9 GLOSSARY AND ABBREVIATIONS

9.1 Glossary

Term	Meaning
(the) Regulator	The Government Agency (State or Commonwealth) that is the decision maker for approvals and performs ongoing regulation of the approval once granted
4D seismic data	A set of numerous closely-spaced seismic lines that provide a high spatially sampled measure of subsurface reflectivity and 4D image
Acceptability	The EP must demonstrate that the environmental impacts and risks of an activity will be of an acceptable level as per Regulation 10A(c).
ALARP	A legal term in Australian safety legislation, it is taken here to mean that all contributory elements and stakeholdings have been considered by assessment of costs and benefits, and which identifies a preferred course of action
Ballast	Extra weight taken on to increase a ship's stability to prevent rolling and pitching. Most ships use seawater as ballast. Empty tank space is filled with inert (non-combustible) gas to prevent the possibility of fire or explosion.
Bathymetry	Related to water depth, a bathymetry map shows the depth of water at a given location on the map.
Benthos/Benthic	Relating to the seabed and includes organisms living in or on sediments/rocks on the seabed
Biodiversity	Relates to the level of biological diversity of the environment. The EPBC Act defines biodiversity as "the variability among living organisms from all sources (including terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are part) and includes: (a) diversity within species and between species; and (b) diversity of ecosystems".
Biota	The animal and plant life of a particular region, habitat or geological period
Cetacean	Whale and dolphin species
Consequence	The worstcase credible outcome associated with the selected event, assuming some controls (prevention and mitigation) have failed. Where more than one impact applies (e.g. environmental and legal/compliance), the consequence level for the highest severity impact is selected.
Coral	Anthozoa that are characterised by stonelike, horny or leathery skeletons (external or internal). The skeletons of these animals are also called coral.
Coral Reef	A wave-resistant structure resulting from skeletal deposition and cementation of hermatypic corals, calcareous algae, and other calcium carbonate-secreting organisms
Crustacean	A large and variable group of mostly aquatic invertebrates that have a hard external skeleton (shell), segmented bodies, with a pair of often very modified appendages on each segment, and two pairs of antennae (e.g. crabs, crayfish, shrimps, wood lice, water fleas and barnacles)
Cyclone	A rapidly-rotating storm system characterised by a low-pressure centre, strong winds, and a spiral arrangement of thunderstorms that produce heavy rain
dB	Decibel, a measure of the overall noise level of sound across the audible spectrum with a frequency weighting (that is, 'A' weighting) to compensate for the varying sensitivity of the human ear to sound at different frequencies
dB re 1 μPa^2	Measure of underwater noise, in terms of sound pressure. Because the dB is a relative measure rather than an absolute measure, it must be referenced to a standard 'reference intensity', in this case 1 micro Pascal (1 mPa), which is the standard reference that is used. The dB is also measured over a specified frequency, which is usually either a one Hertz bandwidth (expressed as dB re 1 mPa ² /Hz), or over a broadband that has not been filtered. Where a frequency is not specified, it can be assumed that the measurement is a broadband measurement.
dB re 1 $\mu\text{Pa}^2\cdot\text{s}$	Normal unit for sound exposure level

Term	Meaning
Demersal	Living close to the floor of the sea (typically of fish)
Dynamic positioning	In reference to a marine vessel that uses satellite navigation and radio transponders in conjunction with thrusters to maintain its position
Echinoderms	Any of numerous radially symmetrical marine invertebrates of the phylum Echinodermata, which includes the starfishes, sea urchins and sea cucumbers, that have an internal calcareous skeleton and are often covered with spines
Endemic	A species that is native to or confined to a certain region
Environment	The surroundings in which an organisation operates, including air, water, land, natural resources, flora, fauna, humans and their interrelations (Source: ISO 14001)
Environment Regulations	OPGGS (Environment) Regulation 2023
Environmental approval	The action of approving something, which has the potential to have an adverse impact on the environment. Environmental impact assessment is generally required before environmental approval is granted.
Environmental impact	Any change to the environment, whether adverse or beneficial, wholly or partially resulting from an organisation's activities, products or services (Source: HB 203:2006).
Environmental impact assessment	An orderly and systematic process for evaluating a proposal or scheme (including its alternatives), and its effects on the environment, and mitigation and management of those effects (Source: Western Australian <i>Environmental Impact Assessment Administrative Procedures 2010</i>)
EP	Prepared in accordance with the <i>OPGGS (Environment) Regulations 2023</i> , which must be assessed and accepted by the Designated Authority (NOPSEMA) before any petroleum-related activity can be performed
EPBC Act	<i>Environment Protection and Biodiversity Conservation Act 1999</i> . Commonwealth legislation designed to promote the conservation of biodiversity and protection of the environment.
Epifauna	Benthic animals that live on the surface of a substrate
Fauna	Collectively, the animal life of a particular region
Flora	Collectively, the plant life of a particular region
Infauna	Aquatic animals that live in the substrate of a body of water, especially in a soft sea bottom
ISO 14001	ISO 14001 is an international standard that specifies a process (called an EMS) for controlling and improving a company's environmental performance. An EMS provides a framework for managing environmental responsibilities so they become more efficient and more integrated into overall business operations.
Likelihood	The description that best fits the chance of the selected consequence actually occurring, assuming reasonable effectiveness of the prevention and mitigation controls
MARPOL (73/78)	The International Convention for the Prevention of Pollution from Ships 1973, as modified by the Protocol of 1978. MARPOL 73/78 is one of the most important international marine environmental conventions. It was designed to minimise pollution of the seas, including dumping, oil and exhaust pollution. Its stated objective is to preserve the marine environment through the complete elimination of pollution by oil and other harmful substances and the minimisation of accidental discharge of such substances.
Meteorology	The study of the physics, chemistry and dynamics of the earth's atmosphere, including the related effects at the air–earth boundary over both land and the oceans
Mitigation	Management measures that minimise and manage undesirable consequences
pH	Measure of the acidity or basicity of an aqueous solution
Protected Species	Threatened, vulnerable or endangered species that are protected from extinction by preventive measures. Often governed by special Federal or State laws.

Term	Meaning
Putrescible	Refers to food scraps and other organic waste associated with food preparation that will be subject to decay and rot (putrefaction)
Risk	The combination of the consequences of an event and its associated likelihood. For guidance, see Environmental Guidance on Application of Risk Management Procedure.
Sessile	Organism that is fixed in one place; immobile
Stereo-BRUVS	Stereo-baited remote underwater video systems
Teleost	A fish belonging to the Teleostei or Teleostomi, a large group of fishes with bony skeletons, including most common fishes. The teleosts are distinct from the cartilaginous fishes such as sharks, rays, and skates.
Zooplankton	Plankton consisting of small animals and the immature stages of larger animals

9.2 Abbreviations

Abbreviation	Meaning
µm	Micrometre
350A	350 Australia
ABF	Australian Border Force
AFC	Antifouling Coating
AFMA	Australian Fisheries Management Authority
AHO	Australian Hydrographic Office
AHT	Anchor Handling Tugs
AIDR	Australian Institute for Disaster Resilience
AIIMS	Australasian Inter-service Incident Management System
AIMS	Australian Institute of Marine Science
AIS	Automatic Identification System
ALAN	Artificial Night At Night
ALARP	As Low As Reasonably Practicable
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
ANZECC	Australian and New Zealand Environment and Conservation Council
AEP	Australian Energy Producers
ARMCANZ	Agriculture and Resource Management Council of Australia and New Zealand
ASAP	As soon as practicable
ASV	Accommodation support vessel
ATSB	Australian Transport Safety Bureau
AusSAR	Australian Search and Rescue
AUV	Autonomous Underwater Vehicle
AWR	Air Weapons Range
BESS	Battery Energy Storage System
BIA	Biologically Important Area
BMSL	Below mean sea level

Abbreviation	Meaning
BOM	Bureau of Meteorology
BOP	Blowout Preventer
BSG	Black Start Generator
BTAC	Buurabalayii Thalanyii Aboriginal Corporation
BTEX	Benzene, Tolulene
CAES	Catch and Effort System
CCP	Cyclone Contingency Plan
CCWA	Conservation Council of Western Australia
CEFAS	Centre for Environment, Fisheries and Aquaculture Science
CFA	Commonwealth Fisheries Association
CH ₄	Methane
CHMP	Cultural Heritage Management Plan
CHP	Commonwealth Heritage Properties
CIMT	Corporate Incident Management Team
CMID	Common Marine Inspection Document
CMMS	Computerised Maintenance Management System
CMP	Conservation Management Plan
CMT	Crisis Management Team
CO	Carbon Monoxide
CO ₂	Carbon Dioxide
CO ₂ -e	Carbon Dioxide Equivalent
CoA	Commonwealth of Australia
CoP	Cessation of Production
CS	Cost/Sacrifice
CSIRO	Commonwealth Scientific and Industrial Research Organisation
Cth	Commonwealth
CVS	Contractor Verification Service
D&C	Drilling and Completions
DAA	Department of Aboriginal Affairs
DAFF	Department of Agriculture, Fisheries and Forestry
dB	Decibel
DBCA	Department of Biodiversity, Conservation and Attractions
DCCEEW	Department of Climate Change, Energy, the Environment and Water
DEA	Doctors for the Environment Australia
DEWHA	Department of Environment, Water, Heritage and the Arts
DGVs	Default guideline values
DISER	Department of Industry, Science, Energy and Resources
DLV	Derrick lay vessel
DMIRS	Department of Mines, Industry Regulation and Safety

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Abbreviation	Meaning
DMP	Department of Mines and Petroleum
DNP	Director of National Parks
DoD	Department of Defence
DoT	Department of Transport
DP	Dynamically Positioned
DPIRD	Department of Primary Industries and Regional Development
EDG	Emergency Diesel Generator
EDU	Electrical Distribution Unit
EET	Emission Estimation Techniques
EFL	Electrical Flying Lead
EGC	Export Gas Compressors
EMBA	Environment that May Be Affected
EMS	Environmental Management System
ENVID	Environmental hazard Identification
EP	Environment Plan
EPA	Environmental Protection Authority
EPO	Environmental Performance Outcome
EPS	Environmental Performance Standard
ER95%	95 th Percentile Exposure Range
ERM	Environmental Resource Management
ERP	Emergency Response Plans
ERT	Emergency Response Team
ESD	Ecological Sustainable Development
EVP	Executive Vice President
F	Control Feasibility
FARA	Friends of Australian Rock Art
FCG	Flooded, cleaned and gauged
FEED	Front End Engineering and Design
FFS	Fitness for Service
FLETS	Flowline end terminations
FLIP	Flowline Induced Pulsation
FLNG	Floating Liquefied Natural Gas units
FPSO	Floating Production Storage Offload
FPU	Floating Production Unit
FRC	Fast Rescue Craft
FWP	Firewater Pump
g/m ²	Grams per square metre

Environment and Biodiversity Policy.docx

OBJECTIVE

Woodside recognises the intrinsic value of nature and the importance of conserving biodiversity and ecosystem services to support the sustainable development of our society. We are committed to doing our part. We understand and embrace our responsibility to undertake activities in an environmentally sustainable way.

PRINCIPLES

Woodside commits to:

- Implementing a systematic approach to the management of the impacts and risks of our operating activities on an ongoing basis, including emissions and air quality, discharge and waste management, water management, biodiversity and protected areas.
- Applying the mitigation hierarchy principle (avoid, minimise, restore) and a continuous improvement approach to ensure we maintain compliance, improve resource use efficiency and reduce our environmental impacts.
- Embedding environmental and biodiversity management, and opportunities, in our business planning and decision making processes.
- Complying with relevant laws and regulations and applying responsible standards where laws do not exist.
- Not undertaking new exploration or development of hydrocarbons within the boundaries of natural sites on the UNESCO World Heritage List (as specified at 1 December 2022). Existing activity may continue if compatible with maintenance of the listed outstanding universal values.
- Not undertaking new exploration or development of hydrocarbons within IUCN Protected Areas (as specified at 1 December 2022) unless compatible with management plans in place for the area. Existing activity may continue if compatible with management plans in place for the area.
- Achieving net zero deforestation¹ associated with new projects that take a Final Investment Decision (FID) after 1 December 2022.
- Developing Biodiversity Action Plans for all new major projects (CAPEX >USD\$2 billion) that take a FID after 1 December 2022.
- Supporting positive biodiversity outcomes in regions and areas in which we operate.
- Setting targets and publicly reporting on our environmental and biodiversity performance.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2023.

¹ Definition of Forest: 'trees higher than 5 metres and a canopy cover of more than 10 percent on the land to be cleared'.

APPENDIX B: RELEVANT REQUIREMENTS

The table below refers to Commonwealth Legislation related to the activity.

Commonwealth Legislation	Legislation Summary
<ul style="list-style-type: none"> • Air Navigation Act 1920 • Air Navigation Regulations 1947 • Air Navigation (Aerodrome Flight Corridors) Regulations 1994 • Air Navigation (Aircraft Engine Emissions) Regulations 1995 • Air Navigation (Aircraft Noise) Regulations 1984 • Air Navigation (Fuel Spillage) Regulations 1999 	<p>This Act relates to the management of air navigation.</p>
<ul style="list-style-type: none"> • Australian Maritime Safety Authority Act 1990 	<p>This Act establishes a legal framework for the Australian Maritime Safety Authority (AMSA), which represents the Australian Government and international forums in the development, implementation and enforcement of international standards including those governing ship safety and marine environment protection. AMSA is responsible for administering the Marine Orders in Commonwealth waters.</p>
<ul style="list-style-type: none"> • Australian Radiation Protection and Nuclear Safety Act 1998 	<p>This Act relates to the protection of the health and safety of people, and the protection of the environment from the harmful effects of radiation.</p>
<ul style="list-style-type: none"> • Biosecurity Act 2015 • Quarantine Regulations 2000 • Biosecurity Regulation 2016 • Australian Ballast Water Management Requirements 2017 • Biosecurity Amendment (Biofouling Management) Regulations 2021 	<p>This Act provides the Commonwealth with powers to take measures of quarantine, and implement related programs as are necessary, to prevent the introduction of any plant, animal, organism or matter that could contain anything that could threaten Australia's native flora and fauna or natural environment. The Commonwealth's powers include powers of entry, seizure, detention and disposal.</p> <p>This Act includes mandatory controls on the use of seawater as ballast in ships and the declaration of sea vessels voyaging out of and into Commonwealth waters. The Regulations stipulate that all information regarding the voyage of the vessel and the ballast water is declared correctly to the quarantine officers.</p> <p>The Biofouling Management Regulations requires ships to report information about biofouling management and the voyage history of the ship in the past 12 months through a pre-arrival report.</p>
<ul style="list-style-type: none"> • Environment Protection and Biodiversity Conservation Act 1999 • Environment Protection and Biodiversity Conservation Regulations 2000 	<p>This Act protects matters of national environmental significance (NES). It streamlines the national environmental assessment and approvals process, protects Australian biodiversity and integrates management of important natural and culturally significant places.</p> <p>Under this Act, actions that may be likely to have a significant impact on matters of NES must be referred to the Commonwealth Environment Minister.</p>
<ul style="list-style-type: none"> • Environment Protection (Sea Dumping) Act 1981 • Environment Protection (Sea Dumping) Regulations 1983 	<p>This Act provides for the protection of the environment by regulating dumping matter into the sea, incineration of waste at sea and placement of artificial reefs.</p>
<ul style="list-style-type: none"> • Industrial Chemicals (Notification and Assessment Act) 1989 • Industrial Chemicals (Notification and Assessment) Regulations 1990 	<p>This Act creates a national register of industrial chemicals. The Act also provides for restrictions on the use of certain chemicals which could have harmful effects on the environment or health.</p>

Commonwealth Legislation	Legislation Summary
	<i>Waste Reduction (Mandatory Product Stewardship – Mercury added Products) Rules 2021).</i>
<ul style="list-style-type: none"> • Protection of the Sea (Prevention of Pollution from Ships) Act 1983 • Protection of the Sea (Prevention of Pollution from Ships) (Orders) Regulations 1994 • Marine order 91 - Marine pollution prevention—oil • Marine order 93 - Marine pollution prevention—noxious liquid substances • Marine order 94 - Marine pollution prevention—packaged harmful substances • Marine order 95 - Marine pollution prevention—garbage • Marine order 96 - Marine pollution prevention—sewage • Maritime Legislation Amendment (Prevention of Air Pollution from Ships) Act 2007 • MARPOL Convention 	<p>This Act relates to the protection of the sea from pollution by oil and other harmful substances discharged from ships. Under this Act, discharge of oil or other harmful substances from ships into the sea is an offence. There is also a requirement to keep records of the ships dealing with such substances.</p> <p>The Act applies to all Australian ships, regardless of their location. It applies to foreign ships operating between 3 nautical miles (nm) off the coast out to the end of the Australian Exclusive Economic Zone (200 nm). It also applies within the 3 nm of the coast where the State/Northern Territory does not have complementary legislation.</p> <p>All the Marine Orders listed, except for Marine Order 95, are enacted under both the <i>Navigation Act 2012</i> and the <i>Protection of the Sea (Prevention of Pollution from Ships) Act 1983</i>.</p> <p>This Act is an amendment to the <i>Protection of the Sea (Prevention of Pollution from Ships) Act 1983</i>. This amended Act provides the protection of the sea from pollution by oil and other harmful substances discharged from ships.</p>
<ul style="list-style-type: none"> • Protection of the Sea (Harmful Antifouling Systems) Act 2006 • Marine order 98—(Marine pollution—anti-fouling systems) 	<p>This Act relates to the protection of the sea from the effects of harmful anti-fouling systems. It prohibits the application or reapplication of harmful anti-fouling compounds on Australian ships or foreign ships that are in an Australian shipping facility.</p>
<ul style="list-style-type: none"> • <i>Aboriginal and Torres Strait Islander Heritage Protection Act 1984</i> 	<p>This Act seeks “to preserve and protect places, areas and objects of particular significance” to Aboriginal people. Under the Section 9 and 10 provisions of the Act, the Minister for the Environment may declare significant Aboriginal areas temporarily or permanently protected if they are considered under threat. Similar declarations regarding Aboriginal objects can be made under Section 12.</p> <p>Under Section 22 of the Act, the contravention of any of these declarations is an offence. Additionally, the discovery of any Aboriginal remains must be reported to the Minister under Section 20.</p> <p>Damage or interference with Aboriginal objects or places is not an offence under the ATSIHO Act except within Victoria under Section 21U.</p>
<ul style="list-style-type: none"> • Underwater Cultural Heritage Act 2018 • Underwater Cultural Heritage Guidance for Offshore Developments • DRAFT Guidelines to Protect Underwater Cultural Heritage 	<p>The Act prescribes penalties for damage to protected Underwater Cultural Heritage without a permit under Section 30 or in contravention of a permit under Section 28. Protected Underwater Cultural Heritage is prescribed in Section 16 to automatically include the remains and associated artefacts of any vessel or aircraft that has been in Australian waters for 75 years, whether known or unknown. This protection is also extended to Underwater Cultural Heritage in Commonwealth waters specified by the Environment Minister under Section 17. Without a declaration under this section, Aboriginal Underwater Cultural Heritage is not protected under the UCH Act.</p>

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 01-May-2024

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar)	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	26
Listed Migratory Species:	42

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	74
Whales and Other Cetaceans:	29
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	1
Habitat Critical to the Survival of Marine Turtles:	3

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	56
Key Ecological Features (Marine):	3
Biologically Important Areas:	11

Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area

[\[Resource Information \]](#)

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Key Ecological Features [[Resource Information](#)]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west

Biologically Important Areas [[Resource Information](#)]

Scientific Name	Behaviour	Presence
Marine Turtles		
Caretta caretta		
Loggerhead Turtle [1763]	Internesting buffer	Known to occur
Chelonia mydas		
Green Turtle [1765]	Internesting buffer	Known to occur
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur
Seabirds		
Ardena pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus breviceuda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus breviceuda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 04-Apr-2024

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	1
National Heritage Places:	2
Wetlands of International Importance (Ramsar)	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	52
Listed Migratory Species:	61

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <https://www.dcceew.gov.au/parks-heritage/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	1
Listed Marine Species:	102
Whales and Other Cetaceans:	32
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	8
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

Listed Migratory Species [\[Resource Information \]](#)

Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons Little Tern [82849]		Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat likely to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahalensis as Sousa chinensis Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Migratory Terrestrial Species		
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area

Listed Marine Species			[Resource Information]
Scientific Name	Threatened Category	Presence Text	
Bird			

Scientific Name	Threatened Category	Presence Text
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica as Puffinus pacificus Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Bubulcus ibis as Ardea ibis Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat likely to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding known to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat known to occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding known to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons as Sterna albifrons Little Tern [82849]		Species or species habitat may occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black- browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalasseus bengalensis as Sterna bengalensis Lesser Crested Tern [66546]		Breeding known to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area

Fish

Scientific Name	Threatened Category	Presence Text
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribbioned Pipehorse, Ribbioned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Breeding known to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platura as Pelamis platurus Yellow-bellied Sea Snake [93746]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area

Whales and Other Cetaceans [[Resource Information](#)]

Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Current Scientific Name	Status	Type of Presence
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Indopacetus pacificus Longman's Beaked Whale [72]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense- beaked Whale [74]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat likely to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahalensis Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks [[Resource Information](#)]

Park Name	Zone & IUCN Categories
Dampier	Habitat Protection Zone (IUCN IV)
Gascoyne	Habitat Protection Zone (IUCN IV)
Dampier	Multiple Use Zone (IUCN VI)
Gascoyne	Multiple Use Zone (IUCN VI)
Montebello	Multiple Use Zone (IUCN VI)
Dampier	National Park Zone (IUCN II)
Gascoyne	National Park Zone (IUCN II)

Key Ecological Features

[\[Resource Information \]](#)

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west

Name	Region
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west

Biologically Important Areas [\[Resource Information \]](#)

Scientific Name	Behaviour	Presence
-----------------	-----------	----------

Dugong

[Dugong dugon](#)

Dugong [28]	Breeding	Known to occur
-------------	----------	----------------

[Dugong dugon](#)

Dugong [28]	Calving	Known to occur
-------------	---------	----------------

[Dugong dugon](#)

Dugong [28]	Foraging (high density seagrass beds)	Known to occur

Natator depressus Flatback Turtle [59257]	Migration corridor	Known to occur
Natator depressus Flatback Turtle [59257]	Nesting	Known to occur
Seabirds		
Ardena pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Thalasseus bengalensis Lesser Crested Tern [66546]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Rhincodon typus Whale Shark [66680]	Foraging (high density prey)	Known to occur
Whales		
Balaenoptera musculus brevipinna Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevipinna Pygmy Blue Whale [81317]	Foraging	Known to occur
Balaenoptera musculus brevipinna Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

List of Aboriginal Cultural Heritage (ACH) Register

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** Represents the actual location of the ACH as understood by the Department.
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via <https://achknowledge.dplh.wa.gov.au/ach-enquiry-form>.
- **Culturally Sensitive Nature:**
 - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
 - **Men only:** Only *males* can view restricted information.
 - **Women only:** Only *females* can view restricted information.

Status:

- **Register:** Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972*.
- **Historic:** Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.

Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

CONSULTATION APPROACH

For the Scarborough Offshore Facility and Trunkline Operations Environment Plan (referred to as either the Operations EP or this EP), Woodside has taken a broad and proactive tiered consultation approach over an extended period of at least four and a half months.

The consultation approach was advertised widely to raise public awareness of the consultation opportunity and enable self-identification. It included two social media campaigns and advertising in national, state, regional and Indigenous newspapers. Consultation was also extended at the request of some relevant and non-relevant persons.

Consultation on the Operations EP considers, assesses and proactively responds to historical feedback received from stakeholders on the Scarborough Project Offshore Project Proposal (Scarborough OPP) and prior Scarborough Energy Project Environment Plans (EPs), as that feedback relates to Scarborough operations.

The tiered consultation approach discharges regulation 25 of the Environment Regulations' requirements. The approach is proactive, extended, has enabled self-identification, and has raised broad awareness of Woodside's activities related to the Operations EP and Scarborough Energy Project.

Consultation Tiered Approach

Regulation 25	Woodside's consultation approach assessed and identified relevant persons, enabled two-way dialogue and engagement, and included email and phone call follow up. The approach taken comfortably satisfies the requirements of regulation 25: to give relevant persons sufficient information and allow a reasonable period of time for consultation (see Section 5).
Proactive	To raise awareness of the consultation process, and to enable grass-roots consultation, Woodside undertook advertised regional consultation roadshows and facilitated consultation at regional community events. Woodside also reviewed, assessed and proactively wrote to numerous relevant and non-relevant persons based on their historical feedback to the Scarborough OPP, and/or four previous Scarborough Energy Project EPs.
Extended	A reasonable consultation period (four and a half months) was provided to enable an informed assessment of possible consequences on functions, interests or activities and associated supportive communication activities. The consultation timeframe was also extended at the request of some relevant and non-relevant persons.
Self-Identification	Broad communication activities were undertaken to build awareness of consultation and enable self-identification, supported by targeted education materials.
Broad Understanding	Broad proactive communication activities were undertaken with the public to raise awareness of Woodside's activities related to the Operations EP and the Scarborough Energy Project.

Building on the Existing Consultation Approach

For the Operations EP, Woodside has built on its consultation methodology and undertaken additional consultation activities throughout the extended consultation period to ensure a reasonable period of time and sufficient information has been provided to relevant persons so that they can make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The approach for the Operations EP has included:

- An extended consultation period of at least four and a half months
- Undertaking proactive consultation activities to provide sufficient information to relevant persons
- Raising awareness of the consultation process and opportunity to provide feedback
- Driving participation in the consultation process.

An overview of this approach is shown below:

Figure: Scarborough Energy Project Consultation Activity

Historical Consultation

Woodside recognises that consultation for the Operations EP, separate from historical consultation and engagement, is required under regulation 25 of the Environment Regulations. However, the historical consultation and engagement provides important background in the context of the information available to relevant persons, awareness of the Scarborough Energy Project, and length of time that engagement has occurred.

Relevant persons have been engaged in discourse about the Scarborough Energy Project and have had access to the Scarborough OPP from February 2020 (Record of Consultation, reference 2) up to and including the end date of Woodside’s broad consultation approach for this EP, and thereafter pursuant to Woodside’s program of ongoing engagement (see Section 5.7).

Initial consultation for the Scarborough OPP commenced in February 2018 with interested and affected stakeholders as part of a planned, integrated and consistent approach to stakeholder engagement for Woodside’s proposed activities.

Consultation on the Scarborough Energy Project also took place during the development of three Scarborough EPs¹ between July 2021 and October 2023. Consultation was also

¹ Scarborough Seabed Intervention and Trunkline Installation, Scarborough Drilling and Completions, and WA-61-L and WA-62-L Subsea Infrastructure Installation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

undertaken regarding the Scarborough 4D Baseline Marine Seismic EP between May 2021 and October 2023.

Additional information (full draft EPs) for the three Scarborough EPs² was available on NOPSEMA’s website between November 2021 and January 2022, then after further consultation following the Prakalpa decision, available in early-December 2023. The Scarborough 4D Baseline Marine Seismic EP was made publicly available from October 2021.

A timeline of historical consultation is shown below:

Figure: Scarborough Energy Project Consultation Timeline

Scarborough Offshore Project Proposal (OPP) and Climate Impacts

The Scarborough OPP has been publicly available on the Woodside website since 2020. Consultation on the OPP at that time included consultation with a number of eNGOs.

As part of consultation for this EP, Woodside referred relevant persons to the OPP which amongst other things provides information on routine GHG emissions associated with the project lifecycle, inclusive of this PAP. Relevant content in the OPP which is relevant to this EP includes:

- Description of emission sources, including direct offshore emissions and indirect emissions associated with onshore processing and third party consumption
- Estimates of GHG emissions on an annual and life of project basis, with description of underpinning assumptions and estimation methodology
- Consideration of the role gas from the Scarborough project can play in the global energy system, energy mixes and climate related scenarios
- Management and mitigation measures for direct and indirect GHG emissions
- Assessment of the potential impacts of climate change, considering Australian and global receptors

In addition to running a broader Scarborough Energy Project information campaign in 2023, Woodside referred relevant persons to the Woodside website which includes a dedicated page on the Scarborough Energy Project. This page includes a section on managing impacts including:

- Scarborough’s role in the energy transition

² See footnote 1 above.

- Managing emissions at Scarborough
- Environmental management
- Cultural heritage management.

Direct references are provided on the website to relevant sections of the OPP and links to reports such as the Pluto LNG Facility Greenhouse Gas Abatement Program.

Throughout historic consultation on the Scarborough Energy Project, and consultation specific to this EP, GHG emissions and broader climate related information relating to the Scarborough Energy Project has been made publicly available.

Traditional Custodian Consultation Approach

Woodside has meaningful long-term relationships with relevant Traditional Owners specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement.

To this end, consultation on any particular EP, including the Operations EP, happens before, during and after the designated consultation period in a more holistic manner allowing for an understanding of the bigger picture and accommodating cultural requirements. Ongoing consultation remains an important part of consulting with Traditional Custodians based on availability, cultural protocols and the preferred method of consultation for each relevant person. In the case of the Scarborough Energy Project, Woodside has been talking to Traditional Owners about the project including the whole project proposal OPP and specific activities under the four previous Scarborough EPs.³

For the past 12 months, where requested, Woodside has been working with nominated representative bodies to develop Consultation Agreements which aim to enable each group to be consulted in a manner requested by the group.

eNGO Consultation Approach

Woodside has an established history of consulting with environmental non-government organisations (eNGOs) as part of its EP consultation. In its methodology (Section 5.3.4, Table 5-2), eNGOs are considered “Other non-government groups or organisations” and “Research institutes and local conservation groups or organisations”. Relevant person identification for these categories is based on registered non-government groups or organisations with current targeted public website material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation.

As part of Woodside’s methodology, Woodside consults with Greenpeace Australia Pacific (GAP), Australian Conservation Foundation (ACF) and Conservation Council of WA (CCWA). In addition to these eNGOs, Woodside consults with various other eNGOs depending on the type of proposed activity or requests to be consulted.

Given the nature and scale of the Operations EP’s planned activity, and extensive current and past public interest, including from a number of eNGOs, Woodside has consulted widely and extended the consultation timeframe. In addition, Woodside has proactively considered historical consultation and feedback from eNGOs so that past issues which may be relevant to this EP have been addressed.

³ These being the three Scarborough EPs (as detailed in footnote 1 above), together with the Scarborough 4D Baseline Marine Seismic EP.

This proactive approach enabled authentic two-way consultation based on the National Offshore Petroleum Safety and Environment Management Authority (NOPSEMA) brochure *Consultation on offshore petroleum environment plans: Information for the community*, which encourages relevant persons to engage with titleholders as early as possible. The booklet states, “*What constitutes sufficient information and a reasonable period of time depends on several factors including the nature of your functions, interests and activities. You should communicate as early as possible in consultation with titleholders about what information and how much time you may need so that they can consider, respond and address these in their planning*”. Woodside’s initial consultation correspondence to all eNGOs included a link to this brochure.

So that eNGOs were given sufficient information and a reasonable period of time to consult, Woodside undertook a series of proactive and extended consultation methods for these relevant persons:

- Consultation was extended to four and a half months and correspondence continued to be exchanged up to submission of the Operations EP
- Extensive advertising of the consultation period (social and traditional media)
- Advanced notice of when consultation was closing for the preparation of the EP
- Advising eNGOs they had been given sufficient information and a reasonable period of time for consultation in preparation of the EP.

In addition to the Consultation Information Sheet, Woodside also made the following available to eNGOs:

- Proactive direct correspondence addressing historical claims and objections, as well as timely responses to ongoing correspondence including new and repeated claims and objectives
- Offers of face-to-face briefings (none of which were taken up by eNGOs)
- An extensive roadshow to communities in the Pilbara, Gascoyne and Murchison which could be attended by any eNGOs including local groups (if eNGOs attended these sessions, they did not identify themselves)
- Provided links to the Scarborough OPP which provided a description of the whole project including risks and controls
- Provided links to the other relevant EPs,⁴ and in particular the Scarborough Seabed Intervention and Trunkline Installation EP, for which the activity is the installation of the trunkline (the activity under the Operations EP includes the operation of the trunkline).

eNGO Response

For the Operations EP, Woodside identified nine eNGOs as relevant and a further seven as not relevant (but which Woodside nevertheless chose to contact). Of those assessed as not relevant, one engaged in a meaningful manner, but was still assessed as being not relevant as issues raised did not sufficiently demonstrate their functions, interests or activities would be impacted by operations. Woodside witnessed a general pattern in eNGO responses to the consultation process and information provided:

- No response or a delay in responses beyond consultation dates. These delayed responses followed an initial four-week consultation period, extended to a four and a half month consultation period, and generally assert, without foundation, that Woodside has not met

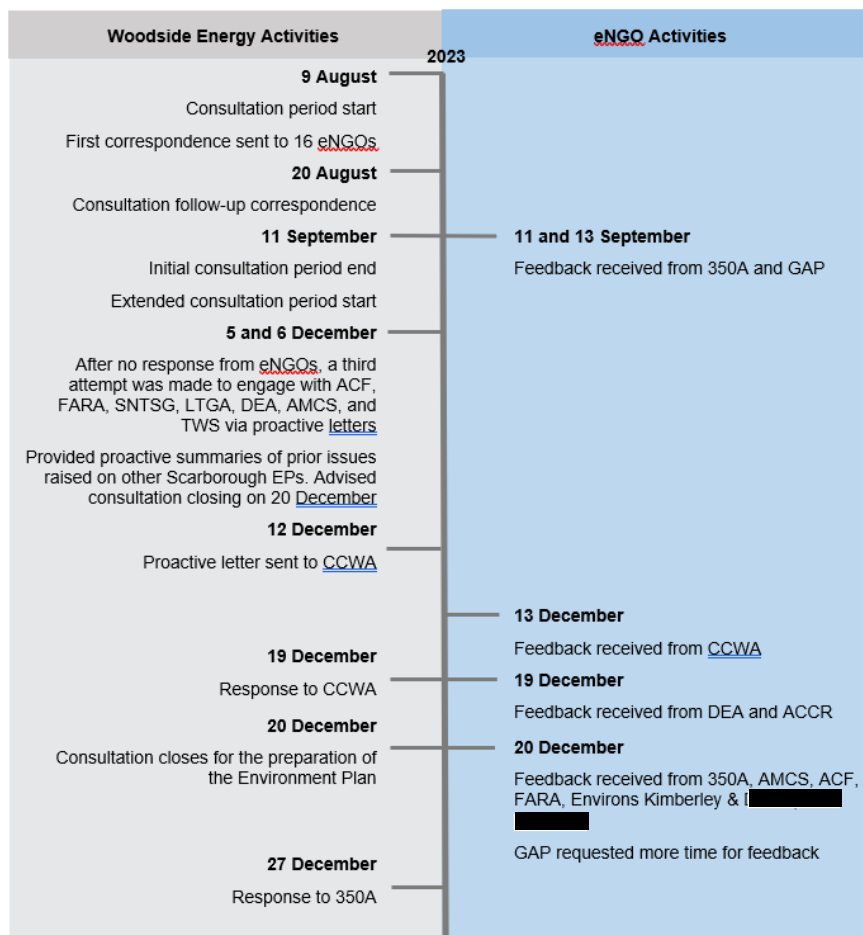

⁴ See footnote 3 on page 5.

regulatory requirements as it has not provided sufficient information or a reasonable period of time for consultation. The exception to this was Conservation Council of WA who provided responses within the initial consultation period.

- Ongoing correspondence continued to be sent to Woodside or NOPSEMA, irrespective of consultation deadlines and the fact information had already been provided which addressed claims, feedback or objections.
- Once the extended consultation period had passed, Woodside continued to receive correspondence related to this EP from eNGOs via feedback on other EPs, specifically the Pluto Facility Operations EP and the Scarborough Trunkline Operations (State Waters) EP.

In addition, of the 16 eNGOs consulted, nine have publicly stated via the media, social media, websites or their submission to the Federal Government’s Future Gas Strategy that their functions, interests or activities included efforts to stop or phase out all fossil fuel use and development in Australia and specifically to block any new gas field development. Further information on the eNGO consultation approach and response is in the Proactive Consultation section of Consultation Activities.

Given the historical consultation that has occurred, consultation that has occurred for this EP, and that several eNGOs have a fundamental objection to the Australian gas industry, Woodside confirms it has made genuine and extensive efforts to consult and eNGOs have not taken the opportunity to consult in a meaningful way. In circumstances where eNGOs who are relevant persons have been provided with sufficient information and a reasonable period to consult, regulation 25 of the Environment Regulations has been discharged.

RELEVANCY ASSESSMENT

Assessment of Relevant Persons for the Proposed Activity

The result of Woodside's assessment of relevant persons in accordance with Regulation 25 of the Environment Regulations is outlined at Table 1 and Table 2.

Persons or organisations that Woodside assessed as not relevant but nonetheless chose to contact at its discretion or self-identified and Woodside assessed as not relevant in accordance with Section 5.3.4 are summarised below at Table 1 and Table 3.

Environment That May Be Affected (EMBA)

The Environment that May Be Affected (EMBA) is the largest spatial extent where unplanned events could have an environmental consequence on the surrounding environment. For this EP, the EMBA is the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the event of the worst-case credible spill. The ecological impact thresholds used to delineate the EMBA are defined in Section 6.8.1.2. The EMBA also includes any areas that are predicted to experience shoreline contact with hydrocarbons above threshold concentrations. The worst-case credible spill scenarios for this EP are highly unlikely loss of marine diesel during a vessel collision:

- At the FPU location
- From a vessel conducting activities along the trunkline in the Montebello Multi Use Zone
- From a vessel conducting activities along the trunkline at the boundary between State and Commonwealth waters.

Results from each of these scenarios were overlaid to create a combined EMBA.

As per Woodside's methodology (Section 5), assessment of relevant persons is based on the EMBA. In the case of the Operations EP, the original EMBA (Figure 2) determined Woodside's consultation. After consultation had been completed, Woodside applied an industry-wide agreed approach to oil spill modelling resulting in a reduced EMBA (Figure 1), the result is that Woodside's original approach to consultation applied an inclusive approach and involved a consultation which was broader than is defined in its methodology. This has meant that, because in the change of the EMBA, some stakeholders previously assessed as relevant are now included in Table 3 as a chose to contact.

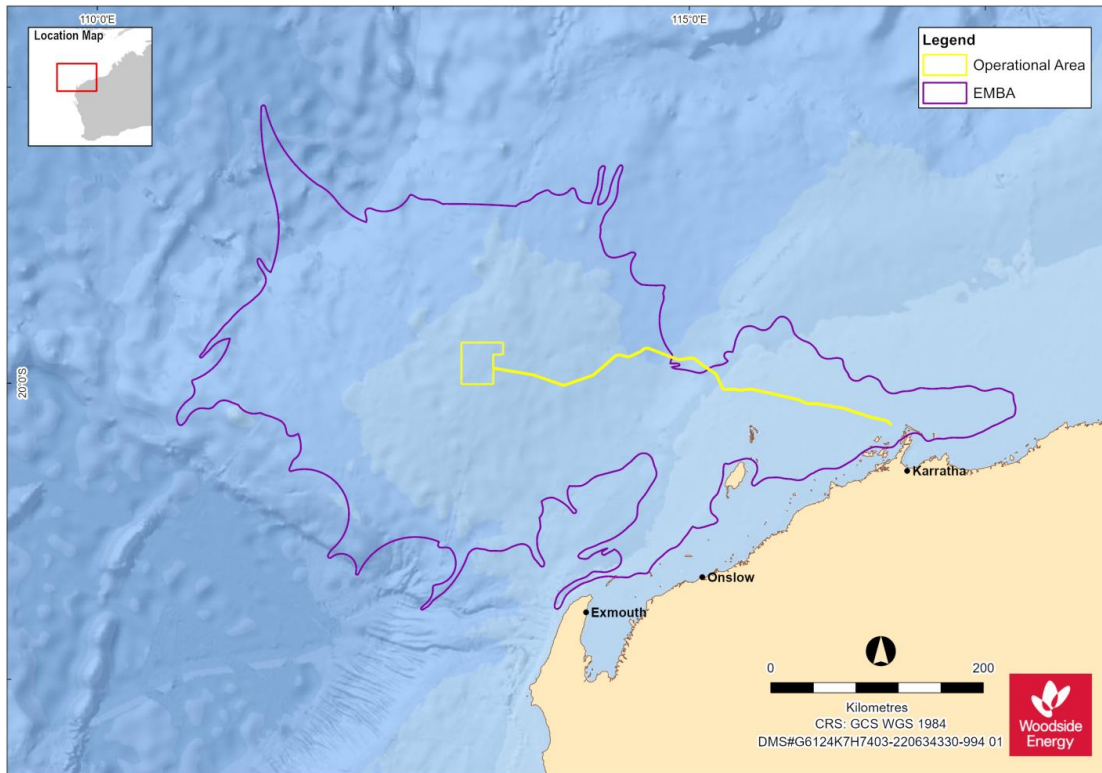

Figure 1: Operational Area and revised EMBA for this EP

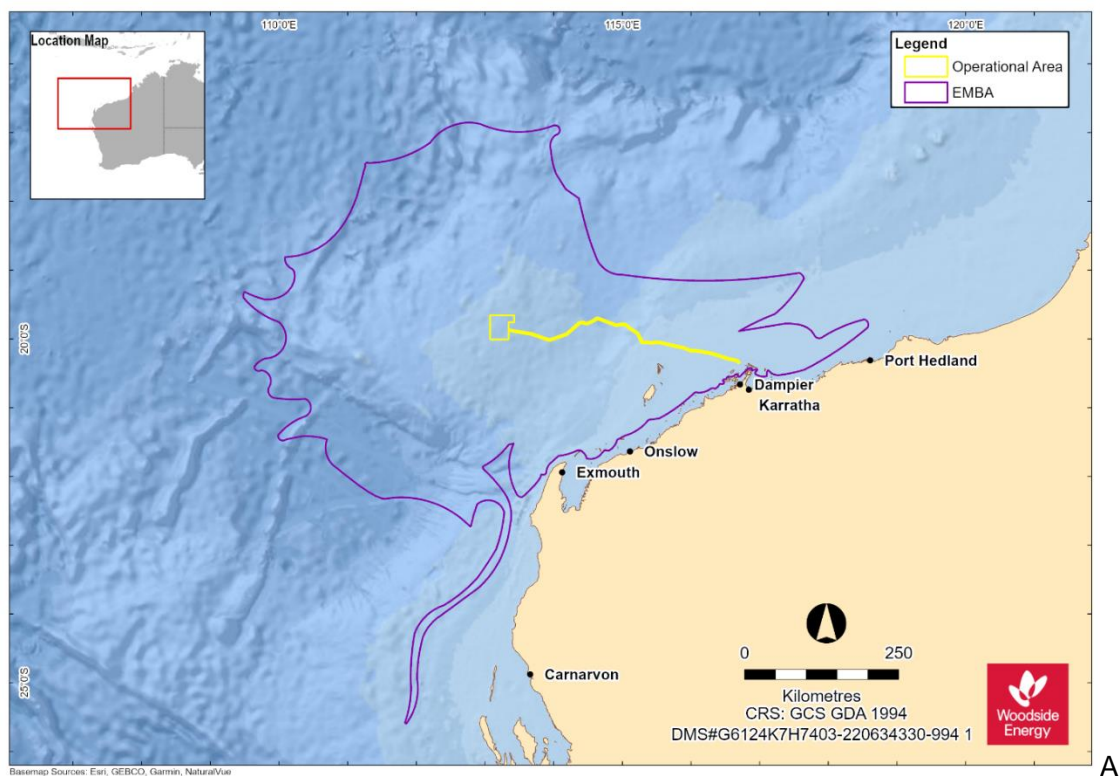

Figure 2: Operational Area and original EMBA for this EP

Table 1: Assessment of Relevance

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth and WA State Government Departments or Agencies – Marine			
Australian Border Force (ABF)	Responsible for coordinating maritime security	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ABF's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Communications and Media Authority (ACMA)	Regulator for communications and media	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ACMA's responsibilities may be relevant to the activity as there are telecommunications lines that intersect the Operational Area.	Yes
Australian Fisheries Management Authority (AFMA)	Responsible for managing Commonwealth fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA. AFMA's responsibilities may be relevant to the activity as the North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area and the EMBA.	Yes
Australian Hydrographic Office (AHO)	Responsible for maritime safety and Notices to Mariners	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AHO's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Safety	Statutory agency for vessel safety and navigation	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Safety's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Australian Maritime Safety Authority (AMSA) – Marine Pollution	Legislated responsibility for oil pollution response in Commonwealth waters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Pollution's responsibilities may be relevant to the activity as the proposed activity has a hydrocarbon spill risk which may require AMSA response in Commonwealth waters.	Yes
Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries	Responsible for implementing Commonwealth policies and programs to support agriculture, fishery, food and forestry industries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area. The North West Slope and Trawl Fishery, Western Deepwater Trawl Fishery, and Western Tuna and Billfish Fishery are active in the EMBA. DAFF – Fisheries' responsibilities may be relevant to the activity as the North West Slope and Trawl Fishery, Western Deepwater Trawl Fishery, and Western Tuna and Billfish Fishery are active in the Operational Area and the EMBA.	Yes
Department of Defence (DoD)	Responsible for defending Australia and its national interests.	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. DoD's responsibilities may be relevant to the activity as defence training areas lie within the EMBA.	Yes
Department of Primary Industries and Regional Development (DPIRD)	Responsible for managing State fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. Marine Aquarium Managed Fishery, Mackerel Managed Fishery - Pilbara (Area 2), Pilbara Crab Managed Fishery, Specimen Shell Managed Fishery, Western Australian Sea Cucumber Fishery, Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery, West Coast Deep Sea Crustacean Managed Fishery and Onslow Prawn Managed Fishery are active in the Operational Area. Marine Aquarium Managed Fishery, Mackerel Managed Fishery, Pilbara Crab Managed Fishery, Specimen Shell Managed Fishery, Western Australian Sea Cucumber Fishery, Pilbara Fish Trawl (Interim) Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Line Fishery (Condition), West Coast Deep Sea Crustacean Managed Fishery, Onslow Prawn Managed Fishery, Exmouth Gulf	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		<p>Prawn Managed Fishery and Nickol Bay Prawn Managed Fishery are active in the EMBA.</p> <p>DPIRD's responsibilities may be relevant to the activity as the government department responsible for State fisheries.</p>	
Department of Transport (DoT)	Legislated responsibility for oil pollution response in State waters	<p>Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations.</p> <p>The proposed activity has a hydrocarbon spill risk, which may require DoT response in State waters.</p>	Yes
Department of Planning, Lands and Heritage (DPLH)	Responsible for state level land use planning and management, and oversight of Aboriginal cultural heritage and built heritage matters.	<p>Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations.</p> <p>There is known Maritime Cultural Heritage overlapping the EMBA.</p>	Yes
Western Australian Museum	Manages 200 shipwreck sites of the 1,500 known to be located off the Western Australian coast.	<p>Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations.</p> <p>There are known shipwrecks overlapping the EMBA which the Western Australian Museum may be responsible for.</p>	Yes
Pilbara Ports Authority	Responsible for the operation of the Port of Dampier, Port of Varanus Island and greenfield port Balla Balla.	<p>Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations.</p> <p>The proposed activity has the potential to impact Pilbara Ports Authority's responsibilities as the Operational Area and EMBA overlaps the Pilbara Ports Authority's area of responsibility.</p>	Yes
Commonwealth and WA State Government Departments or Agencies – Environment			
Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)	<p>DAFF administers, implements and enforces the Biosecurity Act 2015. The Department requests to be consulted where an activity has the potential to transfer marine pests.</p> <p>DAFF also has inspection and reporting requirements to ensure that all conveyances (vessels, installations</p>	<p>Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations.</p> <p>DAFF – Biosecurity's responsibilities may be relevant to the proposed activities in the EMBA in the prevention of introduced marine species.</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
	<p>and aircraft) arriving in Australian territory comply with international health Regulations and that any biosecurity risk is managed.</p> <p>The Dept requests to be consulted where an activity involves the movement of aircraft or vessels between Australia and offshore petroleum activities either inside or outside Australian territory.</p>		
<p>Department of Climate Change, Energy, the Environment and Water Agriculture (DCCEEW)</p>	<p>Responsible for implementing Commonwealth policies and programs to support climate change, sustainable energy use, water resources, the environment and our heritage.</p> <p>Administers the Underwater Cultural Heritage Act 2018 in collaboration with the States, Northern Territory and Norfolk Island, which is responsible for the protection of shipwrecks, sunken aircraft and other types of underwater heritage and their associated artefacts in Commonwealth waters.</p>	<p>Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations.</p> <p>DCCEEW's responsibilities may be relevant to the proposed activities in the EMBA as there are potential environmental impacts from the proposed activity.</p> <p>There is known Maritime Cultural Heritage overlapping the EMBA.</p>	<p>Yes</p>
<p>Director of National Parks (DNP)</p>	<p>Responsible for the management of Commonwealth parks and conservation zones.</p>	<p>Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations.</p> <p>DNP's responsibilities may be relevant to the activity as DNP requires an awareness of activities that occur within AMPs, and an understanding of potential impacts and risks to the values of parks (NOPSEMA guidance note: N-04750-GN1785 A620236, June 2020). Titleholders are required to consult DNP on offshore petroleum and greenhouse gas exploration activities if they occur in, or may impact on the values of marine parks, including where potential spill response activities may occur in the event of a spill (i.e. scientific monitoring).</p>	<p>Yes</p>

Stakeholder	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Department of Biodiversity, Conservation and Attractions (DBCA)	Responsible for managing WA's parks, forests and reserves to achieve wildlife conservation and provide sustainable recreation and tourism opportunities.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. The EMBA for the proposed activities overlap WA parks, forests or reserves. Activities have the potential to impact marine tourism in the EMBA.	Yes
Ningaloo Coast World Heritage Advisory Committee (NCWHAC)	Supports the DBCA to manage the Ningaloo Coast World Heritage Area.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. The proposed activity has the potential to impact NCWHAC's responsibilities as the EMBA overlaps the Ningaloo Marine Park.	Yes
Commonwealth and State Government Departments or Agencies – Industry			
Department of Industry, Science and Resources (DISR)	Department of relevant Commonwealth Minister.	Required to be consulted under regulation 25(1)(a) of the Environment Regulations.	Yes
Department of Mines, Industry Regulation and Safety (DEMIRS)	Department of relevant State Minister	Required to be consulted under regulation 25(1)(c) of the Environment Regulations.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Commonwealth Commercial fisheries and peak representative bodies			
North West Slope and Trawl Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.	Yes
Western Deepwater Trawl Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.	Yes
Western Tuna and Billfish Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the revised EMBA. Nevertheless, to take an inclusive approach and to consult more widely, Woodside chose to consult the Western Tuna and Billfish Fishery based on overlap with the initial EMBA.	No
Commonwealth Fisheries Association (CFA)	Represents the interests of commercial fishers with licences in Commonwealth waters	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area. The North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery, are active in the EMBA. CFA's functions may be relevant to the activity as the North West Slope and Trawl Fishery and Western Deepwater Trawl Fishery are active in the Operational Area and EMBA.	Yes
Tuna Australia	Represents the interests of the Western Tuna and Billfish Fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Tuna Australia's functions are not relevant to the activity as the Western Tuna and Billfish Fishery is not active in the EMBA. Woodside chose to consult Tuna Australia based on the Western Tuna and Billfish Fishery overlap with the initial EMBA.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

State Commercial fisheries and peak representative bodies			
Mackerel Managed Fishery – Area 2 (Pilbara)	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Mackerel Managed Fishery - Pilbara (Area 2) as relevant persons.</p>	Yes
Mackerel Managed Fishery – Area 3 (Pilbara)	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery does not overlap the revised EMBA. Nevertheless, to take an inclusive approach and to consult more widely, Woodside chose to consult the Mackerel Managed Fishery – Area 3 (Pilbara) based on overlap with the initial EMBA.</p>	No
Pilbara Crab Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under Regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Pilbara Crab Managed Fishery as relevant persons.</p>	Yes
Marine Aquarium Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Marine Aquarium Managed Fishery as relevant persons.</p>	Yes
West Coast Deep Sea Crustacean Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Under an agreement with WAFIC Woodside has consulted West Coast Deep Sea Crustacean Managed Fishery as relevant persons.	
Specimen Shell Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Under an agreement with WAFIC Woodside has consulted Specimen Shell Managed Fishery as relevant persons.	Yes
Onslow Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Under an agreement with WAFIC Woodside has consulted Onslow Prawn Managed Fishery as relevant persons.	Yes
Nickol Bay Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario. As all individual licence holders in this fishery were consulted as part of other relevant fisheries, Woodside has chosen to consult the Nickol Bay Prawn Managed Fishery at its discretion in line with Section 5.3.7.	No
Western Australian Sea Cucumber Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		Under an agreement with WAFIC Woodside has consulted Western Australian Sea Cucumber Fishery as relevant persons.	
Exmouth Gulf Prawn Managed Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery does not overlap the Operational Area but overlaps the EMBA and has been active in the EMBA within the past 5 years, however, based on WAFIC's advice, Woodside does not need to consult fisheries in the EMBA.</p> <p>As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.</p> <p>As all individual licence holders in this fishery were consulted as part of other relevant fisheries, Woodside has chosen to consult the Exmouth Gulf Prawn Managed Fishery at its discretion in line with Section 5.3.7.</p>	No
Gascoyne Demersal Scalefish Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery does not overlap the revised EMBA. Nevertheless, to take an inclusive approach and to consult more widely, Woodside chose to consult the Gascoyne Demersal Scalefish Fishery based on overlap with the initial EMBA.</p>	No
Land Hermit Crab Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under Regulation 25(1)(d) of the Environment Regulations.</p> <p>Under an agreement between WAFIC and Woodside, WAFIC has advised there is no need to consult this fishery given the proposed activities operate in depths ~31-1400m which is outside the depth of the hand collection methods used by this fishery.</p>	No
Pilbara Trawl Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Pilbara Trawl Fishery as relevant persons.</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Pilbara Trap Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Pilbara Trap Fishery as relevant persons.</p>	Yes
Pilbara Line Fishery	State commercial fishery	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.</p> <p>Under an agreement with WAFIC Woodside has consulted Pilbara Line Fishery as relevant persons.</p>	Yes
Western Australian Fishing Industry Council (WAFIC)	Represents the interests of commercial fishers with licences in State waters.	<p>Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>Marine Aquarium Managed Fishery, Mackerel Managed Fishery - Pilbara (Area 2), Pilbara Crab Managed Fishery, Specimen Shell Managed Fishery, Western Australian Sea Cucumber Fishery, Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery, West Coast Deep Sea Crustacean Managed Fishery and Onslow Prawn Managed Fishery are active in the Operational Area.</p> <p>Marine Aquarium Managed Fishery, Mackerel Managed Fishery, Pilbara Crab Managed Fishery, Specimen Shell Managed Fishery, Western Australian Sea Cucumber Fishery, Pilbara Fish Trawl (Interim) Managed Fishery, Pilbara Trap Managed Fishery, Pilbara Line Fishery (Condition), West Coast Deep Sea Crustacean Managed Fishery and Onslow Prawn Managed Fishery Exmouth Gulf Prawn Managed Fishery, and Nickol Bay Prawn Managed Fishery, are active in the EMBA.</p> <p>WAFIC's functions may be relevant to the activity as the peak representative body for State fisheries.</p> <p>WAFIC issued consultation materials to relevant commercial fisheries licence holders.</p>	Yes

Vermilion Oil and Gas	Titleholder or Operator	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit areas overlaps the EMBA.	Yes
OMV Australia / Sapura OMV Upstream	Titleholder or Operator	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit areas overlaps the EMBA.	Yes
JX Nippon O&G Exploration (Australia)	Titleholder or Operator	Woodside has applied its methodology for 'Titleholders and Operators' under regulation 25(1)(d) of the Environment Regulations. Titleholder or Operator's permit areas does not overlap the revised EMBA. Nevertheless, to take an inclusive approach and to consult more widely, Woodside chose to consult the Titleholder based on overlap with the initial EMBA.	No
Peak Industry Representative bodies			
Australian Energy Producers (AEP) (previously APPEA)	Represents the interests of oil and gas explorers and producers in Australia.	Woodside has applied its methodology for 'Peak Industry Representative bodies' under regulation 25(1)(d) of the Environment Regulations. AEP's responsibilities are identified as having an intersect with Woodside's planned activities in the EMBA.	Yes
Traditional Custodians and nominated representative corporations			
Wanparta Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarla and Ngarla #2 (Determination Area A) native title claim, for which the Wanparta Aboriginal Corporation is the Registered Native Title Body Corporate, is no longer coastally adjacent to the revised EMBA. The Wanparta Aboriginal Corporation is party to the Ngarla Pastoral ILUA, which is no longer coastally adjacent to the revised EMBA. Wanparta Aboriginal Corporation was relevant based on the original EMBA and had already been included as part of the consultation. Accordingly, to take an inclusive approach and to consult more widely, Woodside has included the Wanparta Aboriginal Corporation in Table 3.	No
Kariyarra Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		<p>The Kariyarra native title claim, for which the Kariyarra Aboriginal Corporation is the Registered Native Title Body Corporate, overlaps the EMBA.</p> <p>The Kariyarra Aboriginal Corporation is party to the Kariyarra and State ILUA, which is coastally adjacent to the EMBA.</p>	
Murujuga Aboriginal Corporation (MAC)	<p>Representative Aboriginal Corporation Local government and community representative groups or organisations (part of Karratha Community Liaison Group)</p>	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>MAC is the Nominated Representative Corporation under the Burrup and Maitland Industrial Estates Agreement (BMIEA), which is coastally adjacent to the EMBA and underpins land access for the onshore component of the Scarborough Project.</p> <p>MAC was established to represent the members of competing Native Title claims over Murujuga, collectively known as the Ngarda Ngarli and comprising Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo people. The determination of the competing Native Title claims resulted in no native title being found over the lands subject to the BMIEA or below the low water mark.</p> <p>MAC also owns and co-manages the Murujuga National Park, is responsible for the Dampier Archipelago (including Burrup peninsula) National Heritage Place and is progressing the World Heritage nomination of the Murujuga Cultural Landscape. The EMBA does not overlap the Murujuga National Park, but does overlap the National Heritage Place.</p> <p>Woodside has consulted with MAC in regard to the Scarborough Project area generally since 2018 and MAC has been involved in ethnographic surveys that included the planned activities of this EP.</p> <p>As discussed further below, Woodside engaged with YMAC as the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia to confirm the best approach to confirm additional cultural values (if any) for the broader Scarborough Project, the scope of which included the proposed activity for this EP. YMAC advised that the most appropriate stakeholders for the Scarborough project generally are MAC and NAC, who are not represented by YMAC (refer to Table 2).</p>	Yes
Ngarluma Aboriginal Corporation (NAC)	<p>Representative Aboriginal Corporation</p>	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		<p>The Ngarluma People's native title determined area does not overlap the EMBA. The determination, for which NAC is the Registered Native Title Body Corporate, is coastally adjacent to the EMBA.</p> <p>The historical Ngarluma/Yindjibarndi native title claim overlaps the EMBA.</p> <p>NAC is party to the Anketell Port, Infrastructure Corridor and Industrial Estates Agreement, which overlap the EMBA.</p> <p>NAC is party to the RTIO Ngarluma Indigenous Land Use Agreement (Body Corporate Agreement), which is adjacent to the EMBA.</p> <p>The EMBA overlaps the Dampier Commonwealth Marine Park, over which the North-west Marine Parks Network Management Plan specifies NAC as representing people whose sea country extends into the marine park which is valued for cultural identity, health and wellbeing.</p> <p>As noted above (and discussed further below), Woodside sought guidance from YMAC as the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia to confirm the best approach to identify additional cultural values (if any) for the broader Scarborough Project, the scope of which included the proposed activity for this EP. YMAC advised that the most appropriate stakeholders for the Scarborough project generally are MAC and NAC, who are not represented by YMAC (refer to Table 2).</p>	
Wirrawandi Aboriginal Corporation (WAC)	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The Operational Area, where planned activities will occur, overlaps the Yaburara & Mardudhunera People's native title claim. In addition, the EMBA is either coastally adjacent or overlaps native title claims and ILUAs, as described below.</p> <p>The Yaburara & Mardudhunera People's native title claim, the determination for which WAC is the Registered Native Title Body Corporate, overlaps the EMBA.</p> <p>WAC is party to the KM & YM ILUA and Cape Preston Project Deed (YM Mardie ILUA), which overlap the EMBA.</p> <p>WAC is party to the Cape Preston West Export Facility ILUA, which is coastally adjacent to the EMBA.</p>	Yes
Yinggarda Aboriginal Corporation (YAC)	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25 (1)(d) of the Environment Regulations. The Operational Area, where planned activities will occur, is over 190 km from Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		<p>People's, native title determinations. However, the EMBA is either coastally adjacent or overlaps the claims, determinations and ILUAs, as described below.</p> <p>The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claims, the determinations for which NTGAC and YAC are the Registered Native Title Bodies Corporate, overlaps the EMBA.</p> <p>YAC is party to the Brickhouse and Yinggarda Aboriginal Corporation ILUA and Quobba – Yinggarda Pastoral ILUA, which are coastally adjacent to the EMBA.</p> <p>The YAC nominated representative was the YMAC and the YAC executive officer and contact officer pursuant to the Corporations (Aboriginal and Torres Strait Islander) Act 2006 is employed by YMAC. Woodside therefore consulted YAC, via YMAC. Woodside was advised that as of late April 2023, the nominated representative for YAC was Gumala Aboriginal Corporation.</p>	
Yindjibarndi Aboriginal Corporation	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The historic Ngarluma/Yindjibarndi native title claim, the successor determinations for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Bodies Corporate, overlaps the EMBA.</p> <p>The EMBA overlaps the Dampier Commonwealth Marine Park, over which the North-west Marine Parks Network Management Plan specifies the Yindjibarndi Aboriginal Corporation as representing people whose sea country extends into the marine park which is valued for cultural identify, health and wellbeing.</p>	Yes
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The Thalanyji native title claim does not overlap the EMBA. The claim, for which BTAC is the Registered Native Title Body Corporate, is coastally adjacent to the EMBA.</p> <p>BTAC is also party to the Macedon ILUA which is coastally adjacent to the EMBA.</p>	Yes
Robe River Kuruma Aboriginal Corporation	Representative Aboriginal Corporation	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>There are no native title claims or determinations that the Robe River Kuruma Aboriginal Corporation is party to overlapping the EMBA or coastally adjacent to the EMBA.</p>	Yes

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

		<p>The Robe River Kuruma Aboriginal Corporation is party to the KM & YM ILUA, which overlaps the EMBA.</p> <p>The Robe River Kuruma Aboriginal Corporation is party to the RTIO Kuruma Marthudunera People ILUA, which is coastally adjacent to the EMBA.</p>	
<p>Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)</p>	<p>Representative Aboriginal Corporation</p>	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Operational Area, where planned activities will occur, is over 190 km from Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claims. However, the EMBA is either coastally adjacent or overlaps native title claims, determinations and ILUAs, as described below.</p> <p>The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claims, the determination of which NTGAC and YAC are the Registered Native Title Bodies Corporate, overlaps the EMBA.</p> <p>The NTGAC is also party, with the WA State Government, to the Ningaloo Conservation Estate Indigenous Land Use Agreement (the ILUA) which overlaps the EMBA. The NTGAC is responsible for the joint management of the Ningaloo Marine Park (State Waters) which is overlapped by the EMBA.</p> <p>The NTGAC is also party to the Gnarloo ILUA, which is coastally adjacent to the EMBA.</p> <p>The NTGAC's nominated representative is the YMAC and the NTGAC executive officer and contact officer pursuant to the Corporations (Aboriginal and Torres Strait Islander) Act 2006 is employed by YMAC. Woodside has therefore consulted the NTGAC, via YMAC.</p>	<p>Yes</p>
<p>Malgana Aboriginal Corporation</p>	<p>Representative Aboriginal Corporation</p>	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The Malgana Part A native title claim, for which the Malgana Aboriginal Corporation is the Registered Native Title Body Corporate, is no longer adjacent to the revised EMBA.</p> <p>Malgana Aboriginal Corporation was relevant based on the original EMBA and had already been included as part of the consultation. Accordingly, to take an inclusive approach and to consult more widely, Woodside has included the Malgana Aboriginal Corporation in Table 3.</p>	<p>No</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Native Title Representative Bodies			
<p>Yamatji Marlpa Aboriginal Corporation (YMAC)</p>	<p>Native Title Representative Body</p>	<p>Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations.</p> <p>YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders.</p> <p>The NTGAC's nominated representative is YMAC. Woodside has therefore consulted the NTGAC via YMAC.</p> <p>YMAC was also the nominated representative for YAC. Woodside was advised that as of late April 2023, the nominated representative for YAC is now Gumala Aboriginal Corporation.</p> <p>Woodside contacted YMAC to seek guidance with respect to the appropriate Traditional Custodian group(s) to engage with respect to the proposed activity where this was not clear.</p> <p>YMAC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.</p>	<p>Yes</p>
Self-identified First Nations Groups			
<p>Ngarluma Yindjibarndi Foundation Ltd (NYFL)</p>	<p>Representative Aboriginal Corporation Local government and community representative groups or organisations (part of Karratha Community Liaison Group)</p>	<p>Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations.</p> <p>The Ngarluma and Yindjibarndi People, the NWS JVs and Woodside entered into an agreement on 22 December 1998 (Agreement).</p> <p>NYFL was subsequently incorporated under the terms of the Agreement to act as trustee for the trust established to benefit the Ngarluma and Yindjibarndi People and the Roebourne Aboriginal Community.</p> <p>Subsequent to that, the Ngarluma people settled their native title claim and established their nominated representative corporation, the Ngarluma Aboriginal Corporation (PBC); and the Yindjibarndi people settled their native title claim and established their nominated representative corporation, the Yindjibarndi Aboriginal Corporation (PBC). The Ngarluma Aboriginal Corporation and the Yindjibarndi Aboriginal Corporation are the appropriate representative bodies for consultation in relation to cultural interests.</p>	<p>Yes</p>

CONSULTATION ACTIVITIES

Scarborough Offshore Facility and Trunkline EP Consultation Activities

Woodside has been undertaking extensive consultation with relevant persons and other parties related to this EP since February 2018. Preliminary consultation for the Scarborough OPP commenced with interested and affected stakeholders as part of a planned, integrated and consistent approach to stakeholder engagement for Woodside’s proposed opportunities.

A broad and extensive consultation process has been undertaken with relevant persons for the Operations EP. Consultation was inclusive, transparent, voluntary, respectful and two-way, and undertaken by email, letter, phone call and/or meeting.

Discharging Regulation 25 of the Environment Regulations

Woodside advertised the planned activities proposed for this EP in national, state and relevant local newspapers (see Record of Consultation, reference 1.61). Regional newspapers do not require subscription and are available (and in some cases delivered) directly to households. All communities within or adjacent to the EMBA had access to this information. No direct comments or feedback were received from the advertisements.

Newspaper	Coverage	Publication dates
The Australian	National	9 August 2023
The West Australian	Regional (WA)	9 August 2023
Pilbara News	Local (WA)	9 August 2023
The Geraldton Guardian	Local (WA)	11 August 2023
Midwest Times	Local (WA)	9 August 2023
North West Telegraph	Local (WA)	9 August 2023
Koori Mail	Indigenous	9 August 2023
National Indigenous Times	Indigenous	29 August 2023

A Consultation Information Sheet was provided to relevant persons and persons Woodside chose to contact (see Section 5.3.4), which included an activity overview, maps, a summary of key risks and/or impacts and management measures (Record of Consultation, reference 1.1).

Since the commencement of the initial consultation period in August 2023, the Consultation Information Sheet has been available on Woodside’s website. It included a toll-free 1800 phone number and Woodside’s feedback email address (feedback@woodside.com).

The Woodside [Consultation Activities](#) webpage (that is accessible on the Consultation Information Sheet, via a QR code, banners at community events, and via social media content and advertisements) includes Consultation Information Sheets for the EPs on which Woodside is currently consulting, including this EP. The website page also features a subscribe field for EP-focussed communications from Woodside.

Additional targeted information was provided to relevant marine users including AHO and AMSA – Marine Safety (Record of Consultation, reference 1.10 and 1.11). This information

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

included maps and additional information (GIS shape files) relevant to the specific category of persons. The relevant persons had a 30-day period in which to provide feedback.

Where appropriate, Woodside conducted phone calls and meetings with relevant persons.

Where appropriate, targeted follow-up emails were sent to relevant persons who had not provided a response prior to the close of the consultation feedback period.

Woodside considered relevant person responses and assessed the merits and relevance of objections and claims about the potential adverse impact of the proposed activity set out in the EP, in accordance with the intended outcome of consultation (see Section 5.3.4).

Consultation activities undertaken with relevant persons are summarised at Appendix F, Table 2.

Engagement undertaken with persons or organisations Woodside assessed as not relevant but chose to contact or self-identified and Woodside assessed as not relevant (see Section 5.3.4) are summarised at Appendix F, Table 3.

From May 2023 to January 2024, Woodside ran an ongoing geotargeted sponsored social media campaign to raise awareness around general consultation on EPs (Record of Consultation, reference 1.64).

From 22 August 2023, Woodside commenced an Operations EP geotargeted sponsored social media campaign (Record of Consultation, reference 1.63) across regions within or coastally adjacent to the Operations EP EMBA. The campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations on how they can find out about Woodside's proposed activities by visiting Woodside's website.

Proactive Consultation

Community engagement

The Community Information Sessions or community events that Woodside has conducted or attended are outlined below and captured in more detail in (Record of Consultation, reference 1.67). Woodside published advertisements ahead of these sessions and events in relevant local newspapers and on social media to support attendance.

Date (2023)	Location	Event (if applicable)
5 and 6 August	Karratha	FeNaCING
18 August	Onslow	Passion of the Pilbara Festival

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

23 and 24 August	Karratha	National Economic Development Conference
------------------	----------	--

From September to October 2023, Woodside undertook a Community Consultation Roadshow on the Scarborough Energy Project and consulted on this EP (Record of Consultation, reference 1.67.4, 1.67.6 and 1.67.7). Other community events included the Dampier Markets (Record of Consultation, reference 1.67.8) and Pilbara Consultation roadshow in March 2024 (Record of Consultation, reference 1.67.9). Woodside published advertisements ahead of community information sessions in relevant local newspapers and on social media to support attendance (Record of Consultation, reference 1.67).

Date	Location	Event (if applicable)
18-20 September 2023	Karratha, Port Hedland and Roebourne	Community Consultation Roadshow
10-11 October 2023	Karratha	Pilbara Summit 2023
16-17 October 2023	Carnarvon and Denham	Community Consultation Roadshow
23 October 2023	Exmouth	Community Consultation Roadshow
4 November 2023	Dampier	Dampier Beachside Twilight Markets
22-24 March 2024	Roebourne, Karratha, Dampier	Community Consultation Roadshow
3 April 2024	NWS Visitors' Centre	Pop Up
19 May 2024	Exmouth	Community Markets

Community Liaison Group Engagement

The Exmouth and Karratha Community Liaison Groups (CLGs) represent the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth and Karratha region. Woodside regularly meets with the two CLGs to discuss a range of issues including consultation of specific EPs.

Let's Talk – EP Newsletter

In March 2024, Woodside launched its first EP-focussed newsletter as a new communication avenue to reach existing and potential stakeholders. Woodside is building on its existing consultation approach, providing additional resources to inform relevant persons about its EP consultation. The newsletter aims to provide periodic updates to relevant persons about EP consultation activities, case studies on effective consultation with relevant persons and other EP focussed updates such as upcoming events where Woodside personnel will be consulting with the local community. It is distributed in a variety of locations (see Record of Consultation, reference 1.60.2) as well as across digital platforms including on woodside.com, and social media platforms and people are encouraged to subscribe to receive copies. (Record of Consultation, reference 1.60.2).

Woodside also publishes the Karratha Community Update newsletter which includes a QR code and encourages people to go to the Woodside Consultation Activities webpage to subscribe and find information about EPs (Record of Consultation, reference 1.60.1).

eNGOs and Save our Songlines and/or [name redacted] and/or [name redacted] engagement

Woodside undertook additional proactive activities to provide sufficient information to relevant persons, raise awareness of the Operations EP consultation period, drive participation in consultation and to facilitate consultation on the proposed activities.

On 27 November 2023 and 5-6 December 2023, Woodside proactively contacted stakeholders that had not participated in consultation. For those who had previously consulted with Woodside on other Scarborough Energy Project EPs, Woodside proactively summarised previous claims and advised of the consultation closing date for preparation of the Operations EP. Woodside also included offers to meet with stakeholders.

On 7 March 2024, Woodside further proactively engaged eNGOs who had provided feedback on climate issues by providing an email and link to the Woodside Climate Transition and Action Plan and 2023 Progress Report.

A high-level overview of consultation with eNGOs and Save our Songlines and their public position to stop gas projects is in the table below. Further information including issues raised and addressed during consultation is included in Table 2 and 3.

Consultation with [name redacted], [name redacted] and Save our Songlines on the Operations EP began with the Summary Information Sheet and a bespoke email being sent directly, copying in the Environmental Defenders Office, on 3 September 2023. Proactive correspondence summarising past issues, objections and feedback raised by [name redacted], [name redacted] and Save our Songlines was sent to [name redacted], [name redacted] and Save our Songlines on 27 November 2023.

Several attempts were made to meet with [name redacted], [name redacted] and Save our Songlines in the lead up and after consultation closed in preparation of the Operations EP on 20 December 2023 including offers to meet in late January-February. The last offer from Woodside to meet was made in late-March 2024. On 10 April 2024, EDO advised Woodside that [name redacted] would engage in consultation in a written format going forward.

Extended Consultation

Woodside extended its Operations EP consultation period from four weeks to four and a half months, from September to December 2023, during which time Woodside undertook additional proactive activities to provide sufficient information to relevant persons, raise awareness of the EP consultation period, and to facilitate consultation on the proposed activities.

In addition to an initial Operations EP geotargeted sponsored social media campaign in August 2023, during November 2023 Woodside launched a second Operations EP geotargeted sponsored social media campaign promoting consultation (Record of Consultation, reference 1.63).

Throughout extended consultation period, Woodside continued to offer to meet with eNGOs and [name redacted], [name redacted] and Save our Songlines.

Social Media Platform	Geotargeted Reach	Additional Social Media Campaign Dates	Impact

Self-Identification

Social media campaign - Are you a relevant person?

In October 2023 Woodside commenced a targeted social media campaign, both organic and sponsored, aimed at community members of key towns within the Kimberley, Pilbara, Gascoyne and Murchison regions. The campaign delivered targeted information to several profiled relevant person groups via story and feed content with text and a short accessible video (Record of Consultation, reference 1.65).

The campaign aims to support self-identification and provides information about Woodside's consultation with relevant persons when preparing EPs and encourages participation in the consultation process.

Six different videos with specific information to potential relevant persons groups were launched on Facebook and Instagram:

- Local communities – volunteering
- Local communities - apprentices/trainees
- Commercial fishing
- Recreational fishing
- Recreational marine users
- Traditional Owners.

Results of first burst at February 2024 are as follows:

Categories	Reach	Frequency	Impressions	Clicks	Click-through rate %
Marine Users	389,383	4.37	1,701,418	2,298	0.14%
Commercial Fisheries Demersal	297,701	2.84	846,530	853	0.10%
Commercial Fisheries Crab	207,104	2.54	526,472	484	0.09%
Volunteering	172,750	2.11	364,635	373	0.10%
Apprentices & trainees	97,083	2.21	214,324	311	0.15%
Traditional Owner Groups	92,209	1.56	143,965	212	0.15%

Results of second burst at April 2024 are as follows:

Categories	Reach	Frequency	Impressions	Clicks	Click-through rate %
Marine Users	251,096	3.48	873,689	1342	0.15%
Commercial Fisheries Demersal	208,759	2.53	529,021	540	0.10%
Commercial Fisheries Crab	71,468	2.54	526,472	484	0.09%
Volunteering	46,354	1.54	71,335	114	0.16%
Apprentices & trainees	50,776	1.43	72,363	101	0.14%
Traditional Owner Groups	192,257	2.47	475,112	566	0.12%

The commercial fisheries, recreational fisheries and Traditional Owners videos are available on the Woodside [Consultation Activities](#) webpage.

Broad Understanding

Integrated Information Campaign - Scarborough Energy Project

From October 2023 to February 2024, Woodside launched an integrated advertising campaign to educate and inform the general public about Woodside’s activities related to this EP and the broader Scarborough Energy Project (Record of Consultation, reference 1.66). The

campaign encouraged stakeholders to visit the Woodside webpage for further information, which includes information on the Operations EP consultation.

Campaign advertisements were run in parallel to the Operations EP consultation advertisements across traditional media, online media and google display, social media and out of home (billboards and flyers).

The dedicated Scarborough Energy Project webpage featured prominently on the Woodside website home page and the webpage displays links to the consultation activities webpage. The webpage provides information and resources that are in addition to the consultation information sheet such as information about managing emissions at the project, which is relevant to this EP.

Traditional Custodian Specific Consultation

In addition to the approaches above including community information sessions, additional activities were undertaken with relevant Traditional Custodians, which were specifically designed to provide for effective engagement with Traditional Custodians and so that information was provided in a form that was readily accessible and appropriate (Record of Consultation, reference 1.2).

As noted under Consultation Approach; Relevancy Assessment; and Environment That May Be Affected (EMBA), consultation was completed based on a broader EMBA. On the application of an industry-wide agreed approach to EMBA modelling, the footprint for this activity was reduced. This has meant Woodside originally engaged in a broader and more inclusive consultation than would have been necessary if Woodside had initially applied its methodology to the reduced EMBA. The consultation for the stakeholders (Malgana Aboriginal Corporation and Wanparta Aboriginal Corporation) is still included in Appendix F, but, as a result of the updated EMBA, they are now included in Table 3 as those to contact rather than as a relevant person in Table 2.

Consultation undertaken specifically with Traditional Custodians for this EP includes:

- Direct engagement with nominated representative bodies via the contact listed on the ORIC website, requesting advice on how they would like to be engaged and asking whether other members and/or individuals should be consulted. This has resulted in:
 - Meetings with directors, elders and any nominated representatives, on country or in Perth
 - Requests and offers of resourcing to enable and support consultation
 - Exchange of written feedback and correspondence
 - Summary Consultation Information Sheet, developed and reviewed by Indigenous representatives in collaboration with technical experts to ensure content is appropriate to the intended recipients, was provided to relevant Traditional Custodian groups (Record of Consultation, reference 1.2) and phone calls to provide context to the consultation made.
- Ongoing efforts were made to engage and develop relationships with these bodies via a variety of means such as email, phone calls, alternative contacts, texts, social media and in some cases physical visits.
- Consultation meetings with attendees decided by Traditional Custodian groups, supported by senior Woodside representatives, subject matter experts, and First Nations Relations advisers with skills and experience in community engagement. Meetings are developed through a two-way consultation process to enable effective information sharing via:
 - Mutually agreed agenda.

- Encouraging Traditional Custodian attendees to control the pace of the meeting and pause at any time to ask questions, seek clarification or provide feedback.
- Visual aids such as posters, presentations, simplified technical videos and real-world pictures and footage.
- Emphasis on potential planned and unplanned risks and impacts of the activity.
- Ample opportunity for questions and feedback.
- Discussion about ongoing relationship development and opportunities.
- Distribution of hard-copy Consultation Information Sheets (Record of Consultation, reference 1.1) and Summary Consultation Information Sheets (Record of Consultation, reference 1.2).
- Meeting all costs such as sitting fees, travel, legal support and executive support and other support required.
- Advertising in Indigenous publications (Record of Consultation, reference 1.61).

Newspaper	Coverage	Publication dates
Koori Mail	Indigenous	9 August 2023
National Indigenous Times	Indigenous	29 August 2023

- Woodside ran an Operations EP geotargeted sponsored social media campaign (Record of Consultation, reference 1.63) to various communities that are coastally adjacent to the EMBA for the proposed activities.
- The wide-reaching campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations how they can find out about Woodside’s proposed activities by visiting Woodside’s website, which details the intent of consultation with relevant persons under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)*. The campaign reached more than two million people across various regions as shown in Record of Consultation, reference 1.63.
- These social media posts were developed with input from Indigenous representatives. Social media is a highly effective means to engage Indigenous audiences as outlined in Indigenous Digital Life (Professor Carlson, 2021). Advertisements used language and information appropriate to Indigenous audiences. Feedback from community engagements indicates a high level of penetration for this technique.

Woodside has employed a diverse range of techniques to allow relevant persons to become aware of the proposed activity and how it may affect their functions, interests or activities, and to understand their ability to provide feedback. The combination of PBC engagement meetings, traditional print media, social media and face-to face community interaction was designed with input from Indigenous representatives and adapted to the audience, so that it provides a wide-ranging opportunity to consult.

Table 2: Consultation Report with Relevant Persons or Organisations

The black numbering **(N)** in the *Summary of information provided and record of consultation for this EP* in Table 2 denotes an issue raised by a relevant person. The green numbering **(N)** in this section denotes Woodside's response to that issue.

Commonwealth and WA State Government Departments or Agencies – Marine		
Australian Border Force (ABF)		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside emailed ABF advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
<p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ABF for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2023. Consultation information provided to Australian Border Force on 9 August 2023 based on their functions, interests or activities. Woodside has provided a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback. Woodside has sent a follow up email seeking feedback on the proposed activities. Woodside has provided the ABF with the opportunity to provide feedback over a 4.5-month period.

Australian Communications and Media Authority (ACMA)

Summary of information provided and record of consultation for this EP:

- On 7 December 2023, Woodside emailed ACMA advising of the proposed activity (Record of Consultation, reference 1.24) and provided a Consultation Information Sheet, a communications cable figure, and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 December 2023, ACMA thanked Woodside for the opportunity to comment on this EP and stated it had reviewed the materials (SI Report, reference 53.1). In addition:
 - **(1)** ACMA noted that operational areas identified were not in the vicinity of any existing protection zones but appeared to be in the vicinity of submarine cables and as such, it encouraged Woodside to contact the owner of existing or planned cables within the projects areas.
 - **(2)** ACMA also noted that the map for this EP was similar to the North West Shelf and Julimar Exploration Wellhead Environmental Plan and the cable to the north of the operational areas marked as proposed appeared to be part of Vocus’ Darwin Jakarta Singapore cable system which was active as of July 2023.
 - **(3)** ACMA recommended that Woodside contact the AHO for further assistance identifying submarine cables that may be impacted by the proposed activities.

Ongoing engagement:

- **(1)** On 27 December 2023, Woodside emailed AMCA and confirmed the operational areas for this EP were not in the vicinity of any existing protection zones, but did appear to be in the vicinity of submarine cables, so Woodside had been in contact with Telstra, the relevant owner of the submarine cables (existing or planned), since March 2020. (SI Report, reference 53.2)
- **(2)** Woodside was also aware that Vocus’ Darwin Jakarta Singapore cable system was active.
- **(3)** Woodside noted that AHO could be contacted should further assistance be required to identify submarine cables.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) ACMA confirmed the operational areas were not in the vicinity of any existing protection zones but were in the vicinity of submarine cables and Woodside should contact the owners of those cables.</p>	<p>(1) Woodside assessment: Woodside noted ACMA’s confirmation that the operational areas was not in the vicinity of existing protection zones but was in the vicinity of submarine cables. Woodside response: Woodside confirmed it had been in contact with Telstra, the relevant owner of the submarine cables.</p>	<p>(1) Not required.</p>
<p>(2) ACMA noted the cable to the north of the operational areas marked as proposed appeared to be part Vocus’ Darwin Jakarta Singapore cable system.</p>	<p>(2) Woodside assessment: Woodside acknowledged ACMA noted the cable to the north of the operational areas marked as ‘proposed’ appeared to be part of Vocus’ Darwin Jakarta Singapore cable system.</p>	<p>(2) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside confirmed it was aware that Vocus' Darwin Jakarta Singapore cable system was active, however was not required to consult with Vocus.	
(3) ACMA recommended Woodside contacted the AHO for further assistance identifying cables.	(3) Woodside assessment: Woodside noted ACMA's recommendation to contact the AHO for further assistance identifying cables. Woodside response: Woodside confirmed that the AHO could be contacted should further assistance be required to identify submarine cables.	(3) Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ACMA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the ACMA on 7 December 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the ACMA over a 2 month period.

Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 5 September 2023, AFMA thanked Woodside for the advice (SI Report, reference 20.1) and:
 - (1) Advised AFMA had no specific comments on the proposal.
 - (2) Encouraged Woodside, if it had not already done so, to engage directly with Commonwealth fishing operators in the area and included contact details for relevant industry associations.
- (1, 2) On 10 September 2023, Woodside thanked AFMA for its feedback and confirmed information had been provided to relevant representative organisations and fishing operators (SI Report, reference 20.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AFMA advised it had no specific comments on the proposal.	(1) Woodside assessment: Woodside noted AFMA had no specific comments on the proposal. Woodside response: Woodside thanked AFMA for its feedback.	(1) Not required.
(2) AFMA encouraged Woodside to consult directly with fishing operators who have entitlements to fish within the proposed area.	(2) Woodside assessment: Woodside considered that consultation with fishing operators, based on overlap with the proposed area, may result in consultation fatigue. However, Woodside recognised AFMA's position recommending direct consultation with fishing operators. Woodside response: Woodside confirmed it had consulted individual Commonwealth fishing operators in the area, as well as relevant representative bodies and fishing industry associations.	(2) Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP.
While feedback has been received, there were no objections or claims.	Woodside has consulted AFMA, DAFF-Fisheries, CFA and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AFMA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation information provided to AFMA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to the AFMA over a 4.5-month period.

Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AHO advising of the proposed activity (Record of Consultation, reference 1.10 and 1.11) and provided a Consultation Information Sheet, shipping lanes map and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(1)** On 10 August 2023, AHO emailed Woodside advising it had received the email and that the data supplied would be registered, assessed, prioritised and validated in preparation for updating its Navigational Charting products. These adhere to International and Australian Charting Specifications and standards. These standards may result in some data generalisation or filtering due to the scale of existing charts, proximity to other features, and the level of risk a reported feature presents to mariner (SI Report, reference 3.1). **(1)** Woodside noted AHO’s feedback but was not required to respond.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) AHO acknowledged receipt of consultation email and advised on updates to its Navigational Charting products.</p>	<p>(1) Woodside assessment: Woodside acknowledges AHO has received data regarding activity and has no specific feedback for this activity. Woodside response: Woodside noted AHO’s acknowledgement of its email and that it would use data supplied to update its Navigational Charting products.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside will notify the AHO no less than four working weeks before operations commence, as referenced as C 1.5 in this EP. No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AHO for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the AHO on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the AHO over a 4.5-month period.

Australian Maritime Safety Authority (AMSA) – Marine Safety

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AMSA advising of the proposed activity (Record of Consultation, reference 1.10 and 1.11) and provided a Consultation Information Sheet, shipping lanes map and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.39).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside will notify AMSA at least 24-48 hours before operations commence and at the end of activities as referenced as PS 1.6.1 in the EP. Woodside will also provide updates to the AHO and JRCC should there be any changes to the activity. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA - Marine Safety for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the AMSA – Marine Safety on 9 August 2023 based on their functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the AMSA – Marine Safety with the opportunity to provide feedback over a 4.5-month period.

Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AMSA advising of the proposed activity (Record of Consultation, reference 1.10 and 1.11) and provided a Consultation Information Sheet, shipping lanes map and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.39).
- On 25 March 2024, Woodside emailed AMSA – Marine Pollution advising of the proposed activity and provided the Oil Pollution First Strike Plan (SI Report, reference 60.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside has addressed oil spill preparedness and response strategy in Appendix H. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA – Marine Pollution for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the AMSA – Marine Pollution on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the AMSA – Marine Pollution with the opportunity to provide feedback over a 4.5-month period.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 1.13) and provided a Consultation Information Sheet, defence map and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.40).
- **(1)** On 8 September 2023, DoD advised Woodside that a new person would be responsible for co-ordinating the Offshore Petroleum Inbox (SI Report, reference 21.1). **(1)** Woodside actioned DoD's feedback but was not required to respond.
- On 19 September 2023, DoD thanked Woodside for its email (SI Report, reference 21.2). DoD provided feedback regarding:
 - **(2)** The location of the activity areas within an exercise area and restricted airspace.
 - **(3)** Unexploded ordnances (UXOs) that may be present on and in the seafloor, and that Woodside must inform itself as to the risks associated with conducting activities in that area, with the Commonwealth of Australia taking no responsibility for reporting the UXO in the area, identifying or removing UXO from the area, or any loss or damage suffered or incurred by Woodside or any third party arising out of, or directly related to, UXO in the area.
 - **(4)** DoD's notification requirements including liaison with the Australian Hydrographic Service/Office (AHS/AHO).
- On 2 November 2023, Woodside thanked DoD for its feedback (SI Report, reference 21.3) and confirmed:
 - **(2)** It had noted the location of activity areas and the presence of exercise areas and restricted airspace.
 - **(3)** It had noted the advice regarding location, identification, removal or damage to equipment from unexploded ordnances (UXOs).
 - **(4)** The Australian Hydrographic Service/Office (AHS/AHO) had been engaged for this activity and is part of the activity notification protocols.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Informed that there would be a new DoD contacts for the Offshore Petroleum Inbox.</p>	<p>(1) Woodside assessment: Woodside noted that the DoD had new contacts for its Offshore Petroleum Inbox. Woodside response: Woodside updated its records to reflect the new DoD contact information for ongoing consultation.</p>	<p>(1) Not required.</p>
<p>(2) Confirmed that activity areas are within North West Exercise area and restricted airspace.</p>	<p>(2) Woodside assessment: Woodside reviewed the DoD's guidance on exercise areas and restricted airspace. Woodside response: Woodside noted the DoD's advice on the location of activity areas within the North West Exercise area and restricted airspace.</p>	<p>(2) Woodside has recorded the defence areas overlapping the PAA in Section 4.10.6 of this EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(3) Advised on the risk of unexploded ordinance (UXO) on and in sea floor.</p>	<p>(3) Woodside assessment: Woodside reviewed DoD advisement on the risk of UXO. Woodside response: Woodside confirmed it had noted the DoD's advice with respect to the risk, location, identification, removal or damage from UXO on and in the sea floor.</p>	<p>(3) Woodside has recorded the defence areas overlapping the PAA in Section 4.10.6 of this EP.</p>
<p>(4) The need for Woodside to continue liaising with AHS/AHO and to ensure AHS/AHO is notified three weeks prior to the actual commencement of activities.</p>	<p>(4) Woodside assessment: Woodside acknowledged the need to continue liaising with AHS/AHO. Woodside response: Woodside confirmed it had engaged AHS/AHO for these activities and it is included in Woodside's activity notification protocols.</p>	<p>(4) Woodside will notify the AHO no less than four working weeks before operations commence as referenced as C 1.5 in the EP. Where the activities overlap a defence area, DOD will be notified of the activity start date no less than five weeks before the scheduled commencement date, see C 1.9 in the EP. Notifying the AHO provides DoD with information of the PAP through maritime safety information.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DoD for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DoD on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to the DoD over a 4.5-month period.

Department of Primary Industries and Regional Development (DPIRD)		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. (1) On 11 August 2023, DPIRD emailed Woodside thanking it for the opportunity to be consulted but advised they had previously commented in February and had no further comments (SI Report, reference 4.1). (1) On 17 August 2023, Woodside responded thanking DPIRD for its prompt response (SI Report, reference 4.2). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) DPIRD advised it had no further comments at this time.</p>	<p>(1) Woodside assessment: Woodside noted DPIRD's response and that it had no comments. Woodside response: Woodside thanked DPIRD for its response and noted there were no further comments.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has consulted DPIRD, WAFIC, and individual licence holders (via WAFIC). Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries (see Table 7-7) ten days before activity commences, and following completion of activities., as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.</p>
Outcomes of Consultation		
<p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DPIRD for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2023. Consultation information provided to the DPIRD on 9 August 2023 based on their functions, interests or activities. Woodside has provided a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. 		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the DPIRD over a 4.5-month period.

Department of Transport (DoT)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DoT advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(1)** On 21 August 2023, DoT responded to Woodside's email and asked to be consulted if there is a risk of a spill impacting State waters (SI Report, reference 12.1).
- **(1)** On 28 August 2023, Woodside responded thanking DoT for its email and confirming DoT would be consulted if there was a risk of a spill impacting State waters from the proposed activities (SI Report, reference 12.2).

Ongoing engagement:

- On 25 March 2024, Woodside emailed DoT advising of the proposed activity (SI Report, reference 12.3) and provided a copy of the Scarborough Offshore Facility and Trunkline Operations Oil Pollution First Strike Plan.
- On 3 May 2024, DoT emailed Woodside thanking it for the Plan and asking for clarification as to why there is a mention in the FSP to only notifying DoT spill incident in port waters (SI Report, reference 12.4).
- On 8 May 2024, Woodside emailed DoT amending the Plan to include Level 1 spills (SI Report, reference 12.5).
- On 9 May 2024, DoT responded to Woodside stating it was happy with the change and had no further comment (SI Report, reference 12.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) DoT requested to be consulted if there is a risk of a spill impacting State waters.</p>	<p>(1) Woodside assessment: Woodside reviewed the DoT's request to be consulted if there is a risk of a spill impacting State waters. Woodside response: Woodside confirmed that if there was a risk of a spill impacting State waters, the DoT would be consulted. Woodside will provide DoT with a copy of the accepted Oil Pollution First Strike Plan (Appendix I). Woodside will consult DoT if there is a spill impacting State waters from the proposed activity, as referenced in the OSPRMA (Appendix H).</p>	<p>(1) Woodside will consult DoT if there is a spill impacting State waters from the proposed activity, as referenced in the OSPRMA (Appendix H). Woodside will provide DoT with a copy of the accepted Oil Pollution First Strike Plan (Appendix I).</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2) of this EP).	No additional measures or controls are required.
---	---	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DoT for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DoT on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the DoT over a 4.5-month period.

Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DPLH advising of the proposed activity (Record of Consultation, reference 1.14) and provided a Consultation Information Sheet, a list of shipwrecks in State waters within the EMBA, and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.41).
- **(1)** On 1 September 2023, DPLH emailed Woodside thanking it for the opportunity to comment on this EP and noted it had no comment on the installation of the Floating Production Unit, exploration wells or gas export trunkline (SI Report, reference 17.1).
 - **(2)** In addition, it stated that in relation to the shipwrecks Trial and Lady Ann, the Western Australian Museum (WAM) was the delegated authority and should be contacted for advice regarding any maritime archaeological impacts.
- **(1, 2)** On 6 September 2023, Woodside emailed DPLH thanking it for its feedback and confirming shipwreck information had been sent to WAM (SI Report, reference 17.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
---	--	-------------------------------

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(1) DPLH advised it had no feedback.</p>	<p>(1) Woodside assessment: Woodside noted DPLH had no feedback. Woodside response: Woodside thanked DPLH for its response.</p>	<p>(1) Not required.</p>
<p>(2) DPLH advised that WAM is the delegated authority for the Trial and Lady Ann shipwrecks and should be contacted.</p>	<p>(2) Woodside assessment: Woodside recognised that WAM is the delegated authority for shipwrecks and consulted WAM as a relevant person. Woodside response: Woodside confirmed shipwreck information had been sent to WAM.</p>	<p>(2) The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the PAP and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Section 4.9 of this EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Appendix H</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DPLH for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DPLH on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to the DPLH over a 4.5-month period.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Western Australian Museum (WAM)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed WAM advising of the proposed activity (Record of Consultation, reference 1.14) and provided a Consultation Information Sheet and a list of shipwrecks in State waters within the EMBA, and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 21 August 2023, WA Museum responded thanking Woodside for the information (SI Report, reference 14.1). WA Museum:
 - (1) Advised that under the *Underwater Heritage Act* 2018, proponents should, in the first place, contact DCCEEW as the Commonwealth regulator.
 - (2) Directed Woodside to refer to the Commonwealth Government’s Underwater Cultural Heritage (UCH) Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.
 - (3) Recommended that Woodside engage a suitably qualified and experienced maritime archaeologist to undertake a UCH Desktop Assessment to identify Aboriginal and non-Aboriginal UCH within the project area.
 - (4) Recommended that Woodside consult with Traditional Custodians where appropriate if the project involved seabed disturbance in water shallower than 130 metres.
- On 20 November 2023, Woodside responded and thanked WA Museum for its feedback (SI Report, reference 14.2). Woodside:
 - (1) Confirmed it had consulted the Commonwealth regulator, DCCEEW, for this EP.
 - (2) Confirmed it referred to the Commonwealth Government’s Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.
 - Noted that this EP involved the Operations phase of the Scarborough facility and associated trunkline, which were being installed under other Environment Plans.
 - (3) Advised that during the assessment of the existing environment in support of Scarborough Project Environment Plans, Woodside engaged a qualified maritime archaeologist to complete desktop assessments using geophysical and geotechnical survey data, completed ethnographic surveys with Traditional Custodians and engaged the University of WA to conduct submerged heritage predictive modelling.
 - (4) Confirmed that Woodside had consulted with Traditional Owners in the course of preparing EPs since 2018 and also engaged in ongoing consultation subsequent to the approval of EPs.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) Advised Woodside contact DCCEEW as the Commonwealth regulator under the <i>Underwater Cultural Heritage Act</i> 2018.</p>	<p>(1) Woodside assessment: Woodside understands that DCCEEW administers the <i>Underwater Cultural Heritage Act</i> 2018 and identified DCCEEW as a relevant person. Woodside response: Woodside confirmed it had consulted DCCEEW for this EP.</p>	<p>(1) Consultation with DCCEEW is described in Appendix F.</p>

<p>(2) Referred to the Commonwealth Government's Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.</p>	<p>(2) Woodside assessment: Woodside reviewed the Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage and noted they are relevant publications. Woodside response: Woodside confirmed for this EP, it referred to the Commonwealth Government's Underwater Cultural Heritage Guidance for Offshore Developments regarding UCH assessments and draft Guidelines for Working in the Near and Offshore Environment to Protect Underwater Cultural Heritage.</p>	<p>(2) Underwater cultural heritage assessments are addressed in Section 4.9 of this EP. While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.8.2-6.8.7, and Appendix H of the EP.</p>
<p>(3) Recommended Woodside engages a maritime archaeologist to undertake a UCH Desktop Assessment.</p>	<p>(3) Woodside assessment: Woodside recognised need for a qualified maritime archaeologist to undertake a desktop review for the Scarborough Project of submerged heritage predictive modelling. Woodside response: Woodside confirmed that, as part of assessments for the Scarborough Project, it completed a desktop review by qualified and experienced maritime archaeologist, completed ethnographic surveys with Traditional Custodians, and engaged the University of WA to conduct submerged heritage predictive modelling.</p>	<p>(3) Section 4.9 of this EP outlines the underwater cultural heritage assessments undertaken by maritime archaeologists, for the Scarborough Project.</p>
<p>(4) Recommended Woodside consults Traditional Owners where appropriate if the project involves seabed disturbance in water shallower than 130m.</p>	<p>(4) Woodside assessment: Woodside consults with relevant Traditional Custodian groups guided by its assessment of relevance consultation methodology for all activities. Woodside response: Woodside confirmed it has consulted with Traditional Custodians from 2018 to present and has completed numerous activities to understand the potential for Traditional Custodians (and non-First Nations) Underwater Cultural Heritage to exist in areas where activities will be undertaken.</p>	<p>(4) Consultation with Traditional Custodians is described in Appendix F of the EP. New heritage information, where applicable to this proposed activity, will be addressed as part of ongoing consultation as referenced in Section 5 of the EP.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its</p>	<p>No additional measures or controls are required.</p>

	Management of Change and Revision process (see Section 7.2.5.2 of this EP).	
--	---	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAM for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the WAM on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the WAM over a 4.5-month period..

Pilbara Ports Authority (PPA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed PPA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with PPA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation information provided to the PPA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the PPA with the opportunity to provide feedback over a 4.5-month period.

Commonwealth and WA State Government Departments or Agencies – Environment

Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DAFF advising of the proposed activity (Record of Consultation, reference 1.12) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 11 August 2023, DAFF emailed Woodside outlining the Department's biosecurity requirements (SI Report, reference 6.1). DAFF also stated the following:
 - **(1)** Intended operating practices may expose domestic conveyances (support vessels and aircraft) to interactions with the Installation/PIV/MODU which may pose an unacceptable level of biosecurity risk.
 - **(2)** To have biosecurity risk status assessed, offshore installation projects must apply to the department at least two months prior to project commencement.
 - **(3)** Requested information must be submitted before the assessment can commence.
- On 27 November 2023, Woodside responded (SI Report, reference 6.2) as follows:
 - **(1)** Recognises the requirement to manage biosecurity risk to domestic conveyances, the attention drawn to requirements under the *Biosecurity Act 2015*, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016.
 - **(2)** Notes the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination".
 - **(3)** Prior to the entry of the Floating Production Unit (FPU) into Australian waters, Woodside will ensure that all specified requirements are met and that all required reporting and documentation detailed in DAFF's email are submitted to allow for timely assessment of the FPU as required under the *Biosecurity Act 2015*.
 - **(3)** Woodside will be the operator of the FPU but will not be the operator of other vessels described in the EP. Woodside continues to work closely with its contractors to ensure compliance with all requirements can be met as defined by DAFF's email, and meet all requirements under Section 6 of the Biosecurity (Exposed Conveyances – Exceptions from Biosecurity Control) Determination 2016.
- A third-party contractor has been negotiating, via phone calls and emails, the application for ballast water exemption for the temporary ballast water treatment system with DAFF on behalf of Woodside. At submission of this EP this process was still underway.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Flagged that intended operating practices may expose domestic conveyancers to interactions which may pose an unacceptable level of biosecurity risk. Noted that an exposed conveyance may be eligible for an exception from biosecurity control if the department concludes that the level of risk associated with the survey vessel is low.</p>	<p>(1) Woodside assessment: Woodside recognises domestic conveyances could be exposed to biosecurity risks which will be managed in accordance with the <i>Biosecurity Control Act 2015</i>. Woodside response: Woodside confirmed it recognised the requirement to manage biosecurity risk to domestic conveyances, the attention drawn to requirements under the Biosecurity Control Act 2015, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016.</p>	<p>(1) Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.11 of the EP). Vessels are required to comply with the Australian <i>Biosecurity Act 2015</i>, specifically the Australian Ballast Water Management Requirements (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS.</p>
<p>(2) Noted to have biosecurity risk status assessed, offshore installation projects must apply to the Department at least two months prior to project commencement.</p>	<p>(2) Woodside assessment: Woodside reviewed the biosecurity risk status assessment timeframe. Woodside response: Woodside noted and will adhere to the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination".</p>	<p>(2) Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.11 of the EP). Vessels are required to comply with the Australian <i>Biosecurity Act 2015</i>, specifically the Australian Ballast Water Management Requirements (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS.</p>
<p>(3) Requested that all information must be submitted before the assessment can commence.</p>	<p>(3) Woodside assessment: Woodside acknowledged the information required for the biosecurity risk status assessment submission for the FPU. Woodside will need to work with contractors of other vessels to ensure compliance with DAFF's request. Woodside response: Woodside advised that prior to the entry of the FPU into Australian waters, Woodside would ensure that all specified requirements are met and that all required reporting and documentation detailed in DAFF's email are submitted to allow for timely assessment of the</p>	<p>(3) Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.11 of the EP).</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>FPU as required under the <i>Biosecurity Act 2015</i>. For clarity, Woodside also advised that Woodside would be the operator of the offshore installation (being the FPU) but would not be the operator of other vessels described in the EP. Woodside continues to work closely with its contractors to ensure compliance with all requirements can be met as defined by DAFF's email, and meet all requirements under Section 6 of the Biosecurity (Exposed Conveyances – Exceptions from Biosecurity Control) Determination 2016.</p>	
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Vessels are required to comply with the Australian <i>Biosecurity Act 2015</i>, specifically the Australian Ballast Water Management Requirements (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS.</p> <p>Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 6.8.11 of the EP).</p> <p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DAFF for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DAFF on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the DAFF over a 4.5-month period.

Department of Climate Change, Energy, the Environment and Water Agriculture (DCCEEW)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 9 August 2023, Woodside emailed DCCEEW advising of the proposed activity (Record of Consultation, reference 1.15) and provided a Consultation Information Sheet, Commonwealth Shipwrecks Information, and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.42).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DCCEEW for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DCCEEW on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the DCCEEW with the opportunity to provide feedback over a 4.5-month period.

Director of National Parks (DNP)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 1.16) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.43).
- On 23 November 2023, in the absence of specific feedback from DNP, Woodside sent a second follow-up email (Record of Consultation, reference 1.52). This email reviewed past feedback from DNP on the Scarborough D&C, SITI, Seismic and Subsea EPs which may be relevant to this EP and provided assessment and response as follows:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Activities identified and managed all impacts and risks on Australian marine park values (including ecosystem values) to an acceptable level and had considered all options to avoid or reduce them to ALARP.
- Activities must not be inconsistent with marine park management plans.
- Notification instructions in emergency response situations.
- On 7 December 2023, DNP responded thanking Woodside for consulting with it regarding this EP and apologised for the delayed reply (SI Report, reference 25.1). DNP advised it had the following objections or claims:
 - **(1)** For 24-hour operations within biologically important areas for sea turtles, applicable recommendations from the National Light Pollution Guidelines for Wildlife must be adopted.
 - **(2)** For routine and non-routine discharges relating to subsea operations and activities, that where possible, marine parks were avoided for this type of activity. If this type of activity could not be avoided, then the impacts of the discharge must be reduced to ALARP and comply with relevant regulatory requirements or frameworks (such as the Chemical Hazard Assessment and Risk Management model under the Offshore Chemical Notification Scheme).
- On 8 December 2023, Woodside responded thanking DNP for its email (SI Report, reference 25.2). Woodside:
 - **(1)** Confirmed it would apply applicable recommendations from the National Light Pollution Guidelines for Wildlife, for operations within 20km of turtle nesting beaches. Due to the remote location of the floating production unit (FPU), Woodside considered that potential impacts to turtles was limited to inspection, maintenance, monitoring and repair works. During activities within 20km of turtle nesting beaches, Woodside would implement controls such as:
 - Lighting be limited to minimum required for navigation and safe operational requirements.
 - Vessel crews trained in light reduction measures when operating within 20km of islands.
 - Use of block out blinds on accommodation quarters.
 - **(2)** Advised there were no planned discharges from the Scarborough trunkline in marine parks, and the only planned discharge associated with this PAP which could occur in the Montebello Marine Park Multiple Use Zone (MUZ) were those associated with usual vessel operations governed by MARPOL discharge requirements. Woodside would implement controls while operating in the Montebello MUZ to reduce potential impacts from routine and non-routine discharges, including:
 - Vessels would avoid making discharges including sewage, grey water and food waste until outside of the Montebello MUZ.
 - Chemicals intended or likely to be discharged into the marine environment would be approved through Woodside’s chemical assessment process.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) Provided recommendations from the National Light Pollution Guidelines for wildlife must be adopted for 24-hour operations within biologically important areas for sea turtles.</p>	<p>(1) Woodside assessment: Woodside reviewed the National Light Pollution Guidelines for Wildlife given potential impacts of light pollution sea turtles and uses the guidelines in its impact assessment for this activity. Woodside response: Woodside confirmed it would apply applicable recommendations from the National Light Pollution Guidelines for Wildlife for operations within 20 km of turtle nesting beaches and will implement controls including lighting to be limited to the minimum required for navigation and</p>	<p>(1) Impact and risk analysis, evaluation and Environment Performance Outcomes and Standards for routine light emissions are described in Section 6.7.3 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	safe operational requirements; vessel crews trained in light reduction measures; use of block out blinds on accommodation quarters.	
(2) Included guidance on routine and non-routine discharges relating to subsea operations and activities should, where possible, avoid marine parks.	(2) Woodside assessment: Woodside reviewed guidance on routine and non-routine discharges. Woodside response: Woodside advised there were no planned discharges from the trunkline in marine parks, and the only planned discharge which may occur in the Montebello MUZ were those associated with usual vessel operations. Woodside will implement controls while in the Montebello MUZ including vessels will avoid making discharges until outside of the Montebello MUZ; and chemicals intended or likely to be discharged into the marine environment will be approved through Woodside's chemical assessment process.	(2) Impact and risk analysis, evaluation and Environment Performance Outcomes and Standards for routine and non-routine discharges are described in Sections 6.7.8 – 6.7.12 of the EP.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	The EP demonstrates that the risks and impacts of proposed planned activities within permitted areas of the Dampier Marine Park and Montebello Marine Park are reduced to ALARP and acceptable levels, including protection of Australian Marine Park values (Sections 6.7 and 6.8). While impacts to Commonwealth Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8.2 and Section 6.8.3 and Appendix H. This EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plans (Section 6). Woodside will ensure the DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix I).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DNP for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DNP on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent follow up emails seeking feedback on the proposed activities.
- Woodside has addressed and responded to the DNP over a 4.5-month period.

Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 1 September 2023, DBCA responded thanking Woodside for the email and consultation information (SI Report, reference 18.1). DBCA noted:
 - **(1)** The operations are in vicinity of reserves managed by DBCA under the CALM Act and given the ecological importance of areas potentially affected by a hydrocarbon release from the proposed activities, it is considered important that the baseline values and state of the potentially affected environment are appropriately understood and documented prior to operations commencing.
 - **(2)** It would like to have confidence that Woodside has established appropriate baseline survey data on the current state of areas supporting important ecological values and any current contamination if present within the area of potential impact of hydrocarbon releases.
 - **(3)** It undertakes monitoring in marine parks and reserves and published monitoring reports which are available on its website, however Woodside should be aware this monitoring is targeted to inform DBCA’s values and objectives and is not necessarily suitable to provide baseline information for oil spill risk assessment and management planning.
 - **(4)** It recommends Woodside refer to the Department of Climate Change, Energy, the Environment and Water’s National Light Pollution Guidelines for Wildlife as a best-practice industry standard for managing potential impacts of light pollution on marine fauna.
 - **(5)** In the event of a hydrocarbon release, it is requested that Woodside notify DBCA’s Pilbara regional office as soon as practicable .

