83946]		Species or species habitat known to occur within area
Migratory Wetlands Species		
[Actitis hypoleucos](#) Common Sandpiper [59309]		Species or species habitat known to occur within area
[Arenaria interpres](#) Ruddy Turnstone [872]		Roosting known to occur within area
[Calidris acuminata](#) Sharp-tailed Sandpiper [874]		Roosting known to occur within area
[Calidris alba](#) Sanderling [875]		Roosting known to occur within area
[Calidris canutus](#) Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
[Calidris ferruginea](#) Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat known to occur within area
[Calidris ruficollis](#) Red-necked Stint [860]		Roosting known to occur within area
[Calidris subminuta](#) Long-toed Stint [861]		Roosting known to occur within area
[Calidris tenuirostris](#) Great Knot [862]	Critically Endangered	Roosting known to occur within area
[Charadrius bicinctus](#) Double-banded Plover [895]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting known to occur within area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting known to occur within area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Phalaropus lobatus Red-necked Phalarope [838]		Roosting known to occur within area
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area
Pluvialis squatarola Grey Plover [865]		Roosting known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting known to occur within area
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area
Tringa incana Wandering Tattler [831]		Roosting known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area
Xenus cinereus Terek Sandpiper [59300]		Roosting known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands	[Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Point Wilson Defence Natural Area	VIC	Listed place
Swan Island and Naval Waters	VIC	Listed place
Tasmanian Seamounts Area	EXT	Listed place

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		

Scientific Name	Threatened Category	Presence Text
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anseranas semipalmata Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]		Breeding known to occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Ardenna tenuirostris as Puffinus tenuirostris Short-tailed Shearwater [82652]		Breeding known to occur within area
Arenaria interpres Ruddy Turnstone [872]		Roosting known to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Breeding likely to occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]		Roosting known to occur within area
Calidris alba Sanderling [875]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area overfly marine area
Calidris subminuta Long-toed Stint [861]		Roosting known to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Roosting known to occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat known to occur within area overfly marine area
Charadrius bicinctus Double-banded Plover [895]		Roosting known to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius ruficapillus Red-capped Plover [881]		Roosting known to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea antipodensis gibsoni as Diomedea gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eudyptula minor Little Penguin [1085]		Breeding known to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area overfly marine area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting known to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Breeding known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting known to occur within area overfly marine area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area
Larus dominicanus Kelp Gull [809]		Breeding known to occur within area
Larus pacificus Pacific Gull [811]		Breeding known to occur within area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Breeding known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Monarcha melanopsis Black-faced Monarch [609]		Species or species habitat known to occur within area overfly marine area
Morus capensis Cape Gannet [59569]		Breeding known to occur within area
Morus serrator Australasian Gannet [1020]		Breeding known to occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area
Myiagra cyanoleuca Satin Flycatcher [612]		Breeding known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area overfly marine area
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting known to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding known to occur within area
Pelecanoides urinatrix Common Diving-Petrel [1018]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Phalaropus lobatus Red-necked Phalarope [838]		Roosting known to occur within area
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area
Pluvialis squatarola Grey Plover [865]		Roosting known to occur within area overfly marine area
Pterodroma cervicalis White-necked Petrel [59642]		Species or species habitat may occur within area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Breeding known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting known to occur within area overfly marine area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area
Sterna striata White-fronted Tern [799]		Breeding known to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]		Breeding known to occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area
Stiltia isabella Australian Pratincole [818]		Roosting known to occur within area overfly marine area
Symposiachrus trivirgatus as Monarcha trivirgatus Spectacled Monarch [83946]		Species or species habitat known to occur within area overfly marine area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei as Thalassarche sp. nov. Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding known to occur within area
Thinornis cucullatus as Thinornis rubricollis Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area
Thinornis cucullatus cucullatus as Thinornis rubricollis rubricollis Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Tringa brevipes as Heteroscelus brevipes Grey-tailed Tattler [851]		Roosting known to occur within area
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Tringa incana as Heteroscelus incanus		
Wandering Tattler [831]		Roosting known to occur within area
Tringa nebularia		
Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area overfly marine area
Tringa stagnatilis		
Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area
Xenus cinereus		
Terek Sandpiper [59300]		Roosting known to occur within area overfly marine area
Fish		
Acentronura australe		
Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area
Acentronura tentaculata		
Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
Campichthys tryoni		
Tryon's Pipefish [66193]		Species or species habitat may occur within area
Cosmocampus howensis		
Lord Howe Pipefish [66208]		Species or species habitat may occur within area
Heraldia nocturna		
Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus abdominalis		
Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
Hippocampus breviceps		
Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus minotaur Bullneck Seahorse [66705]		Species or species habitat may occur within area
Hippocampus whitei White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat known to occur within area
Histiogamphelus briggsii Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Hypselognathus rostratus Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area
Kaupus costatus Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
Kimblaeus bassensis Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Mitotichthys mollisoni Mollison's Pipefish [66260]		Species or species habitat may occur within area
Mitotichthys semistriatus Halfbanded Pipefish [66261]		Species or species habitat may occur within area
Mitotichthys tuckeri Tucker's Pipefish [66262]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus robustus Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
Solegnathus spinosissimus Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Stipecampus cristatus Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Vanacampus vercoi Verco's Pipefish [66286]		Species or species habitat may occur within area
Mammal		
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding known to occur within area
Arctocephalus pusillus Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area
Dugong dugon Dugong [28]		Species or species habitat may occur within area
Mirounga leonina Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area

Scientific Name	Threatened Category	Presence Text
Neophoca cinerea		
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Reptile		
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata		
Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Current Scientific Name	Status	Type of Presence
[Balaenoptera edeni](#) Bryde's Whale [35]		Species or species habitat likely to occur within area
[Balaenoptera musculus](#) Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
[Balaenoptera physalus](#) Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
[Berardius arnuxii](#) Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
[Caperea marginata](#) Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Eubalaena australis](#) Southern Right Whale [40]	Endangered	Breeding known to occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Globicephala melas](#) Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
[Grampus griseus](#) Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
[Hyperoodon planifrons](#) Southern Bottlenose Whale [71]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Phocoena dioptrica Spectacled Porpoise [66728]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Critical Habitats [Resource Information]

Name	Type of Presence
Thalassarche cauta (Shy Albatross) - Albatross Island, The Mewstone, Pedra Branca	Listed Critical Habitat

Commonwealth Reserves Terrestrial [Resource Information]

Name	State	Type
Booderee	JBT	National Park (Commonwealth)

Name	State	Type
Booderee	JBT	Botanic Gardens (Commonwealth)

Australian Marine Parks [Resource Information]

Park Name	Zone & IUCN Categories
Huon	Habitat Protection Zone (IUCN IV)
Flinders	Marine National Park Zone (IUCN II)
Tasman Fracture	Marine National Park Zone (IUCN II)
Apollo	Multiple Use Zone (IUCN VI)
Beagle	Multiple Use Zone (IUCN VI)
Boags	Multiple Use Zone (IUCN VI)
East Gippsland	Multiple Use Zone (IUCN VI)
Flinders	Multiple Use Zone (IUCN VI)
Franklin	Multiple Use Zone (IUCN VI)
Huon	Multiple Use Zone (IUCN VI)
Tasman Fracture	Multiple Use Zone (IUCN VI)
Zeehan	Multiple Use Zone (IUCN VI)
Nelson	Special Purpose Zone (IUCN VI)
Tasman Fracture	Special Purpose Zone (IUCN VI)
Zeehan	Special Purpose Zone (IUCN VI)
Jervis	Special Purpose Zone (Trawl) (IUCN VI)

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Big Horseshoe Canyon	South-east
Bonney Coast Upwelling	South-east
Canyons on the eastern continental slope	Temperate east
Seamounts South and east of Tasmania	South-east
Shelf rocky reefs	Temperate east
Upwelling East of Eden	South-east
West Tasmania Canyons	South-east

Biologically Important Areas

Scientific Name	Behaviour	Presence
Dolphins		
Tursiops aduncus		
Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur

Pelecanoides urinatrix Common Diving-petrel [1018]	Breeding	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Foraging	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Breeding	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Likely to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Known to occur
Procellaria parkinsoni Black Petrel [1048]	Foraging	Likely to occur
Pterodroma macroptera Great-winged Petrel [1035]	Foraging	Likely to occur

Scientific Name	Behaviour	Presence
Pterodroma mollis Soft-plumaged Petrel [1036]	Breeding	Known to occur
Pterodroma mollis Soft-plumaged Petrel [1036]	Foraging	Known to occur
Sterna striata White-fronted Tern [799]	Breeding	Known to occur
Sterna striata White-fronted Tern [799]	Foraging	Known to occur
Thalassarche bulleri Bullers Albatross [64460]	Foraging	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Breeding	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Foraging likely	Likely to occur
Thalassarche cauta steadi White-capped Albatross [82344]	Foraging	Known to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging likely	Likely to occur
Thalassarche melanophris Black-browed Albatross [66472]	Foraging	Known to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Likely to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Known to occur
Thalasseus bergii Crested Tern [83000]	Breeding	Known to occur

Scientific Name	Behaviour	Presence
Thalasseus bergii Crested Tern [83000]	Foraging	Likely to occur
Seals		
Neophoca cinerea Australian Sea Lion [22]	Foraging (male)	Known to occur
Sharks		
Carcharias taurus Grey Nurse Shark [64469]	Foraging	Known to occur
Carcharias taurus Grey Nurse Shark [64469]	Migration	Known to occur
Carcharodon carcharias White Shark [64470]	Breeding (nursery area)	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution	Likely to occur
Carcharodon carcharias White Shark [64470]	Distribution	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution (low density)	Likely to occur
Carcharodon carcharias White Shark [64470]	Foraging	Known to occur
Carcharodon carcharias White Shark [64470]	Known distribution	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging (annual high use area)	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Known Foraging Area	Known to occur

Scientific Name	Behaviour	Presence
Megaptera novaeangliae		
Humpback Whale [38]	Foraging	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 14-Aug-2023

Summary
Details
Matters of NES
Other Matters Protected by the EPBC Act

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	5
Wetlands of International Importance (Ramsar	8
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	24
Listed Threatened Species:	214
Listed Migratory Species:	92

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	120
Commonwealth Heritage Places:	19
Listed Marine Species:	149
Whales and Other Cetaceans:	33
Critical Habitats:	1
Commonwealth Reserves Terrestrial:	2
Australian Marine Parks:	16
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	392
Regional Forest Agreements:	6
Nationally Important Wetlands:	66
EPBC Act Referrals:	423
Key Ecological Features (Marine):	7
Biologically Important Areas:	57
Bioregional Assessments:	2
Geological and Bioregional Assessments:	None

Lowland Grassy Woodland in the South East Corner Bioregion	Critically Endangered	Community likely to occur within area
Lowland Native Grasslands of Tasmania	Critically Endangered	Community likely to occur within area
Natural Damp Grassland of the Victorian Coastal Plains	Critically Endangered	Community likely to occur within area
Natural Temperate Grassland of the South Eastern Highlands	Critically Endangered	Community may occur within area
Natural Temperate Grassland of the Victorian Volcanic Plain	Critically Endangered	Community likely to occur within area
River-flat eucalypt forest on coastal floodplains of southern New South Wales and eastern Victoria	Critically Endangered	Community likely to occur within area
Seasonal Herbaceous Wetlands (Freshwater) of the Temperate Lowland Plains	Critically Endangered	Community likely to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area
Tasmanian Forests and Woodlands dominated by black gum or Brookers gum (Eucalyptus ovata / E. brookeriana)	Critically Endangered	Community likely to occur within area
Tasmanian white gum (Eucalyptus viminalis) wet forest	Critically Endangered	Community likely to occur within area
White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland	Critically Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
null		
Mordacia praecox		
Non-parasitic Lamprey, Precocious Lamprey [81530]	Endangered	Species or species habitat likely to occur within area
BIRD		
Acanthiza pusilla magnirostris listed as Acanthiza pusilla archibaldi		
King Island Brown Thornbill, Brown Thornbill (King Island) [91709]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Acanthornis magna greeniana King Island Scrubtit, Scrubtit (King Island) [82329]	Critically Endangered	Species or species habitat known to occur within area
Anthochaera phrygia Regent Honeyeater [82338]	Critically Endangered	Species or species habitat known to occur within area
Aphelocephala leucopsis Southern Whiteface [529]	Vulnerable	Species or species habitat known to occur within area
Aquila audax fleayi Tasmanian Wedge-tailed Eagle, Wedge-tailed Eagle (Tasmanian) [64435]	Endangered	Breeding likely to occur within area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Roosting known to occur within area
Callocephalon fimbriatum Gang-gang Cockatoo [768]	Endangered	Species or species habitat known to occur within area
Calyptorhynchus banksii graptogyne South-eastern Red-tailed Black-Cockatoo [25982]	Endangered	Foraging, feeding or related behaviour known to occur within area
Calyptorhynchus lathami lathami South-eastern Glossy Black-Cockatoo [67036]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Ceyx azureus diemenensis Tasmanian Azure Kingfisher [25977]	Endangered	Breeding known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Climacteris picumnus victoriae Brown Treecreeper (south-eastern) [67062]	Vulnerable	Species or species habitat known to occur within area
Dasyornis brachypterus Eastern Bristlebird [533]	Endangered	Species or species habitat known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea antipodensis gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregetta grallaria grallaria White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area
Grantiella picta Painted Honeyeater [470]	Vulnerable	Species or species habitat known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Breeding known to occur within area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Vulnerable	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Melanodryas cucullata cucullata South-eastern Hooded Robin, Hooded Robin (south-eastern) [67093]	Endangered	Species or species habitat likely to occur within area
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat known to occur within area
Pedionomus torquatus Plains-wanderer [906]	Critically Endangered	Species or species habitat likely to occur within area
Pezoporus occidentalis Night Parrot [59350]	Endangered	Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Platycercus caledonicus brownii Green Rosella (King Island) [67041]	Vulnerable	Species or species habitat known to occur within area
Pterodroma leucoptera leucoptera Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Breeding known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Pterodroma neglecta neglecta Kermadec Petrel (western) [64450]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Pycnoptilus floccosus Pilotbird [525]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area
Stagonopleura guttata Diamond Firetail [59398]	Vulnerable	Species or species habitat known to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area
Strepera fuliginosa colei Black Currawong (King Island) [67113]	Vulnerable	Breeding likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thinornis cucullatus cucullatus		
Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area
Tyto novaehollandiae castanops (Tasmanian population)		
Masked Owl (Tasmanian) [67051]	Vulnerable	Breeding known to occur within area
CRUSTACEAN		
Astacopsis gouldi		
Giant Freshwater Crayfish, Tasmanian Giant Freshwater Lobster [64415]	Vulnerable	Species or species habitat known to occur within area
Euastacus bispinosus		
Glenelg Spiny Freshwater Crayfish, Pricklyback [81552]	Endangered	Species or species habitat known to occur within area
FISH		
Epinephelus daemelii		
Black Rockcod, Black Cod, Saddled Rockcod [68449]	Vulnerable	Species or species habitat likely to occur within area
Galaxiella pusilla		
Eastern Dwarf Galaxias, Dwarf Galaxias [56790]	Vulnerable	Species or species habitat known to occur within area
Hippocampus whitei		
White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Nannoperca obscura		
Yarra Pygmy Perch [26177]	Vulnerable	Species or species habitat known to occur within area
Nannoperca variegata		
Variegated Pygmy Perch, Ewens Pygmy Perch, Golden Pygmy Perch [26178]	Vulnerable	Species or species habitat known to occur within area
Prototroctes maraena		
Australian Grayling [26179]	Vulnerable	Species or species habitat known to occur within area
Rexea solandri (eastern Australian population)		
Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area
Seriolella brama		
Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
Thunnus maccoyii		
Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area
Thymichthys politus		
Red Handfish [83756]	Critically Endangered	Species or species habitat may occur within area
FROG		
Heleioporus australiacus		
Giant Burrowing Frog [1973]	Vulnerable	Species or species habitat known to occur within area
Litoria aurea		
Green and Golden Bell Frog [1870]	Vulnerable	Species or species habitat known to occur within area
Litoria raniformis		
Growling Grass Frog, Southern Bell Frog, Green and Golden Frog, Warty Swamp Frog, Golden Bell Frog [1828]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Litoria watsoni Watson's Tree Frog [91509]	Endangered	Species or species habitat known to occur within area
Mixophyes balbus Stuttering Frog, Southern Barred Frog (in Victoria) [1942]	Vulnerable	Species or species habitat known to occur within area
INSECT		
Oreisplanus munionga larana Marrawah Skipper, Alpine Sedge Skipper, Alpine Skipper [77747]	Vulnerable	Species or species habitat known to occur within area
Synemon plana Golden Sun Moth [25234]	Vulnerable	Species or species habitat likely to occur within area
MAMMAL		
Antechinus minimus maritimus Swamp Antechinus (mainland) [83086]	Vulnerable	Species or species habitat known to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Chalinolobus dwyeri Large-eared Pied Bat, Large Pied Bat [183]	Vulnerable	Species or species habitat known to occur within area
Dasyurus maculatus maculatus (SE mainland population) Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Dasyurus maculatus maculatus (Tasmanian population)		
Spotted-tail Quoll, Spot-tailed Quoll, Tiger Quoll (Tasmanian population) [75183]	Vulnerable	Species or species habitat known to occur within area
Eubalaena australis		
Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isoodon obesulus obesulus		
Southern Brown Bandicoot (eastern), Southern Brown Bandicoot (south-eastern) [68050]	Endangered	Species or species habitat known to occur within area
Mastacomys fuscus mordicus		
Broad-toothed Rat (mainland), Tooarrana [87617]	Vulnerable	Species or species habitat known to occur within area
Miniopterus orianae bassanii		
Southern Bent-wing Bat [87645]	Critically Endangered	Breeding known to occur within area
Neophoca cinerea		
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Perameles gunnii gunnii		
Eastern Barred Bandicoot (Tasmania) [66651]	Vulnerable	Species or species habitat known to occur within area
Perameles gunnii Victorian subspecies		
Eastern Barred Bandicoot (Mainland) [88020]	Endangered	Translocated population known to occur within area
Petauroides volans		
Greater Glider (southern and central) [254]	Endangered	Species or species habitat known to occur within area
Petaurus australis australis		
Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area
Phascolarctos cinereus (combined populations of Qld, NSW and the ACT)		
Koala (combined populations of Queensland, New South Wales and the Australian Capital Territory) [85104]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Potorous longipes Long-footed Potoroo [217]	Endangered	Species or species habitat known to occur within area
Potorous tridactylus trisulcatus Long-nosed Potoroo (southern mainland) [86367]	Vulnerable	Species or species habitat known to occur within area
Pseudomys fumeus Smoky Mouse, Konoom [88]	Endangered	Species or species habitat likely to occur within area
Pseudomys novaehollandiae New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat known to occur within area
Pseudomys shortridgei Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat known to occur within area
Pteropus poliocephalus Grey-headed Flying-fox [186]	Vulnerable	Roosting known to occur within area
Sarcophilus harrisii Tasmanian Devil [299]	Endangered	Species or species habitat likely to occur within area
OTHER		
Dendronephthya australis Cauliflower Soft Coral [90325]	Endangered	Species or species habitat likely to occur within area
Hyridella glenelgensis Glenelg Freshwater Mussel [82953]	Critically Endangered	Species or species habitat may occur within area
Megascolides australis Giant Gippsland Earthworm [64420]	Vulnerable	Species or species habitat may occur within area
PLANT		
Acacia caerulescens Limestone Blue Wattle, Buchan Blue, Buchan Blue Wattle [21883]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Acacia constablei Narrabarba Wattle [10798]	Critically Endangered	Species or species habitat known to occur within area
Acacia georgensis Bega Wattle [9848]	Vulnerable	Species or species habitat known to occur within area
Amphibromus fluitans River Swamp Wallaby-grass, Floating Swamp Wallaby-grass [19215]	Vulnerable	Species or species habitat known to occur within area
Astelia australiana Tall Astelia [10851]	Vulnerable	Species or species habitat may occur within area
Astrotricha crassifolia Thick-leaf Star-hair [10352]	Vulnerable	Species or species habitat may occur within area
Banksia vincentia [88276]	Critically Endangered	Species or species habitat likely to occur within area
Caladenia calcicola Limestone Spider-orchid [10065]	Vulnerable	Species or species habitat likely to occur within area
Caladenia caudata Tailed Spider-orchid [17067]	Vulnerable	Species or species habitat may occur within area
Caladenia colorata Coloured Spider-orchid, Small Western Spider-orchid, Painted Spider-orchid [54999]	Endangered	Species or species habitat known to occur within area
Caladenia dienema Windswept Spider-orchid [64858]	Endangered	Species or species habitat known to occur within area
Caladenia hastata Melblom's Spider-orchid [16118]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Caladenia insularis French Island Spider-orchid [24372]	Vulnerable	Species or species habitat known to occur within area
Caladenia orientalis Eastern Spider Orchid [83410]	Endangered	Species or species habitat known to occur within area
Caladenia ornata Ornate Pink Fingers [76213]	Vulnerable	Species or species habitat known to occur within area
Caladenia pumila Dwarf Spider-orchid [4155]	Critically Endangered	Species or species habitat likely to occur within area
Caladenia richardsiorum Little Dip Spider-orchid [55018]	Endangered	Species or species habitat likely to occur within area
Caladenia robinsonii Frankston Spider-orchid [24375]	Endangered	Species or species habitat likely to occur within area
Caladenia tensa Greencomb Spider-orchid, Rigid Spider-orchid [24390]	Endangered	Species or species habitat may occur within area
Caladenia tessellata Thick-lipped Spider-orchid, Daddy Long-legs [2119]	Vulnerable	Species or species habitat known to occur within area
Calochilus pulchellus Pretty Beard Orchid, Pretty Beard-orchid [84677]	Endangered	Species or species habitat likely to occur within area
Centrolepis pedderensis Pedder Centrolepis, Pedder Bristlewort [12647]	Endangered	Species or species habitat likely to occur within area
Commersonia prostrata Dwarf Kerrawang [87152]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Correa baeuerlenii Chef's Cap [17007]	Vulnerable	Species or species habitat known to occur within area
Correa lawrenceana var. genoensis Genoa River Correa [66626]	Endangered	Species or species habitat may occur within area
Corunastylis brachystachya Short-spiked Midge-orchid, Rocky Cape Midge Orchid [76410]	Endangered	Species or species habitat known to occur within area
Corunastylis rhyolitica listed as Genoplesium rhyoliticum Pambula Midge-orchid, Rhyolite Midge Orchid [78697]	Endangered	Species or species habitat likely to occur within area
Corunastylis vernalis listed as Genoplesium vernale East Lynne Midge-orchid [78699]	Vulnerable	Species or species habitat known to occur within area
Craspedia preminghana Preminghana Billybutton [77046]	Endangered	Species or species habitat likely to occur within area
Cryptostylis hunteriana Leafless Tongue-orchid [19533]	Vulnerable	Species or species habitat known to occur within area
Cynanchum elegans White-flowered Wax Plant [12533]	Endangered	Species or species habitat may occur within area
Dianella amoena Matted Flax-lily [64886]	Endangered	Species or species habitat known to occur within area
Diuris basaltica Small Golden Moths Orchid, Early Golden Moths [64654]	Endangered	Species or species habitat may occur within area
Diuris lanceolata Snake Orchid [10231]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Dodonaea procumbens Trailing Hop-bush [12149]	Vulnerable	Species or species habitat known to occur within area
Eucalyptus strzeleckii Strzelecki Gum [55400]	Vulnerable	Species or species habitat known to occur within area
Euphrasia collina subsp. muelleri Purple Eyebright, Mueller's Eyebright [16151]	Endangered	Species or species habitat known to occur within area
Genoplesium baueri Yellow Gnat-orchid, Bauer's Midge Orchid, Brittle Midge Orchid [7528]	Endangered	Species or species habitat known to occur within area
Glycine latrobeana Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat known to occur within area
Grevillea infecunda Anglesea Grevillea [22026]	Vulnerable	Species or species habitat known to occur within area
Haloragis exalata subsp. exalata Wingless Raspwort, Square Raspwort [24636]	Vulnerable	Species or species habitat known to occur within area
Hiya distans listed as Hypolepis distans Scrambling Ground-fern [92548]	Endangered	Species or species habitat known to occur within area
Ixodia achillaeoides subsp. arenicola Sand Ixodia, Ixodia [21474]	Vulnerable	Species or species habitat known to occur within area
Lachnagrostis adamsonii Adamson's Blown-grass, Adamson's Blowngrass [76211]	Endangered	Species or species habitat known to occur within area
Leiocarpa gatesii Wrinkled Buttons [76212]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Leionema ralstonii [64926]	Vulnerable	Species or species habitat known to occur within area
Lepidium aschersonii Spiny Peppercress [10976]	Vulnerable	Species or species habitat known to occur within area
Lepidium hyssopifolium Basalt Pepper-cress, Peppercress, Rubble Pepper-cress, Pepperweed [16542]	Endangered	Species or species habitat known to occur within area
Leucochrysum albicans subsp. tricolor Hoary Sunray, Grassland Paper-daisy [89104]	Endangered	Species or species habitat likely to occur within area
Melaleuca biconvexa Biconvex Paperbark [5583]	Vulnerable	Species or species habitat may occur within area
Persicaria elatior Knotweed, Tall Knotweed [5831]	Vulnerable	Species or species habitat known to occur within area
Phaius australis Lesser Swamp-orchid [5872]	Endangered	Species or species habitat may occur within area
Pimelea spinescens subsp. spinescens Plains Rice-flower, Spiny Rice-flower, Prickly Pimelea [21980]	Critically Endangered	Species or species habitat known to occur within area
Pomaderris brunnea Rufous Pomaderris, Brown Pomaderris [16845]	Vulnerable	Species or species habitat may occur within area
Pomaderris cotoneaster Cotoneaster Pomaderris [2043]	Endangered	Species or species habitat may occur within area
Pomaderris halmaturina subsp. halmaturina Kangaroo Island Pomaderris [21964]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Pomaderris parrisiae Parris' Pomaderris [22119]	Vulnerable	Species or species habitat known to occur within area
Prasophyllum affine Jervis Bay Leek Orchid, Culburra Leek-orchid, Kinghorn Point Leek-orchid [2210]	Endangered	Species or species habitat known to occur within area
Prasophyllum atratum Three Hummock Leek-orchid [82677]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum diversiflorum Gorae Leek-orchid [13210]	Endangered	Species or species habitat likely to occur within area
Prasophyllum favonium Western Leek-orchid [64949]	Critically Endangered	Species or species habitat likely to occur within area
Prasophyllum frenchii Maroon Leek-orchid, Slaty Leek-orchid, Stout Leek-orchid, French's Leek-orchid, Swamp Leek-orchid [9704]	Endangered	Species or species habitat known to occur within area
Prasophyllum litorale listed as Prasophyllum littorale Coastal Leek Orchid [55234]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum pulchellum Pretty Leek-orchid [64953]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum secutum Northern Leek-orchid [64954]	Endangered	Species or species habitat likely to occur within area
Prasophyllum spicatum Dense Leek-orchid [55146]	Vulnerable	Species or species habitat known to occur within area
Prostanthera densa Villous Mintbush [12233]	Vulnerable	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Prostanthera galbraithiae Wellington Mintbush [64959]	Vulnerable	Species or species habitat known to occur within area
Pseudocephalozia paludicola Alpine Leafy Liverwort [66441]	Vulnerable	Species or species habitat likely to occur within area
Pterostylis chlorogramma Green-striped Greenhood [56510]	Vulnerable	Species or species habitat known to occur within area
Pterostylis cucullata Leafy Greenhood [15459]	Vulnerable	Species or species habitat known to occur within area
Pterostylis gibbosa Illawarra Greenhood, Rufa Greenhood, Pouched Greenhood [4562]	Endangered	Species or species habitat may occur within area
Pterostylis rubenachii Arthur River Greenhood [64536]	Endangered	Species or species habitat known to occur within area
Pterostylis tenuissima Swamp Greenhood, Dainty Swamp Orchid [13139]	Vulnerable	Species or species habitat known to occur within area
Pterostylis ziegeleri Grassland Greenhood, Cape Portland Greenhood [64971]	Vulnerable	Species or species habitat likely to occur within area
Rhizanthella slateri Eastern Underground Orchid [11768]	Endangered	Species or species habitat may occur within area
Rhodamnia rubescens Scrub Turpentine, Brown Malletwood [15763]	Critically Endangered	Species or species habitat known to occur within area
Rhodomyrtus psidioides Native Guava [19162]	Critically Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Rutidosis leptorhynchoides Button Wrinklewort [67251]	Endangered	Species or species habitat likely to occur within area
Senecio macrocarpus Large-fruit Fireweed, Large-fruit Groundsel [16333]	Vulnerable	Species or species habitat likely to occur within area
Senecio psilocarpus Swamp Fireweed, Smooth-fruited Groundsel [64976]	Vulnerable	Species or species habitat known to occur within area
Syzygium paniculatum Magenta Lilly Pilly, Magenta Cherry, Daguba, Scrub Cherry, Creek Lilly Pilly, Brush Cherry [20307]	Vulnerable	Species or species habitat likely to occur within area
Taraxacum cygnorum Coast Dandelion, Native Dandelion [2508]	Vulnerable	Species or species habitat known to occur within area
Thelymitra epipactoides Metallic Sun-orchid [11896]	Endangered	Species or species habitat known to occur within area
Thelymitra matthewsii Spiral Sun-orchid [4168]	Vulnerable	Species or species habitat known to occur within area
Thesium australe Austral Toadflax, Toadflax [15202]	Vulnerable	Species or species habitat known to occur within area
Westringia davidii [19079]	Vulnerable	Species or species habitat may occur within area
Xerochrysum palustre Swamp Everlasting, Swamp Paper Daisy [76215]	Vulnerable	Species or species habitat known to occur within area
Zieria tuberculata Warty Zieria [56736]	Vulnerable	Species or species habitat known to occur within area
REPTILE		

Scientific Name	Threatened Category	Presence Text
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Delma impar Striped Legless Lizard, Striped Snake-lizard [1649]	Vulnerable	Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Hoplocephalus bungaroides Broad-headed Snake [1182]	Vulnerable	Species or species habitat may occur within area
Lissolepis coventryi Swamp Skink, Eastern Mourning Skink [84053]	Endangered	Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Tympanocryptis pinguicolla Victorian Grassland Earless Dragon [66727]	Critically Endangered	Species or species habitat likely to occur within area
SHARK		
Carcharias taurus (east coast population) Grey Nurse Shark (east coast population) [68751]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Centrophorus harrissoni Harrisson's Dogfish, Endeavour Dogfish, Dumb Gulper Shark, Harrison's Deepsea Dogfish [68444]	Conservation Dependent	Species or species habitat likely to occur within area
Centrophorus uyato listed as Centrophorus zeehaani Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus School Shark, Eastern School Shark, Snapper Shark, Tope, Soupfin Shark [68453]	Conservation Dependent	Species or species habitat likely to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Zearaja maugeana Maugean Skate, Port Davey Skate [83504]	Endangered	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea Sooty Shearwater [82651]		Breeding known to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Ardenna tenuirostris Short-tailed Shearwater [82652]		Breeding known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Sternula albifrons Little Tern [82849]		Breeding known to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Migratory Marine Species		
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Caperea marginata		
Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus		
Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Dugong dugon Dugong [28]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
[Natator depressus](#) Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
[Orcinus orca](#) Killer Whale, Orca [46]		Species or species habitat likely to occur within area
[Physeter macrocephalus](#) Sperm Whale [59]		Species or species habitat may occur within area
[Rhincodon typus](#) Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
[Cuculus optatus](#) Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat known to occur within area
[Hirundapus caudacutus](#) White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
[Monarcha melanopsis](#) Black-faced Monarch [609]		Species or species habitat known to occur within area
[Motacilla cinerea](#) Grey Wagtail [642]		Species or species habitat known to occur within area
[Motacilla flava](#) Yellow Wagtail [644]		Species or species habitat known to occur within area
[Myiagra cyanoleuca](#) Satin Flycatcher [612]		Breeding known to occur within area
[Rhipidura rufifrons](#) Rufous Fantail [592]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
[Symposiachrus trivirgatus as Monarcha trivirgatus](#) Spectacled Monarch [83946]		Species or species habitat known to occur within area
Migratory Wetlands Species		
[Actitis hypoleucos](#) Common Sandpiper [59309]		Species or species habitat known to occur within area
[Arenaria interpres](#) Ruddy Turnstone [872]		Roosting known to occur within area
[Calidris acuminata](#) Sharp-tailed Sandpiper [874]		Roosting known to occur within area
[Calidris alba](#) Sanderling [875]		Roosting known to occur within area
[Calidris canutus](#) Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
[Calidris ferruginea](#) Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat known to occur within area
[Calidris ruficollis](#) Red-necked Stint [860]		Roosting known to occur within area
[Calidris subminuta](#) Long-toed Stint [861]		Roosting known to occur within area
[Calidris tenuirostris](#) Great Knot [862]	Critically Endangered	Roosting known to occur within area
[Charadrius bicinctus](#) Double-banded Plover [895]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting known to occur within area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
[Phalaropus lobatus](#) Red-necked Phalarope [838]		Roosting known to occur within area
[Philomachus pugnax](#) Ruff (Reeve) [850]		Roosting known to occur within area
[Pluvialis fulva](#) Pacific Golden Plover [25545]		Roosting known to occur within area
[Pluvialis squatarola](#) Grey Plover [865]		Roosting known to occur within area
[Thalasseus bergii](#) Greater Crested Tern [83000]		Breeding known to occur within area
[Tringa brevipes](#) Grey-tailed Tattler [851]		Roosting known to occur within area
[Tringa glareola](#) Wood Sandpiper [829]		Roosting known to occur within area
[Tringa incana](#) Wandering Tattler [831]		Roosting known to occur within area
[Tringa nebularia](#) Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
[Tringa stagnatilis](#) Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area
[Xenus cinereus](#) Terek Sandpiper [59300]		Roosting known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anseranas semipalmata Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]		Breeding known to occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Ardenna tenuirostris as Puffinus tenuirostris Short-tailed Shearwater [82652]		Breeding known to occur within area
Arenaria interpres Ruddy Turnstone [872]		Roosting known to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Breeding likely to occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]		Roosting known to occur within area
Calidris alba Sanderling [875]		Roosting known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris subminuta Long-toed Stint [861]		Roosting known to occur within area overfly marine area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Roosting known to occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat known to occur within area overfly marine area
Charadrius bicinctus Double-banded Plover [895]		Roosting known to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Roosting known to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea antipodensis gibsoni as Diomedea gibsoni		
Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora		
Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans		
Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi		
Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eudyptula minor		
Little Penguin [1085]		Breeding known to occur within area
Gallinago hardwickii		
Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area overfly marine area
Gallinago megala		
Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura		
Pin-tailed Snipe [841]		Roosting known to occur within area overfly marine area
Haliaeetus leucogaster		
White-bellied Sea-Eagle [943]		Breeding known to occur within area
Halobaena caerulea		
Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Himantopus himantopus		
Pied Stilt, Black-winged Stilt [870]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area
Larus dominicanus Kelp Gull [809]		Breeding known to occur within area
Larus pacificus Pacific Gull [811]		Breeding known to occur within area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Breeding known to occur within area overfly marine area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Monarcha melanopsis Black-faced Monarch [609]		Species or species habitat known to occur within area overfly marine area
Morus capensis Cape Gannet [59569]		Breeding known to occur within area
Morus serrator Australasian Gannet [1020]		Breeding known to occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat known to occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area
Myiagra cyanoleuca Satin Flycatcher [612]		Breeding known to occur within area overfly marine area
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area overfly marine area
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding known to occur within area
Pelecanoides urinatrix Common Diving-Petrel [1018]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding known to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Roosting known to occur within area
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area
Pluvialis squatarola Grey Plover [865]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Pterodroma cervicalis White-necked Petrel [59642]		Species or species habitat may occur within area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting known to occur within area overfly marine area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area
Sterna striata White-fronted Tern [799]		Breeding likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]		Breeding known to occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area
Stiltia isabella Australian Pratincole [818]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Symposiachrus trivirgatus as Monarcha trivirgatus		
Spectacled Monarch [83946]		Species or species habitat known to occur within area overfly marine area
Thalassarche bulleri		
Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei as Thalassarche sp. nov.		
Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri		
Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta		
Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma		
Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita		
Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thalasseus bergii as Sterna bergii		
Greater Crested Tern [83000]		Breeding known to occur within area
Thinornis cucullatus as Thinornis rubricollis		
Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area
Thinornis cucullatus cucullatus as Thinornis rubricollis rubricollis		
Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Tringa brevipes as Heteroscelus brevipes		
Grey-tailed Tattler [851]		Roosting known to occur within area
Tringa glareola		
Wood Sandpiper [829]		Roosting known to occur within area overfly marine area
Tringa incana as Heteroscelus incanus		
Wandering Tattler [831]		Roosting known to occur within area
Tringa nebularia		
Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area overfly marine area
Tringa stagnatilis		
Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area
Xenus cinereus		
Terek Sandpiper [59300]		Roosting known to occur within area overfly marine area
Fish		
Acentronura australe		
Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Acentronura tentaculata](#) Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
[Campichthys tryoni](#) Tryon's Pipefish [66193]		Species or species habitat may occur within area
[Cosmocampus howensis](#) Lord Howe Pipefish [66208]		Species or species habitat may occur within area
[Heraldia nocturna](#) Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
[Hippocampus abdominalis](#) Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
[Hippocampus breviceps](#) Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
[Hippocampus minotaur](#) Bullneck Seahorse [66705]		Species or species habitat may occur within area
[Hippocampus whitei](#) White's Seahorse, Crowned Seahorse, Sydney Seahorse [66240]	Endangered	Species or species habitat known to occur within area
[Histiogamphelus briggsii](#) Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
[Histiogamphelus cristatus](#) Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
[Hypselognathus rostratus](#) Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Kaupus costatus Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
Kimblaeus bassensis Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys mollisoni Mollison's Pipefish [66260]		Species or species habitat may occur within area
Mitotichthys semistriatus Halfbanded Pipefish [66261]		Species or species habitat may occur within area
Mitotichthys tuckeri Tucker's Pipefish [66262]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus robustus Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
Solegnathus spinosissimus Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Stipecampus cristatus Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Vanacampus phillipi](#) Port Phillip Pipefish [66284]		Species or species habitat may occur within area
[Vanacampus poecilolaemus](#) Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
[Vanacampus vercoi](#) Verco's Pipefish [66286]		Species or species habitat may occur within area
Mammal		
[Arctocephalus forsteri](#) Long-nosed Fur-seal, New Zealand Fur-seal [20]		Species or species habitat likely to occur within area
[Arctocephalus pusillus](#) Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area
[Dugong dugon](#) Dugong [28]		Species or species habitat may occur within area
[Neophoca cinerea](#) Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Reptile		
[Caretta caretta](#) Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
[Chelonia mydas](#) Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
[Dermochelys coriacea](#) Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Whales and Other Cetaceans [Resource Information]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Berardius arnuxii Arnoux's Beaked Whale [70]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
[Caperea marginata](#) Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
[Delphinus delphis](#) Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
[Eubalaena australis](#) Southern Right Whale [40]	Endangered	Breeding known to occur within area
[Globicephala macrorhynchus](#) Short-finned Pilot Whale [62]		Species or species habitat may occur within area
[Globicephala melas](#) Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
[Grampus griseus](#) Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
[Hyperoodon planifrons](#) Southern Bottlenose Whale [71]		Species or species habitat may occur within area
[Kogia breviceps](#) Pygmy Sperm Whale [57]		Species or species habitat may occur within area
[Kogia sima](#) Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
[Lagenorhynchus obscurus](#) Dusky Dolphin [43]		Species or species habitat likely to occur within area
[Lissodelphis peronii](#) Southern Right Whale Dolphin [44]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Critical Habitats [Resource Information]

Name	Type of Presence
Thalassarche cauta (Shy Albatross) - Albatross Island, The Mewstone, Pedra Branca	Listed Critical Habitat

Commonwealth Reserves Terrestrial [Resource Information]

Name	State	Type
Booderee	JBT	Botanic Gardens (Commonwealth)
Booderee	JBT	National Park (Commonwealth)

Australian Marine Parks [Resource Information]

Park Name	Zone & IUCN Categories
Huon	Habitat Protection Zone (IUCN IV)
Flinders	Marine National Park Zone (IUCN II)
Tasman Fracture	Marine National Park Zone (IUCN II)
Apollo	Multiple Use Zone (IUCN VI)
Beagle	Multiple Use Zone (IUCN VI)
Boags	Multiple Use Zone (IUCN VI)
East Gippsland	Multiple Use Zone (IUCN VI)
Franklin	Multiple Use Zone (IUCN VI)

Park Name	Zone & IUCN Categories
Huon	Multiple Use Zone (IUCN VI)
Murray	Multiple Use Zone (IUCN VI)
Tasman Fracture	Multiple Use Zone (IUCN VI)
Zeehan	Multiple Use Zone (IUCN VI)
Murray	Special Purpose Zone (IUCN VI)
Nelson	Special Purpose Zone (IUCN VI)
Zeehan	Special Purpose Zone (IUCN VI)
Jervis	Special Purpose Zone (Trawl) (IUCN VI)

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Big Horseshoe Canyon	South-east
Bonney Coast Upwelling	South-east
Canyons on the eastern continental slope	Temperate east
Seamounts South and east of Tasmania	South-east
Shelf rocky reefs	Temperate east
Upwelling East of Eden	South-east
West Tasmania Canyons	South-east

Biologically Important Areas

Scientific Name	Behaviour	Presence
Dolphins		
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur
Tursiops aduncus Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Known to occur
Seabirds		
Ardenna carneipes Flesh-footed Shearwater [82404]	Foraging	Known to occur
Ardenna grisea Sooty Shearwater [82651]	Breeding	Known to occur
Ardenna grisea Sooty Shearwater [82651]	Foraging	Likely to occur

Scientific Name	Behaviour	Presence
Ardenna grisea Sooty Shearwater [82651]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Breeding	Known to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Diomedea exulans (sensu lato) Wandering Albatross [1073]	Foraging	Likely to occur
Diomedea exulans (sensu lato) Wandering Albatross [1073]	Foraging	Known to occur
Diomedea exulans antipodensis Antipodean Albatross [82269]	Foraging	Known to occur
Eudyptula minor Little Penguin [1085]	Breeding	Known to occur
Eudyptula minor Little Penguin [1085]	Breeding	Likely to occur
Eudyptula minor Little Penguin [1085]	Foraging	Known to occur
Macronectes giganteus Southern Giant Petrel [1060]	Foraging	Known to occur
Macronectes halli Northern Giant Petrel [1061]	Foraging	Known to occur
Morus serrator Australasian Gannet [1020]	Aggregation	Known to occur

Scientific Name	Behaviour	Presence
Morus serrator Australasian Gannet [1020]	Foraging	Known to occur
Oceanites oceanites Wilsons Storm Petrel [1034]	Migration	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Breeding	Known to occur
Pelagodroma marina White-faced Storm-petrel [1016]	Foraging	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Breeding	Known to occur
Pelecanoides urinatrix Common Diving-petrel [1018]	Foraging	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Breeding	Known to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Likely to occur
Phalacrocorax fuscescens Black-faced Cormorant [59660]	Foraging	Known to occur
Procellaria parkinsoni Black Petrel [1048]	Foraging	Likely to occur
Pterodroma macroptera Great-winged Petrel [1035]	Foraging	Likely to occur
Pterodroma mollis Soft-plumaged Petrel [1036]	Foraging	Known to occur
Thalassarche bulleri Bullers Albatross [64460]	Foraging	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Breeding	Known to occur
Thalassarche cauta cauta Shy Albatross [82345]	Foraging likely	Likely to occur

Scientific Name	Behaviour	Presence
Thalassarche cauta steadi White-capped Albatross [82344]	Foraging	Known to occur
Thalassarche chlororhynchos bassi Indian Yellow-nosed Albatross [85249]	Foraging	Known to occur
Thalassarche melanophris Black-browed Albatross [66472]	Foraging	Known to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Likely to occur
Thalassarche melanophris impavida Campbell Albatross [82449]	Foraging	Known to occur
Thalasseus bergii Crested Tern [83000]	Breeding	Known to occur
Thalasseus bergii Crested Tern [83000]	Foraging	Likely to occur
Seals		
Neophoca cinerea Australian Sea Lion [22]	Foraging (male)	Known to occur
Neophoca cinerea Australian Sea Lion [22]	Foraging (male and female)	Known to occur
Sharks		
Carcharias taurus Grey Nurse Shark [64469]	Foraging	Known to occur
Carcharias taurus Grey Nurse Shark [64469]	Migration	Known to occur
Carcharodon carcharias White Shark [64470]	Breeding (nursery area)	Known to occur
Carcharodon carcharias White Shark [64470]	Distribution	Likely to occur
Carcharodon carcharias White Shark [64470]	Distribution	Known to occur

Scientific Name	Behaviour	Presence
Carcharodon carcharias White Shark [64470]	Distribution (low density)	Likely to occur
Carcharodon carcharias White Shark [64470]	Foraging	Known to occur
Carcharodon carcharias White Shark [64470]	Known distribution	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Foraging	Likely to be present

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales
-Department of Environment and Primary Industries, Victoria
-Department of Primary Industries, Parks, Water and Environment, Tasmania
-Department of Environment, Water and Natural Resources, South Australia

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 14-Aug-2023

Summary
Details
Matters of NES
Other Matters Protected by the EPBC Act

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	5
Wetlands of International Importance (Ramsar	8
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	22
Listed Threatened Species:	202
Listed Migratory Species:	93

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	102
Commonwealth Heritage Places:	13
Listed Marine Species:	153
Whales and Other Cetaceans:	33
Critical Habitats:	1
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	15
Habitat Critical to the Survival of Marine Turtles:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	382
Regional Forest Agreements:	6
Nationally Important Wetlands:	60
EPBC Act Referrals:	390
Key Ecological Features (Marine):	8
Biologically Important Areas:	64
Bioregional Assessments:	1
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

World Heritage Properties		[Resource Information]
Name	State	Legal Status
Tasmanian Wilderness	TAS	Declared property

National Heritage Places		[Resource Information]
Name	State	Legal Status
Historic		
Great Ocean Road and Scenic Environs	VIC	Listed place
Point Nepean Defence Sites and Quarantine Station Area	VIC	Listed place
Quarantine Station and Surrounds	VIC	Within listed place
Indigenous		
Western Tasmania Aboriginal Cultural Landscape	TAS	Listed place
Natural		
Tasmanian Wilderness	TAS	Listed place

Wetlands of International Importance (Ramsar Wetlands)	[Resource Information]
Ramsar Site Name	Proximity
Corner inlet	Within Ramsar site
Edithvale-seaford wetlands	Within 10km of Ramsar site
Gippsland lakes	Within Ramsar site
Glenelg estuary and discovery bay wetlands	Within Ramsar site
Lavinia	Within Ramsar site
Piccaninnie ponds karst wetlands	Within Ramsar site
Port phillip bay (western shoreline) and bellarine peninsula	Within Ramsar site
Western port	Within Ramsar site

Commonwealth Marine Area	[Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.
Status of Vulnerable, Disallowed and Ineligible are not MNES under the EPBC Act.

Community Name	Threatened Category	Presence Text
Alpine Sphagnum Bogs and Associated Fens	Endangered	Community may occur within area
Araluen Scarp Grassy Forest	Endangered	Community may occur within area
Assemblages of species associated with open-coast salt-wedge estuaries of western and central Victoria ecological community	Endangered	Community likely to occur within area
Brogo Vine Forest of the South East Corner Bioregion	Endangered	Community likely to occur within area
Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland ecological community	Endangered	Community likely to occur within area
Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland	Endangered	Community likely to occur within area
Giant Kelp Marine Forests of South East Australia	Endangered	Community may occur within area
Gippsland Red Gum (Eucalyptus tereticornis subsp. mediana) Grassy Woodland and Associated Native Grassland	Critically Endangered	Community likely to occur within area
Grassy Eucalypt Woodland of the Victorian Volcanic Plain	Critically Endangered	Community known to occur within area
Illawarra and south coast lowland forest and woodland ecological community	Critically Endangered	Community likely to occur within area
Karst springs and associated alkaline fens of the Naracoorte Coastal Plain Bioregion	Endangered	Community likely to occur within area
Littoral Rainforest and Coastal Vine Thickets of Eastern Australia	Critically Endangered	Community likely to occur within area

Community Name	Threatened Category	Presence Text
Lowland Grassy Woodland in the South East Corner Bioregion	Critically Endangered	Community likely to occur within area
Lowland Native Grasslands of Tasmania	Critically Endangered	Community likely to occur within area
Natural Damp Grassland of the Victorian Coastal Plains	Critically Endangered	Community likely to occur within area
Natural Temperate Grassland of the Victorian Volcanic Plain	Critically Endangered	Community likely to occur within area
River-flat eucalypt forest on coastal floodplains of southern New South Wales and eastern Victoria	Critically Endangered	Community likely to occur within area
Seasonal Herbaceous Wetlands (Freshwater) of the Temperate Lowland Plains	Critically Endangered	Community likely to occur within area
Subtropical and Temperate Coastal Saltmarsh	Vulnerable	Community likely to occur within area
Tasmanian Forests and Woodlands dominated by black gum or Brookers gum (Eucalyptus ovata / E. brookeriana)	Critically Endangered	Community likely to occur within area
Tasmanian white gum (Eucalyptus viminalis) wet forest	Critically Endangered	Community likely to occur within area
White Box-Yellow Box-Blakely's Red Gum Grassy Woodland and Derived Native Grassland	Critically Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
null		
Mordacia praecox		
Non-parasitic Lamprey, Precocious Lamprey [81530]	Endangered	Species or species habitat likely to occur within area
BIRD		
Acanthiza pusilla magnirostris listed as Acanthiza pusilla archibaldi		
King Island Brown Thornbill, Brown Thornbill (King Island) [91709]	Endangered	Species or species habitat known to occur within area
Acanthornis magna greeniana		
King Island Scrubtit, Scrubtit (King Island) [82329]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Anthochaera phrygia Regent Honeyeater [82338]	Critically Endangered	Species or species habitat known to occur within area
Aphelocephala leucopsis Southern Whiteface [529]	Vulnerable	Species or species habitat known to occur within area
Aquila audax fleayi Tasmanian Wedge-tailed Eagle, Wedge-tailed Eagle (Tasmanian) [64435]	Endangered	Breeding likely to occur within area
Botaurus poiciloptilus Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Roosting known to occur within area
Callocephalon fimbriatum Gang-gang Cockatoo [768]	Endangered	Species or species habitat known to occur within area
Calyptorhynchus banksii graptogyne South-eastern Red-tailed Black-Cockatoo [25982]	Endangered	Foraging, feeding or related behaviour known to occur within area
Calyptorhynchus lathami lathami South-eastern Glossy Black-Cockatoo [67036]	Vulnerable	Species or species habitat known to occur within area
Ceyx azureus diemenensis Tasmanian Azure Kingfisher [25977]	Endangered	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Climacteris picumnus victoriae Brown Treecreeper (south-eastern) [67062]	Vulnerable	Species or species habitat known to occur within area
Dasyornis brachypterus Eastern Bristlebird [533]	Endangered	Species or species habitat known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea antipodensis gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregetta grallaria grallaria White-bellied Storm-Petrel (Tasman Sea), White-bellied Storm-Petrel (Australasian) [64438]	Vulnerable	Species or species habitat likely to occur within area
Grantiella picta Painted Honeyeater [470]	Vulnerable	Species or species habitat known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Species or species habitat known to occur within area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Vulnerable	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Melanodryas cucullata cucullata South-eastern Hooded Robin, Hooded Robin (south-eastern) [67093]	Endangered	Species or species habitat likely to occur within area
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat known to occur within area
Pedionomus torquatus Plains-wanderer [906]	Critically Endangered	Species or species habitat likely to occur within area
Pezoporus occidentalis Night Parrot [59350]	Endangered	Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Platycercus caledonicus brownii Green Rosella (King Island) [67041]	Vulnerable	Species or species habitat known to occur within area
Pterodroma leucoptera leucoptera Gould's Petrel, Australian Gould's Petrel [26033]	Endangered	Breeding known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Breeding known to occur within area
Pterodroma neglecta neglecta Kermadec Petrel (western) [64450]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Pycnoptilus floccosus Pilotbird [525]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area
Stagonopleura guttata Diamond Firetail [59398]	Vulnerable	Species or species habitat known to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area
Strepera fuliginosa colei Black Currawong (King Island) [67113]	Vulnerable	Breeding likely to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thinornis cucullatus cucullatus		
Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area
Tyto novaehollandiae castanops (Tasmanian population)		
Masked Owl (Tasmanian) [67051]	Vulnerable	Breeding known to occur within area
CRUSTACEAN		
Astacopsis gouldi		
Giant Freshwater Crayfish, Tasmanian Giant Freshwater Lobster [64415]	Vulnerable	Species or species habitat likely to occur within area
Euastacus bispinosus		
Glenelg Spiny Freshwater Crayfish, Pricklyback [81552]	Endangered	Species or species habitat known to occur within area
FISH		
Brachiopsilus ziebelli		
Ziebell's Handfish, Waterfall Bay Handfish [83757]	Vulnerable	Species or species habitat likely to occur within area
Epinephelus daemelii		
Black Rockcod, Black Cod, Saddled Rockcod [68449]	Vulnerable	Species or species habitat likely to occur within area
Galaxiella pusilla		
Eastern Dwarf Galaxias, Dwarf Galaxias [56790]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Hoplostethus atlanticus		
Orange Roughy, Deep-sea Perch, Red Roughy [68455]	Conservation Dependent	Species or species habitat likely to occur within area
Nannoperca obscura		
Yarra Pygmy Perch [26177]	Vulnerable	Species or species habitat known to occur within area
Nannoperca variegata		
Variegated Pygmy Perch, Ewens Pygmy Perch, Golden Pygmy Perch [26178]	Vulnerable	Species or species habitat known to occur within area
Prototroctes maraena		
Australian Grayling [26179]	Vulnerable	Species or species habitat known to occur within area
Rexea solandri (eastern Australian population)		
Eastern Gemfish [76339]	Conservation Dependent	Species or species habitat likely to occur within area
Seriolella brama		
Blue Warehou [69374]	Conservation Dependent	Species or species habitat known to occur within area
Thunnus maccoyii		
Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area
Thymichthys politus		
Red Handfish [83756]	Critically Endangered	Species or species habitat may occur within area
FROG		
Heleioporus australiacus		
Giant Burrowing Frog [1973]	Vulnerable	Species or species habitat known to occur within area
Litoria aurea		
Green and Golden Bell Frog [1870]	Vulnerable	Species or species habitat known to occur within area
Litoria raniformis		
Growling Grass Frog, Southern Bell Frog, Green and Golden Frog, Warty Swamp Frog, Golden Bell Frog [1828]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Litoria watsoni Watson's Tree Frog [91509]	Endangered	Species or species habitat known to occur within area
Mixophyes balbus Stuttering Frog, Southern Barred Frog (in Victoria) [1942]	Vulnerable	Species or species habitat known to occur within area
INSECT		
Oreisplanus munionga larana Marrawah Skipper, Alpine Sedge Skipper, Alpine Skipper [77747]	Vulnerable	Species or species habitat known to occur within area
Synemon plana Golden Sun Moth [25234]	Vulnerable	Species or species habitat may occur within area
MAMMAL		
Antechinus minimus maritimus Swamp Antechinus (mainland) [83086]	Vulnerable	Species or species habitat known to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Chalinolobus dwyeri Large-eared Pied Bat, Large Pied Bat [183]	Vulnerable	Species or species habitat may occur within area
Dasyurus maculatus maculatus (SE mainland population) Spot-tailed Quoll, Spotted-tail Quoll, Tiger Quoll (southeastern mainland population) [75184]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Dasyurus maculatus maculatus (Tasmanian population)		
Spotted-tail Quoll, Spot-tailed Quoll, Tiger Quoll (Tasmanian population) [75183]	Vulnerable	Species or species habitat known to occur within area
Eubalaena australis		
Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isoodon obesulus obesulus		
Southern Brown Bandicoot (eastern), Southern Brown Bandicoot (south-eastern) [68050]	Endangered	Species or species habitat known to occur within area
Mastacomys fuscus mordicus		
Broad-toothed Rat (mainland), Tooarrana [87617]	Vulnerable	Species or species habitat known to occur within area
Miniopterus orianae bassanii		
Southern Bent-wing Bat [87645]	Critically Endangered	Breeding known to occur within area
Mirounga leonina		
Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area
Neophoca cinerea		
Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Perameles gunnii gunnii		
Eastern Barred Bandicoot (Tasmania) [66651]	Vulnerable	Species or species habitat likely to occur within area
Perameles gunnii Victorian subspecies		
Eastern Barred Bandicoot (Mainland) [88020]	Endangered	Translocated population known to occur within area
Petauroides volans		
Greater Glider (southern and central) [254]	Endangered	Species or species habitat known to occur within area
Petaurus australis australis		
Yellow-bellied Glider (south-eastern) [87600]	Vulnerable	Species or species habitat known to occur within area
Phascolarctos cinereus (combined populations of Qld, NSW and the ACT)		
Koala (combined populations of Queensland, New South Wales and the Australian Capital Territory) [85104]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Potorous longipes Long-footed Potoroo [217]	Endangered	Species or species habitat known to occur within area
Potorous tridactylus trisulcatus Long-nosed Potoroo (southern mainland) [86367]	Vulnerable	Species or species habitat known to occur within area
Pseudomys fumeus Smoky Mouse, Konoom [88]	Endangered	Species or species habitat likely to occur within area
Pseudomys novaehollandiae New Holland Mouse, Pookila [96]	Vulnerable	Species or species habitat known to occur within area
Pseudomys shortridgei Heath Mouse, Dayang, Heath Rat [77]	Endangered	Species or species habitat known to occur within area
Pteropus poliocephalus Grey-headed Flying-fox [186]	Vulnerable	Roosting known to occur within area
Sarcophilus harrisii Tasmanian Devil [299]	Endangered	Species or species habitat likely to occur within area
OTHER		
Hyridella glenelgensis Glenelg Freshwater Mussel [82953]	Critically Endangered	Species or species habitat may occur within area
Megascolides australis Giant Gippsland Earthworm [64420]	Vulnerable	Species or species habitat known to occur within area
PLANT		
Acacia caerulescens Limestone Blue Wattle, Buchan Blue, Buchan Blue Wattle [21883]	Vulnerable	Species or species habitat known to occur within area
Acacia constablei Narrabarba Wattle [10798]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Acacia georgensis Bega Wattle [9848]	Vulnerable	Species or species habitat known to occur within area
Amphibromus fluitans River Swamp Wallaby-grass, Floating Swamp Wallaby-grass [19215]	Vulnerable	Species or species habitat known to occur within area
Astelia australiana Tall Astelia [10851]	Vulnerable	Species or species habitat may occur within area
Astrotricha crassifolia Thick-leaf Star-hair [10352]	Vulnerable	Species or species habitat may occur within area
Caladenia calcicola Limestone Spider-orchid [10065]	Vulnerable	Species or species habitat likely to occur within area
Caladenia colorata Coloured Spider-orchid, Small Western Spider-orchid, Painted Spider-orchid [54999]	Endangered	Species or species habitat known to occur within area
Caladenia dienema Windswept Spider-orchid [64858]	Endangered	Species or species habitat known to occur within area
Caladenia hastata Melblom's Spider-orchid [16118]	Endangered	Species or species habitat likely to occur within area
Caladenia insularis French Island Spider-orchid [24372]	Vulnerable	Species or species habitat known to occur within area
Caladenia orientalis Eastern Spider Orchid [83410]	Endangered	Species or species habitat known to occur within area
Caladenia ornata Ornate Pink Fingers [76213]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Caladenia richardsiorum Little Dip Spider-orchid [55018]	Endangered	Species or species habitat likely to occur within area
Caladenia robinsonii Frankston Spider-orchid [24375]	Endangered	Species or species habitat likely to occur within area
Caladenia tensa Greencomb Spider-orchid, Rigid Spider-orchid [24390]	Endangered	Species or species habitat may occur within area
Caladenia tessellata Thick-lipped Spider-orchid, Daddy Long-legs [2119]	Vulnerable	Species or species habitat known to occur within area
Calochilus pulchellus Pretty Beard Orchid, Pretty Beard-orchid [84677]	Endangered	Species or species habitat known to occur within area
Centrolepis pedderensis Pedder Centrolepis, Pedder Bristlewort [12647]	Endangered	Species or species habitat likely to occur within area
Commersonia prostrata Dwarf Kerrawang [87152]	Endangered	Species or species habitat known to occur within area
Correa baeuerlenii Chef's Cap [17007]	Vulnerable	Species or species habitat known to occur within area
Correa lawrenceana var. genoensis Genoa River Correa [66626]	Endangered	Species or species habitat may occur within area
Corunastylis brachystachya Short-spiked Midge-orchid, Rocky Cape Midge Orchid [76410]	Endangered	Species or species habitat known to occur within area
Corunastylis rhyolitica listed as Genoplesium rhyoliticum Pambula Midge-orchid, Rhyolite Midge Orchid [78697]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Corunastylis vernalis listed as Genoplesium vernale		
East Lynne Midge-orchid [78699]	Vulnerable	Species or species habitat known to occur within area
Craspedia preminghana		
Preminghana Billybutton [77046]	Endangered	Species or species habitat likely to occur within area
Cryptostylis hunteriana		
Leafless Tongue-orchid [19533]	Vulnerable	Species or species habitat known to occur within area
Dianella amoena		
Matted Flax-lily [64886]	Endangered	Species or species habitat known to occur within area
Diuris basaltica		
Small Golden Moths Orchid, Early Golden Moths [64654]	Endangered	Species or species habitat may occur within area
Diuris lanceolata		
Snake Orchid [10231]	Endangered	Species or species habitat known to occur within area
Dodonaea procumbens		
Trailing Hop-bush [12149]	Vulnerable	Species or species habitat known to occur within area
Eucalyptus strzeleckii		
Strzelecki Gum [55400]	Vulnerable	Species or species habitat known to occur within area
Euphrasia collina subsp. muelleri		
Purple Eyebright, Mueller's Eyebright [16151]	Endangered	Species or species habitat known to occur within area
Glycine latrobeana		
Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat known to occur within area
Grevillea infecunda		
Anglesea Grevillea [22026]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Haloragis exalata subsp. exalata Wingless Raspwort, Square Raspwort [24636]	Vulnerable	Species or species habitat known to occur within area
Hiya distans listed as Hypolepis distans Scrambling Ground-fern [92548]	Endangered	Species or species habitat known to occur within area
Ixodia achillaeoides subsp. arenicola Sand Ixodia, Ixodia [21474]	Vulnerable	Species or species habitat known to occur within area
Lachnagrostis adamsonii Adamson's Blown-grass, Adamson's Blowngrass [76211]	Endangered	Species or species habitat known to occur within area
Leiocarpa gatesii Wrinkled Buttons [76212]	Vulnerable	Species or species habitat likely to occur within area
Leionema ralstonii [64926]	Vulnerable	Species or species habitat known to occur within area
Lepidium aschersonii Spiny Peppercress [10976]	Vulnerable	Species or species habitat known to occur within area
Lepidium hyssopifolium Basalt Pepper-cress, Peppercress, Rubble Pepper-cress, Pepperweed [16542]	Endangered	Species or species habitat known to occur within area
Leucochrysum albicans subsp. tricolor Hoary Sunray, Grassland Paper-daisy [89104]	Endangered	Species or species habitat may occur within area
Lomatia tasmanica King's Lomatia [3745]	Critically Endangered	Species or species habitat likely to occur within area
Persicaria elatior Knotweed, Tall Knotweed [5831]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Phaius australis Lesser Swamp-orchid [5872]	Endangered	Species or species habitat may occur within area
Pimelea spinescens subsp. spinescens Plains Rice-flower, Spiny Rice-flower, Prickly Pimelea [21980]	Critically Endangered	Species or species habitat likely to occur within area
Pomaderris cotoneaster Cotoneaster Pomaderris [2043]	Endangered	Species or species habitat may occur within area
Pomaderris halmaturina subsp. halmaturina Kangaroo Island Pomaderris [21964]	Vulnerable	Species or species habitat known to occur within area
Pomaderris parrisiae Parris' Pomaderris [22119]	Vulnerable	Species or species habitat known to occur within area
Prasophyllum atratum Three Hummock Leek-orchid [82677]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum diversiflorum Gorae Leek-orchid [13210]	Endangered	Species or species habitat likely to occur within area
Prasophyllum favonium Western Leek-orchid [64949]	Critically Endangered	Species or species habitat likely to occur within area
Prasophyllum frenchii Maroon Leek-orchid, Slaty Leek-orchid, Stout Leek-orchid, French's Leek-orchid, Swamp Leek-orchid [9704]	Endangered	Species or species habitat known to occur within area
Prasophyllum litorale listed as Prasophyllum littorale Coastal Leek Orchid [55234]	Critically Endangered	Species or species habitat known to occur within area
Prasophyllum pulchellum Pretty Leek-orchid [64953]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Prasophyllum secutum Northern Leek-orchid [64954]	Endangered	Species or species habitat likely to occur within area
Prasophyllum spicatum Dense Leek-orchid [55146]	Vulnerable	Species or species habitat known to occur within area
Prostanthera galbraithiae Wellington Mintbush [64959]	Vulnerable	Species or species habitat likely to occur within area
Pseudocephalozia paludicola Alpine Leafy Liverwort [66441]	Vulnerable	Species or species habitat likely to occur within area
Pterostylis chlorogramma Green-striped Greenhood [56510]	Vulnerable	Species or species habitat known to occur within area
Pterostylis cucullata Leafy Greenhood [15459]	Vulnerable	Species or species habitat known to occur within area
Pterostylis rubenachii Arthur River Greenhood [64536]	Endangered	Species or species habitat known to occur within area
Pterostylis tenuissima Swamp Greenhood, Dainty Swamp Orchid [13139]	Vulnerable	Species or species habitat known to occur within area
Pterostylis ziegeleri Grassland Greenhood, Cape Portland Greenhood [64971]	Vulnerable	Species or species habitat likely to occur within area
Rhizanthella slateri Eastern Underground Orchid [11768]	Endangered	Species or species habitat may occur within area
Rhodamnia rubescens Scrub Turpentine, Brown Malletwood [15763]	Critically Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Rutidosis leptorhynchoides Button Wrinklewort [67251]	Endangered	Species or species habitat may occur within area
Senecio macrocarpus Large-fruit Fireweed, Large-fruit Groundsel [16333]	Vulnerable	Species or species habitat likely to occur within area
Senecio psilocarpus Swamp Fireweed, Smooth-fruited Groundsel [64976]	Vulnerable	Species or species habitat known to occur within area
Taraxacum cygnorum Coast Dandelion, Native Dandelion [2508]	Vulnerable	Species or species habitat known to occur within area
Thelymitra epipactoides Metallic Sun-orchid [11896]	Endangered	Species or species habitat known to occur within area
Thelymitra matthewsii Spiral Sun-orchid [4168]	Vulnerable	Species or species habitat known to occur within area
Thesium australe Austral Toadflax, Toadflax [15202]	Vulnerable	Species or species habitat known to occur within area
Westringia davidii [19079]	Vulnerable	Species or species habitat may occur within area
Xerochrysum palustre Swamp Everlasting, Swamp Paper Daisy [76215]	Vulnerable	Species or species habitat known to occur within area
Zieria tuberculata Warty Zieria [56736]	Vulnerable	Species or species habitat known to occur within area
REPTILE		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Delma impar		
Striped Legless Lizard, Striped Snake-lizard [1649]	Vulnerable	Species or species habitat may occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Lissolepis coventryi		
Swamp Skink, Eastern Mourning Skink [84053]	Endangered	Species or species habitat known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Tympanocryptis pinguicolla		
Victorian Grassland Earless Dragon [66727]	Critically Endangered	Species or species habitat likely to occur within area
SHARK		
Carcharias taurus (east coast population)		
Grey Nurse Shark (east coast population) [68751]	Critically Endangered	Species or species habitat known to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Centrophorus harrissoni		
Harrisson's Dogfish, Endeavour Dogfish, Dumb Gulper Shark, Harrison's Deepsea Dogfish [68444]	Conservation Dependent	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Centrophorus uyato listed as Centrophorus zeehaani		
Little Gulper Shark [68446]	Conservation Dependent	Species or species habitat likely to occur within area
Galeorhinus galeus		
School Shark, Eastern School Shark, Snapper Shark, Tope, Soupfin Shark [68453]	Conservation Dependent	Species or species habitat likely to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Zearaja maugeana		
Maugean Skate, Port Davey Skate [83504]	Endangered	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea		
Sooty Shearwater [82651]		Breeding known to occur within area
Ardenna pacifica		
Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Ardenna tenuirostris		
Short-tailed Shearwater [82652]		Breeding known to occur within area
Diomedea antipodensis		
Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat may occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Sternula albifrons Little Tern [82849]		Breeding known to occur within area
Thalassarche bulleri Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Migratory Marine Species

Scientific Name	Threatened Category	Presence Text
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Breeding known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Physeter macrocephalus		
Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Migratory Terrestrial Species		
Cuculus optatus		
Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat known to occur within area
Hirundapus caudacutus		
White-throated Needletail [682]	Vulnerable	Roosting known to occur within area
Monarcha melanopsis		
Black-faced Monarch [609]		Species or species habitat known to occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat known to occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat known to occur within area
Myiagra cyanoleuca		
Satin Flycatcher [612]		Breeding known to occur within area
Rhipidura rufifrons		
Rufous Fantail [592]		Species or species habitat known to occur within area
Symposiachrus trivirgatus as Monarcha trivirgatus		
Spectacled Monarch [83946]		Species or species habitat known to occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Arenaria interpres Ruddy Turnstone [872]		Roosting known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Roosting known to occur within area
Calidris alba Sanderling [875]		Roosting known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area
Calidris subminuta Long-toed Stint [861]		Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Roosting known to occur within area
Charadrius bicinctus Double-banded Plover [895]		Roosting known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area
Gallinago stenura Pin-tailed Snipe [841]		Roosting known to occur within area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Roosting known to occur within area
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Pluvialis squatarola Grey Plover [865]		Roosting known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Roosting known to occur within area
Tringa glareola Wood Sandpiper [829]		Roosting known to occur within area
Tringa incana Wandering Tattler [831]		Roosting known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area
Xenus cinereus Terek Sandpiper [59300]		Roosting known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Anseranas semipalmata Magpie Goose [978]		Species or species habitat may occur within area overfly marine area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat known to occur within area
Ardenna grisea as Puffinus griseus Sooty Shearwater [82651]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Ardenna tenuirostris as Puffinus tenuirostris Short-tailed Shearwater [82652]		Breeding known to occur within area
Arenaria interpres Ruddy Turnstone [872]		Roosting known to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]		Roosting known to occur within area
Calidris alba Sanderling [875]		Roosting known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area overfly marine area
Calidris ruficollis Red-necked Stint [860]		Roosting known to occur within area overfly marine area
Calidris subminuta Long-toed Stint [861]		Species or species habitat known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris tenuirostris Great Knot [862]	Critically Endangered	Roosting known to occur within area overfly marine area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat known to occur within area overfly marine area
Charadrius bicinctus Double-banded Plover [895]		Roosting known to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Roosting known to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Roosting known to occur within area overfly marine area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat known to occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding known to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea antipodensis gibsoni as Diomedea gibsoni Gibson's Albatross [82270]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eudyptula minor Little Penguin [1085]		Breeding known to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat may occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Gallinago hardwickii Latham's Snipe, Japanese Snipe [863]		Species or species habitat known to occur within area overfly marine area
Gallinago megala Swinhoe's Snipe [864]		Roosting likely to occur within area overfly marine area
Gallinago stenura Pin-tailed Snipe [841]		Roosting known to occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Breeding known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Hirundapus caudacutus White-throated Needletail [682]	Vulnerable	Roosting known to occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area
Larus dominicanus Kelp Gull [809]		Breeding known to occur within area
Larus pacificus Pacific Gull [811]		Breeding known to occur within area
Lathamus discolor Swift Parrot [744]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Limicola falcinellus Broad-billed Sandpiper [842]		Roosting known to occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Roosting known to occur within area overfly marine area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Monarcha melanopsis Black-faced Monarch [609]		Species or species habitat known to occur within area overfly marine area
Morus capensis Cape Gannet [59569]		Breeding known to occur within area
Morus serrator Australasian Gannet [1020]		Breeding known to occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat known to occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat known to occur within area overfly marine area
Myiagra cyanoleuca Satin Flycatcher [612]		Breeding known to occur within area overfly marine area
Neophema chrysogaster Orange-bellied Parrot [747]	Critically Endangered	Breeding known to occur within area overfly marine area
Neophema chrysostoma Blue-winged Parrot [726]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Roosting likely to occur within area overfly marine area
Numenius phaeopus Whimbrel [849]		Roosting known to occur within area

Scientific Name	Threatened Category	Presence Text
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding known to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding known to occur within area
Pelecanoides urinatrix Common Diving-Petrel [1018]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding known to occur within area
Phalaropus lobatus Red-necked Phalarope [838]		Roosting known to occur within area
Philomachus pugnax Ruff (Reeve) [850]		Roosting known to occur within area overfly marine area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Roosting known to occur within area
Pluvialis squatarola Grey Plover [865]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Pterodroma cervicalis White-necked Petrel [59642]		Species or species habitat may occur within area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Breeding known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Roosting known to occur within area overfly marine area
Rhipidura rufifrons Rufous Fantail [592]		Species or species habitat known to occur within area overfly marine area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area overfly marine area
Stercorarius antarcticus as Catharacta skua Brown Skua [85039]		Species or species habitat may occur within area
Sterna striata White-fronted Tern [799]		Foraging, feeding or related behaviour likely to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]		Breeding known to occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area
Stiltia isabella Australian Pratincole [818]		Roosting known to occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Symposiachrus trivirgatus as Monarcha trivirgatus		
Spectacled Monarch [83946]		Species or species habitat known to occur within area overfly marine area
Thalassarche bulleri		
Buller's Albatross, Pacific Albatross [64460]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche bulleri platei as Thalassarche sp. nov.		
Northern Buller's Albatross, Pacific Albatross [82273]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche carteri		
Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area
Thalassarche cauta		
Shy Albatross [89224]	Endangered	Breeding known to occur within area
Thalassarche chrysostoma		
Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche eremita		
Chatham Albatross [64457]	Endangered	Foraging, feeding or related behaviour may occur within area
Thalassarche impavida		
Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche melanophris		
Black-browed Albatross [66472]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thalassarche salvini		
Salvin's Albatross [64463]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Thalassarche steadi		
White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thalasseus bergii as Sterna bergii		
Greater Crested Tern [83000]		Breeding known to occur within area
Thinornis cucullatus as Thinornis rubricollis		
Hooded Plover, Hooded Dotterel [87735]		Species or species habitat known to occur within area overfly marine area
Thinornis cucullatus cucullatus as Thinornis rubricollis rubricollis		
Eastern Hooded Plover, Eastern Hooded Plover [90381]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Tringa brevipes as Heteroscelus brevipes		
Grey-tailed Tattler [851]		Roosting known to occur within area
Tringa glareola		
Wood Sandpiper [829]		Roosting known to occur within area overfly marine area
Tringa incana as Heteroscelus incanus		
Wandering Tattler [831]		Roosting known to occur within area
Tringa nebularia		
Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area overfly marine area
Tringa stagnatilis		
Marsh Sandpiper, Little Greenshank [833]		Roosting known to occur within area overfly marine area
Xenus cinereus		
Terek Sandpiper [59300]		Roosting known to occur within area overfly marine area
Fish		
Acentronura australe		
Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Acentronura tentaculata Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
Campichthys galei Gale's Pipefish [66191]		Species or species habitat may occur within area
Campichthys tryoni Tryon's Pipefish [66193]		Species or species habitat may occur within area
Cosmocampus howensis Lord Howe Pipefish [66208]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Heraldia nocturna Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus abdominalis Big-belly Seahorse, Eastern Potbelly Seahorse, New Zealand Potbelly Seahorse [66233]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
Hippocampus minotaur Bullneck Seahorse [66705]		Species or species habitat may occur within area
Histiogamphelus briggsii Crested Pipefish, Briggs' Crested Pipefish, Briggs' Pipefish [66242]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hypselognathus horridus Shaggy Pipefish, Prickly Pipefish [66244]		Species or species habitat may occur within area
Hypselognathus rostratus Knifesnout Pipefish, Knife-snouted Pipefish [66245]		Species or species habitat may occur within area
Kaupus costatus Deepbody Pipefish, Deep-bodied Pipefish [66246]		Species or species habitat may occur within area
Kimblaeus bassensis Trawl Pipefish, Bass Strait Pipefish [66247]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys mollisoni Mollison's Pipefish [66260]		Species or species habitat may occur within area
Mitotichthys semistriatus Halfbanded Pipefish [66261]		Species or species habitat may occur within area
Mitotichthys tuckeri Tucker's Pipefish [66262]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus robustus Robust Pipehorse, Robust Spiny Pipehorse [66274]		Species or species habitat may occur within area
Solegnathus spinosissimus Spiny Pipehorse, Australian Spiny Pipehorse [66275]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Stipecampus cristatus Ringback Pipefish, Ring-backed Pipefish [66278]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Vanacampus vercoi Verco's Pipefish [66286]		Species or species habitat may occur within area
Mammal		
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding known to occur within area
Arctocephalus pusillus Australian Fur-seal, Australo-African Fur-seal [21]		Breeding known to occur within area
Mirounga leonina Southern Elephant Seal [26]	Vulnerable	Breeding may occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat known to occur within area
Reptile		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata		
Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Foraging, feeding or related behaviour known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Current Scientific Name	Status	Type of Presence
Berardius arnuxii Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Hyperoodon planifrons Southern Bottlenose Whale [71]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Foraging, feeding or related behaviour known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat likely to occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area

Current Scientific Name	Status	Type of Presence
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Critical Habitats [Resource Information]

Name	Type of Presence
Thalassarche cauta (Shy Albatross) - Albatross Island, The Mewstone, Pedra Branca	Listed Critical Habitat

Australian Marine Parks [Resource Information]

Park Name	Zone & IUCN Categories
Flinders	Marine National Park Zone (IUCN II)
Murray	Marine National Park Zone (IUCN II)
Tasman Fracture	Marine National Park Zone (IUCN II)
Apollo	Multiple Use Zone (IUCN VI)
Beagle	Multiple Use Zone (IUCN VI)
Boags	Multiple Use Zone (IUCN VI)
East Gippsland	Multiple Use Zone (IUCN VI)
Franklin	Multiple Use Zone (IUCN VI)
Murray	Multiple Use Zone (IUCN VI)

Park Name	Zone & IUCN Categories
Murray	Multiple Use Zone (IUCN VI)
Tasman Fracture	Multiple Use Zone (IUCN VI)
Zeehan	Multiple Use Zone (IUCN VI)
Murray	Special Purpose Zone (IUCN VI)
Nelson	Special Purpose Zone (IUCN VI)
Zeehan	Special Purpose Zone (IUCN VI)

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 90-120m depth	South-west
Big Horseshoe Canyon	South-east
Bonney Coast Upwelling	South-east
Canyons on the eastern continental slope	Temperate east
Kangaroo Island Pool, canyons and adjacent shelf break, and Eyre Peninsula upwellings	South-west
Shelf rocky reefs	Temperate east
Upwelling East of Eden	South-east
West Tasmania Canyons	South-east

Biologically Important Areas

Scientific Name	Behaviour	Presence
Dolphins		
Tursiops aduncus		
Indo-Pacific/Spotted Bottlenose Dolphin [68418]	Breeding	Likely to occur
Seabirds		
Ardenna carneipes		
Flesh-footed Shearwater [82404]	Foraging	Known to occur
Ardenna grisea		
Sooty Shearwater [82651]	Breeding	Known to occur

Scientific Name	Behaviour	Presence
Ardenna grisea Sooty Shearwater [82651]	Foraging	Likely to occur
Ardenna grisea Sooty Shearwater [82651]	Foraging	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Ardenna pacifica Wedge-tailed Shearwater [84292]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Breeding	Known to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Likely to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging	Known to occur
Ardenna tenuirostris Short-tailed Shearwater [82652]	Foraging (in high numbers)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

APPENDIX C CONSULTATION ARTIFACTS

Appendix C1: Consultation Report

- The relevant person/organisation ID
- Their functions, interests, or activities
- Communications
- Summary of each response

Appendix C2: Objections or claims under section 24

- Relevant person ID (Stakeholder ID)
- Objection/claim
- Assessment of merit
- Response and measures adopted

Appendix C3: Supplementary Evidence

- In further support of the regulatory requirements, ConocoPhillips Australia has undertaken additional efforts and methods to reach relevant person in the community and raise awareness of the ability to self-identify through various mediums.
- Evidence that is associated with multiple people such as project updates.

Appendix C4: First Nations Consultation Report

- Communal interest facilitated a tailored, fit-for-purpose method of consultation. Which was adopted to reasonably reflect the characteristics of the interests affected by the proposed activity.

Appendix C5: Commercial Fishers Consultation Report

- Communal interest facilitated a tailored, fit-for-purpose method of consultation. Which was adopted to reasonably reflect the characteristics of the interests affected by the proposed activity.

Relevant person information	Methodology Met, information provided per consultation approach

Organisation ID 11 - Consultation Summary

Id	Event Type	Start Date	Summary
2576	Meeting - In-person	25/07/2022	Meeting with individual to discuss potential drilling campaign and ongoing consultation.
2919	Telephone call	14/11/2022	OUTGOING CALL: To organisation regarding consultation.
4253	Email	8/02/2023	OUTGOING EMAIL: sent to stakeholder with formal letter advising on upcoming Otway drilling program with two fact sheets - Consultation and Project Overview
1719	Email	8/02/2023	INCOMING EMAIL: from stakeholder re reviewing EP submissions and providing up to date industry commentary
23	Telephone call	13/02/2023	INCOMING CALL from individual about recent correspondence. Provided brief project overview (1 new permit 1 historic, seabed surveys and drilling up to 6 exploration wells) and shared that it was an exploration drilling campaign. General discussion around existing offshore energy projects and consultation requests for organisation.
1732	Email	13/02/2023	INCOMING EMAIL: sent from stakeholder noting stakeholders core interests and who they represent. Stakeholder suggested the team work with them in order to minimise risk and impact for fishing and drilling industries. Stakeholder noted widespread industry closures and structural adjustment.
24	Email	14/02/2023	OUTGOING EMAIL: sent to stakeholder responding to previously received email and telephone conversation. Confirmed updated implementation plan thanks to stakeholders suggestions and asked for value in further strategic decisions in cooperation with stakeholder regarding EP process.
1735	Email	14/02/2023	INCOMING EMAIL: sent from stakeholder in reply to recent email correspondence, stakeholder recommends over-communicating what is happening and where so that fishers understand. Stakeholder commented that the fishers likely won't make comments on the EP.

Organisation Id	**27**
Name of Organisation	Department of Agriculture Fisheries and Forestry
Function, Interest, Activities	The Department of Agriculture, Fisheries and Forestry (DAFF) has primary policy responsibility for promoting the biological, economic and social sustainability of Australian fisheries. DAFF provides policy advice to the Australian Government on a range of economic and environmental fisheries issues, including the conservation of marine ecosystems and biodiversity that support commercially valuable fisheries resource. DAFF administers the Biosecurity Act 2015 (Biosecurity Act). The Biosecurity Act has jurisdiction within Australian territory and does not encompass the full extent of the Commonwealth marine area. DAFF has primary policy and regulatory responsibility for managing marine pest biosecurity through administering the Biosecurity Act.

Organisation Id	**28**
Name of Organisation	Department of Defence
Function, Interest, Activities	The Australian Defence Force utilises several maritime exercise areas in Australian waters to perform a unique role in support of Australia's strategic and national security interests. The Australian Defence Force role requires not only naval warfare capabilities but also disaster relief, search and rescue, fisheries protection and border patrol training capabilities. It is important for the Australian Defence Force to continue to utilise its offshore training areas, manage potential conflict between the presence of the resources sector with Australian Defence Force and other defence training and operational requirements and manage the risk of unexploded ordnance in areas where offshore petroleum activities may take place. The Australian Hydrographic Service (AHS) is responsible for the publication and distribution of nautical products and other information required for the safety of ships navigating in Australian waters.
Identification Method	Consulted for Sequoia 3DMSS

Summary
OUTGOING EMAIL: Sent relevant person information regarding the commencement of preparation of an Environment Plan to undertake an exploration drilling program in Commonwealth waters in the offshore Otway Basin. Included project information documents and personalised letter.
OUTGOING EMAIL: to stakeholder with notice of preparation of an EP to undertake exploration drilling program. with letter and information sheets attached
INCOMING EMAIL: from stakeholder with Automatic Response for Otway Exploration Drilling Proposal
INCOMING EMAIL: from stakeholder re organising group meeting surrounding the Drilling Program development
OUTGOING EMAIL: to stakeholder with follow up for meeting request with suggested dates
INCOMING EMAIL: from individual confirming meeting time
INCOMING EMAIL: from individual re meeting times
OUTGOING EMAIL: to individual with meeting times
OUTGOING EMAIL: to stakeholder with t information about Community Information Sessions - ConocoPhillips Australia Otway Exploration Program.
OUTGOING EMAIL: Victorian Community Information Sessions Invitation: Community Information Session Otway Exploration Drilling Program
OUTGOING EMAIL: Emailed PROJECT UPDATE: ConocoPhillips Australia Otway Exploration Drilling Program
OUTGOING EMAIL: PROJECT UPDATE- June 2024 : ConocoPhillips Australia Otway Exploration Drilling Program
OUTGOING EMAIL: PROJECT UPDATE including notification of the extension of consultation based on feedback from the consultation process with relevant persons.
OUTGOING CALL: No Answer, Left message.
INCOMING CALL - Missed call from individual.
OUTGOING EMAIL: to individual with suggested times for briefing.
OUTGOING EMAIL: PROJECT UPDATE: ConocoPhillips Australia Otway Exploration Drilling Program
INCOMING EMAIL: from individual confirming briefing time
OUTGOING EMAIL: with Response to individual regarding meeting times.
INCOMING EMAIL: from individual re meeting
OUTGOING EMAIL: Notification of Draft EP Chapters available for consultation NOTIFICATION: ConocoPhillips Australia Otway Exploration Drilling Program Draft EP Chapters Available for Consultation
INCOMING EMAIL: Organisation auto reply - received email.

OUTGOING EMAIL: to individual clarifying options for reporting on consultation in the EP or in the sensitive information report.
OUTGOING EMAIL: to individual with Draft notes of meeting with ConocoPhillips Australia
OUTGOING EMAIL: to stakeholder with updated version of meeting notes
INCOMING EMAIL: from individual confirming they are happy with meeting notes
INCOMING EMAIL: Individual acknowledgement of TRP's attachments.
OUTGOING EMAIL: Consultation Pause Notification NOTIFICATION: Consultation Pause - ConocoPhillips Australia Otway Exploration Drilling Program
OUTGOING EMAIL: Pre-submission communications UPDATE: ConocoPhillips Australia Otway Exploration Drilling Program
NOTICE OF PUBLIC COMMENT PERIOD: ConocoPhillips Australia Otway Exploration Drilling Program Environment Plan
NOTIFICATION: Environment Plan Summary - ConocoPhillips Australia Otway Exploration Drilling Program NOTIFICATION: Environment Plan Summary - ConocoPhillips Australia Otway Exploration Drilling Program

ConocoPhillips

C2: Objections or claims under section 24

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
2	23, 3348	ID11:South East Trawl Fishing Industry Association (SETFIA)	13/02/2023 7:49	Request	Relevant person requested that ConocoPhillips Australia consider a text message campaign prior to and during drilling campaign with suggestions on frequency and content focus areas.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it, and additional information included in the implementation strategy on text messages..	Review existing control/s: CM03: Marine and Coastal Users Consultation and Communication Plan	ConocoPhillips to enter fee-for-service arrangement with SETFIA to send SMSs to the western distribution list with details of where and when seabed survey, anchor pre-lay and drilling activities are scheduled to occur and regular updates on progress and forecast plans, and what controls (cautionary and exclusion zones) will be in place at set intervals: - 30 days prior to scheduled mobilisation for each activity - 2 weeks prior to mobilisation for each activity - 1 week prior to scheduled mobilisation for each activity - At commencement of each activity - Periodically during each activity CM03: Marine and Coastal Users Consultation and Communication Plan
6	509, 2724	ID10:Marine and Safety Tasmania (MAST)	15/02/2023 13:56	Request	Relevant persons requested to be kept informed of when activities will occur to facilitate the issuance of an activity related NtM which may assist in informing fishers who are in the relevant area.	High	ConocoPhillips Australia incorporated this request into CM03: Marine and Coastal Users Consultation and Communication Plan to minimise impacts to other marine users.	Include as control measure for seabed survey, anchor pre-lay and drilling activities to minimise impacts to other marine users and to minimise the risk of vessel collision. CM03: Marine and Coastal Users Consultation and Communication Plan	"Requirement for ConocoPhillips Australia (or Seabed survey vessel, MODU and support vessel contractors), to contact Marine and Safety Tasmania so they can issue a generic notice to mariners relating to the activity, added to 'Communication Plan' for each activity (seabed survey, anchor-pre-lay and drilling operations), as: - Notification 30 days prior to mobilisation - On mobilisation - 48 hours prior to relocation between areas - On demobilisation"
7	43, 3352	ID9:University of Tasmania (UTAS)	20/02/2023 14:10	Request	Relevant person requested that ConocoPhillips Australia consider additional data sampling whilst vessel is in the region for seabed survey.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and will ensure that the seabed survey contract requires the collection of representative sediment samples to validate the geophysical survey data, with storage and transport onshore for benthic analysis.	ConocoPhillips Australia has considered additional data sampling whilst vessel is in the region for seabed survey (grab sediment sampling and will ensure the seabed survey contract requires the collection of representative sediment samples from the grab samples collected to validate the geophysical survey data, with storage and transport onshore for benthic analysis (Event ID: 43, Reg16b ID: 7).	ConocoPhillips Australia considers the cost and effort to retain samples collected during the seabed survey, with storage and transport for onshore analysis, to be reasonable and will include this in the procurement process for the seabed survey. Collect benthic samples during seabed surveys CM11: Procurement Vetting Process (with onshore processing)

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
8	484, 2602	ID8:Australian Maritime Safety Authority (AMSA)	21/02/2023 16:59	Request	Relevant person requested that AMSA's Rescue Centre is notified 24-48 hours before operations commence.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it. Specifically, ConocoPhillips Australia will be required to contact AMSA's Rescue Centre prior to seabed survey, anchor pre-lay and drilling activities.	Include as control measure for seabed survey, anchor pre-lay and drilling activities to minimise impacts to other marine users and to minimise the risk of vessel collision. CM03: Marine and Coastal Users Consultation and Communication Plan	Requirement for ConocoPhillips Australia (or Seabed survey vessel, MODU and support vessel contractors), to contact AMSA's Rescue Centre (ARC) through rccaus@amsa.gov.au (Phone: 1800 641 792 or +61 2 6230 6811) for promulgation of radio-navigation warnings and provide vessel details (including name, callsign and Maritime Mobile Service Identity (MMSI)), satellite communications details (including INMARSAT-C and satellite telephone), area of operation, and requested clearance from other vessels when operations start and end. when operations start and end, added to 'Communication Plan' for each activity (seabed survey, anchor-pre-lay and drilling operations), as - Notification 30 days prior to mobilisation - On mobilisation - 48 hours prior to commencement of operations - 48 hours prior to relocation between areas - On demobilisation
9	2602, 484	ID8:Australian Maritime Safety Authority (AMSA)	21/02/2023 17:00	Request	Relevant person stated that vessel details, satellite communications details, area of operation and requested clearance from other vessels will need to be advised when operations start and end.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it. Specifically, ConocoPhillips Australia will be required to contact AMSA's Rescue Centre prior to seabed survey, anchor pre-lay and drilling activities.	Include as control measure for seabed survey, anchor pre-lay and drilling activities to minimise impacts to other marine users and to minimise the risk of vessel collision. CM03: Marine and Coastal Users Consultation and Communication Plan	Requirement for ConocoPhillips Australia (or Seabed survey vessel, MODU and support vessel contractors), to contact AMSA's Rescue Centre (ARC) through rccaus@amsa.gov.au (Phone: 1800 641 792 or +61 2 6230 6811) for promulgation of radio-navigation warnings and provide vessel details (including name, callsign and Maritime Mobile Service Identity (MMSI)), satellite communications details (including INMARSAT-C and satellite telephone), area of operation, and requested clearance from other vessels when operations start and end. when operations start and end, added to 'Communication Plan' for each activity (seabed survey, anchor-pre-lay and drilling operations), as - Notification 30 days prior to mobilisation - On mobilisation - 48 hours prior to commencement of operations - 48 hours prior to relocation between areas - On demobilisation

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
10	484, 2602	ID8:Australian Maritime Safety Authority (AMSA)	21/02/2023 17:01	Request	Relevant person requested that the Australian Hydrographic Office is contacted no less that four weeks before operations commence to allow enough time for notice to mariners to be declared.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it. Specifically, ConocoPhillips Australia will be required to contact AHO prior to seabed survey, anchor pre-lay and drilling activities.	Include as control measure for seabed survey, anchor pre-lay and drilling activities to minimise impacts to other marine users and to minimise the risk of vessel collision. CM03: Marine and Coastal Users Consultation and Communication Plan	Requirement for ConocoPhillips Australia, or contractor, to contact AHO via datacentre@hydro.gov.au added to 'Communication Plan' for exploration program, as 'Notification 30 days prior to mobilisation for: - Seabed survey - Anchor pre-lay - Drilling operations'
11	3371, 536	ID471:[redacted]	2/03/2023 15:45	Claim	Relevant person stated that the activity will cause the displacement of fishers and that light produce by the activity will attract squid away from fishing locations resulting in a loss of catch.	High	ConocoPhillips Australia reviewed the EP, specifically Section 6.4.5.3 which assesses light impacts on ecological species and adapted to include an assessment of impacts to squid.	EP section 6.4.5.3 updated to include assessment of impacts to squid. The range to which squid species are likely to be attracted to the artificial light will be within the immediate vicinity of the MODU and support vessels. In addition, drilling activities will be of a short duration (90 days per well), and therefore no long-term effects on local squid fisheries are expected.	EP section 6.4.5.3 updated to include assessment of impacts to squid.
12	536, 3371	ID471:[redacted]	2/03/2023 15:52	Request	Relevant person requested compensation on the basis that the activity will result in exclusion zones that displace fishing.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.	Review existing control/s: CM04: Commercial Marine Operators Adjustment Protocol.	CM04: Commercial Marine Operators Adjustment Protocol.
13	3368, 582	ID5:Colac Otway Shire Council	3/03/2023 10:37	Claim	Relevant person provided feedback regarding the impact an offshore oil and gas facility would have on the pristine tourism value of the Great Ocean Walk.	High	ConocoPhillips Australia conducted a thorough review of controls measures to ensure impacts to Great Ocean based tourism were adequately considered. It was assessed that as the proposed activity is short-term there will be no long-term impacts to aesthetic values.	The proposed activity is short-term with no long-term impacts to aesthetic values. Existing permanent gas infrastructure already exists in closer proximity to the great ocean walk. Existing controls were reviewed to confirm mitigation of impacts including: CM01: Marine Assurance CM02: Vessel and MODU Operating Procedures CM07: Light Management Plan CM10: Well Testing Program	CM01: Marine Assurance CM02: Vessel and MODU Operating Procedures CM07: Light Management Plan CM10: Well Testing Program
14	3368, 582	ID5:Colac Otway Shire Council	3/03/2023 11:07	Claim	Relevant person requested compensation on the basis that the activity will result in long-term impacts to fisheries like the SRL.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.	ConocoPhillips Australia is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement. We believe we can sustainably coexist with the activities and livelihood of other marine and coastal users and are committed to having a commercial fishing adjustment protocol in place prior to the commencement of the program to address economic impact as a result of displacement. CM04: Commercial Marine Operators Adjustment Protocol	CM04: Commercial Marine Operators Adjustment Protocol

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
15	2729, 649	ID110:Surf Coast Shire Council	16/03/2023 9:10	Objection	Relevant person stated that on 27 July 2021 the Council passed a motion opposing all new oil and gas exploration, development and seismic testing in the Otway Basin which remains the Council's position and has been communicated with relevant persons and bodies.	Low	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that that no alterations were deemed necessary as no objections to the content of the EP were raised.	No change to EP content	Inform relevant persons of NOPSEMAs guidance.
16	2729, 649	ID110:Surf Coast Shire Council	16/03/2023 9:13	Claim	Relevant person expressed concern regarding the impact oil and gas exploration has on all receptors, including its contribution to climate change.	High	ConocoPhillips Australia provided overview of assessment process.	ConocoPhillips Australia is currently assessing the impacts and risks associated with the proposed exploration program on the environment, including (amongst other things) people and communities, the heritage value of places, and their social and cultural features, which may be affected by the proposed exploration program. Consultation will better inform our understanding of the existing environment and improve our ability to minimise environmental impacts and risks. The Environment Plan must demonstrate that the proposed exploration program can be carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD), set out in the Environment Protection and Biodiversity Conservation Act 1999; and that the environmental impacts and risks of the activity will be reduced as low as reasonably practicable (ALARP) and will be of an acceptable level. Consultation is critical to achieving outcomes that are consistent with the principles of ESD, and ensuring that environmental impacts and risks are reduced to ALARP and acceptable levels.	ConocoPhillips Australia will complete the assessment of impacts and risks associated with the proposed exploration program on the environment, including (amongst other things) people and communities, the heritage value of places, and their social and cultural features, which may be affected by the proposed exploration program. We will communicate preliminary and detailed impact and risk assessments to inform consultation. We will work with relevant persons to identify mitigation and management measures and demonstrate that the proposed exploration program can be carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD, set out in the Environment Protection and Biodiversity Conservation Act 1999; and that the environmental impacts and risks of the activity will be reduced as low as reasonably practicable (ALARP) and will be of an acceptable level.
17	720, 2727	ID528:Australian Oceanographic Services Pty Ltd	3/03/2023 9:36	Claim	Relevant person stated that since drilling sites are not shown interactions can not currently be determined.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.	We will not have specific drilling locations prior to EP submission. We are applying a precautionary approach by requesting feedback in relation to potential interactions over the larger operational areas, and the broader Environmental Planning Area, to ensure that we address any potential concerns. We recognize that this may result in an overestimation of impacts and risks that are specific to the relevant persons functions, interests and activities. Updates made to section 1.4 of EP.	Updates made to section 1.4 of EP.
18	1069, 3366	ID595:[redacted]	19/04/2023 10:15	Objection	Relevant person stated that they formally oppose further exploration of the marine environment.	Low	ConocoPhillips Australia requested claims or objections specific to the proposed activity.	No change to EP content	NIL
21	1076, 2725	ID523:Otways Climate Emergency Action Network (OCEAN)	15/04/2023 12:14	Claim	Relevant person queried whether there will be additional consultation as they are away for the proposed meetings. Relevant person provided feedback regarding the time frame for the notice of meetings and how they have been advertised.	High	ConocoPhillips Australia provided notifications for future consultation events.	No change to EP content.	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
25	2726, 1141	ID550:Salty Dog Fishing Charters	3/05/2023 9:52	Claim	Relevant person provided feedback that their tourism based (fishing charter) business will be impacted by the seismic testing and drilling operations in the northern half of VICP/79.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and confirmed the acknowledgement (section 4.75) and assessment (section 6.2.4.1) of Victorian tourism operators in the EP. Further, ConocoPhillips Australia has included information provided in section 6.6.7.2 of the EP.	Information on tourism including the operation of fishing charters along the Victorian west coast was confirmed to be present in section 4.7.5 and section 6.2.4.1 of the draft EP. Information was included in section 6.6.7.2 of the EP: Popper et al (2014) found most fish species are expected to exhibit avoidance behaviours to sound emissions.	Nil
26	574, 2657	ID13:King Island Marine Research	8/03/2023 12:06	Claim	Relevant person provided feedback regarding the proximity of the proposed drilling activity to their lobster hatchery (~8 km) posing a risk to their business.	Low	ConocoPhillips Australia provided a map and clarification that the closest distance is 27 km, and updated Table 4-39 Tasmanian Southern Rock Lobster Fishery.	Table 4-39 Tasmanian Southern Rock Lobster Fishery	Information
27	574, 2657	ID13:King Island Marine Research	3/03/2023 12:08	Claim	Relevant person provided feedback regarding the impact activities may have to the purity of water which will subsequently impact their business.	High	ConocoPhillips Australia provided an overview of the impact and risk assessment process regarding how activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level, and updated Table 4-39 Tasmanian Southern Rock Lobster Fishery.	Table 4-39 Tasmanian Southern Rock Lobster Fishery	Information
28	574, 2657	ID13:King Island Marine Research	3/03/2023 12:09	Claim	Relevant person claimed that since the seismic survey they have noticed adverse changes to the aquaculture surrounding King Island. Relevant person provided feedback that increased drilling may cause further harm to the fragile ecosystem and contribute to climate change.	Low	ConocoPhillips Australia advised they continue to engage with peak fisheries associations and universities which indicated increasing catch rates within the area and a review of catch data showed that catch in tonnes appears to have remained steady since 2008 for both the Tasmanian and Victorian fishing blocks.	No changes to EP content.	Nil
29	2441, 574, 2657	ID13:King Island Marine Research	3/03/2023 12:10	Claim	Relevant person provided feedback regarding the potential impacts (i.e. mortality, displacement) of the proposed activity to the Southern Rock Lobster which is relied on for their commercial viability.	High	ConocoPhillips Australia provided information sheets relevant to the proposed activity including the assessment of impacts to commercial fishers and updated Table 4-39 Tasmanian Southern Rock Lobster Fishery.	Table 4-39 Tasmanian Southern Rock Lobster Fishery	Information
30	574, 2657	ID13:King Island Marine Research	3/03/2023 12:11	Request	Relevant person requested that they are provided with all environmental impact sections including studies associated with the marine environment, specifically around King Island.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that that no alterations were deemed necessary as no objections to the content of the EP were raised.	No change to EP content	Nil
36	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:05	Statement	Relevant person stated that there is international consensus that anthropogenic underwater noise is a pervasive yet relatively transient form of pollution.	High	ConocoPhillips Australia acknowledges feedback provided by the relevant person and reviewed the assessment of underwater sound impacts on sensitive receptors and reflected feedback.	Noted: The Environment Plan includes an assessment if underwater sound impacts, including injury and behavioural disturbance, on sensitive receptors.	Nil
37	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:09	Statement	Relevant person stated that underwater acoustics can pose a risk to marine mammals in the vicinity of operations (i.e. hearing impairment, behavioural changes, stress responses, barotrauma)	High	ConocoPhillips Australia acknowledges feedback provided by the relevant person and reviewed the assessment of underwater sound impacts on sensitive receptors and reflected feedback.	Noted: The Environment Plan includes an assessment if underwater sound impacts, including injury and behavioural disturbance, on sensitive receptors.	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
38	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:11	Statement	Relevant person stated that as multiple cetacean species utilise the area it is difficult to identify a time period where activities can occur with minimal impact.	High	ConocoPhillips Australia concurred with this assessment and updated section 6.6.7.1 to reflect this feedback.	6.6.7.1 Ecological Receptors	None
39	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:12	Statement	Relevant person stated that the proposal lacks specific information about the frequency and noise values of the proposed activities, but suggests that the equipment planned for seabed surveys may have a lower impact on marine organisms compared to seismic systems.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and determined that no alterations were deemed necessary as noise modelling and impact assessment has been conducted on the technique that is considered to represent the largest acoustic source.	Modelling for a range of activities, including sub-bottom profiling (which is considered to represent the largest acoustic source and are therefore the most environmentally impactive for this activity) has been conducted and will be used to complete the assessment of impacts from seabed surveys.	Nil
40	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:12	Request	Relevant person stated that utilising dynamic positioning is likely to be the nosiest activity and suggested that the EP should detail how any potential disturbance to marine mammals from this activity will be mitigated.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. This will be used to inform CM08: Whale Management Plan.	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08:Whale Management Plan.	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan
41	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:19	Request	Relevant person stated that consideration needs to be given to cetacean species with BIAs (southern right whale, pygmy blue whale, dwarf minke whale and humpback whale) within the exploration permits and surrounding areas.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. This will be used to inform CM08: Whale Management Plan. Further, ConocoPhillips Australia incorporated additional information in EP section 4.6.9, 6.6.7 and 6.7.6 on the dwarf minke whale to fill any previous gaps.	"ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan. Additional information was included in EP sections 4.6.9, 6.6.7 and 6.7.6 on the dwarf minke whale. "	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan
42	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:20	Statement	Relevant person emphasised the importance of western Victorian coastline to the southern right whale breeding population and suggested that individuals may migrate through the western Bass Strait, including the proposed exploitation areas.	High	"ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan. Further, Section 4.6.9.2 has been updated to reflect information provided."	Text updated in Section 4.6.9.2 to reflect this information. ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan
43	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:21	Statement	Relevant person stated that VIC/P79 and T/49P overlap with the high use foraging area for pygmy blue whales in the Bonney Upwelling System of Western Victoria.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan.	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
44	995, 3241, 4145	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:22	Statement	Relevant person stated that the Bass Strait is a migratory route for the southern right whale, humpback whale and dwarf minke whale.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan.	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan
45	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:23	Statement	Relevant person referenced a diverse cetacean stranding record for King Island and NW Tasmania, stating that it is fair to assumption the proposed exploration areas could be traversed by many cetacean species at any time of year.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and determined that no changes were deemed necessary as the EP has assessed impacts and risks to a range of cetacean species, including lowand high frequency cetaceans and those with biologically important areas and behaviours. The level of detail provided in the EP is commensurate to the significance and uncertainty associated with impacts and risks.	The Environment Plan includes an assessment of impacts and risks to a range of cetacean species, including low and high frequency cetaceans and those with biologically important areas and behaviours. The level of detail provided in the Environment Plan is commensurate to the significance and uncertainty associated with impacts and risks.	None
46	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:24	Statement	Relevant person recommended that marine mammal monitoring and mitigation actions and procedures should be implemented, similar to those outlined in EPBCA Policy 2.1 and the Underwater Piling Noise Guidelines.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and committed to the development and implementation of a marine mammal adaptive management procedure to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Whale Management Plan.	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan	ConocoPhillips Australia will develop and implement a marine mammal adaptive management procedure (MMAMP) to ensure that impacts to marine mammals are reduced to ALARP and acceptable levels. CM08: Marine Mammal Adaptive Management Plan
47	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:24	Request	Relevant person requested that the occurrence of cetaceans, pinnipeds, turtles, and/or penguins within T/49P is reported within 90 days. Further, that those within 500 m of the drilling or survey activity are reported within 24 hours.	High	ConocoPhillips Australia has reviewed feedback provided by relevant person and updated the Implementation Strategy (Table 10-8 and 10-10) to include the provision of marine mammal observations within T/49P to NRE-Tas.	The provision of marine fauna observations within T/49P to NRE-Tas is included in Tables 10-8 and 10-10 of the Implementation Strategy.	Updated Implementation Strategy - Tables 10-8 and 10-10.
48	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:25	Request	Relevant person recommended that surveys are conducted to collect baseline information on species presence prior to seabed surveys and exploration drilling ; and that passive acoustic mooring technology may provide a cost-effective and robust option for establishing the occurrence of cetaceans and pinnipeds.	High	ConocoPhillips Australia confirmed that information collected from aerial surveys was used to inform the development of the EP, and that consideration of passive acoustic monitoring was included in the ALARP assessment. CM08: Whale Management Plan	"Noted: Information from aerial surveys is being used to inform the Environment Plan. Consideration of passive acoustic monitoring will be included in the ALARP assessment." CM08: Marine Mammal Adaptive Management Plan	Information
49	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:26	Request	Relevant person stated that they are aware that ConocoPhillips Australia has conducted monthly aerial marine mammal surveys in the Otway Basin in 2021 and 2022-23 and recommends that they surveys are used to inform the development of the EP.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and confirmed that information collected from aerial surveys is being used to inform the development of the EP.	Noted: Information from aerial surveys is being used to inform the Environment Plan.	Information

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
50	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:27	Claim	Relevant person stated that indirect impacts for other top predators (i.e. fur seals) which feed on pelagic fish and cephalopods during the spring/summer/early autumn which is an energetically important breeding period.	Low	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the EP were deemed necessary as there are no biologically important areas or behaviours identified for Otariid species within the most conservative area (EMBA) that may be affected by sound resulting in behavioural disturbance.	No changes to EP content	None
51	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:28	Claim	Relevant person recommended that the impact of lighting on seabird species in line with the National Light Pollution Guidelines is considered in the proposal.	High	ConocoPhillips Australia reviewed relevant impact assessments (specifically light and flaring emissions assessments) to ensure that impacts to seabird species (particularly during the breeding season) were adequately assessed. Further, accepted mitigation measures relevant to these impacts are within CM02: Vessel and MODU Operating Procedures and CM07: Light Management Plan.	The Environment Plan includes an assessment of impacts to seabirds prey species associated with routine lighting and flaring light emissions, and fish and invertebrates (prey species) associated with continuous and impulsive underwater sound, where relevant. Depending on the final drilling locations, light associated with short-term flaring has the potential to affect breeding BIAs for three species (Short-tailed Shearwater, Black-faced Cormorant and Little Penguin). The impact from flaring will only be intermittent and temporary (approximately 120 hours per well) and is therefore not expected to interrupt breeding behaviours or cause impact at a population level. Given the large areas typically covered by foraging individuals, and the transient nature of the species, light impacts from flaring are not expected to cause significant impacts to foraging behaviours. Continuous and impulsive underwater sound impact assessments predict no injury and only localised, temporary behavioural disturbance of fish and invertebrate prey species during seabed surveys and drilling operations. CM02: Vessel and MODU Operating	"ConocoPhillips Australia will develop and implement a Seabird Management Plan as per the National Light Pollution Guidelines (CoA 2020b) for the activity. Once safety navigational lighting requirements are met (as per vessel class), the Management Plan will detail additional mitigations to manage light based on the information in the Seabird Light Mitigation Toolbox and at a minimum will implement: • Screens, blinds or window tinting on windows to contain light inside the rig and vessels. • Outdoor/deck lights when not necessary for human safety or navigation will be turned off. • Lights will be directed onto work areas. • Program for handling grounded birds. • Reporting requirements." CM02: Vessel and MODU Operating Procedures CM07: Light Management Plan

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

52	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:29	Claim	Relevant person recommended that indirect impacts of prey disturbance should be considered for seabirds, particularly during energetically important breeding seasons.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and subsequently reviewed relevant impact assessments (specifically non-impulsive and impulsive noise emission assessments) to ensure that impacts to seabird prey species (fish and invertebrates) were adequately assessed.	The Environment Plan includes an assessment of impacts to seabirds prey species associated with routine lighting and flaring light emissions, and fish and invertebrates (prey species) associated with continuous and impulsive underwater sound, where relevant. Depending on the final drilling locations, light associated with short-term flaring has the potential to affect breeding BIAs for three species (Short-tailed Shearwater, Black-faced Cormorant and Little Penguin). The impact from flaring will only be intermittent and temporary (approximately 120 hours per well) and is therefore not expected to interrupt breeding behaviours or cause impact at a population level. Given the large areas typically covered by foraging individuals, and the transient nature of the species, light impacts from flaring are not expected to cause significant impacts to foraging behaviours. Continuous and impulsive underwater sound impact assessments predict no injury and only localised, temporary behavioural disturbance of fish and invertebrate prey species during seabed surveys and drilling operations.	Information
53	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:30	Claim	Relevant person stated that the shy albatross, short-tailed shearwater and little penguin are present on off the west coast of Tasmania. Relevant person suggested that acoustic disturbance on these species is considered and that the avoidance of key foraging habitat is avoided during the breeding season.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and updated section 6.6.7 and 6.7.7 to include an assessment of acoustic impacts to bird species which was previously not considered.	Include assessment of acoustic impacts to bird species in Environment Plan (currently not considered). See sections 6.6.7 and 6.7.7.	Included an assessment of acoustic impacts to bird species in the Environment Plan, section 6.6.7.1 Ecological Receptors, Birds; and section 6.7.6.1 Ecological Receptors, Birds (previously not considered).
54	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:31	Request	Relevant person informed that the harvesting of short-tailed shearwaters is a cultural, non-commercial, and commercial activity (mutton birding), particularly for the Tasmanian Aboriginal Community, allowed for in reserves (except Nature Reserves) and private land. Relevant person suggested consulting mutton birding stakeholders regarding potential risks and mitigation options.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and has since included information on mutton birding in Section 4.6.7.2 of the EP.	Updated section 4.6.7.2 to include information provided on mutton birding.	Information
55	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:33	Request	Relevant person detailed a list of land tenures, specifically in relation to Tasmania, that should be considered under the EP.	High	ConocoPhillips Australia updated Chapter 4 (Existing Environment) to include the land tenures values and sensitivities. Further, ConocoPhillips Australia has carried these through the risk assessment chapters for Loss of Well Control and Marine Diesel Oil, where relevant to the environment that may be affected by these worst-case credible scenario.	ConocoPhillips Australia has updated the description of the existing environment to include the identified values and sensitivities and has carried these through the risk assessment chapters for Loss of Well Control and Marine Diesel Oil, where relevant to the environment that may be affected by these worst-case credible scenarios.	Updated Existing Environment Chapter and risk assessment for Loss of Well Control, and Marine Diesel Oil where relevant).

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
56	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:34	Statement	Relevant person stated that NRE Tas's PWS is responsible for reserves and crown land with each reserve category requiring different management approaches and permit activities as described in Schedule 1 of the NPRMA.	High	ConocoPhillips Australia acknowledges feedback provided by the relevant person and included the National Parks and Reserves Management Act 2022, including the implications of this legislation, in the Legislation and Other Requirements section of the EP.	The National Parks and Reserves Management Act 2022 is included in the Legislative and Other Requirements in the EP and that the implications of this legislation are identified.	Updated Legislative and Other requirements.
57	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:35	Claim	Relevant person stated that impacts to cultural and natural values of reserves may be impacted from "worst case scenarios".	High	ConocoPhillips Australia has reviewed feedback provided by relevant person and conducted a review developed relevant control measures (CM01, CM02, CM05, CM06, CM08, CM09, CM013, CM014, CM015, CM016 and CM017) to ensure that potential impacts to cultural and natural reserves are adequately assessed.	Noted. During the development of the Environment Plan, and through consultation, ConocoPhillips Australia is seeking to identify information on values and sensitivities within the environmental planning area and including this information in the Existing Environment and Risk Assessment chapters for worst-case scenarios including invasive marine species, marine diesel oil spills and loss of well control events. A range of control measures have been developed that address this claim: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM05: Cultural Heritage Protection Program CM06: MODU Mooring Plan CM08: Marine Mammal Adaptive Management Plan CM09: Drilling Program CM13: NOPSEMA accepted Oil and Pollution Emergency Plan (OPEP) CM14: Operational and Scientific Monitoring Plan (OSMP) CM15: Well Design and Delivery Process (WDDP) CM16: Source Control Emergency Response	CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM05: Cultural Heritage Protection Program CM06: MODU Mooring Plan CM08: Marine Mammal Adaptive Management Plan CM09: Drilling Program CM13: NOPSEMA accepted Oil and Pollution Emergency Plan (OPEP) CM14: Operational and Scientific Monitoring Plan (OSMP) CM15: Well Design and Delivery Process (WDDP) CM16: Source Control Emergency Response Plan (SCREP), inclusive of Relief Well Plan CM17: NOPSEMA Accepted Well Operations Management Plan
58	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:35	Statement	Relevant person requested that all land authorities are consulted if they are at risk from potential risk scenarios.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it.	CM03: Marine and Coastal Users Consultation and Communication Plan	CM03: Marine and Coastal Users Consultation and Communication Plan
59	4145, 995, 3241	ID14:Department of Natural Resources and Environment Tasmania (NRE TAS)	17/04/2023 16:36	Claim	Relevant person suggested that the EP should consider the emergency response capabilities and existing framework for different scenarios including King Island and associated emergency management committees, State and regional emergency management committees, land authorities and lead agencies.	High	ConocoPhillips Australia confirmed the Otway Exploration Drilling Program EP and OPEP were developed in consideration of consultation feedback from these groups.	No changes to EP content.	"Consult with: - King Island Council - NRE-Tas - coordinated consultation across the department including Biosecurity and Parks and Wildlife Services - EPA-Tas - We have reached out to the Aboriginal Land Council of Tasmania and are pursuing a meeting."
61	2605, 1225	ID485:[redacted]	2/05/2023 16:57	Claim	Relevant person provided feedback regarding the effect seismic testing will have on abalone spawning impacting production.	Low	The objection or claim is not relevant to the adverse effects of the proposed Otway Exploration Drilling Program to which the Environment Plan relates and is beyond the scope of this assessment.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
62	2617, 2609	ID510:Ocean Racing Club of Victoria (ORCV)	6/03/2023 18:03	Request	Relevant person provided feedback regarding the risk the proposed activity may have on the Melbourne to Hobart yacht race which occurs during December/January each year.	High	ConocoPhillips Australia included a notification to Ocean Racing Club Victoria where activities are planned for late-December to early-January for the 2024-25, 2025-26, 2026-27 and 2027-28 race periods (limited potential for the 2023-24 race) into CM03: Marine and Coastal Users Consultation and Communication Plan. Further, section 4.7.5.2 has been updated to include the information provided.	Provide clarifications to Ocean Racing Club Victoria regarding the limited potential to disrupt activities during the December 2023 - January 2024 race, and include notification requirements to Ocean Racing Club Victoria for activities scheduled for late-December to early-January for the 2024-25, 2025-26, 2026-27 and 2027-28 race periods. CM03: Marine and Coastal Users Consultation and Communication Plan. Updated section 4.7.5.2.	Requirement to notify Ocean Racing Club Victoria included in Communication Plan where activities are planned for late-December to early-January for the 2024-25, 2025-26, 2026-27 and 2027-28 race periods. Notifications to occur at least 30 days prior. CM03: Marine and Coastal Users Consultation and Communication Plan
63	509, 2724	ID10:Marine and Safety Tasmania (MAST)	28/02/2023 18:40	Request	Relevant person requested that MAST be kept informed regarding the more general nature of when activities will be taking place to support notifications.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and updated CM03: Marine and Coastal Users Consultation and Communication Plan to include a notification requirement for MAST.	Include notification requirements for Marine and Safety Tasmania in Communication Plan. CM03: Marine and Coastal Users Consultation and Communication Plan	Requirement to notify Marine and Safety Tasmania included in Communication Plan. CM03: Marine and Coastal Users Consultation and Communication Plan
64	1239, 2727	ID528:Australian Oceanographic Services Pty Ltd	19/05/2023 10:16	Claim	Relevant person informed that the absence of defined drilling and seabed survey locations prior to EP submission is not acceptable.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.	Clarification information provided in section 1.4 of EP.	Updates made to section 1.4 of EP.
69	1655, 1637	ID627:Protect the West Victoria, ID111:Australian Marine Conservation Society	4/05/2023 16:28	Claim	Relevant person stated that ConocoPhillips Australia is required to tick a box (for consultation) and that they are helping with the operators paperwork.	Low	ConocoPhillips Australia provided a copy of NOPSEMA "Consultation on offshore petroleum environment plans: Information for the community"	No change to EP content	Nil
70	2601, 2450	ID111:Australian Marine Conservation Society	17/07/2023 15:49	Claim	Relevant person provided feedback that the 30-day public comment period is not enough time to provide meaningful consultation.	High	ConocoPhillips Australia extended the consultation on two occasions, including the release of draft environment plans prior to the completeness check submission to NOPSEMA and 30-day public comment period in create an extended consultation timeline.	Consultation process extended on two occasions.	Consultation process extended on two occasions.
71	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Claim	Relevant person provided feedback regarding the last-minute addition of another titleholder to attend the ConocoPhillips Australia meeting, and being referred to the other titleholders webpage was not considered to be clear, transparent consultation.	High	ConocoPhillips Australia acknowledged that during the course of agreeing to a meeting time, and subsequent request to change the meeting time, things may have become confusing. Noting, Regia was invited to participate in the briefing on 4 May in response to relevant persons request received via email that same morning. Relevant person had previously been advised that ConocoPhillips Australia was not proposing to conduct a seismic survey and contact details had been provided for other titleholders who were.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
72	2601, 2450	ID111:Australian Marine Conservation Society	17/07/2023 16:10	Claim	Relevant person inquired about the availability of maps which include the EMBA.	High	ConocoPhillips Australia provided maps with the modelling reports in August 2023.	No change to EP content	
73	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Claim	Relevant person noted that when they sought information related to operational shutdowns, they were advised to seek this information from the Australian Antarctic Division, and that this was in contradiction to undertaking meaningful consultation and is unsatisfactory.	High	ConocoPhillips Australia advised in the meeting on 4 May 2023 that the organisation has only conducted a single offshore activity and therefore suggested if the relevant person was interested in how the industry performs, the Australian Antarctic Division would have records for all offshore activities. ConocoPhillips further suggested that these records would demonstrate how shutdowns are managed consistently across the industry, which might be more relevant.	No change to EP content	Nil
74	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Request	Relevant person requested to be added to the notification list for any incidents or spills.	High	ConocoPhillips Australia reviewed CM03: Marine and Coastal Users Consultation and Communication Plan and will provide periodic updates to relevant persons in line with it.	Review of existing control/s: CM03: Marine and Coastal Users Consultation and Communication Plan	CM03: Marine and Coastal Users Consultation and Communication Plan
75	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Request	Relevant person requested that there is to be clarification provided on time frames of incident occurrence to the notification of relevant persons.	High	ConocoPhillips Australia provided clarification that notification would be in accordance with an accepted Oil Pollution Emergency Plan and requested clarification on notification requirements.	No change to EP content	Nil
76	2450	ID111:Australian Marine Conservation Society	17/07/2023 16:22	Request	Relevant person requested access to the EP chapters.	High	ConocoPhillips Australia committed to providing the draft EP chapters (completed August 2023)	No change to EP content	Nil
77	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Request	Relevant person requested that ConocoPhillips Australia share the modelling information regarding the impacts of hydrocarbon release/spills, noise emissions and infrastructure.	High	ConocoPhillips Australia committed to providing modelling reports (completed August 2023)	No change to EP content	Nil
78	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Request	Relevant person requested that ConocoPhillips Australia share any data/modelling information regarding impacts of spills to Marine Parks, Threatened Species and sensitive receptors.	High	ConocoPhillips Australia committed to providing modelling reports (completed August 2023)	Information provided once available via consultation hub with all information provided by 31 August 2023.	Nil
79	3373, 2198, 2197	ID73:King Island Landcare Group	17/07/2023 16:27	Not within scope of the adverse affects of the proposed activity	Relevant person provided feedback that ConocoPhillips Australia has failed to consider the impact of stage 3 emissions associated with the Otway Exploration Drilling Program. Relevant person stated that the EP will be separate from the activity as the drilling will drive up fossil fuel emissions.	Low	The objection or claim is not directly relevant to the adverse effects of the proposed Otway Exploration Drilling Program, to which the Environment Plan relates.	No change to EP content	NIL
80	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Request	Relevant person requested to be informed on shutdown occurrences resulting from sightings of marine mammals.	High	ConocoPhillips Australia requested clarification on intended purpose of information.	No change to EP content	Nil
81	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Other	Relevant person stated that permit T/49P impacts directly on the Zeehan Marine Park and the VIC/P79 lease abounds the Apollo marine protected areas. Relevant person queried if ConocoPhillips Australia will be sharing daily survey reports of marine species spotted in the areas.	High	ConocoPhillips Australia committed to providing observations to relevant state government departments.	Table 10-10: Summary of routine reporting and notification requirements	Information

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
82	1992, 4132	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Request	Relevant person requested information on the location of proposed survey and drill locations in relation to the Apollo and Zeehan marine parks and requested modelling reports.	High	ConocoPhillips Australia provided information on overlap with Zeehan multiple use zone and committed to providing modelling reports (completed August 2023)	No change to EP content.	Nil
83	4132, 1992	ID111:Australian Marine Conservation Society	11/05/2023 16:06	Request	Relevant person queried which biodiversity and critical BIA habitat data was used to inform the EP and asked that this was provided to AMCS.	High	ConocoPhillips Australia provided information on data sources.	No change to EP content	Nil
85	2521, 3828	ID33:Environment Protection Authority (EPA) Tasmania	14/03/2023 15:15	Statement	Relevant person requested that ConocoPhillips continues to liaise with NRE-Tas regarding the impacts on cetaceans and seabirds, including the identification of seasonal sensitivities.	High	ConocoPhillips Australia committed to ongoing consultation with NRE-Tas during development of Whale Management Plan and Light Management Plan.	Ongoing consultation with NRETas.	NIL
86	2521, 3828	ID33:Environment Protection Authority (EPA) Tasmania	14/03/2023 15:15	Other	Relevant person recommended validating response actions by ground-truthing to ensure they are fit for purpose.	High	Ground-truthing was conducted by ConocoPhillips Australia and AMOSC personnel from 12-14 July 2023 and Tactical Response Plans updated and provided. CM13: NOPSEMA Accepted Oil Pollution Emergency Plan (OPEP)	Ground-truthing was conducted by ConocoPhillips Australia and AMOSC personnel from 12-14 July 2023 and Tactical Response Plans updated and provided. CM13: NOPSEMA Accepted Oil Pollution Emergency Plan (OPEP)	Develop Tactical Response Plans and conduct ground truthing exercise on King Island, where access can be secured, prior to EP submission to support OPEP development.
87	3375, 2522	ID36:Victorian Fishing Authority (VFA)	28/11/2022 14:25	Statement	Relevant person provided feedback regarding the cumulative impact of offshore exploration activities.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.	Reviewed existing control/s: CM03: Marine and Coastal Users Consultation and Communication Plan CM04: Commercial Marine Operators Adjustment Protocol Additional Environmental Performance Standard Adopted: ConocoPhillips Australia will work with other titleholders and relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.	CM03: Marine and Coastal Users Consultation and Communication Plan CM04: Commercial Marine Operators Adjustment Protocol Additional Environmental Performance Standard ADOPTED: ConocoPhillips Australia will work with other titleholders and relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.
88	3828, 1657	ID33:Environment Protection Authority (EPA) Tasmania	13/06/2023 10:00	Other	Relevant person stated that some values and sensitivities are not listed in the OPEP (i.e. First Nations cultural heritage, King Island community)	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and confirmed the OPEP includes the listing of First Nations heritage and coastal community values and sensitivities in the NEBAs for MDO and LOWC - Tables 2-11 and 2-12.	Confirmed OPEP (Rev00c) includes this information. First Nations heritage and coastal community values and sensitivities are listed in the NEBAs for MDO and LOWC - Tables 2-11 and 2-12.	Information
89	3828, 1657	ID33:Environment Protection Authority (EPA) Tasmania	13/06/2023 10:00	Request	Relevant person stated that they are required to validate the proposed oil wildlife response strategy and initial response actions as outlined in the OPEP.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations were deemed necessary as no objections to the EP or OPEP content were raised.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
91	1657, 3828	ID33:Environment Protection Authority (EPA) Tasmania	13/06/2023 10:00	Claim	Relevant person requested that ConocoPhillips Australia identifies forward operating base locations on King Island that are key to successful response.	High	"ConocoPhillips Australia reviewed feedback provided by the relevant person and has since updated the Tactical Response Plans to include potential locations for Forward Operating Base which were identified during a ground-truthing exercise. Further, this was updated in CM13: NOPSEMA Accepted Oil Pollution Emergency Plan."	Potential locations for Forward Operating Base identified during ground-truthing exercise conducted by ConocoPhillips Australia and AMOSC personnel from 12-14 July 2023 and Tactical Response Plans updated and provided. CM13: NOPSEMA Accepted Oil Pollution Emergency Plan (OPEP)	Develop Tactical Response Plans and conduct ground truthing exercise on King Island, where access can be secured, prior to EP submission to support OPEP development and include information on potential forward operating base and staging areas in Primary TRP for Ettrick River and reference this in secondary TRPs. CM13: NOPSEMA Accepted Oil Pollution Emergency Plan (OPEP)
105	2536, 3862	ID508:Blue Whale Study	8/05/2023 10:00	Claim	Relevant person stated that bottom moored acoustic mooring is the BW industry standard.	High	ConocoPhillips Australia has contacted relevant specialists to support the development of/or peer review of CM08: Whale Management Plan.	ConocoPhillips Australia has approached relevant specialists to support the development of or peer review of CM08: Whale Management Plan. No change to EP content as of yet.	Undertake to contract relevant specialists to support the development of the Whale Management Plan for the Otway Exploration Drilling Program, including monitoring and mitigation measures to protect blue whales and other species. CM08: Whale Management Plan
115	3828, 2574	ID33:Environment Protection Authority (EPA) Tasmania	26/04/2023 9:00	Request	Relevant person requested that ConocoPhillips Australia consider pre-emptively stockpiling response equipment on King Island prior to conducting drilling adjacent to King Island.	High	ConocoPhillips Australia has committed to having first strike spill response resources pre-emptively located on King Island in the event that drilling is scheduled to occur within the central zone of the T/49P Operational Area, adjacent to King Island. Table 6-1 of the OPEP has updated to reflect this.	ConocoPhillips Australia has committed to having first strike spill response resources pre-emptively located on King Island in the event that drilling is scheduled to occur within the central zone of the T/49P Operational Area, adjacent to King Island. Table 6-1: Environmental performance requirements and responsibilities for the OPEP (OPEP Rev00C page 73) has been updated to reflect this control measure. and measurement criteria have been established to demonstrate compliance including: - Agreements, contracts in place, and - Equipment in position prior to drilling in central zone of T/49P.	First strike response equipment will be pre-positioned on King Island to support rapid response, in the event that drilling is scheduled to occur within the central zone of the T/49P Operational Area, adjacent to King Island.
116	3828, 2574	ID33:Environment Protection Authority (EPA) Tasmania	28/04/2023 9:00	Request	Relevant person requested that ConocoPhillips Australia consider pre-emptive debris clearance in TRPs and including possible methods to collect waxy materials.	High	ConocoPhillips Australia has included the requirement for pre-emptive debris clearance in the section 7 and 8.6 of the Shoreline Plan and TRPs, and methods for recovery of hydrocarbons, including manual removal of weathered waxy residues, are provided in the Shoreline Plan.	ConocoPhillips Australia has included the requirement for shoreline pre-clean in: - Sections 7 and 8.6 of the Shoreline Plan (Rev00c) - The Primary TRP developed for Ettrick River, King Island - as the first response task, and - The Secondary TRPs for King Island - Pre-oil clean-up recommendations, as part of SCAT Information. Methods proposed for recovery of hydrocarbons, including manual removal of weathered waxy residues, are provided in the Shoreline Plan (Rev00C), Appendix 1: Shoreline Treatment Recommendation Guides, Tables A1-1a through to A1-1h, where relevant to shoreline type.	Pre-emptive debris clearance (pre-clean of shorelines to above high tide mark) included in shoreline plan and TRPs. Methods proposed for recovery of hydrocarbons, including manual removal of weathered waxy residues, are provided in the Shoreline Plan (Rev00C), Appendix 1: Shoreline Treatment Recommendation Guides, Tables A1-1a through to A1-1h, where relevant to shoreline type.

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
119	3372, 2575	ID109:Glenelg Shire Council	24/03/2023 9:30	Other	Relevant person recommended that advertising occur through the Portland Observer	High	ConocoPhillips Australia reviewed feedback and has since been advertising in the Portland Observer.	Advertise in the Portland Observer.	Advertise in the Portland Observer.
121	582, 3368	ID5:Colac Otway Shire Council	3/03/2023 12:00	Claim	Relevant person provided feedback regarding military risk during exploration activities.	High	ConocoPhillips Australia reviewed relevant controls (CM01, CM02, CM05, and CM06) to ensure that the risks associated with UXO encounter are adequately assessed and mitigated.	Review of existing control/s: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM05: Cultural Heritage Protection Program CM06: MODU Mooring Plan	CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM05: Cultural Heritage Protection Program CM06: MODU Mooring Plan
122	2576, 3348	ID11:South East Trawl Fishing Industry Association (SETFIA)	25/07/2022 9:00	Other	Relevant person recommended that future project names are simplified.	High	ConocoPhillips Australia reviewed feedback and simplified the name of the activity to reduce confusion.	Simplified naming of project activity to reduce consultation confusion.	Simplified naming of project activity to reduce consultation confusion.
123	3369, 2417	ID470:[redacted]	13/07/2023 11:02	Statement	Relevant person stated that they are relevant and entitled to receive and to continue to receive information on the area as it becomes available.	High	ConocoPhillips Australia committed to ongoing provision of information.	No change to EP content	Nil
124	3369, 2417	ID470:[redacted]	13/07/2023 11:15	Claim	Relevant person suggested that it might make sense to have only one hole drilled at a time to reduce the chance of unknown conditions.	High	ConocoPhillips Australia provided confirmation of only drilling one hole at a time and updated section 2.2.2 Drilling Operations to clarify this.	Addressed in section 2.2.2	Information
125	3369, 2417	ID470:[redacted]	13/07/2023 11:19	Claim	Relevant person stated that the map provided shows sharp drop-off to the west/south west, which suggests that these are marine canyons which likely contain recently deposited fine sediment that may be mobilised by shocks and become mobilised into turbidity currents, transferring sediment from near-shore to off-shore/the abyssal plane.	High	ConocoPhillips Australia provided and overview of water quality impact assessment, based on published literature from comparable activities, that predicts that the near shore will not be impacted by routine operational and drilling discharges.	No change to EP content	NIL
126	3369, 2417	ID470:[redacted]	13/07/2023 11:19	Claim	Relevant person stated that the main effect of the activity will be on water quality.	High	ConocoPhillips Australia provided and overview of water quality impact assessment, based on published literature from comparable activities, that predicts that the near shore will not be impacted by routine operational and drilling discharges.	No change to EP content	NIL
138	3368, 2665	ID5:Colac Otway Shire Council	24/07/2023 8:16	Claim	Relevant person suggested clarification regarding the 20hr statement (for vertical seismic profiling) which needs further clarification to ensure it reflects 20 hrs x 6 wells.	High	ConocoPhillips Australia reviewed and updated the EP so that each reference relating to VSP clearly states that it will occur for 20 hours per well for a maximum of 6 wells.	EP reviewed and updated so that each reference is to 20 hours per well for a maximum of 6 wells.	Information
143	2690, 3860	ID571:Warrnambool Coastcare Landcare Network	1/08/2023 10:52	Claim	Relevant person stated that the Middle Island penguin colony are threatened by human resource use and predation by introduced canids.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and included contextual information to Sections 4.4.6 and 4.6.7.5 and an additional impact assessment was included in Section 6.6.7 to ensure that any potential impacts to the little penguin were adequately assessed.	Contextual information on identified threats/pressures added to sections 4.4.6 and 4.6.7.5 and additional impact assessment information added to section 6.6.7: "It is inferred that penguins have relatively poor hearing thresholds in the lower frequencies (McCauley, 1994). As little penguins typically participate in coastal foraging trips within 8-14 km of their colonies (McCutcheon et al. 2011) and considering colonies are located approximately 20 km [including the middle island colony] or more from the operational areas impacts to the little penguin from continuous underwater sound emissions are not predicted."	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

144	1658, 3377	ID37:Department of Transport and Planning (DOT)	13/06/2023 12:00	Request	Relevant person suggested that it would be beneficial to see the NEBA criteria in the OPEP.	High	ConocoPhillips Australia included the NEBA criteria into the OPEP.	NEBA criteria included in the OPEP (Rev00b).	Information included in OPEP
145	3377, 1658	ID37:Department of Transport and Planning (DOT)	13/06/2023 12:00	Claim	Relevant person informed that the Port of Hastings has been left out of the list of ports.	High	ConocoPhillips Australia included the Port of Hastings into the OPEP tables and Appendix 5: Contact Directory.	Port of Hastings included in OPEP (Revb) tables Appendix 5: Contact Directory	Port of Hastings included in OPEP tables and Appendix 5: Contact Directory Port of Hastings Duty Officer (Incident Notifications)+61 437 645 026 Port of Hastings Office +61 3 5979 5500enquiries@portofhastings.vic.gov.au
146	1658, 3377	ID37:Department of Transport and Planning (DOT)	13/06/2023 12:00	Other	Relevant person requested clarification in the OPEP table 3-4 regarding what regulatory notifications are to be made.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the OPEP (Table 3-4) were deemed necessary as required content was provided.	No change to EP content	Nil
147	1658, 3377	ID37:Department of Transport and Planning (DOT)	13/06/2023 12:00	Other	Relevant person advised that they would be interested in reviewing shoreline document.	High	ConocoPhillips Australia provided these documents.	No change to EP content	NIL
148	1658, 3377	ID37:Department of Transport and Planning (DOT)	13/06/2023 12:00	Other	Relevant person suggested that the definition of environmental in the OPEP is consistent with the NOPSEMA definition.	High	ConocoPhillips Australia included this definition in the next revision of the OPEP.	Definition included in next revision of the OPEP (Rev00C).	Include definition
149	3376, 4249, 1821	ID50:Tasmanian Seafood Industry Council (TSIC)	2/06/2023 9:00	Statement	Relevant person provided feedback regarding the 'marine spatial squeeze' that the fishing industry is feeling due to increase industry activity, market access, regulation and cost of living.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program. This includes a commitment to working with industry, relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.	Review of existing control/s: CM04: Commerical Marine Operators Adjustment Protocol Environmental Performance Standards: - An Adjustment Protocol will be negotiated with peak fishing associations to ensure that any claims of fishers can be assessed and compensated. The protocol will also be developed based on feedback from consultation with other commercial marine operators who identified they could be potentially impacted by the petroleum activity. - ConocoPhillips Australia will work with other titleholders and relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers.	

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
150	4249, 1821, 3376	ID50:Tasmanian Seafood Industry Council (TSIC)	2/06/2023 9:00	Statement	Relevant person stated that the number of activities is causing confusion and disengagement in the fishing community at a time of market uncertainty.	High	ConocoPhillips Australia has committed to collaborative consultation with other titleholders and relevant fishery associations and persons to minimise the potential for cumulative impacts to commercial fishers. This initiative is detailed in CM04: Commercial Marine Operators Adjustment Protocol.	Working in a fee-for-service arrangement with TSIC to reduce consultation fatigue of membership. Exploring collaborative consultation with other titleholders (CM04: Commerical Marine Operators Adjustment Protocol - EPS: ConocoPhillips Australia will work with other titleholders and relevant fishery associations and persons, to design an application process for compensation that minimises the potential for cumulative impacts to commercial fishers (Event ID: 1821, Reg16b ID: 150). Providing information and links to any individual or organisation that confuses the ConocoPhillips Australia Otway Exploration Drilling Program with other titleholder/ proponent activities.	Working in a fee-for-service arrangement with TSIC to reduce consultation fatigue of membership. Providing information and links to any individual or organisation that confuses the ConocoPhilliips Australia Otway Exploration Drilling Program with other titleholder/ proponent activities.
151	4249, 1821, 3376	ID50:Tasmanian Seafood Industry Council (TSIC)	2/06/2023 9:00	Claim	Relevant person stated that the lack of defined drilling locations is causing unnecessary stress.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational area ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.	Review and update of information in EP section 1.4: Specific locations for seabed surveys and exploration drilling have yet to be confirmed. The process for selecting final survey and drilling locations involves the completion of seismic data processing, interpretation of the data to select targets with a high probability of success, and analysis of the efficiency of the drilling program to confirm resources with the least amount of wells, to minimise potential impacts and risks associated with each. Consequently, ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas associated with petroleum titles VIC/P79 and T/49P. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed. It is recognised that this may result in an overestimation of impacts and risks. However, a precautionary approach is being taken that assesses worst-case impacts and applies appropriate control measures across the board to minimise impacts and risks to	Review and update of information in EP section 1.4.
152	4249, 1821, 3376	ID50:Tasmanian Seafood Industry Council (TSIC)	2/06/2023 9:00	Claim	Relevant person provided feedback regarding the adjustment protocol and whether it will be flexible with changing market dynamics.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol) for the exploration program.	Review existing control measure/s: CM04: Commercial Marine Operators Adjustment Protocol	CM04: Commercial Marine Operators Adjustment Protocol

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
153	4249, 1821, 3376	ID50:Tasmanian Seafood Industry Council (TSIC)	2/06/2023 10:08	Claim	Relevant person stated that until the drilling locations are decided ConocoPhillips Australia will not know the full impact of the activity.	High	ConocoPhillips Australia updated section 1.4 of the EP to provide clarification on the evaluation of impacts and risks across the wider operational areas.	Updates to section 1.4	Information
154	2690, 3860	ID571:Warrnambool Coastcare Landcare Network	1/08/2023 10:52	Claim	Relevant person stated that recent declines in the Middle Island little penguin colony are not necessarily due to canid predation and adding additional threatening processes (i.e. seismic testing) is counterproductive to conservation efforts.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and included contextual information to Sections 4.4.6 and 4.6.7.5 and an additional impact assessment was included in Section 6.6.7 to ensure that any potential impacts to the little penguin were adequately assessed.	Contextual information on identified threats/pressures added to sections 4.4.6 and 4.6.7.5 andadditional imapct assessment information added to section 6.6.7: "It is inferred that penguins have relatively poor hearing thresholds in the lower frequencies (McCauley, 1994). As little penguins typically participate in coastal foraging trips within 8-14 km of their colonies (McCutcheon et al. 2011) and considering colonies are located approximately 20 km [including the middle island colony] or more from the operational areas impacts to the little penguin from continuous underwater sound emissions are not predicted."	Information
155	2690, 3860	ID571:Warrnambool Coastcare Landcare Network	1/08/2023 10:52	Claim	Relevant person stated that they oppose seismic testing in the Otway Basin due to the potential impacts on the biologically important behaviours of marine fauna species such as the little penguin (foraging), cetaceans (avoidance) and the potential impacts to the marine food web (i.e. planktonic species in the Bonney Coast Upwelling).	High	ConocoPhillips Australia reviewed feedback provided by relevant person and included contextual information to Sections 4.4.6 and 4.6.7.5 and an additional impact assessment was included in Section 6.6.7 to ensure that any potential impacts to the little penguin were adequately assessed.	Additional information provided in EP section 6.6.7: "It is inferred that penguins have relatively poor hearing thresholds in the lower frequencies (McCauley, 1994). As little penguins typically participate in coastal foraging trips within 8-14 km of their colonies (McCutcheon et al. 2011) and considering colonies are located approximately 20 km [including the middle island colony] or more from the operational areas impacts to the little penguin from continuous underwater sound emissions are not predicted."	
156	649, 2729	ID110:Surf Coast Shire Council	16/03/2023 12:51	Request	Relevant person requested that the Council's opposition to seismic testing and oil and gas development in the Otway Basin is noted in consultation records.	Low	ConocoPhillips Australia notes that feedback in the EP.	No change to EP content	NIL
157	4653, 540	ID28:Department of Defence	2/03/2023 15:21	Statement	Relevant person advised that unexploded ordnance (UXO) may be present on and in the sea floor and therefore, ConocoPhillips Australia must assess the risks associated with conducting activities in the area.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and updated Section 6.2.5.1 of the EP to include information provided.	Updated section 6.2.5.1 of the Environment Plan to include the information provided.	Information

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
158	540, 4653	ID28:Department of Defence	2/03/2023 15:22	Statement	Relevant person advised that all activities are conducted at ConocoPhillips Australia's own risk relating to the presence of UXO within the areas.	High	ConocoPhillips Australia reviewed feedback provided by relevant person and updated Section 6.2.4.6 and 6.2.5.1 of the EP to include information provided. Further, ConocoPhillips Australia commissioned RPS Explosives Engineering Services to conduct desktop study and risk assessment (Appendix K) which is incorporated into Section 4.7.3, 6.2.4.6 and 6.2.5.1 of the EP.	Updated sections 6.2.4.6 and 6.2.5.1 of the Environment Plan to include the information provided and commissioned RPS Explosives Engineering Services to conduct desktop study and risk assessment. This study concluded that there was a 'Low' risk of encountering UXOs within VIC/P79 or T/49P for all activities, with the exception of Snag on Vessel. The risk level of a UXO being snagged on submarine equipment and subsequently brought onto a vessel (Snag on Vessel), e.g. during retrieval of cable, was assessed as 'Moderate' based on the increased severity of the consequence. Reactive mitigations recommended by RPS, including an explosives safety briefing and on-call explosives engineer, were adopted, along with the primary mitigation measure being seabed surveys using magnetometry or similar.	Information
159	540, 4653	ID28:Department of Defence	2/03/2023 15:47	Request	Relevant person requested that there is continued consultation with the AHS to issue NOTMARs.	High	ConocoPhillips Australia will contact AHO prior to seabed survey, anchor pre-lay and drilling activities as per CM03: Marine and Coastal Users Consultation and Communication Plan.	Include as control measure for seabed survey, anchor pre-lay and drilling activities to minimise impacts to other marine users and to minimise the risk of vessel collision.	CM03: Marine and Coastal Users Consultation and Communication Plan Requirement for ConocoPhillips Australia, or contractor, to contact AHO via datacentre@hydro.gov.au added to 'Communication Plan' for exploration program, as 'Notification 30 days prior to mobilisation for: - Seabed survey - Anchor pre-lay - Drilling operations'
212	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried how far the closest drill hole will be to King Island.	High	"ConocoPhillips Australia provided the requested information.	No change to EP content	Nil
213	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried how many km the drilling will occur away from their hatchery.	High	ConocoPhillips Australia provided the requested information.	No change to EP content	Nil
214	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried at what distance the drilling will begin to have an impact.	High	"ConocoPhillips Australia provided information from the EP the highly localised and temporary impacts. "	No change to EP content	Nil
215	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried how big the scope of the proposed drilling operation is.	High	ConocoPhillips Australia provided information on the full scope of the EP assessment.	No change to EP content	Nil
216	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person requested information on how heat dissipate during the drilling process.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	No change to EP content. Assessment already included.	Nil
217	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried whether an assessment of how far heat radiation will extend from the drilling operation.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	No change to EP content. Assessment already included.	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
218	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried what would come into the hatchery as the result of activities.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, as described in section 6.3.5.3.	No change to EP content	Nil
219	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried what the possible effects of heat radiation are, specifically in relation to marine growth and biology.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	No change to EP content	Nil
220	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried how resuspension could affect their water inlet, i.e. could the strength of the water current in the area bring sediment in to their inlet.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, as described in section 6.3.5.3.	No change to EP content	Nil
221	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried how resuspension could affect their water inlet.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, as described in section 6.3.5.3.	No change to EP content	Nil
222	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Request	Relevant person requested details for the quantity and type of chemicals to be used during the drilling exploration process.	High	ConocoPhillips Australia provided an overview of CM12: General and Hazardous Chemical Management Procedures.	Review existing control measure/s CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures
223	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried how ConocoPhillips Australia is planning to test the physical and microbiological parameters of the marine environment.	High	"ConocoPhillips Australia conducted a review of control measures relevant to the mitigation of impacts associated with the physical and microbiological parameters of the marine environment to ensure impacts were adequately assessed. Further, section 10.5.4 (Measuring and monitoring) of the Implementation Strategy provides a summary of the environmental monitoring that will be undertaken as part of the Otway Exploration Drilling Program."	Review of existing control/s: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM09: Drilling Program Implementation Strategy - section 10.5.4. Measuring and Monitoring	CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM09: Drilling Program Implementation Strategy - section 10.5.4. Measuring and Monitoring
224	574, 2657	ID13:King Island Marine Research	8/03/2023 12:28	Other	Relevant person queried if ConocoPhillips Australia is aware of any potential geological impact.	High	ConocoPhillips Australia advised that drilling has been conducted safely for over 50 years in the offshore environment in the Otway Basin, with all wells in the Otway Exploration Drilling Program being plugged and abandoned as per Australian regulatory requirements, with negligible geological impact at the time of drilling (penetration of the formations at the point of the well) and no predicted short or long-term impacts.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
239	3194, 3862	ID528:Australian Oceanographic Services Pty Ltd, ID508:Blue Whale Study	4/09/2023 8:11	Request	Relevant person advised that monitoring equipment has been installed within the VIC/P79 operational area which will need to be avoided.	High	ConocoPhillips Australia added an additional section in Chapter 6.2 (Interference with Other Marine and Coastal Users) relevant to research (6.2.4.1). Further, a new EPS was developed which requires an avoidance area be established around research equipment in VIC/P79, that will be communicated to vessel and MODU operators prior to commencement of the activity.	Addition of relevant text in section in Chapter 6.2 Interference with Other Marine and Coastal Users, including: - New section 6.2.4.1 Research - New section in 6.2.5.1 Consequence Evaluation to Socio-economic Receptors (Research), and - New control Measure in section 6.2 and Section 9 - Table 9-1. CM02: Vessel and MODU Operating Procedures. Environmental Performance Standard: An avoidance area will be established around the temperature logger and mooring in VIC/P79 to minimise the risk of damage to or loss of the monitoring equipment, associated with vessel and MODU movements [see EVENT ID: 3194: for coordinates], and will be communicated to vessel and MODU operators prior to commencement of the activity. Measurement Criteria: - Vessel Logs - Vessel Tracks - Consultation Records - Induction - No recordable incidents	Addition of relevant text in section in Chapter 6.2 Interference with Other Marine and Coastal Users. New control Measure in section 6.2 and Section 9 - Table 9-1. CM02: Vessel and MODU Operating Procedures. Environmental Performance Standard: An avoidance area will be established around the temperature logger and mooring in VIC/P79 to minimise the risk of damage to or loss of the monitoring equipment, associated with vessel and MODU movements [see EVENT ID: 3194: for coordinates], and will be communicated to vessel and MODU operators prior to commencement of the activity.
243	3824, 2470	ID7:Director Of National Parks (DNP)	21/04/2023 13:42	Claim	Relevant person requested that activities which may displace the Pygmy Blue Whale or Southern Right Whale's use of BIAs are avoided.	High	ConocoPhillips Australia updated Section 6.6.7.1 to include more information on this assessment.	Additional information added to EP section 6.6.7.1 on the process for assessing ability to avoid times sensitive times of year.	CM08: Whale Management Plan; Information
244	3824, 2470	ID7:Director Of National Parks (DNP)	21/04/2023 13:44	Claim	Relevant person requested that activities are timed or managed to avoid species' peak migration and foraging behaviours.	High	ConocoPhillips Australia updated Section 6.6.7.1 to include more information on this assessment.	Additional information added to EP section 6.6.7.1 on the process for assessing ability to avoid times sensitive times of year.	CM08: Whale Management Plan; Information
245	3824, 2470	ID7:Director Of National Parks (DNP)	21/04/2023 13:45	Claim	Relevant person requested that potential cumulative impacts on species is addressed considering there are two proposed seismic surveys near the proposed Otway Exploration Drilling Program.	High	ConocoPhillips Australia conducted a review of Chapter 8: Cumulative Impact Assessment to ensure the cumulative impacts associated with the proposed activity were adequately assessed.	Cumulative Impact Assessment CM08: Whale Management Plan Additional Environmental Performance Standards for cumulative impacts Activity limitations - single well drilled/P&A'ed in region at any one time. Implementation Change - single rig operating across multiple projects to minimise number of rigs in region at any one time.	Cumulative Impact Assessment CM08: Whale Management Plan Additional Environmental Performance Standards for cumulative impacts Activity limitations - single well drilled/P&A'ed in region at any one time. Implementation Change - single rig operating across multiple projects to minimise number of rigs in region at any one time.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
246	3824, 2470	ID7:Director Of National Parks (DNP)	21/04/2023 13:47	Other	Relevant authority advised that Australian Marine Parks and their representativeness (including relevant management plans listed objectives and values) are to be considered in the content of the EP.	High	ConocoPhillips Australia incorporated feedback in to the EP including the existing environment (section 4.4.1) and impact and risk sections 6.3-6.9, 7.3 - 7.8 to demonstrate that the activity will not be inconsistent with relevant AMP management plans.	In preparing the EP, ConocoPhillips Australia has undertaken to consider the Australian marine parks and their representativeness to ensure that the EP: •Identifies all Australian Marine Parks within the broader environmental planning area based on the low threshold loss of well control EMBA (environment that may be affected), and their conservation values and sensitivities - See section 4.4.1 of draft Environment Plan chapter 4. Description of the Environment •Identifies and manages all impacts and risks on Australian marine park values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable - see draft environment plan chapter 6. Environmental Impact Assessment and subsections 6.3 Seabed Disturbance, 6.4 Light Emissions, 6.5 Atmospheric Emissions, 6.6 Underwater Sound Emissions - Non-impulsive, 6.7 Underwater Sound - Impulsive, 6.8 Planned Drilling Discharges, 6.9 Planned Operational Discharges, 7.3 Minor Loss of Containment, 7.4 Interaction with Marine Fauna, 7.5 Introduction, Establishment and	Information
247	2470, 3824	ID7:Director Of National Parks (DNP)	21/04/2023 13:49	Request	Relevant authority requested notification of hydrocarbon pollution incidences that may impact a marine park.	High	ConocoPhillips Australia incorporated the notification requirement into the Implementation Strategy (Table 10-8) and the OPEP.	Notification requirements have been included in the Implementation Strategy (Table 10-8) and the OPEP.	Notification requirements have been included in the Implementation Strategy (Table 10-8) and the OPEP.
270	3863, 3129	ID13:King Island Marine Research	28/08/2023 11:40	Claim	Relevant person stated that the drilling program will hamper their operations and the lobsters that inhabit them.	High	ConocoPhillips Australia clarified that the activity presented in the Environment Plan is for short-term, temporary seabed surveys and exploration drilling with no cause-effect pathways identified for impacts to the long-term sustainability of the fishery.	No change to EP content	NIL
271	3863, 3129	ID13:King Island Marine Research	28/08/2023 11:48	Claim	Relevant person provided feedback regarding the dependence fisheries have on the local natural environment to collect brood stock.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol).	Review existing control measure/s: CM04: Commercial Marine Operators Adjustment Protocol	CM04: Commercial Marine Operators Adjustment Protocol
272	3863, 3129	ID13:King Island Marine Research	28/08/2023 11:56	Claim	Relevant person stated that gas exploration and drilling, specifically thermal discharges, can affect the physical properties of water by elevating the localised temperature at discharge locations potentially disrupting the thermal balance of the ecosystem.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	6.9.5.1 Physical Environment	Information
273	3242, 4229	ID35:Department of Energy Environment and Climate Action (DEECA)	1/09/2023 12:26	Objection	Relevant person stated that the information provided regarding the positions of shipwrecks stated in the EP are inaccurate and not the known position of a shipwreck but the centrepoint of an area that the unfound shipwreck may be located based off historic records.	High	ConocoPhillips Australia updated Section 4.8.1 (Marine Archaeological Heritage) to reflect the information provided.	Information provided in draft Environment Plan (EP) chapter 4 revised to address issues raised, namely section '4.8.1 Maritime Archaeological Heritage.	Additional information to clarify the uncertainty in the Australasian Underwater Cultural Heritage Database: https://www.dcceew.gov.au/parks-heritage/heritage/underwater-heritage/auchd

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
274	4229, 3242	ID35:Department of Energy Environment and Climate Action (DEECA)	1/09/2023 12:27	Objection	"Relevant person stated that the risk assessment on marine heritage is much higher than assessed and there is no control measure in place to ensure the project does not impact maritime heritage. Relevant person suggested that survey data should be reviewed by an experienced maritime archaeologist and may need to include multiple survey techniques to determine appropriate mitigation measures."	High	"ConocoPhillips Australia conducted a review of the relevant control measure CM05: Cultural Heritage Protection Plan to ensure impacts to the cultural heritage of the receiving environment were adequately assessed. Further,"	Review existing control measure/s: CM05: Cultural Heritage Protection Process The Implementation Strategy (chapter 10, Table 10-8) includes provisions for reporting the identification of any historic shipwreck, aircraft, UXO or other cultural relics within 7 days using the online shipwrecks notification form: https://environment.gov.au/shipwreck/public/forms/notification.do?mode=add	CM05: Cultural Heritage Protection Process
275	3863, 3129	ID13:King Island Marine Research	28/08/2023 13:13	Claim	Relevant person stated that gas exploration and drilling can affect the physical properties of water, including circulation due to the creation of physical barriers that impede water flow and cause changes in currents, impacting the distribution of heat and nutrients in the affected areas, potentially affecting temperature gradients and other parameters.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as impacts to water quality associated with exploration drilling were adequately assessed in Chapters 6.8 and 6.9 of the EP.	No change to EP content	Nil
276	3863, 3129	ID13:King Island Marine Research	28/08/2023 14:19	Claim	Relevant person stated that gas exploration and drilling can affect the physical properties of water, including sediment resuspension from the seafloor due to construction and drilling operations, increasing turbidity, impacting parameters related to light availability and photosynthesis.	High	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as described in section 6.3.5.3.	6.3.5.3 Socio-economic Environment	Information
277	3863, 3129	ID13:King Island Marine Research	28/08/2023 14:21	Claim	Relevant person stated that stated that gas exploration and drilling, specifically from chemical discharges, can affect the physical properties of water, by introducing substances that may alter water chemistry and adversely impact parameters such as pH, salinity and dissolved oxygen levels.		ConocoPhillips Australia assessed the types of chemicals used for drilling and their effects and included CM12: General and Hazardous Chemical Management Procedures.	6.8.5.1 Drill Cuttings and Fluids	Information
278	3863, 3129	ID13:King Island Marine Research	28/08/2023 14:33	Claim	Relevant person provided feedback regarding underwater noise impacting aquatic species, especially lobsters.	High	ConocoPhillips Australia provided and overview of the underwater sound impact assessments relevant to southern rock lobster, with impacts from non-impulsive and impulsive sound restricted to within 10's to 170 metres of the sound source with negligible impacts, as assessed in sections 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors and 6.7.5 Identifying Sound-sensitive Receptors.	Addressed in section 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors	Information
279	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:25	Claim	Relevant person provided feedback regarding the construction of offshore platforms and laying of pipelined resulting in habitat destruction, resulting in the relocation of lobsters impacting survival and reproductive success.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity as no offshoreplatforms or laying of pipe are being proposed. CM06: Mooring Plan addresses impacts associated with the proposed activity	CM06: MODU Mooring Plan	CM06: MODU Mooring Plan

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
280	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:30	Claim	Relevant person provided feedback regarding underwater noise impacting aquatic species, especially lobsters.	High	ConocoPhillips Australia provided an overview of the underwater sound impact assessments relevant to southern rock lobster, with impacts from non-impulsive and impulsive sound restricted to within 10's to 170 metres of the sound source, as assessed in sections 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors and 6.7.5 Identifying Sound-sensitive Receptors.	No change to EP content	Nil
281	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:32	Claim	Relevant person stated that gas exploration and drilling can have significant impacts, particularly through water contamination, on marine life (including lobsters) as chemicals released into the marine environment can impact water quality and habitat composition. In particular, lobsters, as filter feeders, are susceptible to ingesting and accumulating pollutants, which may have long-term negative effects on their health, growth, and reproduction.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program and CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment, particularly benthic communities, were adequately assessed.	Review existing control measure/s: CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures	CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures
282	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:33	Claim	Relevant person stated that gas exploration and drilling can have significant impacts (displacement and disturbance to natural processes) on marine life, including lobsters which can potential leading to population declines.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as there are no predicted changes to lobster populations as the result of the proposed Otway Exploration Drilling Program.	No change to EP content	Nil
283	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:34	Claim	Relevant person advised that gas exploration and drilling can have significant impacts, particularly through bioaccumulation, on marine life, including lobsters as heavy metals released could result in long-term damage. Information was cited Nkechi et al., 2019 and Xu et al., 2018.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program and CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment, particularly benthic communities, were adequately assessed.	Review existing control measure/s: CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures	CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures
284	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:35	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person advised that hatcheries have been affected by gas exploration and drilling (ex. Queensland coal seam gas extraction raised concerns about the potential to impact nearby hatcheries), with extraction process involving hydraulic fracturing and the extraction of large volumes of ground water. Information was cited Randall, 2015.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
285	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:37	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person advised that hatcheries have been impacted by gas exploration and drilling (ex. Deep water horizon spill had inverse effects on the spawning grounds and larval stages of numerous fish species). Information was cited Sumaila et al., 2012.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09, CM12, CM13, CM14, CM15, CM16, CM17 to ensure impacts to the receiving marine environment were adequately assessed.	Reviewed existing control measure/s: CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA Accepted Oil Pollution Emergency Plan (OPEP) CM14: Operational and Scientific Monitoring Plan (OSMP) CM15: Well Design and Delivery Process (WDDP) CM16: Source Control Emergency Response Plan (SCREP), inclusive of Relief Well Plan CM17: NOPSEMA Accepted Well Operations Management Plan	CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA Accepted Oil Pollution Emergency Plan (OPEP) CM14: Operational and Scientific Monitoring Plan (OSMP) CM15: Well Design and Delivery Process (WDDP) CM16: Source Control Emergency Response Plan (SCREP), inclusive of Relief Well Plan CM17: NOPSEMA Accepted Well Operations Management Plan
286	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:37	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person advised that hatcheries have been affected by gas exploration and drilling (ex. Sakhalin Island, in the Sea of Okhotsk an oil and gas project raised concerns about its impact on the critically endangered Western Pacific gray whales. The project involved offshore drilling and pipeline construction, potentially affecting the whales' feeding areas and migration routes. Information was cited Leonov, A. 2000).	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.	No change to EP content	Nil
287	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:38	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person provided feedback regarding cases where hatcheries have been affected by wastewater spills to creeks affecting downstream water quality and environmental health.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.	No change to EP content	Nil
288	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:39	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person provided feedback regarding cases where hatcheries have been affected by wastewater spills to creeks affecting downstream water quality and environmental health.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.	No change to EP content	Nil
289	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:39	Statement	Relevant person provided feedback regarding historical incidents associated with ConocoPhillips operations globally.	High	ConocoPhillips Australia identified that the incidents referenced related to onshore and offshore production operations, and provided information specific to exploration drilling activities which show zero incidents resulting an uncontrolled release of formation fluids contributing to a fire, pollution event and/or direct impacts to personnel where regaining control of the well requires a third party well control specialist in the last 10 years.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
290	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:40	Claim	"Relevant person stated that subsurface pressure and flow patterns can be altered during drilling and potentially lead to changes in groundwater levels, aquifer depletion, or induce seismic activity. Information was cited Zoback and Gorelick, 2012."	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program, CM15: Well Design and Delivery Process and CM17: NOPSEMA accepted Well Operations Management Plan to ensure impacts to the receiving environment were adequately assessed.	Review of existing controls measure/s: CM09: Drilling Program CM15: Well Design and Delivery Process (WDDP) CM17: NOPSEMA Accepted Well Operations Management Plan	CM09: Drilling Program CM15: Well Design and Delivery Process (WDDP) CM17: NOPSEMA Accepted Well Operations Management Plan
291	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:47	Claim	"Relevant person stated that fluids and solids are introduced into geological formations during drilling which can cause damage to the reservoir rock. Information was cited Blasingame and Holditch, 1985."	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program, CM15: Well Design and Delivery Process and CM17: NOPSEMA accepted Well Operations Management Plan to ensure impacts to the receiving environment were adequately assessed.	Review existing control measure/s: CM09: Drilling Program CM15: Well Design and Delivery Process (WDDP) CM17: NOPSEMA Accepted Well Operations Management Plan	CM09: Drilling Program CM15: Well Design and Delivery Process (WDDP) CM17: NOPSEMA Accepted Well Operations Management Plan
292	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:48	Claim	Relevant person stated that in areas where significant fluid extraction occurs, land subsidence may occur due to the compaction of reservoir rocks and can have long-term implications for the Otway Basin environment and infrastructure. Information was cited Galloway and Burbey, 2011.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as hydraulically fracturing is not an included activity in the proposed Otway Exploration Drilling Program.	No change to EP content	Nil
293	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:48	Claim	"Relevant person stated that improper handling of drilling fluids, spills, or leaks from drilling operations can lead to the contamination of groundwater, affecting both water quality and the viability of groundwater resources and its adjacent areas. Information was cited Jackson et al., 2013."	High	ConocoPhillips Australia conducted a review of relevant control measures to ensure that the proper controls associated with the use of drilling fluids was assessed.	Review of existing control/s: CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures	CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures
294	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:49	Claim	Relevant person stated that high-intensity drilling activities, particularly hydraulic fracturing have been linked to an increased occurrence of small to moderate earthquakes in some region which can pose a risk to infrastructure and public safety. Information was cited Ellsworth, 2013.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as significant extractions of fluid is not proposed during the Otway Exploration Drilling Program.	No change to EP content	Nil
295	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:50	Claim	"Relevant person stated that elevated temperatures can increase the metabolic rate of lobsters and potentially lead to initially faster growth, however prolonged exposure to high temperatures can stress the lobsters and affect overall growth rates. Information was cited Ong and Burnett, 1997."	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	No change to EP content	Nil
296	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:51	Claim	"Relevant person stated that warmer temperatures can accelerate moulting and development which might result in softer shells, leaving lobsters more vulnerable to predation and injury. Information was cited Aiken and Waddy, 1993."	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	No change to EP content	Nil
297	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:52	Claim	Relevant person stated that heat can influence the reproductive behaviour of lobsters (i.e. changes in mating patterns, migration, and spawning times) which can have implications for the reproductive success of populations.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
298	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:52	Claim	Relevant person stated that prolonged exposure to high temperatures can lead to physiological stress in lobsters which can compromise the immune system and result in higher susceptible to disease.	High	ConocoPhillips Australia reviewed 6.9.5.1 Physical Environment which assesses the impact of cooling water on marine water temperature, with localised impacts only.	No change to EP content	Nil
299	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:52	Claim	Relevant person stated that increasing water temperatures due to climate change can lead to shifts in the distribution and habitat preferences of lobsters.	Low	The objection or claim is not relevant to the adverse effects of the proposed Otway Exploration Drilling Program to which the Environment Plan relates and is beyond the scope of this assessment.	No change to EP content	Nil
300	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:53	Claim	Relevant person stated that changes in lobster populations can have cascading effects on marine ecosystems, and that altered lobster growth and behaviour can impact the food web dynamics of the ecosystem. Information was cited Fogarty et al., 2007.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as there are no predicted changes to lobster populations as the result of the proposed Otway Exploration Drilling Program.	No change to EP content	Nil
301	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:53	Not within scope of the adverse affects of the proposed activity	Relevant person provided feedback regarding crop yield reductions, disruption of forest ecosystems and melting of permafrost associated with heat stress and global warming	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.	No change to EP content	Nil
302	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:55	Claim	Relevant person stated that high ocean temperatures can lead to coral bleaching which weakens the corals and can result in coral death. Information was cited Hughes et al., 2017.	Low	ConocoPhillips Australia determined that no alterations were deemed necessary as GHG emissions have previously been assessed in Chapter 6.5 of the EP.	No change to EP content	Nil
303	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:55	Claim	Relevant person stated that elevated temperatures in aquatic ecosystems can lead to shifts in species distributions, changes in predator-prey interactions, and disruptions in nutrient cycling. Information was cited Woodward et al., 2010.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	No change to EP content	Nil
304	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:55	Claim	Relevant person provided feedback regarding disturbed sediments carrying contaminants including heavy metals and hydrocarbons affecting water inlet pipes.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in disturbed sediments, as a result of the proposed activity, carrying contaminants including heavy metals and hydrocarbons affecting the water inlet pipes, and included information on heavy metals in section 6.8.5.1 Drill Cuttings and Fluid and a Baraite Standard in Table 6-40: Control measures for planned drilling discharges and ALARP demonstration.	6.8.5.1 Drill Cuttings and Fluids	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
305	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:56	Claim	Relevant person stated that when drilling involves oil or hydrocarbon extraction, there's a risk of oil spills or leakage which can have severe impacts on water quality and marine life. Information was cited NRC, 2003.	High	ConocoPhillips Australia assessed the impacts of minor and major oil spills in the EP.	No change to EP content	Although ConocoPhillips initial assessment (in draft EP chapter 7.7) assigned a consequence rating to other marine and coastal users of minor, it is understood that for aquaculture facilities, closure of seawater intakes is likely to result in a loss of production with a moderate consequence. This change does not affect the risk rating of medium (RR II) for other marine and coastal users, but has been reflected in the Environment Plan.
306	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:56	Claim	Relevant person stated that drilling fluids and additives can contain various chemicals, such as biocides, lubricants, and corrosion inhibitors which can enter the water supply. Information was cited NASEM, 2020.	High	ConocoPhillips Australia conducted a review of relevant control measures CM09: Drilling Program and CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately assessed.	Review existing control measure/s: CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures	CM09: Drilling Program CM12: General and Hazardous Chemical Management Procedures
307	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:57	Claim	Relevant person stated that cooling water used in drilling processes may carry excess heat, which could affect the temperature and thermal characteristics of the water entering the hatchery. Information was cited Ruddick and Anctil, 2002.	High	ConocoPhillips Australia provided information on the impact assessment which predicted highly localised, temporary and recoverable impacts, as assessed in section 6.9.5.1 Physical Environment.	6.9.5.1 Physical Environment	Information
308	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:57	Claim	Relevant person provided feedback regarding heavy metals naturally present in rock formations being mobilised posing a risk to aquatic organisms.	Low	ConocoPhillips Australia provided information on the geological characteristics and lithology of the offshore Otway Basin, being typical of offshore marine sedimentary deposits (with high concentrations of heavy metals not typically associated with these lithologies or the geological processes that form them) and included information on heavy metals in section 6.8.5.1 Drill Cuttings and Fluid and a Baraite Standard in Table 6-40: Control measures for planned drilling discharges and ALARP demonstration	6.8.5.1 Drill Cuttings and Fluids	Information
309	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:58	Claim	Relevant person provided feedback regarding underwater noise and vibrations impacting aquatic species, especially the spiny rock lobster and their habitats.	High	ConocoPhillips Australia provided an overview of the underwater sound impact assessments relevant to southern rock lobster, with impacts from non-impulsive and impulsive sound restricted to within 10's to 170 metres of the sound source with negligible impacts, as addressed in sections 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors, and 6.7.5 Identifying Sound-sensitive Receptors.	Addressed in section 6.6.3 Exposure Criteria Thresholds, 6.6.6 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors, 6.7.5 Identifying Sound-sensitive Receptors	Information
310	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:59	Claim	Relevant person provided feedback regarding resuspended sediments increasing turbidity, and negatively affecting photosynthesis of aquatic plants and phytoplankton.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, and that an increase in sediment intake through the intake inlet was not predicted as described in section 6.3.5.3.	Information was added to Section 6.3.5.3 Socio-economic Environment.	Information

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
311	3863, 3129	ID13:King Island Marine Research	28/08/2023 8:59	Claim	Relevant person provided feedback regarding increased sediment loads leading to clogging of filters and impacting the efficiency of hatchery water circulation systems.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, and that an increase in sediment intake through the intake inlet was not predicted as described in section 6.3.5.3	No change to EP content	Information
312	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:00	Claim	Relevant person provided feedback regarding the resuspension of sediments settling and accumulating within hatchery water intake pipes and increasing the frequency of maintenance or cleaning.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet, as a result of the proposed activity, resulting in an increase in the frequency of maintenance of cleaning, as described in section 6.3.5.3.	No change to EP content	Information
313	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:00	Claim	Relevant person provided feedback regarding the resuspension of sediments altering the water chemistry of hatcheries.	Low	ConocoPhillips Australia advised that as the petroleum activity is, at the closest possible location, approximately 27 km distant, there is no possible cause-effect pathway that could result in the resuspension of sediment within the vicinity of the water inlet altering the water chemistry of the hatchery. In addition, a Barite quality performance standard was added to CM12: Chemical Selection Process.	Additional environmental performance standard added to CM12: Chemical Selection Process, for a Barite Quality Standard: Barite will adhere to the IFC EHS guidelines (2015) effluent levels of 1 mg/kg of Hg (dry weight) and no more than 3 mg/kg of Cd (dry weight).	Additional environmental performance standard added to CM12: Chemical Selection Process, for a Barite Quality Standard:
314	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:01	Claim	"Relevant person stated that if sediments contain contaminants their resuspension can lead to increased contaminant concentrations in the water. Information was cited Gasiūnaitė and Lubytė, 2006."	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.	Review existing control measure/s: CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures
315	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:01	Claim	Relevant person stated that increased sediment loads can impact the health of larva and juvenile lobsters in the hatchery by affecting feeding efficiency, respiratory structures, and overall survival.	High	ConocoPhillips Australia conducted a review of relevant control measure CM09: Drilling Program to ensure impacts to benthic communities were adequately assessed.	Review existing control measure/s: CM09: Drilling Program	CM09: Drilling Program
316	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:02	Claim	"Relevant person stated that chemical residues can alter water quality and potentially affect the properties of seawater and disrupt natural processes. Information was cited Yakimov et al., 2007."	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.	Review existing control measure/s: CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures
317	3129, 3863	ID13:King Island Marine Research	28/08/2023 9:02	Claim	"Relevant person stated that chemical residues can be toxic to various marine organisms, including plankton, fish, and benthic organisms leading to cascading effects throughout the ecosystem. Information was cited Brooker et al., 2001."	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to sensitive receptors in the receiving marine environment were adequately considered.	Review existing control measure: CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures
318	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:04	Claim	"Relevant person stated that chemicals can bioaccumulate and biomagnify in the marine food web posing potential risks to both wildlife and human health Information was cited Fisk and Tomy, 2003."	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.	Review existing control measure: CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