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (6) It will not implement an oiled wildlife management response on behalf of a petroleum operator except as part of a whole of government response mandated by regulatory decision makers.
- (7) Woodside should refer to the Department of Transport's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements.
- On 30 October 2023, Woodside responded thanking DBCA for its feedback (SI Report, reference 18.2). Woodside:
 - (1) Confirmed it maintained knowledge and an understanding of areas of ecological importance within and adjacent to operational areas.
 - (2, 3) Advised its oil spill scientific monitoring program would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release.
 - (4) Confirmed it had considered DCCEEW's National Light Pollution Guidelines with respect to vessel activities. The impact assessment determined that the impacts of lighting were as low as reasonably practicable.
 - (5) Advised it had incorporated the DBCA Pilbara regional office telephone number as part of the notifications listed in the Oil Pollution First Strike Plan, which describes the incident management structure, notification and reporting requirements, the Operational Area, activity specific credible spill scenarios, and the hydrocarbon spill response strategies available.
 - (6) Noted that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.
- On 31 October 2023, Woodside emailed DBCA Shark Bay consultation information on this EP and other unrelated EPs (Record of Consultation 1.4).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) DBCA noted that areas of ecological importance are in the vicinity of the proposed operations and could be potentially affected by a hydrocarbon release. It is important that baseline values are understood and documented prior to commencement of activities.</p>	<p>(1) Woodside assessment: Woodside reviewed DBCA's points about ecologically important areas including marine parks and island conservation reserves being located within the EMBA and the potential for them to be affected by planned activities. Woodside response: Woodside reaffirmed that areas of ecological importance in the proximity of the EP Operational Areas would be not impacted by planned activities.</p>	<p>(1) The EP demonstrates that the proposed activities are outside the boundaries of a proclaimed State Marine Park and identifies that there are no credible impacts to the values of any State Marine Parks as a result of planned activities (Section 4.8 and Section 6.8 of the EP). While impacts to Commonwealth Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.8.2, 6.8.3 and Appendix H of the EP.</p>
<p>(2)</p>	<p>(2) Woodside assessment: Woodside reviewed the DBCA request about having the appropriate baseline survey data.</p>	<p>(2) Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>DBCA wants to know that Woodside has established the appropriate baseline survey data on the current state of the areas.</p>	<p>Woodside response: Woodside confirmed it maintained knowledge and an understanding of areas of ecological importance adjacent to Operational Areas. It utilises an information system to track current existing environment knowledge that is regularly updated. Woodside advised its oil spill scientific monitoring program provides for a quantitative assessment of overall impacts in the event of an unplanned hydrocarbon release.</p>	<p>environmental baseline studies database is completed and documented as described in Section 7.12 of this EP.</p>
<p>(3) DBCA encouraged Woodside to acquire the necessary information to implement a Before-After Control Impact (BACI) framework.</p>	<p>(3) Woodside assessment: Woodside reviewed the request about implementing a BACI framework. Woodside response: Woodside advised its oil spill scientific monitoring program (SMP) would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors.</p>	<p>(3) Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to environmental baseline studies database is completed and documented as described in Section 7.12 of this EP.</p>
<p>(4) DBCA recommended Woodside refers to DCCEEW's National Light Pollution Guidelines for Wildlife.</p>	<p>(4) Woodside assessment: Woodside referred to the DCCEEW's National Light Pollution Guidelines for Wildlife. Woodside response: Woodside confirmed it had considered DCCEEW's National Light Pollution Guidelines for Wildlife and that lighting associated with this EP is required as a priority for safe operation.</p>	<p>(4) Woodside's impact assessment for light emissions is based on recommendations of the National Light Pollution Guidelines for Wildlife (see Section 6.7.3).</p>
<p>(5) DBCA referenced its Incidents and Emergency process, including that Woodside notify DBCA's Pilbara office as soon as practicable in the event of a hydrocarbon release.</p>	<p>(5) Woodside assessment: Woodside noted DBCA's 'Incidents and Emergency Response' process. Woodside response: Woodside confirmed the DBCA Pilbara number had been incorporated as part of the Oil Pollution First Strike Plan.</p>	<p>(5) DBCA's Pilbara phone number has been incorporated into the Oil Pollution First Strike Plan for this EP (see Appendix I).</p>
<p>(6) DBCA will not implement an oiled wildlife management response except as part of a mandated government response.</p>	<p>(6) Woodside assessment: Woodside reviewed that DBCA would not implement an oiled wildlife management response. Woodside response: Woodside noted that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.</p>	<p>(6) Woodside's Oiled Wildlife Response is included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP (see Appendix H).</p>
<p>(7) DBCA referred Woodside to the Department of Transport's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note</p>	<p>(7) Woodside assessment: Woodside reviewed the recommendation to review the DoT's web content regarding marine pollution and the Offshore</p>	<p>(7) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements.</p>	<p>Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements.</p> <p>Woodside response: Woodside noted the DoT's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements.</p>	
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DBCA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DBCA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to the DBCA over a 4.5-month period.

Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed NCWHAC advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
--	---	--------------------------------------

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
---	--	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NCWHAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the NCWHAC on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the NCWHAC with the opportunity to provide feedback over a 4.5-month period.

Commonwealth and WA State Government Departments or Agencies – Industry

Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DISR advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DISR for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DISR on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the DISR with the opportunity to provide feedback over a 4.5-month period.

Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DEMIRS advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside will provide notifications to DEMIRS prior to the commencement of the activity (Table 7-7 of this EP). Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside will provide notifications to DEMIRS at least 10 days prior to commencement of activities, as referenced at Section 7.9 in the EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DEMIRS for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the DEMIRS on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the DEMIRS with the opportunity to provide feedback over a 4.5-month period.

Commonwealth Commercial fisheries and peak representative bodies

North West Slope and Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed North West Slope and Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted AFMA, DAFF – Fisheries, CFA and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with North West Slope and Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the North West Slope and Trawl Fishery on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the North West Slope and Trawl Fishery with the opportunity to provide feedback over a 4.5-month period.

Western Deepwater Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Western Deepwater Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted AFMA, DAFF – Fisheries, CFA and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-7) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Deepwater Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the Western Deepwater Trawl Fishery on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the Western Deepwater Trawl Fishery with the opportunity to provide feedback over a 4.5-month period.

Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed CFA advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted AFMA, DAFF-Fisheries, CFA and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, (see Table 7-7) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CFA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to the CFA on 9 August 2023 based on their functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the CFA with the opportunity to provide feedback over a 4.5-month period.

State Commercial fisheries and peak representative bodies

Mackerel Managed Fishery – Pilbara (Area 2)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.46).
- Woodside consulted relevant individual fishery licence holders in Mackerel Managed Fishery – Pilbara (Area 2). On 11 September 2023, WAFIC, on behalf of Woodside, emailed Mackerel Managed Fishery (Area 2) individual licence holders advising of the proposed activity (Record of Consultation, reference 1.47) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Mackerel Managed Fishery – Pilbara (Area 2) individual licence holders regarding the activity (SI Report, reference 40.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with North West Slope and Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Mackerel Managed Fishery – Pilbara (Area 2) on 9 August 2023 based on their functions, interests or activities.

- Woodside has provided Pilbara Trawl Fishery with the opportunity to provide feedback over a 4.5-month period.

Pilbara Trap Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Pilbara Trap Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- Woodside consulted relevant individual fishery licence holders in Pilbara Trap Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Pilbara Trap Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.47) and provided a Consultation Information Sheet.
- On 23 September 2023, WAFIC sent a follow up email (Record of Consultation, reference 1.48).
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Pilbara Trap Fishery individual licence holders regarding the activity (SI Report, reference 48.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Trap Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Pilbara Trap Fishery on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside and WAFIC have sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Pilbara Trap Fishery with the opportunity to provide feedback over a 4.5-month period.

Pilbara Line Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Pilbara Line Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- Woodside consulted relevant individual fishery licence holders in Pilbara Line Fishery. On 11 September 2023, WAFIC, on behalf of Woodside, emailed Pilbara Line Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.47) and provided a Consultation Information Sheet.
- On 23 September 2023, WAFIC sent a follow up email (Record of Consultation, reference 1.48).
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Pilbara Line Fishery individual licence holders regarding the activity (SI Report, reference 49.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Line Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation information provided to Pilbara Line Fishery on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside and WAFIC have sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Pilbara Line Fishery with the opportunity to provide feedback over a 4.5-month period.

Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed WAFIC advising of the proposed activity (Record of Consultation, reference 1.9) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 16 August 2023, Woodside emailed WAFIC following a phone call earlier that day and confirmed a meeting for 28 August 2023. Woodside also provided an outline of previous, current and upcoming consultation on EPs including this one (SI Report, reference 10.1).
- On 25 August 2023, Woodside sent a letter to WAFIC acknowledging the volume of consultation under consideration by WAFIC and offering to meet to improve consultation outcomes (SI Report, reference 10.2).
- On 28 August 2023, Woodside met with WAFIC and gave a presentation on EPs (SI Report, reference 10.3).
- On 28 August 2023, following a phone call earlier that day regarding consultation on upcoming EPs, Woodside emailed WAFIC regarding consultation information to be sent via WAFIC on Woodside's behalf as per the fee-for-service agreement for this EP (and for two other EPs) (SI Report, reference 10.4).
- **(1, 1)** On 31 August 2023, following a phone call on 30 August 2023 where it was agreed that WAFIC and Woodside would enter into an agreement around EP consultation, Woodside emailed WAFIC and asked that WAFIC circulate consultation material for this EP and another EP under the fee-for-service option 1 (SI Report, reference 10.5).
- **(2)** On 31 August 2023, WAFIC emailed Woodside seeking clarification on the identification of fisheries in the Operational Area for the activities that are the subject of this EP and confirmed that WAFIC would not be distributing consultation information to licence holders in the EMBA as they do not represent Commonwealth fisheries. WAFIC also advised it would consider a longer-term approach to consultation (SI Report, reference 10.6).
- **(2)** On 1 September 2023, Woodside spoke to WAFIC and sent a follow up email confirming which fisheries needed to be consulted for this EP (SI Report, references 10.7 and 10.8).
- On 11 September 2023, WAFIC emailed relevant commercial fishing licence holders for this activity (SI Report, reference 10.9). The email provided information about this activity and stated that WAFIC was working with Woodside to strategically streamline consultation with the commercial fishing industry. WAFIC requested that any feedback specific to the proposed activity was provided to them.
- **(3)** On the same day, WAFIC confirmed it had delivered consultation notification for this EP to licence holders in the relevant fisheries (SI Report, reference 10.10).

- **(4)** On 12 October 2023, WAFIC advised it had received feedback from one licence holder in the West Coast Deep Sea Crustacean Fishery, stating they were currently south of the operations but as they had been working north of Exmouth in previous years, they appreciated the consultation information. WAFIC advised it had no further concerns regarding the proposed activities (SI Report, reference 10.12).
- **(3, 4)** On 13 October 2023, Woodside thanked WAFIC (SI Report, reference 10.13).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Following feedback from WAFIC regarding the volume of consultation required for Woodside EPs, WAFIC and Woodside negotiated a fee-for-service agreement for this EP.</p>	<p>(1) Woodside assessment: Woodside considered WAFIC feedback on the volume of consultation required for its EPs. Woodside response: Woodside agreed a fee-for-service agreement with WAFIC was appropriate to facilitate best practice consultation for this EP. Woodside and WAFIC negotiated an initial fee-for-service agreement for this and two other EPs.</p>	<p>(1) Not required.</p>
<p>(2) WAFIC sought clarification on Operational Area fisheries and confirmed it would not distribute consultation information to licence holders in the EMBA.</p>	<p>(2) Woodside assessment: Woodside considered WAFIC's advice to not distribute consultation information to license holders in the EMBA. Woodside response: Woodside accepted WAFIC's advice that WAFIC would not distribute consultation information to license holders in the EMBA.</p>	<p>(2) Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP.</p>
<p>(3) WAFIC confirmed it had delivered consultation material to relevant fisheries.</p>	<p>(3) Woodside assessment: Woodside reviewed WAFIC's update on outreach to relevant fisheries which gave them sufficient information to make an informed assessment of possible consequences of the activity on their functions, interests or activities per regulation 25 of the Environment Regulations. Woodside response: Woodside noted consultation information had been distributed to relevant fisheries via WAFIC.</p>	<p>(3) Not required.</p>
<p>(4) WAFIC advised it had no further concerns regarding the proposed activities, and that it had received one response from a licence holder advising that they appreciated the consultation information.</p>	<p>(4) Woodside assessment: Woodside viewed WAFIC response regarding having no further concerns on the proposed activities. Woodside response: Woodside noted WAFIC had no further comments and that while one licence holder had responded following consultation, there were no objections or claims from that relevant fishery.</p>	<p>(4) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>
--	---	---

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAFIC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to WAFIC on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the WAFIC over a 4.5-month period.

Recreational marine users and peak representative bodies

Karratha Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Karratha Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.5) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users.</p>	<p>No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	
--	---	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Karratha Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Karratha Recreational Marine Users on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Karratha Recreational Marine Users with the opportunity to provide feedback over a 4.5-month period.

Exmouth Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Exmouth Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.5) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Outcomes of Consultation		
<p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exmouth Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2023. • Consultation information provided to Exmouth Recreational Marine Users on 9 August 2023 based on their functions, interests or activities. • Woodside has provided a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. • Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided Exmouth Recreational Marine Users with the opportunity to provide feedback over a 4.5-month period. 		
Gascoyne Recreational Marine Users		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> • On 9 August 2023, Woodside sent a letter to Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.6) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. • On 31 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.49). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	<p>Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	No additional measures or controls are required.
Outcomes of Consultation		

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Gascoyne Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Gascoyne Recreational Marine Users on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up letter seeking feedback on the proposed activities.
- Woodside has provided Gascoyne Recreational Marine Users with the opportunity to provide feedback over a 4.5-month period.

Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.6) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.49).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara/Kimberley Recreational Marine User for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Pilbara/Kimberley Recreational Marine Users on 9 August 2023 based on their functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up letter seeking feedback on the proposed activities.
- Woodside has provided Pilbara/Kimberley Recreational Marine Users with the opportunity to provide feedback over a 4.5-month period.

Recfishwest

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 11 August 2023, Recfishwest emailed to thank Woodside for the consultation (SI Report, reference 5.1) and stated:
 - **(1)** It was unlikely this project would have a high impact on recreational fishing and that it had no concerns based on the information provided.
 - **(2)** Recfishwest looked forward to further updates as the project progressed.
- **(1, 2)** On 17 August 2023, Woodside thanked Recfishwest for its response (SI Report, reference 5.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
(1) Recfishwest said that it had no objection to the proposed activities.	(1) Woodside assessment: Woodside noted that Recfishwest had no objections to the proposed activities given it was unlikely activities would have a high impact on recreational fishing. Woodside response: Woodside thanked Recfishwest for its prompt response.	(1) Not required.
(2) Recfishwest requested to be kept informed as activities progress, given the areas surrounding the operations are accessed by recreational fishers.	(2) Woodside assessment: Woodside acknowledges Recfishwest’s request to be informed as activities progress. Woodside response:	(2) Woodside will provide notifications to Recfishwest (see Table 7-7) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside confirmed it would keep Recfishwest informed as the activities progressed, given that the areas surrounding the operation is accessed by recreational fishers	
While feedback has been received, there were no objections or claims.	Woodside has consulted Recfishwest, Marine Tourism Association of WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Recfishwest for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Recfishwest on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to Recfishwest over a 4.5-month period.

Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WA Game Fishing Association for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to WA Game Fishing Association on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided WA Game Fishing Association with the opportunity to provide feedback over a 4.5-month period.

Titleholders and Operators

Chevron Australia (including Osaka Gas Gorgon, Tokyo Gas Gorgon, JERA Gorgon)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Chevron Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Chevron Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Chevron Australia on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Chevron Australia with the opportunity to provide feedback over a 4.5-month period.

Western Gas

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Western Gas advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Gas for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Western Gas on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Western Gas with the opportunity to provide feedback over a 4.5-month period.

Exxon Mobil Australia

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Exxon Mobil Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exxon Mobil Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Exxon Mobil Australia on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9,11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Exxon Mobil Australia with the opportunity to provide feedback over a 4.5-month period.

- On 9 August 2023, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
---	--	-------------------------------

No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
---	--	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AEP for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to AEP on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided AEP with the opportunity to provide feedback over a 4.5-month period.

Traditional Custodians and nominated representative corporations

The ‘Summary of information provided and record of consultation for this EP’ section demonstrates that consultation for the purpose of regulation 25 of the Environment Regulations is complete. Woodside’s commitment to ongoing consultation with Traditional Custodians includes a Program of Ongoing Engagement, as summarised in Appendix G “Program of Ongoing Engagement with Traditional Custodians.”

Kariyarra Aboriginal Corporation (KAC)

Kariyarra is established under the Native Title Act 1993 by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 18 July 2023, Woodside emailed KAC NOPSEMA’s Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 37.1). This email also reiterated Woodside’s request that KAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed KAC Woodside’s planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 37.2).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 August 2023, Woodside emailed KAC advising of the proposed activity (Record of Consultation, reference 1.26) and provided a Consultation Summary Information Sheet (including a link to the Consultation Information Sheet on Woodside's website). The email requested information on the interests that KAC and its members may have within the EMBA, information on how KAC would like to engage, and requested that KAC provide information to other individuals as required.
- On 31 August 2023, KAC emailed Woodside apologising for not responding sooner and noting that KAC were seeking legal advice on matters (SI Report, reference 37.3).
- On 31 August 2023, Woodside emailed KAC acknowledging their response (SI Report, reference 37.4).
- **(1)** On 31 August 2023, KAC via legal representative emailed requesting information about this activity, indicating they required costs to be met for KAC to be engaged in consultations with Woodside (SI Report, reference 37.5).
- **(1)** On 10 September 2023, Woodside emailed KAC via legal representative indicating they were awaiting internal advice about funding (SI Report, reference 37.6). Woodside confirmed that they had covered costs of consultation meetings with other Aboriginal Corporation Board members.
- **(1)** On 10 September 2023, KAC via legal representative emailed Woodside informing that further consultation could move forward with funding from Woodside (SI Report, reference 37.7).
- **(1)** On 13 September 2023, KAC via legal representative emailed requesting a response to funding as soon as possible to enable further consultation with KAC members (SI Report, reference 37.8).
- On 13 September 2023, KAC via legal representative emailed Woodside requesting a copy of the Summary Information Sheet for this EP previously provided by Woodside to KAC (SI Report, reference 37.9).
- **(1)** On 13 September 2023, Woodside emailed KAC via legal representative with the Summary Information sheet for this EP, noting that Woodside would respond to the funding request once they had carried out due diligence in relation to Anti Bribery and Corruption and re-iterating that Woodside wanted to have a positive relationship with KAC (SI Report, reference 37.10).
- **(1)** On 13 September 2023, Woodside emailed KAC via legal representative confirming that Woodside agreed in principle to funding KAC, noting that reasonable quotes applicable to each line item was required and reiterating that Woodside sought a positive relationship with KAC (SI Report, reference 37.11).
- On 22 September 2023, KAC via legal representative emailed Woodside attaching a letter and Woodside policy documents (SI Report, reference 37.12). The letter set out the following:
 - Requesting a meeting with KAC at a suitable time with an agreed Agenda to be arranged, including preparation of "co-management agreement".
 - **(2)** An Agreement which provides the tools for the effective and ongoing consultation by Woodside with KAC.
 - Noting that KAC asserted sea rights in their native title claim. (Note: Native title was found by the Federal Court not to exist in the sea in the KAC determination).
 - **(1)** An agreed budget to fund (among other things) preparation of Agreement, meetings, and specialist advice.
 - Contact protocols going forward.
- **(1)** On 28 September 2023, KAC via legal representative emailed Woodside a funding request for fees and disbursements, however, did not provide a reasonable basis for the quote (SI Report, reference 37.13).
- Between 20 -23 October 2023, several emails were exchanged in relation to costs and Woodside reiterated the need for a reasonable quote (SI Report, references 37.14, 37.15, 37.16, 37.17, 37.18 and 37.19)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** On 26 October 2023, KAC via legal representative emailed Woodside in relation to meeting with KAC about EPs, stating Woodside's proposed cost structure was inadequate and stated that KAC would discuss funding with both the Environmental Defenders Office and the neighbouring Traditional Owners that had taken court action against Woodside (SI Report, reference 37.20).
- On 14 November 2023, KAC via legal representative emailed Woodside in relation to costs of consultation meetings noting that they had taken their concerns to the EDO (SI Report, reference 37.21).
- **(1, 2)** On 22 November, Woodside emailed KAC via legal representative reiterating a preparedness to fund consultation for consultation meetings and noting that Woodside were looking at implementing further environmental controls in relation to operations to reduce or remove any potential impact to KAC sea country. Woodside said they wished to progress the framework agreement and suggested a full day meeting with KAC. The agreement could set out a protocol for ongoing consultation on EPs where consultation for purposes of developing an EP is closed, and for consultation on development of EPs for new activities (SI Report, reference 37.22).
- **(2)** On 23 November 2023, KAC via legal representative emailed Woodside agreeing to Woodside's proposal in the email of 22 November 2023, requesting a draft protocol and suggesting several dates for a meeting between KAC and Woodside (SI Report, reference 37.23).
- **(1)** On 23 November 2023, KAC via legal representative emailed Woodside seeking costs already incurred for services to KAC (SI Report, reference 37.24).
- On 29 November 2023, KAC via legal representative emailed Woodside following a phone conversation with Woodside, confirming a meeting of 5 December 2023 in Karratha with KAC and included quotes for meeting costs (SI Report, reference 37.25).
- **(2)** On 29 November 2023, KAC via legal representative emailed Woodside with details of meeting with KAC, request for proposed protocol and suggested Agenda for the meeting (SI Report, reference 37.26).
- **(1, 2)** On 29 November 2023, Woodside emailed KAC via legal representative attaching Woodside's Program of Ongoing Consultation (SI Report, reference 37.27), a revised Agenda and suggesting the protocol between KAC and Woodside would set out:
 - How Woodside and KAC would consult, the basic procedure for initial and ongoing consultation in relation to activities.
 - Agreement as to how Woodside would provide KAC information.
 - How KAC would provide feedback and how Woodside represents that into submissions.
 - Agreed schedule of rates.
 - How the outputs of the consultations are managed.
- On 29 November 2023, KAC via legal representative emailed Woodside with an amended proposed Agenda for the upcoming meeting (SI Report, reference 37.28).
- On 5 December 2023, Woodside and KAC met in Port Hedland (SI Report, reference 37.29). At the meeting Woodside:
 - **(2)** Presented on an Engagement Protocol.
 - Described what Woodside plan to do to protect the environment.
 - Presented the regulatory context.
 - Spoke about the biological studies that are carried out through different times of the year.
 - Discussed why Woodside were talking to KAC.

- Displayed the EMBA and how it was developed.
- Showed projects open for ongoing consultation.
- Spoke to what Woodside were seeking to understand from KAC:
 - How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
- **(3)** KAC asked how Woodside maintain the validity of controls over periods of times, sighting turtles as an example in terms of whether current controls would be sufficient into the future.
 - **(3)** Woodside noted that there is ongoing monitoring and Woodside would apply its Management of Change and Revision process to address controls.
- Noted the EPs subject of ongoing consultation, including this EP.
- Spoke to planned and unplanned risks.
- KAC gave a presentation to Woodside on their sea country rights and duties:
 - **(4)** Accessing sea country for fishing, trapping, crabbing catching turtle, hunting dugong, using stingray barbs for spears and collecting shellfish.
 - Visiting offshore islands at low tide.
 - **(5)** Passing on traditional knowledge to children.
 - **(5)** Secret totems.
 - **(5)** Having duties to look after and protect all KAC's sea country.
- **(1, 2)** KAC outlined their consultation requirements to Woodside:
 - Co-designed and co-managed approach to protecting sea country.
 - On-going input into EPs.
 - An agreement with Woodside.
 - Funding for sea rangers.
 - A positive and collaborative relationship.
- **(2)** On 13 December 2023, KAC via legal representative emailed Woodside with outcomes of the 5 December 2023 meeting, confirming availability for a workshop in March 2024 and that KAC and Woodside aim to reach agreement on an engagement protocol by mid-2024 (SI Report, reference 37.30).
- On 20 December 2023, Woodside emailed KAC via legal representative confirming the process for ongoing consultation (SI Report, reference 37.31), noting information to be included in this EP provided by KAC:
- **(4)** Sea country resources, gathering and preparing resources, cultural interest species including marine mammals, fish, molluscs, bivalves, gastropods and cephalopods.

- (5) Transfer of knowledge.

Woodside also noted it looked forward to reaching agreement with KAC on a consultation process.

- On 20 December 2023, KAC via legal representative emailed Woodside (SI Report, reference 37.32), noting further information KAC wished noted within this EP:
- (6) Impacts on coastal landforms and coastal native vegetation.
- (7) Tangible and intangible heritage associated with the coast and the ocean.
- On 20 December 2023, KAC via legal representative emailed Woodside acknowledging they looked forward to progressing an agreement in 2024 between KAC and Woodside (SI Report, reference 37.33).

Ongoing engagement:

- (1) On 13 January 2024, KAC via legal representative emailed Woodside a letter outlining proposed costs to settle an agreement with KAC board (SI Report, reference 37.34).
- (2) On 21 February 2024, Woodside emailed KAC via legal representative discussing costings (SI Report, reference 37.35), and attached a letter with the terms of a draft agreement noting:
 - Level of information to satisfy KAC to make informed decisions on the proposed activities.
 - Reasonable period for consultation.
 - How information would be provided.
 - Feedback, objections, and claims and how KAC would provide these.
 - Reasonable costs and expenses to be agreed.
 - How the agreement would be terminated.
- (2) On 22 February 2024, KAC via legal representative exchanged emails with Woodside requesting a word version of the document (SI Report, reference 37.36) to which Woodside responded and supplied (SI Report, reference 37.37).
- (2) On 10 March 2024, KAC via legal representative emailed Woodside (SI Report, reference 37.38) with a draft agreement between KAC and Woodside for Woodside review.
- On 12 March 2024, Woodside emailed KAC via legal representative (SI Report, reference 37.39) acknowledging receipt of the draft agreement and noting they would review and return to KAC in the future.
- On 26 March 2024, KAC via legal representative responded to an email on another activity to advise that KAC would await the consultation agreement for this and other activities (SI Report, reference 37.40).
- (2) On 4 April 2024, Woodside emailed KAC via legal representative advising Woodside had reviewed the draft agreement, provided some amendments for KAC's consideration and requested the date for the next Board meeting (SI Report 37.41).
- On 4 April 2024, KAC via legal representative emailed Woodside advising the amendments were not acceptable (SI Report, reference 37.42). Woodside is reviewing this. Woodside has continued to engage with KAC on other activities.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) KAC has indicated they require costs to be met for KAC to be engaged in consultations with Woodside.</p>	<p>(1) Woodside assessment: The proposed Framework Agreement (See Point (2) below), would be an effective mechanism to address resourcing for ongoing consultation. Woodside response: Woodside supports reasonable requests for resourcing. Woodside have agreed to fund reasonable costs and funded the 5 December 2023 meeting. Woodside will fund future meetings on an agreed costs basis to be set out in the draft agreement, sent to KAC in February 2024.</p>	<p>(1) Not required.</p>
<p>(2) KAC have noted that they want to engage on matters with Woodside and would like to develop an Engagement Protocol for (among other things) ongoing input into EPs and a collaborative relationship with Woodside.</p>	<p>(2) Woodside assessment: An agreement with KAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. Woodside response: Woodside will finalise the draft agreement with KAC which was sent to KAC in February 2024. It will be used to frame ongoing consultation during the life of the EP. Woodside and KAC have agreed to hold a workshop in early 2024 to progress towards finalising the agreement between KAC and Woodside.</p>	<p>(2) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented. The draft agreement with KAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>
<p>(3) At a face-to-face meeting on 5 December 2023, KAC: Asked how the validity of current controls are maintained and appropriate into the future.</p>	<p>(3) Woodside assessment: Management of changes are in accordance with regulations 38 and 39 of the Environment Regulations. Appropriate controls and currency of those controls remain valid through applying new advice from external stakeholders and understanding changes in the environment. Woodside response: Woodside applies its Management of Change and Revision process to address controls.</p>	<p>(3) Management of Change and Revision process (refer to Section 7.2.5.2 of this EP).</p>

<p>(4) At a face-to-face meeting on 5 December 2023, KAC gave a presentation about their sea country rights and duties, they mentioned:</p> <p>Having a duty to look after and protect sea country, mentioning fishing, trapping, crabbing catching turtle, hunting dugong, and using stingray barbs for spears and collecting shellfish.</p>	<p>(4) Woodside assessment: Woodside accepts that KAC may have sea country values within the EMBA for this EP. Woodside response: Woodside has noted the KAC's values and interests in sea country in Section 4.9.</p>	<p>(4) Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>
<p>(5) At a face-to-face meeting on 5 December 2023, KAC gave a presentation about their sea country rights and duties, they mentioned:</p> <p>Having a cultural obligation to look after and protect sea country and secret habitat totems.</p>	<p>(5) Woodside assessment: Woodside respects KAC's position that they have cultural obligations to look after country and cultural knowledge about sea country and customary law. Woodside response: Woodside understands cultural and environmental values are intrinsically linked; in addition to the specific controls for cultural features and heritage values, the controls and performance standards in Section 6 will reduce impacts to cultural features and heritage values, including marine species and habitats.</p>	<p>(5) Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>
<p>(6) At a face-to-face meeting on 5 December 2023, KAC gave a presentation about their sea country rights and duties, they mentioned:</p> <p>Impacts on coastal landforms and coastal native vegetation.</p>	<p>(6) Woodside assessment: Assessment of the impacts and risks associated with the PAP is undertaken in accordance with and consistent with national and international standards and law and policies. Woodside response: Woodside has implemented controls to reduce potential risks and impacts on the environment to ALARP and to an acceptable level.</p>	<p>(6) Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>
<p>(7) At a face-to-face meeting on 5 December 2023, KAC gave a presentation about their sea country rights and duties, they mentioned:</p> <p>Tangible and intangible heritage associated with the coast and the ocean.</p>	<p>(7) Woodside assessment: Woodside seeks to avoid damage or disturbance to cultural heritage (including intangible heritage) and assesses cultural heritage impacts, including both direct and indirect impacts and risks associated with PAPs. Mitigation can include any measure or control aimed at ensuring the viability of the intangible cultural heritage and its intergenerational transmission. Woodside response: Woodside understands cultural and environmental values are intrinsically linked; in addition to the specific controls for cultural</p>	<p>(7) Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>

	<p>features and heritage values, the controls and performance standards in Section 6 will reduce impacts to cultural features and heritage values, including marine species and habitats.</p>	
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside has addressed the objections or claims raised by KAC. No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with KAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on KAC’s preferred method of consultation. This resulted in a face-to-face meeting being coordinated at a location of KAC’s choosing, with KAC nominated representatives. This meeting included Woodside presenting information in a format and style that was readily accessible and appropriate.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to KAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA’s Brochure “Consultation on offshore petroleum environment plans” and Guideline “Guideline: Consultation in the course of preparing an environment plan”.
- Advised that KAC can request that particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside commenced consultation with KAC in August 2023. Woodside has responded to KAC over 9 months, demonstrating a “reasonable period” of consultation, genuine two-way dialogue has occurred through written exchanges on this activity.

Woodside asked KAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on KAC functions, interests or activities.

Murujuga Aboriginal Corporation (MAC)

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi, and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values.

Historical Engagement:

- Woodside has been consulting with MAC on the Scarborough Project area generally since 2018, including over the area for which this EP relates. Woodside noted in discussions about the Scarborough Project that the Floating Production Unit was not part of the initial project EPs.
- On 12 June 2018, Woodside met with MAC to provide a briefing on several projects including Scarborough (SI Report, reference 35.1).
- On 11 September 2018, Woodside met with MAC to provide a briefing on Scarborough’s approvals pathway, schedule, and proposed engagement approach (SI Report, reference 35.2).
- On 12 December 2018, Woodside met with MAC to provide a briefing on Scarborough’s construction footprint and future engagement (SI Report, reference 35.3).
- **(1)** On 1 May 2019, cultural authorities nominated by MAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the traditional custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice (SI Report, reference 35.4). While this survey was conducted nominally for the Scarborough project’s development footprint, a landscape-scale approach was undertaken particularly given the limited knowledge of the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA. Participants contributed to the findings and recommendations of Mott 2019 (which is publicly available) which included:
 - Onshore heritage sites were identified, beyond the Operational Area or EMBA of this EP.
 - No known sites or values were identified beyond the low water mark, but the potential for cultural values to exist was identified as requiring further research.
 - Recommendation to keep Traditional Custodians informed of the broader project.
 - Recommendation to engage with researchers on options to identify submerged heritage.
 - Recommendation for cultural awareness training for contractors.
 - Recommendations for the management of onshore heritage sites beyond the Operational Area or EMBA of this EP.
 - Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.4), keep MAC informed of the progress of the Scarborough project, and where appropriate ensure employees and contractors have completed cultural awareness training through MAC.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(2)** On 25 August 2020, the Woodside CEO and MAC Board met in person at the MAC office on Murujuga about several issues including high-level summary of Scarborough project (SI Report, reference 35.5).
 - MAC members expressed a positive opinion of Woodside and a desire to work together in partnership to achieve future ambitions.
- **(2)** Between December 2020 and May 2021 Woodside met with MAC including a meeting with MAC's Circle of Elders and presented on various components of the Scarborough Project. No feedback was received on activities. (SI Report, reference 35.6)
- On 2 February 2022, Woodside proposed to MAC the establishment of a Heritage Management Committee (HMC) whose role would be to consider the necessary mitigation measures required to address any new heritage information arising following certain milestones related to the Scarborough Project and advise Woodside where any additional mitigation measures are recommended and of any other actions MAC or Woodside should consider (SI Report, reference 35.7).
- **(3)** On 7 October 2022, MAC provided a response to the HMC proposed by Woodside on 2 February 2022 (SI Report, reference 35.8), including a number of suggested changes:
 - That recommendations of the HMC need not be unanimous.
 - That the HMC include MAC staff in addition to MAC Board, executive and Circle of Elders.
 - Developments in regard to the World Heritage listing of the Murujuga Cultural Landscape does not trigger any meeting of the HMC.
 - Regarding the funding structure of the HMC.
- **(3)** On 9 January 2023, Woodside sent a letter to MAC agreeing to issues in correspondence from MAC dated 7 October 2022, and sought confirmation on details of the approach. (SI Report, reference 35.9)
- **(2)** On 22 June 2023, Woodside met with the MAC Board and Circle of Elders and presented on the Scarborough Project (including D&C, SITI, Seismic and Subsea EPs) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP) (SI Report, reference 35.10).

Summary of information provided and record of consultation for this EP:

- On 18 July 2023, Woodside emailed MAC NOPSEMA's *Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information* (SI Report, reference 35.11). This email also reiterated Woodside's request that MAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed MAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 35.12).
- On 21 August 2023, Woodside emailed MAC seeking MAC's cultural clarifications about information in relation to Elder status and whether cultural information about Murujuga can be held by individuals and not known to others (SI Report, reference 35.13).
- On 1 September 2023, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 1.27) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that MAC and its members may have within the EMBA, information on how MAC would like to engage, and requested that MAC provide information to other individuals as required.
- **(1)** On 1 September 2023, MAC emailed a letter to Woodside (SI Report, reference 35.14), noting the following:
 - In response to Woodside's email of 21 August 2023, MAC consulted with women appointed to their Circle of Elders.
 - MAC is comfortable that the women in the Circle of Elders are the right people to be consulted about these matters.
 - MAC notes that it would be extremely unusual for knowledge to be held by an individual without surrounding groups knowing about it.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Circle of Elders themselves represent the Ngarda-Ngarli; the collective term for the Traditional Custodians who look after Murujuga Country.
- **(1)** On 4 October 2023, Woodside phoned MAC to discuss the cultural appropriateness of a proposed visit to Rosemary Island, requested by a self-identifying Traditional Custodian. Woodside was advised not to undertake the trip due to cultural safety concerns.
- **(1)** On 4 October 2023, MAC emailed Woodside thanking it for the call and informing Woodside that it is MAC’s expectation that Woodside continues to request advice regarding cultural safety prior to such trips being undertaken (SI Report, reference 35.15).
- On 4 October 2023, Woodside emailed MAC thanking it for its advice, confirming the trip had been cancelled and that Woodside would continue to seek MAC’s advice on similar matters in future (SI Report, reference 35.16).

Ongoing engagement:

- On 5 January 2024, Woodside emailed MAC (SI Report, reference 35.17) again providing a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside’s website). The email re-attached the email sent to MAC on 1 September 2023 which requested information on how the activity could impact MACs interests, activities and or cultural values, if they had any concerns about the proposed activity and what Woodside should do about those concerns and whether there are other individual, groups or organisations Woodside should talk to. Woodside asked if MAC wished to meet in whatever way was most suitable to MAC and if MAC had any concerns/feedback at this time about this EP.
- **(2)** Woodside provides a weekly update on other components of the Scarborough Project.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) MAC have provided significant valuable input into the management of known and potential cultural and heritage values in the broader Scarborough Project footprint.</p>	<p>(1) Woodside assessment: The completed ethnographic surveys, which align with industry practice, have not identified any heritage risks. The results of these surveys will be addressed through the Heritage Management Committee (see (3)). Woodside response: Woodside remains committed to the further ethnographic surveys planned for the Scarborough Project which go beyond industry standards and is ready to progress these at MAC’s earliest availability.</p>	<p>(1) Existing controls considered sufficient as described in Section 6. Woodside recognises that whales and other species of totemic importance need to be protected, including their populations and migration patterns (Section 4.6). As assessed in Section 6, Woodside considers that when the impacts and risks to marine species, including potential totemic species, have been reduced to ALARP and an acceptable level in offshore areas, the potential impacts and risks to cultural values associated with coastal Indigenous connection with, or traditional uses of marine species and associated ecosystems in nearshore coastal waters are also reduced to ALARP and an acceptable level.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(2) During consultation on similar activities related to the Scarborough Project including the footprint of this Project, MAC have given no feedback and raised no objections or claims to this EP.</p>	<p>(2) Woodside assessment: Woodside respects that MAC decides where to place their time and resources in commenting or engaging on EPs. MAC has engaged in meetings on the Scarborough Project more broadly, asking questions and demonstrating an understanding of the information put to them. Woodside response: Woodside continues to engage with MAC on the Scarborough Project generally and has committed to ongoing consultation (beyond that required by regulation 25 of the Environment Regulations) with MAC Board and Elders.</p>	<p>(2) Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>
<p>(3) On 7 October 2022 MAC provided a response with their suggested changes as to how the HMC will operate.</p>	<p>(3) Woodside assessment: Woodside proposed the HMC to address any new heritage information and allow for mitigation strategies or other action MAC recommends Woodside to undertake. Woodside response: It is appropriate that MAC decide how the HMC should operate, particularly how voting, membership of the HMC and that matters relating to the World Heritage Listing remain separate to the HMC. Woodside agrees with appropriate financial structures.</p>	<p>(3) Woodside and MAC have established the Heritage Management Committee (PS 16.7). Recommendations of the HMC will be implemented where they (independently or in conjunction with other actions) lower the risk of impacts to heritage to ALARP (PS 16.8) New heritage information, where applicable to this proposed activity, will be addressed as part of ongoing consultation (Section 7.9.5).</p>
<p>While feedback has been received, there were no objections or claims</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with MAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside sought direction on MAC's preferred method of consultation. This has not resulted in face-to-face meeting being coordinated on this EP, MAC has been consulted on the overall Scarborough Project over several years, with MAC nominated representatives. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Information Sheets and Summary Information Sheets developed by Indigenous staff to MAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan.
- Advised that MAC can request that particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside first met with MAC to discuss the broader Scarborough Project in August 2020.
- Woodside has addressed and responded to MAC over three years on the Scarborough Project and 9 months on this EP, demonstrating a "reasonable period" of consultation.

Woodside asked MAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since September 2023 and a genuine two-way dialogue has occurred via Scarborough Project meetings and written exchanges to further understand the environment in which the activity will take place.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on MAC's functions, interests or activities.

Ngarluma Aboriginal Corporation (NAC)

NAC is established under the Native Title Act 1993 by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 1 May 2019, cultural authorities nominated by NAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the Traditional Custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Tt-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice (SI Report, reference 35.4). While this survey was conducted nominally for the Scarborough project's development footprint, a landscape-scale approach was undertaken

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

particularly given the limited knowledge of the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA. Participants in this ethnographic survey contributed to the findings and recommendations of Mott 2019 which are detailed in the EP (Section 4.9.4.2) and included:

- Onshore heritage sites were identified, beyond the Operational Area and EMBA of this EP.
 - No known sites or values were identified beyond the low water mark, but the potential for cultural values to exist was identified as requiring further research.
 - Recommendation to keep Traditional Custodians informed including through existing quarterly meetings (see below).
 - Recommendation to engage with researchers on options to identify submerged heritage.
 - Recommendation for cultural awareness training for contractors.
 - Recommendations for the management of onshore heritage sites beyond the Operational Area and EMBA of this EP.
 - Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.4), kept NAC informed of the progress of the Scarborough Project through quarterly meetings (see below), and where appropriate ensure employees and contractors have completed cultural awareness training through NAC.
- **(1)** On 17 May 2023, Woodside met with NAC and presented on the Scarborough Project (including D&C, SIT1, Seismic and Subsea EPs) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP), noting that Woodside would come back to talk further about this activity. NAC asked when the activities were proposed to commence. (SI Report, reference 36.1)

Summary of information provided and record of consultation for this EP:

- On 18 July 2023, Woodside emailed NAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 36.2). This email also reiterated Woodside's request that NAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- On 26 July 2023, Woodside emailed NAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 36.3).
- On 10 August 2023, NAC emailed Woodside to express limited capacity and notify an alternate contact who would be handling EP consultation (SI Report, reference 36.4).
- On 10 August 2023, Woodside emailed NAC apologising for the influx of emails and confirming contact details (SI Report, reference 36.5).
- On 11 August 2023, Woodside held a web meeting with NAC to discuss plans for consultation (SI Report, reference 36.6). NAC requested a list of EPs for which Woodside would seek input from NAC. NAC indicated that it would establish a Working Group which would hold bi-monthly engagements with Woodside. It also noted ongoing capacity issues.
- On 16 Aug 2023, Woodside emailed NAC seeking to re-establish a regular meeting cadence and proposing to commence in the following week (SI Report, reference 36.7).
- On 01 September 2023, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 1.28) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that NAC and its members may have within the EMBA, information on how NAC would like to engage, and requested that NAC provide information to other individuals as required.
- **(2)** On 18 September 2023, NAC emailed Woodside (SI Report, reference 36.8), and proposed:
 - Establishment of Joint Working Group.
 - Woodside to provide draft agreement.
 - Working group meeting commence in October with monthly meetings.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Noting arrangements would cover future scope of consultations with NAC.
- On 28 September 2023, NAC representative emailed Woodside requesting a phone discussion about consultations with NAC (SI Report, reference 36.9).
- **(2, 3)** On 28 September 2023, Woodside had a phone discussion with NAC representative, they were following up on Woodside consultation requests and wished to progress a consultation meeting with NAC Working Group in October (SI Report, reference 36.9). They requested Woodside:
 - Propose date/s to meet.
 - Confirm they would cover cost.
 - Provide any relevant information prior to the meeting.
 - Advise which EPs Woodside would like to consult with NAC on.
 - Woodside agreed to follow up on the above and looked forward to meeting with the Working Group in October.
- On 28 September 2023, Woodside had a phone conversation with a NAC representative on relevant details for a meeting with the NAC working group (SI Report, reference 36.10).
- **(2)** On 10 October 2023, Woodside emailed NAC (SI Report, reference 36.11) in response to their email of 18 September 2023, in principle supporting NAC's proposal for ongoing consultation through a Working Group. Woodside requested meeting dates and requested advice on whether NAC or Woodside would provide a first draft of the agreement.
- On 19 October 2023, Woodside emailed NAC following up on a response to the request in relation to the first draft of an agreement (SI Report, reference 36.12).
- **(2)** On 19 October 2023, NAC emailed Woodside thanking Woodside for confirmation and advising that NAC would share a draft engagement letter in the near future (SI Report, reference 36.13). NAC queried whether there were any urgent matters pending that require NAC's urgent engagement.
- On 2 November 2023, Woodside emailed NAC providing a list of outstanding matters for engagement and noted top priorities as requested by NAC (SI Report, reference 36.14).
- On 3 November 2023, Woodside emailed NAC with an order of priority for current activities and requested availability over the coming weeks (SI Report, reference 36.15).
- **(2)** On 3 November 2023, NAC emailed Woodside advising that the draft Engagement Protocol would be shared on this date and noting that once executed and operational matters could be addressed in the first working group meeting (SI Report, reference 36.16).
- **(2)** On 3 November 2023, NAC emailed Woodside a draft protocol for the process of consultation between NAC and Woodside (SI Report, reference 36.17).
- **(2)** On 13 November 2023, NAC emailed Woodside following a telephone discussion about other unrelated matters to this EP noting a lack of availability to consult on EPs prior to 25 November 2023 and requesting a response to the draft Engagement Protocol (SI Report, reference 36.18).
- On 13 November 2023, Woodside emailed NAC acknowledging that Woodside noted that NAC are not available for consultation prior to 25 November 2023, noting that Woodside would respond to the draft engagement protocol as soon as possible (SI Report, reference 36.19).
- **(2)** On 13 November 2023, NAC emailed Woodside noting there were no other urgent EP consultations, noting this EP (among others) had previously been flagged for consultation and requiring the engagement protocol be in place prior to any meetings occurring (SI Report, reference 36.20).

Ongoing engagement:

- **(2)** On 1 March 2024, Woodside emailed NAC with a letter setting out the draft terms of an agreement between NAC and Woodside (SI Report, reference 36.21), the agreement (among other things) included the following topics:
 - Sufficient Information

<ul style="list-style-type: none"> - Reasonable Period. - Provision of Information. - Objection or claims. - Publications - Cost and termination. <ul style="list-style-type: none"> • On 17 April 2024, NYFL emailed Woodside (SI Report, reference 36.22) to advise there had been a tragic passing in the Roebourne community, the cultural protocols associated with Sorry Business were underway, and that consultation may be impacted as PBC's support affected families. Woodside understands this may impact consultation with NAC. • On 26 April 2024, Woodside emailed NAC to follow up on the draft consultation agreement and asked for an update from NAC on their review of this agreement (SI Report, reference 36.23). No reply has been received. • On 20 May 2024, Woodside emailed NAC to follow up on another activity and to request an update on their review of the consultation agreement (SI Report, reference 36.24). No reply has been received. <p>Quarterly Heritage Meetings:</p> <ul style="list-style-type: none"> • Woodside convenes a quarterly meeting of Traditional Custodian representatives from the Representative Aboriginal Corporations involved in historical native title claims over the Burrup Peninsula, including NAC. Individual attendees are nominated by their representative Aboriginal Corporations. • NAC did not nominate attendees to quarterly meetings in 2021 or the first half of 2022 but were provided with copies of the slides used which included overviews of the Scarborough Project. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) During consultation on similar activities related to the Scarborough Project including the footprint of this activity, NAC asked when the activities were proposed to commence.</p>	<p>(1) Woodside assessment: Woodside responded to NAC's question at the time, no further information has been requested. Woodside response: Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff.</p>	<p>(1) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue ongoing engagement with NAC. Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>
<p>(2) NAC proposed establishing a Joint Working Group to engage in meetings with Woodside for ongoing consultation set out in an Engagement Protocol.</p>	<p>(2) Woodside assessment: An agreement with NAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes, including with the NAC Working Group.</p>	<p>(2) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with NAC (among other things) will set out the process for ongoing engagement. This is</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside will finalise an agreement with NAC to work with the NAC Working Group. The draft agreement sent to NAC in March 2024, will be used to frame ongoing consultation during the life of the EP.	described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).
(3) NAC noted they have capacity issues and require resourcing to cover costs of meeting.	(3) Woodside assessment: The proposed agreement (See Point (2) above), would be an effective mechanism to address resourcing for ongoing consultation. Woodside response: Woodside supports reasonable requests for resourcing.	(3) Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on NAC’s preferred method of consultation. This resulted in correspondence on the activity and telephone engagements with NAC representatives. Woodside has offered to coordinate meetings at the location of NAC’s choosing, with NAC nominated representatives. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to NAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan Provided response to questions asked about the activity through consultation.
- Advised that NAC can request that particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with NAC in August 2023. Woodside has addressed and responded to NAC over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked NAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NAC's functions, interests or activities.

Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the Native Title Act 1993 by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 1 May 2019, cultural authorities nominated by WAC attended an ethnographic survey in conjunction with other Ngarda Ngarli People (the traditional custodians of Murujuga, comprising the Ngarluma, Mardudhunera, Wong-Goo-Ti-Oo, Yaburara and Yindjibarndi people) and both male and female heritage consultants consistent with industry standard practice (SI Report, reference 35.4). While this survey was conducted nominally for the Scarborough project's development footprint, a landscape-scale approach was undertaken particularly given the limited knowledge of the submerged landscape. This survey found no ethnographic values within the Operational Area or EMBA. Participants in this ethnographic survey contributed to the findings and recommendations of Mott 2019 which are detailed in the EP (Section 4.9.4.2) and included:
 - Onshore heritage sites were identified, beyond the Operational Area and EMBA of this EP.
 - No known sites or values were identified beyond the low water mark, but the potential for cultural values to exist was identified as requiring further research.
 - Recommendation to keep Traditional Custodians informed including through existing quarterly meetings (see below).
 - Recommendation to engage with researchers on options to identify submerged heritage.
 - Recommendation for cultural awareness training for contractors.
 - Recommendations for the management of onshore heritage sites beyond the Operational Area and EMBA of this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Following the recommendations of Mott 2019, Woodside conducted further work to identify submerged heritage values (refer to Section 4.9.4), kept WAC informed of the progress of the Scarborough Project through quarterly meetings (see below), and where appropriate ensured employees and contractors had completed cultural awareness training through MAC.
- On 23 March 2023, Woodside met with WAC and presented on several activities including the Scarborough Project (D&C, SITI, Seismic and Subsea) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP) (SI Report, reference 26.1). WAC asked several general questions related to activities, during the meeting which were responded to at that time.

Summary of information provided and record of consultation for this EP:

- On 18 July 2023, Woodside emailed WAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 26.2). This email also reiterated Woodside's request that WAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 20 July 2023, WAC emailed Woodside following Woodside's presentation at a 19 July meeting with WAC about other EPs and requested a list of all Woodside activities and current EPs in preparation (SI Report, reference 26.3).
- On 26 July 2023, Woodside emailed WAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 26.4).
- On 10 August 2023, Woodside emailed WAC providing a list (as requested by WAC) of current and pending EPs, including this activity (SI Report, reference 26.5).
- On 28 August 2023, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 1.29) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that WAC and its members may have within the EMBA, information on how WAC would like to engage, and requested that WAC provide information to other individuals as required.
- **(1)** On 31 August 2023, WAC emailed a letter to Woodside proposing a framework agreement to provide a streamlined, formalised approach to consultation between WAC and Woodside (SI Report, reference 26.6).
- **(1)** On 11 September 2023, WAC emailed Woodside a copy of the letter of 31 August 2023, and advised that WAC does not object to Woodside progressing environment plans for the activities outlined. This was on the proviso that Woodside and WAC enter into a framework agreement to provide for ongoing meaningful consultation with WAC and YM members in relation to activities the subject of EPs, as outlined in their attached letter on terms suitable to both parties within a reasonable period (nominally within the next 2-3 months) (SI Report, reference 26.7).
- On 12 September 2023, Woodside emailed WAC confirming receipt of the email of 11 September 2023 (SI Report, reference 26.8).
- On 28 September 2023, Woodside emailed WAC advising of a new point of contact within Woodside (SI Report, reference 26.9).
- On 3 October 2023, WAC emailed Woodside requesting a meeting to discuss a few issues (SI Report, reference 26.10).
- On 3 October 2023, Woodside emailed WAC confirming Woodside would be happy to meet and proposing dates (SI Report, reference 26.11).
- On 3 October 2023, WAC emailed Woodside to confirm a suitable date (SI Report, reference 26.12) and Woodside replied proposing a meeting location (SI Report, reference 26.13).
- **(1)** On 20 October 2023, WAC and Woodside had a meeting (SI Report, reference 26.14) and discussed:
 - Current EPS and how parties intend to support each other through the process.
 - Woodside's intention to ensure that WAC is adequately consulted on all EPs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- WAC's current corporate restructure and the impact of this on ability to engage in consultation.
- On 12 December 2023, Woodside emailed WAC providing the information on the proposed activity which was originally sent on 28 August 2023 (SI Report, reference 26.15). Woodside again provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that WAC and its members may have within the EMBA, information on how WAC would like to engage, and requested that WAC provide information to other individuals as required.

Ongoing engagement:

- On 28 February 2024, Woodside emailed WAC noting a new point of contact and seeking the appropriate contacts for WAC (SI Report, reference 26.16).
- (1) On 6 March 2024, Woodside emailed WAC with a letter setting out the draft terms of an agreement between WAC and Woodside (SI Report, reference 26.17). The agreement (among other things) included the following topics:
 - Sufficient Information
 - Reasonable Period.
 - Provision of Information.
 - Objection or claims.
 - Publications
 - Cost and termination.
- (1) On 6 March 2024, WAC emailed Woodside requesting a word copy of the draft terms of agreement sent 6 March 2024 (SI Report, reference 26.18).
- On 6 March 2024, Woodside emailed WAC a word copy of the draft terms of agreement (SI Report, reference 26.19).

Quarterly Heritage Meetings:

- Woodside convenes a quarterly meeting of Traditional Custodian representatives from the Representative Aboriginal Corporations involved in historical native title claims over the Burrup Peninsula, including WAC. Individual attendees are nominated by their representative Aboriginal Corporations. These meetings are summarised separately in this table.
- Copies of slides are made available to representative Aboriginal Corporations for the general awareness of members who were not able to attend individual meetings.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) WAC expressed that it does not object to Woodside progressing Scarborough Project EPs (including this activity) on the proviso that Woodside and WAC enter into a framework agreement to provide for ongoing meaningful consultation and a desire for ongoing</p>	<p>(1) Woodside assessment: An agreement with WAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. Woodside response: Woodside will finalise an agreement with WAC and accepts the basis on which they require the agreement, noting that it is not a pre-requisite for consultation under regulation 25 of the Environment</p>	<p>(1) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with WAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

engagement and partnership through a Framework Agreement.	Regulations. The draft agreement sent to NAC in March 2024, will be used to frame ongoing consultation during the life of the EP.	
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on WAC’s preferred method of consultation. This resulted in correspondence on the activity and telephone engagements with WAC representatives. Woodside has offered to coordinate meetings at the location of WAC’s choosing, with WAC nominated representatives. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to WAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA’s Brochure “Consultation on offshore petroleum environment plans” and Guideline “Guideline: Consultation in the course of preparing an environment plan.
- Advised that WAC could request the particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside commenced consultation with WAC in August 2023. Woodside has addressed and responded to WAC over 9 months, demonstrating a “reasonable period” of consultation.

Woodside asked WAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on WAC’s functions, interests or activities.

Yinggarda Aboriginal Corporation (YAC)

YAC is established under the Native Title Act 1993 by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 19 July 2023, Woodside emailed YAC via GAC NOPSEMA’s Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 38.1). This email also reiterated Woodside’s request that YAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 19 July 2023, YAC via GAC emailed Woodside acknowledging receipt of Woodside’s email of 19 July (SI Report, reference 38.2).
- On 26 July 2023, Woodside emailed YAC via GAC Woodside’s planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 38.3).
- On 2 August 2023, YAC legal representative emailed Woodside to indicate that they had been placed on a retainer by YAC to advise on NOPSEMA matters (SI Report, reference 38.4).
- **(1, 2)** On 4 August 2023, YAC via legal representative emailed Woodside noting YAC would engage with Woodside concerning consultation on activities (SI Report, reference 38.5). Woodside were invited to prepare a consultation agreement for YAC’s consideration. A request for funding was put forward.
- On 10 August 2023, YAC via legal representative emailed Woodside (SI Report, reference 38.6), noting that:
 - Woodside had provided a considerable volume of videos, complex materials, and presentations to the YAC board since 1 July 2023, covering multiple proposed activities. The YAC board is seeking advice about different documents and considering cultural and spiritual impacts of proposed activities.
 - The YAC board had not yet concluded its investigations and provided feedback, and stated if Woodside has advanced plans with NOPSEMA it has different view of the role and capacity of Traditional Owners in the process as clarified by Santos v Tipakalippa.
 - **(2)** Requesting appropriate resources and time for YAC board to allow them to form a considered view, as requested on 4 August 2023.
 - YAC board intends to raise matters at a community meeting in Carnarvon in September, including Aboriginal community members who are not YAC members.
- On 11 August 2023, YAC via GAC emailed Woodside confirming a formal resolution by the Board to retain their legal representative to engage on NOPSEMA matters and provided a copy of the Board Resolution (SI Report, reference 38.7).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1, 2)** On 11 August 2023, Woodside emailed YAC via legal representative acknowledging the request for a draft consultation agreement, noting it would be attended to within a week or so and confirming the process for onboarding to receive payments (SI Report, reference 38.8).
- **(1, 2)** On 14 August 2023, YAC via legal representative emailed Woodside stating that it looked forward to receiving the consultation agreement for consideration and agreeing arrangements for provision of resourcing (SI Report, reference 38.9).
- On 01 September, Woodside emailed YAC advising of the proposed activity (Record of Consultation, reference 1.30) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that YAC and its members may have within the EMBA, information on how YAC would like to engage, and requested that YAC provide information to other individuals as required.
- **(1)** On 13 September 2023, YAC via legal representative responded to Woodside advising that in the absence of a draft consultation agreement they were unable to respond in substance to the matters raised (SI Report, reference 38.10).
- **(1)** On 14 September 2023, Woodside emailed YAC via legal representative with a proposed consultation framework (SI Report, reference 38.11).
- **(1)** On 14 September 2023, YAC via legal representative confirmed receipt of the consultation framework and advised they would seek direction from the YAC board (SI Report, reference 38.12).
- **(1)** On 13 October 2023, YAC's legal representative emailed Woodside confirming they act for YAC on NOPSEMA matters (SI Report, reference 38.13). Among other things, they noted, they required an indemnity and hold harmless clause be included in the Framework Agreement to protect against potential exposure to activist litigation.
- On 2 November 2023, Woodside emailed YAC's legal representative advising they would not agree to the request to indemnify YAC against any court proceedings as a result of consultation they engage in with Woodside on EPs (SI Report, reference 38.14).
- On 2 November 2023, YAC via legal representative emailed Woodside requesting information on the reason for Woodside's position not to include indemnification in the consultation agreement (SI Report, reference 38.15).
- On 18 November 2023, Woodside emailed YAC via legal representative with further information about why they would not indemnify YAC as requested in the 13 October 2023 email (SI Report, reference 38.16). Woodside explained that it could harm genuine engagement, may promote behaviours in others who may become aware of the indemnity by Woodside, and it would not be good practice to provide an indemnity in relation to the act or omission of other parties that Woodside would not necessarily engage with.
- On 14 December 2023, Woodside emailed YAC via legal representative providing information about the proposed activity, which was sent to YAC on 1 September 2023 (SI Report, reference 38.17). Woodside requested information on how the activity could impact the interests and activities and or cultural values of YAC. Woodside asked if YAC had any concerns about the proposed activity and what should be done about those concerns and whether there were any other individual, groups or organisation that YAC thought Woodside should talk to. No response was received.
- **(1)** On 8 March 2024 Woodside emailed YAC via a legal representative (SI Report, reference 38.18) with a draft consultation agreement for consideration by YAC and an invitation for YAC to propose a schedule of rates and other details relating to engagement. The draft agreement included:
 - Aims of consultation
 - Proposed consultation agreement details
 - A consultation meeting framework
- **(2)** On 12 March 2024, YAC via a legal representative emailed Woodside with a proposed schedule of rates, indicating they would wait for a response on the proposed schedule of rates before putting the consultation agreement before the YAC Board (SI Report, reference 38.19).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(2)** On 27 March 2024, YAC via a legal representative emailed Woodside (SI Report, reference 38.20) in response to another activity, advising that they require agreement to their proposed Schedule of Fees to be able to proceed with consultation, and a reply to take to the YAC Board.
- On 27 March 2024, Woodside emailed YAC via a legal representative advising they would follow up the status of Woodside’s response (SI Report, reference 38.21).
- **(2)** On 4 April 2024, Woodside emailed YAC via a legal representative advising that Woodside had undertaken a review, providing the Proposed Schedule of Rates for inclusion in the agreement, and asking for the next available Board meeting. (SI Report, reference 38.22).
- **(2)** On 8 April 2024, YAC via legal representative emailed Woodside (SI Report, reference 38.23) advising the next YAC Board would meet on 9 May 2024, asking if Woodside would fund the cost of the meeting for consultation, how much time Woodside would require, and asking for a list of matters for discussion to enable them to provide a cost estimate for legal fees.
- **(2)** On 10 May 2024, Woodside emailed YAC via legal representative (SI Report, reference 38.24) advising Woodside would like to meet with Yinggarda either during or outside of a Board meeting, for a proposed period of 3 hours as Yinggara’s preferred location, that Woodside would cover agreed meeting costs and requesting a cost estimate. Woodside proposed matters for discussion including:
 - EP consultation: overview and EPs current at the time of meeting.
 - Upcoming consultation.
 - Matters Yinggarda would like to discuss.
 - Actions arising and next steps.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) YAC requested a consultation agreement with Woodside and stated that they are unable to respond substantially until Woodside has provided a draft Consultation Framework Agreement which includes suggested timeframes to settle the agreement and timeframes for ongoing consultation with the Board.</p>	<p>(1) Woodside assessment: An agreement with YAC aligns with Woodside’s Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. Woodside response: Woodside will finalise an agreement with YAC, although Woodside does not consider YAC’s request for a consultation agreement as a pre-requisite for consultation under regulation 25 of the Environment Regulations. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has also provided a reasonable period and opportunity for consultation (6 months). The draft agreement sent to YAC in September 2023, will be used to frame ongoing consultation during the life of the EP. Woodside are waiting on a response from YAC.</p>	<p>(1) Woodside’s program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with YAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians. (Appendix G).</p>

<p>(2) YAC requested resourcing to engage in ongoing consultation.</p>	<p>(2) Woodside assessment: The proposed agreement (See Point (1) above), would be an effective mechanism to address resourcing for ongoing consultation. Woodside response: Woodside supports reasonable requests for resourcing.</p>	<p>(2) The Framework Agreement will support any reasonable requests for funding.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with YAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on YAC’s preferred method of consultation. This has not resulted in a face-to-face meeting with the Board, however, Woodside has exchanged multiple correspondence on the activity and telephone engagements with YAC representatives. Woodside has offered to coordinate meetings at the location of YAC’s choosing, with YAC nominated representatives. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to YAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA’s Brochure “Consultation on offshore petroleum environment plans” and Guideline “Guideline: Consultation in the course of preparing an environment plan.
- Advised that YAC could request the particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with YAC in August 2023. Woodside has addressed and responded to YAC over 9 months, demonstrating a “reasonable period” of consultation.

Woodside asked YAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on YAC’s functions, interests or activities.

Yindjibarndi Aboriginal Corporation

Yindjibarndi AC is established under the Native Title Act 1993 by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- **(1)** On 26 February 2023, Yindjibarndi emailed Woodside. Yindjibarndi advised that it will not be providing any comment on the broader Scarborough Project and noted it respected the Traditional Owners whose land and sea lies adjacent to, and within the precinct of, the projects, and will leave any comment and advice to be provided by them (SI Report, reference 33.1).
- On 28 February 2023, Woodside emailed Yindjibarndi to thank them and noted the response (SI Report, reference 33.2).
- **(1)** On 6 & 7 July 2023, Woodside called Yindjibarndi who reiterated they would prefer that comments come from coastal Aboriginal Corporations and not themselves. (SI Report, references 33.3 and 33.4).
- On 18 July 2023, Woodside emailed Yindjibarndi NOPSEMA’s Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside’s request that Yindjibarndi advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email (SI Report, reference 33.5).
- On 26 July 2023, Woodside emailed Yindjibarndi Woodside’s planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 33.6).
- **(2)** On 1 August 2023, Yindjibarndi emailed Woodside in response to the Program of Ongoing Engagement from Woodside and asking that Oil and Gas matters relating to Yindjibarndi be directed to NYFL (SI Report, reference 33.7).
- On 28 August 2023, Woodside emailed Yindjibarndi via NYFL advising of the proposed activity (Record of Consultation, reference 1.31) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside’s website). The email requested information on the interests that Yindjibarndi and its members may have within the EMBA, information on how Yindjibarndi would like to engage, and requested that Yindjibarndi provide information to other individuals as required.

See NYFL on behalf of Yindjibarndi below for record of further engagement.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Yinjibarndi expressed that they would prefer that Traditional Owner groups with land and sea adjacent to and within the precinct of the projects provide comment.</p>	<p>(1) Woodside assessment: Woodside agrees and respects Yinjibarndi's position that Traditional Owners whose land and sea are adjacent to or within the precinct of the projects should be able to provide comment. Woodside response: Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>(1) Woodside's consultation with Traditional Owner groups with land and sea adjacent to the project area is captured in Appendix F and this Table.</p>
<p>(2) Yindjibarndi has instructed Woodside that it will be represented by NYFL in ongoing discussion about EPs.</p>	<p>(2) Woodside assessment: Woodside accepts Yindjibarndi's right to be represented at their own choosing. Woodside response: Woodside will engage with NYFL on behalf of Yindjibarndi for ongoing consultation related to this activity.</p>	<p>(2) Ongoing consultation will be undertaken as set out in Section 7.9.5 of the EP.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Yindjibarndi for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on Yindjibarndi's preferred method of consultation. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to Yindjibarndi. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the information and request for feedback be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that Yindjibarndi can request that particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with Yindjibarndi in September 2023. Woodside has responded to Yindjibarndi over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked Yindjibarndi if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Yindjibarndi functions, interests or activities.

Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the Native Title Act 1993 by the Thalanyji people to represent the Thalanyji people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- Prior to sending out Consultation Information Sheets about the Scarborough Project, Woodside spoke to BTAC on January 4, 2023, to discuss the best way forward to consult with BTAC.
- On 10 January 2023, Woodside emailed BTAC stating it would be very grateful for the opportunity to meet with BTAC in the second half of February as discussed, or sooner if possible (SI Report, reference 32.1). Woodside also offered to cover the reasonable costs of consultations. In relation to the broader Scarborough Project, Woodside stated they would like to discuss:
 - BTAC's expectations for consultation - how Woodside and BTAC could best work together.
 - BTAC's aspirations and plans - how Woodside could support BTAC regarding potential employment and contracting opportunities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Environmental planning consultations about Woodside's Scarborough Project with gas fields planned to be located offshore, approximately 380km northwest of Karratha.

In addition:

- Woodside advised it would like to and is required to consult with BTAC about the nature of any interests BTAC have in the "environment that may be affected" (EMBA) by this work, and any concerns BTAC may have about potential environmental impacts, so these concerns can be addressed through the environmental planning and approvals process.
 - Woodside provided further information about government guidelines for these consultations and provided a link to <https://consultation.nopsema.gov.au/environment-division/consultation-guideline/>.
 - Woodside advised it would reach out shortly with consultation information sheets.
 - Woodside offered to arrange a meeting between senior Woodside staff and BTAC's Board if BTAC believed that was appropriate and it would await guidance from BTAC.
- On 20 February 2023, BTAC emailed Woodside a letter in relation to consultation on the broader Scarborough activities (SI Report, reference 32.2), including the footprint of this activity:
 - BTAC referred to the advertisements placed by Woodside regarding the proposed activities which sought feedback from persons or organisations that may hold interests in the EMBA by the activities.
 - **(1, 2)** BTAC confirmed that BTAC on behalf of Thalanyji people has interests and that the Thalanyji people have an enduring deep connection to sea country north of Onslow, extending out to islands off the Pilbara coast such as the Montebello islands, Barrow Island and the Mackerel Islands.
 - BTAC advised it was seeking the opportunity to engage with Woodside and NOPSEMA on the activities.
 - **(3)** BTAC advised it has not specifically developed values regarding Sea Country into a format that could be articulated for consultation and seeks support from Woodside to enable BTAC to define and articulate its values on Sea Country in a manner that could be more clearly understood by the offshore sector, government, and the community. This would enable BTAC and Woodside to collaborate to develop effective management plans that can provide adequate protection to sea country values.
 - **(4)** BTAC advised the information in the consultation fact sheets was very general. BTAC seeks support from Woodside to obtain technical support to review the information and provide BTAC and its members with feedback on the project risks to Sea Country and help BTAC contemplate the potential management controls that could be developed to protect its values and interests.
 - **(5)** BTAC requested that emergency response capability is developed and locally provided to be able to respond to potential activities/actions that may cause an impact in the EMBA. BTAC encouraged Woodside and industry to build capacity and capability in BTAC's ranger program so that it could participate in response planning and management activities.
 - **(6)** BTAC noted that ongoing consultation with BTAC would be imperative and likely continuous given recent changes to consultation requirements and this will continue to be a burden on the organisation. BTAC requested that Woodside enter a consultation or engagement framework to ensure BTAC can be properly resourced financially and intellectually to participate in the consultation and management planning processes for the activities.
 - Between January 2023 and July 2023, Woodside remained in contact with BTAC exchanging correspondence on the broader Scarborough Project and other activities.

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 19 July 2023, Woodside emailed BTAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that BTAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult (SI Report, reference 32.3). No response was received to this email.
- On 19 July 2023, Woodside emailed BTAC seeking a time to continue discussion regarding a draft presentation for a meeting between Woodside and the BTAC Board about activities on Thalanyji country including other items not related to this proposed activity and seeking to discuss the collaboration principles sent to BTAC on 14 June 2023 (SI Report, reference 32.4).
- On 26 July 2023, Woodside emailed BTAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 32.5).
- On 28 July 2023, BTAC emailed Woodside with outcomes of a meeting held on this date, confirming Woodside had set aside funding for engagement, Woodside wished to meet with BTAC board (or sub-committee) as soon as available to discuss offshore activities/EPs. Woodside would prepare a draft framework agreement to address consultations in relation to NOPSEMA matters (SI Report, reference 32.6).
- (7) On 31 July 2023, Woodside emailed BTAC noting that Woodside would be open to funding a special meeting with the board or sub-committee and requesting a cost estimate for such a meeting (SI Report, reference 32.7).
- (3, 4, 7) On 31 July 2023, Woodside emailed 3 letters to BTAC (SI Report, reference 32.8). One of the letters related to an activity under the Scarborough Project, another of the letters related to another activity. The third letter outlined support for an ethnographic assessment to:
 - Identify sea country values generally sufficient to inform all Woodside EPs.
 - Any work necessary to clarify or define the offshore areas that are relevant to the Thalanyji People.
 - The delivery of interim reports if this will enable prioritising matters considered most critical by BTAC.
 - Enable reasonable costs to complete the assessment.
 - Confirm BTAC retains intellectual property.

The letter relating to another activity under the Scarborough Project provided information as it relates to Thalanyji country. Woodside provided this information to assist Thalanyji to define and articulate sea country values so Woodside could mitigate any potential impacts. Woodside provided timeframes for activities and a map depicting relevant Islands and EP activity area.

- On 15 August 2023, Woodside telephoned and emailed BTAC following up on correspondence from 31 July 2023, requesting to meet and discuss matters with BTAC (SI Report, reference 32.9).
- On 22 August 2023, BTAC emailed Woodside acknowledging correspondence and noting they would come back with a time to meet, and progress matters within the following weeks (SI Report, reference 32.10).
- On 23 August 2023, Woodside emailed BTAC requesting to meet for an initial discussion to layout the various matters that have been under discussion, including BTAC's capacity and priority areas previously identified by BTAC (SI Report, reference 32.11).
- On 1 September 2023, Woodside emailed BTAC advising of the proposed activity (Record of Consultation, reference 1.32) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that BTAC and its members may have within the EMBA, information on how BTAC would like to engage, and requested that BTAC provide information to other individuals as required.

- **(6)** On 14 September 2023, BTAC emailed a letter to Woodside regarding a framework agreement with BTAC (SI Report, reference 32.12). The intent of the agreement would be to formalise a co-ordinated, streamlined approach to progressing meaningful ongoing engagement and consultation. The letter included areas the agreed framework could address, and confirmed that the agreed framework would allow BTAC to meaningfully comment on a range of issues including:
 - How/whether EP activities could impact cultural values, interests and customary or organisational activities and concerns and useful ways these could be addressed.
 - The content of EPs prior to submission to NOPSEMA.
 - Appropriate ways for mitigating risk and ensuring ongoing social licence.
 - **(7)** A further letter was attached outlining a proposed cost recovery mechanism for consultation activities, and BTAC stated that it did not sanction or endorse any consultation occurring without cost recovery.
- On 14 September 2023, Woodside emailed BTAC acknowledging correspondence and noting they would revert to BTAC with a response as soon as they had considered the content of the correspondence (SI Report, reference 32.13).
- **(7)** On 20 September 2023, BTAC emailed Woodside requesting a response from Woodside about accepting the proposed costs acceptance letter which BTAC sent on 14 September 2023 and requesting a list of current and ongoing activities on which Woodside was seeking ongoing consultation (SI Report, reference 32.14).
- **(7)** On 20 September 2023, BTAC emailed Woodside further to their earlier email, requesting a response to BTAC's cost proposal, a list of Woodside activities for ongoing consultation and an update on the status of the framework agreement for BTAC's review (SI Report, reference 32.15).
- **(6, 7)** On 22 September 2023, Woodside emailed BTAC accepting BTAC's proposed consultation fee structure, providing the list of activities that Woodside has consulted BTAC on up to 20 September 2023 and advising that the draft framework agreement was under internal review (SI Report, reference 32.16).
- **(6, 7)** On 26 September BTAC emailed Woodside acknowledging EP information received, signed costs and acceptance letter and acknowledged that a draft agreement was currently under internal Woodside review (SI Report, reference 32.17). The email confirmed BTAC would be assisted with legal advice from a legal representative.
- On 27 September 2023, BTAC's legal representative emailed Woodside clarifying that they are instructed by BTAC on this matter (SI Report, reference 32.18).
- On 4 October 2023, Woodside emailed BTAC via a legal representative thanking BTAC and stating that Woodside looked forward to an ongoing relationship with BTAC and its legal representation (SI Report, reference 32.19).
- On 13 October 2023, BTAC's legal representative emailed Woodside confirming they act for BTAC on NOPSEMA matters. Among other things, they noted, they required an indemnity clause in the proposed framework agreement against any court action that arose from a claim against BTAC in regard to the consultation they engaged on with Woodside EPs (SI Report, reference 32.20).
- On 31 October 2023, BTAC's legal representative emailed Woodside, requesting a response to the email about indemnifying BTAC (SI Report, reference 32.21).
- On 1 November 2023, BTAC emailed Woodside inviting Woodside to present on Woodside activities at a 1-hour slot in the BTAC Common Law Holders meeting on 27 November 2023 (SI Report, reference 32.22).
- **(7)** On 1 November 2023, Woodside emailed BTAC accepting the offer to present at the Common Law Holders meeting and offering to pay costs for the meeting (SI Report, reference 32.23).
- On 2 November 2023, Woodside emailed BTAC's legal representative noting they would not agree to the request to indemnify BTAC against any court proceedings as a result of consultation they engage in with Woodside on EPs (SI Report, reference 32.24). Woodside re-iterated their wish to progress the framework agreement to build their relationship with BTAC. Woodside again noted that they wish to progress other matters, including the commitment to mapping BTAC's sea country values.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 2 November 2023, BTAC's legal representative emailed Woodside requesting more detail about Woodside not supporting the indemnity request (SI Report, reference 32.25).
- On 3 November 2023, BTAC via legal representative emailed Woodside confirming that BTAC would like Woodside to present to a BTAC members meeting on 27 November 2023 in Carnarvon (SI Report, reference 32.26).
- On 18 November 2023, Woodside emailed BTAC's legal representative with further information about why they will not indemnify BTAC as requested in the 13 October 2023 email (SI Report, reference 32.27). Woodside explained that it could harm genuine engagement, may promote behaviours in others who may become aware of the indemnity by Woodside, and it would not be good practice to provide an indemnity in relation to the act or omission of other parties that Woodside would not necessarily engage with. Woodside again noted their commitment to build an ongoing relationship with BTAC.
- **(3, 6, 7)** On 27 November 2023, Woodside attended and presented at the BTAC Common Law Holders meeting (SI Report, reference 32.28). The one-hour timeslot did not allow for taking feedback in relation to EPs, but the Common Law Holders meeting were made aware that Woodside had been attempting to meet since January and had agreed to pay for reasonable consultation costs as well as fund Sea Country mapping but that these offers had not been taken up. BTAC members were very interested in an ongoing relationship and discussed sea country mapping, which Woodside had responded to in writing earlier in 2023, Woodside agreed to re-send the relevant correspondence to the new CEO. BTAC noted they would invite Woodside to attend a meeting with BTAC early in 2024, a collaborative agreement will be settled and further ongoing consultation on all relevant EPs will continue in order of priority for BTAC and Woodside.
- **(6, 7)** On 7 December 2023, Woodside emailed BTAC via legal representative requesting a response to the email of 18 November 2023 in relation to their request and Woodside's response on indemnification (SI Report, reference 32.29). Woodside noted that the framework agreement has not been finalised to date but would include the following:
 - Agreement between parties to consult in a meaningful and genuine manner.
 - Procedure Woodside will follow when a submission requires consultation, which would include notification and an invitation to meet.
 - Initial and ongoing consultation about activities.
 - How Thalanyji provides feedback and how to represent that feedback in submissions.
 - Agreed schedule of rates.
 - How to manage the outputs of consultation.
 - Woodside requested to meet to progress discussions with BTAC.
- **(3, 4, 7)** On 7 December 2023, Woodside emailed BTAC forwarding correspondence received from and correspondence sent to the previous CEO dated 20 February 2023 and dated 17 March 2023, confirming support for recording sea country values and confirming anthropological support (SI Report, reference 32.30). Woodside confirmed support to pay reasonable costs for ethnographic/anthropological support for mapping and recording sea country values. Woodside requested to be contacted to enable progress on the above matters.
- **(3, 5)** On 7 December 2023, BTAC emailed Woodside (SI Report, reference 32.31) accepting the offer to take up sea country mapping and research, and requested a meeting in the week of 15 January 2024 to plan for upcoming activities.
- On 8 December 2023, BTAC's legal representative emailed Woodside in relation to settling finance matters, noting they would wait to schedule a meeting with BTAC once financials were sorted (SI Report, reference 32.32).
- On 8 December 2023, Woodside emailed BTAC's legal representative requesting further details on finances for the framework agreement, noting that Woodside's policies require itemised estimates for services (SI Report, reference 32.33).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 11 December 2023, BTAC's legal representative emailed acknowledging costs estimates would be provided shortly and requesting availability to meet with BTAC during January, February and March 2024 (SI Report, reference 32.34).
- On 12 December 2023, BTAC emailed Woodside asking if 17 January 2024 was a suitable date to meet (SI Report, reference 32.35).
- **(3, 6)** On 12 December 2023, Woodside emailed BTAC's legal representative noting that BTAC had suggested a meeting during the week of 15 January 2024 to discuss sea country mapping (SI Report, reference 32.36). Woodside suggested that they would include time to progress the framework agreement and present on the status of current EPs.
- On 15 December 2023, BTAC emailed Woodside requesting a copy of the slide presentation from the meeting of 27 November 2023 (SI Report, reference 32.37).
- On 18 December 2023, Woodside emailed BTAC a copy of the slide presentation as requested from the meeting of 27 November 2023 (SI Report, reference 32.38).
- On 19 December 2023, Woodside emailed BTAC agreeing to meet on 17 January 2024, Woodside provided an example of costings provided by other PBCs and noted they would not be able to pay legal fees if the framework agreement and EPs were not discussed (SI Report, reference 32.39). Woodside requested other meeting dates if the 17 January 2024 meeting was only to discuss sea country mapping.
- On 19 December 2023, BTAC's legal representative emailed Woodside noting that they had an understanding that the EP consultation and framework agreement would be discussed on 17 January 2024 meeting. BTAC's legal representative queried the detail of the information being sought by Woodside on funding (SI Report, reference 32.40).
- On 20 December 2023, Woodside emailed BTAC's legal representative noting that they were seeking a cost estimate and required this prior to the legal representative being present at the BTAC meeting if they wished to be funded for attendance (SI Report, reference 32.41).

Ongoing engagement:

- On 9 January 2024, Woodside emailed BTAC confirming a meeting on 17 January 2024 to discuss sea country mapping, requesting logistics and cost coverage estimate (SI Report, reference 32.42).
- On 16 January 2024, BTAC emailed Woodside confirming meeting of 17 January 2024 with BTAC and requesting the names of Woodside attendees (SI Report, reference 32.43).
- On 16 January 2024, Woodside emailed BTAC with the names of Woodside attendees, as requested (SI Report, reference 32.44).
- On 17 January 2024, Woodside met with BTAC (SI Report, reference 32.45), and discussed (among other things):
 - (3, 4)** Sea country mapping confirming:
 - BTAC choose their own experts for ethnographic survey.
 - BTAC retain intellectual property of material and may request information not be provided.
 - Fieldwork required with a preferred commencement in April, with Woodside personnel in attendance as guided by BTAC.
 - **(8)** BTAC prefer early notice on EPs, if possible.
 - **(4)** BTAC keen on employment/training opportunities and opportunities for rangers.
 - **(8)** BTAC to form a committee for consultation on EPs.
- **(5)** On 17 January 2024, Woodside emailed BTAC information about training pathways as discussed at the meeting with BTAC on 17 January 2024 (SI Report, reference 32.46).
- On 8 February 2024, Woodside emailed BTAC following up on a quote for Woodside to support BTAC articulating sea country values (SI Report, reference 32.47).

- **(4)** On 8 February 2024, BTAC emailed Woodside noting that they have a consultant generating a scope of work for articulating sea country values which will allow BTAC to understand costings (SI Report, reference 32.48).
- On 8 February 2024, Woodside emailed BTAC acknowledging their response (SI Report, reference 32.49).
- **(6, 8)** On 28 February 2024, Woodside emailed BTAC with a letter setting out the draft terms of an agreement between BTAC and Woodside (SI Report, reference 32.50), the agreement (among other things) included the following topics:
 - Sufficient Information
 - Reasonable Period.
 - Provision of Information.
 - Objection or claims.
 - Publications
 - Cost and termination.
- On 28 February 2024, BTAC's legal representative emailed Woodside querying funding for legal advice for BTAC (SI Report, reference 32.51).
- **(6, 7)** On 28 February 2024, Woodside emailed BTAC's legal representative noting that BTAC had been seeking a draft Consultation Agreement from Woodside and apologising for the delay in providing the draft to BTAC, noting that the rate for engagement could be set out in the agreement (SI Report, reference 32.52). In relation to legal advice Woodside re-iterated that a cost estimate was required and noted that the legal representative's refusal to provide an estimate could be interfering with progressing matters with BTAC.
- On 5 March 2024, BTAC via a legal representative emailed Woodside to request a face-to-face meeting for consultation on another activity, that no meaningful consultation would take place until this occurred, and that BTAC would respond shortly to Woodside's email of 28 February 2024 which included a draft consultation agreement for BTAC's review. (SI Report reference 32.53)
- On 6 March 2024, Woodside emailed BTAC via a legal representative to indicate their willingness to meet face-to-face and to request a suitable meeting date. (SI Report reference 32.54)
- On 11 March 2024, BTAC via a legal representative emailed Woodside to advise they had appointed two liaison committees consisting of BTAC Board members, (a Woodside NOPSEMA Engagement Committee and Macedon ILUA Committee), and they requested to meet with Woodside on the ILUA Committee in the first instance. (SI Report reference 32.55)
- On 27 March 2024, BTAC via a legal representative emailed Woodside in response to another activity and confirming they would nominate a date to meet in the second half of April for the purposes of consultation. (SI Report reference 32.56)
- On 27 March 2024, Woodside emailed BTAC via legal representative to confirm they would await BTAC's advice on a meeting date (SI Report, reference 32.57).
- Between 15 – 22 April 2024, BTAC and Woodside exchanged emails (SI Report, references 32.58, 32.59, 32.60, 32.61) to confirm Woodside would attend a meeting with BTAC Directors on 22 May 2024.
- On 22 May 2024, Woodside met BTAC to discuss another activities and EPs. (SI Report, reference 32.62) During the discussion:
 - **(3)** Woodside reiterated its commitment to supporting BTAC articulate Sea Country Values. Woodside has provided proposals to BTAC and is waiting for a response.

<p>– (5) BTAC indicated an interest in training opportunities and will send Woodside further information on those seeking employment. (5) Woodside committed to looking into training options.</p>		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) BTAC has a cultural obligation to care for the environmental values of sea country.</p>	<p>(1) Woodside assessment: Woodside assessed BTAC's cultural obligation to care for environmental values of Sea country to represent potential cultural values. Woodside response: Updated relevant sections in the EP to record interests and potential cultural values and assessed the potential impact on these and included controls.</p>	<p>(1) Woodside has recorded BTAC's interests and potential cultural values in Section 4.9 and assessed potential impact on these, including controls, in Section 6.10.</p>
<p>(2) BTAC stated that their interests include archaeological sites identified on nearshore islands including the Montebello Islands, Barrow Island and the Montebello Islands.</p>	<p>(2) Woodside assessment: The nearshore islands identified by BTAC do not fall within the EMBA. Woodside response: The islands will not be impacted by any of the activities set out in the EP.</p>	<p>(2) Existing controls considered sufficient as described in Section 6.</p>
<p>(3) BTAC have not specifically developed values regarding Sea Country into a format that could be articulated for consultation. BTAC sought support from Woodside to enable BTAC to define and articulate its values on Sea Country in a manner that could be more clearly understood by the offshore sector, government, and the community.</p>	<p>(3) Woodside assessment: Completion of an ethnographic assessment is not required to undertake or complete consultation under regulation 25 of the Environment Regulations and/or for a comprehensive description of the environment. Opportunity to undertake this work continues under the proposed Collaboration Agreement (see (6) below) as part of ongoing engagement. Woodside has been able to develop a robust understanding of Thalanyji Sea Country cultural values and features in absence of this assessment. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2). Woodside response: Woodside agreed to support the articulation and recording of sea country values. This offer has been taken up and has commenced progress towards the desired outcome. The draft Consultation</p>	<p>(3) Woodside has taken all reasonable steps to identify cultural features and heritage features of Thalanyji people within the EMBA. This is described in Section 4.9, with potential impacts to Cultural Features and Heritage Values assessed in Section 6.10. PS 16.3.1 ensures that potential impacts to newly identified cultural values is managed to ALARP and Acceptable levels.</p>

	Agreement at (6) below includes support for recording and articulation of Sea Country values.	
(4) Requested Woodside supports BTAC in obtaining technical advice relating to the proposed activities which were sent to BTAC.	(4) Woodside assessment: In February 2024, BTAC engaged a consultant who is completing a scope of work to inform BTAC of costings for articulating sea country values (see (3) above). Woodside considers it beneficial for Thalanyji to have technical advice to ensure the delivery of an outcome that does justice to the work involved to record the sea country values. Woodside response: Woodside has offered financial support for technical advice and other support this has now been taken up. The draft Consultation Agreement (see (6) below) includes technical support for recording of sea country values.	(4) Not required.
(5) Expressed desire to be involved in local emergency response capability, potentially via an Indigenous Ranger Program. Interested in opportunities for employment/training.	(5) Woodside assessment: Woodside recognises value in having rangers on the ground trained up in the highly unlikely event of an oil spill. It would be beneficial to an immediate response in an emergency situation. Woodside response: Woodside has offered to support BTAC to engage in management and emergency response. In January 2024 Woodside provided BTAC with information about a training/employment program.	(5) The Program for Ongoing Engagement with Traditional Custodians (Appendix G) includes commitments to social investment to support Indigenous Ranger programs, and support for Indigenous oil spill response capabilities.
(6) BTAC proposed a Consultation Agreement as an appropriate mechanism to provide ongoing feedback to Woodside regarding its activities.	(6) Woodside assessment: An agreement with BTAC aligns with Woodside's Program of Ongoing Engagement with Traditional custodians and will frame ongoing consultation processes. This includes continued engagement regarding the Consultation Agreement that Woodside seeks with BTAC, a draft sent in February 2024 includes (among other things) support for BTAC to define and articulate sea country values, provision of ongoing feedback and cost recovery. Woodside response: Woodside will finalise the draft agreement sent to BTAC in February 2024, it will be used to frame ongoing consultation during the life of the EP. The draft agreement includes support for recording and articulation of Sea Country values and will help support ongoing	(6) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	consultation as set out by BTAC in their 14 September 2023 letter to Woodside, which requested such an agreement. Sufficient information to allow informed assessment has already been provided by other means, including Consultation Information Sheets and a Summary Information Sheet developed by Indigenous staff members.	
(7) BTAC does not endorse any consultation without appropriate cost recovery.	(7) Woodside assessment: The proposed Consultation Agreement is an appropriate mechanism for addressing appropriate cost recovery for BTAC. Woodside response: Woodside has already offered BTAC support for technical advice (see (4, 6) above), which they have now taken up and Woodside has informed BTAC that it would financially support consultation meetings. Woodside and BTAC have agreed on a Costs Acceptance Letter.	(7) The draft Agreement includes provision of appropriate cost recovery.
(8) BTAC requested early notification on EPs and are interested in forming a committee for ongoing consultation on EPs.	(8) Woodside assessment: As described in the summary above, Woodside has afforded sufficient information and reasonable time for BTAC to provide feedback in the course of preparing this EP over the past 6 months. Woodside is supportive of BTAC's desire to form a committee for ongoing consultation on EPs. Woodside response: Woodside supports ongoing consultation being conducted in the most appropriate way for BTAC. The proposed Consultation Agreement has been sent to BTAC for review.	(8) Not required.
Woodside has addressed objections or claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on BTAC's functions, interests or activities. Based on the engagement to date, no additional controls have been identified.
Outcomes of Consultation		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with BTAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on BTAC's preferred method of consultation. This has not resulted in a face-to-face meeting with the Board, however, BTAC has exchanged multiple correspondence on the activity and telephone engagements with BTAC representatives. Woodside has offered to coordinate meetings at the location of BTAC's choosing, with BTAC nominated representatives. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to BTAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that BTAC could request the particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with BTAC in September 2023. Woodside has addressed and responded to BTAC queries over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked BTAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on BTAC's functions, interests or activities.

Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the Native Title Act 1993 by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 9 March 2023, following notification of the broader Scarborough Project, RRKAC emailed Woodside (and copied in CEO of Wirrawandi Aboriginal Corporation (WAC)) (SI Report, reference 27.1):
 - RRKAC advised it had discussed the proposed activities with the Robe River Kuruma Heritage Advisory Committee and they recommended that the interests of Robe River Kuruma people were best served through the joint Heritage Advisory Committee (HAC) that is required under Yaburara Mardudhunera and Kuruma Marthudunera Indigenous Land Use Agreement.
 - RRKAC also suggested that HAC/WAC was required to facilitate this Committee and noted there was an emerging need to deal with other proponent matters, so there is an opportunity to link the engagement from a meeting efficiency perspective.
- On 31 March 2023, Woodside met with HAC/WAC and presented on several activities including the Scarborough Project (D&C, SITI, Seismic and Subsea) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP) (SI Report, reference 27.2). RRKAC asked several general questions related to activities, during the meeting which were responded to at that time.

Summary of information provided and record of consultation for this EP:

- On 19 July 2023, Woodside emailed RRKAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 27.3). This email also reiterated Woodside's request that RRKAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- (1) On 26 July 2023, Woodside emailed RRKAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 27.4).
- (1) On 11 August 2023, RRKAC emailed Woodside in response to another matter and in addition requesting ongoing consultation and training opportunities for rangers to prepare rangers for caring for sea and coastal country (SI Report, reference 27.5).
- On 14 August 2023, Woodside emailed RRKAC thanking them for their response and requesting to meet to discuss training opportunities for rangers (SI Report, reference 27.6).
- On 14 August 2023, RRKAC emailed Woodside agreeing to a meeting and indicating they would arrange a suitable time for a discussion (SI Report, reference 27.7).
- On 29 August 2023, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 1.33) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that RRKAC and its members may have within the EMBA, information on how RRKAC would like to engage, and requested that RRKAC provide information to other individuals as required.
- (2) On 15 September 2023, RRKAC emailed Woodside noting the compliance burden on industry and RRKAC, advising they have noted Woodside's plans, and that they aren't resourced to adequately respond, and would require Woodside to fund additional resources (SI Report, reference 27.8).
- (2) On 18 September 2023, Woodside emailed RRKAC twice, the second email corrected a statement about funding, confirming that Woodside will provide funding to enable groups to participate in consultation (SI Report, references 27.9 and 27.10).
- (2) On 14 November 2023, Woodside emailed RRKAC following up on the offer for Woodside to provide support to RRKAC for EP consultation (SI Report, reference 27.11).
- On 14 November 2023, RRKAC emailed Woodside advising that they would contact Woodside to provide the most appropriate team member to progress discussions (SI Report, reference 27.12).
- On 16 November 2023, Woodside emailed RRKAC with thanks and advised they would wait to hear from the nominated person (SI Report, reference 27.13).
- On 19 December 2023, Woodside emailed RRKAC reiterating that Woodside was available if RRKAC or any other relevant persons required further information on any Woodside project (SI Report, reference 27.14).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Ongoing engagement:</p> <ul style="list-style-type: none"> On 11 January 2024, Woodside and RRKAC, held a telephone discussion (SI Report, reference 27.15): <ul style="list-style-type: none"> (1) RRKAC had recently employed new personnel, RRKAC noted that once the new employees were settled in, RRKAC would be happy to consult with Woodside on relevant EPs. (3) RRKAC noted that some RRKAC country is on the coast (and would be affected by an oil spill or another such environmental incident), they feel that EMBA are far too broad, and the areas covered by EMBA are far too big and unfeasible. (1) On 5 March 2024, RRKAC emailed Woodside responding to another activity, noting that they expected to fill a team position that would be able to respond to EP matters (SI Report, reference 27.16). On 5 March 2024, Woodside emailed RRKAC to acknowledge their response (SI Report, reference 27.17). On 18 March 2024, Woodside emailed RRKAC to follow up on other activities, and asking if there was an opportunity to meet with the Board and interested members (SI Report, reference 27.18). (1,2) On 20 March 2024, Woodside and RRKAC held an online meeting. Woodside outlined the purpose of engagement with Traditional Owner groups and PBC's, consultation on Environment Plans, feedback on heritage and cultural values, opportunities for engagement programs such as rangers and opportunities for future meetings (SI Report, reference 27.19). (1) On 26 March 2024, Woodside emailed RRKAC (SI Report, reference 27.20) to follow up on the meeting, and to outline the upcoming activities for consultation, that reasonable financial support is available for meetings for the purpose of consultation, to ask for guidance on their preferred next steps, and to provide Woodside's Program of Ongoing Engagement. On 5 April 2024, Woodside emailed RRKAC to follow up on previous emails on other activities, to request an opportunity to introduce Engagement staff, and to ask if RRKAC required more information (SI Report, reference 27.21). No reply was received. 		
--	--	--

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) The RRKAC/HAC expressed a desire for ongoing engagement and partnership.</p>	<p>(1) Woodside assessment: Woodside supports ongoing engagement for the life of an EP. Woodside assesses that the Program of Ongoing Engagement with Traditional Custodians will address ongoing engagement and partnership. Woodside response: Woodside is in the process of developing a draft Framework Agreement to address capacity for ongoing engagement and consultation. RRKAC are awaiting the appointment of officers who will engage with Woodside on EPs.</p>	<p>(1) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes addressing ongoing consultation via a Framework Agreement.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(2) RRKAC noted that they are insufficiently resourced to fully engage and respond regarding EPs.</p>	<p>(2) Woodside assessment: The proposed Framework Agreement (See Point (1) above), would be an effective mechanism to address resourcing for ongoing consultation. Woodside response: Woodside supports reasonable requests for resourcing.</p>	<p>(2) The proposed Framework Agreement described in the Program of Ongoing Engagement with Traditional Custodians (Appendix G) addressed appropriate resourcing issues that RRKAC have noted.</p>
<p>(3) RRKAC noted that some RRKAC country is on the coast (and would be affected by an oil spill or another such environmental incident), they feel that EMBA are far too broad, and the areas covered by EMBA are far too big and unfeasible.</p>	<p>(3) Woodside assessment: Woodside aligns with industry guidance in developing the EMBA. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA. Woodside response: The EMBA for this activity is determined by a highly unlikely release of marine diesel as the result of damage to the production facility or vessel collision. Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8 of the EP, and Appendix H.</p>	<p>(3) Woodside has addressed oil spill preparedness and response strategy in Appendix H.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on RRKAC's functions, interests or activities. Based on the engagement to date, no additional controls have been identified.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with RRKAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on RRKAC's preferred method of consultation. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Provided Consultation Information Sheets and Consultation Summary Sheets developed by Indigenous staff to RRKAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that RRKAC can request that particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with RRKAC in August 2023. Woodside has addressed and responded to RRKAC over months, demonstrating a "reasonable period" of consultation.

Woodside asked RRKAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on RRKAC's functions, interests or activities.

Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the Native Title Act 1993 by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

YMAC is the Native Title Representative Body (NTRB) for the Yamatji and Pilbara regions, which includes NTGAC. NTRBs exist to provide assistance to native title claimants and holders in regard to their native title rights. No native title has been recognised over the Project Area, however YMAC is identified in the North-west Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks.

- On 19 July 2023, Woodside emailed NTGAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 31.1). This email also reiterated Woodside's request that NTGAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- On 24 July 2023, Woodside emailed NTGAC via YMAC regarding the content and funding of an upcoming workshop on 15 August 2023, proposed an agenda for the NTGAC meeting and a pre-meeting with YMAC for joint planning (SI Report, reference 31.2).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 26 July 2023, Woodside emailed NTGAC via YMAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians, noting that Woodside's Program would complement what is proposed in NTGAC's proposed Framework (SI Report, reference 31.3).
- On 28 July 2023, NTGAC via YMAC confirmed availability for a pre meeting (SI Report, reference 31.4).
- On 31 July 2023, Woodside emailed NTGAC via YMAC to accept a pre meeting date (SI Report, reference 31.5).
- On 9 August 2023, Woodside emailed NTGAC via YMAC requesting clarity around the meeting scheduled for 15 August 2023 (SI Report, reference 31.6).
- On 14 August 2023, NTGAC via YMAC emailed Woodside acknowledging the meeting to be held 15 August 2023 (SI Report, reference 31.7).
- On 15 August 2023, Woodside presented to the NTGAC/YMAC about several EPs including this activity (SI Report, reference 31.8). At the meeting Woodside:
 - Described the EP framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of EPs.
 - Displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities which were open for consultation in 2023.
 - Provided an update and overview of the Scarborough Project activities including this EP.
 - Described the types of vessels involved.
 - Described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
 - Displayed and spoke to the EMBA for each proposed activity, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
 - Described planned and unplanned risks and impacts of the activity and discussed controls in place to manage risks/impacts to ALARP and acceptable levels.
 - Stated that Woodside wanted to understand how the functions, activities, or interests of NTGAC and the people it represents may be impacted by any of those activities.
 - Specifically asked the following:
 - How could these activities impact your cultural values, interests, and activities – does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
 - Advised that Woodside will continue to take feedback from NTGAC for the life of the EP.
 - Provided personal contact details for further feedback. Woodside provided NOPSEMA contact details, should NTGAC desire to provide feedback directly to the Regulator.
 - NTGAC/YMAC asked the following questions and gave the following feedback:
 - **(1)** YMAC asked about whale sightings and response.
 - **(1)** Woodside responded that response depended on activity and controls, Marine Mammal Observers are implemented.
 - **(2)** NTGAC asked about ballast water discharges.
 - **(2)** Woodside responded by describing Invasive Marine Species requirements and controls.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(3)** A proposed framework for consultation was discussed, involving Woodside funding a General Project Report to be written by an independent suitably qualified and experienced consultant, to be provided to NTGAC initially and then on to Woodside. The General Project Reports were proposed to outline the nature of the activities for each phase of the project and the risks associated with each of the relevant activities.
- Terms for ongoing engagement were discussed, including frequency, participation, and content in context of the proposed General Project Report.
- **(4)** The NTGAC Strategic Plan and relation to potential Woodside social investment opportunities were explored.
- NTGAC stated their consultation expectations (two-way dialogue preferred over one-way presentations and requested that consultation meetings cover whole projects or phases rather than single EP activities which is too time consuming).
- NTGAC requested that a table of EPs be submitted by December with a timeline.
- **(5)** NTGAC stated that they did not consider that they had been consulted on other EPs based on engagement to date, stating that the information provided had been too technical.
- **(3, 4, 5)** On 31 August 2023, Woodside emailed NGTAC via YMAC providing a copy of the presentation from the meeting of 15 August 2023 (SI Report, reference 31.9) Woodside communicated its understanding of next actions:
 - YMAC to provide a first draft of a consultation agreement. Woodside has offered to provide support or first draft if NTGAC desired, however this offer of support has not been accepted.
 - YMAC to prepare the first draft of a general report.
 - Woodside to provide a list of upcoming activities.
 - Woodside agreed to continue discussions relating to key community focus areas highlighted by NTGAC.
 - The feedback from NTGAC on the appropriateness of the information given by Woodside (too technical) to enable NTGAC to provide feedback.
 - Woodside noted that it considered consultation had commenced and was ongoing, however Woodside would work with NTGAC to develop the process further.
- On 31 August 2023, NTGAC via YMAC emailed Woodside confirming they would respond shortly to the outcomes as assessed by Woodside and requested response to queries in relation to another activity (SI Report, reference 31.10).
- On 1 September 2023, Woodside emailed NTGAC via YMAC advising of the proposed activity (Record of Consultation, reference 1.34) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that NTGAC and its members may have within the EMBA, information on how NTGAC would like to engage, and requested that NTGAC provide information to other individuals as required.
- On 6 September 2023, NTGAC via YMAC emailed Woodside acknowledging information and noting it would pass the information over to its environmental scientist, as was stated as part of their proposed framework for consultation at the 15 August 2023 meeting (SI Report, reference 31.11).
- **(3, 4)** On 14 December 2023, Woodside emailed YMAC attaching the Program of Ongoing Engagement and advised that Woodside wanted to progress negotiations on consultation frameworks with groups represented by YMAC (including NTGAC) (SI Report, reference 31.12). Woodside proposed the protocol would include (among other things):
 - The procedures Woodside will follow when a submission requires consultation.
 - Initial and ongoing consultation in relation to activities.
 - Agreement as to how Woodside will provide NTGAC with the information NTGAC requires to make free, prior and informed decisions about Woodside's EPs.

- Agreement as to how NTGAC will provide feedback and how that can best be represented in EPs.
- An agreed schedule of rates for NTGAC's participation in consultation.
- How the outputs of the consultations will be managed.

Ongoing engagement:

- On 21 December 2023, Woodside emailed NTGAC via YMAC with a list of upcoming activities, as requested, including this activity (SI Report, reference 31.13).
- (3) On 28 February 2024, Woodside emailed NTGAC via YMAC with a letter setting out the draft terms of an agreement between NTGAC and Woodside (SI Report, reference 31.14). The agreement (among other things) included the following topics:
 - Sufficient Information
 - Reasonable Period.
 - Provision of Information.
 - Objection or claims.
 - Publications
 - Cost and termination.
- On 29 February 2024, YMAC emailed Woodside acknowledging receipt of the information (SI Report, reference 31.15). No further response has been received.
- On 16 May 2024, Woodside emailed NTGAC via YMAC to request potential availability to meet with the NTGAC Board in coming months for the purposes of consulting on EPs (SI Report, reference 31.16).
- On 21 May 2024 Woodside and NTGAC via YMAC exchanged emails on the possibility of meeting with the NTGAC Board in July. NTGAC outlined that the Board had a relatively full agenda and they would respond with confirmation of their availability (SI Report, references 31.17, 31.18, 31.19).

Woodside will continue to pursue an ongoing two-way relationship with NTGAC under the Proposed Program of Ongoing Engagement with Traditional Custodians.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) NTGAC requested further information on the following topic related to this proposed activity: Whale sightings and response.</p>	<p>(1) Woodside assessment: Woodside has controls in place that address relevant activities in relation to whale sightings and response. Woodside response: Marine Mammal observers are in place during relevant activity and vessel speed management controls are in place when relevant.</p>	<p>(1) Potential impacts to marine fauna are assessed in Section 6.8.10 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(2) NTGAC requested further information on the following topic related to this proposed activity: Ballast water discharges.</p>	<p>(2) Woodside assessment: Woodside considers the risk of unplanned ballast water exchange manageable given the ballast water and biofouling controls which are implemented during and prior to the PAP. Woodside response: Woodside considers the adopted controls appropriate to manage the risks of invasive marine species to an acceptable level.</p>	<p>(2) Potential impacts from ballast water transfer are assessed in Section 6.8.11 of the EP.</p>
<p>(3) NTGAC are developing the first draft of a Consultation Agreement, and General Report. The proposal for the General Report is that it would outline the nature of the activities for each phase of the project and the risks associated with each of the relevant activities. Woodside are awaiting receipt of the initial draft of the General Report.</p>	<p>(3) Woodside assessment: An agreement with NTGAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. The agreement and General Report/s would be used to frame ongoing consultation to occur as part of Woodside's commitment to post regulation 25 of the Environment Regulations consultation. Woodside response: Woodside will finalise agreements with WAC, the draft agreement terms sent to NTGAC in March 2024, will be used to frame ongoing consultation during the life of the EP.</p>	<p>(3) Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with NTGAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).</p>
<p>(4) NTGAC are interested in exploring social investment opportunities with Woodside which may support NTGAC's Strategic Plan.</p>	<p>(4) Woodside assessment: The Proposed Program for Ongoing Engagement with NTGAC is an effective mechanism for exploring social investment opportunities for alignment with NTGAC's Strategic Plan. Woodside response: Woodside is continuing to work with NTGAC regarding social investment opportunities.</p>	<p>(4) Not required. Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).</p>
<p>(5) NTGAC claimed that they have not been consulted about the activity to date, stating that they could not provide information on cultural values because the</p>	<p>(5) Woodside assessment: Woodside met with NTGAC nominated representatives, at location of NTGAC's choice on 15 August 2023 for a multiple hour session where the activity was described face to face by Woodside project representatives, subject matter experts and First Nations</p>	<p>(5) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>information provided has been too technical and that timeframes were not sufficient.</p>	<p>relations advisers (see Section 5 in the EP for approach). This included specifically developed “plain English” material developed by First Nations personnel in collaboration with technical experts, maps and pictures. During the meeting, NTGAC and YMAC representatives were encouraged to control the pace of the engagement and seek clarification. NTGAC and YMAC asked questions about the activity (see (1, 2) above) which indicates that material was engaged with. Woodside has also funded YMAC’s in-house environmental scientist to support consultation. Woodside has addressed and responded to NTGAC over 6 months, demonstrating a “reasonable period” of consultation.</p> <p>Woodside response: Woodside does not agree with NTGAC’s claim that it has not yet been consulted on the activity, or that information provided has been too technical. Regulation 25 of the Environment Regulations consultation is complete and closed.</p>	
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on NTGAC’s functions, interests or activities.</p> <p>Based on the engagement to date, no additional controls have been identified.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NTGAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on NTGAC’s preferred method of consultation. This resulted in a face-to-face meeting being coordinated at the location of NTGAC’s choosing, with NTGAC nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate.
- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to NTGAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets be distributed to members and individuals as required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Provided response to questions asked about the activity through consultation. Through these questions, NTGAC have displayed an understanding of the activities under this Environment Plan as well as the broader Scarborough Project.
- Advised that NTGAC can request that particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).
- As per a request from NTGAC, Woodside funded a YMAC lawyer to attend the August meeting with NTGAC. This assisted in ensuring any technical information was provided in a way which allowed NTGAC to make an informed assessment of the possible consequences of the activities on the functions, interests or activities.

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with NTGAC in August 2023. Woodside has addressed and responded to NTGAC over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked NTGAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside has provided a reasonable opportunity for input since August 2023 and a genuine two-way dialogue has occurred via meetings and written exchanges to further understand the environment in which the activity will take place. NTGAC has engaged with the detail of the activity asking related questions. The details of these engagements are described in the consultation summary below.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside does not agree with NTGAC's assertion that it has not yet completed consultation under regulation 25 of the Environment Regulations for the activity. Woodside has assessed the claims and feedback raised by NTGAC, as detailed above alongside Woodside's response to the claims.

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NTGAC's functions, interests or activities.

Native Title Representative bodies

Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exist to assist native title claimants and holders.

Historical Engagement:

- On 7 July 2022, Woodside met with YMAC to request advice on the appropriate cultural authorities for the Scarborough Project area, including but not limited to the scope of this EP and nearby marine parks (SI Report, reference 28.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside described the Scarborough Project and its footprint and gave an overview of indigenous parties consulted.
- Woodside noted that YMAC was identified in the North West Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks. Woodside sought to understand if the cultural values of the nearby Gascoyne Marine Park may extend into the offshore Scarborough Project areas.
- Woodside requested advice on how best (in addition to work completed) to identify any cultural values in the Marine Parks and in the broader project footprint.
- YMAC requested Woodside provide the relevant detailed information relating to the location and extent of the project.
- **(1)** On 19 July 2022, YMAC emailed Woodside stating the area Woodside as identified requires correspondence directed to Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation (SI Report, reference 28.2). **(1)** Woodside noted YMAC's feedback but was not required to respond.
- On 13 March 2023, Woodside emailed YMAC as to whether YMAC considers itself a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs and, if so, whether that relevance is limited to a facilitation function in its capacity as a representative of Traditional Owner groups/corporations that overlap or adjacent to the environment that may be affected (EMBA) of a particular activity (SI Report, reference 28.3).
- On 15 March 2023, Woodside emailed YMAC seeking a response as to their view on "relevant person" (SI Report, reference 28.4).
- **(2)** On 20 March 2023, YMAC replied to confirm that in its view it is a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation. YMAC does not intend to provide substantive comment on the content of EPs (SI Report, reference 28.5).
- **(2)** On 20 March 2023, Woodside emailed YMAC to thank it for its reply and to advise that that this assessment would be included in Woodside's EPs (SI Report, reference 28.6).
- On 20 March 2023, YMAC emailed Woodside confirming that it is appropriate to use the assessment in the EPs (SI Report, reference 28.7).
- **(3)** On 12 June 2023, YMAC emailed Woodside on behalf of itself and its clients (SI Report, reference 28.8). The email attached:
 - A proposal to fund in-house expertise to support consultations and administration of the consultation framework.
 - A draft consultation framework.
- On 12 June 2023, Woodside responded to YMAC by email, thanking them for the documents and informed them that Woodside would respond shortly (SI Report, reference 28.9).
- **(3)** On 25 July 2023, Woodside emailed YMAC (SI Report, reference 28.10):
 - Agreeing in principle to the draft consultation framework and funding proposal but seeking further discussion on details.
 - Stating that Woodside is open to considering an industry funded position at YMAC to support the work they are facilitating.
 - Attaching Woodside's Program for Ongoing Engagement with Traditional Custodians.
 - Seeking a meeting with YMAC in relation to the draft consultation framework at YMAC's earliest convenience.

Summary of information provided and record of consultation for this EP:

- On 1 September 2023, Woodside emailed YMAC advising of the proposed activity (Record of Consultation, reference 1.36) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website).
- **(3)** On 14 December 2023, Woodside emailed YMAC re-attaching the Program of Ongoing Consultation and advising that Woodside would like to progress negotiations on consultation frameworks with groups represented by YMAC (SI Report, reference 28.11). Woodside proposed the protocol would include (among other things):

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The procedures Woodside will follow when a submission requires consultation.
- Initial and ongoing consultation in relation to activities.
- Agreement as to how Woodside will provide the information groups requires to make free, prior and informed decisions about Woodside's EPs.
- Agreement as to how groups will provide feedback and how that can best be represented in Eps.
- An agreed schedule of rates for groups participation in consultation.
- How to manage the outputs of the consultations.