319	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:04	Claim	"Relevant person stated that chemical residues can interfere with reproductive and developmental processes in marine organisms. Information was cited Tyler and Sumpter, 1996."	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.	review of existing control measure: CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures
320	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:05	Claim	"Relevant person stated that chemical residues can lead to shifts in the composition of marine communities i.e. potential decline of sensitive species and dominance of tolerant species. Information was cited Jackson et al., 2016."	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to sensitive receptors in the receiving marine environment were adequately considered.	Review of existing control measure: CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures
321	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:05	Claim	Relevant person stated that the persistence of chemicals could cause long-term ecosystem effects. Information was cited Diaz and Rosenberg, 2008.	High	ConocoPhillips Australia conducted a review of relevant control measure CM12: General and Hazardous Chemical Management Procedures to ensure impacts to the receiving marine environment were adequately considered.	Review of existing control measure: CM12: General and Hazardous Chemical Management Procedures	CM12: General and Hazardous Chemical Management Procedures
322	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:06	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person provided feedbacks regarding spills to rivers impacting downstream hatcheries.	Low	ConocoPhillips Australia determined that no amendments to the EP were warranted as the objection or claim was not within the scope of the adverse effects of the proposed activity.	No change to EP content	Nil
323	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:07	Claim	Relevant person provided feedback regarding the potential for spilled substances to impact water quality which may subsequently affect the health and growth of hatchery organisms.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.	No change to EP content	Nil
324	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:07	Claim	Relevant person provided feedback regarding the potential for spilled substances to have toxic effects (i.e. mortality, reduced growth, developmental abnormalities) on aquatic organisms, including those in hatcheries.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.	No change to EP content	Nil
325	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:08	Claim	Relevant person provided feedback regarding the potential for spilled substances to impact the reproductive success of hatchery organisms, subsequently affecting the hatchery's ability to replenish its stocks.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.	No change to EP content	Nil
326	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:08	Claim	Relevant person provided feedback regarding the potential for spilled substances to bioaccumulate and biomagnify in the food chain leading to higher concentrations of contaminants in hatchery organisms. Subsequently this could pose a risk to the organisms and those that consume them.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.	7.3.5.3 Socio-economic Receptors impact assessment included in EP.	Information

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
327	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:08	Claim	Relevant person provided feedback regarding the potential for spilled substances to impact the physical characteristics of the aquatic environment (i.e. sediment deposition, alteration of substrate composition) subsequently impacting the availability of suitable habitat conditions for hatchery organisms.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.	7.3.5.3 Socio-economic Receptors impact assessment included in EP.	Information
328	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:09	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person provided feedback regarding the impacts of river spills on hatcheries, including closures, reduced production, mortality, all resulting in economic losses for hatchery operators and the communities relying on products.	Low	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that no alterations to the EP were deemed necessary as there is no proposed activities which will occur within river systems.	No change to EP content	Nil
329	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:09	Claim	Relevant person provided feedback regarding the potential for spilled substances to cause genetic damage in hatchery organisms, subsequently affecting their overall genetic diversity and fitness.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.	7.3.5.3 Socio-economic Receptors impact assessment included in EP.	Information
330	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:10	Claim	Relevant person provided feedback regarding the potential for spilled substances to persist in the environment and result in long-term impacts to the ecosystem, food web dynamics and community structure which the hatchery relies on.	High	ConocoPhillips Australia determined that impacts assessed in Discharge Chapters (6.8 and 6.9) and Accidental release Chapters (7.3, 7.6 and 7.7) were adequately assessed and supported by recent, relevant research, and added 7.3.5.3 Socio-economic Receptors.	7.3.5.3 Socio-economic Receptors impact assessment included in EP.	Information
331	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:10	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person informed that hydraulic fracturing involves the injection of a mixture of water, sand, and chemicals into underground rock formations to release gas. Relevant person stated that if these chemicals migrate through groundwater or surface water pathways, they could potentially contaminate the ocean, affecting marine ecosystems.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.	No change to EP content	Nil
332	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:11	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person stated that chemicals used in fracking fluids, could potentially leach into groundwater, rivers, or estuaries, eventually reaching the ocean which could harm marine life and disrupt marine ecosystems.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.	No change to EP content	Nil
333	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:11	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person provided feedback regarding the production of large quantities of water produced by natural gas extraction. Relevant person stated that the produced water contains fracking chemicals, salts, heavy metals, and radioactive materials and that improper disposal of produced water can lead to ocean contamination and harm marine organisms.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
334	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:12	Claim;Not within scope of the adverse affects of the proposed activity	Relevant person provided feedback regarding gas drilling operations, specifically those involving hydraulic fracturing, and the potential for these to induce seismic activity disturbing the marine environment and coastal areas.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program covers short-term, temporary seabed surveys and exploration drilling and will not be using hydraulic fracturing for the drilling of wells.	No change to EP content	Nil
335	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:12	Claim	Relevant person provided feedback regarding the construction and installation of subsea structure and their impacts to marine habitats and ecosystems.	Low	ConocoPhillips Australia determined that no alterations to the EP were necessary as the Otway Exploration Drilling Program is purely exploratory with no proposed installation of permanent operating infrastructure.	No change to EP content	NIL
336	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:13	Claim	Relevant person provided feedback regarding methane emissions associated with the drilling program and their contribution to climate change, specifically impacts to the marine environment.	High	ConocoPhillips Australia provided information on the assessment of emissions generated as part of the activity which are small when compared to national emissions, insignificant on a global scale and are not predicted to have determinable impacts.	No change to EP content	Nil
337	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:14	Claim	Relevant person provided feedback regarding accidental releases of gas, drilling fluids and chemicals which have the potential to negatively impact organisms and systems in the marine environment.	High	ConocoPhillips Australia provided an overview of relevant risk assessments which demonstrated impacts were ALARP and of acceptable levels.	No change to EP content.	Nil
338	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:14	Claim	Relevant person provided feedback that activities associated with the program which generate underwater noise may disrupt critical behaviours of marine organisms.	High	ConocoPhillips Australia provided an overview of relevant impact assessments which demonstrated impacts were ALARP and of acceptable levels and added feedback to Table 4-29 Victorian Southern Rock Lobster Fishery.	Feedback was received during consultation regarding exploration activities effecting lobsters and their habitat. ConocoPhillips Australia clarified that the activity presented in the Environment Plan is for short-term, temporary seabed surveys and exploration drilling with no cause-effect pathways identified for impacts to the long-term sustainability of the fishery. Table 4-29 Victorian Southern Rock Lobster Fishery	Nil
339	3863, 3129	ID13:King Island Marine Research	28/08/2023 9:16	Claim	Relevant person provided feedback regarding exploration activities hampering the growth and reproduction of the spiny rock lobster and damage to its habitat affecting GDP and long-term sustainability of this resource.	High	ConocoPhillips Australia provided an overview of relevant impact assessments which demonstrated impacts were ALARP and of acceptable levels.	No change to EP content	Nil
340	3823, 3257	ID553:Australian Parents For Climate Action (North Tas and Surf Coast)	22/08/2023 15:53	Claim	Relevant person provided feedback regarding how the GHG emissions for the project were measured by the current project scope and not the complete life of the asset.	Low	ConocoPhillips Australia determined that no alterations to the EP were deemed necessary as the Otway Exploration Drilling Program is purely exploratory with no proposed installation of permanent operating infrastructure.	No change to EP content	Nil
341	3257, 3823	ID553:Australian Parents For Climate Action (North Tas and Surf Coast)	22/08/2023 15:54	Claim	Relevant person stated that the north-west of Tasmania is a key biodiversity area and suggested that the precautionary principle be applied when assessing potential impacts to biodiversity when considering the development of these areas.	High	ConocoPhillips Australia determined that no alterations were deemed necessary as the EP was developed in consideration of the precautionary principle.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
342	3257, 3823	ID553:Australian Parents For Climate Action (North Tas and Surf Coast)	22/08/2023 15:55	Claim	Relevant person suggested that the precautionary approach should be applied to light and flaring activities, as there are potential impacts to migratory, critically endangered birds for example the orange-bellied parrot, and the bogong moth.	High	ConocoPhillips Australia reviewed the EP, in particular the control measures associated with light emissions to ensure that any potential impacts to light sensitive species are adequately mitigated and added information at section 4.6.11 Terrestrial Invertebrates and 6.4.4 and 6.4.5.1.	Information added at section 4.6.11 Terrestrial Invertebrates and 6.4.4 and 6.4.5.1	Information
344	4227, 3432	ID462:Mahina Bay Fishing Co Pty Ltd	5/09/2023 10:22	Claim	Relevant person provided feedback regarding the proximity of the activity to Portland as this is a main fishing ground and displacement would cause increased costs for the fishing business.	High	ConocoPhillips Australia committed to developing an Adjustment Protocol in consultation with peak fishing associations and individual fishers to ensure that claims of fishers can be assessed and compensated (CM04: Commercial Marine Operators Adjustment Protocol).	Review exiting control/s: CM04: Commercial Marine Operators Adjustment Protocol	CM04: Commercial Marine Operators Adjustment Protocol
345	3469, 4271	ID569:Tasmanian Climate Collective	20/09/2023 10:59	Claim	Relevant person stated that they would like to see the opportunity for compensation extended to other industries as many of the impacts of oil and gas exploration may not be black and white.	High	"ConocoPhillips Australia has reviewed feedback provided by relevant person and conducted a review relevant control measures (CM01, CM02, CM03, CM04, CM06 and CM10) to ensure that potential impacts to various industries are adequately assessed. Further, information in section 6.2.4.1 (Table 5-6) of the EP was updated."	The impact assessment and measures to mitigate impacts associated with interference with other marine and coastal users is detailed in section 6.2, and information was updated in section 6.2.4.1 and Table 6-5 of the EP. Control measures adopted to minimise impacts are included in the EP as follows: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM03: Marine and Coastal User Consultation and Communication Plan CM04: Commercial Marine Operators Adjustment Protocol CM06: MODU Mooring Plan CM10: Well Testing Program	Control measures adopted to minimise impacts are included in the EP as follows: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM03: Marine and Coastal User Consultation and Communication Plan CM04: Commercial Marine Operators Adjustment Protocol CM06: MODU Mooring Plan CM10: Well Testing Program

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
346	3469, 4271	ID569:Tasmanian Climate Collective	20/09/2023 11:00	Claim	Relevant person stated that the proposed activity has the potential to significantly impact cultural sites and values across north-west Tasmania including seasonal mutton birding, traditional shellfish harvesting, connection to country and traditional cultural practice.	High	ConocoPhillips Australia confirmed that information on the cultural importance of shearwaters is included in section 4.6.7.2. Further, measures to mitigate impacts associated with light emissions, relevant to shearwater and their prey, are detailed in section 6.4. In response to consultation feedback, ConocoPhillips Australia included an additional EPO, including measures (CM05: Cultural Heritage Protection Program) and performance standards, regarding cultural heritage: EPO12: ConocoPhillips Australia will establish and maintain a culturally responsible and legally compliant framework for cultural heritage protection within the project areas to amplify indigenous voices for the promotion and protection of country and culture.	Information on the cultural importance of shearwaters is included in draft EP chapter 4, section 4.6.7.2 and does not require updating. The impact assessment and measures to mitigate impacts associated with light emissions, relevant to shearwater and their prey, are detailed in section 6.4, and does not require updating. control measures adopted to protect shearwaters and their prey are included in the EP as follows: CM01 CM02 CM07 and CM10. An additional EPO, and measures and performance standards have been developed in response to consultation feedback regarding cultural heritage: - EPO12: ConocoPhillips Australia will establish and maintain a culturally responsible and legally compliant framework for cultural heritage protection within the project areas to amplify indigenous voices for the promotion and protection of country and	CM01: Marine Assurance Process: AMSA Marine Orders 21 and 30 for the safety of navigation and prevention of collisions require that onboard navigation, watchkeeping, radar equipment, and lighting meets the International Rules for Preventing Collisions at Sea (COLREGs) and industry standards. In addition, workplace lighting is required to support safe working conditions at night in accordance with health and safety requirements. CM02: Vessel and MODU Operation Procedures and CM 07: A Light Management Plan will be developed and implemented, as per the National Light Pollution Guidelines for Wildlife (CoA 2023), for the activity. CM10: Well Testing Program: Flaring will be limited to a maximum of 120 hours per well. For each well test, the initial flaring event will commence during daylight hours to reduce the impact of the initial event. However, the timing of subsequent events at each well will be determined by operational safety and testing requirements. CM05: Cultural Heritage Protection Program
347	3469, 4271	ID569:Tasmanian Climate Collective	20/09/2023 11:01	Claim	Relevant person stated that there are a resident population of blue whales and sightings of sperm whales off the western coast of Tasmania in the T/49P permit area (highest October/November). Further, this is a tourism draw for the coastal communities of King Island and NW Tasmania.	High	ConocoPhillips Australia conducted a review of relevant control measures CM08: Whale Management Plan and CM05: Cultural Heritage Protection Plan to ensure impacts to cetacean species, particularly the blue whale and sperm whale, were adequately assessed. Further, Section 4.7.5.1 (Tourism - Tasmania) was updated to reflect the information provided.	Review of impacts and risk assessment specific to blue whales and sperm whales, and existing control measures with particular focus on: CM02: Vessel and MODU Operating Procedure CM08: Whale Management Plan Updated section 4.7.5.1 of the Environment Plan to reflect information provided as follows: “During consultation it was identified that coastal tourist towns like Stanley and Boat Harbour regularly attract visitors to look for whales, in the usually quiet winter months, where they have experienced southern right whales close to shore for extended periods (Tasmanian Climate Collective, 2023)."	CM02: Vessel and MODU Operating Procedures: All vessels and aircraft will adhere to the distances and vessel management practices of EPBC Regulations (Part 8 Division 8.1 interacting with cetaceans) and Wildlife (Marine Mammals) Regulations 2009 and will implement an increased caution zone of 500 m between whales and vessels, to ensure cetaceans are not harmed during offshore interactions with vessels and helicopters. CM08: Whale Management Plan
348	4271, 3469	ID569:Tasmanian Climate Collective	20/09/2023 11:03	Claim	Relevant person considered no impacts are acceptable to the Zeehan Marine Park and emphasised the importance of marine parks for the conservation of biodiversity and for a baseline for environmental studies.	High	ConocoPhillips Australia provided information in the EP (e.g. Section 4.4.1.1) on the multiple use zone and requirements for consultation with the relevant authority, and an overview of the assessments relevant to the marine park which demonstrated impacts to the Zeehan Marine Park from short term seabed survey and exploration drilling activities are acceptable and, through the adoption of control measures as described in the draft EP, as low as reasonably practicable for the proposed Otway Exploration Drilling Program.	No change to EP content	Nil

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
349	3469, 4271	ID569:Tasmanian Climate Collective	20/09/2023 11:02	Claim	Relevant person provided feedback regarding negative impacts on tourism and the Tasmanian Brand.	High	" ConocoPhillips Australia provided an overview of the assessment of impact to aesthetic values and visual amenity and the extent to which coastal recreation and tourism in Tasmania is likely to be affected by the visibility of the derrick and main deck of the drilling rig is short-duration, which is fully recoverable with no long-term impacts to visual amenity or aesthetic values. "	No change to EP content.	Nil
354	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 13:48	Claim	Relevant person provided feedback regarding the assessment of risks as some assessed as 'moderate' are under-represented, and expressed confusion regarding the risk matrix, particularly the likelihood assessment being focused on what has or hasn't happened over a 12 month period.	High	ConocoPhillips Australia provided clarification and determined that no alterations were deemed necessary as the ConocoPhillips impact and risk methodology meets the requirements of the Environment Regulations and is consistent with relevant industry guidelines.	No change to EP content.	Nil
355	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:15	Claim	Relevant person provided feedback that limited consideration of assessments to the past 12 months (for likelihood) is a deliberate effort to work the numbers in favour of approval. Relevant person queried if there is a conflation of impacts and risks.	High	ConocoPhillips Australia provided clarification and determined that no alterations were deemed necessary as the ConocoPhillips impact and risk methodology meets the requirements of the Environment Regulations and is consistent with relevant industry guidelines.	No change to EP	Nil
356	4270, 3785	ID111:Australian Marine Conservation Society	22/09/2023 17:17	Claim	Relevant person requested confirmation that Conservation Advice was used to assess acceptability; disagreed with the process for comparing predicted impacts with acceptable levels, considered that assessments of acceptability in the draft EP did not consider feedback from relevant persons, and that any and all benefits that can be gained to protect coastal areas around a WHA should not be defined as negligible.	High	ConocoPhillips Australia provided information regarding: Conservation Advice's being included in impact and risk assessments; the impact assessment process which takes into consideration the condition of the existing environment; the intent of providing draft EP chapters to support consultation and generate feedback for consideration in the EP; and an overview of the impact assessment for the coastal section of the TWWHA, with low thresholds represent sub-lethal concentrations of hydrocarbons and are not predicted to result in ecological effects.	No change to EP content	Nil

Id	Related Events	Organisation	Date Raised	Feedback type	Summary of each response made by a relevant person	Assessment of Merit	Summary of the titleholders response, if any, to feedback, objection or claim.	Outcome of Assessment	Measure(s) adopted
357	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:18	Claim	"Relevant person provided feedback regarding the lack of drill siting detail prevented them from being able to adequately understand and provide feedback. Further, relevant person provided feedback regarding the potential for drilling activity within Zeehan marine park and requested environmental monitoring mitigation measures be considered, including the collection of baseline data. "	High	"ConocoPhillips Australia reviewed impact Chapter 6.3 (Seabed Disturbance) and reiterated the importance of existing control measure CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values in the EP. During consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further analysis and has included this requirement in the procurement process for the seabed survey (CM11: Procurement Vetting Process). Previous advice had been provided on the conservative assessment process over the broader operational areas and updates to section 1.4 of the EP to provide clarity."	Reiteration of the importance of existing control measures CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values. During consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further analysis. The cost and effort to retain samples collected during the seabed survey, with storage and transport for onshore analysis, are considered to be reasonable and this requirement will include this in the procurement process for the seabed survey. Adopt CM11: Procurement Vetting Process (with onshore processing). Review and update of information in EP section 1.4: Specific locations for seabed surveys and exploration drilling have yet to be confirmed. The process for selecting final survey and drilling locations involves the completion of seismic data processing, interpretation of the data to select targets with a high probability of success, and analysis of the efficiency of the drilling program to confirm resources	CM06: MODU Mooring Plan Development of a MODU mooring plan to ensure: •The mooring spread and anchor locations is appropriate for the environment •Adequate tensioning of mooring is applied and maintained •Anchors are located within the 2 km radius drilling areas (within the operational areas) •Seabed relief and sensitive seabed features are considered. Seabed surveys will be undertaken prior to finalising MODU position and location of mooring equipment, and prior to installing or removing the wellhead. These details will inform the well location and minimise impacts to the benthic environment and sensitive receptors at all locations. Section 572 of the OPGGS Act details the requirements for removal of property. Upon well abandonment, all subsea equipment shall be removed from sea floor, with wellheads cut below mudline and retrieved to surface. Retrieval of all mooring equipment from the sea floor within 3 months following the completion of the drilling campaign.
358	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:21	Claim	Relevant person suggested that Chapter 7.3 (Minor LOC) did not adequately assess the impacts of a minor LOC to the receiving environment. It was requested for additional scientific evidence to be incorporated.	High	ConocoPhillips Australia determined that Minor Loss of Containment impacts (Chapter 7.3) were adequately assessed and supported by recent, relevant research. Therefore no alterations to the EP were deemed necessary.	No change to EP content	Nil
359	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:22	Objection	"Relevant person stated that the EP acknowledges oil pollution as a threat in the marine park management plan however then to go on to simply disagree with the very clear statement as it applies to its proposal. Relevant person stated that they strongly disagree with this assertion and suggest that ConocoPhillips Australia make no material justification for why its proposed activities in Zeehan MP are not inconsistent with this management plan as any drilling programs within the Zeehan marine park are inconsistent with the management plan and therefore have an unacceptable impact."	High	ConocoPhillips Australia determined that impacts related to a Minor Loss of Containment Chapter (7.3), specifically to the Zeehan Marine Park, were adequately assessed and supported by recent, relevant research. Therefore no alterations to the EP were deemed necessary.	No change to EP	Nil
360	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:23	Claim	Relevant person considers the introduction of a new minor oil spill risk within the Zeehan MP to be unacceptable and that serious control measures are necessary, such as no drilling within the AMP or including a reasonable buffer area. Further, relevant person stated the absence of drill locations makes it difficult to properly assess impacts across the entire potential impact area.	High	ConocoPhillips Australia conducted a review of controls measures relevant to the mitigation of risks associated with minor spills, specifically in the Zeehan Marine Park, to ensure that risks were adequately considered and updated the EP to ensure this was explicit where relevant. It was determine that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and supported by recent, relevant research. Previous advice had been provided on the conservative assessment process over the broader operational areas and updates to section 1.4 of the EP to provide clarity.	Existing proposed control measures were reviewed and confirmed as appropriate, including: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA accepted Oil Pollution Emergency Plan (OPEP)	CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA accepted Oil Pollution Emergency Plan (OPEP)

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

361	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:24	Objection	Relevant person considered activities outside of the petroleum activity be considered in the EP.	High	ConocoPhillips Australia reviewed and confirmed that appropriate control measures are in place within operational areas for petroleum activities, and provided information to relevant person on legislation relevant to other maritime activities.	We reviewed and confirmed that appropriate control measures are in place within operational areas for petroleum activities including: CM01: Marine Assurance Process - The MODU and vessels will meet the navigation equipment, watchkeeping, radar and lighting requirements of the Navigation Act 2012 and associated Marine Orders, e.g. MO 30 - Prevention of Collisions. CM02 Vessel and MODU Operating Procedures: All vessels and aircraft will adhere to the distances and vessel management practices and reporting requirements of EPBC Regulations (Part 8 Division 8.1 interacting with cetaceans) and will implement an increased caution zone of 500 m between whales and vessels, to ensure cetaceans are not harmed during offshore activities. CM08: Marine Mammal Adaptive Management Plan - Marine mammal observers: •A dedicated MMO with experience in whale observation, distance estimation and reporting, will undertake observations. •In addition, facility crew who act as Officer	Reviewed and confirmed appropriate control measures are in place within operational areas for petroleum activities including: CM01: Marine Assurance Process - The MODU and vessels will meet the navigation equipment, watchkeeping, radar and lighting requirements of the Navigation Act 2012 and associated Marine Orders, e.g. MO 30 - Prevention of Collisions. CM02 Vessel and MODU Operating Procedures: All vessels and aircraft will adhere to the distances and vessel management practices and reporting requirements of EPBC Regulations (Part 8 Division 8.1 interacting with cetaceans) and will implement an increased caution zone of 500 m between whales and vessels, to ensure cetaceans are not harmed during offshore activities. CM08: Marine Mammal Adaptive Management Plan - Marine mammal observers: •A dedicated MMO with experience in whale observation, distance estimation and reporting, will undertake observations. •In addition, facility crew who act as Officer of the Watch will receive training from the
362	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:25	Request	Relevant person requested that they are provided with data that has been used to determine presence of cetaceans within the EMBA, including interactions and/or shutdowns that occurred during its recent seismic blasting operation.	High	ConocoPhillips Australia provided information on the collection and use of data on cetacean presence in the operational areas since 2021; that data has been made available to government agencies and research organisations and has been used to inform the development of the Environment Plan, for example see section 4.6.9.2 of the draft Environment Plan.	No changes to EP content	Nil
363	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:27	Claim	Relevant person provided feedback that cetacean presence was underestimated during the previous Sequoia seismic survey and that species were present within the operational area during the survey. Relevant person suggests that additional mitigation measures would provide additional environmental benefits of reducing vessel strike.	High	ConocoPhillips Australia provided reference to ConocoPhillips Australia's data used in the assessment and determined that further alterations to the EP were deemed necessary as appropriate, industry standard, mitigation measures relating to interactions with marine fauna were adopted by the Otway Exploration Drilling Program.	Reference to use of data collected between 2021-23 included.	Information

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

CM08: Whale Management Plan - Marine mammal observers: "
365	3785, 4270	ID111:Australian Marine Conservation Society	22/09/2023 17:33	Objection	Relevant person stated that ConocoPhillips Australia did not provide sufficient data to dismiss vessel strike mitigation measures, particularly that activities only occur outside of environmentally sensitive periods. Relevant person suggested that a detailed assessment be made to determine whether the exclusion of specific biologically important windows would reduce risks to key species. Relevant person stated that not being able to reduce the impact on all species is not a justification for the rejection of this control measure.	High	"ConocoPhillips Australia updated Section 6.6.7 in Chapter 6.6 (Non-Impulsive Noise) to provide clarity around the process followed to assess the variability of timing. Further, ConocoPhillips Australia made commitments to implement a Marine Mammal Adaptive Management Plan that includes whale detection and mitigation measures to minimise anthropogenic noise threats to whales. These measures will effectively reduce the likelihood of vessel strike and have been referred to Table 7-8."	Updated section 6.6.7 of the draft EP to include: If an offshore project or activity creates noise above relevant published injury and/or behavioural disturbance impact criteria inside a Foraging Area, NOPSEMA advises that titleholders should firstly evaluate all feasible measures to avoid times of the year when blue whales are likely to be foraging. ConocoPhillips Australia has determined that the risk to all listed marine fauna cannot be avoided due to variability in timing of environmentally sensitive periods and unpredictable presence of some species, with blue whales typically present in foraging areas in higher numbers between November and May, and southern right whale typically present in Australian waters from early April to early November. Therefore, there is no period where avoidance of both species is possible. If it is not possible to avoid times sensitive times of year, there are requirements of the EPBC Act and the NOPSEMA EPBC Act-endorsed Program that constrain decision makers to 'not act inconsistently' with EPBC Act instruments, such as a recovery plan (e.g.	Additional information added to section 6.6.7 of the EP to provide clarify around the process followed to assess the variability of timing. Measures adopted for underwater sound also effectively reduce the likelihood of vessel strike and have been referred to Table 7-8.

385	3480, 4527	ID524:Wilderness Society	22/09/2023 21:56	Claim	Relevant person stated that benthic impacts, including on the Zeehan MP, are referred to as impacts that 'may' occur (i.e. risks), when in fact they should be measurable impacts that will occur.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. By using the broader operational areas ConocoPhillips Australia has taken a precautionary approach which ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.	Review and update of information in EP section 1.4: Specific locations for seabed surveys and exploration drilling have yet to be confirmed. The process for selecting final survey and drilling locations involves the completion of seismic data processing, interpretation of the data to select targets with a high probability of success, and analysis of the efficiency of the drilling program to confirm resources with the least amount of wells, to minimise potential impacts and risks associated with each. Consequently, ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas associated with petroleum titles VIC/P79 and T/49P. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed. It is recognised that this may result in an overestimation of impacts and risks. However, a precautionary approach is being taken that assesses worst-case impacts and applies appropriate control measures across the board to minimise impacts and risks to	Review and update of information in EP section 1.4: Specific locations for seabed surveys and exploration drilling have yet to be confirmed. The process for selecting final survey and drilling locations involves the completion of seismic data processing, interpretation of the data to select targets with a high probability of success, and analysis of the efficiency of the drilling program to confirm resources with the least amount of wells, to minimise potential impacts and risks associated with each. Consequently, ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas associated with petroleum titles VIC/P79 and T/49P. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed. It is recognised that this may result in an overestimation of impacts and risks. However, a precautionary approach is being taken that assesses worst-case impacts and applies appropriate control measures across the board to minimise impacts and risks to
386	3480, 4527	ID524:Wilderness Society	22/09/2023 21:57	Claim	Relevant person provided feedback regarding the potential for drilling to occur in Zeehan Marine Park and suggested that drilling locations should occur outside the marine park to reduce impacts, specifically cumulative impacts, to the parks integrity. Mitigation measures such as directional drilling were suggested.	High	ConocoPhillips Australia reviewed impact Chapter 6.3 (Seabed Disturbance) and reiterated the importance of existing control measure CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values in the EP.	Reiteration of the importance of existing control measures CM06: MODU Mooring Plan for the consideration of sensitive seabed features and conservation values.	CM06: MODU Mooring Plan

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

387	3480, 4527	ID524:Wilderness Society	22/09/2023 21:59	Claim	Relevant person requested that ConocoPhillips Australia should reconsider the collection of baseline data control measure (currently rejected) as the monitoring of at least the first and second wells may present significant material information that may affect control measure benefits for later wells specifically as it is an area with an absence of baseline data. Relevant person provided feedback relating to this approach and believes that without this control measure there is an increased likelihood of risks occurring. Relevant person further requested that if baseline data is or is not obtained that said person is provided with these details.	High	As the result of consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further benthic analysis onshore. This requirement will now be include this in the procurement process for the seabed survey and have been adopted in CM11: Procurement Vetting Process.	During consultation ConocoPhillips Australia identified that benthic samples collected during seabed surveys could be retained for further analysis. The cost and effort to retain samples collected during the seabed survey, with storage and transport for onshore analysis, are considered to be reasonable and this requirement will include this in the procurement process for the seabed survey. Adopt CM11: Procurement Vetting Process (with onshore processing)	Collect benthic samples during seabed surveys CM11: Procurement Vetting Process (with onshore processing)
388	3480, 4527	ID524:Wilderness Society	22/09/2023 22:00	Claim	Relevant person suggested that Chapter 7.3 (Minor LOC) did not adequately assess the impacts of a minor LOC to the receiving environment. It was requested for additional scientific evidence to be incorporated.	High	ConocoPhillips Australia reviewed feedback provided by the relevant person and determined that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and supported by recent, relevant research. Therefore no alterations to the EP were deemed necessary.	Additional information provided in EP section 7.3.5.2 Conservation Values and Sensitivities.	Nil
389	3480, 4527	ID524:Wilderness Society	22/09/2023 22:01	Claim	Relevant person stated that ConocoPhillips Australia provided no material justification for why its proposed activities in Zeehan MP are not inconsistent with he SE MP management plan and considers drilling in the Zeehan MP is inconsistent with the management plan and represents an unacceptable impact.	High	ConocoPhillips Australia conducted a thorough review of controls measures relevant to the mitigation of risks associated with minor spills, specifically in the Zeehan Marine Park, to ensure that risks were adequately considered. It was determine that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and supported by recent, relevant research. Therefore no alterations to the EP were deemed necessary.	Existing proposed control measures were reviewed and confirmed as appropriate, including: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA accepted Oil Pollution Emergency Plan (OPEP)	CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA accepted Oil Pollution Emergency Plan (OPEP)
390	3480, 4527	ID524:Wilderness Society	22/09/2023 22:03	Claim	Relevant person considers the introduction of a new minor oil spill risk within the Zeehan MP to be unacceptable and that serious control measures are necessary, such as no drilling within the AMP or including a reasonable buffer area. Further, relevant person stated the absence of drill locations makes it difficult to properly assess impacts across the entire potential impact area.	High	ConocoPhillips Australia conducted a review of controls measures relevant to the mitigation of risks associated with minor spills, specifically in the Zeehan Marine Park, to ensure that risks were adequately considered and updated the EP to ensure this was explicit where relevant. It was determine that the assessment in the Minor Loss of Containment Chapter (7.3) was adequate and supported by recent, relevant research. Previous advice had been provided on the conservative assessment process over the broader operational areas and updates to section 1.4 of the EP to provide clarity.	Existing proposed control measures were reviewed and confirmed as appropriate, including: CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA accepted Oil Pollution Emergency Plan (OPEP)	CM01: Marine Assurance Process CM02: Vessel and MODU Operating Procedures CM12: General and Hazardous Chemical Management Procedures CM13: NOPSEMA accepted Oil Pollution Emergency Plan (OPEP)

396	3480, 4527	ID524:Wilderness Society	22/09/2023 22:10	Objection	Relevant person stated that ConocoPhillips Australia did not provide sufficient data to dismiss vessel strike mitigation measures, particularly rejected control measure - activities only occur outside of environmentally sensitive periods. Relevant person suggested that a detailed assessment be made to determine whether the exclusion of specific biologically important time windows would reduce risks to key species. Relevant person stated that not being able to reduce the impact on all species is not a justification for the rejection of this control measure.		"ConocoPhillips Australia has reviewed feedback provided by relevant person and updated Section 6.6.7 in Chapter 6.6 (Non-Impulsive Noise) to provide clarity around the process followed to assess the variability of timing. Further, ConocoPhillips Australia made commitments to implement a Marine Mammal Adaptive Management Plan (whale management plan) that includes whale detection and management measures to minimise anthropogenic noise threats to whales. These measures effectively reduce the likelihood of vessel strike and have been referred to Table 7-8."	Updated section 6.6.7 of the draft EP to include: If an offshore project or activity creates noise above relevant published injury and/or behavioural disturbance impact criteria inside a Foraging Area, NOPSEMA advises that titleholders should firstly evaluate all feasible measures to avoid times of the year when blue whales are likely to be foraging. ConocoPhillips Australia has determined that the risk to all listed marine fauna cannot be avoided due to variability in timing of environmentally sensitive periods and unpredictable presence of some species, with blue whales typically present in foraging areas in higher numbers between November and May, and southern right whale typically present in Australian waters from early April to early November. Therefore, there is no period where avoidance of both species is possible. If it is not possible to avoid times sensitive times of year, there are requirements of the EPBC Act and the NOPSEMA EPBC Act-endorsed Program that constrain decision makers to 'not act inconsistently' with EPBC Act instruments, such as a recovery plan (e.g.	Additional information added to section 6.6.7 of the EP. Measures adopted for underwater sound also effectively reduce the likelihood of vessel strike and have been referred to Table 7-8.

Please note, this does not include objections and claims raised by relevant persons who opted to keep their information confidential.

445	4269, 4131	ID588:Western Abalone Divers Association, ID580:Abalone Council Victoria	6/10/2023 12:54	Claim	Relevant person advised that a map of the Victorian abalone fisheries should be available online for inclusion in the EP.	High	A map showing the Victorian fishery was included in Environment Plan - section 4.7.7.3.	Map showing Victorian fishery included in Environment Plan - section 4.7.7.3.	Map showing Victorian fishery included in Environment Plan - section 4.7.7.3.
446	4269, 4131	ID588:Western Abalone Divers Association, ID580:Abalone Council Victoria	6/10/2023 13:13	Claim	Relevant person advised that there had been historical outbreaks of an abalone virus and provided feedback that outbreaks are related to stress, with impacts to inshore areas of particular concern.	High	ConocoPhillips Australia identified research supporting the link between virus outbreaks and stress and updated Environment Plan sections 4.6.4.4 and 4.7.7.3 (Table 4-31) to reflect the existing condition and pressures on abalone stocks in Victoria.	Research supporting link between virus outbreaks and stress identified: https://www.frdc.com.au/fish-vol-30-2/arming-abalone-against-disease and Environment Plan sections 4.6.4.4 and 4.7.7.3 (Table 4-31) updated to reflect the existing condition and pressures on abalone stocks in Victoria.	Environment Plan sections 4.6.4.4 and 4.7.7.3 (Table 4-31) updated to reflect the existing condition and pressures on abalone stocks in Victoria.
448	4658, 4153	ID111:Australian Marine Conservation Society	26/10/2023 14:08	Objection;Claim	Relevant person provided feedback regarding the ability to assess and understand the impacts of the proposed project when there are no projected drill locations and requested information on how drill site locations are selected.	High	ConocoPhillips Australia incorporated clarification regarding the reasoning and process behind selecting final survey and drilling locations in Section 1.4, and considers that it is essential data is analysed efficiently to confirm resources with the least amount of wells, therefore minimising potential impacts and risks associated with each. ConocoPhillips Australia advised that it is not a requirement to have confirmed drilling locations prior to EP acceptance, and provided additional information and updated section 1.4 of the EP to provide clarification on the process for selection of drilling locations and the assessment of impacts and risks across the full range of potential locations.	Review and update of information in EP section 1.4: Specific locations for seabed surveys and exploration drilling have yet to be confirmed. The process for selecting final survey and drilling locations involves the completion of seismic data processing, interpretation of the data to select targets with a high probability of success, and analysis of the efficiency of the drilling program to confirm resources with the least amount of wells, to minimise potential impacts and risks associated with each. Consequently, ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas associated with petroleum titles VIC/P79 and T/49P. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed. It is recognised that this may result in an overestimation of impacts and risks. However, a precautionary approach is being taken that assesses worst-case impacts and applies appropriate control measures across the board to minimise impacts and risks to	Review and update of information in EP section 1.4: Specific locations for seabed surveys and exploration drilling have yet to be confirmed. ConocoPhillips

C3: Supplementary Evidence

Otway Exploration Drilling Program

ConocoPhillips Australia

Consultation

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed exploration program will consist of seabed surveys and the drilling of up to six exploration wells.

This is a continuation of our exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek acceptance from the regulator for this exploration program. As part of EP development we will undertake consultation in line with a prescribed regulatory process.

This information sheet outlines a consultation process we are proposing to undertake and we are inviting feedback on this process.

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the offshore Otway Basin, off the coast of Victoria and King Island, Tasmania subject to EP acceptance and rig availability. Any decision to proceed to development will be dependent on a conducive investment environment.
- Consultation will inform the identification, assessment and management of environmental impacts and risks during the development of the EP.
- ConocoPhillips Australia is seeking to identify authorities, individuals and organisations. who may have functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program that would like to be consulted as part of this process.

Have we missed anyone?

If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.

E: otway@conocophillips.com

T: 07 3182 7122

PO BOX 1243, MILTON, QLD, 4064

conocophillips.com.au

Our Approach

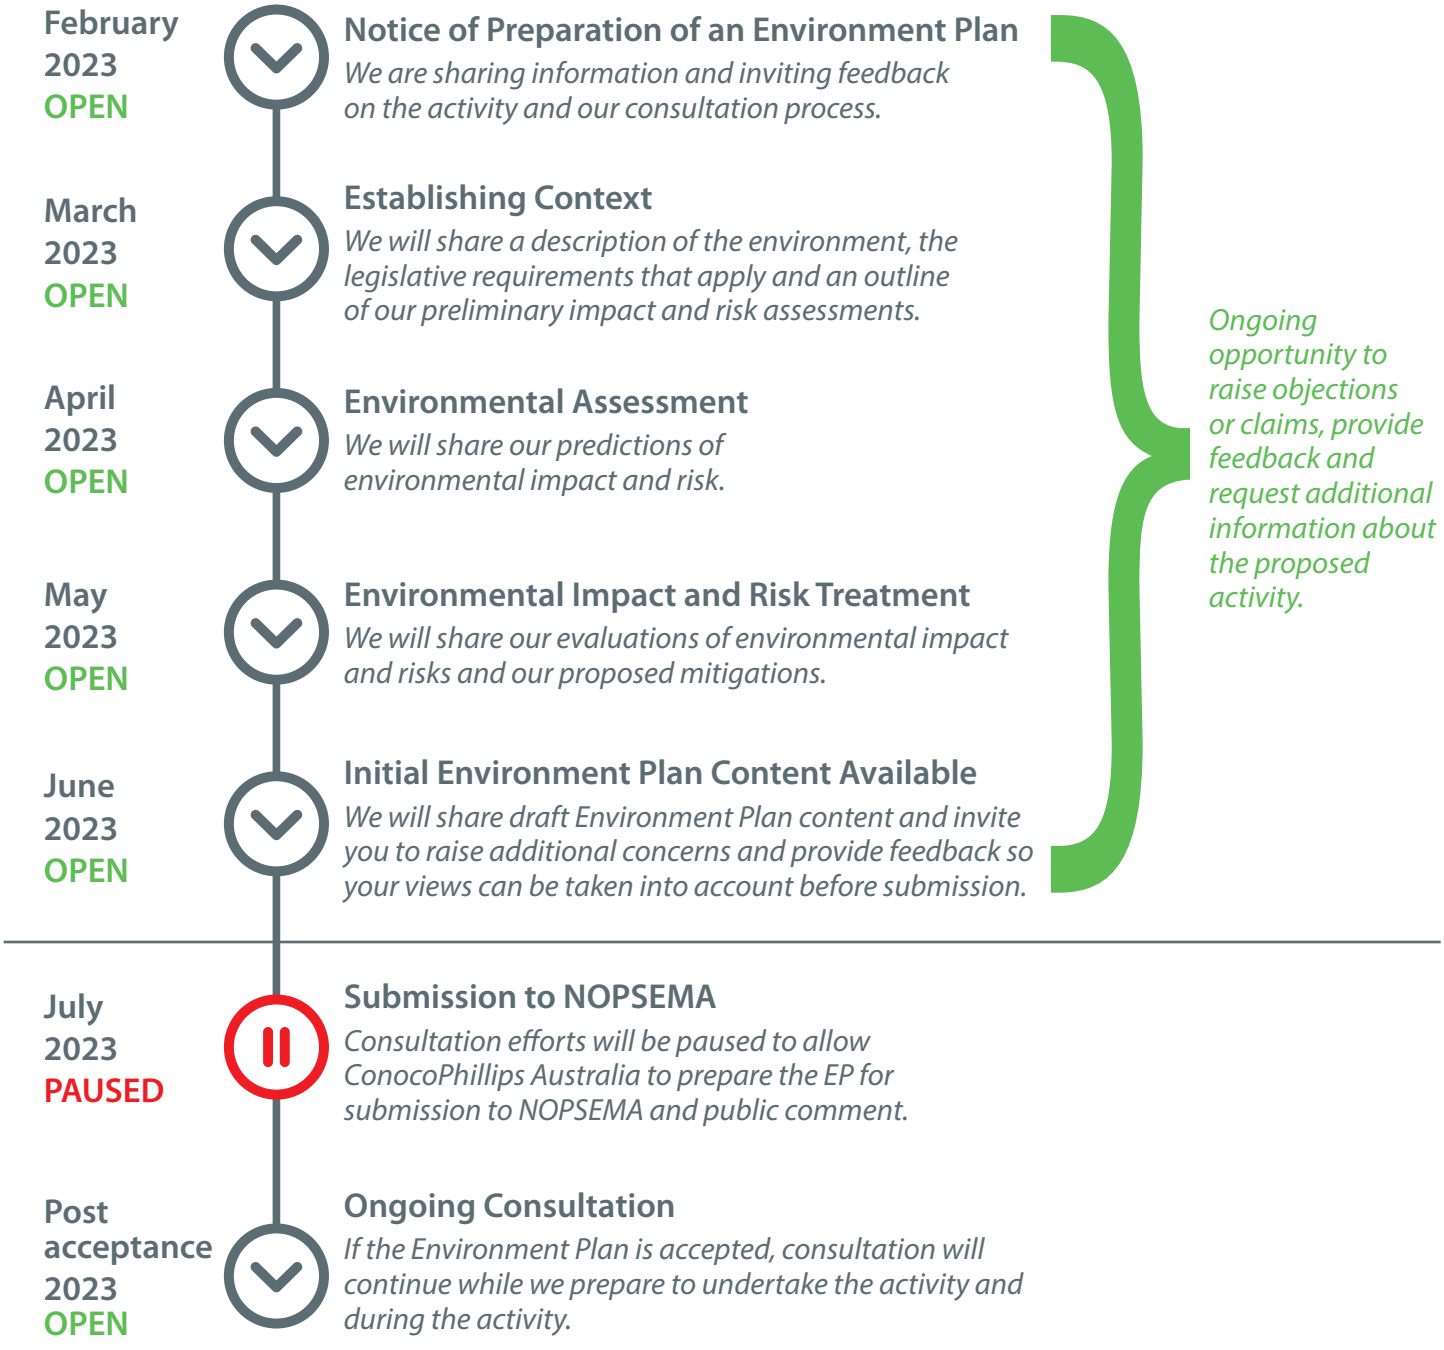
The purpose of consultation is to ensure authorities, individuals and organisations that are potentially affected by the proposed Otway Exploration Drilling Program are consulted and that their input is considered in both the development of the consultation processes and in the EP for this activity.

Consultation provides an avenue to receive information, ask questions, provide feedback, identify additional environmental values and sensitivities, and raise issues and concerns about the activity and its environmental impacts and risks.

Consultation informs our understanding of the environment in which our activity will take place. We are particularly interested to hear from individuals and organisations who may be affected by the proposed activity in areas including: people and communities, heritage values, and ecological, social and cultural features. This information provides valuable insight and local context that supports us identifying, assessing and effectively managing environmental impacts and risks.

ConocoPhillips Australia is proposing to use various consultation methods and communication tools to identify and provide sufficient information for relevant persons to make an informed assessment of the possible consequences of the activity on them.

Our Approach *continued*



These consultation methods may include:

- Community pop-ups and drop in sessions
- Workshops
- Technical committees/ groups
- Meetings and briefings (in person and/or online)
- Interactive forums
- Information sheets
- Telephone conversations
- Email and letters
- Website content
- Advertising

The way we plan to consult is outlined below. We welcome and invite feedback on the proposed approach.

Throughout EP development and consultation ConocoPhillips Australia will continue to identify and consult potentially affected authorities, individuals and organisations.

Environment Plan Preparation and Consultation Timeline

Understanding the environment

During the development of the EP for the Otway Exploration Drilling Program, we will undertake to identify environmental values and sensitivities and how these may be affected by the proposed activity.

We will be seeking input through the consultation process to validate and better understand the environment we are proposing to work in. This will improve our predictions of impacts and risks and help to identify any additional measures that could be considered for adoption to manage environmental impacts and risks more effectively.

Environmental values and sensitivities typically include rare, important and/or sensitive physical, biological, ecological, social, economic and/or cultural features of the environment.

Examples that are often referred to in EPs for offshore activities include:

- Benthic (sea floor) communities and habitats, marine fauna and the quality of the water, sediment and biota (animal and plant life of a region or habitat)
- World Heritage Values, National Heritage Values, the ecological character of declared RAMSAR wetlands, listed threatened species and ecological communities, listed migratory species and Marine Parks, and
- Social and economic features of the environment including the rights of other users.

Other examples may include biologically important areas, habitats critical to the survival of listed species, key ecological features, marine and coastal industries, marine tourism and recreation, Commonwealth and State managed commercial fisheries, and cultural heritage features and values.

Understanding your functions, interests and activities

ConocoPhillips Australia is seeking to understand functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program. This information, along with the assessment of impacts and risks, determines if an individual or organisation is a 'relevant person'. A relevant person is a mandatory consultee under the Regulations and this information guides:

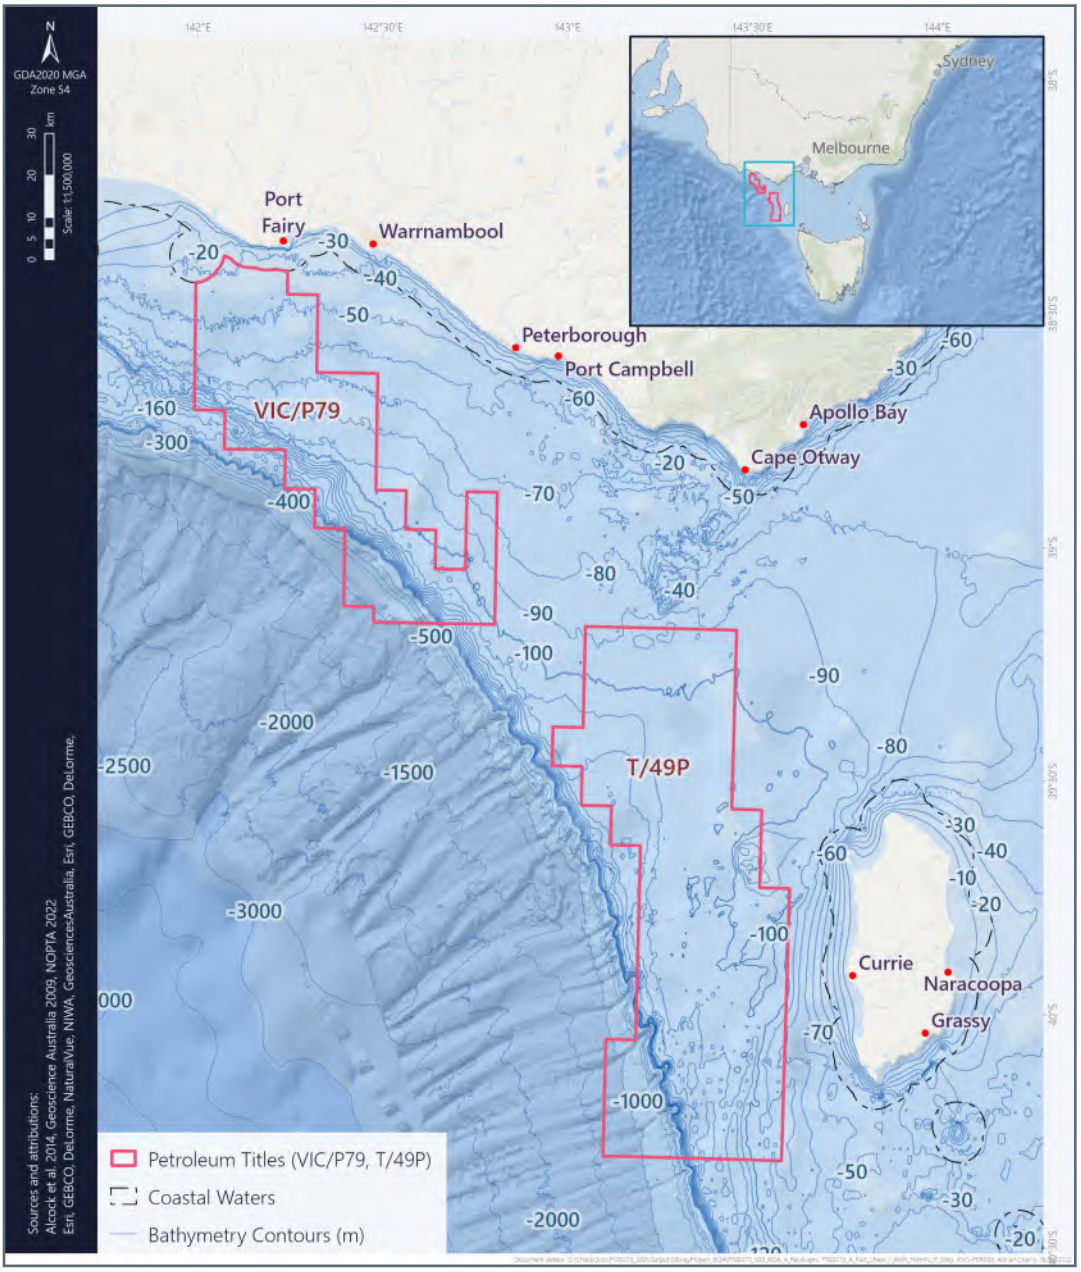
a) the degree to which a relevant person may be affected.

b) the type and form of information that should be provided to a relevant person to support their assessment of the possible consequences of the activity on them.

c) an assessment of the level of participation in the consultation process required.

To assist you determining if you are a relevant person, we have adopted the following definitions of functions, interests, and activities:

- A function refers to a power or duty to do something.
- Interests are any interest possessed above that of the general public.
- Activities are things a person or group already does.



The level of participation required in the consultation process will vary (depending on, for example, the extent of the affect) and will be appropriate for the relevant person and the type of function, activity or interest.

Are you a relevant person?

Take our consultation survey to determine if you may be a relevant person.

You can also use the QR code to provide instant feedback

Map of Permit Areas

Preparation of the EP

ConocoPhillips Australia has a regulatory requirement to consult potentially affected authorities, individuals and organisations as part of the development of an EP.

In preparing the EP, ConocoPhillips Australia is required to keep all records of all interactions and correspondence which includes but is not limited to letters, emails, phone calls and records of meetings. This is submitted to NOPSEMA with the EP for assessment but is not available for public review as part of public comment.

Within the EP ConocoPhillips Australia may choose to include a log of all interactions to demonstrate the extent of consultation undertaken in preparation of the EP. In this instance, key identifying information of individuals participating in consultation is removed and only a summary of the interaction is provided.

In addition, a relevant person may request that information they provide throughout consultation not be published in the EP and ConocoPhillips Australia must comply with this request.

Questions

and Answers

Why have I been sent this information sheet?

You are receiving this information sheet because ConocoPhillips Australia identified you or your organisation as potentially having a function, interest or activity that may be affected by our proposed Otway Exploration Drilling Program. We have a regulatory requirement to consult relevant persons as part of the development of an EP.

How did ConocoPhillips Australia identify me?

ConocoPhillips Australia undertook a global search for relevant persons to find authorities, organisations, or persons that may have functions, interests and activities potentially affected by the proposed activity. Increased efforts have been made closer to the activity location where the largest possible geographical area exposed to risks from the activity was searched through desktop investigation, database queries, online research, and other targeted search methods.

We will also place paid advertisements throughout the development of the EP across a range of media platforms to encourage potentially affected authorities, individuals and organisations to self-identify.

What should I do if I want to be included in consultation?

If you want to be consulted, you will need to provide us with contact details and an indication of your functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program. Through the course of EP development, we will work with you to ensure the provision of sufficient information so you can make an informed assessment of the potential consequences of the activity to you. You will then need to provide ConocoPhillips Australia with feedback on the information provided.

What happens if I don't respond to the information provided to me throughout the consultation process?

ConocoPhillips Australia will attempt to contact you multiple times using multiple methods to gather your feedback. Your feedback is important to us, this is why we ask you to provide a number of contact methods.

I think someone I know should be a relevant person, what should I do?

Please share this information sheet with them and encourage them to contact us.

What should I do if I don't want to be consulted?

If you don't want to be consulted as part of EP development, please contact us. It's important to note that you can opt out of consultation by telling us that you no longer wish to be consulted for the EP. This decision can be reversed at any time by opting back into the consultation process by advising us.

How do I arrange a meeting with ConocoPhillips Australia?

Contact us using any of the contact points listed below.

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

ConocoPhillips Australia

ConocoPhillips Australia

Proposed Exploration Activity Overview

2024 - 2028

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

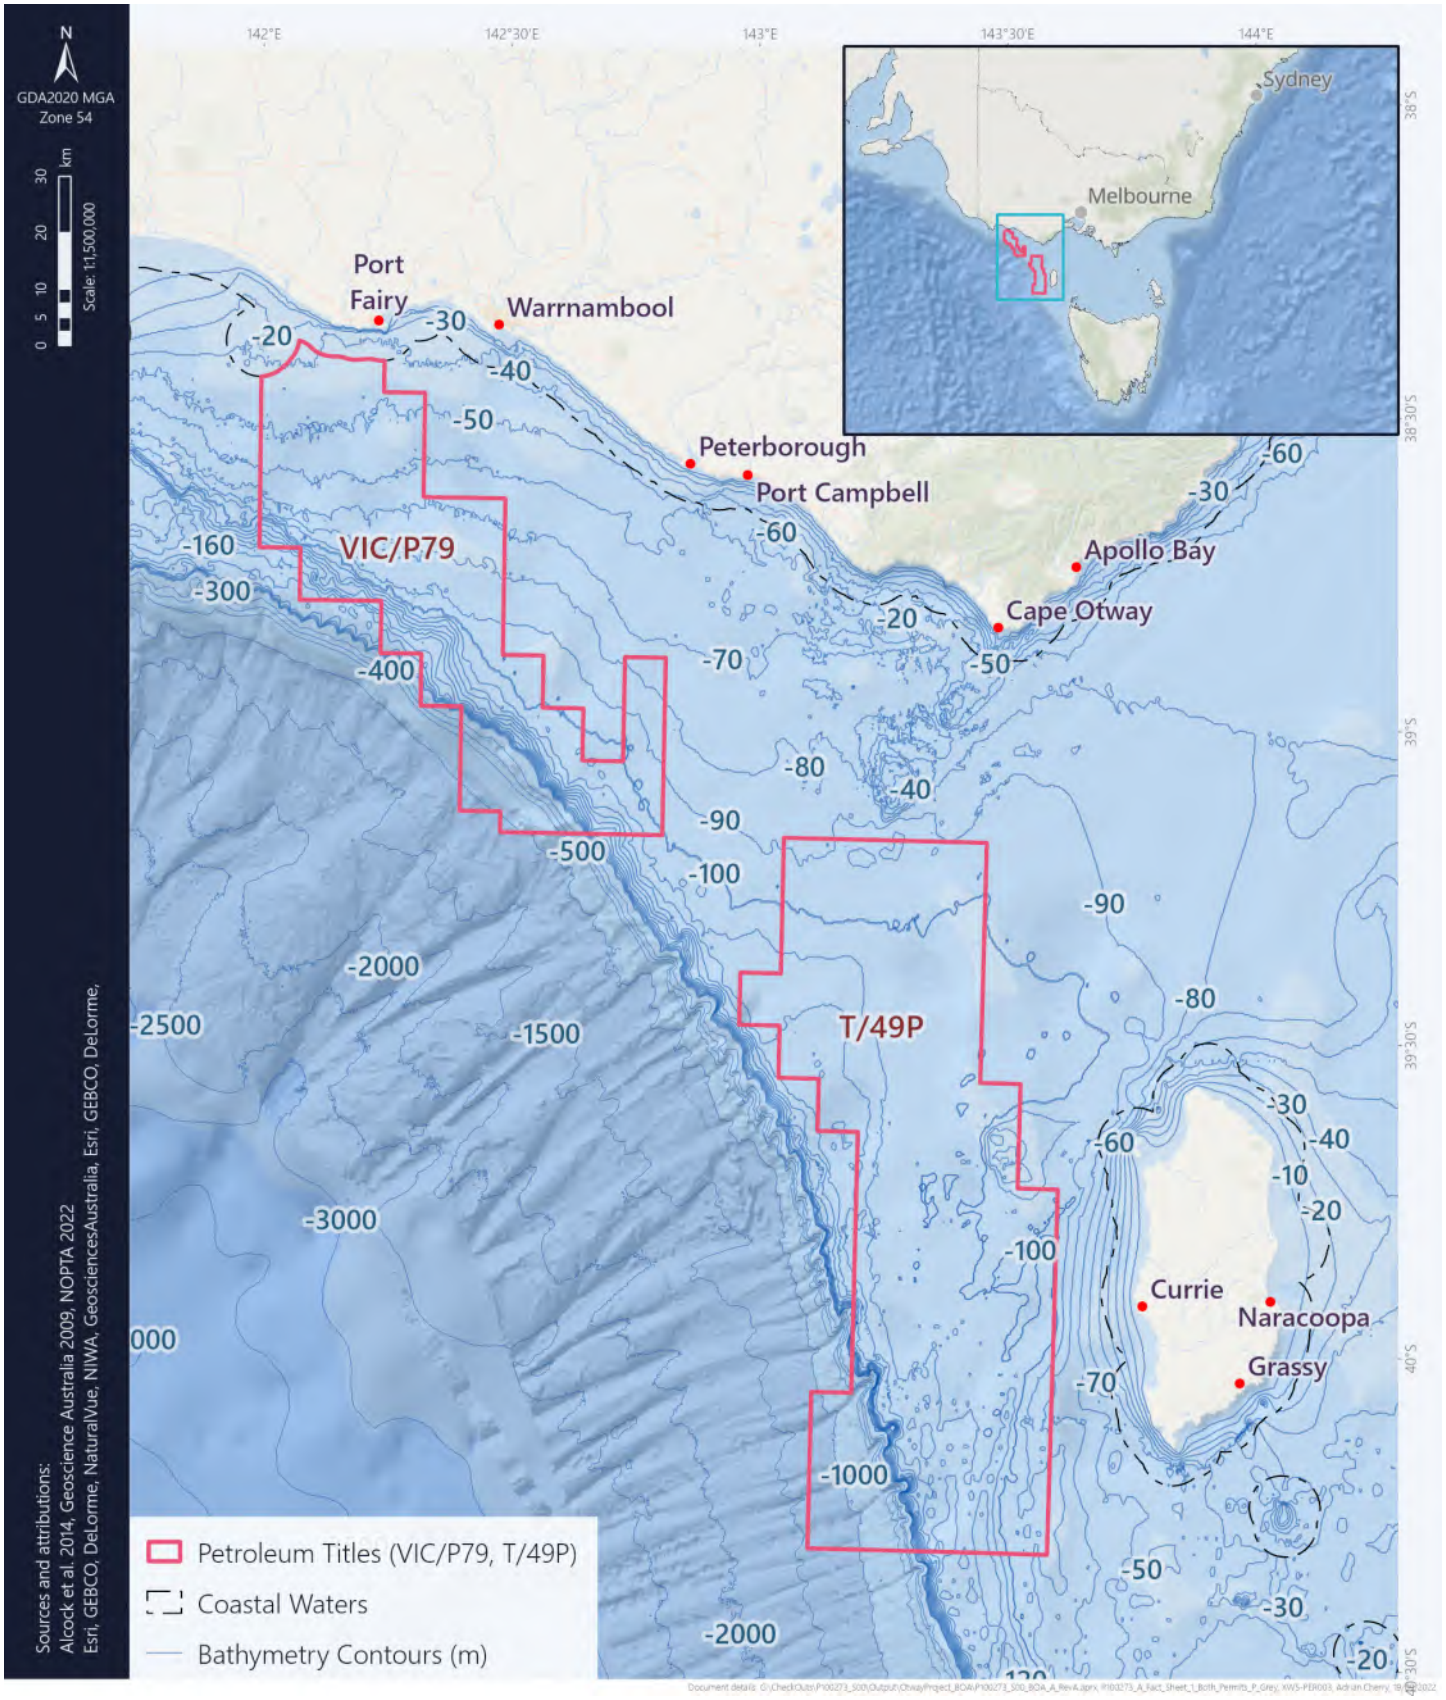
ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the offshore Otway Basin, off the coast of Victoria and King Island, Tasmania subject to EP acceptance and rig availability. Any decision to proceed to development will be dependent on a conducive investment environment.
- The proposed exploration program will involve seabed surveys and drilling up to a maximum of six exploration wells.
- The exploration program will commence no earlier than January 2024, subject to an accepted EP being in place.
- ConocoPhillips Australia is currently preparing an EP for these activities and will undertake consultation prior to submitting the EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment.

Have we missed anyone?

If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.



E: otway@conocophillips.com

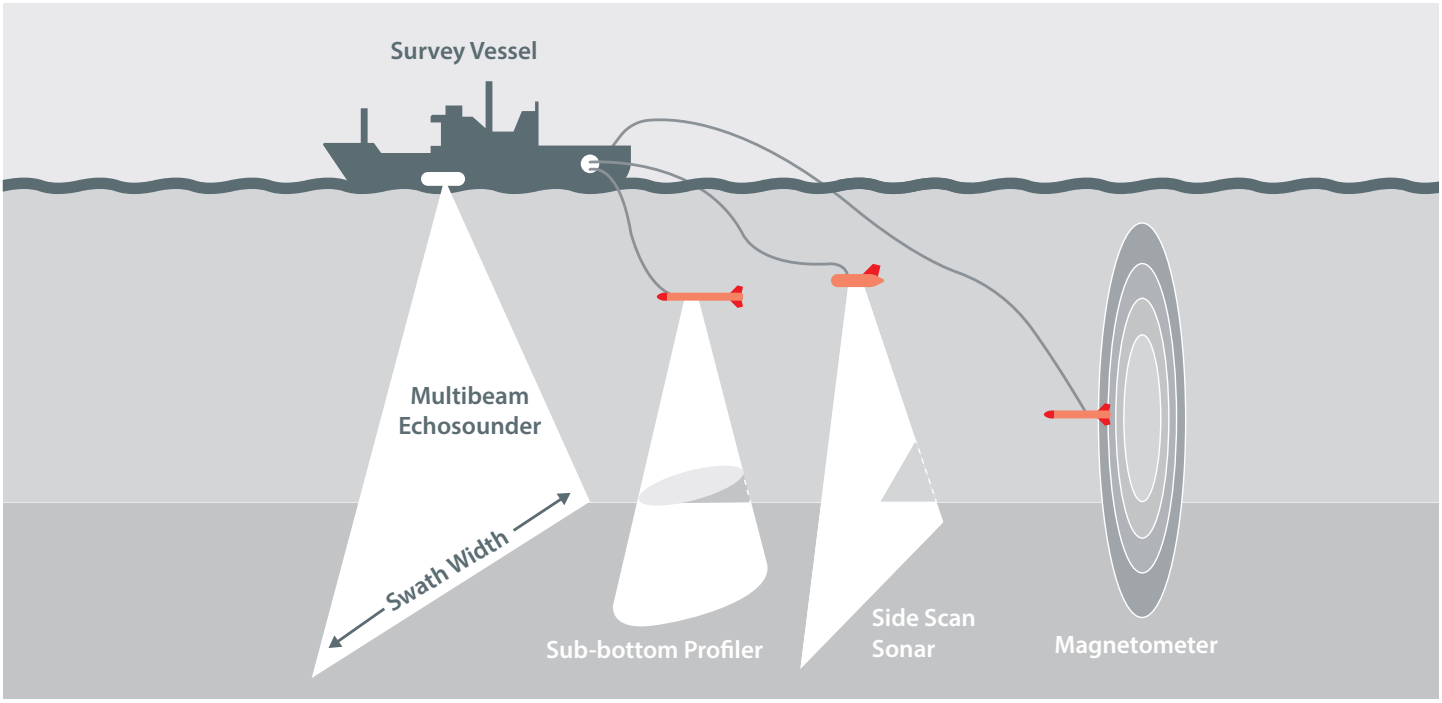
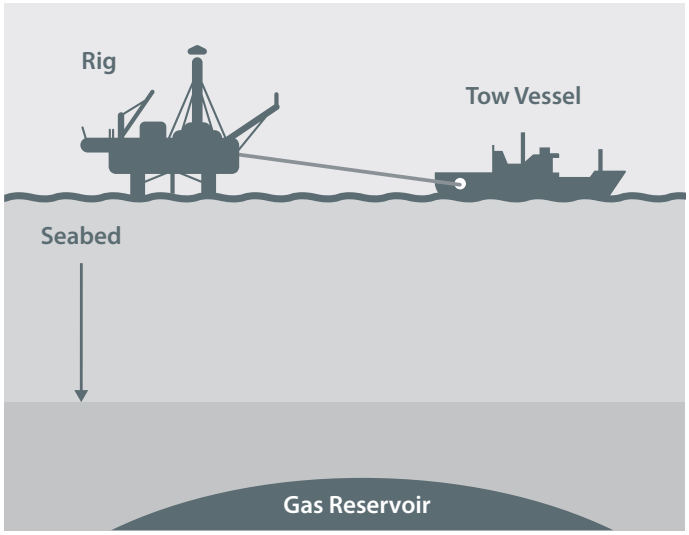
conocophillips.com.au

Map of Permit Areas



Activity Phases

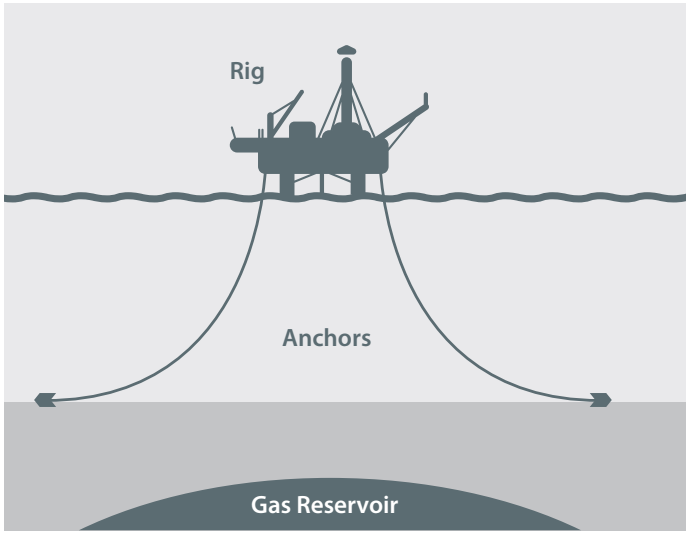
An overview of the activity phases involved in drilling an exploration well is provided below.



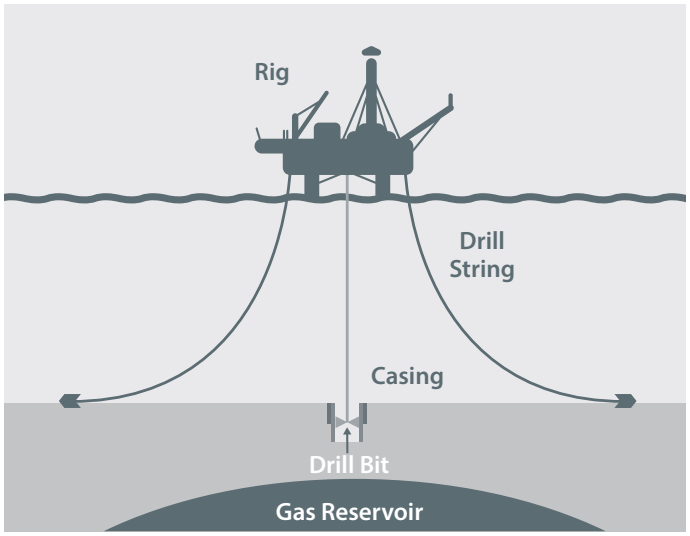
A seabed survey is undertaken across all drilling locations to identify possible hazards and natural features which may impact anchoring. Common seabed survey equipment includes: multi-beam echosounders, side scan sonars, subbottom profilers and magnetometers.

Each well will take a maximum of 90 days to drill but typically takes 30-40 days. The extra time accounts for potential operational delays and environmental constraints like severe weather events. After a well is completed the drilling rig is moved to the next location.

Seabed Survey



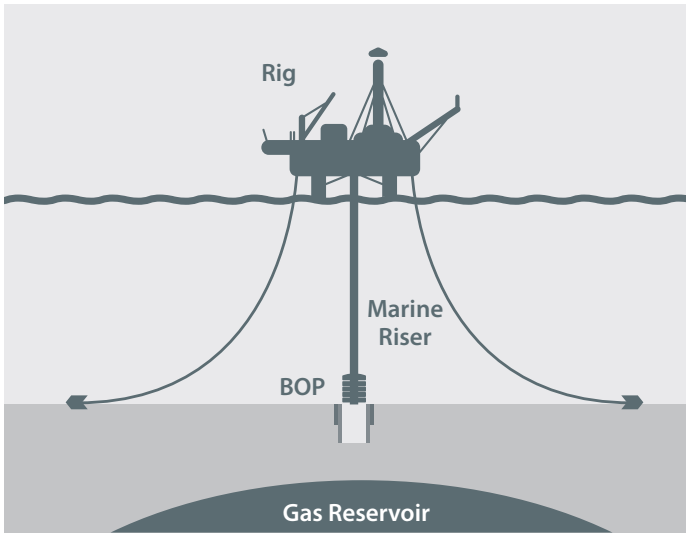
1. Rig towed to site



A drilling rig is towed to the drilling location.

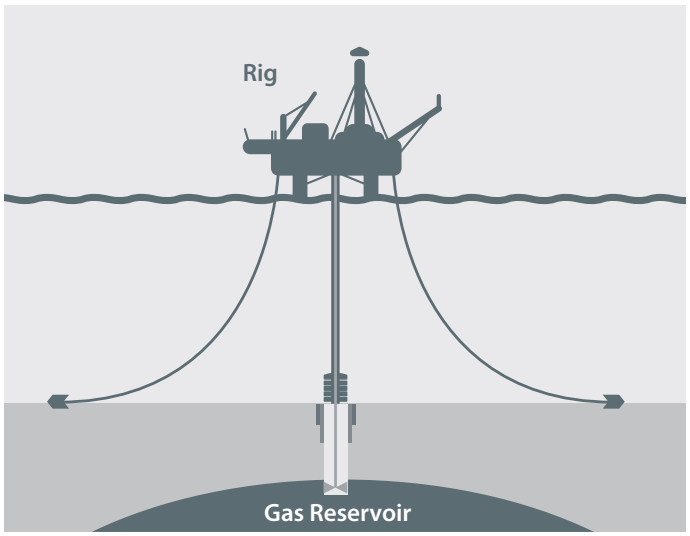
2. Anchors laid on seabed

Anchors are laid on the seabed and can be laid prior to or on arrival of the drilling rig.



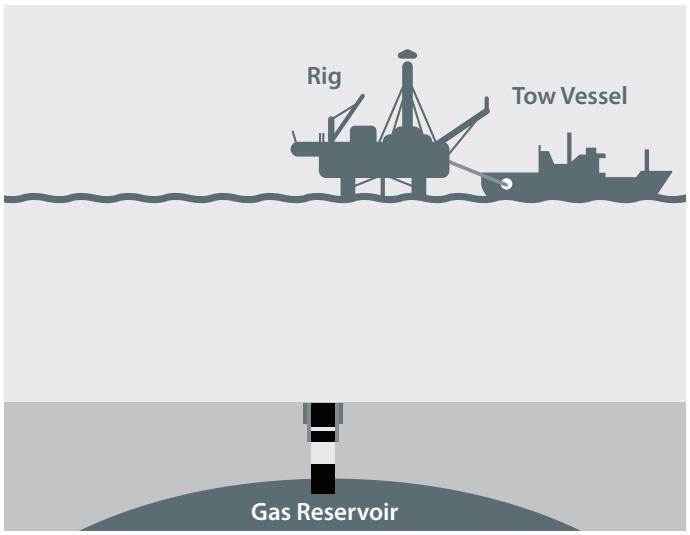
3. Top hole constructed

The top hole is drilled and then cased with cement and steel. The top hole is approximately 1m in diameter.



Supply boats will regularly service the rig throughout the drilling process.

4. Marine riser and blow-out preventer (BOP) installed



The marine riser returns drilling fluids and cuttings to the drilling rig for reconditioning, recirculation and/or discharge. The BOP is an assembly of specialised safety valves put in place before drilling into the reservoir and is used in the unlikely event of an emergency to control well pressure and prevent a loss of well control release.

5. Drill and construct well to gas reservoir

In the event that a gas reservoir is discovered, the well may be tested by flowing gas to the surface for analysis and then flaring through the flare boom.

6. Well permanently plugged and abandoned

Cement plugs are placed within the well as part of a process called plug and abandonment. The marine riser, BOP and wellhead are removed so no equipment is protruding from the seabed. The anchors are then removed so the drilling rig can be towed to the next drilling location or demobilised from the area on completion of the program.

Regulatory Framework

Offshore petroleum activities are regulated under the Offshore Petroleum and Greenhouse Gas Storage Act 2006 (OPGGS Act) which requires an accepted EP to be in place for the proposed exploration program.

An EP is a comprehensive document that provides information on the proposed activities and interactions with the marine, socio-economic and cultural heritage environment. The EP will describe and assess the environmental impacts and risks associated with the proposed activities. It also outlines control measures to avoid, minimise and mitigate environmental impacts and risks.

Consultation

As part of EP development ConocoPhillips Australia will undertake consultation in line with a prescribed regulatory process. Information will be provided to authorities, individuals and organisations so that they can understand the potential consequences of the exploration drilling program on things that they value and/or activities they undertake. Feedback provided to ConocoPhillips will be considered in the design and conduct of our activities.

Under the OPGGS Act all records of consultation including emails, phone calls and meetings, are required to be submitted to NOPSEMA with the EP for assessment.

About ConocoPhillips:

ConocoPhillips is the one of the world's largest independent exploration and production companies and has operated in the offshore environment for more than 75 years. We are committed to our role in responsibly accessing, developing and producing oil and natural gas to help meet the world's energy needs.

ConocoPhillips Australia was established almost two decades ago. Headquartered in Brisbane, Queensland, we are a 47.5 percent shareholder in Australia Pacific LNG and operate the LNG facility on Curtis Island. We are also pursuing exploration opportunities in Australia. In Australia we have a proud track record of safety, environmental and social performance and are an active and valued member of the communities in which we operate.

Australia Pacific LNG Facility on Curtis Island.

Questions

and Answers

What is a seabed survey?

Seabed surveys are an important safety and environmental measure undertaken ahead of drilling activities. They typically involve geophysical and geotechnical sampling techniques that identify possible hazards and benthic habitat to inform exploration well and drilling rig anchor placement.

Seabed surveys typically take about a week to complete at each drilling location.

How is a seabed survey different from a seismic survey?

Seabed surveys are designed specifically to map the seabed and directly below the seabed (up to ~100 m), whereas seismic surveys are designed to image the subsurface up to several kilometres below the seabed.

Sound generated from seabed survey sampling techniques is significantly lower in intensity and duration than sound produced from a seismic array.

How will environmental impacts be assessed in the EP?

Exploration activities do not operate to a no-impact standard. Instead, ConocoPhillips Australia is required to define the acceptable level of impact and work below that level. Acceptable levels of impact are established based on relevant up-to-date technical and scientific studies, government advice, and are considerate of the information gathered through the consultation process.

ConocoPhillips Australia will utilise this information to make predictions of the levels of impact we expect to occur and compare those to the previously defined acceptable levels. Our assessment is then scrutinised by NOPSEMA who will determine if the EP demonstrates that the environmental impacts and risks of the activity will be of an acceptable level and that the EP meets all of the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009.

How will impacts to commercial fishing and commercial marine users be managed?

The proposed exploration activities will occur in designated Commonwealth and state fishery management areas. The seabed survey and drilling activities require access to relatively small areas for short periods of time. However, these activities may displace commercial fishing activities and other commercial marine users. ConocoPhillips Australia will consult with commercial fishers and other marine users to ensure impacts from displacement are assessed and mitigated.

Will there be exclusion zones?

Yes, two types of exclusion zones will be in place at set times and locations.

Exclusion zone – All vessels will be required to abide by a cautionary zone which covers a 2 km radius around the drilling rig once in position. This zone is to allow for anchors, mooring chains and wire to be placed within the operational area during the drilling program.

Petroleum Safety Zone (PSZ) – The PSZ is a formal 500 m radius safety exclusion zone around each drilling location and will be communicated via a 'Notice to Mariners' by the Australian Hydrographic Office (AHO).

How will impacts to the marine environment be managed?

During preparation of the EP, ConocoPhillips Australia will build on our knowledge and identify current, peer reviewed literature and research on the impacts of our activities to the marine environment, particularly in relation to impacts to marine mammals and commercially fished species. Through relevant persons engagement we will aim to gain a deeper understanding of potential concerns and use this knowledge to help us minimise our impacts and protect ecological, social, economic and cultural values and sensitivities.

What are the typical environmental impacts associated with an exploration program?

Typical impacts associated with exploration activities are provided in the table below. ConocoPhillips Australia will conduct a detailed assessment of impacts specific to the proposed exploration program and unique operating environment. We will present these in the EP along with information on how these impacts will be managed and mitigated.

Aspect	Activity	Impacts
Seabed Disturbance	• Seabed Survey • Drilling	• Seabed samples may be collected during seabed surveys, resulting in localised disturbance of the seabed. • Anchor placement and drilling activities will result in localised seabed smothering and increased turbidity. • Impacts are expected to affect localised areas within a 2 km radius of each well.
Underwater Sound Emissions	• Seabed Survey • Drilling	• Seabed survey activities typically emit levels of sound similar to other vessel activities for short durations (typically ~1 week per drilling location.). • Underwater sound from drilling and support vessel activities has the potential to cause physiological impacts near the source and behavioural impacts to marine fauna within tens of kilometres depending on operations and location.
Atmospheric Emissions	• Seabed Survey • Drilling	• Atmospheric emissions from survey and drilling activities are localised and rapidly disperse in the vicinity of the vessels and rig.
Planned Vessel/Rig Discharges	• Seabed Survey • Drilling	• Routine discharges from support vessels and drilling rigs are similar to passing ships and other vessel discharges, which are managed to relevant standards and expected to disperse rapidly.
Planned Drilling Discharges	• Drilling	• Cement, cuttings and drilling fluid discharges occur during drilling activities resulting in temporary environmental effects out to tens of metres from each well.
Interference with Other Marine Users	• Seabed Survey • Drilling	• Seabed surveys are undertaken by vessels over short durations (typically 1-week per drilling location) and cover small areas. • Drilling rigs are stationary while drilling and are attended by support vessels who monitor a 500 m Petroleum Safety Zone and larger (typically 2 km radius) cautionary area to support safe operations. Notice to Mariners are issued and standard maritime safety precautions are in place.
Light and Visual Amenity	• Drilling	• The drilling rig may be visible from nearby coastlines while in transit and during drilling. • Flaring may be required over a few days at each drilling location and may also be visible from nearby coastlines.

What are the typical environmental risks considered in an EP?

Typical environmental risks that could occur and are assessed in exploration EPs include:

Vessel based risks, which include:

- Loss of material or waste overboard
- Interactions with marine fauna
- Introduction and establishment of invasive marine species

Hydrocarbon related risks, which include:

- Minor loss of containment
- Marine diesel oil releases
- Loss of well control releases

How are oil spill risks managed?

An Oil Pollution Emergency Plan (OPEP) is required to be submitted with the EP to NOPSEMA. The OPEP details the arrangements in place for responding to, monitoring and managing the highly unlikely release of hydrocarbons during the exploration program. The OPEP is based on the most conservative (i.e. worst-case) credible scenarios to ensure that the arrangements in place are adequate for any event.

Why is ConocoPhillips Australia continuing to explore for natural gas?

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market.

As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

What happens if ConocoPhillips Australia finds natural gas?

Exploration wells are drilled to confirm the presence or absence of natural gas reserves. Further drilling may be required to determine if commercial quantities of natural gas are present. If it is feasible to develop the discovered gas resource ConocoPhillips Australia would prepare an Offshore Project Proposal (OPP) detailing future development plans that may lead to production of natural gas. The development of the OPP would involve consultation and public comment prior to assessment by NOSPEMA. If an OPP is accepted, individual EPs, including relevant persons consultation, would still be required for subsequent development and production activities.

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

ConocoPhillips Australia

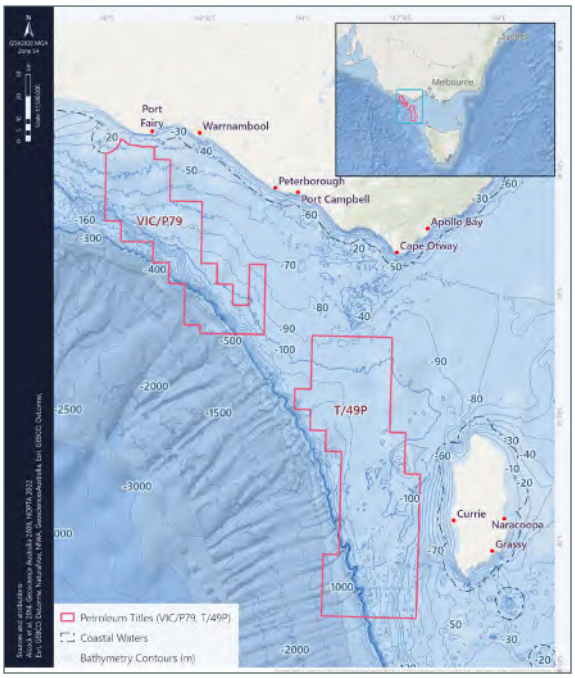
Otway Exploration Drilling Program

ConocoPhillips Australia

Project Update

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Drilling Program



ConocoPhillips Australia is proposing to undertake an exploration drilling program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of our Environment Plan development and consultation, where we will be establishing the context of our proposed activity. We are now able to share a more detailed description of our activity and the existing environment, and a preliminary environmental impact and risk assessment, as well as information on the legislative requirements that apply to our activity.

We have also created an online mapping tool where individuals, organisations and associations can share feedback about locations of environmental values and sensitivities.

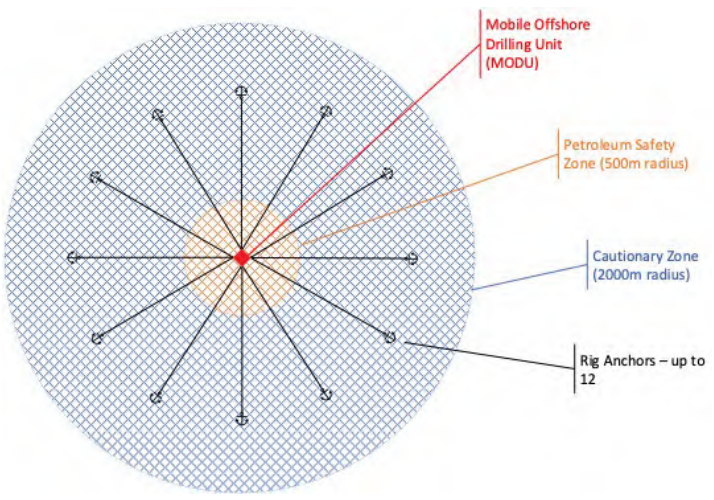
Permit Areas

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment . Any decision to proceed to development will be dependent on a conducive investment environment.
- A preliminary environmental impact and risk assessment has been developed to inform ongoing EP development and to support consultation.
- ConocoPhillips Australia is now looking for feedback on values and sensitivities within the environmental planning area to help inform our assessments.
- Individuals, organisations and associations are invited to share feedback on locations with values and sensitivities through an online interactive map via the consultation hub.

Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

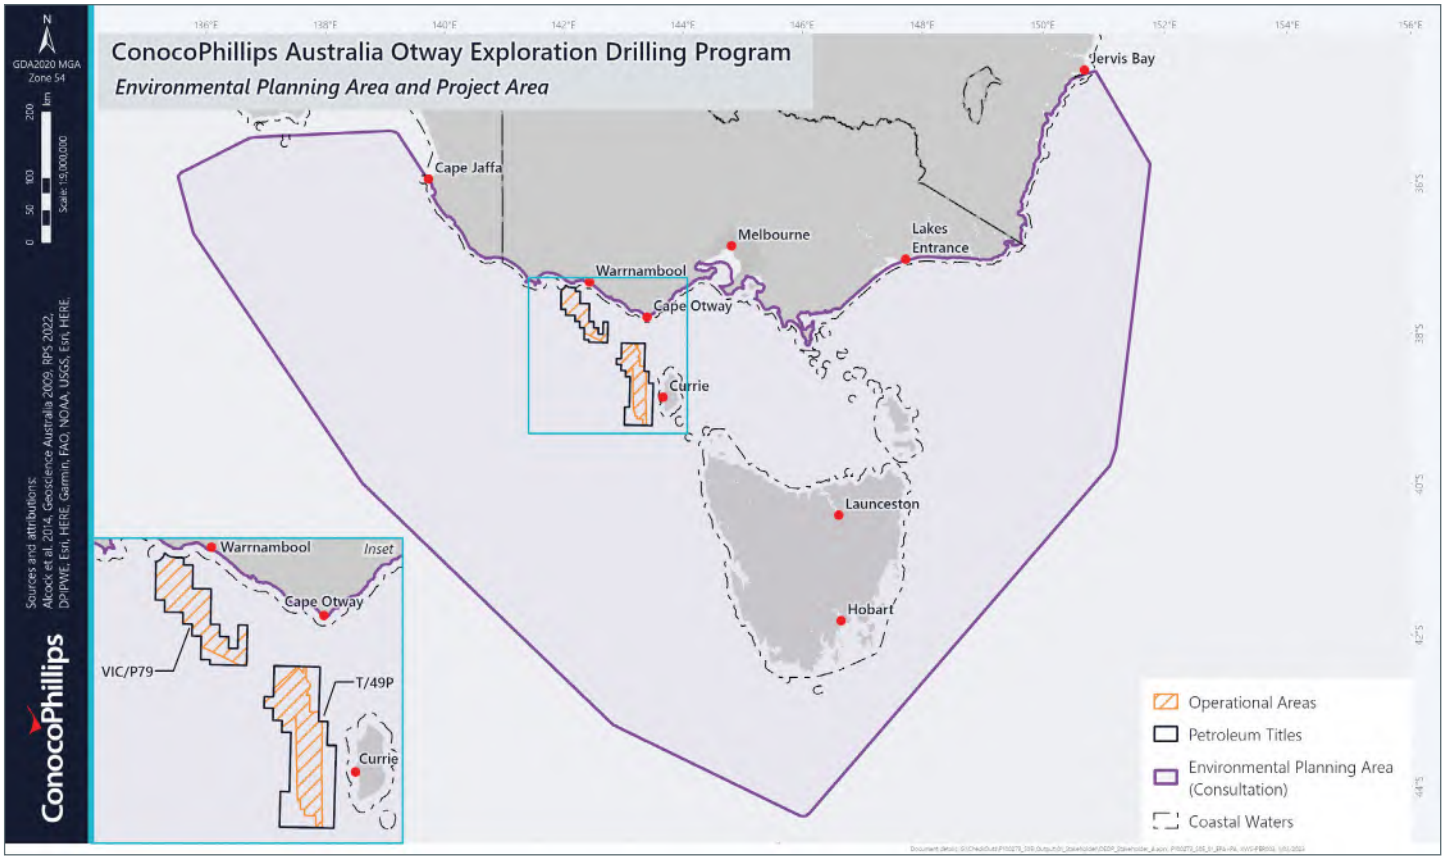


ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and Vic/P79	Operational Areas within T/49P and Vic/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km^2 (Nine locations, each 6 x 6 km) within Operational Areas	75 km^2 (Six locations, each a 2 km radius Drilling Area) within Operational Areas

Exclusion Zones

During drilling, three types of exclusion zones will be in place at set times and locations:



- **Safe Navigation Area** – A 500 m radius safe navigation area will be established around seabed survey vessels and any towed equipment when conducting seabed surveys.
- **Petroleum Safety Zone** – A 500 m radius petroleum safety zone will be enforced around each drilling location once the drilling rig is in position.
- **Cautionary Zone** – A 2 km radius cautionary zone will be established around the drilling rig once in position. This zone will cover the area of seabed anchors and mooring equipment and will be maintained by support vessels.

Environmental Planning Area Map

The Environmental Planning Area has been established as the largest physical area ConocoPhillips Australia will use for planning the proposed Otway Exploration Drilling Program and includes the marine environment and a 1 km buffer into coastal areas. This area has been established to support the identification of marine and coastal environmental values and sensitivities, and relevant persons and organisations with functions, interests and activities that may be affected by the proposed activity.

Environmental Planning Area Map

Understanding the Existing Environment

The marine environment of the offshore Otway Basin, Victoria is a diverse and dynamic ecosystem that supports a range of important physical, ecological, socio-economic and cultural activities and values. Understanding the existing environment creates a reference point from where we can evaluate the impacts and risks of the proposed Otway Exploration Drilling Program. The existing conditions are also used to determine the significance of the impacts and risks and to identify any necessary mitigation measures, management strategies or additional baseline studies.

The Environmental Planning Area encompasses a wide range of habitats and marine species including fish, crustaceans, birds, marine turtles, marine mammals and kelp forests. The marine environment also supports a range of cultural values and socio-economic activities including, but not limited to, commercial fishing, shipping, gas production and recreational activities.

The table below provides an overview of environmental considerations and why they are assessed in an Environment Plan.

Table 1 Environmental Considerations

Environmental Component		Understanding Required	Sub-components Considered
Physical Environment	The physical environment refers to the non-living natural elements of an ecosystem	Understanding the physical environment is essential for comprehending the functioning of an ecosystem and for developing sustainable management practices that preserve and enhance the ecological, socio-economic and cultural values of the environment.	• Water quality. • Sediment quality. • Air quality. • Climate. • Ambient light. • Ambient sound.
Ecological Environment	The ecological environment refers to the living components of an ecosystem, as well as their interactions with each other and with the nonliving elements of the environment.	Understanding the ecological environment is important for conserving biodiversity, preserving the integrity and functioning of ecosystems and supporting the livelihoods of communities.	• Benthic habitats and communities. • Coastal habitats and communities. • Plankton invertebrates. • Fish. • Birds. • Marine reptiles • Marine mammals • Conservation values and sensitivities.
Socio-economic Environment	The socio-economic environment refers to the social and economic relationships between people and the environment including the physical, psychological and economic elements that shape human well-being.	Understanding the socio-economic environment is critical for developing effective and equitable environmental management strategies that balance the needs of people with the conservation of the environment.	• Coastal communities. • Commercial fisheries. • Defence activities. • Offshore petroleum activities. • Offshore renewable energy activities. • Other offshore infrastructure. • Tourism. • Recreational diving and fishing. • Shipping.
Cultural Environment	The cultural environment refers to both First Nations and European cultures.	Understanding the cultural environment is critical for developing effective and equitable management strategies that consider cultural values and sensitivities that may be affected by environmental change.	• First Nations Peoples. • Native Title. • Maritime archaeological heritage (including shipwrecks).

Identifying Environmental Values and Sensitivities

To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.

Individuals, organisations and associations are encouraged to visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

Questions and Answers

What is an environmental value and sensitivity?

Environmental values and sensitivities include rare, important and/or sensitive physical, ecological, socio-economic and/or cultural features of the environment. Examples from NOPSEMA are provided below:

- The values and sensitivities of the marine environment may include benthic communities and habitats, marine fauna and the quality of the water, sediment and biota.
- The values and sensitivities that exist in relation to Protected Matters (Part 3 EPBC Act) may include World Heritage Values, National Heritage Values, the ecological character of declared RAMSAR wetlands, listed threatened species and ecological communities, listed migratory species and Marine Parks.
- The values and sensitivities of socio-economic features of the environment including the rights of other users which are to be managed responsibly.

Other examples may include biologically important areas, habitats critical to the survival of threatened species, key ecological features, marine and coastal industries (i.e., commercial shipping, Defence, petroleum exploration and production), marine tourism and recreation, and Commonwealth and State managed commercial fisheries, and cultural heritage features and values.

Will ConocoPhillips Australia only assess the Environmental Components and Sub-components listed above?

Through the feedback that we receive during consultation, we will continue building on our understanding and learnings of the environmental values and sensitivities during our Environment Plan process. Those learnings that are predicted to cross-over with our proposed activities will be carried through to the full assessment of impacts and risks which will be detailed in our EP and sent to the regulator for assessment.

How will environmental impacts and risks be assessed in the EP?

Exploration activities do not operate to a zero-impact standard. Instead, ConocoPhillips Australia is required to define the acceptable level of impact, and work below that level. Acceptable levels of impact are established based on relevant up-to-date technical and scientific studies, government advice, and are considerate of the information gathered through the consultation process.

The predicted levels of impact and risk expected to occur are then compared to the previously defined acceptable levels. This assessment is then scrutinised by the independent regulator, NOPSEMA, who will determine if the EP demonstrates that the environmental impacts and risks of the activity will be of an acceptable level and meets all the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009.

Preliminary Environmental Impact and Risk Assessment and Relevant Legislative Requirements

Our Preliminary Environmental Impacts and Risk Assessment report and a list of currently identified legislative requirements are available online from the Consultation Hub Document Library.

Meet the Project Team

We will be visiting Victorian and Tasmanian coastal communities throughout May and June to meet with local businesses and community groups and to host information sessions. If you would like to be informed of upcoming information sessions to be held near you, please get in touch with us on otway@conocophillips.com

Contact us

Webinar

Can't get to an information session? Register for our online webinar series via our consultation hub.

The next Webinar will be held on Wednesday 23 May 2023 commencing at 5pm AEST.

ConocoPhillips Australia

Commercial Fishing

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

We are committed to ensuring that commercial fishers and offshore petroleum activities can sustainably coexist, that impacts are limited to interference to no greater extent than is necessary and that commercial fishers are no worse off as a result of the Otway Exploration Drilling Program.

This information sheet summarises the ongoing assessment of potential impacts and risks to the commercial fishing industry arising from ConocoPhillips Australia's Otway Exploration Drilling Program.

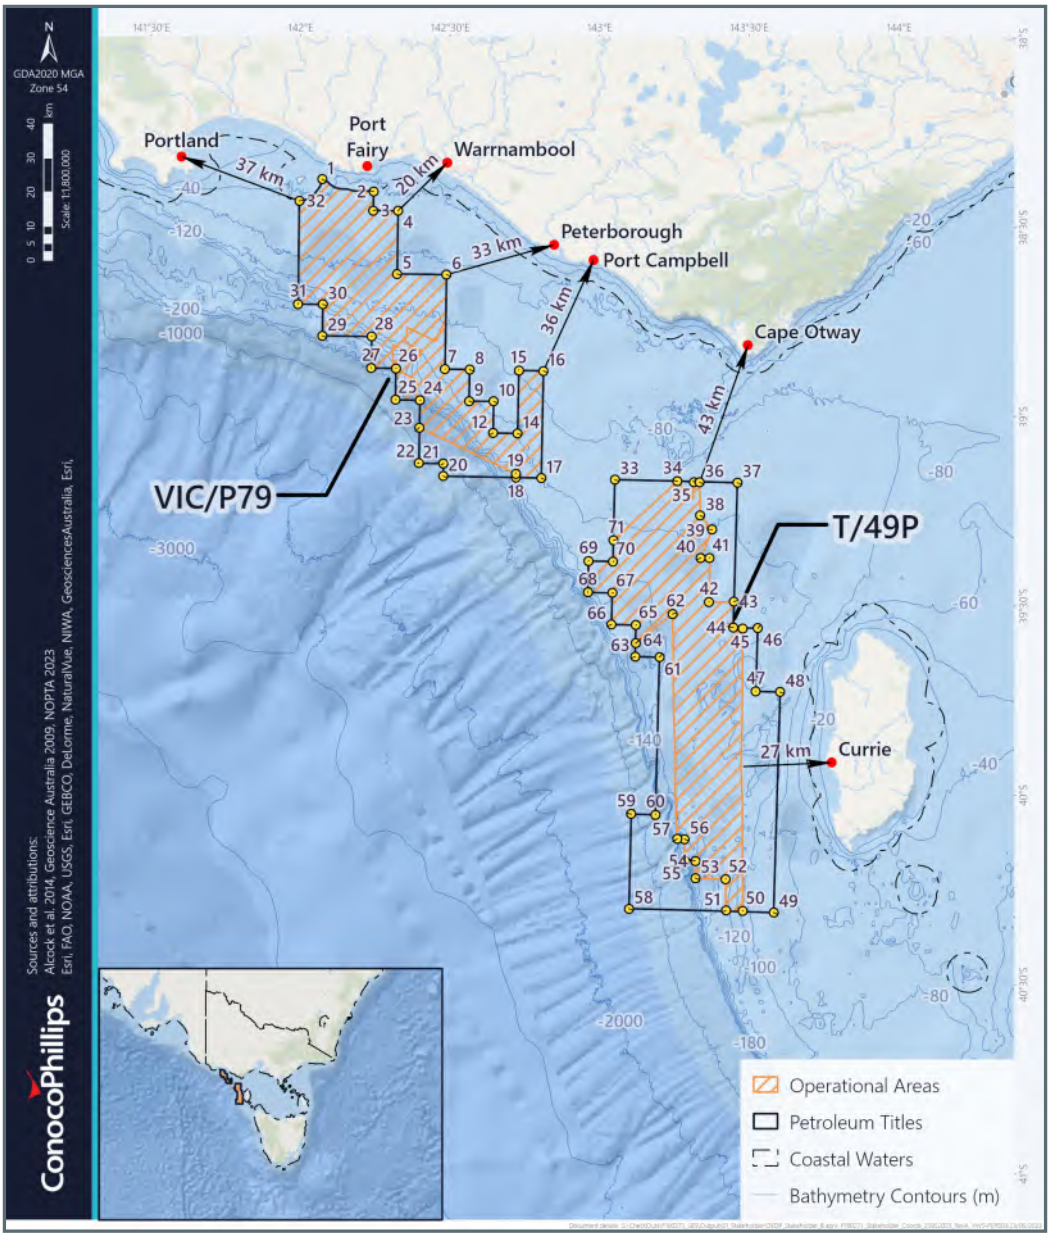

Figure 1 shows the permit areas and operational areas, within which exploration activities may occur.

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.
- Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.
- A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:
  - Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.
  - Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10s to 100s of meters and will not affect the long-term sustainability of fisheries.
  - Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

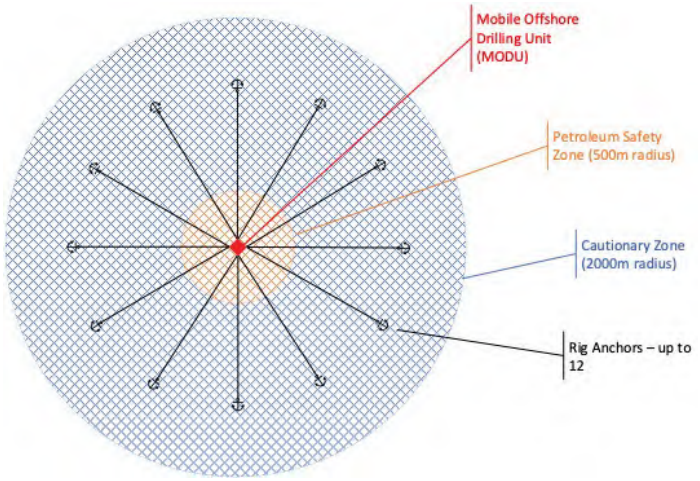
Assessment of Commercial Fishing

Several Commonwealth and State fisheries (with recorded activity in the last five years) have been identified within the Otway Exploration Drilling Program's permit areas.

Commonwealth Fisheries	State Fisheries	
	Victoria	Tasmania
Southern and Eastern Scalefish and Shark Fishery • Commonwealth Trawl Sector • Scalefish Hook Sector • Gillnet Hook Trap Sector Shark Gillnet sub-sector • Gillnet Hook Trap Sector Shark Hook sub-sector	Giant Crab Fishery	Giant Crab Fishery
Bass Strait Central Zone Scallop Fishery	Rock Lobster Fishery	Rock Lobster Fishery
Southern Squid Jig Fishery	Wrasse (Ocean) Fishery	
	Octopus Fishery	
Eastern Tuna Billfish	Multi-species Ocean Fisheries	

Potential Effects on day-to-day Fishing Operations

ConocoPhillips Australia is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement. There are three key aspects to potential displacement:



1. Location

Drilling will be undertaken at up to a maximum of six locations that are yet to be determined, but will be entirely within the permit areas. Once prioritised drilling locations are identified, seabed surveys will be conducted to identify possible hazards and natural features which may impact operations. Up to a maximum of six exploration wells will be drilled over both permit areas, with each taking typically between 30 to 40 days to complete. Specific seabed survey and drilling locations will be communicated with commercial fisheries prior to commencement.

2. Exclusion Zones

Exclusion zones are in place as a safety precaution for fishing vessels and crew as well as drilling equipment and crew. These zones allow anchors and mooring equipment to be placed within the operational area during the drilling program and prevent interactions or collisions with equipment or between vessels. Exclusion zones will be communicated via a 'Notice to Mariners' by the Australian Hydrographic Office. Three types of exclusion zones will be in place at set times and locations during the program:

- **Safe Navigation Area –** A 500 m radius safe navigation area will be established around seabed survey vessels and any towed equipment when conducting seabed surveys.
- **Cautionary zone –** a 2 km radius cautionary zone will be established around the drilling rig and once in position. This zone will cover the area of seabed anchors and mooring equipment and will be maintained by support vessels.
- **Petroleum Safety Zone –** A 500 m radius petroleum safety zone will be enforced around the drilling rig once in position at each drilling location.

3. Timing and Duration

Up to nine seabed surveys may be completed, each expected to take approximately 1 week to complete. Surveys will commence no earlier than January 2024.

For drilling, each well will typically take between 30 to 40 days, and a maximum of 90 days to complete accounting for operational delays and weather events.

Potential interactions with commercial fishing

ConocoPhillips Australia has assessed the potential for interactions between our planned activities and unplanned events that could affect commercially targeted fish and marine invertebrates such as the southern rock lobster.

The following table describes these events.

Aspect	Activity	Commercially relevant species	Assessment
Planned			
Underwater sound (Impulsive)	Seabed survey operations	• Marine invertebrates • Fish	Seabed surveys involve a range of geophysical assessment techniques with the most potentially environmentally impactive method being Sub-bottom Profiling (SBP). SBP uses an impulsive acoustic source to penetrate typically less than 100 metres into the seafloor to identify shallow geological hazards prior to drilling. The sound levels emitted during SBP do not reach or exceed any of the relevant thresholds for effects on fish, fish eggs and larvae or marine invertebrates.
	Well evaluation operations (during drilling)		An evaluation will be performed on all drilled wells to determine the well's ability to produce hydrocarbons. This may include a range of tests, with the most potentially environmentally impactive being Vertical Seismic Profiling (VSP). Fish and benthic invertebrates may be sensitive to the impulsive sound emitted from this activity, however, the short duration (maximum 20 hours per well), along with the likelihood of negative affect being restricted to within a few hundred metres of the source, reduce the potential for impacts to these species. Further, fish are expected to exhibit avoidance behaviour and swim away when sound reaches levels which may cause physiological effects[1].
Underwater Sound (Continuous)	Drilling rig and support vessel operations	• Marine invertebrates • Fish	Drilling and support vessel operations are expected to occur 24 hours a day for typically 30-40 days per well. Sound produced by these activities is predicted to reach the levels associated with physiological effects, recoverable injury and temporary threshold shift (TTS or temporary injury) for some fish species within 10 metres to the sound sources. For effect thresholds to be exceeded, fish would have to remain continuously at those distances for either 12 hours (temporary injury threshold) or 48 hours (recoverable injury threshold). Although there are no threshold criteria relevant to marine invertebrates for continuous sound, there is the potential for sub-lethal impacts[2].
Routine Operational Discharges	Seabed survey vessel, drilling rig and support vessel operations	• Marine invertebrates • Fish	Discharges from seabed survey vessels, the drilling rig and support vessels will be of low toxicity and dilute rapidly within the marine environment. These discharges are typical of marine vessels and are treated to meet relevant standards.
Routine Drilling Discharges	Drilling rig operations	• Marine invertebrates • Fish	Cement, cuttings and drilling fluid discharges occur during drilling activities, resulting in localised and temporary changes in water quality, but will dilute rapidly within the marine environment.

Potential Effects on day-to-day Fishing Operations *continued*

Aspect	Activity	Commercially relevant species	Assessment
Unplanned Events			
Introduction of Invasive Marine Species	Seabed survey vessel, drilling rig and support vessel operations	• Marine invertebrates • Fish	Drilling will occur in deep, well mixed waters which are unfavourable conditions for most invasive marine species. ConocoPhillips Australia will implement its Marine Assurance System and Invasive Marine Species Risk Assessment process to mitigate the risk of introduction, and vessels operating within permit areas will comply with Australian requirements for ballast water and biofouling management.
Accidental hydrocarbon release	Seabed survey vessel, drilling rig and support vessel operations	• Marine invertebrates • Fish	In the unlikely event of an accidental hydrocarbon release, an exclusion zone will be put in place resulting in the displacement of fishing activities. ConocoPhillips Australia and their contractors will have tested plans in place to support an effective and timely response to minimise the duration of any effects, including: • A Shipboard Oil Pollution Emergency Plan or Shipboard Marine Pollution Emergency Plan, depending on the class of vessel. • An Oil Pollution Emergency Plan. • A Source Control Emergency Response Plan. In addition, an Operational and Scientific Monitoring Program will be implemented to ensure that potential impacts to commercial fisheries are assessed and monitored to recovery. Impacts to fisheries from a hydrocarbon spill are expected to be limited to small numbers of juvenile fish, larvae and plankton, and are not expected to affect population viability or recruitment, or the long-term sustainability of the fisheries.
Interaction with Marine Fauna	Seabed survey vessel, drilling rig and support vessel operations	• Fish	Given the underwater sound emitted during exploration activities, fish are expected to exhibit avoidance behaviours resulting in a low likelihood of interaction. ConocoPhillips Australia will implement additional measures to minimise the risk of interaction, including: • Reducing vessel speeds within operational areas. • Minimising the number of vessels within operational areas at any one time; and • Implementing procedures to detect and protect marine fauna.

Questions

and Answers

How is ConocoPhillips Australia consulting commercial fishers for the Otway Exploration Drilling Program?

The proposed exploration activities will occur in designated Commonwealth and State fishery management areas. The seabed survey and drilling activities require access to relatively small areas for short periods of time, however, these activities may displace commercial fishing activities and other commercial marine users.

ConocoPhillips Australia has arrangements in place with Seafood Industry Victoria (SIV), the Tasmanian Seafood Industry Council (TSIC) and Tuna Australia to be the primary point for consultation with their members. All members may choose to engage directly with ConocoPhillips Australia at any point to represent their individual interests. To do this, contact ConocoPhillips Australia on the details below.

All other commercial fishers will be consulted individually by ConocoPhillips Australia unless directed otherwise.

We encourage commercial fishers to provide feedback, request a meeting and ask questions on the proposed activity by contacting us via the Otway Consultation Hub or email or telephone.

Will seismic surveys be used as part of the Otway Exploration Drilling Program?

No, seismic survey is not part of the Otway Exploration Drilling Program.

The sound emitted by vessel operations and exploration drilling is a continuous sound. Whereas, the sound emitted during a marine seismic survey is a non-continuous or impulsive sound. A number of studies predict that, for a range of species exposed to impulsive sounds, impacts occur at lower sound levels than for exposure to continuous sounds.

- *Vertical seismic profiling (VSP) may be conducted over a maximum of 20 hours at each well, and may not be conducted at all depending on specific well appraisal objectives. The sound generated during VSP is significantly lower in intensity and duration than sound produced from a seismic array.*

Seabed surveys are designed specifically to map the seabed and directly below the seabed (up to ~100 m), whereas seismic surveys are designed to image the subsurface up to several kilometres below the seabed. Sound generated from sub-bottom profiling during the seabed survey is significantly lower in intensity and duration than sound produced from a seismic array.

What is well evaluation and Vertical Seismic Profiling (VSP)?

Well evaluation is a process of assessing the potential of an oil or gas reservoir by drilling a well and conducting tests to measure its characteristics such as pressure, temperature and fluid properties.

One of the techniques used in well evaluation is called Vertical Seismic Profiling (VSP).

VSP involves measuring the seismic response of the rock formations surrounding the well by sending sound waves into the ground and recording the reflections. The data collected from the VSP can be used to create a picture of the rock formations and determine the location and size of potential hydrocarbon reservoirs.

Fish and benthic invertebrates may be sensitive to the impulsive sound emitted during VSP. However, the short duration (maximum of 20 hours per well), along with the likelihood of negative effects being restricted to within a few hundred meters of the source, reduce the potential for impacts to these species.

VSP sound levels are not predicted to result in permanent or temporary threshold shift to marine mammals and only localised behavioural disturbance, and are significantly lower than those produced during 3-dimensional (3D) marine seismic surveys.

Will ConocoPhillips Australia compensate commercial fishers if economically impacted?

Yes, ConocoPhillips Australia is committed to having a commercial fishing adjustment protocol in place prior to the commencement of the drilling program. ConocoPhillips Australia will work in consultation with identified peak fishing industry associations to develop this protocol.

Questions

and Answers *continued*

Will light impact commercial fishing species?

The National Light Pollution Guidelines (CoA 2020) do not provide specific guidance for the assessment of impacts to plankton, marine invertebrates or fish and, it is considered that impacts to these species are not likely to be significant.

Will dive-based fisheries be impacted?

Commercial divers have the potential to be impacted by underwater sound where certain exploration activities occur in close proximity to the shoreline and shallow waters. If vertical seismic profiling was to occur near the northern border of permit VIC/P79, Victorian dive-based fisheries would be impacted. Sound emissions from VSP will occur only once per well (maximum of six) for no longer than 20 hours. This activity has the potential to result in displacement for a maximum of 6 days over the entire exploration program for these fisheries, assuming all wells are drilled in the northern extent of VIC/P79, which is highly unlikely.

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

The process for selecting drilling locations involves several steps, including the acquisition and processing of seismic data, interpretation of the data to select high probability of success targets, and efficiency of the program to prove up resources with the least amount of wells. A summary of current activities to support this effort are described below:

1. Interpretation of seismic data: Skilled geoscientists analyse the processed data to identify potential drilling locations. They look for feature such as faults, folds and stratigraphic traps that could indicate the presence of hydrocarbons.
2. Selection of high probability targets: After identifying potential drilling locations, geoscientists prioritise them based on their likelihood of success. They consider factors such as the quality and quantity of the reservoir, the geologic complexity of the area and the cost of drilling.
3. Efficiency of the program: The goal is to prove up resources with the least number of wells, which involves optimising the drilling program whilst maximising the chance of success.

Overall, the process for selecting drilling locations is a complex and multidisciplinary effort that requires skilled professionals and advanced technology. It involves a careful balance of science, economics and risk management to ensure that drilling efforts are successful and efficient.

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

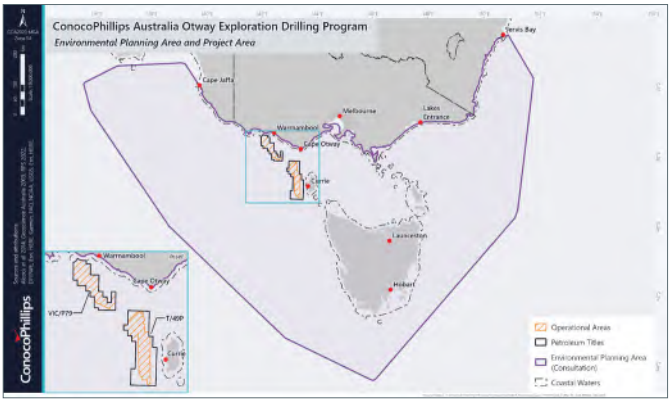
ConocoPhillips Australia

Emissions and Discharges

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.



About the Otway Exploration Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

This information sheet summarises the ongoing assessment of potential impacts and risks arising from air emissions and planned discharges associated with the Otway exploration drilling program. Figure 1 below shows the permit areas, within which exploration activities may occur, and the Environmental Planning Area that has been applied to ensure that far ranging environmental values and sensitivities are appropriately identified and considered.

Environmental Planning Area Map

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The EP will include a detailed assessment of potential impacts and risks arising from the air emissions and planned discharges associated with the Otway exploration drilling program.
- A preliminary assessment of potential impacts associated with emissions and discharges has identified:
  - Air emissions from seabed survey vessels, the drilling rig and support vessels have the potential to result in localised changes in air quality.
  - Planned discharges from survey vessels, the drilling rig and support vessels have the potential to result in localised changes to water quality that will quickly dissipate in the water column.
  - Discharges from drilling operations, including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid from testing subsea equipment, have the potential to result in localised changes to water and sediment quality.
- If you would like to ask questions or give feedback, see the contact details at the end of the document.

Emissions and Discharges Assessment

Activities conducted as part of the Otway Exploration Drilling Program will result in emissions to the atmosphere, as well as discharges to the marine environment. The detailed Emissions and Discharfes Assessment will be available online in the Impact and Risk Assment report which is currently being finalised.

Air Emissions

Air emissions are generated from the combustion of fuels to power the drilling rig, vessels and onboard equipment. Emissions are generally made up of a variety of different gases, some of which are classified as greenhouse gases (GHG). In the event that exploration drilling activities result in the discovery of hydrocarbons, well testing may be conducted which results in additional air emissions associated with short duration flaring.

Type	Potential impact	Assessment
Air Emissions	Operational activities and flaring involve the combustion of fuel which will primarily emit nitrogen dioxide, sulphur dioxide and carbon dioxide. These emissions will result in a localised reduction in air quality around the emission source and represent a source of greenhouse gases (GHGs).	These emissions are predicted to be small on a state, national and global scale, representing a minute contribution to the local airshed and overall GHG emissions, and will dissipate rapidly. Impacts from a reduction in air quality are expected to be short-term and limited to the immediate vicinity of the emission source, well within 2 km of each drilling area or vessel. Long-term impacts from the increase of GHGs in the atmosphere have been shown to contribute to the global impacts of climate change which has numerous direct and indirect impacts on various sensitive receptors.

Discharges

Operational activities conducted during the **Otway Exploration Drilling Program** will result in discharges to the marine environment including:

- Planned discharges from survey vessels, the drilling rig and support vessels which include (but are not limited to) treated sewage, grey water, oily water, food waste, bilge water, water treatment brine and cooling water.
- Drilling discharges to the seabed and sea surface including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid diluted in potable water from testing subsea equipment.

Type	Potential impact	Assessment
Planned Discharges	Planned discharges will cause temporary and localised changes in water quality in the immediate environment surrounding the source. This change has the potential to affect fauna behaviour (e.g. increase scavenging behaviour) but is unlikely to cause injury or mortality to fauna.	Routine discharges are required to be treated to meet the International Convention for the Prevention of Pollution from Ships (known as MARPOL). Consequently, impacts will be highly localised and temporary, as the treated discharges are quickly broken down by microbial activity and dispersed by wave action and local ocean currents.
Drilling Discharges	The release of drilling discharges to the seabed and sea surface will result in localised changes in water quality, sediment quality and habitat composition. These changes may cause injury or mortality to marine species through toxicity or smothering.	Drilling discharges will be of low toxicity and will quickly dissipate in the water column or disperse on the seafloor. Impacts are expected to be short-term and restricted to smaller areas within 2 km of each well.

Reducing Impact

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to the protection of the marine environment and marine ecosystems from negative impacts associated with offshore petroleum activities. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and marine ecosystems. This involves establishing acceptable environmental standards and thresholds for specific activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts to protected species, particularly during periods of peak biological importance. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

Examples of mitigation measures and activity limitations that will be implemented are listed below:

- Vessels will comply with Marine Order 97: Marine Pollution Prevention – Air Pollution for emissions from combustion of fuel, including:
  - Holding a valid Air Pollution Prevention (APP) certification or equivalent in accordance with MARPOL Annex VI.
  - Using low sulphur fuel in accordance with Marine Order 97: Marine Pollution Prevent – Air Pollution (Division 7).
  - Complying with National (AMSA) and International (IMO / MARPOL) Emissions and Discharge Standards for vessels.
- Fuel use and flaring volumes will be recorded and reported in alignment with the National Greenhouse and Energy Reporting Act 2007.
- ConocoPhillips Australia will implement a chemical selections procedure which requires all chemicals used and discharged to the sea to be environmentally acceptable by national and international standards, including the World Bank (2015) Environmental, Health and Safety Guidelines for Offshore Oil and Gas Development.
- ConocoPhillips Australia will implement a cuttings management system which reduces the volume of discharges that are release into the marine environment. The cuttings management system will be developed with adherence to international best practice standards, including the World Bank (2015) Environmental, Health and Safety Guidelines for Offshore Oil and Gas Development.
- Vessels will comply with Marine Orders 91, 95 and 96 which all deal with marine pollution prevention of different discharges i.e. oil, garbage and waste.
- Further, ConocoPhillips Australia has contracted a greenhouse gas (GHG) specialist to calculate the amount of GHG emissions that may be released from the various activities of the Otway exploration drilling program, so that these can be accounted for in both internal and external reporting.

Questions

and Answers

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

Why can't drilling discharges be collected and disposed of onshore?

The process of collecting and transporting discharges to shore introduces a safety risk and would result in an increased offshore environmental impact due to additional vessel movements and their associated emissions.

Why do you need to flare?

The purpose of exploration drilling is to identify commercially viable natural gas reserves. To know whether a reservoir is suitable for development, the contents of the reservoir are tested onboard the drilling rig. Flaring is a high-temperature process used to burn waste gases containing combustible components such as natural gas. Flaring occurs from a remote and elevated location, using a specifically designed burner to promote clean and safe disposal of the combustible components. Flaring is the safest method to dispose of combustible components during a well test. In the event that a well test is conducted, flaring will occur up to a maximum flow rate of 40 MMscf for 120 hours per well over multiple short-term events and may be visible from shore depending on the drilling rig's location.

Will the air emissions or discharges impact wildlife?

Impacts from emissions and discharges produced during the activities are expected to cause short-term and localised reductions in air and water quality, which will be limited to the immediate vicinity of the release. The majority of the wildlife found within the area (e.g., seabirds, marine turtles, fish and marine mammals) are highly mobile and are not expected to remain near the source for long enough to be impacted. Impacts to plankton are expected to be localised and short-term and are not expected to result in impacts to foraging marine species, given the overall abundance of food resources within the region.

Can air emissions or discharges be harmful to humans?

The use of fuel to power drilling rig and vessel engines, generators and mobile and fixed plant will primarily result in emissions of carbon dioxide, nitrogen dioxide and sulphur dioxide. The inhalation of air emissions from the combustion of fuel could be harmful if a person was standing immediately downwind of the source or in a poorly ventilated area. However, emissions from the drilling rig and vessels are relatively small and will be emitted from well-ventilated areas to the environment, whereby they will be rapidly dispersed by moderate-strong winds typical of the Otway Basin. Petroleum activities are not expected to have any adverse impacts on the air quality of nearby coastal towns.

Discharges, such as drill cuttings (rock from the seabed) and drilling fluids from the drilling process, will be localised and will not reach the coastline. The extent of impact is predicted to be within 2 km of each well. The closest shoreline to the Otway exploration drilling program is 5.6 km away and therefore there is no predicted impact to coastal communities.

Questions

and Answers *continued*

What type of air emissions will the activities create?

Operation of the drilling rig and vessel engines, helicopters, generators and other equipment will release emissions to the atmosphere which include greenhouse gases (GHG) such as carbon dioxide (CO_2), methane (CH4) and nitrous oxide (N_2O), along with non-GHG, such as sulphur oxides (SO_X) and nitrogen oxides (NO_X). These emissions are typical for marine vessels when combusting hydrocarbons for power and will be short-term, for the duration of the activities.

Are drilling fluids harmful to the marine environment?

Drilling fluids that are discharged to the environment are considered to pose little or no risk to the environment, as assessed by the Oslo and Paris Conventions (OSPAR) and Offshore Chemical Notification Scheme (OCNS).

The OSPAR commission has identified substances considered to pose little or no risk to the environment based on their toxicity, biodegradation and potential to bioaccumulate. Drilling fluids are selected based on their low potential for toxic effects or bioaccumulation, and high biodegradation within the marine environment.

ConocoPhillips Australia

Seabirds, Penguins and Marine Turtles

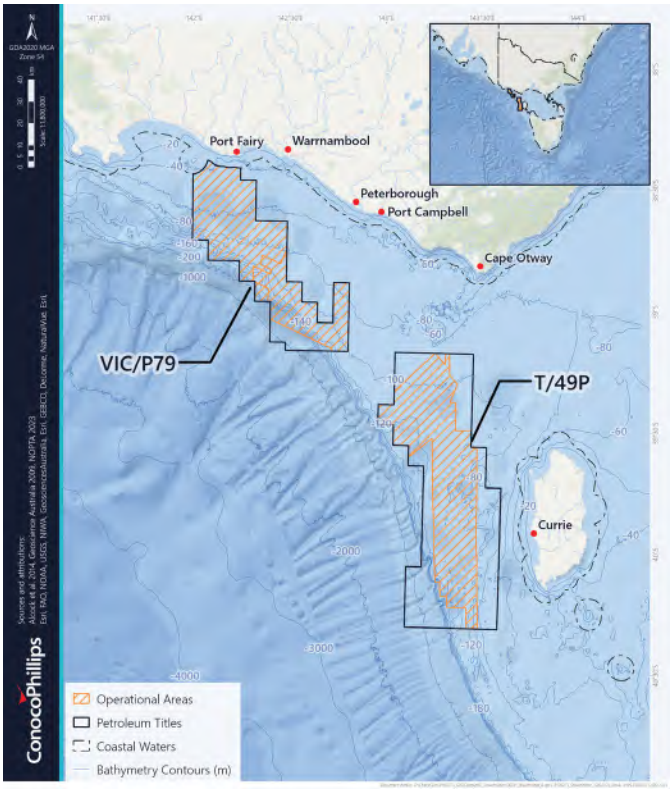
ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activity is a continuation of ConocoPhillips Australia's exploration activities in the offshore Otway basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Program

About the Otway Exploration Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than January 2024.



We are committed to ensuring that seabirds, penguins and marine turtles continue to undertake biologically important behaviours in the offshore environment, with no unacceptable impacts to critical life-cycles stages or population characteristics because of the Otway exploration drilling program.

This information sheet summarises the ongoing assessment of potential impacts and risks to seabirds, penguins and marine turtles arising from exploration activities.

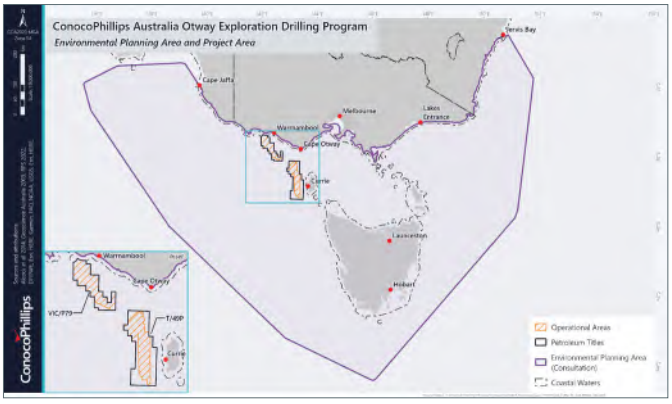


Figure 1 opposite shows the permit areas, the operational areas within which exploration activities may occur, and the Environmental Planning Area that has been applied to ensure that far ranging environmental values and sensitivities are appropriately identified and considered.

Map of Permit Areas

Figure 1

Environmental Planning Area Map

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.
- A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:
  - Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
  - Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
  - A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging, breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.
- The purpose of this information sheet is to provide details of potential impacts and risks that have been identified, as well as the measures proposed to reduce those impacts and risks, to support consultation prior to the submission of the Environment Plan.
- If you would like to ask questions or provide feedback, see the contact details at the end of the information sheet.

Seabirds, Penguins and Marine Turtles in the Area

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the Environment Protection and Biodiversity Conservation Act 1999. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

The following species are known to occur within the environmental Planning Area and exhibit one or more of these important behaviours:

- Caspian tern
- Common-diving petrel
- Black-faced cormorant
- Flesh-footed shearwater
- Great-winged petrel
- Greater crested tern
- Little penguin
- Pacific gull
- Short-tailed shearwater
- Shy albatross
- Soft-plumage petrel
- Sooty shearwater
- Wedge-tailed shearwater
- White-capped albatross
- White-faced storm petrel
- White-fronted tern

Marine turtles are highly migratory and rely on both marine and terrestrial habitats. Although they may occur within the Environmental Planning Area, no habitat critical to their survival occurs in the waters off southern Australia and they are not known to exhibit any identified biologically important behaviours in this area. The closest biologically important areas for marine turtles are located south of Brisbane, QLD, and at Shark Bay, WA. Even though the presence of individuals within the area is expected to be of a transient nature, the potential impacts of the Otway Exploration Drilling Program on marine turtles has been assessed as they are listed as Matters of National Environmental Significance and are protected under the Environment Protection and Biodiversity Conservation Act 1999.

Potential interactions with seabirds and marine turtles

The preliminary environmental impact and risk assessment has identified aspects of exploration activities that have the potential to impact, or pose a risk to, seabirds, penguins and marine turtles, as shown below.

Aspect	Potential for impacts to seabirds, penguins and turtles
Artificial Light	Minor consequences for seabirds, penguins and turtles
Underwater Sound	Minor consequence for marine turtles. Negligible consequences for seabirds and penguins
Interactions with Marine Fauna	Low risk to seabirds, penguins and marine turtles
Loss of Material or Waste Overboard	Low risk to seabirds, penguins and marine turtles
Accidental Release of Hydrocarbon	Low risk to seabirds and marine turtles.
	Medium risk to penguins.

Impacts and risks vary for different species. More detail is provided below for impacts and risks associated with light, underwater sound and accidental hydrocarbon releases.

Light

Routine operational lighting on survey vessels, the drilling rig and support vessels is a critical safety requirement for offshore activities and supports safe navigation. In addition, if hydrocarbons are found during exploration, a well test may be conducted involving short periods of flaring for the safe disposal of hydrocarbons.

The impact of routine operational and flaring-related light on marine fauna is highly dependent on the species' vulnerability and behaviours that occur within the area. As animals perceive light differently from humans, an understanding of the type of lights used and the nature of a species vision is required for assessment. Species of concern identified by the National Light Pollution Guidelines (2020)[1] include both seabirds and marine turtles.

Seabirds are most impacted by the intensity and colour of artificial lights. They are particularly sensitive to violet – blue wavelengths, long wavelengths when using their "daylight" adapted vision and short wavelengths when using their "dark" adapted vision. Seabirds may be attracted to the light glow of the drilling rig or vessels which increases the likelihood of injury through collision and may disrupt migration or foraging at sea. Disorientation due to artificial light is especially evident in nocturnal seabird species who migrate, forage, or return to their colonies at night. However, this is typically associated with areas closer to the coast. Artificial light is not identified as a threat in the National Recovery Plan for Threatened Albatrosses and Giant Petrels 2011-2016 (2011[2]). Given the large areas typically covered by foraging birds and the transient nature of these species in the area, artificial light is not expected to cause significant impacts to foraging behaviours.

Light emissions have the potential to impact little penguins as this species is known to occur within 20 km of the operational area. Typically, penguins are most impacted by light when it is directly illuminating nesting areas, as this may prevent individuals from returning to shore at dusk. Potential increases in light levels, particularly along coastline areas where little penguins are known to breed, are not expected to inhibit biologically important behaviours, as the light emissions at 20 km are equivalent to the ambient light on a night with a quarter moon.

Artificial light has been shown to impact critical nesting and hatching behaviours of marine turtles and is listed as a key threat in the Recovery Plan for Marine Turtles in Australia (2017)[3]. Although species may be present, there are no biologically important behaviours, like nesting and hatching, or critical habitat essential to marine turtles identified within southern Australia.

Underwater Sound

Much like humans, hearing plays an important role in communication for many animal species. For marine species, it is often also an essential tool for navigation and hunting. Additional noise emissions in the marine environment during the Otway Exploration Drilling Program will be caused by vessel and drilling rig movement and drilling. Marine species of concern include those who spend a significant portion of their time under water, like marine turtles. Each species will typically display different sensitivities to underwater noise.

There is potential for seabirds and penguins who spend time foraging at sea to be impacted by noise emissions. However, the majority of seabirds, such as albatrosses and petrels, are not anticipated to remain within the water column for an extended period of time, and penguins are highly mobile and are not expected to remain within relevant effect distances. Noise impacts are assessed over 12, 24 or 48-hour intervals, as the time exposed to the sound is related to the severity of impact. These intervals are typically longer than any seabird species would spend in the water column at one time, or any penguin would remain in the area, and therefore, seabirds and penguins are not expected to be impacted.

Currently, underwater noise impacts to marine turtles are not well understood. These species do not possess external ears. However, it is thought that sounds could potentially be used for navigational and hunting purposes. There is some evidence to support marine turtles' avoidance of areas where noise emissions are occurring. Although species may be temporarily displaced due to noise emissions, any individuals in the area are expected to be transient due to the absence of biologically important behaviours or critical habitat within southern Australia.

Shy Albatross

Reducing Impact and Risk

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to the protection of the marine environment and marine ecosystems from negative impacts associated with offshore petroleum activities. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and marine ecosystems. This involves establishing acceptable environmental standards and thresholds for specific activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts to protected species, particularly during periods of peak biological importance. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

Examples of mitigation measures and activity limitations that will be implemented are listed below:

- ConocoPhillips Australia will develop and implement a Seabird Management Plan as per the National Light Pollution Guidelines for the activity. This plan will ensure that the light emissions are minimised to protect seabirds and other species in the area, and that procedures are in place to support grounded birds.
- Flaring will be restricted to a maximum of 120 hours per well and will only be conducted in the event that hydrocarbons are discovered to ensure safe disposal.
- Activity-specific emergency preparedness and response plans and capability will be in place prior to activity commencement. Wildlife response procedures will be incorporated into ConocoPhillips Australia's Oil Pollution Emergency Plan to be activated in the highly unlikely event of an accidental hydrocarbon release. These will include protection priorities relevant to seabirds and penguins, contacts for trained and specialist personnel, species collection and handling procedures and equipment requirements, and nearby veterinary and rehabilitation resources.

Questions and Answers

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

Why is lighting needed?

The use of navigational and deck lighting is required by Commonwealth law to ensure safe operating conditions for personnel onboard survey vessels, the drilling drilling rig and support vessels, and for other users in marine waters.

What is flaring and why is it needed?

The purpose of exploration drilling is to identify commercially viable natural gas reserves. To know whether a reservoir is suitable for development, the contents of the reservoir are tested onboard the drilling rig. Flaring is a high-temperature process used to burn the waste gases containing combustible components such as natural gas. Flaring occurs from a remote and elevated location, using a specifically designed burner to promote clean and safe disposal of the combustible components.

Flaring is the safest method to dispose of combustible components during a well test. If a well test is conducted, flaring will occur up to a maximum flow rate of 40 MMscf for 120 hours per well over multiple short-term events and may be visible from shore depending on the drilling rig's location.

How far do light impacts extend from the activity?

The National Light Pollution Guidelines (2020) recommend that a 20 km distance is used for the assessment of impacts to sensitive species as it provides a precautionary limit based on observed effects of sky glow on marine turtle hatchlings demonstrated to occur at 15-18 km and fledgling seabirds grounded in response to artificial light 15 km away. Further, a 50 km threshold has been adopted to account for the combination of operational lighting and short-term flaring from the drilling drilling rig.

The light emissions at this distance are equivalent to ambient light on a moonless clear night sky/new moon. Any listed species sensitive to light that may occur within 50 km of the light source will undergo an impact assessment in the Environment Plan.

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

conocophillips.com.au

ConocoPhillips Australia

ConocoPhillips Australia

Other Marine and Coastal Users

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activity is a continuation of ConocoPhillips Australia's exploration activities in the offshore Otway basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

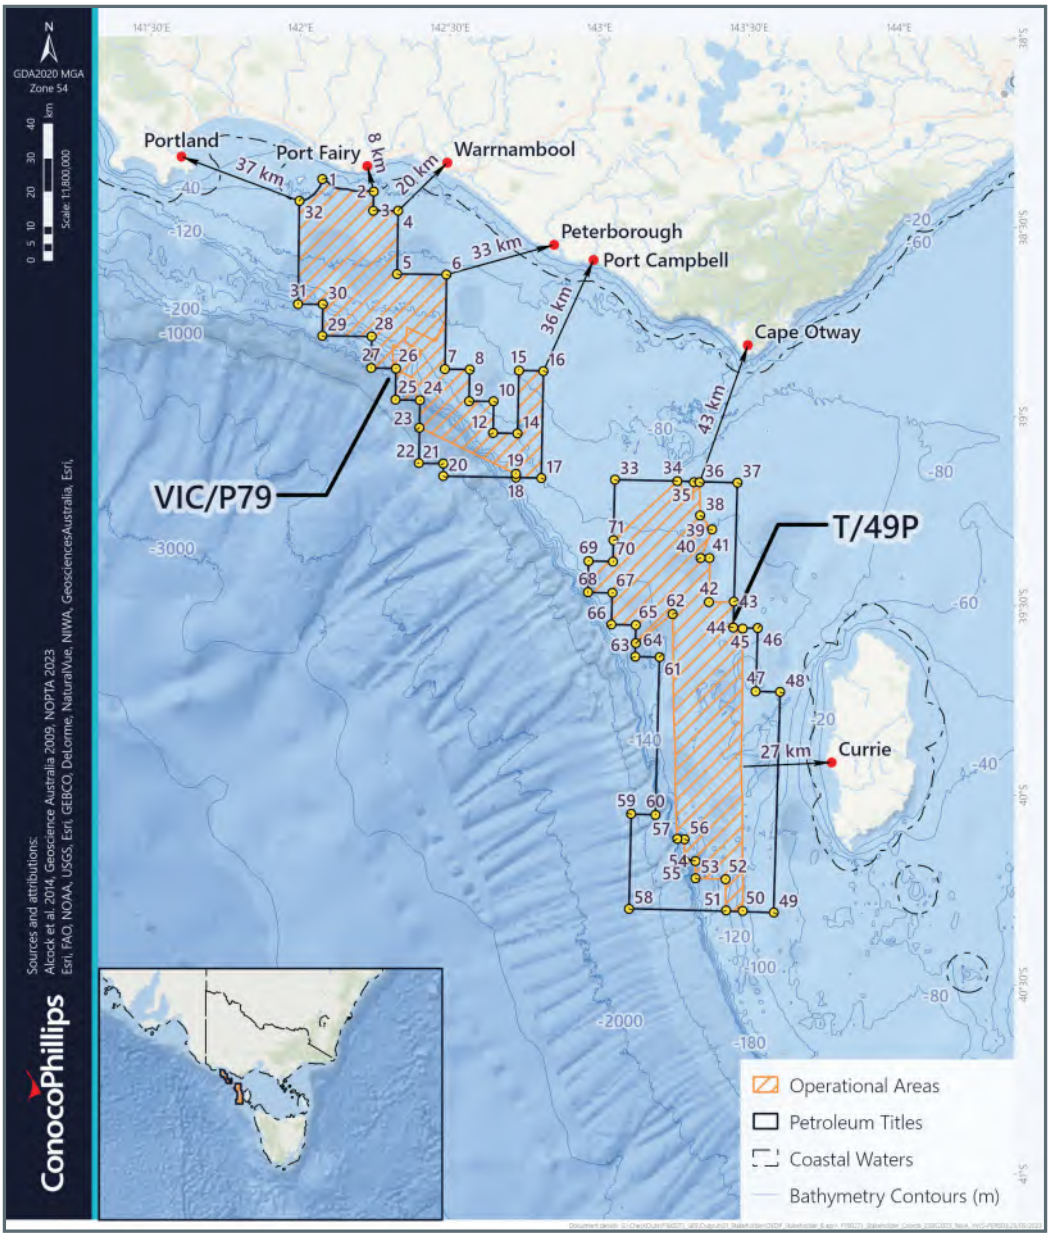
About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than January 2024.

We are committed to sustainably co-existing with other marine and coastal users, and carrying out our offshore activities in a manner which does not interfere with other marine users' drilling rights to a greater extent than is necessary.

Figure 1 (overleaf) shows the proposed operational areas and provides coordinates for corner points and distances to nearby coastal communities.



This information sheet summarises the ongoing assessment of potential impacts and risks to other marine and coastal users arising from the Otway Exploration Drilling Program.

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The Environment Plan will include an assessment of potential impacts and risks to other marine and coastal users that may arise from the exploration drilling program. This assessment has currently identified a number of marine and coastal users and values including recreation and tourism, commercial shipping, petroleum activities, renewable energy, defence activities, commercial fishing and cultural heritage.
- Exclusion zones will be established to support safe operations. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during the drilling program and prevent interactions or collisions with equipment or between vessels.
- Recreational diving is likely to be restricted to coastal waters in depths <18 m but with more advanced diving possible to 40 m. Water depths within the operational areas range between 35 and 670 m, which is mostly beyond the recognised maximum recreational diving depth of 40 m, and also an unlikely depth for recreational swimming. The sound generated by the activity has the potential to reach shallower waters if the drilling activity is in the northern portion of permit VIC/P79.

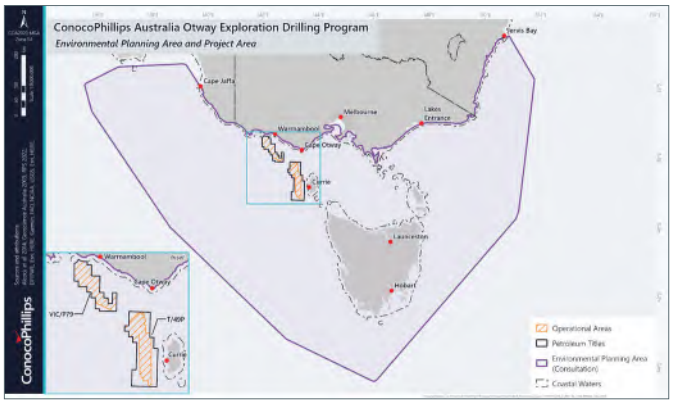
Overview



The Otway Exploration Drilling Program may affect the activities of other marine and coastal users. For example, the physical presence of seabed survey vessels, the drilling rig and support vessels used for the activity, and the establishment of exclusion zones, may result in the displacement of other marine users engaging in activities such as recreational and commercial fishing.

Other short-term petroleum activities, for example Vertical Seismic Profiling (VSP), have the potential to cause additional displacement if conducted in close proximity to coastal areas, with sound emissions from VSP limited to a maximum of 20 hours per well.

Figure 2 opposite shows the environmental planning area that has been applied to ensure that far ranging environmental values and sensitivities are appropriately identified and considered.

Environmental Planning Area Map

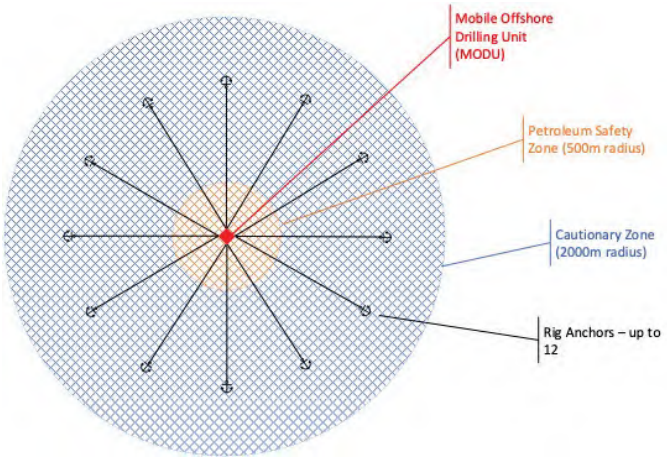
Figure 2

Potential Effects on Day-to-Day Activities

Potential displacement of other marine and coastal users will be determined by the following aspects:

1. Location

Up to six exploration wells will be drilled across both permit areas. The exact location of the wells is still to be determined.



2. Exclusion Zones

Exclusion zones are put in place as a safety precaution. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during seabed surveys and the drilling program and prevent interactions or collisions with equipment or between vessels. Three types of exclusion zones will be in place at set times and locations during the program.

3. Timing and Duration

ConocoPhillips Australia will undertake seabed surveys in up to nine locations, with the survey at each location expected to take approximately one week. Surveys will commence no earlier than January 2024.

For drilling, each well will typically take between 30 to 40 days but could take up to 90 days to complete, accounting for operational delays and weather events. Drilling will commence no earlier than October 2024.

Safe Navigation Area – A 500 m radius will be established around seabed survey vessels and any towed equipment when conducting seabed surveys.

Cautionary zone – a 2 km radius cautionary zone will be established around the drilling rig, once in position. This zone will cover the area of seabed anchors and mooring equipment and will be maintained by support vessels.

Petroleum Safety Zone (PSZ) – A 500 m radius petroleum safety zone will be enforced around the drilling rig once in position at each drilling location.

Reducing Impact and Risk

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to minimising impacts and risks to the marine environment as well as other marine and coastal users. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and the activities, functions and interests of other marine and coastal users. This involves establishing acceptable environmental standards and thresholds for specific activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts and risks.

Examples of mitigation and management measures that will be implemented are listed below:

- Exclusion zones will be put in place prior to the commencement of seabed survey and drilling activities. These will be communicated via notices to mariners. Vessel and drilling rig operating procedures will establish:
  - A 500 m radius Safe Navigation Area (SNA) will be monitored around the seabed survey vessels to minimise interactions with other vessels.
  - A mandatory 500 m Petroleum Safety Zone (PSZ) around each drilling location while the drilling rig is in position. This prohibits unauthorised vessels from entering or being present within the PSZ.
  - A 2 km cautionary zone will be in place around the drilling drilling rig while on location. To avoid entanglement and safety risks, fishing nets, lines or pots should not be placed within the cautionary zone.
  - Vessel speeds will also be limited within the 2 km cautionary zone, known as the drilling area.
- A Communication Plan will be prepared to ensure that relevant persons are aware and informed of the activity. Specific notifications will be provided to:
  - Australian Maritime Safety Authority (AMSA) Rescue Coordination Centre (RCC)
  - Australian Hydrographic Office (AHO)
  - Other relevant Authorities, and
  - Relevant Persons.
- ConocoPhillips Marine Assurance System ensures that project vessels meet all maritime laws and includes pre-commencement vessel inspections of class certification requirements under the Navigation Act 2012 and Marine Order 27 (Safety of Navigation and Radio Equipment) 2016; and Marine Order 30 (Prevention of Collisions) 2009.
- ConocoPhillips Australia will monitor the implementation and effectiveness of control measures for the duration of the activity and is required to report on environmental performance, including recordable incidents and non-compliances, to the independent regulator the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) at specified intervals during the exploration program. In addition, NOPSEMA typically conducts compliance inspections prior to and during the activity

Questions

and Answers

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

Will it be safe to swim and dive?

All potential drilling locations will be confined to water depths between 35 - 670 m. Although the recognised maximum recreational diving depth of 40 m and an unlikely depth for recreational swimming, the sound generated by the activity has the potential to reach the shallower waters.

In particular, the northern portion of permit VIC/P79 is located within close proximity to the shoreline of Victoria. If drilling occurs near the northern border of the permit area, commercial dive-fisheries and recreational water-based activities may be affected by aversion during some short-term activities.

Will I still be able to fish?

Fishing within the permit area will be allowed, but not within established safe navigation areas, cautionary zones or the petroleum safety zone.

How will we know vessels and facilities are out there?

There will be a 'Notice to Mariners' provided by the Australian Hydrographic Office to inform other marine users of the activity taking place and of the exclusion zones in place, as regulated by the AMSA.

The drilling rig will also be equipped with an Automatic Identification System (AIS) installed to ensure the facility is detected at sea by other vessels or operators. Further, additional lighting as per Commonwealth required guidelines will be installed on the drilling rig and support vessels, which will allow easy identification.

Where can I find information on exclusion zones relevant to me?

PSZ notices will be published in the Gazette on the NOPSEMA website. A description of the activity, location and the time frame of exclusion will also be available at:

https://www.nopsema.gov.au/offshore-industry/directions-notices-alerts/gazetted-notices

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

ConocoPhillips Australia

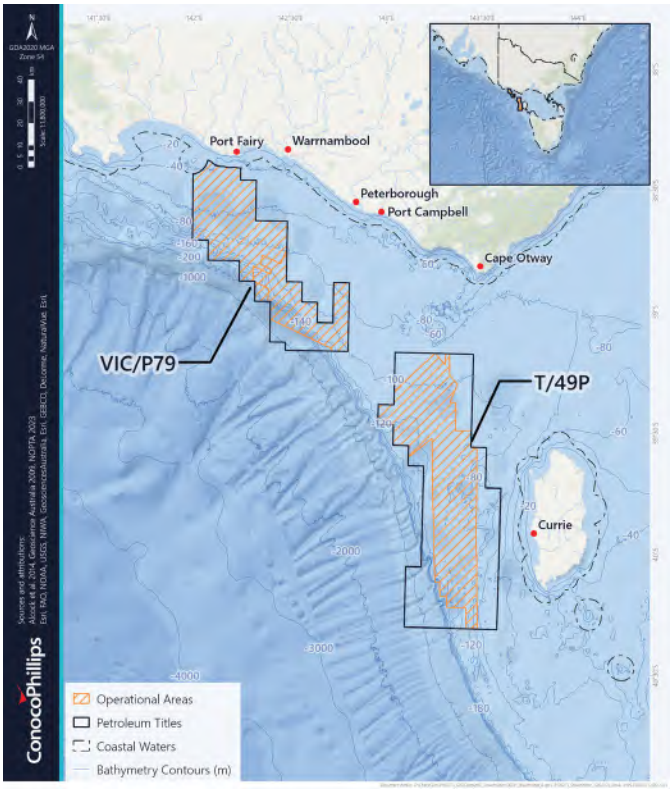
Marine Mammals

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced the preparation of an Environment Plan that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than January 2024.



We are committed to ensuring that marine mammals can continue to undertake biologically important behaviours in the offshore environment, with no unacceptable impacts to critical life-cycles stages or population characteristics because of the Otway exploration drilling program.

This information sheet summarises the ongoing assessment of potential impacts and risks to marine mammals arising from exploration activities.

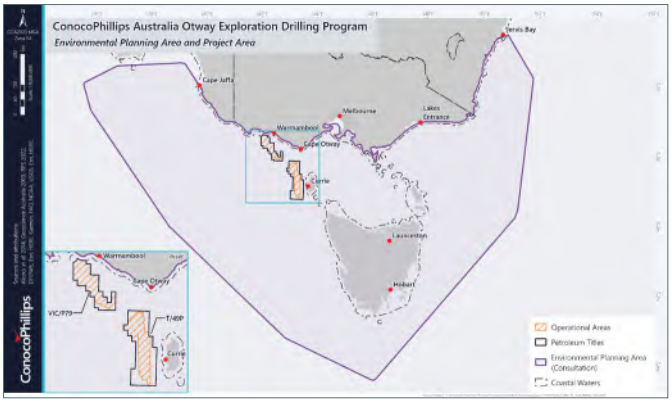


Figure 1 below shows the permit areas, the operational areas within which exploration activities may occur, and the Environmental Planning Area that has been applied to ensure that far ranging environmental values and sensitivities are appropriately identified and considered.

Map of Permit Areas

Environmental Planning Area Map

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The EP will include an assessment of potential impacts and risks to marine mammals that might arise from the exploration program.
- A preliminary assessment of impacts and risks to marine mammals has identified that:
  - Several species of whales, dolphins and seals are typically found in the Otway Basin, many of which exhibit biologically important behaviours such as foraging.
  - Marine mammals are particularly sensitive to the effects of underwater noise which has the potential to result in hearing impairment, stress, and changes in behaviour at a range of effect distances.
  - Where underwater noise has the potential to affect biologically important behaviours of threatened species, effective control measures will need to be in place.
- The purpose of this information sheet is to provide details of potential impacts and risks that have been identified, as well as the measures proposed to reduce those impacts and risks, to support consultation prior to the submission of the Environment Plan.
- If you would like to ask questions or provide feedback, see the contact details at the end of the information sheet.

Marine Mammals in the Area

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal). In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:

- Southern right whales
- Blue whales
- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/ spotted bottlenose dolphins, and
- Australian sea lion

Potential Interactions with Marine Mammals

The preliminary environmental impact and risk assessment has identified aspects of exploration activities that have the potential to impact, or pose a risk to, marine mammals as shown below.

Aspect	Potential for impact to marine mammals
Underwater Sound	Moderate consequence to some whale species
Interactions with Marine Fauna	Low risk of vessel collision with marine mammals
Loss of Material or Waste Overboard	Low risk of entanglement from loss of material overboard
Accidental Release of Hydrocarbons	Medium risk rating to marine mammals

Impacts and risks vary for different species. Impacts that have the potential to result in moderate consequences, and risks that have an inherent risk rating of medium, are discussed in more detail below.

Underwater Sound

Marine mammals, particularly cetaceans (i.e., whales and dolphins) rely on hearing as their principal sense for navigation, communication and/or hunting and can be extremely vulnerable to noise created by humans. The effects of underwater sound can include hearing impairment, stress and changes in behaviour from sounds that mask environmental noise. Each species of marine mammal has a different sensitivity to underwater noise and whales and dolphins can be classified into low, high and very high frequency cetaceans based on their hearing (Note: No species of very-high frequency cetaceans are expected to be present within the Environmental Planning Area).

The occurrence and significance of a change in behaviour varies by individual, species and circumstances. Some sounds may not cause any response, while others may result in minor to significant changes in a variety of behaviours, such as diving, surfacing, vocalizing, feeding or mating.

To assess the potential effects of a sound-producing activity, it is necessary to first establish the sound levels that may affect marine mammals. Due to the variety of species considered, sound levels are analysed and evaluated against effects including mortality, injury, temporary reduction in hearing sensitivity and behavioural disturbance.

The temporary loss of sensitivity is called a temporary threshold shift (or TTS). As the sound exposure increases, threshold shift will eventually become permanent, and this effect is called a permanent threshold shift (or PTS). Permanent threshold shift can occur because of repeated occurrences of temporary threshold shift, or because of a single exposure to a very intense sound.

Noise Modelling

ConocoPhillips Australia has commissioned a modelling study of underwater sound levels associated with the Otway exploration drilling program to inform the impact assessment process. The study predicts the distances over which exploration activities have the potential to impact marine mammals, known as the 'effect distance'. The sound from a range of activities is typically assessed, including those with the most significant predicted impacts. The preliminary results from the impact assessment are presented in Table 1.

Table 1: Predicted impacts of underwater noise to marine mammals

Species	Worst-case predicted impacts for currently identified activities
Low frequency cetaceans *(e.g., Humpback whales, Blue whales and Southern right whales)*	• Short-term behavioural changes within 12.6 km from the noise source during resupply whilst drilling and vessel on standby at locations on the continental shelf. This distance is predicted to increase in the offshore direction when activities occur close to the shelf break. • Temporary threshold shift within 3.6 km and permanent threshold shift within 320 m of the noise source for the short duration of mooring activities. • No mortality.
High frequency cetaceans *(e.g., Pygmy sperm whale and Dwarf sperm whale)*	• Short-term behaviour changes within 12.6 km from the noise source for specific activities. • Temporary threshold shift within 160 m and permanent threshold shift within 60 m from the noise sources during resupply whilst drilling and vessel on standby. • No mortality.
Pinnipeds *(e.g. Australian sea lion)*	• Short-term behaviour changes within 12.6 km from the noise source for specific activities. • Temporary threshold shift within 100 m and permanent threshold shift within 60 m from the noise source during drilling with resupply and vessel on standby. • No mortality.

Hydrocarbon Release

Although an accidental hydrocarbon release has been determined to be highly unlikely to occur, the potential impacts are assessed to ensure appropriate mitigation measures and response plans are in place. In the event of an accidental release, hydrocarbons may be found on the surface of the water, at various water depths through the water column and eventually on the shoreline, meaning that a range of marine species may be affected in the highly unlikely event that this occurs. Potential impacts may occur from external as well as internal exposure to hydrocarbons. The severity of impacts would be highly dependent on the hydrocarbon characteristics as well as the species lifestyle characteristics.

An accidental release of hydrocarbons can result in a change in water quality that may result in injury or mortality to marine mammals and changes in behaviour. If an incident occurred, impacts would largely be restricted to the upper water column and are expected to be restricted to individual fauna and unlikely to impede the recovery of a protected species.

As the risk of an accidental release of hydrocarbons cannot be completely eliminated, detailed response plans for credible spills are required to be developed to demonstrate preparedness in the extremely unlikely event a spill occurs. These plans are reviewed with state control agencies and must be accepted by the independent regulator, NOPSEMA. In the highly unlikely event of a spill, the response will include integration with local, national and international response organisations to mobilise resources including experts and specialist equipment.

Reducing impact

The objectives of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations (2009) are to ensure that any petroleum activity is carried out in a manner that is consistent with the principles of ecologically sustainable development as set out in section 3A of the EPBC Act. Additionally, these activities must be carried out in a manner that reduces the environmental impacts and risks associated with them to as low as reasonably practicable (ALARP), while also ensuring that any remaining environmental impacts and risks are at an acceptable level.

These objectives are critical to the protection of the marine environment and marine ecosystems from negative impacts associated with offshore petroleum activities. The principles of ecologically sustainable development promote the responsible use of natural resources and emphasise the need to consider the long-term impacts of human activities on the environment.

Reducing environmental impacts and risks associated with offshore petroleum activities to ALARP is an important aspect of responsible and sustainable business practices in the offshore petroleum industry. This involves identifying potential environmental impacts and risks associated with an activity, implementing measures to minimise those impacts and risks, and continually monitoring and evaluating the effectiveness of those measures.

Ensuring that any remaining environmental impacts and risks are at an acceptable level is also critical to protecting the marine environment and marine ecosystems. This involves establishing acceptable environmental standards and thresholds for specific activities and ensuring that the environmental impacts and risks associated with an activity do not exceed those standards and thresholds.

Through the development of the Environment Plan and during consultation, ConocoPhillips Australia will identify and evaluate mitigation and management measures to minimise potential impacts to protected species, particularly during periods of peak biological importance. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

Examples of mitigation measures that will be implemented are listed below:

- Vessels will comply with EPBC Regulations 2000 – Part 8 Division 8.1 interacting with cetaceans which requires vessels to adhere to an increased caution zone of 500 m between whales and vessels.
- All activities will comply with a Marine Mammal Adaptive Management Procedure outlining specific actions to minimise impacts from anthropogenic noise in accordance with:
  - Conservation Management Plan for the Blue Whale, and
  - Conservation Management Plan for the Southern Right Whale.
- Activity-specific emergency preparedness and response plans and capability will be in place prior to activity commencement.

Questions

and Answers

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

How is ConocoPhillips Australia ensuring the ongoing protection of endangered species?

ConocoPhillips Australia has been conducting marine mammal surveys since 2021 to produce contemporary data that supports effective decision-making in the Otway Basin. This research continues to improve knowledge on the presence/absence, distribution and behaviours of key species during and outside of known peak seasons. Data is made available to government agencies and research organisations and can be made available to other commercial operators in the region through a memorandum of understanding.

ConocoPhillips Australia is an advocate for community-based research programs with the Dolphin Research Institute, who are expanding their Two Bays Whale Program. We also support research, through the Arthur Rylah Institute, in expanding their southern right whale aerial monitoring program along the Victorian coastline.

Will ConocoPhillips Australia restrict activity for seasonally important behaviours?

ConocoPhillips Australia recognises the importance of the offshore Otway Basin and nearby coastlines for a number of species including blue whales who forage through the area in summer, and southern right whales who calve and aggregate along the Victorian coastline in winter.

Our approach is to ensure that activities are scheduled to minimise potential interactions with protected species, particularly during peak biologically important times. However, given the diversity of biologically important activities with differing peak periods, there is no perfect window where exploration activities can occur without the potential for impact in the absence of effective controls.

The Environment Plan must demonstrate that, in all cases, the activity is undertaken in a manner that continually reduces environmental impacts and risks to a level that is as low as reasonably practicable (ALARP) and that any residual impacts or risks are at an acceptable level. This will require the implementation of effective control measures that mitigate impact to whichever species is likely to be present.

Does ConocoPhillips Australia know that the proposed activity is close to and overlaps Biologically Important Areas (BIA's) for whales?

Yes, ConocoPhillips Australia recognises the biological importance of the offshore Otway Basin and nearby coastlines for a number of species including blue whales who forage through the area in summer, and southern right whales who calve and aggregate along the Victorian coastline in winter.

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

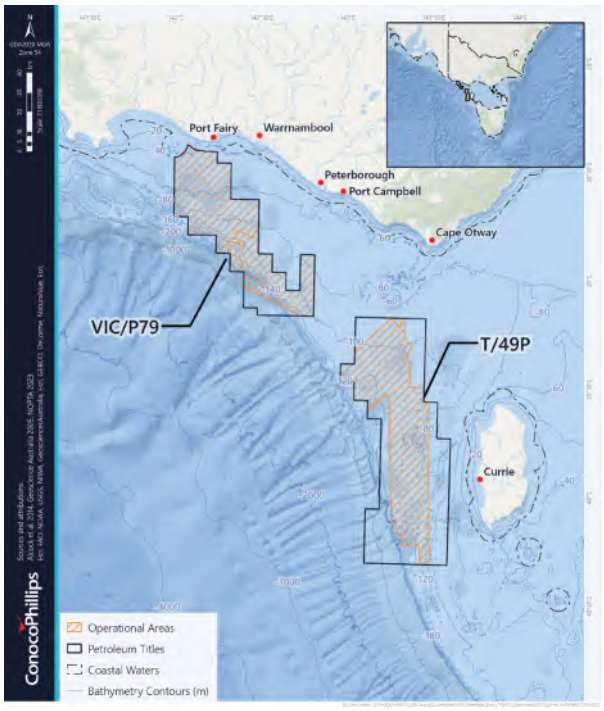
ConocoPhillips
Australia

Historical Military Ordnance Risks

(Unexploded Ordnance)

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Program



ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed assessments which will commence no earlier than January 2024.

This information sheet summarises the ongoing assessment of the risk of interaction between vessels or equipment associated with the Otway exploration drilling program and any historic defence activities in the operational area. Figure 1 shows the proposed location of the program.

Map of Permit Areas *Figure 1*

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration program in the Otway Basin and is preparing an Environment Plan which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The EP will include an assessment of impacts and risks associated with historical defence activities in the area, including the potential presence of unexploded ordnance.
- Both permit areas overlap a historic air-to-air firing range which the government has classified as having a Slight Potential for unexploded ordinance (UXO) presence, with most ammunition used in this area being considered low risk.
- There is no overlap between the permit areas and historic offshore UXO sea dumping sites. The closest sea dumping site to either permit area is located 21 km from T/49P.

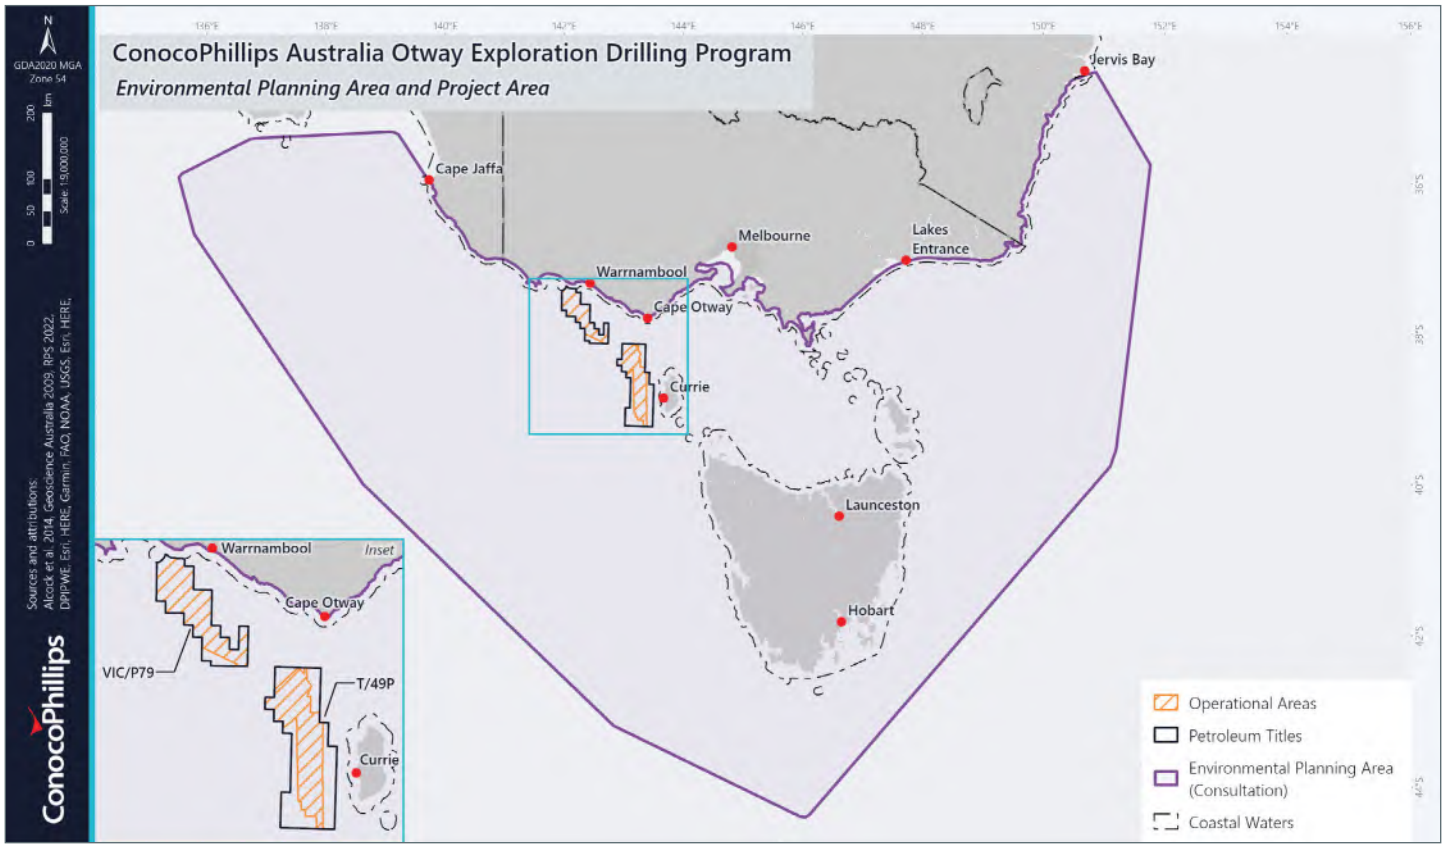
Unexploded Ordnance Explained

Unexploded ordnance (UXO) is ammunition which has been previously fired but was defective and did not function correctly at the time of use. These objects still have the potential to explode and therefore pose a risk to any person or object that comes into contact with them. UXO presence in offshore areas of Australia is a result of past military training activities that used live ammunition or the disposal (sea dumping) of waste materials into the marine environment.

The Federal Government Department of Defence classify offshore areas based on their potential to contain UXO. Both permit areas within the Otway exploration drilling program overlap with a historic air-to-air firing range which is now classified by the government as having a Slight Potential for UXO presence. Most ammunition used in this area are not highly explosive and considered low risk. Further, there is no overlap between the permit areas and offshore UXO sea dumping sites. The closest sea dumping site to either permit area is located 21 km from T/49P.

Risk Assessment

The risks associated with UXO were assessed to establish a 'UXO Risk Profile' for the permit areas. This risk profile considers the probability of encountering UXO, the probability of UXO detonation, and the consequence of detonation.



Encountering UXOs within the permit areas is considered low risk for all activities, except for some activities involving subsea equipment. The risk of a UXO being snagged by equipment, for example when collecting seabed samples, and subsequently being brought onto a vessel was assessed as Moderate.

Reducing Impact and Risk

ConocoPhillips Australia is taking action to reduce the risk of encountering UXOs and to minimise any impact in the unlikely event of interaction. Mitigation measures which will be evaluated in the Environment Plan include:

- Conducting seabed surveys using speciality equipment to detect the presence of metals and collect seabed images, to inform activities that interact with the seafloor or sediments.
- Delivering an explosives safety awareness briefing to personnel carrying out seabed survey and exploration drilling activities, and
- Maintaining on-call access to an explosives engineer to provide specialist advice in the unlikely event of UXO encounter.

Environmental Planning Area Map

Questions

and Answers

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will involve seabed surveys and will commence no earlier than January 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

ConocoPhillips Australia continues to interpret available data to prioritise and select final drilling locations with the highest likelihood of success. This process involves a careful balance of science, economics, and risk management to ensure that drilling efforts are safely executed with minimal impact to the environment.

What happens if ConocoPhillips Australia finds a UXO during the seabed surveys?

Prior to commencing work, ConocoPhillips Australia will ensure that an explosives safety and awareness briefing is provided to personnel carrying out seabed survey and exploration drilling activities. The briefings will allow the project team to plan the proposed works and deal with a suspicious item or UXO discovery incident.

In addition, ConocoPhillips Australia will maintain on-call access to explosives engineer who can provide real time assistance to drilling rig and vessel personnel in dealing with a potential UXO encounter.

What happens to marine life if a UXO is detonated?

The Department of Defence has advised that most of the ammunition used in this area are not highly explosive and the risk from this ammunition is negligible.

How does ConocoPhillips Australia work with the Department of Defence to ensure the safety of other marine users?

The Department of Defence has been identified as a relevant authority for the purposes of consultation during Environment Plan development. ConocoPhillips provides information on the type of activity and the locations and requests advice from the Department to inform their risk assessment process. This information has been supported by an additional military and UXO desktop study and risk assessment conducted for ConocoPhillips Australia by RPS Explosives Engineering Services in 2022, which assessed the risk associated with each type of munition that may be present and each pathway to exposure and confirmed a low risk of encountering UXOs within the operational areas.

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

ConocoPhillips Australia

Otway Exploration Drilling Program

ConocoPhillips Australia

Project Update

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Drilling Program

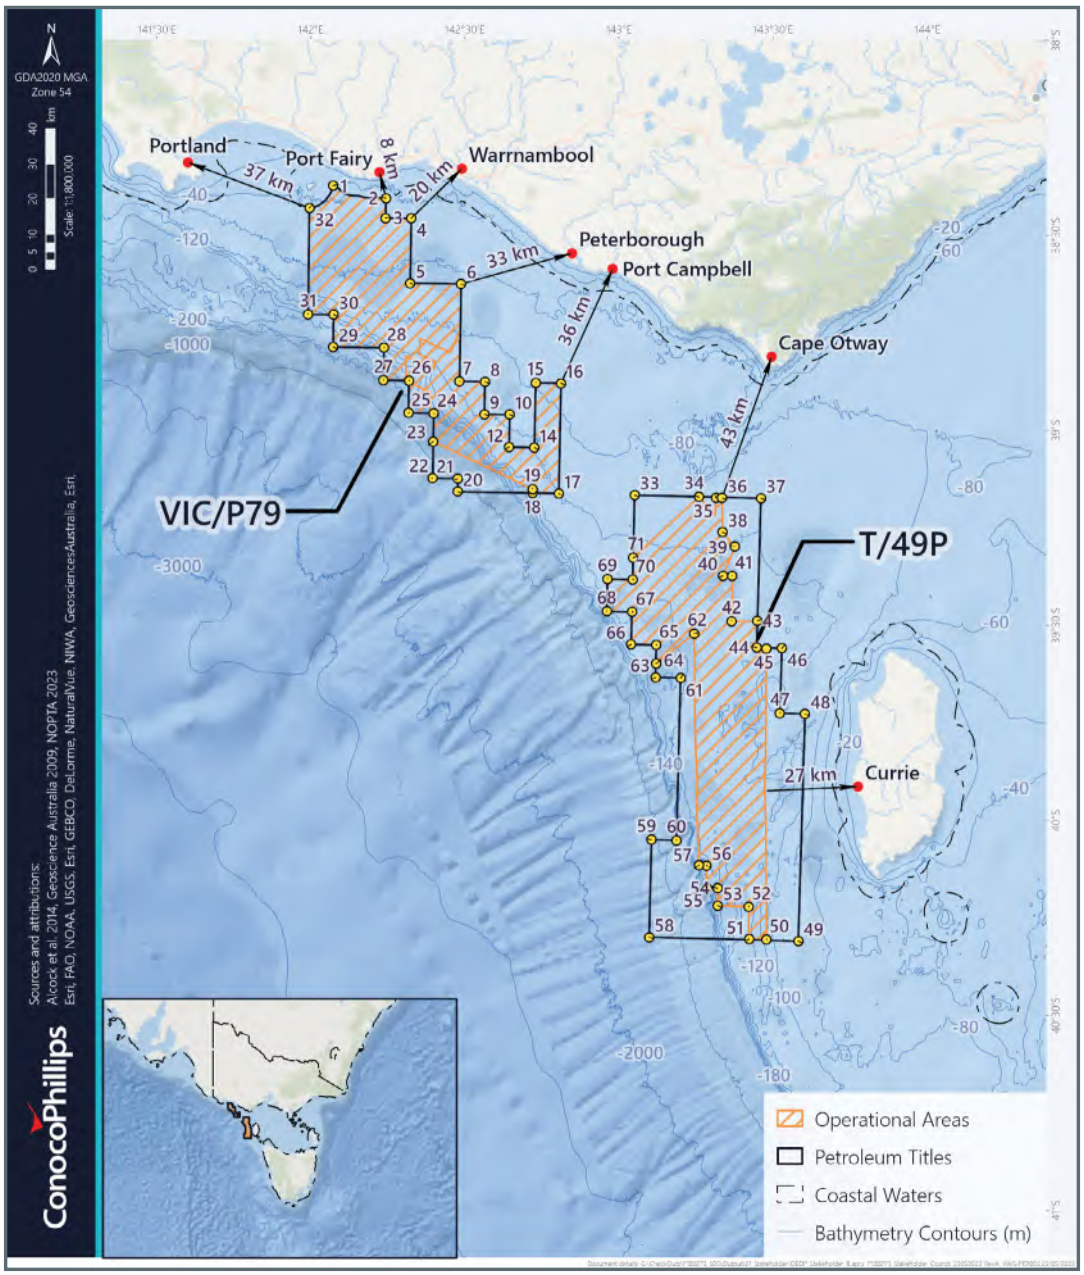
ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of Environment Plan development and consultation, where we will share our evaluations of environmental impacts and risks.

We also have an online mapping tool where individuals, organisations and associations can continue to share feedback about environmental values and sensitivities.

How to Participate in the Regulatory Approvals Process



NOPSEMA has recently published a brochure with information for the community about consultation on offshore petroleum environment plans. The brochure has excellent information to help you or your organisation decide if you are a relevant person and can be found here. We strongly encourage those of you uncertain about whether you are a relevant person to consider this information.