Ongoing engagement:

- On 21 December 2023, Woodside emailed YMAC providing a list of upcoming activities as requested by YMAC (SI Report, reference 28.12).
- **(3)** On 28 February 2024, Woodside emailed YMAC with a letter setting out the draft terms of an agreement between NTGAC and Woodside (SI Report, reference 28.13). The agreement (among other things) included the following topics:
 - Sufficient Information
 - Reasonable Period.
 - Provision of Information.
 - Objection or claims.
 - Publications
 - Cost and termination.
- On 29 February 2024, YMAC emailed Woodside acknowledging receipt of the information (SI Report, reference 28.14). No further response has been received.
- On 16 May 2024, Woodside emailed YMAC to request potential availability to meet with the NTGAC Board in coming months for the purposes of consulting on EPs (SI Report, reference 28.15).
- On 21 May 2024 Woodside and YMAC exchanged emails on the possibility of meeting with the NTGAC Board in July. YMAC outlined that the Board had a relatively full agenda and they would respond with confirmation of their availability (SI Report, references 29.16, 28.17, 28.18).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) YMAC has advised that the most appropriate stakeholders for the Scarborough Project generally are Murujuga Aboriginal Corporation and Ngarluma Aboriginal Corporation who are not represented by YMAC.</p>	<p>(1) Woodside assessment: Woodside agrees with YMAC's advice that MAC and NAC should be consulted regarding the activity. Woodside response: Woodside has consulted with MAC and NAC.</p>	<p>(1) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(2) YMAC has provided feedback that in its view it is a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation and does not intend to provide substantive comment on the content of EPs.</p>	<p>(2) Woodside assessment: YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate representing the cultural rights of a Traditional Custodian Community but exists to assist native title claimants and holders. Woodside response: Woodside accepts YMAC's feedback that it is a relevant person only in relation to its facilitation and coordination function as a representative body. Woodside has consulted with YMAC in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation, and it has responded that it does not intend to provide substantive comment on the content of EPs.</p>	<p>(2) YMAC has been consulted with in accordance with the methodology described in Section 5 of the EP.</p>
<p>(3) YMAC has provided feedback that it is seeking an industry funded position to support consultations for this and other activities and has provided a draft consultation framework to assist the consultation process.</p>	<p>(3) Woodside assessment: Woodside has assessed the Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with YMAC and/or the groups it represents. In February 2024 Woodside sent a draft agreement to YMAC as representative of NTGAC. The agreement would frame ongoing consultation, address appropriate support for resourcing, separate from consultation under regulation 25(1) of the Environment Regulations. Sufficient information to allow informed assessment has already been provided by other means. Woodside response: Woodside will continue to engage with YMAC in relation to its request for an industry funded position and put a proposal to YMAC in December 2023 for a Framework Agreement, and in February 2024 sent the draft terms of agreement between NTGAC (represented by YMAC) and Woodside. This is described further in the Program of Ongoing Engagement with Traditional Custodians, Appendix G. Woodside engages in ongoing consultation throughout the life of an EP.</p>	<p>(3) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with YMAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. YMAC has indicated that it will not provide substantive comment on EPs.

Sufficient Information:

- Woodside sought direction on YMAC's preferred method of consultation. This resulted in meetings being coordinated at location of YMAC's choosing, with YMAC nominated representatives. These meetings included Woodside presenting information in a format and style that was readily accessible and appropriate.
- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to YMAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback. Ac
- Woodside commenced consultation with YMAC in August 2023. Woodside has addressed and responded to YMAC over 9 months, demonstrating a "reasonable period" of consultation.

Woodside asked YMAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on YMAC functions, interests or activities.

Self-identified First Nations Groups

Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as Trustee for the Trust under the Northwest Shelf Agreement 1998 struck between the Ngarluma and Yindjibarndi registered native title claimants, the NWS JVs and Woodside, prior to the resolution of the Ngarluma and Yindjibarndi native title claim. Its purpose is to carry on the business of enterprise development, investment and social welfare.

In 1999 the Ngarluma and Yindjibarndi native title claim was settled with the Federal Court appointing, at the request of the common law native title holders, the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and Yindjibarndi as relevant persons in the course of preparing this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

NYFL self-identified and has advised it is relevant for this EP.

Summary of information provided and record of consultation for this EP:

- **(1)** On 29 June 2023, NYFL emailed Woodside in response to notification of another activity responding that they were waiting to agree to a national framework for consultation between industry and First Nations to be resolved before they consult on Environment Plans (SI Report, reference 34.1). This email was referring to the NOPSEMA Summit.
- On 10 July 2023, Woodside emailed NYFL seeking clarity in relation to their request (SI Report, reference 34.2). Woodside stated they understood the outcomes of the NOPSEMA Summit were as recorded by the facilitator and communicated to all participants as the following:

It was agreed that:

- There is a need for a National Summit of Indigenous Groups and Traditional Owners to consult together and agree what they require and what their collective and individual concerns may be.
- Government (DISR) will assist by mapping and compiling a list of all Traditional Owner groups that should be invited to the Summit.
- Kimberley Land Council and other PBCs will form a Steering Committee to draft the agenda for the Summit.
- APPEA will seek membership approval to facilitate by funding the Summit; and
- The Summit will be independently facilitated.
- APPEA to further consult with their members in order to get some agreement on priorities and next steps for Industry.
- After the National Summit of Indigenous Groups, the first of several meetings will be held between a smaller representative Traditional Owners group and a smaller representative Industry group, the latter to be coordinated through APPEA; and
- There will be ongoing parallel consultations in relation to current EPs, which will continue in accordance with what is required by regulation 25(1)(d) of the OPGGSA Environment Regulations.

Woodside stated that it is committed to supporting the National Summit of Traditional Owners and is committed to industry and Traditional Owners working together to agree consultation frameworks. Woodside noted, however, this would take time and necessarily must occur in parallel to ongoing consultation, with operators obliged to consult pursuant to regulation 25 of the Environment Regulations. Woodside also stated they were committing to a program of ongoing consultation for the life of the EP that they would be happy to discuss with NYFL.

- **(1)** On 10 July 2023, NYFL stated that they did not agree with the facilitators record of the NOPSEMA Summit, particularly that there would be parallel ongoing consultation in relation to current EPs prior to the proposed National Summit of Indigenous Groups and Traditional Owners (SI Report, reference 34.3).
- On 19 July 2023, Woodside emailed NYFL NOPSEMA's Consultation Guideline, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 34.4). This email also requested that NYFL advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- On 26 July 2023, Woodside emailed NYFL Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 34.5).
- **(1, 2)** On 26 July 2023, NYFL emailed Woodside in response to Woodside's planned Program of Ongoing Engagement with Traditional Custodians, noting it was a good start particularly with the inclusion of Traditional Owner feedback and indicating that assistance with resourcing and internal capacity would be required. NYFL noted their expectations about resourcing as a relevant person (SI Report, reference 34.6).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 11 August NYFL emailed Woodside primarily in response to another matter (SI Report, reference 34.7). The email noted that:
 - NYFL look forward to progressing discussion with Woodside on the proposed program of consultation.
 - **(1)** NYFL was participating with other First Nations organisations and representative bodies to develop a framework for consultation, which they anticipated would provide clarity to all parties on appropriate consultation, resourcing timeframes etc.
 - **(3)** There may be people, who in accordance with Indigenous tradition, may have spiritual and cultural connections to the EMBA that have not yet been afforded the opportunity to provide information.
 - **(3)** There may be additional cultural or environmental values that relate to the area that have not been identified or communicated to Woodside.
- On 15 August 2023, Woodside emailed NYFL thanking them for their correspondence and requesting availability to meet (SI Report, reference 34.8).
- On 18 August 2023, NYFL emailed Woodside proposing a date of 30 August to meet to discuss next steps (SI Report, reference 34.9).
- On 18 August 2023, Woodside emailed NYFL accepting the proposed date to meet to discuss engagement processes (SI Report, reference 34.10).
- On 28 August 2023, Woodside emailed NYFL requesting a video link for a consultant to Woodside who would be involved in consultation and engagement going forward (SI Report, reference 34.11).
- On 28 August 2023, NYFL emailed through an agenda for the proposed meeting (SI Report, reference 34.12), noting for discussion:
 - **(2)** Strain on limited resources.
 - Representative capacity of NYFL.
 - **(1)** Noting next steps; NYFL's involvement in the upcoming development of the National First Nations led Framework on consultation, indicating this should provide greater guidance to both Traditional Owner groups and Industry.
- On 28 August 2023, Woodside emailed NYFL acknowledging receipt of agenda and providing contact details for engagement (SI Report, reference 34.13).
- On 28 August 2023, Woodside emailed NYFL advising of the proposed activity (Record of Consultation, reference 1.37) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that NYFL and its members may have within the EMBA, information on how NYFL would like to engage, and requested that NYFL provide information to other individuals as required.
- On 30 August 2023, Woodside met with NYFL (SI Report, reference 34.14) to discuss a consultation process and engagement with NYFL and Yindjibarndi, NYFL put forward the following:
 - **(4)** NYFL requested Woodside employ 3 Traditional Owners who would engage/consult with NYFL members.
 - **(5)** NYFL stated that time frames must be longer than one month for consultation.
- On 31 August 2023, NYFL emailed Woodside requesting a copy of consultation record for NYFL and Yindjibarndi regarding this EP (SI Report, reference 34.15).
- On 12 September 2023, NYFL emailed Woodside noting their outcomes of the meeting held on 30 August 2023 (SI Report, reference 34.16), they noted discussion about:
 - **(5)** Traditional Owner expectations that engagement commences on projects at an early stage.
 - Digital animations to assist with communicating projects to Traditional Owners. Resourcing for Traditional Owner organisations.
 - Capacity building, cultural sensitivity, and the role of NYFL and other organisations.

- Woodside to follow-up with NYFL with next steps.
- On 14 September 2023, Woodside emailed NYFL in response to their query about EP information sent to Yindjibarndi and NYFL (SI Report, reference 34.17). Woodside noted that they had sent this EP information for Yindjibarndi and NYFL to NYFL and had also had a telephone discussion with Yindjibarndi [redacted] on 12 September 2023, he re-iterated that Yindjibarndi respected the Traditional Owners whose land and sea lies adjacent to, and within the precinct of, the projects, and would leave any comment and advice to be provided by those Traditional Owners.
- **(6)** On 27 October 2023, NYFL emailed Woodside re-iterating that they did not have capacity to meet with Woodside until they had an updated consultation protocol (SI Report, reference 34.18). NYFL provided a paper outlining their position on consultation/engagement with Industry.
- On 3 November 2023, Woodside emailed NYFL acknowledging their response and offering to meet with NYFL in their offices (SI Report, reference 34.19).
- **(1)** On 7 November 2023, Woodside emailed NYFL again requesting to meet in person, noting that NYFL had previously said they did not want Woodside to progress the proposal until after the summit taking place in Darwin (SI Report, reference 34.20). Woodside suggested a date to meet later in November which allowed for time to consider outcomes of the Summit.
- **(2, 6)** On 19 November 2023, NYFL emailed Woodside, stating that they were awaiting an updated consultation framework from Woodside and were not able to meet as they didn't have resources to apply to developing a framework but looked forward to providing feedback on an updated framework (SI Report, reference 34.21).
- On 20 November 2023, Woodside emailed NYFL acknowledging their email of 19 November 2023 (SI Report, reference 34.22).
- On 4 December 2023, Woodside emailed NYFL (SI Report, reference 34.23):
 - **(1)** seeking clarification about changes in recent correspondence, noting that NYFL had indicated on several occasions over a number of months that they wished to await outcomes of the First Nations Sea Country Summit in Darwin and would be involved in the development of the National First Nations Led Framework on consultation.
 - Woodside indicated that they had requested to meet face to face with NYFL in November as Woodside wanted to understand NYFL's expectations and discuss the outcomes of the Summit.
 - Woodside also wanted to discuss the strategic sponsorship funding request noting they required a business case to understand what NYFL was suggesting and how it would align with NYFL's strategic objectives.
- On 6 December 2023, NYFL emailed Woodside noting that (SI Report, reference 34.24):
 - At the meeting of 30 August 2023 there was discussion about challenges and proposed solutions to progress EP consultation.
 - **(2)** NYFL operate in a resource-constrained environment.
 - **(6)** A proposal to NYFL responding to issues raised at the above meeting was expected.
 - **(1)** The Summit had been referred to as a potential useful resource for developing an updated framework.
 - NYFL had agreed to progress the Program of Ongoing Engagement with Traditional Custodians.
 - Social investment and capacity building funding should remain separate to consultation regarding EPs and other environment and heritage matters.
- **(6)** On 13 December 2023, Woodside emailed NYFL acknowledging that Woodside and NYFL were working towards an updated consultation process, once again providing the information on the proposed activity which was originally sent on 28 August 2023 (SI Report, reference 34.25). Woodside again provided a Consultation Summary Information Sheet

(including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that NYFL and its members may have within the EMBA, information on how NYFL would like to engage, and requested that NYFL provide information to other individuals as required.

- On 14 December Woodside emailed NYFL, following up on previous emails about consultation on EPs, acknowledging NYFL's resource constraints and limitations that can be allocated to consultation on the EPs (SI Report, reference 34.26). Woodside proposed/noted the following to support consultation activities that would provide NYFL with the ability to engage and provide input and feedback:
 - (4) Woodside intends engaging a senior Ngarluma person in an advisory/liaison capacity, which will include facilitating consultation with NYFL members in relation to EPs.
 - (6) An Agreement between Woodside and NYFL to consult in a meaningful and genuine manner.
 - The procedures Woodside will follow when a submission requires consultation.
 - (4) Initial and ongoing consultation in relation to relevant Woodside EPs and the senior Ngarluma person's role in facilitating those consultations.
 - Agreement as to how Woodside will provide NYFL with the information NYFL requires to make free, prior and informed decisions about Woodside's EPs.
 - Agreement as to how NYFL will provide feedback and how that can best be represent NYFL's feedback to NOPSEMA or other relevant organisations.
 - (2) An agreed schedule of rates for NYFL's participation in the consultations regarding Woodside's EPs.
 - How to manage the outputs of the consultations.
 - Agreement on an approach to minimise duplication of consultation activities conducted with NAC, Yindjibarndi and NYFL.
 - An EP Consultation Working Group with representation from Woodside and NYFL.
 - Suggested further discussion on the proposal at the NYFL/Woodside Quarterly meeting on 19 December 2023.
- (5, 6) On 6 March 2024, Woodside emailed NYFL with a letter setting out the draft terms of an agreement between NYFL and Woodside (SI Report, reference 34.27), the agreement (among other things) included the following topics:
 - Sufficient Information
 - Reasonable Period.
 - Provision of Information.
 - Objection or claims.
 - Publications
 - Cost and termination.
- On 14 March 2024 NYFL emailed Woodside acknowledging receipt of their email and attachments of 6 March 2024 (SI Report, reference 34.28).
- (6) On 19 March 2024 NYFL emailed Woodside attaching a quote for an initial review of the draft terms of agreement (SI Report, reference 34.29).
- On 5 April 2024, NYFL emailed Woodside in response to another activity, noting that modernisation agreement negotiations were likely to continue until later in the year, that a consultation agreement was an appropriate interim solution to enable consultation to continue, and they had previously provided a quote for an initial review of Woodside's draft consultation agreement (SI Report, reference 34.30).
- On 5 April 2024, Woodside emailed NYFL noting they would get up to date on the matter. (SI Report, reference 34.31)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 12 April 2024, NYFL emailed Woodside requesting a response about EP consultation going forward. (SI Report, reference 34.32)
- On 12 April 2024, Woodside emailed NYFL acknowledging they had not responded and would revert to NYFL within the week. (SI Report, reference 34.33)
- On 17 April 2024, NYFL emailed Woodside noting they were attending to sorry business and as per cultural protocols would require time within the community and engagement would be delayed until appropriate to re-commence (SI Report, reference 34.34). Woodside supports engaging with NYFL when it is appropriate for them to do so.
- On 10 May 2024, Woodside emailed NYFL (SI Report, reference 34.35) to clarify Woodside's position on NYFL's quote for an initial review of the draft consultation agreement and the availability of reasonable funding to assist and enable consultation. Woodside sought direction on NYFL's preferred manner of consultation and the costs they would prefer to have covered as part of consultation. No response has been received.

NYFL is also consulted through its membership on the Karratha Community Liaison Group and the Quarterly Heritage Group.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>NYFL self-identified and advised Woodside they are a relevant person for activities.</p>	<p>Woodside assessment: NYFL was created to act as Trustee for the Northwest Shelf Agreement 1998. NYFL's membership is made up of Ngarluma people and Yindjibarndi people, membership is not open to any person who is not accepted as Ngarluma or Yindjibarndi. Woodside has also consulted with Ngarluma and Yindjibarndi Aboriginal Corporations individually. Ngarluma and Yindjibarndi Aboriginal Corporations were appointed by the Federal Court, at the request of the Ngarluma and Yindjibarndi common law native title holders as PBCs to represent the communal interests of the Ngarluma and Yindjibarndi people respectively. Ngarluma and Yindjibarndi Aboriginal Corporations are representative of all Ngarluma and Yindjibarndi people regardless of membership.</p> <p>Woodside response: Woodside has responded to NYFL's self-identification and consulted with them as a relevant person.</p>	<p>NYFL has been consulted with in accordance with the methodology described in Section 5 of the EP.</p>
<p>(1) NYFL wished to pause consultation on activities until after the First Nations National Summit was held and a framework for consultation developed. NYFL noted they were working with First Nations Organisations and representative Bodies to develop a framework for consultation. This has not yet been proposed to Woodside. The summit took place in Darwin in November 2023.</p>	<p>(1) Woodside assessment: Woodside did not consider the proposal that consultation be paused until the proposed First Nations National Summit was reasonable. Woodside continued to offer to meet to progress discussions with NYFL, a meeting was held on 30 August 2023 and further meetings were proposed by Woodside over the following months during September to December but were not taken up.</p> <p>Woodside response: Separate from consultation under regulation 25 of the Environment Regulations, Woodside is open to engaging with a joint First Nations framework for consultation, however, notes that this is not required</p>	<p>(1) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>to undertake and/or complete consultation while preparing this EP. The framework could be used to frame ongoing consultation. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has an existing engagement framework in place with NYFL via the Quarterly Heritage Group which enables regular communication about Woodside activities.</p>	
<p>(2) NYFL have noted they operate in a restrained resource environment.</p>	<p>(2) Woodside assessment: The proposed Framework Agreement (See Point (6) below), would be an effective mechanism to address resourcing for ongoing consultation. Woodside response: Woodside supports reasonable requests for resourcing.</p>	<p>(2) See point (6) below. The proposed agreement will address any reasonable requests for funding.</p>
<p>(3) NYFL expressed, in response to notification to another matter, that there may be additional cultural and environmental values that relate to the area that have not been communicated to Woodside and NYFL there may be people who in accordance with Indigenous tradition, may have spiritual and cultural connections to the EMBA who have not yet been afforded the opportunity to provide information.</p>	<p>(3) Woodside assessment: Woodside has a robust understanding of the environment, cultural values and heritage features based on publicly available information and consultation with relevant persons. This is described in Section 4.9 of the EP. As described in Section 5 of the EP, Woodside's consultation methodology provided Traditional Custodians with the opportunity to be aware of the proposed activity and to participate in consultation. This methodology has afforded all people whose spiritual connection to the environment that may be affected a reasonable opportunity to consult. Woodside response: Consultation with NYFL has not identified any other groups or individuals relevant to communally held functions, activities or interests. Woodside has also consulted with Ngarluma and Yindjibarndi Aboriginal Corporations who are the Representative Aboriginal Corporations nominated by the Ngarluma and Yindjibarndi people respectively to represent the communally held interests of the Ngarluma and Yindjibarndi people.</p>	<p>(3) Description of cultural values and heritage features, derived from consultation and other methods, is included in Section 4.9 of the EP. Potential impacts to Cultural Features and Heritage Values are assessed in section 6.10.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(4) NYFL requested that Woodside employ three Ngarluma/Yindjibarndi Traditional Owners who would consult with NYFL members.</p>	<p>(4) Woodside assessment: Woodside does not consider NYFL's request that Woodside employ three Ngarluma/Yindjibarndi Traditional Owners to consult with NYFL members a reasonable proposal or a necessary step to allow consultation to occur. Woodside notes that consultation must be capable of reasonable and practicable discharge. Woodside's consultation efforts are informed and undertaken by personnel with significant experience in First Nations relations, including Indigenous employees. Woodside response: Woodside is currently finalising the employment of a Ngarluma person in an advisory position who will be facilitating consultation with NYFL. The proposed Framework Agreement will address appropriate NYFL resourcing.</p>	<p>(4) Not required.</p>
<p>(5) NYFL stated that time frames must be longer than one month for consultation.</p>	<p>(5) Woodside assessment: Woodside has already provided NYFL with reasonable period of time to participate in consultation (as required by regulation 25 of the Environment Regulations). Woodside response: The draft consultation framework sent to NYFL in March 2024 will provide a framework for consultation.</p>	<p>(5) Not required.</p>
<p>(6) NYFL have acknowledged they support an agreement to enable a process of consultation. They have previously indicated they were working with other organisations to develop a consultation framework, more recently they have indicated they are waiting on Woodside to put forward a proposal.</p>	<p>(6) Woodside assessment: Separate from consultation under regulation 25 of the Environment Regulations, Woodside is open to engaging with a joint First Nations framework for consultation, however, notes that this is not required to undertake and/or complete consultation in the course of preparing this EP. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has an existing engagement framework in place with NYFL which enables regular (quarterly) communication about Woodside activities. Feedback from NYFL on 27 October 2023 requested Woodside develop a draft consultation framework. Woodside response: Woodside sent a draft consultation framework to NYFL for their consideration.</p>	<p>(6) Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes continued engagement regarding the proposed Framework Agreement which would be applied to ongoing consultation for this activity. Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>

<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on NYFL’s functions, interests or activities. Based on the engagement to date, no additional controls have been identified.</p>
---	---	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NYFL for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Sought direction on NYFL’s preferred method of consultation. NYFL requested consultation material suitable for Traditional Custodian audience, which was developed and provided. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 (Environment Regulations) consultation.
- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to NYFL. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed purpose of consultation and set out in detail what is being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA’s Brochure “Consultation on offshore petroleum environment plans” and Guideline “Guideline: Consultation in the course of preparing an environment plan.
- Advised that NYFL can request that particular information provided in the consultation not be published (to align with 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state, and relevant local newspapers including The Australian, The West Australian, Pilbara News, Midwest Times, Northwest Telegraph and Geraldton Guardian (August 2023) The Koori Mail (09 August 2023) and the National Indigenous Times (29 August 2023) advising of the proposed activities and requesting comments or feedback.
- Woodside commenced consultation with NYFL in September 2023. Woodside has responded to NYFL over 9 months, demonstrating a “reasonable period” of consultation.

Woodside asked NYFL it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NYFL functions, interests or activities.

Local government and elected Parliamentary representatives, community groups or organisations

City of Karratha

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed City of Karratha advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with City of Karratha for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to City of Karratha on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided City of Karratha with the opportunity to provide feedback over a 4.5-month period.

Shire of Exmouth

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside emailed Shire of Exmouth advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
<p>Outcomes of Consultation</p> <p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Shire of Exmouth for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:</p> <ul style="list-style-type: none"> Consultation Information Sheet publicly available on the Woodside website since August 2023. Consultation information provided to Shire of Exmouth on 9 August 2023 based on their functions, interests or activities. Woodside has provided a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback. Woodside has sent a follow up email seeking feedback on the proposed activities. Woodside has provided Shire of Exmouth with the opportunity to provide feedback over a 4.5-month period. 		
<p>Shire of Ashburton (SoA)</p>		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside emailed Shire of Ashburton (SoA) advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 14 August 2023, SoA emailed Woodside and invited Woodside to present at SoA's December community information sessions (SI Report, reference 15.1). It was also suggested that for more regular information sharing, Woodside could submit articles to the <i>Onslow Pipeline</i>. 		
<p>This document is protected by copyright. Refer to electronic version for most up to date information.</p>		

- On 28 August 2023, SoA responded to Woodside's 9 August 2023 email thanking Woodside for its correspondence and noting its support of the significant contribution the oil and gas sector makes to the community (SI Report, reference 15.2). SoA asked for consideration of the following comments:
 - (1) SoA confirmed it had no objections to the proposed activities.
 - (2) SoA expected that Woodside would identify, manage and mitigate all possible impacts and risks in line with relevant regulatory frameworks.
 - (3) The Aboriginal Cultural Heritage Inquiry System (ACHIS) should be consulted to ensure site of significance are not impacted without consents.
 - (4) SoA required Woodside to brief its Local and District Emergency Management Committee's on its planned responses to such events before any activities commence.
 - (5) SoA required Woodside to communicate with appropriate emergency management agencies at either/or National, State, District and Local levels on potential hazards and risks around the activity; collaboration and/or cooperation on risk mitigation; considered impacted areas response capacity and capability and sustainability of response activities and escalation triggers.
 - (6) SoA anticipated that Woodside had undertaken their own emergency management planning to mitigate risk and recover from a risk related incident, has engaged with external emergency management agencies to ensure emergency management plans are aligned with outcomes to respond and/or recovery from the incident.
 - (7) SoA anticipated that Woodside had engaged with the community regarding what may happen in areas that are affected by the proposed activities.
 - SoA proposed that Woodside consider the SoA operated Pilbara Regional Waste Management Facility for future decommissioning, recycling and waste disposal purposes.
 - (8) SoA appreciated the opportunity to comment on the proposed activities and requested that Woodside provide SoA with further updates as the proposal progresses.
- On 26 September 2023, Woodside and SoA exchanged four emails regarding SoA's next Local and District Emergency Management Committee (LEMC) meeting and Woodside attending the meeting (SI Report, references 15.3, 15.4, 15.5 and 15.6).
- On 17 October 2023, SoA and Woodside exchanged further emails confirming presentation start time and attendee details (SI Report, reference 15.7).
- On 6 November 2023, Woodside responded to SoA on a range of items relating to a separate EP and confirmed it was looking forward to presenting to SoA on 21 November 2023 (SI Report, reference 15.8). Woodside also sought to clarify a request from SoA that the Shire required Woodside to brief the Shire's Local and District Emergency Management Committee's on its planned responses to such events before any activities commenced as this would potentially mean Woodside was providing frequent briefings on the same issue.
- On 14 November 2023, SoA responded and, regarding Woodside's query seeking clarification on LEMC briefing requirements (SI Report, reference 15.9), confirmed:
 - Woodside was not required to give a briefing on its response capability every time it undertook an activity that had a risk of a hydrocarbon release.
 - It was proposed that Woodside, when operating in an area, provided a briefing that covered its program of activities over a period of time, which could be determined by Woodside's own assessment of the need and liaison with the relevant LEMC/DEMC.
 - The word briefing should not be confused with advising stakeholders of any assessed high-risk activity where it was appropriate to inform those who may be impacted or involved in a response or recovery process.
- On 20 November 2023, Woodside responded to SoA's email of 28 August 2023 thanking SoA for its feedback on this EP (SI Report, reference 15.10). Woodside noted:
 - (2) Woodside was required to manage environmental impacts and risks to the environment that may be affected (EMBA) by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Environment Regulations), through the implementation of the EP. Woodside's proposed EPs would be submitted to NOPSEMA for assessment and acceptance.

- (3) Woodside routinely used the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and included the results of these inquiry system searches as an appendix to each EP.
- (4) Woodside was looking forward to presenting to SoA at its LEMC on 21 November 2023 on its approach to managing a hydrocarbon release in the highly unlikely event this occurred. Woodside confirmed it would welcome questions regarding this EP during the presentation. Woodside also sought to clarify SoA's request to provide a briefing prior to activities commencing as this would potentially mean Woodside was providing frequent briefings on the same issue.
- (5) Woodside had an Oil Pollution First Strike Plan in place for all EPs which detailed potential impacts, notifications and response mitigations that may be executed to manage an emergency event.
- (6) In the course of developing an EP, Woodside developed oil spill preparedness and response positions tailored for individual projects. Woodside consulted with the relevant external emergency management agencies to ensure all emergency management plans were aligned with effective outcomes.
- (7) Woodside confirmed it consulted relevant persons in the course of preparing an EP, and as per Woodside's ongoing consultation approach, feedback and comments from relevant persons continued to be assessed and responded to, as required, throughout the life of an EP.
- Woodside aimed to work with local business through employment and contracting opportunities, where practical, to create and build community capacity and capability. While future decommissioning of infrastructure in the Scarborough Field was not expected until End of Field Life (EOFL) and was outside of the scope of this EP, any future decommissioning would be subject to a separate consultation under a future EP.
- (8) Woodside confirmed it would continue to provide the SoA with significant updates with respect to the proposed activities when relevant.
- On 21 November 2023, Woodside presented at the SoA LEMC meeting (SI Report, reference 15.11) and provided:
 - An overview of proposed activities relevant to SoA including this EP.
 - An outline of the consultation approach and explanation of the EMBA as a modelling process of the broadest extent an unplanned hydrocarbon release could spread based on a number of conditions.
 - Details of the oil spill response approach in the highly unlikely event of a hydrocarbon spill.
 - Woodside's key steps when activating an oil spill response plan.
 - (1) SoA thanked Woodside for presenting to the committee and no questions or concerns were raised.
- On 22 November 2023, Woodside responded thanking SoA for its email from 14 November 2023 (SI Report, reference 15.12) and confirmed:
 - SoA's advice that it was not required to provide a briefing on its response capability every time it undertook an activity that had a risk of a hydrocarbon release.
 - It accepted SoA's proposal to provide briefings that covered its program of activities over a period of time, as determined by Woodside's own assessment of need and in liaison with the relevant LEMC.
 - It would provide notifications to relevant stakeholders if required as per Woodside's oil spill response arrangements.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1)	(1)	(1)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>SoA supports the contribution of the oil and gas sector and had no objections to the proposed activities.</p>	<p>Woodside assessment: Woodside noted SoA had no objections in relation to the activities. Woodside response: Woodside provided a presentation to the SoA LEMC meeting on this EP. No questions or concerns were raised by SoA.</p>	<p>Not required.</p>
<p>(2) Identifying, managing and mitigating all possible impacts and risks.</p>	<p>(2) Woodside assessment: Woodside is required to manage environmental impacts and risk in accordance with the Environment Regulations. Woodside response: Woodside confirmed it was required to manage environmental impacts and risks to the EMBA to ALARP and an acceptable level, as per the <i>Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009</i>.</p>	<p>(2) Woodside has assessed the potential impacts and risks associated with the PAP in Section 6 of the EP. The existing controls as described in Section 6 of the EP are considered sufficient.</p>
<p>(3) Consulting the Aboriginal Cultural Heritage Inquiry System (ACHIS).</p>	<p>(3) Woodside assessment: Woodside uses the Department of Planning, Land and Heritage ACHIS as part of the EP development process. Woodside response: Woodside confirmed it routinely utilised the Department of Planning, Land and Heritage ACHIS as part of the EP development.</p>	<p>(3) For this EP, a search of DPLH's Aboriginal Cultural Heritage Inquiry System was undertaken (see Appendix G).</p>
<p>(4) Briefing SoA's Local and District Emergency Management Committee (LEMC).</p>	<p>(4) Woodside assessment: Woodside welcomed the opportunity to brief the LEMC on its planned approach to an unplanned hydrocarbon release or discharge. A meeting was scheduled in this regard. Woodside response: Woodside noted it was looking forward to presenting to SoA's LEMC meeting on 21 November 2023 regarding its approach to managing a hydrocarbon release in the highly unlikely event this occurred and was happy to take questions regarding this EP during the presentation. On 21 November 2023, Woodside presented at the SoA's LEMC on oil spill responses.</p>	<p>(4) Not required.</p>
<p>(5) Ensuring Woodside is communicating with appropriate national and state emergency management agencies.</p>	<p>(5) Woodside assessment: Woodside had undertaken emergency management planning and consults with relevant emergency management agencies to ensure alignment of its emergency management plans.</p>	<p>(5) In the course of developing this EP, Woodside has developed oil spill preparedness and response positions and an Oil Pollution First Strike Plan (See Appendix H and I of this EP).</p>

	Woodside response: Woodside confirmed it had an Oil Pollution First Strike Plan in place for this EP which detailed potential impacts, notifications and response mitigations that may be executed to manage an emergency event.	
(6) SoA assumed Woodside had emergency management planning in place.	(6) Woodside assessment: Woodside has considered emergency planning for EPs. Woodside response: Woodside confirmed that in the course of developing EPs, it developed oil spill preparedness and response positions tailored for individual projects. Woodside consults with the relevant external management agencies to ensure all emergency management plans were aligned with effective outcomes.	(6) In the course of developing this EP, Woodside has developed oil spill preparedness and response positions and an Oil Pollution First Strike Plan (See Appendix H and I of this EP).
(7) Woodside has engaged with the community.	(7) Woodside assessment: Woodside consults relevant persons in the course of preparing an EP, as required by the Environment Regulations. Woodside response: Woodside confirmed it consulted relevant persons in the course of preparing an EP, and as per Woodside's ongoing consultation approach, feedback and comments from relevant persons continued to be assessed and responded to, as required, throughout the life of an EP.	(7) Woodside consults relevant persons in the course of developing an EP as described in Section 5.3 of the EP.
(8) Provide SoA with further updates as the proposal progresses.	(8) Woodside assessment: Woodside will provide SoA with updates with respect to the activities the subject of this EP. Woodside response: Woodside confirmed it would continue to provide SoA with significant updates with respect to the proposed activities when relevant.	(8) Woodside engages in ongoing consultation and will provide notifications of significant change, as appropriate, to relevant persons as referenced at Section 7.9.5 in this EP.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on SoA's functions, interests or activities. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Shire of Ashburton for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Consultation information provided to Shire of Ashburton on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has addressed and responded to the SoA over a 4.5-month period.

Exmouth Community Liaison Group (CLG)

Summary of information provided and record of consultation for this EP:

- On 10 August 2023, Woodside emailed Exmouth CLG advising of the proposed activity (Record of Consultation, reference 1.17) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 20 October 2023, Woodside sent an email to Exmouth CLG alerting it to the fact Woodside employees would be in Exmouth on 23 October 2023 if anyone wanted to discuss EPs (SI Report, reference 23.1).
- On 21 November 2023, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide which listed EPs on which the CLG members had recently been consulted and EPs currently under consultation including this EP (SI Report, reference 23.2). A summary of this meeting follows:
 - Woodside Corporate Affairs, Scarborough Energy Project, Aviation and Operations representatives were available to answer questions.
 - 12 individuals attended the meeting representing:
 - Exmouth Volunteer Marine Rescue
 - Gascoyne Development Commission
 - Shire of Exmouth
 - PHI Helicopters
 - Bhagwan Marine
 - Exmouth Chamber of Commerce and Industry
 - Ningaloo Coast World Heritage Advisory Council
 - Australia's Coral Coast Tourism
 - Santos.
 - The Exmouth CLG raised the following questions:
 - **(1)** What was under the waterline of the Scarborough Floating Production Unit (FPU) and whether it has a riser turret?

- (1) Woodside explained the subsurface and advised that there was no turret.
- (2) How many people will be on board the FPU?
 - (2) Woodside advised the living quarters could hold 75 and that during normal operations it is expected that about 12 people will be on board. During maintenance campaigns, this could be between 50 – 75 people.
- (3) Why wasn't the FPU being built in Australia?
 - (3) Woodside advised that due to the scale, there was no facility large enough in Australia. Woodside also advised that some of the subsea infrastructure was being built in Henderson, WA and where possible, Woodside was using local content.
- (4) When will the FPU be in location?
 - (4) Woodside response – advised ready for start up was 2026 and that installation is expected to commence in 2025.
 - (4) Woodside committed to continue providing the Exmouth CLG with updates on the Scarborough Energy Project.
- On 4 December 2023, Woodside emailed the 21 November 2023 Exmouth CLG meeting presentation to all CLG members, regardless of their attendance (SI Report, reference 23.3).
- On 6 March 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide that listed Environment Plans on which the CLG members had recently been consulted and Environment Plans currently under consultation (SI report, reference 23.4). No feedback was provided on this EP. 12 individuals attended the meeting representing:
 - Exmouth Volunteer Marine Rescue
 - Gascoyne Development Commission
 - Shire of Exmouth
 - PHI Helicopters
 - Exmouth Freight and Logistics
 - Exmouth Chamber of Commerce and Industry
 - Ningaloo Coast World Heritage Advisory Council
 - WA Country Health Service
 - Santos.
- On 2 April 2024, Woodside's presentation was emailed to all Exmouth CLG members, regardless of their attendance at the meeting.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) The Exmouth CLG provided feedback and asked the following questions:	(1) Woodside Assessment: There is no riser turret.	(1) An overview of the Scarborough FPU and associated infrastructure is provided in Section 3 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

What was under the waterline of the Scarborough Floating Production Unit (FPU) and whether it had a riser turret?	Woodside Response: Explained the subsurface and advised that there was no turret.	
(2) How many people will be on board the FPU?	(2) Woodside Assessment: The number of people on board varies. During normal operations approximately 12 people would be on board the FPU; during maintenance between 50-75 people. Woodside Response: Advised the living quarters can hold 75 and that during normal operations it is expected that about 12 people will be on board. During maintenance campaigns, this could be between 50-75 people.	(2) An overview of the Scarborough FPU and associated infrastructure is provided in Section 3 of the EP.
(3) Why wasn't the FPU being built in Australia?	(3) Woodside Assessment: It is not possible to build the FPU in Australia. Woodside Response: Woodside advised that due to the scale, there was no facility large enough in Australia. Some of the subsea infrastructure was being built in Henderson, WA and Woodside was using local content where possible.	(3) Not required.
(4) When will the FPU be in location?	(4) Woodside Assessment: Installation was expected to occur in 2025. Woodside Response: Woodside advised the FPU would be ready for start up in 2026 and that installation was expected to commence in 2025. Woodside committed to continue to provide the Exmouth CLG with updates on the Scarborough Project.	(4) An overview of the Scarborough FPU and associated infrastructure is provided in Section 3 of the EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on Exmouth CLG's functions, interests or activities. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exmouth CLG for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Exmouth CLG on 10 August 2023 based on their functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to the Exmouth CLG over a 4.5-month period.

Karratha Community Liaison Group (CLG)

Summary of information provided and record of consultation for this EP:

- On 10 August 2023, Woodside emailed Karratha CLG advising of the proposed activity (Record of Consultation, reference 1.17) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- **(1)** On 30 August 2023, Dampier Community Association emailed Woodside (SI Report, reference 16.1) and confirmed the information had been passed on to its committee and that no comments or feedback had been received.
- **(1)** On 6 September 2023, Woodside responded noting Dampier Community Association had no comments (SI Report, reference 16.2).
- On 29 September 2023, Woodside presented to the Karratha CLG on Woodside activities, including this EP. Woodside presented slides which listed EPs on which the CLG members had recently been consulted and EPs currently under consultation (SI Report, reference 16.3). One slide included a QR and URL to the Consultation Activities page of the Woodside website. No feedback was provided on this EP. A summary of the meeting is below:
 - Woodside Corporate Affairs representatives were available to answer questions.
 - 14 individuals attended the meeting representing:
 - City of Karratha – Council representatives and staff representatives
 - Karratha Central Health Care
 - Bechtel
 - Dampier Community Association
 - Pilbara Development Commission
 - Regional Development Australia
 - Karratha & Districts Chamber of Commerce & Industry
 - Ngarluma Yindjibarndi Foundation Ltd.
 - Pilbara Ports Authority.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside provided details of local engagement sessions held at the Karratha Shopping Centre, Red Earth Arts Precinct, Woodside’s Roebourne Office and at the South Hedland Square. Woodside shared that sessions were for local community members to seek information about its EPs, to discuss functions, activities or interest that may be affected by its proposed projects and to provide an opportunity for feedback. Woodside noted sessions were advertised in the Pilbara News and through social media advertising (Record of Consultation, reference 1.67 and 3).
- On 22 March 2024, Woodside presented to the Karratha CLG on Woodside activities, including this EP. Woodside presented slides which listed Environment Plans on which the CLG members had recently been consulted and Environment Plans currently under consultation (SI report, reference 16.4). Woodside also presented on how Woodside consults relevant persons in the course of preparing our EPs and provided information on relevant persons and EMBAAs. The slides included a QR and URL to Consultation Activities page of the Woodside website, and upcoming consultation opportunities in Roebourne, Karratha and Dampier from the 22 March to 24 March 2024. No feedback was provided on this EP. Seven Karratha CLG members attended the meeting representing:
 - City of Karratha
 - Dampier Community Association
 - Department of Education
 - Murujuga Aboriginal Corporation
 - Karratha and Districts Chamber of Commerce and Industry
 - Karratha Central Health.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) Dampier Community Association, a member of the Karratha CLG, advised it had not received any feedback in relation to this EP.</p>	<p>(1) Woodside assessment: Woodside noted Dampier Community Association had no feedback on this EP. Woodside response: Woodside responded noting Dampier Community Association had no comments on this EP.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Karratha CLG for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.

- Consultation information provided to Karratha CLG on 10 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to the Karratha CLG over a 4.5-month period.

Onslow Chamber of Commerce and Industry (CCI)

Summary of information provided and record of consultation for this EP:

- On 31 August 2023, Woodside emailed Onslow Chamber of Commerce and Industry advising of the proposed activity (Record of Consultation, reference 1.20) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Onslow CCI for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Onslow Chamber of Commerce and Industry on 31 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has provided Onslow Chamber of Commerce and Industry with the opportunity to provide feedback over a 3.5-month period.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Exmouth Chamber of Commerce and Industry (CCI)

Summary of information provided and record of consultation for this EP:

- On 10 August 2023, Woodside emailed the Exmouth Chamber of Commerce and Industry President and CEO advising of the proposed activity (Record of Consultation, reference 1.17) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 23 October 2023, the Exmouth [redacted] attended an information session in Exmouth on behalf of the Chamber (Record of Consultation, reference 1.67).and also attended the Exmouth CLG on 21 November 2023 where further information was supplied (SI Report, reference 23.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exmouth CCI for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Exmouth Chamber of Commerce and Industry on 10 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has provided Exmouth Chamber of Commerce and Industry with the opportunity to provide feedback over a 4.5-month period.

Karratha & Districts Chamber of Commerce and Industry (CCI)

Summary of information provided and record of consultation for this EP:

- On 16 August 2023, Woodside emailed Karratha & Districts Chamber of Commerce and Industry advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.45).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Karratha & Districts CCI for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Karratha & Districts CCI on 16 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Karratha & Districts Chamber of CCI with the opportunity to provide feedback over a 4-month period.

Other non-government groups or organisations or individuals

Conservation Council of WA (CCWA)

Historical Engagement:

2018 – 2020

- CCWA was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020. CCWA provided comment on the OPP via the Environmental Defenders Office (EDO) (Record of Consultation, reference 4) regarding:
 - Assessment of GHG emissions and regulation/management of emissions.
 - Risks and impacts of GHG emissions on environmental receptors and climate change.
 - Potential impacts to Murujuga rock art and control measures for managing the impacts/risks.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside addressed all CCWA's comments in the OPP (Record of Consultation, reference 4).

2021 – 2023

- From 2021 to 2023 Woodside consulted CCWA on the Scarborough D&C, SITI, Subsea and Seismic EPs. A number of issues raised by CCWA during consultation on those EPs were addressed and have been raised as part of consultation on this EP and include:
 - Woodside should consult with a wider group of relevant persons, provide a copy of the draft EPs and other studies that would be submitted to the Regulator in support of the EPs, and provide additional time for feedback.
 - GHG emissions associated with the activities and the potential impacts and risks in relation to global warming and climate change including information relating to control measures for reducing impacts and risks associated with individual EPs and the broader Scarborough Project.
 - Information used to assess direct or indirect impacts on cultural heritage including Murujuga rock art and the Dampier Archipelago National Heritage Place.
 - The Scarborough Project had not been properly approved under the EPBC Act and there were potential impacts on the Great Barrier Reef.
 - Information provided regarding Paris Agreement alignment, warming and energy mix scenarios may be inaccurate and cumulative effects from climate change on the ecological communities at risk had not been factored into the impact assessment.
 - Some modelling was based on data from habitats outside the impact zones, used receptor species studies which were not specific to the areas under consideration, or with uncertain results.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(3)** On 17 August 2023, CCWA ([name redacted]) emailed Woodside stating CCWA was interested in providing feedback but needed more time to consider the information provided and would like to meet (SI Report, reference 11.1).
- On 4 September 2023, Woodside emailed CCWA thanking it for its email and providing three dates to meet and offering to meet at another time which suited CCWA (SI Report, reference 11.2)
- On 14 September 2023, after receiving no response from CCWA, Woodside emailed CCWA asking if it would like to meet on 9 October 2023 (one of the three previously suggested dates) (SI Report, reference 11.3).
- On 10 October 2023, after receiving no response from CCWA, Woodside emailed CCWA following up its request for a meeting, asking that CCWA provide dates it was available to meet (SI Report, reference 11.4).
- On 6 November 2023, after receiving no response from CCWA, Woodside rang [name redacted]'s, the CCWA contact on the email, and left a message stating Woodside was following up the past emails and was still open to meeting at a time convenient to CCWA. CCWA was asked to please respond to the emails if it wanted to meet and Woodside would arrange a time.
- On 12 December 2023, after receiving no further responses from CCWA, Woodside sent an email and letter to CCWA (SI Report, reference 11.5). Woodside summarised:
 - **(5)** The two-way consultation since the Scarborough Project's Offshore Petroleum Project document was released.
 - **(5)** Resending a link to the Consultation Information Sheet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (5) Advising that consultation closed on 20 December 2023.
- (5) Requesting any feedback before 20 December 2023 and offering to also meet prior to this date.
- In the absence of specific feedback from CCWA, Woodside reviewed past feedback from CCWA on the Scarborough D&C, SIT1, Seismic and Subsea EPs and provided assessment and response as follows:
 - (5) Woodside's consultation process was restrictive and does not meet requirements.
 - ❖ (5) Woodside complies with regulations and engages with stakeholders throughout the life of the EP.
 - (7) Impacts on Dampier Archipelago National Heritage Place need to be assessed.
 - ❖ (6) Both indirect and direct environmental impacts and risks will be assessed.
 - (8) The Scarborough Project has not been properly addressed under the EPBC Act and potential impacts on World Heritage and National Heritage values of the Great Barrier Reef.
 - ❖ (7) The Scarborough OPP was authorised by the EPBC Act and Woodside does not accept the assertion that the Scarborough Project is likely to have a significant impact on the heritage values of the Great Barrier Reef, or the basis for that assertion as identified in the letter.
 - (1) The Scarborough EPs should include an evaluation of impacts and risks related to GHG emissions caused by the Project.
 - ❖ (1) GHG emissions relevant to the PAP including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP.
 - (2, 3) Indirect impacts and risks in terms of climate change and degradation of rock art is not properly addressed and CCWA requires more information about total acid gas and GHG emissions over the life of the Project.
 - ❖ (2, 3) There are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the offshore Floating Production Unit. Gas will be exported onshore and processed at the Pluto Gas Plant. Pluto LNG's Air Quality Management Plan has been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant.
 - (9) Some modelling is not relevant.
 - ❖ (8) The EP will be informed and supported by a wide range of literature and studies, with many publicly available. Woodside has commissioned a range of modelling related to the activities described in the EP, which includes analysis against various environmental receptors.
 - (10) Importance of epifauna and infauna to overall ecosystem health is downplayed, as is environmental impact on benthic communities in the spoils ground.
 - ❖ (9) Disturbance to the seabed and impacts to benthic habitat and communities is assessed in the EP. Spoils ground issues are addressed in the Seabed Intervention and Trunkline Installation EP accepted by NOPSEMA in December 2023.
- On 12 December 2023, in response to Woodside's letter sent via email, Woodside received two out of office replies, including one from [name redacted].
 - [name redacted] advised that as of 27 October 2023 she no longer worked for CCWA and to send future emails to conswa@ccwa.org.au (SI Report, reference 11.6).
 - The second out-of-office reply directed emails to be sent to two other people (SI Report, reference 11.7).
- On 12 December 2023, Woodside resent its letter via email to the three addresses provided on the out-of-office replies (SI Report, reference 11.8).

- On 13 December 2023, CCWA responded to Woodside via a letter thanking Woodside for its correspondence dated 12 December 2023 (SI Report, reference 11.9), and claiming the following:
 - (5) It was disingenuous for Woodside to state it had been in a continued dialogue with CCWA.
 - (5) CCWA was not aware of the previous requests to consult on this EP and stated that although it was regrettable that emails and phone calls were not responded to, it should be understood that CCWA had limited resources and staff.
 - (4) CCWA had the right to be consulted, and wished to review relevant information and respond by 31 January 2023. CCWA stated this timeframe was not unreasonable given the commencement date for activities was the second half of 2025.
 - (5) As this EP covered decades of substantial fossil fuel production operations, there should be a high degree of consultation.
 - (5) The Consultation Information Sheet contained limited information about impacts from the activity with no details of GHG emissions and CCWA required more information on this aspect of the activity.
- On 19 December 2023, Woodside responded to CCWA advising the following (SI Report, reference 11.10):
 - (4, 5) It had provided the Consultation Information Sheet to CCWA on 9 August 2023 and received a response that it had been received and the four attempts it had made to arrange to meet with CCWA with no response to any.
 - (5) To accommodate CCWA's request for more time, it had already extended the consultation period from ending on 11 September 2023 to ending on 20 December 2023.
 - (5) It had also run an extensive media and social media campaign calling for comments and directing stakeholders to further information.
 - (5) Assessed that based on the many attempts to engage with CCWA and provision of material already provided to CCWA, that sufficient information and a reasonable period of time had been provided to CCWA and that as previously advised, consultation closed on 20 December 2023.
 - (5) It also noted that since August 2021, Woodside had been actively engaged in an exchange of correspondence with CCWA and/or the Environmental Defenders' Office on behalf of CCWA around the four other Scarborough EPs and those four EPs had now been accepted by NOPSEMA.
 - (5) In the absence of feedback, Woodside proactively reviewed, considered and addressed CCWA's previous feedback on the four Scarborough EPs.
 - (5) In the absence of feedback, Woodside proactively reviewed, considered and addressed CCWA's previous feedback on the Scarborough OPP.
 - (5) Woodside also provided links to the Statement of Reasons for the OPP, the formal consultation report for the OPP and a factsheet about the Pluto LNG Facility Greenhouse Gas Abatement Program.
 - (5) It advised that consultation continues to occur during the life of an EP and that the Management of Change and Review process can be applied if appropriate.

Ongoing engagement:

- On 7 March 2024, Woodside sent emails to CCWA stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, references 11.11, 11.12 and 11.13).
 - The email included links to the CTAP and the ASX Announcement.
 - (5) The email also re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.

– (5) Finally, the email stated that Woodside was available to meet with CCWA to discuss this EP should they be interested.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) GHG emissions and their management.</p>	<p>(1) Woodside assessment: GHG emissions relevant to the PAP, including sources and volumes, have been presented and assessed in the EP. Woodside response: Woodside confirmed GHG emissions relevant to the PAP would be presented and assessed in the EP and the EP would address both direct and indirect impacts and risks. Woodside advised that assessment of the broader Scarborough Project including the contribution to global GHG emissions and the potential impacts on sensitive receptors within Australian jurisdictions was described in the OPP. Acknowledging the interest in this aspect, a copy of Woodside's Climate Transition Action Plan and 2023 Progress Report were provided when these were published.</p>	<p>(1) GHG emissions related to the proposed activity are assessed in Section 6.7.6 of the EP.</p>
<p>(2) Risks and impacts of GHG emissions on climate change.</p>	<p>(2) Woodside assessment: Woodside assesses emissions against a range of scenarios and assessment of these is publicly available in its climate report. Woodside response: Woodside advised that assessment of the broader Scarborough Project including the contribution to global GHG emissions and the potential impacts on sensitive receptors within Australian jurisdictions was described in the OPP. Acknowledging the interest in this aspect, a copy of Woodside's Climate Transition Action Plan and 2023 Progress Report were provided when these were published.</p>	<p>(2) GHG emissions related to the proposed activity are assessed in Section 6.7.6 of the EP.</p>
<p>(3) Impacts on cultural heritage including Murujuga rock art.</p>	<p>(3) Woodside assessment: There are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the FPU. Woodside supports the MRAMP and will implement feasible recommendations of the program. Woodside supports the decision of Traditional Owners and the State to pursue World Heritage listing for the Burrup Peninsula. Woodside response: Woodside confirmed it had carried out an assessment of the direct and indirect emissions from the Scarborough Project. It advised</p>	<p>(3) Cultural heritage is described in Section 4 of the EP. Potential impacts from indirect emissions associated with gas processing onshore is assessed in Section 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>there were no credible impacts to Murujuga rock art in relation to air emissions produced at the offshore FPU.</p> <p>Woodside advised gas would be exported onshore and processed at the Pluto Gas Plant, for which the AQMP has been reviewed and approved by the WA EPA.</p> <p>Woodside confirmed it would implement feasible recommendations of the MRAMP and assess and implement Design Out and Operate Out opportunities to reduce emissions.</p>	
<p>(4) CCWA is a relevant person.</p>	<p>(4) Woodside assessment: Woodside complies with regulation 25 of the Environment Regulations. For this EP, CCWA has been assessed as a relevant person based on its functions, interests or activities.</p> <p>Woodside response: Woodside advised it followed the requirements set out in regulation 25 of the Environment Regulations in relation to the consultation process for EPs. Woodside followed the same consultation process whether a person was a relevant person or not. Woodside engaged in ongoing consultation throughout the life of an EP.</p>	<p>(4) Woodside's assessment of relevant persons for this EP is described in Appendix F, Table 1.</p>
<p>(5) Insufficient information and time provided for consultation, and consultation not wide enough.</p>	<p>(5) Woodside assessment: Woodside does not accept that CCWA has not been provided sufficient information and time to make an informed assessment of the possible consequences of the proposed activity on its functions, activities or interests.</p> <p>Woodside response: Woodside reiterated that CCWA had been a consultation participant since the Scarborough OPP document was released for public comment in 2018. Woodside has been in a continued dialogue with CCWA since CCWA requested to be consulted on Scarborough EPs in August 2021.</p> <p>For this EP, on 9 August 2023, Woodside provided CCWA with a consultation information sheet and requested feedback. Woodside also made multiple attempts to reach CCWA for the purposes of organising a meeting. In the absence of feedback, Woodside proactively reviewed prior feedback from CCWA regarding Scarborough EPs that may be relevant to this EP. Woodside also extended the consultation period from an initial four-week period to 4.5 months.</p>	<p>(5) CCWA has been provided sufficient information and a reasonable period of time for consultation, as described in Section 5.4 of the EP.</p> <p>Woodside's assessment of relevant persons is described in Appendix F, Table 1 of the EP.</p>

	Woodside also advised it followed the requirements of regulation 25 of the Environment Regulations to identify relevant persons for the purposes of consultation.	
(6) Impacts on Dampier Archipelago National Heritage Place need to be assessed.	(6) Woodside assessment: Impacts to cultural heritage places and values, including Dampier Archipelago National Heritage Place, are assessed in the EP. Woodside response: Woodside confirmed the EP would assess both direct and indirect environmental impacts and risks associated with the PAP. The EP assessed impacts to heritage places and values including the potential for unplanned impacts.	(6) Cultural heritage is described in Section 4 of the EP. Potential impacts from indirect emissions associated with gas processing onshore is assessed in Section 6.7.7 of the EP.
(7) Scarborough OPP not properly addressed under EPBC Act and potential impacts on World Heritage and National Heritage values of the Great Barrier Reef.	(7) Woodside assessment: The Scarborough OPP has been authorised under the EPBC Act through its acceptance by NOPSEMA. Woodside does not accept the assertion that the Scarborough Project is likely to have a significant impact on the heritage values of the Great Barrier Reef. Woodside response: Woodside confirmed the Scarborough OPP had been authorised under the EPBC Act through its acceptance by NOPSEMA, in accordance with the OPGGS Endorsed Program Approval. Woodside advised that specifically, the 'offshore component' of the Scarborough Project would be undertaken in accordance with the endorsed program referred to in the OPGGS Endorsed Program Approval. Woodside advised it did not accept the assertion that the Scarborough Project was likely to have a significant impact on the heritage values of the Great Barrier Reef.	(7) Not required.
(8) Some modelling not relevant.	(8) Woodside assessment: Woodside has commissioned a range of modelling related to the activities described in the EP and will include relevant information in the EP. Woodside response: Woodside confirmed the EP would be informed and supported by a wide range of literature and studies, with many publicly available. Relevant information from modelling commissioned by Woodside would be included within the EP to support relevant impact/risk evaluations.	(8) Not required.
(9)	(9)	(9)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Importance of epifauna and infauna to ecosystem health.</p>	<p>Woodside assessment: Disturbance to the seabed and impacts to benthic habitat and communities are assessed in the EP.</p> <p>Woodside response: Woodside confirmed benthic epifauna and infauna living on or in the sediments may be impacted, particularly in the physical footprint of permanent infrastructure which would result in the displacement and/or permanent loss of epifauna and infauna. Demonstration of impacts reduced to ALARP and acceptable levels, with appropriate control measures would be defined in the EP.</p>	<p>Impacts to benthic habitat are described in Section 6.7.2 of the EP.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls in the EP address CCWA's functions, interests or activities. No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CCWA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to CCWA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to the CCWA over a 7-month period, including the 4.5 month consultation period.

Greenpeace (GAP)

Historical Engagement:

2018 – 2020

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- GAP was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - GAP chose not to take up the opportunity to participate in consultation.

2022 – 2023

- From 2022 to 2023 Woodside consulted GAP on the Scarborough D&C, SIT1, Subsea and Seismic EPs. A number of issues raised by GAP during consultation on those EPs were addressed and have been raised as part of consultation on this EP and include:
 - Routine light emissions including external lighting on project vessels.
 - Information on the direct and indirect GHG emissions of the activity.
 - How expected emissions from the activities aligned with global temperature and decarbonisation goals.
 - Summary of the expected offsets to be provided in the EP.
 - Indirect scope 3 emissions regarding from activities in the EP should be included in the assessment of impacts and risks.
 - Assessment of climate-related impacts to MNES coral reef systems such as Ningaloo Marine Park and the Great Barrier Reef.
 - Unplanned hydrocarbon release – vessel collision.
 - Risk of collision with marine fauna and the need for speed restrictions for vessels.
 - Routine acoustic emissions, including potential cumulative impacts from all activities at the Scarborough site.
 - Adapting the consultation process to GAP's needs, including all consultation to be in writing.
 - A public statement by GAP stating its objective was to use every means possible to stop Woodside.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed GAP advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 13 September 2023, GAP sent a letter to Woodside (SI Report, reference 1.1) and stated the following:
 - **(1)** GAP was a relevant person and GAP asked that Woodside provide written confirmation that Woodside considered Greenpeace to be a relevant person under regulation 25 of the Environment Regulations.
 - As per Regulation 25(2), GAP required additional information about the activities in the EP to make an informed assessment of the possible consequences of the activities on its functions, interests or activities. GAP advised it needed:
 - **(2, 6)** Approximately one month to consider and respond to additional information provided by Woodside. An opportunity to respond within the above timeframe to any additional information including an expectation that Woodside would not resubmit EPs to NOPSEMA for assessment without first allowing GAP approximately one month (or longer if advised by GAP) to consider and respond to additional information.

- **(6)** The full text of any changes made to a published draft EP. For clarity and to prevent confusion, GAP preferred this to be provided as an updated version of the EP.
 - **(6)** GAP expected Woodside to be open and generous with the provision of additional information (and that this should be standard practice with all relevant persons and interested stakeholders), and GAP expected Woodside to directly address the questions and concerns GAP raised, rather than avoiding or distracting from the issues as standard practice with all relevant persons and interested stakeholders.
 - **(6)** GAP required any additional information provided to be at a similar level of detail and supported by a similar level of evidence that was normally provided to NOPSEMA within an EP. GAP needed all descriptions, statements, justifications, reasonings, etc to be fully referenced and the underlying technical or scientific evidence provided.
- Additional information required:
 - **(8)** Detailed, comprehensive and fully justified information about each potential planned and unplanned risk and impact, and proposed mitigation actions.
 - **(9)** Copies of any full text modelling, reports or analyses underlying the Proponent's risk assessment.
 - **(3)** Comprehensive information setting out the sources and volumes of GHG emissions considered in the EP, as well as those GHG emissions Woodside has chosen not to consider in the EP.
 - **(11)** The states and countries in which the direct and indirect GHG emissions were expected to be released, and the volume of greenhouse gases to be released in each state and country.
 - **(4)** Full explanation and justification as to whether and/or how the expected direct and indirect GHG emissions in the EP fit within:
 - Australia's portion of the remaining global carbon budget needed to limit global warming to 1.5°C (with a 66% probability).
 - Western Australia's portion of the remaining global carbon budget needed to limit global warming to 1.5°C (with a 66% probability).
 - the remaining carbon budget for Australia that would allow the nation to reach net zero GHG emissions by 2050, and
 - the remaining carbon budget for Western Australia that would allow the state to reach net zero GHG emissions by 2050.
 - **(5)** Comprehensive information about any carbon offsets that may be used to offset the direct or indirect GHG emissions from the activities, and
 - **(9, 11)** Comprehensive information about the species and protected areas at risk from the planned and unplanned activities.
- On 6 December 2023, Woodside responded to GAP in a letter (SI Report, reference 1.2). Woodside stated:
 - **(6)** Woodside had been in a continued dialogue, with a significant exchange of information, with GAP since December 2018 around the Scarborough Project which had been acknowledged by GAP.
 - This exchange of information continued from April 2022 around the 4 Scarborough EPs.
 - GAP had shown a high level of technical awareness of the Scarborough Project which demonstrated a comprehensive and detailed understanding of the potential environmental risks and potential impacts and Woodside's mitigations.
 - Woodside had advertised about this EP extensively in media and social media and run Community Information Sessions in regional WA.
 - Woodside had offered to meet with GAP but this had not been taken up and instead, GAP had run an ongoing campaign called Stop Woodside where protestors had scaled a crane next to the Woodside Perth office and unlawfully entered offshore safety exclusion zones and boarded decommissioned infrastructure.
 - Woodside advised GAP consultation would close on 20 December 2023 and asked if GAP had any feedback before this time or would like to meet.

- (6) Woodside complied with regulation 25 of the Environment Regulations in relation to the consultation process for this EP. Woodside engaged in ongoing consultation with stakeholders throughout the life of an EP.
- (2, 6) Woodside provided information on this EP via the Consultation Information Sheet to GAP on 9 August 2023 and had provided a reasonable period of time for GAP to submit feedback in relation to the EP. Feedback and comments received continued to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
- (2, 6, 8, 11) The Consultation Information Sheet provided to GAP provided information to enable a person to make an informed assessment of the possible consequences of the activity on their functions, interests or activities of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program (PAP) and a summary of proposed mitigation and management measures. The information contained within the Consultation Information Sheet was sufficient to inform consultation. Woodside does not provide drafts of EPs and while content was subject to change. Publicly available versions assisted stakeholders to access and comment on the same information and removes confusion. The EP would be made publicly available on NOPSEMA's website once it had been submitted and is under assessment by NOPSEMA.
- (6) Woodside has had ongoing contact with GAP throughout the Scarborough Project, this had included correspondence and offers to meet with GAP regarding the Scarborough Project. Woodside continued to welcome the opportunity to meet with GAP to discuss any specific questions or concerns regarding the activity.
- (6) The Woodside response contained responses to GAP questions and concerns.
- (6) The EP will be informed and supported by literature and studies, with many publicly available. The relevant information from these will be included within the EP to support the relevant impact and risk evaluation and will be referenced as appropriate, in response to GAP questions and concerns.
- (6) The EP and relevant appendices (such as reports, analyses and modelling) would be made publicly available once the EP is submitted to NOPSEMA and is under assessment by NOPSEMA.
- (3) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008*. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
- (3) The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide, and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
- (3) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rates estimated by contractors, internal helicopter fuel consumption data and emission factors from the NGER Scheme.
 - An impact assessment of GHG from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub. Woodside also had in place a Climate Strategy which was an integral part of the company strategy. The strategy had two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.
 - Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ Avoiding GHG emissions through the way we designed our assets.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ Reducing GHG emissions through the way we operated our assets.
- ❖ Originating and acquiring carbon credits to use as offsets for the remainder.
- **(4)** Avoiding and reducing emissions are Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve its net zero aspiration.
- **(9, 8, 11)** The existing environment that may be affected by the PAP would be described in the EP. This included details of values and sensitivities of the environment, including species and protected areas, which would be used for the assessment of impacts and risks for planned and unplanned activities. A specific assessment would be undertaken to confirm that the PAP would not be inconsistent with a recovery plan or threat abatement plan for a listed threatened species or ecological community and would be consistent with the principles of Ecologically Sustainable Development.
- On 20 December 2023, GAP emailed Woodside (SI Report, reference 1.3) and:
 - Confirmed it did have additional feedback.
 - **(1, 6)** Advised it preferred all relevant person consultation to be in writing.
 - **(2, 6)** Advised it generally required one month to consider and respond to information. As such, GAP asked to have until 6 January 2023 to respond. GAP also requested that Woodside respond to this email by 10 January 2023.

Ongoing engagement:

- On 21 December 2023, Woodside responded to GAP (SI Report, reference 1.4) as follows:
 - **(1, 2, 6)** It had responded to feedback, claims and objections and advised consultation would close on 20 December 2023.
 - **(2, 6)** It had extended its consultation period from four weeks to 4.5 months giving GAP time and opportunity to provide feedback, claims and objections.
 - **(2)** On the basis of the extended period for consultation, numerous attempts to engage GAP, and provision of information sheets as well as the 6 December 2023 response to feedback, claims and objections; sufficient information, a reasonable period of time and opportunity for consultation has been provided to GAP.
 - It advised that consultation continued to occur during the life of an EP and that the Management of Change and Review process could be applied if appropriate.
 - **(6)** Noted GAP preferred to be consulted in writing however, Woodside was still open to meeting in the future.
- On 9 January 2024, GAP responded to Woodside (SI Report, reference 1.5) as follows:
 - **(1, 6)** GAP is a relevant person but does not want to meet with Woodside and wants all communications in writing.
 - **(2)** The consultation process should be adjusted to allow access to more detailed information and Woodside should advise on a practical solution to this quandary.
 - **(6)** GAP objected to Woodside developing the Scarborough gas field and undertaking the activities in the EP.
 - **(8, 11)** GAP required detailed additional information on each of the potential impacts that posed a risk to marine wildlife, habitats or environments including:
 - Physical presence – seabed disturbance.
 - Routine light emissions – FPU and project vessels.
 - Routine acoustic emissions – FPU and project vessels including intensity and frequency, distances which marine fauna may be impacted and mitigations.

- Routine and non-routine discharges from project vessels including make-up, toxicity, characteristics, volumes, frequency and impacts on marine wildlife, habitats and environments, and mitigations.
 - Routine and non-routine discharges from FPU operations (waste water streams).
 - Routine and non-routine discharges from FPU and subsea commissioning.
 - Routine and non-routine discharges from FPU operations.
 - Routine and non-routine discharges from FPU operations (commingled produced water/cooling water stream).
 - Routine and non-routine discharges subsea operations and activities.
 - Unplanned hydrocarbon release – FPU loss of structural integrity including volumes released, time to stop and contain a spill, adequacy of actions to prevent unplanned release, environmental impacts of unplanned release and remediation.
 - Unplanned hydrocarbon release – vessel collision.
 - Unplanned hydrocarbon release – loss of well containment.
 - Unplanned hydrocarbon release – trunkline, flowline and riser loss of containment.
 - Unplanned hydrocarbon or chemical release – hydrocarbon release during bunkering/refuelling and chemical release during transfer, storage and use
 - Unplanned discharges – deck and subsea spills.
 - Unplanned discharges – loss of hazardous and non-hazardous wastes/equipment.
 - Physical presence (unplanned) seabed disturbance.
 - Physical presence (unplanned): vessel collision with marine fauna.
 - Physical presence (unplanned): introduction of invasive marine species.
- Potential impacts associated with climate change, including routine and non-routine atmospheric and GHG emissions. GAP was concerned about:
- **(3)** The sources and volumes of GHG emissions.
 - **(10)** The volumes of GHG emissions expected to be released in Western Australia, Australia and overseas.
 - **(4)** How these compare to the remaining carbon budgets (allowing for a 66% probability of limiting global warming to 1.5 degrees Celsius) for Western Australia, Australia and globally.
 - **(9)** The integrity of the modelling underlying any assessment of GHG emissions and their potential impacts.
 - **(12)** The effectiveness of the decarbonisation plan for the Pluto Hub.
 - **(13)** Environmental harm that may result from warming associated with the release of the GHG emissions.
 - **(3)** The full extent of Scarborough Scope 3 emissions (and their associated environmental impacts) are not being considered in the EP.
 - **(14)** Residual GHG emissions will remain high, even after mitigation efforts.
 - **(5)** There will be an overreliance on carbon offsets to mitigate the GHG emissions.

- **(15)** GAP was concerned that Woodside may rely on its Climate Strategy to mitigate the potential impacts of the direct and indirect GHG emissions that may result from the activities.
- On 1 February 2024, Woodside responded to GAP (SI Report, reference 1.6) as follows:
 - **(6)** Woodside noted GAP's objection to meeting but still extended its offer for GAP to meet with Woodside.
 - **(2, 6)** Information had been provided which addressed the key issues raised, sufficient for GAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities and specifically to understand the nature of the GHG emissions that were predicted from both the activity and the overall Scarborough project. The global context and predicted impacts from those emissions were also public.
 - **(6, 7)** While the information in this EP Consultation Information Sheet may not meet GAP's objective to phase out all fossil fuel use (i.e. fundamental opposition to the Scarborough Project), that was not required in order for the consultation requirements under the Regulations to be met.
 - **(3)** Woodside had also referred GAP to the published OPP for further detailed information and quantification of Scope 3 emissions estimates from the overall project.
 - **(7)** Woodside noted GAP's fundamental opposition to the activities described in this EP and would cite GAP's fundamental objection to Woodside and its activities in this EP when it was submitted to NOPSEMA.
 - **(8, 11)** Woodside noted GAP's request for more detailed additional information on each of the potential impacts that posed a risk to marine wildlife, habitats or environmental, plus those associated with climate change.
 - **(2, 6)** Woodside considered the information in the Scarborough OPP as well as previous information provided to GAP to be sufficient to allow GAP to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of GAP.
 - **(2, 6)** Woodside also noted that GAP was contacted in 2018 to provide comment on the Scarborough Project OPP. GAP did not provide any comment regarding its functions, interests or activities nor any claims or objections regarding the Scarborough Project OPP.
 - **(3)** It should be noted this EP would include a revised estimate of emissions, taking into account changes since the OPP was accepted by NOPSEMA, including but not limited to:
 - Updated GHG emission factors.
 - Maturation of FPU design and operational details.
 - Changes in associated regulatory requirements such as the updated Pluto LNG Facility GHG Abatement Program and associated conditions in Ministerial Statement 1208.
 - **(3)** The Scarborough OPP acknowledged that GHG estimates were subject to a range of variables that may change and presented a description of the methodology and emission factors used to quantify emission estimates. The total GHG emission estimates for the field life had not changed, although some annual variations were anticipated, consistent with the narrative set out in the Scarborough OPP.
 - **(4, 13)** Climate science had drawn a robust link between cumulative net emissions of greenhouse gases and global temperature levels. The link between cumulative net emissions and temperature levels allowed a carbon budget to be calculated. This was the remaining amount of net emissions (i.e. all global sources of emissions minus all global sinks of emissions) that could occur before today's concentration of greenhouse gases increased to the concentration associated with potential temperature outcomes.
 - However, the distribution of this carbon budget across different human activities required additional judgements about a wider range of social, economic and technological factors and consumer and policy choices. Strategies to achieve emissions reductions included transitioning from fossil fuels without Carbon Capture Storage (CCS) to very

- low-or zero-carbon energy sources, such as renewables or fossil fuels with CCS, demand side measures and improving efficiency, reducing non-CO₂ emissions, and deploying carbon dioxide removal methods to counterbalance residual GHG emissions.
- Pathways to limit warming therefore show different combinations of sectoral mitigation strategies consistent with a given warming level.
 - As a result the demand for oil and gas in climate-related scenarios that could limit global warming to 1.5°C or 2°C was uncertain. For example in the AR6-WG3 report, the IPCC stated that in pathways that limit warming to 1.5°C (with a greater than 50% probability and with no or limited overshoot) the potential global use of gas in 2050 ranged from 30% above 2019 levels to 85% below them with a median 45% decline.
- (4) Woodside sees an ongoing role for Scarborough LNG and pipeline gas to support its customers' plans to secure their energy needs, while they reduce their emissions. The Scarborough reservoir contained only around 0.1% carbon dioxide and would be combined with processing design efficiencies at the FPU (offshore) and at Pluto Train 2 (onshore) to deliver one of the lowest carbon intensity projects for LNG delivered into Asian markets.
 - (9) On the integrity of the modelling underlying the assessment of GHG emissions and their potential impacts, Woodside emphasised that, due to the high level of complexity and numerous variables associated with climate and ecological processes, it was not considered feasible to correlate the potential impact of Scarborough GHG emissions on receptors given:
 - That it is the net global GHG concentrations that caused climate change and climate related impacts.
 - The inability to precisely predict the amount of total future global GHG emissions.
 - The inability to predict future national and international initiatives on climate change and the impact they would have on total future global GHG emissions, including Scarborough emissions.
 - (12) On the effectiveness of the decarbonisation plan for the Pluto Hub, Woodside noted that interim and long term emission reduction targets for the Pluto LNG Facility had been set to achieve net zero emissions by 2050. Following the State Minister's inquiry under section 46 of the *Environmental Protection Act* 1986, these emission reduction targets had become emission limits in Ministerial Statement 1208. Furthermore, public reporting by Woodside would be undertaken to confirm compliance with the various emission limits, providing assurance of the effectiveness of the Pluto LNG Facility Greenhouse Gas Abatement Program.
 - (3, 13, 14) It was important to acknowledge that climate change impacts could not be directly attributed to any one project as they were instead the result of GHG emissions, minus GHG sinks, that had accumulated in the atmosphere since the industrial revolution started. This meant there was no link between GHG emissions from Scarborough and climate impacts.
 - (3) The EP would assess both direct and indirect impacts and risks associated with the Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. Direct estimated GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - (3) Indirect estimated GHG emissions associated with the PAP from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - (5) Avoiding and reducing GHG emissions were a Woodside priority, and this was principally achieved through pursuing opportunities in the design and operation of our assets that were economically viable when assessed using an internal long-term cost of carbon, currently US\$80/tCO₂e, which exceeded the current market price of Australian Carbon Credit Units (ACCU).

- (5) Offsetting emissions allowed Woodside flexibility to reduce net emissions, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, residual emissions would be offset using carbon credits in order to achieve our emission reduction requirements.
- (15) Woodside's climate strategy was an integral part of the company strategy. It had two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that its customers needed as they secured their energy needs and reduced their emissions.
- (15) Woodside announced a Scope 3 emissions plan in 2021, which had three key elements:
 - 1. Invest: New energy products and lower carbon services – Woodside expected increasing demand for new energy products such as hydrogen and ammonia, and lower carbon services such as CCUS. These could reduce the emissions arising when our customers consumed energy compared to unabated use of fossil fuels.
 - ❖ Woodside was investing to add these new products and services to its portfolio, seeking to match the pace, scale and needs of its customers as they determined their own decarbonisation pathways.
 - ❖ In December 2021, Woodside announced a US\$5 billion investment target in new energy products and lower carbon services by 2030. The US\$5 billion was intended for investments that helped its customers decarbonise by using these products and services. It was not used to fund reductions of Woodside's net equity Scope 1 and 2 emissions which were managed separately through asset decarbonisation plans.
 - 2. Support: Customer and supplier emissions reduction – Woodside could support its customers and suppliers by identifying opportunities to collaborate on their decarbonisation pathways.
 - 3. Promote Global measurement and reporting – Woodside was actively participating in industry collaboration initiatives to mature, harmonise and advocate for accurate and transparent measurement and reporting.
- (15) GAP was advised that Woodside's Climate Strategy was not the governing framework outlining the management and mitigation measures to reduce GHG emissions associated with the Scarborough Project, the Scarborough OPP outlined the management and mitigation measures already adopted by Woodside for the Scarborough Project.
 - Furthermore, the Pluto LNG Facility Greenhouse Gas Abatement Program outlined the strategies adopted to avoid, reduce, mitigate and offset GHG emissions associated with the Pluto LNG Facility.
- On 7 February 2024, Woodside emailed GAP correcting a date on previous correspondence (SI Report, reference 1.7).
- On 7 March 2024, Woodside sent GAP an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 1.8).
 - (4, 5) The email included links to the CTAP and the ASX Announcement.
 - (1, 6) It also re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - (1, 6) Finally it stated Woodside was available to meet with GAP to discuss this EP should they be interested.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1)	(1)	(1)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>GAP self-identified as a relevant person and requested to be consulted on Scarborough EPs.</p>	<p>Woodside assessment: Woodside complies with regulation 25 of the Environment Regulations and has assessed GAP as a relevant person for this EP based on its functions, interests or activities.</p> <p>Woodside response: Woodside advised it complied with regulation 25 of the Environment Regulations in relation to the consultation process for this EP. Woodside engages in ongoing consultation with stakeholders throughout the life of an EP.</p>	<p>Woodside has assessed GAP as a relevant person in its Assessment of Relevance (see Appendix F, Table 1 of this EP).</p>
<p>(2) Additional information and time required to make informed assessments about possible consequences on its functions, interests or activities.</p>	<p>(2) Woodside assessment: Woodside disputes the claim that GAP has not been given sufficient information or reasonable time to make an informed assessment regarding the possible consequences of the proposed activity on its functions, interests or activities.</p> <p>Woodside response: Woodside provided information regarding this EP to GAP via the Consultation Information Sheet on 9 August 2023. The sheet provided a summary of the activity description, receiving environment, a comprehensive summary of impacts and risks associated with the PAP and a summary of proposed mitigation and management measures. Woodside also extended the consultation period from an initial four weeks to 4.5 months and offered to meet with GAP to discuss its claims and objections. Woodside also noted GAP was contacted in 2018 to provide comment on the Scarborough OPP, and Woodside and GAP had engaged in an extensive exchange of emails regarding all four prior Scarborough Project EPs.</p>	<p>(2) GAP has been provided with sufficient information and a reasonable period for consultation, as described in Section 5.4 of the EP.</p>
<p>(3) Comprehensive information setting out sources and volumes of direct and indirect emissions related to the EP.</p>	<p>(3) Woodside assessment: GAP has been provided sufficient information on the emissions associated with the proposed activities via the consultation information sheet and Scarborough OPP in order to make an informed assessment about the possible consequences of the proposed activity on its functions, interests or activities. An updated estimate of the direct and indirect GHG emissions associated with the PAP will be included in the EP.</p> <p>Woodside response: Woodside confirmed that routine and non-routine atmospheric and GHG emissions relevant to the PAP would be assessed in the EP using the NGER Measurement Determination. Woodside advised that in addition to the Consultation Information Sheet provided to GAP, the various direct and indirect sources of volumes of GHG emissions were included in the OPP on which GAP was invited to comment in 2018.</p>	<p>(3) Direct and indirect emissions associated with the proposed activity are presented and assessed in Sections 6.7.6 and 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside advised it should be noted that this EP would include a revised estimate of these emissions based on updated GHG emission factors, maturation of FPU design, and changes in associated regulatory requirements such as the updated Pluto LNG Facility GHG Abatement Program.</p>	
<p>(4) Full explanation as to whether/how expected GHG emissions fit within temperature and decarbonisation goals.</p>	<p>(4) Woodside assessment: Woodside assesses emissions against a range of scenarios including the IEA NZE and assessment of these is publicly available in its CTAP and 2023 Progress Report. Woodside response: Woodside confirmed routine and non-routine atmospheric emissions and routine GHG gas emissions associated with the FPU and vessels would be assessed in the EP. Woodside outlined its climate strategy which has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions. Woodside advised its net equity emissions reduction targets had an aspiration of net zero by 2050 or sooner, and that further information was available in the 2022 Climate Report. Woodside also provided GAP with a copy of its CTAP and 2023 Progress Report once released. Woodside provided detailed information regarding the Scarborough Project and climate related scenarios, and then followed up with a copy of its Climate Transition Action Plan (which contains further context) and 2023 Progress Report when they were published.</p>	<p>(4) GHG emissions related to the proposed activity and relation to climate related scenarios are assessed in Section 6.7.6 of the EP.</p>
<p>(5) Information about carbon offsets and concerns there will be an overreliance on carbon offsets to mitigate GHG emissions.</p>	<p>(5) Woodside assessment: Information about Woodside's decarbonisation strategy is publicly available in its CTAP and 2023 Progress Report, as well as in previous iterations of its climate report. Mitigation and management measures specific to the Scarborough Project are outlined in the Scarborough OPP. Woodside response: Woodside confirmed its priority was avoiding and reducing GHG emissions by pursuing opportunities in the design and operation of assets that were economically viable when assessed using an internal long-term cost of carbon, which exceeded the current market price of ACCUs.</p>	<p>(5) Not required.</p>

	Woodside noted offsetting emissions allowed Woodside flexibility to reduce net emissions while asset and technology decarbonisation plans were matured and implemented.	
<p>(6) Claims the consultation process did not incorporate all relevant persons and needed to be adapted for GAP, including all claims in writing, highly detailed and specific information, timeframes for consultation prior to resubmission, and full text of any changes to the EP.</p>	<p>(6) Woodside assessment: Woodside complies with regulation 25 of the Environment Regulations in relation to the consultation process for EPs. Woodside accepts GAP's objection to meeting but still extends its offer to meet with GAP. Sufficient information has been provided which addresses the key issues raised. Woodside response: Woodside advised it noted GAP's objection to meeting and that it complied with regulation 25 of the Environment Regulations in relation to the consultation process for this EP. Woodside also confirmed it engaged in ongoing consultation throughout the life of an EP. Woodside advised it considered information had been provided which addressed the key issues raised, sufficient for GAP to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Woodside noted it had also referred GAP to the published OPP for further detailed information.</p>	<p>(6) Woodside's consultation process is described in Section 5 of the EP and its assessment of relevant persons is described in Appendix F, Table 1 of the EP.</p>
<p>(7) GAP has called on Woodside to abandon fossil fuel expansion plans particularly in relation to the proposed development of the Burrup Hub.</p>	<p>(7) Woodside assessment: Woodside is aware of GAP's fundamental opposition to the activities described in this EP. Woodside response: Woodside confirmed it had noted GAP's fundamental opposition to the activities and advised GAP it would cite this opposition in the EP when it was submitted to NOPSEMA.</p>	<p>(7) Not required.</p>
<p>(8) Detailed comprehensive information about each potential planned and unplanned risk and impact and proposed mitigating actions.</p>	<p>(8) Woodside assessment: GAP has received sufficient information on the potential impacts of routine light emissions via its consultation information sheet for this activity, and the Scarborough OPP. Woodside response: Woodside noted GAP's objection to developing the Scarborough gas fields and the request for more detailed additional information on each of the potential impacts that posed a risk to marine wildlife, habitats or environments. Woodside advised it considered sufficient information had been provided. Woodside also noted GAP was contacted in</p>	<p>(8) Woodside has assessed the potential impacts and risks to marine wildlife from planned and unplanned activities in Sections 6.7 and 6.8 of the EP.</p>

	2018 to provide comment on the Scarborough OPP, which included information on potential risks to marine wildlife, habitats or environments.	
(9) Copies of any full text modelling, reports or analyses underlying the risk assessment.	(9) Woodside assessment: Relevant reports, analyses and modelling will be publicly available once the EP is submitted to NOPSEMA and is under assessment. Woodside response: Woodside confirmed the EP and relevant appendices such as reports, analyses and modelling would be made publicly available once the EP was under assessment by NOPSEMA.	(9) Not required.
(10) States and countries in which direct and indirect GHG emissions are expected to be released, and the volumes.	(10) Woodside assessment: Emissions associated with the PAP will be assessed in the EP. GAP has been provided sufficient information on the emissions associated with the proposed activities via the consultation information sheet and Scarborough OPP. Woodside response: Woodside advised that in addition to the Consultation Information Sheet provided to GAP, routine and non-routine atmospheric and GHG emissions associated with the FPU and vessel activities were included in the OPP on which GAP was invited to comment in 2018. This included an estimate of the indirect onshore processing emissions in the Western Australian jurisdiction.	(10) Emissions associated with the proposed activities are assessed in Sections 6.7.6 and 6.7.7 of the EP.
(11) Comprehensive information about the species and protected areas at risk from the planned and unplanned activities.	(11) Woodside assessment: Woodside has assessed the existing environment that may be affected, and impacts and risk of planned and unplanned activities, in the EP. Woodside response: Woodside advised the existing environment that may be affected by the PAP would be described in the EP, including details of values and sensitivities of the environment including species and protected areas, which would be used for the assessment of impacts and risks for planned and unplanned activities. Woodside advised a specific assessment would be undertaken to confirm the PAP was not inconsistent with a recovery plan or threat abatement plan for a listed threatened species or ecological community.	(11) A description of the existing environment is described in Section 4 of the EP.
(12) The effectiveness of the decarbonisation plan for the Pluto Hub.	(12)	(12) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside assessment: Interim and long-term emission reduction targets for the Pluto LNG Facility have been set to achieve net zero emissions by 2050.</p> <p>Woodside response: Woodside advised public reporting by Woodside would be undertaken to confirm compliance with the various emission limits, providing assurance of the effectiveness of the Pluto LNG Facility Greenhouse Gas Abatement Program.</p>	
<p>(13) Environmental harm that may result from warming associated with the release of GHG emissions.</p>	<p>(13) Woodside assessment: Climate change impacts cannot be attributed to any one activity or project, including the Scarborough Project. Although the direct and indirect GHG emissions associated with the Scarborough Project cannot be lined to climate change impacts to the environment, a contextual evaluation is provided in the EP.</p> <p>Woodside response: Woodside confirmed lifecycle GHG emissions were assessed in the OPP against relevant receptors and were found to be negligible. Woodside provided detailed information regarding the Scarborough Project and climate related scenarios, and then followed up with a copy of its Climate Transition Action Plan (which contains further context) and 2023 Progress Report when they were published.</p>	<p>(13) GHG emissions related to the proposed activity and relation to climate related scenarios are assessed in Section 6.7.6 of the EP.</p>
<p>(14) Residual GHG emissions will remain high even after mitigation efforts.</p>	<p>(14) Woodside assessment: Management and mitigation measures adopted to avoid, reduce and offset GHG emissions will be outlined in the EP.</p> <p>Woodside response: Woodside confirmed this EP would outline the management and mitigation measures adopted to avoid, reduce and offset GHG emissions as well as indirect emissions associated with onshore processing. Management and mitigation measures relating to indirect GHG emissions from transport and customer use would also be outlined in the EP.</p>	<p>(14) Management and mitigation measures regarding GHG emissions are outlined in Sections 6.7.6 and 6.7.7 of the EP.</p>
<p>(15) Concerns Woodside may rely on its climate strategy.</p>	<p>(15) Woodside assessment: Woodside's climate strategy is an integral part of the company's strategy but is not the governing framework for management and mitigation measures to reduce GHG emissions associated with the Scarborough Project.</p> <p>Woodside response: Woodside advised the climate strategy was an integral part of the company's strategy and included two key elements: reducing net equity Scope 1 and 2 GHG emissions, and investing in the products and services customers need as they secured their energy needs</p>	<p>(15) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>and reduced their emissions. Woodside also announced a Scope 3 emissions plan in 2021.</p> <p>Woodside advised Woodside’s climate strategy was not the governing framework outlining management and mitigation measures to reduce GHG emissions associated with the Scarborough Project, and that the Scarborough OPP outlined the management and mitigation measures already adopted by Woodside for the Scarborough Project.</p>	
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on GAP’s functions, interests or activities.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with GAP for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to GAP on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to GAP over a 7-month period, including the 4.5 month consultation period.

Australian Conservation Foundation (ACF)

Historical Engagement:

2018 – 2020

- ACF was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - ACF chose not to take up the opportunity to participate in consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

2022 – 2023

- From 2022 to 2023 Woodside consulted ACF on the Scarborough D&C, SITI, Subsea and Seismic EPs. A number of issues raised by ACF during consultation on those EPs were addressed and have been raised as part of consultation on this EP and include:
 - Several vulnerable and endangered marine and avian species were within the Operational Areas.
 - Impacts and risks from light emissions on seabirds.
 - Impacts and risks from acoustic emissions on cetaceans, turtles, pygmy blue whales, fish and sharks.
 - Impacts to benthic habitats and communities and the Gascoyne Marine Parks.
 - ACF detailed the impacts of GHG emissions.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 5 December 2023, in the absence of specific feedback from ACF, Woodside sent a letter via email (Record of Consultation, reference 1.57) which stated the following:
 - (1) Woodside met with ACF in October 2022 and briefed it on the Scarborough Project and related EPs. Since then, ACF and Woodside have engaged in correspondence around all four EPs.
 - (7) Woodside had provided ACF with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Consultation Information Sheet.
 - (1) Woodside advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if ACF had feedback and/or would like to meet.
 - The letter also reviewed past feedback from ACF on the Scarborough D&C, SITI, Seismic and Subsea EPs and provided an assessment and response as follows:
 - (6) The Scarborough Project EPs should include an evaluation of all impacts and risks related to the GHG emissions that would be caused by the Project.
 - ❖ GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database.
 - ❖ The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - ❖ Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - (2) There were several vulnerable, endangered and critically endangered marine species within both the Operational Area and the environment that may be affected (EMBA) including loggerhead and leatherback turtles, blue whales and the eastern curlew.
 - ❖ In accordance with regulation 13(2) and 13(3) of the Environment Regulations, the EP would describe the existing environment that may be affected by the activity, including details of the particular relevant values and sensitivities of the environment. This included the presence of turtles, whales and seabirds. Controls would be implemented to reduce risks to As Low as Reasonably Possible (ALARP) and acceptable levels.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (3) Light emissions from the activities were expected to have potential impacts and risks including behavioural disturbance, injury and mortality to seabirds while the activities were underway.
 - ❖ Evaluation of risks and impacts associated with routine light emissions from the Field Production Unit (FPU) and Project Vessels would be presented in the EP. This included routine lighting from FPU and vessel operation. As the FPU was approximately 430 km offshore and away from islands or other emergent features, including a 105 km separation from a breeding Biologically Important Area (BIA) for the wedge-tailed shearwater, any presence of seabirds or shorebirds was considered likely to be of a transient nature only.
 - ❖ The Trunkline Operational Area was in proximity to and overlapped breeding and foraging habitat for a number of seabird species, with descriptions and impacts evaluated in the EP. However, planned activities in the Trunkline Operational Area were minimal, limited to infrequent and short-term vessel presence. The Trunkline Operational Area also represented a relatively small portion of the seabird BIAs and while seabird presence may occur, it was considered likely to be of a transient nature only.
 - ❖ Further details including demonstration that impacts of lighting on seabirds would be reduced to ALARP and acceptable levels, with controls implemented would be presented in the EP.
- (4) Acoustic emissions from the activities were expected to have potential impacts and risks on marine species, including:
 - ❖ Recognition that noise interference was a key threat to migratory and threatened cetaceans and marine turtles within the Operational Area.
 - ❖ The potential for pygmy blue whales to deviate from their migration course.
 - ❖ Noise emissions exceeding thresholds for behavioural impacts on cetaceans.
 - ❖ A risk of moderate impacts on marine turtles, in the context of a “paucity of data” on these species.
 - ❖ Behavioural impacts on fish and sharks in the Operational Area.
 - The PAP would be comprised of different acoustic emissions sources, primarily associated with infield vessel operations and support activities, such as geophysical surveys and other IMMR activities. Sound levels would fluctuate over the course of the PAP.
 - Woodside had undertaken a comprehensive assessment of routine acoustic emissions, including underwater noise emissions modelling, with full justification of the impacts and risks for the Regulator to assess in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*, and NOPSEMA Guidance Note (N-04750-GN1344 A339814) EP Content Requirement.
- (5) Localised impacts to benthic habitat and communities including displacement and/or permanent loss of epifauna and infauna within the physical footprint.
 - ❖ Disturbance to the seabed and impacts to benthic habitat and communities was assessed in the EP. Benthic epifauna and infauna living on or in the sediments may be impacted by the activities that cause disturbance to the seabed. Permanent infrastructure would be present for the duration of field life and would result in the displacement and/or permanent loss of epifauna and infauna within the physical footprint. Gravimetry surveys or IMMR activities may cause temporary disturbance to the seabed as a result of working close to or on the seabed.
 - ❖ No threatened or migratory species, or ecological communities (as defined under the EPBC Act), were identified in the benthic communities during studies completed in the Petroleum Activities Area (PAA).
 - ❖ Demonstration of impacts reduced to ALARP and acceptable levels, with appropriate controls measures was defined in the EP.
- (5) Hydrocarbon spill to Ningaloo Coast and Gascoyne marine parks.
 - ❖ The EP would assess potential impacts of a highly unlikely hydrocarbon spill. This included a combination of modelling at three locations in the PAA from a worst-case release of marine diesel from a vessel collision resulting in rupture of a tank.

- On 20 December 2023, ACF wrote to Woodside (SI Report, reference 55.1), acknowledging receipt of the 5 December 2023 letter and attached Consultation Information Sheet for this EP and raised the following issues:
 - (1) ACF was a relevant person under regulation 25 and understood Woodside accepted this.
 - (7) The Consultation Information Sheet did not comply with regulation 25(2).
 - (2, 3, 4, 5, 6) ACF requested further information including documents referenced in the Consultation Information Sheet; consequences of emissions; details of any offsetting regime or CCS being considered; and surveys and details around impacts on marine flora and fauna.
 - ACF requested to meet with Woodside to discuss the EP.

Ongoing engagement:

- On 8 January 2024, Woodside responded to ACF (SI Report, reference 55.2), as follows:
 - (7) Woodside provided information and a Consultation Information Sheet including a link to NOPSEMA's *Consultation on offshore petroleum environment plans: Information for the community* which encouraged relevant persons to engage with titleholders as early as possible to ACF on 9 and 30 August 2023.
 - As well as directly consulting ACF, Woodside advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers, and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information available at community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - In the absence of a response, Woodside proactively addressed previously raised issues (see 5 December 2023 summary).
 - Woodside had extended the consultation period from four weeks to 4.5 months.
 - (7) Sufficient information and a reasonable period of time had been provided.
 - (1) Ongoing consultation could continue during the life of an EP.
 - Woodside asked ACF to advise a date which suited ACF so that arrangements could be made to meet.
- On 1 February 2024, Woodside responded to ACF's claims/objections/further information (SI Report, reference 55.3), as follows:
 - (7) Woodside had provided sufficient information, and a reasonable period of time and opportunity for consultation.
 - As offered in December 2023 and January 2024 and as requested by ACF, Woodside was still willing to meet with ACF at its convenience.
 - ACF had made it clear in multiple forums its functions, interests, or activities included efforts to phase out fossil fuel use and development in Australia and specifically to block new gas field developments. Woodside noted ACF's fundamental opposition to the activities described in this EP.
 - Woodside noted ACF's published response to the Australian Future Gas Strategy around its push for a rapid exit from gas. In the submission ACF stated:
 - Recommendation 1: Add an explicit objective to the strategy to rapidly phase out gas, starting with a ban on new gas.
 - Recommendation 2: New fossil fuel developments are incompatible with a safe climate. The science is very clear on this, there is no role for new gas in Australia's energy future. None! The strategy needs to aggressively phase out fossil gas. Future gas supply should only be short term to satisfy the planned and phased reduction of fossil gas demand.

- (7) Given ACF's fundamental objection to the Australian gas industry, and considering the information already exchanged between Woodside and ACF during consultation, and a reasonable period of time of 4.5 months being provided, Woodside considered consultation with ACF for the purpose of preparing this EP under the Environment Regulations had been completed.
- (7) Woodside also noted that a significant body of information on the Scarborough Project had been provided to ACF in the Scarborough Offshore Project Proposal (Scarborough OPP) which had been publicly available since 2020. Woodside noted that ACF was contacted in 2018 to provide comment on the Scarborough Project OPP. ACF did not provide feedback regarding the Scarborough Project OPP.
- The Consultation Information Sheet provided by Woodside on 9 August 2023 also set out the relevant activity description as well as a summary of the key risks and impacts and preliminary management measures.
- (6) It was important to acknowledge that climate change impacts could not be directly attributed to any one project, as they were instead the result of GHG emissions, minus GHG sinks that had accumulated in the atmosphere since the industrial revolution started. This means there was no link between GHG emissions from Scarborough and climate change impacts.
- (6) An updated estimate of the total direct and indirect GHG emissions associated with the Scarborough facility and trunkline operations (Petroleum Activities Program) would be included in the EP, noting that estimates of the annual average and total GHG emissions were included in the Scarborough OPP, Section 7.1.3.
- (6) Avoiding and reducing emissions was Woodside's first priority for reducing GHG emissions. However, offsetting emissions provided flexibility in reducing net emissions, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, residual emissions would be offset using carbon credits in order to achieve emission reduction requirements.
- (6) With regards to Carbon Capture and Storage, assessment of this opportunity would form part of Woodside's assessment in the EP to demonstrate that direct and indirect emissions would be reduced to as low as reasonably practicable (ALARP).
- (2, 3, 4, 5) Consistent with information supplied in the Consultation Information Sheet, Woodside would implement appropriate controls so that potential environmental impacts resulting from marine discharges were reduced to ALARP and acceptable levels.
- (2, 7) In assessing potential impacts from vessel collisions with cetaceans, Woodside had analysed publicly available data and information in peer reviewed papers. An assessment of the likelihood based on these sources would be presented in the EP.
 - Woodside considered there was a low likelihood of a vessel interaction with a cetacean in the offshore operational area as it did not overlap with any migratory or foraging biologically important areas (BIA) for cetaceans.
 - Although there was increased likelihood of marine mammal presence within the Trunkline Operational Area, vessel presence would be significantly reduced, and would be transiting the area for short periods of time only as required to undertake inspection, monitoring, maintenance, and repair activities.
- (6) On 7 March 2024, Woodside sent ACF an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 55.4).
 - The email included links to the CTAP and the ASX Announcement.
 - It also re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Finally, it stated Woodside was available to meet with ACF to discuss this EP should they be interested.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) ACF self-identified as a relevant person and requested to be consulted on Scarborough EPs.</p>	<p>(1) Woodside assessment: Woodside followed the requirements of regulation 25 of the Environment Regulations and assessed ACF as not a relevant person for the purposes of consultation on prior Scarborough EPs. The assessment determined there was no potential for the functions, interests or activities of ACF to be affected by the activities to be carried out under those EPs. However, Woodside assessed ACF as a relevant person for this EP based on its functions, interests or activities. Woodside response: For previous Scarborough EPs, Woodside confirmed it was open to receiving feedback and discussing issues raised in relation to each of the Scarborough EPs and that consultation is ongoing. For this EP, Woodside consulted ACF as a relevant person.</p>	<p>(1) Woodside has assessed ACF as a relevant person in its Assessment of Relevance (see Appendix F, Table 1 of the EP) in accordance with regulation 25 of the Environment Regulations as per Section 5.2 of the EP.</p>
<p>(2) Impacts and risks of the activities of other Scarborough EPs on marine and avian species including that several vulnerable and endangered species are within the Operational Area.</p>	<p>(2) Woodside assessment: Woodside has assessed the potential impacts and risks on marine and avian species and controls will be implemented to reduce risks to ALARP and acceptable levels. Woodside response: Woodside advised ACF that assessments were conducted on impacts and risks of activities in relation to marine species, Marine Parks, World Heritage areas and the shoreline, and coral receptors in accordance with Environment Regulations. The EPs describe the existing environment that may be affected by the activities and the controls that will be implemented to reduce risks to ALARP and acceptable levels.</p>	<p>(2) Woodside has assessed the potential impacts and risks to marine and avian species in Section 6 of the EP.</p>
<p>(3) Impacts and risks from light emissions on seabirds.</p>	<p>(3) Woodside assessment: Woodside has assessed the potential impacts and risks from light emissions on seabirds and controls will be implemented to reduce risks to ALARP and acceptable levels. Woodside response: Woodside advised ACF that assessments were conducted on impacts and risks of activities in relation to marine species, Marine Parks, World Heritage areas and the shoreline, and coral receptors in accordance with Environment Regulations. The EPs describe the existing environment that may be affected by the activities and the controls that will be implemented to reduce risks to ALARP and acceptable levels.</p>	<p>(3) Woodside has assessed the potential impacts and risks associated with routine light emissions in Section 6.7.3 of the EP.</p>

<p>(4) Impacts and risks from acoustic emissions on cetaceans, turtles, pygmy blue whales, fish and sharks.</p>	<p>(4) Woodside assessment: Woodside has assessed the potential impacts and risks from acoustic emissions on cetaceans, turtles, pygmy blue whales, fish and sharks and controls will be implemented to reduce risks to ALARP and acceptable levels. Woodside response: Woodside advised ACF that assessments were conducted on impacts and risks of activities in relation to marine species, Marine Parks, World Heritage areas and the shoreline, and coral receptors in accordance with Environment Regulations. The EPs describe the existing environment that may be affected by the activities and the controls that will be implemented to reduce risks to ALARP and acceptable levels.</p>	<p>(4) Potential impacts associated with routine acoustic emissions are assessed in 6.7.5 of the EP.</p>
<p>(5) Impacts to benthic habitats and communities and the Gascoyne Marine Parks.</p>	<p>(5) Woodside assessment: Woodside has assessed the potential impacts to benthic habitats and communities and the Gascoyne Marine Parks and controls will be implemented to reduce risks to ALARP and acceptable levels. Woodside response: Woodside advised ACF that assessments were conducted on impacts and risks of activities in relation to marine species, Marine Parks, World Heritage areas and the shoreline, and coral receptors in accordance with Environment Regulations. The EPs describe the existing environment that may be affected by the activities and the controls that will be implemented to reduce risks to ALARP and acceptable levels.</p>	<p>(5) Disturbance to the seabed and impacts to benthic habitat and communities is assessed in Section 6 of the EP.</p>
<p>(6) ACF provided a list of impacts and risks of the activities of other Scarborough EPs due to GHG emissions. The Scarborough Project EPs should include an evaluation of all impacts and risks related to the GHG emissions that will be caused by the Project.</p>	<p>(6) Woodside assessment: Woodside has assessed the potential impacts and risks of the activities due to GHG emissions and controls will be implemented to reduce risks to ALARP and acceptable levels. Woodside response: The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions. Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated</p>	<p>(6) GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP.</p>

	<p>using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p> <p>Woodside proactively sent ACF Woodside’s Climate Transition Action Plan (CTAP) and 2023 Progress Report.</p>	
<p>(7) Insufficient information on Scarborough EPs to allow consultation to commence. The Consultation Information Sheet for this EP does not comply with Regulation 25(2). ACF requested further information including documents referenced in the Consultation Information Sheet; consequences of emissions; details of any offsetting regime or CCS being considered; and surveys and details around impacts on marine flora and fauna.</p>	<p>(7) Woodside assessment: Woodside has been engaging with ACF since 2018. Regarding this EP, Woodside provided Consultation Information on 9 August 2023 in accordance with regulation 25 of the Environment Regulations. Woodside also proactively provided information to ACF for this EP on 5 December 2023 based on previous information which supported the Consultation Information Sheet and included information regarding emissions, CCS and impacts on marine flora and fauna. Woodside response: Woodside proactively provided information to ACF for this EP which supported the Consultation Information Sheet and included information regarding emissions, CCS and impacts on marine flora and fauna. Woodside complies with regulation 25 of the Environment Regulations in relation to the consultation process for this EP.</p>	<p>(7) ACF has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on ACF’s functions, interests or activities. No additional measures or controls are required.</p>
<p>Outcomes of Consultation</p>		
<p>Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ACF for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:</p> <ul style="list-style-type: none"> • Consultation Information Sheet publicly available on the Woodside website since August 2023. • Consultation information provided to ACF on 9 August 2023 based on their functions, interests or activities. • Woodside has provided a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. • Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback. 		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to the ACF over a 7-month period, including the 4.5 month consultation period.

350 Australia (350A)

Historical Engagement:

2022- 2023

- From 2022 to 2023 Woodside consulted 350A on the Scarborough D&C, SIT1, Subsea and Seismic EPs. A number of issues raised by 350A during consultation on those EPs were addressed and have been raised as part of consultation on this EP and include:
 - The Scarborough development had the potential to impact marine wildlife.
 - JASCO acoustic modelling.
 - Impacts from all pollution sources on all potential receptors and information about stringent monitoring and pollution response programs.
 - The Scarborough development would produce over one billion tonnes of carbon emissions in next 25 years, adding to WA's emissions and would accelerate climate change.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed 350A advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 11 September 2023, 350A sent an email to Woodside (SI Report, reference 22.1):
 - (1) Stating 350A was a relevant person.
 - (3) Requesting further information on routine acoustic emissions from the FPU and project vessels.
 - (4) Requesting further information on routine and non-routine atmospheric and GHG emissions.
- On 6 December 2023, Woodside responded thanking 350A for its email (SI Report, reference 22.2) and stated the following:
 - (1) 350A had been provided with sufficient information.
 - (1) Consultation in the course of preparing this EP would close on 20 December 2023 and asked if 350A has further feedback or would like to meet.
 - (1) Any further feedback received after 20 December 2023 would be accepted and considered as part of ongoing consultation.
 - (1) Woodside complied with regulation 11A (now regulation 25) in relation to the consultation process for this EP.
 - (2) The Petroleum Activities Program (PAP) would comprise a number of different acoustic emissions sources, primarily associated with vessel operations and support activities, such as geophysical surveys and other inspection, maintenance, monitoring and repair (IMMR) activities. Some sound will also be associated with the start-up and operations phase of the Floating Production Unit (FPU) and subsea facilities. Sound levels will fluctuate over the course of the PAP. Generally, underwater sound associated with steady state operations will be limited as the FPU is moored and not dynamically positioned. Woodside has undertaken an assessment of routine acoustic emissions, including an assessment of the impacts and risks in accordance with:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*, and
- NOPSEMA Guidance Note (N-04750-GN1344 A339814) EP Content Requirement.
- (3) Acoustic modelling results and other pertinent information related to modelling completed for the assessment of noise impacts would be presented in the EP. The EP would be made publicly available once submitted to NOPSEMA for assessment.
- (3) The area over which sound may adversely impact marine species depends upon multiple factors including the extent of sound propagation relative to the location of receptors, and the sensitivity and range of spectral hearing of different species.
- (3) Based on the implementation of controls, the potential impacts of noise emissions from the activity on cetaceans were likely to be limited to temporary behavioural changes (avoidance) in individuals moving through the Petroleum Activity Area, with predicted noise not considered likely to cause injury effects.
- (2) The impact assessment in the EP would provide a suite of management actions that would be in place to avoid or minimise potential impacts to relevant threatened fauna, and specifically whales, as a result of the PAP.
- (4) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008*. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub.
 - There were no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the Floating Production Unit (FPU). Gas would be exported on shore and processed at Pluto Train 2.
 - Pluto LNG's Air Quality Management Plan had been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant.
 - Woodside would implement feasible recommendations of the Murujuga Rock Art Monitoring Program (MRAMP), run by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation.
 - Woodside would optimise flaring at the FPU to reduce GHG emissions and allow for safe operation of the facility through design measures and a suite of management actions.
- On 6 December 2023, 350A responded to the Woodside email with an out of office reply asking that Woodside forward urgent emails to another email address (SI Report, reference 22.3).
- On 6 December 2023, Woodside forwarded the letter to the new email address as requested (SI Report, reference 22.4).
- On 20 December 2023, 350A emailed Woodside attaching a letter and copying in NOPSEMA (SI Report, reference 22.5), which stated:
 - (1) 350A was a relevant person and should be consulted. Woodside must provide sufficient information and a reasonable period for consultation. 350A was also willing to assist Woodside to identify other relevant persons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(4)** Climate change impacts, including Scope 3 emissions which would result from the Scarborough Project, fell under the scope of indirect consequences that must be assessed.
- **(5)** The information provided in the Consultation Information Sheet and the response to the letter dated 6 December 2023 were not sufficient. As Woodside had not yet provided sufficient information, further time was required to consider information.
- **(6)** This EP should not be finalised, submitted to NOPSEMA or assessed until regulation 25 had been met and Woodside should respond to this letter within two weeks, no later than 1 January 2024.
- 350A required Woodside to respond to Attachment A as a minimum to assess effects of this EP. Attachment A included the following objections/claims/requests for further information:
 - **(4)** Estimates of greenhouse gas and other emissions, including Scope 3 emissions from the Scarborough project. At a minimum, this should include:
 - ❖ Independent assessment of all emissions that would arise from the development, including all emissions sources and scopes (direct and indirect), annually and over the lifetime of the project with evidence of independent verification.
 - ❖ A breakdown of each emissions source, its nature and location, whether it was under the operational control of Woodside, and how it would be reduced or otherwise abated in each year that the project was operational.
 - **(7)** Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including 1.5°C scenarios, including the IEA's NZE. At a minimum this should include:
 - ❖ Independent evaluation of the impacts of the Scarborough Project on global temperature scenarios, global GHG concentrations in the atmosphere, and globally agreed temperature and fossil fuel phase down goals, including what incremental warming was anticipated to occur as a result of the direct and indirect emissions from the Scarborough project.
 - ❖ Independent evaluation of the alignment and compatibility of the Scarborough Project with global 1.5 degree compatible energy scenarios, including what global 1.5 degree scenarios were considered by Woodside to be aligned with the Scarborough project, and which global energy scenarios were not considered to be aligned with the project.
 - ❖ Where global energy scenarios relied on carbon removals from the atmosphere, what was the volume of carbon removals that was assumed, how and where and by what means Woodside expected this to occur, and what (if any) carbon removals would be implemented by Woodside.
 - ❖ What fossil fuel phase down scenarios were considered by Woodside to be compatible with the Scarborough project.
 - ❖ What effect the Scarborough Project would have on GHG concentrations in the atmosphere, including how long CO₂ from direct and indirect emissions associated with the Scarborough Project would remain in the atmosphere, and what effect this would have on global concentrations of GHG over this period.
 - ❖ Analysis of the GHG concentrations that would be in the atmosphere, and climate effects that would be felt as a result of the global energy scenario that the Scarborough Project was consistent with. For example, if global demand for fossil gas was maintained and increased as anticipated by Woodside in commercial decisions to proceed with the Scarborough project, what GHG concentrations and temperature outcomes would result from this global energy scenario on an annual and decade basis for the life of the project and its impacts.
 - **(8)** Independent assessment of the climate change impacts of the Scarborough Project on the Australian environment: At a minimum, this should include:
 - ❖ Analysis of sensitive environmental receptors in Australia and internationally that would be impacted by global climate change, including the Great Barrier Reef, Ningaloo Reef, other Matters of National Environmental Significance (MNES) and other cultural and environmental values.
 - ❖ What the anticipated effects of the Scarborough Project would be on these receptors, both as a result of emissions from the Scarborough Project itself, and from the international energy scenario that the Scarborough Project is compatible with.