If you believe you are a relevant person, we need to understand your activities or interests so that we can provide the right information to you. When engaging with our team we encourage you to be specific about how you might potentially be affected, so that we can properly consider how we might avoid or lessen those impacts or risks.

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- A range of information sheets providing information on the evaluation of environmental impacts and risks has been developed to support consultation.
- ConocoPhillips Australia is now looking for feedback on these evaluations.
- Individuals, organisations and associations continue to be able to share feedback on locations with values and sensitivities through an online interactive map via the consultation hub.

Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and VIC/P79	Operational Areas within T/49P and VIC/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km^2 (Nine locations, each 6 x 6 km) within Operational Areas	75 km^2 (Six locations, each a 2 km radius Drilling Area) within Operational Areas

Identifying Environmental Values and Sensitivities

To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.

Individuals, organisations and associations are encouraged to visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

Commercial Fishing

The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:

- Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.
- Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10s to 100s of metres and will not affect the long-term sustainability of fisheries.
- Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

The full Commercial Fishing information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Marine Mammals

The EP will include an assessment of potential impacts and risks to marine mammals that might arise from the exploration program.

A preliminary assessment of impacts and risks to marine mammals has identified that:

- Several species of whales, dolphins and seals are typically found in the Otway Basin, many of which exhibit biologically important behaviours such as foraging.
- Marine mammals are particularly sensitive to the effects of underwater noise which has the potential to result in hearing impairment, stress and changes in behaviour at a range of effect distances.
- Where underwater noise has the potential to affect biologically important behaviours of threatened species, effective control measures will need to be in place.

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal).

In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:

- Southern right whales
- Blue whales
- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/spotted bottlenose dolphins, and
- Australian sea lion

The full Marine Mammals information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Seabirds, Penguins and Marine Turtles

The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.

A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:

- Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
- Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
- A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging, breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the EPBC Act. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

The following species are known to occur within the Environmental Planning Area and exhibit one or more of these important behaviours:

- Caspian tern
- Flesh-footed shearwater
- Little penguin
- Shy albatross
- Wedge-tailed shearwater
- White-fronted tern
- Common-diving petrel
- Great-winged petrel
- Pacific gull
- Soft-plumage petrel
- White-capped albatross
- Black-faced cormorant
- Greater crested tern
- Short-tailed shearwater
- Sooty shearwater
- White-faced storm petrel

Marine turtles are highly migratory and rely on both marine and terrestrial habitats. Although they may occur within the Environmental Planning Area, no habitat critical to their survival occurs in the waters off southern Australia and they are not known to exhibit any identified biologically important behaviours in this area. The closest biologically important areas for marine turtles are located south of Brisbane, QLD, and at Shark Bay, WA. Even though the presence of individuals within the area is expected to be of a transient nature, the potential impacts of the Otway Exploration Drilling Program on marine turtles has been assessed, as they are listed as Matters of National Environmental Significance and are protected under the EPBC Act.

The full Seabirds, Penguins and Marine Turtles information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Other Marine and Coastal Users

The Environment Plan will include an assessment of potential impacts and risks to other marine and coastal users that may arise from the exploration drilling program. This assessment has currently identified a number of marine and coastal users and values including recreation and tourism, commercial shipping, petroleum activities, renewable energy, defence activities, commercial fishing and cultural heritage.

The Otway Exploration Drilling Program may affect the activities of other marine and coastal users. For example, the physical presence of seabed survey vessels, the drilling rig and support vessels used for the activity, and the establishment of exclusion zones, may result in the displacement of other marine users engaging in activities such as commercial fishing.

Other short-term petroleum activities, for example, Vertical Seismic Profiling (VSP), have the potential to cause additional displacement if conducted in close proximity to coastal areas, with sound emissions from VSP limited to a maximum of 20 hours per well.

Exclusion zones will be established to support safe operations. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during the drilling program and prevent interactions or collisions with equipment or between vessels.

All potential drilling locations will be confined to water depths between 35 - 670 m. Recreational diving is likely to be restricted to coastal waters in depths <18 m but with more advanced diving possible to 40 m. Water depths within the operational areas are mostly beyond the recognised maximum recreational diving depth of 40 m, which is also an unlikely depth for recreational swimming. The sound generated by the activity has the potential to reach shallower waters if the drilling activity is in the northern portion of permit VIC/P79.

The full Other Marine and Coastal Users information sheet, including examples of mitigation measures is available in the document library of the consultation hub.

Emissions and Discharges

The EP will include a detailed assessment of potential impacts and risks arising from the air emissions and planned discharges associated with the Otway Exploration Drilling Program. Activities conducted as part of the Otway Exploration Drilling Program will result in emissions to the atmosphere, as well as discharges to the marine environment.

A preliminary assessment of potential impacts associated with emissions and discharges has identified:

- Air emissions from seabed survey vessels, the drilling rig and support vessels have the potential to result in localised changes in air quality.
- Planned discharges from survey vessels, the drilling rig and support vessels have the potential to result in localised changes to water quality that will quickly dissipate in the water column.
- Discharges from drilling operations, including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid from testing subsea equipment, have the potential to result in localised changes to water and sediment quality.

Historical Military Ordnance Risk (Unexploded Ordnance)

The EP will include an assessment of impacts and risks associated with historical defence activities in the area, including the potential presence of unexploded ordnance.

Both permit areas overlap a historic air-to-air firing range which the government has classified as having a Slight Potential for unexploded ordinance (UXO) presence, with most ammunition used in this area being considered low risk.

There is no overlap between the permit areas and historic offshore UXO sea dumping sites. The closest sea dumping site to either permit area is located 21 km from T/49P.

The full Historical Military Ordnance Risk information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Contact us

ConocoPhillips Australia values consultation and feedback and invites consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.

You are invited to provide feedback, request a meeting and ask questions on the proposed activity by contacting us in one of the following ways:

T: 07 3182 7122
PO BOX 1243, MILTON, QLD, 4064
conocophillips.com.au

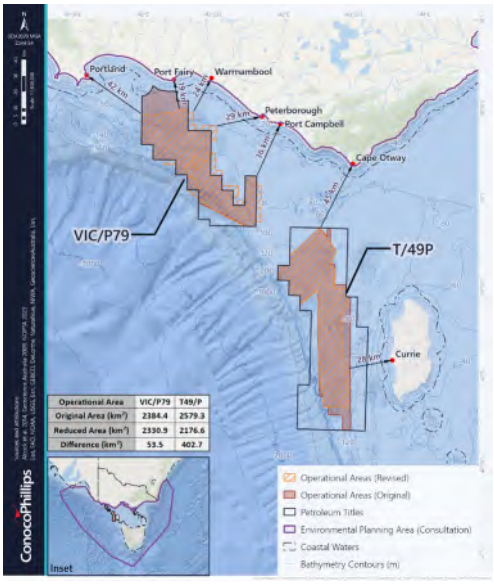
ConocoPhillips Australia

Otway Exploration Drilling Program

ConocoPhillips Australia

Project Update

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.



About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than April 2024.

This information sheet summarises the next phase of Environment Plan development and consultation.

Revised Permit and Operational Areas Map

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- ConocoPhillips Australia has secured a harsh environment semi-submersible rig as part of a rig consortium. Drilling remains dependent on the EP being accepted by NOPSEMA.
- ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.
- ConocoPhillips Australia is asking relevant persons to provide feedback, including objections or claims, about the potential impacts of the activity.
- Based on the (now identified) operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction in total area. As a result of this refinement, some operational areas now extend outside of the petroleum titles. Additional information on these changes, and a revised map with coordinates, are provided within this information sheet.

Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Changes made to the proposed activity

Operational Area: Based on operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction of total area. As a result of this refinement, some operational areas now extend past title permit boundaries.

Operational Area	Original Area (km2)	Reduced Area (km2)	Overall reduction (km2)
VIC/P79	2384.4	2330.9	53.5
T/49P	2579.3	2176.6	402.7

Operational Areas represent the area within which petroleum activities can occur. Operational areas are located predominantly within the relevant petroleum titles (T/49P and VIC/P79) and have been selected based on similar constraints around rig operations and well design. Where operational areas extend outside of a petroleum title, ConocoPhillips Australia will apply for and secure an Access Authority (AA) from NOPTA, prior to the commencement of activities in these areas. Activities in these areas will be 'other than drilling a well' and may include the placement of anchors, the collection of geophysical and geotechnical data, and the operation of vessels.

Design Envelope: The initial timing provided for the commencement of seabed surveys was 'no earlier than 1 January 2024'. This has now been extended to 'no earlier than 1 April 2024'. The term of the approval for these activities remains unchanged – at 31 December 2028, to allow for the drilling of a maximum of six exploration wells.

Parameter	Seabed Survey	Drilling
Earliest Start Date	1 April 2024	1 October 2024
Latest Start Date	31 December 2028	31 December 2028
Maximum Number of Locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells)
Spatial Extent (within which activity can occur)	Operational Areas associated with T/49P and VIC/P79	Operational Areas associated with T/49P and VIC/P79

Consultation Extended

Based on relevant person feedback, ConocoPhillips Australia has extended consultation on the proposed activity until **30 September 2023**. This ensures all relevant persons have a reasonable period of time to consider the information we have provided during the course of consultation and provide feedback to us on the potential impacts of the activity on their functions, interests and activities.

Consultation with relevant persons is an important part of developing and reviewing Environment Plans. Relevant persons are defined in the regulations as *a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the environment plan.* Please note, all consultation records will be provided to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) and published with the Environment Plan, unless you advise us that you don't want that information published.

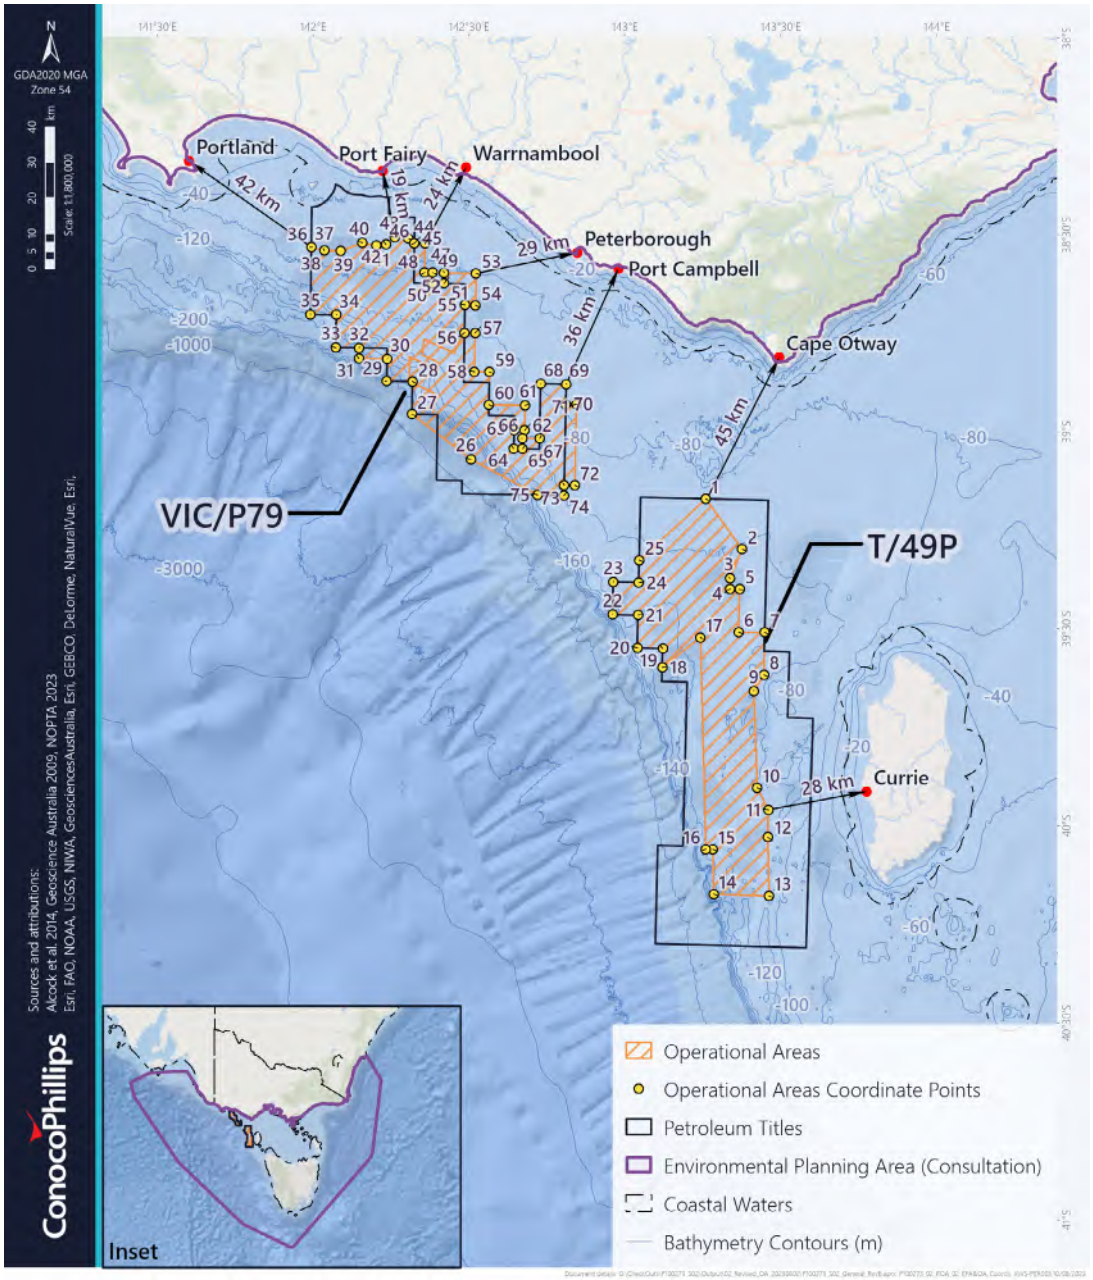
Provide feedback on draft Environment Plan chapters

As part of ongoing consultation, ConocoPhillips Australia is releasing draft EP chapters for review. We are asking relevant persons to raise concerns, including objections or claims, about the potential impacts of the activity. We are also seeking information about how relevant persons may be affected and feedback about how we intend to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

By providing the draft EP chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

Relevant persons can view the draft EP chapters and information on how to provide feedback via the consultation hub by scanning the QR code or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by **30 September 2023**, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.



How to provide feedback on the draft Environment Plan chapters

There are three ways to provide feedback on the draft EP chapters:

- Fill out the feedback form. This form is ideal for short-form feedback, objections or claims and is located on the consultation hub.
- Send detailed feedback, including your assessment of the possible consequences of the proposed activity on your functions, interests or activities and any objections or claims to otway@conocophillips.com or PO BOX 1243, MILTON, QLD, 4064.
- Request specific information and/or an opportunity to discuss the proposed activity and provided information with a member of the ConocoPhillips Australia's Otway Exploration Drilling Program team by emailing otway@conocophillips.com or calling 07 3182 7122.

Please note, PDF versions of EP chapters can be made available for relevant persons on request. In addition, excerpts or a summary of EP information, e.g. specific to particular aspects or receptors, can also be provided on request.

Questions

and Answers

Why does the new operational area in VIC/P79 now extend beyond the boundary of the permit?

Based on the (now identified) operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction in total area. As a result of this refinement, some operational areas now extend outside of the petroleum titles. Additional information on these changes, and a revised map with coordinates, are provided within this information sheet.

Operational Areas represent the area within which petroleum activities can occur. Operational areas are located predominantly within the relevant petroleum titles (T/49P and VIC/P79) and have been selected based on similar constraints around rig operations and well design. Where operational areas extend outside of a petroleum title, ConocoPhillips Australia will apply for and secure an Access Authority (AA) from NOPTA, prior to the commencement of activities in these areas. Activities in these areas will be 'other than drilling a well' and may include the placement of anchors, the collection of geophysical and geotechnical data, and the operation of vessels.

If I don't want to be consulted as a relevant person, can I still provide feedback on the draft EP chapters?

Yes, the best way for individuals not undertaking consultation through the relevant person consultation process is to complete the online feedback form on the consultation hub.

Why have you signed a contract for a drilling rig when you don't have an approved EP?

It is important to know that no activity can occur prior to the acceptance of the EP by NOPSEMA. ConocoPhillips Australia has secured a harsh environment semi-submersible rig as part of a rig consortium. Securing the services of a drilling rig and mobilising it to the Otway Basin is a considerable logistical and commercial undertaking. To ensure availability of a drilling rig, this process is often undertaken at the same time as EP development and relevant person consultation.

What is a semi-submersible drilling rig?

A semi-submersible drilling rig is a rig that can float like a ship while moving under its own power, or when being towed into position, but is then partially submerged using ballast water to enhance stability on location prior to drilling. Once drilling is completed, the rig is refloated before moving on to the next location.

Why do you keep asking people to add to your online map?

The Environmental Planning Area covers the broader area within which environmental values and sensitivities and functions, interests and activities are identified for consideration in the Environment Plan. It encompasses a wide range of habitats and marine species including fish, crustaceans, birds, marine turtles, marine mammals and kelp forests. The marine environment also supports a range of functions, interests and activities such as cultural values and socio-economic activities like commercial fishing, shipping, gas production, tourism and recreational activities.

The Environmental Planning Area also encompasses the modelled area that could be impacted at low thresholds in the extremely unlikely event there was a loss of well control or marine diesel oil release. The Environmental Planning Area in no way represents the actual extent of any single spill, but rather, it establishes the area within which ConocoPhillips Australia needs to be prepared and able to respond to an incident. ConocoPhillips Australia is also required to submit an Oil Pollution Emergency Plan (OPEP) to NOPSEMA with the EP for assessment.

The interactive map of the Environmental Planning Area is available via our online consultation hub.

Questions

and Answers *continued*

Have you finished processing the seismic data for T/49P yet?

Yes, the processing of the seismic data acquired over T/49P as part of the Sequoia 3D marine seismic survey acquired in 2021 has been completed. ConocoPhillips Australia has commenced assessing and interpreting the seismic data as part of identifying potential prospects for the Otway Exploration Drilling Campaign.

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than April 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

The process for selecting drilling locations involves several steps, including the acquisition and processing of seismic data, interpretation of the data to select high probability of success targets, and efficiency of the program to prove up resources with the least amount of wells. A summary of current activities to support this effort are described below:

1. Interpretation of seismic data: Skilled geoscientists analyse the processed data to identify potential drilling locations. They look for features such as faults, folds and stratigraphic traps that could indicate the presence of hydrocarbons.
2. Selection of high probability targets: After identifying potential drilling locations, geoscientists prioritise them based on their likelihood of success. They consider factors such as the quality and quantity of the reservoir, the geologic complexity of the area and the cost of drilling.
3. Efficiency of the program: The goal is to prove up resources with the least number of wells, which involves optimising the drilling program whilst maximising the chance of success.

Overall, the process for selecting drilling locations is a complex and multidisciplinary effort that requires skilled professionals and advanced technology. It involves a careful balance of science, economics and risk management to ensure that drilling efforts are successful and efficient.

Have we missed anyone?

If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.

ConocoPhillips Australia

Unplanned Hydrocarbon Release

ConocoPhillips Australia is planning to undertake exploration activities in operational areas associated with offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

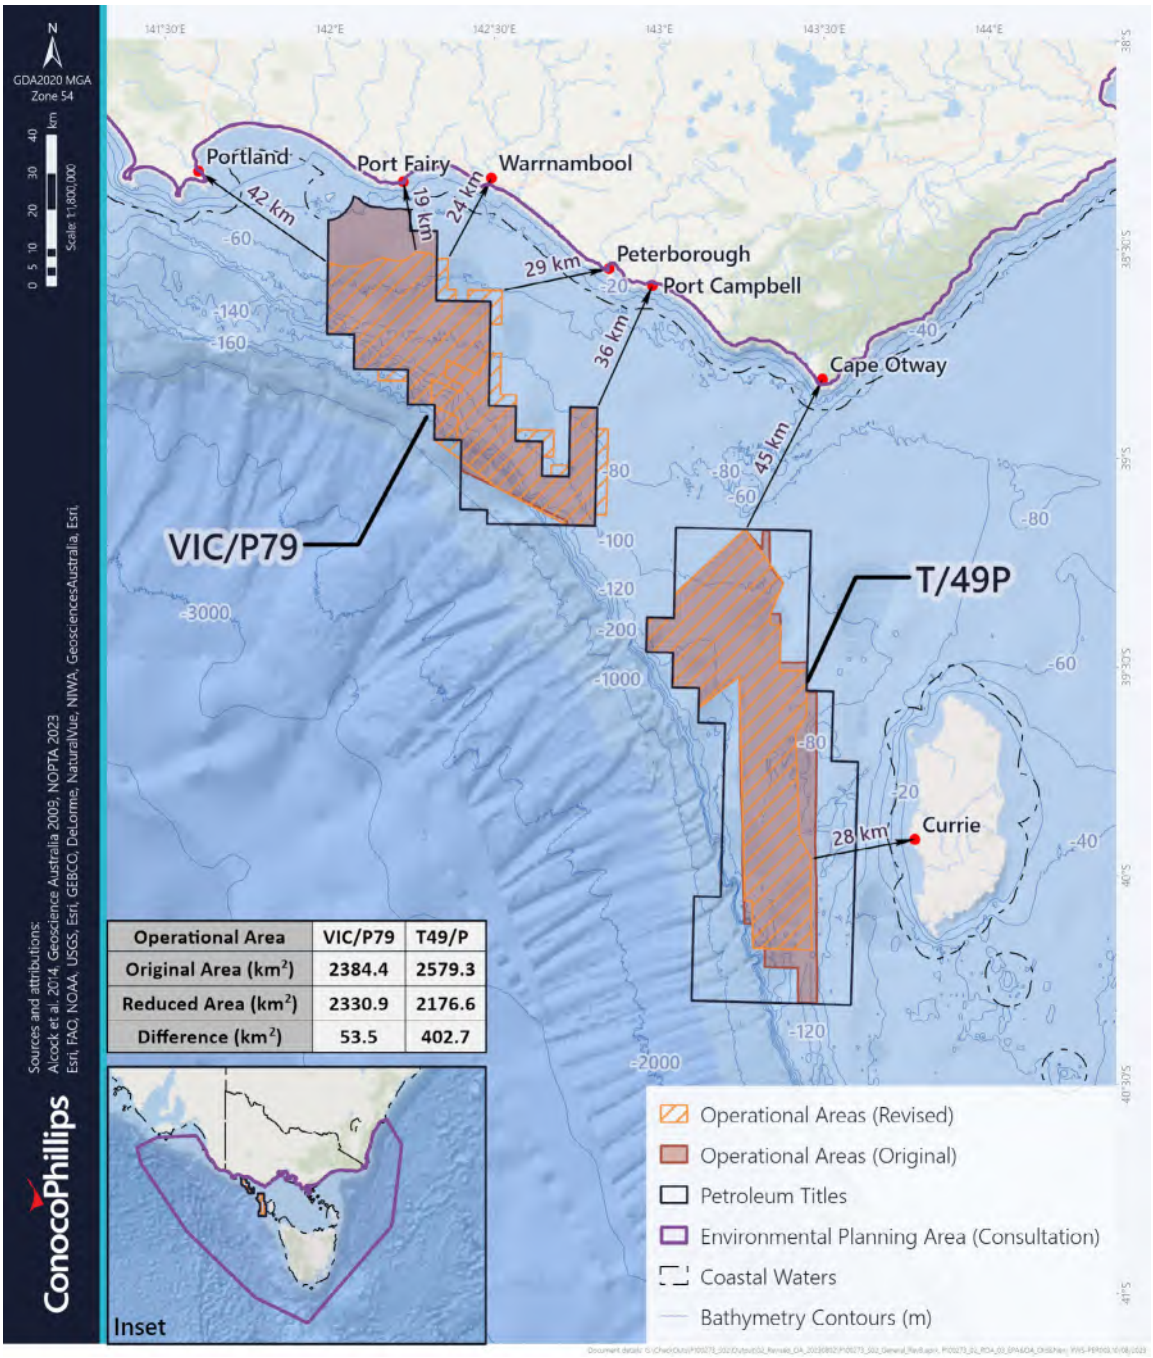
About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in operational areas associated with exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than April 2024.

This information sheet summarises the assessed risk and response planning required for an unplanned hydrocarbon release as part of the proposed activity.

Activity Overview



ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

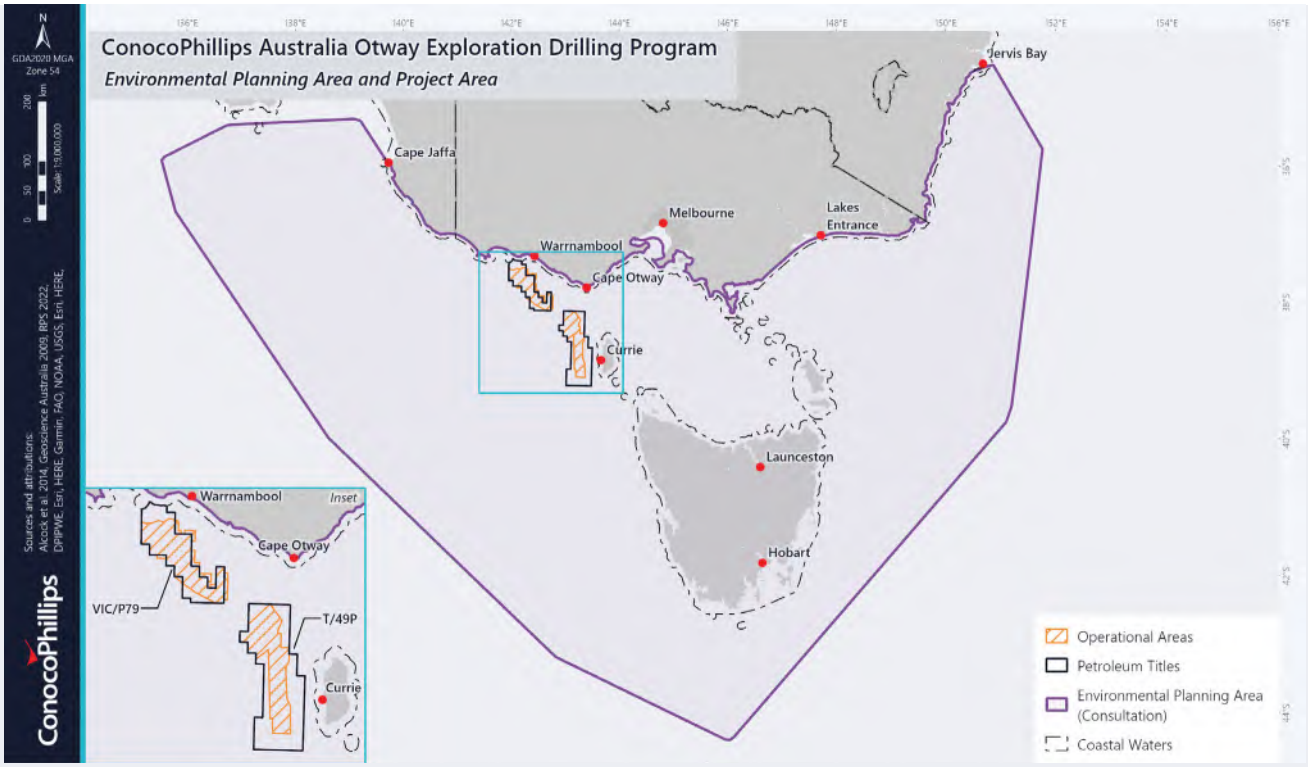
ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in operational areas associated with exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

KEY INFORMATION

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.
- The Environment Plan includes an assessment of the risks associated with the extremely unlikely event of an unplanned hydrocarbon release from vessel operations and drilling operations.
- As the risk of an unplanned hydrocarbon release cannot be completely eliminated, detailed response plans for credible events must be developed to demonstrate to NOPSEMA, ConocoPhillips Australia is prepared to respond in the extremely unlikely event an unplanned release occurs.
- The primary response plan, the oil pollution emergency plan (OPEP), is submitted to NOPSEMA, along with relevant state control agencies, and is assessed as part of the EP assessment process.

Revised Permit and Operational Areas Map

Spill Modelling Explained



All offshore operations carry an inherent risk of an unplanned hydrocarbon release. Based on a review of national and international publications, the possibility has been assessed as remote. As such, an event is extremely unlikely to occur.

Although extremely unlikely to occur, spill modelling is required to support the risk assessment and the development of response plans. Modelled simulations provide an informed estimate of where the hydrocarbon might go if no response is undertaken, and allows the prediction of possible effects.

There are two types of modelling used when informing the development of an Environment Plan and Oil Pollution Emergency Plan - stochastic modelling and deterministic modelling.

Scan this QR code to view NOPSEMA's video explanation of Oil Spill modelling

Environmental Planning Area

What the planning area represents:
The full range of locations that could be affected depending on the metocean conditions and the area, for which ConocoPhillips Australia needs to be prepared to respond to an incident.

What the planning area does not represent:
The actual spatial extent or area of impact for any single release[1]

Understanding where hydrocarbons might go under different conditions (Stochastic Modelling)

Stochastic modelling is conducted whereby hundreds of hypothetical individual spill scenarios are simulated to show where oil from a spill could go under different metocean conditions (such as currents, wind, waves and temperature) which are always changing.

Stochastic modelling is used in the risk assessment to support the prediction of possible effects, and supports preparedness by identifying a planning area, within which environmental values and sensitivities are identified and priorities for protection are established. In order to assess the possible effects, each type of hydrocarbon is assessed over low, moderate and high thresholds which have increasing impacts to the receiving environment.

By overlaying hundreds of hydrocarbon spills into a single map, stochastic modelling shows the full range of locations that could be affected depending on the metocean conditions. It is important to note that the stochastic model does not in any way represent the extent of any single spill event.

Defining credible spill scenarios (Deterministic Modelling)

Analysis of all the simulations developed during stochastic modelling is conducted to identify hypothetical deterministic simulations that predict possible worst-case outcomes, based on a single set of metocean conditions.

Deterministic modelling is used for preparedness and response planning to establish the type and amount of resources (e.g. equipment) needed to be available for immediate deployment. It is also used during oil spill response operations in the event of an actual spill. Deterministic modelling more closely represents what could occur during an unplanned hydrocarbon release, i.e. what a single hydrocarbon spill would look like and the area it may affect[1], but is specific to the weather and ocean conditions used in the model that resulted in the worst-case outcomes.

Scenario Assessment

Activities conducted during the Otway exploration drilling program that have the potential to result in an unplanned hydrocarbon release are described below.

Vessel Collision

The Otway exploration drilling program will rely on the assistance of a variety of vessels to conduct and support the activities. Larger sized vessels typically use marine diesel oil (MDO) which has the potential to be released to the marine environment as a result of a vessel-to-vessel collision or a vessel to drilling rig collision.

In the case of a vessel collision, the worst-case scenario has been modelled as a 350m^3 release of marine diesel oil over a six-hour period[2]. Modelling was conducted at seven different locations across the two permit areas to represent the entire span of possible operations.

Marine diesel oil is a medium-grade oil (classified as a Group II – light persistent oil) used in the maritime industry. It has a low density and a low dynamic viscosity, meaning that this oil will spread quickly if spilled at sea and thin out to low thicknesses, increasing its rate of evaporation.

Based on the fate and weathering modelling, approximately 40 percent of the released MDO would be lost to atmosphere through evaporation over the first day and an additional 55 percent would evaporate over several days. Approximately 5 percent would not evaporate but would decay slowly over time.

Loss of Well Control

Exploration drilling involves drilling through the seabed in order to access the hydrocarbon reservoirs that lie below. The risk associated with this activity is an unplanned release of hydrocarbons into the water column of the marine environment as a result of a loss of well control.

In the case of a loss of well control, the worst-case scenario has been modelled as a 139,000 m^3 release of gas condensate. Modelling was conducted at seven different locations across the two permit areas to represent the entire span of possible operations.

This scenario represents an unrestricted open-hole release from a high productivity gas condensate reservoir at a depth of 2,820 mTVDSS, which assumes the failure of multiple control systems, and is considered the worst-case scenario that could potentially occur during the activity.

Hydrocarbon reserves within the Otway basin typically consist of gas condensate. As the reservoir is yet to be drilled, gas condensate properties from another reservoir, which represents the target formation ConocoPhillips Australia is intending to intersect, have been used for modelling.

Based on the fate and weathering modelling, approximately 83 percent of the released condensate would be lost to atmosphere through evaporation over the first day. Approximately 16 percent would continue to evaporate at a slower rate. Only 1 percent is considered persistent and would weather to a waxy substance.

Condensate is categorised as a Group I oil (non – persistent oil) based on the specific gravity of the hydrocarbons. The heavier components of the condensate will tend to entrain into the upper water column during the presence of moderate winds (> 10 knots) and can potentially remain entrained for as long as the winds persist. Subsequently, in calm conditions entrained oil can resurface.

Managing Unplanned Hydrocarbon Release Risks

Unplanned hydrocarbon releases are prevented during activities through a range of preventative control measures involving detailed planning, engineering and execution. If an unplanned hydrocarbon release does occur, ConocoPhillips Australia will have detailed plans to respond.

The primary response plan is the oil pollution emergency plan (OPEP), which is linked to the state and national contingency plans. The OPEP is submitted to NOPSEMA, along with relevant state control agencies, and is assessed as part of the EP assessment process.

There are national and state contingency plans in place across Australia to respond in the event of a large oil spill from all the different types of offshore activities in Australian waters.

Control measures

Although the scenarios discussed above are considered extremely unlikely to occur, the control measures below are also put in place to further reduce the likelihood of a spill.

- Accepted Oil Pollution Emergency Plan (OPEP)
- Operational and Scientific Monitoring Program
- Accepted Well Operations Management Plan
- Source Control Emergency Plan
- Shipboard Marine Pollution Emergency Plan or Shipboard Oil Pollution Emergency Plan.

In addition to the above plans, the following control measures will also be in place for the activity.

- Petroleum safety zone (500m radius) surrounding the drilling rig during the drilling activity.
- Cautionary zone (2km radius) around the drilling activity to minimise the potential for vessel collisions.
- Notifications provided for any on-water activities and ongoing communication with other marine users.

Response Preparedness

As the risk of an unplanned hydrocarbon release cannot be eliminated, detailed response plans for credible events are developed to demonstrate preparedness in the extremely unlikely event a spill occurs. These response plans include integration with local, national and international response organisations to mobilise resources, including experts and specialist equipment.

These plans outline how and what ConocoPhillips Australia will do to respond to an unplanned hydrocarbon release, how it will work with contractors, State and National agencies to respond, and what resources will be used and where these resources are located and need to be mobilised from for a response.

Details on resourcing and response arrangements for an unplanned hydrocarbon release will be provided in an Oil Pollution Emergency Plan (OPEP) which is currently available in draft for consultation on the online consultation hub.

ConocoPhillips Australia

Questions

and Answers

How will ConocoPhillips Australia determine when and where drilling will occur?

Drilling commencement is dependent on regulatory approval and drilling rig availability. The initial activity will be seabed surveys which will commence no earlier than April 2024.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas associated with petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

The process for selecting drilling locations involves several steps, including the acquisition and processing of seismic data, interpretation of the data to select high probability of success targets, and efficiency of the program to prove up resources with the least amount of wells. A summary of current activities to support this effort are described below:

1. Interpretation of seismic data: Skilled geoscientists analyse the processed data to identify potential drilling locations. They look for features such as faults, folds and stratigraphic traps that could indicate the presence of hydrocarbons.
2. Selection of high probability targets: After identifying potential drilling locations, geoscientists prioritise them based on their likelihood of success. They consider factors such as the quality and quantity of the reservoir, the geologic complexity of the area and the cost of drilling.
3. Efficiency of the program: The goal is to prove up resources with the least number of wells, which involves optimising the drilling program whilst maximising the chance of success.

Overall, the process for selecting drilling locations is a complex and multidisciplinary effort that requires skilled professionals and advanced technology. It involves a careful balance of science, economics and risk management to ensure that drilling efforts are successful and efficient.

What are the chances of a spill?

The likelihood of a vessel-on-vessel collision is assessed using industry published data. The Australian Maritime Safety Authority (AMSA) Annual Report measures incidents which occur in the marine environment. For all marine operations within Australia, there have been two reported serious marine pollution incidents within the last four years. The likelihood of a loss of containment of marine diesel oil is therefore assessed as remote.

The likelihood of a loss of well control is assessed using internationally accepted published data. The International Association of Oil & Gas Producers has published a Risk Assessment Data Directory. There is a 0.016 percent chance that a loss of well control event may occur on any well, which corresponds to a likelihood ranking of remote.

Why is deterministic modelling a more credible worst-case scenario?

Stochastic modelling is the combination of hundreds of credible scenarios overlapped to show the potential largest extent under a range of metocean conditions. While deterministic modelling is the predictive modelling of a single incident subject to a single sample of wind and weather conditions over time. In the unlikely case of an oil spill only one scenario would occur which makes deterministic modelling a more credible worst-case scenario.

Would an unplanned hydrocarbon release reach the shore and if so, where?

In the extremely unlikely case of an unplanned hydrocarbon release there is potential for it to reach the shoreline of Tasmania or Victoria. The closest point of the operational areas to the Victorian and Tasmanian coastline is 19km and 28km respectively. It is important to note that the chances of an unplanned hydrocarbon release are extremely unlikely and comprehensive plans are in place to support a rapid response and integration with local, national and international response organisations to mobilise resources including experts and specialist equipment.

Would ConocoPhillips Australia compensate impacted tourism and fishing industry businesses in the unlikely event of an unplanned hydrocarbon release?

Yes. The scope for compensation would be in accordance with international compensation protocols.

ConocoPhillips Australia is self-insured and is required to hold financial assurance for this activity in line with NOPSEMA requirements. NOPSEMA's 'Financial assurance for petroleum titles Guideline ' states 'It is generally sufficient for the titleholder to hold financial assurance for the greatest reasonably credible costs, expenses and estimable third-party liabilities that may arise from a petroleum incident relating to their activities'.

Environment Plan Summary

ConocoPhillips Australia is planning to undertake exploration activities in operational areas associated with offshore permits VIC/P79 and T/49P located in Commonwealth waters. The overarching purpose of the Environment Plan is to demonstrate that ConocoPhillips Australia's proposed Otway Exploration Drilling Program can meet the objectives of the Environment Regulations. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in operational areas associated with exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration program to be undertaken. Commencement of the exploration program is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than April 2024.

This document summarises the EP for the proposed petroleum activity.

Overview

ConocoPhillips Australia's proposed Otway Exploration Drilling Program (exploration program) involves seabed surveys and drilling a maximum of six exploration wells, and will commence no earlier than April 2024, subject to acceptance of the EP, rig availability and a conducive investment and regulatory environment.

ConocoPhillips Australia has been undertaking consultation with relevant authorities, persons and organisations (relevant persons) since February 2023. The EP has now been submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) and is available for public comment on the NOPSEMA website until 18 December 2023. Following the public comment period, comments will be considered, and will be responded to in a thematic manner. ConocoPhillips Australia plans to submit the EP to NOPSEMA for assessment in early 2024. NOPSEMA's EP assessment process does not commence for explorative drilling activities until the EP is submitted following the public comment period.

The EP demonstrates how the exploration program will be completed in an environmentally responsible way.

Environmental Approvals

Offshore petroleum activities are regulated under the Offshore Petroleum and Greenhouse Gas Storage Act 2006 (OPGGS Act) which requires an accepted EP to be in place for the proposed exploration program.

Under the OPGGS (Environment) Regulations an EP is required, among other things, to:

- comprehensively describe the activity to be carried out under the EP.
- describe the environment that may be affected by the activity, including the values and sensitivities of that environment.
- detail and evaluate the environmental impacts and risks for the relevant activity.
- demonstrate that the impacts and risks of the activity will be reduced to as low as reasonably practicable (ALARP) and an acceptable level (and detail the control measures to be used to achieve this).
- demonstrate that consultation has occurred with each relevant person, whose functions, interests or activities may be affected by the activities to be carried out under the EP.
- demonstrate that the measures (if any) adopted, or proposed to be adopted, because of the consultations are appropriate.

Petroleum activities do not operate to a no-impact standard. Instead, ConocoPhillips Australia is required to define the acceptable levels of impact and risk, and work below those levels. Acceptable levels of impact are established based on relevant up-to-date technical and scientific studies, government advice, and are considerate of the information gathered through the consultation process. This information is used to make predictions of the levels of impact we expect to occur and compares those to the previously defined acceptable levels.

ConocoPhillips Australia is required to demonstrate to NOPSEMA that activities will be carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD) and that environmental impacts and risks of the activity are reduced to ALARP and acceptable levels in the EP. We recognise that consultation is crucial to achieve outcomes that are consistent with the principles of ESD – by ascertaining, understanding and addressing information that we may otherwise not be aware of, by informing our understanding of the environment, and by refining the environmental management of the activity in response.

We have endeavoured to undertake genuine and meaningful consultation, in which relevant persons have been given sufficient information and time to allow them to make an informed assessment of the possible consequences of the activity on their functions, interests or activities. We have encouraged a codesigned process, aiming to work with relevant persons in responding to any issues raised and any measures proposed throughout the consultation process.

Under the OPGGS (Environment) Regulations, all records of consultation including emails, phone calls and meetings, are required to be submitted to NOPSEMA with the EP. We undertook to advise all relevant persons that they may request that particular information provided during consultation not be published and only be provided to NOPSEMA as part of a sensitive information report.

Activity Location and Timings

ConocoPhillips Australia has been granted petroleum titles VIC/P79 and T/49P (permit areas) by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA) and, as a titleholder, has committed to completing exploration activities within time-frames agreed with NOPTA.

ConocoPhillips Australia's permit areas and the associated operational areas, within which petroleum activities may occur, are located 28 km at the closest point from King Island, Tasmania and 19 km at the closest point from the Victorian coastline as shown in Figure 1. Water depths within operational areas range from approximately 53 m to 500 m.

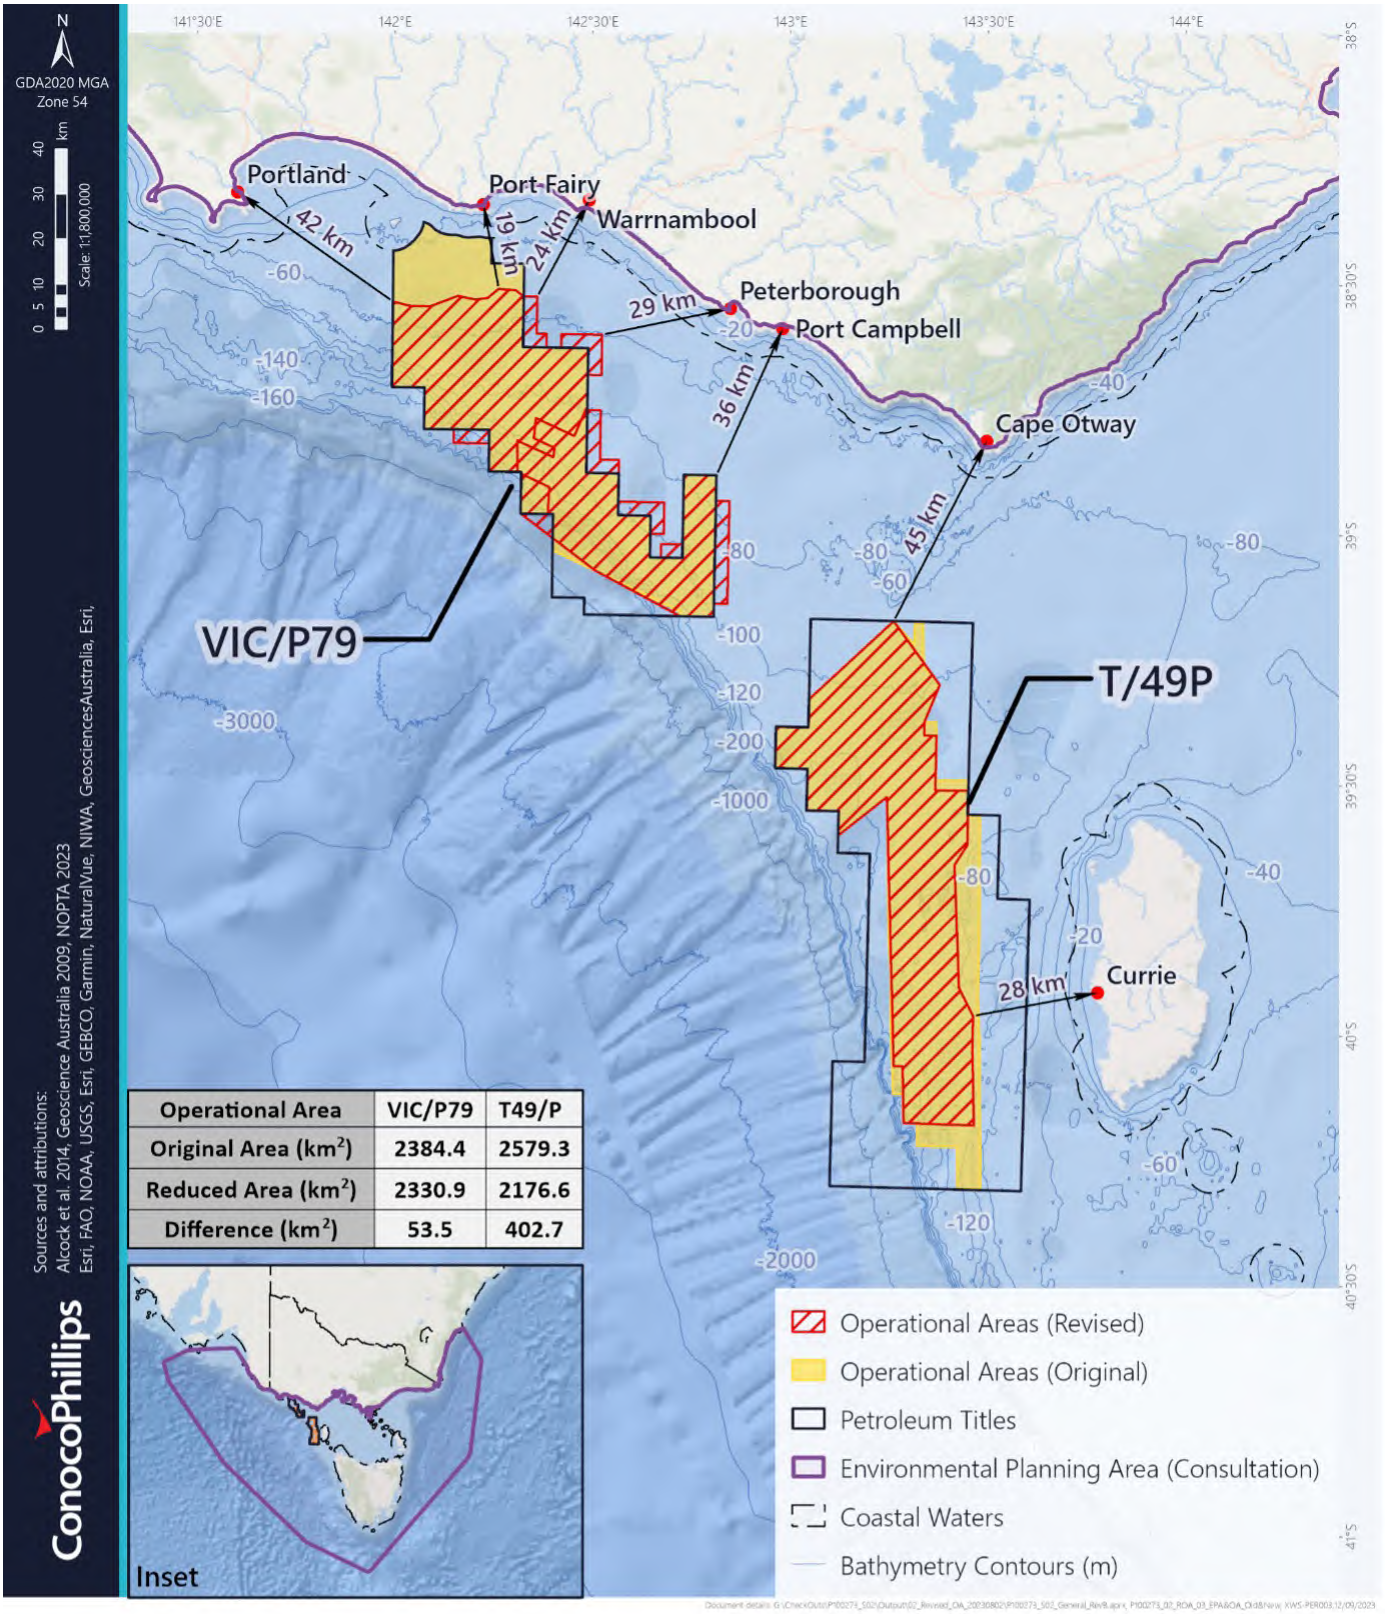

Figure 1: Location of petroleum titles T/49P and VIC/P79 and operational areas

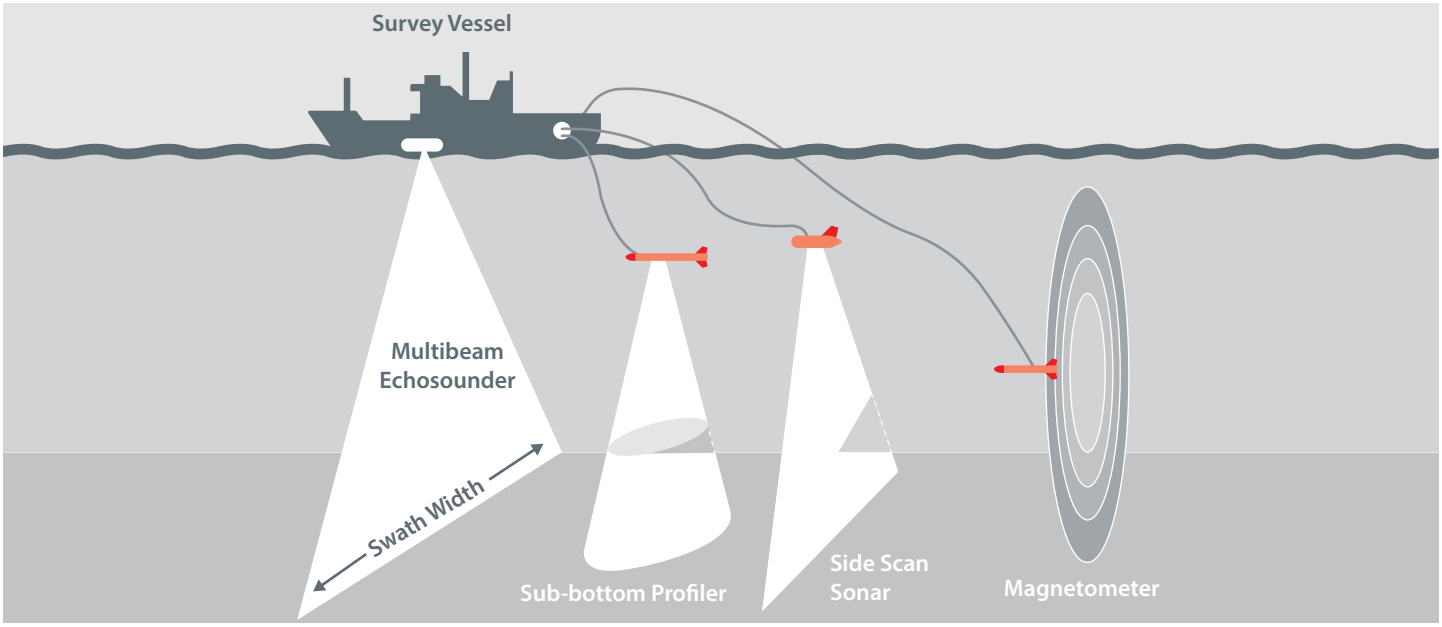
Specific locations for seabed surveys and exploration drilling have yet to be confirmed. The process for selecting final survey and drilling locations involves the completion of seismic data processing, interpretation of the data to select targets with a high probability of success, and analysis of the efficiency of the drilling program to confirm resources with the least amount of wells, to minimise potential impacts and risks associated with each.

Consequently, ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas associated with the permit areas. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed. It is recognised that this may result in an overestimation of impacts and risks. However, a precautionary approach is being taken that assesses worst-case impacts and applies appropriate control measures across the board to minimise impacts and risks to acceptable levels that are as low as reasonably practicable.



Presenting the full extent of ConocoPhillips Australia's proposed exploration program allows for the consideration of impacts and risks across the broadest possible spatial and temporal extents on one occasion. This is considered preferable as it will reduce consultation burden when compared to the alternative of developing multiple EPs for a reduced number of specific drilling locations, without consideration of feedback from consultation or disclosure of the full extent of the proposed exploration program.

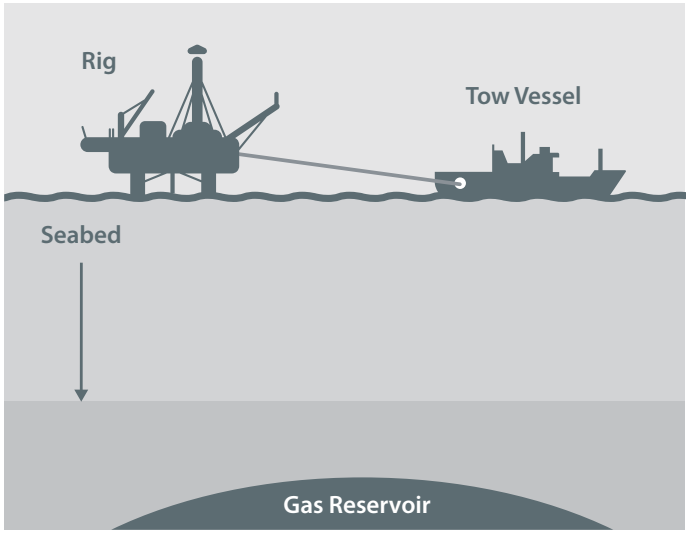
The initial activity involves completing seabed surveys which will commence no earlier than 1 April 2024, subject to EP acceptance. Exploration drilling will not commence before 1 October 2024. Although the proposed duration of the EP is until 31 December 2028, the activity will not occur continuously over this duration.

Overview of proposed activities

Key activities proposed under the Otway Exploration Drilling Program are summarised below.

Seabed Surveys

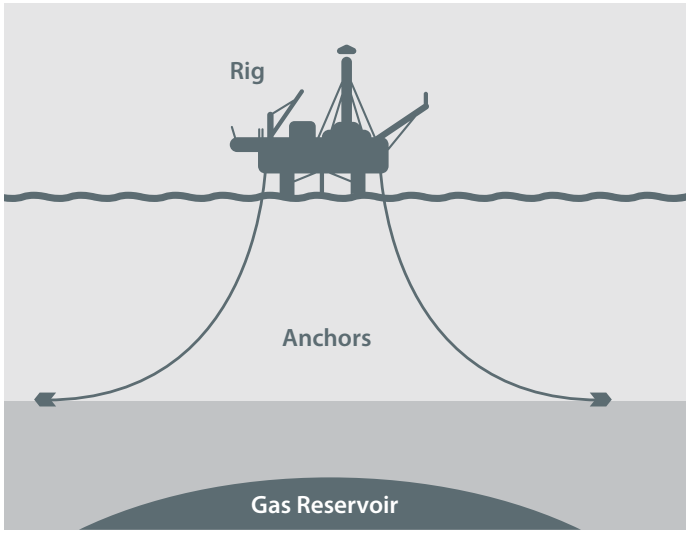
Seabed surveys will be conducted by one or two vessels travelling at slow speeds during data acquisition or stationary, for example, during geotechnical sampling. There will be a 500-metre radius Safe Navigation Area (SNA) in place around survey vessels and any towed equipment for the duration of the activity. Seabed surveys will be conducted at a maximum of nine locations, each location approximately 6 km by 6 km (or 36km^2) in size and are expected to take one week at each location.



Seabed surveys are different from a seismic survey. They are designed specifically to map the seabed and directly below the seabed (up to approximately 100 metres), whereas seismic surveys are designed to image the subsurface up to several kilometres below the seabed. Sound generated from seabed survey equipment is significantly lower in intensity and duration than sound produced from a seismic array.

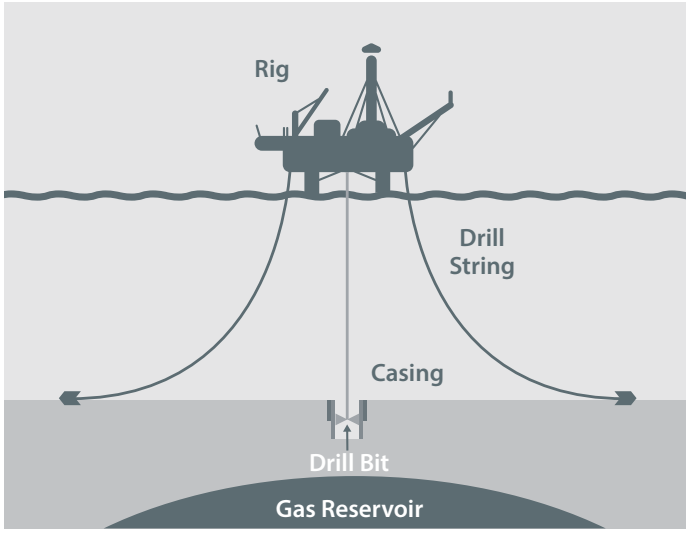
In the event of unsafe environmental conditions such as a heavy sea state, equipment may be retrieved, and survey vessels may transit away from the operational area to a safer location, noting that once a vessel leaves the operational area it is no longer undertaking a petroleum activity.

Exploration Drilling



Exploration wells will be drilled using a single semi-submersible mobile offshore drilling unit (MODU, rig or drilling rig). Drilling each well typically takes between 30-40 days and may take up to a maximum of 90 days depending on weather and operational delays. Drilling involves several steps, summarised in the graphics below.

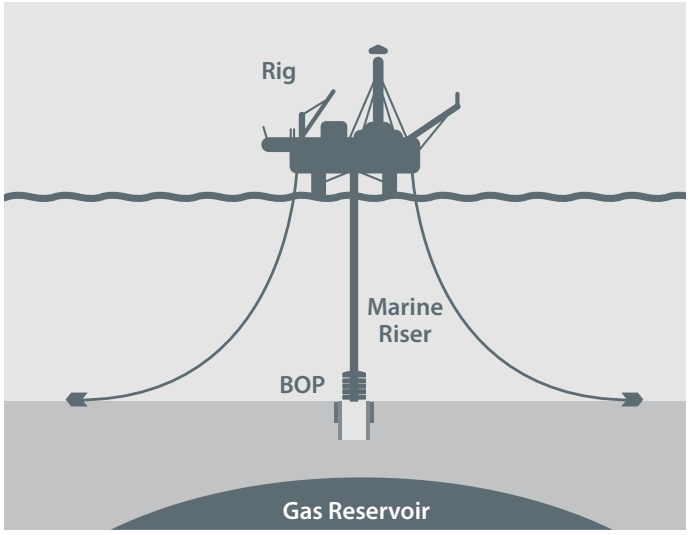
1. Rig towed to site



A drilling rig is towed to the drilling location.

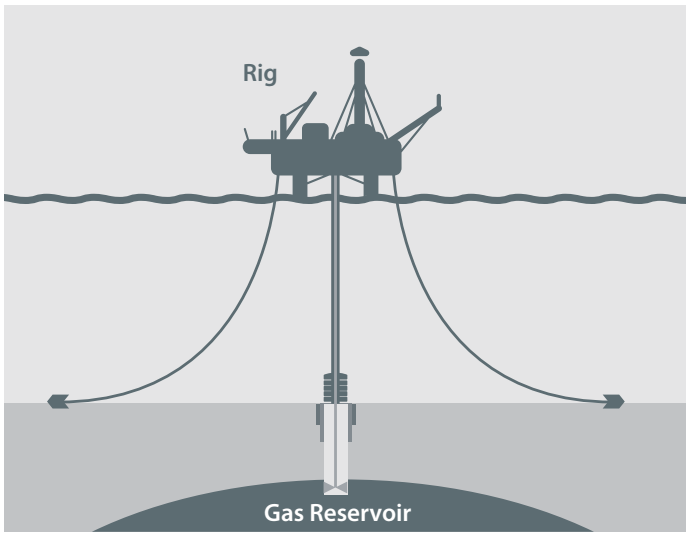
2. Anchors laid on seabed

Anchors are laid on the seabed and can be laid prior to or on arrival of the drilling rig.



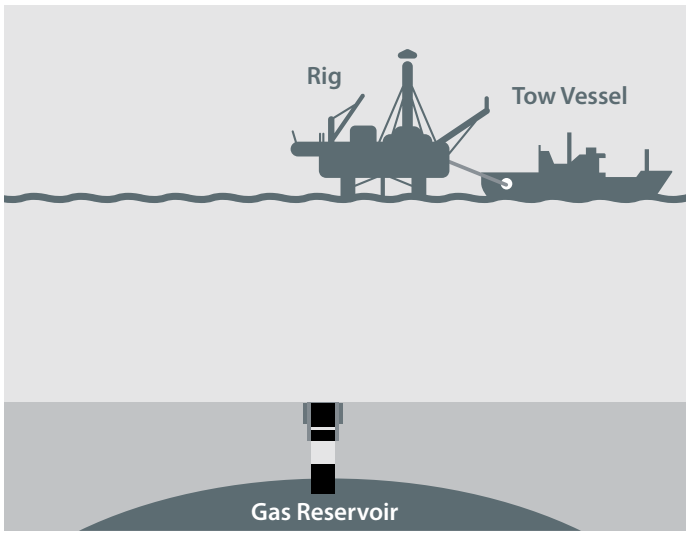
3. Top hole constructed

The top hole is drilled and then cased with cement and steel. The top hole is approximately 1m in diameter.



Supply boats will regularly service the rig throughout the drilling process.

4. Marine riser and blow-out preventer (BOP) installed



The marine riser returns drilling fluids and cuttings to the drilling rig for reconditioning, recirculation and/or discharge. The BOP is an assembly of specialised safety valves put in place before drilling into the reservoir and is used in the unlikely event of an emergency to control well pressure and prevent a loss of well control release.

5. Drill and construct well to gas reservoir

In the event that a gas reservoir is discovered, the well may be tested by flowing gas to the surface for analysis and then flaring through the flare boom.

6. Well permanently plugged and abandoned

Cement plugs are placed within the well as part of a process called plug and abandonment. The marine riser, BOP and wellhead are removed so no equipment is protruding from the seabed. The anchors are then removed so the drilling rig can be towed to the next drilling location or demobilised from the area on completion of the program.

Drilling Rig and Support Vessels

ConocoPhillips Australia has secured a harsh environment semi-submersible rig as part of a rig consortium. However, drilling remains dependent on the EP being accepted by NOPSEMA.

To ensure safe, efficient operations and minimise our environmental footprint, the vessels that will be used to support the drilling campaign will be multi-purpose vessels with the ability to manage anchors for the drill rig, carry out towage operation of the rig, conduct supply runs from a shore supply base and carry out safety standby duties at the rig itself. All vessels will be required to have a valid Offshore Vessel Inspection Database (OVID) inspection and meet the ConocoPhillips Global Marine Assurance and Vetting standard.

The transit of vessels outside the operational areas is not within the scope of the EP and is managed under other regulatory frameworks such as the Commonwealth Navigation Act 2012.

Aircraft including helicopters, fixed wing planes and drones may be used for crew changes, critical supply deliveries, surveillance and emergency response use.

More detail about the specific activities proposed to be carried out under the EP have been provided during consultation, with the provision of draft EP chapters on the ConocoPhillips Australia Otway Exploration Drilling Program Consultation Hub on 31 August 2023. The Environment Plan has now been made available for public comment from 16 November until 18 December 2023 and can be accessed on the NOPSEMA website: https://info.nopsema.gov.au/home/open_for_comment

The Existing Environment

Understanding the existing environment, including historical and existing threats and pressures, creates a reference point from where we can evaluate the impacts and risks of the proposed Otway Exploration Drilling Program. The existing condition of the environment is also used to determine the significance of impacts and risks and to identify additional mitigation measures, management strategies or baseline studies necessary to improve the environmental management of the activity.

The Environmental Planning Area

A broad Environmental Planning Area (EPA) was established in May 2023 to support consultation and the preparation of the Otway Exploration Drilling Program EP. This area extends across the regional marine environment and includes a 1 km buffer into coastal areas, as shown in Figure 2 below. The EPA, along with an interactive mapping tool provided during consultation, has supported the identification of marine and coastal environmental values and sensitivities more broadly within the region, and relevant persons and organisations with functions, interests and activities that may be affected by the proposed activity.

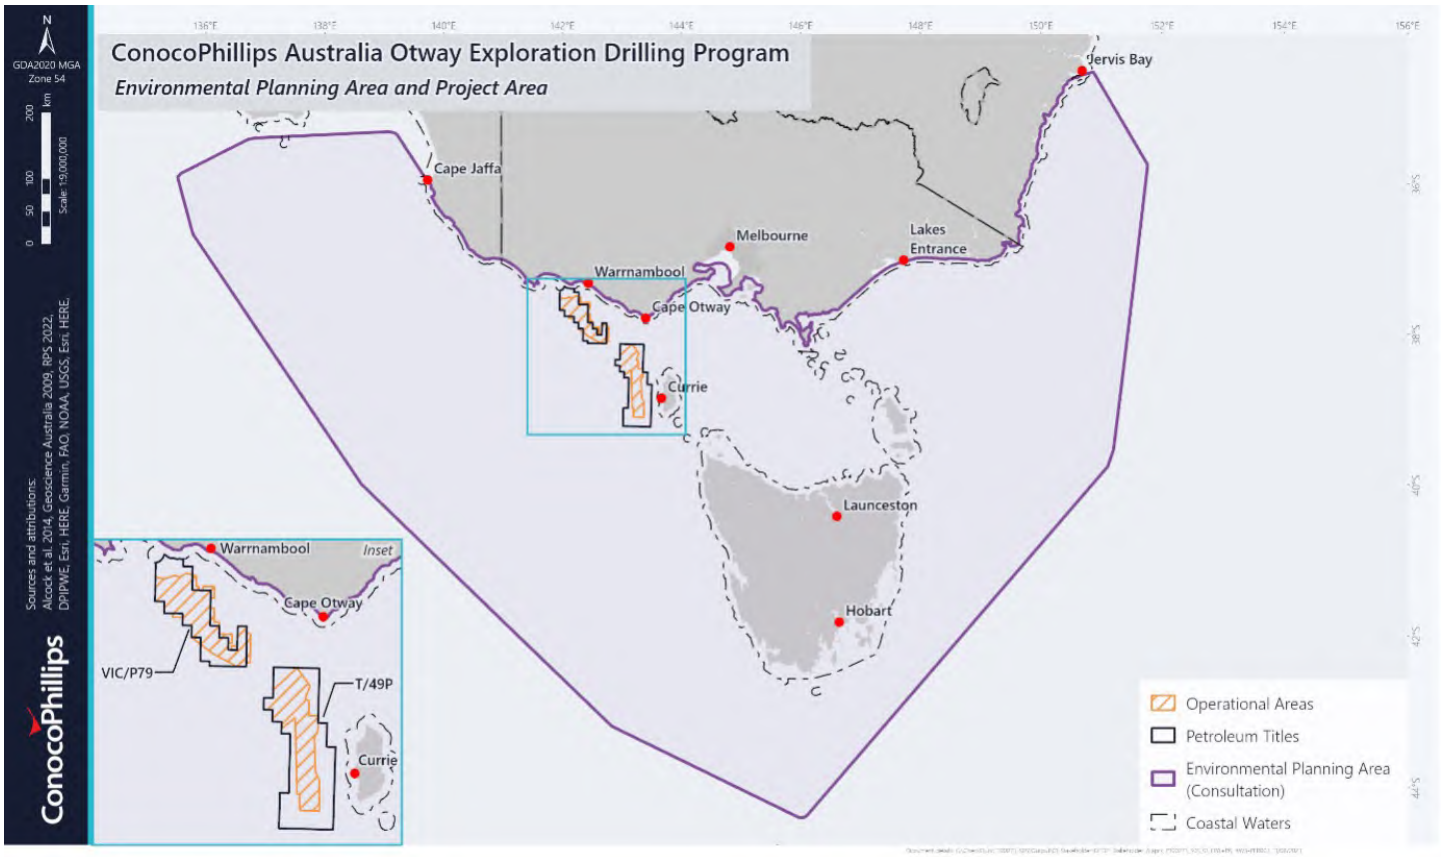


Figure 2: Otway Exploration Drilling Program Environmental Planning Area

The Environment That May Be Affected

The Environment Regulations require that the EP describes the 'Environment that May Be Affected' (EMBA) by the proposed activity. It is common to define the EMBA using worst-case hydrocarbon spill modelling.

Modelling provides an informed estimate of where a hydrocarbon spill may go if no response is undertaken, and supports the prediction of possible effects. Hundreds of hypothetical individual spill scenarios (1400 in this case) are simulated to show where hydrocarbon from a spill could go under different metocean conditions (such as currents, wind, waves and temperature).

Overlaying hundreds of hypothetical spills into a single map using low threshold exposure values, as shown in Figure 3, supports the identification of environmental values and sensitivities, the prediction of possible effects, and the development of protection priorities and preparedness plans that cover the full range of possible locations that could be affected depending on metocean conditions.

The low threshold exposure values are considered below levels which would cause environmental harm and are more indicative of the areas perceived to be affected due to e.g. visibility on the sea surface. They may trigger temporary closures of areas as a precautionary measure.

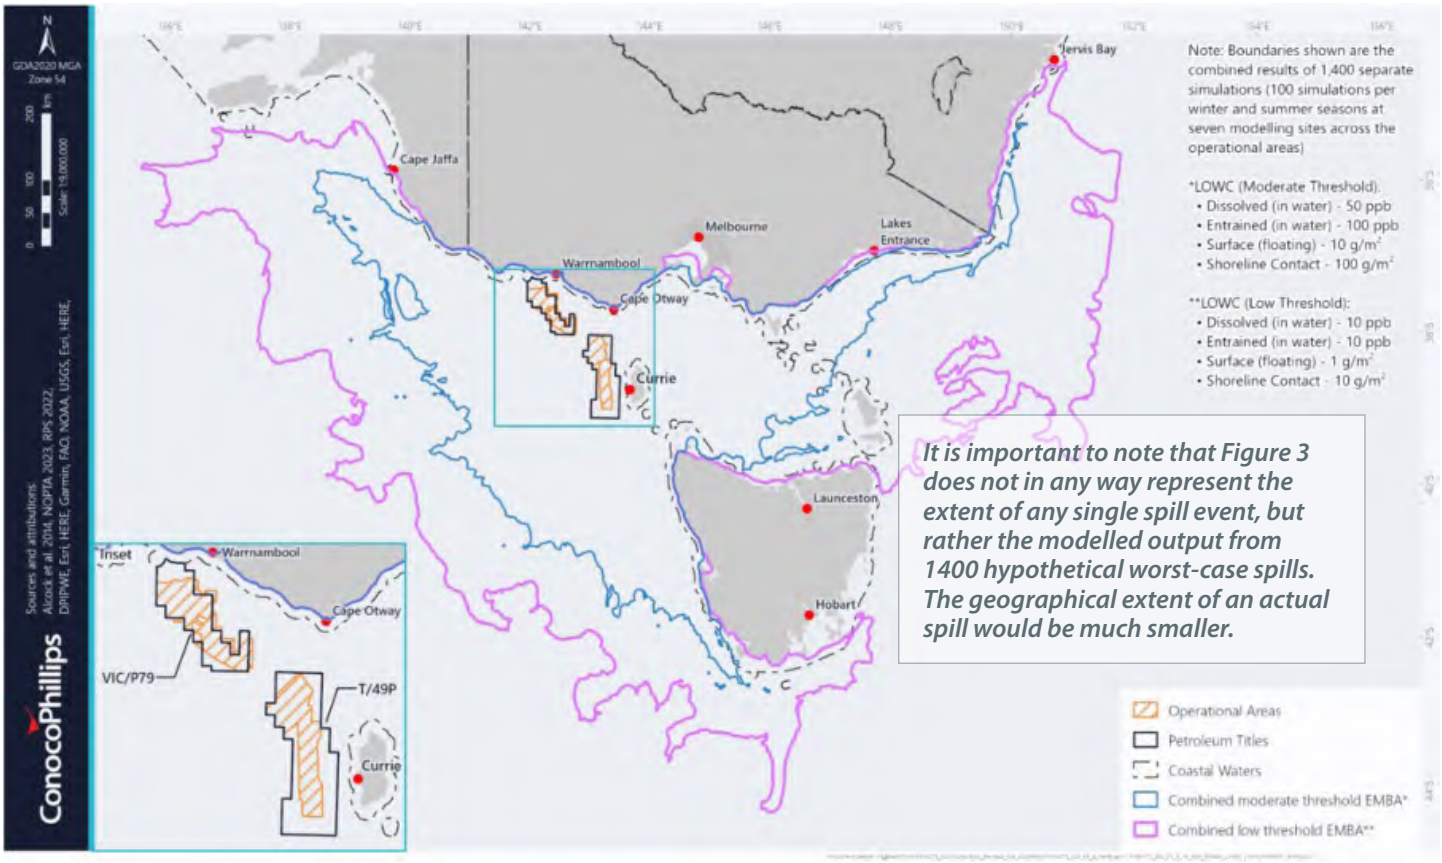

Figure 3: Otway Exploration Drilling Program EMBA at the low and moderate threshold

The OPGGS Act requires titleholders, like ConocoPhillips Australia, to prevent the escape of hydrocarbons to the environment from their activities. Prior to activities occurring titleholders must demonstrate to NOPSEMA that all reasonably practicable measures are in place to prevent oil pollution. Failure to prevent the escape of petroleum is an offence.

Although extremely unlikely to occur, all offshore operations do carry a risk of an unplanned hydrocarbon release and response plans are required to be developed and tested. ConocoPhillips Australia's primary response plan was made available on the ConocoPhillips Australia Otway Exploration Drilling Program Consultation Hub in August 2023 and is available in the Appendices to the Environment Plan on NOPSEMA's website.

More information on pollution management and preparedness can be found on NOPSEMA's website which can be accessed by scanning the QR code using any smart device.

Environmental Values and Sensitivities within the EMBA

Environmental values and sensitivities identified within the EMBA encompass rare, important and/or sensitive physical, ecological, socio-economic and cultural features of the environment. Examples include:

- The values and sensitivities of the marine environment including benthic communities and habitats, marine fauna and the quality of the water, sediment and biota.
- The values and sensitivities that exist in relation to Protected Matters (Part 3 of the EPBC Act), i.e. conservation areas such as World Heritage and National Heritage values, RAMSAR wetlands, listed threatened species and ecological communities, listed migratory species and Marine Parks.
- The values and sensitivities of cultural heritage and socio-economic features of the environment including the rights of other marine users.

More information on identified values and sensitivities within the EMBA is provided below.

Conservation Values and Sensitivities

Conservation values and sensitivities are primarily associated with matters of national environmental significance (MNES) protected under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act). Additional conservation values and sensitivities have also been identified where they are of regional importance for either the region's biodiversity or ecosystem function and integrity.

Values and sensitivities identified within the EMBA that are either close to operational areas or have coastal features are summarised in Table 1. Additional details for each of the identified values below, and all others within the EMBA, can be found in the EP. An interactive map of values and sensitivities can be found at the online consultation hub by scanning the QR Code.

ConocoPhillips Australia sought input through the consultation process to validate and improve our understanding of the environment in the Otway region. We recognise the importance of local knowledge in this process.

Table 1: Summary of Conservation Values and Sensitivities

Conservation Values	Description of values and sensitivities	Operational Areas	EMBA
Australian Marine Parks (AMPS) – The Multiple Use Zone of the Zeehan AMP is the only AMP that overlaps the operational areas (at T/49P). The multiple use zone provides for a wide range of sustainable activities by allowing those that do not significantly impact benthic (seafloor) habitats or have unacceptable impact on the values of the area. Authorisation is required for activities within this zone, such as commercial fishing and mining, among others. No other Marine Parks are overlapped by the operational areas.			
Zeehan AMP	- Submarine canyons that incise the continental slope, extending from the shelf edge to the abyssal plain. - Variety of seabed habitats supporting a range of communities and commercial species such as giant crab and rock lobster. - Important foraging and migration areas for a variety of species including seabirds, the white shark and cetaceans.	✓	✓
Apollo AMP	- Rocky reef patches interspersed with areas of sediment and rich, benthic fauna dominated by sponges. - Important foraging and migration areas for a variety of species including seabirds, the white shark, seals and cetaceans. - The wreck of the MV City of Rayville, a known heritage site of cultural significance.	X	✓
Beagle AMP	- Sponge gardens and important habitat for a range of species including sharks and cetaceans. - Foraging areas and islands that provide haul-out and breeding grounds for seabirds, little penguins and Australian fur seals. - The wrecks of the SS Cambridge steamship and the ketch, Eliza Davies, as known heritage sites of cultural significance.	X	✓
Boags AMP	- Sandy seabed habitat for benthic species, fish and extensive sponge gardens. - Adjacent to important colonies for shy albatross, fairy prions, cormorants, petrels, little penguins and Cape Barren geese. - Important foraging and migration areas for a variety of species including seabirds, the white shark and cetaceans. - Intersects the migration route for the Critically Endangered orange-bellied parrot.	X	✓
Franklin AMP	- Shallow continental shelf ecosystems including the major bioregions of western Bass Strait and the Tasmanian Shelf. - Feeding grounds for seabirds, including shy albatross, short-tailed shearwater, Australasian gannet, fairy prion, little penguin, petrels, cormorant and gulls that breed on nearby Hunter Island Group. - Foraging area of the white shark.	X	✓
Nelson AMP	- Plateaus, knolls, canyons and the abyssal plain. - Potential migration area of the blue, fin, sei, and humpback whales.	X	✓
World Heritage Properties (with outstanding universal value) **and National Heritage Places** (with outstanding significance to the nation) with coastal features. There are no world heritage or national heritage places within the operational areas.			
The Tasmanian Wilderness World Heritage Area (TWWHA)	The TWWHA intersects the EMBA along its coastal extent of 755 km in the south-south-west of Tasmania. The Tasmanian wilderness is one of the largest temperate wilderness areas and a precious cultural landscape for Tasmanian First Nations people who have lived there for at least 35,000 years.	X	✓
Great Ocean Road	Designed as a memorial to all Australian First World War servicemen, and a gift to residents and tourists to enable access to the spectacular coastal vistas and landscapes, the Great Ocean Road runs through an area that is 150 million years old and yields rare fossils and information on geomorphology and coastal erosion processes.	X	✓

Table 1: Summary of Conservation Values and Sensitivities

Conservation Values	Description of values and sensitivities	Operational Areas	EMBA
Recherche Bay (North East Peninsula) Area	Landed in 1792, French explorers set up camp and prepared a garden and scientific observatory, and catalogued species while supplies were replenished. Recordings, from the French perspective, of encounters with First nations peoples, provide important observations into the lives of the Tasmanian First Nations people.	X	✓
Western Tasmania Aboriginal Cultural Landscape	The remains of shell middens in the Western Tasmania Aboriginal Cultural Landscape and accompanying hut depressions provide evidence of an unusual, specialised and more sedentary First Nations community that began almost 2,000 years ago and continued until 1830.	X	✓
Commonwealth Heritage Places – These include natural, Indigenous and historic heritage places owned or controlled by the Commonwealth. There are no known Commonwealth Heritage Places within the operational areas.			
- Jervis Bay Territory, 7,600 ha home of the Koori people of Wreck Bay with the majority of the Territory still in its natural state. - Tasmanian seamounts located 50 and 100 km off southern Tasmania, with approximately 70 seamounts on the continental slope. - Beecroft Peninsula on the northern headland of Jervis Bay, of high cultural significance to the Jerrinja and Wreck Bay First Nations communities. - Swan Island and Naval Waters heritage place located off the Bellarine Peninsular in Victoria. - Point Wilson Defence Natural Area covering approximately 176 ha of the central-western coast of Port Philip Bay. - HMAS Cerberus Marine and Coastal Area with geomorphological, botanical and zoological significance near Western Port in Victoria. - Crocodile Head Area, an indigenous listing of approximately 20 ha, located near Crocodile Head and Currarong on the Beecroft Peninsular.		X	✓
Wetlands of International Importance (Ramsar Wetlands) – These are wetlands that are representative, rare or unique, or are important for conserving biological diversity. There are no Ramsar wetlands within the operational areas.			
- Corner Inlet approximately 200 km south-east of Melbourne, Victoria - East Coast Cape Barren Island Lagoons on Cape Barron Island, part of the Furneaux Group, about 50 km from the north-eastern tip of Tasmania. - Gippsland Lakes approximately 300 km east of Melbourne, Victoria. - Glenelg Estuary and Discovery Bay Wetlands in western Victoria, approximately 430 km west of Melbourne, Victoria. - Lavinia, approximately 12 km north of Naracoopa on King Island, Tasmania. - Logan Lagoon in the south-east corner of Flinders Island, Tasmania, approximately 6 km north-east of Lady Barron. - Piccaninnie Ponds Karst Wetlands 32 km south-east of Mount Gambier, South Australia. - Port Phillip Bay (western Shoreline) and Bellarine Peninsula near the city of Geelong in Victoria. - Western Port approximately 60 km southeast of Melbourne, Victoria.		X	✓
Threatened Ecological Communities (TECs) with coastal features – TECs provide wildlife corridors and/or habitat refuges for many plant and animal species. There are no TECs within the operational areas.			
- Assemblages of species associated with Open-Coast Salt-Wedge Estuaries of Western and Central Victoria Ecological Community - Coastal Swamp Oak (Casuarina glauca) Forest of New South Wales and South East Queensland Ecological Community - Coastal Swamp Sclerophyll Forest of New South Wales and South East Queensland - Giant Kelp Marine Forests of South East Australia - Subtropical and Temperate Coastal Saltmarsh		X	✓

Table 1: Summary of Conservation Values and Sensitivities

Conservation Values	Description of values and sensitivities	Operational Areas	EMBA
Key Ecological Features (KEFs) – Areas considered to be of regional importance for either the region's biodiversity or ecosystem function and integrity. There are no KEFs within the operational areas.			
Bonney Coast Upwelling	The Bonney coast upwelling seasonally delivers cold nutrient rich water to the sea surface which supports regionally high productivity and high species diversity.	X	✓
West Tasmania Canyons	The West Tasmania canyons have the greatest density of canyons within Australian waters, with 72 submarine canyons incised over a 500 km-long section of slope. This KEF is located on the continental slope west of Tasmania, within the EMBA, and influences currents, acts as a sink for organic sediments and debris, and creates upwellings that result in productivity and biodiversity hotspots.	X	✓

Ecological Environment

Ecological values and sensitivities are associated with matters of national environmental significance (MNES) protected under the EPBC Act such as threatened and migratory species. These are identified using the Australian Government's Protected Matters Search Tool (PMST). Additional ecological values and sensitivities have also been identified where they are considered to be of regional importance such as declared biologically important areas (BIAs). These are summarised in Table 2 below. Additional details for each of the identified values below, and all others within the EMBA, can be found in the EP.

ConocoPhillips Australia has considered government guidance, including conservation management plans, recovery plans, conservation advice and threat abatement plans in the development of the EP and has identified control measures to reduce impacts and risks to marine fauna and biologically important areas to ALARP and to acceptable levels.

Table 2: Summary of Ecological Values and Sensitivities

Ecological Values	Description of values and sensitivities	BIAs within Operational Areas	BIAs within EMBA
Fish and Sharks	The PMST report identified 63 fish species protected under the EPBC Act potentially occurring in the EMBA. This includes twenty species listed as threatened, primarily related to coastal habitat degradation, six species listed as migratory and a further 40 listed as marine (all of which are Sygnathiformes – seahorses, pipefishes and their relatives which are typically found in shallow water).	White shark – foraging, distribution BIAs. The white shark is widely distributed throughout temperate and sub-tropical regions in the northern and southern hemispheres.	White shark – foraging, distribution, breeding BIAs.

Table 2: Summary of Ecological Values and Sensitivities

Ecological Values	Description of values and sensitivities	BIAs within Operational Areas	BIAs within EMBA
Seabirds and Shorebirds	The PMST report identified 137 bird species with the potential to occur within the EMBA, of which 62 are listed as threatened including 8 Critically Endangered (curlew sandpiper, eastern curlew, orange-bellied parrot, great knot, swift parrot, King Island scrubtit, regent honeyeater, plains wanderer), 19 Endangered and 35 Vulnerable. The National Recovery Plan for Threatened Albatrosses and Giant Petrels 2011-2016 states that the most pervasive threat to albatross and giant petrel survival is the accidental mortality and injury arising from interactions with human fishing activities. The Wildlife Conservation Plan for Seabirds (2020) lists a range of anthropogenic threats to shearwaters including climate change, marine pollution, and mortality and injury arising from interactions with commercial fishing activities. The Wildlife Conservation Plan for Migratory Shorebirds (2015) notes that threats to these species include habitat loss and modification, marine pollution, climate change, hydrological changes, and mortality and injury arising from interactions with commercial fishing activities. The National Recovery Plan for the Orange-bellied Parrot (2016) states this species may be impacted by barriers to movement, though there is little more than anecdotal evidence, as individuals may be killed by flying into barriers, or behaviour may be modified by the presence of barriers such as wind turbines and illuminated boats, with the impacts of barriers greatest where they occur on migration routes. For the little penguin, identified threats include mortality and injury arising from interactions with commercial fishing, vessel collisions, oil pollution and changing oceanic conditions affecting food availability and reproductive success.	Foraging BIAs for Antipodean albatross, Black-browed albatross, Buller's albatross, Campbell albatross, Common diving-petrel, Indian yellow-nosed albatross, Short-tailed shearwater, Shy albatross, Wandering albatross, Wedge-tailed shearwater and White-faced storm-petrel.	• Foraging BIAs for Antipodean albatross, Black-browed albatross, Black petrel, Buller's albatross, Campbell albatross, Caspian tern, Fairy tern, Flesh-footed shearwater, Great-winged petrel, Indian yellow-nosed albatross, Northern giant petrel, Pacific Gull, Southern giant-petrel, Wandering albatross, White-capped albatross. • Breeding and foraging BIAs for Black-faced cormorant, Common diving-petrel, Greater crested tern, little penguin, Short-tailed shearwater, Shy albatross, Soft-plumaged petrel, Sooty shearwater, Wedge-tailed shearwater, White-faced storm-petrel, White-fronted tern. • Migration BIA for Wilsons storm petrel. • Aggregation and foraging BIAs for Australasian gannet.

Table 2: Summary of Ecological Values and Sensitivities

Ecological Values	Description of values and sensitivities	BIAs within Operational Areas	BIAs within EMBA
Marine Turtles (Reptiles)	The PMST report identified 5 species of threatened marine turtles with the potential to occur within the EMBA. Two are Endangered (loggerhead turtle and the leatherback turtle) and three are listed as Vulnerable (green turtle, hawksbill turtle and flatback turtle). The Recovery Plan for Marine Turtles in Australia (2017) lists a range of anthropogenic threats to marine turtles which include climate change and variability, marine debris, chemical and terrestrial discharge, fisheries bycatch, light pollution, vessel disturbance and sound interference.	None Even though there are no BIAs in the areas, marine turtles, primarily leatherbacks, are expected to occur as rare transient individuals within the operational areas.	None There are no known nesting or foraging BIAs for marine turtles in the region.
Marine Mammals	The PMST report identified 39 species of marine mammal with the potential to occur within the EMBA. Six are threatened species, including three Endangered species (blue whale, southern right whale and Australian sea lion) and three Vulnerable species (sei whale, fin whale, and the southern elephant seal). The Conservation Management Plans for Blue Whales (2015) and Southern Right Whales (2012) identify threats related to vessel disturbance and strike, climate change and variability, sound interference and entanglement. Similar threats are identified for humpback, dwarf minke, sperm, sei and fin whales. Conservation advice from the Threatened Species Scientific Committee (TSSC) indicates interactions with commercial fishing and entanglement are key threats to Australian sea lions, with secondary threats associated with oil spills, noise emissions and climate change.	Blue whale – foraging, distribution BIAs Southern right whale – migration BIA	• Blue whale – foraging, distribution BIAs. • Southern right whale – migration, reproduction BIAs. • Humpback whale, Sperm whale, Australian sea-lion – foraging BIAs. • Indian Ocean bottlenose dolphin, Spotted bottlenose dolphin – breeding BIAs.

Socio-Economic and Cultural Heritage Values

The socio-economic values assessment for the exploration program encompasses the communities and economies that depend on the environment for their livelihoods, health, and well-being. Maritime heritage and cultural values also exist across the region. In the context of marine areas, the socio-economic and cultural heritage environment includes a range of activities that require a close connection to the sea and its resources. These are summarised in Table 3, with more detail provided in the EP.

Table 3: Summary of Socio-Economic and Cultural Values and Sensitivities

Value and Sensitivity	Description
Socio-Economic	
Coastal Settlements	The closest Tasmanian coastal settlement to the operational areas is King Island, located approximately 28 km to the east of T/49P. Approximately half of the population (of 1,617 people) live in the township of Currie located on the west coast, with the remainder in smaller townships and along the coastline from Wickham in the north to Grassy and Naracoopa in the east. The closest Victorian coastal settlement region to the operational areas is the shire of Moyne, located approximately 19 km to the north of VIC/P79. Moyne supports a population of 17,374 people.
Offshore Exploration, Production and Development	Although no other confirmed third-party petroleum exploration or drilling activities are planned within the operational areas during the Otway Exploration Drilling Program, a number of other petroleum activities within the Otway Basin are either occurring, such as long-term operations, or are considered reasonably foreseeable. These have been included the assessment of impacts and cumulative impacts in the EP.
Offshore Renewables and Other Infrastructure	No confirmed offshore renewable energy projects overlap the operational areas; however, there are two proposed offshore wind farm projects in the feasibility stages of development overlapped by the operational area of VIC/P79. These areas represent proposals for feedback only and have not been "declared to be suitable" by the Australian Government. The Indigo-central subsea telecommunications cable connecting Perth to Sydney runs in an easterly-westerly direction to the north of King Island and overlaps with the T/49P operational area. The Victorian Desalination Plant, located at Wonthaggi, is approximately 200 km northeast of the T/49P operational area. Aquaculture facilities operate nearshore sub-surface seawater intakes along the Victorian coastline and on King Island.
Defence Activities	The South-east Marine Region is important for a range of defence activities particularly training exercises. Australian Defence Force (ADF) activities in the region include transit of naval vessels, training exercises, shipbuilding and repair, hydrographic survey, surveillance, enforcement, and search and rescue (DoE 2015b). No defence practice, training or protected areas were identified within the operational area; however, the potential presence of unexploded ordnance was identified, and risk assessed.
Shipping	The South-east Marine Region (which includes Bass Strait) is one of the busiest shipping regions in Australia. Shipping consists of international and coastal cargo trade, passenger services and cargo and vehicular ferry services across Bass Strait. Commercial vessels use the route when transiting between ports on the east, south and west coasts of Australia, and there are regular passenger and cargo services between mainland Australia and Tasmania. The EMBA overlaps the majority of the South-east Marine shipping region, with the main shipping route running through the VIC/P79 operational area.
Tourism	The King Island tourism sector is estimated to generate $5 million in annual economic output, contributing to a total output from the King Island economy of $190.6 million. King Island is renowned for its fresh produce, recreational activities including fishing, surfing, kiteboarding and golf. Tourism employed 34 people representing 4.9% of King Island employment in 2013. In Victoria, a total of 53.9 million domestic visitors visited the region, however, these levels are only 88% of the pre-pandemic numbers (Business Victoria, 2023). The Great Ocean Road tourism region in particular places enormous importance on the coastal and marine environment, including whale watching, recreational diving, surfing and fishing. The 2018/2019 season employed 13,100 people in tourism, or 19% of workers in the region (Business Victoria 2023).

Table 3: Summary of Socio-Economic and Cultural Values and Sensitivities

Value and Sensitivity	Description
Commonwealth Managed Fisheries	The following Commonwealth managed fisheries have recorded fishing in the EMBA in the last 10 years. Details are provided below regarding the overlap with operational areas: • Southern and Eastern Scalefish and Shark Fishery (SSESF) – The operational areas overlap areas of low, medium and high Shark Gillnet sub-sector fishing intensity (recorded 2016-2021) by approximately 1.54%, 0.52% and 0.77% respectively; with no known catch recorded for the Shark Hook sub-sector or Scalefish Hook sector within operational areas; the operational areas overlap areas of low Commonwealth Trawl Sector (CTS) intensity fishing in T/49P (<0.5 hours/km2) and low and medium intensity fishing in VICP/79 (recorded 2016 and 2021). • Southern Squid Jig Fishery (SSJF) – The VICP/79 operational area overlaps areas of low, medium and high fishing intensity (recorded 2016-2021) by approximately 15.95%, 25.01% and 36.1% respectively. • Bass Strait Central Zone Scallop Fishery (BSCZSF) – No known catch recorded within operational areas. • Eastern Tuna and Billfish Fishery (ETBF) – No known catch recorded within operational areas. • Southern Bluefin Tuna Fishery (SBTF) – No known catch recorded within operational areas. • Small Pelagic Fishery (SPF) – No known catch recorded within operational areas.
State-Managed Fisheries	The following State-managed fisheries have recorded fishing in the EMBA in the last 10 years. Details are provided below regarding the overlap with operational areas: • **Victorian-managed fisheries:** - Southern Rock Lobster – The operational areas overlap 11 of the 53 reporting blocks recording vessel activity within the SRL fishery, nine of which report <5 vessels. The remaining blocks range between five and seven vessels. - Giant Crab – 28 reporting grids overlap operational areas. However, catch and effort data is not available due to low number (<5) operators. - Multi-Species Ocean – Limited data is available due to confidentiality as there are less than five active fishers. - Octopus – 2 reporting grids overlap the northern extent of the VICP/79 operational areas. Catch and effort data is not available due to the low number of operators (<5). - Abalone, Eel and Pipis – No overlap with operational areas. - Scallop, Sea Urchin and Wrasse – No known catch recorded within operational areas. • **Tasmanian-managed fisheries:** - Southern Rock Lobster – 17 reporting grids overlap the T/49P operational area. However, catch and effort data is not available due to the low number of operators (<5). - Giant Crab – 10 reporting grids overlap the T/49P operational area. However, catch and effort data is not available due to the low number of operators (<5). - Abalone, Commercial Dive and Marine Plants – No overlap with operational areas. - Octopus, Scalefish and Scallops – No known catch recorded within operational areas. • **South-Australian managed fisheries:** - Abalone, Charter boat, Giant Crab, Marine Scalefish, Miscellaneous, Sardine and Rock Lobster – No overlap with operational areas • **NSW-managed fisheries:** - Abalone, Lobster, Ocean hauling, Ocean trap & line, Southern fish trawl, Ocean trawl, Sea urchin and turban shell restricted fishery and S37 permit – No overlap with operational areas.

Table 3: Summary of Socio-Economic and Cultural Values and Sensitivities

Value and Sensitivity	Description
Cultural Heritage	
Maritime Archaeological Heritage	The Australasian Cultural Heritage Database lists hundreds of wrecks both historic (>75 years old) and non (< 75 years old) within the EMBA. During consultation it was identified that, although no wrecks are identified within the operational areas, it is considered possible that unidentified shipwrecks and aircraft may be present. Many of the positions provided in the database, including those near the operational areas, are not the known position but are the centre point of an area within which a shipwreck may be located. In addition to the general protection provided by the Underwater Cultural Heritage Act 2018, there are a number of shipwrecks within Australia which have established protected zones. Zones may be established for a number of reasons including conservation, management, or public safety considerations. Within the EMBA there are four shipwrecks with established protection zones.
First Nations Heritage	The Otway Exploration Drilling Program is located within western Bass Strait which is the marine environment between mainland Australia and Tasmania. Bass Strait was formed during the last glacial period, between 110,000 and 12,000 years ago. Sea Country is of First Nations cultural heritage significance. Although this area is now submerged, it had been occupied for thousands of years (Biosis 2023). The South-east Regional Marine Plan Assessment Report titled 'Sea Country – an Indigenous perspective', states "As on land, saltwater country contained evidence of the Dreamtime events by which all geographic features, animals, plants and people were created. It contained sacred sites, often related to these creation events, and it contained tracks, or Songlines along which mythological beings travelled during the Dreamtime. The sea, like the land, was integral to the identity of each clan, and clan members had a kin relationship to the important marine animals, plants, tides and currents." "In addition, 'Indigenous peoples still relate to land that was inundated by sea during the last ice age and regard it as their own." ConocoPhillips Australia is aware of First Nations peoples' connection to coastal areas, totem species and Sea Country and will support the development of a Cultural Heritage Protection Program (CHPP) that will be co-designed with First Nations cultural heritage advisors and indigenous communities, to protect cultural values and sensitivities (CM05). **We are aware of the following Indigenous Protected Areas and Consultation Areas in Victoria, within the EMBA:** • The Deen Maar Indigenous Protected Area (IPA) dedicated in 1999. This IPA covers 453 hectares of rolling sand dunes, limestone ridges, a river, lake and wetlands and is located on the south-west coast of Victoria near the town of Yambuk. • The Gunditjmara Sea Country Indigenous Protected Area (IPA) Consultation Area (Gunditj Mirring Traditional Owners Aboriginal Corporation with Eastern Marr Aboriginal Corporation). The consultation project aims to support Indigenous-led consultation with Traditional Owners and other stakeholders, management planning, and on-sea/on-land management. • The Nanjit to Mallacoota Sea Country IPA Consultation Area (Gurnaikurnai Land and Waters Aboriginal Corporation), in coastal waters of the Gippsland region in Victoria. The area comprises numerous marine and coastal parks and includes the Ramsar listed Gippsland Lakes and Raymond Island, a highly significant cultural site. **We are aware of the following Indigenous Protected Areas In Tasmania, within the EMBA:** • The Preminghana IPA covering 524 hectares of land to protect historic Aboriginal engraving sites and the endangered Preminghana daisy, dedicated in 1999. • The Babel Island IPA, located to the east of Flinders Island, with Australia's largest mutton bird rookery, dedicated in 2009. • The Badger Island IPA dedicated in 2000. • The Iungatalanana (Clarke Island) IPA, being the third largest of the Furneaux islands, dedicated in 2009. • The Mount Chappell Island IPA dedicated in 2000 with mutton bird rookeries accommodation for community members. • Big Dog Island, an important mutton-birding island located to the south of Flinders Island, dedicated in 2009.

Table 3: Summary of Socio-Economic and Cultural Values and Sensitivities

Value and Sensitivity	Description
Cultural Heritage	
Native Title	The Native Title Act 1993 (Cth) is a law that was passed by the Australian Parliament which recognises the rights and interests of Aboriginal and Torres Strait Islander people in land and waters according to their traditional laws and customs. Within the EMBA in Tasmania, there are no registered native title claims. **Within the EMBA in Victoria, native title has been recognised to:** • the Gunditjmara people (in 2007) • the Gunaikurnai people (in 2010) • the Gunditjmara and the Eastern Maar people (in 2011) • the Eastern Maar people (in 2023) **Two other active claims exist where there is currently no registration or determination, including:** • the Boonwurrung People (2021) • the Wadawurrung People (2022) Within the EMBA in South Australia, a registered claim exists from 2017 over the south east coast (19,681 km^2) of South Australia near the Victorian border by the First Nations of the South East. There is currently no determination registered over the area of the claim in the National Native Title Register. Within the EMBA in New South Wales, a registered claim exists from 2017 over the south coast land and waters (16,808 km^2) by the South Coast people. There is currently no determination registered over the area of the claim in the National Native Title Register.

Summary of Environmental Assessment

The Environment Regulations require that the EP details and evaluates the environmental impacts and risks for the activity and demonstrates that the impacts and risks of the activity will be reduced to as low as reasonably practicable and acceptable levels, providing details of the control measures to be used to achieve this.

The ConocoPhillips Australia environmental impact and risk assessment methodology provides a structured and comprehensive process for identifying, assessing and managing environmental impacts and risks. The methodology aligns with ConocoPhillips Australia's Risk Management Procedure which is part of ConocoPhillips Australia's Health, Safety and Environmental Management System (HSEMS). The methodology meets the requirements of the Environment Regulations and is consistent with:

- Australian and New Zealand Standard for Risk Management (AS/NZS ISO 31000:2018, Risk Management – Principles and Guidelines)
- AS/NZS ISO 14001:2016: Environmental Management System (EMS) – Requirements with guidance for use
- UK offshore oil and gas industry guidance on risk-related decision making (Oil & Gas UK, formerly UKOOA, 2014)
- NOPSEMAs Environment Plan Decision Making Guideline (N-04750-GL1721, December 2022), and
- NOPSEMAs Environment Plan Content Requirements Guidance Note (N-04750-GN1344, September 2020).

Environmental aspects are an element of an activity that interacts or can interact with the environment. Environmental aspects can have a direct impact on the environment, contribute only partially or indirectly to a larger environmental change or create a risk to one or more environmental receptors. Aspects can be planned (inherent part of the activity e.g., light) or unplanned (not part of the activity e.g., spills).

A summary of the planned and unplanned aspects identified for the Otway Exploration Drilling Program, and the determination of control measures, is provided below.

Environmental Impacts from Planned Aspects

The assessment of planned aspects has identified the following key topics for assessment:

- Interaction with Other Marine and Coastal Users
- Light Emissions
- Noise Emissions
- Seabed Disturbance
- Air Emissions
- Discharges

ConocoPhillips Australia has undertaken consultation during the preparation of the Otway Exploration Drilling Program EP to inform its understanding of relevant environmental values and sensitivities and to support the assessment of environmental impacts, risks and control measures.

Interference with Other Marine and Coastal Users

Other marine and coastal users, such as commercial and recreational shipping and fishing vessels, may be operating within the operational area during the activity. The movement of vessels or the presence of the MODU could interfere with these other users.

What are the possible impacts?

Exclusion zones will be established by ConocoPhillips Australia to support safe marine operations, minimising the risk of interactions with other marine users. These include a 500 m radius Safe Navigation Area (SNA) around seabed survey vessel(s) and any towed equipment, and a 500 m radius Petroleum Safety Zone (PSZ) and a 2 km radius cautionary zone around the MODU. Access to these areas by other marine users will be limited. Marine users will be notified e.g. notice to mariners, prior to the exclusion zones being enacted and again once the short-term temporary seabed survey and exploration drilling activities are completed and the exclusion zones are no longer in effect.

ConocoPhillips Australia has undertaken to assess the impacts associated with the visibility of the rig from the coast. Visibility modelling predicts that the tip of the derrick on the MODU may be visible from the Victorian or King Island coastline. Additionally, the main deck of the MODU may be visible from some locations along the coast when operating in the closest parts of the operational areas on a clear day. Impacts to visual amenity will be short-term, temporary and fully recoverable once the activities are completed.

How will ConocoPhillips Australia manage impacts?

ConocoPhillips Australia will implement a Marine and Coastal Users Consultation and Communication Plan for the activity to ensure that the outcomes of the NOPSEMA assessment are communicated to marine and coastal users and that during the activity relevant persons are informed about the progress of the activity and any changes. Specific notifications will be provided prior to vessel/MODU arrival in the operational areas and on departure, so the maritime industry is aware of petroleum activities.

A Safe Operations Guide will be developed and implemented detailing pre-activity and on-water communication processes, including SMS messages and radio communications on Channel 16.

In addition, an Adjustment Protocol will be negotiated with peak fishing associations to ensure that commercial fishers are not economically disadvantaged as a result of the activity. The protocol will also be developed in consideration of feedback from consultation with marine users who identified they could be potentially impacted.

These measures are consistent with legislative requirements, international standards and good practice guidelines, and reduce the consequences associated with interference to minor levels that are ALARP and acceptable.

Seabed Disturbance

Seabed disturbance occurs when activities interact with the seabed in some way, for example, when anchors are placed on the seabed or when sediment is collected as part of the seabed survey. The extent of direct seabed disturbance is predicted to be 0.006 km^2 per well, or 0.037 km^2 in total, located entirely within the operational areas.

What are the possible impacts?

The seabed within the operational areas is a mixture of unconsolidated calcareous ooze, calcareous sand and silt and a mixture of mud and sand with some rocky reefs. The diversity of species (such as invertebrates) in these areas is relatively high, but with patchy distribution and little evidence of distinct biogeographic regions. Extensive areas of rocky reefs or outcrops (where sponges, coral and more diverse fauna may be present) are unlikely to be present in the operational areas.

When the seabed is disturbed, e.g. during the placement of anchors, soft sediments can be suspended into the water column, resulting in a decrease in water quality or light penetration near the seabed. Given the hydrodynamics in open ocean areas, the area of decreased water quality is expected to be localised and temporary, as sediments settle out of the water column relatively quickly.

Following the removal of anchors and other equipment on the seabed, disturbed areas are expected to recolonise within weeks to a few months, and impacts are not predicted to be long-lasting.

If drilling were to occur within the multiple use zone of the Zeehan Marine Park, the potential impact area (0.006 km^2 at each well) is small compared to the size of the AMP (19,897 km^2). Considering impacts to ecological receptors are localised, short-term and recoverable, no changes are predicted to the ecosystems, habitats, communities or sea-floor features which represent the conservation values of this Marine Park.

Commercially important seabed species, including giant crab and southern rock lobster, are mobile and are generally less vulnerable than sessile species to sedimentation, as they are able to move to areas with less sediment accumulation or by more efficiently physically removing particles. Due to the small area of seabed which may be disturbed within the wider extent of available fishing grounds, and the short duration of the activity, impacts to commercial benthic species are predicted to be localised and insignificant at a population level.

Disturbance of the seabed also has the potential to interfere with cultural heritage, being both maritime archaeology and First Nations values and sensitivities.

How will ConocoPhillips Australia manage the impacts?

Seabed surveys will be undertaken prior to finalising the MODU position and location of mooring equipment, and seabed equipment. Seabed relief and sensitive seabed features will inform the well location to minimise impacts to the benthic environment and sensitive receptors. At the end of drilling at each well, all equipment on the seafloor will be removed.

ConocoPhillips Australia will support the development of a Cultural Heritage Protection Program (CM05) in consultation with First Nations cultural heritage advisors and indigenous communities with Sea Country within or adjacent to the operational areas, to protect cultural values and sensitivities. This program includes the analysis of seabed survey data by suitably qualified persons to support the identification of priorities and measures to protect both maritime archaeology and First Nations cultural heritage values and sensitivities. This Program will provide benefits across all aspects of the activity, not just related to seabed disturbance.

These measures are consistent with legislative requirements, industry standards and good practice guidelines, and reduce the consequences associated with seabed disturbance to minor levels that are ALARP and acceptable.

Additionally, sediment samples collected to validate seabed survey data will be retained for onshore analysis, contributing to knowledge of the benthic environment in the Otway Basin.

Light Emissions

Lighting is required on vessels and the MODU for operational and navigation safety, and is mandatory under maritime regulations. In addition, well testing may be conducted should a gas discovery occur. Well testing involves short-term flaring, up to a maximum of 120 hours per well over intermittent periods, which would emit additional light.

The National Light Pollution Guidelines for Wildlife (CoA 2023) recommends that potential impacts to sensitive wildlife are assessed within 20 km of a vessel-based light source. ConocoPhillips Australia undertook light modelling for flaring, which conservatively estimated that a change in ambient light may be detectable out to 50 km.

What are the possible impacts?

Marine turtles, seabirds and migratory shorebirds and some socio-economic receptors and cultural features may be sensitive to additional light in the environment.

Marine fauna, particularly seabirds and shorebirds, may be attracted to light and can become disorientated resulting in more time at sea, interference with navigation and stranding or grounding. Birds that are most sensitive to light within 20-50 km of the operational areas include the nocturnally foraging common-diving petrel and the Critically Endangered orange-bellied parrot which may overfly an area of increased ambient light on migration. The National Recovery Plan for the Orange-bellied Parrot (2016) identifies that the behaviour of this species may be modified by the presence of barriers such as wind turbines and illuminated boats, with the impacts of barriers greatest where they occur on migration routes, though there is little more than anecdotal evidence to support this. During the exploration program, illuminated vessels and the MODU will not be conducting petroleum activities in areas that overlap the migration routes. Impacts associated with flaring, which will not occur within the migration route but rather may change ambient light in the area, will be temporary and of short duration (120 hours per well). Therefore, a change in ambient light is unlikely to cause behavioural changes or result in injury/mortality to the orange-bellied parrot.

During day-to-day operations, light from the vessels and the MODU will be indistinguishable from other marine traffic when viewed from the coast. When flaring is taking place, light levels viewed from the closest possible point on the coast will be equivalent to a quarter moon night sky.

How will ConocoPhillips Australia manage the impacts?

ConocoPhillips Australia will develop and implement a Light Management Plan in line with the National Light Pollution Guidelines for Wildlife, for the exploration program. Once safety navigational lighting requirements are met, the Light Management Plan will detail additional mitigations to ensure artificial lighting is reduced to minimum levels based on the information in the Seabird Light Mitigation Toolbox wherever practicable, whilst maintaining safe working conditions and navigation. Specifically, outwards facing lighting will be reduced to minimum levels, directions will be issued to MODU and vessel personnel to minimise non-essential lights (e.g. close blinds, turn lights off, etc.), and a rescue program will be implemented for grounded birds.

If flaring is needed, it will be limited to a maximum of 120 hours per well, and initial flaring events will commence during daylight hours. The timing of subsequent flaring events at each well will be determined by operational safety and testing requirements.

These measures are consistent with legislative requirements, international standards and good practice guidelines, and reduce the consequences associated with light emissions to minor levels that are ALARP and acceptable.

Air Emissions

Air emissions arise from the combustion of fuel to operate vessels, helicopters, the MODU and onboard equipment, and from flaring and venting. Air emissions include Greenhouse Gas (GHG) emissions (Scope 1 GHG emissions emitted during the exploration program) and non-GHG emissions. Air emissions can change localised air quality and contribute to national GHG emissions.

What are the possible impacts?

Changes to air quality will be rapidly dispersed and diluted by offshore winds to below measurable levels, in close proximity to emissions sources. These emissions are not predicted to impact on the health or amenity of the nearest human coastal settlements, nor affect seabirds overflying the activity.

Although emissions of GHGs such as carbon dioxide, methane and nitrous oxide during the activity will add to GHGs in the atmosphere, they are very small when compared to national emissions, insignificant on a global scale, and are not predicted to have determinable impacts.

How will ConocoPhillips Australia manage the impacts?

Air emissions will be limited through measures to ensure vessels, the MODU, and equipment are well maintained and optimised. Flaring will be limited to a maximum of 120 hours per well and the flaring system selected will aid in the reduction of emissions; Volumes flared will be recorded and combustion emissions calculated and reported, as required by relevant regulations.

These measures are consistent with legislative requirements, international standards and good practice guidelines, and reduce the consequences associated with air emissions to minor levels that are ALARP and acceptable.

Underwater Sound Emissions

Sound emissions can be categorised as:

- Non-impulsive, or 'continuous' sound which is monotonous in nature and typically present while that activity is undertaken. Non-impulsive sound will be generated by propellers, thrusters and equipment operation on the vessels and MODU, and by helicopters. These noises are typical of other marine activities in the region such as commercial shipping and fishing.
- Impulsive sound varies in tone or frequency, often rapidly. Impulsive sound sources from the activity include geophysical survey equipment, and short-term well evaluation techniques.

Modelling for a range of impulsive and non-impulsive sound sources was conducted by international experts to inform the assessment of impacts to the marine environment associated with the activity.

What are the possible impacts?

Noise in the marine environment can lead to permanent or temporary hearing impairment, and can behaviourally disturb sensitive fauna, with some of these species having identified cultural significance. Research into noise thresholds, which cause different impacts for different receptor groups, combined with the modelling undertaken for the activity, have been used to inform the assessment of impacts.

Fish and Marine Invertebrates

Non-impulsive sound is predicted to reach the levels associated with effects for some fish species within 10s of metres of sound sources. For effect thresholds to be exceeded, fish would have to remain continuously at those distances for either 12 hours (temporary injury threshold) or 48 hours (recoverable injury threshold). Although there are no threshold criteria relevant to marine invertebrates for non-impulsive sound, there is the potential for sub-lethal impacts.

Fish and benthic invertebrates may be sensitive to impulsive sound during well testing, however, the short duration (maximum 20 hours per well), along with the likelihood of negative affect being restricted to within a few hundred metres of the source, reduce the potential for impacts to these species. Further, fish are expected to exhibit avoidance behaviour and swim away when sound reaches levels which may cause physiological effects.

Marine Turtles

Marine turtles are expected to be transient in the area due to the absence of biologically important behaviours or critical habitat. Consequently, permanent and temporary injuries, which occur as a result of prolonged exposure, are not predicted.

Birds

Most seabirds, including penguins, are generally shallow divers and utilise surface waters where the acoustic signals destructively interfere with the sea surface, resulting in much lower sound exposure compared with deeper waters. Consequently, birds are not expected to be affected by above or below water noise.

Marine Mammals

Marine mammals are sensitive to changes in sound in the marine environment as they use sound for important behaviours such as communicating and echolocation. Modelling recognises the different hearing levels or thresholds of different species and groups, relevant to their hearing ranges, to help inform the assessment process. The most sensitive species are low-frequency hearing cetaceans, such as the Endangered southern right whale and blue whale. For these low-frequency species, injury as a result of underwater sound is not predicted to occur; however, they could be behaviourally disturbed. ConocoPhillips Australia has undertaken detailed assessment of the largest extent of possible impacts over biologically important areas to ensure that underwater sound emissions do not impact on the recovery of blue whales and southern right whales, or on biologically important behaviours of other species. These measures will be implemented and evaluated for effectiveness throughout the exploration program.

How will ConocoPhillips Australia manage the impacts?

ConocoPhillips Australia has developed and will implement a Whale Management Plan. Specific controls include:

- Dedicated marine mammal observers, who will monitor for marine mammals, report detections and provide oversight of the implementation of adaptive management measures.
- A decision making framework to support the commencement of specific activities based on detections during daylight and pre-activity surveys, including night-time and low visibility controls.
- Safe operating distances between vessels and marine mammals, and
- Safe points for operational activities.

Further, the implementation of the Cultural Heritage Protection Program (CM05) may support the development of additional mitigation strategies for culturally important species that may be sensitive to underwater sound.

The measures detailed in the Whale Management Plan are consistent with conservation and recovery plans and conservation advice for potentially affected species and good practice guidelines, and reduce the consequences associated with underwater sound to minor levels that are ALARP and acceptable.

Discharges

Activities conducted as part of the Otway Exploration Drilling Program will result in discharges to the marine environment including:

- Drilling discharges, such as drill cuttings and fluids, cements, and other minor discharges such as hydraulic fluid.
- Operational discharges from vessels and the MODU (such as cooling water, brine, putrescible waste, grey water and sewage), with small volumes released to surface water, as done by most commercial offshore vessels.

What are the possible impacts?

The release of drilling discharges to the seabed and sea surface will result in localised and temporary changes in water quality, sediment quality and habitat composition. Drilling discharges are of low toxicity and will quickly dissipate in the water column or disperse on the seafloor. Consequently, impacts are expected to be short-term, localised to smaller areas within 2 km of each well, and recoverable.

Operational discharges will cause localised and temporary changes in water quality, with extensive research showing impacts are limited to 500 m from the discharge source. Marine fauna and plankton within 500 m of the MODU or vessels could experience a change in behaviour e.g. increased foraging due to elevated nutrient levels, however, the small volumes and dynamic nature of the marine environment means any impacts will be short-term, localised and recoverable.

Discharges are expected to be dispersed and diluted rapidly within the offshore waters of the Otway Basin.

How will ConocoPhillips Australia manage the impacts?

Discharges to offshore waters are to be managed to acceptable levels as regulated by maritime laws and conventions, such as MARPOL and relevant Marine Orders.

ConocoPhillips Australia will implement a chemical selections procedure which requires that all chemicals used that may be discharged to sea are environmentally acceptable by national and international standards, based on their toxicity, biodegradation and potential to bioaccumulate.

These measures are consistent with legislative requirements, international standards and good practice guidelines, and reduce the consequences associated with planned discharges to minor levels that are as low as reasonably practicable and acceptable.

Environmental Risks from Unplanned Events

In the course of preparing the EP, ConocoPhillips Australia identified possible unplanned events which could occur during the activity. These include:

- Loss of material or waste overboard
- Interaction with marine fauna
- Invasive Marine Species (IMS)
- Accidental release of hydrocarbons

Loss of Materials or Waste Overboard

While undertaking the activity there is a remote likelihood that small quantities of waste or other materials may be lost to the marine environment, e.g. litter blowing over the side of a vessel, solid objects dropped during transfer operations and floating or sinking to the seafloor, or small uncontained spills. These types of events have been heard of within the industry and are known to occur during other offshore marine activities such as shipping and commercial fishing.

What are the possible impacts?

Wastes and materials lost overboard could result in a change in water quality, a change in benthic habitat, present a risk to marine fauna of entanglement or ingestion, or create a navigational hazard to other vessels.

How will ConocoPhillips Australia manage the impacts?

Vessel management systems addressing dropped objects, waste storage, and chemical selection, handling and storage are well practised and well understood. Processes will be in place to ensure standards for carriage, stowage and securing of cargos and waste management are met and support vessels can undertake to retrieve objects where safe to do so.

These measures are consistent with legislative requirements, international standards and good practice guidelines, as well as relevant conservation management and recovery plans and conservation advice, reducing the residual risk to low levels that are ALARP and acceptable.

Interactions with Marine Fauna

Vessels, the rig and aircraft may have limited manoeuvrability during particular activities. During these periods there is a remote likelihood of interactions with marine fauna such as vessel collision and aircraft collision. These types of interactions have been heard of within the industry and are known to occur during other offshore marine activities such as shipping and commercial fishing.

What are the possible impacts?

Large or slow-moving marine fauna that commonly dwell near the surface and frequent areas associated with a high level of vessel traffic are the most susceptible to vessel collision. In the operational areas, this includes threatened and migratory cetaceans and marine turtles. Additionally, seabirds are at risk of colliding with surface infrastructure, for example the derrick on the MODU, or with aircraft. Some of these species have identified cultural significance.

The risk of collision between fauna and a vessel depends on the vessel speed, with fast moving vessels less likely to be able to take evasive action and more likely to have serious consequences. When vessels are stationary or slow moving, such as the vessels undertaking activities within the operational areas, the risk of collision is extremely low. Birds have been known to collide with surface infrastructure and be attracted and/or disoriented by lights.

How will ConocoPhillips Australia manage the impacts?

ConocoPhillips Australia will adhere to legislative requirements regarding vessel distances from fauna, as described in the EPBC Regulations (Part 8 Division 8.1 interacting with cetaceans) and will implement speed restrictions and an increased caution zone of 500 m between whales and vessels, to ensure cetaceans are not harmed during offshore activities. The ConocoPhillips Australia Whale Management Plan includes measures to limit impacts to marine mammals and the presence of marine mammal observers on vessels will provide for early detection of cetaceans in the area.

The ConocoPhillips Australia Light Management Plan will include measures to minimise light impacts, and vessel and MODU crew will be provided guidance for responding to and reporting grounded birds. Further, the implementation of the Cultural Heritage Protection Program (CM05) may support the development of additional mitigation strategies for culturally important species that may be at risk of vessel and aircraft strike.

These measures are consistent with maritime legislation, conservation and recovery plans and conservation advice for potentially affected species, and reduce the risk of interactions with marine fauna to low levels that are ALARP and acceptable.

Introduction and Establishment of Invasive Marine Species

Invasive Marine Species (IMS), or marine pests, include marine plants or animals that have been introduced to an to area where they do not normally occur, and become established and spread. These species have the potential harm Australia's marine environment and dependent industries.

The introduction and translocation of IMS within Australian waters may occur as a result of ballast water discharges or from biofouling on vessels and submerged equipment.

What are the possible impacts?

The establishment of IMS in the Otway Basin could affect marine invertebrates and associated benthic habitats, protected marine areas and commercial fisheries. Successful establishment in a new environment depends on water currents, upwellings, habitat type, water depth, wave exposure, water temperature, salinity and the distance from the coast; with most species preferring shallow disturbed waters, such as those found in ports, and hard rocky substrates. The benthic environment within the operational areas does not represent favourable habitat given the deep, well mixed waters away from coastal habitats.

How will ConocoPhillips Australia manage the impacts?

Vessel management systems addressing IMS risks are well practiced and well understood. ConocoPhillips Australia's marine assurance process and IMS risk assessment process will ensure that vessel contractors adhere to maritime legislation and national and international requirements for the management of ballast water and biofouling, reducing the risk of introduction, establishment and spread of IMS to low levels that are as low as reasonably practicable and acceptable.

Accidental Release of Hydrocarbons

The OPGGS Act requires titleholders to prevent the escape of petroleum to the environment from their activities. Failure to prevent the escape of petroleum is an offence. Although extremely unlikely to occur, all offshore operations do carry a risk of an unplanned hydrocarbon release. Detailed risk assessment and response planning is required prior to activities occurring.

As described earlier in this EP summary (section: Environment That May Be Affected), modelling of worst-case credible spill scenarios has been conducted to provide an informed estimate of where hydrocarbons might go if nothing is done to respond, and supports the prediction of possible effects. Hundreds of hypothetical individual spills (1400 in this case) are simulated for each worst-case scenario to show where hydrocarbons from a spill could go under different metocean conditions (such as currents, wind, waves and temperature).

For the Otway Exploration Drilling Program, the worst-case spill scenarios have been defined as:

- A marine diesel spill from a vessel collision or during refuelling; and
- A Loss of Well Control (LOWC), assuming the failure of multiple control systems.

Other minor spills could occur from hose failures, incorrect handling procedures, or mechanical failures, etc.

ConocoPhillips Australia has also prepared a detailed information sheet on Unplanned Hydrocarbon Releases, available via the Resource Library on the online consultation hub. Visit the online consultation hub by scanning the QR Code.

What are the possible impacts?

Hydrocarbons in the marine environment will affect water quality, which can have knock-on effects for all marine fauna and flora. These impacts can be due to ingestion of contaminated water, or from contact with hydrocarbons i.e. coating skin or feathers. Wider ecosystem impacts can occur if the spill is large or affects a sensitive population, habitat or location.

If hydrocarbons reach coastal waters, or are washed up onto the shoreline, they could affect coastal habitats and require remediation.

Other marine and coastal users, such as shipping, fishing and tourism, could be impacted by a hydrocarbon release when exclusions are put in place during response efforts. Fisheries can also be affected by tainting of fish stocks in extreme circumstances.

How will ConocoPhillips Australia manage the impacts?

ConocoPhillips Australia will ensure that all contractors adhere to national and international requirements regarding spill prevention and response, including maintaining response plans, equipment and training.

Maritime notifications will ensure marine users are aware of the presence of the exploration program, including any operational exclusion zones, reducing the risk of collision. The rig and vessels will have automatic identification systems and will meet navigational lighting requirements to support detection at sea, and support vessels will establish communications with nearby vessels.

Operational and preventative maintenance procedures are well practiced and well understood and minimise the likelihood of spills occurring. The well design and delivery process is conducted in accordance with international, national, industry and corporate standards; and processes and equipment that support well integrity are monitored to ensure effectiveness throughout the activity.

ConocoPhillips Australia has developed an Oil Pollution Emergency Plan for the Otway Exploration Drilling Program in consultation with state control agencies, and has prepared an Operational and Scientific Monitoring Program (OSMP) to inform initial response activities and monitor the environment through to recovery. In the highly unlikely event of a spill, the response, including implementation of these plans, will include integration with local, national and international response organisations to mobilise resources, including experts and specialist equipment.

The implementation of the Cultural Heritage Protection Program (CM05) may support the development of additional mitigation strategies for culturally important species that may be at risk in the extremely unlikely event of a spill.

These measures are consistent with legislative, international and national standards and good practice guidelines, and reduce the risks associated with hydrocarbons releases to medium levels that are ALARP and acceptable.

Implementation

The ConocoPhillips Australia Health, Safety and Environmental Management System (HSEMS) includes specific measures that will be used to ensure that, for the duration of the activity:

- The environmental impacts and risks of the activity continue to be identified and reduced to a level that is as low as reasonably practicable (ALARP), and
- Control measures detailed in the EP are effective in reducing the environmental impacts and risks of the activity to ALARP and acceptable levels, and
- Environmental performance outcomes and standards set out in the EP are being met.

Consultation and Next Steps

ConocoPhillips Australia formally commenced consultation for the Otway Exploration Drilling Program in February 2023 to support the preparation of the EP. ConocoPhillips Australia has carried out a range of activities to:

- Identify relevant persons and raise awareness of the proposed Otway Exploration Drilling Program to support the self-identification of relevant persons.
- Provide information about the activity and its potential impacts and risks, so individuals and organisations can determine if they have functions, interests or activities that may be affected by the proposed activity, and wish to be consulted as a relevant person.
- Provide relevant persons with sufficient information and reasonable time, so they can make an informed assessment of the possible consequences of the proposed activity on their functions, interests and activities.
- Receive and respond to feedback, including objections and claims.
- Make appropriate changes in response to objections and claims, appropriate, to improve the environmental management of the activity..

ConocoPhillips Australia also made the draft EP chapters available to support consultation and the identification of further relevant persons, and so that relevant persons could provide further feedback to inform the preparation of the EP.

Consultation in the preparation of the EP was completed in October 2023, which enabled ConocoPhillips Australia to consolidate the valuable information provided by relevant persons and ensure it was properly reflected in the EP, prior to submission to NOPSEMA for public comment. ConocoPhillips Australia will continue to communicate with relevant persons throughout the public comment process. Once the EP is accepted, ongoing consultation procedures are in place, outlined in the EP, to ensure relevant persons remain up to date and informed throughout the life of the activity.

Subject: UPDATE: ConocoPhillips Australia Otway Exploration Activities

ConocoPhillips Australia Otway Exploration Activities

25 November 2022

We'd like to provide you with an update on our exploration plans in the offshore Otway Basin.

The purpose of ConocoPhillips Australia's exploration activities is to identify gas reserves to supply into the domestic market and contribute to Australia's energy security.

In 2021 we completed a marine seismic survey over our permit T/49P. We are currently processing the data we obtained which will help inform us of the location of potential gas reserves within that permit.

This year we agreed to acquire an 80 percent interest in permit VIC/P79 which is located northwest of T/49P.

As part of Government requirements for holding exploration permits, we will be progressing plans to drill exploration wells in both of these permit areas.

To be able to do this, we will need to undertake consultation and prepare an Environment Plan (EP), which is then submitted to the offshore regulator (NOPSEMA) for public comment and assessment. No exploration activity can take place without an accepted EP in place.

We will shortly be starting consultation on this work, and we look forward to engaging with you to better understand your interests, views and potential impacts.

Have we missed anyone? If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.

Good morning,

Please find attached the ConocoPhillips Australia Otway Exploration Drilling Program Project Update. This information sheet summarises the next phase of our Environment Plan development and consultation, where we will be establishing the context of our proposed activity.

We have created an online mapping tool where individuals, organisations and associations can share feedback about locations of environmental values and sensitivities. To view this, visit our consultation hub.

We are also hosting a webinar on Tuesday 23 May, 5-6pm AEST, register to attend via our consultation hub.

If you have any questions or require further information, please don't hesitate to contact us:
otway@conocophillips.com or (07) 3182 7122
Warm regards

ConocoPhillips Australia Community Team

Otway Exploration Drilling Program

ConocoPhillips Australia

Community Information Sessions

ConocoPhillips Australia will be hosting information sessions in Victoria to provide an update on the progress of the Environment Plan for the Otway Exploration Drilling Program, which will include information on environmental impacts and risks associated with the proposed activity.

Warrnambool - Monday 29 May, 6-8pm
Archie Graham Community Centre
118 Timor Street, Warrnambool

Port Fairy - Tuesday 30 May, 6-8pm
Star of the West Hotel
76 Sackville Street, Port Fairy

Portland - Wednesday 31 May, 6-8pm
Portland Yacht Club
Lee Breakwater Road, Portland

Please note sessions in other Victorian locations will be communicated at a later date.

Identifying Environmental Values and Sensitivities

To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.

Visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

Discover our Map

Don't forget to take the consultation survey to let us know if you'd like to be consulted as a relevant person as we continue to develop the Environment Plan.

Take the Survey

Can't get to an information session? Register for our online webinar series via our consultation hub.

Otway Exploration Drilling Program

ConocoPhillips Australia

Project Update - June 2023

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of Environment Plan development and consultation, where we will share our evaluations of environmental impacts and risks.

Key Information

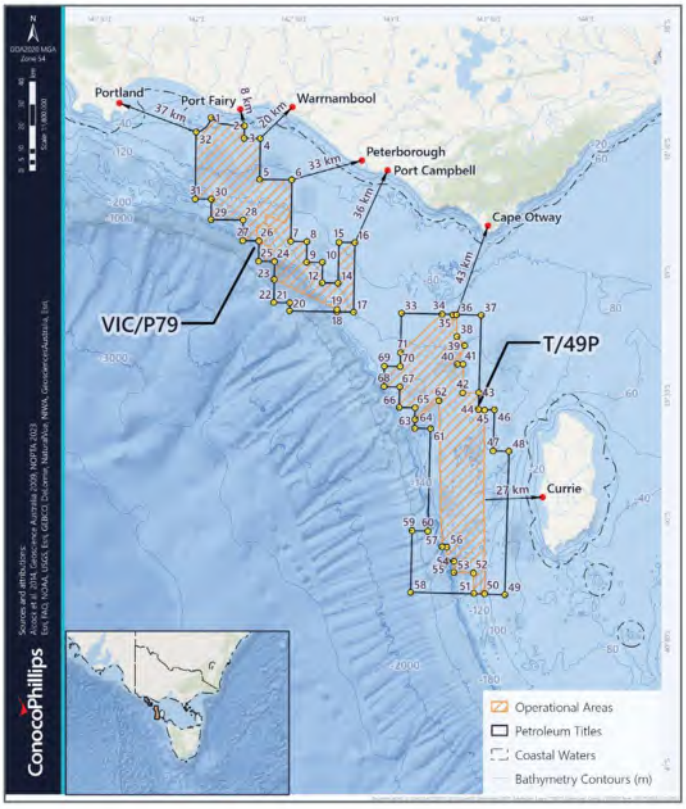
- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.

- A range of information sheets providing information on the evaluation of environmental impacts and risks has been developed to support consultation.
- ConocoPhillips Australia is now looking for feedback on these evaluations.
- Individuals, organisations and associations continue to be able to share feedback on locations with valuesand sensitivities through an online interactive map via the consultation hub.

How to Participate in the Regulatory Approvals Process

NOPSEMA has recently published a brochure with information for the community about consultation on offshore petroleum environment plans. The brochure has excellent information to help you or your organisation decide if you are a relevant person and can be found here. We strongly encourage those of you uncertain about whether you are a relevant person to consider this information.

If you believe you are a relevant person, we need to understand your activities or interests so that we can provide the right information to you. When engaging with our team we encourage you to be specific about how you might potentially be affected, so that we can properly consider how we might avoid or lessen those impacts or risks.



Upcoming Relevant Persons Information Sessions

Peterborough - Monday 19 June, 12-2 pm
Peterborough Community Hall
Macs Street, Peterborough

Port Campbell - Monday 19 June, 6-8pm
The Arts Space
50 Lord Street, Port Campbell

Apollo Bay - Tuesday 20 June, 6-8pm
Apollo Bay Bowls Club
6 Moore Street, Apollo Bay

Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and VIC/P79	Operational Areas within T/49P and VIC/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km² (Nine locations, each 6 x 6 km) within Operational Areas	75 km² (Six locations, each a 2 km radius Drilling Area) within Operational Areas

---

Commercial Fishing

The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:

- Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.

- Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10sto 100s of metres and will not affect the long-term sustainability of fisheries.
- Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

The full Commercial Fishing information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Marine Mammals

The EP will include an assessment of potential impacts and risks to marine mammals that might arise from the exploration program.

A preliminary assessment of impacts and risks to marine mammals has identified that:

- Several species of whales, dolphins and seals are typically found in the Otway Basin, many of which exhibit biologically important behaviours such as foraging.
- Marine mammals are particularly sensitive to the effects of underwater noise which has the potential to result inhearing impairment, stress and changes in behaviour at a range of effect distances.
- Where underwater noise has the potential to affect biologically important behaviours of threatened species,effective control measures will need to be in place.

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal).

In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:

- Southern right whales
- Blue whales

- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/spotted bottlenose dolphins, and
- Australian sea lion.

The full Marine Mammals information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Seabirds, Penguins and Marine Turtles

The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.

A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:

- Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
- Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
- A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging ,breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the EPBC Act. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

The following species are known to occur within the Environmental Planning Area and exhibit one or more of these important behaviours:

Otway Exploration Drilling Program

ConocoPhillips Australia

Project Update - June 2023

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than January 2024.

This information sheet summarises the next phase of Environment Plan development and consultation, where we will share our evaluations of environmental impacts and risks.

Key Information

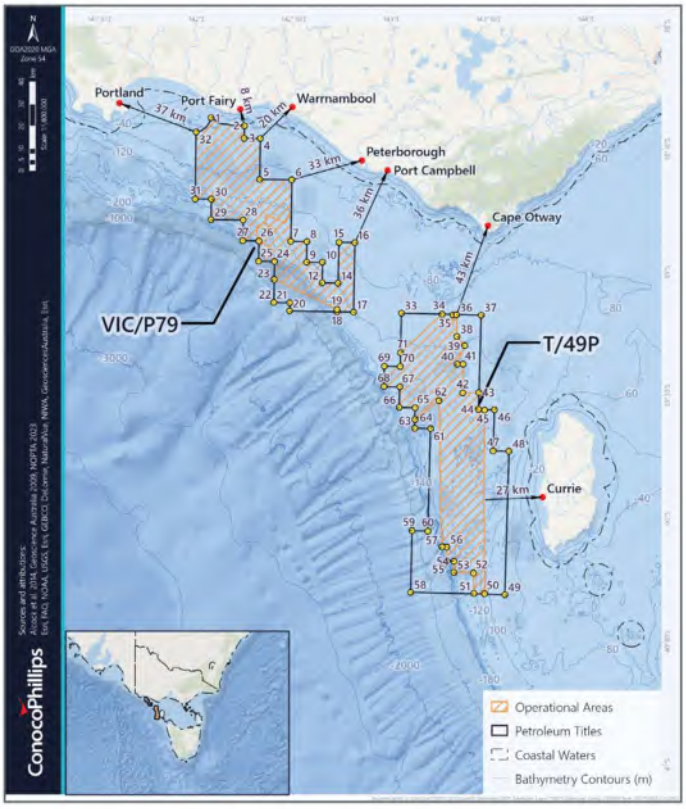
- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.

- A range of information sheets providing information on the evaluation of environmental impacts and risks has been developed to support consultation.
- ConocoPhillips Australia is now looking for feedback on these evaluations.
- Individuals, organisations and associations continue to be able to share feedback on locations with valuesand sensitivities through an online interactive map via the consultation hub.

How to Participate in the Regulatory Approvals Process

NOPSEMA has recently published a brochure with information for the community about consultation on offshore petroleum environment plans. The brochure has excellent information to help you or your organisation decide if you are a relevant person and can be found here. We strongly encourage those of you uncertain about whether you are a relevant person to consider this information.

If you believe you are a relevant person, we need to understand your activities or interests so that we can provide the right information to you. When engaging with our team we encourage you to be specific about how you might potentially be affected, so that we can properly consider how we might avoid or lessen those impacts or risks.



Upcoming Relevant Persons Information Sessions

Peterborough - Monday 19 June, 12-2 pm
Peterborough Community Hall
Macs Street, Peterborough

Port Campbell - Monday 19 June, 6-8pm
The Arts Space
50 Lord Street, Port Campbell

Apollo Bay - Tuesday 20 June, 6-8pm
Apollo Bay Bowls Club
6 Moore Street, Apollo Bay

Activity Overview

ConocoPhillips Australia is seeking to identify commercially viable natural gas reserves that can be developed to contribute towards energy security for the Australian east coast domestic market. As a titleholder, ConocoPhillips Australia has made a commitment to undertake exploration activities within timeframes agreed by the Commonwealth National Offshore Petroleum Titles Administrator (NOPTA).

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P, located in Commonwealth waters offshore of Victoria and King Island, Tasmania, as outlined below.

Parameter	Seabed Survey	Drilling
The broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and VIC/P79	Operational Areas within T/49P and VIC/P79
Narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km² (Nine locations, each 6 x 6 km) within Operational Areas	75 km² (Six locations, each a 2 km radius Drilling Area) within Operational Areas

---

Commercial Fishing

The Otway Exploration Drilling Program is located within existing designated Commonwealth and State fisheries. Exploration drilling activities will occur in only very small areas within the fisheries area.

Specific locations for seabed surveys and exploration drilling are yet to be confirmed. ConocoPhillips Australia has undertaken to assess the environmental impacts and risks associated with seabed surveys and drilling activities that may occur anywhere within broader operational areas within petroleum titles T/49P and VIC/P79. This ensures that the impacts and risks associated with all potential survey and drilling locations are assessed.

A preliminary assessment of potential impacts and risks to the commercial fishing industry has identified that:

- Commercial fishers may be temporarily displaced from parts of the fisheries during exploration activities. Any displacement, i.e. through exclusion zones, would be communicated in a timely manner.

- Impacts to fish and marine invertebrates from planned activities are predicted to be short term, limited within 10sto 100s of metres and will not affect the long-term sustainability of fisheries.
- Potential risks from unplanned events have been identified and mitigation and management measures are being developed.

The full Commercial Fishing information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Marine Mammals

The EP will include an assessment of potential impacts and risks to marine mammals that might arise from the exploration program.

A preliminary assessment of impacts and risks to marine mammals has identified that:

- Several species of whales, dolphins and seals are typically found in the Otway Basin, many of which exhibit biologically important behaviours such as foraging.
- Marine mammals are particularly sensitive to the effects of underwater noise which has the potential to result inhearing impairment, stress and changes in behaviour at a range of effect distances.
- Where underwater noise has the potential to affect biologically important behaviours of threatened species,effective control measures will need to be in place.

Under the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act) all cetaceans (whales, dolphins and porpoises) are protected in Australian waters. There are several species of whales, dolphins and seals typically found in the Otway Basin, including species that are listed as nationally threatened under the EPBC Act including three endangered species (blue whale, southern right whale and Australian sea lion) and three vulnerable species (sei whale, fin whale and the southern elephant seal).

In addition, some species are known to undertake biologically important behaviours, such as foraging, calving and migration, within the Environmental Planning Area, including:

- Southern right whales
- Blue whales

- Humpback whales
- Sperm whales
- Indian Ocean/Indo-Pacific/spotted bottlenose dolphins, and
- Australian sea lion.

The full Marine Mammals information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Seabirds, Penguins and Marine Turtles

The EP will include an assessment of potential impacts and risks to seabirds, penguins and marine turtles that might arise from the exploration program.

A preliminary assessment of impacts and risks to seabirds, penguins and marine turtles has identified that:

- Seabirds, penguins and marine turtles are known to be sensitive to the effects of artificial light, particularly during critical behaviours such as breeding and foraging for seabirds and penguins, and nesting and hatching for marine turtles.
- Marine turtles are known to be sensitive to the effects of underwater noise. However, there are no biologically important behaviours or critical habitat essential to marine turtles identified in the area and their presence is expected to be of a transient nature.
- A number of seabird species utilise the offshore Otway Basin for biologically important behaviours such as foraging ,breeding and migration. Where underwater noise and artificial light have the potential to affect biologically important behaviours of threatened seabird species, effective control measures will need to be in place.

There are several species of seabirds that are known to be present in the Otway Basin. Some of these species such as albatross and petrels, and penguins, are listed as Matters of National Environmental Significance and are protected under the EPBC Act. Many seabird species utilise the area for biologically important behaviours such as foraging, breeding and migration.

The following species are known to occur within the Environmental Planning Area and exhibit one or more of these important behaviours:

- Caspian tern
- Flesh-footed shearwater
- Little penguin
- Common-diving petrel
- Great-winged petrel
- Black-faced cormorant
- Greater crested tern

- Shy albatross
- Wedge-tailed shearwater
- White-fronted tern
- Pacific gull Soft-plumage petrel
- White-capped albatross
- Short-tailed shearwater
- Sooty shearwater
- White-faced storm petrel

Marine turtles are highly migratory and rely on both marine and terrestrial habitats. Although they may occur within the Environmental Planning Area, no habitat critical to their survival occurs in the waters off southern Australia and they are not known to exhibit any identified biologically important behaviours in this area. The closest biologically important areas for marine turtles are located south of Brisbane, QLD, and at Shark Bay, WA. Even though the presence of individuals within the area is expected to be of a transient nature, the potential impacts of the Otway Exploration Drilling Program on marine turtles has been assessed, as they are listed as Matters of National Environmental Significance and are protected under the EPBC Act.

The full Seabirds, Penguins and Marine Turtles information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Other Marine and Coastal Users

The Environment Plan will include an assessment of potential impacts and risks to other marine and coastal users that may arise from the exploration drilling program. This assessment has currently identified a number of marine and coastal users and values including recreation and tourism, commercial shipping, petroleum activities, renewable energy, defence activities, commercial fishing and cultural heritage.

The Otway Exploration Drilling Program may affect the activities of other marine and coastal users. For example, the physical presence of seabed survey vessels, the drilling rig and support vessels used for the activity, and the establishment of exclusion zones, may result in the displacement of other marine users engaging in activities such as commercial fishing.

Other short-term petroleum activities, for example, Vertical Seismic Profiling (VSP), have the potential to cause additional displacement if conducted in

close proximity to coastal areas, with sound emissions from VSP limited to a maximum of 20 hours per well.

Exclusion zones will be established to support safe operations. These zones allow for anchors, mooring chains and wire to be placed within the operational areas during the drilling program and prevent interactions or collisions with equipment or between vessels.

All potential drilling locations will be confined to water depths between 35 - 670 m. Recreational diving is likely to berestricted to coastal waters in depths <18 m but with more advanced diving possible to 40 m. Water depths withinthe operational areas are mostly beyond the recognised maximum recreational diving depth of 40 m, which is also anunlikely depth for recreational swimming. The sound generated by the activity has the potential to reach shallowerwaters if the drilling activity is in the northern portion of permit VIC/P79.

The full Other Marine and Coastal Users information sheet, including examples of mitigation measures is available in the document library of the consultation hub.

Emissions and Discharges

The EP will include a detailed assessment of potential impacts and risks arising from the air emissions and planned discharges associated with the Otway Exploration Drilling Program. Activities conducted as part of the Otway Exploration Drilling Program will result in emissions to the atmosphere, as well as discharges to the marine environment.

A preliminary assessment of potential impacts associated with emissions and discharges has identified:

- Air emissions from seabed survey vessels, the drilling rig and support vessels have the potential to result in localised changes in air quality.
- Planned discharges from survey vessels, the drilling rig and support vessels have the potential to result in localisedchanges to water quality that will quickly dissipate in the water column.
- Discharges from drilling operations, including drilling fluids and rock cuttings, cement, and small volumes of hydraulic fluid from testing

subsea equipment, have the potential to result in localised changes to water and sediment quality.

The full Emissions and Discharges information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Historical Military Ordnance Risk(Unexploded Ordnance)

The EP will include an assessment of impacts and risks associated with historical defence activities in the area, including the potential presence of unexploded ordnance.

Both permit areas overlap a historic air-to-air firing range which the government has classified as having a Slight Potential for unexploded ordinance (UXO) presence, with most ammunition used in this area being considered low risk.

There is no overlap between the permit areas and historic offshore UXO sea dumping sites. The closest sea dumpingsite to either permit area is located 21 km from T/49P.

The full Historical Military Ordnance Risk information sheet, including examples of mitigation measures, is available in the document library of the consultation hub.

Identifying Environmental Values and Sensitivities

To support our understanding of the marine environment of the offshore Otway Basin, ConocoPhillips Australia is inviting individuals, organisations and associations to provide additional context and feedback on our proposed activity through an online collaborative mapping process.

Visit the consultation hub and use the interactive map to identify (pin) locations of interest or concern and provide additional information or comment on existing pins.

Environmental values and sensitivities can be physical, ecological, socio-economic and/or cultural.

Discover our Map

Don't forget to take the consultation survey to let us know if you'd like to be consulted as a relevant person as we continue to develop the Environment Plan.

Otway Exploration Drilling Program

ConocoPhillips Australia

Community Information Session

ConocoPhillips is currently developing an Environment Plan for the proposed Otway Exploration Drilling Program and will be hosting two community information sessions on King Island in July.

Residents and all relevant persons are encouraged to come along to a session to learn more about the progress of the environmental impact and risk assessments and the typical control measures that have been identified to support ongoing consultation. The content will focus on activities specific to King Island, with ample opportunity to ask questions and provide feedback.

Session 1
Thursday 13 July 2023
11am - 1pm
King Island Town Hall

Session 2
Thursday 13 July 2023
6 - 8pm
King Island Town Hall

Light refreshments will be provided.

Can't make either session? Register for the next webinar via the consultation hub.

For more information about this activity:
Visit the consultation hub.

Otway Exploration Drilling Program

ConocoPhillips Australia

Consultation Extended

This email is to advise you that, based on feedback from consultation, ConocoPhillips Australia is extending the consultation period on the proposed Otway Exploration Drilling Program until 3 September 2023.

This ensures all relevant persons have a reasonable period of time to consider the information we have provided during the course of consultation and provide feedback to us on the potential impacts and risks of the activity on their functions, interests and activities.

Consultation and feedback with relevant persons, whose functions, interests or activities may be affected by the exploration program activities, is an important part of developing Environment Plans. More information on the Otway Exploration Drilling Program and how to provide feedback can be found on our consultation hub.

King regards,

ConocoPhillips Australia Community Team

Otway Exploration Drilling Program

ConocoPhillips Australia

Project Update - August 2023

Click here to access the PDF version of this update.

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

About the Otway Exploration Drilling Program

ConocoPhillips Australia is proposing to undertake an exploration program that consists of seabed surveys and the drilling of up to six exploration wells in exploration permits VIC/P79 and T/49P located in Commonwealth waters offshore of Victoria and King Island, Tasmania.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek approval for this exploration drilling program to be undertaken. Drilling commencement is dependent on regulatory approval and rig availability. The initial activity will be a vessel-based seabed survey that will commence no earlier than April 2024.

This update summarises the next phase of Environment Plan development and consultation.

KEY INFORMATION:

- ConocoPhillips Australia is planning to undertake an exploration drilling program in the Otway Basin and is preparing an Environment Plan (EP) which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for public comment and assessment. Any decision to proceed to development will be dependent on a conducive investment environment.

- ConocoPhillips Australia has secured a harsh environment semi-submersible rig as part of a rig consortium. Drilling remains dependent on the EP being accepted by NOPSEMA.
- ConocoPhillips Australia is releasing draft Environment Plan chapters to support consultation and has extended consultation on the proposed activity until 30 September 2023, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.
- ConocoPhillips Australia is asking relevant persons to provide feedback, including objections or claims, about the potential impacts of the activity.
- Based on the (now identified) operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction in total area. As a result of this refinement, some operational areas now extend outside of the petroleum titles. Additional information on these changes, and a revised map with coordinates, are provided within this information sheet.

Changes made to the proposed activity

Operational Area: Based on operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction of total area. As a result of this refinement, some operational areas now extend past title permit boundaries.

Operational Areas represent the area within which petroleum activities can occur. Operational areas are located predominantly within the relevant petroleum titles (T/49P and VIC/P79) and have been selected based on similar constraints around rig operations and well design. Where operational areas extend outside of a petroleum title, ConocoPhillips Australia will apply for and secure an Access Authority (AA) from NOPTA, prior to the commencement of activities in these areas. Activities in these areas will be 'other than drilling a well' and may include the placement of anchors, the collection of geophysical and geotechnical data, and the operation of vessels.

Click here to see a map of how the operational areas have changed.

Design Envelope: The initial timing provided for the commencement of seabed surveys was 'no earlier than 1 January 2024'. This has now been

extended to ‘no earlier than 1 April 2024’. The term of the approval for these activities remains unchanged – at 31 December 2028, to allow for the drilling of a maximum of six exploration wells.

Consultation Extended

Based on relevant person feedback, ConocoPhillips Australia has extended consultation on the proposed activity until 30 September 2023. This ensures all relevant persons have a reasonable period of time to consider the information we have provided during the course of consultation and provide feedback to us on the potential impacts of the activity on their functions, interests and activities.

Consultation with relevant persons is an important part of developing and reviewing Environment Plans. Relevant persons are defined in the regulations as a person or organisation whose functions, interests or activities may be affected by the activities to be carried out under the environment plan. Please note, all consultation records will be provided to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) and published with the Environment Plan, unless you advise us that you don’t want that information published.

Provide feedback on draft Environment Plan chapters

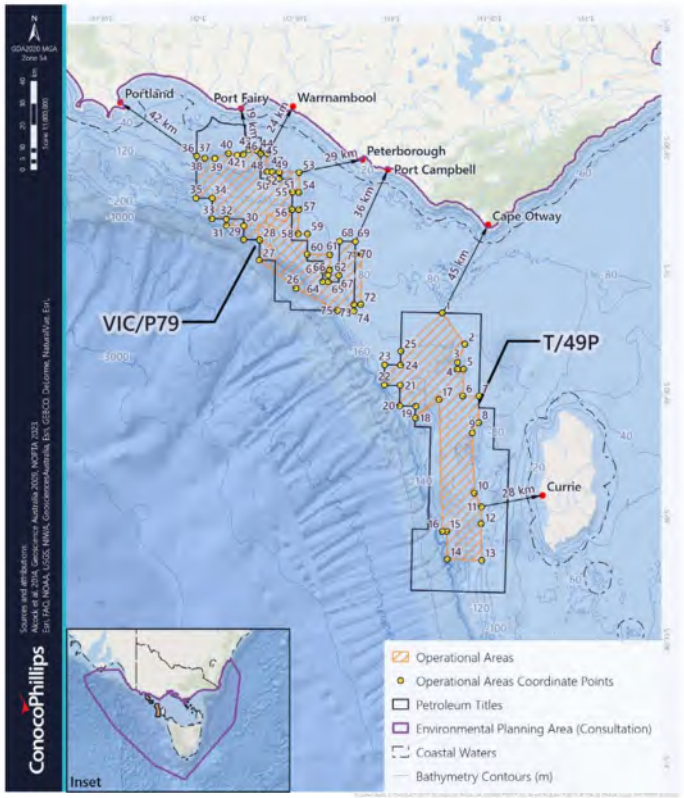
As part of ongoing consultation, ConocoPhillips Australia is releasing draft EP chapters for review. We are asking relevant persons to raise concerns, including objections or claims, about the potential impacts of the activity. We are also seeking information about how relevant persons may be affected and feedback about how we intend to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

By providing the draft EP chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

Relevant persons can view the draft EP chapters and information on how to provide feedback via the consultation hub by scanning the QR code or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by 30 September 2023, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.

View available draft Environment Plan chapters



How to provide feedback on the draft Environment Plan chapters

There are three ways to provide feedback on the draft EP chapters:

- Fill out the feedback form. This form is ideal for short-form feedback, objections or claims and is located on the consultation hub.
- Send detailed feedback, including your assessment of the possible consequences of the proposed activity on your functions, interests or activities and any objections or claims to otway@conocophillips.com or PO BOX 1243, MILTON, QLD, 4064.
- Request specific information and/or an opportunity to discuss the proposed activity and provided information with a member of the ConocoPhillips Australia's Otway Exploration Drilling Program team by emailing otway@conocophillips.com or calling 07 3182 7122.

Please note, PDF versions of EP chapters can be made available for relevant persons on request. In addition, excerpts or a summary of EP information, e.g. specific to particular aspects or receptors, can also be provided on request.

Otway Exploration Drilling Program

ConocoPhillips Australia

Draft EP Chapters Available for Consultation

ConocoPhillips Australia is planning to undertake exploration activities in operational areas associated with offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

Provide feedback on draft Environment Plan chapters

As part of ongoing consultation, ConocoPhillips Australia has released draft EP chapters for review. We are asking relevant persons to raise concerns, including objections or claims, about the potential impacts of the activity. We are also seeking information about how relevant persons may be affected and feedback about how we intend to manage the activity to ensure the associated impacts are as low as reasonably practicable and are acceptable.

By providing the draft EP chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

Relevant persons can view the draft EP chapters and information on how to provide feedback via the consultation hub by scanning the QR code or can request copies of the draft chapters and other relevant information, by contacting ConocoPhillips Australia.

We are asking relevant persons to provide feedback by 30 September 2023, after which time we will pause consultation so we can collate a submission to NOPSEMA for public comment and assessment.

View available draft Environment Plan chapters

How to provide feedback on the draft Environment Plan chapters

There are three ways to provide feedback on the draft EP chapters:

- Fill out the feedback form. This form is ideal for short-form feedback, objections or claims and is located on the consultation hub.
- Send detailed feedback, including your assessment of the possible consequences of the proposed activity on your functions, interests or activities and any objections or claims to otway@conocophillips.com or PO BOX 1243, MILTON, QLD, 4064.
- Request specific information and/or an opportunity to discuss the proposed activity and provided information with a member of the ConocoPhillips Australia's Otway Exploration Drilling Program team by emailing otway@conocophillips.com or calling 07 3182 7122.

Please note, PDF versions of EP chapters can be made available for relevant persons on request. In addition, excerpts or a summary of EP information, e.g. specific to particular aspects or receptors, can also be provided on request.

Have we missed anyone?

If there is someone you believe to be affected by the proposed activities, please have them contact us using the details below.

Otway Exploration Drilling Program

ConocoPhillips Australia

Webinar Details

Please find below the log-in details for the ConocoPhillips Australia Otway Exploration Drilling Program Webinar.

Date: Wednesday 20 September 2023
Time: 5-6.30pm AEST

Can't make the webinar? A recording will be loaded to the consultation hub after the event.

Teams Meeting Details

Join on your computer, mobile app or room device.

Click here to join the meeting

Meeting ID: 271 782 037 96

Passcode: iyGftj

Download Teams | Join on the web

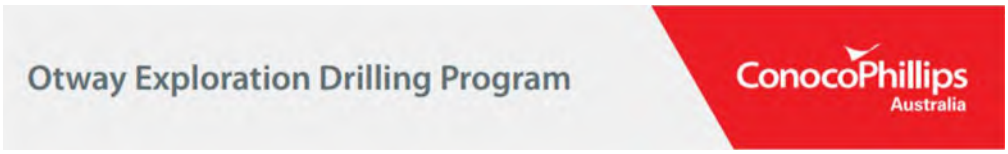
Additional Meeting Information: Participants will be muted for the duration of the presentation and able to ask questions through the chat function with questions grouped and answered at the end of the presentation.

Only individuals who have registered for webinars via the ConocoPhillips Australia Consultation Hub have received this invitation.

Recording Notice

This webinar will be recorded (video, audio and content). The recording may be used and distributed by ConocoPhillips Australia as part of its stakeholder engagement/consultation and associated purposes. By attending this session, you consent to being recorded. ConocoPhillips Australia collects and deals with personal information in accordance with our privacy policy, available at https://www.conocophillips.com.au/privacy-policy/legal-privacy-australia/.

Draft Environment Plan Chapters Now Available



ConocoPhillips Australia is seeking your insights, experience, and expertise as we look to refine the impact and risk assessments for the Otway Exploration Drilling Program Environment Plan.
These chapters have been compiled using careful research, analysis, and the dedicated pursuit of informed decision-making. Any environmental assessment process is improved by thoughtful critique, suggestions, and feedback to ensure these assessments are as comprehensive, robust, and accurate as possible. Your unique perspectives and areas of expertise could shed light on facets that we might have overlooked or underestimated.
The available Environment Plan (EP) chapters have been prepared as a draft for consultation. They form the basis of the EP that will be submitted to NOPSEMA. They will be amended based on feedback received and any subsequent research required.
By providing the draft chapters, we aim to ensure that all relevant persons are provided with sufficient information so they can make an informed assessment of the potential impacts of the proposed Otway Exploration Drilling Program on their functions, interests and activities.

Otway Exploration Drilling Program

ConocoPhillips Australia

Notification of Consultation Pause

In line with our consultation approach for the Otway Exploration Drilling Program, ConocoPhillips Australia is briefly pausing consultation during October while we compile the Environment Plan for submission to NOPSEMA for formal public comment.

During this time we will also respond to all individuals and organisations who provided feedback or raised objections and claims on the draft Environment Plan content that was made available from 31 August 2023 via our online consultation hub. These chapters remain available on the consultation hub.

Please note that during this time our responses may be delayed but we will get back to you.

Visit the consultation hub

Otway Exploration Drilling Program

ConocoPhillips Australia

Pre-submission Consultation Complete

ConocoPhillips Australia has completed pre-submission consultation on the Otway Exploration Drilling Environment Plan. ConocoPhillips Australia will shortly submit the EP and NOPSEMA will check the EP before publishing it for public comment. ConocoPhillips will continue consultation throughout public comment and the life of the project, and we encourage people with feedback to contact us as detailed below. We thank everybody who has participated in the consultation process over the past year.

Sensitive Information

As a reminder, you may request that information you provide to us not be published in the Environment Plan. Correspondence between us will be provided in full to NOPSEMA in a part of the Environment Plan which is marked as 'sensitive information' and will not be published.

To make this request please notify us by October 31st.

NOPSEMA - Information for the Community

The National Offshore Petroleum and Environmental Management Authority (NOPSEMA) has produced a brochure that provides information to the community regarding consultation on offshore petroleum environment plans. The brochure can be found in the Resource Library here.

What we've heard

Through our consultation activities, we have received and considered information unique to the activity area and put environmental protection measures in place where appropriate. We have produced a table, which can be found here, showing what we've heard, how we have assessed it and any measures adopted because of the consultations. The table is a thematic representation of the feedback we've heard. If you do not see your specific feedback, objection, or claim shown here it may be due to our thematic approach. Noting, all feedback received during consultation is provided unchanged to NOPSEMA.

Webinar

The next activity update webinar will be on Wednesday 15th November, please register for the webinar via the consultation hub.

Otway Exploration Drilling Program

ConocoPhillips Australia

NOTICE OF PUBLIC COMMENT PERIOD

ConocoPhillips Australia Otway Exploration Drilling Program Environment Plan

The proposed ConocoPhillips Australia Otway Exploration Drilling Program Environment Plan (EP) is now available for public comment via the NOPSEMA website https://consultation.nopsema.gov.au

You are invited to read the EP and associated documents and submit your comments to NOPSEMA during the public comment period which will run between 16 November and 18 December 2023.

The public comment period provides an opportunity for community members to raise issues about environmental management matters that have not yet been considered in the environment plan for the proposed activity. To read more about the public comment period and how to make an effective comment visit the NOPSEMA website and read *Have your say on environmental aspects of offshore energy activities*.

If you'd like to unsubscribe and stop receiving these emails click here.

Otway Exploration Drilling Program

ConocoPhillips Australia

ConocoPhillips Australia is planning to undertake exploration activities in operational areas associated with offshore permits VIC/P79 and T/49P located in Commonwealth waters. The proposed activities are a continuation of ConocoPhillips Australia's exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

Environment Plan Summary Now Available

To support the public comment period, ConocoPhillips Australia has developed the Otway Exploration Drilling Program Environment Plan Summary which can be accessed via the resource library on the consultation hub.

To view the proposed ConocoPhillips Australia Otway Exploration Drilling Program Environment Plan (EP) now available for public comment, visit the NOPSEMA website https://consultation.nopsema.gov.au

The public comment period commenced on 16 November and will close on 18 December 2023. To read more about the public comment period and how to make an effective comment visit the NOPSEMA website and read *Have your say on environmental aspects of offshore energy activities*.

Seeking Relevant Persons

ConocoPhillips Australia is seeking to understand functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program.

This information, along with the assessment of impacts and risks, determines if an individual or organisation is a 'relevant person'.

A relevant person is a mandatory consultee under the Regulations.

ConocoPhillips

4

4

ConocoPhillips Australia

ConocoPhillips Australia was established almost two decades ago.

- We are a shareholder in Australia Pacific LNG (APLNG) and operate the APLNG facility on Curtis Island, in Queensland.
- We are headquartered in Brisbane, QLD.
- We have more than 50 years offshore experience globally (starting in the North Sea off UK and Norway and including offshore between northern Australia and Timor Leste).

Current exploration portfolio

Two permits in the offshore Otway Basin:

- T/49P
- VIC/P79

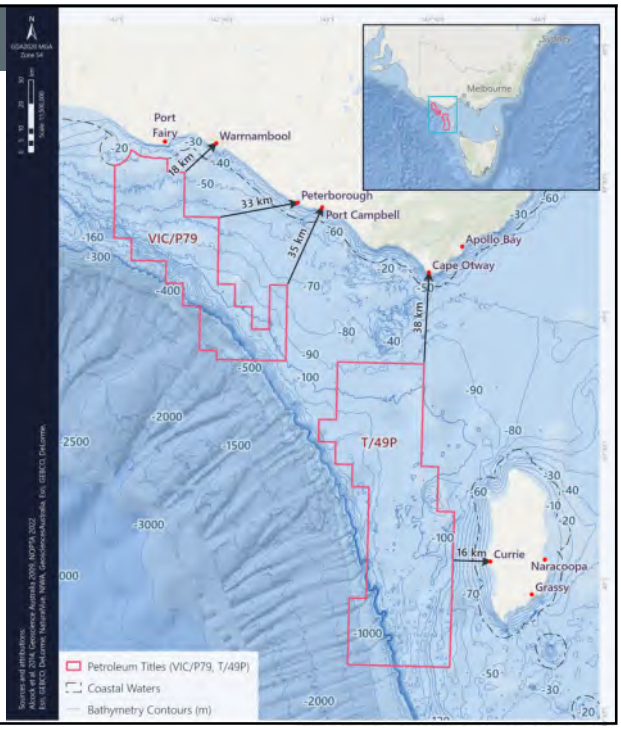
APLNG facility on Curtis Island in the Gladstone Region, Queensland.

ConocoPhillips
11/9/2023

5

Otway Exploration Drilling Program

Areas:



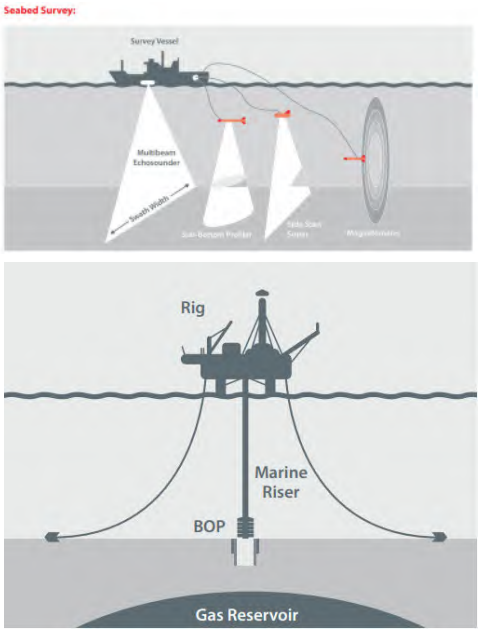
- VIC/P79 and T/49P
- ConocoPhillips Australia holds an 80% interest and operatorship of both permits.

Key Permit Prospects Characteristics:

- Offshore Otway Basin
- Water depth range 35-1400m, predominantly ~100m
- Adjacent to producing Thylacine, Geographe, Casino, and Henry gas fields.

Existing permit commitments:

- T/49P commitment of one exploration well.
- VIC/P79 commitment of one exploration well.



ConocoPhillips

6

Otway Exploration Drilling Activities

1. Seabed Hazard Survey involves:
   - ~6 km^2 per site area at up to 9 locations
   - Vessel operations
   - Geophysical survey
   - Geotechnical sampling
   - Imagery
2. Exploration Drilling involves:
   - Marine offshore drilling unit operations
   - Support vessels, remote operated vehicle, aircraft
   - Anchor placement/removal
   - Evaluation and testing (flaring)
   - Plug and Abandon all wells

Environment Plan and associated impact and risk assessment based on maximum of 6 wells over 5yrs.

ConocoPhillips

Offshore Regulation Overview

The Basics

8

The Environment Regulations

The Regulations place the burden of proof on the titleholder:

Recognises environments are all different

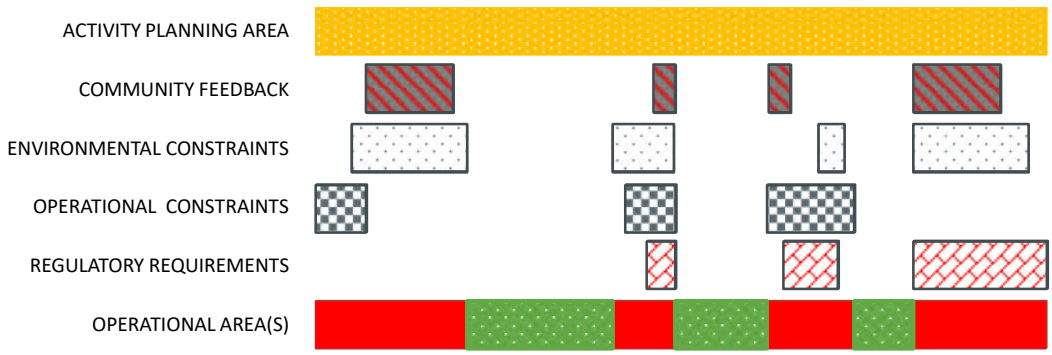
Titleholder must do the work to justify it environmental standards

Our propositions are independently scrutinized by Government

The Regulations have three foundational concepts:

Principles of ecologically sustainable development.

Environmental impacts and risks must be of an acceptable level.



Environmental impacts and risks must be managed to as low as reasonably practicable.

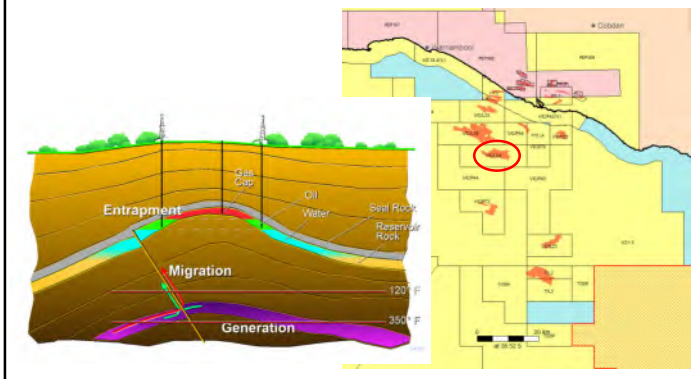
Offshore Drilling

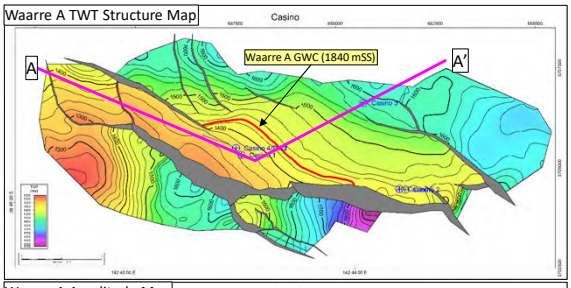
The Basics

12

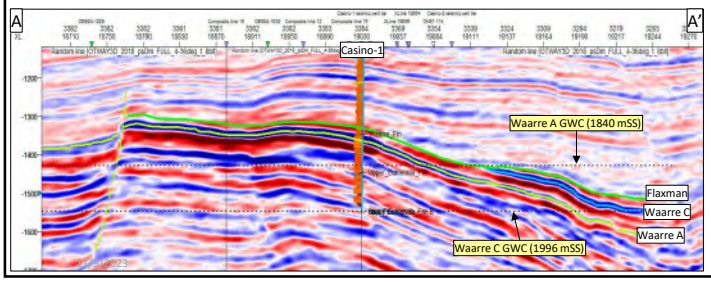
Drilling Terms



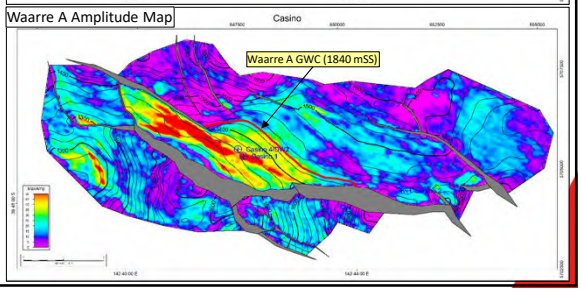
MODU	Mobile Offshore Drilling Unit (Rig)
AHSV	Anchor Handling Supply Vessel (Boat)
Exploration Well	A well drilled to investigate an exploration prospect – usually the first well drilled in a field or area
Appraisal Well	The wells drilled following the initial discovery well – usually drilled to identify the extent of a discovery or to gather more information
Production Well	A well drilled for the purpose of producing hydrocarbons
BOP	Blowout Preventer – a series of high pressure valves that prevent the flow of formation fluids to the environment
MWD/LWD	Measurement While Drilling and Logging While Drilling – drilling tools that contain measurement sensors that transmit data to surface real time.