- **(9)** Assessment of the climate change impacts of the Scarborough Project on communities that were impacted by climate change: At a minimum, this should include:
 - ❖ Evidence of consultation that had been undertaken by Woodside pursuant to the Environment Regulations to understand the particular interests and activities of communities affected by climate change, including but not limited to: island nations and communities, indigenous communities, farmers, young people, people with special needs and other groups. This should include evidence of what attempts at consultation with such communities had been made by Woodside, a summary of responses received by Woodside to date, and Woodside's responses to issues raised.
 - ❖ Evidence of Woodside's own analysis of impacts of the Scarborough Project and this EP on communities that were affected by climate change, including those listed above, including information on what communities had been considered, what baseline information had been used by Woodside regarding climate impacts to these communities, and what impacts were anticipated by Woodside, both as a result of the Scarborough Project itself, and from the international energy and global gas demand scenario that the Scarborough Project was compatible with.
- **(10)** Independent analysis of mitigation options and commitments. At a minimum, this should include:
 - ❖ The impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions, including a decarbonisation plan for the Pluto Hub as described in the letter from Woodside to 350 Australia dated 6 December 2023. This should include all technical studies, consultation, and other data that was relied upon or used in the development of these documents, including details of what (if any) independent review had been undertaken, including the outcomes of such independent review.
 - ❖ An independent analysis of all available mitigation options that had been considered by Woodside in relation to Scope 1, 2, and 3 emissions that would result from the project.
 - ❖ Detailed information on what (if any) mitigation of emissions were expected to occur at each stage or facility in the extraction, processing, transport and end use of gas from the Scarborough field. This should include information on whether this mitigation effort is voluntary commitment from Woodside or another party or resulting from an enforceable regulatory requirement. If the latter, describe the regulatory arrangements and jurisdiction as applicable.
 - ❖ Independent analysis to demonstrate that mitigation efforts at each stage and scope (including Scope 1,2 and 3 emissions) result in emissions reduced to As Low As Reasonably Practicable (ALARP)
 - ❖ Evidence to demonstrate why any potential mitigation efforts that would not be undertaken by Woodside or third parties on behalf of Woodside had not been considered reasonably practicable, including detailed independent evaluation of the cost impacts and operational consequences of each available mitigation option.
 - ❖ Identification of any third parties which Woodside relied upon in delivering mitigation actions for direct and indirect emissions from the project, and evidence of contractual obligations or other binding agreements to demonstrate the mitigation efforts would be delivered.
 - ❖ Independent assessment of abatement options for the Scarborough Project according to a mitigation hierarchy which prioritised avoidance and at source mitigation before offsets and other forms of abatement, with justification for Woodside's chosen mitigation commitments over the life of the project.
 - ❖ Identification of all offsets that would be used by Woodside in meeting abatement goals and commitments, including the type, method, provider and jurisdiction where the offsets would occur, what registry would be used, what standards of accountability and accreditation would be applied and, how the offsets would be retired and what measures would be put in place to ensure that offsets would be guaranteed in the event of unplanned events.
 - ❖ What ongoing public reporting and verification would be provided by Woodside of emissions and abatement from the project, including direct and indirect emissions from all sources (including unplanned emissions).
- **(11)** Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources. At a minimum, this should include:

- ❖ Evidence of what other energy sources were expected to be displaced, both in current market and for those forecast over the life of the project, including any displacement of renewable energy, fossil fuels, or other energy sources that will result from the Scarborough Project and the net effect of such displacement on global emissions.
- ❖ Evidence of where this displacement was expected to occur, when and how.
- ❖ Evidence of contractual or other arrangements that were, or would be in place, to ensure that this displacement occurred as predicted by Woodside.
- ❖ Independently verifiable evidence to demonstrate that any displacement of more emissions intensive fuels resulting from the Scarborough project, and any resulting absolute and net emissions abatement would be additional to what would otherwise had occurred if the Scarborough Project did not proceed.
- ❖ Evidence of third party verification (such as internationally recognised or domestic carbon credits) that would be provided by Woodside or other parties to verify claims of abatement achieved through net fuel displacement, including additionality and verifiability of such claims.
- **(12)** Independent assessment of how the Scarborough Project and associated mitigation efforts met the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines. At a minimum, this should include:
 - ❖ How Woodside's corporate emissions reduction targets and those for the Scarborough Project were science-based, and covered all-scopes of emissions, and took into consideration Woodside's historical emissions.
 - ❖ How the mitigation efforts for the Scarborough Project would deliver an immediate an absolute reduction in emissions from current levels.
 - ❖ How the Scarborough Project supported a global and local phase out of fossil fuels.
 - ❖ How the abatement efforts proposed by Woodside included targets for methane-specific emissions, including what these targets were and how they would be achieved.
 - ❖ Evidence of Woodside's lobbying and advocacy efforts and how these were aligned with global temperature scenarios.
- **(13)** Evidence of how the requirements of the approved Scarborough OPP relating to mitigation and avoidance of direct and indirect GHG emissions from the project would be achieved. At a minimum, this should include:
 - ❖ Details of contractual, regulatory, or other measures that demonstrate that both Woodside and third-party emissions reduction through fuel displacement, offsets or other abatement would be delivered according to international standards for carbon accounting, and for all scopes of direct and indirect emissions.
- **(5)** Other documents, including documents relied upon by Woodside, and the draft of this EP. At a minimum, this should include:
 - ❖ **(5)** All studies, information and other material commissioned or relied upon by Woodside in assessing the GHG emissions and climate impacts from the project, including mitigation options, climate impacts, alignment with global temperature goals, and any other issues mentioned above.
 - ❖ **(5)** A copy of the draft of this EP.

Ongoing engagement:

- On 27 December 2023, Woodside responded to 350A's 20 December 2023 letter (SI Report, reference 22.6), as follows:
 - **(5)** Based on Woodside's provision of the Consultation Information Sheet on 9 August 2023, which provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program and proposed mitigation and management measures, and Woodside's substantive feedback to 350A's requests on 6 December 2023, 350A has been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Additionally:

- (5) Woodside extended the consultation period from an initial four-week period ending on 11 September 2023, to 4.5 months, ending on 20 December 2023. Woodside did not receive any response from 350A until 20 December 2023, the day consultation closed, however still addressed claims, objections and additional information in its response on 27 December 2023 correspondence.
- As requested, Woodside responded before 1 January 2023 however received out of office replies from 350A stating they would be on leave until 2 January 2024 and 15 January 2024 respectively.
- (4) GHG emissions relevant to the Petroleum Activities Program, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions (Scope 3), aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub.
- (7) Woodside assessed emissions against a range of scenarios including the IEA NZE. Assessment of these could be found in Woodside's 2022 Climate Report which was publicly available on Woodside's website. Selected GHG emissions in Woodside's Climate Report were assured by GHD.
 - Woodside aimed to thrive through the energy transition by building a low cost, lower carbon, profitable, resilient and diversified portfolio. For Woodside, a lower carbon portfolio was one from which the net equity Scope 1 and 2 GHG emissions, which included the use of offsets, were being reduced towards targets, and into which new energy products and lower carbon services were planned to be introduced as a complement to existing and new investments in oil and gas. Woodside's Climate Policy set out the principles that it believes would assist achieve this aim.
 - The climate strategy had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.
 - Woodside's net equity emissions reduction targets had an aspiration of net zero by 2050 or sooner. The target was for net equity Scope 1 and 2 GHG emissions, relative to a starting base representative of the gross annual average equity Scope 1 and 2 GHG emissions over 2016-2020 and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021.
 - Woodside had set near- and medium-term targets to reduce net equity Scope 1 and 2 GHG emissions and had three ways to achieve these targets: avoiding emissions through design; reducing them through efficient operations; and offsetting the remainder.
 - Avoiding and reducing emissions was Woodside's first priority for meeting its net equity emissions reduction targets. However, offsetting emissions allowed Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits to achieve our net zero aspiration.

- Woodside was developing a portfolio of carbon credits to contribute to the achievement of its net equity Scope 1 and 2 GHG emissions targets. These also had the potential to be bundled with product sales if customer demand was present, at a scale which was able to be supported.
- **(8)** In accordance with regulation 13(2) and 13(3) of the Environment Regulations, the EP would describe the Environment that May Be Affected (EMBA) including details of receptor sensitivities and exposure potential. This included consideration of Matters of National Environmental Significance (MNES) that may potentially occur in the EMBA.
 - The Scarborough Offshore Project Proposal (OPP) – publicly available on the NOPSEMA website – defined a level of Significant Impact for receptors, informed by the MNES Significant impact guidelines. Environmental Performance Outcomes (EPO) and Controls were defined in the OPP and cascaded to subsequent EPs where relevant, to ensure maintenance of Acceptable impact levels.
- **(9)** Woodside consulted relevant persons in the course of preparing an EP in accordance with regulation 25 of the Environment Regulations. Consultation was designed to ensure that relevant persons were identified and given sufficient information and a reasonable period to allow them to make an informed assessment of the possible consequences of the proposed activity on them and, to ensure that titleholders could consider and adopt appropriate measures in response to the matters raised by relevant persons. Consistent with regulation 3 of the Environment Regulations, consultation also supported Woodside’s objective to ensure that the environmental impacts and risks of the activity are reduced to ALARP and an acceptable level.
 - Woodside’s consultation with relevant persons would be summarised and included in the EP which would be made public on the NOPSEMA website.
 - The FPU Safety Case and facility design take into consideration/ assesses impacts to worker health and safety from facility operations including emissions and discharges. Woodside considers there were no credible impacts to populations onshore from planned emissions/discharges from the Scarborough FPU at the FPU location.
 - Indirect emissions from Scarborough FPU operations, such as processing through the Pluto LNG Plant, had been assessed for potential to impact on human health and remain within recognised criteria (i.e. World Health Organisation and National Environment Protection Measure limits).
- **(10)** Woodside would report GHG emissions as required by relevant reporting regulations including Australian National Greenhouse and Energy Reporting (NGER).
- **(13)** For Scarborough project-wide impacts and controls, ACF could refer to the OPP as Environmental Performance Outcomes (EPO) and Controls were defined in the OPP and cascaded to subsequent EPs where relevant, to ensure maintenance of Acceptable impact levels.
- **(2, 5)** The Consultation Information Sheet provided to 350A on 9 August 2023 provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program (PAP) and proposed mitigation and management measures.
 - Woodside does not provide drafts of an EP while in development or under assessment due to the potential for content to change. Restricting access to publicly available versions enables stakeholders to access and comment on the same information and removes potential for any confusion. The EP would be made publicly available on NOPSEMA’s website once it has been submitted and was under assessment.
- On 27 December 2023, Woodside received two out of office email replies from 350A stating they were on leave until 2 January 2024 and 15 January 2024 (SI Report, references 22.7 and 22.8).
- On 7 March 2024, Woodside sent 350A an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside’s Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside’s climate-related plans, activities, progress and climate-related data (SI Report, reference 22.9). The email included links to the CTAP and the ASX Announcement and:
 - **(1, 5, 6)** It also re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1, 5, 6) Finally, it stated Woodside was available to meet with 350A to discuss this EP should they be interested.
- On 7 March 2023, Woodside received an automatic reply from 350A advising that the recipient of Woodside's email no longer worked for the organisation and provided an alternate contact address at 350A (SI Report, reference 22.10).
- On 8 March 2023, Woodside forwarded its correspondence from 7 March 2024 to the supplied 350A address from the automatic reply on the same day (SI Report, reference 22.11).
- (5, 6) On 28 March 2023, Woodside received a response from 350A to the Pluto Facility Operations EP consultation email (sent 27 February 2024) stating it had not been consulted adequately on this EP (SI Report, reference 22.12).
- (5, 6) On 2 April 2024, Woodside responded to 350A seeking clarification as to whether it was providing feedback on the Pluto Facility Operations EP as it had already consulted 350A on this EP (SI Report, reference 22.13).
- On 10 May 2024, Woodside emailed 350A to advise consultation for the Pluto Facility Operations EP had closed (SI Report, reference 22.14).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) 350A is a relevant person.</p>	<p>(1) Woodside assessment: Woodside followed regulation 25 of the Environment Regulations and assessed 350A as not a relevant person for the purposes of consultation on prior Scarborough EPs. The assessment determined there was no potential for the functions, interests or activities of 350A to be affected by the activities to be carried out under those EPs. However, Woodside assessed 350A as a relevant person for this EP based on its functions, interests or activities. Woodside response: Woodside confirmed it complied with regulation 25 of the Environment Regulations and provided 350A with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p>	<p>(1) Woodside has assessed relevant persons in Appendix F, Table 1 of the EP.</p>
<p>(2) Potential to impact on marine wildlife and concerns risks and impacts had not been controlled to ALARP.</p>	<p>(2) Woodside assessment: Woodside has undertaken a comprehensive assessment of the impacts and risks associated with marine wildlife in accordance with the Environment Regulations and NOPSEMA's guidance note EP Content Requirement. Woodside response: Woodside confirmed it had assessed the potential impacts and risks on marine wildlife and the EP provided a suite of management actions to avoid or minimise potential impacts from light emissions, acoustic emissions and interaction with marine fauna.</p>	<p>(2) The potential impacts and risks associated with marine wildlife are assessed in Sections 6.7 and 6.8 of the EP.</p>
<p>(3)</p>	<p>(3)</p>	<p>(3)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Requested further information on routine acoustic emissions from the FPU and project vessels, and likely impacts on whales.</p>	<p>Woodside assessment: The consultation summary information sheet provided to 350A included a summary of impacts and risks associated with the PAP. Woodside’s assessment of potential impacts and risks from routine acoustic emissions and results of modelling is presented in the EP.</p> <p>Woodside response: Woodside advised the PAP would comprise a number of different acoustic emissions sources, primarily associated with vessel operations and support activities, and that generally sound associated with steady state operations would be limited.</p> <p>Based on the implementation of controls, potential impacts of noise emissions on cetaceans were likely to be limited to temporary behavioural changes in individuals moving through the PAP.</p> <p>Woodside confirmed acoustic modelling resulted and would be presented in the EP, along with the impact assessment which would provide a suite of management actions to avoid or minimise potential impacts.</p>	<p>The potential impacts and risks of routine acoustic emissions are assessed in Sections 6.7.4 and 6.7.5 of the EP.</p>
<p>(4) Estimates of GHG emissions and other emissions, including Scope 3 GHG emissions from the Scarborough Project.</p>	<p>(5) Woodside assessment: GHG emissions relevant to the PAP, including sources and volumes, are presented and assessed in the EP.</p> <p>Woodside response: Woodside confirmed GHG emissions relevant to the PAP would be presented and assessed in the EP. The assessment would include direct and indirect impacts and risks associated with the PAP. An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken.</p>	<p>(5) Routine and non-routine atmospheric and GHG emissions associated with the activities are assessed in Section 6.7.6 and 6.7.7 of the EP.</p>
<p>(5) Woodside has not provided sufficient information, either in its Consultation Information Sheet or its responses.</p>	<p>(6) Woodside assessment: Woodside does not accept that 350A has not been provided sufficient information or a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p> <p>Woodside response: Woodside summarised its correspondence with 350A regarding this EP, which started with an initial email including a consultation information sheet and request for feedback on 9 August 2023. The consultation information sheet provided a summary of impacts and risks associated with the PAP and proposed mitigation and management measures. Woodside extended the consultation period from an initial four-week period to 4.5 months and provided substantive responses to 350A’s feedback, claims and objections on 6 December 2023.</p>	<p>(6) 350A has been given sufficient information and a reasonable period for consultation, as described in Section 5.4 of the EP. Woodside engages in ongoing consultation as described in Section 7.9.5 of the EP.</p>

<p>(6) The EP should not be finalised, submitted to NOPSEMA or assessed until regulation 25 has been met.</p>	<p>(7) Woodside assessment: Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations for this EP. Woodside response: Woodside advised it complied with regulation 25 of the Environment Regulations in relation to the consultation process for this EP. Woodside also engaged in ongoing consultation throughout the life of an EP and was open to receiving feedback and discussing issues raised in the relation to the EP.</p>	<p>(7) Woodside's consultation process is described in Section 5 of the EP.</p>
<p>(7) Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals.</p>	<p>(8) Woodside assessment: Woodside assesses emissions against a range of scenarios including the IEA NZE and assessment of these is publicly available in its climate report. Woodside response: Woodside advised it assessed emissions against a range of scenarios including the IEA NZE, and assessment of these could be found in Woodside's publicly available 2022 Climate Report, with selected GHG emissions in the climate report assured by GHD. Woodside outlined its climate strategy which has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions. Woodside advised its net equity emissions reduction targets had an aspiration of net zero by 2050 or sooner, and that further information was available in the 2022 Climate Report. A copy of the Woodside Climate Transition Action Plan and 2023 Progress Report was also provided when these were published.</p>	<p>(8) Not required.</p>
<p>(8) Independent assessment of the climate change impacts of the Scarborough Project on the Australian environment.</p>	<p>(9) Woodside assessment: Woodside has considered receptor sensitivities and exposure potential in the EP in accordance with the Environment Regulations. Woodside response: Woodside confirmed the EP would describe the EMBA including details of receptor sensitivities and exposure potential. This included consideration of MNES that may potentially occur. The Scarborough OPP also defined a level of Significant Impact for receptors and EPOs and controls were cascaded to relevant subsequent EPs to ensure maintenance of Acceptable impact levels.</p>	<p>(9) Not required.</p>

<p>(9) Assessment of the climate change impacts of the Scarborough Project on communities that are impacted by climate change</p>	<p>(10) Woodside assessment: Woodside has consulted relevant persons in the course of preparing this EP to support Woodside's objective of ensuring environmental impacts and risks of the activity are reduced to ALARP and an acceptable level, and assessed potential impacts of the FPU to human health and safety. Woodside response: Woodside advised it consulted relevant persons in the course of preparing an EP to ensure relevant persons were able to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities. Consultation also supported Woodside's objective to ensure environmental impacts and risks of the activity were reduced to ALARP and an acceptable level. Woodside advised the FPU Safety Case and facility design took into consideration/assessed impacts to worker health and safety and Woodside considered there were no credible impacts to populations onshore from planned emissions/discharges from the FPU at the FPU location. Indirect emissions from Scarborough FPU operations had been assessed for potential impact on human health and remained within recognised criteria.</p>	<p>(10) Woodside's record of consultation with relevant persons is described in Appendix F, Table 2 of the EP.</p>
<p>(10) Independent analysis of mitigation options and commitments.</p>	<p>(10) Woodside assessment: GHG emissions relevant to the PAP, including sources and volumes, and options analysis for GHG emissions reduction/abatement are presented and assessed in the EP. Woodside response: Woodside confirmed GHG emissions relevant to the PAP would be presented and assessed in the EP. Woodside noted it would report GHG emissions as required by relevant reporting regulations including NGER.</p>	<p>(10) Routine and non-routine atmospheric and GHG emissions associated with the activities, and options analysis of reduction/abatement measures (in the form of ALARP demonstration) are assessed in 6.7.6 and 6.7.7 of the EP</p>
<p>(11) Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources.</p>	<p>(11) Woodside assessment: Woodside's publicly available CTAC and 2023 Progress Report summarises Woodside's climate-related plans, activities, progress and climate-related data. Woodside response: Woodside outlined its climate strategy and advised further information was available in its publicly available climate report. Woodside referred to previous substantive responses regarding its climate strategy and net equity emissions reduction targets.</p>	<p>(11) Not required.</p>
<p>(12)</p>	<p>(12)</p>	<p>(12)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Independent assessment of how the Scarborough Project and associated mitigation efforts meets the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines.</p>	<p>Woodside assessment: Woodside assesses emissions against a range of scenarios and assessment of these is publicly available in its climate report.</p> <p>Woodside response: Woodside advised it assessed emissions against a range of scenarios, and assessment of these could be found in Woodside's publicly available climate report. Woodside referred to previous substantive responses regarding its climate strategy and net equity emissions reduction targets.</p>	<p>Not required.</p>
<p>(13) Evidence of how the requirements of the approved Scarborough OPP relating to mitigation and avoidance of direct and indirect GHG emissions from the project would be achieved</p>	<p>(13) Woodside assessment: EPOs and controls defined in the OPP have been cascaded to this EP where relevant, to ensure maintenance of Acceptable impact levels.</p> <p>Woodside response: Woodside advised 350A should refer to the OPP for Scarborough project-wide impacts and controls. EPOS and controls defined in the OPP were cascaded to subsequent EPs where relevant.</p>	<p>(13) A comparison of Environmental Protection Outcomes (EPOs) between the OPP and the EP is provided in the EP Section 6.3</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with 350 Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to 350A on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to 350A over a 7-month period, including the 4.5 month consultation period.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The Wilderness Society (TWS)

Historical Engagement

2018 – 2020

- TWS was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - TWS chose not to take up the opportunity to participate in consultation.

2022- 2023

- In October 2022, Woodside provided a briefing to TWS on the on the Scarborough D&C, SITI, Subsea and Seismic EPs as well as the broader Scarborough Project. During the briefing and in follow up correspondence, TWS raised several issues which are also relevant to this EP including:
 - Impacts and risks to marine fauna populations and their migration patterns and controls in place to mitigate impacts from acoustic surveillance and marine fauna observers.
 - Details regarding the Scarborough trunkline.
 - Environmental impacts and risks.
 - How Woodside engaged with Traditional Owners on its EPs.
 - Carbon offsets, biodiversity and native vegetation.
 - Woodside employees being financially incentivised to achieve acceptance of EPs.
 - Continuous consideration of cumulative impacts occurred for the proposed activities under each of the Scarborough EPs and the pipeline and subsea infrastructure was designed to be removed from the seabed (the subject of a future decommissioning EP and approval).
 - How has Woodside addressed the risk of real or perceived bias in relation to funding, support or influence of scientific studies, for example those cited as undertaken by the AIMS and UWA?

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed TWS advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 5 December 2023, in the absence of specific feedback from TWS, Woodside sent a letter via email to TWS (Record of Consultation, reference 1.56) which stated:
 - Woodside met with TWS in October 2022 and briefed it on the Scarborough Project and related EPs. Since then, TWS and Woodside have engaged in correspondence on all four EPs.

- In a letter sent on 17 October 2022, Woodside noted TWS's more general interest in carbon offsets, biodiversity and native vegetation, and although outside the scope of the Scarborough Project consultation, Woodside welcomed the opportunity to meet with TWS to discuss the work Woodside was undertaking in this space. TWS did not take up this offer.
- Woodside had provided TWS with Consultation Information Sheets on 9 August 2023 and 30 August 2023 and provided a link to this.
- Woodside advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if TWS had feedback and/or would like to meet.
- In the absence of specific feedback from TWS on this EP, Woodside reviewed feedback from TWS on the D&C, Subsea, SITI and Seismic EPs which may be relevant to this EP as follows:
 - **(1,3)** Work undertaken to understand marine fauna populations and their migration patterns in relation to Woodside's proposed activities and controls in place to mitigate potential impacts.
 - ❖ **(1,3)** Woodside engaged environmental consultants to provide information related to the existing environment including migratory patterns and behaviours associated with marine mammals to inform assessment of potential risks and impacts on marine fauna as a result of activities described in the EP. Woodside demonstrated reduction of all impacts to ALARP and acceptable levels and implements controls to achieve this.
 - ❖ **(1,3)** Woodside undertook research with scientific partners to understand impacts on migratory species including Woodside's partnership with AIMS.
 - **(2)** The route of the Scarborough trunkline, including the position, depth and length.
 - ❖ **(2)** The route for the Scarborough trunkline could be found in the publicly available SITI EP (on NOPSEMA's website).
 - **(4)** Woodside's engagement with Traditional Owners on relevant EPs.
 - ❖ **(4)** To identify Traditional Custodian groups or individuals, Woodside:
 - Used existing systems of recognition to identify First Nations groups who overlapped or were coastally adjacent to the EMBA.
 - Notified and invited consultation with First Nations people through their nominated representative corporation or the Native Title representative body.
 - Requested the nominated representative body forward notifications and invitations to consult to their members (individual communal rights holders).
 - Requested advice around which other First Nations groups or individuals should be consulted.
 - Advertised widely to invite self-identification and consultation by First Nations groups and/or individuals.
 - **(5)** Woodside's current methodology and application regarding offsets (carbon and biodiversity), in response to proposed activities.
 - ❖ **(5)** Woodside's Climate Strategy, an integral part of the company strategy, had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in products and services Woodside's customers needed as it secured its energy needs and reduced its emissions.
 - ❖ **(5)** Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets by avoiding GHG emissions through the way it designed its assets; reduced GHG emissions through the way it operated its assets; originated and acquired carbon credits to use as offsets for the remainder.
 - ❖ **(5)** Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve net zero aspiration.
 - **(6)** Were direct financial incentives (e.g. bonuses) provided to employees following EP acceptance? Does Woodside link corporate KPIs regarding EPs to employee or contractor remuneration?

- ❖ (6) Direct financial incentives (e.g. bonuses) were not provided to employees following EP acceptance. There were no linkage to remuneration or bonus schemes for achievement of EP acceptance and no corporate or business KPI suite linked the progress/finalisation of EPs to employee or contractor remuneration.
- (7) Confirmation that the development of a cumulative/holistic impact assessment covered the full breadth of development, production and decommissioning activities.
 - ❖ (7) The PAP for this EP covered the hook-up, commissioning and ongoing operations of the Scarborough FPU and Trunkline. TWS had previously been consulted on the other Scarborough EPs which covered the construction of the Scarborough infrastructure and which included assessment of risks associated with concurrent operations and cumulative impact.
 - ❖ (7) Decommissioning activities were not expected to be required within the life of this EP and would be subject to a future EP.
- (8) Outline of how dissenting scientific or technical expertise to the proposal was identified, actively sought and considered.
 - ❖ (8) Woodside previously advised the importance of scientific understanding and knowledge to its environmental management approach and confirmed that input from internal and external experts was part of the established EP process. This included consideration of recently published peer-reviewed data and studies to inform understanding of risk and impact assessment, and consideration of current best practice controls within the ALARP framework.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1)</p> <p>In relation to previous Scarborough EPs, TWS posed questions regarding:</p> <ul style="list-style-type: none"> • Marine fauna populations and their migration patterns and the mitigation of potential impacts such as acoustic surveillance and marine fauna observers. 	<p>(1)</p> <p>Woodside assessment: Woodside has conducted extensive work to understand marine fauna migration patterns and has adequate controls in place to mitigate potential impacts such as acoustic surveillance and marine fauna observers.</p> <p>Woodside response: Woodside engages qualified environmental consultants to provide information related to the existing environment including information on the migratory patterns and behaviours associated with marine mammals, which inform Woodside's assessment of potential risks and impacts on marine fauna as a result of activities described in the Scarborough EPs.</p> <p>Woodside demonstrates reduction of all impacts to ALARP and acceptable levels and implements controls to achieve this.</p> <p>Woodside also undertakes research and studies in collaboration with scientific partners to understand impacts on migratory species (including Woodside's partnership with the Australian Institute of Marine Science (AIMS)).</p>	<p>(1)</p> <p>Woodside has assessed the potential impacts and risks associated with marine fauna populations, their migration patterns, acoustic surveillance and marine fauna observers in Section 6.8.10 of the EP.</p>
<p>(2)</p> <p>In relation to previous Scarborough EPs, TWS posed questions regarding:</p>	<p>(2)</p> <p>Woodside assessment: Information regarding the Scarborough trunkline is publicly available in a separate EP (SITI).</p>	<p>(2)</p> <p>Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> Route of the Scarborough trunkline, including the position, depth and length. 	<p>Woodside response: Woodside provided information regarding the route of the Scarborough trunkline, including the position, depth and length to TWS and also advised it can be found in the publicly available SITI EP on NOPSEMA's website.</p>	
<p>(3) In relation to previous Scarborough EPs, TWS posed questions regarding:</p> <ul style="list-style-type: none"> Environmental impacts and risks. 	<p>(3) Woodside assessment: As required by regulation 21(5) and 21(6) of the Environment Regulations, Woodside conducts thorough analysis and evaluation to demonstrate that the identified impacts and risks associated with the PAP are reduced to ALARP, are of an acceptable level and consider all operations of the activity, including potential emergency conditions. Woodside response: Woodside confirmed that scientific studies and findings had been conducted to inform the Scarborough OPP and EPs and demonstrate that Woodside's activities are performed in a manner that prevents injury to whales and minimises the potential for biologically significant behavioural disturbance, and that there is continuous consideration of cumulative impacts for the proposed activities under each of the EPs. The Scarborough pipeline and subsea infrastructure are designed to be removed from the seabed (the subject of a future decommissioning EP).</p>	<p>(3) Information regarding Environmental Risk Assessment, Performance Outcomes, Standards and Measurement criteria is detailed in Section 6 of the EP.</p>
<p>(4) In relation to previous Scarborough EPs, TWS posed questions regarding:</p> <ul style="list-style-type: none"> Woodside's engagement with Traditional Owners. 	<p>(4) Woodside assessment: Woodside has undertaken extensive engagement with relevant Traditional Owners and their representative groups on relevant EPs. Woodside consults with relevant First Nations groups guided by its consultation assessment of relevance methodology for all activities. Woodside response: Woodside confirmed it had undertaken extensive engagement with relevant Traditional Owners and their representative groups including archaeological and ethnographic surveys. Woodside detailed its consultation process to identify and engage with Traditional Owners groups or individuals.</p>	<p>(4) Woodside's approach to consultation with Traditional Owners is described in Section 5 of the EP.</p>
<p>(5) In relation to previous Scarborough EPs, TWS posed questions regarding:</p> <ul style="list-style-type: none"> Carbon offsets, biodiversity and native vegetation. 	<p>(5) Woodside assessment: Woodside noted TWS's interest in carbon offsets, biodiversity and native vegetation and is open to arranging a meeting with TWS and Woodside subject matter advisers to discuss work being undertaken in this area. Woodside response: Woodside's Climate Strategy involves reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the</p>	<p>(5) GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	products and services that Woodside’s customers need as they secure their energy needs and reduce their emissions.	
<p>(6) In relation to previous Scarborough EPs, TWS posed questions regarding:</p> <ul style="list-style-type: none"> Linkage of any remuneration or business unit KPIs to the progression of the EP or the commencement of related activities. 	<p>(6) Woodside assessment: Direct financial incentives (eg. Bonuses) are not provided to employees following EP acceptance. No corporate or business KPIs are linked to the progress/finalisation of EPs. Woodside response: Woodside confirmed there was no linkage to remuneration or bonus schemes for achievement of EP acceptance and also confirmed no corporate or business unit KPI suite links the progress/finalisation of EPs to employee or contractor remuneration.</p>	<p>(6) Not required.</p>
<p>(7) In relation to previous Scarborough EPs, TWS posed questions regarding:</p> <ul style="list-style-type: none"> Does development of a cumulative/holistic impact assessment cover the full breadth of development, production and decommissioning activities. 	<p>(7) Woodside assessment: Woodside has assessed the potential impacts and risks associated with the PAP for this EP. While decommissioning activities are not within the 5 year period covered by this EP, planning and management for decommissioning is covered in the EP. Woodside response: The PAP covers the hook-up, commissioning and ongoing operations of the Scarborough FPU and Trunkline. TWS has previously been consulted on the other Scarborough EPs which cover the construction of the Scarborough infrastructure. The EPs include assessment of risks associated with concurrent operations and cumulative impact. Decommissioning activities are not expected to be required within the life of this EP and will be subject to a future EP.</p>	<p>(7) Woodside has assessed the potential impacts and risks associated with the PAP in Section 6 of the EP. Planning for decommissioning is described in Section 7.3 of the EP.</p>
<p>(8) In relation to previous Scarborough EPs, TWS posed questions regarding:</p> <ul style="list-style-type: none"> How is dissenting scientific or technical expertise to the proposal identified, actively sought and considered? 	<p>(8) Woodside assessment: Woodside has a thorough and established process to inform and guide its environmental management process that includes consideration of published data and best practice controls within the ALARP framework. Woodside response: Woodside advised the importance of scientific understanding and knowledge to its environmental management approach and confirmed that input from internal and external experts is an integral part Woodside’s established EP process. This includes consideration of recently published peer-reviewed data and studies to inform understanding of risk and impact assessment, and consideration of current best practice controls within the ALARP framework.</p>	<p>(8) Not required.</p>

<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on TWS's functions, interests or activities. No additional measures or controls are required.</p>
---	---	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with TWS for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to TWS on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to TWS over a 4.5-month period.

Say No to Scarborough Gas (SNTSG)

Historical Engagement:

2022- 2023

- In October 2022, Woodside provided a briefing to SNTSG on the Scarborough D&C, SIT1, Subsea and Seismic EPs as well as the broader Scarborough Project. During the briefing and in follow up correspondence, SNTSG raised several issues which are relevant to this EP including:
 - There was no information on which communities and groups would be consulted or on what the process would be for incorporating feedback and re-releasing the EPs. SNTSG asked if Woodside would publish its redrafted EPs and how local groups had been made aware of their right to be consulted.
 - The EPs were not consistent with existing conservation plans or ecological principles including the intergenerational principle and the Blue Whale Conservation Management Plan/threatened species recovery plans.
 - Questioned the independence of participants in the Environmental Risk and Impact Identification workshop mentioned in the EP and the meaning / determinants of ALARP.
 - Emissions from the Scarborough Project were a major concern and the EPs ignored the large scale Scope 1, 2 and 3 emissions the project was clearly designed to support. SNTSG requested further information and figures on lifetime emissions of the project, emissions forecasting, consistency with conservation management plans and species recovery plans, Woodside's response to various external reports and sources, carbon capture storage (CCS) and carbon offset planning, emissions projections and Scope 3 emissions.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The project would see the introduction of artificial lights which had an effect on ecological processes and asked about the impacts of these lights on ecological processes, seabirds, why routine light emissions were only estimated to have an impact for a year and whether Woodside would commit to the National Light Pollutions Guidelines for Wildlife.
- In terms of post-extraction, SNTSG queried methods for long-term monitoring of environmental health, including post-production and decommissioning.
- SNTSG raised concerns around ecosystem impacts and whether climate change would affect the interactions between marine life and the disturbance and pollution caused by the project and asked where the effects of this had been considered. What ecological parameters are used to assess impacts on species, populations, assemblages and ecosystems? And what grounds do Woodside propose for not suspending work during pygmy blue whale migration season?

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed SNTSG advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 5 December 2023, in the absence of specific feedback from SNTSG, Woodside sent a letter via email (Record of Consultation, reference 1.53) which stated the following:
 - Woodside met with SNTSG in October 2022 and briefed it on the Scarborough Project and related EPs. Since then, SNTSG and Woodside had engaged in correspondence on four EPs.
 - Woodside had provided SNTSG with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Consultation Information Sheet.
 - Woodside advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if SNTSG had feedback and/or would like to meet.
- The 5 December 2023, letter also reviewed past feedback from SNTSG on the Scarborough D&C, SIT1, Seismic and Subsea EPs and provided assessment and response as follows:
 - **(2)** SNTSG's concerns related to the nature and process of Woodside's community consultation, its thoroughness in nature, and whether it was genuine in intent, or purely a box-ticking exercise.
 - ❖ **(2)** Consultation requirements set out in regulation 11A (now regulation 25) of the Environment Regulations had been complied with in relation to the consultation process for the EPs which Woodside detailed during its consultation meeting with SNTSG on 13 October 2022. Woodside's consultation process had continued to evolve based on ongoing Regulator feedback.
 - ❖ Where feedback was received which informed Woodside of measures that it may take to mitigate potential environmental impacts from the PAP, Woodside incorporated this feedback into its EP, and where appropriate, introduced additional controls to ensure risks were managed to ALARP and an acceptable level.
 - **(3)** Consistency with existing conservation plans and ecological principles. The EPs were not consistent with the principles of ecologically sustainable development (ESD), specifically the 'intergenerational principle.' And the Blue Whale Conservation Management Plan and threatened species recovery plans?
 - ❖ **(3)** The PAP would be carried out in a manner consistent with the principles of ESD (as defined in Section 3A of the Commonwealth Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)).
 - ❖ **(3)** In developing the EP, Woodside would demonstrate the PAP was not inconsistent with any relevant recovery plans or threat abatement plans. Woodside confirmed that the EP would include demonstration of acceptability and provide assessment of relevant activities against the Blue Whale Conservation Management Plan, including relevant EPOs and Controls.
 - **(4)** Independence of participants in Environmental Risk and Impact Identification workshop.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ (4) An Environmental Risk and Impact Identification Workshop (ENVID) was undertaken to identify potential risks and impacts to inform the EP. Participants were from varied backgrounds, knowledgeable and experienced, and included external environmental consultants with understanding of all topics relevant to the PAP.
- (5) Emissions caused by the Scarborough Project were of major concern as the EPs ignored the large-scale Scope 1, 2 and 3 emissions and there were further concerns about global warming, gas leakage, flaring, GHG emissions, UN stating 'investing in new fossil fuels infrastructure is moral and economic madness', IEA comments that no new oil and natural gas fields were required, CCS project inadequacies, credibility issues around carbon offset programs, protection of coral reefs, and catastrophic climate outcomes.
 - ❖ (5) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP and estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).
 - ❖ (5) The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - ❖ (5) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - ❖ (5) An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken and included development of a decarbonisation plan for the Pluto Hub.
 - ❖ (5) Woodside had in place a Climate Strategy which was an integral part of the company strategy. The strategy had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.
 - ❖ (5) Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - Avoiding GHG emissions through the way it designs its assets.
 - Reducing GHG emissions through the way it operates its assets.
 - Originating and acquiring carbon credits to use as offsets for the remainder.
 - ❖ (5) Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets, however, offsetting emissions would allow Woodside more flexibility to meet targets, while asset and technology decarbonisation plans were matured and implemented.
- (6) Lighting impacts on ecological processes in the upper ocean such as vertical migration of plankton; seabirds; and marine turtle hatchlings.
 - ❖ (6) Routine light emissions associated with the PAP would be considered in the EP and would include assessment of lighting on marine ecosystem receptors and species including seabirds and marine turtles. The EP would demonstrate impacts from lighting would be reduced to ALARP and provided demonstration of acceptability.
- (7) Post extraction, what methods for long-term monitoring of environmental health in the area were in place; what potential existed for the re-introduction of contaminants into the environment; would a good practice measure of conducting environmental monitoring of the seabed before and after the activities be implemented; what was the likelihood of disturbed species recolonising affected areas.

- ❖ (7) The EP would provide an assessment of all discharges from the Floating Production Unit (FPU) including wastewater streams. Woodside would implement controls which demonstrated that impacts and risks from potential contaminants entering the marine environment were ALARP and acceptable.
- ❖ (7) Woodside proactively planned for decommissioning including the development of the Scarborough Decommissioning Strategy. Decommissioning activity was not part of this Petroleum Activity Program (PAP) and would be subject to future EPs.
- (8) SNTSG concerns as to whether changing environmental conditions due to climate change would affect the interactions between marine life and the disturbance and pollution caused by the project including where the effects of climate change and subsequent ocean changes such as higher water temperatures increased the toxicity of petroleum hydrocarbons, expansion of oxygen minimum zones and further oxygen depletion, and ocean acidification. Also, which ecological parameters were used to assess impacts on species, populations, assemblages and ecosystems and which ecological baselines were used for these assessments. The process behind the deep-water environment survey and from this, which species were most likely to suffer losses. What assessments were done on microbial communities and processes and on what grounds does Woodside propose for not suspending work during pygmy blue whale migration season.
 - ❖ (8) All emissions and discharges including from atmospheric and greenhouse gases, as well as discharges of commingled produced water and cooling water streams would be assessed in the EP. This included an evaluation of all receptors that may be impacted from these.
 - ❖ (8) Impacts on pygmy blue whales would be assessed throughout the EP and impacts and risks reduced to ALARP and acceptable levels.
 - ❖ (8) In the course of preparing an EP, Woodside engaged suitably qualified environmental consultants and experts to inform what ecological parameters were required to be considered to inform potential risks and impacts from activities. Additionally, Woodside had extensive experience working in the Western Australian offshore environment and had developed a comprehensive database of information related to the existing environment. Woodside drew on this experience when evaluating all aspects relating to the risks and impacts of the activity and in developing appropriate control measures to mitigate impacts to environmental receptors.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) SNTSG advised it was a relevant person in relation to a previous EP.</p>	<p>(1) Woodside assessment: In the course of preparing other Scarborough EPs, SNTSG self-identified, provided comment on the broader Scarborough Project and requested to be consulted on Scarborough EPs. Woodside applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside assessed that SNTSG's public website material and previous feedback demonstrates an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation. Woodside response: Woodside agreed to meet SNTSG and in correspondence confirmed the purpose of their meeting was to provide context and an overview on upcoming Scarborough Project activities to allow for feedback to be provided as relevant. Woodside encouraged SNTSG to share any interests, claims or concerns regarding these EPs to assist Woodside with appropriate measures to mitigate impacts of the activities.</p>	<p>(1) Woodside has assessed SNTSG as a relevant person in its Assessment of Relevance (see Appendix F, Table 1) in accordance with regulation 25 of the Environment Regulations as per Section 5.2 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(2) Concerns related to the nature and process of Woodside's community consultation.</p>	<p>(2) Woodside assessment: Woodside has complied with regulation 25 of the Environment Regulations for this EP. Woodside response: Consultation requirements set out in regulation 25 of the Environment Regulations have been complied with in relation to the consultation process for the Scarborough EPs. Where feedback is received which informs Woodside of measures it may take to mitigate potential environmental impacts from the PAP, Woodside incorporates this feedback into the EP, and where appropriate, introduces additional controls to ensure risks are managed to ALARP and an acceptable level.</p>	<p>(2) Woodside's consultation process is outlined in Section 5 of the EP and is in accordance with regulation 25 of the Environment Regulations.</p>
<p>(3) The previous EPs are not consistent with the principles of ecologically sustainable development (ESD), specifically the 'intergenerational principle'.</p>	<p>(3) Woodside assessment: The PAP is not inconsistent with any relevant recovery plans or threat abatement plans. Woodside response: The PAP will be carried out in a manner consistent with the principles of ESD. In developing the EP, Woodside will demonstrate the PAP is not inconsistent with any relevant recovery plans or threat abatement plans. Woodside confirms that the EP will include demonstration of acceptability and provide assessment of relevant activities against the Blue Whale Conservation Management Plan, including relevant Environment Performance Outcomes and Controls.</p>	<p>(3) Woodside's assessment to confirm that the PAP is consistent with the relevant principles of ESD is described in Section 2.3.6 of the EP.</p>
<p>(4) Concern relating to the independence of participants in Environmental Risk and Impact Identification workshop (ENVID).</p>	<p>(4) Woodside assessment: Woodside does not agree that there was a lack of independence in relation to the ENVID workshop. The ENVID workshop was undertaken with independent experts from various backgrounds. Woodside response: The participants at the ENVID workshop (undertaken to identify potential risks and impacts to inform preparation of this EP) were from a multi-disciplinary background with a wealth of relevant knowledge and experience and included external environmental consultants supporting the EP development with extensive experience and understanding across all topics relevant to the PAP for this EP.</p>	<p>(4) Not required.</p>
<p>(5) Concern related to GHG emissions caused by the Scarborough Project, including Scope 1, 2 and 3</p>	<p>(5) Woodside assessment: Woodside noted SNTSG's concerns in relation to emissions. The EPs do take into account Scope 1, 2 and 3 emissions.</p>	<p>(5)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: The EP assesses both direct and indirect impacts and risks associated with the PAP.</p> <p>Direct GHG emissions will be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p> <p>An impact assessment of GHG emissions from the Scarborough facility has been undertaken, and options analysis of reduction/abatement opportunities conducted.</p> <p>Woodside's Climate Strategy and net equity reduction targets are designed to assist it to avoid and reduce emissions. Offsetting emissions will assist Woodside to meet its targets, while asset and technology decarbonisation plans are matured and implemented.</p>	<p>GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP.</p>
<p>(6) Lighting: Impact on ecological processes in the upper ocean such as vertical migration of plankton, seabirds, and marine turtle hatchlings.</p>	<p>(6) Woodside assessment: Woodside has assessed impacts of lighting in the EP. Woodside response: Routine light emissions associated with the PAP will be considered in the EP and will include assessment of lighting on marine ecosystem receptors and species including seabirds and marine turtles. The EP will demonstrate that impacts from lighting will be reduced to ALARP and will provide demonstration of acceptability.</p>	<p>(6) Woodside has assessed the potential impacts and risks associated with routine light emissions in Section 6.7.3 of the EP.</p>
<p>(7) Post extraction: What methods for long-term monitoring of environmental health in the area are in place, including post-production and decommissioning? What potential exists for the re-introduction of contaminants into the environment? Will a good practice measure of conducting environmental monitoring of the seabed before and after the activities be implemented?</p>	<p>(7) Woodside assessment: Management of decommissioning is a critical step in the project life cycle and is addressed in the EP. Woodside response: Woodside advised that the EP will provide an assessment of all discharges from the Floating Production Unit (FPU) including wastewater streams and controls will be implemented which demonstrate that impacts and risks from potential contaminants entering the marine environment are ALARP and will provide demonstration of acceptability.</p>	<p>(7) Planning for decommissioning is described in Section 7.3 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>What are the likelihoods of disturbed species recolonising affected areas, particularly around the base of the cuttings pile?</p>	<p>While decommissioning is not planned within the five year span of this EP, planning for decommissioning is included in the EP.</p>	
<p>(8) Ecosystem impacts:</p> <ul style="list-style-type: none"> • Would climate change affect interactions between marine life and the disturbance and pollution caused by the project and have the effects of this been considered? • What ecological parameters are used to assess impacts on species, populations, assemblages and ecosystems? • What grounds does Woodside propose for not suspending work during pygmy blue whale migration season? 	<p>(8) Woodside assessment: Woodside assesses ecosystem impacts and risks in the EP. Woodside engages experts and consultants and draws on its own expertise and experience to inform the required ecological parameters. Woodside response: All emissions and discharges including from atmospheric and GHGs are assessed in the EP including an evaluation of all receptors that may be impacted from these. Impacts on pygmy blue whales have been assessed throughout the EP and impacts and risks have been reduced to ALARP and acceptable levels. Woodside engages suitably qualified experts to inform what ecological parameters are required to be considered to inform potential risks and impacts from activities. Woodside draws on its database and experience when evaluating all aspects relating to risks and impacts and develops appropriate control measures to mitigate impacts to environmental receptors.</p>	<p>(8) GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP. The approach used to assessing potential impacts is described in Section 2.3 of the EP Potential impacts to marine fauna are assessed in Section 6 of the EP.</p>
<p>No feedback, objections or claims received for this EP despite follow up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on SNTSG functions, interests or activities. No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with SNTSG for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to SNTSG on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9,11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has provided the SNTSG with the opportunity to provide feedback over a 4.5 month period.

Australian Marine Conservation Society (AMCS)

Historical Engagement:

2022- 2023

- From 2022 to 2023 Woodside sent consultation material to AMCS on the Scarborough D&C, SITI and Subsea EPs as Woodside had identified that AMCS had referred to the Scarborough Project in an online public campaign.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 16 November 2023, in the absence of specific feedback from AMCS, Woodside sent a letter via email to AMCS (Record of Consultation, reference 1.50) which stated the following:
 - Woodside consulted AMCS on the Scarborough D&C, SITI and Seismic EPs and was advised AMCS was involved in a large number of consultations and needed to prioritise resources but requested it still be sent notifications and reminders of future consultation.
 - Woodside had provided AMCS with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Information Sheet.
 - Advised that Woodside was reaching out one final time and requested AMCS provide feedback and/or advise Woodside by 8 December 2023 if it would like to meet.
- On 20 December 2023, AMCS sent an email to Woodside (SI Report, reference 51.1), passing on personal details to ensure:
 - **(1)** AMCS was recognised as a relevant person, and
 - That Woodside had correct contact details, as well as outlining AMCS's role.
- **(1)** On 20 December 2023, Woodside responded to AMCS confirming it had been assessed as a relevant person, and as such, had already been sent the Consultation Information Sheet on 9 August 2023 and a follow up email on 30 August 2023 to the general enquiries email address (SI Report, reference 51.2). It had also been sent a proactive follow up letter on 16 November 2023.
 - Woodside updated its database to include the new email address.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AMCS is a relevant person.	(1)	(1) Woodside has assessed AMCS as a relevant person in its Assessment of Relevance (see Appendix F, Table 1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside assessment: Woodside followed the requirements of regulation 25 of the Environment Regulations and assessed AMCS as a relevant person for this EP based on its functions, interests or activities.</p> <p>Woodside response: Woodside confirmed AMCS had been assessed as a relevant person for this EP and had been provided with consultation information.</p>	<p>of the EP) in accordance with regulation 25 of the Environment Regulations.</p>
<p>Woodside has addressed objections and claims as noted above</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on AMCS functions, interests or activities.</p> <p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMCS for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to AMCS on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to AMCS over a 4.5-month period.

Doctors for the Environment Australia (DEA)

Historical Engagement:

2022- 2023

- From 2022 to 2023 Woodside consulted and responded to feedback from DEA on the Scarborough D&C, SIT1, Subsea and Seismic EPs. A number of issues raised by DEA during consultation on those EPs have been addressed and raised as part of consultation on this EP and include:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- DEA requested to be consulted on the proposed activity due to its membership comprising of medical professionals who dealt with people impacted directly and indirectly by climate change e.g. youth, elderly, First Nations people, people from low socioeconomic backgrounds, disabled people, those with disabilities, pre-existing medical conditions and people who lived in remote and rural communities.
- Climate change was being called the greatest global health threat of the 21st century and in Australia, the Australian Medical Association and the Australian College of Nursing had said climate change was a health emergency and health impacts of climate change threatened to undermine the last centuries progress in public and global health.
- Gas was also recognised as a health threat e.g. gas in domestic premises has been shown to contribute to childhood asthma.
- Gas processing on the Burrup Peninsula would also increase existing levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds. Air pollutants of this type could cause serious health impacts, including heart disease, stroke, lung cancer, asthma and diabetes, even at low levels of exposure.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed DEA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 5 December 2023, in the absence of specific feedback from DEA, Woodside sent a letter via email to DEA (Record of Consultation, reference 1.54) which stated the following:
 - **(1)** DEA self-identified for the Scarborough D&C, SITI and Seismic EPs and provided feedback to Woodside which was addressed.
 - Woodside had provided DEA with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Information Sheet.
 - Advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if DEA had feedback and/or would like to meet.
- The 5 December 2023 letter also reviewed past feedback from DEA on the Scarborough D&C, SITI and Seismic EPs and provided an assessment and response. Woodside assessed DEA's feedback as follows:
 - **(2, 3, 4)** DEA members would be affected by the Scarborough Project because climate change and the use of gas as an energy source for domestic and commercial use produces both direct and indirect health impacts.
 - **(2, 3, 4)** Climate change had impacted on health directly, indirectly, and via social mechanisms and world-wide, including in Western Australia, these impacts had been seen including extreme heat, increasingly severe extreme weather events, drought, changing infectious disease patterns, and resource scarcity, among others.
 - **(2, 3, 4)** In addition to the contribution to climate change, gas itself had also been recognised as a health threat.
 - **(2, 3, 4)** The processing of the gas at facilities on the Burrup Peninsula would also increase existing levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds. Air pollutants of this type could cause serious health impacts, including heart disease, stroke, lung cancer, asthma and diabetes, even at low levels of exposure.
 - Woodside responded to the feedback as follows:
 - **(2, 3, 4)** GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008*. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.

- **(2, 3, 4)** The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
- **(2, 3, 4)** Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
- **(2,3, 4)** An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken and included development of a decarbonisation plan for the Pluto Hub.
- **(2, 3, 4)** Woodside had a Climate Strategy which was an integral part of the company strategy and had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers needed as they secure their energy needs and reduced their emissions.
- **(2, 3, 4)** Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ Avoiding GHG emissions through the way it designs its assets.
 - ❖ Reducing GHG emissions through the way it operates its assets.
 - ❖ Originating and acquiring carbon credits to use as offsets for the remainder.
- **(2, 3, 4)** Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets however, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits to achieve net zero aspiration.
- On 19 December 2023, DEA sent an email and letter to Woodside, copying in NOPSEMA, stating it was, on behalf of the Western Australia Committee for Doctors for the Environment Australia, requesting that it be consulted as a relevant person (SI Report, reference 52.1). It also stated the following:
 - **(1)** DEA, WA considered itself a relevant person and DEA, WA had not been contacted by Woodside in relation to the EP. DEA, WA was concerned Woodside did not understand its interests, functions and activities affected by the project and outlined these in detail. DEA, WA also invited Woodside to reflect on the purpose of the consultation regime and outlined regulation 25 of the Environment Regulations requirements.
 - **(5)** DEA, WA stated it understood the EP had been submitted to NOPSEMA for consideration and asked that the project not be accepted until regulation 25 of the Environment Regulations was met.
 - **(6)** It required a response to its letter within two weeks, no later than 2 January 2024.
 - In addition, it requested reports, analyses, assessments, modelling and/or other documents around the following:
 - **(7)** A description of the environment that may be affected by the activities, including the potential extent and area of a hydrocarbon release/loss of containment from planned and unplanned activities.
 - **(8)** The potential environmental impacts and risks of the activities, including in relation to a Worst Case Oil Spill.
 - **(9)** The potential impacts and risks on any species listed under the *Environment Protection and Biodiversity Conservation Act 1999* (Cth), including in relation to a Worst-Case Oil Spill.

- **(10)** The potential impacts and risks on the Scott Reef Marine Park, and any other significant marine ecosystem, including in relation to a Worst Case Oil Spill.
 - **(11)** The potential impacts and risks in relation to Sea Country and other areas of marine or terrestrial Aboriginal cultural significance and/or heritage, including in relation to a Worst Case Oil Spill
 - **(12)** The total GHG emissions associated with the activities and where these GHG emissions would occur, including any flaring/venting of GHG emissions both offshore and onshore.
 - **(13)** The potential impacts and risks of the activities' GHG emissions in relation to global warming and climate change, including whether and how those emissions would fit within a carbon budget and emissions reduction scenarios aligned with the temperature goals of the Paris Agreement, and specifically whether the Project could be accommodated within a carbon budget for a 1.5 degree, well below 2 degree, or 2 degree warming scenario.
 - **(14)** The proposed GHG emissions control measures, including details of any proposed offsets and any proposal for carbon capture and storage.
 - **(15)** The potential cumulative impacts of the above listed impacts or risks considered in the context of existing and proposed developments and/or activities in the vicinity of the area that may be affected by the activities and/or the Project, including in relation to a Worst Case Oil Spill.
 - **(16)** The potential cumulative impacts of upstream and downstream activities associated with the Project as a whole, including transport of gas via undersea pipeline and onshore processing of gas.
 - **(17)** The potential impacts on human health of the Project's GHG emissions, air and water pollution, including in the event of a Worst Case Oil Spill.
 - **(18)** The Proponent should provide information explaining whether reasonably available options had been explored for resolving or minimising the degree to which DEA, WA and the environment generally, may be affected by the activities, particularly through control measures. Accordingly, DEA also requested the following information, including any reports, analyses, assessments and/or other documents, that:
 - ❖ Demonstrated that the environmental impacts and risks of the activities would be reduced to as low as reasonably practicable.
 - ❖ Demonstrated that the environmental impacts and risks of the activities would be of an acceptable level.
 - ❖ Details of the environmental performance outcomes, environmental performance standards and measurement criteria to be adopted in relation to the activities.
 - ❖ Details of the implementation strategy and monitoring, recording and reporting arrangements in relation to the environmental impacts and risks of the activities.
 - **(19)** DEA, WA noted that a copy of any draft EP would assist an informed assessment.
- On 20 December 2023, Woodside sent a letter via email to DEA, [name redacted] and NOPSEMA (SI Report, reference 52.2), addressing the following:
 - **(1, 6)** Confirming DEA had been assessed as a relevant person, and as such, had already been sent the Consultation Information Sheet on 9 August 2023 and a follow up email on 30 August 2023 to the email address used for previous correspondence in relation to other EPs. It had also been sent a proactive follow up letter on 5 December 2023 outlining responses to previous claims, objections and requests for information and advising consultation closed on 20 December 2023.
 - **(6)** As well as directly corresponding with DEA, Woodside advertised the EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - **(6)** The provision of consultation information, an extended period over and above a reasonable period for consultation, numerous attempts to engage DEA, and proactively considering information previously provided by DEA on other Scarborough Project EPs, meant that sufficient information, a reasonable period of time and reasonable opportunity for consultation had been provided.

- (5) The EP had not yet been submitted to NOPSEMA.
- (1) Woodside responded the next day, well before the requested response date of 2 January 2024.
- (7) In accordance with regulation 13(2) and 13(3) of the Environment Regulations, the EP would describe the Environment that May Be Affected (EMBA) including details of receptor sensitivities and exposure potential.
 - The EMBA was defined as the largest spatial extent where unplanned events could have an impact on the surrounding environment and for this EP, was the potential spatial extent of surface and in-water hydrocarbons at concentrations above ecological impact thresholds, in the highly unlikely event of a loss of marine diesel from vessel collision.
 - The EMBA also included any areas that were predicted to experience shoreline contact with hydrocarbons above threshold concentrations.
- (8) The potential environmental impacts and risks of activities, including from a worst-case credible loss of containment event, had been explained in the Consultation Information Sheet sent on 9 and 30 August 2023.
- (9) The EP would describe details of the particular relevant values and sensitivities of the environment including identification of EPBC Act listed species considered to be Matters of National Environmental Significance (MNES) that may potentially occur in the EMBA.
 - The EP would include an evaluation of potential impacts to EPBC Act listed species including unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of a vessel collision. The impact assessment in the EP would provide a suite of controls that would be implemented during the activity to avoid or minimise potential impacts to relevant EPBC listed species.
- (10) Woodside does not consider that there would be any credible impact on Scott Reef Marine Park as a result of the PAP described in the EP including unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of vessel collision.
- (11) The EP would assess potential impacts and risks in relation to cultural heritage on both land and sea including from unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of vessel collision.
 - Woodside had consulted extensively with relevant Traditional Custodian(s)/groups in development of all Scarborough EPs to identify any cultural values, interests, activities and functions as well as respond to any claims and feedback prior to submission. Examples of Sea Country considerations, including controls to reduce impacts to ALARP and acceptable levels, could be seen in the accepted Scarborough EPs publicly available on the NOPSEMA website.
- (12) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken including the development of a decarbonisation plan for the Pluto Hub.

- **(13)** Woodside had a Climate Strategy which had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.
 - Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ Avoiding GHG emissions through the way it designed its assets.
 - ❖ Reducing GHG emissions through the way it operates its assets.
 - ❖ Originating and acquiring carbon credits to use as offsets for the remainder.
 - Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets, however, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits to achieve its net zero aspiration.
- **(14)** Woodside would include control measures in the EP to reduce potential impacts resulting from GHG emissions to ALARP and acceptable levels and these would be made publicly available in the EP on NOPSEMA's website once it had been submitted and was under assessment by NOPSEMA.
 - Relevant controls and Environmental Performance Objectives (EPOs) would cascade from the Scarborough Offshore Project Proposal (OPP) which was publicly available on the NOPSEMA website.
- **(15, 16, 17)** The Scarborough OPP assessed the potential cumulative impact of the Scarborough Project and other activities/developments. In addition, Woodside had considered other Scarborough activities that could result in overlapping temporal and spatial extents. While concurrent operations were currently not anticipated to occur between activities included in this Petroleum Activities Program and Scarborough activities covered by other EPs (i.e., D&C, SIT1, Seismic and Subsea); where they did occur, this would be assessed.
- The FPU safety case and facility design took into consideration/assessed impacts to worker health and safety from facility operations including emissions and discharges. Woodside considered there were no credible impacts to populations onshore from planned emissions/discharges from the Scarborough FPU at the FPU location.
 - Indirect emissions from Scarborough FPU operations, such as processing through the Pluto LNG Plant, had been assessed for potential to impact on human health and remained within recognised criteria.
- **(18)** Woodside confirmed as required by the Environment Regulations the EP would demonstrate that environmental impacts and risks would be reduced to ALARP and acceptable levels. The EP would outline the implementation strategy, which would include fit for purpose systems, practices and procedures to direct, review and manage the activities so environmental risks and impacts were continually being reduced to ALARP and acceptable levels, and ensured EPOs and Standards outlined in this EP were achieved.
 - In addition to the above, DEA may wish to access the following publicly available documents which provided additional detail on the project:
 - ❖ Acceptance of Scarborough Offshore Project Proposal – Statement of Reasons (link included)
 - ❖ Scarborough OPP Formal Consultation Report (pages 1073-1081) (link included)
 - ❖ Pluto LNG Facility Greenhouse Gas Abatement Program Factsheet (link included).
- **(19)** The Consultation Information Sheet provided to DEA on 9 August 2023 provided a summary of the PAP, the receiving environment, a summary of impacts and risks and proposed mitigation and management measures. Woodside confirmed it did not provide EP drafts during EP development due to the potential for content to change and in

addition, restricting access to publicly available versions enabled stakeholders to access and comment on the same information, removing potential for confusion. The EP would be publicly available on NOPSEMA's website once it had been submitted and was under assessment.

- On 20 December 2024, Woodside received an out of office from DEA (SI Report, reference 52.3).

Ongoing engagement:

- **(2, 3, 4, 12, 13, 14)** On 7 March 2024, Woodside sent DEA an email stating that as it had shown an interest in climate-related matters, it may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 52.4).
 - The email included links to the CTAP and the ASX Announcement.
 - It also re-iterated that consultation in the preparation of the EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Finally, it stated Woodside was available to meet with DEA to discuss the EP should they be interested.
- On 24 April 2024, during the course of preparing the Pluto Facility EP, DEA self-identified by emailing NOPSEMA and including a feedback letter addressed to Woodside regarding this EP (SI Report, reference 52.5) and:
 - **(1)** Understood Woodside was undertaking consultation with relevant persons for both EPs under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) prior to NOPSEMA assessment.
 - **(1)** Considered itself to be a relevant person and Woodside was required to consult.
 - **(5)** Noted that Woodside was required by regulations 11A(2) and (3) of the Environment Regulations to provide relevant persons with "sufficient information" to assess the possible consequences of the activities on its functions, interests or activities and provide "reasonable period" for consultation.
 - **(1)** DEA provided statements related to its interests, functions, activities and resources including:
 - background on DEA as an independent, non-government organisation of medical doctors and students in Australian States and Territories that had a voice in the sphere of environmental health.
 - reference to annual reports that articulated its strategy and impact goals to reduce fossil fuel combustion and cut global greenhouse gas emissions this decade.
 - resources including health reports, fact sheets and submissions.
 - consultation-relevant fact sheets "How Climate Change Affects Your Health: The Facts, How Climate Change Affects Mental Health in Australia" and "Asthma and Indoor Gas Appliances."
 - submissions including the Senate Inquiry Duty of Care Intergenerational Equity Bill and Protecting the Spirit of Sea Country Bill 2023.
 - support of phasing-out gas in households and policies and programs to phase out use of Gas in Australia.
 - Support of global emissions reduction aligned with the Paris Agreement with DEA arguments found in its Future Gas Strategy consultation paper.
 - **(2)** Understood a range of different pathways and energy scenarios may be considered to align with globally agreed temperature goals and each had different levels of certainty, risk profiles and public health outcomes, so DEA supported the position of the United Nations, IEA and other authorities that there should be no new fossil fuel resource

developments that were not already under production. It considered that Woodside projects were not consistent with findings and wanted more information to understand and evaluate health implications.

- **(5)** Noted the consultation helped the proponent and environment in improving an EPs content and it looked forward to receiving more information and opportunity to comment.
- **(5)** Noted that consultation required under regulation 11A of the Environment Regulations, required a proponent to provide DEA with “sufficient information” to make an informed assessment and provide a “reasonable period” for consultation.
- **(5)** Referenced NOPSEMA’s “Guidance Note: Environment Plan content requirements” dated September 2020 (EP Content Guidance) and “Guideline: Consultation in the course of preparing an environment plan” dated 12 May 2023 (Consultation Guideline) and stated that consultation in relation to any EP for development activities should assist the proponent to understand the external context, define “acceptable levels” of environmental impact and risk, and inform appropriate control measures.
- **(5, 12, 13, 14, 15, 17)** Did not feel that Woodside’s published consultation material for this EP or another EP provided “sufficient information” as it did not address indirect impacts related to greenhouse gas emissions, climate change impacts and health impacts associated with gas usage. Nor did it sufficiently address local air pollution impacts from Woodside’s gas processing facilities.
- **(13, 15, 17)** Cited Woodside’s estimate of total lifecycle emissions from the development – 878m tonnes – and that indirect consequences on climate change and health impacts of air pollution from fuel combustion were significant.
- **(1)** Believed its interests and objective would be impacted by the Operation EP in at least the following ways:
 - health impacts in Australia and elsewhere as a consequence of climate change
 - health impacts for workers and the local community as a result of Woodside’s LNG processing operations
 - health and wellbeing impacts for Aboriginal peoples who experience impacts to cultural heritage and Sea Country as a result of Woodside’s gas processing operations and climate change and ocean acidification more generally
 - health and wellbeing impacts associated with the use of gas in domestic and commercial settings, both in Western Australia and elsewhere where the gas is exported
 - health considerations arising from carbon pollution mitigation options such as the use of offsets, carbon capture and storage, direct mitigation, or other abatement methods
 - impacts and implications for healthcare professionals and health care systems arising from the health impacts mentioned above.
- **(13)** Noted indirect impacts from GHG emissions from this activity and climate change and air pollution from burning fossil fuels were not considered or provided.
- **(12)** Noted that climate change impacts, including from Scope 3 emissions that would result from another activity, fell under the scope of indirect consequences which must be assessed in accord with the approved NOPSEMA Program under the EPBC Act, and separately, as part of the broader environment that must be considered by NOPSEMA in accordance with the Environment Regulations.
- **(5)** Considered that Woodside had not provided DEA with sufficient information to make an informed assessment of consequences on its functions, interests and activities.
- **(2, 3, 8, 9, 10, 11, 14, 17)** Provided examples of information DEA required to make an assessment including:
 - Woodside’s analysis of impacts
 - Woodside’s analysis of impacts including independent health impact assessments, baseline health studies or other analysis including:
 - health impacts from use of gas produced by Australian and overseas projects
 - health impacts arising from climate impacts that were attributable to emissions from these projects

- health impacts from climate change and other effects
 - identification of groups or communities disproportionately affected by impacts
 - health and wellbeing effects of both direct and indirect impacts of the projects to sea country and cultural heritage
 - health and wellbeing impacts for the local community and others who may be exposed to, or impacted by airborne emissions and other effects of Woodside's gas processing and export facilities, or other infrastructure associated with the projects
 - health impact on workers involved in the construction and production phase of the projects and the gas processing facilities over the period they would be utilised for these projects
 - information regarding mitigation measures
 - information about what mitigation measures were proposed (if any) by Woodside to address impacts that have been identified, including what effects these mitigation measures are likely to have, how they will be implemented
 - details of the implementation strategy and monitoring, recording and reporting arrangements in relation to the described indirect and direct environmental impacts and risks of the activities, including how they would be reviewed and evaluated
 - details on how the proposed mitigation measures and implementation strategy would be subject to enforceable regulatory requirements or otherwise regulated
 - information about what other mitigation options had been considered by Woodside (if any) but were not proposed for implementation
 - information regarding Woodside's evaluation and selection process for mitigation measures, including how decisions had been made and what criteria had been applied to the consideration by Woodside of what mitigation measures would be implemented
 - information to demonstrate how the chosen mitigation measures would achieve the required outcome of 'as low as reasonably practicable and acceptable' residual impacts
 - information on residual impacts and risks
 - information to specify what residual health risks, impacts and outcomes Woodside believed would occur as a result of the projects after the application of proposed mitigation measures
 - details of what residual impacts Woodside considered to be acceptable, in the context of the regulatory requirement for 'as low as reasonably practicable and acceptable'
 - information on relevant person consultation in relation to health impacts and effects
 - what efforts Woodside had made to identify and consult with persons or organisations who may be impacted by health effects of the activities as relevant persons under the regulations
 - what relevant persons Woodside had consulted with who may be impacted by health effects of the activities and what concerns or issues had been raised in the process of such consultation to date
- **(5)** Shared why the above information was needed for DEA to make an informed assessment as it wanted to respond in an evidenced-based manner and direct its activities to better protect the health of communities from such impacts and prepare the health sector for climate change impacts.
- **(5)** Requested the above information as part of consultation and it should include reports, analyses, assessments, modelling and/or other documents used by Woodside.

- **(17)** Noted that Woodside had made general statements related to its Climate Transition Action Plan and 2023 Progress Report (the Report) and given majority of this project's emissions would be from Scope 3 emissions which the report set only a 5 Mtpa abatement target. It did not describe the health outcomes or impacts from its proposed activities.
- **(1)** Noted Regulation 11A of the Environment Regulations requires a "reasonable period" for consultation.
- **(5)** Referenced the EP Content Guidance note that specified consultation time should be based on complexity and volume of information provided and practicalities of DEA's available personnel and resources. After receiving requested information, it can determine the length of time needed for consultation. It noted that the 30 day period for public exhibition of certain EPs specified under Regulation 11B(1)(a) of the Environment Regulations is unlikely to be sufficient for the purposes of consultation under Regulation 11A. This is because the consultation envisaged by Regulation 11A is required to be more rigorous than public exhibitions.
- **(1)** Noted the EP Content Guidance and Consultation Guidelines stated that under Regulation 11A, consultation should demonstrate two-way communication, transparency, collaboration and inclusiveness. It continued that Regulation 16(b) requires proponents to provide feedback to DEA on its comments.
- **(5)** Reiterated that any EP for the project should not be accepted until the requirements of Regulation 11A were met, including consultation requirements with DEA identified in this document.
- **(5)** Noted it looked forward to receiving more information so consultation could commence in accordance with Regulation 11A of the Environment Regulations.
- On 14 May 2024, Woodside responded to DEA's email from 24 April 2024 (SI Report, reference 52.6) and:
 - **(1)** Noted receipt of DEA's letter which related to this EP and another EP.
 - **(1)** Woodside consulted DEA for this EP starting in August 2023. Woodside outlined its EP feedback process and Management of Change and Review process. Based on feedback for the Pluto Operations EP, DEA had been assessed as being a relevant person for the Pluto Operations EP.
 - **(1)** Confirmed it consulted relevant persons during EP preparation in accordance with Regulation 25 of the Environment Regulations.
 - **(1)** Noted DEA's statements and document reference but made no comment as to the factual accuracy or otherwise of these documents.
 - **(2)** Referred DEA to Section 4.2 Global demand for oil and gas (on pages 44 and 45) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. Woodside referred DEA to publicly available information and noted that more granular detail relating to GHG emissions would be set out and assessed in the respective EPs. GHG emissions would be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).
 - **(5)** Confirmed it refers to NOPSEMA's guidance materials when undertaking consultation.
 - **(2, 12, 13, 14, 15, 17)** Noted that GHG information for this EP is already publicly published. The statutory regime relating to onshore emissions includes various State and Commonwealth legislation which manages potential impacts and risks to environment and cultural features, and legislation is applied to the relevant proponents for the onshore processing facilities.
 - **(2)** Recommended review of Section 3.1 Climate strategy (on page 14), Section 3.5 Scope 3 emissions (on page 32 and 33) and Section 3.6 Scope 3 targets (on pages 34 – 40) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. The EPs would assess both direct and indirect impacts and risks associated with the Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. Direct and indirect emissions with the potential to result in climate change impacts will be considered.

- (2, 3) Noted that emissions associated with onshore gas processing were subject to a range of legislative requirements including those which considered and managed potential to impact on human health (for example Part IV environmental impact assessment and associated air quality monitoring management, as well as broader World Health Organisation requirements and National Environment Protection Measure limits and specific health and safety related regulations.).
- (19) Woodside does not provide drafts of EP while in development or under assessment for a number of reasons, including the potential for content to change. Allowing access to publicly available versions enables stakeholders to access and comment on the same information, assists with version control and removes potential for confusion. The EP would be made publicly available on NOPSEMA’s website once it had been submitted and was under assessment.
- (2, 12, 13, 14) Noted that climate change impacts couldn’t be attributed to any one activity or one project, as they were instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Although the direct and indirect GHG emissions associated with Scarborough and Pluto couldn’t be linked to climate change impacts to the environment, a contextual evaluation of climate change impacts will be provided in the EPs. Encouraged DEA to read Woodside’s suite of climate disclosures including Woodside’s Climate Report 2021, Climate Report 2022 and Climate Transition Action Plan and 2023 Progress Report.
- (1, 5) Woodside disagreed with the assertion that the Project should not be accepted as Woodside had engaged in consultation with DEA in accordance with Regulation 25.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) DEA is a relevant person and has not been contacted by Woodside in relation to this EP.</p>	<p>(1) Woodside assessment: Woodside identified DEA as a relevant person for this EP and provided consultation information to DEA and followed this up. Woodside also sent a proactive email addressing DEA’s previous feedback on other Scarborough EPs. Woodside response: Woodside confirmed DEA had been assessed as a relevant person for this EP. Woodside provided a Consultation Information Sheet to DEA on 9 August 2023 and 30 August 2023, and in the absence of a response, Woodside proactively reviewed, considered and addressed previous feedback provided by DEA on the Scarborough Project in a letter emailed on 5 December 2023.</p>	<p>(1) Woodside has assessed DEA as a relevant person in Appendix F, Table 1 of the EP in accordance with regulation 25 of the Environment Regulations.</p>
<p>(2) Climate change is health emergency.</p>	<p>(2) Woodside assessment: Woodside has conducted a full assessment of the impacts and risks of the activities the subject of this EP. The EP demonstrates that environmental impacts and risks will be reduced to ALARP and acceptable levels. Woodside response: GHG emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP.</p>	<p>(2) GHG emissions associated with the activity and are considered in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>The EP will assess both direct and indirect impacts and risks associated with the PAP.</p> <p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions have been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p> <p>Provided references and links to the Climate Transition Action Plan and 2023 Progress Report.</p>	
<p>(3) Gas is a health threat.</p>	<p>(3) Woodside assessment: Woodside has conducted a full assessment of the impacts and risks of the activities the subject of this EP. The EP demonstrates that environmental impacts and risks will be reduced to ALARP and acceptable levels.</p> <p>Woodside response: GHG emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP.</p> <p>The EP will assess both direct and indirect impacts and risks associated with the PAP.</p> <p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions have been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p>	<p>(3) Not required.</p>
<p>(4) Gas processing on the Burrup Peninsula would increase levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds.</p>	<p>(4) Woodside assessment: Woodside has conducted a full assessment of the impacts and risks of the activities the subject of this EP. Emissions related to onshore processing of Scarborough gas are assessed in the EP, which demonstrates that environmental impacts and risks will be reduced to ALARP and acceptable levels.</p> <p>Woodside response: GHG emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP.</p> <p>The EP will assess both direct and indirect impacts and risks associated with the PAP.</p> <p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions have been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p>	<p>(4) Emissions related to onshore processing of Scarborough gas are assessed in section 6.7.7 of the EP.</p>

<p>(5) The EP has been submitted to NOPSEMA and sufficient information has not been provided so the project should not be accepted until regulation 25 of the Environment Regulations is met.</p>	<p>(5) Woodside assessment: This EP had not yet been submitted to NOPSEMA. Woodside has complied with regulation 25 of the Environment Regulations for consultation for this EP. Woodside response: Woodside advised DEA that the EP had not yet been submitted to NOPSEMA. Feedback could continue to be provided during the life of an EP, including after consultation for the EP had closed, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continued to receive, assess and respond to feedback and comments from relevant persons throughout the life of the EP.</p>	<p>(5) Not required.</p>
<p>(6) Woodside should respond to DEA's letter within two weeks.</p>	<p>(6) Woodside assessment: Woodside sent DEA a Consultation Information Sheet for this EP on 9 August 2023 and a follow up email on 30 August 2023. Woodside also sent DEA a proactive follow up letter on 5 December 2023 outlining responses to previous claims, objections and requests for information and advised consultation closed on 20 December 2023. Woodside response: Woodside responded to DEA on 20 December 2023, well before the requested date of 2 January 2024.</p>	<p>(6) Not required.</p>
<p>(7) DEA stated it required further information on:</p> <ul style="list-style-type: none"> A description of the EMBA, including the potential extent and area of a hydrocarbon release / loss of containment from planned and unplanned activities. 	<p>(7) Woodside assessment: DEA has been provided with sufficient information. A description of the existing environment is provided in Section 4 of the EP. Woodside response: In accordance with the Environment Regulations, the EP will describe the EMBA including details of receptor sensitivities and exposure potential.</p>	<p>(7) A description of the existing environment is provided in Section 4 of the EP.</p>
<p>(8)</p> <ul style="list-style-type: none"> The potential environmental impacts and risks of the activities, including in relation to a Worst Case Oil Spill. 	<p>(8) Woodside assessment: Woodside has provided sufficient information in relation to oil spill. Woodside response: The potential environmental impacts and risks of activities, including from a worst-case credible loss of containment event, have been described in the publicly available EP Consultation Information Sheet.</p>	<p>(8) An assessment of impacts and risks from planned and unplanned activities is described in Section 6 of the EP.</p>
<p>(9)</p>	<p>(9)</p>	<p>(9)</p>

<ul style="list-style-type: none"> The potential impacts and risks on any species listed under the <i>Environment Protection and Biodiversity Conservation Act 1999 (Cth)</i>, including in relation to a Worst-Case Oil Spill. 	<p>Woodside assessment: The EP will include an evaluation of potential impacts and risks on species listed under the <i>Environment Protection and Biodiversity Conservation Act 1999 (Cth)</i>.</p> <p>Woodside response: The EP will include an evaluation of potential impacts to EPBC Act listed species including unplanned impacts resulting from a highly unlikely hydrocarbon spill as a result of a vessel collision. The impact assessment will provide a suite of controls that will be implemented during the activity to avoid or minimise potential impacts.</p>	<p>An assessment of impacts and risks from planned and unplanned activities is described in Section 6 of the EP.</p>
<p>(10)</p> <ul style="list-style-type: none"> The potential impacts and risks on the Scott Reef Marine Park, and any other significant marine ecosystem, including in relation to a Worst Case Oil Spill. 	<p>(10)</p> <p>Woodside assessment: Woodside does not consider there will be any credible impact on Scott Reef Marine Park as a result of the activities the subject of this EP.</p> <p>Woodside response: Woodside advised DEA it did not consider there would be any credible impact on Scott Reef Marine Park as a result of the PAP described in the EP.</p>	<p>(10)</p> <p>Not required.</p>
<p>(11)</p> <ul style="list-style-type: none"> The potential impacts and risks in relation to Sea Country and other areas of marine or terrestrial Aboriginal cultural significance and/or heritage, including in relation to a Worse Case Oil Spill. 	<p>(11)</p> <p>Woodside assessment: Woodside has assessed the potential impacts and risks in relation to cultural heritage on both land and sea. Woodside has consulted extensively with Traditional Owners and their representative groups in development of the Scarborough EPs.</p> <p>Woodside response: The EP will assess potential impacts and risks in relation to cultural heritage on both land and sea. Woodside has consulted extensively with Traditional Custodian groups in development of the Scarborough EPs to identify any cultural values, interests, activities and functions as well as respond to any claims and feedback prior to submission. Examples of Sea Country considerations, including controls to reduce impacts to ALARP and acceptable levels, can be seen in the accepted Scarborough EPs publicly available on NOPSEMA’s website.</p>	<p>(11)</p> <p>Woodside recognises Traditional Custodians connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.10 of the EP.</p>
<p>(12)</p> <ul style="list-style-type: none"> The total GHG emissions associated with the activities and where these GHG emissions will occur, including any flaring/venting of GHG emissions both offshore and onshore. 	<p>(12)</p> <p>Woodside assessment: Woodside has conducted a full assessment of the impacts and risks of the activities the subject of this EP. The EP demonstrates that environmental impacts and risks will be reduced to ALARP and acceptable levels.</p> <p>Woodside response: GHG emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP.</p>	<p>(12)</p> <p>GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	GHG emissions will be estimated using the <i>National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008</i> and other industry standard database. The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. An impact assessment of GHG emissions from the Scarborough facility and mitigation management controls to reduce GHG emissions has been undertaken.	
<p>(13)</p> <ul style="list-style-type: none"> The potential impacts and risks of the activities' GHG emissions in relation to global warming and climate change, including whether and how those emissions would fit within a carbon budget and emissions reduction scenarios aligned with the temperature goals of the Paris Agreement, and specifically whether the Project can be accommodated within a carbon budget for a 1.5 degree, well below 2 degree, or 2 degree warming scenario. 	<p>(13)</p> <p>Woodside assessment: Woodside noted DEA's comments in relation to GHG emissions.</p> <p>Woodside response: Woodside's climate strategy has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions. Woodside's net equity reduction targets have an aspiration of net zero by 2050 or sooner.</p>	<p>(13)</p> <p>Woodside's approach to Climate Strategy and carbon offsets is described in Section 6.7.6 of the EP (and in Woodside's Climate Report available on Woodside's website).</p>
<p>(14)</p> <ul style="list-style-type: none"> The proposed GHG emissions control measures, including details of any proposed offsets and any proposal for carbon capture and storage. 	<p>(14)</p> <p>Woodside assessment: Woodside noted DEA's comments in relation to GHG emissions.</p> <p>Woodside response: Woodside will include control measures in the EP to reduce potential impacts resulting from GHG emissions to ALARP and acceptable levels.</p>	<p>(14)</p> <p>GHG emissions and indirect emissions associated with the activity are considered in Section 6.7.6 and 6.7.7 of the EP.</p> <p>Woodside's approach to Climate Strategy and carbon offsets is described in Section 6.7.6 of the EP (and in Woodside's Climate Report available on Woodside's website).</p>
<p>(15)</p> <ul style="list-style-type: none"> The potential cumulative impacts of the above listed impacts or risks considered in the context of existing and proposed developments and/or activities in the vicinity of the area that may be affected by the activities and/or the Project, including in relation to a Worst Case Oil Spill. 	<p>(15)</p> <p>Woodside assessment: Woodside noted DEA's comments in relation to GHG emissions.</p> <p>Woodside response: The Scarborough OPP assesses the potential cumulative impact of the Scarborough Project and other activities/developments.</p>	<p>(15)</p> <p>The potential impacts of a worst-case credible hydrocarbon loss of containment are assessed in Section 6.8.2 of the EP</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(16)</p> <ul style="list-style-type: none"> The potential cumulative impacts of upstream and downstream activities associated with the Project as a whole, including transport of gas via undersea pipeline and onshore processing of gas. 	<p>(16)</p> <p>Woodside assessment: Woodside noted DEA’s comments in relation to GHG emissions.</p> <p>Woodside response: The Scarborough OPP assesses the potential cumulative impact of the Scarborough Project and other activities/developments.</p>	<p>(16)</p> <p>Indirect atmospheric emissions associated with downstream processing of gas are assessed in Section 6.7.7 of the EP</p>
<p>(17)</p> <ul style="list-style-type: none"> The potential impacts on human health of the Project’s GHG emissions, air and water pollution, including in the event of a Worst Case Oil Spill. 	<p>(17)</p> <p>Woodside assessment: Woodside noted DEA’s comments in relations to GHG emissions.</p> <p>Woodside response: The FPU Safety Case and facility design take into consideration/ assesses impacts to worker health and safety from facility operations including emissions and discharges from the Scarborough FPU at the FPU location. Indirect emissions from Scarborough FPU operations have been assessed for potential to impact on human health and remain within recognised criteria.</p>	<p>(17)</p> <p>Indirect atmospheric emissions associated with downstream processing of gas are assessed in Section 6.7.7 of the EP</p>
<p>(18)</p> <ul style="list-style-type: none"> The Proponent should provide information explaining whether options have been explored for minimising the degree to which DEA and the environment generally, may be affected by the activities, particularly through control measures. DEA also requested information that: <ul style="list-style-type: none"> demonstrates impacts and risk would be reduced to ALARP and an acceptable level; details the environmental performance outcomes, environmental performance standards and measurement criteria to be adopted; details the implementation strategy/reporting arrangement for impacts and risks. 	<p>(18)</p> <p>Woodside assessment: Woodside does not provide EP drafts during EP development. DEA has been provided with sufficient information and a reasonable period of time to make an informed assessment.</p> <p>Woodside response: Woodside does not provide EP drafts during EP development. The EP will be publicly available on NOPSEMA’s website once it has been submitted and is under assessment. Publicly available versions assist stakeholders to access and comment on the same information and removes confusion.</p> <p>Woodside confirms the EP will demonstrate that environmental impacts and risks will be reduced to ALARP and acceptable levels and it will outline the implementation strategy to manage the activities so environmental risks and impacts are continually being reduced to ALARP and acceptable levels, and ensure EPOs and Standards outlined in the EP are achieved.</p>	<p>(18)</p> <p>DEA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(19)</p> <ul style="list-style-type: none"> A copy of any EP draft to assist in an informed decision. 	<p>(19)</p> <p>Woodside assessment: Woodside does not provide EP drafts during EP development. The Consultation Information Sheet provided to DEA on 9 August 2023 provided sufficient information.</p> <p>Woodside response: The Consultation Information Sheet provided to DEA on 9 August 2023 provided a summary of the PAP, the receiving environment, a summary of impacts and risks and mitigation and management measures.</p> <p>Woodside does not provide EP drafts during EP development or under assessment due to the potential for content to change. Also, restricting access to publicly available versions enables stakeholders to access and comment on the same information, removing potential for confusion.</p> <p>The EP will be publicly available on NOPSEMA's website once it has been submitted and is under assessment.</p>	<p>(19)</p> <p>Not required.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on DEA's functions, interests or activities.</p> <p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DEA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to DEA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to DEA over a 9-month period, including the 4.5 month consultation period.

Friends of Australian Rock Art. Inc (FARA)

Historical Engagement:

2018 – 2020

- FARA was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal (OPP) during the 3 phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - FARA chose not to take up the opportunity to participate in consultation.

2022- 2023

- From 2022 to 2023 Woodside consulted FARA on the Scarborough Subsea EP. A number of issues raised by FARA during consultation on this and the Scarborough D&C, Seismic and SITI EPs were addressed and have been raised as part of consultation on this EP and include:
 - FARA wished to be consulted by Woodside on all EPs pertaining to developments which would cause or lead to damage (both direct and indirect impacts) to Murujuga's rock art.
 - The broader impacts of the Scarborough Project including climate change impacts.
 - The damage to the cultural landscape and rock art and impacts on Traditional Custodians of Murujuga and the Dampier Archipelago who would be directly impacted (emissions, facilities) and indirectly impacted (noise, view, dust).
 - Endorsing and supporting the request made by Murujuga custodians [name redacted] and [name redacted] that they were relevant persons to be consulted by Woodside on the Scarborough gas project.
 - Increased industrial emissions on the Burrup Peninsula would almost certainly compromise the application to have the site added as a World Heritage place.
 - Its members (local workers in the gas industry and community members) would be affected by atmospheric emissions from offshore drilling, along associated pipelines, during processing, production, transport of the Scarborough gas, and gas used by Perdaman and others on the Burrup Peninsula.
 - Raised concerns regarding the marine environment and endangered species from the impacts from all pollution sources on all potential receptors.
 - Whether there was a robust decommissioning plan with funds set aside.
 - Acidic emissions from Woodside's Joint Venture site at the Karratha Gas Plant had been impacting on the fragile patina of the adjoining petroglyphs and emissions from Scarborough activities would further increase this impact. It was extremely urgent that Woodside's emissions-control technology, and that of the two Pluto plants, were updated to world standards in order to substantially reduce its toxic NOx and SOx emissions.
 - Provided Woodside with a number of research papers.

Summary of information provided and record of consultation for this EP (FARA):

- On 9 August 2023, Woodside emailed FARA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

- In the absence of specific feedback from FARA, Woodside sent a letter via email on 5 December 2023, (Record of Consultation, reference 1.58) which stated the following:
 - **(1)** FARA self-identified for the Scarborough D&C, SITI and Seismic EPs and provided feedback to Woodside which had been addressed.
 - **(1)** Woodside had provided FARA with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Information Sheet.
 - Advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if FARA had feedback and/or would like to meet.
- The 5 December 2023 letter also reviewed past feedback from FARA on the Scarborough D&C, SITI and Seismic EPs and provided assessment and response as follows:
 - **(1)** FARA was a relevant person for this EP.
 - **(1)** Woodside recognised that FARA was a relevant person for this EP. In recognition of this fact, Woodside had provided FARA with consultation information and requested feedback on 9 August 2023 and 30 August 2023.
 - Woodside was now contacting FARA a final time to offer an opportunity to provide feedback or request a meeting by 20 December 2023.
 - **(5, 8)** Preservation and conservation of Murujuga rock art and cultural landscape; impacts of acidic gas emissions from LNG processing plant on rock art.
 - **(8)** Research to date on the impacts of emissions on rock art had not been conclusive.
 - **(8)** Woodside recognised the need for further research and supported the Murujuga Rock Art Monitoring Program (MRAMP), run by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation.
 - **(8)** In the absence of scientific certainty on the level of emissions which theoretically may affect rock art, Woodside was taking reasonable and practicable measures across its operations and growth projects to minimise emissions.
 - **(5)** Pluto LNG's Air Quality Management Plan had been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 was consistent with best practice in the context of air emissions control for LNG plants.
 - **(8)** A number of technologies had been assessed by Woodside and it understood that FARA had previously advocated for the use of "scrubber technology", which Woodside interpreted to refer to some form of selective catalytic reduction (SCR) technology. The installation of SCR systems would introduce new hazards, including significant importation and handling of ammonia or urea, may introduce risks associated with ammonia emissions when operating SCR, and had adverse impacts on greenhouse efficiency.
 - **(4)** Impact of Scarborough development on Traditional Custodians of Murujuga and Dampier Archipelago.
 - **(3)** Woodside had consulted extensively with the Traditional Custodians of Murujuga through their nominated representatives for all Scarborough EPs.
 - **(3)** This consultation had included the appropriate management of cultural heritage on Murujuga, and all of the matters raised were directly addressed through the EPs.
 - **(3)** Woodside believed it had addressed all of the potential impacts which Traditional Custodian representatives had themselves identified.
 - **(3)** Woodside did not provide comment on the content of consultation undertaken with Traditional Custodians or their representatives, which may include confidential or culturally sensitive material.
 - **(2)** The Scarborough gas field development would lead to the production of 1.5 billion tonnes of carbon emissions over coming decades, adding to WA's emissions and the planet's burden of climate change impacts

- (2) The climate impacts of the project, which would cause increasing severity in heatwaves, bushfires, floods, storms, etc., and socio-economic pressures that would arise from these environmental changes and would be particularly acute for indigenous communities in the Pilbara.
 - (2) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - (2) The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - (2) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - (2) An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken. This included development of a decarbonisation plan for the Pluto Hub.
 - (2) Woodside also had in place a Climate Strategy which was an integral part of the company strategy. The strategy had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers needed as they secured their energy needs and reduced their emissions.
 - (2) Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ (2) Avoiding GHG emissions through the way we design our assets.
 - ❖ (2) Reducing GHG emissions through the way we operate our assets.
 - ❖ (2) Originating and acquiring carbon credits to use as offsets for the remainder.
 - (2) Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions proved to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve its net zero aspiration.
- (4) Compromise of the Murujuga World Heritage consideration.
 - (4) Woodside had operated on Murujuga in the Pilbara region of Western Australia for more than 35 years. Woodside understood that the World Heritage nomination had been progressed with full awareness of existing and future industry on the peninsula and reflected the ongoing co-existence of heritage and industry.
 - (4) Woodside's support for the World Heritage listing of the Burrup Peninsula reflected the successful co-existence of heritage and industry.
- (6) Impacts from pollution sources on all potential receptors, specifically to the marine environment and biodiversity from catastrophic marine pollution events.
 - (6) While impacts to potential receptors were possible in the event of an unplanned diesel release from vessel collision (the worst case credible spill scenario for this PAP), Woodside considered it adopted appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of occurrence.
- (7) Robust decommissioning plans with funds set aside to ensure all infrastructure is properly decommissioned.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(7)** Woodside proactively planned for decommissioning and had developed a Scarborough Decommissioning Strategy which would be used to plan for infrastructure decommissioning at the end of field life. All decommissioning activities would be subject to future EP approvals. Decommissioning activities would comply with Section 572 of the OPGGS Act.
- **(24)** Endorse and support the requests made by Murujuga custodians [name redacted] and [name redacted] that they were relevant persons to be consulted on all potential impacts at each stage of the Scarborough Project.
 - Woodside consults extensively with First Nations communities and stakeholders for all EPs.
 - Woodside does not provide comment on the extent of consultation with specific individuals, including their status as relevant persons.
- On 20 December 2023, FARA sent an email and letter to Woodside, copying in NOPSEMA (SI Report, reference 57.1), stating the following:
 - **(1)** FARA considered itself a relevant person and outlined its interests, functions and activities affected by the project.
 - **(9)** FARA received the copy of this EP Consultation Information Sheet and a letter on 5 December 2023 setting out responses to various issues raised by FARA in the past. FARA claimed Woodside had not provided sufficient information and therefore not allowed a reasonable period of time for consultation and asked that this EP not be accepted until Regulation 25 was met.
 - In addition to objections/claims/information raised in the letter, FARA also sent an Attachment A on 20 December 2023, which included the following objections/claims/information provided:
 - **(8)** Increased intensity and duration of exposure of petroglyphs to acid gas which dissolved the outer rock patina and degraded the petroglyphs, and other emissions resulting from the processing and use of Scarborough gas on the Burrup, including in the NWS and Pluto LNG facilities and Proposed Perdaman urea plant.
 - **(10)** Increased levels of direct disturbance and displacement of petroglyphs and other heritage sites and values that would result from the utilisation of Scarborough gas on the Burrup Peninsula, in particular by the proposed Perdaman urea facility.
 - **(11)** Increased intensity and duration of other industrial impacts on the Murujuga cultural landscape, including noise, light, visual amenity, disruption of views, restrictions of access, and other social and physical impacts resulting from the processing and utilisation of Scarborough gas on the Burrup Peninsula.
 - **(12)** Increased disruption to the ongoing cultural practises connected with the Murujuga landscape.
 - **(13)** Impacts on the opportunity for visitors, researchers and custodians to use and enjoy the cultural landscape and to appreciate, and benefit from the World Heritage values.
 - **(14)** Impacts on the economic, social and other opportunities that existed for local communities and custodians in connection with the protection and maintenance of the outstanding World Heritage values of the area.
 - **(5)** Impacts on the health of visitors and the surrounding community resulting from exposure to elevated levels of pollution resulting from processing and utilisation of Scarborough gas on the Burrup Peninsula.
 - **(2)** Impacts connected with climate change, including impacts of extreme temperature, sea level rise, extreme weather events, wildfires, and other climate-related impacts that would be exacerbated by the Scarborough project.
 - **(15)** Impacts on the ability to remediate and restore the Murujuga cultural landscape in the future.
 - **(16)** A number of peer-reviewed scientific studies which demonstrated and provided evidence for impacts of industrial emissions, including LNG processing emissions on Murujuga Petroglyphs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(17)** Murujuga Rock Art Monitoring Program: Summary Monitoring Studies Report 2023 provided information to support the findings of the above mentioned studies, by showing that the pH of rock surfaces within the industrial area was 4.6 or less in October/November 2022, when it was known that the outer rock patina, essential for preservation of the petroglyphs, was dissolved when rock surface pH is 6 or less.
- **(18)** FARA was aware of several options for controlling and mitigating industrial emissions, including from LNG processing and utilisation of natural gas in urea manufacturing. These included, but were not limited to:
 - ❖ Wet scrubber technology, such as commonly used in industrial applications for the removal of NO_x and SO_x from waste gas streams;
 - ❖ Catalytic and electrostatic pollution control equipment commonly used on industrial exhaust gas streams;
 - ❖ Underground disposal and sequestration of compounds such as those removed from feed gas streams in acid gas removal units, for example as currently operational but faulty at the Gorgon LNG facility on Barrow Island.
- **(19)** Impacts on Murujuga petroglyphs:
 - ❖ Estimates of volumes of emissions to air.
 - ❖ Air dispersion modelling and analysis.
 - ❖ Disclosure of what levels of industrial air emissions and what level of impact on Murujuga petroglyphs Woodside considered to be acceptable.
 - ❖ What action would be taken by Woodside if the levels of emissions and impacts considered to be acceptable were exceeded.
 - ❖ Evidence of legal authority for any and all impacts on Murujuga petroglyphs.
 - ❖ Evidence to demonstrate that the regulatory controls on emissions from Pluto LNG were adequate.
 - ❖ Independent analysis of any and all available equipment and technology for controlling atmospheric pollution on the Burrup.
 - ❖ Evidence of when and how technologies would be evaluated in the future.
 - ❖ Any other evidence, studies, engineering reports to demonstrate emissions to air would be ALARP/acceptable.
 - ❖ Evidence that there was no scientific evidence demonstrating impacts and effects on petroglyphs as a result of emissions.
 - ❖ Woodside's response and reasons for dismissing the peer-reviewed scientific literature demonstrating ongoing impact of emissions on petroglyphs.
- **(20)** Other impacts on Murujuga cultural heritage landscape and values:
 - ❖ A description of the heritage values of the Burrup Peninsula that may be affected by the activities.
 - ❖ Independent studies and analysis of the potential impact of industrial operations connected with the processing/use of Scarborough gas on the Burrup Peninsula on the heritage values.
 - ❖ Independent assessment of impact of industrial operations connected with the processing/utilisation of Scarborough gas i.e. on economic, social and cultural benefits from World Heritage Listing.
 - ❖ Range and nature of mitigation options considered.
 - ❖ Levels of industrial air emissions and what level of impact on Murujuga heritage values Woodside considered to be acceptable (repeat question).
 - ❖ What action would be taken if levels of impacts were exceeded (repeat question).
 - ❖ Decommissioning and rehabilitation of sites used for processing and utilisation of Scarborough gas.
- **(5)** Health and social impacts to communities and visitors:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ Health impact studies and exposure studies to identify health impacts from industrial operations.
- ❖ Social impact studies, including access by local custodians for cultural practice.
- ❖ Baseline social and health data for surrounding communities.
- ❖ Disclosure of what levels of social and health impacts Woodside considered to be acceptable.
- ❖ What action would be taken if these were exceeded.
- **(21)** Impacts and effects related to climate change and GHG emissions:
 - ❖ Sensitive environmental receptors that would be impacted by climate change inc. MNES, World Heritage Values etc.
 - ❖ Effects of Scarborough Project on these receptors (emissions from the project and from international energy scenario that the Scarborough Project is compatible with)
 - ❖ Modelling on the following parameters and effect in the landscape – temperature, extreme weather events, fire patterns etc.
 - ❖ Assessment of mitigation options for impacts at a landscape level.
 - ❖ Evidence of consultation with local Pilbara communities affected by climate change.
 - ❖ Evidence of Woodsides analysis of impacts of the Scarborough Project on local Pilbara communities that were affected by climate change.
 - ❖ Assessment of impact on local Pilbara communities including social, economic, and other costs and impacts affected by climate change.
 - ❖ Mitigation options for impacts to local Pilbara communities.
- **(9)** Requests by FARA for other documents and information included:
 - ❖ All studies, information and other material relied upon in assessing the impact of chemical emissions on the surface of rock art, mitigation strategies / options to reduce emissions etc.
 - ❖ All studies, information and other material relied upon in assessing GHG emissions and climate impacts.
 - ❖ A draft copy of this EP.

Ongoing engagement:

- On 12 January 2024, Woodside responded to FARA (SI Report, reference 57.2), as follows:
 - **(9)** Woodside provided information and a Consultation Information Sheet, including a link to NOPSEMA's *Consultation on offshore petroleum environment plans: Information for the community* which encourages relevant persons to engage with titleholders as early as possible, to FARA on 9 and 30 August 2023.
 - **(9)** As well as directly consulting FARA, Woodside advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers, and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - **(9)** In the absence of a response, Woodside proactively addressed previously raised issues (see 5 December 2023 summary).
 - **(9)** Woodside had extended the consultation period from four weeks to 4.5 months.
 - **(9)** Woodside reattached the responses sent proactively on 5 December 2023.
 - **(9)** Sufficient information and a reasonable period of time had been provided.

- (9) Ongoing consultation could continue during the life of an EP.
- (9) FARA had been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- In addition, Woodside sent the following responses to FARA/s claims/objections/additional information:
 - Research to date on the impacts of emissions on rock art had not been conclusive. Woodside recognised the need for further research and supported the Murujuga Rock Art Monitoring Program (MRAMP), run by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. In the absence of scientific certainty on the level of emissions which theoretically may affect rock art, Woodside was taking reasonable and practicable measures across its operations and growth projects to minimise emissions.
 - (10) No disturbance or displacement of petroglyphs or other heritage sites was planned or anticipated in the development of the Scarborough Project. The processing of Scarborough gas would occur within the footprint of existing Woodside LNG processing facilities. Woodside could not comment on the activities and impacts of other proponents such as Perdaman.
 - (11, 12, 13, 14, 15) There would be no additional impact associated with the processing of Scarborough gas, which occurred within the footprint of existing Woodside LNG processing facilities. Woodside had consulted extensively with Traditional Custodians of Murujuga to understand their functions, interests or activities, which were not anticipated to be impacted by the processing of Scarborough gas.
 - (5, 8, 16, 18, 19, 21) Pluto LNG's Air Quality Management Plan (AQMP) had been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 was consistent with best practice in the context of air emissions control for LNG plants. Modelling investigations focussed on human health and vegetation impacts as well as potential emission deposition impacts on rock art across the Burrup Peninsula. Further refinements of the modelling supporting the AQMP showed that Pluto Train 2 air emissions and impacts remain within the existing MS 757 approval. The modelling shows there is minimal difference between existing NO₂ deposition rates and the modelled future state with Pluto Train 2 in operation, both of which were within the Pluto Public Environment Review deposition monitoring projections.
 - (17) The Summary Monitoring Studies Report explicitly cautioned against drawing these sorts of conclusions, noting that data collected in the first year of observation does not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time. The document was a summary of the more detailed Murujuga Rock Art Monitoring Program: Monitoring Studies Report 2023, which reported on the first year of monitoring studies completed from March 2022 to March 2023.
 - (18) A number of technologies had been assessed by Woodside for emissions control at the Pluto LNG Plant. Pluto LNG's Air Quality Management Plan had been reviewed and approved by the Western Australian Environment Protection Authority (EPA) as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 is consistent with best practice in the context of air emissions control for LNG plants. Also see (10).
 - (19) Woodside had undertaken work to estimate the direct and indirect emissions from the Scarborough Project that may impact the Murujuga Petroglyphs. There were no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the Floating Production Unit (FPU). Gas would be processed and exported onshore. Pluto LNG's Air Quality Management Plan had been reviewed and approved by the EPA as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. Also see (10).
 - (19) Woodside would implement relevant feasible recommendations of the Murujuga Rock Art Monitoring Program (MRAMP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(19)** Woodside would assess and implement Design Out and Operate Out opportunities to reduce emissions on the Scarborough FPU and emissions related to onshore processing of Scarborough gas.
 - **(20)** The EP would include a full description of cultural features and heritage values that occurred within the Environment that May be Affected (EMBA), as described in the Consultation Information Sheet. This included consideration of cultural features and heritage values identified during consultation with relevant persons. Cultural heritage on the Burrup Peninsula with respect to Pluto Train 2 were managed under existing Pluto LNG Plant approvals.
 - **(7)** Woodside proactively planned for decommissioning and had developed a Scarborough Decommissioning Strategy which would be used to plan for infrastructure decommissioning at the end of field life. All decommissioning activities would be subject to future EP approvals. Decommissioning activities would comply with Section 572 of the OPGGS Act.
 - **(5, 8, 18, 19)** Woodside monitored air quality around the Pluto LNG Plant as per the AQMP which was publicly available on the Woodside website. The AQMP identified no substance exceedances of National Environment Protection Measures (NEPM) standards in the most recent reporting period in 2022. Also see (10).
 - **(20, 21)** The EP would provide a full description of the existing environment that may occur within the EMBA. This included a description of Matters of National Environmental Significance (MNES) and World Heritage Values which occurred within the EMBA and whether these would be affected.
 - **(2, 21)** Woodside assessed emissions against a range of scenarios including the IEA NZE. Assessment of these could be found in Woodside's 2022 Climate Report which was publicly available on Woodside's website. Selected GHG emissions in Woodside's Climate Report are assured by GHD.
 - **(1)** Woodside consults relevant persons in the course of preparing an EP in accordance with regulation 11A (now Regulation 25) under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*.
 - **(9)** The Consultation Information Sheet provided to FARA on 9 August 2023 provided a summary of the PAP, the receiving environment, a summary of impacts and risks associated with the PAP and proposed mitigation and management measures.
 - **(9)** Woodside does not provide drafts of an EP while in development due to the potential for content to change. Restricting access to publicly available versions enables stakeholders to access and comment on the same information and removes potential for any confusion. The EP would be made publicly available on NOPSEMA's website once it has been submitted and was under assessment.
- On 1 February 2024, FARA sent an email and letter to Woodside, copying in NOPSEMA and [names redacted] (SI Report, reference 57.3). In the email, FARA also included the following attachments:
 - EPA response to the Appeals Convenor in relation to public appeals received against EPA Report 1727 North West Shelf Project Extension Proposal – Woodside Energy Ltd Supplementary Appeal by [name redacted] against the EPA response.
 - *The impact of industrial pollution on the rock art of Murujuga, Western Australia*. Benjamin W. Smith, John L. Black, Stéphane Hoërlé, Marie A. Ferland, Simon M. Diffey, Jolam T. Neumann and Thorsten Geisler
 - *Surface chemistry of Burrup Rock art at the Yara monitoring sites*, October 2020, Report for Yara Pilbara Nitrates by CBG Solutions. Prepared by Dr Ian D MacLeod, Heritage Conservation Solutions. Draft report. Version 1.6. 18 December 2020
 - FARA stated the following in their letter:
 - **(9)** Woodside had not provided sufficient information and requests for detailed information, had ignored a request for a draft copy of this EP and the Fox Report, and that it make this report public.
 - **(9, 16)** Questioned the quality of information used for responses stating:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ Woodside had ignored advice of the WA EPA to Minister for the Environment that controls on Pluto LNG facility emissions were inadequate in relation to GHG and rock protection.
 - ❖ Woodside had ignored 'relevant test' under the Regulations.
 - ❖ Comparisons with international best practise were irrelevant because of the uniqueness of the situation on the Burrup.
 - ❖ Woodside had a lack of understanding around relevant scientific information (some provided by FARA).
 - **(8)** FARA supported research by MRAMP but questioned if it was influenced by the fact it was funded by industry located on Murujuga and the results would not be available until 2025-2026, after plans for Scarborough were finalised.
 - **(18)** For preservation of the world unique rock art on Murujuga, Woodside must either adopt the SCR technology at all nitrogen dioxide outlets or replace gas with renewable energy-generated electricity for all heat sources used within its operations. Woodside should stop all gas flaring and recycle excess gas back through the LNG process.
 - **(10)** Woodsides claimed it could not comment on Perdaman's activities, but as they were directly dependent on Woodside's supply of gas, sealed with an official contract, FARA believed Woodside held some responsibility for their actions.
 - **(22)** Requested specific reference to the EPA's approval statement that Woodside's AQMP met the requirement for 'best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant'.
 - ❖ The EPA had subsequently recommended in public advice that Ministerial Statement 757 and amendment MS 850 should be reviewed, as current controls on GHG emissions and measures for the protection of cultural heritage are inadequate. These recommendations had not been addressed by the WA Minister for the Environment and ignored in Woodside's response.
 - **(3)** Besides the Murujuga Aboriginal Corporation, had Woodside consulted with any other Custodians concerned with the desecration of their rock art heritage such as [names redacted], [name redacted], [name redacted], [name redacted] and several others FARA could name.
 - **(23)** Had Woodside consulted with any independent archaeologists, anthropologists about the outstanding significance of the ancient art gallery which would be eventually destroyed by Woodside's industrial development.
 - **(4)** Woodside should provide evidence as previously requested that the proposed developments and their impacts would not compromise or otherwise affect the proposed Murujuga for World Heritage listing.
- On 7 February 2024, Woodside responded to FARA thanking them for their correspondence and advising Woodside was working on a response (SI Report, reference 57.4).
 - On 22 February 2024, Woodside sent an email and letter to FARA responding to the 1 February 2024 letter (SI Report, reference 57.5), as follows:
 - **(9)** Woodside confirmed that it provided consultation information and a Consultation Information Sheet on this EP to FARA on 9 August 2023 and 30 August 2023. In the absence of a response to Woodside's correspondence and requests for feedback on the EP, Woodside proactively reviewed, considered and addressed previous feedback provided by FARA on the Scarborough Project and related EPs, and assessed that feedback in the context of the EP.
 - **(9)** Woodside provided this to FARA on 5 December 2023 and advised that the consultation period, which had been extended, would close on 20 December 2023. Woodside did not receive any response from FARA until 20 December 2023, the day consultation closed, in which FARA acknowledged it received both the Consultation Information Sheet and the letter on 5 December 2023. FARA's 20 December 2023 letter included a list of claims, objections and additional information which Woodside responded to on 12 January 2024.

- (9) FARA responded to this letter on 1 February 2024, copying in NOPSEMA, [name redacted] (Climate Safe Consultant), [name redacted] and [name redacted], and attaching three documents in the form of reports and papers. Woodside acknowledged receipt of the reports and papers provided by FARA, and confirmed it was already aware of these reports and papers and had considered them in its assessments for the EP.
- (9) FARA sought information as to who Woodside consulted during preparation of the EP and Woodside confirmed that, as well as directly contacting persons and organisations including FARA, Woodside advertised the EP in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had subject matter experts and consultation information available at a number of community events held in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
- (3) In relation to FARA's enquiry around consultation regarding cultural features and heritage claims, Woodside confirmed it had consulted extensively with First Nations relevant persons. Woodside also noted that under the United Nations Declaration on the Rights of Indigenous Persons that cultural heritage and other communal rights of Indigenous people must be managed through consultation with representative institutions. Direct consultation with individual First Nations persons outside of this process had the potential to undermine the cultural authority of recognised elders and democratically elected representatives. This process of understanding communally held beliefs had recently been confirmed by the Federal Court in the Munkara v Santos matter.
- (23) Woodside noted that FARA provided references to various articles and academics who FARA copied to the correspondence. Woodside confirmed that it engaged with independent experts in the assessment of its projects where appropriate, including to understand the cultural significance of Murujuga. However, Woodside considered Traditional Custodians to be the primary authority on the significance of the Murujuga Cultural Landscape.
- (9) Woodside confirmed that it engaged in ongoing consultation with stakeholders throughout the life of an EP and that feedback and comments received continued to be assessed and responded to, as appropriate, through the life of an EP.
- (8) Many comments in the FARA letter related to alleged impacts on rock art and approvals that had been granted in relation to the project:
 - Woodside confirmed that, in its capacity as operator of the Pluto LNG Facility, it developed an Assessment of Best Practice for Minimising Emission to Air from Major Plant – Pluto Train 2 (Best Practice Report). The Department of Water Environmental Regulation commissioned an independent peer review of the Best Practice Report which concluded the Best Practice Report was comprehensive and achieved the objectives to demonstrate that adopted pollution control technology was consistent with the current best practice for air emissions control for LNG plants, adopting field proven technology in the Australian regional context. The Western Australian Minister for Environment approved the document in January 2020.
 - Similarly, the Pluto LNG Air Quality Management Plan (AQMP) had been updated to incorporate Pluto Train 2 which would process Scarborough gas. The AQMP was approved by the Minister for Environment in April 2020, upon receiving advice from the EPA.
 - The assessment of potential impacts to rock art and cultural heritage values from air emissions (and management of them to ALARP and an acceptable level) would be set out in the Atmospheric Emissions section of the EP.
 - As to the queries relating to Perdaman, Woodside was not in a position to comment authoritatively on Perdaman's activities.
 - Additionally, together with the Murujuga Aboriginal Corporation (MAC), the Western Australian Department of Water and Environmental Regulation (DWER), Yara and Rio Tinto, Woodside was supporting the five-year, A\$7 million State Monitoring Program.
 - Woodside, in its capacity as operator of the Pluto LNG Facility and separately as operator of the North West Shelf Karratha Gas Plant, had committed to manage potential impacts to Aboriginal rock art on the Burrup Peninsula in accordance with the Murujuga Rock Art Strategy.