ConocoPhillips
11/9/2023



13



13

We are looking for Gas

14

Common Offshore Rig Types

Jack-up
6-100m Water Depth

Semi-Submersible
50-1000+m Water Depth

Drill Ship
600-3000+m Water Depth

ConocoPhillips
11/9/2023

16

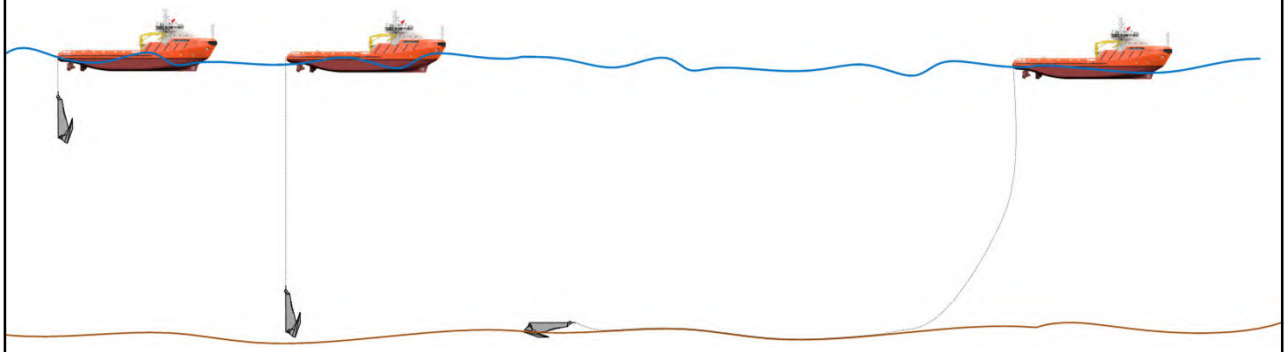
16

Drilling Process - Mooring

Anchors

Anchors are ~ 20 metric ton with an additional 9 metric ton ballast

8-12 anchors required to hold rig on location



ConocoPhillips
11/9/2023

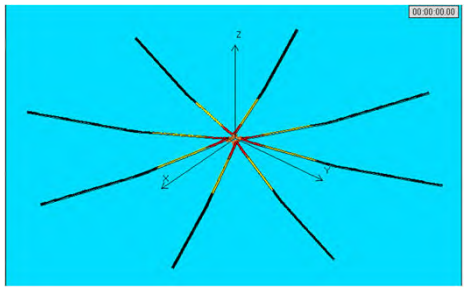
17

17

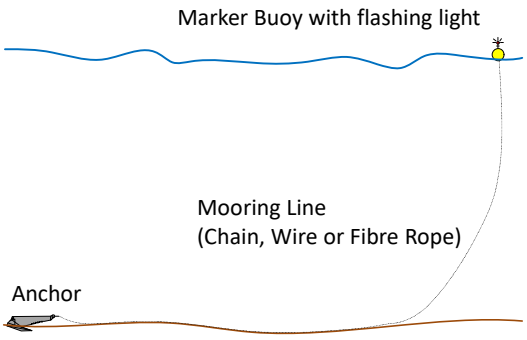
Drilling Process - Mooring

Anchor Installation – Pre-laid mooring

ConocoPhillips
11/9/2023



18



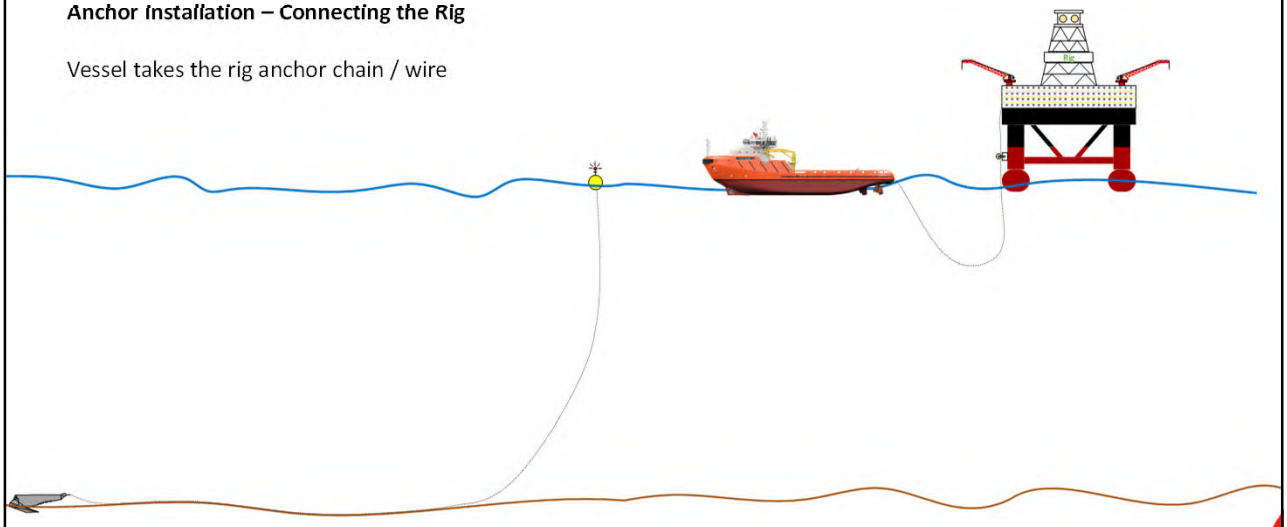
18

Drilling Process - Mooring

Anchor Installation – Pre-laid mooring

- Anchors may be pre-laid a few weeks before the rig arrives on location
- Rigs have between 8 and 12 anchors
- Navigation warnings will be in place via Notice to Mariners

ConocoPhillips
11/9/2023



19

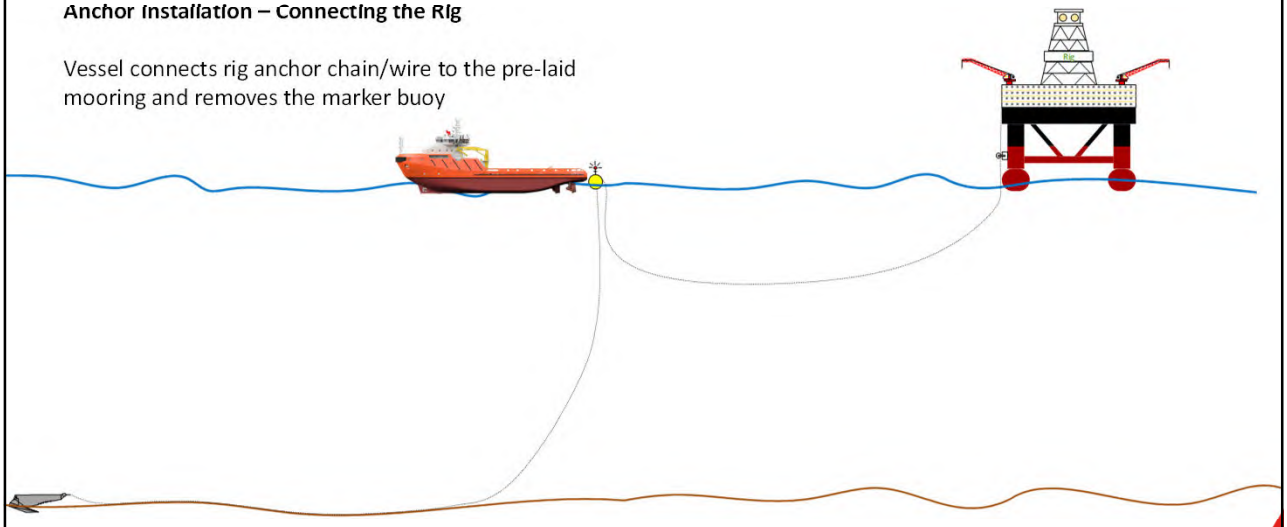
19

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Vessel takes the rig anchor chain / wire

ConocoPhillips
11/9/2023



20

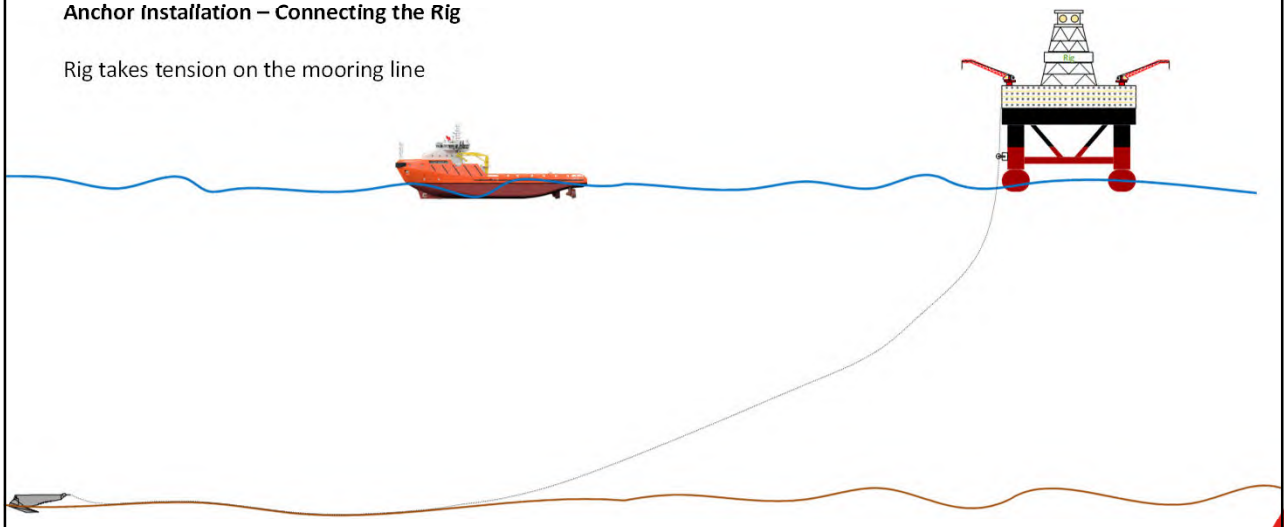
20

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Vessel connects rig anchor chain/wire to the pre-laid mooring and removes the marker buoy

ConocoPhillips
11/9/2023



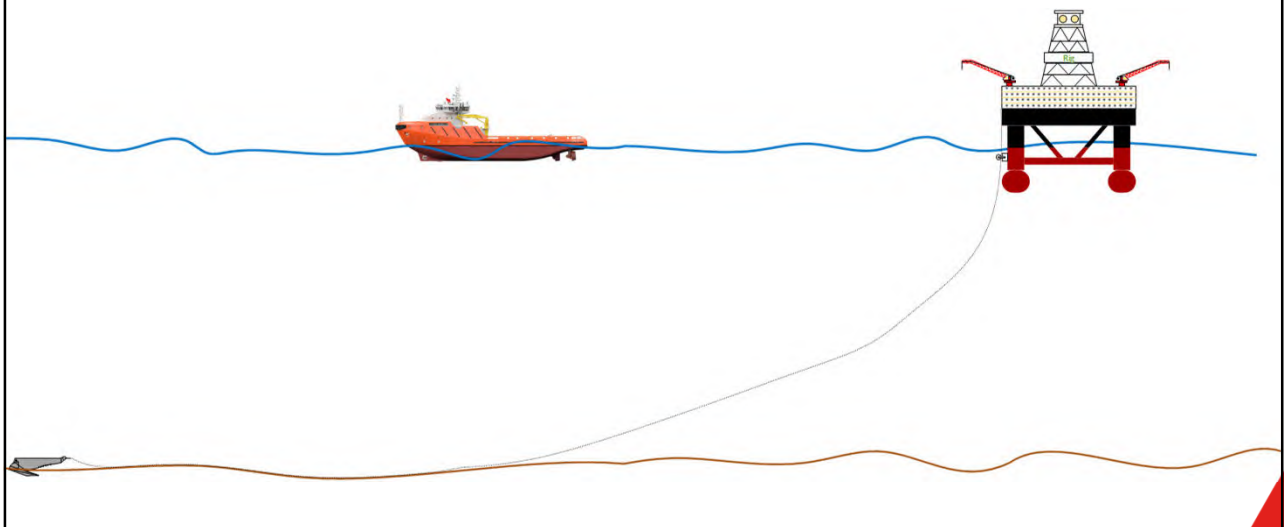
21

21

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Rig takes tension on the mooring line



ConocoPhillips
11/9/2023

22

22

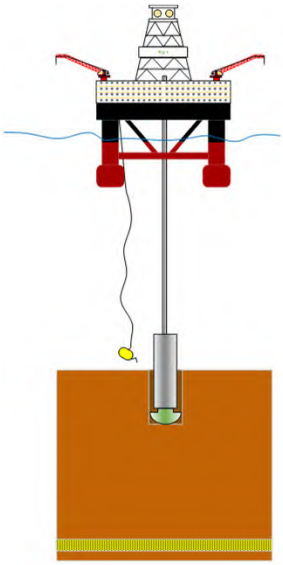
Drilling Process - Mooring

Once anchors are connected – rig ballasts down to drilling draft

ConocoPhillips
11/9/2023

23

23



Drilling Process – Drilling the well

Spudding the well

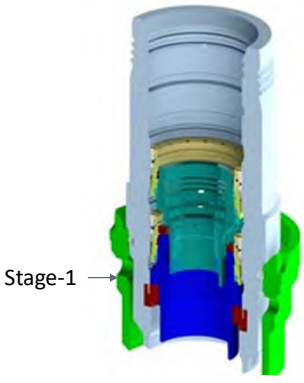
- Drilling the foundation hole
- Typically 42” hole
- Drilled 60-100m below seabed

Drill bit and Hole Opener

ConocoPhillips 11/9/2023

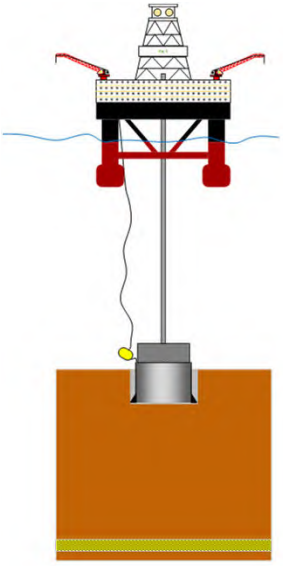
24

24



Drilling Process – Drilling the well

Installing the First Part of the Wellhead



- 36” conductor pipe
- Stage 1 wellhead housing installed
- The conductor is cemented in place

Conductor Pipe

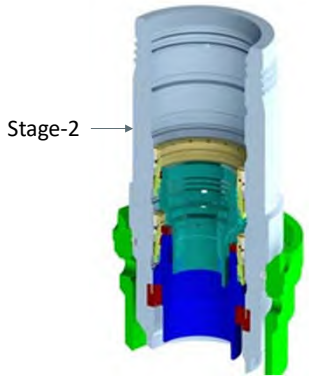
Subsea Wellhead System

ConocoPhillips 11/9/2023

25

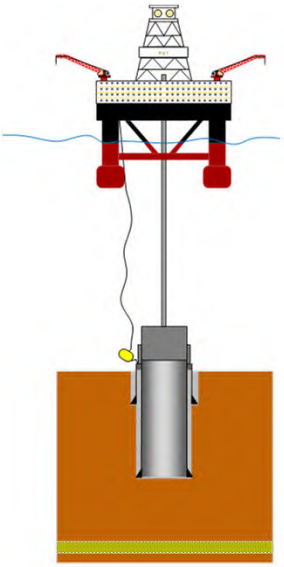
25

Drilling Process – Drilling the well

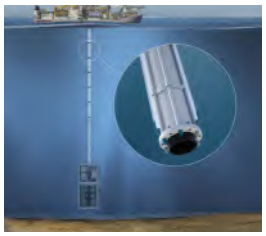


Drilling Surface Hole

- Drill 26” hole
- 20” Surface Casing
- Stage-2 wellhead housing installed
- Casing is cemented in place

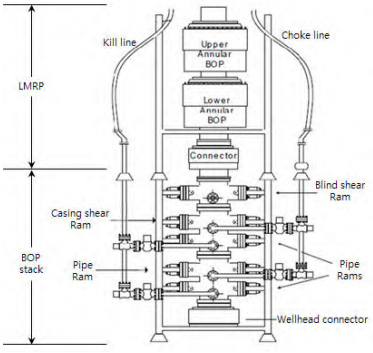


Well Casing



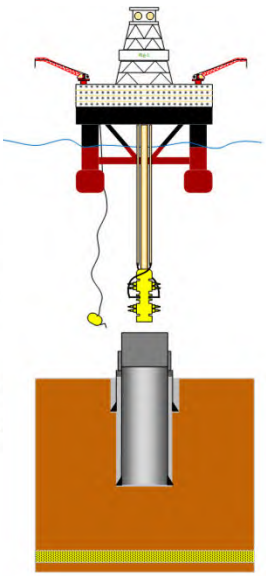
Subsea Wellhead System

ConocoPhillips 11/9/2023



Drilling Process – Drilling the well

Installing the BOP and Riser



Well Casing

Subsea Wellhead System

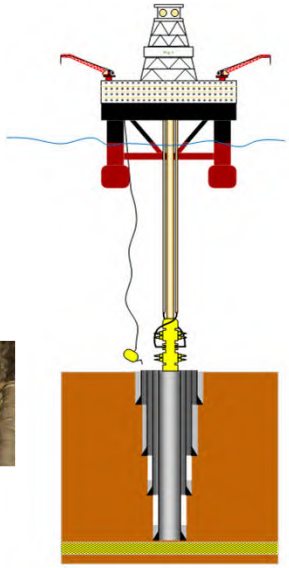
ConocoPhillips 11/9/2023

Drilling Process – Drilling the well

Drilling the Intermediate Hole

A. Primary Barrier

- Used to maintain "overbalance" to the pressure in the formation.
- The static hydrostatic pressure of the drilling fluid must be more than the pressure WITHIN the rock.



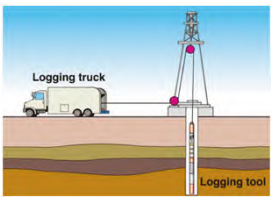
B. Using the drilling fluids

- Used to cool the drill bit and the wellbore.
- Transports cuttings to the surface.
- Water based muds contain barite and bentonite (natural minerals).
- Chemicals added as required.
- MUST go through chemical selection process per the Environment Plan.

Drilling Fluids

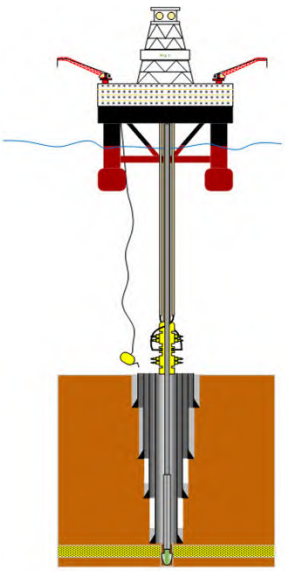
ConocoPhillips
11/9/2023

28



28

Drilling Process – Drilling the well

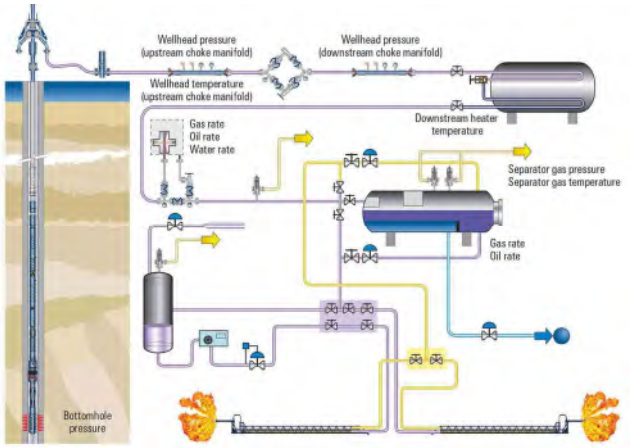


Drilling the Reservoir Hole and Evaluate Well

- Reservoir / Formation Evaluation
  - Used to establish key subsurface information
    - Formation type
    - Formation fluid type
    - Formation porosity and permeability
    - Formation pressure and flow characteristics
    - Sample reservoir fluids
  - MWD/LWD – performed whilst drilling
  - Wireline logging – after hole is drilled

Pictures from SLB, Paniz Energy & ANOG

ConocoPhillips
11/9/2023



29

29

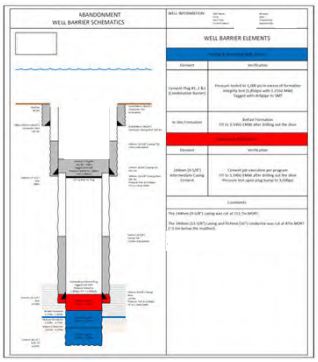
Drilling Process – Well Testing

Well Testing determines the reservoir delivers hydrocarbons

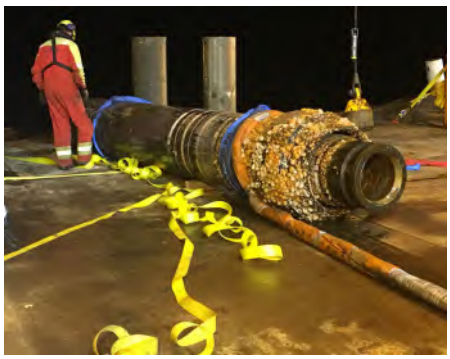
- Not every well is tested.
- Typical to test “appraisal wells”.
- Typical used to fill the well with hydrocarbons for preparation of new production wells.

ConocoPhillips
11/9/2023

Pictures from SLB

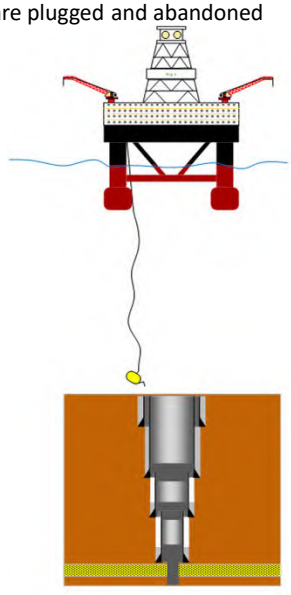


30



30

Drilling Process – Well Abandonment



Following the drilling of exploration wells or at the end of a wells production life – wells are plugged and abandoned

- Set cement plugs to prevent the movement of formation fluids either to surface or into shallower formations.
- Removal of the wellhead at below seabed floor level.

Picture from Acteon

33

ConocoPhillips

Environmental Impacts and Risks

Preliminary Assessment

34

Understanding the proposed activity

ConocoPhillips

35

Proposed Activity

Parameter	Seabed Survey	Drilling
Design Envelope – the broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and Vic/P79	Operational Areas within T/49P and Vic/P79
Operating Envelope – narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km^2 (Nine locations, each 6 x 6 km) within Operational Areas	75 km^2 (Six locations, each a 2 km radius Drilling Area) within Operational Areas

37

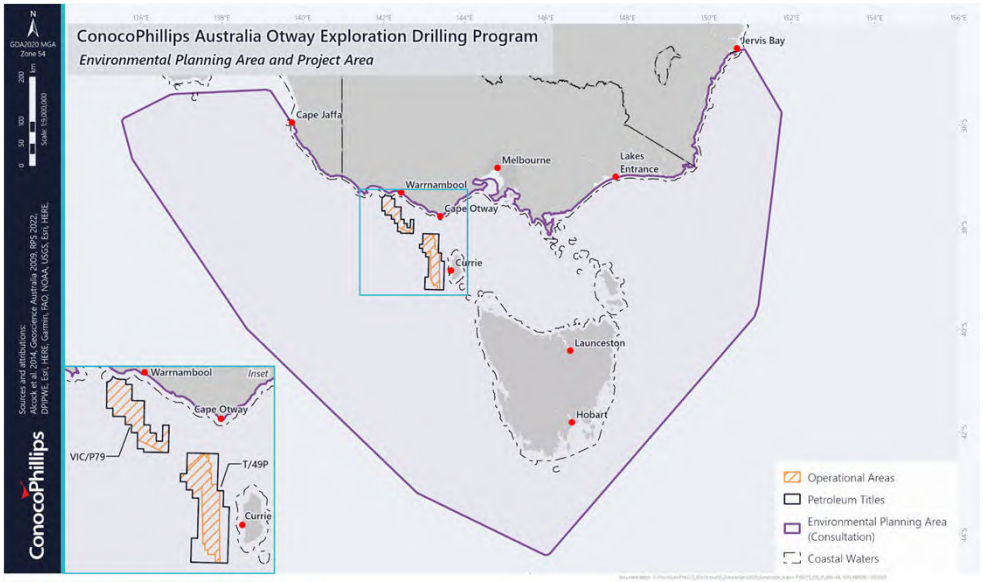
Consideration to how our activity interacts with the existing environment



Environmental Impacts	Seabed Disturbance	• Seabed samples • Anchor placement
	Underwater Sound Emissions	• Underwater sound from drilling and support vessel. • Impulsive sound from seabed surveys.
	Atmospheric Emissions	• Emissions from survey and drilling activities.
	Planned Vessel/ Rig Discharges	• Routine discharges from support vessels and drilling rigs. • Cement, cuttings and drilling fluid.
	Interference with other Marine Users	• Short-term displacement.
	Light and Visual Amenity	• Potential visibility of drilling rig from coastline. • Routine light expected to be visible on horizon. • Potential visibility of flare from coastline.
Environmental Risks	Vessel based risks	• Loss of material or waste overboard. • Interactions with marine fauna. • Introduction and establishment of invasive marine species.
	Hydrocarbon related risks	• Minor loss of containment. • Marine diesel oil release. • Loss of well control release.

41

Exploration Terms

NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority Independent expert regulator responsible for health and safety, structural (well) integrity and environmental management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.
NOPTA	National Offshore Petroleum Titles Administrator They are responsible for the day-to-day administration of petroleum & greenhouse gas titles in Commonwealth waters in Australia.
EP	Environment Plan A document submitted to NOPSEMA for assessment prior to the commencement of an activity, which contains information on environmental assessment, implementation of environmental management, details of the titleholder and other information specified in the Environment Regulations
Exploration Well	A well drilled to investigate an exploration prospect – usually the first well drilled in a field or area.
Seabed Survey	Seabed surveys are an important safety and environmental measure undertaken ahead of drilling activities. They typically involve geophysical and geotechnical sampling techniques that identify possible hazards and seafloor habitat to inform exploration well and drilling rig anchor placement.

2/21/2024

13

We are looking for Gas

Tools we use – Seismic Data

- Subsurface work towards a 'drill target'
- This is a point (generally at 'top reservoir') that we ask the drillers to hit.
- The 'drill target' has a 'target tolerance': +/- 200m in the N-S and E-W direction

ConocoPhillips
2/21/2024

Common Offshore Rig Types

Jack-up
6-100m Water Depth

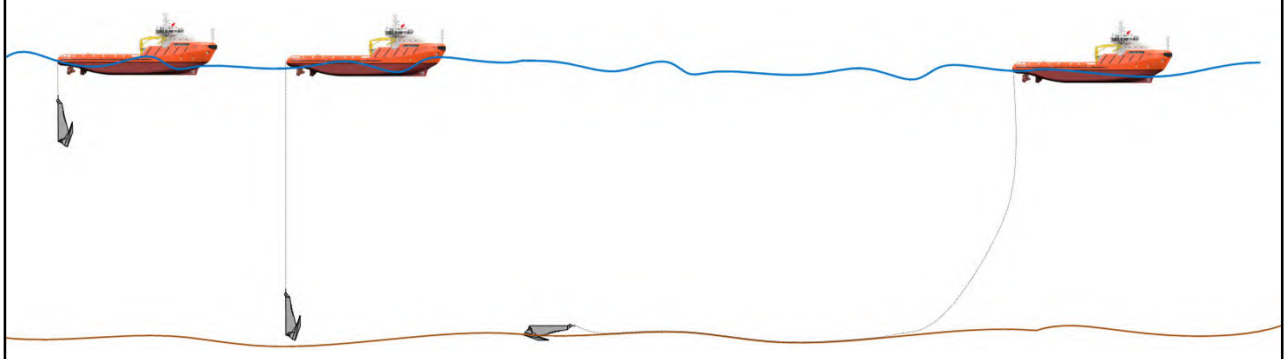
Semi-Submersible
50-1000+m Water Depth

Drill Ship
600-3000+m Water Depth

ConocoPhillips
2/21/2024

Drilling Process - Mooring

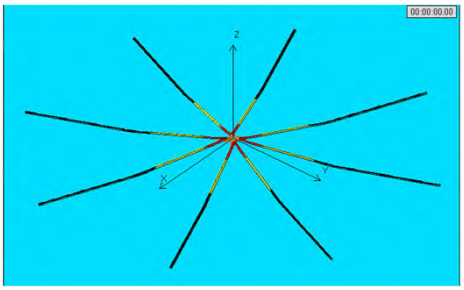
Anchors



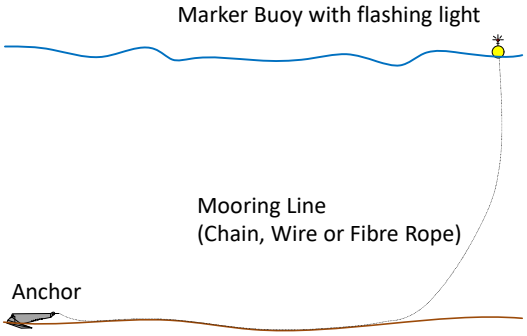
Anchors are ~ 20 metric ton with an additional 9 metric ton ballast

8-12 anchors required to hold rig on location

Drilling Process - Mooring



Anchor Installation – Pre-laid mooring

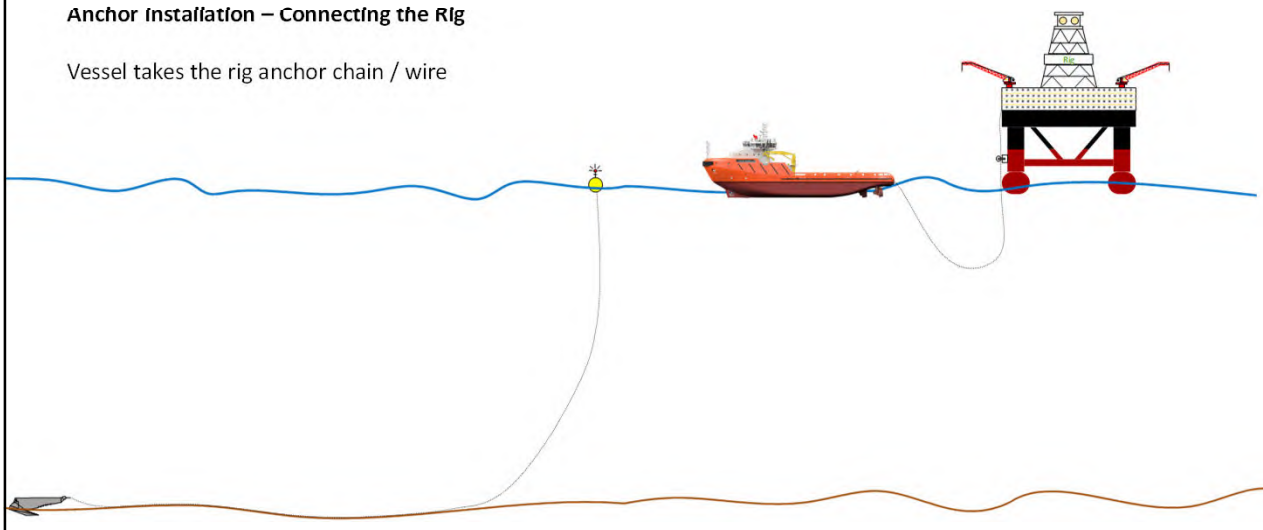


Drilling Process - Mooring

Anchor Installation – Pre-laid mooring

- Anchors may be pre-laid a few weeks before the rig arrives on location
- Rigs have between 8 and 12 anchors
- Navigation warnings will be in place via Notice to Mariners FM0

ConocoPhillips
2/21/2024



19

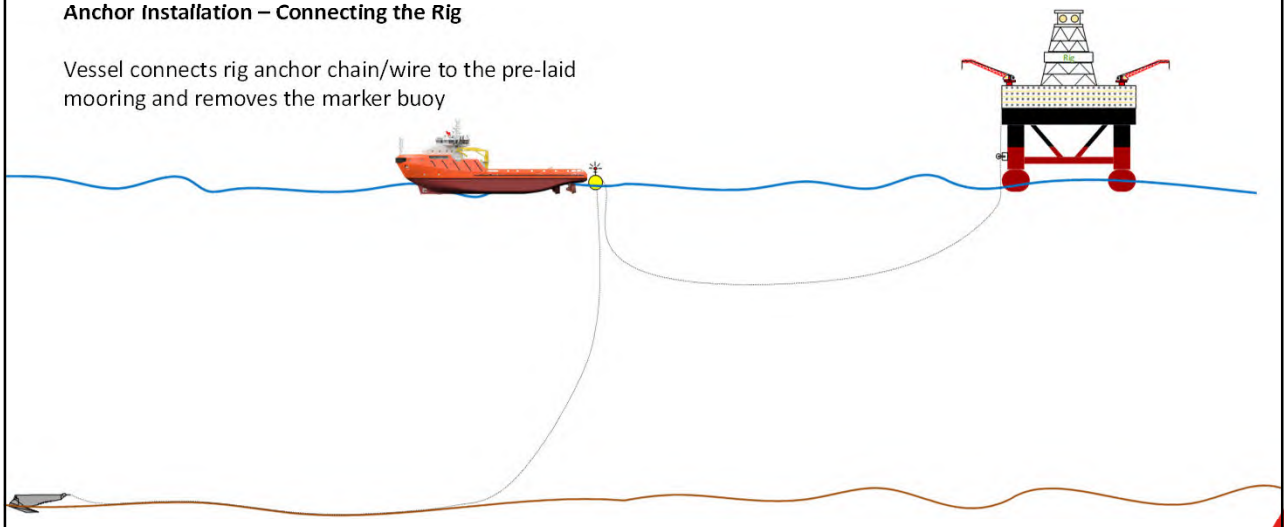
19

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Vessel takes the rig anchor chain / wire

ConocoPhillips
2/21/2024



20

20

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Vessel connects rig anchor chain/wire to the pre-laid mooring and removes the marker buoy

ConocoPhillips

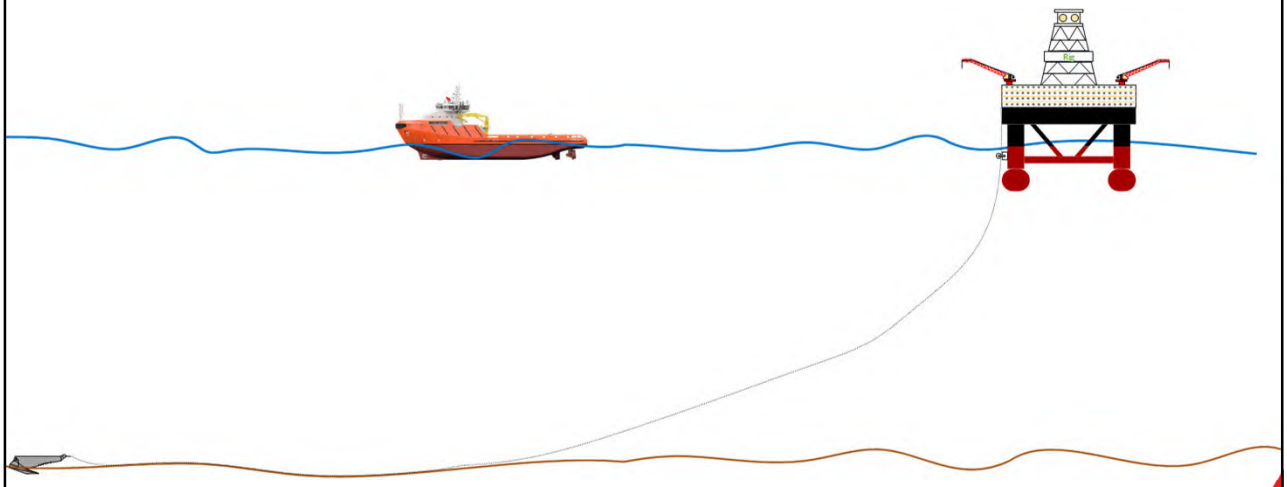
21

21

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Rig takes tension on the mooring line



ConocoPhillips
2/21/2024

22

22

Drilling Process - Mooring

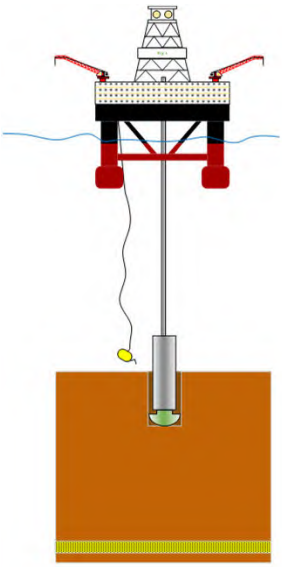
Once anchors are connected – rig ballasts down to drilling draft

ConocoPhillips
2/21/2024

23

23

Drilling Process – Drilling the well



Spudding the well

FM0

- Drilling the foundation hole
- Typically 42” hole
- Drilled 60-100m below seabed

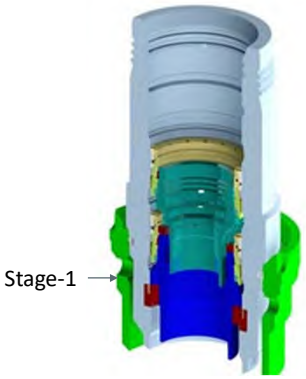
Drill bit and Hole Opener

ConocoPhillips
2/21/2024

24

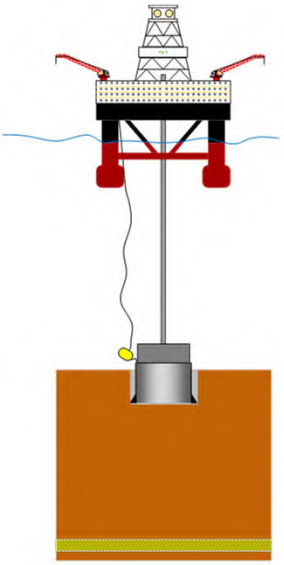
24

Drilling Process – Drilling the well



Installing the First Part of the Wellhead

FM0



- 36” conductor pipe
- Stage 1 wellhead housing installed
- The conductor is cemented in place

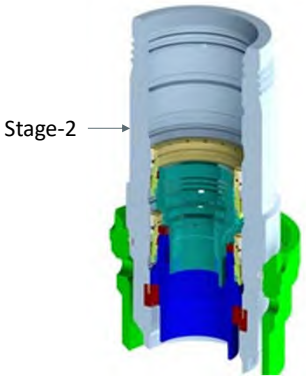
Conductor Pipe

Subsea Wellhead System

ConocoPhillips 2/21/2024

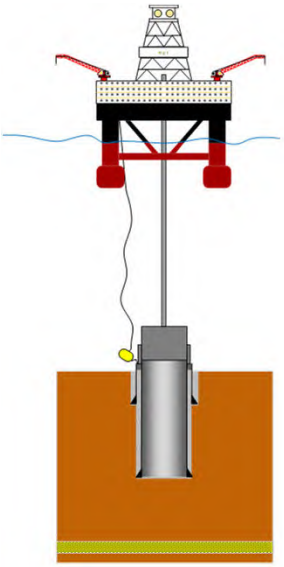
25

Drilling Process – Drilling the well



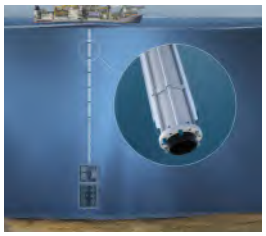
Drilling Surface Hole

- Drill 26” hole
- 20” Surface Casing
- Stage-2 wellhead housing installed
- Casing is cemented in place



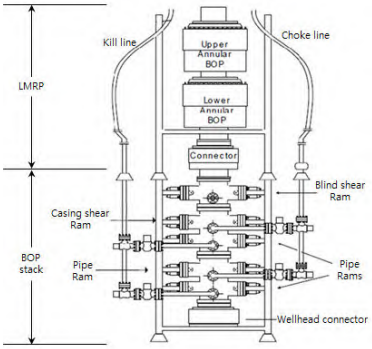
Well Casing

Subsea Wellhead System



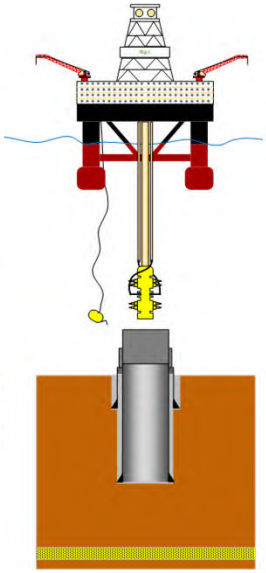
ConocoPhillips 2/21/2024

26



Drilling Process – Drilling the well

Installing the BOP and Riser

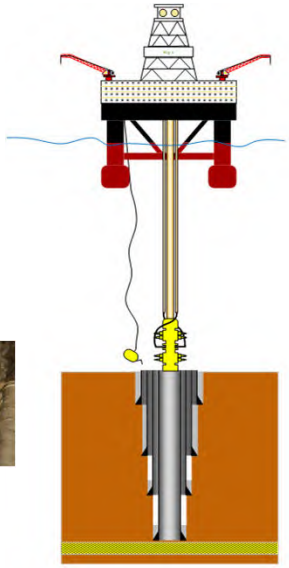


Well Casing

Subsea Wellhead System

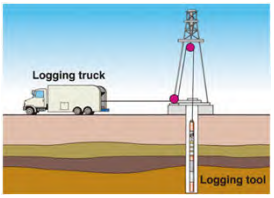
Drilling Process – Drilling the well

Drilling the Intermediate Hole



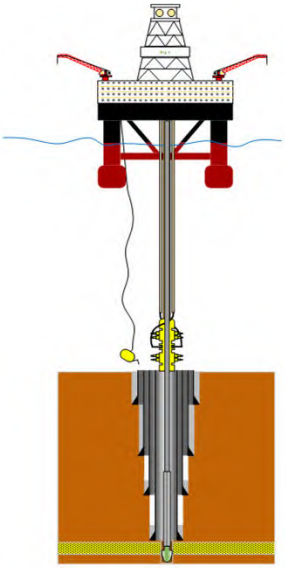
A. Primary Barrier
- Used to maintain "overbalance" to the pressure in the formation.
- The static hydrostatic pressure of the drilling fluid must be more than the pressure WITHIN the rock.

B. Using the drilling fluids
- Used to cool the drill bit and the wellbore.
- Transports cuttings to the surface.
- Water based muds contain barite and bentonite (natural minerals).
- Chemicals added as required.
- MUST go through chemical selection process per the Environment Plan.



Drilling Fluids

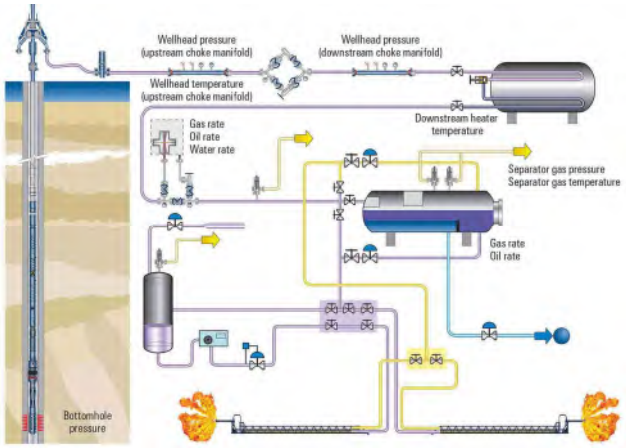
Drilling Process – Drilling the well



Drilling the Reservoir Hole and Evaluate Well

- Reservoir / Formation Evaluation
  - Used to establish key subsurface information
    - Formation type
    - Formation fluid type
    - Formation porosity and permeability
    - Formation pressure and flow characteristics
    - Sample reservoir fluids
  - MWD/LWD – performed whilst drilling
  - Wireline logging – after hole is drilled

Pictures from SLB, Paniz Energy & ANOG



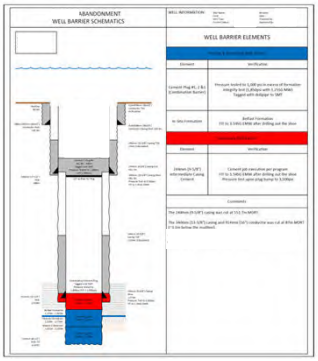
ConocoPhillips 2/21/2024

FM0

Drilling Process – Well Testing

Well Testing determines the reservoir delivers hydrocarbons

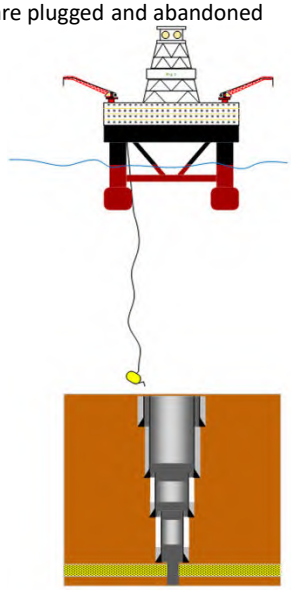
- Not every well is tested.
- Typical to test “appraisal wells”.
- Typical used to fill the well with hydrocarbons for preparation of new production wells.



ConocoPhillips 2/21/2024

Pictures from SLB

Drilling Process – Well Abandonment



Following the drilling of exploration wells or at the end of a wells production life – wells are plugged and abandoned

- Set cement plugs to prevent the movement of formation fluids either to surface or into shallo FM0 formations.
- Removal of the wellhead at below seabed floor level.

Picture from Acteon

ConocoPhillips
2/21/2024

31

Drilling Process – Equipment Used

ConocoPhillips
2/21/2024

32

Drilling Process – Life Offshore

- Rosters are either 3 weeks on, 3 weeks off or 4 weeks on, 4 weeks off
- 12 hour shifts
- No alcohol.

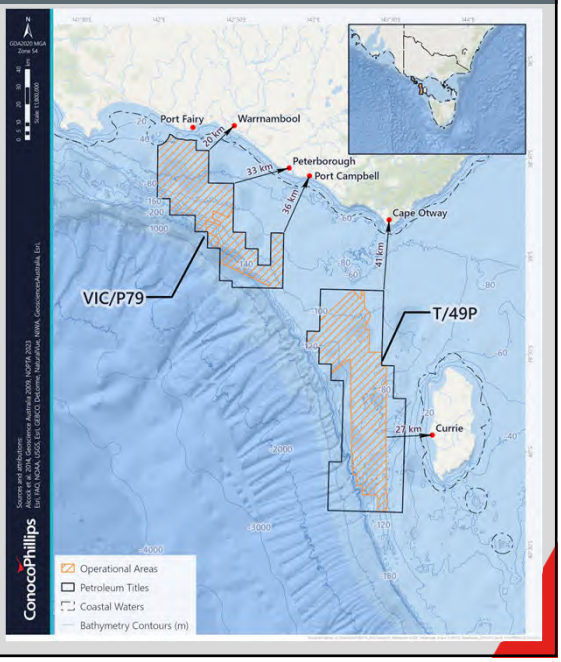
Environmental Impacts and Risks



Preliminary Assessment

34

Understanding the proposed activity

The Preliminary Environmental Impact and Risk Assessment is publicly available on the Consultation Hub

ConocoPhillips

35

Proposed Activity

Parameter	Seabed Survey	Drilling
Design Envelope – the broadest timeframe and spatial extent of the activity		
Earliest start date	1 January 2024	1 October 2024
Latest finish date	31 December 2028	31 December 2028
Maximum number of locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells).
Spatial extent (within which activity can occur)	Operational Areas within T/49P and Vic/P79	Operational Areas within T/49P and Vic/P79
Operating Envelope – narrowing the timing and location of the activities to the current best estimates		
Maximum duration	1 week per seabed survey location	Up to 90 days of drilling per location
Spatial extent (within which activity can occur)	324 km^2 (Nine locations, each 6 x 6 km) within Operational Areas	75 km^2 (Six locations, each a 2 km radius Drilling Area) within Operational Areas

41

ConocoPhillips
End

42

Exploration Terms

NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority Independent expert regulator responsible for health and safety, structural (well) integrity and environmental management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.
NOPTA	National Offshore Petroleum Titles Administrator They are responsible for the day-to-day administration of petroleum & greenhouse gas titles in Commonwealth waters in Australia.
EP	Environment Plan A document submitted to NOPSEMA for assessment prior to the commencement of an activity, which contains information on environmental assessment, implementation of environmental management, details of the titleholder and other information specified in the Environment Regulations
Exploration Well	A well drilled to investigate an exploration prospect – usually the first well drilled in a field or area.
Seabed Survey	Seabed surveys are an important safety and environmental measure undertaken ahead of drilling activities. They typically involve geophysical and geotechnical sampling techniques that identify possible hazards and seafloor habitat to inform exploration well and drilling rig anchor placement.

ConocoPhillips

ConocoPhillips Australia's Response to Climate Change

- As a global organisation, ConocoPhillips embraces environmental stewardship as a fundamental business priority.
- We incorporate climate-related risk into our planning.
- Our climate risk strategy consists of actions consistent with the 2015 Paris Agreement goal to limit global temperature rise to well below 2 degrees Celsius.

Our commitment

- Strengthening our previously announced operational GHG emissions intensity reduction target to 40-50% by 2030 and expanding it to apply to both a gross operated and net equity basis to ensure active engagement in our non-operated investments.
- Meeting a further 10% reduction target for methane emissions intensity by 2025 from our 2019 baseline, building upon the 65% reduction we have made since 2015.
- Achieving near-zero methane emissions intensity by 2030.
- Achieving a target of zero routine flaring by 2025, five years sooner than the World Bank initiative's goal of 2030.

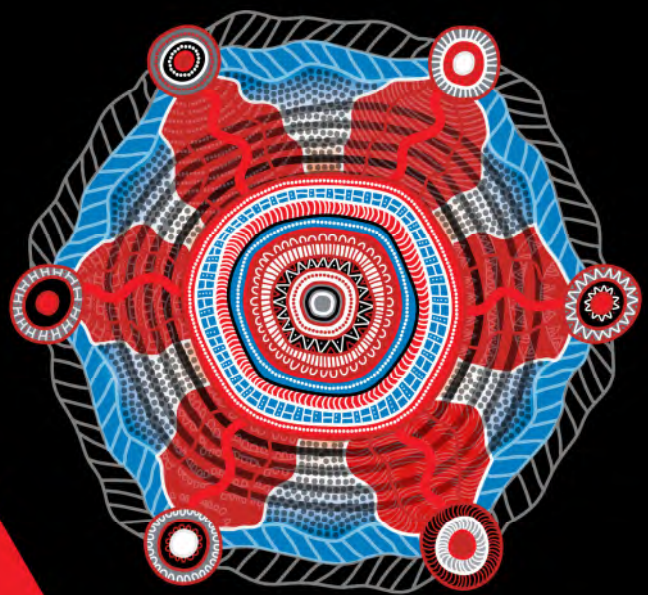
Otway Exploration Drilling Program

Webinar 2

26 July 2023

1

Recording Notice



This public information session will be recorded (video, audio and content) and photographs may be taken. The recording and any photographs may be used and distributed by ConocoPhillips Australia as part of its stakeholder engagement/consultation and associated purposes. By attending this session, you consent to this.

ConocoPhillips Australia collects and deals with personal information in accordance with our privacy policy, available at https://www.conocophillips.com.au/privacy-policy/legal-privacy-australia/.

2

ConocoPhillips

ConocoPhillips Australia acknowledges the Aboriginal and Torres Strait Islander peoples as the First Nations Peoples and Traditional Custodians of this land, and we pay our respects to Elders past and present. We celebrate the Aboriginal and Torres Strait Islander peoples' long histories, rich cultures and connection to the land, water and air.

3

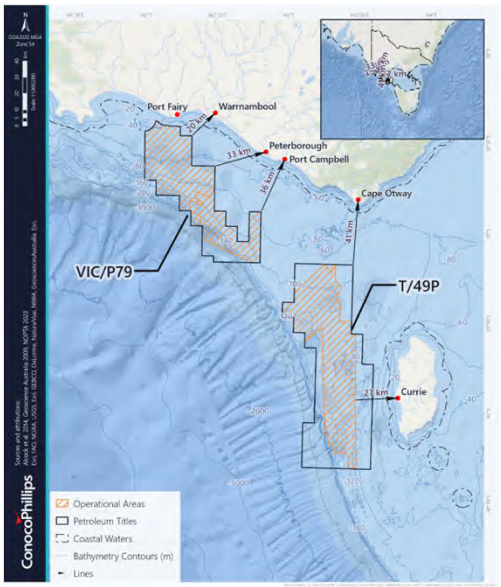
Tonight's Webinar

- Overview of the proposed exploration drilling activity.
- Overview of the consultation process
- Share feedback received through consultation
- Overview of initial environmental impact and risk assessments
- Questions and feedback

4

Otway Exploration Drilling Program

Areas:



- VIC/P79 and T/49P
- ConocoPhillips Australia holds an 80% interest and operatorship of both permits.

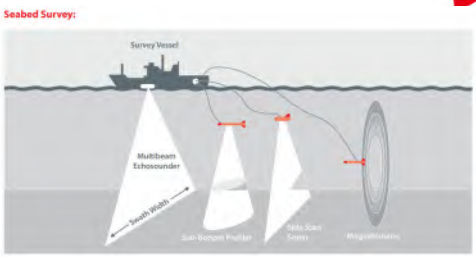
Key Permit Prospects Characteristics:

- Offshore Otway Basin
- Water depth range 35-1400m, predominantly ~100m
- Adjacent to producing Thylacine, Geographe, Casino, and Henry gas fields.

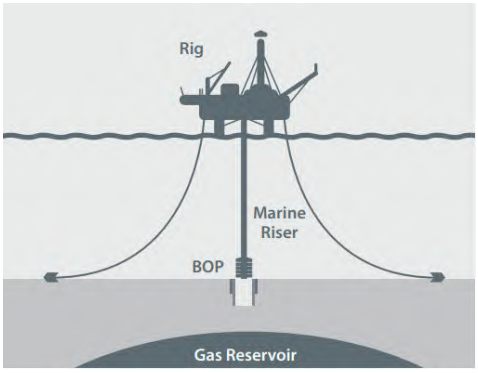
Existing permit commitments:

- T/49P commitment of one exploration well.
- VIC/P79 commitment of one exploration well.

5



5

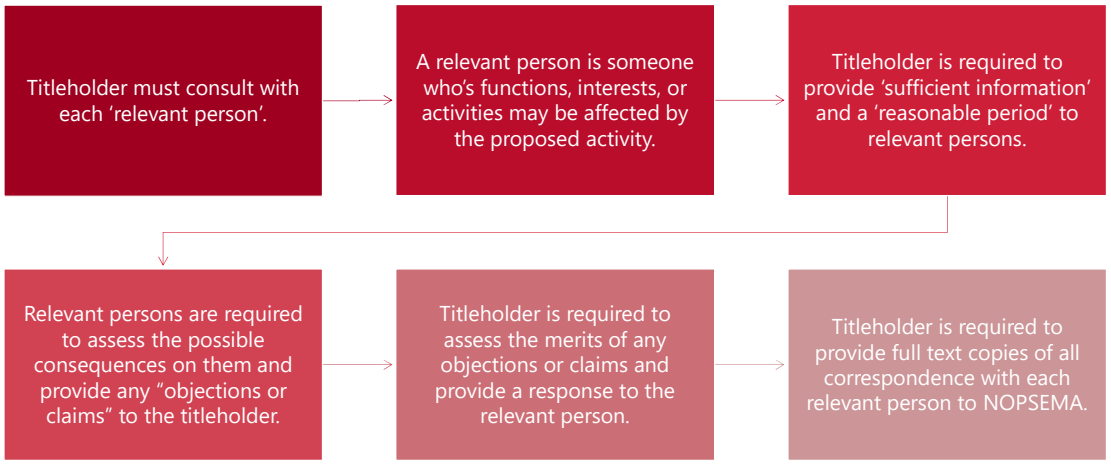


Otway Exploration Drilling Activities

1. **Seabed Hazard Survey involves:**
   - ~6 km^2 per site area at up to 9 locations
   - Vessel operations
   - Geophysical survey
   - Geotechnical sampling
   - Imagery

2. **Exploration Drilling involves:**
   - Mobile offshore drilling unit operations
   - Support vessels, remote operated vehicle, aircraft
   - Anchor placement/removal
   - Evaluation and testing (flaring)
   - Plug and Abandon all wells

Environment Plan and associated impact and risk assessment based on maximum of 6 wells over 5yrs.



6

6

The Consultation Process

7

ConocoPhillips

Feedback from Consultation

8

Climate

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Why do we need more gas if we are trying to address climate change.	Exploration activities in the Otway Basin are meant to help meet Australia's ongoing energy needs. Gas is a resource that is vital to our daily lives and our economy. It is used in the manufacture of many of the products we consume and is used to heat homes and businesses and generate electricity. The steep decline in gas being supplied in Victoria indicated new supply is required to ensure ongoing energy security.	We register every view provided to our regulator in the Sensitive Information Chapter of the EP. We provide relevant person concerns to the development and strategy teams.

9

Activity

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
The only acceptable level of impact for this activity is zero impact.	Exploration activities do not operate to a zero-impact standard. Instead, ConocoPhillips Australia is required to define the acceptable level of impact and work below that level. Acceptable levels of impact are established based on relevant up-to-date technical and scientific studies, government advice, and are considerate of the information gathered through the consultation process.	ConocoPhillips is looking for further information from individuals about key values and sensitivities that need to be protected.
There is already seismic over these areas, you shouldn't have to do this again.	The Otway Exploration Drilling Program is not proposing seismic acquisition as part of its activity.	Clarifying proposed activity with all individuals that make this claim, including providing information for current titleholders and proponents proposing to undertake seismic acquisition in the region.

10

Consultation

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Not everyone can attend a public information session.	ConocoPhillips Australia values consultation and feedback and invites any and all information on how we can continue to improve our consultation with individuals, groups and organisations potentially affected by the proposed activities to help inform the development of the EP.	ConocoPhillips Australia has included the webinar format to support ongoing consultation. Webinars are recorded and loaded to the consultation hub for individuals to review if they are unable to attend.
Documents are difficult to find on the consultation hub	ConocoPhillips Australia acknowledges there is a lot of information available via our consultation hub.	ConocoPhillips Australia added a large banner section on the home page of the consultation hub linking visitors to the document library.

11

Marine Fauna

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
The Victorian and Tasmanian Coastline is critical habitat for many marine fauna, especially whales. Any impact to these animals would be unacceptable.	The conservation management plans published by the Department of Climate Change, Energy, the Environment, and Water allow for some level of impact, typically behavioural responses.	All activities will comply with a Marine Mammal Adaptive Management Procedure outlining specific actions to minimise impacts from anthropogenic noise in accordance with Conservation Management Plans. Vessels will adhere to an increased caution zone of 500 m between whales and vessels. ConocoPhillips Australia will develop and implement a Light Management Plan as per the National Light Pollution Guidelines for Wildlife, for the activity to minimise impacts to seabirds. Flaring will be restricted to a maximum of 120 hours per well and will only be conducted in the event that hydrocarbons are discovered to ensure safe disposal. Activity-specific emergency preparedness and response plans and capability will be in place prior to activity commencement.

12

Commercial Fishing

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Activities may impact commercial fishing operators' ability to undertake regular activities.	ConocoPhillips Australia is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement.	Exclusion zones will be put in place prior to the commencement of seabed survey and drilling activities. These will be communicated via notices to mariners. ConocoPhillips Australia is committed to having a commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.
Fishers are unable to make an informed assessment as there are no defined drilling locations.	ConocoPhillips Australia is developing an Environment Plan that assesses the potential impacts and risks associated with exploration activities over larger operational areas within each of permit areas. We understand that this may result in an overestimation of impacts and risks that are specific to functions, interests and activities.	Maps with latitude and longitude coordinates have been provided to support ongoing consultation with the commercial fishing industry. We've requesting feedback from fishers in relation to potential interactions over the larger operational areas, and the broader Environmental Planning Area, to ensure that we can address any concerns they may have.

Coastal and Other Marine Users

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Activities may impact the regular use of the marine environment.	The Otway Exploration Drilling Program may affect the activities of other marine and coastal users. For example, the physical presence of seabed survey vessels, the drilling rig and support vessels used for the activity, and the establishment of exclusion zones, may result in the displacement of other marine users engaging in activities such as recreational and commercial fishing. Other short-term petroleum activities, for example Vertical Seismic Profiling (VSP), have the potential to cause additional displacement if conducted in close proximity to coastal areas, with sound emissions from VSP limited to a maximum of 20 hours per well.	Exclusion zones will be put in place prior to the commencement of seabed survey and drilling activities. These will be communicated via notices to mariners. A Communication Plan will be prepared to ensure that relevant persons are aware and informed of the activity. ConocoPhillips Marine Assurance System ensures that project vessels meet all maritime laws and includes pre commencement vessel inspections of class certification requirements.

Unexploded Ordnance

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
There are historic ordnance dumps in and around where your planned activities are.	The risks associated with UXO were assessed to establish a 'UXO Risk Profile' for the permit areas. This risk profile considers the probability of encountering UXO, the probability of UXO detonation, and the consequence of detonation. Encountering UXOs within the permit areas is considered low risk for all activities, except for some activities involving subsea equipment. The risk of a UXO being snagged by equipment, for example when collecting seabed samples, and subsequently being brought onto a vessel was assessed as Moderate.	Conducting seabed surveys using speciality equipment to detect the presence of metals and collect seabed images, to inform activities that interact with the seafloor or sediments. Delivering an explosives safety awareness briefing to personnel carrying out seabed survey and exploration drilling activities. Maintaining on-call access to an explosives engineer to provide specialist advice in the unlikely event of UXO encounter.

15

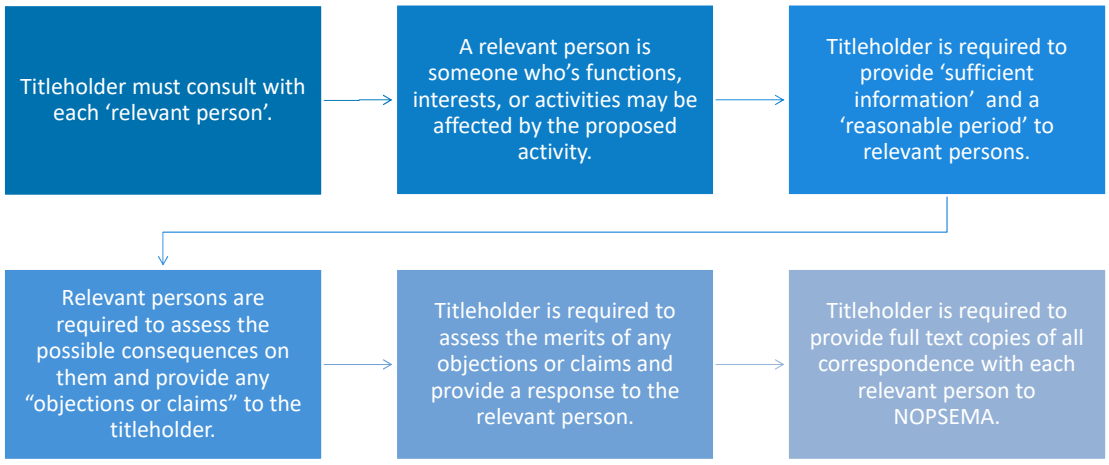
2

Seeking Relevant Persons

- ConocoPhillips Australia is seeking to understand functions, interests or activities that may be affected by the proposed Otway Exploration Drilling Program.
- This information, along with the assessment of impacts and risks, determines if an individual or organisation is a 'relevant person'.
- A relevant person is a mandatory consultee under the Regulations.
- This is an information session is to provide you information as an individual, about whether you are a Relevant Person under the process and regulations.



ACTION REQUIRED: Register as a relevant person via the consultation hub by advising ConocoPhillips Australia of your functions, interests or activities.

ConocoPhillips

4

ConocoPhillips Australia

ConocoPhillips Australia was established almost two decades ago.

- We are a shareholder in Australia Pacific LNG (APLNG) and operate the APLNG facility on Curtis Island, in Queensland.
- We are headquartered in Brisbane, QLD.
- We have more than 50 years offshore experience globally (starting in the North Sea off UK and Norway and including offshore between northern Australia and Timor Leste).

Current exploration portfolio

Two permits in the offshore Otway Basin:

- T/49P
- VIC/P79

APLNG facility on Curtis Island in the Gladstone Region, Queensland.

Offshore Regulation Overview

The Basics

5

The Environment Regulations

The Regulations place the burden of proof on the titleholder:

Recognises environments are all different

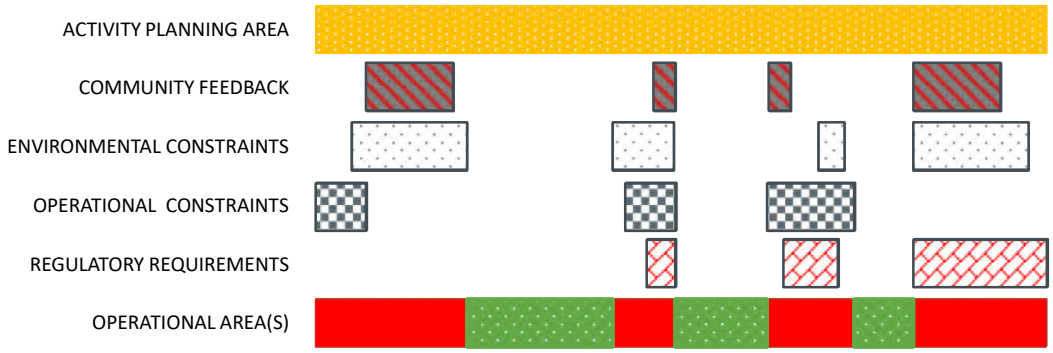
Titleholder must do the work to justify it environmental standards

Our propositions are independently scrutinized by Government

The Regulations have three foundational concepts:

Principles of ecologically sustainable development.

Environmental impacts and risks must be of an acceptable level.



Environmental impacts and risks must be managed to as low as reasonably practicable.

ConocoPhillips

6

6

Activity Planning Process

ConocoPhillips

7

7

The Consultation Process

Titleholder must consult with each 'relevant person'.

A relevant person is someone who's functions, interests, or activities may be affected by the proposed activity.

Titleholder is required to provide 'sufficient information' and a 'reasonable period' to relevant persons.

Relevant persons are required to assess the possible consequences on them and provide any "objections or claims" to the titleholder.

Titleholder is required to assess the merits of any objections or claims and provide a response to the relevant person.

Titleholder is required to provide full text copies of all correspondence with each relevant person to NOPSEMA.

ConocoPhillips

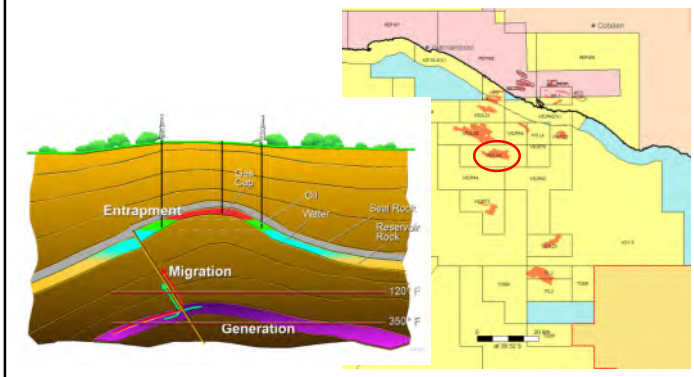
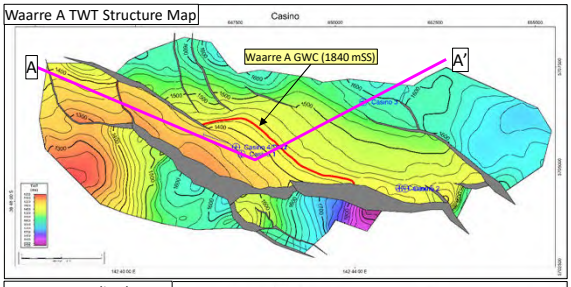
Offshore Drilling

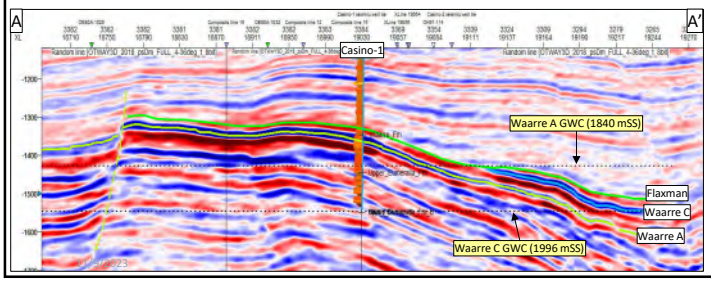
The Basics



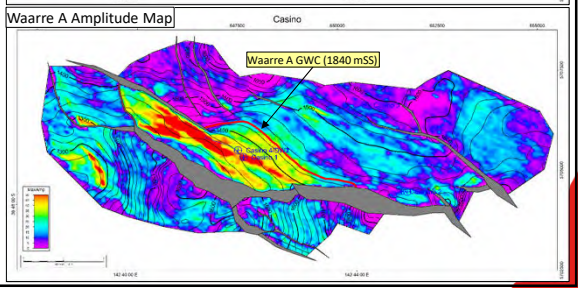
9



Drilling Terms



MODU	Mobile Offshore Drilling Unit (Rig)
AHSV	Anchor Handling Supply Vessel (Boat)
Exploration Well	A well drilled to investigate an exploration prospect – usually the first well drilled in a field or area
Appraisal Well	The wells drilled following the initial discovery well – usually drilled to identify the extent of a discovery or to gather more information
Production Well	A well drilled for the purpose of producing hydrocarbons
BOP	Blowout Preventer – a series of high pressure valves that prevent the flow of formation fluids to the environment
MWD/LWD	Measurement While Drilling and Logging While Drilling – drilling tools that contain measurement sensors that transmit data to surface real time.



10

We are looking for Gas

11

Common Offshore Rig Types

Jack-up
6-100m Water Depth

Semi-Submersible
50-1000+m Water Depth

Drill Ship
600-3000+m Water Depth

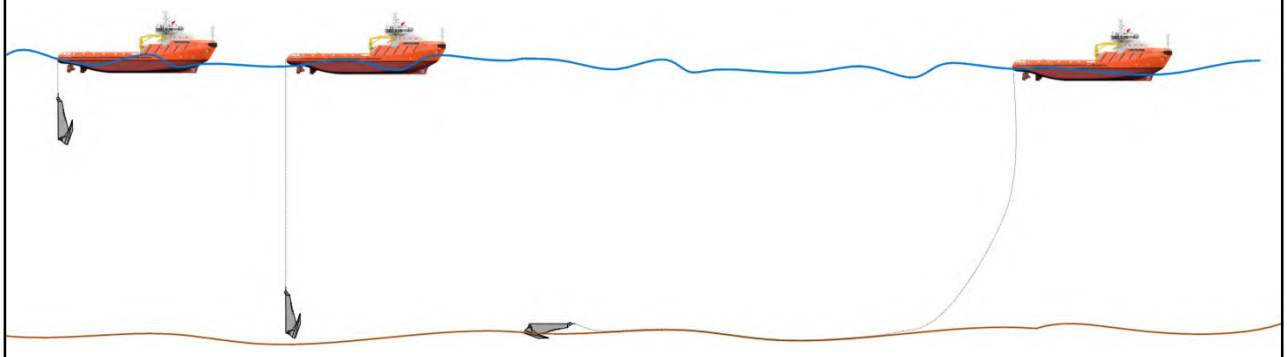
ConocoPhillips
11/9/2023

12

12

Drilling Process - Mooring

Anchors



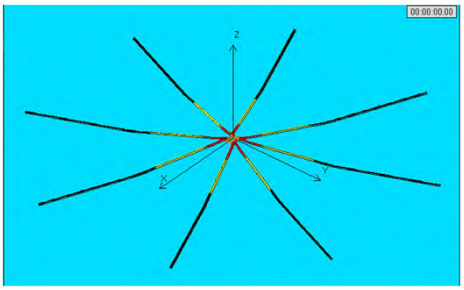
Anchors are ~ 20 metric ton with an additional 9 metric ton ballast

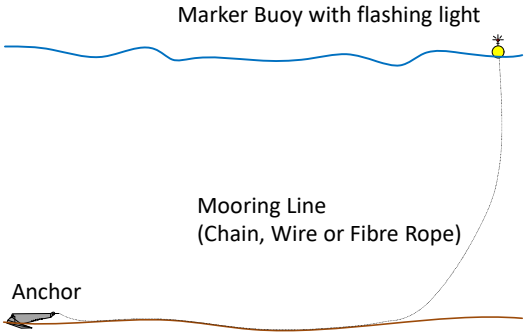
8-12 anchors required to hold rig on location

13

Drilling Process - Mooring

Anchor Installation – Pre-laid mooring





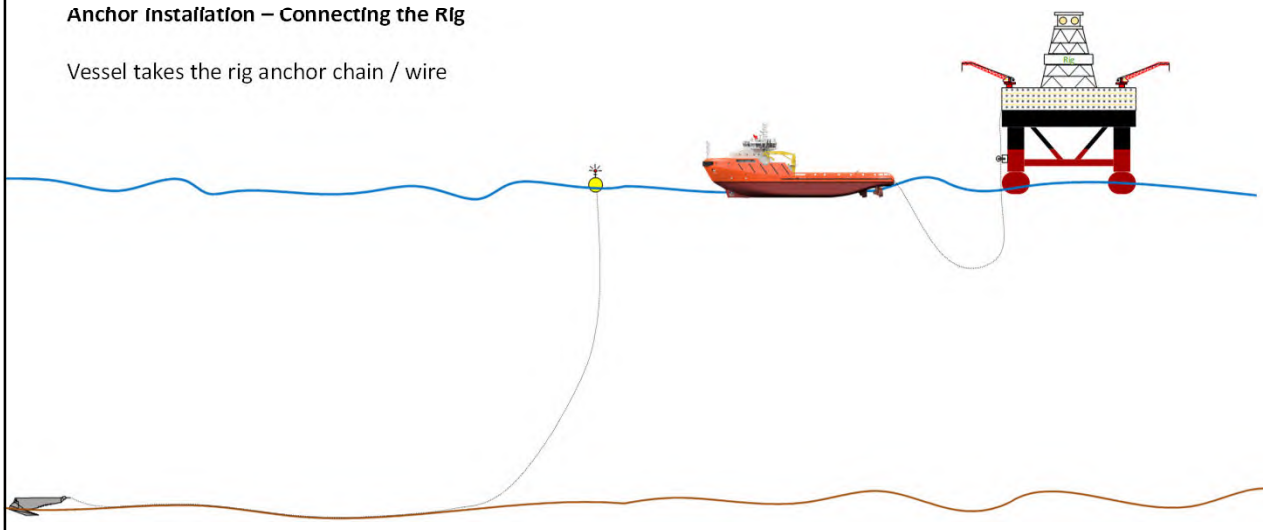
14

Drilling Process - Mooring

Anchor Installation – Pre-laid mooring

- Anchors may be pre-laid a few weeks before the rig arrives on location
- Rigs have between 8 and 12 anchors
- Navigation warnings will be in place via Notice to Mariners

ConocoPhillips
11/9/2023



15

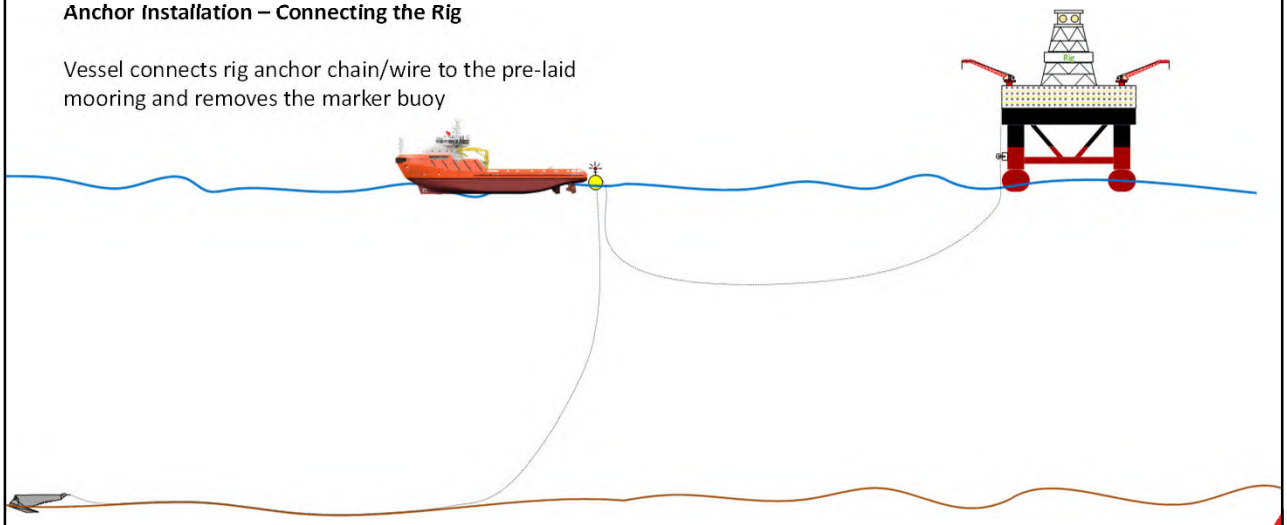
15

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Vessel takes the rig anchor chain / wire

ConocoPhillips
11/9/2023



16

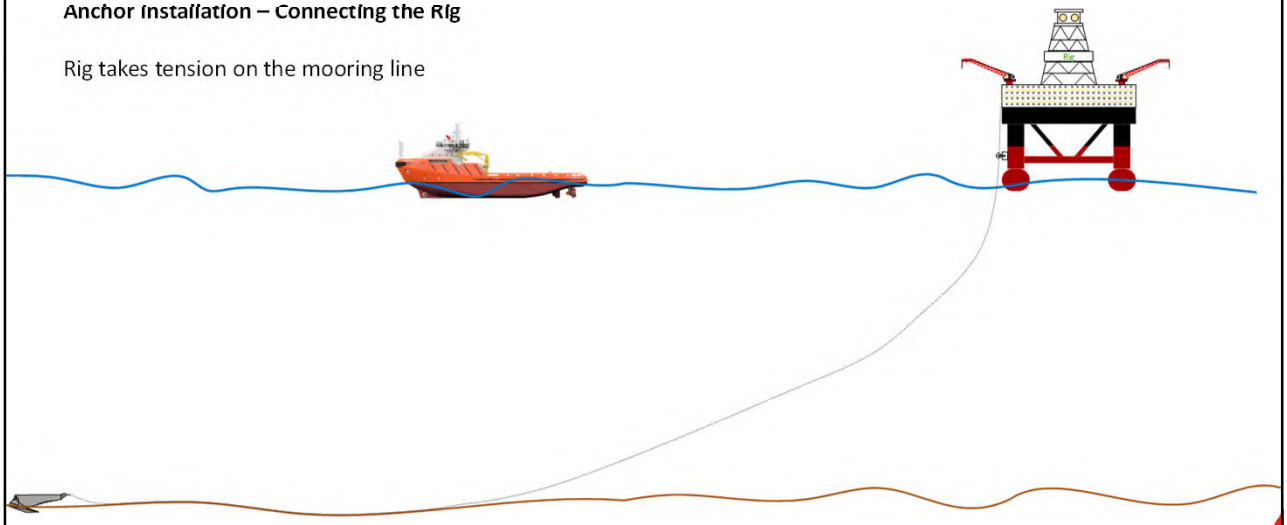
16

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Vessel connects rig anchor chain/wire to the pre-laid mooring and removes the marker buoy

ConocoPhillips
11/9/2023



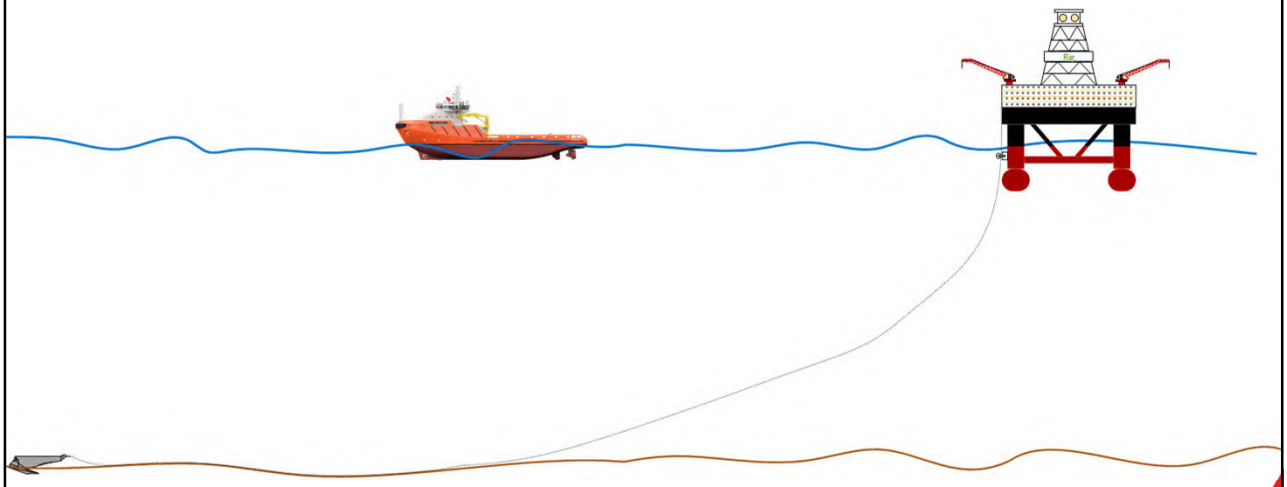
17

17

Drilling Process - Mooring

Anchor Installation – Connecting the Rig

Rig takes tension on the mooring line



ConocoPhillips
11/9/2023

18

18

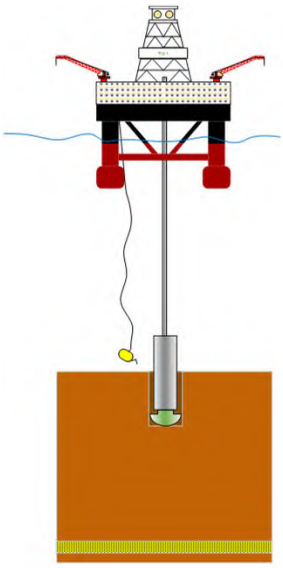
Drilling Process - Mooring

Once anchors are connected – rig ballasts down to drilling draft

ConocoPhillips
11/9/2023

19

19



Drilling Process – Drilling the well

Spudding the well

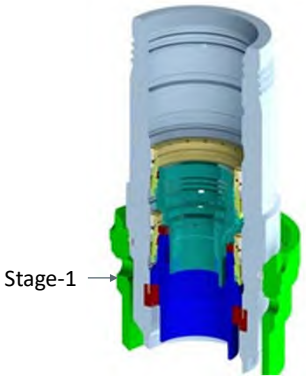
- Drilling the foundation hole
- Typically 42” hole
- Drilled 60-100m below seabed

Drill bit and Hole Opener

ConocoPhillips
11/9/2023

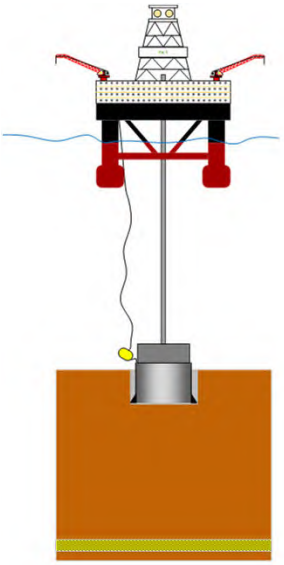
20

20



Drilling Process – Drilling the well

Installing the First Part of the Wellhead



- 36” conductor pipe
- Stage 1 wellhead housing installed
- The conductor is cemented in place

Conductor Pipe

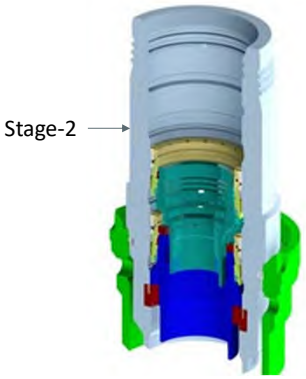
Subsea Wellhead System

ConocoPhillips
11/9/2023

21

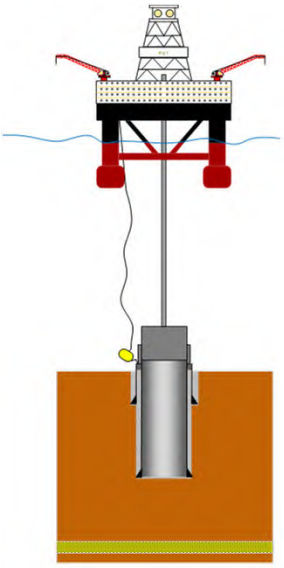
21

Drilling Process – Drilling the well



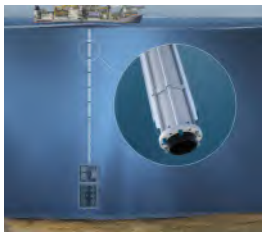
Drilling Surface Hole

- Drill 26” hole
- 20” Surface Casing
- Stage-2 wellhead housing installed
- Casing is cemented in place



Well Casing

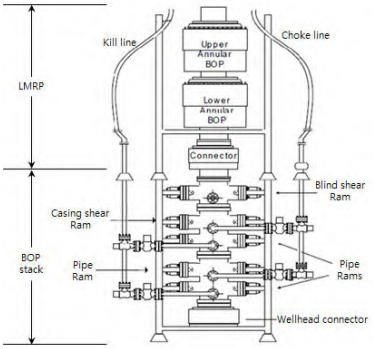
Subsea Wellhead System



ConocoPhillips
11/9/2023

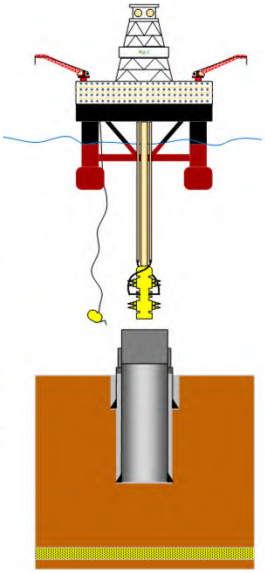
22

22



Drilling Process – Drilling the well

Installing the BOP and Riser



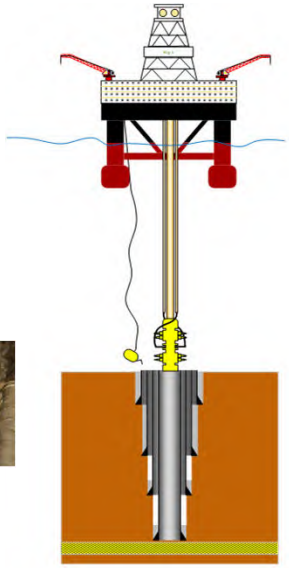
Well Casing

Subsea Wellhead System

23

Drilling Process – Drilling the well

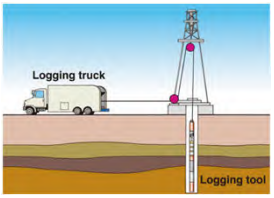
Drilling the Intermediate Hole



A. Primary Barrier
- Used to maintain "overbalance" to the pressure in the formation.
- The static hydrostatic pressure of the drilling fluid must be more than the pressure WITHIN the rock.

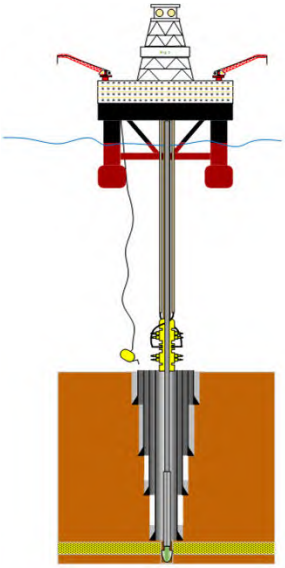
B. Using the drilling fluids
- Used to cool the drill bit and the wellbore.
- Transports cuttings to the surface.
- Water based muds contain barite and bentonite (natural minerals).
- Chemicals added as required.
- MUST go through chemical selection process per the Environment Plan.

Drilling Fluids



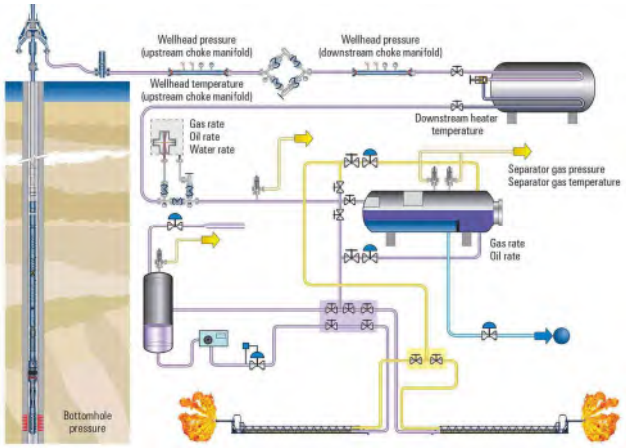
24

Drilling Process – Drilling the well



Drilling the Reservoir Hole and Evaluate Well

- Reservoir / Formation Evaluation
  - Used to establish key subsurface information
    - Formation type
    - Formation fluid type
    - Formation porosity and permeability
    - Formation pressure and flow characteristics
    - Sample reservoir fluids
  - MWD/LWD – performed whilst drilling
  - Wireline logging – after hole is drilled

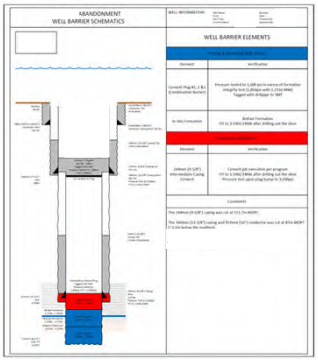


Pictures from SLB, Paniz Energy & ANOG

Drilling Process – Well Testing

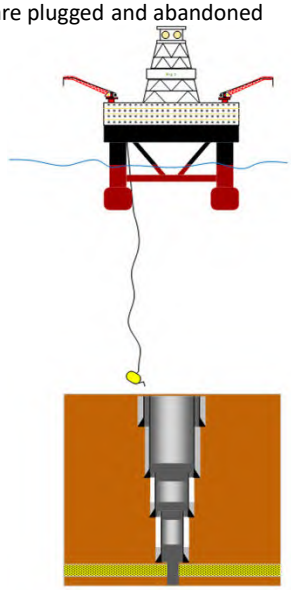
Well Testing determines the reservoir delivers hydrocarbons

- Not every well is tested.
- Typical to test “appraisal wells”.
- Typical used to fill the well with hydrocarbons for preparation of new production wells.