- (9) Woodside noted FARA's requests for internal documents and assessments and confirmed it complied with regulation 25 (formerly regulation 11A) of the Environment Regulations in relation to the consultation process for its EPs.
 - FARA had been provided a reasonable period, reasonable opportunity for consultation and sufficient information to allow FARA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities and to provide its claims or objections.
 - The information provided by Woodside included:
 - ❖ a Consultation Information Sheet, which set out a summary of the activity, the receiving environment, impacts and risks associated with the proposed activity and proposed mitigation and management measures,
 - ❖ Woodside's 5 December 2023 responses to claims or objections from FARA,
 - ❖ Woodside's 12 January 2024 responses to FARA's claims or objections in its 20 December 2023 letter.
 - ❖ Woodside had also referred FARA to the publicly available Scarborough Project Offshore Project Proposal for further detailed information and information relating to topics of interest to FARA, including GHG emissions estimates.
- Woodside advised consultation in the preparation of the EP was closed however Woodside was available to meet with FARA to discuss the EP or to receive and consider further claims or objections from FARA.
- On 7 March 2024, Woodside sent FARA an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 57.6). The email:
 - Included links to the CTAP and the ASX Announcement.
 - Re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Stated Woodside was available to meet with FARA to discuss this EP should they be interested.
- (9) On 29 March 2024, Woodside received a response from FARA to the Pluto Facility Operations EP consultation email (sent 27 February 2024) stating it had not been adequately consulted on this EP and that it expects the feedback in all its letters to be included in the public section of the EP to allow for transparency (SI Report, reference 57.7).
- On 1 May 2024, Woodside received an email from FARA regarding a State EP which mentioned this EP and had three papers attached which had already been provided to Woodside by FARA in the past. One paper, although entitled 18.12.2020 MacLeod report for Yara on Surface Chemistry of Burrup Rock Art, was in fact a copy of the draft FARA letter to Woodside (SI Report, reference 57.8).
 - On 10 May 2024, NOPSEMA resent these papers to Woodside.
 - On 22 May 2024, Woodside responded to FARA acknowledging receipt of the 1 May 2024 email and stating it would respond shortly (SI Report, reference 57.10).
- On 14 May 2024, Woodside sent an email to thank FARA for consulting on the Pluto Facility Operations EP and provided response to its claims, objections and additional information request (SI Report, reference 57.9).
 - Noted the assumption that reference to this EP was a typo.
- On 24 May 2024, Woodside received an email, letter and paper from FARA (cced to NOSPEMA), in relation to this EP and the Pluto Facility Operations EP (SI Report, reference 57.11). The letter reiterated points raised in previous letters including:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (1, 2) FARA is a relevant person and has raised concerns regarding indirect impacts of these two EPs on Murujuga rock art as a result of LNG processing and gas use on the Burrup Peninsula.
- (9) Woodside has not yet provided sufficient information to FARA to make an informed assessment.
- (8, 16, 17) Attached is the April 2024 report entitled *The Effects of Acidic Pollution on the Rock Art of Murujuga* by Benjamin Smith and the Murujuga Rock Art Conservation Project which contains an analysis of the MRAMP campaign. Combined with other reports and studies it shows that atmospheric emissions are causing conditions which are harmful to rock art and increased emissions will increase harmful levels. FARA looks forward to Woodside's response.
- (9, 16, 17, 18) A lack of scientific certainty should not prevent the adoption of precautionary avoidance and mitigation measures.
- (19) FARA's position is that no impact on the Murujuga rock art from LNG processing an industrial emissions is considered acceptable and wants to know what Woodside considers acceptable.
- (9, 19) FARA reiterates its opposition to the proposed activities.
- (1, 9, 16) On 28 May 2024, Woodside emailed FARA thanking it for the new information and stating it would assess it alongside other papers in the EP (SI Report, reference 57.12). Furthermore, it stated:
 - FARA has been assessed as being a relevant person for both the Scarborough Offshore Facility and Trunkline Operations EP and the Pluto Facility Operations EP. Woodside has consulted with FARA in accordance with section 25 of the Regulations and FARA has been provided with consultation information for both EPs.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) FARA was a relevant person.</p>	<p>(1) Woodside assessment: Woodside followed the requirements of regulation 25 of the Environment Regulations and assessed FARA as not a relevant person for the purposes of consultation on prior Scarborough EPs. The assessment determined there was no potential for the functions, interests or activities of FARA to be affected by the activities to be carried out under those EPs. However, Woodside assessed FARA as a relevant person for this EP based on its functions, interests or activities. Woodside response: Woodside confirmed it had consulted FARA as a relevant person for this EP.</p>	<p>(1) Woodside assessed FARA as a relevant person in its Assessment of Relevance for this EP (Appendix F, Table 1), in accordance with regulation 25 of the Environment Regulations.</p>
<p>(2) Concerns about the broader impacts of the Scarborough Project including climate change impacts.</p>	<p>(2) Woodside assessment: Emissions related to the proposed activities will be assessed in the EP, while the impacts and risks of the broader Scarborough Project are assessed in the publicly available Scarborough OPP. Woodside response: Woodside advised that previous Scarborough EPs assessed both direct and indirect environmental impacts and risks associated with the proposed PAP, however the extraction of Scarborough</p>	<p>(2) Routine and Non-Routine Atmospheric and GHG emissions are assessed in Section 6.7.6 and 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	gas for onshore processing was not included in those EPs. Woodside confirmed that GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in this EP, and communicated details about Woodside's Climate Strategy.	
(3) Concerns regarding damage to the cultural landscape and rock art and impacts on Traditional custodians who would be directly impacted (emissions, facilities) and indirectly impacted (noise, view, dust).	(4) Woodside assessment: Woodside has consulted extensively with the Traditional Custodians of Murujuga through their representatives and addressed the potential impacts which Traditional Custodian representatives have themselves identified. Woodside response: Woodside confirmed it had consulted extensively with Traditional Custodians of Murujuga, through their representatives, and had included the appropriate management of cultural heritage on Murujuga, and all matters raised were directly addressed through the EP. Woodside noted it did not provide comment on the content of consultation undertaken with Traditional Custodians, which may include confidential or culturally sensitive material.	(4) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP. The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(4) Increased industrial emissions on the Burrup Peninsula would compromise the site's World Heritage application.	(4) Woodside assessment: Woodside understands the World Heritage nomination has been progressed with full awareness of existing and future industry. Woodside response: Woodside advised that it understood the World Heritage nomination had been progressed with full awareness of existing and future industry, and that its support for the World Heritage listing of the Burrup Peninsula reflected the co-existence of heritage and industry.	(4) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(5) FARA's members (local workers and community members) would be affected by atmospheric emissions and associate activities.	(5) Woodside assessment: Pluto LNG's AQMP identified no substance exceedances of National Environment Protect Measures (NEPM) in the most recent reporting period in 2022. Woodside response: Woodside confirmed it monitors air quality around the Pluto LNG Plant as per the publicly available AQMP, with no substance exceedances of NEPM in the most recent reporting. As part of commencing design and construction activities associated with Pluto Train 2, modelling investigations focussed on human health and vegetation impacts as well as potential emission deposition impacts on rock art across the Burrup Peninsula. Further refinements of the AQMP showed Pluto Train 2 air emissions and impacts remained within the existing MS 757 approval.	(5) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(6) Concerns regarding the marine environment and endangered species and questioned whether the Scarborough EPs had considered the impacts from all pollution sources on potential receptors.</p>	<p>(6) Woodside assessment: Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of occurrence. Woodside response: Woodside advised that while impacts to potential receptors were possible in the event of an unplanned diesel release from a vessel collision, Woodside considered it adopted appropriate controls to prevent a spill and to respond in the highly unlikely case a spill did occur.</p>	<p>(6) Impacts from credible planned and unplanned activities are described in Section 6 of the EP.</p>
<p>(7) Robust plans for decommissioning.</p>	<p>(7) Woodside assessment: Woodside proactively plans for decommissioning and activities will comply with Section 572 of the OPGGS Act. Woodside response: Woodside confirmed it had developed a Scarborough Decommissioning Strategy which would be used to plan for infrastructure decommissioning at the end of field life. All decommissioning activities will be subject to future EP approvals.</p>	<p>(7) Decommissioning planning and framework is described in Section 7.3 of the EP.</p>
<p>(8) Claims acidic emissions from Woodside's Joint Venture site at the Karratha Gas Plant had been impacting the petroglyphs and emissions from Scarborough would further increase the impact; and that scrubber technology advocated by FARA had not been adopted by Woodside.</p>	<p>(8) Woodside assessment: Woodside recognises that research to date on the impacts of emissions on rock art has not been conclusive and supports the MRAMP. In the absence of scientific certainty, Woodside is taking reasonable and practicable measures to minimise emissions. The installation of SCR technology would introduce new hazards and have adverse impacts on greenhouse efficiency. Woodside response: Woodside advised it recognised the need for further research and supported the MRAMP. Woodside also advised it was taking reasonable and practicable measures across its operations to minimise emissions, with the Pluto LNG's AQMP approved as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions. Woodside noted the installation of SCR systems would introduce new hazards.</p>	<p>(8) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(9) Woodside had not provided sufficient information and a reasonable period of time for consultation, and needed to be transparent with FARA's feedback. FARA requested further information including studies relating to the impact of chemical emissions on rock</p>	<p>(9) Woodside assessment: Woodside disputes FARA's claim that it has not been provided sufficient information or a reasonable period for consultation. Woodside complies with regulation 25 of the Environment Regulations in how it handles correspondence.</p>	<p>(9) FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>art, studies relied up in assessing GHG emissions; a draft copy of this EP.</p>	<p>Woodside response: Woodside provided consultation information, including a summary of the PAP, impacts and risks, and proposed mitigation and management strategies directly to FARA on 9 August and 30 August 2023. In the absence of a response, Woodside proactively addressed previous feedback provided by FARA on the Scarborough Project and provided this to FARA on 5 December 2023, while also advising Woodside had extended the consultation period to 20 December 2023 – a total of 4.5 months. Woodside also advised it did not provide drafts of an EP while in development due to the potential for content to change. Woodside confirmed it also advertised consultation for this EP in various public channels, and advised that Woodside engaged in ongoing consultation with stakeholders throughout the life of an EP.</p>	
<p>(10) Increased levels of direct disturbance and displacement of petroglyphs.</p>	<p>(10) Woodside assessment: No disturbance or displacement of petroglyphs or other heritage sites is planned or anticipated in the development of the Scarborough Project. Woodside response: Woodside advised FARA the processing of Scarborough gas would occur within the footprint of existing Woodside LNG processing facilities, and that Woodside could not comment on the activities and impacts of other proponents such as Perdaman.</p>	<p>(10) Not required.</p>
<p>(11) Increased intensity and duration of other industrial impacts on the Murujuga cultural landscape.</p>	<p>(11) Woodside assessment: There will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.</p>	<p>(11) Not required.</p>
<p>(12) Increased disruption to ongoing cultural practises connected with the landscape.</p>	<p>(12) Woodside assessment: The functions, interests or activities of Traditional Custodians of Murujuga are not anticipated to be impacted by the processing of Scarborough gas. Woodside response: Woodside confirmed it had consulted extensively with Traditional Custodians to understand their functions, interests or activities, which are not anticipated to be impacted by the processing of Scarborough gas.</p>	<p>(12) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.</p>
<p>(13)</p>	<p>(13)</p>	<p>(13)</p>

<p>Impacts on opportunity for visitors, researchers and custodians to use the cultural landscape.</p>	<p>Woodside assessment: In Woodside’s assessment, there will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.</p>	<p>Not required.</p>
<p>(14) Impacts on the opportunities that exist for local communities and custodians in connection with the protection and maintenance of the World Heritage Values of the area.</p>	<p>(14) Woodside assessment: In Woodside’s assessment, there will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.</p>	<p>(14) Not required.</p>
<p>(15) Impacts on the ability to remediate and restore the cultural landscape in the future.</p>	<p>(15) Woodside assessment: In Woodside’s assessment, there will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.</p>	<p>(15) Not required.</p>
<p>(16) Peer-reviewed scientific studies and other papers on impacts of industrial emissions.</p>	<p>(16) Woodside assessment: Research to date on the impacts of emissions on rock art has not been conclusive. In the absence of scientific certainty, Woodside is taking reasonable and practicable measures to minimise emissions. Woodside response: Woodside advised its publicly available Pluto LNG’s Air Quality Management Plan had been reviewed and approved by the Western Australian Government. The plan included independent peer review assessment which concluded the design of Pluto Train 2 was consistent with best practice in the context of air emissions control for LNG plants and the minimisation of GHG emissions.</p>	<p>(16) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(17) Murujuga Rock Art Monitoring Program: Summary Monitoring Studies Report 2023 findings regarding the PH of rock surfaces.</p>	<p>(17) Woodside assessment: Woodside considers that no meaningful conclusions can be drawn from this data at this time, given the Summary Monitoring Studies Report notes “data collected in the first year of observation do not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time”.</p>	<p>(17) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>

	<p>Woodside response: Woodside advised FARA that the report cautioned against drawing conclusions from the data during the first year of observation, and that it was incorrect to state that the publications supported the hypothesis that industrial emissions were impacting rock art through increased acidification.</p>	
<p>(18) Options for controlling and mitigating industrial emissions.</p>	<p>(18) Woodside assessment: A number of technologies have been assessed by Woodside for emissions control at the Pluto LNG Plant, and Pluto LNG's AQMP includes independent peer review assessment which concluded the design of Pluto Train 2 is consistent with best practice in the context of air emissions control for LNG plants. Woodside response: Woodside advised FARA it had assessed a number of technologies and that Pluto LNG's AQMP had been approved as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment.</p>	<p>(18) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP..</p>
<p>(19) No impacts on Murujuga petroglyphs are acceptable.</p>	<p>(19) Woodside assessment: Woodside considers there are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the FPU. Woodside response: Woodside advised it had undertaken work to estimate the direct and indirect emissions from the Scarborough Project that may impact the Murujuga Petroglyphs. Woodside referred to Pluto LNG's Air Quality Management Plan and advised it would implement relevant feasible recommendations of the MRAMP, and would assess and implement Design Out and Operate Out opportunities to reduce emissions.</p>	<p>(19) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(20) Other impacts on Murujuga cultural heritage landscape and values.</p>	<p>(20) Woodside assessment: Woodside considers cultural features and heritage values in its description of the existing environment in the EP. Woodside supports further research including the MRAMP. Woodside response: Woodside will include a full description of cultural features and heritage values within the EMBA in the EP.</p>	<p>(20) Cultural Features and Heritage Values are described in Section 4.9 of the EP.</p>
<p>(21) Impacts and effects related to climate change and GHG emissions, including sensitive environmental</p>	<p>(21)</p>	<p>(21) A description of the existing environment is provided in Section 4 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>receptors that would be impacted including MNES and World Heritage Values; effects of Scarborough project on these receptors; modelling; and mitigation options.</p>	<p>Woodside assessment: Woodside has included in the EP a description of MNES and World Heritage Values which occur in the EMBA and whether these will be affected.</p> <p>Woodside response: Woodside advised it would provide a description of the existing environment in the EP and that in regards to the effects of the Scarborough Project on sensitive environmental receptors, Woodside assessed emissions against a range of scenarios. Assessment of these could be found in Woodside’s publicly available 2022 Climate Report. Woodside later provided FARA a link to Woodside’s Climate Transition Action Plan (CTAP) and 2023 Progress Report.</p>	
<p>(22) Specific reference to EPA’s approval statement regarding Woodside’s AQMP.</p>	<p>(22) Woodside assessment: Woodside’s Pluto QAMP has been approved by the Minister of Environment upon receiving advice from the EPA.</p> <p>Woodside response: Woodside developed a Best Practice Report in accordance with Ministerial Statement 757, condition 11-1. A peer review was commissioned by the Department of Water Environmental Regulation and the WA Minister for Environment approved the document. Woodside’s QAMP was updated to incorporate Pluto Train 2 and received approval from the Minister of Environment in April 2020, upon receiving advice from the EPA.</p>	<p>(22) Not required.</p>
<p>(23) Independent archaeologists or anthropologists Woodside has consulted.</p>	<p>(23) Woodside assessment: Woodside engages with independent experts in the assessment of its projects where appropriate.</p> <p>Woodside response: Woodside advised that it engaged with independent experts as appropriate, however Woodside considered Traditional Custodians to be the primary authority on the significance of the Murujuga Cultural Landscape.</p>	<p>(23) Not required.</p>
<p>(24) Murujuga custodians [name redacted] and [name redacted] that they were relevant persons.</p>	<p>(24) Woodside assessment: Woodside has consulted extensively with the Traditional Custodians of Murujuga through their representatives and addressed the potential impacts which Traditional Custodian representatives have themselves identified.</p>	<p>(24) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside does not provide comment on the extent of consultation with specific individuals, including their status as relevant persons.	
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with FARA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to FARA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to FARA over a 9-month period, including the 4.5 month consultation period.

Lock The Gate Alliance (LTGA)

Historical Engagement:

2022- 2023

- From 2022 to 2023 Woodside consulted and responded to feedback from LTGA on the Scarborough D&C, SITI, Subsea and Seismic EPs. A number of issues raised by LTGA during consultation on those EPs have been addressed and raised as part of consultation on this EP and include:
 - LTGA believed its members, especially those who lived in the Pilbara and Kimberley, those who depended on groundwater, and those who lived in areas subject to flooding (especially the Kimberley), would be affected by climate change which would be increased by the project.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The development would produce carbon emissions over the next 25 years, impacting climate change and socioeconomic pressures which would directly affect LTGA and its supporters.
- The Scarborough development would lead to damage to the National Heritage values of the Burrup Peninsula.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed LTGA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 5 December 2023, in the absence of specific feedback from LTGA, Woodside sent a letter via email, (Record of Consultation, reference 1.55) which stated the following:
 - (1) LTGA self-identified for the Scarborough D&C, SITI and Seismic EPs and provided feedback to Woodside which has been addressed.
 - Woodside had provided LTGA with Consultation Information Sheets on 9 and 30 August 2023 and once again sent a link to the Information Sheet.
 - Woodside advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if LTGA had feedback and/or would like to meet.
 - The 5 December 2023 letter also reviewed past feedback from LTGA on the Scarborough D&C and SITI EPs and provided assessment and response as follows:
 - (2) LTGA and its members would be affected by climate change which would be increased by the Scarborough project. It would especially affect its members who live in the Pilbara and Kimberley, the many people who depend on groundwater, and areas that were subject to flooding, especially the Kimberley.
 - (2) The Scarborough gas field development would lead to the production of 1.6 billion tonnes of carbon emissions over the next 25 years, adding to WA's emissions and the planet's burden of climate change impacts. LTGA and its supporters stood to be directly affected by the climate impacts of the project, which would cause increasing severity in heatwaves, bushfires, floods, storms, etc., and socio-economic pressures that would arise from these environmental changes.
 - (3) The Scarborough gas field development would support further industrialisation of the Burrup Peninsula which would damage the National Heritage values of this area.
 - Woodside responded as follows:
 - (2) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - (2) The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - (2) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - (3) An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken including development of a decarbonisation plan for the Pluto Hub.
 - (2, 3) Woodside had a Climate Strategy which was an integral part of the company strategy and had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(2, 3)** Woodside’s net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - Avoiding GHG emissions through the way it designs its assets.
 - Reducing GHG emissions through the way it operates its assets.
 - Originating and acquiring carbon credits to use as offsets for the remainder.
- **(2, 3)** Avoiding and reducing emissions were Woodside’s first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions prove to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits to achieve its net zero aspiration.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) LTGA believed it was a relevant person and that its members would be affected by climate change which will be increased by the Scarborough project.</p>	<p>(1) Woodside assessment: Woodside followed the requirements of regulation 25 of the Environment Regulations and assessed LTGA as not a relevant person for the purposes of consultation for the Seismic, D&C and SITI EPs, based on its functions, interests or activities. Woodside has assessed LTGA as a relevant person for this EP based on its functions, interests or activities. Woodside response: LTGA self-identified for the Scarborough Seismic, D&C and SITI EPs and provided feedback to Woodside which had been addressed. For this EP, Woodside consulted ACF as a relevant person.</p>	<p>(1) Woodside has assessed LTGA as a relevant person in its Assessment of Relevance (see Appendix F, Table 1) in accordance with regulation 25 of the Environment Regulations as per Section 5.2 of the EP.</p>
<p>(2) LTGA commented that the development would produce carbon emissions over the next 25 years, impacting climate change and socioeconomic pressures.</p>	<p>(2) Woodside assessment: GHG emissions relevant to the PAP are presented and assessed in the EP. The EP assesses both direct and indirect impacts and risks associated with the PAP. Woodside’s Climate Strategy addresses how Woodside is planning to address climate change impacts from its activities and reduce its net equity Scope 1 and 2 GHG emissions. Woodside response: Woodside advised the GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. The EP would assess both direct and indirect impacts and risks associated with the PAP. Woodside also has in place a Climate Strategy which is an integral part of the company strategy. The strategy has two key elements: reducing Woodside’s net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside’s customers need as they secure their energy needs and reduce their emissions.</p>	<p>(2) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(3) LTGA believed the Scarborough development would lead to damage to the National Heritage values of the Burrup Peninsula</p>	<p>(3) Woodside assessment: GHG emissions relevant to the PAP are presented and assessed in the EP. The EP assesses both direct and indirect impacts and risks associated with the PAP. Woodside's Climate Strategy addresses how Woodside is planning to address climate change impacts from its activities and reduce its net equity Scope 1 and 2 GHG emissions. Woodside response: Woodside advised the GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. The EP would assess both direct and indirect impacts and risks associated with the PAP. Woodside also has in place a Climate Strategy which is an integral part of the company strategy. The strategy has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.</p>	<p>(3) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in section 6.7.7 of the EP.</p>
<p>No feedback, objections or claims received for this EP despite follow up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with LTGA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to LTGA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- For this EP, Woodside has provided the LTGA with the opportunity to provide feedback over a 4.5-month period.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Telstra		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 12 March 2020, Telstra Corporation Limited as operator and owner of the Fibre Optic Cable Assets (subsequently referred to as 'Telstra') and Woodside Energy Limited signed a agreement to support engagements regarding design of the Scarborough trunkline crossing over the Telstra Fibre Optic Cables. Since that time Woodside and Telstra have had regular project engagements on undertaking and executing the project activities. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims for this EP.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2).	No additional measures or controls are required.
Outcomes of Consultation		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Telstra for the purpose of regulation 25 is complete.		
[name redacted]		
[name redacted] self-identified but is the co-convenor, co-founder and committee member of Friends of Australian Rock Art (FARA) so Woodside considers that they have had access to all information and correspondence provided to FARA as summarised in this Table.		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 20 December 2023, [name redacted] sent an email and letter to Woodside (SI Report, reference 56.1), stating the following: <ul style="list-style-type: none"> (24) Woodside was required to consult with them as a relevant person as they had worked as a consultant anthropologist and professional Aboriginal heritage consultant for a wide range of Aboriginal organisations in Western Australia and the Northern Territory, was a Fellow of the Australian Anthropological Society and had provided evidence as an expert witness in numerous Federal Court native title cases since 2012. (25) Woodside had availed itself of the BMIEA Agreement 4.6 gag clause which legally prevented native title BMIEA signatories as well as the Murujuga Aboriginal Corporation from objecting to Woodside's destructive activities within the Burrup industrial area. (3) They were aware of strong opposition in the local community to the continuation of Woodside's activities on the Burrup. (2) Climate Analytics had estimated that the project would result in around 1.3 billion tonnes of GHG emissions over its lifetime. 		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(8)** In terms of the rock art, it was of particular concern that, as revealed in several recent refereed scientific publications, Woodside was releasing vast quantities of NO_x and SO_x emissions which had generated very high acid levels which were destroying the rock art patina.
- **(17)** Although the recent Murujuga Rock Art Monitoring Program first year interim report was at a very early stage of its research, it was still able to make very disturbing findings relevant to industrial impacts on the rock art.
- **(8, 18)** They understood Woodside had declined requests by FARA and others to install state of the art scrubber technology in its Burrup facilities.
- **(2, 3)** Impacts on Murujuga petroglyphs and cultural heritage landscape fall under the scope of indirect consequences that would result from the EP and must be assessed in accordance with the approved NOPSEMA Program under the EPBC Act, and separately, as part of the broader environment that must be considered by NOPSEMA in accordance with the Environment Regulations.
- **(14)** Requests for peer reviewed evidence of how Woodside was assessing the impacts of the project on Murujuga's Aboriginal cultural heritage.
- **(8)** Explain how Woodside planned to mitigate the impacts of this project on their area of research interest and activities.

Ongoing engagement:

- On 12 January 2024, Woodside responded to [name redacted] (SI Report, reference 56.2) as follows:
 - **(24)** Woodside recognised [name redacted] was a co-convenor, co-founder and committee member of FARA which, as referenced on the FARA website, held committee meetings monthly. Woodside provided consultation information including a Consultation Information Sheet on this EP to FARA on 9 August 2023 and 30 August 2023.
 - **(24)** As well as directly consulting FARA, Woodside advertised the EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and consultation information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - **(24)** The Consultation Information Sheet had been available to members of the public on the Woodside website since 9 August 2023. Woodside noted that [name redacted] made references in their correspondence about claims they'd found on the Woodside website and suggested that to ensure they received future information about Woodside's EPs they could subscribe to receive information.
 - **(9)** [name redacted] was informed that in the absence of a response from FARA to Woodside's correspondence and requests for feedback on this EP in August 2023, Woodside proactively reviewed, considered and addressed previous feedback provided by FARA on the Scarborough Project and related EPs, and assessed that feedback in the context of this EP.
 - Woodside provided this to FARA on 5 December 2023 and advised that the consultation period, which had been extended, would close on 20 December 2023. FARA acknowledged it received both the Consultation Information Sheet and the letter on 5 December 2023 in its correspondence on 20 December 2023.
 - Woodside included the Attachment A from the 5 December 2023 letter which had been sent to FARA and included a review of past feedback from FARA on the Scarborough D&C, SITI and Seismic EPs and provided assessment and response.
 - **(9)** Based on the Consultation Information Sheet provided to FARA on 9 August 2023, which provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program and proposed mitigation and management measures, and Woodside's substantive feedback on 5 December 2023 addressing previous feedback from FARA, as well as responses raised in FARA's 20 December 2023 letter, FARA had been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.

- (9) Woodside considered that based on [name redacted] stated and strong connection to FARA and [name redacted] stated use of the Woodside website, he had access to sufficient information to allow an informed assessment of the possible consequences of the proposed activity on his functions, interests or activities, along with reasonable time and opportunity, to consult in relation to this EP.
- (25) Woodside took the reference to BMIEA Agreement 4.6 to mean clause 4.8 of the Burrup and Maitland Industrial Estates Agreement (BMIEA) as Clause 4.6 related to financial compensation by the Western Australian government.
 - Woodside did not interpret Clause 4.8 of the BMIEA as preventing Traditional Custodians of Murujuga Aboriginal Corporation (MAC) from objecting to projects in the Burrup industrial area if they had concerns about heritage impacts.
 - Woodside understood that MAC's own interpretation of Clause 4.8 was "*The No Objections clause in the BMIEA does not prevent MAC and the contracting parties represented by MAC from objecting to the damage, destruction or any deleterious impact to cultural heritage values within a development footprint*".
 - Woodside believed the State Government similarly agreed that this clause did not prevent Traditional Owners from objecting to projects on Murujuga.
- (3) Woodside had consulted extensively with Traditional Custodians in the development of this EP.
- (2) GHG emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, would be presented and assessed in this EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. This EP would assess direct and indirect GHG emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
- (2) The publicly available Scarborough OPP presented GHG emissions estimate calculations for the total expected field life of the Scarborough Project, broken into the different emissions categories.
- (3) It was not clear what recent referred scientific publications were being referred to, however compliance data for the Pluto LNG facility was available online in the Annual Compliance Reports Pluto Annual Compliance Report – Ministerial Statement 757 as amended by Ministerial Statement 850.
- (17) The Murujuga Rock Art Monitoring Program (MRAMP): Summary Monitoring Studies Report 2023 explicitly cautioned against drawing conclusions, noting that data collected in the first year of observation does not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time."
 - Woodside recognised the need for further research and supported the MRAMP and would implement relevant practicable measures resulting from the programme.
- (18) A number of technologies had been assessed by Woodside for emissions control at the Pluto LNG Plant.
 - Pluto LNG's Air Quality Management Plan (AQMP) had been reviewed and approved by the Western Australian Environment Protection Authority (EPA) as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 was consistent with best practice in the context of air emissions control for LNG plants.
 - The AQMP was publicly available on the Woodside website.
- (2) The Scarborough Offshore Project Proposal (OPP – publicly available on the NOPSEMA website) was assessed and subsequently accepted by NOPSEMA, in accordance with regulation 5D of by the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*.
- (8) Impact and risk assessments in this EP would provide controls that would be in place to manage risks to ALARP and acceptable levels. Mitigation measures relating to impacts onshore at Pluto Train 2 were managed according to the relevant environmental approvals including the Pluto LNG's AQMP.

Ongoing engagement (Dr [name redacted]):

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 7 March 2024, Woodside sent [name redacted] and FARA an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 56.3 and 57.6).
 - The email included links to the CTAP and the ASX Announcement.
 - (9) It also re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - (9) Finally it stated Woodside was available to meet with FARA and [name redacted] to discuss this EP should they be interested.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) FARA was a relevant person.</p>	<p>(1) Woodside assessment: Woodside followed the requirements of regulation 25 of the Environment Regulations and assessed FARA as not a relevant person for the purposes of consultation on prior Scarborough EPs. The assessment determined there was no potential for the functions, interests or activities of FARA to be affected by the activities to be carried out under those EPs. However, Woodside assessed FARA as a relevant person for this EP based on its functions, interests or activities. Woodside response: Woodside confirmed it had consulted FARA as a relevant person for this EP.</p>	<p>(1) Woodside assessed FARA as a relevant person in its Assessment of Relevance for this EP (Appendix F, Table 1), in accordance with regulation 25 of the Environment Regulations.</p>
<p>(2) Concerns about the broader impacts of the Scarborough Project including climate change impacts.</p>	<p>(2) Woodside assessment: The publicly available Scarborough OPP provides sufficient information regarding potential impacts of the broader Scarborough Project. Direct and indirect environmental impacts and risks associated with the PAP will be assessed in the EP. Woodside response: Woodside advised that previous Scarborough EPs assessed both direct and indirect environmental impacts and risks associated with the proposed PAP, however the extraction of Scarborough gas for onshore processing was not included in those EPs. Woodside confirmed that GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in this EP, and that Woodside has in place a climate strategy which has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.</p>	<p>(2) Routine and Non-Routine Atmospheric and GHG emissions are assessed in Section 6.7.6 and 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside noted that in regard to the broader Scarborough Project, the OPP was assessed and subsequently accepted by NOPSEMA.	
(3) Concerns regarding damage to the cultural landscape and rock art and impacts on Traditional custodians who would be directly impacted (emissions, facilities) and indirectly impacted (noise, view, dust).	(4) Woodside assessment: Woodside has consulted extensively with the Traditional Custodians of Murujuga through their representatives and addressed the potential impacts which Traditional Custodian representatives have themselves identified. Woodside response: Woodside confirmed it had consulted extensively with Traditional Custodians of Murujuga, through their representatives, and had included the appropriate management of cultural heritage on Murujuga, and all matters raised were directly addressed through the EP. Woodside noted it did not provide comment on the content of consultation undertaken with Traditional Custodians, which may include confidential or culturally sensitive material.	(4) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP. The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(4) Increased industrial emissions on the Burrup Peninsula would compromise the site's World Heritage application.	(4) Woodside assessment: Woodside understands the World Heritage nomination has been progressed with full awareness of existing and future industry. Woodside response: Woodside advised that it understood the World Heritage nomination had been progressed with full awareness of existing and future industry, and that its support for the World Heritage listing of the Burrup Peninsula reflected the co-existence of heritage and industry.	(4) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(5) FARA's members (local workers and community members) would be affected by atmospheric emissions and associate activities.	(5) Woodside assessment: Pluto LNG's AQMP identified no substance exceedances of National Environment Protect Measures (NEPM) in the most recent reporting period in 2022. Woodside response: Woodside confirmed it monitors air quality around the Pluto LNG Plant as per the publicly available AQMP, with no substance exceedances of NEPM in the most recent reporting. As part of commencing design and construction activities associated with Pluto Train 2, modelling investigations focussed on human health and vegetation impacts as well as potential emission deposition impacts on rock art across the Burrup Peninsula. Further refinements of the AQMP showed Pluto Train 2 air emissions and impacts remained within the existing MS 757 approval.	(5) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(6) Concerns regarding the marine environment and endangered species and questioned whether the Scarborough EPs had considered the impacts from all pollution sources on potential receptors.</p>	<p>(6) Woodside assessment: Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of occurrence. Woodside response: Woodside advised that while impacts to potential receptors were possible in the event of an unplanned diesel release from a vessel collision, Woodside considered it adopted appropriate controls to prevent a spill and to respond in the highly unlikely case a spill did occur.</p>	<p>(6) Existing controls considered sufficient as described in Section 6 of the EP.</p>
<p>(7) Robust plans for decommissioning.</p>	<p>(7) Woodside assessment: Woodside proactively plans for decommissioning and activities will comply with Section 572 of the OPGGS Act. Woodside response: Woodside confirmed it had developed a Scarborough Decommissioning Strategy which would be used to plan for infrastructure decommissioning at the end of field life. All decommissioning activities will be subject to future EP approvals.</p>	<p>(7) Decommissioning planning and framework is described in Section 7.3 of the EP.</p>
<p>(8) Claims acidic emissions from Woodside's Joint Venture site at the Karratha Gas Plant had been impacting the petroglyphs and emissions from Scarborough would further increase the impact; and that scrubber technology advocated by FARA had not been adopted by Woodside.</p>	<p>(8) Woodside assessment: Woodside supports further research on the impacts of emissions on rock art and is taking reasonable and practicable measures to minimise emissions. The installation of SCR technology would introduce new hazards and have adverse impacts on greenhouse efficiency. Woodside response: Woodside advised it recognised the need for further research and supported the MRAMP. Woodside also advised it was taking reasonable and practicable measures across its operations to minimise emissions, with the Pluto LNG's AQMP approved as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions. Woodside noted the installation of SCR systems would introduce new hazards.</p>	<p>(8) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(9) Woodside had not provided sufficient information and a reasonable period of time for consultation. And needed to be transparent with FARA's feedback. FARA requested further information including studies relating to the impact of chemical emissions on rock art, studies relied up in assessing GHG emissions; a draft copy of this EP.</p>	<p>(9) Woodside assessment: Woodside disputes FARA's claim that it has not been provided sufficient information or a reasonable period for consultation. Woodside complies with regulation 25 of the Environment Regulations in how it handles correspondence. Woodside response: Woodside provided consultation information, including a summary of the PAP, impacts and risks, and proposed mitigation and management strategies directly to FARA on 9 August and 30 August 2023.</p>	<p>(9) FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	In the absence of a response, Woodside proactively addressed previous feedback provided by FARA on the Scarborough Project and provided this to FARA on 5 December 2023, while also advising Woodside had extended the consultation period to 20 December 2023 – a total of 4.5 months. Woodside also advised it did not provide drafts of an EP while in development due to the potential for content to change. Woodside confirmed it also advertised consultation for this EP in various public channels, and advised that Woodside engaged in ongoing consultation with stakeholders throughout the life of an EP.	
(10) Increased levels of direct disturbance and displacement of petroglyphs.	(10) Woodside assessment: No disturbance or displacement of petroglyphs or other heritage sites is planned or anticipated in the development of the Scarborough Project. Woodside response: Woodside advised FARA the processing of Scarborough gas would occur within the footprint of existing Woodside LNG processing facilities, and that Woodside could not comment on the activities and impacts of other proponents such as Perdaman.	(10) Not required.
(11) Increased intensity and duration of other industrial impacts on the Murujuga cultural landscape.	(11) Woodside assessment: There will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.	(11) Not required.
(12) Increased disruption to ongoing cultural practises connected with the landscape.	(12) Woodside assessment: The functions, interests or activities of Traditional Custodians of Murujuga are not anticipated to be impacted by the processing of Scarborough gas. Woodside response: Woodside confirmed it had consulted extensively with Traditional Custodians to understand their functions, interests or activities, which are not anticipated to be impacted by the processing of Scarborough gas.	(12) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.
(13) Impacts on opportunity for visitors, researchers and custodians to use the cultural landscape.	(13) Woodside assessment: There will be no additional impact associated with the processing of Scarborough gas.	(13) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.	
(14) Impacts on the opportunities that exist for local communities and custodians in connection with the protection and maintenance of the World Heritage Values of the area.	(14) Woodside assessment: There will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.	(14) Not required.
(15) Impacts on the ability to remediate and restore the cultural landscape in the future.	(15) Woodside assessment: There will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities.	(15) Not required.
(16) Peer-reviewed scientific studies on impacts of industrial emissions.	(16) Woodside assessment: Research to date on the impacts of emissions on rock art has not been conclusive. In the absence of scientific certainty, Woodside is taking reasonable and practicable measures to minimise emissions. Woodside response: Woodside advised its publicly available Pluto LNG's Air Quality Management Plan had been reviewed and approved by the Western Australian Government. The plan included independent peer review assessment which concluded the design of Pluto Train 2 was consistent with best practice in the context of air emissions control for LNG plants and the minimisation of GHG emissions.	(16) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(17) Murujuga Rock Art Monitoring Program: Summary Monitoring Studies Report 2023 findings regarding the PH of rock surfaces.	(17) Woodside assessment: Woodside considers that no meaningful conclusions can be drawn from this data at this time, given the Summary Monitoring Studies Report notes "data collected in the first year of observation do not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time". Woodside response: Woodside advised FARA that the report cautioned against drawing conclusions from the data during the first year of observation, and that it was incorrect to state that the publications supported	(17) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	the hypothesis that industrial emissions were impacting rock art through increased acidification.	
(18) Options for controlling and mitigating industrial emissions.	(18) Woodside assessment: A number of technologies have been assessed by Woodside for emissions control at the Pluto LNG Plant, and Pluto LNG's AQMP includes independent peer review assessment which concluded the design of Pluto Train 2 is consistent with best practice in the context of air emissions control for LNG plants. Woodside response: Woodside advised FARA it had assessed a number of technologies and that Pluto LNG's AQMP had been approved as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment.	(18) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(19) Impacts on Murujuga petroglyphs.	(19) Woodside assessment: There are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the FPU. Woodside response: Woodside advised it had undertaken work to estimate the direct and indirect emissions from the Scarborough Project that may impact the Murujuga Petroglyphs. Woodside referred to Pluto LNG's Air Quality Management Plan and advised it would implement relevant feasible recommendations of the MRAMP, and would assess and implement Design Out and Operate Out opportunities to reduce emissions.	(19) Routine and Non-Routine Atmospheric and GHG Emissions are assessed in Section 6.7.6 of the EP.
(20) Other impacts on Murujuga cultural heritage landscape and values.	(20) Woodside assessment: Woodside considers cultural features and heritage values in its description of the existing environment in the EP. Research to date on the impact of emissions on rock art has not been conclusive and Woodside supports further research including the MRAMP. Woodside response: Woodside will include a full description of cultural features and heritage values within the EMBA in the EP.	(20) Cultural Features and Heritage Values are described in Section 4.9 of the EP.
(21) Impacts and effects related to climate change and GHG emissions, including sensitive environmental	(21)	(21) A description of the existing environment is provided in Section 4 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>receptors that would be impacted including MNES and World Heritage Values; effects of Scarborough project on these receptors; modelling; and mitigation options.</p>	<p>Woodside assessment: Woodside has included in the EP a description of MNES and World Heritage Values which occur in the EMBA and whether these will be affected.</p> <p>Woodside response: Woodside advised it would provide a description of the existing environment in the EP and that in regards to the effects of the Scarborough Project on sensitive environmental receptors, Woodside assessed emissions against a range of scenarios. Assessment of these could be found in Woodside’s publicly available 2022 Climate Report. Woodside later provided FARA a link to Woodside’s Climate Transition Action Plan (CTAP) and 2023 Progress Report.</p>	
<p>(22) Specific reference to EPA’s approval statement regarding Woodside’s AQMP.</p>	<p>(22) Woodside assessment: Woodside’s Pluto QAMP has been approved by the Minister of Environment upon receiving advice from the EPA.</p> <p>Woodside response: Woodside developed a Best Practice Report in accordance with Ministerial Statement 757, condition 11-1. A peer review was commissioned by the Department of Water Environmental Regulation and the WA Minister for Environment approved the document. Woodside’s QAMP was updated to incorporate Pluto Train 2 and received approval from the Minister of Environment in April 2020, upon receiving advice from the EPA.</p>	<p>(22) Not required.</p>
<p>(23) Independent archaeologists or anthropologists Woodside has consulted.</p>	<p>(23) Woodside assessment: Woodside engages with independent experts in the assessment of its projects where appropriate.</p> <p>Woodside response: Woodside advised that it engaged with independent experts as appropriate, however Woodside considered Traditional Custodians to be the primary authority on the significance of the Murujuga Cultural Landscape.</p>	<p>(23) Not required.</p>
<p>(24) [name redacted] was a relevant person.</p>	<p>(24) Woodside assessment: As co-convenor, co-founder and committee member of FARA, [name redacted] had access to the consultation information regarding this EP which was initially supplied to FARA on 9 August 2023 and available on the Woodside website from the same date.</p>	<p>(24) Woodside’s assessment of relevant persons is described in Appendix F, Table 1 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: Woodside noted that [name redacted] was co-convenor, co-founder and committee member of FARA, which had been provided consultation information in August 2023. In addition to directly consulting FARA, Woodside advertised in newspapers, on social media, and had information available at community events and at tailored roadshows in the Pilbara and Gascoyne regions. Woodside also noted that [name redacted] was familiar with Woodside’s website and that consultation information for this EP had been available on the website since August 2023.</p>	
<p>(25) BMIEA Agreement 4.6 preventing objection to Woodside activities.</p>	<p>(25) Woodside assessment: Woodside takes the reference to mean clause 4.8 of the Burrup and Maitland Industrial Estates Agreement (BMIEA) and does not interpret clause 4.8 to prevent Traditional Custodians of MAC from objecting to projects in the Burrup industrial area if they have concerns about heritage impacts. Woodside response: Woodside advised it had taken the reference to mean clause 4.8 of the BMIEA and did not interpret the clause to prevent Traditional Custodians from objecting to projects if they had concerns about heritage impacts. Woodside advised it understood both MAC and the State’s interpretation was that the clause did not prevent Traditional Owners from objecting to projects on Murujuga.</p>	<p>(25) Not required.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Dr [name redacted], as a representative of FARA, for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to FARA on 9 August 2023 and Dr [name redacted], as a co-founder of FARA, on 12 January 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has sent a follow up email to FARA seeking feedback on the proposed activities.
- For this EP, Woodside has addressed and responded to FARA and [name redacted] over a 7.5-month period, including the 4.5 month consultation period.

Ms [name redacted], Ms [name redacted] and Save Our Songlines (SOS)

Summary

Since at least 2022, Woodside has provided information to [name redacted], [name redacted] and SOS on the Scarborough Project to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities in their Traditional Owner and eNGO capacities. While activities related to this EP have been discussed during consultation since that time (summarised in the table of feedback referred to in the bulleted list below), information specific to this EP has been provided to [name redacted], [name redacted] and SOS as set out below. This information has been sufficient to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities.

- The Consultation Information Sheet publicly available on the Woodside website since August 2023.
- PowerPoint slides about this EP were available for consultation at meetings on 25 July 2023, 12 September 2023, 4 and 5 October 2023 and the meetings cancelled by [name redacted], [name redacted] and SOS of 20 December 2023 and 16 February 2024.
- The Consultation Information Sheet and the Summary Information Sheets were provided by email on 3 September 2023, 22 November 2023, 27 November 2023, 13 December 2023, 19 December 2023, 21 December 2023, 13 February 2024.
- The Consultation Information Sheet for this EP was provided to [name redacted], [name redacted] and SOS in person at the meeting of 12 September 2023.
- A table of feedback previously provided by [name redacted], [name redacted] and SOS on other SCA EPs and Woodside's assessment of relevance to this EP and proposed controls for comment and feedback by [name redacted], [name redacted] and SOS provided by email 27 November 2023, 13 December 2023, 19 December 2023, 21 December 2023, 13 February 2024.
- A video describing the floating production unit and the Scarborough Project emailed on 19 December 2023, 13 February 2024.

The method of consultation in relation to the broader Scarborough project including this EP has been informed by [name redacted], [name redacted] and SOS's preferences and has included consultation meetings held on-Country but also online when requested by [name redacted], [name redacted] and SOS.

Woodside has been available to meet specifically in relation to this EP since 3 September 2023 and followed up on 22 November 2023, 27 November 2023, 13 December 2023, 19 December 2023 seeking a time to meet with a meeting confirmed for 20 December 2023 which was cancelled by EDO and [name redacted] (which this time EDO confirmed it was now only representing [name redacted]).

Aside from the cancelled meeting, [name redacted] and EDO had not previously made themselves available to meet. [name redacted] and SOS have been unresponsive. Woodside repeatedly advised EDO, [name redacted], [name redacted] and SOS that consultation in the preparation of this EP would close on 20 December 2023. Regardless of consultation closing, Woodside communicated availability to meet with [name redacted], [name redacted] and SOS to discuss this EP or to receive and consider further claims or objections from [name redacted], [name redacted] and SOS. Woodside then agreed to meet with [name redacted], [name redacted] and EDO on 16 February 2024, but this meeting was also cancelled by EDO, [name redacted] and [name redacted] (Woodside had been advised [name redacted] was attending the meeting despite EDO not representing her).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

On a number of occasions, Woodside has confirmed to [name redacted], [name redacted] and SOS the purpose of consultation and has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans", Guideline "Guideline: Consultation in the course of preparing an environment plan" and Policy "Draft policy for managing gender-restricted information PL2098" [Ref for example: email 7 June 2023].

In meetings and correspondence:

- [name redacted], [name redacted] and SOS have confirmed that, since around 2022, they have received and read the Scarborough Project EP materials [most recently: 4 October 2023].
- [name redacted], [name redacted] and SOS have raised specific issues and displayed an understanding of the activities under this EP as well as the broader Scarborough Project. [Ref Woodside 29 March 2023 email; 27 July 2023 email; meetings on 25 July 2023; 12 September 2023; 4 October 2023].
- Since around 2022, [name redacted], [name redacted] and SOS have been represented by the Environment Defenders Office (EDO), a legal team with experience in oil and gas projects and EPs, who are experienced in representing clients who, in accordance with Indigenous tradition, have cultural and spiritual values.
- [name redacted], [name redacted] and SOS originally sought to consult on all Scarborough EPs at once and confirmed they have information and 'objections' to share on all Scarborough EPs as early as September 2022. From about June 2023, this position changed, and [name redacted], [name redacted] and SOS expressly directed Woodside to consult on individual EPs. Woodside has been ready, willing and able to consult on all Scarborough EPs (including this EP) since consultation commenced and has attempted to do so [i.e. most recently 25 July 2023, 12 September 2023, 4 October 2023.] through the presentation and provision of information on this EP as well as discussion on all EPs.
- Objections, claims and topics relevant to [name redacted], [name redacted] and SOS and addressed by Woodside, were initially focused on Murujuga and included a focus on land-based impacts to Murujuga rock art, removal of Murujuga rock art, air emission impacts on Murujuga rock art, restriction to sites on the Burrup Peninsula and to plants and animals of Murujuga [Ref letter to Woodside 6 June 2022; letter to NOPSEMA 26 September 2022]. More recently, their focus has shifted to an interest in Sea Country and marine plants and animals [Ref for example Second Border Affidavit dated 7 September 2022]. As of mid-September 2023, they have identified Rosemary Island (near the Burrup Peninsula, and not near the EMBA or operations area) as being a place of particular cultural significance. Notably, the Second Border Affidavit dated 7 September 2023 stated that [name redacted], [name redacted] and SOS have information to share with Woodside and this information "needs to be shared at the appropriate place, namely on-Country". However, the Second Border Affidavit did not identify Rosemary Island as being a culturally significant location or the only location at which that information could be shared with Woodside.
- Objections, claims and topics have been unclear or inconsistent in some instances – in one meeting [name redacted] indicated her concern was not pygmy blue whales (a focus of EP noise controls due to PBW distribution and behaviour) but humpback whales [12 September 2023]. At the next meeting, Woodside was criticised for reflecting a position that humpback whales were a topic of specific interest to [name redacted], [name redacted] and SOS [4 October 2023]. Generally speaking, [name redacted] has stated that whales carry important Songlines, the whale Dreaming, and connection between land and sea [Second Border Affidavit dated 7 September 2023]. The EP contains several controls to manage potential risks and impacts to whales to ALARP and acceptable levels.
- Throughout consultation, it has been made clear to Woodside that [name redacted], [name redacted] and SOS hold a fundamental objection to the Scarborough Project and their preference is for the Scarborough Project to be stopped [Ref: 14 March 2023; 12 October 2023 meetings; SOS website].
- Throughout consultation, [name redacted], [name redacted] and SOS have continued to state that they have further information they wish to tell Woodside and that they say Woodside requires for its EPs. However, despite Woodside offering ample opportunities for consultation, including online and in person on-Country, [name redacted], [name redacted] and SOS have expressly refused to provide that information to Woodside [Ref 17 April 2023 letter and most recently 4 October 2023 meeting].
- On a number of occasions, [name redacted], [name redacted] and SOS have declined to provide the information to Woodside but have been prepared to provide the information publicly [Affidavits of [name redacted] September 2023] or offered to provide the information to others [Ref: letter to NOPSEMA 26 September 2022; letter to NOPSEMA 4 October 2023].

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has attended all meetings in listening mode to hear from [name redacted], [name redacted] and SOS and also in presentation mode, ready, willing and able to present and provide information on the activities proposed under the EP as well as on the broader Scarborough Project. In those meetings, Woodside has listened to items and topics raised by [name redacted], [name redacted] and SOS and has prepared and brought material in the form of presentations, tables, maps and video to share with [name redacted], [name redacted] and SOS. [Ref meetings on 14 March 2023; 25 July 2023; 12 September 2023; 4 October 2023 and presentations prepared for those meetings].
- During meetings, Woodside has discussed with [name redacted], [name redacted] and SOS, the controls Woodside has in place to manage topics relating to potential impacts and risks relating to spiritual and cultural connections and values that Woodside understands are relevant to [name redacted], [name redacted] and SOS. Woodside has also attended ready, willing and able to answer questions and provide additional information as appropriate and when requested. In a number of instances, despite confirmation that Woodside would present on all of the activities under the Scarborough Project, [name redacted], [name redacted] and SOS expressly told Woodside that they did not want to hear from Woodside on the Scarborough Project activities and instead directed Woodside to only discuss or present on specific aspects of each EP. Despite that direction, at some of those meetings, [name redacted], [name redacted] and SOS raised queries that related more broadly to other activities in the Scarborough Project. Woodside provided responses and information in relation to those questions [Ref: meetings and following correspondence on 14 March; 25 July; 12 September; 4 October 2023].
- As part of consultation, Woodside has also taken time to show [name redacted], [name redacted] and SOS how the information [name redacted], [name redacted] and SOS have provided during consultation has been incorporated into the EPs and how Woodside has proposed control measures to manage potential impacts and risks to topics Woodside understands are relevant to them, including to request any input by [name redacted], [name redacted] and SOS into the proposed control measures or any other available measures. [name redacted], [name redacted] and SOS have provided input in some cases and have otherwise expressed views in relation to the control measures. In some instances, in response to queries seeking their views, [name redacted], [name redacted] and SOS have explicitly stated that they do not have any views to share with Woodside on the control measures. [12 September; 4 October meetings].
- In a number of instances, [name redacted], [name redacted] and SOS have indicated an impossibility to provide information to Woodside – in that they cannot yet, or that it is not possible to provide the information. For instance they have made statements to Woodside to the effect that there is information that they do not yet know and that they don't know when they will know (for example, information that the Murujuga rocks have not yet disclosed to them) [Ref 14 March 2023] or information that they will find out from animals who speak to them [Second Border affidavit Sept 2023 para 11] as well as information that comes to them from time-to-time in visions [12 September 2023].
- During consultation, consistent with NOPSEMA's guidance and suggestions, Woodside has asked [name redacted], [name redacted] and SOS on a number of occasions whether there are other individuals who ought to be consulted. [name redacted], [name redacted] and SOS have made various references to MAC. In some instances, [name redacted], [name redacted] and SOS did not provide an answer [email to EDO 3 August 2023 and EDO response 9 August 2023]. Most recently, [name redacted], [name redacted] and SOS stated words to the effect that "it is not [their] responsibility to identify relevant persons on Woodside's behalf and to distribute information to them". Consultation with [name redacted], [name redacted] and SOS has not otherwise identified any other groups or individuals who, in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity, or whom may have other communally held functions, activities or interests. [Ref example: Woodside email 15 Sept 2023 email; EDO email 19 September 2023].
- In correspondence and meetings, Woodside has questioned what it has perceived to be a general refusal by [name redacted], [name redacted] and SOS to provide information to Woodside, including at meetings where [name redacted], [name redacted] and SOS had confirmed they would provide information [25 July 2023; 12 September 2023; 4 October 2023].
- Throughout consultation, [name redacted], [name redacted] and SOS have expressed a general dislike and mistrust of Woodside and a reluctance to provide Woodside with information, stating most recently words to the effect: "I don't trust any of you. There is no trust here, trust me lady, there is nothing" [Ref 4th October 2023 meeting].
- Given those circumstances, and with a genuine aim of attempting to manage potential impacts and risks to [name redacted], [name redacted] and SOS and to more broadly understand their functions, interests or activities, as well as topics that might relate to a fundamental objection to the Scarborough Project and in accordance with Indigenous tradition, [name redacted], [name redacted] and SOS's potential spiritual cultural and connections and values; Woodside has reviewed publicly available information. This has included reviewing [name

redacted]'s statement made to the Commonwealth Senate Standing Committee on Environment and Communications [Ref Opening Statement from Miss [name redacted], Chairperson Murujuga Aboriginal Corporation – Public Hearing, Perth – 20 April 2017], information provided by [name redacted], [name redacted] and SOS on their SOS website, submissions made by [name redacted], [name redacted] and SOS to various Commonwealth government bodies [Ref: February 2022 and 19 October 2022 s10 ATSIHP Act applications] the United Nations [Ref: UN letter 22 September 2022], the Woodside Board [Ref June 2022], various government bodies [Ref NOPSEMA letters including 22 September 2022], at Annual General Meetings held by Woodside [Ref transcript Question time 19 May 2022], in proceedings against NOPSEMA and Woodside in the Federal Court [Ref Border Affidavits dated August and September 2023] and in various Appeal Convenor processes. Topics, claims and objections in that information have been included in the EP where relevant and in brief, provide the following insights:

- Information set out in the publicly available information shows that [name redacted], [name redacted] and SOS have an understanding of the Scarborough Project and the activities involved in the Scarborough Project and this EP.
- [name redacted] has expressed a view that MAC holds the key responsibility for the stewardship and management of the Land and Sea Country according to the Aboriginal Lore and Culture; MAC's work includes collecting environmental and heritage records to assist with compiling data [building a library] relevant to Law and Culture on sacred sites, including 42 islands of the Dampier Archipelago; MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity. This means that some decisions or advice given by individuals previously, may not reflect the current and more valid cultural leadership that governs today [Ref: 20 April 2017 Opening Statement]. This position is at odds with the position being put forward by [name redacted], [name redacted] and SOS in consultation with Woodside.
- [name redacted], [name redacted] and SOS hold a fundamental objection to the Scarborough Project (for example: SOS website).
- On a number of occasions, [name redacted], [name redacted] and SOS have declined to provide the information to Woodside and have instead provided information publicly [Affidavits of [name redacted] September 2023] or offered to provide the information to others [Ref: letter to NOPSEMA 26 September 2022; letter to NOPSEMA 4 October 2023].

Consultation capacities:

- [name redacted], [name redacted] and SOS have been consulted in their individual Traditional Owner and eNGO capacities. Notably:
- [name redacted], [name redacted] and SOS have been consulted in their capacities as eNGOs who have a fundamental objection to the Scarborough Project and seek to pause or stop the Scarborough Project or "Stop Scarborough Gas" [Ref for example SOS website; 14 March 2023 meeting; 4 October 2023 meeting].
- [name redacted] has indicated she is a Kuruma Mardudhunera woman and [name redacted] has indicated she is a Mardudhunera woman. Woodside has consulted with the Kuruma and Mardudhunera people including through consultation with MAC, Wirrawandi Aboriginal Corporation (WAC), Ngarluma Aboriginal Corporation (NAC) and Robe River Aboriginal Corporations. Both [name redacted] and [name redacted] have been consulted in their capacities as Traditional Custodians of Murujuga in so far as their interests relate, in accordance with indigenous tradition, to spiritual and cultural heritage and values. Further, the results from an ethnographic heritage assessment undertaken for the Scarborough Project development footprint identified no ethnographic sites, values or traditional interests relevant to this EP or the Scarborough Project [Ref MAC consultation].
- As to individual interests:
- Woodside has addressed in this EP, topics expressed to be of interest to [name redacted] and [name redacted]. Controls that Woodside has either updated or implemented as a result of consultation with [name redacted] and [name redacted] have been discussed with them and their views have been provided on them.
- [name redacted] has been invited to all consultation meetings and has been provided opportunity to consult. Despite this, she has not engaged in consultation in person since 25 July 2023 and, despite being invited, did not attend consultation meetings on 12 September or 4 and 5 October 2023. Woodside has made enquiries directly to [name redacted] by email,

phone calls and text messages and has sought confirmation from [name redacted] and the lawyers Woodside understood were acting for [name redacted]. [name redacted] has declined to attend meetings.

- During correspondence, in Court affidavits and at meetings with [name redacted] and [name redacted] (in so far as [name redacted] attended those meetings), [name redacted] and [name redacted] have expressed a deep and emotional interest in topics they have covered. They have provided information to Woodside about “visions” that come to them individually [Ref for example 14 March and 12 September 2023 meetings], information that comes to them from ancestors from the grave [Ref for example 4 October meeting], messages that are communicated to them individually from Murujuga rocks [Ref for example 14 March 2023 meeting] and to their ability to listen and speak on behalf of all plants and animals [Border Affidavit 7 Sept 2023]. Stories about Songlines have been communicated to Woodside as being “my stories” and Songlines have been expressed as being personal, as expressed in consultation [for example 4 October 2023]. Songlines have also been expressed to Woodside as having been recent and individually held, rather than ancient, group Songlines, passed down in community [25 July 2023 meeting]. For example, [name redacted], [name redacted] and SOS expressed words to the effect that the whales is a “big dreaming story [they] just finished” [25 July 2023 meeting]. This may have been what was referenced as a being a first proposed response by video of storytelling generally and of storytelling on-Country [Ref EDO emails 25 July 2023 and 9 August 2023]. [name redacted], [name redacted] and SOS later declined to provide the videos. In addition, a whale songline was expressed to Woodside as having been recently envisioned by [name redacted] when she was doing certain activities at a recent visit to Rosemary Island [Ref for example 12 September and 4 October meetings – sensitive woman’s only information]. Information has been expressed along the lines of being “my story”, “my songline” [Ref 12 September and 4 October 2023 meetings].
- In circumstances where it has been expressed to Woodside that these stories and interests are deeply personal and personally emotionally connected to [name redacted] and [name redacted], they are interests that are individual. They have not been expressed by [name redacted] and [name redacted] as being stories or connections that are communal or are held by Traditional Owner groups. Indeed, other Traditional Owner groups consulted by Woodside have indicated a position to the effect that it is very unlikely that cultural stories and values can be known only to individuals within a community. This is consistent with the sentiment expressed in [name redacted]’s statements from 2017 when she was on the Board of MAC to the effect that “MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity... [A]dvice given by individuals ... may not reflect the current and more valid cultural leadership ... [of MAC]”. Ethnographic surveys undertaken by Traditional Owner groups, as well as continuing engagements with those groups, have similarly indicated there are no specific values and interests at risk of harm in the operational area or EMBA for this EP. In these circumstances, the interests conveyed by [name redacted] and [name redacted], while respected by Woodside appear to be individual interests and presented in an individual capacity, rather than interests held by a community.
- Consistent with the indications from other Traditional Owner groups, Woodside is not aware of any other individual interests of this nature (and no other individual First Nations persons have indicated to Woodside that they have any such individual or personal interests).
- Consistent with this position, [name redacted], [name redacted] and SOS have expressly stated to Woodside that their views and positions differ from that of MAC and other elders. In addition, Woodside has received communications, strong warnings and information from authorised Traditional Owner groups expressing a view that [name redacted], [name redacted] and SOS do not speak for them and [name redacted], [name redacted] and SOS views are not held by the communities. [Ref for example; emails from Woodside 3 October 2023]

Conduct in consultation:

- The process of consultation has limits. It is a statutory obligation that must be understood in a practical and reasonable way so that it is capable of performance. It cannot be one that is incapable of being complied with within a reasonable time. The consultation scheme must operate in a way that a titleholder will be able to, with reasonable diligence, discharge its obligation to consult. The consultation obligation is an obligation that must be capable of practical and reasonable discharge by the person upon whom it is imposed. Consultation does not require consent. In carrying out consultation, titleholders are not required to wait indefinitely for a response.
- During consultation, [name redacted], [name redacted] and SOS have made serious statements including that Woodside has caused delays in meetings, has misrepresented information, is disrespectful, discriminatory and has breached protocols. In each instance, Woodside has expressed concern that [name redacted], [name redacted] and SOS have

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

formed these perceptions of consultation, and Woodside has taken time to address and clarify the issue in each instance. Despite challenging circumstances, Woodside personnel have maintained professionalism and integrity in genuine efforts to consult with [name redacted], [name redacted] and SOS during all consultation efforts, which have been occurring since at least 2022.

- Woodside has demonstrated a genuine openness to consult, provide and listen to information. In most instances, meetings have opened and closed amicably but, during the progress of the meeting, Woodside employees have often been subjected to hostile, offensive language and behaviours, placing unacceptable strain on Woodside personnel. This includes recent demands to meet on Rosemary Island, where cultural safety concerns were raised by the recognised Traditional Custodians. Woodside does not consider these outcomes to be aligned with the consultation requirement. In circumstances where Woodside has fulfilled its obligations under regulation 25 of the Environment Regulations, Woodside does not consider it appropriate to continue to consult further with [name redacted], [name redacted] and SOS including because of these risks.
- Finally, Woodside has made clear to [name redacted], [name redacted] and SOS that consultation is not to be used by parties as a mechanism to stall and delay approvals [Ref Woodside 17 April 2023 letter], especially in circumstances where parties (as in this instance) have publicly stated a fundamental objection to the Scarborough Project and stated publicly an aim including one which is to stop or pause the Scarborough Project.

Consultation is complete:

- Consultation under regulation 25 of the Environment Regulations is complete because sufficient information, a reasonable period of time and reasonable opportunity have been provided to [name redacted], [name redacted] and SOS in their individual Traditional Owner and eNGO capacities.
- The fact that relevant persons have requested further consultation does not mean that Woodside has not met its obligations under regulation 25 of the Environment Regulations. This is underscored in the current circumstances where further consultation is not reasonable and is not required in order to comply with regulation 25.
- Persons being consulted have stated they have additional information they wish to share with Woodside for Woodside's EPs [Ref Federal Court proceedings] but then declined to share this information.
- Persons being consulted have stated that information has not yet been revealed to them, is not yet known to them, it will be revealed 'in time', but also they do not know when it will be revealed to or known by them (for instance where the wisdom of Murujuga rocks have not yet spoken to them; when animals have not yet provided information to them or where they at various times, receive information in visions) [Ref meetings on 14 March 2014 and 12 September 2023; Border Affidavit dated 17 August 2023].
- Persons have affirmed that information about certain matters can only be disclosed to people "born as biological female and living as a female in accordance with their beliefs and customary practices" [Ref Border Affidavit 7 September 2023 para 12].
- Further consultation exposes Woodside employees to unacceptable risk including psychosocial, health and safety risk.
- In all of the circumstances, consultation under regulation 25 of the Environment Regulations has been completed and Woodside has met its obligations under regulation 25.

Woodside understands:

- [name redacted] is a Karuma Mardudhunera woman and a Traditional Custodian of Murujuga.
- [name redacted] is a Mardudhunera woman and a Traditional Custodian of Murujuga.
- SOS is an organisation formed by [name redacted] and [name redacted].

Historical Engagement:

2017 – September 2022

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has engaged with the Ngarluma and Mardudhunera communities on the Scarborough Project since 2018 through their representative organisations including Murujuga Aboriginal Corporation (MAC), Wirrawandi Aboriginal Corporation (WAC) and Ngarluma Aboriginal Corporation (NAC).

Woodside understands [name redacted] was a member of MAC since inception, was the [redacted] of MAC between 2016 and 2017, and was a [redacted] of MAC until 11 February 2022, and took part in discussions between Woodside and MAC on the Scarborough Project. During these two-way engagements, in the three years leading up to November 2021, Woodside was not made aware of any specific concerns of [name redacted], [name redacted], (Mardudhunera Traditional Owners) and [name redacted] (Ngarluma Traditional Owner) around the Scarborough Project.

While a member of MAC, [name redacted] expressed a view that MAC holds the key responsibility for the stewardship and management of the Land and Sea Country according to the Aboriginal Lore and Culture; MAC's work including collecting environmental and heritage records to assist with compiling data [building a library] relevant to Law and Culture on sacred sites, including 42 islands of the Dampier Archipelago; MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity. This means that some decisions or advice given by individuals previously, may not reflect the current and more valid cultural leadership that governs today [Ref Opening Statement from Ms [name redacted], Chairperson Murujuga Aboriginal Corporation – Public Hearing, Perth – 20 April 2017].

The first time Woodside became aware of [name redacted], [name redacted] and SOS's concerns regarding the Scarborough Project was via a number of public statements on the SOS websites and on social media (November 2021).

After seeing the concerns, Woodside met or has attempted to meet with individuals involved in SOS to discuss the Scarborough Project in other capacities and on numerous occasions, including:

- On 15 December 2021, Woodside held a meeting at the MAC office in Dampier with the MAC Board (including [name redacted]) and Circle of Elders, to provide an overview of the Scarborough and Pluto Train 2 projects. (Evidence of this meeting supplied with the MAC correspondence in the Traditional Custodian part of this Table). (SI Report, reference 50.1).
- In February 2022, [name redacted] and [name redacted] wrote to the (then) Federal Environment Minister requesting an assessment under section 10 of the *Aboriginal Torres Strait Islander Heritage Protection Act 1984 (Cth)* regarding: (SI Report, reference 50.2).
- **(1)** "threats to the Murujuga Aboriginal heritage posed by proposed Scarborough LNG...", the letter cited potential damage to Murujuga rock art due to "acid gas emissions from Woodside's LNG processing operations on the Burrup" and climate change.
- **(2)** The letter also claimed that members of MAC had been subject to a "gag clause".
- On 21 March 2022, [name redacted] and [name redacted] sent an email addressed to the Woodside [name redacted], requesting a meeting with Woodside on the morning of 21 March 2022 (SI Report 50.3).
- On 24 March 2022, there was an attempted virtual meeting over Microsoft Teams between Woodside, [name redacted], [name redacted] and [name redacted] (SI Report, reference 50.4). On the same day, Woodside emailed [name redacted], [name redacted] and SOS:
- Woodside noted that despite its representatives being online and waiting for 35 minutes, the meeting did not proceed due to technical issues.
- Woodside advised that it remained keen to understand Traditional Custodian concerns, including those matters that [name redacted], [name redacted] and SOS had set out, and that Woodside remained available to meet.
- On 24 March 2022, [name redacted], [name redacted] and SOS also emailed Woodside to advise that:
- They were waiting to join the virtual meeting but there was no response.
- They were disappointed at this outcome and hoped to have a more formal meeting in times to come.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Emails exchanged later that day extended Woodside's offer to hold further meetings. By this stage, there had been four attempts by Woodside to meet and discuss issues with [name redacted], [name redacted] and SOS. This was in addition to the previous three years of consultation with [name redacted] and [name redacted] via MAC (SI Report, reference 50.5).
- On 6 June 2022, some seven months after SOS had launched its public campaign on social media, [name redacted], [name redacted] and SOS wrote to the Chairman and Board of Woodside regarding consultation on the NOPSEMA assessment of Scarborough offshore gas field development. The letter (sent with attachments) contained the following assertions, among others (SI Report, reference 50.6 and attachment 50.7):
- **(1)** Grave concerns about the impacts on rock art through "gas processing operations, fertiliser production and other industry on the Burrup, all of which is facilitated by Woodside's Scarborough development".
- **(1, 3)** Impacts by industrialisation on rock art through pollution, physical displacement of rock art, damage to other heritage site.
- **(4)** Restriction of access to sites of cultural and spiritual significance. These impacts on cultural heritage will all be further exacerbated by the Scarborough gas developments and related activities. After being preserved and respected for at least 50,000 years of continuous cultural and spiritual practice, Traditional Owners and Custodians are now seeing this degradation occur within their own lifetimes.
- **(4)** As a result, industrial activity on the Burrup is already impacting their ability to practice cultural traditions and pass on our culture to future generations in accordance with our cultural obligations.
- **(5)** We assert our rights to be consulted as 'relevant persons' in relation to cultural heritage impacts of the Scarborough gas development according to the OPGGS (E) regulations. [This relates to cultural values that are nationally protected as part of the Dampier National Heritage Place and values yet to be described as part of the proposed World Heritage Listing for the Burrup Peninsula and surrounds].
- **(6)** Given the lack of previous assessment of cultural heritage impacts "of the cumulative impacts of gas-related industry" and the significant uncertainties regarding these impacts a precautionary approach must be taken according to the ESD Principles in Section 3A of the EPBC Act.
- **(4)** Direct and indirect impacts on cultural heritage must be assessed now, and for all stages of the Scarborough development according to Section 527E of the Environmental Protection and Biodiversity Conservation (EPBC) Act and the EPBC Act Indirect Consequences Policy.
- In order to comply with requirements to consult under the regulations, disclosure of certain information is required from Woodside.
- Woodside's own policy, the UNDRIP and other frameworks require that Traditional Owners are provided with the right of free, prior and informed consent regarding any cultural heritage impacts.
- Impacts to heritage values and other potential impacts associated with the Scarborough gas development must be understood and assessed with reference to the cultural practices, beliefs and customs and unique understanding of these issues held by Murujuga's traditional knowledge holders.
- **(7)** The Murujuga Aboriginal Corporation does not represent the interests of Traditional Owners seeking to protect cultural heritage and Woodside's limited consultation with MAC does not satisfy the requirement for free, prior and informed consent for cultural heritage impacts, or the requirements of 'relevant person' consultation according to the above regulations.
- Woodside notes that in the opening paragraph of this letter [name redacted] and [name redacted] state that they are Murujuga Elders, Traditional Owners, Traditional Custodians and members of the Murujuga Aboriginal Corporation (MAC). MAC was established to preserve and protect the land, heritage and culture of the Burrup and Maitland Industrial Estate and is made up of a Circle of Elders who hold cultural authority and consist of representation from the 5 language groups.

- Included with the correspondence was an open letter signed by several Traditional Custodians requesting (among other things) that further investment on project on Murujuga be withheld and that any further investments decisions on the Scarborough Project be paused. The letter was titled 'Open letter from Traditional Owners and Custodians of Murujuga concerning the proposed Woodside Scarborough gas development'.
- On 22 July 2022, Woodside responded to the 6 June letter sent by [name redacted] and [name redacted]. The letter largely related to the Seismic Survey EP, but also stated that Woodside 'is open to receiving feedback and to discussing issues raised in relation to each of its Scarborough Environment Plans' (SI report, 50.8).
- Throughout July and August 2022, the Ngarluma Yindjibarndi Foundation Ltd (NYFL) offered to engage [name redacted] and [name redacted] and to facilitate a series of up to three meetings between Woodside and [name redacted] and [name redacted] to discuss Scarborough and Pluto Train 2 projects and activities. Woodside accepted this invitation, including outlining payment for [name redacted] and [name redacted]'s time. The proposed meeting did not progress because of a lack of response from [name redacted] and [name redacted].
- On 2 August 2022, Woodside wrote to NYFL accepting NYFL's offer to facilitate SOS meetings (SI Report, reference 50.9).
- On 26 August 2022, Woodside wrote to [name redacted], [name redacted] and SOS providing an information sheet and links for other Scarborough Project EPs. The letter confirmed ethnographic surveys undertaken of the pipeline route concluded that the pipeline route is likely to have "low to nil" impacts to Indigenous archaeological values across the project footprint (SI Report, reference 50.10).
- On 26 September 2022, [name redacted], [name redacted] and SOS emailed a letter to NOPSEMA regarding the Scarborough D&C, SIT1 and Seismic EPs (SI Report, reference 50.11).
- [name redacted], [name redacted] and SOS raised several issues relating to Woodside's consultation requirements under the Regulations.
- [name redacted], [name redacted] and SOS stated that they have functions interests and activities within the EMBA's of the Scarborough EPs which might be directly affected by the proposed activity.
- [name redacted], [name redacted] and SOS requested that NOPSEMA refrain from accepting the Scarborough EPs until Woodside had properly complied with Regulation 11A (now regulation 25 of the Environment Regulations) in relation to their functions, interests or activities and in relation to the time provided for consultation.
- [name redacted], [name redacted] and SOS offered to provide to NOPSEMA, further information about their functions, interests or activities that may be affected by activities under the Scarborough EPs.
- **(8)** Information to be shared by SOS was to be treated sensitively and confidentially.
- The letter stated that Woodside had not provided a "reasonable opportunity to provide our objections in relation to the Trunkline and Drilling EPs, and therefore cannot have responded to those objections".
- **(9)** [name redacted] and [name redacted] offered to share information about their functions, interests or activities regarding these EPs to NOPSEMA. This is an indication that as early as September 2022, [name redacted] and [name redacted] had information and "objections" to share about all Scarborough EPs which, despite Woodside providing ample opportunity, they had not shared with Woodside.
- On 29 September 2022, Woodside emailed [name redacted], [name redacted] and SOS (SI Report, reference 50.12):
- Woodside requested a meeting to share information in relation to the Scarborough Project. Woodside requested to hold this meeting prior to 10 October 2022.
- Woodside advised it welcomed the opportunity to meet to discuss the matters raised in the letters of 6 June 2022 and 29 September 2022, to share information in relation to the Scarborough Project and demonstrate how items raised in the correspondence have been addressed in the relevant EPs.

- Woodside proposed that the meeting would be attended by subject matter experts and project personnel as required, to answer any questions.
- On 6 October 2022, Woodside followed up with [name redacted], [name redacted] and SOS via email and phone / voicemail (SI Report, reference 50.13).
- On 7 October 2022, [name redacted], [name redacted] and SOS responded to Woodside via phone to arrange a suitable date and time (SI Report, reference 50.14).
- On 7 October 2022, Woodside and [name redacted], [name redacted] and SOS discussed arrangements via phone to meet on 11 October 2022.
- On 7 October 2022, [name redacted] and SOS contacted Woodside via phone to advise that [name redacted] would be in touch to set up the meeting. [name redacted] and SOS could not confirm if the 11 October 2022 meeting was proceeding as planned.
- On 10 October 2022, Woodside emailed [name redacted], [name redacted] and SOS noting it had not received any further contact or confirmation of the 11 October 2022 consultation meeting. Woodside advised it was still ready and available to proceed with a meeting (SI Report, reference 50.15).
- On 11 October 2022, Woodside flew personnel to Karratha to attend the meeting with [name redacted], [name redacted] and SOS and followed up with [name redacted], [name redacted] and SOS via phone and SMS (SI Report, reference 50.16).
- On 11 October 2022, [name redacted], [name redacted] and SOS advised Woodside via SMS that it was awaiting confirmation from its lawyers regarding the proposed meeting (SI Report, reference 50.16).
- Woodside did not receive further contact and, despite Woodside being ready in Karratha for the meeting as agreed, this meeting did not proceed.
- None of [name redacted], [name redacted] or SOS provided an explanation to Woodside as to their non-attendance at this meeting.
- On 8 November 2022, [name redacted], [name redacted] and SOS sent a letter to Woodside in relation to the Scarborough Project EP meetings request. (SI Report, reference 50.17).
- [name redacted], [name redacted] and SOS referred to correspondence dated 29 September and 6 October 2022 and stated they had not been able to respond by the date requested. The letter further acknowledged their understanding that Woodside's correspondence encompassed all activities associated with the Scarborough Project including D&C, SITI, Seismic and the State EPs and (at the time) the forthcoming Subsea EP.
- **(5)** [name redacted], [name redacted] and SOS reiterated that they were relevant persons for activities relating to these EPs and acknowledged the invitation to meet to discuss the EPs.
- [name redacted], [name redacted] and SOS stated it was unfortunate that they had been unavailable to meet as requested, however they welcomed the opportunity to discuss their letters dated 6 June 2022 and 26 September 2022 and their concerns on the impacts and risks of the (above mentioned) activities. They acknowledged that Woodside may have an internal target date but that it was generally not practicable to arrange meetings with less than 4 weeks' notice and requested that Woodside provide sufficient notice for any meeting opportunities.
- [name redacted], [name redacted] and SOS offered several dates on which they were available to meet and shared their preference to meet on Murujuga.
- [name redacted] and [name redacted] wrote to Woodside, stating "Unfortunately we have been unavailable to meet as requested..." but that "we acknowledge your invitation to meet... to discuss the Scarborough EPs and to answer any questions we may have" and that [name redacted] and [name redacted] "welcome the opportunity to discuss our letters of 6 June 2022 and 26 September 2022 and our concerns as to the impacts and risks of the above activities" (being the D&C, SITI, Seismic and Subsea EPs). [name redacted] and [name redacted] therefore represented they were ready and able to discuss all Scarborough EPs. [name redacted] and [name redacted] also requested 4 weeks' notice for meetings and proposed a meeting in late November 2022.
- On 22 November 2022, Woodside emailed [name redacted], [name redacted] and SOS (SI Report, reference 50.18).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside acknowledged the letter addressed to Woodside on 8 November 2022 that was passed on via NOPSEMA.
- Woodside confirmed its availability to meet in Karratha on Tuesday 29 November 2022 or a date suitable to [name redacted], [name redacted] and SOS.
- On 24 November 2022, [name redacted], [name redacted] and SOS wrote a letter to Woodside regarding the proposed meeting date. Despite recording in their correspondence on 26 September 2022 and 8 November 2022 that they had information and “objections” they were ready to share regarding the Scarborough Project, [name redacted] and [name redacted] now stated they would not proceed with consultation until there was clarification around the scope and purpose of the meeting and until Woodside confirmed their status as “relevant persons” and Woodside provided requested information. [name redacted] and [name redacted] stated, “We will not be in a position to provide substantive information about our functions, interests or activities at the first meeting you have proposed”, but still committed to discussing all Scarborough EPs. In particular [name redacted], [name redacted] and SOS sought confirmation on the following items (SI Report, reference 50.19).
- **(5)** Acknowledgement from Woodside as to relevant person status for all EPs associated with the Scarborough Project.
- Provision of necessary information about the proposed activities and the anticipated impacts to allow for informed comment and input to be made as part of the relevant person consultation process. As a minimum they requested draft copies of the Scarborough EPs and associated technical and other information and any studies, research or other information held by Woodside relating to:
 - **(4)** Cultural values (not limited to ethnographic sites) including marine fauna of cultural significance.
 - **(1)** Impacts and risks of industrial pollution from gas processing on cultural heritage at Murujuga.
- Purpose of meeting, indicating they would be happy to meet when information requested in points above was received and they understood Woodside’s assessment of them as relevant persons. They indicated that the initial meeting would be for introductions and an opportunity for [name redacted], [name redacted] and SOS to ask questions and obtain information they require to determine the consequences, impacts and risks of the proposed activities so that consultation could commence.
- **(8)** The issue of protocols around gender restricted information was raised and they stated that they would not be able to provide substantive information about their functions, interests or activities at the first meeting proposed.
- On 2 December 2022, Woodside emailed [name redacted], [name redacted] and SOS and included responses to address the items raised on 24 November 2022, where appropriate. Woodside reiterated its availability to meet and provided an option for any date in December 2022. [name redacted], [name redacted] and SOS did not respond to this offer (SI Report, reference 50.20).
- **(9)** Woodside reiterated that it is open to continue consulting, receiving feedback and discussing concerns in relation to Woodside’s Scarborough EPs. Consultation is ongoing and feedback will continue to be accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.
- **(9)** Woodside confirmed its arrangements to meet and consult that have been ongoing since November 2021, and it remains open to continue consulting in relation to the Scarborough EPs.
- Woodside advised it is available to meet with [name redacted], [name redacted] and SOS on any date in December 2022 in Karratha. Woodside requested confirmation of availability to meet by 9 December 2022.
- Woodside again provided a link to the Consultation Information Sheets for the Scarborough D&C, SITI, Seismic and Subsea EPs, to assist in preparing for the meeting.
- Woodside noted there has been ample time and information available to inform feedback on EPs to date. Woodside requested [name redacted], [name redacted] and SOS provide feedback on those Scarborough EPs no later than at the proposed meeting in December 2022.

- **(8)** Woodside noted the letter dated 24 November 2022 made reference to arrangements which would enable [name redacted], [name redacted] and SOS to share relevant information such as matters that are restricted to women or men only. Woodside requested for [name redacted], [name redacted] and SOS to confirm what arrangements are required to enable them to share this information by 9 December 2022.
- **(9)** Despite Woodside being available to meet any time in December and the date of December 9 being suggested, there was no response from [name redacted], [name redacted] and SOS so a meeting could not proceed.
- On 4 January 2023, Woodside emailed [name redacted], [name redacted] and SOS to follow-up on its meeting request Woodside reiterated its availability to meet and provided an option for any date in January 2023 (SI Report, reference 50.21).
- On 13 January 2023, [name redacted], [name redacted] and SOS emailed Woodside (SI Report, reference 50.22).
- [name redacted], [name redacted] and SOS confirmed it would like to meet with Woodside, but reiterated its requests contained within its 24 November 2022 correspondence.
- [name redacted], [name redacted] and SOS stated it can advise of its availability for a meeting once the information requested above is provided.
- On 19 January 2023, Woodside emailed [name redacted], [name redacted] and SOS. Woodside included the following responses to address the items raised, where appropriate (SI Report, reference 50.23).
- **(5)** Woodside reiterated it is open to continue consulting with [name redacted], [name redacted] and SOS, receiving feedback and discussing their concerns in relation to Woodside's Scarborough EPs in Commonwealth and State waters (collectively referred to as the Scarborough EPs).
- **(9)** That consultation on the Scarborough EPs began when Woodside provided [name redacted], [name redacted] and SOS with consultation information on the Scarborough EPs. Information on the Seismic EP has been provided directly to [name redacted], [name redacted] and SOS since at least July 2022 [Ref Woodside letter 22 July 2022].
- **(9)** That Woodside has made every effort to meet with [name redacted], [name redacted] and SOS to understand their claim of relevance and to develop a comprehensive understanding of potential impacts to their functions, interests or activities.
- **(9)** That it has been trying to arrange a meeting with [name redacted], [name redacted] and SOS since November 2021 to discuss the Scarborough EPs, including a representative travelling to Karratha for a planned meeting on 11 October 2022 and making representatives available for a meeting on 29 November 2022.
- Woodside reiterated its availability to meet and provided an option for any date in January or early February 2023.
- On 8 February 2023, Woodside was copied into correspondence sent from the Environmental Defender's Office (EDO) to the WA State Minister for Mines and Petroleum regarding a separate EP under State Regulations. Copies of previous correspondence between Woodside and [name redacted], [name redacted] and SOS were attached to the email. This included a detailed response from Woodside dated 5 January 2023 which responded to claims and objections made in relation to spiritual and cultural values. On the same day, the EDO (acting on behalf of SOS) emailed Woodside, referred to the email and correspondence sent to the Minister and advised that its client's earliest availability to meet would be the weeks commencing 13 and 20 March 2023 (SI Report, reference 50.24).
- On 15 February 2023, Woodside emailed [name redacted], [name redacted] and SOS. Woodside reiterated its availability to meet and, based on dates suggested within the 8 February correspondence, provided [name redacted], [name redacted] and SOS with confirmation it was available to meet on the suggested dates in March 2023 (SI Report, reference 50.25).
- On 24 February 2023, Woodside sent [name redacted], [name redacted] and SOS a follow up email. Woodside reiterated its availability to meet (SI Report, reference 50.26).
- **(10)** On 24 February 2023, the EDO (acting on behalf of [name redacted], [name redacted] and SOS) emailed Woodside requesting that correspondence to [name redacted] and [name redacted] was sent to the EDO as well as [name redacted] and [name redacted]. The EDO further advised its clients were available to meet on 13 and 14 March 2023 and requested

that Woodside nominated a female staff member who could receive “highly sensitive” cultural information at the meeting, which Woodside took to mean that [name redacted], [name redacted] and SOS intended to share cultural information at the meeting (SI Report, reference 50.27).

- On 28 February 2023, the EDO (acting on behalf of [name redacted], [name redacted] and SOS) emailed Woodside to follow up on the request to secure a meeting (SI Report, 50.28).
- **(8)** On 1 March 2023, Woodside emailed [name redacted], [name redacted] and SOS (and cc. to EDO) to propose the meeting time and location for 14 March 2023. Woodside also nominated a female staff member to receive cultural information (SI Report, reference 50.29).
- On 7 March 2023, the EDO (acting on behalf of [name redacted], [name redacted] and SOS) emailed Woodside to confirm the meeting time and location for 14 March 2023 (SI Report, reference 50.30).
- **(9)** On 8 March 2023, Woodside emailed the EDO, [name redacted], [name redacted] and SOS with a proposed agenda for the 14 March 2023 meeting and requested they advise if there were any particular issues they wished to discuss during the meeting (SI Report, reference 50.31).
- **(8)** On 10 March 2023, Woodside emailed EDO, [name redacted], [name redacted] and SOS with further logistic and meeting protocol details for the proposed meeting on 14 March 2023. The agreed meeting protocol, based on a discussion between Woodside and [name redacted], included that attendees would be all female, would attend with open hearts, deep listening and seeking a respectful conversation and open to sharing knowledge about the environment that may be affected, including the heritage of places. It was also agreed that there would be no audio or video recording of the meeting to respect privacy, safety and cultural values (SI Report, reference 50.32).
- On 13 March 2023, the female nominated by Woodside to receive sensitive information called [name redacted], [name redacted] and SOS to check in and confirm the meeting would go ahead.
- **(4, 9) MEETING:** On 14 March 2023 (summarised in email on 16 March 2023), Woodside met with the EDO, [name redacted], [name redacted] and SOS on-Country and discussed the Seismic EP, Subsea EP, D&C EP, SITI EP (Cth and State). Maps and pictures of Scarborough Project footprint were shown. Despite Woodside’s continued efforts and offers to meet since at least September 2022, this meeting represented the first time Woodside and [name redacted], [name redacted] and SOS had met in person since the establishment of SOS in November 2021.
- Woodside provided an overview of the Scarborough activities (D&C, SITI, Seismic, Subsea EP (Cth and State)). Discussion was also held regarding the FPU.
- Feedback from [name redacted], [name redacted] and SOS (at the on-Country meeting):
 - When told about the pipeline route, borrow grounds and pipelay, [name redacted], [name redacted] and SOS spoke of concerns to the effect of the earth and world breaking apart when the project got underway and raised specific concerns about the pipeline passing near contaminated waters near the Montebello islands. They also discussed topics relating to whales and other sea animals related to the installation of the Scarborough Trunkline.
 - **(11)** When asked for their views on how the activities could be managed by Woodside to reduce risks and impacts to their interests, [name redacted], [name redacted] and SOS told Woodside that the proposed activities gave them a sick feeling and the activities should be stopped. [name redacted], [name redacted] and SOS also informed Woodside that, in their view, there is nothing that could be done by Woodside to progress with the proposed Scarborough activities in a way that could minimise impact to [name redacted], [name redacted] and SOS’s functions, activities and interests or that would be respectful to its culture and country. Woodside response (at the on-Country meeting):
 - **(8)** Woodside agreed to keep confidential to women and to not otherwise share cultural details which were shared at the 14 March 2023 meeting.
 - **(10)** [name redacted] and [name redacted] noted there is information that is not yet known to them as the rocks have not yet told them (for instance, wisdom that Murujuga rocks have for the past and future) and they are not sure when it will be known.

- On 16 March 2023, Woodside emailed EDO, [name redacted], [name redacted] and SOS to advise that (SI Report, reference 50.33).
- It appreciated the request for Woodside to attend the meeting with open hearts, deep listening and respectful conversation and that it would intend to continue this approach to engagement.
- **(9)** Woodside’s consultation process is ongoing through the environmental approval process and when an activity is being performed and that Woodside looks forward to continuing its discussions with [name redacted], [name redacted] and SOS in the future.
- **(9)** Woodside is open to consulting further with [name redacted], [name redacted] and SOS on the proposed Scarborough activities and are open to the continuing engagements regarding the Scarborough activities. Woodside noted this was notwithstanding comments made at the meeting by [name redacted] and [name redacted] that the proposed activities gave them a 'sick feeling' and should be stopped.
- Woodside provided responses to specific actions taken during the meeting, including:
 - A request for Woodside to provide background information on the “why” behind the Scarborough activities. Woodside responded that the Scarborough Project helps play a role in the global energy transition, including helping neighbouring Asian countries take action on emissions reduction and advised there is further information on Woodside’s website.
 - **(12)** A request for Woodside to check with MAC whether MAC’s ethnographic survey can be shared with [name redacted], [name redacted] and SOS.
 - **(12)** Woodside advised that the ethnographic survey is held by MAC and Woodside does not have permission to share it.
 - **(13)** A request for Woodside to confirm whether fracking would occur in relation to the Scarborough activities.
 - **(13)** Woodside confirmed that no fracking would be undertaken as part of the proposed Scarborough activities.
- On 17 March 2023, Woodside emailed [name redacted], [name redacted] and SOS acknowledging SOS correspondence to Woodside dated 6 June 2022, 26 September 2022 and 24 November 2022 and the discussion with Woodside on 14 March 2023. Woodside included an attachment containing responses to relevant objections, claims and additional information raised in the correspondence stated to relate to the Scarborough Seismic EP although some responses related to Scarborough activities under other EPs as the matters raised were about the Scarborough Project as a whole. (SI Report, reference 50.34). Woodside stated:
 - **(4)** Woodside has conducted an ethnographic survey to support the development of EPs for the Scarborough Project which have not identified any heritage places, objects or values which will be impacted.
 - **(2)** None of Woodside’s agreements with Traditional Custodians include “gag clauses” or restrictions on voicing opinions on Woodside projects.
 - Re the principles of FPIC: Woodside is guided by UNDRIP under our Indigenous Communities Policy and has consulted representative institutions including MAC for a number of years.
 - **(9)** Woodside has made several attempts since November 2021 to engage with [name redacted], [name redacted] and SOS. There was a meeting held on Tuesday 14 March 2023. Woodside is open to receiving feedback.
 - **(1)** Re impacts on rock art through pollution, emissions from the activities covered by the Seismic EP is not relevant, but these “may be evaluated in other Scarborough EPs”.
 - Re the proposed removal of rock art from the Perdaman site, Woodside stated it is not appropriate for Woodside’s EPs to address or seek to regulate the activities of third parties progressing separate projects.
 - Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(12)** A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so. The Scarborough Project Cultural Heritage Management Plan is a publicly available document and can be found on Woodside's website.
 - **(7)** Woodside continues to consult with MAC on all relevant aspects of this EP prior to and during the execution of activities.
 - **(1)** Re impacts and risks on Aboriginal heritage sites on and around Murujuga, Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by Scarborough activities.
 - **(9)** Woodside considers the time it has provided to consider information prior to meetings to be more than suitable to inform [name redacted], [name redacted] and SOS's feedback on Woodside's proposed Scarborough EPs.
 - **(9)** Woodside confirms as per Woodside's ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
 - On 24 March 2023, the EDO (acting on behalf of [name redacted], [name redacted] and SOS) provided a letter to Woodside which copied NOPSEMA, DMIRS and the WA Minister for Mines and Petroleum (SI Report, reference 50.35):
 - The letter acknowledged that Woodside had provided information on all relevant Scarborough EPs (D&C, SIT1, Seismic and Subsea), and confirmed that [name redacted] and [name redacted] raised "particular concerns about the impacts that underwater activities that form part of the EP activities might have on their functions, interests and activities". This confirmed that the parties were consulting on all EPs.
 - The letter detailed a response to the 14 March 2023 meeting and Woodside's 16 March 2023 email, and covered the range of Scarborough EPs (Seismic, D&C, SIT1, Subsea and State EPs). The EDO noted its client's concerns relating to:
 - **(7)** The summary of the meeting, stating the functions, interests or activities of their client were distinct from those of Murujuga Aboriginal Corporation and that their stories were not told as a part of any consultation with MAC.
 - **(1)** They raised concerns about impact of underwater activities, impacts related to greenhouse gas and Murujuga industrialisation.
 - **(10)** Clarification of its client's position, that Woodside had mischaracterised their clients' position. Their view is that Woodside should not undertake the Scarborough Project because of the harm it will cause and that is different to the conclusion that there is 'nothing that can be done' to minimise impacts or be respectful to our clients, their culture and their country. Their clients regard genuine consultation on the proposed EP activities an important demonstration of their respect for their functions, interests or activities.
 - The letters asserted that they considered that the consultation process has just commenced.
 - **(5)** Communication of relevant person status – the EDO stated that its clients should be recognised as relevant persons individually and not only SOS, (the foundation its clients founded).
- Acknowledgement of response to questions arising at the meeting of 14 March 2023:
- **(12)** that Woodside had followed up their requests and provided a link to Woodside's publicly available website and advised that the ethnographic survey was held by MAC and Woodside did not have permission to share it.
 - **(9)** The letter noted that the EDO's clients would review the consultation information provided, and that it anticipated its clients would require approximately six weeks to do this.

- The letter requested Woodside not submit the draft EP until consultation was complete.
- On 28 March 2023, Woodside emailed the EDO, [name redacted], [name redacted] and SOS (cc. to NOPSEMA) in response to the 24 March 2023 letter. Woodside reiterated its responses to topics raised during the meeting and in previous correspondence, relevant to the proposed activity. (SI Report, reference 50.36). The response included the following responses which are summarised as follows:
In regard to additional or new information:
 - Woodside advised it has a process in place for the life of an EP that allows the EP to be updated to include additional or new information or feedback that is received after an EP is submitted. This is done through a “Management of Knowledge” process. This means that feedback or information provided in future meetings can still be taken into account and, where appropriate, can be incorporated in the EP during the life of the activity.
 - Woodside advised that following the meeting, based on the information provided, no updates were required to the EP via the Management of Knowledge process.
In regard to functions, interests or activities:
 - **(7)** Woodside acknowledged that it had been advised that [name redacted], [name redacted] and SOS’s functions interests and activities are distinct from those of MAC and that it was interested to learn about this further.
 - **(11)** In response to a request for the ethnographic survey undertaken by MAC, Woodside reiterated that it has no authority to provide this information. Given [name redacted]’s previous role with MAC at the time the ethnographic survey was being undertaken, Woodside suggested that [name redacted] may have contacts at MAC to request a copy of that survey.
 - **(9)** Woodside advised that as to [name redacted], [name redacted] and SOS’s functions, interests or activities, it continues to invite these to be shared with Woodside so it can consider the likely impacts and risks of the EP activities on these functions, interests or activities and what Woodside can do to lessen or avoid those impacts.
 - **(9, 10)** Woodside confirmed that as [name redacted], [name redacted] and SOS’s were not prepared to share some information with Woodside, it remains open to hearing from them when this is known, and it is ready to be shared.
 - **(1)** Regarding minimising impacts to functions, interests or activities, Woodside reshared its interpretation of the take-aways from the meeting in relation to underwater activities, GHG emissions and industrialisation of Murujuga.
 - **(14)** In the meeting of 14 March 2023, there was a discussion about potential impacts of activities on whales.
 - **(1)** Emissions from the activities covered by the Commonwealth EPs are of a scale that no credible impact pathway to their onshore cultural interests is foreseen. This has been the subject of separate correspondence.
 - **(9, 10)** In relation to the detail of the EPs and information accessed and provided, the meeting provided an overview of the Scarborough Project and followed volumes of previous correspondence on the Scarborough Project. Previous correspondence indicated that a large volume of information on the Scarborough Project had been accessed, read and considered. The correspondence showed an informed and thorough understanding of the various Scarborough activities and the Scarborough Project.
 - **(9)** In relation to Consultation in general, Woodside advised it has continued to consult with [name redacted], [name redacted] and SOS’s and continues to invite further consultation.
 - **(5)** In relation to relevant persons, Woodside advised that the Commonwealth approval process requires Woodside to consult with “relevant persons”.
 - **(5)** Woodside has previously explained the approval process relating to the concept of “relevant persons” and noted that, at the relevant time consultations are included under a category of “relevant persons” in EPs. Woodside generally applies this category at a stage when they are trying to understand more about a person’s functions, interests or activities and also the impacts of Woodside’s activities on them.

- (5) Woodside reiterated that there is no need for it to categorise persons as relevant in order to consult with them.
- (5) In relation to Ongoing consultation, Woodside advised that once an EP is accepted, Woodside continues ongoing consultations with relevant persons. Is open to continuing consultation to understand how the proposed Commonwealth EP activities relevantly affect [name redacted], [name redacted] and SOS.
- (9, 10) In relation to further consultation, Woodside noted that [name redacted], [name redacted] and SOS's correspondence, it would like to organise another meeting and will require approximately six weeks to read into materials and prepare for a meeting.
- Woodside requested for [name redacted], [name redacted] and SOS's to advise its preferred times for the next meeting, noting the time taken to arrange the previous meeting.
- Woodside advised it is available to meet in the week commencing 8 May 2023 or earlier.
- The agreed meeting protocol was shared again, including there being no audio or visual recording of meetings.
- On 29 March 2023, the EDO responded acknowledging receipt of Woodside's email, noted the invitation for further consultation and advised it was seeking instructions and would respond in due course (SI Report, reference 50.37).
- (8) On 17 April 2023, Woodside responded by email to a letter from the EDO dated 6 April 2023 addressed to NOPSEMA and copied to Woodside about a different activity. Woodside stated (SI Report, reference 50.38):
- Woodside provided notes including in relation to Woodside's repeated and protracted attempts to meet, engage and consult with [name redacted] and [name redacted] and SOS on the Scarborough Project.
- Woodside reiterated the process for consultation remains open post EP approval and that it has consistently offered an open invitation to [name redacted] and [name redacted] and SOS to provide feedback to allow Woodside to consider the potential impacts and risks of the activities on functions, interests or activities and to provide input on things Woodside can do to mitigate those potential impacts and risks on all Scarborough EPs.
- An attachment of 5 pages sent with this response to NOPSEMA sets out the history of Woodside's extensive engagements with [name redacted] and [name redacted] and SOS. It states that since June 2018, Woodside has undertaken 82 substantial engagements relating to the Scarborough Project including 32 meetings with Traditional Custodians and their representatives.
- The letter went on to provide further context and highlighted relevant engagements with [name redacted] and [name redacted] and SOS, and stated Woodside's position i.e. having regard to all of the circumstances of the consultation undertaken with [name redacted] and [name redacted] and SOS, and in light of the concepts of "reasonable time", "reasonable diligence", a consultation obligation that "must be capable of practical and reasonable discharge ... that must be capable of performance", NOPSEMA can be reasonably satisfied that an appropriate level of consultation has taken place with [name redacted] and [name redacted] and SOS.
- Woodside also outlined details about correspondence and the opportunities and invitations Woodside has attempted to provide for consultation to occur and why these have not occurred.
- Woodside closed the letter by stating Woodside would be pleased to discuss the notes contained in this letter and the issues raised in the Letter from EDO with NOPSEMA.
- On 8 May 2023, the EDO emailed Woodside to advise they had not had any response to date, and were writing again to enquire whether Woodside wished to propose dates that can put to their clients for consultation regarding another Scarborough EP (SI Report, reference 50.39).
- (8) On 9 May 2023, Woodside emailed [name redacted], [name redacted], and SOS via the EDO reiterating Woodside's willingness to engage in ongoing consultation on Scarborough EPs; On proposed meeting dates in May, noting that Woodside was awaiting response on [name redacted], [name redacted] and SOS availability and that Woodside was open to

meeting either on-Country or remotely, noted draft guidance from NOPSEMA regarding Managing gender-restricted information, and included a draft agenda (SI Report, reference 50.40).

- On 9 May 2023, Woodside emailed [name redacted], [name redacted] and SOS, (and cc. the EDO) with respect to the SITI EP and included responses to relevant objections (some of which are broadly applicable to the entire Scarborough Project including activities under the other Scarborough EPs), claims and additional information raised on 6 June 2022, 26 September 2022 and 24 November 2022 (SI Report, reference 50.41):
- **(4, 7)** Woodside confirmed it has conducted an ethnographic survey to support the development of EPs for the Scarborough Project (Mott 2019, UWA 2021, McDonald and Phillips 2021, Nutley 2022a and 2022). An ethnographic survey determines the cultural values which are associated with a particular area, feature or object. Representatives from the Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo Peoples—all five Indigenous groups represented by MAC—participated in these surveys (Mott 2019, McDonald and Phillips 2021). Participants were not restricted in the types of heritage or other values they were encouraged to identify, but typical results from surveys of this nature might include Songlines, ceremonial places such as ‘thalu’ sites for managing environmental resources, or places where activities such as birthing, initiation or other significant activities are performed.
- **(4)** Woodside advised Archaeological assessments have been made over the ancient landscape, being the extent of the continental shelf, which was previously exposed during human occupation. This includes an Australian-first assessment of the archaeological perspectivity along the trunkline route conducted with the support and consultation of Traditional Custodians (UWA 2021). An executive summary is available on Woodside’s website at <https://www.woodside.com/docs/default-source/sustainability-documents/indigenous-peoples/cultural-heritage/scarborough-pipeline-cultural-heritage-assessment-exec-summary.pdf>.
- **(4)** Woodside advised it has had all of its submerged heritage work assessed by an expert underwater archaeologist for gaps in our processes (Nutley 2022a), as well as a review of Side Scan Sonar data to confirm whether archaeological sites could be identified on the seabed (Nutley 2022b).
- **(2)** Woodside confirmed that none of Woodside’s agreements with Traditional Custodians include “gag clauses” or restrictions on voicing opinions on its projects. Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the Scarborough project.
- **(7)** Woodside advised that the principles of Free, Prior and Informed Consent (FPIC) are based in the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) where it is envisaged as a communal right of Indigenous communities and secured through consultation with representative institutions utilising traditional decision-making mechanism such as deferring to MAC’s Circle of Elders. Woodside is guided by UNDRIP under its First Nations Communities Policy and has consulted representative institutions including MAC for a number of years.
- **(4)** Several documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider in appropriate to do so.
- **(4)** Woodside provided a link to the Scarborough Project Cultural Heritage Management Plan which is a publicly available document and can be found at: https://www.woodside.com/docs/default-source/our-business---documents-and-files/burruhub---documents-and-files/scarborough---documents-and-files/scarborough-cultural-heritage-management-plan.pdf?sfvrsn=162e353a_3
- **(7)** Woodside advised it continues to consult with MAC on all relevant aspects of this EP prior to and during the execution of activities.
- Woodside advised it considers the adequate time and information it has provided, including the meeting on Tuesday 14 March 2023, to be more than suitable to inform feedback on Woodside’s proposed Scarborough EPs.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside confirmed that as per Woodside's ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
- On 10 May 2023, the EDO (acting on behalf of [name redacted], [name redacted], and SOS) emailed Woodside to query the date of previous correspondence (SI Report, reference 50.42).
- On 15 May 2023, Woodside emailed the EDO confirming that the May 2023 correspondence refers to emails dated 9 May 2023 with the subject line "RE: Scarborough Environment Plans – Consultation (SI Report, reference 50.43).
- On 1 June 2023, the EDO emailed Woodside confirming [name redacted], [name redacted], and SOS were available to meet in Karratha on Tuesday, 13 June 2023 (SI Report, reference 50.44).
- On 6 June 2023, Woodside emailed [name redacted], [name redacted], and SOS with respect to the Scarborough Drillings and Completions EP. Acknowledging and in response to the SOS correspondence of 6 June 2022, 26 September 2022, 24 November 2022, correspondence via EDO of 6 April 2023, 18 April 2023 and during meeting on 14 March 2023, with information much the same as that sent on 9 May 2023 (SI Report, reference 50.45).
- On 7 June 2023, Woodside emailed the EDO requesting the email be forwarded to [name redacted], [name redacted], and SOS. Woodside confirmed availability to meet in Karratha on 13 June 2023 to continue consultation on the Scarborough EPs; proposed an agenda; confirmed meeting protocols and advised Woodside attendees. Woodside requested to know who would be attending on behalf of SOS and confirmation of other meeting details. The agenda included the sharing of interests, the functions of [name redacted], [name redacted] and SOS, a walk-through of Scarborough EPs, and a description of the Scarborough Project and activities to be undertaken under each EP. The same meeting protocol agreed prior to the March meeting was shared, including female only meeting, attend with open hearts and prepared for deep listening and respectful conversation and to share knowledge about the environment including the heritage of places. In addition, it was agreed there would be no audio or visual recording. Because it had not received confirmation of the meeting and because of past history of Woodside turning up for meetings without [name redacted], [name redacted] or SOS attending, or meetings that did not proceed, on 9 June 2023, Woodside emailed the EDO, [name redacted], [name redacted], and SOS requesting confirmation of the meeting scheduled for Tuesday 13 June 2023 and its time and location. Confirmation was sought by 5pm on 9 June 2023 as there were a number of flight and other logistics that needed to be confirmed by 5pm in order for that meeting to progress on Tuesday. If the meeting could not proceed Woodside requested the provision of alternative meeting dates (SI Report, reference 50.46).
- On 9 June 2023, Woodside thanked the EDO and SOS for suggesting a meeting on 14 June 2023 in Karratha and requested confirmation of the meeting by 5pm that date or alternative dates for a meeting so that flights and logistics could be confirmed. Later that day a further email was sent correcting the proposed meeting date to 13 June instead of 14 June 2023 (SI Report, reference 50.47).
- On 9 June 2023, after 5pm the EDO emailed Woodside confirming availability for a morning meeting on 13 June 2023 (SI Report, reference 50.48 and 50.49).
- On 9 June 2023, Woodside emailed the EDO advising reasons why it was no longer available to meet on 13 June 2023 due to flights and other logistics having timed out (SI Report, reference 50.50).
- On 10 June 2023, the EDO emailed Woodside to advise [name redacted], [name redacted] and SOS were available to meet on 13 June 2023 on-Country with the EDO and provided a phone number to discuss logistics. The EDO did not object to the agenda or the meeting protocol (including no recording being taken) (SI Report, reference 50.51).
- On 12 June 2023, the EDO on behalf of its clients [name redacted], [name redacted] and SOS emailed Woodside advising availability to meet on 13 June 2023 at Hearson Cove. Despite its previous position committing to consulting on all Scarborough EPs, and confirmation that [name redacted], [name redacted] and SOS had information to share on all Scarborough EPs and the Scarborough Project generally (see correspondence dated 26 September 2022, 8 November 2022 and 24 November 2022) the EDO for the first time stated (SI Report, reference 50.52):

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(15)** it did not think it was appropriate to deal with all 4 EPs in one meeting. EDO did not raise any concern with the meeting protocol, including no recording being taken.
- On 12 June 2023, Woodside emailed [name redacted], [name redacted] and SOS and the EDO regarding meeting arrangements and a draft agenda. Woodside requested next available dates for a meeting with [name redacted], [name redacted] and SOS and the EDO (SI Report, reference 50.53).
- On 12 June 2023, the EDO emailed Woodside to advise the [name redacted], [name redacted] and SOS wanted to keep the existing arrangement for a consultation meeting on 13 June 2023 in Karratha (SI Report, reference 50.54).
- On 14 June 2023, the EDO emailed Woodside to advise that their clients, [name redacted], [name redacted] and SOS were still willing to meet at the times specified in the previous email while the EDO solicitors were going to be available in Karratha and that Woodside could join by phone or videoconference if needed (SI Report, reference 50.55).
- On 14 June 2023, Woodside emailed the EDO and [name redacted], [name redacted] and SOS to advise that Woodside was not available to meet the week of 13 June 2023 but proposed 5 alternative dates in June 2023 for a meeting to be held in Karratha or remotely via Teams. These dates allowed for Woodside to follow the agreed protocols (including having a female only team) (SI Report, reference 50.56).
- On 14 June 2023, the EDO emailed Woodside to advise it would revert back once instructions had been received from their clients (SI Report, reference 50.57).
- **(9)** On 20 June 2023, the EDO emailed Woodside to advise the EDO will not be in a position to arrange any in-person consultation meeting for the week of 20 June and the EDO is awaiting instructions as to preferred dates and next steps for consultation. In the meantime, Woodside could let the EDO know if Woodside had any questions (SI Report, reference 50.58).
- **(9, 10)** On 21 June 2023, Woodside emailed the EDO, [name redacted], [name redacted] and SOS, thanking them for their email and advising that Woodside was looking forward to hearing from them when ready. Woodside offered for comments / queries / requests to be emailed in the meantime if more efficient (SI Report, reference 50.59).
- **(9,10)** On 28 June 2023, the EDO on behalf of its clients, [name redacted], [name redacted] and SOS, emailed a letter to NOPSEMA and copied Woodside urging NOPSEMA to not accept the 4 Scarborough EPs Woodside had submitted as Woodside had failed to comply with its consultation obligations under regulation 25 of the Environment Regulations (SI Report, reference 50.60). The EDO stated:
 - Woodside had not notified their clients that the EPs had been submitted nor the dates of submission.
 - A meeting scheduled for 13 June 2023 did not proceed; plans to reschedule are ongoing.
 - Woodside had not explained the activities of the Scarborough EPs and the associated impacts and risks in a way the SOS can understand and how this will impact their functions, interests or activities. Also, [name redacted], [name redacted] and SOS had not been provided with sufficient information and a reasonable period for consultation.
- On 3 July 2023, Woodside emailed the EDO and copied NOPSEMA in response to the EDO's letter to NOPSEMA dated 28 June 2023 (copied to Woodside) (SI Report, reference 50.61). Woodside clarified:
 - **(5, 9)** Woodside had consulted [name redacted], [name redacted] and SOS while preparing the 4 Scarborough Project EPs since March 2022. Woodside reaffirmed [name redacted], [name redacted] and SOS's relevant persons status.
 - **(9, 10)** Consultation between Woodside and [name redacted], [name redacted] and SOS had been extensive over an extended period. As at 13 April 2023, consultation had included 5 meetings, 2 attempted meetings, 19 emails, 7 phone calls and 10 letters [Ref letter to NOPSEMA, copied to EDO dated 17 April 2023].
 - **(8, 9, 10)** At a meeting on 14 March 2023, Woodside provided an overview of the Scarborough Project to [name redacted], [name redacted] and SOS to provide further understanding of the activities to be carried out under the Scarborough EPs. Woodside agreed to keep the full details of the meeting confidential at the request of the EDO's clients on the basis that some matters included secret women's business.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(9,10)** Following this meeting, a suite of correspondence was exchanged where Woodside further explained the activities to enable [name redacted], [name redacted] and SOS to make an informed assessment of the possible consequences of the activities on their functions, interests or activities. This was in addition to consultation material previously provided since August 2022 and the publicly accessible Scarborough EPs published on NOPSEMA's website.
- **(9, 10, 11)** During the meeting, without expressing to Woodside what their functions, activities and interests were (which remained (at the date of this letter) unexpressed by the EDO or its clients), [name redacted], [name redacted] and SOS informed Woodside that nothing could be done by it to progress with the activities to be carried out under the Scarborough EPs in a way that could minimise the effects of those activities on their undisclosed functions, interests or activities. Nonetheless, Woodside had continued to continue to consult with [name redacted], [name redacted] and SOS in the event they had any matters they wished to communicate to Woodside that could be relevant to the Scarborough EPs.
- Woodside had been prepared to meet and had continued to correspond with the EDO's clients and the EDO.
- Woodside considered it had met regulation 25 of the Environment Regulations.
- Woodside remained open and available to meet and proposed a meeting date from 3 July 2023.
- On 17 July 2023, the EDO emailed Woodside with 4 potential video conference meeting dates in July. The EDO also acknowledged receipt of Woodside's letter of 3 July 2023 and advised it would revert in due course (SI Report, reference 50.62).
- On 17 July 2023, Woodside emailed the EDO advising it would revert with meeting details (SI Report, reference 50.63).
- On 18 July 2023, Woodside emailed the EDO confirming it was available for a meeting on Tuesday 25 July at 9am by Webex and asked for confirmation. A draft agenda was proposed and the agreed protocols were included that were previously agreed. This included female only attendees, an agreement to attend with open hearts and ready for deep listening and respectful conversation and an agreement to share knowledge of the environment including the heritage of places. It also included an agreement that there would be no audio or video recordings (SI Report, reference 50.64).
- On 19 July 2023, Woodside again provided the EDO with NOPSEMA consultation documents (brochure, guideline and policy) and again asked they be provided to [name redacted], [name redacted] and SOS ahead of the meeting (SI Report, reference 50.65).
- On 19 July 2023, the EDO advised [name redacted] and Ms [name redacted] of EDO have taken over carriage of the matter and they will respond to the latest emails from Woodside (SI Report, reference 50.66).
- On 19 July 2023, the EDO responded to Woodside confirming the meeting on 25 July 2023 and provided a revised agenda which was the agenda that was agreed ahead of the 13 June Karratha meeting that did not proceed. The EDO made no objection to the agreed meeting protocol, including no audio or video recordings (SI Report, reference 50.67).
- **(8)** On 20 July 2023, Woodside responded to EDO agreeing to the meeting time and date, stating that the proposed agenda would be reviewed internally, and requesting confirmation on specific protocols to be adhered to in the meeting would be aligned with those previously set by SOS (SI Report, reference 50.68).
- **(8)** On 21 July 2023, Woodside emailed EDO notifying arrangements had been made for the planned meeting on 25 July, that Woodside was comfortable with the proposed agenda and that Woodside would provide information on the broader Scarborough Project and EPs currently being assessed rather than a single EP. This would give [name redacted], [name redacted] and SOS an opportunity to discuss and ask questions on the other Scarborough EPs currently being assessed. Woodside also sought confirmation that previously mentioned protocols would be followed (SI Report, reference 50.69).
- **(8, 15)** On 24 July 2023, EDO emailed Woodside to inform that presentation of broader information on the Scarborough Project and EPs was acceptable and requested that the meeting be recorded but paused for discussion of culturally sensitive matters. This was raised a day before the meeting, despite Woodside circulating the agreed protocol for comment several times since the March 2023 meeting. EDO had also confirmed that the existing protocols would be appropriate (SI Report, reference 50.70).

- On 25 July 2023, Woodside emailed EDO to state that Woodside intends to adhere to the protocols already agreed, including that attendees are welcome to take written notes however there will be no other recording of meetings. Woodside stated that it does not consent to the meeting being recorded (SI Report, reference 50.71).
- On 25 July 2023, [name redacted], [name redacted] and SOS's lawyers confirmed they were running late to the meeting (SI Report, reference 50.72).
- On 25 July 2023, Woodside acknowledged the EDO's email and stated it looked forward to meeting for the consultation 'in 10 minutes (SI Report, reference 50.73).
- MEETING: On 25 July 2023, Woodside met with EDO and SOS, [name redacted] and [name redacted] via web meeting (SI Report, reference 50.74):
- **(8)** Introductions, EDO stated that for the meeting to proceed the meeting had to be recorded. It was stated that if the meeting was not recorded, [name redacted], [name redacted] and SOS would not participate in the meeting. [name redacted], [name redacted] and SOS were emphatic on this point.
- **(8)** As this had not been agreed between the parties, at around 9.40am, the meeting paused while arrangements were discussed. As noted above, EDO raised this as an issue on 24 July, the day before the meeting. EDO, [name redacted], [name redacted] and SOS had an opportunity to object to the agreed meeting protocol at any time between the March and July meetings, including when Woodside circulated the agreed protocol on several occasions (SI Report, reference 50.75 and 50.76).
- **(8)** During the meeting on 25 July, following a pause in the meeting to consider recording, Woodside emailed EDO to inform that following an internal discussion, Woodside agreed to rejoin the meeting and the meeting being recorded under certain conditions. The issue around recording delayed the meeting by approximately 1 hour.
- **(9, 15)** When the meeting recommenced, Woodside provided the meeting with a power-point presentation covering Scarborough D&C, SIT1, Seismic and Subsea EPs and presented on regulatory context and provided an overview of the Scarborough Project including the FPU and trunkline operation. In accordance with emails exchanged before the meeting Woodside came to the meeting ready, willing and able to address all Scarborough activities and to hear from [name redacted], [name redacted] and SOS on their knowledge and concerns.
- **(9, 15)** Woodside opened the presentation by describing the Scarborough Project and the 430km trunkline route and the use of the trunkline including that gas will be pumped through it and exported back to the Pluto Gas Plant. On behalf of [name redacted], [name redacted] and SOS, EDO intervened on several occasions during the meeting and told Woodside words to the effect that [name redacted], [name redacted] and SOS did not want the opportunity to hear the presentation on any other EP, stating that their client was only there to consult on one EP (Seismic EP). This was despite EDO confirming in its email on 24 July 2023 that Woodside had said it would provide information on the Scarborough Project and other EPs. Woodside presented on the Seismic EP including by describing the activity in detail and talking through potential risks and impacts of the proposed activity and controls in place to manage them. Woodside also attempted to provide information on the D&C, SIT1 and Subsea EPs and the broader project and gave an opportunity to hear [name redacted], [name redacted] and SOS (as agreed in the meeting agenda) but was declined.
- Woodside provided an overview of the Scarborough Project and the offshore infrastructure. Despite a direction to only discuss the Seismic EP, [name redacted] asked a question relating to the Drilling EP regarding the depth of the Scarborough wells. Woodside noted the wells will be drilled in approximately 900-950 m water depth, however the wells themselves are drilled a lot deeper to get to the reservoir. Woodside noted they would take an action to provide specific accurate water depths and target reservoir depths and provided this detail as part of their correspondence on 27 July 2023. [name redacted], [name redacted] and SOS also asked questions relating more broadly to the other Scarborough EPs.
- Woodside provided an overview of the Scarborough Seismic survey activity. [name redacted] asked about the spatial extent of the Operational Area and the larger environment that may be affected. Woodside provided an overview of the spatial extent of the environment that may be affected for the Scarborough Project and how it is driven by the highly unlikely event of a hydrocarbon spill from a vessel collision. [name redacted] enquired as to:
 - **(16)** the unplanned risk of an oil spill, particularly querying who determines the credible spill scenario. Woodside offered to explain or to note the question and respond after the presentation, though EDO lawyers said they would make a list of questions to go through after.

- At this point. EDO lawyers again required that the meeting would only discuss the seismic EP. When the topic of drilling and well depth was raised later in the meeting [name redacted] indicated she didn't want to skip past and wanted to go through the 'whole lot', and, despite this, EDO lawyers again suggested the meeting was to only discuss the seismic EP.
- **(9, 10)** [name redacted], [name redacted] and SOS provided feedback and asked questions some which related to all of the Scarborough EPs. [name redacted], [name redacted] and SOS stated at the meeting words to the effect that no new cultural information was provided relevant to any of the Scarborough activities. [name redacted], [name redacted] and SOS declined to provide further detail about the nature of their cultural values at the meeting.
- **(16)** [name redacted], [name redacted] and SOS raised queries relating to the oil spill modelling Woodside undertakes to determine the EMBA. Woodside gave an overview of oil spill modelling and the stochastic nature of the model. EDO requested Woodside to provide the underlying information for the oil spill modelling about how the risk is determined i.e., worst case hydrocarbon spill scenario. Woodside provided a response to this request as part of their correspondence on 27 July 2023.
- **(14, 17)** [name redacted], [name redacted] and SOS stated that they are broadly concerned about impact on the whales and other animals, the Songlines (unspecified) and the energy lines (unspecified).
- **(7)** [name redacted], [name redacted] and SOS stated that only they know the Songlines and other Traditional Custodians did not, including MAC.
- The meeting agreed outstanding questions for Woodside to revert on. Woodside also pointed [name redacted], [name redacted] and SOS to the Summary Consultation Information sheets which are designed to explain highly complex content in a more readily understood manner.
- **(10)** Woodside asked whether [name redacted], [name redacted] and SOS could share information about themselves and SOS, in particular the communal and/ or individual interests held. [name redacted] declined to do so and suggested that this meeting was not the time for that. [name redacted] stated the focus of herself, [name redacted] and SOS at that time was to understand the activities, and that this information could be shared at a later time when they are ready.
- Woodside pointed out that [name redacted], [name redacted] and SOS had told Woodside that they would provide information at the meeting and had not done so. Woodside asked for honesty going forward so that information would be provided to Woodside where [name redacted], [name redacted] and SOS had told Woodside they would provide it.
- **(8)** Woodside offered to establish fortnightly meetings to provide [name redacted], [name redacted] and SOS opportunities to provide the information to Woodside. [name redacted], [name redacted] and SOS stated they would be unavailable for the next 6 weeks.
- SOS stated that they did not regard consultation had commenced until today. Woodside did not agree and this contradicts previous correspondence from [name redacted], [name redacted] and SOS, where letter 24 March 2023 consultation had just commenced.
- At this meeting, further meeting opportunities were also discussed by Woodside. Woodside suggested there be fortnightly meetings. [name redacted], [name redacted] and SOS declined this offer.
- The parties agreed to share the recording of the meeting.
- On 25 July 2023, EDO emailed Woodside (SI Report, reference 50.77).
- Requesting a copy of the recording,
- **(18)** Requesting a response to six follow up questions from [name redacted], [name redacted] and SOS which are relevant to this EP relating to the depth of wells, freshwater, migratory patterns of whales, dugongs and turtles, seagrass distribution, and the worst case spill scenario and modelling.
- **(19)** Informing Woodside of [name redacted], [name redacted] and SOS's desired approach for response to the meeting on 25 July and further engagements, including that [name redacted], [name redacted], SOS would provide a preliminary response to the meeting in video format on-Country, which may need to be supplemented. This video has never been provided to Woodside.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(15)** Proposing a sequence of meetings and responses be adopted on a per-EP basis.
- On 25 July 2023, Woodside emailed EDO notifying that Woodside will discuss the points raised and respond accordingly, and agreeing to provide the recording of the meeting (SI Report, reference 50.78).
- On 25 July 2023, EDO emailed Woodside requesting the meeting recording be provided via SharePoint, confirming that it would be passed on (SI Report, reference 50.79).
- On 26 July 2023, Woodside provided a recording of the meeting held on 25 July to EDO via a secure file transfer system and requested that it be passed on to SOS (SI Report, reference 50.80).
- On 27 July 2023, Woodside responded to EDO's email on 25 July (SI Report, reference 50.81):
- Confirming that a copy of the meeting recording from 25 July had been sent to EDO.
- **(18)** Providing responses to the seven follow up questions from [name redacted], [name redacted] and SOS.
- **(10)** Noting that despite agreement prior to the meeting that cultural interests and feedback would be discussed at the meeting, this was not shared.
- **(19)** Describing previous offers of meetings, noting that these were declined and confirming Woodside availability to meet on-Country.
- **(15)** Describing why it is it Woodside's preference to consult on the Scarborough Project as a whole rather than on a per-EP basis, and noting that during the meeting [name redacted], [name redacted] and SOS asked questions about various Scarborough Project EPs.
- **(8)** Describing how requirements of regulation 25 of the Environment Regulations have been met, however Woodside remains open to continued consultation with SOS in good faith.
- Noting that an offer to meet fortnightly to support consultation had been made, which was declined.
- On 3 August, Woodside emailed EDO requesting that a message be passed on to SOS (SI Report, reference 50.82).
- Following up on Woodside's offer to meet on-Country and whether SOS would be available.
- Informing that a separate Scarborough EP had been accepted by NOPSEMA with conditions requiring Woodside to seek further input and requesting that SOS inform Woodside if it has input or information to provide.
- Providing links to information about EP consultation and describing the purpose of EP consultation.
- **(8)** Informing SOS that gender-restricted or culturally sensitive information is managed carefully and attaching NOPSEMA's "Policy for Managing Gender-Restricted Information".
- On 9 August 2023, EDO emailed Woodside (SI Report, reference 50.83)
- Confirming that the recording of the meeting from 25 July had been received and passed on to SOS.
- **(9, 10)** Reiterating its clients had said they were not ready to provide Woodside with information following the presentation. This was contrary to previous correspondence where [name redacted] and [name redacted] confirmed they had information to share on all Scarborough EPs and the Scarborough Project generally (see correspondence dated 26 September 2022, 8 November 2022 and 24 November 2022).
- **(9)** Stating that approaching consultation in good faith requires flexibility, that a fortnightly meeting arrangement is not appropriate and that a proposed date for another meeting will be part of a separate email.
- **(15)** Reiterating that SOS, [name redacted] and [name redacted] intend to consult on EPs individually and consecutively, rather than concurrently, despite the previous position that consultation was occurring across all Scarborough EPs and the Scarborough Project generally.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Stating that SOS do not consider that requirements of Regulations have been met, and that a response following the meeting on 25 July is in preparation.
- On 16 August 2023, Woodside emailed the EDO to clarify that they were acting for [name redacted] and [name redacted] (SI Report, reference 50.84).
- On 17 August 2023, EDO confirmed they represented both [name redacted] and [name redacted] (SI Report, reference 50.85).
- On 21 August 2023, Woodside emailed the EDO seeking consultation regarding the Seismic EP. In the email, Woodside also reiterated previously agreed upon consultation conditions and reaffirmed its readiness and willingness to meet and consult with [name redacted], [name redacted] and SOS, and requested available dates to meet (SI Report, reference 50.86).
- On 21 August 2023, a letter was sent to the EDO to inform that Woodside's position is that it had complied with Regulations, and that Woodside is prepared to meet with [name redacted], [name redacted] and SOS at any time or place suitable to them so that they could provide any information they consider relevant. That letter attached a table confirming consultation undertaken with [name redacted], [name redacted] and SOS, relevant to all Scarborough EPs (SI Report, reference 50.87)
- On 22 August 2023, the EDO emailed Woodside informing that they would obtain further instructions from their clients regarding available dates for consultation and would email soon. The EDO also reiterated that SOS remains willing to consult (SI Report, reference 50.88).
- On 25 August 2023, the EDO emailed Woodside with two dates and location options available for consultation with their clients (SI Report, reference 50.89).
- On 25 August 2023, Woodside emailed the EDO seeking clarification on the two dates and information regarding payment for [name redacted]'s airfare to and from the consultation location (SI Report, reference 50.90).
- On 25 August 2023, the EDO emailed Woodside confirming both date options (SI Report, reference 50.91).
- On 25 August 2023, Woodside emailed the EDO confirming receipt of the email and responding that they would revert with availability (SI Report, reference 50.92).

Summary of information provided and record of consultation for this EP:

- **(8, 9, 10, 19)** On 29 August 2023, Woodside emailed the EDO with a preferred consultation meeting date of 12-13 September 2023. The purpose of the meeting was to engage in ongoing consultation in relation to Woodside's EPs (including this EP). Woodside re-affirmed that these consultations would take place on a no-admission basis in relation to whether Woodside has satisfied Regulation 25 of the OPGGS (E) Regulations given that EDO's clients hold a different view. It was also stated in the email that Woodside is proceeding on the basis that previously agreed protocols apply. Woodside also enquired about receipt of a video taken on Murujuga that was expected to be forwarded from [name redacted], [name redacted] and SOS (SI Report, reference 50.93).
- On 30 August 2023, the EDO emailed Woodside confirming receipt of the email and said they would respond soon (SI Report, reference 50.94).
- On 1 September 2023, Woodside emailed the EDO following up a confirmation for consultation on the 12 and 13 September 2023, for a 2-day on-Country workshop with SOS (SI Report, reference 50.95).
- On 3 September 2023, Woodside emailed SOS specifically regarding consultation on this EP. The email provided an overview of the activity, and requested feedback on how it could impact functions, interests or activities or cultural values and concerns about the proposed activity and what SOS proposed to be done to mitigate these concerns, and whether there are other individuals or groups that Woodside should speak to. The email included a Summary Information Sheet about the proposed activity and requested a response by 30 September 2023 (Record of Consultation, reference 1.21).
- On 4 September 2023, the EDO emailed Woodside responding to the email sent on the 29 August 2023 (SI Report, reference 50.96). The EDO:
- Stated it understood that the consultation would take place on a no-admission basis given the diverging issues of the parties and reiterated its client's position that consultation had not occurred as per the Regulations. Provided instructions on how the 2-day consultation meeting was to proceed including separating the two days over time.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Asked for the first meeting (to be held on 12 September 2023) to focus on the Seismic EP and the second meeting, (to be held sometime after the 29 September 2023), to be held on-Country with the intention of visiting the islands off Murujuga. As noted above, this was contrary to the initial position taken by [name redacted], [name redacted] and SOS that they would consult on all Scarborough EPs and had information to share on each Scarborough EP. The EDO expressed their client's interest in meeting a third time to discuss appropriate measures to be put in place for the SE.
- The EDO asked Woodside to confirm that audio recordings at the meeting are permissible, as agreed on 25 July 2023; that the consultation is to take place with only women and responded to Woodside's query about the on-Country Murujuga video stating that their clients no longer intend to provide that video.
- On 7 September 2023, the EDO emailed Woodside asking for confirmation of the consultation date of 12 September 2023 for planning purposes (flights and accommodation) (SI Report, reference 50.97).
- On 7 September 2023, Woodside emailed the EDO confirming the consultation date of 12 September 2023 along with a proposed location in Karratha. Woodside restated the previously agreed upon protocols and listed the female Woodside employees that would be attending the meeting. Woodside confirmed the consultation would be conducted on a non-admission basis given the different view of the parties as to whether consultation had occurred in accordance with Environment Regulations (SI Report, reference 50.98).
- On 7 September 2023, the EDO emailed Woodside agreeing to the location, outlining dietary requirements and listing the attendees on their side (SI Report, reference 50.99).
- On 7 September 2023, as part of the Federal Court proceedings, a second affidavit of Ms Border was filed. This affidavit sets out information relating to [name redacted], [name redacted] and SOS. It contains information that [name redacted], [name redacted] and SOS have declined to previously provide to Woodside in the course of consultation, communications and meetings that have taken place since around 2022.
- **(17)** The affidavit contains information about [name redacted], [name redacted] and SOS's interests, including in relation to whale dreaming and Songlines. This information is publicly accessible in an online court file. This information was not provided to Woodside in previous consultation and was asserted it could not be provided due to cultural sensitivity and as a result of a lack of information about the Scarborough EPs and their impacts on [name redacted]'s interests. Woodside was therefore surprised to see the information for the first time being provided in a public forum when Woodside has been asking for and consulting with [name redacted], [name redacted] and SOS in order to hear and discuss the information for at least a year.
- On 11 September 2023, the EDO emailed Woodside confirming the 12 September 2023 meeting and asked Woodside to confirm that the purpose for the meeting was to discuss the Seismic EP only and to better understand the nature of the activities and ask questions to Woodside (SI Report, reference 50.100).
- **(9, 10, 15)** On 11 September 2023, Woodside emailed the EDO (SI Report, reference 50.101):
 - Confirming that the meeting proposed is to go over the Seismic EP as well as the Scarborough Project and answer any further questions their clients have.
 - Asking [name redacted], [name redacted] and SOS to provide questions in advance so that Woodside can have answers ready to share.
 - **(9, 15)** Stating that they would like to provide a refresher on other Scarborough activities with the aim to consult and provide [name redacted], [name redacted] and SOS the opportunity to discuss their interests and any claims and objections that they may have on the broader Scarborough Project footprint.
 - Restating Woodside's commitment to ongoing consultation with [name redacted], [name redacted] and SOS as part of its commitment to ongoing consultation during the life of an EP.
 - **MEETING:** On 12 September, Woodside met with [name redacted], SOS and EDO in Karratha. [name redacted] told Woodside that [name redacted] sent her apologies as she could not make it and asked for the meeting to go ahead without her. At that meeting, Woodside provided and [name redacted] took copies of Consultation Information Sheets for Scarborough EPs including this EP. Slides relating to this EP were also included in the presentation. Culturally sensitive and gender restricted content was discussed and has been

provided to NOPSEMA separately in accordance with NOPSEMA's Managing Gender Restricted Information. The meeting covered all of the Scarborough activities to the extent that is described or discussed below (SI Report, reference 50.102). During the meeting:

- EDO and [name redacted] opened the meeting by stating that [name redacted] would like to learn more about the activities covered under the Seismic EP and that she would then revert to Woodside to share her story.
- **(18)** Woodside provided a recap of the previous meeting (on 25 July 2023) and ran through how Woodside had addressed the topics raised during that meeting. Woodside shared the control measures that had been adopted in the Scarborough EPs as a result of consultation with [name redacted], [name redacted] and SOS. [name redacted], SOS and EDO queried whether any control measures have been removed from the Scarborough EPs overtime and what mitigation measures were considered and not implemented in the EPs. Woodside explained that principles of the ALARP process underpin environmental impact and risk assessment, and that the process generally means building in and improving environmental controls over time.
- The trunkline and pipeline route were mentioned a number of times and in the context of topics of concern to [name redacted], [name redacted] and SOS.
- Throughout the meeting, [name redacted], [name redacted] and SOS raised concerns and questions, which are summarised below, and were addressed during the meeting:
 - **(20)** How Woodside determines that the potential impacts from an activity are ALARP and acceptable.
 - **(14, 18)** A concern about the potential impacts from the Seismic EP on whales and emphasised the importance of whales and their deep connection to them.
 - **(12)** Who conducted the MAC ethnographic surveys, and whether [name redacted] and SOS could be provided with the full report.
 - How Marine Fauna Observers (MFOs) are able to spot whales from the vessels.
 - A request for further information on the Jupiter Fields. Woodside noted that all the Scarborough gas fields are covered in the Scarborough OPP and that this information could be provided to [name redacted], [name redacted] and SOS.
- **(11)** In response to these concerns and questions, Woodside asked [name redacted] and SOS whether there was anything that Woodside might be able to do to help minimise any impacts to cultural values. [name redacted] and SOS stated words to the effect that the only thing Woodside could do is stop the project.
- **(9, 10, 12)** Woodside encouraged [name redacted] and SOS to take some time and read through materials provided including the Consultation Information Sheet for this EP. Woodside asked whether [name redacted] and SOS had any information from her own history and her own knowledge and information that she could share, including the kinds of issues that Woodside should be looking at that are of importance to her. [name redacted] and SOS again stated that she could not share any further information until she is provided with the cultural heritage surveys Woodside has had completed. Woodside said they would share the publicly available content from the report, and repeated that [name redacted] and SOS would need to speak to MAC if they wanted access to the full report.
- **(19)** [name redacted] and SOS indicated a desire to take Woodside employees out to Rosemary Island for an on-Country meeting. Woodside enquired as to the logistics including whether they would need to travel by boat and how long the boat ride would take.
- **(9, 10)** Woodside shared that there were consultation meetings happening in Karratha in relation to this EP, Port Headland and Roebourne the following week, and that [name redacted], [name redacted] and SOS were welcome to attend and ask any questions or share anything then.
- Woodside concluded the meeting noting the information that Woodside had committed to providing [name redacted], [name redacted] and SOS and checking whether there were any other documents to be provided.
- **(8)** On 13 September 2023, the EDO thanked Woodside by email for the meeting on the 12 September 2023. The EDO also stated they were looking forward to receiving the requested information and listed the specific requests in the email. The EDO also reiterated that it expected that certain cultural information divulged in the meeting remained confidential and

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

gender-restricted, referring to the agreed upon consultation protocols. This was not expected by Woodside because at all times, [name redacted] and SOS had control to stop a recording and point out that culturally sensitive information was being shared. It was not apparent during the meeting that the information was culturally sensitive and [name redacted] at no time asked for the recording to be stopped. In any event, Woodside acknowledged the position and undertook to manage the information sensitively (SI Report, reference 50.103).

- **(8)** On 13 September 2023, as part of the Federal Court proceedings, a third Border affidavit was filed. This affidavit confirmed that [name redacted] “has not been consulted and wishes to be consulted in relation to the Drilling EP (and other EPs relevant to the Scarborough Project that are not the subject of these proceedings”).
- On 17 September 2023, Woodside provided the information to [name redacted], [name redacted] and SOS by email (SI Report, reference 50.104).

Summary – Correspondence leading to 4 and 5 October 2023 meeting:

A significant amount of correspondence was exchanged between Woodside and [name redacted], [name redacted] and SOS from 15 September 2023 in relation to Woodside’s offer to meet on 4 and 5 October 2023 to give another opportunity for [name redacted], [name redacted] and SOS to provide and discuss information they said they had and that Woodside needed for the Scarborough EPs.

A summary of the correspondence is as follows:

- 17 September – 2 October 2023
- On 17 September 2023, Woodside emailed [name redacted], [name redacted] and SOS to agree a way forward to finalise consultation on the Scarborough EPs with the utmost expedition and in a culturally appropriate way (SI Report, reference 50.105).
- **(8, 9, 10)** Woodside confirmed the urgency around consultation and offered an opportunity to attend a meeting on-Country every day (including weekends) during the next week. Woodside also confirmed it was open to discussing and receiving any and all information on all Scarborough EPs. This was acknowledged by the EDO (Ref email 19 September 2023 and 20 September 2023).
- Given the urgency and that there was no response, the email was followed by phone calls, voice mail and text messages to [name redacted] and [name redacted] on 18 September 2023.
- Woodside confirmed that information provided at [name redacted], [name redacted] and SOS’s request relating to the DSDMP, CHMP, UWA study and OPP was already publicly available.
- The information has been previously provided to [name redacted], [name redacted] and SOS or is information they were previously aware of. Reading that information is not a reason to delay consultation on the Scarborough Commonwealth EPs.
- On 19 September 2023, the EDO sent an email to Woodside and noted that [name redacted] was unable to meet due to personal circumstances, because her lawyers were heavily occupied with the Federal Court proceedings related to another Scarborough EP and because of the large amount of information provided following the 12 September 2023 meeting (SI Report, reference 50.106).
- On 20 September 2023, Woodside sent an email to the EDO and reiterated [name redacted] had stated that she already knew the information she wished to provide to Woodside, had received information on each Scarborough EP since at least 2022, through questions and information had shown an understanding of each of the EPs and had been provided with the opportunity to discuss each of the EPs at each meeting this year (in 2023). Woodside requested a meeting by 6 October 2023 at the latest (SI Report, reference 50.107).

- On 20 September 2023, the EDO confirmed via email that [name redacted], [name redacted] and SOS were available for a meeting on 4 and 5 October 2023 and that they would like to visit the islands off Murujuga during this part of consultation and asked Woodside to coordinate logistics. A concern was expressed regarding the amount of information that would need to be reviewed prior to the meeting (SI Report, reference 50.108).
- **(9, 10, 15)** On 21 September 2023, Woodside agreed to a meeting on 4 and 5 October 2023 and agreed to investigate logistics regarding a trip to Rosemary Island. Woodside appreciated the confirmation that consultation would occur on all Scarborough EPs on those 2 meeting dates. Woodside also confirmed that there was no reason for concern regarding information that would need to be reviewed prior to the meeting because [name redacted] had stated that the information, she and SOS wanted to share with Woodside was currently known to them given she and SOS had stated that they had information they wanted and were ready to share with Woodside. Woodside also reiterated that [name redacted], [name redacted] and SOS had had that information since at least 2022 and had shown an understanding of the content. Woodside asked [name redacted], [name redacted] and SOS to confirm items so that Woodside could investigate logistics associated with arranging the meeting, including hiring a boat and a venue for the meetings (SI Report, reference 50.109).
- On 25 September 2023, the EDO confirmed that [name redacted] wished to visit Rosemary Island as part of the consultation meeting, that [name redacted]'s attendance was not yet confirmed, and that further logistics would be confirmed the next day (SI Report, reference 50.110).
- On 27 September 2023, Woodside sent a follow up email as it had still not had confirmation from [name redacted], [name redacted] and SOS regarding the items that Woodside needed to be confirmed in order for the meetings and vessel hire to have progressed. Woodside set out a proposed agenda for the 4 and 5 October 2023 meetings and some logistical issues. One issue was that the vessel Woodside was investigating had space for [name redacted] and 3 other attendees [name redacted] selected. Woodside respectfully also notified [name redacted], [name redacted] and SOS that the crew of the vessel was likely to be male and that there were potentially ways to manage the culturally sensitive information out of ear shot of the male crew (SI Report, reference 50.111).
- **(8,10)** On 28 September 2023, EDO provided some information regarding travel to Rosemary Island including that [name redacted] would potentially bring eight other attendees with her on the boat to Rosemary Island and requiring Woodside to arrange a larger vessel. [name redacted] noted that Rosemary Island is a culturally significant place and she had included two males to attend for the purposes of cultural safety. She also suggested that a third-party Appeals Convenor [name redacted] should be included in the trip. She also noted that she did not anticipate there would be any need for the Appeals Convenor or Woodside to share confidential or culturally sensitive information during or on the trip to Rosemary Island (SI Report, reference 50.112).
- On 29 September 2023, Woodside emailed the EDO advising that the recording of 12 September 2023 would be shared with NOPSEMA and confirming that culturally sensitive and gender restricted information would be managed appropriately, in accordance with NOPSEMA's "Draft Policy for Managing Gender Restricted Information" (SI Report, reference 50.113 and 50.114).
- On 29 September 2023, EDO emailed Woodside regarding meeting logistics (SI Report, reference 50.115).
- On 29 September 2023, Woodside arranged a meeting with the external boat provider to undertake a risk assessment (including for health and safety) for the proposed travel by boat to Rosemary Island (SI Report, reference 50.116).
- On 29 September 2023, during the course making preparations for the trip to Rosemary Island, Woodside received strong advice from cultural authorities that because of Rosemary Island's high cultural significance, the cultural authority did not support Woodside convening a meeting at Rosemary Island (SI Report, reference 50.117).
- On 29 September 2023, Woodside sent an email to the EDO. Woodside said that it had received broader cultural advice that Rosemary Island has high cultural significance and that Woodside has been strongly cautioned against convening a meeting at that location because of cultural sensitivity and safety concerns. Woodside suggested Hearson Cove as an alternative meeting location for [name redacted], [name redacted] and SOS to share any and all remaining information on the Scarborough EPs. Woodside also stated that it did not think it would be appropriate for the Appeals Convenor to attend, given the purpose of the meeting and questioned why three EDO lawyers needed to be in attendance (SI Report, reference 50.117).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 2 October 2023, the EDO emailed Woodside to advise it was seeking instructions regarding the matters raised and would revert as soon as possible (SI Report, reference 50.118).
- On 2 October 2023, the EDO emailed Woodside, expressing [name redacted]'s disappointment at Woodside's decision regarding Rosemary Island and confirming arrangements for the meeting on 4 and 5 October (SI Report, reference 50.119).
- On 2 October 2023, Woodside emailed the EDO regarding the meeting on 4 and 5 October 2023 explaining the decision not to progress with the meeting on Rosemary Island. The email also conveyed that Woodside's priority was to understand the cultural values that [name redacted], [name redacted] and SOS asserted that Woodside needed to know for Scarborough EPs (SI Report, reference 50.120).
- **(8)** On 4 October 2023, Woodside replied confirming that it takes cultural safety very seriously and confirmed that Ngaarda Ngarli community leaders have strongly discouraged Woodside from attending Rosemary Island. Other meeting items and logistics were confirmed (SI Report, reference 50.121).

Meeting on 4 and 5 October 2023

- **MEETING:** On 4 October 2023, Woodside met with [name redacted] and SOS in Karratha.
- Rosemary Island Trip
- **(8)** There was discussion regarding [name redacted]'s preference to travel to Rosemary Island and Woodside's position that it could not attend due to the strong cautions given to Woodside with regard to spiritual and cultural health and safety reasons.
- Woodside's aim was to maintain integrity and respect for all First Nations people with whom it consults and to present the information in a balanced manner. [name redacted] stated that she found Woodside's change in position on attending Rosemary Island to be disrespectful. In particular, [name redacted] was offended by the fact that Woodside had spoken to other person(s) about her consultation with them.
- During the meeting, [name redacted] and SOS shared their perspective on matters leading up to the meeting, including their disappointment about the cancellation of the Rosemary Island trip. Woodside confirmed it was following meeting protocols and showing respect to the Traditional Custodian groups for the area. Woodside suggested alternative meeting locations and other options, as at a previous meeting [name redacted], [name redacted] and SOS had indicated that they would tell their story at Hearson Cove. The offer to meet at another place or meet at an alternative location on-Country of cultural significance where Woodside could receive the information was rejected by [name redacted] and SOS - all options suggested by Woodside were rejected including:
 - A suggestion was made by Woodside that they use the boat Woodside had secured to circumnavigate Rosemary Island (but not disembark onto Rosemary Island), allowing [name redacted] and SOS to share her information. [name redacted] and SOS agreed that this could be a compromise. Woodside contacted Bhagwan Marine during the meeting to see if a boat was available for 5 October 2023 that could circumnavigate Rosemary Island to allow for consultation on sea country to proceed, without landing on the Island. Bhagwan Marine confirmed it had a suitable vessel available and made special efforts to stand-up a marine crew. When Woodside confirmed this was available, [name redacted] rejected the offer and declined to meet.
 - Another option suggested was that [name redacted] and SOS visited Rosemary Island and produced an audio recording of her story; and
 - A meeting at Hearson Cove, as Hearson Cove had previously been identified as culturally safe by [name redacted], [name redacted] and SOS and a place where they had (in March 2023) shared information with Woodside.
- Presentation and discussion on Scarborough Eps.
- **(14, 21, 22)** During the meeting, Woodside presented on each of the Scarborough EPs (D&C, SIT1, Seismic, Subsea and this EP) and controls suggested to demonstrate how Woodside had addressed each of the topics and cultural values previously raised by [name redacted], [name redacted] and SOS and the relevant controls in place for each of the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Scarborough EP activities. Woodside displayed a table on-screen during the meeting which contained the previously expressed areas of interest to [name redacted], [name redacted] and SOS and controls pertaining to each of these interests. EDO questioned why controls were being discussed, and not EP overview / content. In reviewing the newly adopted controls that were able to be covered, [name redacted], SOS and EDO provided views on some controls including the cultural awareness crew training control that had been included in all Scarborough EPs. [name redacted] and SOS's feedback on the control was adopted.

- **(10, 14,)** While Woodside was presenting on the controls implemented for humpback whales, [name redacted] recognised the words were those she had said in the previous meeting with Woodside and noted that she was pleased that her words were used to describe the controls in the EP. [name redacted] and SOS noted that all marine animals are important, not just whales. Woodside asked [name redacted] and SOS to clarify, as in the previous meeting on 12 September 2023 [name redacted] and SOS had specified humpback whales as being of particular importance. [name redacted] and SOS stated that she had always said all animals and plants have importance, but whales and turtles are more apparent due to their size.
- **(15)** On request of [name redacted] and SOS, Woodside presented on Scarborough activities (D&C, SITI, Subsea, Seismic and this EP), showing the presentation that had been prepared for the 25 July 2023 meeting including the FPU in the project overview, when Woodside was ready to present on all EPs and was directed to only discuss the Seismic EP.
- Woodside described the trunkline route, the floating production unit, and proximity to existing infrastructure and controls protecting the environment during installation. [name redacted] and SOS had various questions, including:
 - **(16)** [name redacted] stated she had watched a lot of spills and was concerned that they didn't get contained.
 - **(16)** Woodside responded that gas released at 900m (Scarborough well depths) would dissolve in the water column and would not result in a typical oil spill scenario, but that the greater risk for the Scarborough activities including this from a spill perspective was diesel spill from vessels caused by vessel collisions, for example. Woodside provided an overview of a credible spill scenario from a vessel collision and discussed the Environment that May be Affected (EMBA).
 - **(16)** Whether NOPSEMA approves the oil spill preparedness and response plans, Woodside confirmed that these plans were assessed and approved as part of the EP assessment process.
 - Whether the floating production unit meant that Woodside had a version of the Karratha Gas Plant on the bottom of the ocean. Woodside explained the floating production unit in detail, how it was moored in place and connected by flow lines and umbilicals to the wells.
- Woodside provided an overview of the proposed trunkline and explained the process for selecting the trunkline route and trunkline construction methodology. [name redacted] and SOS spent some time looking at the figures showing where the trunkline passed through the Montebello MUZ and the various marine park classifications around the Montebello Islands and sought to understand that further. Woodside provided an overview of the dredging activity for the offshore borrow ground area, and explained the logic behind the focus on environmental impacts from dredging in that EP.
- Meeting conclusion.
- Woodside emphasised again a willingness to listen to [name redacted]'s and SOS's story and keenness to ensure cultural values are protected.
- **(10, 19)** Towards the end of the meeting, Woodside confirmed that a boat was available to circumnavigate Rosemary Island on 5 October 2023 as was the agreed compromise position. [name redacted] said words to the effect that this was not good enough, and after a brief discussion on the logistics of the boat trip to Rosemary Island, the meeting ended.
- **(9)** After the close of the meeting, Woodside informed the EDO lawyers that another option available for [name redacted], [name redacted] and SOS to share [name redacted]'s story was to share it directly with NOPSEMA.
- On 5 October 2023, Woodside attended the Red Earth Arts Precinct ready, willing, and able to engage in consultation on 5 October 2023. Despite Woodside confirming it was ready for the meeting, [name redacted] and EDO declined to attend.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Correspondence following the 4 October 2023 meeting:

A summary of the correspondence is as follows:

- Woodside and the EDO exchanged emails following the meeting, noting that accounts and take-aways from the meeting differed.
- On 4 October 2023, the EDO emailed Woodside stating that each of the Scarborough EPs were not discussed “substantively” with [name redacted] before the meeting that day (4 October 2023), other than the Seismic EP discussed at the 25 July 2023 meeting, and that it was the first time Woodside had provided a “substantive” presentation describing the activities described in the D&C, SIT1 and Subsea EPs (SI Report, reference 50.122).
- **(21)** Through the EDO, [name redacted] emphasised the importance of understanding the impacts and controls relating to animals affected by the activities.
- **(8,9,10,19)** The EDO stated that [name redacted] did not agree to meet again on 5 October 2023 in Karratha and [name redacted] could not proceed with the proposed agenda, as she could not share the story she wanted to share with Woodside anywhere other than on Rosemary Island. [name redacted] wished to engage in consultation and share information about her story and how her functions, interests or activities may be affected, and she did not wish to meet in those circumstances.
- **(19)** The EDO re-emphasised the importance of attending Rosemary Island for purposes of [name redacted] sharing information.
- **(8, 9, 10, 19)** On 5 October 2023, Woodside emailed the EDO acknowledging the email sent on 4 October 2023 and stated that Woodside’s understanding of the meeting differed. Woodside enquired if there were alternative approaches for [name redacted] to share her story from Rosemary Island, such as recording her story or inviting the Regulator to attend and that they remained open to understanding how the issue could be progressed (SI Report, reference 50.123).
- On 5 October 2023, the EDO emailed Woodside stating that [name redacted] and EDO would not be attending the meeting that day (SI Report, reference 50.124).
- [name redacted] considered Woodside had seriously damaged the relationship of trust and confidence required for consultation. The EDO were instructed to say that [name redacted] was open to the prospect of future meetings if the relationship was able to be repaired.
- **(8, 9, 10, 19)** On 5 October 2023, Woodside emailed EDO sharing their disappointment that [name redacted] and SOS would not be attending the meeting that day. Woodside confirmed employees were at the Red Earth Arts Precinct centre, as agreed, and were keen for the meeting to go ahead, for Woodside to hear further information [name redacted] wished to say on the Scarborough EPs. Woodside re-iterated that there was no disrespect intended towards [name redacted]. Woodside stated that there was a limit where consultation could be held in circumstances where there were unacceptable health and safety risk, as was the case in the instance of Woodside employees going onshore for a meeting with [name redacted] and SOS at Rosemary Island when it was advised not to. Woodside reiterated that Woodside employees had received strong advice on cultural safety and did not have cultural permission to convene a meeting with [name redacted] or SOS on Rosemary Island and asked again if there were alternatives available for [name redacted] to share her information. A link to the NOPSEMA draft policy for managing gender restricted information (PL2098) was provided (SI Report, reference 50.125).
- **(8, 9, 10, 19)** On 5 October 2023, EDO sent a letter on behalf of [name redacted] to NOPSEMA, and copied Woodside (SI Report, reference 50.126), which:
 - Acknowledged that, in [name redacted]’s view, consultation with Woodside began in October or November 2022,
 - Pointed out that [name redacted] believed Woodside had shared information regarding consultation with individuals not involved in the consultations.
 - Said that Woodside presented on matters outside of the agreed agenda, noting there was discussion on control measures Woodside had adopted in each of its EPs following the 12 September 2023 meeting.
 - Stated that [name redacted] felt the trust and respect had been damaged and was not conducive to her sharing her knowledge.

- Sought to arrange a meeting with female representatives of NOPSEMA at Rosemary Island or another place of her choosing, where she is able to share her information in a culturally safe manner.
- **(8, 9, 10, 19)** On 9 October 2023, Woodside emailed NOPSEMA stating that Woodside disagreed with a number of statements contained within the EDO letter sent to NOPSEMA (of 5 October 2023) and, accordingly, wished to correct the record and provide context. Woodside had consistently provided opportunities for [name redacted], [name redacted] and SOS to share information and engage in two-way dialogue and had attempted to accommodate the varied consultation requests made by [name redacted], [name redacted] and SOS. The email included supporting information as attachments (SI Report, reference 50.127).
- On 22 November 2023, Woodside emailed [name redacted], [name redacted] and SOS following up specifically on consultation for this EP, the email re-attached the email sent 3 September 2023. The email provided an overview of the activity and a Summary Information Sheet and requested feedback prior to 8 December 2023 (Record of Consultation, reference 1.51).
- On 27 November 2023, Woodside emailed [name redacted], [name redacted] and SOS advising that consultation would close for this EP on 20 December 2023 and offered to meet between 4 and 20 December 2023. The email included a table of feedback previously provided by [name redacted], [name redacted] and SOS on other Scarborough EPs and Woodside's assessment of relevance to this proposed activity and proposed controls for comment. The email notified that consultation on this EP would now close on 20 December 2023 (SI Report, reference 50.128).
- **(1, 9, 16, 20)** On 6 December 2023, the EDO emailed Woodside, following up on information requested during October on spill modelling and impacts to species for each Scarborough Project activity. A request was made for a further consultation meeting in relation to this activity and that information on impacts and mitigation measures on a number of issues be provided prior to the proposed meeting (SI Report, reference 50.129).
- **(9)** On 13 December 2023, Woodside emailed EDO, attaching copies of consultation emails previously sent, including the information that had been requested and sent and noting that the EDO subscribed to the Woodside website and receives Information Sheets and updates on consultation through that means. Woodside confirmed that the FPU was previously discussed, including on 4 October 2023 where [name redacted] made direct reference to it. Woodside agreed to meet on terms best suited to the purposes of consultation. Woodside noted that [name redacted], [name redacted] and SOS have shown understanding of the project as demonstrated by questions and issues raised and the various mechanisms through which Woodside has sought and welcomed feedback and noted that consultation has limits and that a titleholder is not obliged to wait indefinitely for a response or gain consent. Woodside also requested EDO respond as to who their client was (SI Report, reference 50.130).
- On 13 December 2023, EDO emailed Woodside, confirming that [name redacted] was available to meet Woodside on 20 December 2023 in Perth, requesting that Woodside coordinate a suitable venue (SI Report, reference 50.131).
- On 18 December 2023, the EDO emailed Woodside, confirming that the EDO was currently acting only for [name redacted], not [name redacted] or SOS. EDO requested copies of audio recordings of previous meetings and suggested another meeting date in January 2024 (SI Report, reference 50.132).
- **(9)** On 19 December 2023, Woodside emailed EDO noting disappointment that [name redacted] was unable to meet on 20 December 2023, offering another alternative to meet during December. Woodside noted that as previously advised, consultation would close on 20 December 2023 and that Woodside intended to conclude consultation under regulation 25 of the Environment Regulations as soon as possible so that feedback, claims and objections can be best considered prior to EP submission. Woodside re-attached the information requested in the 13 December 2023 email, noting the information had been provided twice before. Woodside provided a video describing the FPU and the Scarborough Project (SI Report, reference 50.133).
- **(9, 10)** On 19 December 2023, Woodside emailed EDO, noting that Woodside had previously provided a recording of the meeting held on 25 July 2023. Woodside stated that EDO and Woodside had both made its own individual recordings of meetings on 12 September and 4 October 2023, and as previously requested, Woodside desired copies of EDO's recordings to cover inaudible sections in Woodside's version so that transcripts could be finalised (SI Report, reference 50.134).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(9, 10)** On 20 December 2023, EDO emailed Woodside, stating that Woodside's given the planned commencement of the activity, consultation prior to the EP being submitted should be delayed. They also stated that [name redacted] has not had the opportunity to consider the proposed activity or provide feedback and did not recall being provided with any information about this EP at previous meetings. Noted that onshore processing and GHG emissions are a potential risk or impact which should be addressed in the EP and had not been discussed at previous meetings. EDO requested availability to meet and offered to share EDO's recording of the consultation meeting on 4 October 2023, but stating that the EDO did not have a recording of the meeting on 12 September 2023 (SI Report, reference 50.135).
- On 20 December 2023, given the EDO's email of 18 December 2023, Woodside also separately emailed [name redacted]/Save Our Songlines making reference to the 3 September 2023 email sent to [name redacted]/[name redacted]/Save Our Songlines and asking whether they would like to separately meet regarding this EP (SI Report, reference 50.136). In addition:
- Woodside referenced an email sent on 22 November 2023 seeking feedback by 8 December and another email sent on 27 November advising consultation would be closing on 20 December 2023 but offering to meet between 4-20 December 2023.
- Advising that as of 20 December 2023, consultation had closed under regulation 11A (now regulation 25 of the Environment Regulations).
- Noting that consultation could still occur throughout the life of an EP.
- Attached the Summary Information Sheet and Table of information and topics previously provided by SOS, sent by Woodside on 27 November 2023.

Ongoing engagement:

- **(9)** On 21 December 2023, Woodside emailed EDO, notifying that as previously communicated, consultation under regulation 25 of the Environment Regulations for the EP closed on 20 December 2023 and that [name redacted] has had a reasonable period of time to consider the activities and provide feedback about how these activities affect her functions, interests or activities (SI Report, reference 50.137).
- Noting that the FPU was discussed at face-to-face meetings on 14 March, 25 July, 12 September and 4 October 2023, and mentioned the following:
 - Woodside sent [name redacted] an email attaching the Summary Information Sheet for the activity on 3 September 2023, requesting feedback by 30 September 2023.
 - At the face-to-face consultation meeting on 12 September 2023, [name redacted] and SOS took hard copies of the Consultation Information Sheet and Summary Information Sheet for this EP. A photo of these Information Sheets available at the meeting was provided.
 - Woodside again sent [name redacted] an email attaching the Summary Information Sheet for the activity on 22 November 2023, requesting feedback by 8 December 2023.
 - On 27 November 2023, Woodside emailed [name redacted] advising that consultation would close on 20 December 2023 and suggested a range of meeting dates in December 2023. To assist, this email attached a table summarising a review of previous feedback provided by [name redacted], [name redacted] and SOS since at least 2022 on other Scarborough EPs, in the context of this proposed activity.
- **(11)** [name redacted] attended a protest at Woodside on 7 December 2023, indicating her availability around that time to participate in consultation, however selected the final date for consultation (20 December 2023) to meet, a date for which she was subsequently not available.
- **(9, 10, 11)** Referring to a radio interview [name redacted] had on 3CR, on 17 December 2023, where she stated that she had done everything she could in terms of providing information to Woodside as part of the consultation process and that significant information had been provided.
- **(9, 10)** On 22 December 2023, EDO emailed NOPSEMA (and copied Woodside Feedback) (SI Report, reference 50.138):

- Informing NOPSEMA that Woodside had closed consultation on 20 December 2023, and attaching an email chain in which [name redacted] requested a consultation meeting after 24 January 2024. The EDO stated that [name redacted] considered this request reasonable, given that the activities in the EP are not proposed to begin until 2025.
- Noting that [name redacted] has not yet met with Woodside in relation to this EP, and that the EP covers activities that will have impact that goes beyond the scope of what has previously been discussed.
- Stating that consultation on the EP had not occurred with [name redacted] in accordance with regulation 25 of the Environment Regulations, and urging NOPSEMA to ask Woodside to provide further information so that NOPSEMA can be satisfied that consultation in accordance with the Regulations had occurred.
- **(9)** On 19 January 2024, Woodside emailed EDO in response to an email sent to Woodside by the EDO on 21 December 2023 and an email sent to NOPSEMA by the EDO on 22 December 2023, confirming consultation had closed for the preparation of this EP on 20 December 2023 (SI Report, reference 50.139). In addition:
- Despite this, as per a previous request from the EDO on 18 December 2023 for [name redacted] to meet with Woodside after 24 January 2024, Woodside proposed a meeting between 22 January and 11 February 2024. The purpose of the meeting would be to hear anything further [name redacted] may have to provide by way of feedback in relation to this EP. As previously stated, Woodside could also speak to a slide pack on the FPU and Operations scopes.
- On 24 January 2024, the EDO emailed Woodside thanking them for their email and stating they were currently seeking instructions from [name redacted] and will revert as soon as possible (SI Report, reference 50.140).
- **(8, 9)** On 8 February 2024, the EDO emailed Woodside thanking them for their patience while they obtained instructions from [name redacted]. A date for a meeting in Karratha was suggested with other logistical details. A request for a slide presentation on this activity be provided prior to the meeting and the same protocols as previously agreed. EDO again requested a transcript from previous meetings (SI Report, reference 50.141). EDO also:
- **(23)** Noted compliance with the existing meeting protocol but also noted that any information coming out of consultation with [name redacted] is not communicated to any third parties.
- On 9 February 2024, Woodside emailed the EDO and advised them it was available to attend the 16 February 2024 meeting in Karratha and it would revert with further responses (SI Report, reference 50.142)
- On 9 February 2024, the EDO emailed Woodside and advised they had made travel details (SI Report, reference 50.143).
- On 12 February 2024, Woodside emailed the EDO advising that due to a pilots' strike Woodside attendees had been waitlisted for flights and proposed that the meeting take place over Teams or in Perth if [name redacted] and [name redacted] were intending to fly to Karratha (SI Report, reference 50.144).
- On 13 February 2024, the EDO emailed Woodside twice discussing logistics details and suggesting availability for alternative dates and advised they would seek instructions and come back to Woodside (SI Report, reference 50.145 and 50.146).
- On 13 February 2024, Woodside emailed the EDO confirming logistics to meet (SI Report, reference 50.147). In addition:
- Woodside asked for confirmation as to who the EDO was representing at the meeting and if [name redacted] was attending as a Traditional Owner, Representative of SOS and/or representation of the Australian Conservation Foundation.
- **(8, 23)** Agreed to comply with the meeting protocol, except for a new addition about no consultation with third parties, Woodside noted that due to the communal aspect of culture it may be necessary certain information would require testing broad acceptance with an appropriate cultural authority.
- **(9, 10)** Woodside confirmed the purpose of the meeting was to consult on this EP and to hear anything further [name redacted], SOS and [name redacted] may have to provide by way of feedback in relation to this EP. Woodside would also speak to a slide pack on the Floating Production Unit and Operations scopes.

- **(10)** Woodside attached the following for pre-read:
 - The summary of claims made by [name redacted], [name redacted] and SOS as part of previous Scarborough consultations and how they relate to this EP, previously sent on 27 November 2023 and 13 December 2023.
 - The Summary Information Sheet (prepared with Traditional Owner input), that had been provided to [name redacted], [name redacted], SOS and EDO via email in September, November, and December 2023. [name redacted] collected a consultation Information Sheet in person at the meeting of 12 September 2023.
 - A video which provided an overview: Scarborough and Pluto Train 2 – YouTube.
- **(9, 10)** Requested an indication of the topics, issues and questions that [name redacted], [name redacted] and SOS would be interested in being discussed at the meeting.
- **(9, 10)** Looking forward to the opportunity to discuss and engage in dialogue on the EP and in particular to hearing objections or claims about the adverse impact of each activity to which the EP relates.
- Woodside thanked the EDO for providing its recording for the 4 October 2023 meeting which now enabled a full transcript to be prepared (which was then attached to the email).
- Woodside noted it was still awaiting provision of the EDO recording from the 12 September 2023 meeting and attached Woodside's recording of the meeting.
- **(23)** On 14 February 2024, the EDO emailed Woodside noting [name redacted] did not wish to go ahead with the meeting as she did not believe her cultural information would be contained to only being shared with NOPSEMA, due to Woodside consulting with cultural authorities about a trip to Rosemary Island in October 2023. EDO noted that [name redacted] might share information in a written or other format rather than in a meeting. No further information has been received (SI Report, reference 50.148).
- On 15 February 2024, Woodside emailed the EDO noting disappointment at the cancellation of the meeting again, but that it looked forward to receiving written feedback on this or any other EP from [name redacted] at any time (SI Report, reference 50.149).
Regarding confidentiality Woodside noted:
 - **(8)** As per the agreed protocol, cultural details would be kept confidential amongst females, and they have not disclosed any cultural details to the public that had come out of consultation.
 - **(23)** They sought direction from the Traditional Custodians and Elders of Murujuga about a visit to Rosemary Island, as Woodside were made aware of the cultural significance of Rosemary Island through existing relationships. Woodside respects the cultural values and concerns of all the Traditional Custodians and could not proceed to meet on Rosemary Island when told it was not culturally safe to do so. Woodside did not share details from consultation that [name redacted] said was sensitive women's information.
 - **(22)** Information shared is on the public record through evidence presented in Cooper v NOPSEMA, in affidavits, open court, through assertions online and in the media and other public forums.
 - **(23)** On 21 March 2024, EDO emailed Woodside disagreeing with Woodside's assessment of *Munkara v Santos* and suggesting Woodside had changed their approach to consultation shortly before the proposed February 2024 meeting (SI Report, reference 50.150).
 - **(23)** On 28 March 2024, Woodside emailed EDO again re-iterating that it was appropriate for Woodside to take advice from Murujuga Elders and requesting once again to meet with [name redacted] at her earliest convenience (SI Report, reference 50.151).
 - **(23)** On 10 April 2024, EDO emailed Woodside once again disagreeing with the *Munkara v Santos* assessment and claiming Woodside were not answering [name redacted]'s questions (SI Report, reference 50.152). The EDO also stated:

- **(23)** [name redacted] would only provide information in writing and it would not contain culturally sensitive information. This means Woodside may not have complete information about how all relevant persons' functions, interests and activities may be affected.
- **(23)** [name redacted] also noted Woodside had not informed her of with whom it shared information about the Rosemary Island trip.
- On 9 May 2024, SoS and/or [name redacted] emailed Woodside (SI Report, reference 50.153) in response to another activity, with comments relating to this EP and the other activity. The response noted there was no culturally sensitive information included and outlined the following feedback:
 - An overview of [name redacted]'s functions, interests and activities including:
 - [name redacted]'s connection to Murujuga and cultural responsibilities.
 - **(11)** [name redacted]'s opposition to all industry on Murujuga.
 - **(10)** That [name redacted] holds information that is critical for Woodside to understand the impacts of its activities and that [name redacted] may also have feedback on proposed mitigation measures.
 - **(1)** [name redacted]'s concern that the sacred rock art at Murujuga is at risk from emissions from the Pluto and Scarborough facilities.
 - **(24)** That Woodside's proposed mitigation/management measures to reduce GHG emissions does not focus on the protection of the environment.
 - **(4)** [name redacted] is concerned about the cumulative impacts of any industry on Murujuga which:
 - restricts access to Murujuga.
 - affects cultural practices.
 - contributes to cultural genocide by creating irreplaceable, irreversible cultural damage.
 - Affects the environment.
 - **28)** That climate change should be considered as an impact.
 - **(25)** That activities are offshore from culturally significant islands, including Rosemary Island which is a women's island to which [name redacted] has a significant connection and that Rosemary Island:
 - holds a connection to songlines.
 - Is a main breeding ground and habitat for turtles, which are culturally significant.
 - That erosion on the island caused by climate change, vessel traffic and fishing prevent turtles laying eggs and incubating properly.
 - Can only be protected by stopping the Scarborough project, and asks how Woodside will protect the island and the species reliant on the island.
 - **(26)** That consultation of relevant persons needs to be consistent. Specifically:
 - Offering the same level of support.
 - Consulting in two stages, information provision, then response.
 - Providing assurance that culturally sensitive information will not be shared.
 - **(17)** That the environment and cultural values are one, that Dreaming stories come from the animals depicted on the rock art and will live forever, that the connection and songlines are being disrupted.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(27)** That there are other individuals that Woodside should speak to about these activities but [name redacted] is not comfortable identifying these people.
- On 14 May 2024, Woodside emailed SOS and/or [name redacted] to thank them for their feedback, confirm that Woodside would reply shortly, and request an attachment that was missing from the original email (SI Report, reference 50.154).
- On 16 May 2024, EDO on behalf of [name redacted] emailed Woodside with a copy of the body of the Border Affidavit attached (SI Report, reference 50.155).
- **(25)** On 23 May 2024, Woodside responded to the 9 May 2024 correspondence from SOS and/or [name redacted] to advise that some of their feedback for this EP related to a WA State EP, and provided information relating to Rosemary Island, turtles and other concerns relating to activity in State waters (SI Report, reference 50.156).
- On 29 May 2024, Woodside emailed SoS and/or [name redacted] with a response to their feedback of 9 May 2024 (SI Report , reference 50.157). The response addressed:
 - Woodside’s understanding of [name redacted]’s connection to Murujuga.
 - How Woodside deals with culturally sensitive information and the protocol that has been followed.
 - **(11)** [name redacted]’s opposition to the existence of all industry on Murujuga.
 - The process by which consultation has taken place, including:
 - providing sufficient information, and a reasonable period of time and opportunity to be heard and share concerns, claims and/or objections, and to input on measures Woodside could implement to manage risks and impacts.
 - **(10)** That information held by [name redacted] and described as relevant to Woodside’s activity had not been provided, despite opportunities to do so.
 - **(26)** That Woodside consults consistently with relevant persons, while making consultation bespoke where appropriate.
 - **(26)** That consultation is designed to enable effective engagement and the method of consultation is led by the Traditional Custodians.
 - **(27)** That Woodside identifies relevant persons for consultation and advertises publicly to allow others to self-identify.
- **(1)** [name redacted]’s concerns relating to Murujuga rock art including:
 - The regulations relating onshore processing facilities.
 - Involvement in monitoring industrial emissions and strategies relating to Murujuga rock art.
 - The inconclusive nature of research to date and Woodside’s support of further research including involvement in the Murujuga Rock Art Monitoring Program.
 - **(3)** That activities described in this EP do not involve the movement or disturbance of any heritage sites including rock art.
- **(24)** Mitigation and measures to reduce direct GHG emissions to ALARP
- **(28)** The need to consider the impacts of climate change.
- The assessment and controls of the highly unlikely potential impact of seabed disturbance.
- **(25)** [name redacted]’s connection to Rosemary Island, and the unlikely impact of this activity on the Island and its turtles.
- **(17)** The connection of culture and environment and recording of cultural values.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
---	--	-------------------------------

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(1) Threat posed to Murujuga rock art due to acid gas emission from Woodside's LNG processing operations on the Burrup and climate change.</p>	<p>(1) Woodside Assessment: Potential impact from indirect emissions onshore are assessed in the EP. Woodside Response: The EP assesses Direct Emissions and Indirect atmospheric emissions (Sections 6.76, 6.77). Gas will be processed and exported onshore. Woodside will implement relevant feasible recommendations of the Murujuga Rock Art Monitoring Program (MRAMP).</p>	<p>(1) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(2) MAC is subject to gag clauses.</p>	<p>(2) Woodside Assessment: None of Woodside's agreements with Traditional Custodians include gag clauses or restrictions on voicing opinions on its projects. Woodside Response: Woodside supports Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the Scarborough Project. [For example, emails from Woodside 5 Jan 2023, 6 June 2023 and letter dated 17 April 2023]. In any event, Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(2) Not required.</p>
<p>(3) Threat posed to Burrup by movement of rock art and damage to other heritage.</p>	<p>(3) Woodside Assessment: No rock art will be moved by Woodside during the Scarborough Project. Woodside Response: Woodside advised that no rock art will be displaced as a result of the Scarborough Project. [For example, email from Woodside 5 Jan 2023 letter dated 17 April 2023 and on 6 June 2023].</p>	<p>(3) Not required.</p>

<p>(4) Cultural heritage impacts both direct and indirect (restriction of access to sites of cultural and spiritual significance impacts to cultural obligations).</p>	<p>(4) Woodside Assessment: Woodside accepts that access restrictions to Operational Area apply, as detailed in Section 6.7.1 of the EP, noting the distance offshore for the Operational Area. Woodside Response: Woodside EPs assess cultural heritage impacts, including both direct and indirect impacts and risks associated with PAPs.</p>	<p>(4) Existing controls considered sufficient as described in Section 6.10 of the EP.</p>
<p>(5) [name redacted], [name redacted] and SOS stated their desire to be consulted as relevant persons.</p>	<p>(5) Woodside Assessment: Woodside accepts [name redacted], [name redacted] and SOS as relevant persons to be consulted on the Scarborough Project and this activity. Woodside Response: Woodside has consulted extensively with [name redacted], [name redacted] and SOS on both the proposed activity and the broader Scarborough Project and have responded to all requests for further information. [For example, see consultation record in this EP, letter dated 3 July 2023]. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(5) Not required.</p>
<p>(6) Precautionary approach taken for gas related industry.</p>	<p>(6) Woodside Assessment: Woodside assesses emissions against a range of scenarios including the IEA NZE. Woodside has undertaken work to estimate the direct and indirect emissions from the Scarborough project that may impact the Murujuga petroglyphs. There are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the FPU, and potential impacts from onshore processing of Scarborough gas are assessed in the EP. Woodside Response: Gas will be processed and exported onshore. Woodside will implement relevant feasible recommendations of the MRAMP. A description of the existing environment is provided in Section 4 of the EP.</p>	<p>(6) Existing controls considered sufficient as described in Section 6 of the EP. A description of the existing environment is provided in Section 4 of the EP. GHG Emissions are assessed in Section 6.7.6 of the EP. The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>

<p>(7) MAC does not represent the interests of [name redacted], [name redacted] or SOS. [name redacted], [name redacted] and SOS have interests that are separate and distinct from those of MAC.</p>	<p>(7) Woodside Assessment: Woodside deals individually with each relevant person/group that Woodside accepts as relevant for any EP, including the Scarborough Project and this activity. Woodside Response: Woodside has consulted with [name redacted], [name redacted] and SOS separately from MAC and other relevant representative bodies [See consultation record]. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(7) Not required.</p>
<p>(8) Sensitive information shared by [name redacted], [name redacted] and SOS was to be treated with high sensitivity and confidentiality. Meeting protocols agreed by both parties should be met.</p>	<p>(8) Woodside Assessment: Woodside respects that relevant persons share sensitive information, including gender specific information and that information given with confidentiality expectations are respected and protocols adhered to. Woodside Response: Sensitive information has been appropriately handled by Woodside in accordance with agreed protocols. Woodside has agreed with requests from [name redacted], [name redacted] and SOS in relation to meeting protocols. This has included significant efforts by Woodside to allocate women subject matter experts to prepare and attend meetings with [name redacted], [name redacted] and SOS where matters are otherwise managed by male subject matter experts for Woodside [for example, see emails setting up meetings on 14 March 2023, 25 July 2023, 12 September 2023 and 4 October 2023. See emails on 3, 4 and 5 October 2023]. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(8) Not required.</p>

<p>(9) [name redacted], [name redacted] and SOS have not been afforded reasonable opportunity or sufficient information for consultation.</p>	<p>(9) Woodside Assessment: Since 2022, Woodside has provided information to [name redacted], [name redacted] and SOS on the broader Scarborough Project. Information and discussion on the FPU has occurred since March 2023. Information to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities in their Traditional Owner and eNGO capacities has been provided and available for at least 12 months for this activity. [name redacted], [name redacted] and SOS have been provided a reasonable time and opportunity to consult in relation to this EP and all of the Scarborough EPs. [Please see consultation record].</p> <p>Woodside Response: The information provided by Woodside meets the requirements of regulation 25 of the Environment Regulations for the reasons set out above. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(9) Not required.</p>
<p>(10) [name redacted], [name redacted] and SOS have interests they wish to share with Woodside, for consideration in Woodside's Scarborough EPs.</p>	<p>(10) Woodside Assessment: Woodside has provided a reasonable period of time and ample opportunity for [name redacted], [name redacted] and SOS to provide the information that they say Woodside requires for its EPs. Despite providing that reasonable period of time and opportunity, [name redacted], [name redacted] and SOS have not provided the information. Throughout consultation, [name redacted], [name redacted] and SOS have continued to state that they have additional information they wish to tell Woodside and that they say Woodside requires for its EPs, and, despite Woodside offering ample opportunity, to provide that information to Woodside, it has not occurred. [Ref, for example, 17 April 2023 letter, letters setting up each meeting on 14 March, 25 July, 12 September, and 4 October 2023 and most recently 3, 4 and 5 October 2023 correspondence]. On several occasions, [name redacted], [name redacted] and SOS have declined to provide the information to Woodside and have instead provided information publicly [Affidavits of [name redacted] September 2023] or offered to provide the information to others [Ref letter to NOPSEMA 26 September 2022, letter to NOPSEMA 4 October 2023].</p>	<p>(10) Not required.</p>

	<p>Woodside Response: There is a limit to consultation – Woodside is not required to wait indefinitely to receive information. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates. Woodside engages in ongoing consultation throughout the life of an EP.</p>	
<p>(11) Objection to the Scarborough Project, including the view that no controls could be implemented to minimise potential impacts to cultural values.</p>	<p>(11) Woodside Assessment: Based on engagements with [name redacted], [name redacted] and SOS, they have expressed a fundamental objection to the Scarborough Project, including this EP. Despite this, Woodside continues to engage in good faith to understand what could be done to minimise any potential impacts to cultural interests and values held by [name redacted], [name redacted] and SOS. [Ref, for example, consultation record and discussions with [name redacted], [name redacted] and SOS on their views regarding controls in place to manage topics of concern to them – Ref, for example, 12 September and 4 October 2023 meetings]. Woodside Response: Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2).</p>	<p>(11) Impact potential to Cultural Features and Heritage Values are assessed in Section 6.10 of the EP with appropriate controls adopted including Management of Change and New Knowledge processes to capture new cultural values or information provided during consultation, application of the Woodside Unexpected Finds Procedure, training of relevant vessel and ROV crew in what to do in the case of an Unexpected Find, compliance with the ATSIHP Act, Management of vessel speeds in the humpback and pygmy blue whale BIAs during migration seasons(s) and Ministerial Statement obtainment by onshore processing facilities. .</p>
<p>(12) Request for MAC ethnographic survey results to be shared with [name redacted], [name redacted] and SOS. Requests to know who from MAC participated in the ethnographic surveys.</p>	<p>(12) Woodside Assessment: Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities. A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside respects this position and does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so. Woodside Response: Woodside has provided [name redacted], [name redacted] and SOS with the outcomes of these surveys to the extent that these can be shared publicly, consistent with the information in the public domain (i.e., where culturally appropriate). [Ref, for example, 14 March 2023 and following correspondence]. In any event, as above at (2), Woodside</p>	<p>(12) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.	
(13) Whether the Scarborough activity included fracking.	(13) Woodside Assessment: No fracking will occur in the Scarborough Project for any of the activities. Woodside Response: Woodside confirmed that no fracking would be undertaken as part of Scarborough activities	(13) Not required.
(14) Cultural features associated with whales.	(14) Woodside Assessment: Woodside understands that some species hold spiritual and cultural importance to [name redacted], [name redacted] and SOS. Woodside discussed with [name redacted], [name redacted] and SOS controls that Woodside has put in place to manage impacts and risks relating to their spiritual and cultural connection to the environment. [Ref, for example, 25 July 2023 meeting and following correspondence, 12 September 2023 meeting and following correspondence as well as 4 October 2023 meeting]. Woodside Response: Woodside has implemented controls to reduce potential risks and impacts to ecological and cultural values to ALARP and to an acceptable level.	(14) Control 24.8 has been adopted which requires the management of vessel speeds in the humpback and pygmy blue whale migration BIA(s) during migration season(s) – within the Trunkline Operational Area – to ≤ 10kn

<p>(15) That it is not appropriate for Woodside to consult on the Scarborough Project as a whole in each meeting.</p>	<p>(15) Woodside Assessment: [name redacted], [name redacted] and SOS originally sought to consult on all Scarborough EPs at once and confirmed they have information and “objections” to share on all Scarborough EPs as early as September 2022. [Ref correspondence and information in the public domain from around February 2022, July 2022, 26 August 2022 and 4 January 2023]. From about June 2023, this position changed, and [name redacted], [name redacted] and SOS expressly directed Woodside to consult on individual EPs. Woodside has been ready, willing and able to consult on all Scarborough EPs (including this EP) since consultation commenced, and prepared materials to consult on all EPs – and attempted to present these materials – however was directed by EDO to only talk about the Seismic EP, or to describe activities and not cover controls [Ref 12 September 2023 meeting and 4 October 2023 meeting]. Woodside Response: In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(15) Not required.</p>
<p>(16) How credible spill scenarios are determined and who determines these.</p>	<p>(16) Woodside Assessment: Woodside aligns with industry guidance in assessing these scenarios. A quantitative hydrocarbon spill modelling using a three-dimensional hydrocarbon spill trajectory and weathering model was undertaken. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA. Woodside Response: The EMBA for this activity is determined by a highly unlikely release of marine diesel as the result of damage to the production facility or vessel collision. Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8 of the EP.</p>	<p>(16) Credible spill scenarios are described in Section 6.8.2 of the EP. Woodside has addressed oil spill preparedness and response strategy in Appendix H of the EP. No additional measures or controls are required.</p>
<p>(17) Cultural features associated with Songlines, dreaming and energy lines.</p>	<p>(17) Woodside Assessment: Woodside understands that Songlines and energy lines to hold personal spiritual and cultural value individually (rather than communally) to [name redacted], [name redacted] and SOS. Woodside has consistently sought to understand the nature of these values to ensure</p>	<p>(17) Woodside has considered [name redacted], [name redacted] and SOS’s feedback and updated Section 4.9 to record topics of interest and cultural values, including Songlines and energy lines. These are assessed in Section 6.10 with appropriate controls implemented. At</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>impacts to these values can be minimised. [name redacted], [name redacted] and SOS have declined to provide further information on these values.</p> <p>Woodside Response: In any event, Woodside has sought to include controls that seek to reduce risks and impacts to ALARP and acceptable levels and has sought [name redacted], [name redacted] and SOS's views on the proposed controls. [Ref, for example, 12 September 2023 meeting and following correspondence, 4 October 2023 meeting].</p>	<p>this stage, Woodside has not been provided with specific information on these potential values to enable a more fulsome assessment. In lieu of additional information on these values, Woodside has implemented a control that inductions for all relevant marine crew will include information on cultural values, including tangible and intangible cultural heritage (C 24.3). This control was updated further during the 4 October 2023 meeting based on feedback received during the meeting that the control should be timebound (updated to state this should occur prior to the individual undertaking the activity)-</p>
<p>(18) Demonstrated an interest in marine mammals, seagrass, the meeting of freshwater and saltwater.</p>	<p>(18) Woodside Assessment: [name redacted], [name redacted] and SOS have not expressly confirmed their interests, rather, have raised topics of interest to them. Woodside has considered [name redacted], [name redacted] and SOS's topics of interest and shared relevant information with [name redacted], [name redacted] and SOS relating to these interests, including controls put in place to manage risks and impacts to them, during meetings and subsequent emails. [Ref, for example, 25 July 2023 meeting and following correspondence, 12 September 2023 meeting and following correspondence, and 4 October 2023 meeting].</p> <p>Woodside Response: Woodside has updated Section 4.9 to record the interests and assessed them in Section 6.10 implementing appropriate controls.</p>	<p>(18) Woodside has considered topics raised by [name redacted], [name redacted] and SOS's interests and updated Section 4.9 to record these. These are assessed in 6.10 with appropriate controls implemented. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural features or heritage values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2).</p>
<p>(19) Need for [name redacted], [name redacted] and SOS to share their cultural knowledge and story on-Country.</p>	<p>(19) Woodside Assessment: Woodside has consistently sought to make arrangements for [name redacted], [name redacted] and SOS to be able to share their cultural knowledge and stories in a culturally appropriate manner, including offering and attending several on-Country meetings (Ref 14 March, 25 July, 12 September and 4 October 2023 meetings). Woodside also sought to meet the requests of [name redacted] and SOS to attend an on-Country meeting at Rosemary Island but was cautioned by the relevant cultural authority that Woodside did not have cultural permissions or spiritual protection to do so. Woodside and [name redacted] reached a compromise relating to circumnavigating Rosemary Island rather than going on shore.</p>	<p>(19) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>[name redacted] later declined this compromise and refused to share information [Ref meeting on 4 October 2023].</p> <p>Woodside Response: In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [name redacted], [name redacted] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	
<p>(20) Environmental impacts from Scarborough activities and how Woodside determines that environmental impacts are at an ALARP and acceptable level.</p>	<p>(20) Woodside Assessment: Principles of the ALARP process underpin environmental risk assessment. Woodside Response: As required by the Environment Regulations i.e. Regulations 13(5), 13(6), 13(7), the EP will demonstrate that environmental impacts and risks will be reduced to ALARP and acceptable levels. Woodside explained this process</p>	<p>(20) The ALARP process is described in Section 2 of the EP.</p>
<p>(21) The need for Woodside to consider all animals in EP impact assessments.</p>	<p>(21) Woodside Assessment: Woodside has confirmed that consideration is given to all marine animals in the EP preparation process, Woodside has also stepped through these issues during consultation meetings [Ref, for example 12 September 2023 meeting and 4 October 2023 meeting]. Woodside Response: Marine fauna that may credibly be impacted by both direct and/or indirect activities are considered in the impact assessment (Section 6).</p>	<p>(21) Credible impacts from planned and unplanned activities are assessed in Section 6 of the EP.</p>
<p>(22) Cultural values publicly available in the Affidavits of Ms Border (September 2023) and Concise Statement (Ref. Section 4.9.4):</p> <ul style="list-style-type: none"> • Murujuga 	<p>(22) Woodside Assessment: Through the publicly available Affidavits of Ms Border (August and September 2023) and Concise Statement, Woodside has been made aware that [name redacted], [name redacted] and SOS may hold cultural and spiritual values associated with Caring for Country, bungarra, eagle and kangaroo. Bungarra, eagles and kangaroos have not</p>	<p>(22) Woodside has considered [name redacted], [name redacted] and SOS's feedback and updated Section 4.9 to record indicated topics of interest and cultural values.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> • Rock art • Caring for Country • Bungarra • Eagle • Kangaroo 	<p>been identified as species credibly impacted by either direct or indirect activities associated with this proposed activity. Woodside has assessed potential risk/impact of the activity on receptors raised. Woodside has not been provided with any additional detail regarding values associated with Caring for Country.</p> <p>Woodside Response: Woodside has updated Section 4.9 to record topics of interest and cultural values and assessed them in Section 6.10 with appropriate controls implemented. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2).</p>	<p>These are assessed in Section 6.10, with appropriate controls implemented.</p>
<p>(23) Expect no communication with third parties about what is said in consultation.</p>	<p>(23) Woodside Assessment: The Federal Court case of Munkara v Santos confirms that the communal aspect of the cultural beliefs and values requires validation that individual beliefs are broadly representative of other members of the group.</p> <p>Woodside Response: If Woodside is informed that a belief is cultural it must be respectfully taken back to the relevant cultural authority to understand whether it is broadly accepted. Gender sensitive information would follow the relevant gender protocols.</p>	<p>(23) Not required.</p>
<p>(24) That proposed mitigation/management measures to reduce GHG emissions does not focus on the protection of the environment.</p>	<p>(24) Woodside Assessment: The Scarborough Operations EP estimates and assesses Greenhouse Gas Emissions (GHG) from relevant sources including operational flaring exhaust emissions from fuel combustion, fugitive emissions from the FPU, exhaust emissions from internal combustion engines on project vessels and helicopters as well as GHG emissions associated with onshore processing of Scarborough gas (including third party transportation, regasification and combustion by end users).</p> <p>Woodside Response: The Scarborough FPU facility has been designed to reduce direct GHG emissions to ALARP, by implementing a number of GHG abatement opportunities in design and operational planning. The EP includes</p>	<p>(24) Not required, existing controls sufficient.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>a range of controls to reduce impacts to ALARP and Acceptable levels. A comprehensive list of controls to protect the environment from emissions impact potential was provided in the full response to [name redacted], along with technology employed in the FPU facility design to reduce and minimise emissions.</p>	
<p>(25) The significance of offshore islands, including Rosemary Island, which is a womens island. That Rosemary Island has:</p> <ul style="list-style-type: none"> • a place to which [name redacted] has a significant spiritual connection • a connection to songlines • is a breeding ground for turtles which are a culturally significant species • erosion due to climate change and vessel traffic that prevents turtles from laying eggs. • Can only be protected by stopping the Scarborough project. 	<p>(25) Woodside Assessment: Woodside notes your connection to Rosemary Island and acknowledges the significance of the area around Rosemary Island to various turtle species. This EP does not cover activities in State Waters, where Rosemary Island is located. Woodside Response: Woodside has responded in writing to the issues raised, advised that the area around Rosemary Island relates to the Scarborough Trunkline Operations (State Waters) EP, and invited further feedback be provided for the relevant EP if required.</p>	<p>(25) Not required.</p>

<p>(26) That consultation should be consistent with all relevant persons.</p>	<p>(26) Woodside Assessment: Woodside endeavours to consult consistently while still making consultation bespoke, where appropriate. Relevant persons are provided with Consultation Information Sheets and First Nations relevant persons are provided with an additional Summary Information Sheet. Relevant persons are asked their preferred method of consultation and it is accommodated as far as is reasonable in the circumstances. Woodside Response: Consultation undertaken with Traditional Custodians considers how they would like to be engaged and support is tailored to the needs of the specific relevant person and requests for support as far as is reasonable in the circumstances.</p>	<p>(26) Not required.</p>
<p>(27) That there are other individuals who should be consulted but [name redacted] is not comfortable identifying them.</p>	<p>(27) Woodside Assessment: Woodside seeks to engage with relevant persons it has identified as well as those who self-identify. Woodside Response: Woodside applies its methodology for the identification of relevant person for consultation and advertises publicly to invite comment from others who self-identify. Woodside notifies the relevant cultural authorities under statute, such as the Registered Native Title Bodies Corporate recognised under the Native Title Act 1993 (Cth) and the Murujuga Aboriginal Corporation included under the Aboriginal Heritage Regulations 1974 (WA), and seeks advice as to individuals who should be consulted and asks them to forward our notifications to their membership and the Traditional Owners they represent, if appropriate.</p>	<p>(27) Woodside's Consultation Approach is outlined in Appendix F.</p>
<p>(28) That Woodside consider climate change as an impact of its activities and how climate change will affect Murujuga, the rock art, and Country more broadly.</p>	<p>(28) Woodside Assessment: The Environment Plans do assess Climate Change in the context of emissions (direct and indirect). Woodside Response: Woodside does consider climate change. The Scarborough Operations EP and Pluto Operations EP assess Routine and Non-routine Greenhouse Gas Emissions as well as Offshore and Indirect Emissions from Gas Processing Onshore, including potential to impact accelerated weathering of Murujuga rock art.</p>	<p>(28) Woodside assesses emissions and potential impacts and controls in Section 6.3 and Section 6.7.7. of the EP. No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received as part of ongoing consultation. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on [name redacted], [name redacted] and SOS's functions, interests or activities.</p>
---	--	--

Outcomes of Consultation

Woodside has consulted in accordance with regulation 25 of the Environment Regulations with [name redacted], [name redacted] and Save Our Songlines (SOS) by providing them with sufficient information and a reasonable period of time and opportunity to make an informed assessment of the possible consequences of the activities on their functions, interests or activities in their individual Traditional Owner and eNGO capacities.

Woodside has addressed each objection or claim made by [name redacted], [name redacted] and SOS, and has implemented controls in response to topics raised by them during consultation as well as in response to objections and claims they have made. Woodside has consulted [name redacted], [name redacted] and SOS both individually and together, providing opportunities for any and all topics relating to their functions, interests or activities – and potential risks or impacts to their functions, interests or activities – to be discussed, including those relating to a fundamental objection to the Scarborough Project as well as those relating, in accordance with Indigenous tradition, to spiritual and cultural heritage and values.

For completeness, it is also noted that [name redacted] and [name redacted] have also, from time to time, been members of Aboriginal corporations who have been separately consulted as relevant persons by Woodside.

As demonstrated in the summary above consultation with [name redacted], [name redacted] and SOS complies with regulation 25 of the Environment Regulations and is complete.

Research institutes and local conservation groups or organisations

University of Western Australia (UWA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed UWA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
---	--	-------------------------------

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
---	--	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with UWA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to UWA on 9 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s Brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the UWA with the opportunity to provide feedback over a 4.5-month period.

Commonwealth Scientific and Industrial Research Organisation (CSIRO)

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed CSIRO advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.44).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CSIRO for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to CSIRO on 11 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s Brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the CSIRO with the opportunity to provide feedback over a 4.5-month period.

Curtin University

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed Curtin University advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.44).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Curtin University for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Curtin University on 11 August 2023 based on their functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided a link to NOPSEMA’s Brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the Curtin University with the opportunity to provide feedback over a 4.5-month period.

Cape Conservation Group (CCG)

Historical Engagement:

- Cape Conservation Group (CCG) did not respond to Woodside’s emails, but in correspondence sent to Woodside on 13 March 2023 in relation to another Woodside EP, CCG stated:
 - **(1)** Woodside be held accountable for failing to maintain infrastructure during and after the use/decommissioning of a field, as well as environmental and social damage caused by its industrial activities. **(1)** Woodside did not need to respond to this as its unrelated to this EP but has responded to this issue via a separate decommissioning EP.
 - Due to previous Woodside consultations being unsatisfactory, CCG efforts in this space would be directed towards the regulators, government and media.

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed Cape Conservation Group advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) In relation to another EP, Woodside should be held accountable for failing to maintain infrastructure during and after the use/decommissioning of a field, as well as environmental and social damage caused by its industrial activities.</p>	<p>(1) Woodside Assessment: Woodside noted CCG’s feedback and assessed it would continue to provide consultation information to CCG where it deemed CCG to be a relevant person. Woodside Response: Woodside sent CCG consultation information for this EP and a follow up consultation email.</p>	<p>(1) Not required.</p>
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Cape Conservation Group for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Cape Conservation Group on 11 August 2023 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA’s Brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the Cape Conservation Group with the opportunity to provide feedback over a 4.5-month period.

Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Protect Ningaloo for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since August 2023.
- Consultation information provided to Protect Ningaloo on 11 August 2023 based on their functions, interests or activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside has provided a link to NOPSEMA's Brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- Woodside published advertisements in a national, state, and relevant local newspapers on 9, 11 and 29 August 2023 advising of the proposed activities and requesting comments or feedback.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided the Protect Ningaloo with the opportunity to provide feedback over a 4.5-month period.

Table 3: Engagement Report with Persons or Organisations Assessed as Not Relevant

The black numbering **(N)** in the *Summary of information provided and record of consultation for this EP* in Table 3 denotes an issue raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside’s response to that issue.

Commonwealth Commercial fisheries and representative bodies		
Western Tuna and Billfish Fishery		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside emailed Western Tuna and Billfish Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. (1) Between 10 August 2023 and 9 September 2023, five individual licence holders from the Western Tuna and Billfish Fishery responded asking to be removed from Woodside’s mailing list and for Woodside to consult with Tuna Australia (SI Report, references 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, and 2.7) (1) On 10 September 2023, Woodside responded to five individual licence holders thanking them for their email and confirming they would be removed from Woodside’s mailing list and correspondence would be directed to Tuna Australia (SI Report, references 2.8, 2.9, 2.10, 2.11 and 2.12). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
(1) Five licence holders from the Western Tuna and Billfish Fishery asked to be removed from Woodside’s mailing list and for Woodside to consult with Tuna Australia.	(1) Woodside confirmed it had removed the licence holders from mailing lists and had consulted Tuna Australia. Woodside has consulted AFMA, Tuna Australia, DAFF–Fisheries, CFA, and individual relevant licence holders.	(1) Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF–Fisheries (see Table 7-7) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP. No additional measures or controls are required.

Outcomes of Consultation		
<p>While Western Tuna and Billfish Fishery is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Western Tuna and Billfish Fishery to provide feedback during the consultation process.</p>		
<p>Tuna Australia</p>		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> • On 9 August 2023, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. • (1) On 14 August 2023, Tuna Australia emailed Woodside stating it would consult on this EP once it had a services agreement in place (SI Report, reference 8.1). • On 23 August 2023, in a response to another EP, Tuna Australia stated it had not yet heard about the services agreement and asked if Woodside was planning to engage Tuna Australia on behalf of the tuna longline industry for this EP (SI Report, reference 8.2). • (1) On 22 November 2023, Woodside responded thanking Tuna Australia for its email of 23 August 2023 regarding this EP (SI Report, reference 8.3) and advised: <ul style="list-style-type: none"> – Woodside’s consultation process identified relevant persons and provided them with sufficient information and a reasonable period to make an informed assessment of the possible consequences of a proposed activity on their functions, interests or activities. – Woodside obtained contact details of individual Commonwealth fishing statutory fishing rights and fishing permit holders so that consultation was consistent with the Regulations. As noted on its website, AFMA’s expectation was that petroleum operators consulted with fishing operators about all activities and projects which may affect day-to-day fishing activities. – In addition to consulting individual licence holders, Woodside consulted relevant fishing industry associations and representative bodies such as Tuna Australia and Commonwealth Fisheries Association, and referred to the AFMA website to help inform which associations and bodies were relevant. – While the management area for the Western Tuna and Billfish Fishery overlaps the Operational Area for this EP, based on AFMA data, no recent fishing effort had occurred within the Operational Area for at least the past 10 years. Despite this, Woodside chose to consult licence holders in this fishery. – (1) The Offshore Environment Regulations do not require entry into service agreements in order to meet EP consultation requirements. (1) Woodside has assessed TA as not relevant for this EP. – Woodside considers it has met its consultation obligations under the Regulations and given Tuna Australia sufficient time and information to provide input. 		
<p>Summary of Feedback, Objection or Claim</p>	<p>Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response</p>	<p>Inclusion in Environment Plan</p>

<p>(1) Tuna Australia advised it would consult once it had a services agreement in place.</p>	<p>(1) Woodside has assessed Tuna Australia as not relevant for this EP.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

While Tuna Australia is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Tuna Australia to provide feedback during the consultation process.

State Commercial fisheries and representative bodies

Mackerel Managed Fishery – Pilbara (Area 3)

Summary of information provided and record of consultation:

- On 9 August 2023, Woodside sent a letter to Mackerel Managed Fishery – Pilbara (Area 3) individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.46).

<p>Summary of Feedback, Objection or Claim</p>	<p>Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response</p>	<p>Inclusion in Environment Plan</p>
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

While Mackerel Managed Fishery – Pilbara (Area 3) is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Mackerel Managed Fishery – Pilbara (Area 3) to provide feedback during the consultation process.

Nickol Bay Prawn Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Nickol Bay Prawn Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 31 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.46).
- On 11 September 2023, WAFIC, on behalf of Woodside, emailed Nickol Bay Prawn Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.47) and provided a Consultation Information Sheet.
- On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Nickol Bay Prawn Managed Fishery individual licence holders regarding the activity (SI Report, reference 45.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Nickol Bay Prawn Managed Fishery is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Nickol Bay Prawn Managed Fishery to provide feedback during the consultation process.

Exmouth Gulf Prawn Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Exmouth Gulf Prawn Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Exmouth Gulf Prawn Managed Fishery is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Exmouth Gulf Prawn Managed Fishery to provide feedback during the consultation process.

Gascoyne Demersal Scalefish Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside sent a letter to Gascoyne Demersal Scalefish Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.46).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Gascoyne Demersal Scalefish Fishery is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Gascoyne Demersal Scalefish Fishery to provide feedback during the consultation process.

Recreational marine users and representative bodies

Shark Bay Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 31 October 2023, Woodside emailed Shark Bay Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 15 December 2023, Woodside sent Shark Bay Recreational Marine Users a follow up email (Record of Consultation, reference 1.59) and asked for feedback by 22 December 2023.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Shark Bay Recreational Marine Users is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Shark Bay Recreational Marine Users to provide feedback during the consultation process.

Titleholders and Operators

Finder Energy

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Finder Energy advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan

No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
---	--	--

Outcomes of Consultation

While Finder Energy is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Finder Energy to provide feedback during the consultation process.

JX Nippon Oil & Gas Exploration Corporation

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed JX Nippon Oil & Gas Exploration Corporation advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While JX Nippon Oil & Gas Exploration Corporation is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for JX Nippon Oil & Gas Exploration Corporation to provide feedback during the consultation process.

Traditional Custodians and nominated representative corporations

Wanparta Aboriginal Corporation (Wanparta)

Wanparta is established under the Native Title Act 1993 by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Summary of information provided and record of consultation for this EP:

- On 18 July 2023, Woodside emailed Wanparta NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 29.1). This email also reiterated Woodside's request that Wanparta advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 21 July 2023, Wanparta emailed Woodside noting they were planning two Board meetings in order to hear from the multiple proponents that have identified Wanparta as Relevant Persons and inviting Woodside to present at one of these meetings (SI Report, reference 29.2).
- On 25 July 2023, Woodside emailed Wanparta accepting the proposed date and proposing a longer time on the agenda (SI Report, reference 29.3).
- On 26 July 2023, Woodside emailed Wanparta Woodside's planned Program of Ongoing Engagement with Traditional Custodians and confirming Woodside's preference to attend the 31 August 2023 Board meeting (SI Report, reference 29.4).
- On 28 August 2023, Woodside emailed Wanparta advising of the proposed activity (Record of Consultation, reference 1.25) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that Wanparta and its members may have within the EMBA, information on how Wanparta would like to engage, and requested that Wanparta provide information to other individuals as required.
- On 31 August 2023, Woodside met with Wanparta Board and members in South Hedland (SI Report, reference 29.5), Woodside:
 - Described the EP framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of EPs.
 - Displayed a map of activities open for feedback to be discussed in the meeting and provided a list of other upcoming activities open for consultation in 2023/24.
 - Woodside provided an overview of this activity, describing the location, offshore facility, subsea infrastructure, gas pipeline, liquefied and domestic gas.
 - Described the types of vessels involved.
 - Described the planned impacts and respective controls of the above activity including: the presence of vessels, seabed disturbance, underwater noise, discharge from vessels, emissions to air and external lighting.
 - Described planned and unplanned environmental risks and impacts in accordance with tables provided in the Information Sheets for the activities, emphasising that unplanned risks are not expected to occur and are unlikely.
 - Displayed and spoke to the EMBA for each proposed activity, and the individual worst-case loss of containment scenarios identified, noting that they are all diesel fuel releases which would only be caused by vessel collisions.
 - Stated that Woodside wanted to understand how the functions, activities, or interests of Wanparta and the people it represents may be impacted by any of those activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Specifically asked the following:
 - How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?
 - What are your concerns about the proposed activities and what do you think we should do about them?
 - Is there anything you would like included in the EPs before submission?
 - Is there anyone else Woodside should consult with about the activities?
- Advised that Woodside will continue to take feedback from Wanparta for the life of the EP.
- Provided personal contact details for further feedback. Woodside provided NOPSEMA's contact details, should Wanparta desire to provide feedback directly to the Regulator.
- At the 31 August 2023 meeting Wanparta asked/noted:
- **(1)** What chemicals in the water may be discharged during commissioning.
 - **(1)** Woodside responded that biocide, oxygen scavenger and corrosion inhibitor, have low concentrations. They are carefully regulated to make sure they don't persist in the environment.
- **(2)** Wanparta stated that water is extremely important to Ngarla people, and they feel a responsibility to look after the ocean and lore. They noted the spiny bream, octopus, stingray and kestrel as totemic species.
- **(3)** Wanparta would like to discuss a program of support for rangers with Woodside in the future.
 - **(3)** Woodside responded that they would come back to Wanparta with regards to training and future support for a Ranger Program.
- **(3)** Wanparta would like to engage in an annual meeting with Woodside.
- Wanparta advised that whilst there are 5 family groups within Wanparta, only 4 were represented at the meeting. The others would be brought up to speed by emails, and chats.
- Wanparta broke for a closed session, when asked if there were any stories that could be shared with Woodside.
- **(4)** On return, Wanparta through their lawyer gave verbal support for this EP activity and said they were keen to continue a relationship with Woodside.
 - **(4)** Woodside responded that there was further opportunity to provide feedback and indicated tentative dates for meetings in the next eight to nine months.
- On 14 September 2023, Woodside emailed Wanparta following up on previous consultation and information discussed at the 31 August 2023 meeting (SI Report, reference 29.6). Woodside advised of the planned start date for the activity (December 2024), and once again requested if Wanparta was aware of any other people with whom Woodside should consult, and if there was any information Wanparta wished to provide on cultural values. The email requested that information be distributed to members or individuals who may be interested. It requested this information prior to 11 December 2023, but reiterated that Woodside will take feedback after the commencement of the activity as part of ongoing consultation. The Summary Information Sheet for this activity was attached. Woodside sent through an EP and activity dates for this EP, asking Wanparta for any further feedback. The email also contained within NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Wanparta advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 14 September 2023, Wanparta thanked Woodside and confirmed receipt of emails (SI Report, reference 29.7).
- **(3)** On 4 October 2023, Woodside phoned Wanparta, to check in generally and inform about upcoming EPs (SI Report, reference 29.8). A discussion was had about Wanparta Rangers, a tour of the Karratha Gas Plant and a school kids visit to the Woodside Perth Office.
- On 4 October 2023, Woodside emailed Wanparta following up with a summary of the previous phone call (SI Report, reference 29.9). The outcomes of the phone discussion were:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (3) Wanparta's interest in a Wanparta Ranger program and EP funding.
- Wanparta's interest in a Karratha Gas Plant visit, as well as possible school visits and Perth Office visits.
- Wanparta's request for updates on EPs unrelated to this one.
- Woodside's query into Wanparta's view on a formal authorisation/consent/endorsement process regarding future EPs.
- On 6 October 2023, Wanparta emailed Woodside thanking Woodside for the 4 October email and summary of discussion had and stating that Wanparta would bring all the 4 October 2023 items to the Board for further consideration and would revert shortly after (SI Report, reference 29.10).
- (3) On 10 November 2023, Woodside and Wanparta spoke by phone, Wanparta emailed Woodside a Ngarla ranger proposal document (SI Report, reference 29.11).
- (5) On 13 November 2023, Wanparta emailed Woodside, requesting funding to assist with ongoing consideration of Woodside EPs (SI Report, reference 29.12). Wanparta noted the consultation meeting to be held between Wanparta and Woodside in February 2024.
- (5) On 22 November, Woodside acknowledged Wanparta's requests and agreed to seek out available options for funding (SI Report, reference 29.13).
- On 24 November 2023, Woodside emailed Wanparta requesting availability for a telephone discussion relating to EP funding (SI Report, reference 29.14).
- On 30 November 2023, Wanparta emailed Woodside in relation to a financial matter, their email also noted the Directors availability for a meeting on 23 February 2024 (SI Report, reference 29.15).

Ongoing engagement:

- Between 8 – 15 February 2024, Woodside and Wanparta exchanged emails confirming logistics of consultation and site visit meetings in Karratha for week of 26 February 2024 (SI Report, references 29.16, 29.17, 29.18, and 29.19).
- On 20 February 2024, Wanparta emailed Woodside informing of a death in the community and requesting a re-schedule of the meeting (SI Report, reference 29.20).
- On 21 February 2024, Woodside acknowledged and agreed to a re-schedule (SI Report, reference 29.21).
- On 23 February 2024, Wanparta emailed Woodside with suggested dates for a re-scheduled meeting in April 2024 (SI Report, reference 29.22).
- On 26 February 2024, Woodside emailed Wanparta confirming availability for the proposed April meeting and noting logistics (SI Report, reference 29.23).
- Between 16-22 April, Woodside and Wanparta exchanged emails regarding logistics and funding for a meeting for consultation on another activity and a site visit with the Wanparta Board. (SI Report, references, 29.24-29.33)
- On 24 April 2024, Woodside met with Wanparta at Murujuga. Woodside presented an overview of EPs and ongoing consultation in 2024, and provided information on another activity, Aboriginal employment, and ranger programs. Wanparta informed Woodside that there were no issues following the discussion (SI Report, reference 29.34).
- On 7 May 2024, Wanparta emailed Woodside following the meeting on 24 April 2024 (SI Report, reference 29.35). Wanparta advised:
 - (6) The Ngarla People have a deep spiritual connection to sea country.
 - (2) The Ngarla peoples' totem species – the octopus, stingray, spiny bream fish and kestrel – is of great significance.
 - (2) The protection and management of marine life and healthy ocean plays a significant role in their lore, culture and customs.
 - (7) That they request Woodside attends an annual Board meeting with Wanparta for the purposes of progressing ongoing and meaningful consultation.

- On 30 May 2024, Woodside emailed Wanparta in response to their correspondence of 7 May 2024. Woodside acknowledged and supported the feedback raised by Wanparta including:
 - (2) The significance of the Ngarla People's totem species- the octopus, stingray, spiny bream fish and kestrel.
 - (2) The role that the protection and management of marine life plays in Ngarla People's practise of lore, culture and customs.
 - (6) The Ngarla People's connection to sea country.
 - (7) Woodside's willingness to attend Wanparta's annual Board meeting for the purpose of consultation.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1)</p> <p>During face-to-face engagement, related to this activity and others Wanparta requested further information on topics related to this proposed activity which was responded to during the meeting:</p> <ul style="list-style-type: none"> • What chemicals in the water may be discharged during commissioning. 	<p>(1)</p> <p>Woodside Assessment: Woodside's response at the meeting noted that biocide, oxygen scavenger and corrosion inhibitor, have low concentrations. They are carefully regulated to make sure they don't persist in the environment.</p> <p>Woodside Response: No further information request or follow up has been received.</p>	<p>(1)</p> <p>Existing controls considered sufficient, as described in Section 6.</p>
<p>(2)</p> <p>Wanparta stated that water and the ocean is extremely important to them, and that they have a responsibility to look after the ocean and their law. They noted the bream, octopus, stingray and kestrel as totemic species.</p>	<p>(2)</p> <p>Woodside Assessment: Woodside assessed Wanparta's interest in water and the species described to represent potential cultural values.</p> <p>Woodside Response: Wanparta's interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including controls, have been assessed.</p>	<p>(2)</p> <p>Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.10.</p>
<p>(3)</p> <p>Wanparta expressed interest in a range of social investment opportunities including a ranger program and have an interest in ongoing engagement with Woodside.</p>	<p>(3)</p> <p>Woodside Assessment: A framework agreement is an effective mechanism for social investment opportunities, including for a ranger program and ongoing consultation. It aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians. Ranger program funding may allow Traditional Custodians to be involved in spill response.</p> <p>Woodside Response: Woodside is continuing to work with Wanparta regarding social investment opportunities. A framework agreement will be proposed at a meeting in April with the Wanparta Board.</p>	<p>(3)</p> <p>Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, an agreement with Wanparta (among other things) could address social investment in ranger programs and would set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(4) At the 31 August 2023 meeting, Wanparta expressed support for the EP, Wanparta said they had no concerns regarding the activity for now and wished to be kept updated on any changes.</p>	<p>(4) Woodside Assessment: Woodside accepts Wanparta’s position. Woodside Response: Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>(4) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>
<p>(5) Wanparta requested funding to participate in ongoing consultation.</p>	<p>(5) Woodside Assessment: Woodside considers all funding requests and supports funding within reasonable parameters. The proposed agreement will address any reasonable requests for funding, including ranger program support. Woodside Response: Woodside has agreed to fund reasonable requests.</p>	<p>(5) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>
<p>(6) On 7 May 2024, Wanparta advised of their connection to sea country.</p>	<p>(6) Assessment: Woodside assessed Wanparta’s connection to sea country to represent potential cultural values. Woodside Response: Wanparta’s interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including controls, have been assessed.</p>	<p>(6) Woodside recognises that Wanparta’s connection to Sea Country (Section 4.9). Potential impacts on cultural features and heritage values are assessed in Section 6.10 of the EP.</p>
<p>(7) On 7 May 2024, Wanparta requested Woodside attend an annual Board Meeting for the purpose of ongoing consultation.</p>	<p>(7) Woodside Assessment: Woodside supports ongoing consultation with Traditional Custodians. Woodside Response: Woodside supports ongoing consultation with Wanparta through their preferred method of consultation.</p>	<p>(7) Not required.</p>
<p>Whilst feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>Based on the engagement to date, no additional controls have been identified.</p>

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While Wanparta is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Wanparta to provide feedback during the consultation process.

Malgana Aboriginal Corporation

Malgana is established under the Native Title Act 1993 by the Malgana people to represent the Malgana people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 4 April 2023, Woodside met with Malgana and presented on several activities including the Scarborough Project relevant to Malgana (SITI and Subsea) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP) (SI Report, reference 30.1). Malgana asked several general questions related to activities, during the meeting which were responded to at that time.

Summary of information provided and record of consultation for this EP:

- On 19 July 2023, Woodside emailed Malgana NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 30.2). This email also reiterated Woodside's request that Malgana advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email.
- On 26 July 2023, Woodside emailed Malgana Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 30.3).
- **(1)** On 1 August 2023, Woodside emailed Malgana (SI Report, reference 30.4) with follow up information that came out of a query about hydrocarbon spill modelling by Malgana at the meeting of 4 April 2023:
 - **(1)** The information showed that Shark Bay hydrodynamics are adequately resolved in the model, as tidal flushing can be observed. This reinforces that the indication from modelling that the EMBA for the activity does not enter Shark Bay is appropriate.
- **(2)** On 1 August 2023, Malgana emailed Woodside with thanks for the information and noting that Malgana was looking to get an environmental consultant to provide advice to their Board, noting they were seeking quotes and would come back to Woodside for cost approval (SI Report, reference 30.5).
- **(2)** On 3 August 2023, Woodside emailed Malgana notifying about another activity and requesting to meet to discuss matters, including the issue raised by Malgana about getting an environmental consultant to give advice to their Board (SI Report, reference 30.6). Woodside also said they were available to catch up over the phone over the next coming days to discuss the above matters and for Malgana to reply with a preferred time. Malgana have not yet responded.
- On 1 September 2023, Woodside emailed Malgana advising of the proposed activity (Record of Consultation, reference 1.35) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that Malgana and its members may have within the EMBA, information on how Malgana would like to engage, and requested that Malgana provide information to other individuals as required.
- On 11 September 2023, Malgana emailed Woodside advising that the information on the proposed activity had been shared with the Board for feedback (SI Report, reference 30.7).
- On 14 September 2023, Woodside emailed Malgana thanking them for sharing the information with the Board and offering assistance from Woodside (SI Report, reference 30.8). Woodside provided information on the planned start date for relevant Scarborough activities discussed at the meeting of 4 April 2023 and NOPSEMA's Consultation Guidelines,

<p>Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside’s request that Malgana advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.</p> <ul style="list-style-type: none"> On 20 October 2023, Woodside emailed Malgana requesting feedback/further information about activities that Woodside had previously notified Malgana about and offering assistance to Malgana for consultation if required (SI Report, reference 30.9). On 26 October 2023, Woodside attempted to call Malgana, but the number was disconnected, Woodside emailed Malgana following up on the proposed activities and requesting feedback and re-iterating an offer of assistance if required by Malgana about the activities (SI Report, reference 30.10). On 2 November 2023, Woodside emailed Malgana following up on the proposed activities and requesting feedback (SI Report, reference 30.11). On 14 December 2023, Woodside emailed Malgana providing the information on the proposed activity which was originally sent on 1 September 2023 (SI Report, reference 30.12). Woodside again provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside’s website). The email requested information on the interests that Malgana and its members may have within the EMBA, information on how Malgana would like to engage, and requested that Malgana provide information to other individuals as required. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) During previous consultation in relation to separate related activities, Malgana requested further information on a topic related to this proposed activity which were responded to in correspondence shortly afterwards:</p> <ul style="list-style-type: none"> Hydrodynamic modelling and reflection of flow into the bay. 	<p>(1) Woodside Assessment: Hydrocarbon spill modelling is undertaken using global best practice approaches and software. Modelling demonstrates tides are the primary drivers of hydrodynamic transport within Shark Bay. Woodside Response: Specific information addressing Malgana’s query was sent to Malgana on 1 August 2023. No further information request or follow up has been received.</p>	<p>(1) Existing controls considered sufficient, as described in Section 6.</p>
<p>(2) During previous consultation in relation to separate activities, Malgana noted that their funding is restricted for these types of engagement and requested funding support, including an environmental consultant to advise the Board.</p>	<p>(2) Woodside Assessment: Woodside supports ongoing engagement and have responded to Malgana’s advice about the limitations on their resources. Woodside is implementing a program to actively support Traditional Custodians’ capacity for ongoing engagement and consultation on EPs. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes addressing Malgana’s resourcing issue for ongoing consultation via a Consultation Agreement. Woodside Response: Woodside has offered to support Malgana in correspondence sent in August, September and December 2023, including support for environmental expertise supplying names of organisations that</p>	<p>(2) Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as set out in Section 7.9.5 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Malgana may want to consider conducting the work, however these offers have not been taken up as of yet.	
No feedback, objections or claims received on this activity despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Malgana is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Malgana to provide feedback during the consultation process.

Local government and elected Parliamentary representatives, community groups or organisations

Town of Port Hedland

Summary of information provided and record of consultation for this EP:

- On 16 August 2023, Woodside emailed Town of Port Hedland advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.45).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While the Town of Port Hedland is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Town of Port Hedland to provide feedback during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Shire of Carnarvon (SoC)

Summary of information provided and record of consultation for this EP:

- On 16 August 2023, Woodside emailed Shire of Carnarvon advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- (1)** On 16 August 2023, SoC emailed Woodside and asked if there were any anticipated impacts on Coral Bay and Carnarvon. (SI Report, reference 9.1)
- On 16 August, Woodside presented to the SoC's Local Emergency Management Committee members and provided an overview of a variety of EPs, including this EP, the EMBA and how Woodside would respond in the unlikely event of a hydrocarbon spill. Woodside requested feedback on this EP by 11 September 2023 (SI Report, reference 9.2).
- (1)** On 17 August 2023, Woodside emailed SoC responding to its email on 16 August 2023 further explaining the EMBA and stating it did not overlap Coral Bay or Carnarvon (SI Report, reference 9.3)
- (1)** On 17 August 2023, SoC emailed to thank Woodside for the information regarding the EMBA (SI Report, reference 9.4).
- On 30 August 2023, Woodside sent a follow up email to check if SoC had any further feedback regarding the proposed activity (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) SoC asked for anticipated impacts on Coral Bay or Carnarvon.	(1) Woodside Assessment: The EMBA for this EP does not overlap Coral Bay or Carnarvon. Woodside Response: Woodside advised that the EMBA for this EP did not overlap Coral Bay or Carnarvon.	(1) Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While the Shire of Carnarvon is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Shire of Carnarvon to provide feedback during the consultation process.

Shire of Shark Bay

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 20 October 2023, Woodside emailed Shire of Shark Bay following up a face-to-face conversation with information about this EP including that although the EMBA was more than 100 km off the Shark Bay coastline Woodside was open to receiving feedback or providing further information if required (SI Report, reference 24.1). On 31 October 2023, Woodside emailed Shire of Shark Bay advising of the proposed activity (Record of Consultation, reference 1.4) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 15 December 2023, Woodside sent Shire of Shark Bay a follow up email (Record of Consultation, reference 1.22) and asked for feedback by 22 December 2023. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
<p>Outcomes of Consultation</p> <p>While the Shire of Shark Bay is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Shire of Shark Bay to provide feedback during the consultation process.</p>		
<p>Carnarvon Chamber of Commerce and Industry</p>		
<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 16 August 2023, Woodside emailed Carnarvon Chamber of Commerce and Industry advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.45). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Outcomes of Consultation		
While the Carnarvon Chamber of Commerce and Industry is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Carnarvon Chamber of Commerce and Industry to provide feedback during the consultation process.		
Port Hedland Chamber of Commerce and Industry		
Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> On 16 August 2023, Woodside emailed Port Hedland Chamber of Commerce and Industry advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.45). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While the Port Hedland Chamber of Commerce and Industry is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Port Hedland Chamber of Commerce and Industry to provide feedback during the consultation process.		
RAC Monkey Mia Dolphin Resort		
Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> On 31 October 2023, Woodside emailed RAC Monkey Mia Dolphin Resort advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 15 December 2023, Woodside sent RAC Monkey Mia Dolphin Resort a follow up email (Record of Consultation, reference 1.59) and asked for feedback by 22 December 2023. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
---	--	--

Outcomes of Consultation

While RAC Monkey Mia Dolphin Resort is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for RAC Monkey Mia Dolphin Resort to provide feedback during the consultation process.

Dirk Hartog Island

Summary of information provided and record of consultation for this EP:

- On 31 October 2023, Woodside emailed Dirk Hartog Island advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 15 December 2023, Woodside sent Dirk Hartog Island a follow up email (Record of Consultation, reference 1.59) and asked for feedback by 22 December 2023.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Dirk Hartog Island is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Dirk Hartog Island to provide feedback during the consultation process.

Shark Bay Community Resource Centre

Summary of information provided and record of consultation for this EP:

- On 31 October 2023, Woodside emailed Shark Bay Community Resource Centre advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 15 December 2023, Woodside sent Shark Bay Community Resource Centre a follow up email (Record of Consultation, reference 1.59) and asked for feedback by 22 December 2023.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Shark Bay Community Resource Centre is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Shark Bay Community Resource Centre to provide feedback during the consultation process.

[name redacted] MLA

Summary of information provided and record of consultation for this EP:

- On 31 October 2023, Woodside emailed [name redacted] MLA advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 15 December 2023, Woodside sent [name redacted] MLA a follow up email (Record of Consultation, reference 1.59) and asked for feedback by 22 December 2023.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While [name redacted] MLA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for [name redacted] MLA to provide feedback during the consultation process.

Shark Bay Aviation

<p>Outcomes of Consultation</p>		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While Shark Bay Coastal Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Shark Bay Coastal Tours to provide feedback during the consultation process.

Naturetime Tours

Summary of information provided and record of consultation for this EP:

- On 31 October 2023, Woodside emailed Naturetime Tours advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 15 December 2023, Woodside sent Naturetime Tours a follow up email (Record of Consultation, reference 1.59) and asked for feedback by 22 December 2023.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Naturetime Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Naturetime Tours to provide feedback during the consultation process.

Wula Gula Nyinda Eco Cultural Tours

Summary of information provided and record of consultation for this EP:

- On 31 October 2023, Woodside emailed Wula Gula Nyinda Eco Cultural Tours advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 15 December 2023, Woodside sent Wula Gula Nyinda Eco Cultural Tours a follow up email (Record of Consultation, reference 1.59) and asked for feedback by 22 December 2023.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and,	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).

Outcomes of Consultation

While the Wula Gula Nyinda Eco Cultural Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Wula Gula Nyinda Eco Cultural Tours to provide feedback during the consultation process.