Pictures from SLB

Drilling Process – Well Abandonment



Following the drilling of exploration wells or at the end of a wells production life – wells are plugged and abandoned

- Set cement plugs to prevent the movement of formation fluids either to surface or into shallower formations.
- Removal of the wellhead at below seabed floor level.

Feedback received from commercial fishing industry

28

Activity

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Activities may impact commercial fishing operators ability to undertake regular activities.	ConocoPhillips Australia is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement.	Exclusion zones will be put in place prior to the commencement of seabed survey and drilling activities. These will be communicated via notices to mariners. ConocoPhillips Australia is committed to having a commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.
There is already seismic over these areas, you shouldn't have to do this again.	The Otway Exploration Drilling Program is not proposing seismic acquisition as part of its activity.	Clarifying proposed activity with all individuals that make this claim, including providing information for current titleholders and proponents proposing to undertake seismic acquisition in the region.
Catch and effort data from relevant fishing authorities (VFA, NRE TAS, AFMA) is not the only indication of productivity in commercial fisheries.	ConocoPhillips Australia has used historic catch and effort data as part of its analysis of Coastal and other marine users chapter. We also look at the stock status of key fished species and assess impacts to these species.	Requesting feedback from fishers in relation to potential interactions over the larger operational areas, and the broader Environmental Planning Area, to ensure that we can address any concerns you may have.

29

29

Activity contd.

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Exploration drilling impacts the recruitment to and long-term sustainability of fisheries.	Although exploration drilling activities do not operate to a no-impact standard, impacts are required to be as low as reasonably practicable (ALARP) and of an acceptable level. Long-term impacts to the sustainability of fisheries are not acceptable.	Requesting feedback from fishers in relation to key values and sensitivities within fisheries (fishing areas) that ConocoPhillips Australia should consider for exclusion.
Commercial fishing industry has experienced ongoing financial impacts in the past 3-5 years (COVID, Trade Embargos, low prices) and this [drilling activity] is an additional impact that puts livelihoods at risk	ConocoPhillips Australia is conscious of the ongoing constraints faced by many in the commercial fishing industry and is aware that the Otway Exploration Drilling Program may interfere with the operation of Commonwealth and State fisheries and result in temporary displacement which has a flow-on affect to income.	ConocoPhillips Australia is committed to having an evidence based commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.

ConocoPhillips

30

30

Consultation

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Fishers are unable to make an informed assessment as there are no defined drilling locations.	ConocoPhillips Australia is currently analysing seismic data obtained during the Sequoia 3D Marine Seismic Survey in permit T/49P, in 2021, and is reprocessing historic seismic data for parts of permit VIC/P79, to support the identification of drilling locations. ConocoPhillips Australia is developing an Environment Plan that assesses the potential impacts and risks associated with exploration activities over larger operational areas within each of permit areas. We understand that this may result in an overestimation of impacts and risks that are specific to functions, interests and activities.	Provided map with latitude and longitude coordinates to support ongoing consultation with commercial fishing industry. Requesting feedback from fishers in relation to potential interactions over the larger operational areas, and the broader Environmental Planning Area, to ensure that we can address any concerns you may have.

ConocoPhillips

31

31

Adjustment protocol

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
ConocoPhillips Australia's Adjustment protocol for the Sequoia Seismic Survey was still too hard to apply for.	ConocoPhillips Australia worked with peak fishing industry associations and made best attempts to ensure the Sequoia Seismic Adjustment Protocol was as simple as possible to apply to, including allowing for a payment of $2500 in administrative costs for fishers regardless of assessment outcome.	ConocoPhillips Australia is seeking feedback from the commercial fishing industry on how applications to an evidence-based adjustment protocol can be simplified for ease of application.
A displacement based compensation approach is not an adequate compensation approach	ConocoPhillips Australia is aware that there is not a one-size-fits all approach to adjustment and compensation of commercial fishers. ConocoPhillips Australia is committed to the principle that no fisher will be worse off financially as a result of our activity.	ConocoPhillips Australia is seeking feedback from the commercial fishing industry on how best to assess impact to commercial fishers through an evidence based adjustment protocol.

ConocoPhillips

32

32

Adjustment protocols contd.

Objection or Claim (What we've heard)	Assessment of Merit (Our View)	Measures adopted as a result of consultation
Any compensation/ adjustment should be paid to those doing the actual fishing	ConocoPhillips Australia is committed to the principle that no fisher will be worse off financially as a result of our activity.	ConocoPhillips Australia is committed to having an evidence based commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.
ConocoPhillips Australia should retire the SRL fishing quota for the entire season they are planning to be active.	ConocoPhillips Australia does not believe a full retirement of quota is an appropriate response to a short-term, recoverable activity.	ConocoPhillips Australia is committed to having an evidence based commercial fishing adjustment protocol in place prior to the commencement of the drilling program which will address economic impact as a result of displacement.

Environmental Impacts and Risks

Initial Assessment

34

Desktop analysis to understand the existing environment

Physical Environment	Ecological Environment	Socio-economic Environment	Cultural Environment
• Water quality • Sediment quality • Air quality • Climate • Ambient light • Ambient Sound	• Benthic Habitats and Communities • Coastal Habitats and Communities • Plankton Invertebrates • Fish • Birds • Marine Reptiles • Marine Mammals • Conservation values and sensitivities	• Coastal Communities • Commercial Fisheries • Defence Activities • Offshore Petroleum Activities • Offshore Renewable Energy Activities • Other Offshore Infrastructure • Tourism • Recreational Diving and Fishing • Shipping	• First Nations Peoples • Native Title • Maritime Archaeological Heritage (including shipwrecks)

ConocoPhillips

35

35

Consideration to how our activity interacts with the existing environment

Environmental Impacts	Seabed Disturbance	• Seabed samples • Anchor placement
	Underwater Sound Emissions	• Underwater sound from drilling and support vessel. • Impulsive sound from seabed surveys.
	Atmospheric Emissions	• Emissions from survey and drilling activities.
	Planned Vessel/ Rig Discharges	• Routine discharges from support vessels and drilling rigs. • Cement, cuttings and drilling fluid.
	Interference with other Marine Users	• Short-term displacement.
	Light and Visual Amenity	• Potential visibility of drilling rig from coastline. • Routine light expected to be visible on horizon. • Potential visibility of flare from coastline.
Environmental Risks	Vessel based risks	• Loss of material or waste overboard. • Interactions with marine fauna. • Introduction and establishment of invasive marine species.
	Hydrocarbon related risks	• Minor loss of containment. • Marine diesel oil release. • Loss of well control release.

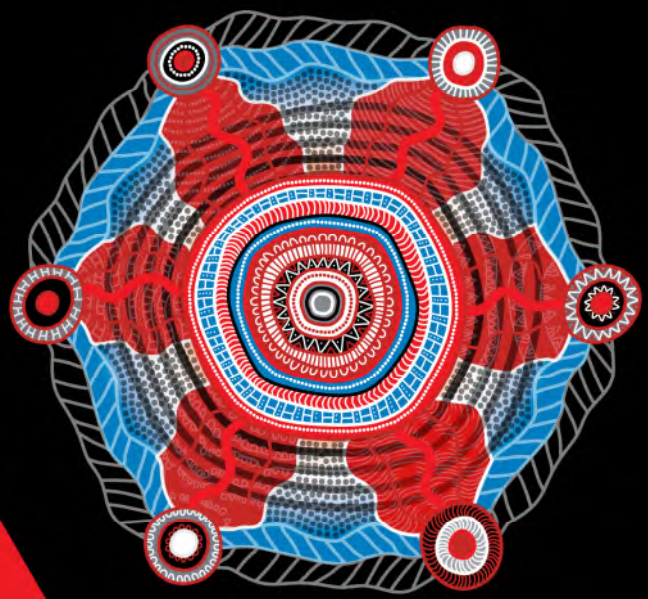
Otway Exploration Drilling Program

Webinar 3

20 September 2023

1

Recording Notice



This webinar will be recorded (video, audio and content) and photographs may be taken. The recording and any photographs may be used and distributed by ConocoPhillips Australia as part of its stakeholder engagement/consultation and associated purposes. By attending this session, you consent to this.

ConocoPhillips Australia collects and deals with personal information in accordance with our privacy policy, available at https://www.conocophillips.com.au/privacy-policy/legal-privacy-australia/.

2

ConocoPhillips

ConocoPhillips Australia acknowledges the Aboriginal and Torres Strait Islander peoples as the First Nations Peoples and Traditional Custodians of this land, and we pay our respects to Elders past and present. We celebrate the Aboriginal and Torres Strait Islander peoples' long histories, rich cultures and connection to the land, water and air.

2/21/2024

3

Tonight's Webinar

- Project overview and update
- Overview on providing feedback, objections and claims on the draft EP chapters
- Overview of the Environmental Planning Area and how we've described the existing environment
- Environmental Performance Outcomes for the Activity
- Participant led discussion of topics and aspects covered in the EP

ConocoPhillips 4

4

Participant Preferences for EP Information

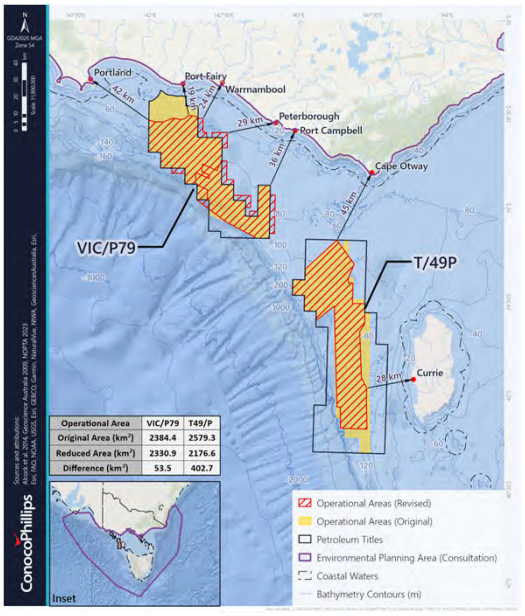
ACTION: Please use the chat function to share your top 3 topics you'd like to see covered this evening from below.

- Atmospheric Emissions
- Commercial Fishing
- Light Emissions
- Planned Drilling Discharges
- Unplanned Hydrocarbon Release (Spill)
- Underwater Sound
- Underwater Sound and Marine Mammals
- Unexploded Ordnance
- Implementation Strategy

5

Otway Exploration Drilling Program

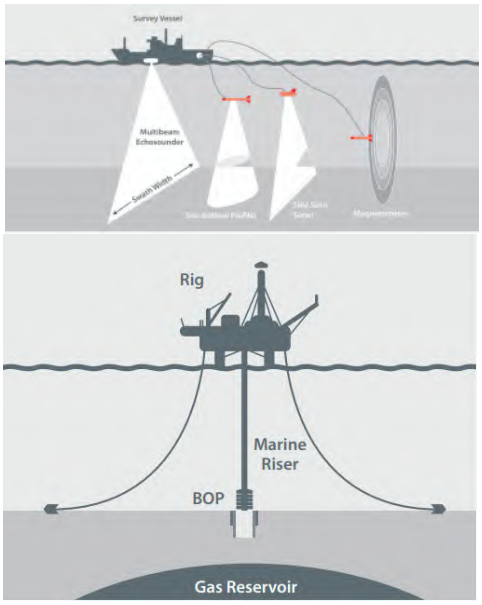
Areas:



- VIC/P79 and T/49P
- ConocoPhillips Australia holds an 80% interest and operatorship of both permits.

Key Permit Prospects Characteristics:

- Offshore Otway Basin
- Water depth range 35-1400m, predominantly ~100m
- Adjacent to producing Thylacine, Geographe, Casino, and Henry gas fields.



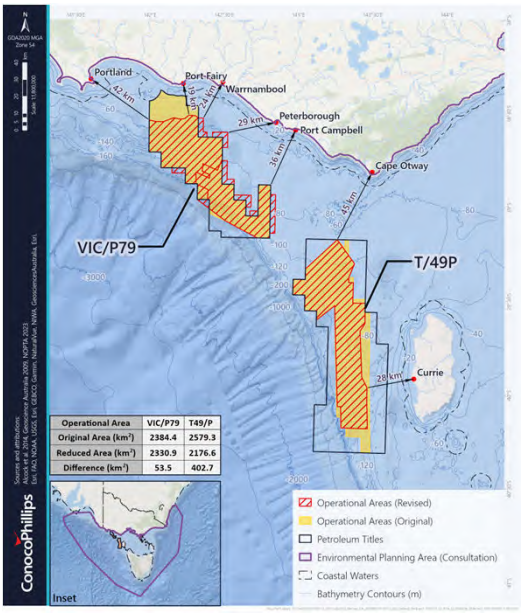
Existing permit commitments:

- T/49P commitment of one exploration well.
- VIC/P79 commitment of one exploration well.

6

What hasn't changed…

1. **Seabed Hazard Surveys:**
   - ~6x6 km per site area at up to 9 locations
   - Vessel operations
   - Geophysical survey
   - Geotechnical sampling
   - Imagery



2. **Exploration Drilling:**
   - Minimum of 2 wells and up to 4 optional wells
   - Mobile offshore drilling unit operations
   - Support vessels, remote operated vehicle, aircraft
   - Anchor placement/removal
   - Evaluation and testing (flaring)
   - Plug and Abandon all wells

Environment Plan and associated impact and risk assessment based on maximum of 6 wells over 5yrs.

7

7

What has Changed?

Operational Area

Based on operational constraints of the drilling rig and ConocoPhillips Australia's ongoing assessment of seismic data, the operational areas of the proposed activity have been refined, resulting in an overall reduction of the total area by 456.2 km^2.

Operational Area	Original Area (km^2)	Reduced Area (km^2)	Overall reduction (km^2)
VIC/P79	2384.4	2330.9	53.5
T/49P	2579.3	2176.6	402.7

Design Envelope

The initial timing provided for the commencement of seabed surveys was *no earlier than 1 January 2024*. This has now been extended to *no earlier than 1 April 2024*.

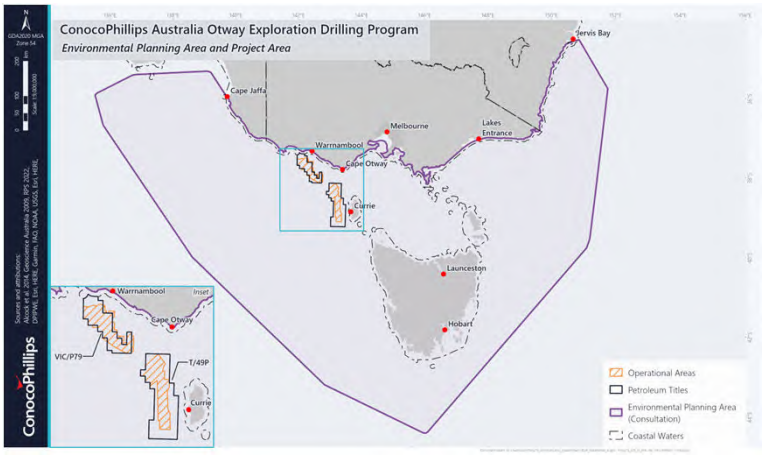
Parameter	Seabed Survey	Drilling
Earliest Start Date	1 April 2024	1 October 2024
Latest Start Date	31 December 2028	31 December 2028
Maximum Number of Locations	9 (to support confirmation of final drilling locations)	6 (2 firm wells and up to 4 optional wells)
Spatial Extent (within which the activity can occur)	Operational Areas associated with T/49P and VIC/P79	Operational Areas associated with T/49P and VIC/P79

8

8

Draft Environment Plan Chapters

We are seeking objections and claims that relate to the information contained in the draft Environment Plan that is currently available on the online consultation hub.



Objections and Claims could relate to:

- The way the existing environment (including the socioeconomic and cultural environment) in the area of the proposed activity is described in the document (Chapter 4)
- The environmental impacts and risks of the proposed activity (Chapter 6-8)
- The proposed measures for managing the environmental impacts and risks (Chapter 6-9)
- The proposed methods for monitoring the environmental performance of the activity (Chapter 9-10).

REMINDER: Blanket objections to the proposed activity and/or fossil fuel are not considered in NOPSEMA's decision making.

Description of the Environment

- Considers the spatial extent of the proposed activity (operational areas, continuous sound emissions, impulsive sound emissions, artificial light emissions, accidental hydrocarbon releases).
- Identifies conservation values and sensitivities like Australian Marine Parks, World Heritage Properties and National Heritage Places, State Protected Areas, Threatened Ecological Communities and Key Ecological Features.
- Considers the physical environment
- Considers the ecological environment
- Considers the socio-economic environment
- Considers the cultural environment such as maritime archaeological heritage, First Nations Heritage and Native Title.

REMINDER: The Environmental Planning Area was established to support the identification of marine and coastal environmental values and sensitivities and potentially relevant persons.

The Environmental Planning Area

Overlaps nine bioregions across three marine regions and includes, but is not limited to the following values and sensitivities:

- 12 Australian Marine Parks
- 1 World Heritage-listed property
- 4 National Heritage Places with coastal features
- 7 Commonwealth Heritage Places with seafloor and/or coastal features
- 9 Ramsar Wetlands Sites
- 46 Marine Protected Areas
- 28 State Protected Areas
- 5 Threatened Ecological Communities with marine or coastal features
- 9 Key Ecological Features
- 274 Fauna species identified to occur
- 36 Commercial Fisheries
- 5 Known to occur invasive marine species
- 31 Coastal settlement regions
- 2 Indigenous Protected Areas
- 17 Known significant shipwrecks

11

Environmental Performance Outcomes for the Activity

EPO1: Undertake the activity in a manner that will not interfere with other marine and coastal users to a greater extent than is necessary for the exercise of right conferred by the titles granted.

EP02: Commercial marine operators are not economically disadvantaged as a result of the Otway Exploration Drilling Program.

EPO3: No death or injury to listed threatened or migratory species, from the activity.

EPO4: Biologically important behaviours within a BIA or outside a BIA can continue while the activity is being undertaken.

EPO5: No substantial reduction of air quality within local airshed caused by atmospheric emissions produced during the activity.

EPO6: No substantial or unrecoverable change in seabed quality which may adversely impact on biodiversity, ecological integrity, social amenity, cultural values or human health.

EPO7: No unplanned objects, emissions or discharges to sea or air.

EPO8: No discernible change to the air quality of coastal communities.

EPO9: Anthropogenic noise in biologically important areas will be managed such that:

- Any blue whale continues to utilise the area without injury, and is not displaced from a foraging area.
- It does not prevent any southern right whale from utilising the area or cause injury (TTS and PTS) and/or disturbance.

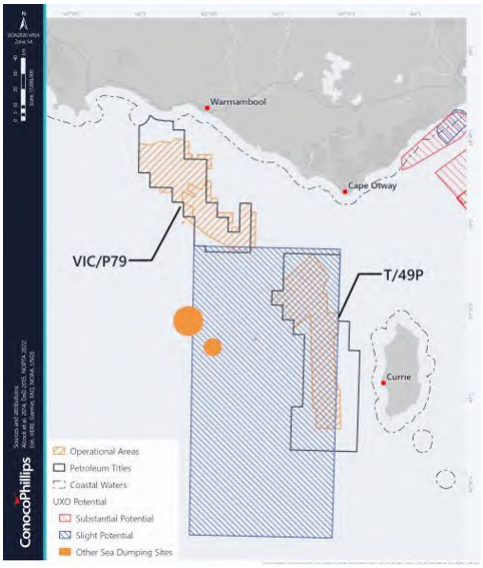
EPO10: No substantial or unrecoverable change in water quality which may adversely impact on biodiversity, ecological integrity, social amenity, cultural values or human health.

EPO11: No invasive marine species introduced, established or spread attributable to the activity.

12

Unexploded Ordnance

Assessment:



- Low risk of encountering UXO's within VIC/P79 or T/49P for all activities with the exception of snag on vessel.
- Moderate risk of UXO being snagged on submarine equipment and subsequently being brought onto a vessel (snag on vessel). Increase in risk is based on increased severity of the consequence.

Control Measures:

- **CM06:** MODU Mooring Plan – A magnetometer survey and review of the seabed imagery will be conducted as part of the seabed survey to support avoidance of ferric metal objects, including unidentified shipwrecks and unexploded ordnance.

Environmental Performance Outcomes:

- **EPO1:** Undertake the activity in a manner that will not interfere with other marine and coastal users to a greater extent than is necessary for the exercise of right conferred by the titles granted.
- **EPO3:** No death or injury to listed threatened or migratory species, from the activity.
- **EPO6:** No substantial or unrecoverable change in seabed quality which may adversely impact on biodiversity, ecological integrity, social amenity, cultural values or human health.

Atmospheric Emissions

Assessment:

- Atmospheric emissions are predicted to result in localised and temporary reduction in air quality, which will rapidly disperse given the open ocean environment and prevailing winds of the Otway Basin, as such the impact has been assessed as Minor.
- GHGs produced by this activity in a year would represent approximately 0.0085% of the annual Australian GHG emissions. While these emissions add to the GHG load in the atmosphere, they are small when compared to national emissions, insignificant on a global scale and are not predicted to have determinable impacts, as such the impact has been assessed as Minor.

Control Measures:

- **CM01:** Marine Assurance Process
- **CM02:** Vessel and MODU Operating Procedures
- **CM10:** Well Testing Program
- **CM11:** Procurement Vetting Process

Environmental Performance Outcomes:

- **EPO5:** No substantial reduction of air quality within local airshed caused by atmospheric emissions produced during the activity.
- **EPO7**: No unplanned objects, emissions or discharges to sea or air.
- **EPO8**: No discernible change to the air quality of coastal communities.

Planned Drilling Discharges

Assessment:

- Drilling discharges are predicted to result in a temporary and localised impacts (within a few hundred metres to 2 km from the well) with discharges rapidly dispersing in the marine environment and anticipated to return to pre-impact state without long-term impacts to the physical environment, as such the impacts have been assessed as negligible to minor.

Control Measures:

- **CM02:** Vessel and MODU Operating Procedures
- **CM09:** Drilling Program
- **CM11:** Procurement Vetting Process
- **CM12:** General and Hazardous Chemical Management Procedures

Environmental Performance Outcomes:

- **EPO3:** No death or injury to listed threatened or migratory species, from the activity.
- **EPO6:** No substantial or unrecoverable change in seabed quality which may adversely impact on biodiversity, ecological integrity, social amenity, cultural values or human health.
- **EPO7**: No unplanned objects, emissions or discharges to sea or air.
- **EPO10:** No substantial or unrecoverable change in water quality which may adversely impact on biodiversity, ecological integrity, social amenity, cultural values or human health..

15

Planned Operational Discharges

Assessment:

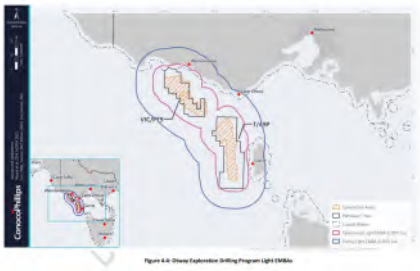
- Operational discharges are anticipated to result in a temporary and localised impacts (within 500m of the source) with discharges rapidly dispersing in the marine environment and anticipated to return to pre-impact state without long-term impacts to the physical environment, as such the impacts have been assessed as negligible to minor.

Control Measures:

- **CM01:** Marine Assurance Process
- **CM02:** Vessel and MODU Operating Procedures
- **CM11:** Procurement Vetting Process
- **CM12:** General and Hazardous Chemical Management Procedures

Environmental Performance Outcomes:

- **EPO3:** No death or injury to listed threatened or migratory species, from the activity.
- **EPO7**: No unplanned objects, emissions or discharges to sea or air.
- **EPO10:** No substantial or unrecoverable change in water quality which may adversely impact on biodiversity, ecological integrity, social amenity, cultural values or human health..



16

Light Emissions – impact to coastal communities

Table 4-4: Suburbs and localities located within the light EMBAs

Suburbs and Locality	T/49P		VIC/P79 Southern extent*		VIC/P79 Northern extent*	
	Light EMBA	Flaring EMBA	Light EMBA	Flaring EMBA	Light EMBA	Flaring EMBA
King Island Population: 1,617		✓				
Peterborough Population: 322				✓		✓
Port Campbell Population: 440				✓		✓
Princetown Population: 236				✓		
Warrnambool Population: 31,308				✓		✓
Killarney Population: 195						✓
Port Fairy Population: 3,742				✓	✓	✓
Yambuk Population: 284						✓
Narrawong Population: 462						✓
Portland Population: 10,016						✓

* Light impacts associated with VIC/P79 have been assessed for northern and southern extents to reflect the spatial extent of the permit area and proximity to the Victorian coastline.
Source for population statistics: ABS 2021.

Light Emissions

Assessment:

- Light emissions from navigational lighting have the potential to result in a change in ambient light within 20km of the light source. Lighting on vessels and the MODU will be limited to only that which is required for navigational and safety purposes and as such the impacts for navigational lighting have been assessed as negligible to minor for all species.
- Light emissions from flaring operations have the potential to result in a change in ambient light within 50km of the light source. Whilst an overlap of the flaring operations EMBA occurs with five species breeding BIA's the impact from flaring will be short-duration, intermittent and temporary (maximum of 120 hours per well) and as such have been assessed as negligible to minor except for the orange-bellied parrot which is moderate.
- Additional control measures have been considered to ensure higher-order impacts are managed to ALARP and acceptable levels.

Control Measures:

- **CM01:** Marine Assurance Process
- **CM02:** Vessel and MODU Operating Procedures
- **CM07:** Light Management Plan
- **CM10:** Well Testing Program

Environmental Performance Outcomes:

- **EPO1:** Undertake the activity in a manner that will not interfere with other marine and coastal users to a greater extent than is necessary for the exercise of right conferred by the titles granted.
- **EPO3:** No death or injury to listed threatened or migratory species, from the activity.
- **EPO4:** Biologically important behaviours within a BIA or outside a BIA can continue while the activity is being undertaken.

Underwater Sound – Non-impulsive

Background:

The Otway Exploration Drilling Program will generate non-impulsive (or continuous) underwater sound emissions as a result of vessel, MODU, drilling and aircraft operations.

Assessment:

Jasco modelled a range of operational activities and identified the furthest distances for a range of effect thresholds for different species.

Example – Low-frequency cetaceans:

- Permanent Threshold Shift (PTS) within 320 m of source assuming present for 24 hours during resupply – not possible.
- Temporary Threshold Shift (TTS) within 3.6 km of source assuming present for 24 hours during resupply – not possible.
- Behavioural disturbance within 12.6 km on the continental shelf and 22.8 km out from shelf-edge (when drilling near the edge) for short-term resupply activities.

Example – Fish and Invertebrates:

- Recoverable Injury within 80 m of source assuming present for 48 hours.
- Temporary Threshold Shift within 190 m assuming present for 12 hours.
- Sound exposure impacts to invertebrates (i.e. giant crab and southern rock lobster) are expected to be restricted to within metres of the continuous sound source.

Impacts are required to be managed to protect threatened whale species, reducing the consequence severity to minor through the implementation of effective monitoring and mitigation measures.

Control Measures:

- **CM01:** Marine Assurance Process
- **CM02:** Vessel and MODU Operating Procedures
- **CM08:** Marine Mammal Adaptive Management Plan

Environmental Performance Outcomes:

- **EPO3:** No death or injury to listed threatened or migratory species, from the activity.
- **EPO4:** Biologically important behaviours within a BIA or outside a BIA can continue while the activity is being undertaken.
- **EPO9**: Anthropogenic noise in biologically important areas will be managed such that:
  - Any blue whale continues to utilise the area without injury, and is not displaced from a foraging area.
  - It does not prevent any southern right whale from utilising the area or cause injury (TTS and PTS) and/or disturbance.

Underwater Sound – Impulsive

Background:

The Otway Exploration Drilling Program will generate impulsive underwater sound emissions during seabed surveys and during short-term downhole formation evaluation.

Assessment:

Jasco modelled the noisiest geophysical seabed survey technique, being sub-bottom profiling at 169 decibels, and the noisiest downhole formation evaluation technique, being Vertical Seismic Profiling at 216 decibels (not to be confused with 3D Marine Seismic Surveys) and identified the furthest distances effect thresholds.

Example – Low-frequency cetaceans:

- PTS within 330 m of VSP source assuming present for 24 hours during VSP – not possible.
- TTS within 2.4 km of VSP source assuming fauna is present for 24 hours during VSP – not possible.
- Behavioural disturbance within 1.5 km of VSP source (for 160 dB criteria).
- Behavioural disturbance within 130 m of SBP source and 6.5 km of VSP source (for more conservative 140 dB criteria for southern right whale cow-calf pairs).

Example – Fish, Fish Eggs, Larvae and Invertebrates:

- Mortality/potential mortality/recoverable Injury within 50 m of VSP source.
- TTS within 450 m of VSP source assuming present for 24 hours.
- 'No effect at seafloor' threshold for invertebrates reached within 170 m during VSP – no other criteria were reached for invertebrates.

Impacts are required to be managed to protect threatened whale species, reducing the consequence severity to minor through the implementation of effective monitoring and mitigation measures.

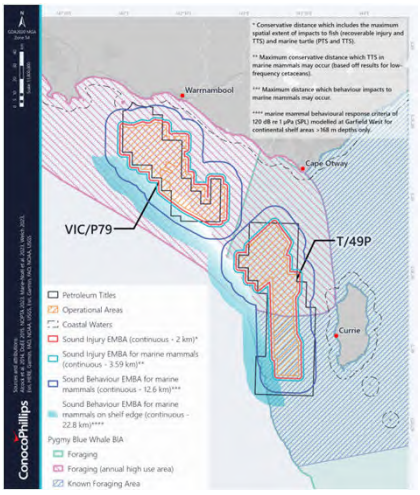
Control Measures:

- **CM02:** Vessel and MODU Operating Procedures
- **CM08:** Marine Mammal Adaptive Management Plan
- **CM10:** Drilling Program
- **CM11:** Procurement Vetting Process

Environmental Performance Outcomes:

- **EPO3:** No death or injury to listed threatened or migratory species, from the activity.
- **EPO4:** Biologically important behaviours within a BIA or outside a BIA can continue while the activity is being undertaken.
- **EPO9**: Anthropogenic noise in biologically important areas will be managed such that:
  - Any blue whale continues to utilise the area without injury, and is not displaced from a foraging area.
  - It does not prevent any southern right whale from utilising the area or cause injury (TTS and PTS) and/or disturbance.

Underwater sound and marine mammals

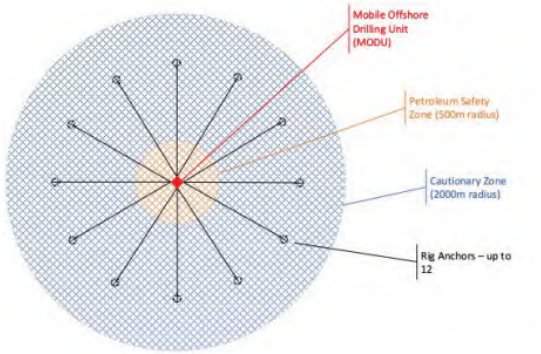


Assessment:

Underwater sound emissions associated with vessels, the drilling rig and seabed survey and drilling operations will occur in the offshore marine environment and overlap Sea Country for the duration of the activity.

- A change in ambient sound has the potential to result in impacts to receptors, including changes in behaviour, injury or mortality.
- Underwater sound emissions must be managed so they do not impact on the recovery of pygmy blue whales and southern right whales as per the federal Conservation Management Plans for these species. This means that injury to or behavioural disturbance of these species is 'not acceptable'.

Environmental Performance Outcomes:



- **EPO3:** No death or injury to listed threatened or migratory species, from the activity.
- **EPO4:** Biologically important behaviours within a BIA or outside a BIA can continue while the activity is being undertaken.
- **EPO9**: Anthropogenic noise in biologically important areas will be managed such that:
  - Any blue whale continues to utilise the area without injury, and is not displaced from a foraging area.
  - It does not prevent any southern right whale from utilising the area or cause injury (TTS and PTS) and/or disturbance.

Other Marine and Coastal Users

Assessment:

- The presence of the activity has the potential to interfere with other marine users such as commercial shipping, defence activities and recreation and tourism resulting in temporary displacement raging from a 500 m to 2 km radius around the activity and potential visibility of the MODU in certain locations. Interference will be short-term and fully recoverable and as such has been assessed as minor.

Control Measures:

- **CM01:** Marine Assurance Process
- **CM02:** Vessel and MODU Operating Procedures
- **CM03:** Marine and Coastal Users Consultation and Communication Plan
- **CM04:** Commercial Marine Operators Adjustment Protocol
- **CM06:** MODU Mooring Plan

Environmental Performance Outcomes:

- **EPO1:** Undertake the activity in a manner that will not interfere with other marine and coastal users to a greater extent than is necessary for the exercise of right conferred by the titles granted.
- **EP02:** Commercial marine operators are not economically disadvantaged as a result of the Otway Exploration Drilling Program.

Commercial Fishing

Assessment:

- The presence of the activity has the potential to interfere with the operation of commonwealth and state fishers and result in temporary displacement raging from a 500 m to 2 km radius around the activity. Interference will be short-term and recoverable with vessel advised in advance of locations to enable journey planning to navigate around the activity and as such the impacts to commercial fishing have been assessed as minor.

Control Measures:

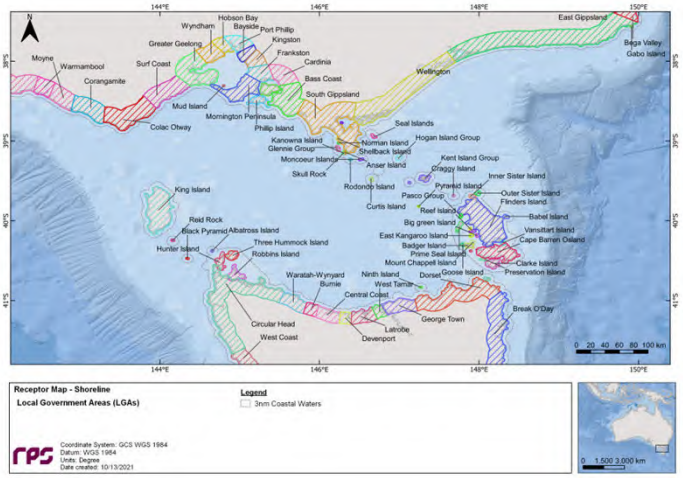
- **CM01:** Marine Assurance Process
- **CM02:** Vessel and MODU Operating Procedures
- **CM03:** Marine and Coastal Users Consultation and Communication Plan
- **CM04:** Commercial Marine Operators Adjustment Protocol
- **CM06:** MODU Mooring Plan

Environmental Performance Outcomes:

- **EPO1:** Undertake the activity in a manner that will not interfere with other marine and coastal users to a greater extent than is necessary for the exercise of right conferred by the titles granted.
- **EP02:** Commercial marine operators are not economically disadvantaged as a result of the Otway Exploration Drilling Program.

Potential Risks of Activity – Unplanned Hydrocarbon Release

Risks associated with activity

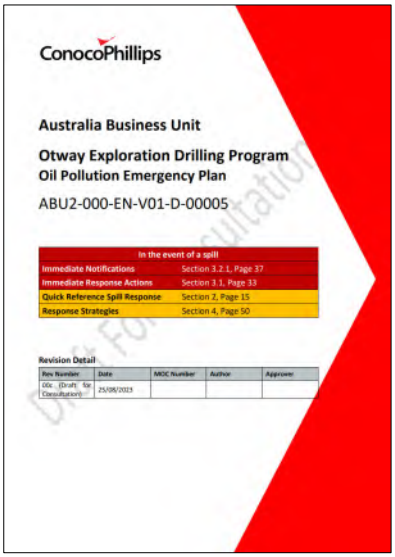


In the highly unlikely event of a Marine Diesel Oil spill or Loss of Well Control (both events assessed as 'Remote'), there is potential for hydrocarbons to move into coastal waters and shorelines.

Control Measures:

- Accepted Oil Pollution Emergency Plan (OPEP)
- Operational and Scientific Monitoring Program
- Accepted Well Operations Management Plan
- Source Control Emergency Plan
- Shipboard Marine Pollution Emergency Plan or Shipboard Oil Pollution Emergency Plan.

In addition to the above plans, the following control measures will also be in place for the activity.

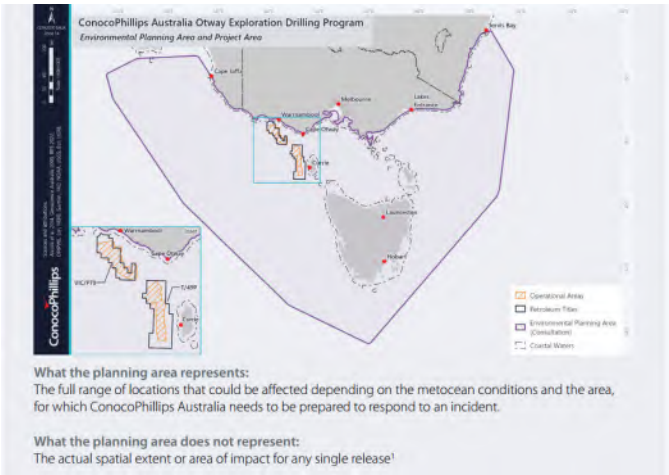


- Petroleum safety zone (500m radius) surrounding the drilling rig during the drilling activity.
- Cautionary zone (2km radius) around the drilling activity to minimise the potential for vessel collisions.
- Notifications provided for any on-water activities and ongoing communication with other marine users.

Oil Pollution Emergency Plan

Demonstrates the capability to respond to spills that may result from offshore activities:

- Worst-case spill scenarios – hydrocarbon-types, modelling and actionable areas
- Crisis Management and Emergency Response Framework/System
- Roles and Responsibilities
- Initial Response Actions and Notifications
- Response and Protection Priorities
- Response Strategies and Resources
- Environmental Performance Outcomes, Environmental Performance Standards and Measurement Criteria
- Operational and Scientific Monitoring Program
- Preparedness, Exercises, Training and Competency
- Record Keeping
- Appendices:
  - Aviation Plan
  - Shoreline Plan
  - Tactical Response Plans



REMINDER: The OPEP is developed in consultation with State Control Agencies

25

Understanding where hydrocarbons might go under different conditions (Stochastic Modelling)

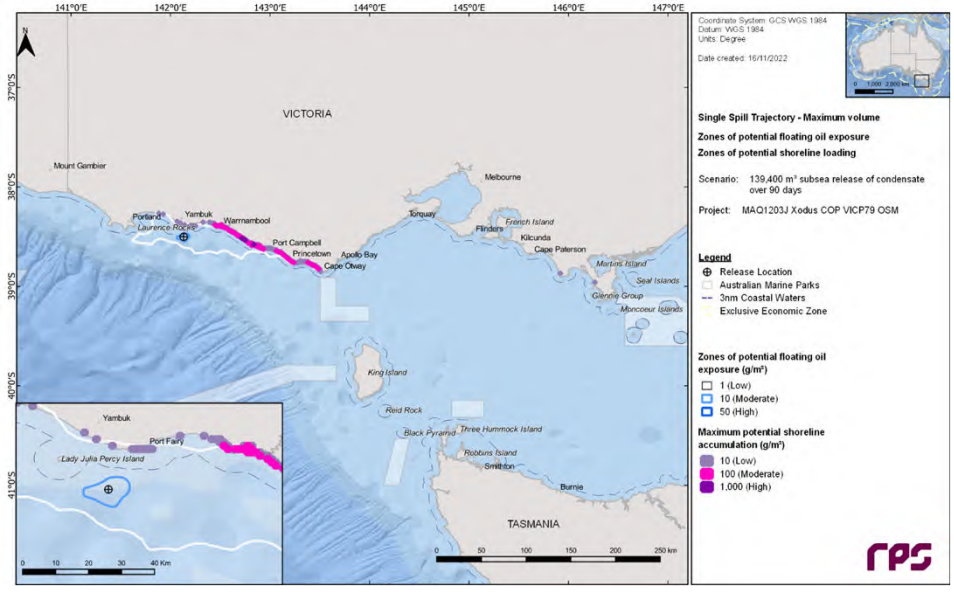
- Used in the risk assessment to support the prediction of possible effects and supports preparedness by identifying a planning area, within which environmental values and sensitivities are identified and priorities for protection are established.
- Shows the full range of locations that could be affected depending on metocean conditions – in no way representative of an individual spill.
- Each type of hydrocarbon is assessed over low, moderation and high thresholds which have increasing impacts to the receiving environment.

26

Defining credible spill scenarios (Deterministic Modelling)

The potential worst-case hydrocarbon spill scenarios relating to offshore petroleum activities are outlined below:

For seabed surveys, drilling rig and support vessel operations:



- A vessel collision within the operational area resulting in a 350 m^3 surface release of MDO over 6 hours was identified as the worst-case credible spill scenario based on the AMSA Technical guidelines for preparing contingency plans for marine and coastal facilities (AMSA 2015). Calculation of discharge volume and timing align with the methodology recommended therein.

For drilling operations:

- Worst-case discharge calculations completed in line with the ConocoPhillips Corporate Practice (Calculation and Documentation of WCD, 2018) for a hypothetical open hole, unrestricted Loss of Well Control (LOWC) scenario during exploration drilling. The WCD highest daily flow rate of hydrocarbons resulted in a predicted total spill volume of 139,400 m^3 over a 90-day duration.

27

Modelling: Largest Volume of Hydrocarbons Ashore

28

Implementation Strategy

Describes ConocoPhillips Australia's Health, Safety and Environmental Managemental System (HSEMS), including specific measures that will be used to ensure that, for the duration of the activity:

- The environmental impacts and risks of the activity continue to be identified and reduced to a level that is as low as reasonably practicable (ALARP), and
- Control measures detailed in the EP are effective in reducing the environmental impacts and risks of the activity to ALARP and an acceptable level, and
- Environmental performance outcomes and standards set out in the EP are being met.

Establishes a clear chain of command, setting out the roles and responsibilities of personnel in relation to the implementation, management and review of the EP, including during emergencies or potential emergencies.

Provides measures to ensure each employee or contractor working on, or in connection with, the activity is aware of their responsibilities in relation to the EP, including during emergencies or potential emergencies, and has the appropriate competencies and training.

Provides for monitoring, recording, audit, management of nonconformance and review of environmental performance and the implementation strategy to ensure that the environmental performance outcomes and standards in the EP are being met.

Provides for monitoring of, and maintaining a quantitative record of, emissions and discharges (during normal operations or otherwise), to assess whether the environmental performance outcomes and standards in the EP are being met.

Provides for an oil pollution emergency plan and updating and testing of the plan consistent with the national system for oil pollution preparedness and response.

Provides for monitoring and recording of impacts to the environment from oil pollution and response activities.

Provides for appropriate consultation with relevant authorities of the Commonwealth and State, and other relevant persons or organisations.

Among may other things…

- Notifications, Communications, Ongoing Consultation
- Management of Change
- Reporting, Auditing and Inspections…

Next Steps: Consultation Pause

- Consultation will pause on 30 September – this is to allow ConocoPhillips time to finalise compiling the Environment Plan prior to submitting it to the regulator for a 30-day Public Comment period.
- During this time, we will:
  - Assess and respond to the feedback, objections and claims received from relevant persons
  - Update the Environment Plan to reflect feedback, objections and claims received.
- After the EP has been submitted for Public Comment, consultation will resume and be ongoing.
- The next you will hear from us will be:
  - ConocoPhillips Australia formally responding to your feedback, objections and claims you may have raised.
  - Notification that that EP is available on the NOPSEMA website for public comment.

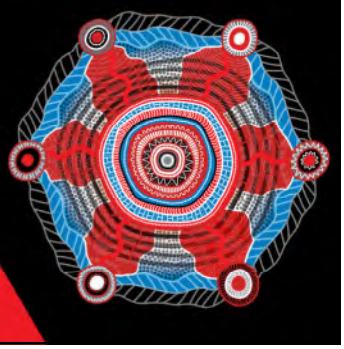
Otway Exploration Drilling Program

Webinar 4

15 November 2023

1

Recording Notice



This webinar will be recorded (video, audio and content) and photographs may be taken. The recording and any photographs may be used and distributed by ConocoPhillips Australia as part of its stakeholder engagement/consultation and associated purposes. By attending this session, you consent to this.

ConocoPhillips Australia collects and deals with personal information in accordance with our privacy policy, available at https://www.conocophillips.com.au/privacy-policy/legal-privacy-australia/.

2

ConocoPhillips

ConocoPhillips Australia acknowledges the Aboriginal and Torres Strait Islander peoples as the First Nations Peoples and Traditional Custodians of this land, and we pay our respects to Elders past and present. We celebrate the Aboriginal and Torres Strait Islander peoples' long histories, rich cultures and connection to the land, water and air.

1/18/2024

3

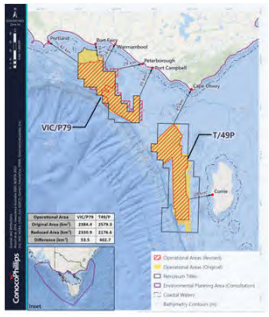
Tonight's Webinar

- Project overview and update
- Recap of consultation process and consultation milestones to-date.
- Overview on consultation moving forward.
- Q&A (Please note, this will be limited to procedural questions only).

ConocoPhillips 4

4

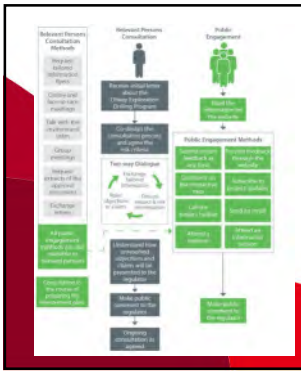
Otway Exploration Drilling Program



Areas:
- VIC/P79 and T/49P

Existing permit commitments:
- T/49P commitment of one exploration well.
- VIC/P79 commitment of one exploration well.

Proposed activities assessed in Environment Plan
Seabed Hazard Surveys:
- ~6x6 km per site area at up to 9 locations
- Vessel operations
- Geophysical survey
- Geotechnical sampling
- Imagery



Exploration Drilling:
- Minimum of 2 wells and up to 4 optional wells
- Mobile offshore drilling unit operations
- Support vessels, remote operated vehicle, aircraft
- Anchor placement/removal
- Evaluation and testing (flaring)
- Plug and Abandon all wells

Environment Plan and associated impact and risk assessment based on maximum of 6 wells over 5yrs.

5

5

Recap of consultation process to-date

6

Consultation Milestones to-date

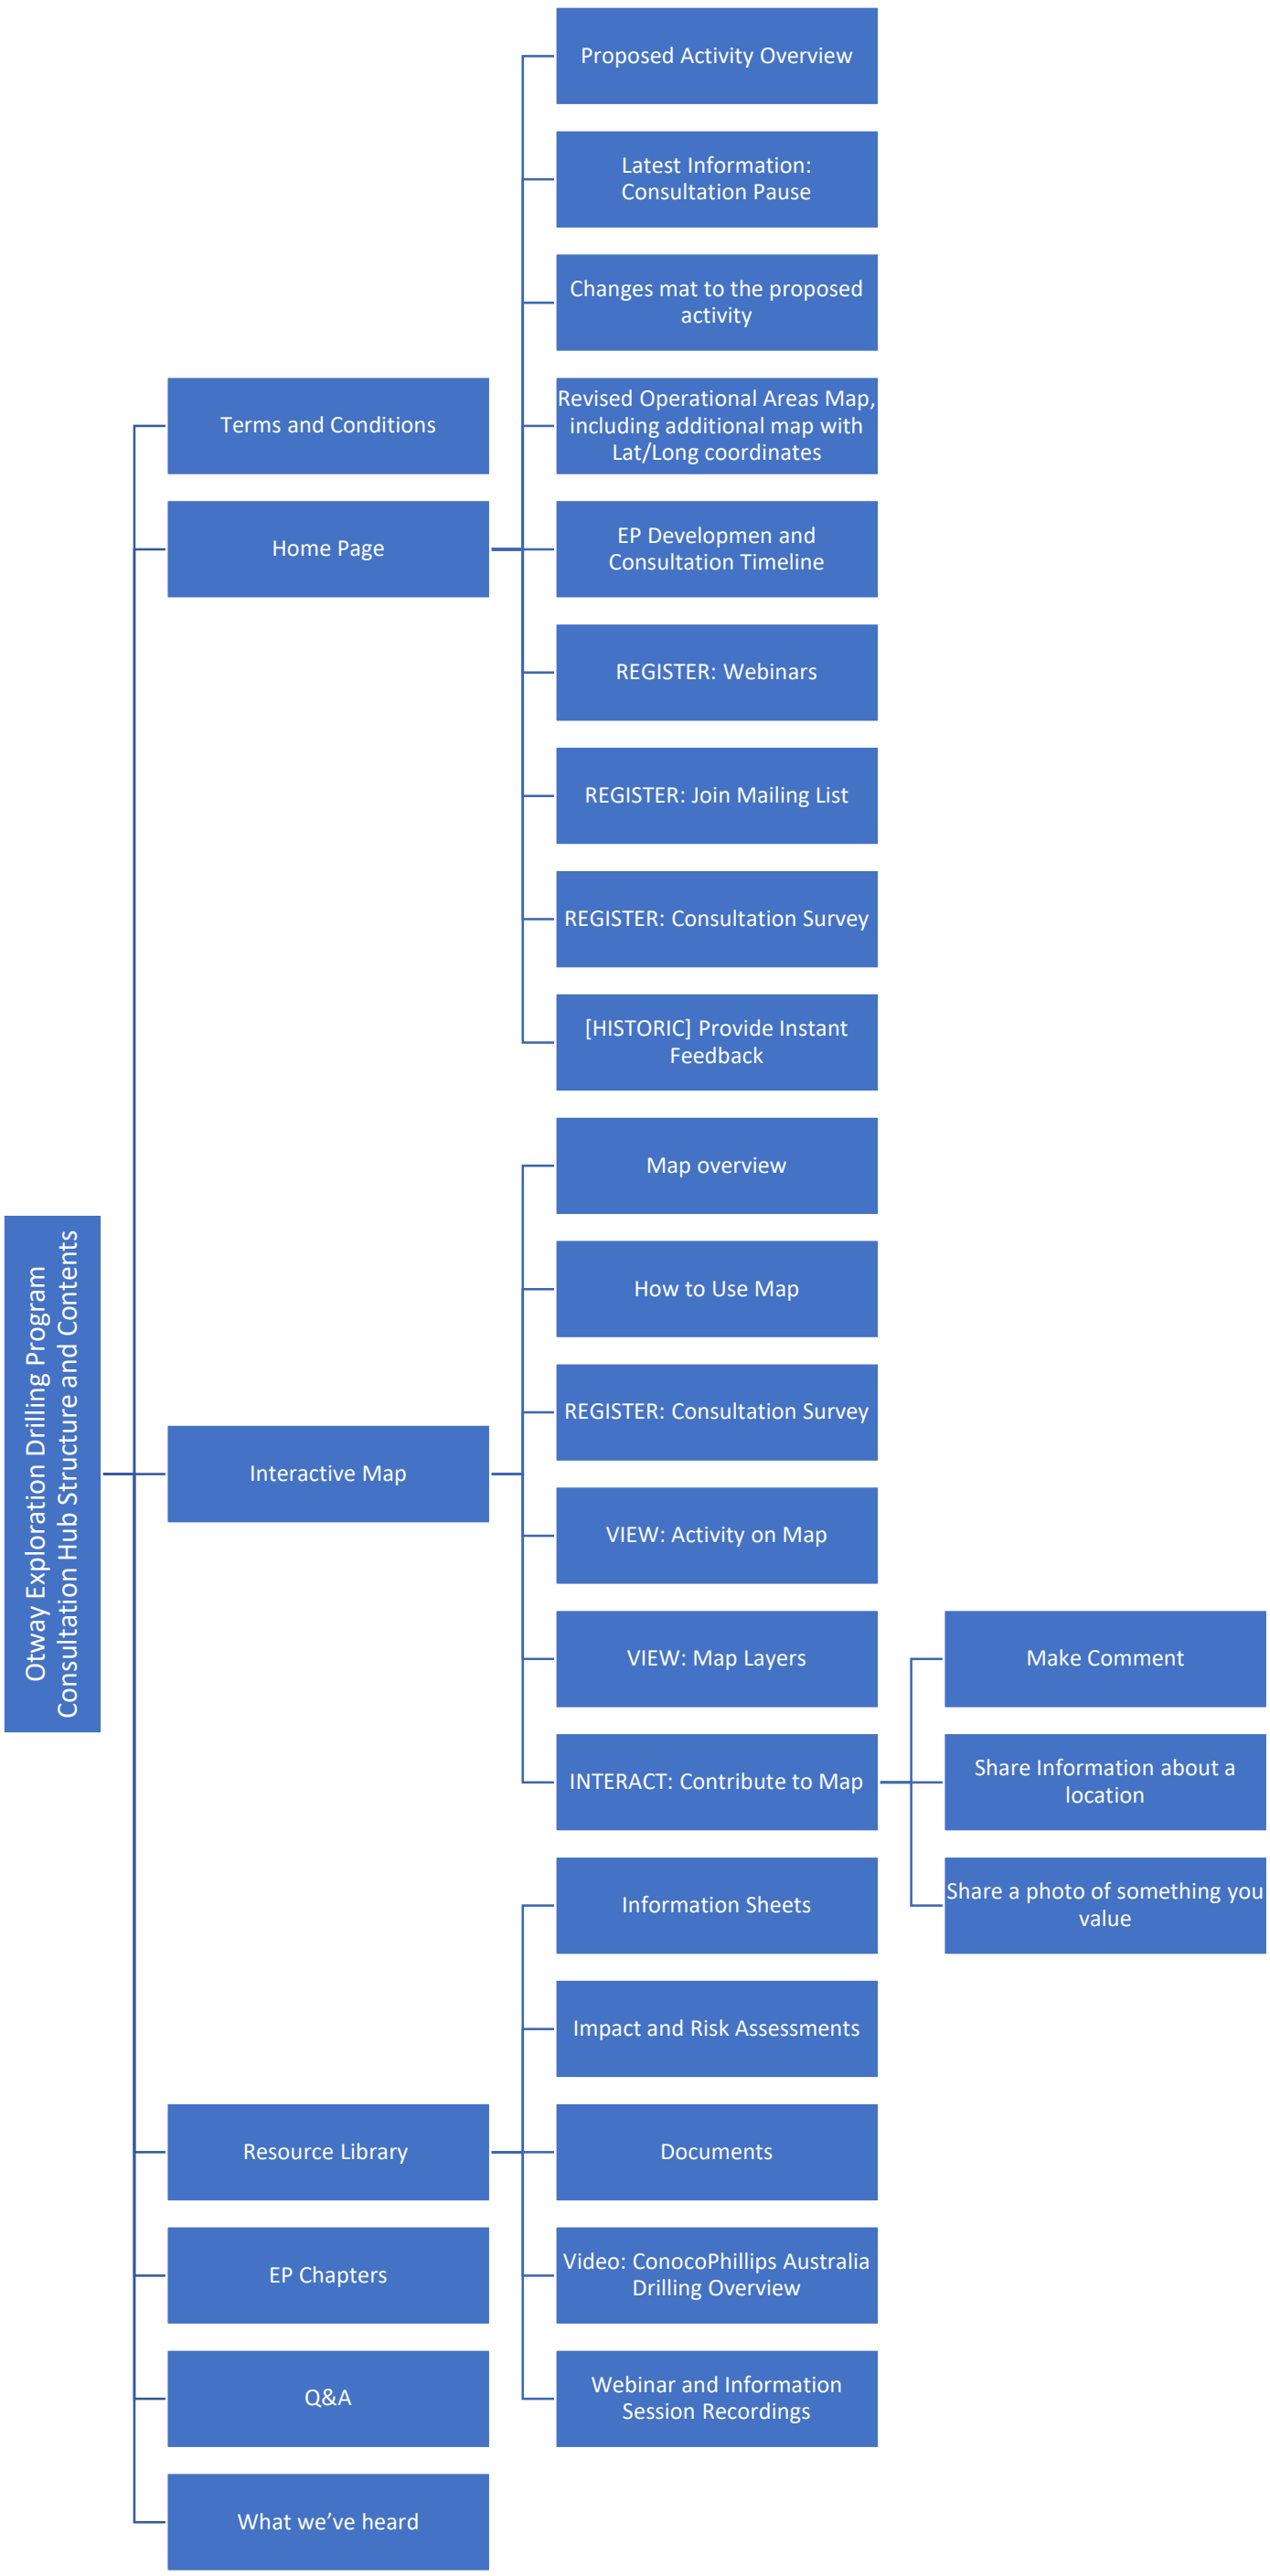
7

Next Steps: Consultation

NOPSEMA are currently ensuring our submission is complete.

If it is, the full Environment Plan (EP) will be made available for public comment on NOPSEMAs website.

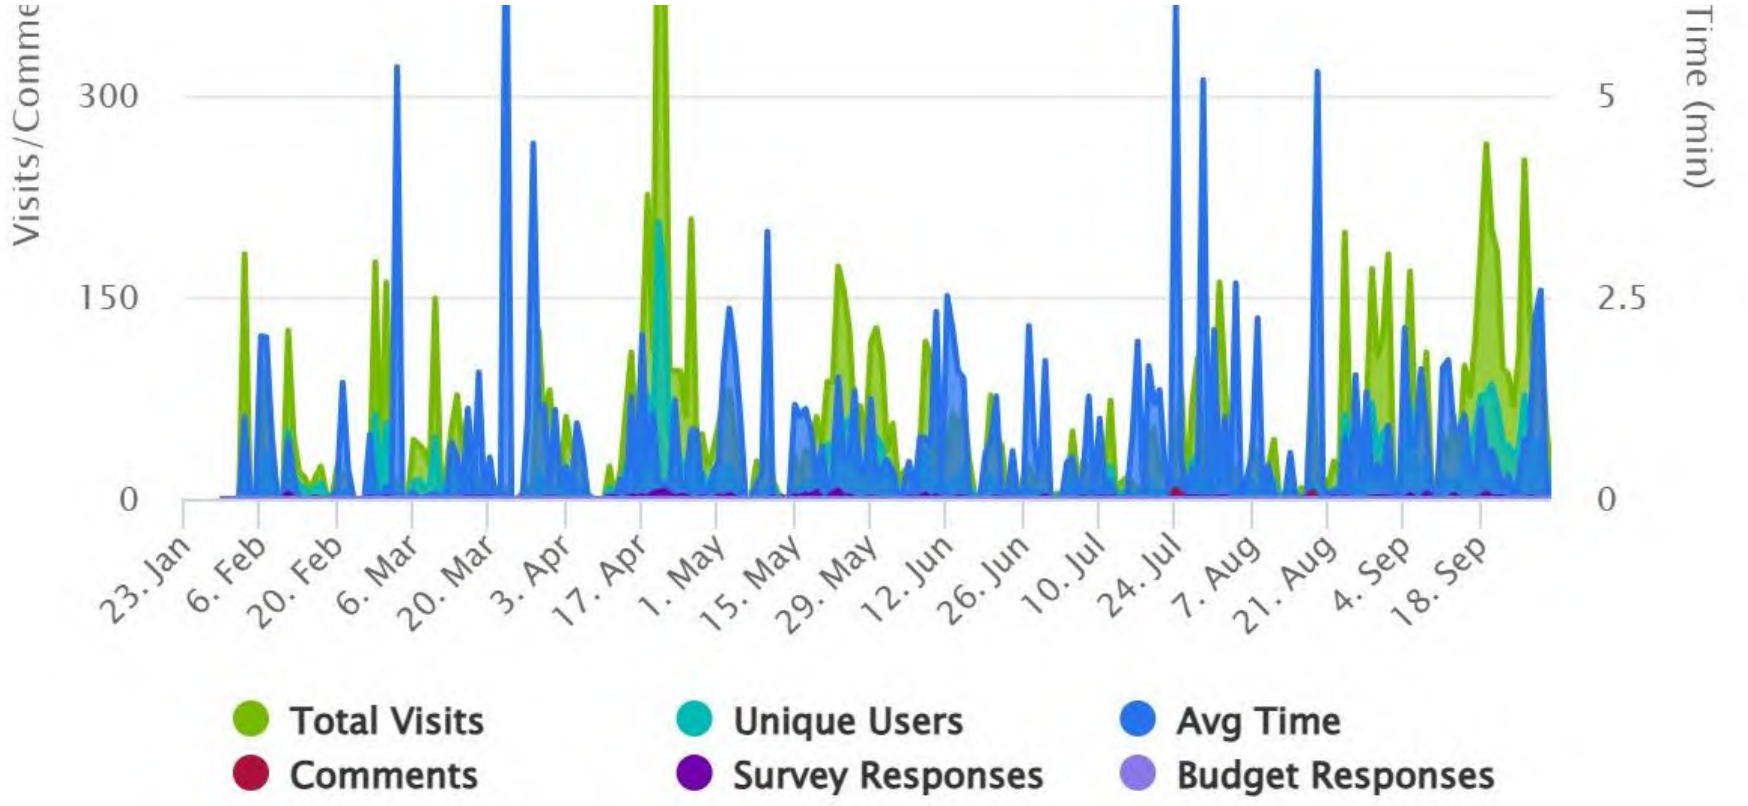
Comments on the EP need to be submitted to NOPSEMA within 30 days.



NOPSEMA will provide a copy of the comments to ConocoPhillips Australia.

ConocoPhillips Australia will consider each public comment and may modify the EP.

As part of a resubmission after public comment, ConocoPhillips Australia will:



- Respond in general terms to the comments.
- Indicate whether any modifications of the EP were made in response to public comments.
- Refer to any modifications made in response to the comments.

King Island Courier

A Beacon for the Community

Vol. 38 No. 5 *Thursday, February 9, 2023* *$1.50*

Part of the crowd celebrating the premier annual event, Festival of King Island, and, inset, performer Kim Churchill jammed the mosh pit.

ISLAND PARTY TIME

PAM ROLLEY

AS THE sun rose Sunday morning and the weary FOKI crew started the breakdown of the festival site at Currie Harbour the call (or maybe a whisper) was "the best FOKI ever" – even from those who would not see the light of day for many hours,

Every performer repeated the phrase that organisers hear year after year ...

"FOKI is like no other festival; it is unique; the place is beautiful, the families, the kids, the scenery, the cheese...."

The Smokin Elmores/Skooterz from Tasmania had all ages on the hill to down at front stage rocking with two completely different styles of music.

"We have loved every minute," they said.

"As musicians you don't get the opportunity to sit and mix with other musicians.

"You are working; other festivals have you in a time slot to play, and then you leave.

"We have made some great new connections."

The mosh pit was jammed packed when Kim Churchill hit the stage.

Many were young children when Churchill played his first FOKI. He was joined on stage by Boo Seeka, and together they mixed their melodic styles and Boo with his high tempo drum beat grabbed the crowd by the throat. Churchill was able to get in some surfing and Boo kicked back in the green room and shared stories.

Flynn Gurry and Medanhit couldn't have more different music styles, but as storytellers drew both younger and older into their webs. Sumner's electronic vibe shook the Currie

"Best ever" FOKI: Pages 4&5

TRANSFER ON HIGH SEAS- Page 2

Fiver drops new King

AUSTRALIA is removing the British monarchy from its bank notes.

Australia's Reserve Bank announced last week that the new $5 bill would feature an indigenous design rather than an image of King Charles III.

It is the only note that features an image of the monarch.

The King is expected to appear on Australian coins that currently bear the image of the late Queen Elizabeth II later this year.

Australia's Reserve Bank said the new $5 bill would feature a design to replace the portrait of the late queen.

The bank said the move would honour "the culture and history of the First Australians".

"The other side of the $5 banknote will continue to feature the Australian parliament," a statement said.

The Queen appeared on the £1 note in 1953 -1954 and all Australian banknotes had an image of the ruling monarch printed on them. When Australia moved to decimal currency the monarch appeared on the lowest denomination polymer note.

In 1992 Queen Elizabeth was added to the $5 note. The decision was not popular politically or socially according to the Reserve Bank Museum's website, as the image replaced Caroline Chisholm, who had been celebrated for her work improving the lives of immigrants.

Boat crew in high seas transfer

THE Wave Swell Energy crew last week responded to a call for help to transport an offshore oil and gas construction ship crew member who was onboard a vessel 3 km off Naracoopa.

Mustafa Bhatti, who lives in Currie, is regularly trotting the globe as an oil rig crane operator. He spoke to his friend of 10 years, Steve Phillips from MMA Offshore and heard that a crew member needed to leave the ship on compassionate grounds.

The Wave Swell crew Mustafa, Cody Rooks and Kane Denny in the company's ex-police, rigid inflatable zodiac left Naracoopa in rough conditions, completed the ship transfer and returned the crewman to shore.

"We cannot thank Wave Swell Energy enough for the assistance they provided with transporting one of our crew members, helping with accommodation and feeding him," Mr Phillips said.

"Our man was even driven to the airport the following day to catch a flight from King Island home because of a family medical emergency.

"The kind people on King Island did everything within their ability to assist us, even though there were some delays at our end waiting for approvals for the transfer plan.

"We changed the location for the boat transfer due to weather conditions and Wave Swell Energy moved to this location without hesitation. We are so impressed with the kindness and hospitality of the tight knit community on King Island.

"My good mate Mustafa could not do enough to help us out with arranging the logistics on King Island and even delivered us some beautiful King Island cheese when the transfer took place.

"We have heard from our crew member, and he is beyond grateful for the effort everyone went to carrying out this operation. He is now back where he needs to be. Thanks again to Wave Swell Energy, Mustafa and all those that made this a safe and successful operation. Thank you, King Island. We could not have carried this out without your help."

The MMS Crewman, left, returns to shore with oil rig crane operator Mustafa Bhatti.

Trainers develop ag career program

TWO of Tasmanian's most well-known agricultural organisations are joining forces to provide a unique career development opportunity for people working in the state's agriculture sector.

The Tasmanian Institute of Agriculture and Rural Business Tasmania are working together to create eNABLE, a new training program that brings together TIA's Extension Accelerator Program and RBT's Cultivating Rural Excellence Program.

The aim is to create a high-impact training program that is relevant for farm owners and managers, and agricultural extension professionals and consultants.

TIA director Michael Rose said eNABLE would provide a valuable opportunity for early and mid-career extension professionals to learn hand-in-hand with farm managers and owners to the benefit of the Tasmanian agriculture sector.

TIA director Michael Rose and Rural Business Tasmania CEO Elizabeth Skirving announce the eNABLE training.

"TIA's mission is to enable Tasmania's agriculture sector to accelerate primary sector productivity while maintaining land and water quality for future generations," Professor Rose said.

"Supporting the training and development of our agricultural leaders and innovators is a critical part of this and we welcome the opportunity to work alongside industry to deliver this training program."

RBT chief executive officer Elizabeth Skirving said eNABLE would provide an opportunity for agricultural professionals to interact and learn from each other while developing important leadership skills and resilience.

"We are delighted to partner with Tasmanian Institute of Agriculture to deliver the eNABLE program," she said.

"Collaboration on this project has allowed us to understand the important role of TIA and to look at the role of research, development and extension."

Ms Skirving said a valuable part of the program was the cross pollination that occured between experienced extension officers, newly appointed extension officers and agricultural leaders, offering extension and adoption as an everyday part of future farm management.

"Participants will build long-term connections by working together in workshops and exploring topics including business management, communication skills and human relations," she said.

eNABLE is a part-time program and will be delivered from April until October 2023.

The study commitments will include one full-day workshop and one two-hour online session each month.

The program is funded by the Australian Government Department of Agriculture, Fisheries and Forestry through the AgUp Program.

Applications are open until March 1.

Farm dogs will be at the show in an effort to break the hay bale jumping record.

Show back after Covid

KING ISLAND AGRICULTURAL, HORTICULTURAL AND PASTORAL SHOW

AFTER last year's cancellation, the 67th annual King Island Agricultural, Horticultural and Pastoral Show returns next month on Tuesday, March 7.

Show society secretary Claire Perry said the small group of dedicated volunteers had been working behind the scenes to get organised for a day full of family fun.

"We hope the island community will join us by supporting our local show tradition by exhibiting or entering our show day competitions.

"The show schedule is available now online at www.king island show.com or printed copies are available at Elders and IGA. There has been a considerable increase in Junior prize money placed throughout sections to encourage and reward participation.

"New exhibitors are always welcome and all the details of how to go about entering are listed in the schedule," Claire said.

Children's entertainment is a high priority and a new act, CJ's Puppet Show, was made possible with funds from Group 6 Metals. There will be a side show alley with games such as hook-a-duck and mini golf being made by King Island locals.

The committee has also been able to purchase two traditional amusement

Continued page 5

Material shortage

Solar farm delay

HIGH demand and material shortages in the global supply chain have pushed back the construction schedule of King Island's new Solar Farm. The $4.5M project, announced late last year for the Huxley Hill Wind Farm site, is intended to increase the amount of renewable energy produced on King Island and replace 300,000 litres of diesel on the island every year. The 1.5MW solar installation will also offset an additional 800 tonnes of CO2 per annum.

Simon van der Aa, Specialist Electrical Engineer at Hydro Tasmania, said the project team had recently learned that a key piece of infrastructure could not be delivered on time.

"Unfortunately, due to material shortages and high demand, the kiosk substation ordered to connect the solar farm to the King Island 11kV network won't likely be delivered until August/September 2023," Mr van der Aa said.

"This will result in site work likely stopping around April/May and then recommencing for a short period around September/October 2023, despite the original goal of finishing this financial year."

Hydro Tasmania is committed to working with stakeholders about the revised construction timeline. The solar project will form part of the existing King Island Renewable Integration Project (KIREIP), a world-leading, hybrid, off-grid power system. It is expected to remain in operation for at least 20 years.

To find out more around the King Island Renewable Energy Integration Project and to see the island's real-time energy demand and contribution download the free app on apple and android (search hydrokireip).

Time out on the g

Planning begins to better

DESPITE predicted bad weather that all week threatened the Festival of King Island, record numbers attended both Friday and Saturday festival days and nights.

Families, younger and older King Islanders sat on the hill overlooking Currie Harbour, or positioned themselves under the numerous marquees protected by giant hay bale walls which were created as wind breaks in case the weather turned foul.

The bar served local Brewhouse beers on tap. The mammoth task of keeping the crowds fed and watered throughout the festival was taken up by the K&K Food truck, Murphy Summers with King Island Fresh, Mandy Potter in the Lions Food Van, Holey Donuts all needing to engage teams to keep the food lines moving quickly and at prices festival goers could afford.

The annual festival pie eating competition, sponsored by King Island Bakehouse was once again Saturday afternoon highlight. Tom Graham was simply too good for the gutsy field. Later, when seen eating a steak sandwich, and having consumed further beverages he said that he has an advantage in that "there's a lot of me to fill."

The kayak race, which was to replace the traditional home-built raft race, was cancelled due to the rough sea conditions.

"If people start building their rafts now, they will consider bigger cash prize incentives for FOKI2024," one sponsor said.

The sun shone, the littlest kids to the biggest danced and played and a great weekend was had by all (even if some will need a week to recover.)

As the hoodies and tshirts said, 'a fokin' good time'.

Christine Lincoln and Rachael Jordon.

The FOKI crew takes time out for a snapshot.

Sarah Ashley in the Green Room.

Show back after Covid break

From page 3

games including a high striker sponsored by TRT Pastoral Group and laughing clowns sponsored by Greenham Tasmania.

The Hoof-to-a-Hook competition for beef producers had a successful re-launch last show after many years of absence.

Ms Perry said Proway Livestock Equipment had sponsored the prize money for this year's competition and a barbecue sponsored by JBS Australia would be held for entrants post show day to review the carcasses and hear the judge's feedback.

"There is also an equivalent carcass competition for fat lambs and show goers can take up the opportunity to bid on some locally grown prime lamb at a public auction on show day," she said.

"Also returning to show day is the whip cracking competition, with both open and junior sections. We encourage members of the community to participate in the event and we look forward to seeing their skills."

Dog jumping for small and large dogs is a crowd favourite and there are cash prizes for both whip cracking and dog jumping both sponsored by Waverly Station.

Since the last show day there have been showground improvements which include an electrical upgrade to allow stall holders more functionality and supported by a grant from the Tasmanian Government's Community, Sports, and Recreation Fund. Funding from TasPorts and the King Island Council enabled the purchase of new trestle tables and chairs for use in the pavilion and for stall holders.

While the show is organised by a small committee, the actual running of show day involves many more people.

"To thank existing show volunteers and encourage new people to join, we are holding a volunteer draw of two return air tickets at the end of show day.

"The tickets have been supplied by Sharp Airlines and King Island Airlines."

"To be included in this volunteer draw the show committee will place names of all who have helped in a designated job for a minimum of two hours."

Contact details for the show committee are listed in the schedule and website or to help, contact Claire directly 0438 017 860 / kishow.secretary@outlook.com.

Performers' high praise fo

Tasm

RIGHT: Headlne act Donna Fisk charmed the country folk.

ABOVE LEFT: Rick Munday Band Jarred Perryman, Sam Woolley, Jess Boyes and guest drummer Ernie Blakeman.

ABOVE RIGHT: The Smokin Elmores.

LEFT: Greta Ziller

From Page 1

night skies and introduced a modern alternative excitement that many would not have heard before. All three have asked if they could be considered for FOKI 2024.

The big voices of Donna Fisk, Andrew Swift and Greta Ziller exuded confidence and showed why they are master and mistresses of their art.

The local bands Rusty Falcon Band and The Rick Munday band enjoyed sharing the stage with seasoned troopers and having the opportunity to showcase their talent in front of a large King Island crowd.

Bi de Way, with relocated islanders, Di de Rooy, Phil Smith, and Launceston musicians Duncan and Oliver were happy to 'be back home.' Di said that coming to play at FOKI reminded them of what they don't have.

The standout for them was the completely family friendly nature of the festival. Donna Fisk also said her highlight and what she will take away from FOKI, is the memory of young children wanting to meet her and being excited.

"The kids. They were so excited by the music. I really appreciate that. It's this experience I'll remember. One might take up music, they will be in audiences, they are the future of music and as a performer, I loved that."

Festival of King Island president Kim George thanked everyone for their support.

"On behalf of the many involved in bringing FOKI 2023 together, thank you very much for everyone's support!

"We really do feel a great level of support for FOKI within the community, tourism, from the commercial operators and sponsors.

"Each FOKI is a year in the making," he said.

"King Island Council operations have been very supportive, and our compliments to the punctual and effective delivery of materials (toilets, signage, rubbish bins, marquees) for our infrastructure build and the rapid turn-around on the Saturday morning and pickup on Monday after our site breakdown and cleanup.

"Everyone from artists to patrons, are being very complimentary about the festival, and the general theme is clearly "best FOKI ever"... so we will lock that one in ... and take up the mayor's challenge of "a hard act to beat" for FOKI 2024.

"As with each year, we have a long list of big improvement points that we intend to implement next year... and we aim to repeat "Best FOKI ever!"

Mayor Marcus Blackie said FOKI was an amazing event and - in his humble opinion - your best lineup of music acts ever.

"Please accept and pass on to all of the team our congratulations on a fantastically successful FOKI for 2023.

"It will be a hard act to beat in the years ahead. Everyone I have spoken to had a ball, all ages were able to enjoy themselves in total safety. You handled the weather challenges very well and the venue continues to be brilliant for such concerts and what a plug for King Island.

As the sun goes down on FOKI 2023, the last site inspection completed, the planning for FOKI 2024 begins.

Reunion for GG, Mayor

AUSTRALIA's Governor-General General David Hurley and Mrs Linda Hurley will visit King Island on May 19.

Last year King Island was declared National Keep Australia Beautiful (KAB) overall winner and the island will be hosting the National Keep Australia Awards.

As Patrons of KAB, the Governor-General of Australia, His Excellency, General David Hurley and Mrs Linda Hurley will visit King Island to attend the Awards.

"Depending on the time we have available we will design a program to show them some of the sights of King Island as well as meet our great people, prior to officiating as Patrons of the Keep Australia Beautiful Awards," Mayor Marcus Blackie said.

"It is a great honour for King Island to host the Governor-General and I know they are very excited to visit us.

"As far as we can ascertain this will be only the third time a Governor-General has visited King Island, the most recent being Quentin Bryce about 10 years ago.

By contrast King Island has only been visited by two prime ministers over the years, Robert Menzies and Julia Gillard.

"The Governor-General and I also have a personal connection. I served as his military personal assistant in Darwin in 1999.

"It turned out to be a huge year for the both of us because East Timor exploded on our doorstep," Cr Blackie said.

The official visit program will be announced closer to the time.

The Governor-General and Mayor serving together in the Army, Darwin 1999.

Stewie prepares on grass

LAST weekend King Island born, Tokyo Olympic finalist in 1500m, current world Number 3, Stewart McSweyn returned to Victoria to avenge his close second in his last Beachside Gift run.

The Gift is one of Australia's preeminent athletic events.

McSweyn started from scratch in the handicapped 3200m race as part of preparation for the World Cross Country Championships in Bathurst on February 18.

McSweyn's preparation – handicapped races on grass – is in contrast with other members of Australia's 28-strong team for the World Cross Country Championships, who have lined up to compete on the road in the Maragume half marathon in Japan.

The William Buck 2 Mile Championship for Men at the Gift was run just inside the boundary line of the AFL ground at Mentone Reserve - an undulating surface that was not fast underfoot.

McSweyn picked up the rest of the field and had a sprint finish with rising distant talent Jude Thomas, and finished four seconds behind the winner. Logan Janetzki who was running off a generous mark of 220m to took second.

McSweyn headlines Australia's 4x2km relay team in Bathurst and Janetzki will take on the world's best junior distance runners at the World Cross Country Championships.

NO ORDINARY ISLAND.
NO ORDINARY CHEESE.

Sweet win for beekeepers

NEW Zealand's long running campaign to trademark and claim ownership of the name "Manuka honey" has hit a brick wall as they withdraw their appeal on earlier rulings in the UK and European union.

It is a major win for Tasmanian and King Island manuka honey producers.

Federal Liberal Member for Braddon, Gavin Pearce said that for five years, the Australian Manuka Honey Association has been battling New Zealand and their attempts to trademark the term "Manuka" as exclusively their own.

"For years, I've been supporting our local manuka honey industry to shut down this ridiculous and greedy legal battle.

"Manuka honey originates from bees that collect the nectar from the Leptospermum genus. Australia is home to 85 of the 87 known Leptospermum species worldwide and we have produced manuka honey since European honeybees were introduced in the 1820s."

"This was simply a greedy attempt by New Zealand to monopolise the term 'Manuka' honey for their own commercial gain.

"Quite rightly, it's failed.

"Thank you to all of Tassie's manuka honey producers for the heavy lifting you've done to shut down this absurd legal claim," Mr Pearce said.

By the 1920s and 30s King Island exported honey to Melbourne markets weekly.

The ability to produce a high grade monofloral manuka honey puts the brand King Island Pure Manuka in a unique and advantageous position.

King Island Pure Manuka owner Rob Skellet with some of the company's hives.

King Island Pure Manuka owner Rob Skellet says the benefit that King Island has over much of the manuka forests in New Zealand, is that there are no floral alternatives available to bees on King Island.

"The manuka is the only floral source available to the bee colonies, and as such they have no choice but to harvest the nectar from the manuka tree when it is in flower from late October through to early January.

"This ensures that King Island manuka honey is a pure monofloral manuka honey, that is not tainted by other floral sources."

The literature says that manuka honey contains methylgloxal, and it is an antibacterial ingredient capable of stimulating collagen, has healing capabilities, and works like an antibiotic and much more.

It is clear from New Zealand's long drawn out battle to trademark and claim ownership of the name "Manuka honey" it is big business.

The market value of this sticky special golden liquid is $500 a kilo. A 230gm jar of New Zeaiand 'rare harvest' honey sells for more than $3,700 a jar at Harrods in London and the demand for manuka honey surged during the pandemic as the world searched for elixirs.

A January 27 report published by Allied Market Research "Manuka Honey Market by Type" said the global manuka honey industry size was valued at $455.4 million in 2021, and is projected to reach $776.4 million by 2031.

Then there is additional value in sprays, syrups, eczema and cosmetic creams, soothers and healers, lozenges – 'with added manuka honey.' Research may yet reveal more applications and usage.

Mr Skellet, graduated in Agricultural Science then entered the finance sector.

In 2012 he established King Island Pure Manuka, in Nugara, with hives and extraction facility.

In January 2020, the first manuka honey was harvested and sent to the University of Sunshine Coast, the preeminent body for honey and nectar testing in Australia.

Drawing on these results, the company is accelerating their business plan.

"It's my intention to develop a vertically integrated Manuka Honey operation," he said.

With four leases covering 10,000ha of wild manuka forest, King Island Pure intends to start small and slowly build into a substantial manuka honey producer."

E-waste collection

I AM collecting e-waste to take off island in my car, for recycling at Officeworks. The types of things I will take are electronic products, computers, and computer related, mobile phones, batteries, and printers that are no longer wanted or working.

I've already collected close to 100 kilos of toxic junk that won't end up in King Island landfill, so let's keep up the good work.

Cut off date is the end of February, so message me on Facebook to arrange collection or you can drop your ewaste at the Currie op-shop (unless it's huge) and I'll do regular pick ups from there.

– TRACEY COLLYER

Works on South Road

THE King Island Council started works on the South Road Widening Project on Monday, February 6.

The council acknowledges and appreciates the concern expressed about the condition of the road by regular users and residents. This project has been impacted by supply difficulties, weather conditions, and staff availability.

Workers will be working on the west (UHT) side of the road at this stage. Using traffic lights and zoning off one side of the road means a single lane can be kept open for the duration of these works.

Our intention is to improve the condition of the road, while progressing towards having the road widening completed.

Otway Exploration Drilling Program

Consultation

ConocoPhillips Australia is planning to undertake exploration activities in offshore permits VIC/P79 and T/49P located in Commonwealth waters.

The proposed exploration program will consist of seabed surveys and the drilling of up to six exploration wells.

This is a continuation of our exploration program in the offshore Otway Basin which aims to identify commercially viable natural gas reserves to help meet Australia's energy needs.

ConocoPhillips Australia has commenced preparation of an Environment Plan (EP) that will seek acceptance from the regulator for this exploration program. As part of EP development we will undertake consultation in line with a prescribed regulatory process.

If you would like more information or think you may be affected by the proposed activities, please use our QR code or contact us using the details below.

Scam alert for online lovers

THE Australian Competition and Consumer Commission (ACCC) Scamwatch is warning people to be vigilant for scams online, in social media and dating apps as Valentine's Day approaches.

They say that scammers are becoming more sophisticated and broadening their targets and methods of scamming.

Scamwatch provides information to consumers and small businesses about how to recognise, avoid and report scams.

Farmers and small businesses in rural and regional areas are urged to be cautious, particularly when buying heavy machinery, following a spike in scams targeting the agricultural sector late last year.

The most common scam targeting farmers involved the sale of tractors and heavy machinery.

"Unfortunately, we have seen a concerning rise in agricultural scams in recent years, as farm businesses increasingly purchase machinery online.

"These scams are causing substantial financial losses and emotional devastation," the ACCC said.

The scammers use legitimate platforms, have fake websites, and offer good online deals.

The ACCC advises to search the business and address and call a nearby business to check they exist, and request live video of the equipment.

It's a red flag if they make excuses or will not accept a personal inspection.

Scamwatch says that losses to scams are likely to be much higher than reported. Their research shows that of all scam victims, only around 13% report to Scamwatch.

With Valentine's Day approaching they warn that romance scammers play on emotional triggers to take advantage of victims.

"They often use 'love bombing' techniques, such as professing love and affection very quickly, to try to influence victims to send money, gifts or financial information."

While King Islanders may think they would not fall victim, there have been on-island cases in recent years where either the police have been advised or others have intervened and stopped large financial transfers.

The ACCC says a variation is romance baiting, where once a connection has been established, the offer is to show the victim how to invest in cryptocurrency or bitcoin.

The romance scam turns into an investment scam.

According to the ACCC, people aged over 55 made up close to half the losses to romance scams.

A red flag is when the scammer makes excuses as to why they cannot use their video function when asked or ask for money (or cryptocurrency) for pay for airfares, gifts, bills, or finance a meetup.

Scammers make use of SMS, Messenger, similar texting apps, phone calls, emails, and letters.

Scamwatch is currently warning of fake social media accounts which impersonate Government organisations.

The mygov scam is doing the rounds again via email and SMS, advising that the recipient is eligible for a rebate.

The modern, well-equipped King Island Childcare and Early Learning Centre.

Centre looks to future

THE King Island Childcare and Early Learning Centre Inc has had to lifts fees to create more childcare positions and to increase staff.

The centre committee has called for donations to support their services and programs.

"The committee is very proud to be continuing the tradition of over 50 years continuous provision of childcare on the island," centre leader Diane Rawlings said.

"As our community has grown so has the requirement to provide more facilities to support families on the island.

"The centre provides an essential service enabling local businesses on the island to encourage working families to come into the community.

"Many families call the centre to check childcare availability before accepting employment on King Island.

"As a committee run organisation, KICC&ELC Inc is a not-for-profit association, which is quite unique nowadays for such facilities.

"The centre is licensed for 65 positions from the ages of 0-12 years under the auspices of the National Childcare Regulations including the guidelines for staff: children ratios.

"Our current level of staffing inhibits our ability to make all these positions available.

"Presently on any given day we can have about 45 children at the centre. We are actively engaged in recruiting new staff to join our team," Ms Rawlings said.

"To support our educational programmes, we are calling for suitable donations to continue our provision of our services.

"Currently, we are funded through childcare fees and support from CCCF Sustainability Fund and Capital Funding.

"We have been recently advised by CCCF that we need to increase our childcare fees to remain financially viable. We have been successful in applying for a wide number of grants to enhance our learning environments and Educational Programmes.

"Our business is run with passion and dedication to support families in our unique community, to ensure the well -being, education, and development of all children - who are our future.

"The saying goes 'It takes a village to raise a child' and we continue to assist all families on King Island.