Other non-government groups or organisations

Australasian Centre for Corporate Responsibility (ACCR)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Australasian Centre for Corporate Responsibility advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.38).
- On 19 December 2023, ACCR sent a letter via email, copying in NOPSEMA, advising they had met with Woodside’s investor relations and climate teams (SI Report, reference 54.1).
 - (1) ACCR requested to be added to the approvals consultation register.
 - (2) Despite being consulted on previous Woodside EPs, ACCR claimed it had not been notified of consultation for this EP and had only just become aware Woodside was seeking feedback by 20 December 2023.
 - (3) Requested that Woodside confirmed with ACCR via email that ACCR was contacted for future consultations.
 - (4) Requested that Woodside confirmed it had received the letter and would respond by 16 January 2024.
- In the 19 December 2023 letter, ACCR made the following claims, objections, requests for information:
 - (5) ACCR considered itself a relevant person.
 - (6) ACCR understood that climate change impacts, including Scope 3 emissions, which would result from this EP must be assessed in accord with the approved NOPSEMA program under the EPBC Act and broader environment in accordance with Environment Regulations.
 - (7) ACCR stated that Woodside had not provided sufficient information and not allowed a reasonable period of time for consultation and asked that this EP not be accepted until regulation 11A (now regulation 25) was met.
 - (8) Estimates of GHG and other emissions, including Scope 3 emissions from the Scarborough project. At a minimum, this should include:
 - Assessment of all emissions that would arise from the development, including all emissions sources and scopes (direct and indirect), annually and over the lifetime of the project.
 - A breakdown of each emissions source, its nature and location, whether it was under the operational control of Woodside.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(9)** Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including 1.5°C scenarios, including the IEA's NZE. At a minimum, this should include:
 - Independent evaluation of the impacts of the Scarborough Project on global temperature scenarios, including what incremental warming was anticipated to occur as a result of the direct and indirect emissions from the Scarborough Project.
 - Independent evaluation of the compatibility of the Scarborough Project with global 1.5°C scenarios, including what global 1.5°C scenarios were considered by Woodside to be consistent with the operation of the Scarborough Project and which were not.
 - Where global energy scenarios rely on carbon removals from the atmosphere, what was the volume of carbon removals that was assumed, how and where and by what means Woodside expected this to occur, and what (if any) carbon removals would be implemented.
- **(10)** Independent assessment of the climate change impacts of the Scarborough Project on the Australian and international environment and communities, including:
 - Analysis of sensitive environmental receptors in Australia and internationally that would be impacted by global climate change, including the Great Barrier Reef, Ningaloo Reef, other Matters of National Environmental Significance (MNES) and other cultural and environmental values.
 - What the anticipated effects of emissions from the Scarborough Project would be on these receptors.
- **(11)** Independent analysis of mitigation options and commitments. At a minimum, this should include:
 - An independent analysis of all available options to avoid, reduce or offset material Scope 1, 2 and 3 GHG emission sources as well as other material emission sources.
 - The qualitative and quantitative criteria that had been used to assess each option, the assessment of each option and identification of which options would and would not be implemented.
 - Independent analysis to demonstrate that mitigation efforts at each stage and scope (including Scope 1, 2 and 3 emissions) resulted in emissions reduced to As Low As Reasonably Practicable (ALARP).
 - Where the options selected were not the lowest emission option, a justification of why a lower emission option had not been selected.
 - Independent assessment of abatement options for the Scarborough Project according to a mitigation hierarchy which prioritised avoidance and at source mitigation before offsets and other forms of abatement with justification for Woodside's chosen mitigation commitments over the life of the project.
 - Identification of all (if any) offsets that would be used, including the type, method, provider and jurisdiction where the offsets would occur, what registry would be used, what standards of accountability and accreditation would be applied and, how the offsets would be retired.
 - Where GHG offsets were to be used, whether and how these would interact with national and state-based emission registries, including how these offsets will contribute to Western Australia and Australian emission reduction targets, and what ongoing public reporting and verification would be provided by Woodside of emissions and abatement from the project, including direct and indirect emissions from all sources.
 - How this demonstrates that any estimates or commitments made in the Scarborough OPP were met.
- **(12)** Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources. At a minimum, this should include:
 - Evidence of what other energy sources were expected to be displaced, both in current market and for those forecast over the life of the project, including any displacement of renewable energy, fossil fuels, or other energy sources that would result from the Scarborough Project and the net effect of such displacement on global emissions.
 - Evidence of where this displacement was expected to occur, when and how.

- Evidence of contractual or other arrangements that were, or would be, in place to ensure that this displacement occurred as predicted by Woodside.
- Third party verification that would be provided to verify claims of abatement achieved.
- How this demonstrated that any estimates or commitments made in the Scarborough OPP were met.
- **(13)** Independent assessment of how the Scarborough Project and associated mitigation efforts meet the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines. At a minimum, this should include:
 - How Woodside's corporate emissions reduction targets and those for the Scarborough Project were science-based, and cover all-scopes of emissions, and take into consideration Woodside's historical emissions.
 - How the mitigation efforts for the Scarborough Project would deliver an immediate and absolute reduction in emissions from current levels.
 - How the Scarborough Project supported a global and local phase out of fossil fuels.
 - How the abatement efforts proposed by Woodside included targets for methane-specific emissions, including what these targets were and how they would be achieved.
 - Evidence of Woodside's lobbying and advocacy efforts and how these were aligned with global temperature scenarios.
- **(14)** Other documents, including documents relied upon by Woodside. At a minimum, this should include:
 - All studies, information and other material commissioned or relied upon by Woodside in assessing the GHG emissions and climate impacts from the project, including mitigation options, climate impacts, alignment with global temperature goals, and any other issues mentioned above.
 - A copy of this EP.
- **(15)** A signed declaration from a Scarborough executive stating that:
 - All emissions reductions options that were identified have been disclosed.
 - Any considered option that could result in a lower emissions outcome had had its costs and benefits quantitatively and qualitatively disclosed, with a clear justification of why lower emission options had not been selected.
 - The disclosures were a complete and fair reflection of Woodside's own assessment of the costs and benefits of potential options.
 - The disclosed material was consistent with representations made to other stakeholders, such as shareholders, financial regulators, the media and customers.
 - Providing false or misleading information may be an offence.
- **(4)** On 27 December 2023, Woodside responded to ACCR's letter of 19 December 2023 (SI Report, reference 54.2) and received two out of office replies (SI Report, reference 54.3 and 54.4). The Woodside response was as follows:
 - **(1, 5)** Woodside explained ACCR was already on its distribution list but that it had also added the ACCR's individual as requested.
 - **(2, 5)** Woodside provided consultation information and a Consultation Information Sheet on this EP to ACCR on 9 August 2023 and 30 August 2023.
 - The Consultation Information Sheet provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program and proposed mitigation and management measures, so ACCR had been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
 - **(5, 7)** Woodside extended the consultation deadline from an initial four-week period ending on 11 September 2023, to 4.5 months, ending on 20 December 2023. This afforded ACCR additional time and opportunity to provide feedback, claims and objections during the consultation process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (7) As well as directly corresponding with ACCR, Woodside advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
- (7) Woodside did not receive any response from ACCR until 19 December 2023, the day before consultation closed for this EP.
- (7) On the basis of the extended period for consultation, provision of information sheets as well the below response to your feedback, claims and objections; sufficient information, a reasonable period of time and opportunity for consultation has been provided to ACCR.
- (3) Woodside confirmed it would consult ACCR on future activities and also suggested ACCR subscribed to Woodside's consultation activities on the Woodside website.
- (6, 8) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess direct emissions (Scope 1) and indirect emissions (Scope 3), aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
- (6, 8) The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
- (6, 8) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
- (9, 10, 11, 12, 13, 15) Woodside assessed emissions against a range of scenarios including the IEA NZE. Assessment of these could be found in Woodside's 2022 Climate Report which was publicly available on Woodside's website.
- (9, 10, 11, 12, 13, 15) Selected GHG emissions in Woodside's Climate Report were assured by GHD.
- (9, 10, 11, 12, 13, 15) For Woodside, a lower carbon portfolio was one from which the net equity Scope 1 and 2 GHG emissions, which included the use of offsets, were being reduced towards targets, and into which new energy products and lower carbon services were planned to be introduced as a complement to existing and new investments in oil and gas. Woodside's Climate Policy set out the principles that it believes would assist achieve this aim.
- (9, 10, 11, 12, 13, 15) Woodside's net equity emissions reduction targets had an aspiration of net zero by 2050 or sooner. The target was for net equity Scope 1 and 2 GHG emissions, relative to a starting base representative of the gross annual average equity Scope 1 and 2 GHG emissions over 2016-2020 and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021.
- (9, 10, 11, 12, 13, 15) Woodside had set near- and medium-term targets to reduce net equity Scope 1 and 2 GHG emissions and had three ways to achieve these targets: avoiding emissions through design; reducing them through efficient operations; and offsetting the remainder.
- (10) In accordance with Regulation 13(2) and 13(3) of the Environment Regulations, this EP would describe the Environment that May Be Affected (EMBA) including details of receptor sensitivities and exposure potential. This included consideration of Matters of National Environmental Significance (MNES) that may potentially occur in the EMBA.
- (10) The Scarborough Offshore Project Proposal (OPP - publicly available on the NOPSEMA website) defined a level of Significant Impact for receptors, informed by the MNES Significant Impact guidelines. Environmental Performance Outcomes (EPO) and Controls were defined in the OPP and cascaded to subsequent EPs where relevant, to ensure maintenance of Acceptable impact levels.

- (14) Woodside did not provide drafts of an EP while in development or under assessment due to the potential for content to change. Restricting access to publicly available versions enabled stakeholders to access and comment on the same information and removed potential for any confusion. The EP would be made publicly available on NOPSEMA's website once it had been submitted and was under assessment.
- (9, 15) On 7 March 2024, Woodside sent ACCR an email stating that as they had shown an interest in climate-related matters, they may be interested in the release of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 54.5). The email:
 - Included links to the CTAP and the ASX Announcement.
 - Re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Stated Woodside was available to meet with ACCR to discuss this EP should they be interested.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) An ACCR individual requested to be added to the 'approvals consultation register'.</p>	<p>(1) Woodside assessment: ACCR was already on Woodside's consultation database but Woodside also added the individual representing ACCR to the database. Woodside response: Woodside confirmed that the ACCR was already on its consultation database and that the individual representing ACCR had also been added to the database.</p>	<p>(1) Not required</p>
<p>(2) ACCR was not aware that it had been consulted on this EP and had only just become aware Woodside was seeking feedback by 20 December 2023.</p>	<p>(2) Woodside assessment: Woodside assessed that ACCR was provided consultation information on this EP on 2 occasions in August 2023 (initial consultation information on 9 August 2023 and a follow up email on 30 August 2023). Woodside response: Woodside advised ACCR it had provided consultation information to ACCR on 9 August and 30 August 2023.</p>	<p>(2) Not required.</p>
<p>(3) Requested Woodside confirms that ACCR is contacted for future consultations.</p>	<p>(3) Woodside assessment: Woodside assessed it would consult ACCR on future consultations. Woodside response: Woodside confirmed it would consult ACCR on future activities and also suggested ACCR subscribed to Woodside's consultation activities on Woodside's website.</p>	<p>(3) Not required.</p>
<p>(4)</p>	<p>(4)</p>	<p>(4)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Requested Woodside confirms it had received ACCR's letter of 19 December 2023 and will respond by 16 January 2024.</p>	<p>Woodside assessment: Woodside responded to ACCR's letter of 19 December 2023 on 27 December 2023 before the requested date of 16 January 2023.</p> <p>Woodside response: Woodside wrote to ACCR on 27 December 2023 and noted it was responding to ACCR's claims/objections/provided information in its letter dated 19 December 2023.</p>	<p>Not required.</p>
<p>(5) ACCR considers itself a relevant person.</p>	<p>(5) Woodside assessment: Woodside assessed that ACCR's public website material did not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2). Woodside chose to contact ACCR at its discretion in line with Section 5.3 of this EP.</p> <p>Woodside response: Woodside provided ACCR with consultation information on this EP on 9 August 2023 and 20 August 2023 and extended the consultation deadline from an initial four weeks to 4.5 months.</p>	<p>(5) Woodside chose to contact ACCR at its discretion in line with Section 5.3 of this EP and in accordance with regulation 25 of the Environment Regulations.</p>
<p>(6) Climate change impacts, including Scope 3 emissions, which will result from this EP, must be assessed in accordance with the approved NOPSEMA program under the EPBC Act and broader environment in accordance with the Environment Regulations.</p>	<p>(6) Woodside assessment: Woodside has assessed climate change impacts, including indirect emissions (Scope 3) for this EP in accordance with the relevant Environment Regulations.</p> <p>Woodside response: GHG emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the <i>National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008</i> and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions (Scope 3), aligned with the definitions of the GHG Protocol Corporate Standard and the <i>National Greenhouse and Energy Reporting Regulations 2008 (Cth)</i>.</p>	<p>(6) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.</p>
<p>(7) Woodside has not provided sufficient information nor a reasonable period of time.</p>	<p>(7) Woodside assessment: Woodside does not agree that ACCR has not been provided with sufficient information and a reasonable period of time for consultation. ACCR was provided with consultation information sheets as well as responses to its feedback, claims and objections. ACCR was also provided with an extended period for consultation. In total ACCR was provided with a 4.5 month period for consultation.</p> <p>Woodside response: Woodside provided consultation information for this EP to ACCR on 9 August 2023 and 30 August 2023 which provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with PAP and proposed mitigation and management</p>	<p>(7) ACCR has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>measures. ACCR has been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.</p> <p>Woodside extended the consultation deadline from an initial four-week period to a 4.5 month period ending on 20 December 2023. This afforded ACCR additional time and opportunity to provide feedback, claims and objections during the consultation process.</p> <p>Woodside also advertised the EP and consultation opportunities in national, state, regional and Indigenous newspapers and ran social media campaigns. Woodside also had experts and information available at a number of community events and roadshows in the Pilbara, Gascoyne and Murchison regions throughout September and October 2023.</p> <p>Woodside did not receive any response from ACCR until 19 December 2023, the day before consultation closed for this EP.</p>	
<p>(8) Estimates of greenhouse gas and other emissions, including Scope 3 emissions from the Scarborough project including assessment and breakdown of emissions.</p>	<p>(8) Woodside assessment: Woodside has assessed GHG emissions relevant to the PAP in the EP.</p> <p>The EP assesses Direct Emissions (Scope 1) and Indirect Emissions (Scope 3) aligned with the definitions of the GHG Protocol Corporate Standard and the <i>National Greenhouse and Energy Reporting Regulations 2008 (Cth)</i>.</p> <p>The EP assesses both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP.</p> <p>Woodside response: GHG emissions relevant to the PAP, including sources and volumes, are assessed in the EP. GHG emissions are estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database.</p> <p>The EP will assess Direct Emissions (Scope 1) and Indirect Emissions (Scope 3), aligned with the definitions of the GHG Protocol Corporate Standard and the <i>National Greenhouse and Energy Reporting Regulations 2008 (Cth)</i>.</p> <p>Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p>	<p>(8) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.</p>

	<p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions has been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p>	
<p>(9) Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including 1.5°C scenarios, including the IEA's NZE.</p>	<p>(9) Woodside assessment: Woodside assesses emissions against a range of scenarios. Selected GHG emissions in Woodside's Climate Report are assured by GHD. Woodside response: Woodside assesses emissions against a range of scenarios including the IEA NZE. Assessment of these can be found in Woodside's 2022 Climate Report which is publicly available on Woodside's website. Selected GHG emissions in Woodside's Climate Report are assured by GHD. For Woodside, a lower carbon portfolio is one from which the net equity Scope 1 and 2 greenhouse gas emissions, which includes the use of offsets, are being reduced towards targets, and into which new energy products and lower carbon services are planned to be introduced as a complement to existing and new investments in oil and gas. Woodside's net equity emissions reduction targets have an aspiration of net zero by 2050 or sooner. The target is for net equity Scope 1 and 2 greenhouse gas emissions, relative to a starting base representative of the gross annual average equity Scope 1 and 2 greenhouse gas emissions over 2016-2020 and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021. Woodside has set near and medium-term targets to reduce net equity Scope 1 and 2 greenhouse gas emissions and had three ways to achieve these targets: avoiding emissions through design; reducing them through efficient operations; and offsetting the remainder. A copy of the Woodside Climate Transition Action Plan and 2023 Progress Report were provided when these were published</p>	<p>(9) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.</p>
<p>(10) Independent assessment of climate change impacts of the Scarborough Project on the Australian and international environment and communities.</p>	<p>(10) Woodside assessment: Lifecycle GHG emissions are assessed in the publicly available Scarborough OPP. Woodside response: In accordance with Regulation 13(2) and 13(3) of the Environment Regulations the EP will describe the Environment that May Be Affected (EMBA) including details of receptor sensitivities and exposure potential. This includes consideration of Matters of National Environmental Significance (MNES) that may potentially occur in the EMBA.</p>	<p>(10) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	The Scarborough Offshore Project Proposal (OPP - publicly available on the NOPSEMA website) defines a level of Significant Impact for receptors, informed by the MNES Significant impact guidelines. Environmental Performance Outcomes (EPO) and Controls are defined in the OPP and cascaded to subsequent EPs where relevant, to ensure maintenance of Acceptable impact levels.	
(11) Independent analysis of mitigation options and commitments in relation to Scope 1, 2 and 3 GHG emission sources as well as other material emission sources.	(11) Woodside assessment: Woodside and its contractors undertake options analysis and opportunity identification and screening processes to implement emissions reduction/abatement measures. Woodside response: Woodside provided details related to its Climate Strategy and targets, and confirmed that the OPP contains a high level description of emissions reduction framework	(11) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.
(12) Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources.	(12) Woodside assessment: Woodside's publicly available CTAP and 2023 Progress Report summarises Woodside's climate-related plans, activities, progress and climate-related data. Woodside response: Woodside assesses emissions against a range of scenarios including the IEA NZE. Assessment of these can be found in Woodside's 2022 Climate Report and 2023 Climate Transition Action Plan which is publicly available on Woodside's website. Selected GHG emissions in Woodside's Climate Report are assured by GHD. For Woodside, a lower carbon portfolio is one from which the net equity Scope 1 and 2 GHG emissions, which includes the use of offsets, are being reduced towards targets, and into which new energy products and lower carbon services are planned to be introduced as a complement to existing and new investments in oil and gas. Woodside's Climate Policy sets out the principles that it believes will assist achieve this aim. Woodside's net equity emissions reduction targets have an aspiration of net zero by 2050 or sooner. The target is for net equity Scope 1 and 2 GHG emissions, relative to a starting base representative of the gross annual average equity Scope 1 and 2 GHG emissions over 2016-2020 and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021.	(12) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside referred ACCR to the Woodside 2022 Climate Report for further information. A copy of the Woodside Climate Transition Action Plan and 2023 Progress Report were provided when these were published	
(13) Independent assessment of how the Scarborough Project and associated mitigation efforts meet the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines.	(13) Woodside assessment: Woodside has assessed GHG Emissions against a broad range of 1.5°C and 2° C aligned climate related scenarios including the IEA NZE. Woodside response: Woodside initially referred ACCR to the Woodside 2022 Climate Report for further information. A copy of the Woodside Climate Transition Action Plan and 2023 Progress Report were provided when these were published.	(13) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.
(14) Other documents, including documents relied upon by Woodside, and a draft of this EP.	(14) Woodside assessment: Woodside has provided sufficient information for ACCR in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP. Woodside does not provide drafts of EPs. Woodside response: Woodside advised ACCR it does not provide drafts of an EP while in development or under assessment due to the potential for content to change. Restricting access to publicly available versions enables stakeholders to access and comment on the same information and removes potential for any confusion. The EP will be made publicly available on NOPSEMA’s website once it has been submitted and is under assessment.	(14) Not required.
(15) Requested Woodside provide a signed declaration stating in relation to disclosure of its emissions reductions.	(15) Woodside assessment: Woodside would not provide a signed declaration in relation to its emissions reductions for this EP as Woodside’s climate strategy is described in Woodside’s Climate Report. GHG emissions in relation to this EP are considered in Section 6.7.6 and 6.7.7. Woodside response: Woodside did not provide a signed declaration.	(15) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
--	--	--

Outcomes of Consultation

While ACCR is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACCR to provide feedback during the consultation process.

Extinction Rebellion WA (XRWA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Extinction Rebellion WA (XRWA) advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While XRWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for XRWA to provide feedback during the consultation process.

International Fund for Animal Welfare (IFAW)

Historical Engagement:

2018 - 2020

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Between 2018 and 2020, IFAW was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - IFAW chose not to take up the opportunity to participate in consultation.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed International Fund for Animal Welfare advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While IFAW is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for IFAW to provide feedback during the consultation process.

Market Forces

Historical Engagement:

2018 - 2020

- Market Forces was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - Market Forces chose not to take up the opportunity to participate in consultation.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Market Forces advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(1)** On 14 August 2023, Market Forces emailed Woodside thanking it for the opportunity to engage and informed Woodside that they would not be providing feedback on this EP but would like to continue to be consulted on EPs for Woodside's projects (SI Report, reference 7.1).
- On 17 August 2023, **(1)** Woodside thanked Market Forces and confirmed it would continue to consult on future EPs (SI Report, reference 7.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Market Forces advised it would not be providing feedback on the EP but wished to be consulted on future Woodside EPs.</p>	<p>(1) Woodside assessment: Woodside reviewed that Market Forces would not provide feedback on the EP but asked to be consulted on future EPs. Woodside response: Woodside noted Market Forces had no feedback on the EP but would like to be consulted on future EPs.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>

Outcomes of Consultation

While Market Forces is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Market Forces to provide feedback during the consultation process.

Sea Shepherd Australia (SSA)

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Sea Shepherd Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>No feedback, objections or claims received despite follow up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and,</p>	<p>No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	
--	--	--

Outcomes of Consultation

While Sea Shepherd Australia is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Sea Shepherd Australia is to provide feedback during the consultation process.

World Wildlife Fund (WWF) Australia

Historical Engagement:

2018 - 2020

- WWF was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - WWF chose not to take up the opportunity to participate in consultation.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed World Wildlife Fund Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up letter (Record of Consultation, reference 1.38).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While the World Wildlife Fund Australia is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the World Wildlife Fund Australia to provide feedback during the consultation process.

Environs Kimberley

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of information provided and record of consultation for this EP:

- On 20 December 2023, Environs Kimberley sent a letter to Woodside (and copied NOPSEMA) referring to this EP and the Consultation Information Sheet (SI Report, reference 58.1). It made the following comments:
 - They understood Woodside was currently consulting with relevant persons on this EP.
 - **(1)** Environs Kimberley considered that Woodside should consult it as a relevant person.
 - **(2)** Climate change impacts fell under the scope of indirect consequences which must be assessed according to the Environment Regulations and NOPSEMA's guidelines.
 - **(3)** Environs Kimberley was dedicated to the protection and management of the environmental values of the Kimberley in partnership with communities and Traditional Owners which were threatened by climate change and fossil fuel developments and as a result Woodside should consult with communities across the Kimberley.
 - **(4)** Woodside should provide Environs Kimberley with sufficient information. The Consultation Information Sheet was not sufficient to make an informed decision. A list of further information was also requested regarding climate change, GHG emissions and a draft of the EP.
 - **(5)** Because sufficient information had not been provided, further time was necessary to consider the information based on Environs Kimberley available personnel and resources.
 - **(6)** As a relevant person, Environs Kimberley reiterated that this EP should not be finalised, submitted or assessed by NOPSEMA.
 - **(7)** A response to this letter was required within two weeks, no later than 1 January 2024 (note – two weeks from when the letter was sent would have been 3 January 2024).

Ongoing consultation:

- **(1)** On 3 January 2024, Woodside sent a letter to Environs Kimberley acknowledging they had self-identified and provided feedback, including a request to be consulted (SI Report, reference 58.2). In considering this, Woodside stated the following in its response:
 - Woodside acknowledged *NOPSEMA's Guideline on Consultation in the course of preparing an environment plan* as well as judicial guidance in the Tipakalippa Appeal on the intent of consultation.
 - Woodside had applied its methodology including by reviewing Environs Kimberley's public website (which notes that Environs Kimberley is a Broome-based conservation group), which did not demonstrate that its functions, interests or activities may be affected by the activities to be carried out under the EP, in accordance with the intended outcome of consultation. The website (cited 28 December 2023) stated that Environs Kimberley undertook 'Kimberley Campaigns' and 'Kimberley Nature Projects'. More specifically, it outlined the following:
 - Protecting the Kimberley Coast
 - Keeping the Fitzroy River running wild
 - Keeping the Kimberley free from fracking
 - Watching Briefs (James Price Point)
 - Protecting the North Kimberley from bauxite mining
 - The Scarborough Floating Production Unit (FPU) is 244 km north-northwest of Exmouth and 374 km west-northwest of Dampier (both in the Pilbara region) and the closest Marine Park is Gascoyne Marine Park (77 km south of the FPU). The environment that may be affected (EMBA) does not overlap with the Kimberley region.
 - Woodside had considered Environs Kimberley's self-identification as part of its assessment of relevant person process, however, it was not apparent that Environs Kimberley's functions, interests or activities may be affected by the proposed activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> (2, 3, 4, 5, 6, 7) No response required as Woodside had considered Environs Kimberley's self-identification as part of its assessment of relevant person process, however, it was not apparent that Environs Kimberley's functions, interests or activities may be affected by the proposed activities. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Environs Kimberley considers that Woodside should consult it as a relevant person.	(1) Woodside assessment: In the course of preparing the EP, Environs Kimberley self-identified and requested to be consulted. -Environs Kimberley's public website material does not demonstrate that it has functions, interests or activities that may be affected by the activities to be carried out under the EP, in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP.) Woodside response: Woodside had considered Environs Kimberley's self-identification as part of its assessment of relevant person process, however, it is not apparent that Environs Kimberley's functions, interests or activities may be affected by the proposed activities of this EP.	(1) Environs Kimberley is not a relevant person as set out in its Assessment of Relevance (see Appendix F, Table 1) in accordance with Regulation 25 of the Environment Regulations as per Section 5.2 of the EP.
(2) Climate change impacts fall under the scope of indirect consequences which must be assessed according to the Environment Regulations and NOPSEMA's guidelines.	(2) Woodside assessment: It is not apparent that Environs Kimberley's functions, interests or activities may be affected by the activities to be carried out under this EP and therefore Environs Kimberley is not a relevant person. In addition, these claims or objections have previously been raised by relevant persons, assessed by Woodside and included in this EP as appropriate. Woodside response: As Environs Kimberley is not a relevant person, and in any event, its feedback does not present any new objections or claims and therefore no response was required.	(2) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP
(3) Woodside should consult with communities across the Kimberley.	(3) Woodside assessment: Woodside assesses and consults communities when relevant, as per Woodside's relevancy assessment methodology. Kimberley communities are not relevant based on the methodology. Woodside response: No response required. Woodside consults relevant persons as per the relevancy assessment methodology.	(3) Methodology for identifying relevant persons is in Section 5.3 and included in Table 1 of Appendix F.
(4)	(4)	(4) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Requested additional information and stated the Consultation Information Sheet was not sufficient for making an informed decision.</p>	<p>Woodside assessment: It is not apparent that Environs Kimberley's functions, interests or activities may be affected by the activities to be carried out under this EP and therefore Environs Kimberley is not a relevant person.</p> <p>Woodside response: As Environs Kimberley is not a relevant person, and as its feedback did not present any new objections or claims in any event, no response was required.</p>	
<p>(5) Further time was needed to consider the information.</p>	<p>(5) Woodside assessment: It is not apparent that Environs Kimberley's functions, interests or activities may be affected by the activities to be carried out under this EP and therefore Environs Kimberley is not a relevant person.</p> <p>Woodside response: As Environs Kimberley is not a relevant person, and as its feedback did not present any new objections or claims in any event, no response was required.</p>	<p>(5) Not required.</p>
<p>(6) The EP should not be finalised, submitted or assessed by NOPSEMA.</p>	<p>(6) Woodside assessment: It is not apparent that Environs Kimberley's functions, interests or activities may be affected by the activities to be carried out under this EP and therefore Environs Kimberley is not a relevant person. In addition, its feedback did not present any new objections or claims.</p> <p>Woodside response: As Environs Kimberley is not a relevant person, and as its feedback did not present any new objections or claims in any event, no response was required.</p>	<p>(6) Not required.</p>
<p>(7) Requested Woodside responded within two weeks.</p>	<p>(7) Woodside assessment: It is not apparent that Environs Kimberley's functions, interests or activities may be affected by the activities to be carried out under this EP and therefore Environs Kimberley is not a relevant person. In addition, its feedback did not present any new objections or claims.</p> <p>Woodside response: As Environs Kimberley is not a relevant person, and as its feedback did not present any new objections or claims in any event, no response was required. On 3 January 2024, Woodside advised Environs Kimberley it is not apparent its functions, interests or activities may be affected by the proposed activities.</p>	<p>(7) Woodside's responded to Environs Kimberley on 3 January 2024 (SI Report, reference 58.2).</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed</p>	<p>No additional measures or controls are required.</p>

	and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	
Outcomes of Consultation		
Environs Kimberley is not a relevant person under regulation 25 of the Environment Regulations and it is not apparent that Environs Kimberley's functions, interests or activities may be affected by the proposed activities.		
Research institutes and local conservation groups or organisations		
Western Australian Marine Science Institution (WAMSI)		
Summary of information provided and record of consultation for this EP: <ul style="list-style-type: none"> On 11 August 2023, Woodside emailed WAMSI advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.44). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While WAMSI is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WAMSI to provide feedback during the consultation process.		
Murdoch University		
Summary of information provided and record of consultation for this EP: <ul style="list-style-type: none"> On 11 August 2023, Woodside emailed Murdoch University advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.44). 		
<p>This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.</p> <p>Controlled Ref No: SA0006AF0000022 Revision: 1 Page 394 of 636</p> <p style="text-align: center;">Uncontrolled when printed. Refer to electronic version for most up to date information.</p>		

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Murdoch University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Murdoch University to provide feedback during the consultation process.

Edith Cowan University (ECU)

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed ECU advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, Woodside sent a follow up email (Record of Consultation, reference 1.44).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While ECU is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ECU to provide feedback during the consultation process.

Australian Institute of Marine Science (AIMS)

Summary of information provided and record of consultation for this EP:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> On 11 August 2023, Woodside emailed AIMS advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. (1) On 21 August 2023, AIMS emailed Woodside and confirmed it would not be conducting any work in the vicinity where the activities for this EP are taking place (SI Report, reference 13.1). (1) On 5 September 2023, Woodside responded noting and thanking AIMS for its response (SI Report, reference 13.2). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) AIMS confirmed there were no overlaps with planned AIMS science activities in the area.</p>	<p>(1) Woodside assessment: Woodside reviewed AIMS's update that it would not be conducting any work in the vicinity of the EPs activities. Woodside response: Woodside noted AIMS's confirmation that there were no overlaps with planned AIMS science activities in the area.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of this EP).</p>	<p>No additional measures or controls are required.</p>
Outcomes of Consultation		
<p>While AIMS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AIMS to provide feedback during the consultation process.</p>

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

Woodside Energy Limited (Woodside) consults relevant persons in the course of preparing an environment plan (EP) to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. This is the intended outcome of consultation.

Woodside's aim is to ensure the activity is carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD), by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level. Woodside want relevant persons whose functions, interests or activities that may be affected by the proposed activity to have the opportunity to identify themselves and provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Overview

Woodside plans to submit the Scarborough Offshore Facility and Trunkline Operations EP in Commonwealth waters, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (regulations). The EP will cover Floating Production Unit (FPU) installation (hook-up), commissioning, start-up and operations and other support activities, including gravimetry surveys, and inspection, maintenance, monitoring and repair (IMMR) activities for the FPU, subsea infrastructure and the gas export trunkline.

Proposed Activity Overview

Woodside plans to install the FPU and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough project within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning. The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Future decommissioning of infrastructure will be subject to separate future EPs.

Vessels

A range of vessels may be used during the FPU installation, hook-up and commissioning phase including tow, support and anchor handling tugs, light construction vessels, survey vessels, supply/support vessels and contingent accommodation support vessel.

During normal operations, vessels will typically be limited to supply/support vessels and IMMR vessels. The vessel size and type will be dependent on the work scope. Vessels are not planned to anchor/moor on the seabed. It is anticipated vessels will operate 24 hours per day for the duration of activities.

Location and Operations

The FPU and associated subsea production infrastructure will be installed in Commonwealth waters within Production Licenses WA-61-L and WA-62-L, in water depths ranging from ~900 to 1000 m and around 374 km west-northwest of Dampier, Western Australia.

Gas from the FPU will be exported through the ~440 km trunkline to the Pluto LNG Plant in Dampier, Western Australia for further processing.

Communication with mariners

The location of the Scarborough FPU will be marked on nautical charts and will be surrounded by a fixed 500 m radius petroleum safety zone (PSZ).

A temporary exclusion zone will also be in place around installation vessels during activities, to manage vessel movements. These distances will be communicated through marine notices and are typically 500m. Other marine users are permitted to use the area but should take care when entering the relevant Operational Area (provided in Table 1) and remain clear of any exclusion zone(s) in effect.

Assessment

Woodside has undertaken an assessment of the potential impacts and risks to the environment as well as to relevant persons arising from the planned activities as well as unplanned events. This assessment considers timing, duration and location of activities. A number of mitigation and management measures will be implemented and are summarised in Table 3. Further details will be provided in the EP, which is being developed to manage proposed activities.

In preparing the EP, our intent is to minimise environmental and social or cultural impacts associated with the proposed activities, and Woodside are seeking any interest or comments you may have to inform our decision making.

Joint Venture

Woodside is the Titleholder for this activity, on behalf of a Joint Venture comprising both Woodside Energy Scarborough Pty Ltd and Woodside Energy (Australia) Pty Ltd.

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision. This is depicted in Figure 3.

The EMBA does not represent the extent of the predicted impact of the highly unlikely marine diesel release. Rather, the EMBA represents the merged area of many possible paths a highly unlikely hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release.

This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time - the specific and minimal part of the EMBA that is affected will only be known at the time of the release.

The three hydrocarbon spill modelling sites are representative of the range of locations where a vessel collision could occur in the Petroleum Activities Area and are summarised below. The EMBA has been defined using a combination of all three locations:

- **Outside Mermaid Sound (Location 1):** Near the State Waters Boundary, this site represents the closest location to shore IMMR activities may occur under this EP.
- **Montebello Marine Park Multiple Use Zone (Location 2):** This location was chosen to represent around half-way along the trunkline length where IMMR activities may occur under this EP.
- **Scarborough Field (Location 3):** This location is representative of a spill in the deep-water open-ocean environment in Production License WA-61-L, where the FPU is planned to be installed and activities at the most western end of the Petroleum Activities Area.

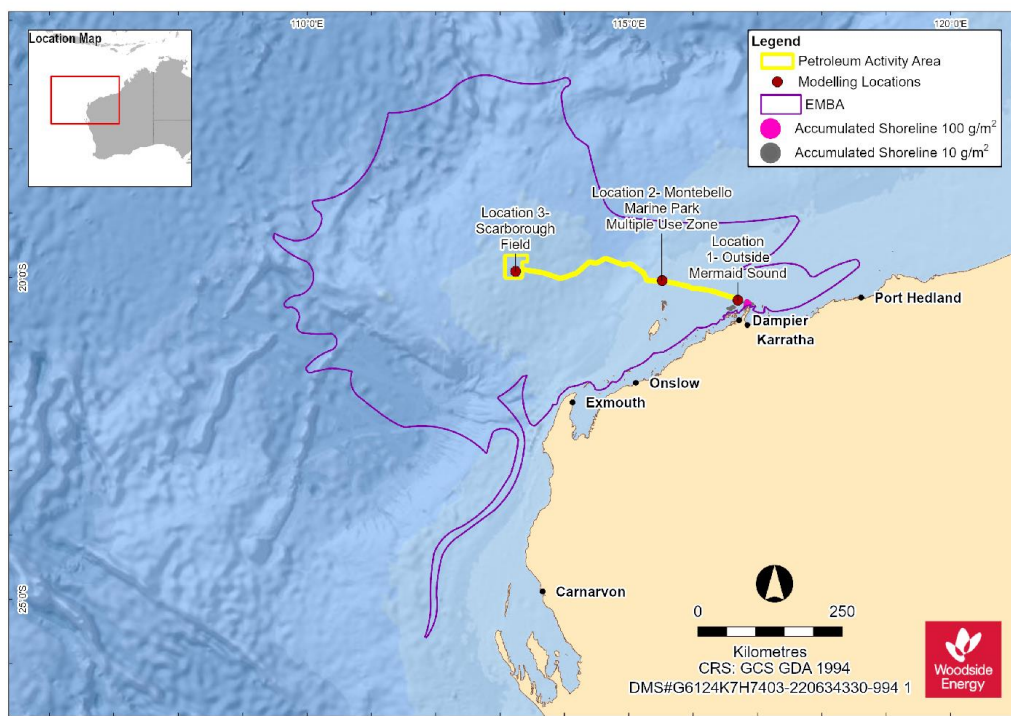

Figure 3. Environment that May Be Affected (EMBA) by a diesel release from an accident/incident during the EP Petroleum Activities Program.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Routine and Non-routine Discharges: Project Vessels	<ul style="list-style-type: none"> Discharge of sewage, grey water and putrescible waste from vessels to the marine environment. Discharge of deck, bilge and drain water from vessels to the marine environment. Discharge of brine and cooling water from vessels to the marine environment. 	<ul style="list-style-type: none"> Impacts to water quality from planned discharges above a slight or negligible level are not expected because of the minor quantities involved, the expected localised mixing zone and high level of dilution into the open water marine environment of the Operational Area. Similarly, although some marine fauna may transit the Operational Area, the potential for impact remains slight or lower (negligible) due to the localised nature of discharges and rapid dilution. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements (e.g., Marine Orders / MARPOL).
Routine and Non-routine Discharges: FPU Operations (Wastewater streams)	<ul style="list-style-type: none"> Discharge of sewage, grey water and putrescible waste from FPU to the marine environment. Discharge of deck, bilge and drain water from FPU to the marine environment. 	<ul style="list-style-type: none"> Localised and slight decrease in water and sediment quality with no lasting effect around discharge locations within Offshore Operational Area. Negligible impact potential for plankton, epifauna and infauna indirectly from decreased water quality. Localised and short-term impact potential to fish, marine mammals and marine reptiles from discharges in the Offshore Operational Area. Impacts from discharges on KEFs in the Offshore Operational Area are expected to the slight with no lasting effects. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements. FPU design includes a range of measures that specifically aid in containment of non-routine and routine discharges for example deck drainage collected to a drainage system for separation and collection of hydrocarbons for safe, contained disposal onshore.
Routine and Non-Routine Discharges: FPU and Subsea Commissioning	<ul style="list-style-type: none"> Routine and non-routine discharges of commissioning fluids during installation of the FPU and commissioning activities. 	<ul style="list-style-type: none"> The discharges are expected to result in slight or lower (negligible) impacts including a temporary decline in water quality and sediment quality around the discharge locations with no accumulation and no lasting effect predicted. Negligible impact to plankton, epifauna and infauna indirectly from decreased water quality. Localised and short-term impacts to fish, marine mammals and marine reptiles through from discharges in the Offshore Operational Area. Impacts from discharges on KEFs in the Offshore Operational Area are expected to the slight with no lasting effects. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Commissioning procedures implemented.
Routine and Non-Routine Discharges: FPU Operation (Commingled Produced water/cooling water stream)	<ul style="list-style-type: none"> Discharge of produced water, cooling water and brine during routine and non-routine operations. 	<ul style="list-style-type: none"> Localised and slight decrease in water and sediment quality with no lasting effect around discharge locations within Offshore Operational Area. Negligible impact of injury/mortality to plankton, epifauna and infauna indirectly from decreased water quality. Localised and short-term impacts to fish, marine mammals and marine reptiles through injury or behavioural changes from discharges in the Offshore Operational Area. Impacts from discharges on KEFs in the Offshore Operational Area are expected to the slight. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Implement adaptive monitoring and management for applicable FPU discharges.

Mitigation and management measures

Woodside has undertaken an assessment to identify potential impacts and risks to the environment arising from the Scarborough FPU installation (hook-up), commissioning, start-up and operations activity, including gravimetry surveys, IMMR activities and other contingent activities. A number of mitigation and management measures for the activity are outlined in **Table 3**. Further details will be provided in the EP.

Impact areas are split into the Offshore Operational Area (nominally the FPU and subsea infrastructure location(s) in WA-61-L / WA-62-L) and the Trunkline Operational Area (1500m either side, from the centerline of the gas export trunkline WA-32-PL)

Table 3. Summary of key risks and/or impacts and preliminary management measures for the Activity*

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Planned Activities (Routine and Non-routine)			
Physical Presence: Interaction with Other Marine Users, Cultural Values & Heritage.	<ul style="list-style-type: none"> The presence of FPU, trunkline and other subsea infrastructure has the potential to exclude and/or displace other users from Petroleum Safety Zone (PSZ) and routine/IMMR activities within the PAA respectively. A range of vessels will be required to complete the hook-up and commissioning activities, prior to start-up and operations. The physical presence and movement of vessels within the PAA has the potential to displace other marine users. Helicopters will be used to transport personnel, which will occur on a regular basis. Physical presence of project vessels and activities may have potential to impact cultural values and heritage. 	<ul style="list-style-type: none"> The Offshore Operational Area is not an area of high commercial fishing activity. Commercial fishing vessels will have a localised exclusion from a 500 m Petroleum safety zone (PSZ) around the FPU and temporary exclusion zones associated with vessel operations. The Offshore Operational Area does not overlap with Australian Maritime Safety Authority (AMSA) fairways and therefore impacts to commercial shipping vessels are not expected. In the Trunkline Operational Area impact to commercial shipping is limited to the temporary presence of IMMR vessels. Tourism and recreation within the Offshore Operational Area are expected to be limited due to the distance offshore and water depths. During IMMR activities in the Trunkline Project Area potential impacts to tourism and recreational activities would likely be minor interactions (i.e. navigational hazard) and temporary, localised displacement/avoidance. Several oil and gas facilities are located in proximity to the Trunkline Operational Area. Activities associated with the physical presence of IMMR vessels may result in localised, short-term interactions with industry vessels requiring minor course alteration or readjustment in asset management. 	<ul style="list-style-type: none"> Vessels adhere to regulatory requirements for navigational safety. Maintain a permanent 500 m Petroleum Safety Zone around FPU. Establish temporary exclusion zones around applicable vessels which are communicated to marine users. Notify relevant government departments, fishing industry representative bodies and licence holders of activities prior to commencement and upon completion of activities. Notify the Australian Hydrographic Office (AHO) prior to commencement of the activity to enable them to update maritime charts, so that marine users are aware of the activity. Consult with relevant persons so that they are informed of the proposed activities. Woodside will actively support the capacity of Traditional Custodians for ongoing engagement and consultation on environment plans, for the purpose of avoiding impacts to cultural heritage values.
Physical Presence: Seabed disturbance	<p>Seabed disturbance may result from the following activities:</p> <ul style="list-style-type: none"> Presence of subsea infrastructure, FPU moorings and trunkline modifying marine habitats. FPU mooring line retrieval and connection operations. Seabed disturbance during riser/umbilical hook-up to the FPU. Temporary placement of passive gravity meter, tide gauges during gravimetry surveys. Deployment of oceanographic monitoring systems. IMMR activities. Movement of a Remotely Operated Vehicle (ROV) near the seabed. 	<ul style="list-style-type: none"> Localised modification of seabed habitat within the PAA. Seabed disturbance has the potential to result in a change in habitat, water quality and sediment quality, which may affect fauna. However, impacts from seabed disturbance will be highly localised. Seabed disturbance is not expected to impact adversely on biologically important behaviours or biologically important habitat, including critical habitat. Displacement of individuals will not result in significant impacts at a population level. The Exmouth Plateau, Continental Slope Demersal Fish Communities and Ancient Coastline at 125 m depth Contour Key Ecological Features (KEFs) overlap the Operational Area. Potential seabed disturbances in this area are expected to be localised and short-term and are unlikely to affect the ecological value of the KEF. 	<ul style="list-style-type: none"> Infrastructure will be placed on the seabed within the predefined design footprint using positioning technology to limit seabed disturbance. Infrastructure wet parked (temporarily placed) on the seabed will be tracked and removed. Vessels are not planned to anchor/moor during routine operations. Monitoring and maintenance of infrastructure is undertaken in accordance with the IMMR process. Comply with regulatory requirements for Underwater Cultural Heritage.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Routine Light Emissions: FPU and Project Vessels	<ul style="list-style-type: none"> The FPU and vessels will use external lighting to conduct safe operations at night. Vessel lighting will also be used to communicate vessels' presence to other marine users (i.e. navigation/ warning lights). Light emissions from FPU during flaring. 	<ul style="list-style-type: none"> Light emissions have the potential to affect fauna such as fish, marine reptiles and seabirds by influencing changes in their behaviour or impacting orientation. The Operational Areas may be occasionally visited by seabirds and marine turtles. Potential impacts are expected to be limited to localised behavioural disturbance to isolated individuals, with no significant impact to seabird foraging or turtle nesting. 	<ul style="list-style-type: none"> Lighting limited to the minimum required for navigational and safety requirements, except for emergency events.
Routine Acoustic Emissions: FPU and Project Vessels	<ul style="list-style-type: none"> Generation of underwater noise from FPU and associated subsea infrastructure and vessels. Underwater noise may also be generated by geophysical sources during surveys, positioning equipment (transponders), and helicopters. 	<ul style="list-style-type: none"> Elevated underwater noise can affect marine fauna, including marine mammals, turtles and fish. Marine fauna associated with the Offshore Operational Area will be predominantly pelagic fish species, with the potential for species such as whale sharks, rays, marine turtles and whale species to transit through the Operational Area. There are no marine fauna Biologically Important Areas (BIAs) within the Offshore Operational Area. Therefore, potential impacts from FPU and vessel noise are likely to be restricted to temporary avoidance behaviour to individuals. IMMR activities occurring in the Trunkline Operational Area within the migration BIAs during migration seasons for pygmy blue whales and humpback whales, may result in a behavioural response from individuals or groups of whales transiting in proximity to vessel/s. Similarly, potential impacts from acoustic emissions on marine turtles, fish, sharks and rays from IMMR activities are likely to be restricted to localised and temporary avoidance behaviour of individuals. 	<ul style="list-style-type: none"> Comply with regulatory requirements for interactions with marine megafauna to prevent adverse interactions.
Routine and Non-routine Atmospheric and Greenhouse Gas (GHG) Emissions	<ul style="list-style-type: none"> Atmospheric emissions and GHG emissions generated through FPU, vessels and helicopters. GHG emissions associated with onshore processing of Scarborough gas. 	<ul style="list-style-type: none"> Emissions from FPU, vessels and helicopters could result in temporary, localised reductions in air quality in the immediate vicinity. Emissions associated with gas processing onshore (considered as indirect impacts from this Petroleum Activities Program) could result in temporary, localised reductions in air quality limited to the airshed of the gas plant. 	<ul style="list-style-type: none"> Comply with regulatory requirements for GHG emissions reporting. Vessel operations planned, where practicable, to minimise fuel consumption and associated GHG/air emissions. Fuel types will be selected to reduce expected GHG emissions. Project vessels will not use heavy fuel oil (HFO) or intermediate fuel oil (IFO). Optimise flaring to reduce GHG emissions and allow for safe operation of the facility.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Routine and Non-Routine Discharges: Subsea Operations and Activities	<p>Discharge of routine and non-routine operational discharges including:</p> <ul style="list-style-type: none"> Hydraulic fluid. Operational and non-process chemicals e.g., corrosion inhibitors biocides. <p>Discharges during typical IMMR activities:</p> <ul style="list-style-type: none"> Process and non-process chemicals. Residual hydrocarbons in subsea infrastructure. Cement and grout during span rectification. 	<ul style="list-style-type: none"> The discharges are expected to result in slight or lower (negligible) impacts including a temporary decline in water quality and sediment quality around the discharge locations with no accumulation and no lasting effect predicted. Impacts from discharges on fish, epifauna and infauna has been assessed as slight or negligible impact significance. Highly localised changes in habitats/ water quality and faunal communities within KEFs and Australian Marine Parks (AMPs) from planned routine and non-routine hydrocarbon, chemical and cement discharges. Assessed as slight impact significance. 	<ul style="list-style-type: none"> Marine discharges managed according to regulatory requirements. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Subsea infrastructure flushed where practicable prior to disconnection to reduce volume/ concentration of hydrocarbons released to the environment. Limit volume of subsea control fluid discharged to the marine environment through monitoring subsea control fluid use and investigating material discrepancies.

Unplanned Events (Accidents / Incidents)			
Unplanned Hydrocarbon Release: FPU Loss of Structural Integrity	<ul style="list-style-type: none"> Surface or subsea release from flowlines and FPU to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere. 	<ul style="list-style-type: none"> Impacts to water and sediment quality from marine diesel oil release caused by a loss of structural integrity. Marine diesel is a relatively volatile, nonpersistent hydrocarbon with up to approximately 40% evaporating within the first 24 hours for a surface spill. Potential impacts across the EMBA will be assessed including receptors such as plankton, mangroves, seabirds and migratory shorebirds, saltmarshes, coral, tourism, recreation and cultural heritage (for example). Considering receptor sensitivity, potential loss of containment volume(s) and potential spill locations, most receptors are expected to be rated as having a potential consequence level of 'Minor' or less (Slight or Negligible). Impact assessment will be informed by loss of containment modelling and existing environment knowledge, similar to other Scarborough Environment Plans. 	<p>Preventing loss of structural integrity</p> <ul style="list-style-type: none"> The subsea infrastructure and FPU design include a range of measures that specifically aid in minimising the risk of external damage. Woodside management system implemented during operations to maintain structural safety critical element systems and safety instrumented systems to an acceptable standard. Ongoing process and structural monitoring, inspection, planned maintenance and repair, to ensure process and structural integrity are maintained within the design envelope. Communication with approaching vessels. Vessels entering the 500 m PSZ are managed in accordance with the facility operating procedures. <p>Spill response arrangements:</p> <ul style="list-style-type: none"> Develop an operations specific Oil Pollution Emergency Preparation document (OPEP) including first strike response plan. Arrangements supporting the Oil Pollution Emergency Preparation document (OPEP) will be tested to ensure the OPEP can be implemented as planned. Emergency response activities would be implemented in line with the OPEP.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Unplanned Hydrocarbon or Chemical Release: Hydrocarbon Release during bunkering/ refuelling and Chemical Release during Transfer, Storage and Use	<ul style="list-style-type: none"> Loss of hydrocarbons (diesel) to marine environment from bunkering/ refuelling. Chemical release to marine environment during transfer, storage and use. 	<ul style="list-style-type: none"> Localised and temporary change in water quality from a marine diesel or chemical spill. Injury/mortality to seabirds, fish, plankton, marine mammals and marine reptiles from a marine diesel or chemical spill. 	<ul style="list-style-type: none"> Bunkering equipment controls. Liquid chemical and fuel storage areas banded or secondarily contained when they are not being handled or temporarily moved. Contractor procedures include requirements to be implemented during bunkering/refuelling operations.
Unplanned Discharges: Deck and Subsea Spills	<ul style="list-style-type: none"> Accidental discharge of hydrocarbons/ chemicals from project vessels deck activities and equipment, from subsea ROV hydraulic leaks. Unplanned release of chemicals or hydraulic fluid due to failure of subsea equipment. 	<ul style="list-style-type: none"> Unplanned discharges of non-process chemicals and hydrocarbons may decrease the water quality in the immediate vicinity of the release. Only small volumes are anticipated, resulting in very short-term impacts to water quality and limited to the immediate release location. As a result of a change in water quality, further impacts to receptors may occur, however impacts to marine fauna are expected to be limited to temporary irritation of sensitive membranes to individuals and are considered slight or less (negligible). 	<ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of marine pollution for project vessels. Liquid chemical and fuel storage areas are banded or secondarily contained when they are not being handled/moved temporarily on project vessels. Spill kits positioned in high-risk locations around the vessels (near potential spill points such as transfer stations). Chemicals will be selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process.
Unplanned Discharges: Loss of Hazardous and Non-Hazardous Wastes/ Equipment	<ul style="list-style-type: none"> Accidental loss of hazardous or non-hazardous solid wastes / equipment to the marine environment. 	<ul style="list-style-type: none"> The potential impacts of hazardous or non-hazardous solid wastes and equipment accidentally discharged to the marine environment include contamination of the environment as well as secondary impacts relating to potential contact of marine fauna with wastes. The temporary or permanent loss of waste materials/equipment into the marine environment is not likely to have a significant environmental impact, based on the location of the Operational Area, the types, size and frequency of wastes that could occur and species present. 	<ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes (i.e., Marine Orders 95 and 94). Implement waste management procedures which provide for safe handling and transportation, segregation and storage and appropriate classification of waste generated. Solid waste/equipment dropped to the marine environment is to be recovered where safe and practicable to do so. Where retrieval is not practicable and/or safe, material items (property) that are lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title.

¹¹ Scarborough Offshore Facility and Trunkline (Operations) Environment Plan | August 2023

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Physical Presence (Unplanned): Seabed Disturbance	<ul style="list-style-type: none"> Dropped objects resulting in the disturbance of benthic habitat. 	<ul style="list-style-type: none"> Unplanned seabed disturbance may result in localised changes to water and sediment quality or a localised temporary impact to benthic communities and is therefore considered to present a negligible risk. Potential impacts to KEFs which intersect the PAA of the activity are considered to be minor as they would be limited to the footprint of a dropped object resulting in potential highly localised and temporary change in habitat. 	<ul style="list-style-type: none"> Project vessel work procedures for lifts, bulk transfers and cargo loading. Subsea lifts of equipment will occur overboard in a designated deployment zone to reduce the risk of dropped objects in proximity to existing subsea infrastructure that could potentially cause damage/leaks. FPU and project vessel inductions include control measures for dropped object prevention. Dropped objects intended to be recovered and relocated where safe and practicable to do so. Where retrieval is not practicable and/or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title. Appropriate approval obtained from third party asset owner prior to IMMR activities being carried out in proximity to asset.
Physical Presence (Unplanned): Vessel Collision with Marine Fauna	<ul style="list-style-type: none"> Vessel movements have the potential to result in collisions between the vessel (hull and propellers) and marine fauna. The factors contributing to the frequency and severity of impacts due to collisions vary greatly due to vessel type, vessel operation (specific activity, speed), physical environment (e.g., water depth) and the type of animal potentially present and their behaviours. 	<ul style="list-style-type: none"> The risk of vessel collision with marine mammals is present year-round but is seasonally elevated for species such as humpback whales and pygmy blue whales during migration periods and within migration BIAs. The Offshore Operational Area does not overlap with cetacean BIAs or critical habitat. Given this, and the slow speeds at which project vessels operate, collisions with cetaceans are considered highly unlikely. Whilst a portion of the Trunkline Operational Area overlaps the pygmy blue whale and humpback whale migration BIAs, this overlap represents a very small proportion of the overall area of the BIA. Given the short duration of IMMR activities, and the slow speeds at which project vessels operate, interactions with whales are considered highly unlikely. IMMR activities within sensitive turtle areas (BIAs and critical habitat) will be short term and intermittent, reducing the potential for impact at the individual and population level. It is expected whale shark presence within the Operational Area would not comprise significant numbers and their presence would be transitory and of short duration. Given the slow speeds at which project vessels operate, vessel collisions with whale sharks are considered highly unlikely. 	<ul style="list-style-type: none"> Comply with regulatory requirements for interactions (e.g., EPBC Regulations 2000 – Part 8 Division 8.1) with marine fauna to reduce the likelihood of a collision occurring.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Physical Presence (Unplanned): Introduction of Invasive Marine Species (IMS)	<ul style="list-style-type: none"> Introduction and establishment of IMS within the PAA. 	<ul style="list-style-type: none"> It is not credible for IMS to be introduced and establish on the seabed or subsea structures in the Offshore Operational Area as these deep waters are not conducive to the settlement and establishment of IMS. The Trunkline Operational Area in shallower waters (30 – 40 m) present a slightly increased risk of IMS establishment, however, the risk of establishment, whilst credible, is remote. Given the low likelihood of IMS translocation to and colonisation within the PAA, project activities are unlikely to result in establishment of IMS, and as such will not adversely affect other marine user activities in the region. 	<ul style="list-style-type: none"> Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements, as applicable. Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the PAA.

¹ These mitigation and management measures are subject to change through the consultation and subsequent assessment process and may not represent content in the publicly available EP or in the final plan once accepted.

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **11 September 2023** via:

**E: Feedback@woodside.com
Toll free: 1800 442 977**

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

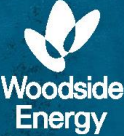

www.woodside.com/sustainability/consultation-activities.

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

1.2 Summary Consultation Information Sheet (August 2023)

CONSULTATION

SUMMARY INFORMATION SHEET

August 2023

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

When preparing an environment plan (EP), Woodside needs to notify relevant persons and obtain their input. This helps confirm current measures or identify additional measures, that may need to be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. Woodside wants to give relevant persons whose functions, interests or activities may be affected by the proposed activity the opportunity to identify themselves and provide feedback on our proposed activity.

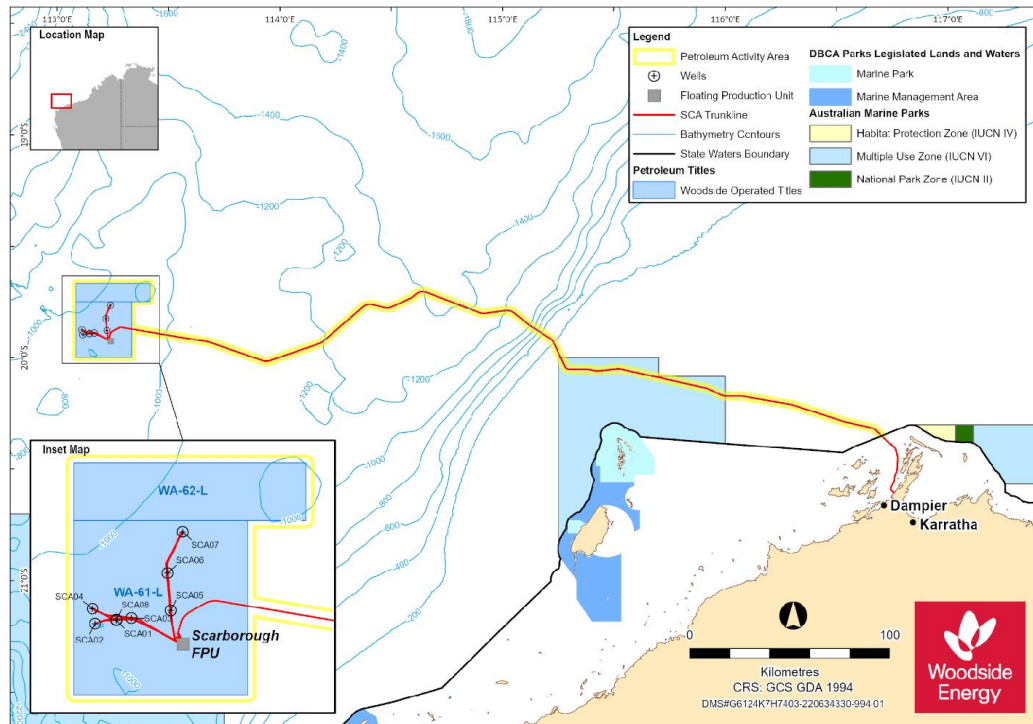

This summary information sheet provides a high-level overview of the Scarborough Offshore Facility and Trunkline Operations Environment Plan. Further details, including an assessment of the potential impacts and risks to the environment, as well as mitigation and management measures, are available within the Scarborough Offshore Facility and Trunkline Operations Environment Plan Consultation Information Sheet (August 2023) which can be found at:

www.woodside.com/sustainability/consultation-activities

Overview

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. The FPU and associated subsea production infrastructure will be installed in water depths ranging from -900 to 1000 m, in Commonwealth waters around 374 km west-northwest of Dampier, Western Australia. Gas from the FPU will be transferred through the ~440 km trunkline to the Pluto LNG Plant in Dampier, Western Australia for further processing. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities, and other contingent activities.

A map showing the location of where the activities will take place is provided below, with work planned to start in the second half of 2025.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Work Method

Key features of the Floating Production Unit (FPU) include:

- Semi-submersible hull with integrated storage tanks, ballast and bilge systems (for balance and buoyancy).
- Connected to the seabed and subsea production system by risers, umbilicals and a chain mooring system illustrated schematically in Figure 2.
- Above the water there will be supporting gas processing systems and equipment, flare systems, utilities, cranes, laydown and storage areas, utility building, living quarters and helideck.
- The FPU provides gas processing to make the gas suitable for exporting through the trunkline.

Summary of key activities include:

- The commissioning activity involves dewatering and commissioning of the subsea production system, and activities to confirm the integrity of the entire interconnected facility, so it is ready for the introduction of reservoir hydrocarbons.
- The start-up of the FPU consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to perform to design criteria.
- Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen removal.
- Routine production operations involve transfer of reservoir fluids, including gas through the subsea infrastructure to the FPU, with gas transferred to shore via the Trunkline.
- Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities on the FPU, subsea infrastructure and gas export trunkline, and other contingent activities.

A range of vessels may be used during the FPU installation, hook-up and commissioning phase including tow, support and anchor handling tugs, light construction vessels, survey vessels, supply/support vessels and contingent accommodation support vessel.

During normal operations, vessels will typically be limited to supply/support vessels and Inspection Monitoring Maintenance and Repair (IMMR) vessels.

A floating production unit

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision. This is depicted in Figure 3.

The EMBA does not represent the extent of the predicted impact of the highly unlikely marine diesel release. Rather, the EMBA represents the merged area of many possible paths a highly unlikely hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release.

This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time - the specific and minimal part of the EMBA that is affected will only be known at the time of the release.

The three hydrocarbon spill modelling sites are representative of the range of locations where a vessel collision could occur in the Petroleum Activities Area and are summarised below. The EMBA has been defined using a combination of all three locations:

- **Outside Mermaid Sound (Location 1):** Near the State Waters Boundary, this site represents the closest location to shore Inspection, Maintenance, Monitoring and Repair (IMMR) activities may occur under this EP.
- **Montebello Marine Park Multiple Use Zone (Location 2):** This location was chosen to represent around half-way along the trunkline length where IMMR activities may occur under this EP.
- **Scarborough Field (Location 3):** This location is representative of a spill in the deep-water open-ocean environment in Production License WA-61-L, where the FPU is planned to be installed and activities at the most western end of the Petroleum Activities Area.

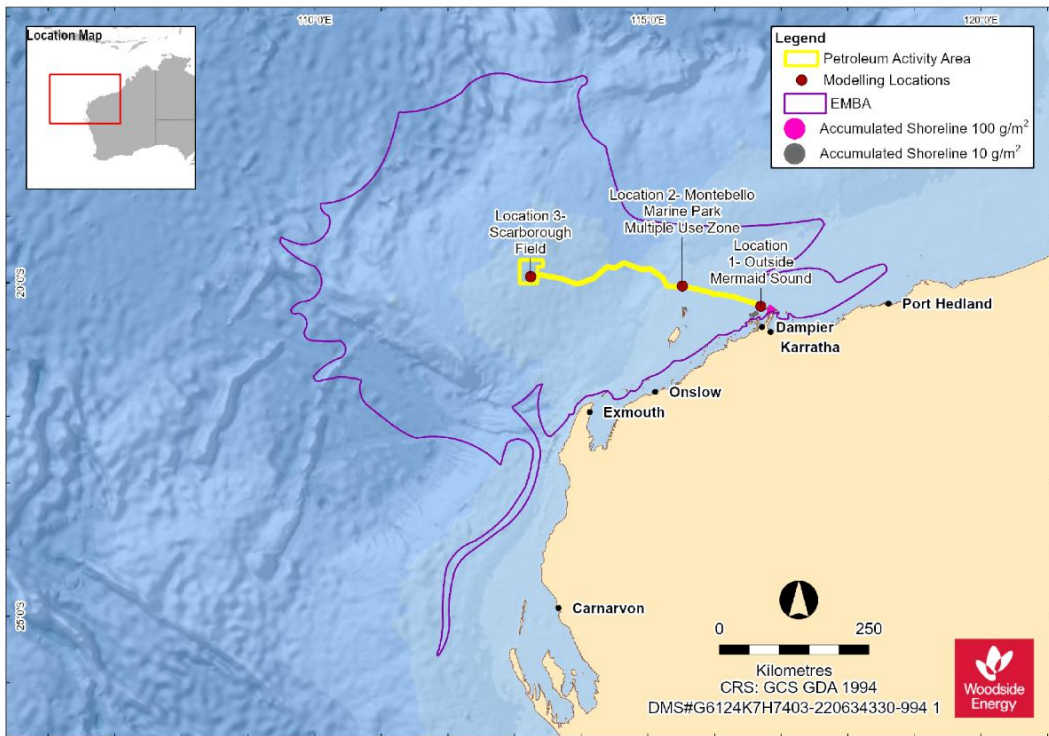

Figure 3. Environment that May Be Affected (EMBA) by a diesel release from an accident/incident during the EP Petroleum Activities Program.

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **18 September 2023** via:

E: Feedback@woodside.com

Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

www.woodside.com/sustainability/consultation-activities

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

INITIAL CONSULATATION

1.3 Email sent to Australian Border Force (ABF), Department of Transport (DoT), Pilbara Ports Authority, Ningaloo Coast World Heritage Advisory Committee (NCWHAC), Department of Biodiversity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of Energy , Mines, Industry Regulation and Safety (DEMIRS), Recfishwest, Marine Tourism WA, WA Game Fishing Association, Chevron Australia, Western Gas, Exxon Mobil Australia Resources Company, Shell Australia, INPEX Alpha Ltd, Carnarvon Energy Ltd, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia, Jadestone, KATO Energy, Finder Energy, KUFPEC, Santos, Coastal Oil and Gas, Bounty Oil and Gas, Vermilion Oil and Gas, OMV Australia, JX Nippon, Australian Petroleum Production and Exploration Association (APPEA), 350 Australia (350A), Australasian Centre for Corporate Responsibility (ACCR), Australian Conservation Foundation (ACF), Australian Marine Conservation Society (AMCS), Conservation Council of Western Australia (CCWA), Doctors for the Environment Australia (DEA), Extinction Rebellion WA (XRWA), Friends of Australian Rock Art (FARA), Greenpeace Australia Pacific (GAP), International Fund for Animal Welfare (IFAW), Lock the Gate Alliance (LTGA), Market Forces, Say No To Scarborough Gas (SNTSG), Sea Shepherd Australia (SSA), The Wilderness Society (TWS), World Wildlife Fund (WWF), University of Western Australia (UWA), Cape Conservation Group, Protect Ningaloo, Shire of Exmouth, City of Karratha, Shire of Ashburton, (9 August 2023)

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N2) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL
Location	<ul style="list-style-type: none"> • ~ 374 km west-northwest of Dampier at closest landfall • ~ 244 km north-northwest of Exmouth at closest landfall
Approx. Water Depth (m)	<ul style="list-style-type: none"> • FPU ~950 m • Production Licenses ~900 m to 1000 m • Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Timing	Anticipated around H2 2025 pending approvals

Approx. Estimated Duration	<ul style="list-style-type: none"> • FPU Hook-up and commissioning: ~4 months • FPU Start-up: ~3 months • FPU operations: for the life of the EP • Gravimetry: ~2 months
Operational Areas	<p>The Petroleum Activities Area (PAA) consists of the following Operational Areas</p> <ul style="list-style-type: none"> • Offshore Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ Facility: 2000 m around future location of the FPU ○ Subsea: 1500 m from the centerline of subsea infrastructure ○ Gravimetry: 1000 m beyond the boundary of the WA-61-L and WA-62-L • Trunkline Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ 1500 m radius from the centerline of the gas export trunkline (WA-32-PL)
Exclusionary/ Cautionary Zone	<ul style="list-style-type: none"> • Fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU. • Temporary 500 m exclusion zone around applicable vessels to manage vessel movements.
Infrastructure	<p>Key infrastructure includes, but is not limited to:</p> <ul style="list-style-type: none"> • Moored Floating Production Unit (FPU) with gas processing equipment and utilities • Suction piles and anchor chains • Wells, Christmas trees, manifolds, flowlines, umbilicals and risers • Gas export trunkline
Vessels	<p>Key vessels include, but are not limited to:</p> <ul style="list-style-type: none"> • Tow, Support and Anchor Handling Tugs (AHT) • Light Construction Vessel (LCV) • Survey vessel • Supply and support vessel • Accommodation support vessel (contingency)

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,

Woodside Feedback

1.4 Email sent to Department of Biodiversity, Conservation and Attractions (DBCA) – Shark Bay and Shire of Shark Bay (31 October 2023)

Dear [names redacted],

Woodside recently met with the Shire of Shark Bay who advised you may be interested in and have feedback on the following proposed Woodside activities. We have also consulted the central DBCA agency which has provided feedback regarding the establishment of baseline survey data for nearby areas of ecological importance, light pollution guidelines, and the 'Incidents and Emergency Response' process.

Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans (EPs):

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin FPSO facilities. Operations began in 2008 for Ngujima-Yin and 2010 for Pyrenees. Woodside is planning to submit five-year revisions of the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations EPs:

- The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.
- The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L.

Both EPs are being revised and resubmitted for the continued production of crude oil via existing subsea infrastructure to the FPSOs, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

The activities that will continue at both FPSOs are:

- Routine oil production, including crude oil offloading and associated activities,
- Routine inspection, monitoring, maintenance and repair (IMMR) of the FPSOs and associated subsea infrastructure; and
- Disconnection and sail-away of the FPSO with the turret mooring and subsea infrastructure remaining in place.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Scarborough Offshore Facility and Trunkline Operations EP:

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Consultation Information Sheets

Consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can also choose to receive updates on our consultation activities by subscribing [here](#).

Feedback

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **13 November 2023**.

Your feedback and our response will be included in our EPs, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.5 Email sent to Karratha Recreational Marine Users, Exmouth Recreational Marine Users (9 August 2023)

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Dear Stakeholder

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our website at woodside.com. You can subscribe to receive updates on our consultation activities by subscribing on our website.

1.9 Email sent to Western Australian Fishing Industry Council (WAFIC) (9 August 2023)

Dear WAFIC

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL
Location	<ul style="list-style-type: none"> • ~ 374 km west-northwest of Dampier at closest landfall • ~ 244 km north-northwest of Exmouth at closest landfall
Approx. Water Depth (m)	<ul style="list-style-type: none"> • FPU ~950 m • Production Licenses ~900 m to 1000 m • Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Timing	Anticipated around H2 2025 pending approvals
Approx. Estimated Duration	<ul style="list-style-type: none"> • FPU Hook-up and commissioning: ~4 months • FPU Start-up: ~3 months • FPU operations: for the life of the EP • Gravimetry: ~2 months
Operational Areas	<p>The Petroleum Activities Area (PAA) consists of the following Operational Areas</p> <ul style="list-style-type: none"> • Offshore Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ Facility: 2000 m around future location of the FPU ○ Subsea: 1500 m from the centerline of subsea infrastructure ○ Gravimetry: 1000 m beyond the boundary of the WA-61-L and WA-62-L • Trunkline Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ 1500 m radius from the centerline of the gas export trunkline (WA-32-PL)

1.14 Email sent to Western Australian Museum, Department of Planning, Lands and Heritage (DPLH) (9 August 2023)

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or 1800 442 977 by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N2) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). **Also attached is a list of shipwrecks in State waters within the EMBA.** You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL
Location	<ul style="list-style-type: none"> • ~ 374 km west-northwest of Dampier at closest landfall • ~ 244 km north-northwest of Exmouth at closest landfall
Approx. Water Depth (m)	<ul style="list-style-type: none"> • FPU ~950 m • Production Licenses ~900 m to 1000 m • Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)

1.15 Email sent to Department of Climate Change, Energy, the Environment and Water (DCCEEW) – Underwater Heritage & Petroleum and Fisheries (9 August 2023)

Dear Department of Climate Change, Energy, the Environment and Water

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or 1800 442 977 by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

1.16 Email sent to Director of National Parks (DNP) (9 August 2023)

Dear Director of National Parks

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or 1800 442 977 by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Australian Marine Parks (AMPs)

- We note Australian Government Guidance on consultation activities and confirm that:
 - The Trunkline Operational Area overlaps the Montebello Marine Park (Cwlth).
 - The Dampier Marine Park (Cwlth) is ~ 20 km east of KP40
 - The Gascoyne Marine Park (Cwlth) is ~ 80 km south-west of KP350
 - The Ningaloo Marine Park (Cwlth) is ~184 km south of KP350
- We have assessed potential impacts to AMPs in the development of the proposed Environment Plan and given the Trunkline Operational Area overlaps the Montebello Marine Park Multiple Use Zone, there may be slight (or lower) impacts to benthic habitats and marine fauna associated with Inspection Maintenance, Monitoring and Repairs activities along the Trunkline.
- The worst-case credible spill scenario assessed in this EP is the highly unlikely event of damage to the production facility or vessel collision resulting in a release of marine diesel. Through review of hydrocarbon spill modelling, and with consideration of a 50 ppb

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.17 Email sent Karratha Community Liaison Group (KCLG), Exmouth Community Liaison Group and Exmouth Chamber of Commerce and Industry (CCI) (10 August 2023)

Dear Exmouth Community Liaison Group

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au, or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL
Location	<ul style="list-style-type: none"> • ~ 374 km west-northwest of Dampier at closest landfall • ~ 244 km north-northwest of Exmouth at closest landfall

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,

Woodside Feedback

1.19 Email Carnarvon Chamber of Commerce and Industry, Shire of Carnarvon, Port Hedland Chamber of Commerce, Town of Port Hedland, Karratha & Districts Chamber of Commerce and Industry (16 August 2023)

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

Kind regards,

Woodside Feedback

1.21 Email sent to [name redacted], [name redacted] and Save Our Songlines (3 September 2023)

Dear [name redacted], [name redacted] and Save Our Songlines,

We are contacting you regarding Woodside's Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests you may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **30 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let us know.

You can also provide feedback directly to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

We look forward to hearing from you.

Regards,

Woodside Feedback

1.22 Email sent to Shire of Shark Bay (31 October 2023)

Dear [names redacted],

Following Woodside's recent visit, please find an overview of proposed Woodside activities you may be interested in providing feedback on.

Also below is the previous email we sent to admin@sharkbay.wa.gov.au on 16 October regarding the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations Environment Plans.

Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans (EPs):

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin FPSO facilities. Operations began in 2008 for Ngujima-Yin and 2010 for Pyrenees. Woodside is planning to submit five-year revisions of the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations EPs:

- The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.
- The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Both EPs are being revised and resubmitted for the continued production of crude oil via existing subsea infrastructure to the FPSOs, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (Environment Regulations).

The activities that will continue at both FPSOs are:

- Routine oil production, including crude oil offloading and associated activities,
- Routine inspection, monitoring, maintenance and repair (IMMR) of the FPSOs and associated subsea infrastructure; and
- Disconnection and sail-away of the FPSO with the turret mooring and subsea infrastructure remaining in place.

Scarborough Offshore Facility and Trunkline Operations EP:

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Consultation Information Sheets

Consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can also choose to receive updates on our consultation activities by subscribing [here](#).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Feedback

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **13 November 2023**.

Your feedback and our response will be included in our EPs, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,

Woodside Feedback

1.23 Email sent to Shark Bay Recreational Marine Users, RAC Monkey Mia Dolphin Resort, Dirk Hartog Island, Shark Bay Community Resource Centre, [name redacted] MLA, Shark Bay Aviation, Shark Bay Coastal Tours, Naturetime Tours, Wula Gula Nyinda Eco Cultural Tours (31 October 2023)

Dear Stakeholder,

Woodside recently met with the Shire of Shark Bay who advised you may be interested in and have feedback on the following proposed Woodside activities:

Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans (EPs):

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin FPSO facilities. Operations began in 2008 for Ngujima-Yin and 2010 for Pyrenees. Woodside is planning to submit five-year revisions of the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations EPs:

- The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.
- The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L.

Both EPs are being revised and resubmitted for the continued production of crude oil via existing subsea infrastructure to the FPSOs, in accordance with the *Offshore Petroleum and*

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) (Environment Regulations).

The activities that will continue at both FPSOs are:

- Routine oil production, including crude oil offloading and associated activities,
- Routine inspection, monitoring, maintenance and repair (IMMR) of the FPSOs and associated subsea infrastructure; and
- Disconnection and sail-away of the FPSO with the turret mooring and subsea infrastructure remaining in place.

Scarborough Offshore Facility and Trunkline Operations EP:

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

These are also available on our [website](#). You can also choose to receive updates on our consultation activities by subscribing [here](#).

Feedback

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **13 November 2023**.

Your feedback and our response will be included in our EPs, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.24 Email sent to Australian Communications and Media Authority (ACMA) (7 December 2023)

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **20 December 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N2) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Also attached is a communication cable map. Woodside is consulting with Telstra which has existing and proposed cables in the area.

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL
Location	<ul style="list-style-type: none"> • ~ 374 km west-northwest of Dampier at closest landfall • ~ 244 km north-northwest of Exmouth at closest landfall
Approx. Water Depth (m)	<ul style="list-style-type: none"> • FPU ~950 m • Production Licenses ~900 m to 1000 m • Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Timing	Anticipated around H2 2025 pending approvals

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Approx. Estimated Duration	<ul style="list-style-type: none"> • FPU Hook-up and commissioning: ~4 months • FPU Start-up: ~3 months • FPU operations: for the life of the EP • Gravimetry: ~2 months
Operational Areas	<p>The Petroleum Activities Area (PAA) consists of the following Operational Areas</p> <ul style="list-style-type: none"> • Offshore Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ Facility: 2000 m around future location of the FPU ○ Subsea: 1500 m from the centerline of subsea infrastructure ○ Gravimetry: 1000 m beyond the boundary of the WA-61-L and WA-62-L • Trunkline Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ 1500 m radius from the centerline of the gas export trunkline (WA-32-PL)
Exclusionary/ Cautionary Zone	<ul style="list-style-type: none"> • Fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU. • Temporary 500 m exclusion zone around applicable vessels to manage vessel movements.
Infrastructure	<p>Key infrastructure includes, but is not limited to:</p> <ul style="list-style-type: none"> • Moored Floating Production Unit (FPU) with gas processing equipment and utilities • Suction piles and anchor chains • Wells, Christmas trees, manifolds, flowlines, umbilicals and risers • Gas export trunkline
Vessels	<p>Key vessels include, but are not limited to:</p> <ul style="list-style-type: none"> • Tow, Support and Anchor Handling Tugs (AHT) • Light Construction Vessel (LCV) • Survey vessel • Supply and support vessel • Accommodation support vessel (contingency)

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **20 December 2023**.

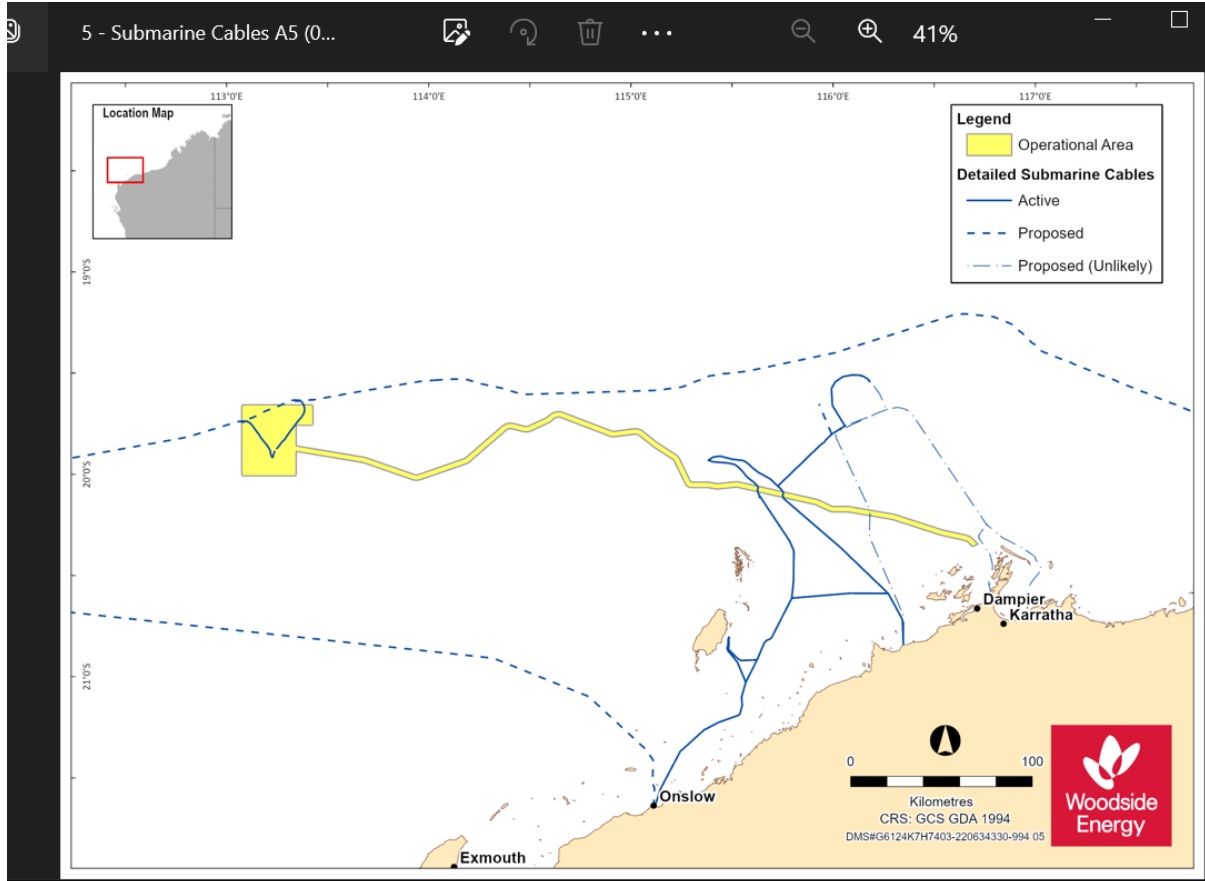

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

Kind regards,

Woodside Energy Feedback

1.25 Email Sent to Wanparta Aboriginal Corporation (28 August 2023)

Dear [name redacted]

Although we are meeting this Thursday, I thought it best to email Scarborough Offshore Facility and Trunkline Operations environment plan information and we will speak to this EP on Thursday.

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Wanparta Aboriginal Corporation and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **28 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to Wanparta Aboriginal Corporation members as required. Woodside would be pleased to speak with Wanparta Aboriginal Corporation members in addition to the Wanparta Aboriginal Corporation Board / office holders.

Kind regards,

1.26 Email sent to Kariyarra Aboriginal Corporation (29 August 2023)

Dear [name redacted]

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan.
Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Kariyarra Aboriginal Corporation and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have

environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **29 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to Kariyarra Aboriginal Corporation members as required. Woodside would be pleased to speak with Kariyarra Aboriginal Corporation members in addition to the Kariyarra Aboriginal Corporation Board / office holders.

Kind regards,

1.27 Email Sent to Murujuga Aboriginal Corporation (MAC) (1 September 2023)

Hi [name redacted]

I hope this message finds you well.

I am contacting you regarding Woodside's plans in relation to near future activities as part of the Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that MAC and its members may have in the 'environment that may be affected' (EMBA) by this activity. The Summary Information sheet (attached) provides more detail. We are interested in hearing:

- 2 How the activity could impact your interests and activities and/or your cultural values
- 3 Your concerns about the proposed activity and what you think we should do about those concerns.
- 4 Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by 2 October 2023. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

As always you can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to MAC members as required. Woodside would be pleased to speak with MAC members in addition to the MAC Board and office holders. I look forward to hearing from you.

Kind regards

1.28 Email Sent to Ngarluma Aboriginal Corporation (NAC) (1 September 2023)

Hi [name redacted]

I hope this message finds you well.

I am contacting you regarding Woodside's plans in relation to near future activities as part of the Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that NAC and its members may have in the 'environment that may be affected' (EMBA) by this activity. The Summary Information sheet (attached) provides more detail. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by 2 October 2023. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

As always you can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to NAC members as required. Woodside would be pleased to speak with NAC members in addition to the NAC Board / office holders. I look forward to hearing from you.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Many thanks

1.29 Email Sent to Wirrawandi Aboriginal Corporation (WAC) (28 August 2023)

Dear [name redacted]

I hope this message finds you well. Hoping to have the template we discussed last week soon and will then forward on to you.

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Wirrawandi Aboriginal Corporation and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **28 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to Wirrawandi Aboriginal Corporation members as required. Woodside would be pleased to speak with Wirrawandi Aboriginal Corporation members in addition to the Wirrawandi Aboriginal Corporation Board / office holders.

Kind regards,

1.30 Email Sent to Yinggarda Aboriginal Corporation (1 September 2023)

Dear [names redacted]

I write regarding Woodside's near future activities under the Scarborough Offshore Facility and Trunkline Operations Environment Plan. In summary, Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Scarborough project. Gas from the FPU will be transferred through a trunkline to Woodside's Pluto LNG Plant on the Burrup Peninsula.

Please find attached a summary information sheet that explains the activities we plan to undertake. A detailed consultation information sheet can be found at the link below:

- [scarborough-project-offshore-facility-and-trunkline-operations-environment-plan.pdf \(woodside.com\)](https://www.woodside.com/scarborough-project-offshore-facility-and-trunkline-operations-environment-plan.pdf)

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned activities and unplanned events. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Yinggarda Aboriginal Corporation (YAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the attached Summary Information sheet. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **2 October 2023**. Please also let us know as soon as possible if a meeting would be beneficial, and how you would like us to engage with you. We will also include this activity in the draft consultation framework / agreement that has been the subject of our previous correspondence.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to YAC members as required. Woodside would be pleased to speak with YAC members in addition to the YAC Board / office holders.

We look forward to hearing from you.

Sincerely,

1.31 Email Sent to Yindjibarndi Aboriginal Corporation (YAC) (28 August 2023)

Hi [name redacted]

As spokesperson for Yindjibarndi Aboriginal Corporation;

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Once again, I know we are meeting Wednesday to discuss ongoing engagement/consultation with NYFL, however I thought best to send this new environment plan information ahead of our meeting.

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan.
Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Yindjibarndi Aboriginal Corporation (YAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **28 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to YAC members as required. Woodside would be pleased to speak with YAC members in addition to the YAC Board / office holders.

Kind regards,

1.32 Email Sent to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) (01 September 2023)

Dear [name redacted]

Thank you for your time on the phone this morning.

As we discussed, I write regarding Woodside's near future activities under the Scarborough Offshore Facility and Trunkline Operations Environment Plan. In summary Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to Woodside's Pluto LNG Plant on the Burrup Peninsula.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please find attached a summary information sheet that explains the activities we plan to undertake. A detailed consultation information sheet can be found at the link below:

- [scarborough-project-offshore-facility-and-trunkline-operations-environment-plan.pdf \(woodside.com\)](https://www.woodside.com/scarborough-project-offshore-facility-and-trunkline-operations-environment-plan.pdf)

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned activities and unplanned events. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Buurabalayji Thalanyji Aboriginal Corporation (BTAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the attached Summary Information sheet. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **2 October 2023**. Please also let us know as soon as possible if a meeting would be beneficial, and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to BTAC members as required. Woodside would be pleased to speak with BTAC members in addition to the BTAC Board / office holders.

We look forward to hearing from you.

Sincerely,

1.33 Email Sent to Robe River Kuruma Aboriginal Corporation (RRKAC) (29 August 2023)

Dear [name redacted]

I am contacting you regarding Woodside's plans in relation to near future activities: Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Robe River Kuruma Aboriginal Corporation (RRKAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

How the activity could impact your interests and activities and/or your cultural values
Your concerns about the proposed activity and what you think we should do about those concerns.

Whether there are any other individuals, groups, or organisations you think we should talk to. If you would like to speak with us, please let us know by 29 September 2023. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to RRKAC members as required. Woodside would be pleased to speak with RRKAC members in addition to the RRKAC Board / office holders.

Kind regards,

1.34 Email Sent to Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC) via Yamatji Marlpa Aboriginal Corporation (YMAC) (01 September 2023)

Hi [names redacted]

This will be the last one for the week I promise!

This email is regarding Woodside's plans in relation to near future activities as part of the Scarborough Offshore Facility and Trunkline Operations Environment Plan. For background, Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that NTGAC and its members may have in the 'environment that may be affected' (EMBA) by this activity. The Summary Information sheet (attached) provides more detail however I note your feedback regarding

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

our material at our last meeting and as previously mentioned we are reviewing these resources.

We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to discuss this further please let me know by **2 October 2023**. I appreciate there are a few matters we need to discuss therefore a meeting may be more appropriate and we can include this on the agenda. Even if it is with you both in the first instance and NTGAC down the track, noting their limited availability. We would also be more than happy to speak with NTGAC members if required.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

As always you can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700. Please feel free to forward this email and, the attached documents to NTGAC members as required. I look forward to hearing from you.

Many thanks

1.35 Email Sent to Malgana Aboriginal Corporation (01 September 2023)

Dear [name redacted]

I hope this message finds you well and thank you for your correspondence earlier this week.

I write regarding Woodside's near future activities under the Scarborough Offshore Facility and Trunkline Operations Environment Plan. In summary Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to Woodside's Pluto LNG Plant on the Burrup Peninsula.

Please find attached a summary information sheet that explains the activities we plan to undertake. A detailed consultation information sheet can be found at the link below:

- [scarborough-project-offshore-facility-and-trunkline-operations-environment-plan.pdf \(woodside.com\)](#)

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned activities and unplanned events. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Malgana Aboriginal Corporation (MAC) and its members may have in the 'environment that may be affected'

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

(EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the attached Summary Information sheet. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **2 October 2023**. Please also let us know as soon as possible if a meeting would be beneficial, and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to MAC members as required. Woodside would be pleased to speak with MAC members in addition to the MAC Board / office holders.

We look forward to hearing from you.

Sincerely,

1.36 Email Sent to Yamatiji Marlpa Aboriginal Corporation (YMAC) (29 August 2023)

Hi [names redacted]

This will be the last one for the week I promise!

This email is regarding Woodside's plans in relation to near future activities as part of the Scarborough Offshore Facility and Trunkline Operations Environment Plan. For background, Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that NTGAC and its members may have in the 'environment that may be affected' (EMBA) by this activity. The Summary Information sheet (attached) provides more detail however I note your feedback regarding our material at our last meeting and as previously mentioned we are reviewing these resources.

We are interested in hearing:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to discuss this further please let me know by **2 October 2023**. I appreciate there are a few matters we need to discuss therefore a meeting may be more appropriate and we can include this on the agenda. Even if it is with you both in the first instance and NTGAC down the track, noting their limited availability. We would also be more than happy to speak with NTGAC members if required.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

As always you can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700. Please feel free to forward this email and, the attached documents to NTGAC members as required. I look forward to hearing from you.

Many thanks

1.37 Email Sent to Ngarluma and Yindjibarndi Foundation Ltd (NYFL) (29 August 2023)

Hi [name redacted]

I know we are meeting Wednesday to discuss ongoing engagement/consultation, however I thought best to send this new environment plan information ahead of our meeting.

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Ngarluma Yindjibarndi Foundation Limited (NYFL) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **28 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to NYFL members as required. Woodside would be pleased to speak with NYFL members in addition to the NYFL Board / office holders.

Kind regards,

FOLLOW-UP CONSULTATION

1.38 Email sent to Australian Border Force (ABF), Pilbara Ports Authority, Ningaloo Coast World Heritage Advisory Committee (NCWHAC), Department of Biodiversity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of Energy, Mines, Industry Regulation and Safety (DEMIRS), Marine Tourism WA, WA Game Fishing Association, Chevron Australia, Western Gas, Exxon Mobil Australia Resources Company, Shell Australia, INPEX Alpha Ltd, Carnarvon Energy Ltd, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia, Jadestone, KATO Energy, Finder Energy, KUFPEC, Santos, Coastal Oil and Gas, Bounty Oil and Gas, Vermilion Oil and Gas, OMV Australia, JX Nippon, Australian Petroleum Production and Exploration Association (APPEA), Australasian Centre for Corporate Responsibility (ACCR), Australian Conservation Foundation (ACF), Australian Marine Conservation Society (AMCS), Doctors for the Environment Australia (DEA), Extinction Rebellion WA (XRWA), Friends of Australian Rock Art (FARA), Greenpeace Australia Pacific (GAP), International Fund for Animal Welfare (IFAW), Lock the Gate Alliance (LTGA), Say No To Scarborough Gas (SNTSG), Sea Shepherd Australia (SSA), The Wilderness Society (TWS), World Wildlife Fund (WWF), University of Western Australia (UWA), Cape Conservation Group, Protect Ningaloo, Karratha Recreational Marine Users, Exmouth Recreational Marine Users, Shire of Exmouth, City of Karratha, Shire of Carnarvon, Karratha Community Liaison Group, Exmouth Community Liaison Group, Exmouth Chamber of Commerce and Industry (CCI), Australian Fisheries Management Authority (AFMA), North West Slope and Trawl Fishery, Western Deepwater Trawl Fishery, Commonwealth Fisheries Association (CFA), Onslow Prawn Managed Fishery, Exmouth Gulf Prawn Managed Fishery, Demersal Scalefish Fishery: Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery (30 August 2023)

Dear Stakeholder

Woodside previously consulted you on its plans to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activity is provided in the email below and in the attached Consultation Information Sheet.

We would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by 11 September 2023.

Kind regards,

Woodside Feedback

NORTH FREMANTLE WA 6159

Dear Stakeholder

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

Woodside previously consulted you (correspondence dated 9 August 2023) regarding the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au, phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

You were previously sent a Consultation Information Sheet (also available on our website woodside.com), which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. You can subscribe to receive updates on our consultation activities by subscribing on our website.

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL.
Location	<ul style="list-style-type: none"> ~ 374 km west-northwest of Dampier at closest landfall ~ 244 km north-northwest of Exmouth at closest landfall

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Regards,

Woodside Feedback

1.47 Email sent to Marine Aquarium Managed Fishery, Mackerel Managed Fishery (Area 2), Pilbara Crab Managed Fishery, West Coast Deep Sea Crustacean Managed Fishery, Specimen Shell Managed Fishery, Onslow Prawn Managed Fishery, Nickol Bay Prawn Managed Fishery, Western Australia Sea Cucumber Fishery Demersal Scale Fish Fishery: Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery by Western Australian Fishing Industry Council (WAFIC) (11 September 2023)

Dear Commercial Licence Holders

WAFIC is now working with Woodside to strategically streamline consultation with the commercial fishing industry, noting you may have previously received notifications regarding this proposed activity.

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.

Overview of Activities:

- The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.
- The commissioning activity involves:
 - Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
 - Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up with the introduction of reservoir hydrocarbons.
- The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen removal.
- Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.
- Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

The table below provides a summary of the proposed activities under this EP. The attached Information Sheet provides additional information including a map of impacted areas, summaries of potential impacts and risks relating to the proposed activities, and associated management measures. These are also available on Woodside's [website](#).

WAFIC

1.49 Letter sent to Gascoyne Recreational Marine Users, Pilbara/Kimberley Recreational Marine Users (31 August 2023)

Dear Stakeholder

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

Woodside previously consulted you (correspondence dated 9 August 2023) regarding the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

You were previously sent a Consultation Information Sheet (also available on our website woodside.com), which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. You can subscribe to receive updates on our consultation activities by subscribing on our website.

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL
Location	<ul style="list-style-type: none">• ~ 374 km west-northwest of Dampier at closest landfall• ~ 244 km north-northwest of Exmouth at closest landfall
Approx. Water Depth (m)	<ul style="list-style-type: none">• FPU ~950 m• Production Licenses ~900 m to 1000 m• Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Timing	Anticipated around H2 2025 pending approvals
Approx. Estimated Duration	<ul style="list-style-type: none">• FPU Hook-up and commissioning: ~4 months• FPU Start-up: ~3 months• FPU operations: for the life of the EP• Gravimetry: ~2 months

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Regards,

Woodside Feedback

1.50 Email sent to Australian Marine Conservation Society (16 November 2023)

Dear Australian Marine Conservation Society

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Woodside consulted AMCS on the following Environment Plans:

- Scarborough 4D Baseline Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI).

In response to consultation on the Seismic EP, AMCS advised it was involved in a large number of consultations and needed to prioritise limited resources but requested Woodside continue to send notifications and reminders of future consultation.

As per this previous request, on 9 and 30 August 2023 Woodside sent AMCS information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan. The consultation information for this Environment Plan is located [here](#).

Proposed activities under this Environment Plan involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

At this stage Woodside has not received a response from AMSC. We are now reaching out one final time to see if AMCS has any feedback or if you'd like to meet to discuss the Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)* and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 by 8 December 2023.

Kind regards,
Woodside Energy Feedback

1.51 Email sent to [name redacted], [name redacted] and Save Our Songlines & cc: Environmental Defenders Office (22 November 2023)

Dear [name redacted], [name redacted] and Save Our Songlines

Woodside previously provided you with consultation information on its plans to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activity is provided in the email below and in the attached Consultation Information Sheet.

We would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by 8 December 2023.

Kind regards,

Woodside Feedback

1.52 Email sent to Director of National Parks (DNP) (23 November 2023)

Dear Director of National Parks

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

On 9 and 30 August 2023, Woodside provided the Director of National Parks (DNP) with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

Proposed activities under the Operations EP involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

In 2021, 2022 and 2023 we consulted DNP on the following Scarborough Environment Plans:

- Scarborough 4D B1 Marine Seismic Survey (Seismic) – DNP provided feedback in July 2021
- WA-61-L Scarborough Drilling and Completions (D&C) – DNP provided feedback in August 2021
- Scarborough Seabed Intervention and Trunkline Installation (SITI) – DNP provided feedback in December 2021

1.53 Email sent to Say No to Scarborough Gas (SNTSG) with letter attached (5 December 2023)

Dear Say No to Scarborough Gas

Please find attached a letter seeking feedback or the opportunity to meet before consultation on the Scarborough Offshore Facility and Trunkline Operations Environmental Plan closes on 20 December 2023.

Kind regards,

Woodside Energy Feedback

Dear Say No To Scarborough Gas

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

Woodside met with Say No To Scarborough Gas on 14 October 2022 to provide a briefing on the Scarborough Project and related Environment Plans including:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)
- WA-61-L and WA-62-L Subsea Infrastructure Installation (Subsea)

Since this meeting, Say No To Scarborough Gas and Woodside have engaged in correspondence on the Seismic, D&C, SITI and Subsea EPs where Say No To Scarborough Gas provided feedback to Woodside. This feedback has been addressed.

On 9 and 30 August 2023, Woodside provided Say No To Scarborough Gas with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from Say No To Scarborough Gas on the Operations EP, Woodside has reviewed previous feedback provided by Say No To Scarborough Gas on the Seismic, D&C, SITI and Subsea EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
Say No To Scarborough Gas concerns related to the nature and process of Woodside’s community consultation, its thoroughness in nature, and whether it is genuine in intent, or purely a box-ticking exercise.	<p>Consultation requirements set out in Regulation 11A of the Environment Regulations have been complied with in relation to the consultation process for the EPs which Woodside detailed during its consultation meeting with SNTSG on 13 October 2022. Woodside’s consultation process has continued to evolve based on ongoing Regulator feedback.</p> <p>Where feedback is received which informs Woodside of measures that it may take to mitigate potential environmental impacts from the Petroleum Activities Program (PAP), Woodside incorporates this feedback into</p>

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

	its EP, and where appropriate, it will introduce additional controls to ensure risks are managed to As Low As Reasonably Practicalable (ALARP) and an acceptable level.
Consistency with existing conservation plans and ecological principles: The Environment Plans are not consistent with the principles of ecologically sustainable development, specifically the 'intergenerational principle.' According to Woodside, how do these plans meet these principles? How is the plan consistent with the Blue Whale Conservation Management Plan and threatened species recovery plans?	<p>The PAP will be carried out in a manner consistent with the principles of ecological sustainable development (ESD) (as defined in Section 3A of the Commonwealth <i>Environment Protection and Biodiversity Conservation Act 1999</i> (EPBC Act)).</p> <p>In developing the EP Woodside will demonstrate the PAP is not inconsistent with any relevant recovery plans or threat abatement plans. Woodside confirms that the EP will include demonstration of acceptability and provide assessment of relevant activities against the Blue Whale Conservation Management Plan, including relevant Environment Performance Outcomes and Controls.</p>
Independence of participants in Environmental Risk and Impact Identification workshop.	An Environmental Risk and Impact Identification Workshop (ENVID) has been undertaken to identify potential risks and impacts to inform preparation of the Scarborough Offshore Facility and Trunkline Operations EP. The participants at the Environmental Risk and Impact Identification workshop were from a multi-disciplinary background with a wealth of relevant knowledge and experience and included external environmental consultants supporting the EP development with extensive experience and understanding across all topics relevant to the PAP.
Emissions: Emissions caused by the Scarborough project are of major concern. The EPs ignore the large-scale scope 1, 2 and 3 emissions that the project is clearly designed to support. These emissions cannot be ignored when considering approvals. Also includes global warming, gas leakage, flaring, greenhouse gas emissions, UN stating 'investing in new fossil fuels infrastructure is moral and economic madness', IEA comment that no new oil and natural gas fields are required, CCS project inadequacies, credibility issues around carbon offset programs, protection of coral reefs, and catastrophic climate outcomes.	<p>Greenhouse Gas (GHG) emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).</p> <p>The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions attributed to Scarborough from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Ecosystem impacts: Say No To Scarborough Gas concerns as to whether changing environmental conditions due to climate change will affect the interactions between marine life and the disturbance and pollution caused by the project. Where have the effects of climate change and subsequent ocean changes such as higher water temperatures increasing the toxicity of petroleum hydrocarbons, expansion of oxygen minimum zones and further oxygen depletion, and ocean acidification been considered? What is the impact of these changes on increased metabolic demand? Which ecological parameters are used to assess impacts on species, populations, assemblages and ecosystems? (i.e., biodiversity, biomass, productivity). Which ecological baselines are used for these assessments? What was the process of the deep-water environment survey? And from this, which species are most likely to suffer losses? What assessments were done on microbial communities and processes? And what grounds do Woodside propose for not suspending work during pygmy blue whale migration season?</p>	<p>All emissions and discharges including from atmospheric and greenhouse gases, as well as discharges of commingled produced water and cooling water streams will be assessed in the EP. This includes an evaluation of all receptors that may be impacted from these.</p> <p>Impacts on pygmy blue whales will be assessed throughout the EP and impacts and risks reduced to ALARP and Acceptable levels.</p> <p>In the course of preparing an EP, Woodside engages suitably qualified environmental consultants and experts to inform what ecological parameters are required to be considered to inform potential risks and impacts from activities. Additionally, Woodside has extensive experience working in the Western Australian offshore environment and has developed a comprehensive database of information related to the existing environment. Woodside draws on this experience when evaluating all aspects relating to the risks and impacts of the activity and in developing appropriate control measures to mitigate impacts to environmental receptors.</p>
---	--

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether Say No To Scarborough Gas has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Kind regards,

Woodside Feedback
 T: 1800 442 977
 E: Feedback@woodside.com

Dear Doctors for the Environment Australia

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Doctors for the Environment Australia (DEA) self-identified for the following Scarborough EPs:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI).

In response to the D&C, SITI and Seismic EPs, DEA provided feedback to Woodside which Woodside has addressed.

On 9 and 30 August 2023, Woodside provided the DEA with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from DEA on the Operations EP, Woodside has reviewed previous feedback provided by the DEA on the Seismic, D&C, and SITI EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
<ul style="list-style-type: none"> • DEA members will be affected by the Scarborough project because climate change and the use of gas as an energy source for domestic and commercial use produces both direct and indirect health impacts. • Climate change has impacts on health directly, indirectly, and via social mechanisms. Worldwide, including in Western Australia, we are already seeing these impacts. This includes the impacts of extreme heat, increasingly severe extreme weather events, drought, changing infectious disease patterns, and resource scarcity, among others. • In addition to the contribution to climate change, gas itself has also been recognised as a health threat. For example, the use of gas in domestic 	<p>Greenhouse Gas (GHG) emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).</p> <p>The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use, flaring, non-routine</p>

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

11.69 in

<p>premises has been demonstrated to cause a significant proportion of childhood asthma.</p> <ul style="list-style-type: none"> The processing of the gas at facilities on the Burrup Peninsula will also increase existing levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds. Air pollutants of this type can cause serious health impacts, including heart disease, stroke, lung cancer, asthma and diabetes, even at low levels of exposure. 	<p>venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions attributed to the Scarborough Project from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p> <p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions has been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p> <p>Woodside also has in place a Climate Strategy which is an integral part of the company strategy. The strategy has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.</p> <p>Woodside's net equity reduction targets have an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside plans to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:</p> <ul style="list-style-type: none"> Avoiding GHG emissions through the way we design our assets Reducing GHG emissions through the way we operate our assets Originating and acquiring carbon credits to use as offsets for the remainder. <p>Avoiding and reducing emissions are Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions will allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans are matured and implemented. In the longer term, where emissions prove to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve our net zero aspiration.</p>
---	--

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether DEA has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with

the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Kind regards,

Woodside Energy Feedback

Dear Lock the Gate Alliance

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Lock the Gate Alliance (LGA) self-identified for the following Scarborough EPs:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)

In response to the Seismic, D&C, and SITI EPs, LGA provided feedback to Woodside which Woodside has addressed.

On 9 and 30 August 2023, Woodside provided the LGA with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from LGA on the Operations EP, Woodside has reviewed previous feedback provided by the LGA on the Seismic, D&C, and SITI EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
<ul style="list-style-type: none"> • LGA and its members will be affected by climate change which will be increased by the Scarborough project. It will especially affect our members who live in the Pilbara and Kimberley, the many people who depend on groundwater, and areas that are subject to flooding, especially the Kimberley. • The Scarborough gas field development will lead to the production of 1.6 billion tonnes of carbon emissions over the next 25 years, adding to WA’s 	<p>Greenhouse Gas (GHG) emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).</p> <p>The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use,</p>

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

11.69 in

<p>emissions and the planet's burden of climate change impacts. LGA and its supporters stand to be directly affected by the climate impacts of the project, which will cause increasing severity in heatwaves, bushfires, floods, storms, etc., and socio-economic pressures that will arise from these environmental changes.</p> <ul style="list-style-type: none"> The Scarborough gas field development will support further industrialisation of the Burrup Peninsula which will damage the National Heritage values of this area. 	<p>flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions attributed to the Scarborough Project from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p> <p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions has been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p> <p>Woodside also has in place a Climate Strategy which is an integral part of the company strategy. The strategy has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.</p> <p>Woodside's net equity reduction targets have an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside plans to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:</p> <ul style="list-style-type: none"> Avoiding GHG emissions through the way we design our assets Reducing GHG emissions through the way we operate our assets Originating and acquiring carbon credits to use as offsets for the remainder. <p>Avoiding and reducing emissions are Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions will allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans are matured and implemented. In the longer term, where emissions prove to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve our net zero aspiration.</p>
--	---

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether LGA has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety

and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Kind regards,

Woodside Energy Feedback

Dear The Wilderness Society

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

Woodside met with The Wilderness Society on 6 October 2022 to provide a briefing on the Scarborough Project and related Environment Plans:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)
- WA-61-L and WA-62-L Subsea Infrastructure Installation (Subsea)

Since this meeting, The Wilderness Society and Woodside have engaged in correspondence on the D&C, Subsea, Seismic and SITI EPs where The Wilderness Society provided feedback to Woodside which Woodside has addressed.

In a letter sent 17 October 2022, Woodside also noted The Wilderness Society’s more general interest in carbon offsets, biodiversity and native vegetation, and although outside of the scope of the Scarborough Project consultation, we welcomed the opportunity to meet with The Wilderness Society to discuss the work Woodside is undertaking in this space. This offer has not been taken up by The Wilderness Society.

On 9 and 30 August 2023, Woodside provided The Wilderness Society with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from The Wilderness Society on the Operations EP, Woodside has reviewed previous feedback provided by The Wilderness Society on the Seismic, D&C, SITI and Subsea EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
The work undertaken to understand marine fauna populations and their migration patterns in relation to Woodside’s proposed activities and	In development of the EP Woodside engages qualified Environmental Consultants to provide information related to the existing environment. This includes information on the migratory patterns and behaviours associated with marine mammals, which informs Woodside’s assessment of potential

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

	<ul style="list-style-type: none"> • Avoiding GHG emissions through the way we design our assets • Reducing GHG emissions through the way we operate our assets • Originating and acquiring carbon credits to use as offsets for the remainder. <p>Avoiding and reducing emissions are Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions will allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans are matured and implemented. In the longer term, where emissions prove to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve our net zero aspiration.</p>
<p>Are employees financially rewarded for the acceptance of EPs.</p>	<p>As per previous responses to The Wilderness Society on other Scarborough EPs.</p>
<p>Confirmation that the development of a cumulative/holistic impact assessment covers the full breadth of development, production and decommissioning activities.</p>	<p>This Petroleum Activities Program (PAP) covers the Hook-up, Commissioning and ongoing operations of the Scarborough Floating Production Unit (FPU) and Trunkline. The Wilderness Society has previously been consulted on the other Scarborough EPs which cover the construction of the Scarborough infrastructure. The EP(s) include assessment of risks associated with concurrent operations and cumulative impact.</p> <p>Woodside proactively plans for decommissioning. This includes development of the Scarborough Decommissioning Strategy. Decommissioning activities are not expected to be required within the life of this EP and will be subject to a future EP.</p>
<p>Outline of how dissenting scientific or technical expertise to the proposal was identified, actively sought and considered.</p>	<p>As per previous responses to The Wilderness Society on other Scarborough Environment Plans.</p>

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on the 20 December 2023 and to enquire as to whether The Wilderness Society has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009

(Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Kind regards,

Woodside Energy Feedback

Dear The Australian Conservation Foundation

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

Woodside met The Australian Conservation Foundation on 11 October 2022 to provide a briefing on the Scarborough Project and related Environment Plans including:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)
- WA-61-L and WA-62-L Subsea Infrastructure Installation (Subsea)

Since this meeting, The Australian Conservation Foundation and Woodside have engaged in correspondence on the Seismic, D&C, SITI and Subsea EPs where The Australian Conservation Foundation provided feedback to Woodside which was addressed.

On 9 and 30 August 2023, Woodside provided The Australian Conservation Foundation with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from The Australian Conservation Foundation on the Operations EP, Woodside has reviewed previous feedback provided by The Australian Conservation Foundation on the Seismic, D&C, SITI and Subsea EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside's assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
The Scarborough Gas Project EPs should include an evaluation of all impacts and risks related to the greenhouse gas emissions that will be caused by the Project.	Greenhouse Gas (GHG) emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).

¹ Woodside's current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

	<p>The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions attributed to the Scarborough project from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p>
<p>There are several vulnerable, endangered and critically endangered marine species within both the operational area and the environment that may be affected including loggerhead and leatherback turtles, blue whales and the eastern curlew.</p>	<p>In accordance with Regulation 13(2) and 13(3) of the Environment Regulations the EP will describe the existing environment that may be affected by the activity, including details of the particular relevant values and sensitivities of the environment. This includes presence of turtles, whales and seabirds.</p> <p>Controls will be implemented to reduce risks to As Low as Reasonably Possible (ALARP) and acceptable levels.</p>
<p>Light emissions from the activities are expected to have potential impacts and risks including behavioural disturbance, injury and mortality to seabirds while the activities are underway</p>	<p>Evaluation of risks and impacts associated with routine light emissions from the Field Production Unit (FPU) and Project Vessels will be presented in the EP. This includes routine lighting from FPU and vessel operation. As the FPU is ~430km offshore and away from islands or other emergent features, including a 105 km separation from a breeding Biologically Important Area (BIA) for the wedgetailed shearwater, any presence of seabirds or shorebirds is considered likely to be of a transient nature only.</p> <p>The Trunkline Operational Area is in proximity to and overlaps breeding and foraging habitat for a number of seabird species, with descriptions and impacts evaluated in the EP. However, planned activities in the Trunkline Operational Area are minimal, limited to infrequent and short-term vessel presence. The Trunkline Operational Area also represents a relatively small portion of the seabird BIAs and while seabird presence may occur, it is considered likely to be of a transient nature only.</p> <p>Further details including demonstration that impacts of lighting on seabirds will be reduced to ALARP and acceptable levels, with controls implemented will be presented in the EP.</p>
<p>Acoustic emissions from the activities are expected to have potential impacts and risks on marine species, including:</p> <ul style="list-style-type: none"> a. Recognition that noise interference is a key threat to migratory and threatened cetaceans 	<p>The Petroleum Activities Program will be comprised of different acoustic emissions sources, primarily associated with infield vessel operations and support activities, such as geophysical surveys and other IMMR activities. Some sound will also be associated with the start-up and operation phase of the FPU and subsea facilities. Sound levels will fluctuate over the course of the Petroleum Activities Program.</p>

<p>and marine turtles within the operational area</p> <p>b. The potential for pygmy blue whales to deviate from their migration course</p> <p>c. Noise emissions exceeding thresholds for behavioural impacts on cetaceans</p> <p>d. A risk of moderate impacts on marine turtles, in the context of a "paucity of data" on these species</p> <p>e. Behavioural impacts on fish and sharks in the operational area</p>	<p>Generally, sound associated with steady state operations will be limited, due to the FPU being moored and not dynamic positioned, with periodic and short-term increases in sound associated with activities such as FPU installation, commissioning and start-up, and Inspection, Maintenance, Monitoring and Repair (IMMR).</p> <p>Woodside has undertaken a comprehensive assessment of routine acoustic emissions, including underwater noise emissions modelling, with full justification of the impacts and risks for the Regulator to assess in accordance with:</p> <ul style="list-style-type: none"> • Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (the Environment Regulations), and • NOPSEMA Guidance Note (N-04750-GN1344 A339814) EP Content Requirement.
<p>Localised impacts to benthic habitat and communities including displacement and/or permanent loss of epifauna and infauna within the physical footprint.</p>	<p>Disturbance to the seabed and impacts to benthic habitat and communities is assessed in the EP. Benthic epifauna and infauna living on or in the sediments may be impacted by the activities that cause disturbance to the seabed. Permanent infrastructure will be present for the duration of field life and will result in the displacement and/or permanent loss of epifauna and infauna within the physical footprint. Gravimetry surveys or IMMR activities may cause temporary disturbance to the seabed as a result of working close to or on the seabed.</p> <p>No threatened or migratory species, or ecological communities (as defined under the EPBC Act), were identified in the benthic communities during studies completed in the Petroleum Activities Area (PAA). The epifauna and infauna benthic communities known to exist in the PAA are likely to be well represented elsewhere in the region, with impacts restricted to a highly localised proportion of benthic communities.</p> <p>Demonstration of impacts reduced to ALARP and acceptable levels, with appropriate controls measures is defined in the EP.</p>
<p>Hydrocarbon spill to Ningaloo Coast and Gascoyne Marine Park</p>	<p>The EP will assess potential impacts of a highly unlikely hydrocarbon spill. This includes a combination of modelling at three locations in the PAA from a worst-case release of marine diesel from a vessel collision resulting in rupture of a tank. Worst-case modelling results are evaluated in the EP and will show the probability of hydrocarbon contact (entrained hydrocarbon (≥ 100 ppb)) with Gascoyne Marine Park and Ningaloo Marine Park.</p>

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether The Australian Conservation Foundation has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Kind regards,

Woodside Energy Feedback

5 December 2023

Dear Friends of Australian Rock Art

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Friends of Australian Rock Art (FARA) self-identified as a 'relevant person' for the following Scarborough EPs:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI).

On 9 and 30 August 2023, Woodside provided FARA with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from FARA on the Operations EP, Woodside has reviewed previous feedback provided by the FARA on the Seismic, D&C, and SITI EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside's assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
<ul style="list-style-type: none"> • FARA is a relevant person/organisation. • "We have since consulted with NOPSEMA and understand further why you do not consider us 'relevant persons' with Letters from FARA regard to your current deepwater EPs - although it is just the first part of an operation which ultimately links to development which we don't condone. However, we understand that it is appropriate you consult with us as relevant persons when it comes to the preparation of your Construction and Operations EP plans." 	<ul style="list-style-type: none"> • Woodside recognises that FARA [is/considers itself/has self-identified as] a relevant person for the Scarborough Offshore Facility and Trunkline Operations Environment Plan. • In recognition of this fact, Woodside has provided FARA with consultation information and requested feedback on 9 August 2023 and 30 August 2023. • Woodside is now contacting FARA a final time to offer an opportunity to provide feedback or request a meeting by 20 December 2023.

¹ Woodside's current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

11 60 in

<ul style="list-style-type: none"> • Preservation and conservation of the Murujuga rock art and surrounding cultural landscape. • Harmful effects of acidic gas emissions from Woodside's LNG processing facilities on rock art. 	<ul style="list-style-type: none"> • Research to date on the impacts of emissions on rock art has not been conclusive. • Woodside recognises the need for further research and supports the Murujuga Rock Art Monitoring Program (MRAMP), run by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. • In the absence of scientific certainty on the level of emissions which theoretically may affect rock art, Woodside is taking reasonable and practicable measures across its operations and growth projects to minimise emissions. <ul style="list-style-type: none"> ◦ Pluto LNG's Air Quality Management Plan has been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 is consistent with best practice in the context of air emissions control for LNG plants. ◦ A number of technologies have been assessed by Woodside; we understand that FARA has previously advocated for the use of "scrubber technology", which we interpret to refer to some form of selective catalytic reduction (SCR) technology. The installation of SCR systems would introduce new hazards, including significant importation and handling of ammonia or urea, may introduce risks associated with ammonia emissions when operating SCR, and have adverse impacts on greenhouse efficiency.
<p>Impact of the Scarborough development on Traditional Custodians of Murujuga and the Dampier Archipelago, as they consider themselves responsible for the cultural landscape and the significant cultural heritage contained in the rock art of those places.</p>	<ul style="list-style-type: none"> • Woodside has consulted extensively with the Traditional Custodians of Murujuga through their nominated representatives for all Scarborough Environment Plans. • This consultation has included the appropriate management of cultural heritage on Murujuga, and all of the matters raised are directly addressed through the Environment Plans. • Woodside believes it has addressed all of the potential impacts which Traditional Custodian representatives have themselves identified. • Woodside does not provide comment on the content of consultation undertaken with Traditional Custodians or their representatives, which may include confidential or culturally sensitive material.
<p>The Scarborough gas field development will lead to the production of 1.5 billion tonnes of carbon emissions over coming decades, adding to WA's emissions</p>	<ul style="list-style-type: none"> • GHG emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Compromise of the Murujuga World Heritage consideration.</p>	<ul style="list-style-type: none"> • Woodside has operated on Murujuga in the Pilbara region of Western Australia for more than 35 years. Woodside understands that the World Heritage nomination has been progressed with full awareness of existing and future industry on the peninsula and reflects the ongoing co-existence of heritage and industry. • Our support for the World Heritage listing of the Burrup Peninsula reflects the successful co-existence of heritage and industry.
<p>Impacts from pollution sources on all potential receptors, specifically to the marine environment and biodiversity from "catastrophic marine pollution events".</p>	<ul style="list-style-type: none"> • While impacts to potential receptors are possible in the event of an unplanned diesel release from vessel collision (the worst case credible spill scenario for this PAP), Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of occurrence.
<p>Robust decommissioning plans with funds set aside to ensure all infrastructure is properly decommissioned.</p>	<ul style="list-style-type: none"> • Woodside proactively plans for decommissioning and has developed a Scarborough Decommissioning Strategy which will be used to plan for infrastructure decommissioning at the end of field life. All decommissioning activities will be subject to future Environment Plan approvals. <p>Decommissioning activities will comply with Section 572 of the OPGGS Act.</p>
<p>Endorse and support the requests made by Murujuga custodians Josie Alec and Raelene Cooper that they are relevant persons to be consulted on all potential impacts at each stage of the Scarborough Project.</p>	<ul style="list-style-type: none"> • Woodside consults extensively with First Nations communities and stakeholders for all Environment Plans. • Woodside does not provide comment on the extent of consultation with specific individuals, including their status as relevant persons.

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether FARA has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

1.59 Email sent to Shire of Shark Bay, Shark Bay Recreational Marine Users, Department of Biodiversity, Conservation and Attractions – Shark Bay, RAC Monkey Mia Dolphin Resort, Dirk Hartog Island, Shark Bay Community Resource Centre, [name redacted] MLA, Shark Bay Aviation, Shark Bay Coastal Tours, Naturetime Tours, Wula Gula Nyinda Eco Cultural Tours (15 December 2023)

Dear

Woodside previously consulted you regarding its plans to submit:

1. Five-year revisions of the Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans:
 - The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.
 - The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L;
2. The Scarborough Offshore Facility and Trunkline Operations Environment Plan, which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activities is provided in the email below and in the Consultation Information Sheets which are available on our website [here](#) (Ngujima-Yin FPSO Facility and Pyrenees Facility Operations) and [here](#) (Scarborough Offshore Facility and Trunkline Operations).

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **22 December 2023**.

Please let us know if your feedback for this activity is sensitive and we will make this known to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

Kind regards,

Woodside Energy Feedback

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Liz Westcott,
Executive Vice President
Australian Operations.

Karratha Community House Chairperson,
Niamh and Operations Manager, Kat with
Pluto Train 2 Site Manager, Chris Quinn.

Karratha is the heartbeat of Woodside's Australian operations and we are proud of the contribution that we've made to the community over almost four decades.

This year, our Pilbara operations along with our Scarborough and Pluto Train 2 projects, continued to deliver important benefits in the City of Karratha, including ongoing investment in community partnerships, contracting opportunities for local businesses and employment and training pathways for local residents. You can read more about these in this newsletter. 2024 promises to be just as dynamic. We will recognise 40 years of operations at Karratha Gas Plant and continue work on our Scarborough Energy Project. This new development, some 400 km offshore from Karratha, will deliver long term benefits to the Karratha community while the gas produced will help power industry and homes, supplying reliable energy to Western Australia and the world.

On behalf of the team at Woodside, have a safe and enjoyable festive season, and we look forward to 2024.

Liz Westcott
Executive Vice President Australian Operations.

15 years of partnership and counting - Karratha Community House

Woodside and its joint venture partners recently celebrated a three-year partnership extension with Karratha Community House.

The new partnership builds on 15 years of support for the not-for-profit, community-driven organisation whose mission is to connect families through play-based learning.

Over this time, Woodside's contribution has helped Karratha Community House to deliver initiatives such as Once Upon a Time, a walk-in educational program which aims to facilitate early learning and interest in literacy for children under five years old. The partnership also supports Ready, Set, School, which helps build school readiness in three-year-old children prior to their entry into pre-school.

Karratha Community House Chairperson, Niamh Herd said she was grateful for the commitment from Woodside and its joint venture partners.

"The partnership has enabled us to positively impact the lives of over 1,000 children through Ready, Set, School and countless other families who have been part of the Once Upon a Time program.

"The dedication to our community through the partnership has truly made a difference, and we look forward to continuing our shared journey towards a brighter future," said Niamh.

Local students learn about career opportunities

Eighteen students from Year 11 and 12 at St Luke's College and Karratha Senior High School participated in work experience at the Karratha Gas Plant, Pluto LNG Plant and the King Bay Supply Facility this year.

Through our recruitment partner Programmed, the students spent time at our operations, learning about trade pathways and engineering.

As well as rotating between various on-site teams, students were also taken on a cultural tour of Ngajarli, boarded an LNG tanker and had a technology session with the Woodside Robotics Team.

St Luke's College Year 12 student, Indiana said she wanted to get a feel for working on-site at Woodside.

"The first day as soon as we got there, we went straight out to the ship they were loading, and the pilot gave us permission to go on and we got to move the loading arms. It was so cool. It was unreal," said Indiana.

Indiana was exploring her options of either university or doing a traineeship at a company like Woodside. She says the work experience was extremely valuable in helping her make a decision.

"I like the hands-on side of the operator role and how they weren't doing one thing, but working on many different things, and making sure the place was safe to work. So, the Operator role is something I could see myself doing," said Indiana.

“ I LIKE THE HANDS-ON SIDE OF THE OPERATOR ROLE

- Indiana, work experience participant.

Training Academy set for 2024 intake

Woodside Energy is committed to providing employment and training opportunities locally and assisting our trainees and apprentices to gain the skills needed for future careers in the sector.

Our local training programs in Karratha are integral to our operations, with more than 260 apprentices and trainees completing their training at the Woodside Training Academy since it began in 2010.

The Woodside Training Academy currently has 102 apprentices and trainees building their knowledge and experience at Karratha Gas Plant. The 2024 intake will see an additional 13 Operations Trainees, 12 Apprentices, 5 Operations Support Trainees and 4 Pre-Pathway Trainees join the Academy.

Woodside is supporting 14 school leavers and 12 mature age recruits from the Karratha area. Out of the 34 new recruits, more than a third are female and over half are Indigenous.

Operations Support Trainee and local recruit, Phil said he is looking forward to developing new skills with the role.

"I've just started my Operations Support Traineeship with Woodside. I'm excited to build a career around the oil and gas industry and understand the process from exploration to production, and learn from supportive trainers in the Academy."

If you're interested in trainee and apprenticeship pathways in 2024, visit programmed.com.au/woodside to find out more.

Murujuga Commercial Transport and Woodside Energy representatives.

New buses for North West

Woodside Energy has appointed Murujuga Commercial Transport (MCT) as its new bussing services provider.

MCT is a joint venture between Murujuga Commercial Ltd (the commercial arm of Murujuga Aboriginal Corporation) and Australian Transit Group.

Under the contract, MCT will service Woodside's Karratha onshore facilities bus transport requirements, including turnaround, onshore project, airport and heliport transfers.

The MCT contract will support local employment outcomes including two positions for Indigenous employees, including an administration traineeship and a heavy-duty diesel fitter apprenticeship in the first year of its contract. In the second year of its contract, the company will further develop the career path of an employee through an operations manager traineeship.

The contract supports Woodside bus transport requirements which aim to reduce the number of vehicles on local roads and improve community safety outcomes.

"This is an important milestone for Woodside - the agreement is the first direct Woodside contract to be signed with a Murujuga Joint Venture and supports our ongoing commitment to working with our Traditional Owner businesses," said Mike Price, Vice President Pluto Scarborough Woodside Energy.

"This contract is pivotal to the success of MCT and provides a solid foundation for the further development of the company that in turn will provide longer term benefits to the members of the Murujuga Aboriginal Corporation. We would like to also recognise the commitment from Woodside to make this a commercial reality," said Derek (Jig) Albert, Director Murujuga Commercial Transport.

Woodside announces 15-year build and lease with Yurra

Woodside (as operator of the Pluto LNG Project) has entered into a long-term agreement with local Traditional Owner business Karratha Housing Pty Ltd (a subsidiary of Yurra Pty Ltd) for the build and lease back of 20 houses in Karratha with construction planned to commence in the first quarter of 2024.

The lease of the houses is for 15 years (with two five-year extension options), making it Woodside's longest Traditional Owner business direct award, providing long-term revenue and capital assets to support the business into the future.

Under the agreement, 10 homes will be built by GBSC Yurra and another 10 will be constructed by Ngarluma Yindjibarndi Foundation Limited (NYFL) in partnership with Thomas Building. All of the houses will be maintained by Karratha Housing Pty Ltd for the duration of the leases.

The houses will be leased by Woodside for its residential workforce. Seventy-five per cent of Woodside's Burrup workforce is currently residential, up from 56% in 2018.

Woodside and Yurra have worked collaboratively to deliver a sustainable long-term agreement to support local Indigenous business and employment outcomes.

This agreement demonstrates the commitment of Woodside Energy and its fellow Pluto joint venture participants to contribute to the long-term sustainability of communities in their area of operations.

The agreement is subject to conditions precedent which are targeted to be satisfied by the end of this year.

"This is an important agreement that supports local Traditional Owner businesses and employment opportunities as well as providing additional quality housing stock to support our Karratha residential workforce," said Ryan Beccarelli, Asset Manager Pluto LNG.

"The build to lease back model also provides a long-term legacy asset to Yurra, improved housing choice for our employees and supports normalisation of the Karratha housing market in the long term," said Mr Beccarelli.

"We are very proud of the Yurra team and the partnership that has been established with Woodside over recent years. This successful housing development process builds on the existing scaffold supply contract at Karratha Gas Plant and hopefully other opportunities over time as the sophistication of the relationship grows," said Michael Woodley, Chief Executive Officer at Yindjibarndi Aboriginal Corporation and Yurra Founder.

"Having long term contracts such as this enables us to work collaboratively with Woodside Energy on mutually beneficial plans that will create real legacy for our community," said Mr Woodley.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

The Scarborough Energy Project will see gas from the Scarborough fields piped approximately 430 km to be processed onshore at the Pluto LNG facility, where Pluto Train 2 is currently under construction. Scarborough gas will also be processed through the existing Pluto Train 1 plant following modifications, which are expected to commence in late 2024.

The Project is now more than 55% complete¹, and in March 2024, Pluto Train 2 achieved a key milestone, the arrival of the first modules in Karratha. This year, a total of 51 modules will be delivered to Pluto for installation.

This year, Woodside also celebrates its 70th anniversary and the North West Shelf Project marks 40 years of domestic gas production and 35 years of LNG exports from Karratha. Over this period, we have provided reliable energy to Australia and the world from the community we continue to call home. Karratha is where the Woodside story began and the Scarborough Energy Project will build on the legacy of supporting the world's energy needs from this region.

We are proud of the Scarborough Energy Project and what it will deliver for the Karratha community and the nation.

Mike Robinson
Vice President Scarborough

¹ The completion percentage excludes the Pluto Train 1 modifications project.

Celebrating success: Woodside Training Academy Graduation and Awards

The Karratha Gas Plant-based Woodside Training Academy has seen more than 750 apprentices and trainees commence their learning journey with Woodside since it opened its doors in 2010.

The Academy plays an integral role in hosting those who are building their employable skills and experience, supporting the development of local workforce capabilities.

This March, Woodside welcomed 21 apprentices and trainees into roles across its Burrup assets. The Woodside Training Academy Graduation and Awards held at Red Earth Arts Precinct saw the graduating cohort celebrated for their achievements in completing their training. The event also recognised and awarded the outstanding performance of particular individuals throughout their training process. The award recipients were selected for their dedication, commitment and consistent demonstration of Woodside's values.

An additional 33 apprentices, trainees and pre-pathway trainees, including 17 school leavers from the Karratha area, have been recruited by Woodside's training partner, Programmed Training Services and are being hosted by Woodside in 2024. We're proud to have close to 100 apprentices and trainees learning their craft at the Woodside Training Academy and offshore assets this year.

Scan the QR code or click [here](#) to get to know a few of Woodside's new team members.

Woodside extends investment in education initiative

Woodside was recently joined in Karratha by the WA Minister for Education Dr. Tony Buti MLA and Kevin Michel MLA to share news of our ongoing collaboration with schools in the local community.

Together with our joint venture partners, we were pleased to announce our extended support for education in the City of Karratha after signing five-year community partnership agreements for the ongoing delivery of the Karratha and Roebourne Education Initiative (KREI).

The extension builds on more than 15 years of investment by the Woodside-operated North West Shelf Project to bridge the gap between the opportunities and resources available to students residing in the Pilbara and their metropolitan peers, and support students on their pathway to employment.

The renewed agreements with the Department of Education and St Luke's College increases funding provided for programming at local high schools and extends that support to primary schools in the community.

The funding will enable the delivery of quality educational opportunities, including ATAR revision seminars, additional STEM curriculum, student leadership programs, employment and career pathway planning, and teacher development.

Western Australia's Minister for Education, Hon Dr Tony Buti MLA, said he is thrilled support for the Initiative will continue for years to come, benefitting even more students in the Pilbara.

"It has proved to be a very successful partnership over the years helping many students achieve their best and guiding them to a range of careers," Minister Buti said.

Woodside CEO, Meg O'Neill, said the renewed agreements reflected Woodside's commitment to improving capability and capacity in its host communities.

"The Initiative has delivered strong educational outcomes and its success is a testament to what can be achieved when we work collaboratively with a student-centred approach," she said.

Baynton West Primary School Principal Lisa Ledger, WA Minister for Education Hon Dr Tony Buti MLA, Woodside Energy Corporate Affairs Manager North West Amanda Fuery, Pilbara Education Regional Office Program Coordinator Amanda Lawrence, Member for Pilbara Kevin Michel MLA and students from Baynton West Primary School.

Apprentice takes home Citizen of the Year

Meet Rhian. She's a fourth-year, Programmed Electrical Instrumentation Apprentice at Karratha Gas Plant and was recently named the City of Karratha's Citizen of the Year.

Rhian joined the Karratha Volunteer Fire and Rescue Service to meet people and make friends when she first moved to Karratha. She now holds a senior position and is on-call 24/7 with requests for jobs, including road crash rescues, house fires, HAZMAT incidents and assisting the local police.

But Rhian's contribution to the community doesn't stop at fire and rescue. Five years ago, she joined St John Ambulance as an Emergency Medical Technician volunteer.

She's attended more than 800 jobs in and around Karratha, and she also helped at the 2019-2020 Black Summer fire in QLD. Rhian also volunteers at community events like Speedway, Karratha's FeNaCING festival, Santa lolly runs, youth cadets and school visits.

"I just love giving back to the community and helping people in times of need. It's what I enjoy doing in my spare time. Some people play sport. I volunteer," said Rhian.

Electrical Instrumentation Apprentice and City of Karratha Citizen of the Year, Rhian

Indigenous Collegiate leads cargo loading

As the Woodside-operated North West Shelf Project prepares to mark 35 years of delivering LNG cargoes to our international customers, another achievement was recently recognised at Karratha Gas Plant.

In January, an LNG cargo was loaded at Karratha Gas Plant's berths by a team made up entirely of Indigenous employees.

The team consisted of nine members from Storage and Loading, including Operations Support Trainees through to Maintenance Technicians and Supervisors. The vessel was also piloted by Woodside and Australia's first Indigenous master mariner.

Woodside's Indigenous Liaisons Coach, Josh Hill, said the activity demonstrated the progress Woodside has made in creating employment opportunities for First Nation's people.

"It was inspiring to see and reflects Woodside's work to increase Indigenous recruitment and provide career support for members of the Indigenous Collegiate," he said.

Making significant progress on the Scarborough Energy Project

The Scarborough Energy Project's Pluto Train 2 achieved a major milestone with the first three modules now safely installed on site in Karratha.

The modules, which arrived in February 2024, weigh a combined total of more than 4,000 metric tonnes, equivalent to the weight of 30 houses or 24 Boeing 787 Dreamliner aircraft. The modules were transported from Pilbara Ports to the construction site at the existing Pluto LNG facility using 21 specialised hydraulic transporters with 126 axles and 504 wheels.

Our CEO, Meg O'Neill, said the delivery of the first Pluto Train 2 module was a key milestone towards the delivery of the Scarborough Energy Project, which will help meet the growing demand for the low-cost, lower-carbon, reliable energy the world needs today and into the future.

"The safe and timely arrival of the module is a testament to the hard work and dedication of the Woodside team and our lead contractor Bechtel," she said.

The Scarborough Energy Project will contribute significantly to the Australian economy and create thousands of job opportunities during its construction phase.

The Project is already benefiting local Karratha businesses, including almost 30 Indigenous businesses that have been engaged. It is also supporting Woodside's investment in social contribution partnerships that provide positive impacts for those living in the Karratha community.

Scan the QR code or click [here](#) to see the arrival of the modules in Karratha.

Local businesses set to benefit from the Scarborough Energy Project

The Scarborough Energy Project, including Pluto Train 2 is providing opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Project has injected more than \$90 million locally and contracted with close to 70 Karratha businesses.

Local, family-owned business, ATOM is one of these businesses. ATOM was recently awarded a contract to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best, which is why their 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha.

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980, where during the same decade, we commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader of ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

LET'S TALK

MARCH 2024
OUR PLANS,
YOUR SAY

WELCOME

Welcome to the first edition of Let's Talk – a platform to stay connected on Woodside Energy's Australian happenings and the stories behind our activities and operations. Dive in and explore to learn more about what Woodside has planned on land and sea; when, where and how we're engaging on our activities; and how you can provide feedback to us. If you or your organisation have functions, interests, or activities that may be affected by our planned activities, we want to hear from you.

THE RUNDOWN

In December 2023, The Scarborough Energy Project received secondary Commonwealth environmental approvals for key offshore work scopes. The project is now well underway (over 50% complete) with the commencement of relevant offshore construction activities.

Woodside also received environmental approvals in November and December 2023 enabling in-field works for decommissioning activities at the Griffin (65 km northwest of Onslow) and Stybarrow fields (51 km to the northwest of the North West Cape).

As part of the decommissioning of the Enfield field, Woodside received environmental approvals in July 2023 for the removal of the Nganhurra riser turret mooring (RTM) from the permit area off the coast of Exmouth.

The Nganhurra RTM is a metal structure, about 83 metres long, on which Woodside previously moored an oil producing facility.

The RTM allowed the facility to rotate with weather while moored and also brought subsea production lines from the Enfield oil field to a Floating Production Storage and Offloading facility. Enfield ceased production in November 2018 and the RTM was removed as part of decommissioning activities at the field, which also included the permanent plugging and abandonment of 18 former production wells.

The decommissioning concept for the Nganhurra RTM was matured over more than two years of careful planning and detailed engineering, undertaken in conjunction with a range of specialist contractors.

In late 2023, Woodside safely and successfully completed activities in the Environment Plan, including lifting the RTM in one piece out of the water and placing it on a barge for transportation to the Australian Marine Complex (AMC) at Henderson.

To stay updated, subscribe for future editions click [here](#) or visit www.woodside.com/what-we-do/consultation-activities

The RTM is now in its final stages of deconstruction at the AMC, expected to be completed by April 2024. More than 95% of the Nganhurra RTM will be recycled or re-used, supporting local employment and contracting opportunities.

[Click here to view the safe removal of Nganhurra Riser Turret Mooring](#)

LET'S TALK

TALKING POINT

Woodside safely completes marine survey

A marine seismic survey conducted by Woodside Energy in December 2023 applied controls to avoid interaction with whales as part of the environment planning process.

Once the Environment Plan for the activity was accepted by the Regulator, Woodside conducted the survey from 2 December to 31 December 2023.

The survey was undertaken with a range of standard and project-specific controls designed to reduce interactions with marine fauna including a dedicated spotter vessel with trained Marine Fauna Observers operating during daylight hours and the use of a Passive Acoustic Monitoring system to detect the presence of vocalising whales.

A shut down zone was in place for whales detected within 2 km of the acoustic source and for sea turtles spotted within 100 m of the acoustic source.

There were also specific controls in place relating to whale species of potential cultural significance, such as pygmy blue whales and humpback whales.

This included an extended 'limits of visibility' shutdown zone if these whale species or large unidentified whales were detected by observers, within their limits of vision.

Weekly project update reports were published on the Woodside website during the survey to provide information on cetacean or marine turtle observations. These reports confirmed that marine fauna continued to move through the area during the survey. They also confirmed that no pygmy blue whale or sea turtles were sighted during the survey.

COMMUNITY SPOTLIGHT

The Scarborough Energy Project

The Scarborough Energy Project will provide a boost to the WA economy and communities, growing jobs and bringing work through the supply chain, with a focus on the Pilbara region.

A second processing train, Pluto Train 2, is being constructed within the existing Pluto LNG facility located near Karratha in the Pilbara Region of Western Australia and is currently set to process about five million tonnes per annum of Scarborough gas. The project is providing various opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Scarborough Energy Project has injected more than \$90 million locally and contracted over 65 Karratha businesses.

Local business spotlight: ATOM

We're spotlighting local, family-owned business: ATOM. The company name stands for Aqua Terra Oil & Mineral. ATOM has recently been contracted to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best which is why its 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Terry Klowss, Bechtel's Site Manager for Pluto Train 2 said, "ATOM's 100% local workforce helps us ensure our partnerships are benefiting local people - this is something that is very important to us at Bechtel."

“Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha.”

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980. In the same decade, Woodside commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

With access to more than one million products, ATOM is one of Australia's fastest growing industrial and safety supply business.

“If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team.”

HAVE YOUR SAY

Woodside consults relevant persons in the course of preparing our Environment Plans. This is to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse impacts of the proposed activity on the environment.

We welcome your input so please contact us if you'd like to discuss your functions, interests or activities which may be affected by our proposed activities.

Environment Plan	Activity Type	Location	Consultation Dates
Pluto Facility Operations	Operations	-190km north-west of Dampier	February – March 2024
North Rankin Complex Operations	Operations	-135 km offshore from Dampier	April – May 2024
Scarborough Trunkline Operations (State)	Operations	-30km north of Dampier	April – May 2024

You can access our consultation information, provide feedback and subscribe for updates by visiting www.woodside.com/what-we-do/consultation-activities or click [here](#).

PROGRESS SNAPSHOT

You can view Environment Plans for approved projects and activities by visiting: info.nopsema.gov.au/home/approved_projects_and_activities or click [here](#).

Environment Plan	Activity type	Date Accepted	Status
Stybarrow Decommissioning and Field Management	Decommissioning	8 January 2024	Work intended to commence in 2024
Stybarrow Plug and Abandonment	Decommissioning	21 December 2023	In progress
WA-34-L Pyxis Drilling and Subsea Installation (Revision)	Project	21 December 2023	Work intended to commence in 2024
Griffin State Pre-Decommissioning	Decommissioning	20 December 2023	Completed
Scarborough Seabed Intervention and Trunkline Installation	Project	13 December 2023	In progress
Scarborough WA-61-L and WA-62-L Subsea Infrastructure Installation	Project	8 December 2023	In progress
Scarborough Drilling and Completions	Project	1 December 2023	In progress
Scarborough 4D B1 Marine Seismic Survey	Survey	1 December 2023	Completed

LET'S TALK

What's an Environment Plan?

A Titleholder must have an accepted Environment Plan (EP) in order to carry out certain petroleum activities. An EP sets out information about the proposed activity, how the activity may potentially impact the environment, measures to mitigate potential risks and impacts to as low as reasonably practical (ALARP) and acceptable levels, a record of consultation undertaken by the Titleholder, preparedness for emergencies and information on how environmental performance will be monitored and reported.

When an EP is being developed, a Titleholder:

- Engages in consultation with relevant persons and organisations.
- Provides information on its activities.
- Engages in dialogue with persons being consulted (where appropriate).
- Responds to claims or objections about the activity.

Consultation is an important part of environmental management.

Consultation on Environment Plans

Consultation provides an opportunity for persons who wish to provide feedback or raise concerns about:

- The potential adverse impacts of the activity on their functions, interests or activities, to seek information about the activity.
- How the Titleholder intends to manage the activity so that the risks and impacts are managed to ALARP and acceptable levels.

Information provided by the relevant person may assist the Titleholder to better put in place measures to manage the risks and impacts of an activity.

Commonwealth Waters

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) is Australia's independent regulator for health and safety, structural and well integrity, and environment management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.

EPs submitted to NOPSEMA for assessment are made available on the NOPSEMA website.

Woodside consults in the course of preparing Commonwealth EPs in accordance with section 25 of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023*. Consultation methodologies are designed to:

- Identify relevant persons.
- Provide them with sufficient information and a reasonable period of time to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities.
- Assist Titleholders to consider and adopt appropriate measures in response to claims or objections raised during consultation.

Woodside identifies relevant persons for consultation in accordance with section 25 of the Environment Regulations. Alternatively persons who wish to consult can self-identify, in accordance with regulation 25 of the Environment Regulations.

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest area where a petroleum activity could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned activities and unplanned events. Woodside's assessment of relevant persons is based on the EMBA assessed for the activity.

State Waters

The Department of Energy, Mines Industry Regulation and Safety (DEMIRS) is the regulator for activities in State waters in Western Australia. Woodside follows a similar process to identify relevant persons to consult for State EPs. However consultation for State EPs is based on activities in the operational area, not unplanned events in the EMBA. For State EPs, only EP summaries are made public on the DEMIRS website once the EP has been approved.

Are you a Relevant Person?

Recently, Woodside launched an information campaign online and on social media focusing on the Kimberley, Pilbara, Gascoyne and Murchison areas to build a greater understanding of how members of those communities can get involved in consultation and the environmental planning process.

A series of short videos were shared on Woodside's website and on social media with targeted information for different community members including commercial fishers, marine users and traditional custodians.

In the videos, Woodside tells community members about our EPs and asks viewers who might be relevant to our activities to self-identify and participate in consultation.

The campaign is still running and provides suggestions as to ways to get into contact with Woodside and learn more about our EPs.

CONSULTATION ACTIVITIES
We look after each other, our communities and the environment. Our engagement processes encourage open and transparent communication and feedback.

We look after each other, our communities and the environment.

The way we engage is fundamental to building the trust and understanding needed for long-term relationships. We emphasise open and transparent communication and feedback on our activities. To facilitate this, we have a range of consultation documents that we make available for review and comment. To give feedback on any of these documents and activities, please visit our [Contact page](#), where you can submit comments online or find direct contact details for the relevant location.

Are you a relevant person?
You may be a relevant person if you or your organisation have functions, interests, or activities that may be affected by an offshore petroleum activity proposed under an environment plan. Watch the short clips below to find out more.

LET'S TALK

EDITION 2 | APRIL 2024

OUR PLANS,
YOUR SAY

THE RUNDOWN

On 1 March 2024, Woodside received Commonwealth environmental acceptance for the Griffin Field Decommissioning (End State) Environment Plan, supporting the staged decommissioning program for the Griffin oil and gas field, located off the Western Australian (WA) coast 65 km north-west of Onslow and 94 km north-east of Exmouth.

During late 2023, Woodside received acceptance for other Griffin decommissioning activities, with several activities already safely and successfully completed.

WHAT IS DECOMMISSIONING?

Decommissioning involves managing infrastructure that is no longer required in a timely, safe, and culturally and environmentally responsible manner.

GRIFFIN FIELD - FAST FACTS

- Field discovered 1989
- Production period 1994 – 2009
- Gas produced for the WA domestic gas market - 62 trillion cubic feet
- Barrels of oil produced - 167 million

Griffin gas export pipeline removed safely, offshore from Onslow

Woodside recently completed staged decommissioning activities under the Griffin Gas Export Pipeline (GEP) Decommissioning Environment Plan, which was accepted on 30 November 2023. Woodside removed ~25 km of the pipeline offshore within Commonwealth waters at depths ranging from 52 m to 127 m, approximately 41 km north-west of Onslow.

During production, the 62 km long and 30 cm in diameter Griffin GEP transported gas from the field to the former onshore Griffin gas export facility south of Onslow for use by WA businesses and households.

The decommissioning of the pipeline's WA State waters section and related onshore infrastructure requires separate state approvals. Woodside will engage local stakeholders to understand their views on potential decommissioning options for this pipeline portion.

Woodside is now undertaking a post-removal assessment of the Commonwealth section of the Griffin pipeline to inform future decommissioning activities in the region. Woodside will continue to assess decommissioning options case-by-case, guided by science, consultation, and legislative requirements.

NINGALOO OUTLOOK SYMPOSIUM

To increase the ecological understanding of the Ningaloo Coast World Heritage Area's deep and shallow reefs and shark and turtle populations, Woodside and CSIRO have partnered on the Ningaloo Outlook Marine Research Partnership. For Ningaloo Outlook (Phase 1 and 2) over A\$12million has been invested in scientific research to further develop new knowledge about the Ningaloo Coast World Heritage Area. The initial Phase 1 was in partnership with BHP, now part of the merged Woodside Energy.

The 300 km long Ningaloo Reef is the largest fringing coral reef on the west coast of any continent. With shallow lagoons and deeper waters offshore, the reef is home to a variety of marine life and diverse habitats.

The sixth **Ningaloo Outlook Symposium** recently enabled marine park managers, the scientific community and interested stakeholders to discuss the partnership's 2023 research findings.

[Click here to view footage shown at the 2024 Ningaloo Outlook symposium.](#)

COMMUNITY SPOTLIGHT

Support for Murujuga

Woodside is proud to be a signatory of Murujuga Aboriginal Corporation's (MAC) Statement of Intent as part of our unwavering support for World Heritage Listing over the Murujuga Cultural Landscape, and our ongoing support for the protection and management of Murujuga's outstanding heritage values. We are committed to and support the protection of Aboriginal cultural heritage and continue to work closely with Traditional Custodians in the areas we operate.

Woodside was one of 11 signatories to the MAC Statement of Intent at a ceremony held at Hearson Cove on Murujuga Country. Other parties to the Statement of Intent included MAC (as the representative body for five Traditional Custodian groups, being Ngarluma, Yaburara, Yindjibarndi, Mardudhunera and Wong-Goo-tt-oo peoples), the Government (Premier, Environment Minister and Aboriginal Affairs Minister), Commonwealth Government (Environment Minister), Rio Tinto, Pardaman, Yara Pilbara, Horizon Power and the City of Karratha.

The Statement of Intent sets out the guiding principles for MAC, government and industry parties to work together to negotiate a cooperative Strategic Head Agreement in relation to the management, protection, and conservation of the Murujuga Cultural Landscape in support of the World Heritage nomination of this landscape.

Woodside takes its responsibility to protect and manage cultural heritage seriously, including through taking reasonable and practical measures across our operations and growth projects to minimise our emissions.

TALKING POINT

Supporting Science at Scott Reef

Out on the edge of Australia's continental shelf sits the north and south reefs and sandy islet of Scott Reef.

Located about 425 km north-west of Broome, to reach Scott Reef a boat would need to travel from the closest point on the WA coast for 270 km across the Indian Ocean.

Scott Reef and other reefs in the Pilbara and Kimberley were considered "poorly understood" by the Australian Institute of Marine Science (AIMS) three decades ago. However, over the last 30 years, more than 50 expeditions by numerous marine scientists have led to extensive research and understanding of Scott Reef.

In 1993, Woodside supported AIMS' extensive survey of coral and fish communities. This led to the establishment of a long-term monitoring program in 1994, which continues today. The Scott Reef coral reef monitoring program is globally one of the few continuous programs providing insight into the health and condition of resident corals and fish.

Woodside partnered with the WA Museum in 1998, contributing to research on oceanography and the biology and ecology of the resident species. The partnership has enabled long-term research to understand the reef's health and how it changes through time. WA Museum scientists visited Scott Reef in 1984 to carry out extensive surveys to sample fauna. Then, in 2006

returned with Woodside's support and catalogued 1,897 marine life species, including 262 new discoveries.

The WA Museum partnership included the Woodside Collection Project, focused on the marine life of the Dampier Archipelago and Kimberley. Over 55,000 specimens were collected and 700 new species were identified as part of the large Australian biodiversity project.

The wide-ranging Scott Reef research projects have revealed important insights into a complex ecosystem and have delivered a wealth of knowledge to support Woodside's long-term environmental planning and management.

Woodside is consulting on the Browse State Wellhead Decommissioning Environment Plan (EP), involving decommissioning options for three historical wellheads in WA State waters, approximately 430 km north of Broome.

[View the consultation information sheet.](#)

In preparing the EP, Woodside's intent is to minimise environmental and social impacts and is seeking stakeholder input to inform Woodside's development of the EP.

Dates and times subject to change.

Woodside is consulting with local communities at local events so you can easily come and chat to us about our operations, decommissioning activities, or proposed projects.

Recently our team talked with community members at the Karratha Shopping Centre and the Dampier Beachside Markets about Environment Plans for the Scarborough State Trunkline Operations and Pluto Operations. We also meet quarterly

with Community Liaison Groups in Karratha and Exmouth where we communicate updates and consult with community members on a range of relevant topics.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team and follow the [Woodside North West Facebook page](#) for updates. You can also read our recent [Karratha Community Update here](#).

HAVE YOUR SAY

Woodside consults relevant persons while preparing our Environment Plans to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse impacts of the proposed activity on the environment.

We welcome your input so please contact us if you'd like to discuss your functions, interests or activities which may be affected by our proposed activities.

Environment Plan	Activity Type	Location	Consultation Dates

LET'S TALK

EMBA'S AND OIL SPILL MODELLING

Let's talk about EMBA's - what they are, and just as importantly, what they're not. When Woodside talks to community members about our activities, we're often asked about the areas marked on our consultation material referred to as the "Environment that May Be Affected" (EMBA).

EMBA's are an important part of preparing the environmental and emergency response strategies that underpin the planning for our offshore activities.

They are produced as part of our extensive oil spill modelling and response planning. They represent the largest spatial area where a petroleum activity could potentially have a direct or indirect environmental impact.

Understanding the EMBA

The EMBA represents the largest, merged area of many potential paths that a highly unlikely oil spill could travel based on predictions around weather, currents, and other conditions at the time. An EMBA is not a predicted impact of a single oil spill, which would be much smaller, and the extent and path of the impact would only be known at the time it occurred.

This means the area the EMBA covers includes locations where planned activities and unplanned events could potentially occur.

Oil Spill Modelling

While offshore oil spills are extremely rare, it is important oil and gas companies are still ready to prepare for and respond to them. There are several different approaches to oil spill modelling, and Woodside uses these in combination for information about where an oil spill could move, how quickly, and the possible effect of using methods to manage a potential oil spill.

To calculate this, our oil spill modelling involves running many (sometimes hundreds) computer simulations of the same scenario to predict the behaviour of oil under different conditions.

Each simulation is subject to a range of variables, including weather and sea conditions, tides, and times of year. In the model, the oil responds to these conditions and behaves differently in each individual simulation.

Every individual simulation is overlaid on top of the next, allowing statistical analysis of the possible area the oil spill

could travel in the highly unlikely event that a spill occurs. The smooth boundary drawn around all these computer simulations of the spill creates the EMBA.

The models process the information based on an assumption there is no emergency response, which would of course not be the case in a real emergency.

Oil spill modelling helps us develop our oil spill emergency management plans and assists in preparedness and response planning. Woodside conducts regular emergency response training exercises involving multiple facets of the business so our teams are ready to respond should they ever need to.

The many simulations used to underpin our planning are estimates and predictions only. It is not possible to exactly predict the outcome until the exact weather and other conditions are known if an oil spill event occurs.

Emergency Management Plans

The emergency management plan informed by the oil spill modelling is submitted to both State and Commonwealth regulators for approval along with all other planning documents for our activities.

Woodside, in more than 60 years, has not experienced any significant uncontrolled release of oil or gas to the environment as a result of loss of well control.

Figure 1: The first stage in EMBA creation is running computer simulations (model runs). Figure 1 shows the model runs for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

Nevertheless, our extensive planning continues, drawing on international good practice, so the impacts and risks associated with our activities are detailed, evaluated and managed to a level that is as low as reasonably practicable.

We are committed to continuous improvement and share our expertise with our peers and take the lessons learned from other operators to incorporate into our management processes.

Figure 2: The EMBA is a culmination of all the computer simulations with a smooth boundary. Figure 2 shows the final EMBA for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing LNG projects in Australia. Today, we aim to thrive through the global energy transition with a low cost, lower carbon, profitable, resilient and diversified portfolio.

We are committed to consulting and ensuring feedback from relevant persons is considered and used to inform the development of an Environment Plan for the Scarborough Offshore Facility and Trunkline Operations.

Our activities

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities.

Located around 374 km off the coast of Dampier in Western Australia, work is planned to start in the second half of 2025. We are seeking input from relevant persons whose functions, interests or activities may be affected by the proposed operations.

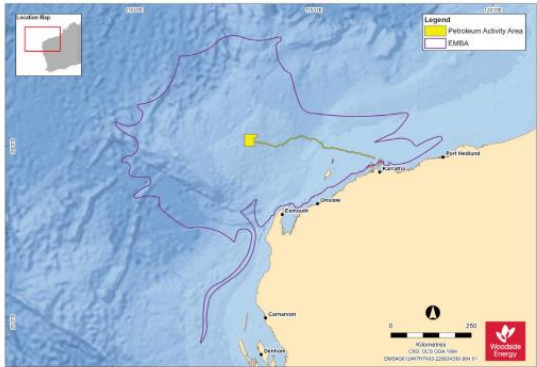

The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

The EMBA represents the merged area of many possible paths a hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time.

We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the proposed activity, we would like to hear from you by Monday, **11 September 2023** to identify as a relevant person.

The West Australian – 9 August 2023

The West Australian
Wednesday, August 9, 2023
AUSTRALIA v FRANCE SATURDAY 3PM
LIVE ON **7|7+** 15

the World Cup, Foord was Australia's best player, scoring seven times in eight games and forming a potent partnership with Kerr.

"When I'm just not thinking too much and just play the game and play it off instinct is when I'm at my best," she said.

Foord and Kerr go way back, having played together in the US with Sky Blue FC, but also at A-League Women level for Sydney FC and Perth Glory.

Foord's chemistry with Kerr is apparent, and they share a seemingly psychic connection.

With Australia on the verge of a shock exit after two group games at the World Cup, coach Tony Gustavsson decided to

shift Foord from the centre back on to her favoured left wing against Canada and was rewarded with a 4-0 win. "My job as a national team coach is not about over-coaching players and trying to keep them in a small frame," Gustavsson said. "She should have a big frame and paint whatever pictures she wants."

Then came the Denmark game and the goal against the run of play — but it was a full stop, rather than an exclamation point on Foord's career up to now — after all, she has been doing this sort of thing for some time.

From right: Caitlin Foord with Matildas teammates Mackenzie Arnold and Sam Kerr, with her dog and pictured as a youngster with older sister Jamie.

Kerr knows there's no 'I' in team

JACKSON BARRETT

Her every move has been under the microscope for the past couple of weeks but Sam Kerr knows her teammates have been doing just fine without her.

The superstar, who made her first appearance in this World Cup with a 15-minute cameo against Denmark, was quick to praise the rest of the Matildas.

"The girls smashed it," said the 29-year-old, whose calf injury before the first game had left fans fearing they wouldn't see her in an Australia jersey.

"They've done unbelievable this week and to put in that performance after a big game against Canada, it's amazing."

And Kerr, who will be looking to start in the quarterfinal against France on Saturday, said the team had been feeding off the Australian public's enthusiasm.

"I think the girls are just doing what we've always done and the crowd gets us over the line," she said.

"I think we're embracing it, the Australian public has been amazing, on the street, making us coffee — whoever it is — they have all got behind us, we have felt the love. I'm embracing it, we're loving it and hopefully we can keep pushing on."

QUARTERFINALS DRAW SPORT P54

Quiet Life's worth lauding

FLAVOUR REPORT
DEREK GOFORTH

For the time being, we've had enough of takeaways, snacks and baked goods, so this time we decided to head out for a filling lunch.

Quiet Life's pork belly miso ramen came highly recommended by friends and colleagues. After all, who could say no to twice-cooked pork belly, 12-hour pork broth, mild-spiced miso, soft soy-boiled egg, sweet corn, spring onion, ramen noodles, and seasonal veg? Not us on this occasion, that's for sure.

Along with the ramen, we also opted for a slow-cooked pork bagel with slaw, pickles, and tangy-sweet barbecue sauce. And, of course, we couldn't go to Quiet Life Specialty Coffee without grabbing a couple of capps. At just under \$50 for everything, we felt happy with the value, given the service and standard.

Quiet Life would not be out of place on Fremantle's cappuccino strip or one of Melbourne's trendy corners in the city centre. Despite its hip and groovy (sorry, but I am nearly 50) atmosphere, it attracts everyone from families and youngsters to older folk out for a lunchtime walk.

Even on this relatively quiet Sunday afternoon, the place was still busy with many different people from the community. We were pleased that parking was not an issue, and there were plenty of places to sit, inside and out.

This was my first experience with ramen, so I didn't really have a frame

Pork belly miso ramen and pork bagel from Quiet Life in Geraldton. Pictures: Derek Goforth

of reference. But I must say it certainly packed a flavour punch. The broth itself had a deep, complex flavour, with just enough heat to awaken the taste buds. The noodles and the veg were fresh and tasty. But the star of the dish had to be the pork – tender and flavourful, it melted with every forkful, offering a sublime blend of sweetness and spice. Admittedly, the price might have

seemed steep, but the quality of the ingredients made it a feast worth savouring. To be honest, the bagel was even better, packed to the brim with flavour and so many textures that played off each other. The pork, again, was amazing, but the highlight had to be the bagel itself – crispy, fresh, and moist – everything you'd want in a good quality bagel.

We have had Quiet Life's coffees before and have never been disappointed – and we were not let down here. Smooth, mellow, and just enough foam.

Would I recommend Quiet Life? Without a doubt. They have carved out an interesting niche for themselves and pretty much guarantee a tasty experience, no matter what you order.

Quiet Life on Marine Terrace.

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing LNG projects in Australia. Today, we aim to thrive through the global energy transition with a low cost, low carbon, profitable, resilient and diversified portfolio.

We are committed to consulting and ensuring feedback from relevant persons is considered and used to inform the development of an Environment Plan for the Scarborough Offshore Facility and Trunkline Operations.

Our activities

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant. Other activities include surveys to monitor the reservoir, as well as inspection maintenance, monitoring and repair activities.

Located around 374 km off the coast of Dampier in Western Australia, work is planned to start in the second half of 2025. We are seeking input from relevant persons whose functions, interests or activities may be affected by the proposed operations.

The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by a highly unlikely release of marine diesel to the environment as a result of loss of damage to the production facility or vessel collision.

The EMBA represents the merged area of many possible paths a hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time.

We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the proposed activity, we would like to hear from you by Monday, 11 September 2023 to identify as a relevant person.

Want to know more or provide input?

A feedback form and more information can be found at www.woodside.com/sustainability/consultation-activities. You can also subscribe via our website to receive future information on upcoming activities.

West End fire accused in custody

JESSICA MORONEY

A Geraldton man accused of deliberately setting fire to the Geraldton Housing Office — which left a damage bill of about \$400,000 to the 138-year-old West End building — remains behind bars after his first court appearance.

Anthony John Kruger, 51, of Beachlands, faced Geraldton Magistrates Court on Friday morning, less than 24 hours after he is alleged to have caused shock and panic in the city.

Police say Mr Kruger walked into the Department of Communities building on Marine Terrace on Thursday just before 2pm with a jerry can of fuel, which he splashed on the front counter and set alight.

Office staff quickly evacuated and there were no other people in the building at the time.

A new high-tech helicopter, coincidentally in Geraldton for community and school engagement events, tracked Mr Kruger's vehicle in Moonyoonooka, leading officers on the ground to his location, where he was arrested about 4.15pm on Thursday.

Fire crews extinguished the blaze within half an hour, containing it to a few rooms on the ground floor.

Mr Kruger made a brief appearance in court after spending the night in custody. He was not required to enter any pleas and no bail application was made.

He is charged with criminal damage by fire and intent to harm, and unlawfully doing an act as a result of which the life, health and safety of a person was or was likely to be endangered.

His case was adjourned until September 7.

A Department of Fire and Emergency Services spokesperson on Friday said the estimated damage caused to the building was about \$400,000.

A Department of Communities spokesperson on Friday said the department would seek advice on operational plans while the Geraldton office was closed.

The day before, they said the incident had left staff in "shock and distress" and they were being provided with immediate support to "prioritise their wellbeing".

Truck fatality involved cattle

PHIL HICKEY

Police have released new information surrounding a shocking truck crash in the Pilbara on Thursday. The crash happened about 10pm

on Thursday on the North West Coastal Highway, approximately 26km south of the Pannawonica Road intersection in Fortescue.

Police say the truck, which was towing a trailer containing a concrete pizza oven, was being driven by a 23-year-old man.

The 23-year-old man suffered critical injuries and died at the scene.

The Isuzu truck hit two cows that were crossing the highway before the vehicle veered off the road and rolled several times.

Major crash officers have been sent to the remote area to carry out an examination of the scene and

are appealing for any witnesses to come forward.

Dash-cam or mobile phone

video relating to the crash can be uploaded directly to investigators via tinyurl.com/4vta9azt.

Pilbara Minerals puts plan for expansion on the table

DANIELLE LE MESSURIER

Pilbara Minerals could expand production capacity at Pilgangoora beyond one million tonnes a year after revealing a substantial 36 per cent increase in mineral resources at the lithium project, in WA's Pilbara region.

Shares in Pilbara were up 4 per cent, trading at \$5.19, about an hour before chief executive Dale Henderson was due to take the stage on the first day of Kalgoorlie's Diggers & Dealers Mining Forum.

The mineral resource has increased by 109 million tonnes to 43.8Mt, Pilbara said. It represents a 36 per cent increase in total resource tonnage compared to June 30 last year, now containing 4.75Mt of lithium oxide grading at 1.15 per cent.

Pilbara said the update would underpin an ore reserve update slated to be released in the September quarter.

The company said it "may pro-

vide an opportunity to further expand production capacity beyond P1000" — its project to expand lithium-rich spodumene output to 1Mt a year.

"This significant resource upgrade reinforces our... Pilgangoora operation as one of the largest hard rock lithium deposits globally," Mr Henderson said.

"The upgraded mineral resource is consistent with our strategy to grow our operating base and therefore maximise value by achieving the full potential from our world class operation.

"We have added 109Mt of additional mineral resource at a direct exploration cost of only 13 cents per tonne of additional resource — an outstanding result."

The announcement comes less than a week after Pilbara revealed it had given the go-ahead to a \$105m demonstration plant at Pilgangoora with Calix to produce a higher value lithium phosphate product.

Nabil Bazzi. Picture: WA Courts

Convicted drug tsar has a 'win'

PHIL HICKEY

Convicted WA drug kingpin Nabil Bazzi has had a minor court victory after an attempt to pervert the course of justice charge brought against him was recently dropped.

Bazzi was jailed last year for more than two decades for being the head of a major Perth drug network that was smashed by the organised crime squad following a 10-month investigation.

The 44-year-old former Port Hedland pizza parlour owner turned Soils Ain't Soils franchisee was jailed for 21 years after being found guilty of three serious drugs offences following a three-week District Court trial.

Following his trial, The West Australian newspaper exclusively revealed how Bazzi was also facing an outstanding charge of attempting to pervert the course of justice.

As reported by The West at the time, Bazzi was charged with the offence about six weeks before his drugs trial began. Police were set to allege he personally delivered bags containing almost \$100,000 in cash to the family of a man who ultimately turned State witness against Bazzi during the

A seized Mercedes-Benz owned by Nabil Bazzi.

District Court trial. It was going to be alleged the money was an attempt by Bazzi — who was on bail at the time — to convince the witness to give evidence that would be “beneficial” to Bazzi at trial.

But Bazzi — who had pleaded not guilty to the charge — will no longer have to go to trial over the matter. Court records show the charge was discontinued several months ago.

It's understood it was dropped by State prosecutors on public interest grounds.

Sensational details about Bazzi's drug empire emerged when one of his couriers turned State witness and agreed to testify against his former boss.

The trial was told how Bazzi was first arrested by police during a traffic stop on Mounts Bay Road in Crawley in September 2019. The court heard

how a search of his car uncovered a Coles bag containing \$114,550 as well as two Ciphra phones.

Bazzi later told police the cash was from his Soils Ain't Soils business and that the phones weren't his, claiming he was going to sell them for \$250 each.

It wasn't until a few months later, following the arrest of two of Bazzi's couriers in relation to the seizure of almost 7kg of meth in East Cannington, that the organised crime squad slapped Bazzi with more serious drugs charges.

That also prompted police to seize millions of dollars in assets belonging to Bazzi, including a 2017 AMG Mercedes-Benz and two luxury properties.

Bazzi is in the process of appealing his lengthy jail sentence and his conviction.

Bitter Labor row risks party split, PM intervention

EXCLUSIVE

MATTHEW HERRICK
ANANDA CRAMERSON

Anthony Albanese is set to be dragged into a bitter power struggle to decide the fate of the Labor Party and to push to oust the current leader, Peter Dutton.

Former Labor leader David Oliver has accused Mr Albanese of a "backstab" and a "betrayal" of the party's principles.

Mr Albanese is expected to announce his resignation in the next few days, but he has not yet done so.

Mr Albanese's resignation is expected to trigger a leadership contest, with Mr Oliver and other senior party figures vying for the top job.

Zimmermann and Nicky Zimmermann at their Maline Avenue fashion boutique in New York.

Zimmermanns surge up nation's rich list

MATTHEW HERRICK

Nicky and Nicole Zimmermann's wealth has soared in the past year, with the couple's net worth rising by more than \$1 billion.

The couple's wealth is primarily derived from their fashion business, Maline Avenue, which has become a major success story in the industry.

The Zimmermanns' rise to the top of the nation's rich list is a testament to their hard work and entrepreneurial spirit.

The couple's success has also led to a significant increase in their philanthropic activities, as they seek to give back to the community.

The Zimmermanns' rise to the top of the nation's rich list is a testament to their hard work and entrepreneurial spirit.

National Indigenous Times – 29 August 2023

nt.com.au SPORT N T 23

Walk the talk for AFL star

DAVID PRESTIPINO

This year's 20th Long Walk will bear extra significance for Indigenous AFL trailblazer Michael Long as he strives to unite the nation behind the Voice to Parliament.

The Essendon great will again walk the 660km journey from Melbourne to Canberra, as he first did 20 years ago when setting off to speak with then-prime minister John Howard after the Aboriginal and Torres Strait Islander Commission (ATSIC) was abolished.

This year's event aligns the Voice referendum campaign and is expected to take the Australian football hall-of-famer 30 to 40 days.

The 53-year-old is re-creating the first journey, stopping in regional communities along the way to discuss how the upcoming referendum could band the country together

before reaching Parliament House for meetings with Prime Minister Anthony Albanese and Opposition Leader Peter Dutton.

In its 20 years The Long Walk has transformed into an annual charity event, where people join Long in the trek from Melbourne's Birrarung Marr to the MCG before the annual Essendon-Richmond Dream-time game during AFL Indigenous Round.

Long said football had played a crucial role in improving the lives of Indigenous people in Australia, and the two-time premiership player believed the Voice can help change lives and bring Australians together for good.

"What I have learnt from footy, I have seen things transformed. I've seen sport change lives," he said.

"One of the greatest advocates in (former Collingwood

Anthony Albanese will meet with former AFL star Michael Long after the Long Walk. Picture: AAP

player) Damian Monkhorst, he has become a great advocate for change."

During a 1995 match between Collingwood and Essendon, Monkhorst used racist language during a tussle with Long.

Long spoke candidly about the referendum and the opportunities it posed, inviting all

Australians to join him along the journey to Canberra. The first leg began at Melbourne's Town Hall on Sunday finishing later at the Bombers' Windy Hill home ground in Kessendon.

"I want all Australians to come walk with me," Long said.

"I want all the sporting codes — Australian rules, soccer, netball, basketball, rugby, swim-

ming, tennis — to come walk with me. I want corporate Australia to come walk with me.

"I want community groups to come walk with me, and I want Aboriginal organisations to come walk with me."

More information on The Long Walk and its legs and destinations is available at thelongwalk.com.au.

Koori Mail – 9 August 2023

news

On the road to the Cape

Queensland Governor makes a trip to visit remote communities

By CHRISTINE HOWES

It would be fair to say the majority of visitors to Cape York – especially the more high profile ones – fly in and fly out. But Queensland Governor, the Honourable Dr Jeannette Young AC PSM, recently travelled to several communities for a wide range of reasons, by car.

Weipa, Aurukun, Napranum, Mapoon and Lockhart River were all on her itinerary.

"It was just gorgeous," she told the Koori Mail.

"It's an absolutely perfect part of Queensland, it's amazing, the scenery going across to Lockhart River and then coming over that Iron Range, it's just spectacular, and the beaches."

She said the drive was well-worth it.

"You miss so much if you don't drive," she said.

"It does take longer, but I had the time, thank goodness, and so I could see so much."

"I think it's amazing how people live in Lockhart River and then drive across to Weipa to do

HACC workers Bessie Hobson, Eleanor Short and Noella Clarke with the Governor in Lockhart River.

their shopping.

"It's not the best of roads, but it's pretty well maintained and you can see the council's doing a lot of work there – it was a really good trip to do."

Lockhart River Mayor Wayne Butcher said Dr Young officially opened the community's new secondary school premises.

"Whilst at the school, she visited a few classes and read books to the students," he said.

"She then had lunch with the community at the social club where we spoke about the importance of investing in educating our community about sensible drinking and building an environment to cater into the future."

"She also visited the new subdivision site and she expressed her interest in home ownership."

Dr Young said she met regularly with the premier and ministers of the state, and was able to pass on what she had found.

"I like to always try and catch

Queensland Governor Dr Jeannette Young and Lockhart River Mayor Wayne Butcher.

up with the ministers who are champions of the community. For instance, I spoke to Minister Grace about Napranum, she's their champion," she said.

She said she particularly enjoyed visiting the schools, art centres and health clinics, and meeting the Elders and Land and Sea Rangers.

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing LNG projects in Australia. Today, we aim to thrive through the global energy transition with a low cost, lower carbon, profitable, resilient and diversified portfolio.

We are committed to consulting and ensuring feedback from relevant persons is considered and used to inform the development of an Environment Plan for the Scarborough Offshore Facility and Trunkline Operations.

Our activities

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. Gas from the FPU will be transported through the gas export trunkline to the Pluto LNG Plant. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities.

Located around 334 km off the coast of Dampier in Western Australia, work is planned to start in the second half of 2025. We are seeking input from relevant persons whose functions, interests or activities may be affected by the proposed operations.

The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EIP, is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

The EMBA represents the merged area of many possible paths a hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time.

We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the proposed activity, we would like to hear from you by Monday, 11 September 2023 to identify as a relevant person.

- Type:** Seismic , General , Operations , Environmental , Decommissioning , Community , Drilling
- Year:** (dropdown menu)

The screenshot shows a PDF document titled **CONSULTATION INFORMATION SHEET** for the Scarborough Offshore Facility and Trunkline Operations Environment Plan. The document is dated August 2023 and is for the CARNARVON BASIN, NORTH-WEST AUSTRALIA. The Woodside Energy logo is visible in the top left corner.

The document content includes:

- Overview:** Woodside plans to submit the Scarborough Offshore Facility and Trunkline Operations EP in Commonwealth waters, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (regulations). The EP will cover Floating Production Unit (FPU) installation (hook-up), commissioning, start-up and operations and other support activities, including gravimetry surveys, and inspection, maintenance, monitoring and repair (IMMR) activities for the FPU, subsea infrastructure and the gas export trunkline.
- Proposed Activity Overview:** Woodside plans to install the FPU and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough project within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.
- Other activities:** include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.
- Vessels:** A range of vessels may be used during the FPU installation, hook-up and commissioning phase including tow, support and anchor handling tugs, light construction vessels, survey vessels, supply/support vessels and contingent accommodation support vessel.
- Location and Operations:** The FPU and associated subsea production infrastructure will be installed in Commonwealth waters within Production Licenses WA-61-L and WA-62-L, in water depths ranging from ~900 to 1000 m and around 374 km west-northwest of Dampier, Western Australia. Gas from the FPU will be exported through the ~440 km trunkline to the Pluto LNG Plant in Dampier, Western Australia for further processing.
- Communication with mariners:** The location of the Scarborough FPU will be marked on nautical charts and will be surrounded by a fixed 500 m radius petroleum safety zone (PSZ). A temporary exclusion zone will also be in place around installation vessels during activities, to manage vessel movements. These distances will be communicated through marine notices and are typically 500m. Other

November 2023

1.64 Social Media Generic EP Campaign

Facebook Campaign – 3 May – 11 January 2024

A Facebook information campaign was targeted along the coastline from Geraldton to Derby to ensure it reached all communities adjacent to the EMBA. Geotargeting locations are distributed along the coast, with 80 km radiuses around towns, cities and shires. Geotargeting points were also included for spaces between towns, cities and shires to ensure no areas were missed – you'll see below there are latitude and longitude references for those locations.

As at 11 January 2024

Ad reach: 131,507 users

Impressions: 1,352,808 views

Clicks through to *Consultation Information* page: 5,990 link clicks

Geotargeting locations:

- Broome (+80 km)
- Carnarvon (+80 km)
- Denham (+80 km)

1.66 Scarborough Energy Project – Integrated Information Campaign

SCARBOROUGH ENERGY PROJECT

Production is targeted to start-up in 2026. The Scarborough Energy Project will provide thousands of jobs and supply reliable energy to Australia and the world.

375 KMS **KARRATHA**

LARGE ENOUGH TO POWER MORE THAN 0.5 MILLION HOMES AROUND THE WORLD FOR MORE THAN 30 YEARS*

SCARBOROUGH ENERGY PROJECT IS ALREADY UNDER CONSTRUCTION

WILL BOOST AUSTRALIA'S ECONOMY BY BILLIONS OF DOLLARS

WILL PAY OVER \$10 BILLION IN TAXES SUPPORTING THE ESSENTIAL SERVICES AUSTRALIANS RELY ON, INCLUDING HOSPITALS AND SCHOOLS

MORE GAS FOR WA HELPS KEEP DOWNWARD PRESSURE ON THE COST OF LIVING

START OF PRODUCTION TARGETED FOR 2025

WILL DELIVER GAS AT A TIME WHEN WA IS PREDICTED TO FACE SUPPLY SHORTAGES

BACKS UP RENEWABLES AS WA'S COAL FIRED POWER STATIONS ARE SHUT DOWN

IT'S A NATURAL GAS FIELD LOCATED 375 KM OFFSHORE FROM KARRATHA

DELIVERS MORE GAS TO THE WA MARKET

GAS WILL BE PROCESSED AT WOODSIDE'S EXISTING SITE NEAR KARRATHA

WILL PROVIDE THE GAS NEEDED TO PRODUCE FERTILISER THAT OUR FARMERS USE TO GROW FOOD

THE SCARBOROUGH GAS FIELD CONTAINS LESS THAN 0.1% CARBON DIOXIDE

SECURES SAFE AND RELIABLE ENERGY FOR WEST AUSTRALIAN FAMILIES AND BUSINESSES

WILL PAY THE SAME TO THE COST OF BUILDING A NEW FIONA STANLEY HOSPITAL EVERY THREE YEARS

DELIVERING OPPORTUNITIES FOR FIRST NATIONS JOBS AND BUSINESSES IN WA

MORE OPPORTUNITIES FOR APPRENTICES AND TRAINEES

PRIMARY ENVIRONMENTAL APPROVALS GRANTED THROUGH AUSTRALIA'S STRINGENT REGULATORY SYSTEM

AWARDED MORE THAN \$3.6 BILLION IN CONTRACTS TO LOCAL WA BUSINESSES

SUPPORTS THE ENERGY TRANSITION AND SHIFT TO RENEWABLES

CONTRIBUTION OF \$30 MILLION TO THE CONSTRUCTION TRAINING FUND, SUPPORTING THOUSANDS OF APPRENTICES

CREATING MORE THAN 3,200 CONSTRUCTION JOBS AND ALMOST 600 JOBS WHEN OPERATING

PROGRESSING SECONDARY ENVIRONMENTAL APPROVALS

PERTH

Melski's murals brought to life

DANIEL SPENCE

Tambrey Primary School has successfully brought renowned artist Mel McVee, popularly known as Melski, and her sister Tash to create three vibrant murals around the school premises.

With funding support from corporate entities like Woodside, FMG, and Pilbara Real Estate, as well as community contributions from Jetwave Marine, Santos, Yara, and QUBE Energy, the school raised more than \$30,000 to bring this art project to life.

Home to nearly 700 students, with a third of them having Indigenous backgrounds, school Deputy Principal Toni Whitbread and visual arts specialist Felicity Collins said the mission of the project was to celebrate diversity and create a sense of belonging by reflecting students' culture through artwork.

The school's mission was to celebrate diversity and create a profound sense of belonging by reflecting the students' culture through artwork.

What particularly attracted the school to Mel's art-

The artist was brought to the school to create murals.

work was its unique paint-by-numbers style, which allowed students to actively participate in the mural creation process.

Eager to engage the entire school community, the school declared a special "paint week," during which more than 650 students enthusiastically joined hands to contribute to the murals.

Throughout the week, students not only participated in the creation of the murals but also enjoyed immersive art sessions in the park, indulging in painting, drawing, collaging, and chalk drawings under the enchanting winter weather. The entire experience

served to nurture the students' creativity and appreciation for art, leaving a lasting impact on their artistic aspirations.

Ms Collins said she was thrilled to see the whole school coming together for a week of collaborative art.

"We were delighted to see students immersed in a week of collaborative art," she said.

"Students not only contributed to the creation of the mural but also with their involvement in the immersive art in the park session — which included painting, drawing collaging and chalk drawings — while all outside soaking up the winter weather."

this is your chance to make a change

Chevron's Community Spirit Fund is offering up to **\$15,000** towards local projects.

Beyond supplying affordable, reliable, ever-cleaner energy — we believe we have an important role to play in helping local communities build a vibrant and prosperous future.

We do this by investing in programs which contribute to areas of health and wellbeing, education, environment and building thriving communities.

We're calling for applications for the Chevron Community Spirit Fund, offering donations of up to \$15,000 to not-for-profit organisations operating in the following Northwest locations:

- Carnarvon
- Coral Bay
- Dampier
- Denham
- Exmouth
- Karratha
- Onslow
- Port Hedland
- Roebourne
- Shark Bay

Applications are open now until 13 August 2023. To apply, head to australia.chevron.com

1.67.2 Onslow Passion of the Pilbara Festival

Location	Onslow – Passion of the Pilbara festival
Date	18 August 2023
Description of the consultation	Members of Woodside’s Corporate Affairs engaged with the community to discuss proposed Environment Plan activities. The stand included Consultation Information Sheets for a number of EPs including the Scarborough Offshore Facility and Trunkline Operations EP.
Advertising and invitations	Ahead of the event, Woodside advertised the session via the means below to assist individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: <ul style="list-style-type: none"> • The consultation opportunity was promoted prior to the Festival in a story on the Woodside North West Facebook page on 17 August 2023.
Estimated number of individuals consulted	<ul style="list-style-type: none"> • Woodside estimates approximately 100 people visited the Woodside stand.
Summary of Feedback, Objection or Claim	
<p>Community discussions centred on:</p> <ul style="list-style-type: none"> • Update of Woodside activities and employment opportunities • General Scarborough project update and operations. A Scarborough operations map and Floating Production Unit images were available (see below). There was general community interest and support for the project. Discussions included: <ul style="list-style-type: none"> ○ Support for the project and dissatisfaction about protester activity against the project ○ Number of jobs during construction ○ Location of activities (noting activity was not off the coast of Onslow) • General interest on the Browse project included: <ul style="list-style-type: none"> ○ Awareness that Carbon Capture Storage concept is feasible and has been included in the development concept. • One individual asked in relation to the Scarborough Project what Woodside was doing in relation to the protecting environment. • Community members were encouraged to provide their views on Woodside’s activities through the Woodside feedback form on the Woodside website, or to subscribe to Woodside updates. 	
Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	
Whilst feedback was received, there were no objections or claims.	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

The community information sessions were part of Woodside’s broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

City of Karratha Mayor Peter Long. Picture: Tom Zaunmayer

Mayor runs again as candidates put forward pitches

DANIEL SPENCE

Nominations have closed for the 2023 Karratha mayoral and councillor elections, with the list of candidates running to be the city's next mayor being released.

Peter Long — who has been in the position since 2011 — will be running again and said, if re-elected, he would continue to provide Karratha with intelligent, safe and inclusive leadership.

"I am a full-time mayor, always able to receive you and your ideas," he said. "I love the Pilbara and our community."

Regional Development Australia Pilbara chief executive and former local government minister Tony Simpson is also running for mayor.

His vision is to join forces with State and Federal entities to progress childcare, health and housing solutions.

"I would work to draw major brand investments in retail and leisure to provide more options for residents. Identify land for a

foreshore entertainment hub and infuse Karratha with festivals and quality entertainment," he said.

Brenton Johannsen — who ran for the seat of Durack at the recent Federal election under One Nation — said he would donate the entire mayoral allowance to charity.

"I will be a committed full-time mayor, my goal is to visit all businesses and resident groups on a regular basis to touch base and discuss any new issues," he said.

Mr Johannsen said his aims would be neighbourhood safety, more opportunities for locals, ratepayer discounts for local facilities, moving airport smokers' areas, and eco-friendly weed management.

As a sitting councillor, radio announcer, parent and former local business owner mayoral candidate Pablo Miller said he had got to know the people of Karratha.

"As your mayor, I will continue to not only listen but be a strong advocate for our community," he

said. Mr Johannsen said he was interested in expanding opportunities for young people and families, growing local and cultural tourism, supporting businesses and bolstering mental health services.

The owner of the North West Brewing Co Daniel Scott has a vision as mayor to grow Karratha's economy.

His plan is to create an education and sporting precinct between the TAFE and St Luke's College, with accommodation for secondary and tertiary students.

His plans also include a new home for the Pilbara Universities Centre, and a sporting hub for rugby, soccer, hockey and gymnastics.

Those running for council include Daniel Scott, Kieran Dart, Wayne Mothershaw, Mr Johannsen, Sarah Roots, George Lewisianos, Bradley Davey, Mr Simpson, James Corea, Joseph Almonte and Geoff Harris.

Elections will be held for the four vacancies on October 21st.

1.67.5 Pilbara Summit 2023

Activity	Pilbara Summit 2023
Location	Karratha
Date	10 – 11 October 2023
Description of the consultation	Woodside hosted a stand at Pilbara Summit 2023, a sold-out conference established to raise the profile of issues and opportunities in the Pilbara region. The event provides the opportunity for the Pilbara region’s industry, investors, businesses, community, and government representatives to connect. The stand was staffed by members from Woodside’s Corporate Affairs, Supply Chain and New Energy teams. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website.

	Woodside also made available printed Consultation Information Sheets on Scarborough Offshore Facility and Trunkline Operations EP.
Advertising and invitations	No advertising was undertaken. The Vice President for Pluto and Scarborough delivered a speech during the conference, which highlighted the important role the Pilbara region will continue to play in the energy transition. Attendees were invited to find out more about Woodside's projects, developments or EPs plans by speaking team members on the Woodside conference stand or to visit Woodside's town office based in The Quarter.
Estimated number of individuals / organisations consulted	Over 600 people attended the event over 2 days
Summary of Feedback, Objection or Claim Approximately 25 conversations occurred around new energy opportunities and plans, local content, social investment, Chevrans involvement in NWSP, Onslow operations and Scarborough project and approvals in general. No feedback was received regarding Woodside's EPs.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
This session forms part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).	

1.67.6 Carnarvon and Denham Roadshow

Location	Carnarvon and Denham - Community Consultation Roadshow
Date	16 and 17 October 2023
Description of the consultation	Woodside hosted community consultation sessions in Carnarvon and Denham to enable community members to understand Woodside's proposed activities and how it may affect them, ask questions, and provide their feedback. Woodside Project, Corporate Affairs and Environment representatives were available to answer questions. A number of Environment Plan Consultation Information Sheets were available to attendees including the Scarborough Offshore Facility and Trunkline Operations EP Consultation Information Sheet.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: <ul style="list-style-type: none"> • Advertisement in the Pilbara News on 4 and 11 October 2023. • Geotargeted social media campaign advertising in Carnarvon and Denham and surrounding areas (+80 kms) from 9 to 16 October 2023. • Inviting local Traditional Custodian groups. • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website), and Scarborough Project banner were displayed along with current EP factsheets.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Estimated number of individuals / organisations consulted	Carnarvon – 3 Denham – 2 (Shire of Shark Bay)
Summary of Feedback, Objection or Claim	
<p>Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback.</p> <ul style="list-style-type: none"> • General interest in Woodside activities in the Pilbara • Discussion with the Shire of Shark Bay: <ul style="list-style-type: none"> ○ Explained purpose of consultation for EPs ○ Noted consultation based on an EMBA and no activities planned in Shark Bay ○ Provided an overview of Woodside activities ○ Shire advised it will provide a list of other relevant persons to consult, recognising the need to consult the community more broadly 	
Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	
<p>Whilst feedback was received, there were no objections or claims.</p> <p>The community information sessions were part of Woodside’s broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).</p>

MinRes in \$24m deal with local company

DANIEL SPENCE

Local Pilbara Indigenous-owned business Djoleanna Pty Ltd has been awarded a \$24 million contract by Mineral Resources as part of the company's flagship Onslow Iron project.

It is the largest contract MinRes has ever signed with an Indigenous-owned business, as well as the first contract awarded to Djoleanna Pty Ltd, which is a Robe River Kuruma business. The Robe River Kuruma people are the traditional owners of the land on which the Ken's Bore mine site is located.

The four-year contract is for exploration earthworks at Ken's Bore mine site, east of Onslow, including constructing access tracks, building drill pits, road maintenance and general earthworks.

Djoleanna Pty Ltd will employ about 10 people as

MinRes managing director Chris Ellison and Djoleanna business owner Bevan Wally. Picture: Russell James

part of the contract including a project manager, mechanics, operators and administration staff.

Djoleanna Pty Ltd owner Bevan Wally, who grew up on country, said: "The support provided by MinRes has given us the confidence and capacity to help establish and grow our business. MinRes have shown us action and given us commitments. It's unusual for them to invest and give us a go."

MinRes managing director Chris Ellison said that the company was proud to

partner with businesses such as Djoleanna that had such a strong connection to country.

"Providing practical guidance and support, such as guaranteeing finance for equipment and plant, helps to build local capability and ensure Indigenous-owned businesses share in our success," he said.

At the contract signing ceremony in Perth, Mr Wally presented traditional gifts to Mr Ellison, including boomerangs, a shield and a long stick.

SUPPORTING OUR LOCAL COMMUNITIES

The MinRes Community Fund supports our commitment to making meaningful contributions to the communities in which we operate.

Grants of up to \$10,000 are available to eligible local organisations to support programs and events that help create strong, vibrant and healthy communities.

Applications are open to groups operating in the Pilbara and Goldfields-Esperance regions or within the Shires of Yilgarn, Irwin and Mingenew.

Applications accepted between 1 to 31 October 2023.

Schools to get a staff cash boost

DANIEL SPENCE

Pilbara schools will benefit from a multi-million dollar cash injection from the State Government to recruit and retain staff.

Education Minister Tony Buti said the success of last year's temporary Regional Attraction and Incentive Package meant an additional 18 schools would benefit from \$15.49 million worth of incentive packages.

Schools in the Pilbara who will receive a boost include Broome Senior High School, Carnarvon Community

Colleges, Karratha Senior High School, Hodland Senior High School, Tom Price Senior High School and Newman Senior High School.

The incentive helps rural schools to attract and recruit teachers and retain staff and school administrators at schools by providing additional financial incentives.

Staff members will receive between \$5000 and \$17,000 for working in rural and remote public schools for the 2024 school year.

The incentives will be paid

in two instalments: the first at the start of the 2024 school year, the balance paid at the end of the 2024 school year.

Dr Buti said schools in regional and remote areas faced additional challenges when recruiting and retaining teachers.

"This significant investment will bring greater continuity for regional and remote students, their families, and the whole community," he said. The temporary Regional Attraction and Retention Incentive was initially allocated to 48 regional and remote schools.

Government of Western Australia
Department of Health

Fluoridation for the Newman drinking water system

Community water fluoridation helps protect teeth against decay and is a safe and effective way of improving oral health. More than 92 per cent of the Western Australian population, including the Perth metropolitan area and most large regional communities in the Pilbara and other parts of Western Australia, has benefited from fluoridation of drinking water for more than 40 years.

Fluoridation equipment has been installed at the water treatment plant servicing Newman and is now operational. As with similar plants located throughout Western Australia, the Department of Health will monitor the performance of the water treatment plant to ensure compliance with the Australian Drinking Water Guidelines and the Fluoridation of Public Water Supplies Act 1966.

For more information, please contact the Department of Health by email to ehin@health.wa.gov.au or call 08 9222 2000 or visit health.wa.gov.au and search fluoridation.

Animal flight policy criticised

CAIN ANDREWS

A prominent pet adoption agency has slammed Qantas' animal flight policy claiming it will lead to the unnecessary deaths of hundreds of animals.

Over the past year, animal adoption agency Saving Animals From Euthanasia's regional branches in Broome, Newman, Hedland and Karratha collectively rescued 1826 animals with 62.8 per cent or 956 of them requiring air transport to get to their new homes.

But with Qantas now enforcing a "no-fly" policy for animals when temperatures are forecast to reach more than 35C SAFE founder Sue Hedley said rescue animals that required air transport might have to be destroyed.

"It is crucial to recognise that this policy alteration could have dire consequences for these animals. If they are unable to reach their destination and find new homes, they may tragically face euthanasia as an alternative," she said.

Ms Hedley said SAFE had engaged with Qantas to try to find alternative solutions such as trailers or only allowing animals on early morning flights on days over 35C but was knocked back by the company.

"In over 20 years of operation, SAFE has never had a death during transportation from regional areas to Perth, no matter the temperature," she said.

"Unfortunately, we have been advised that the policy will remain

Sue Hedley & Salem. Pic: Helen Odeh

and that no exceptions will be made. "We firmly believe that the risks associated with this policy extend far beyond those related to flying on a day when temperatures may reach 35C later in the day."

A Karratha woman, who only wishes to be identified as Simone, was told her two dogs would not be allowed to catch a Qantas flight on October 5 because of the policy.

According to Simone, at the last minute she was told her dogs could not catch the flight despite being told the night before her dog would be able to fly.

"It's ridiculous we're here with our dogs everything's packed, and we're going away as well.

"With the way things are in Karratha with the shortage of space available there's no one to look after our pets," she said.

"It's not just inconvenient, it's unethical as they're not even adhering to their own policy.

Simone's dogs faced being bumped off a Qantas flight because of the airline's heat policy.

"I get it's about animal safety but what is ridiculous is that the policy clearly states 35C and above and it (was) only 29C."

Qantas eventually made an exception for Simone and her dogs on the day, however, she claims she was told by those at the airport to not tell Ms Hedley about the incident.

Last year, temperatures in Karratha exceeded 35C on 106 days, with a consecutive period of 42 days over 35C between February 12 and March 26.

Responding to questions about the policy, a Qantas spokesperson said the policy was led by the International Pet and Animal Association and the International

Air Transport Association. "Qantas takes the safety and welfare of pets and animals who travel with us extremely seriously," the spokesperson said.

"This is why we don't transport pets when temperatures exceed 35C or fall below 5C, due to the stress and anxiety this could cause."

Hard work earns Zane Walkington scholarship

DANIEL SPENCE

St Luke's College Year 12 student Zane Goes has been awarded the City of Karratha 2023 Walkington Award for his academic achievements and outstanding citizenship.

This is the 40th time the award, valued at \$5000, has been given to a Year 12 student within the City of Karratha to continue full-time or part-time tertiary studies.

Zane is a sports captain and member of St Luke's student executive council.

As part of his role he has run new initiatives such as the Father's Day breakfast, men's mental health day, International Women's Day and the school busy bee.

Zane will use the \$5000 award from the City of Karratha to support his studies in physiotherapy.

Former city of Karraths Mayor Peter Long congratulated this year's recipient and all applicants for their outstanding achievements.

"The Walkington Award has a proud history of supporting local students who embody the three pillars of academic excellence, extra-

Zane Goes receives his award from the outgoing mayor of Karratha Peter Long.

curricular activities and community service," he said. "We are beyond proud of the leadership, commitment and accountability our young people demonstrate and the significant contribution they make to our community." He said Zane was a hard working student who

had achieved stand-out results including Academic Excellence Awards in Years 11 and 12.

"I would like to wish Zane all the best on his studies as he pursues his dream to be a physiotherapist and hope to one day see him practice in Karratha."

EV charging stations open

DANIEL SPENCE

Electric vehicle fast chargers have been installed in Karratha, Exmouth and Kununurra as part of the WA EV Network extending into the Pilbara.

The stations are the first of six planned to be installed by mid-2024.

The WA EV Network is being delivered by Horizon Power and Synergy as part of the State Government's \$48.5 million investment to boost EV infrastructure and includes 98 charging stations in 49 locations connecting Perth to regional WA. When complete, the \$21m network will stretch more than 7000km which will help to make clean transportation more accessible in WA.

The charging sites have a 150kW fast charger that allows drivers to charge their vehicles in 30 minutes.

The charging station in Exmouth has an additional DC fast charger allowing four EVs to be charged at the same time.

The WA EV Network will stretch north to Kununurra, along the south-west coast to Esperance and

Horizon Power's Cameron Parrotte with member for Pilbara Kevin Michel. Picture: Marg Berting

east to Kalgoorlie and Eucla which is due to be completed next year.

As part of the project, Horizon Power is installing EV fast chargers at 27 of these locations across regional and remote WA.

Executive GM, engineering & project delivery at Horizon Power Cameron Parrotte in his speech at the opening of the charging station said it was hoped the project was the start of something bigger.

"It's not until you can get about 200km and be able to charge with confidence that we know we can bring these stations to this part of the country. It's great to see Red Dog renewables

bring the cars for their employees to use," he said.

"This is site No.5 going live and around October next year we will have 27 new locations complete."

There have been more than 3200 charging sessions along the WA EV Network since the first charging site went live in Geraldton in April 2023.

Energy Minister Bill Johnston said WA's transition to a cleaner, greener electric vehicle future was well under way.

"We are delighted Karratha, Exmouth and Kununurra have joined the WA EV Network, with many more fast chargers opening soon," he said.

1.67.9 Roebourne, Karratha and Dampier Roadshow

Location	Roebourne, Karratha and Dampier Roadshow
Activity	Community information sessions
Location	22 March 2024 - Woodside Roebourne office 23 March 2024 - Karratha Shopping Centre 24 March 2024 - Dampier Beachside Markets
Date	22- 24 March 2024
Description of the consultation	Woodside hosted community consultation sessions in Roebourne, Karratha and Dampier to enable community members to understand Woodside’s proposed activities and how it may affect them, ask questions, and provide their feedback. Woodside Corporate Affairs, First Nations and Environment representatives were available to answer questions. A number of Environment Plan Consultation Information Sheets were available to attendees including the Scarborough Trunkline Operations (State Waters) Environmental Plan <i>and</i> Pluto Facility Operations Environmental Plan Consultation Information Sheet. An iPad with consultation/feedback subscription prompt was made available with approximately 12 signs people subscribing.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: <ul style="list-style-type: none"> • Advertisement in the Pilbara News on 13 March and 20 March. • Social - Geotargeted social media campaign advertising in Karratha (Reach 22,095), Port Hedland (reach 26,487), and Roebourne (reach 22,134) (+80 kms) from 19 – 30 March 2024. • Social - organic

	<ul style="list-style-type: none"> • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website), Scarborough Project banner were displayed stand along with current EP factsheets. • Hard copy posters were also put up at high traffic areas including Lo's Café in Karratha and the Ieramugadu Store Maya in Roebourne.
<p>Estimated number of individuals / organisations consulted</p>	<p>Woodside spoke to many community members, recording 32 meaningful conversations. Over 500 community members (Dampier Community Association) attended the event</p>
<p>Summary of Feedback, Objection or Claim</p>	
<ul style="list-style-type: none"> • General queries about employment and local content opportunities. • General interest in Pluto Train 2 progress and Scarborough project and trunkline location. • Comments on Red Dog Village accommodation. Woodside staff discussed that the average local economy spend was \$120 per person, per week. • Positive commentary to see Woodside active in the community and good sentiment toward the company as a respected local employer. • Interest in taking further information such as the Karratha Community Update (newsletter) and EP newsletter (Let's Talk). Approximately 25 copies of each were distributed over the 3 days. • Woodside social investment activities and community funding opportunities. • Environment Plan awareness building with multiple conversations on "What is an Environment Plan?" and "What is an EMBA?" • Query around impacts to whales due to noise from drilling and seismic surveys. Woodside staff discussed whale migration research, vessel whale spotters and the controls that Woodside puts in place during drilling and seismic activities. Community member took consultation information sheets and was referred to the consultation page on the Woodside website for further information and opportunity to provide feedback. • Query on the location of the Scarborough Energy Project and proximity to the Montebello Islands. Woodside staff discussed that the FPU would be located 201 km from the Montebello Marine Park using the potential risks and controls as per the Scarborough Trunkline Operations (State Waters) Environment Plan consultation information sheet. • General comment on climate change and the impacts from fossil fuels. Woodside staff advised that Woodside are looking into new energy options including solar power and carbon capture. • Comment from a Woodside employee partner about Karratha Gas Plant hosting a family day for employees. 	
<p>Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response</p>	
<p>Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).</p>

Chance to argue case in political processes

KATYA MINNS

Young people in the Pilbara are being called to become the next generation of youth leaders in an opportunity to represent their electorate and participate in democratic processes.

In its 29th year, the 2024 Y WA Youth Parliament program has opened applications for people aged 15-25 who wish to gain experience in government and policy development.

Participants will have the opportunity to draft, debate and advocate for mock youth-focused legislation on topics they're passionate about and present to Members of Parliament.

In 2023, Port Hedland local Erin Hayes joined Karratha's Emer O'Brien to represent the Pilbara electorate, travelling to Perth to present their Bill focusing on sea-

Emer O'Brien and Erin Hayes during the 2023 Y WA Youth Parliament.

based discrimination. "I was in the women's committee and we wrote a Bill on education and health reform talking about menstrual justice, such as providing free period products at a higher standard than what we currently have, and menstrual leave," Ms Hayes said.

"It's an aspirational program so you don't have to express what site of politics you're on, you're

more focused on the issues that you're passionate about.

"It's kind of like a really respectful way to have debates."

After first hearing about the program through a teacher's forum at the school where she taught politics, Ms Hayes applied for the 2023 Y WA Youth Parliament and encourages other young people to do the same.

"It was amazing, I got to meet

people that were like-minded and got to talk about things we're really passionate about," she said.

"It's given me more experience as I still want to work in politics in some aspects. I think it would be really great if more local people from the Pilbara could participate." More information on how to apply can be found on the Y's Youth Parliament website. Applications close on March 24.

The duo at WA's Parliament House.

ABORIGINAL RANGER PROGRAM

GRANT APPLICATIONS OPEN

11 MARCH TO 22 APRIL 2024

Round 8 of the Aboriginal Ranger Program is now open with up to \$16.5 million available for Aboriginal organisations.

Eligible Aboriginal organisations can apply for projects under one or more of the categories - climate action, youth and/or cultural tourism.

This new round of funding is part of a \$103 million commitment by the State Government, investing in Aboriginal rangers through the program.

Details about eligibility, the application process and assessment criteria are available at dcca.wa.gov.au/aboriginalrangerprogram

Monitoring upped at KHC

The Karratha Health Campus is among the hospitals trialling new security measures.

New 24/7 security support at campus

ROSS MORAIE

The Karratha Health Campus has been selected as one of the pilot sites for the WA Government's \$48.990 investment in a state-of-the-art security hub for regional hospitals. The new security hub, operating out of a State-wide CCTV operations room co-located within the WA Country Health Service Command Centre in Perth, will provide 24/7 real-time monitoring and support for some of the most isolated hospitals in regional WA, including Karratha.

It aims to enhance safety, deter anti-social behaviour, and provide greater support for frontline healthcare staff.

"Any kind of aggressive behaviour towards healthcare staff is completely unacceptable, and the State Government remains committed to doing all we

can to keep staff safe at work," WA Health Minister Amber-Jade Sanderson said.

WACHS chief executive Jeff Moffet acknowledged the concerning rise in violence and aggressive incidents against healthcare workers in regional areas, with an average of two assaults a day occurring.

"It's important we continue to do all we can to keep staff and patients safe," he said.

WACHS noted that the pilot sites, such as Karratha, were chosen based on their overall risk profile for incidents at the site, local crime rates, proximity to immediate police response and isolation.

"This specialised technology will be operated around the clock by security specialists and will provide another layer of security for our frontline healthcare workers," Ms Sanderson said.

Mr Moffet said the new advanced security monitoring will complement existing measures such as on-ground CCTV, security personnel, duress alarms and access control systems.

Other pilot sites include Hedland, Kununurra, Meekatharra, Collie, Bridgetown and Halls Creek with further sites to be added throughout 2024.

The inclusion of Hedland Health Campus comes in the wake of a high-profile incident in July 2023, when an Aboriginal woman, who was a known suicide risk and had been receiving mental health treatment, took her own life inside the hospital after being left alone in a room, despite staff being aware of her high risk.

Rural Link AH mental health: 1800 352 062 (toll free) or 1800 720 101 (TTY) Lifeline: 13 11 14

WACHS chief executive Jeff Moffet.

Health Minister Amber Jade Sanderson.

Appendix M – Scarborough OPP Formal Consultation Report

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - Including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
1	Murujuga Aboriginal Corporation (MAC)		<p><i>"The Murujuga Aboriginal Corporation (MAC) as the approved body corporate for the Burrup and Maitland Industrial Estates Agreement (BMIEA), respectfully requests a two-week extension to allow us time to prepare and finalise a submission on the Scarborough Offshore Project Proposal.</i></p> <p><i>MAC is typically reliant on pro bono support to review documents such as this proposal, so we are not able to always respond as quickly as we would like. I should add that we are broadly supportive of the proposed Burrup Hub project and do not seek to unnecessarily delay the process.</i></p> <p><i>If our request for an extension until the 13th of September 2019 can be granted, it would be most appreciated by MAC's members who are the cultural custodians of the land and waters which could potentially be impacted by this proposal."</i></p>	<p>On the afternoon that the OPP public comment period closed on 30 August 2019, the Murujuga Aboriginal Corporation (MAC) lodged a request for a two-week extension to comment on the OPP. In response to this request, Woodside's Indigenous Affairs Manager met with MAC's CEO on 2 September 2019. Woodside explained the proposed Scarborough development area and asked whether there was a specific issue MAC had wished to raise. While MAC advised of its intention to make comment on the Dredging and Spoil Disposal Management Plan required by the Western Australian Environmental Protection Authority as part of its assessment of the proposed development, MAC responded that it did not have any particular concerns about the OPP. MAC further advised, the intention for requesting an extension was to reserve its right to comment, if necessary. Consequently, MAC was advised it would be unlikely Woodside would support an extension and MAC confirmed it would accept a decision not to extend the comment period. No further action was recorded.</p> <p>Woodside notes MAC's purpose is to administer the Burrup and Maitland Industrial Estate Agreement (BMIEA) on behalf of Traditional Owner "contracting parties". We further note that the organisation is the representative for joint management of the Murujuga National Park.</p> <p>MAC receives annual funding from Woodside under the BMIEA Agreement to carry out its specific cultural obligations and responsibilities including input on regulatory approvals. Annual payments in direct benefits are made under the BMIEA (annual lease payment) in addition to Conservation Agreement funds for MAC Rangers other direct financial support provided for related programs and activities.</p> <p>Woodside will continue to work with MAC and Traditional Owner representatives as the proposed Scarborough development is progressed.</p>	Record of this engagement has been added to Table 10.5 ('Phase 2 stakeholder consultation activities').
2	Environmental Defenders Office (on behalf of CCWA)		Comments have been compiled by the EDO on behalf of CCWA. The key issues are summarised below according to the EDO submission section.	Subsections of the submission are addressed below.	Subsections of the submission are addressed below.
2.1	Environmental Defenders Office (on behalf of CCWA)		<p>Background</p> <p>Contains statements about the proposal from the OPP.</p>	The statements about the project reflect information in the OPP and do not require a response.	The statements about the project reflect information in the OPP and do not require amendment of the document.
2.2	Environmental Defenders Office (on behalf of CCWA)		<p>Impact of GHG Emissions (summary section) (EDO submission sections 6-14) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP fails to manage the impacts/risks of the Proposal's GHGe to a level that is acceptable in accordance with the established science of climate change, the EPBC Act or Australia's international obligations under the Paris Agreement the OPP and the above controls are insufficient to manage the impacts and risks of the Proposal's GHGe to an acceptable level or as low as reasonably practicable (ALARP) changes to the OPP are required to sufficiently manage impacts and risks of Greenhouse Gas emissions (GHGe); and 	The themes raised in this summary section of the submission are covered in more detail in subsections of the submission. Responses to each subsection are provided below.	The themes raised in this summary section of the submission are covered in more detail in subsections of the submission. Changes to the OPP relevant to each subsection are described below.

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
			<ul style="list-style-type: none"> discussion of risk to Murujuga rock art and controls are included and changes to the OPP are required to sufficiently manage risk. 		
2.3	Environmental Defenders Office (on behalf of CCWA)		<p>Insufficient Management and Regulation of Impacts of GHGE to Acceptable Level (EDO submission sections 15-23) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> national GHG regulation, Woodside's Climate Change Policy and WA EPA Public Environment Review (PER) documentation do not adequately regulate or manage GHG to acceptable levels. The Pluto PER documentation is outdated and does not consider processing of Scarborough Gas at Pluto Train 2, and it is therefore inappropriate to rely on this to evaluate and manage scope 2 and 3 emissions. a fresh Commonwealth assessment of risks and impacts associated with processing Scarborough gas through Pluto be undertaken; and the OPP be amended to include details of additional GHG emitted from processing through the Pluto LNG and introduction of specific control measures that achieve net zero emissions. 	<p>The Paris Agreement represents global consensus on controls to limit anthropogenic climate change to an acceptable level. The Australian Government has ratified the Paris Agreement and implemented policy mechanisms as described in Section 3.4.1 (which has been added to provide further detail).</p> <p>Compliance with Australian legislation, as described in Sections 3.4.1 and 6.5 ensures that GHGe from the Project will be acceptable by keeping GHGe at or below the emissions baselines set by the Clean Energy Regulator or dealing with any excess emissions accordingly.</p> <p>As described in the OPP, raw product from the Scarborough Project will be processed at the onshore Pluto LNG facility. Existing environmental approvals for the Pluto LNG facility already include processing emissions for a second train and scope 3 emissions associated with sold product. Figure 7.6 has been added to section 7.1.3 of the OPP to better illustrate how related onshore processing emissions are considered in the existing approved Pluto PER.</p> <p>Pluto is required to have in place management plans including a Greenhouse Gas Abatement Program developed to address the requirements of Ministerial Statement 757, which ensures ongoing regulatory oversight. The Pluto approvals process is out of scope for the OPP.</p>	<p>Section 3.4.1 ('Greenhouse Gas Legislation') has been added, which describes Australian GHG legislation.</p> <p>A statement in the second paragraph of section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') has been added about Australia's ratification of the Paris Agreement as a relevant international standard.</p> <p>Paragraph six has been added to Section 6.5 ('Environmental Performance Outcomes and Acceptable Levels') to link Australia's implementation of the Paris Agreement via legislation to the acceptability of the project.</p> <p>The part of section 7.1.3 (Planned Aspects – Routine Greenhouse Gas Emissions) describing related onshore processing emissions has been expanded, including incorporation of updated assumptions relating to scope 3 emissions.</p> <p>Discussion of risks and impacts associated with climate change, including change in habitats, fauna behaviour, injury/mortality to fauna, and social changes has been added in section 7.1.3.8</p>
2.4	Environmental Defenders Office (on behalf of CCWA)		<p>Total Lifecycle GHGe Should be Considered and Managed (EDO submission sections 24-30) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the Pluto PER process did not assess and approve Scope 3 emissions and proposes amendment of the OPP to include details and management of total lifecycle GHG, including risk and impact to the environment and rock art using the best available climate science. 	<p>As described in the OPP, raw product from the Scarborough project will be processed at the onshore Pluto LNG facility. Existing environmental approvals for the Pluto LNG facility already include processing emissions for a second train and scope 3 emissions associated with sold product. Figure 7.6 has been added to section 7.1.3 of the OPP to better illustrate how related onshore processing emissions are considered in the existing approved Pluto PER.</p>	<p>The part of section 7.1.3 (Routine Greenhouse Gas Emissions) describing indirect GHG emissions has been updated to include a reference to where in the Pluto PER lifecycle emissions are included and recalculation of scope 3 emissions attributed to Scarborough with updated assumptions.</p> <p>The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more comprehensively explain how</p>

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
					Scarborough fits into a decarbonising global economy. Discussion of risks and impacts associated with climate change, including change in habitats, fauna behaviour, injury/mortality to fauna, and social changes has been added in section 7.1.3.8
2.5	Environmental Defenders Office (on behalf of CCWA)		<p>Cumulative Impacts Should be Considered and Managed (EDO submission sections 31-44) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP does not adequately consider the impacts of the broader Burrup Hub, including cumulative impacts. given the decision to assess the Burrup Hub projects individually, the cumulative emissions from the proposal should be considered in context of the other projects and global GHG. There are multiple cases which identify that small incremental increases to emissions as contribute to a broader global impact. 	<p>Burrup Hub is Woodside's vision to develop an integrated regional LNG production centre on the Burrup Peninsula. The Burrup Hub is not a proposal for a single activity for impact assessment; it describes Woodside's vision of several separate but related activities that, subject to respective joint venture approvals and relevant regulatory approvals, may be undertaken. The current allocation of approvals between jurisdictions has been established with all relevant regulatory bodies.</p> <p>As described in the OPP, the contribution of the Scarborough floating petroleum unit (FPU) to Australian and global GHGe is very low. Attempting to model the impact on global climate change is not feasible, and similarly it is not practical to describe associated risk to global receptors.</p>	<p>Woodside has determined that the approvals approach in place for the individual Burrup Hub activities are adequate and no changes were made to the document.</p>
2.6	Environmental Defenders Office (on behalf of CCWA)		<p>Net Zero Emissions Outcome Should be Applied as Environmental Performance Outcome (EDO submission sections 45-54) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the environmental performance outcomes described in the OPP are insufficient to achieve acceptability for GHG emissions, and that a "net zero" performance outcome should be adopted, stating that this should be the fundamental test for environmental acceptability. by reference to the DOE Report for the Prelude FLNG Facility (2010), the project should result in no net increase in Australia's GHG emissions, and the IPCC Special Report on Global Warming statement has established that global GHG must achieve net zero by 2050 to avoid global warming above 1.5°C is relevant. a carbon budget approach is appropriate and proposes that internationally agreed science has established that the amount of emissions allowable to maintain a safe climate has already been exceeded and therefore all future developments should achieve net zero GHG emissions. the project requires implementation of technologies such as renewables, all-electric design or carbon capture and storage, or offsets. 	<p>Achieving "net zero" GHGe abatement goes beyond the Climate Change Authority's recommendation to achieve that outcome by 2050. The Australian Government has established a 26-28% emissions reduction target by 2030 and the Paris Agreement encourages Australia to submit a new target by 2025. The State of Western Australian Government has also set an aspiration to achieve net zero emissions by 2050. Woodside's climate policy encourages government to set targets based on climate science.</p> <p>Acceptability for Scarborough project GHGe is achieved by actions taken to achieve compliance with Australian legislation which implements the Paris Agreement by keeping GHGe at or below the emissions baselines set by the Clean Energy Regulator or dealing with any excess emissions accordingly. Further details are provided within the response to 15-23 (Item 2.3).</p>	<p>Section 3.4.1 ('Greenhouse Gas Legislation') has been added, which describes Australian GHG legislation.</p> <p>A statement in the second paragraph of Section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') has been added about Australia's ratification of the Paris Agreement as a relevant international standard. A new section 7.1.3.5 (Customer Commitments under the Paris Agreement) has been included to provide examples of how Scope 3 emissions from Scarborough will fit within the international agreement.</p> <p>Paragraph six has been added to section 6.5 ('Environmental Performance Outcomes and Acceptable Levels') to link Australia's implementation of the Paris Agreement via legislation to the acceptability of the project.</p> <p>The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more</p>

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
					comprehensively explain how Scarborough fits into a decarbonising global economy.
2.7	Environmental Defenders Office (on behalf of CCWA)		<p>Energy Efficiency Measures Insufficient to Manage Impacts of GHGe to Acceptable Level (EDO submission sections 55-58) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the energy efficiency measures listed in the OPP (allowance for battery energy storage system, waste heat recovery unit, gas-gas exchanger, flow coated trunkline, turbine and equipment selection) are not sufficient to achieve the current environmental performance outcome of reducing GHGe to ALARP and Acceptable Levels because there is no inclusion of control measures to avoid, reduce or offset the Proposal's GHG emissions. 	The energy efficiency measures presented in section 4.5.4.1 reflect the design decisions taken to date based on ALARP principles. Demonstrations that greenhouse gas emissions have been reduced to ALARP levels in future design decisions will be submitted to NOPSEMA for approval as part of the regular Environment Plan process which will follow approval of this OPP.	A new section in the Assessment of Alternatives section (4.5.4.1 – Energy Efficiencies) has been added to describe measures implemented to date in design phase. A new section 7.1.3.6 (Greenhouse Gas Management and Mitigation) has been added to describe relevant controls in a hierarchy, including these design features but also how GHG emissions will be managed during operations.
2.8	Environmental Defenders Office (on behalf of CCWA)		<p>Specific Control Measures Required to Manage Impacts of GHGe to Acceptable Level (EDO submission sections 59-64) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP does not refer to any specific control measures to manage impacts or avoid, reduce or offset. DOE report on Prelude is cited in reference to required measures and offsets that result in no net increase to Australia's CO₂ emissions. the OPP should consider LNG projects (Kitimat, Gorgon) that are employing renewable energy and carbon capture storage for management of GHG to an acceptable level. 	The environmental performance outcomes in the OPP are designed to ensure that the risks and impacts associated with the project are acceptable. Compliance with the safeguarding mechanism will ensure that emission reductions implemented through the Emissions Reduction Fund (ERF) are not offset or exceeded by significant GHG emissions (above 'business-as-usual levels') emanating from other industrial or economic sectors. The safeguarding mechanism includes a framework to offset emissions if necessary for compliance.	Section 3.4.1 ('Greenhouse Gas Legislation') has been added, which describes Australian GHG legislation. A statement in the second paragraph of section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') has been added about Australia's ratification of the Paris Agreement as a relevant international standard.
2.9	Environmental Defenders Office (on behalf of CCWA)		<p>Reporting Under NGER Act Insufficient to Manage Impacts of GHGe to Acceptable Level (EDO submission sections 65-69) *</p> <p>Submits that voluntary public reporting should be implemented that includes facility level GHG data, including Scope 3, performance on managing GHG to acceptable and ALARP, publish through a government hosted portal and include data on offsets.</p>	The NGER Act requires the Clean Energy Regulator to publish facility level emissions on an annual basis for facilities subject to the Safeguard Mechanism, including the use of Australian Carbon Credit Units. Additionally, Woodside also currently voluntarily participates in the Carbon Disclosure Project which includes publishing scope 3 emissions data at an equity, portfolio level.	Woodside considers that GHG emissions reporting is adequately described in the document and no changes were made. The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more comprehensively explain how Scarborough fits into a decarbonising global economy. A new section in the Assessment of Alternatives section (4.5.4.1 – Energy Efficiencies) has been added to describe measures implemented to date in design phase. A new section 7.1.3.6 (Greenhouse Gas Management and Mitigation) has been added to describe relevant controls in a hierarchy, including these design features but also how GHG emissions will be

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
					managed during operations and reporting.
2.10	Environmental Defenders Office (on behalf of CCWA)		<p>Argument that LNG Displaces Emission Intensive Fuels Not Substantiated (EDO submission sections 70-79) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the statement that LNG is able to displace higher carbon intensity fossil fuels and complements renewables is not valid because it is not aligned with market mechanics and fails to consider policy trends and global market transition away from fossil fuels; and the Proponent must produce proof that the claim is substantiated and backed with credible evidence, data from customer countries and robust reporting of Scope 3 GHG emissions. 	<p>Woodside acknowledges that the effect of LNG exports on global GHGe is complex and subject to market mechanisms. However, it does have the potential to play a role in displacing higher carbon intensity fossil fuels and complementing renewables. In 2019, the International Energy Agency concluded that gas use has resulted in over 500 MCO₂e emissions savings since 2010, where it had displaced coal power. Providing clean burning LNG as a power source can displace higher emissions energy sources in transport and power generation and provide firming capacity for renewable energy sources in a growing global economy.</p>	<p>The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more comprehensively explain how Scarborough fits into a decarbonising global economy.</p>
2.11	Environmental Defenders Office (on behalf of CCWA)		<p>Impact on Rock Art (EDO submission sections 80-86) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP does not contain details of risk and impact of the project and related Burrup Hub on Murujuga rock art, or any control measures. includes reference to NOx and CO₂ from the proposal over estimated 2070 life of field and refers to controls for French cave paintings which include mitigation of CO₂ from tourists' breath. 	<p>The effective management of Aboriginal cultural heritage is critical to Woodside's continued operations and growth success.</p> <p>Woodside's preferred development concept is to transport gas from the Scarborough fields through a pipeline for processing at the Woodside operated onshore Pluto LNG Facility. Emissions from the Pluto LNG Facility will remain within the impact envelope of the existing approval for that facility. Woodside has contributed to air monitoring studies of the Burrup Peninsula since 2008 and our approach to emissions management practices has been informed by third-party studies including the work undertaken by the Burrup Rock Art Monitoring Management Committee. Woodside's approach to protection of rock art on the Burrup Peninsula is further informed by our relationship with the Murujuga Aboriginal Corporation and Traditional Owners and takes into account their vision for the protection and management of cultural heritage. Woodside is also playing an active and productive role in the Department of Water and Environmental Regulation's Burrup Rock Art Stakeholder Reference Group, established in 2018.</p> <p>Woodside will continue to focus on emissions reductions from all its operations and support appropriate scientific air emissions monitoring.</p>	<p>Woodside considers potential measures described in this comment to be outside the scope of the OPP. As indicated in the response to this comment, Woodside will continue to work with stakeholders on this issue through the appropriate mechanisms.</p>
2.12	Environmental Defenders Office (on behalf of CCWA)		<p>Control Measures to Manage Impacts on Rock Art Required (EDO submission sections 87-91) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP must include control measures for managing the impacts/risks on rock art and proposes a precautionary approach in context of UNESCO World Heritage nomination for the Burrup Peninsula. 	<p>Woodside supports the decision of Traditional Owners and the State to pursue World Heritage listing for the Burrup Peninsula. This support reflects our commitment to the successful co-existence of heritage and industry. In this context, Woodside also supports the reinstatement of ambient air quality monitoring on the Burrup Peninsula and is working with stakeholders including Traditional Owners and the State on the preferred monitoring options and approach.</p>	<p>Woodside considers potential measures described in this comment to be outside the scope of the OPP. As indicated in response to a related comment above, Woodside will continue to work with stakeholders on this issue through the appropriate mechanisms.</p>
3	Western Gas		<p>It is suggested that in relation to Woodside's statement in the OPP that it is engaging other resource owners on future development opportunities (section 4.1) these opportunities should be included as alternate development options in the OPP.</p>	<p>The OPP currently identifies the Equus development as a future proposal in section 5.7.6. This section has been further updated to show the location of the Equus fields in Figure 5-57 and notes the proposed project in Table 5-11.</p> <p>As per Table 10.5 Woodside has held a series of consultations with Western Gas with regards to alternate development concepts. The merits of these concepts were subject to internal assessment processes and were considered unsuitable for the current development timeline. Details of this assessment process were communicated to</p>	<p>Updates have been made to section 5.7.6 ('Description of the Environment – Industry') and consultation has been added to the table in section 10.4.2 ('Formal OPP Consultation').</p>

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
				Western Gas along with a commitment to consider future opportunities for cooperation including tie-backs. This consultation has been added to the table in section 10.4.2.	
4	Anonymous		<p><i>"It is clear reviewing all combined impacts from the Scarborough project that offsetting residual impacts (e.g. on protected matters impacted including but not limited to pygmy blue whales, other whales/cetaceans, seabirds, whale sharks, turtles, commonwealth marine area) should occur because the project is not delivering net biodiversity benefit.</i></p> <p><i>In addition, cumulative impacts of the O&G industry operating on the NW shelf should be taken into account here i.e. considering what's there already and what is planned to come and what may reasonably be expected to come in future, the cumulative impacts on the MNES of the marine environment are nothing short of significant.</i></p> <p><i>EPBC policy and international impact assessment process (hierarchy of control) requires offsets to be considered in such circumstances which result in a net biodiversity benefit from the project.</i></p> <p><i>Note, I don't think like for like offsets are appropriate or required in the case of Scarborough, however there should be a strong case of indirect offsets which add value to the broader region from a biodiversity perspective.</i></p> <p><i>Implementing this will ensure the impact assessment follows EPBC policy (http://www.environment.gov.au/epbc/publications/epbc-act-environmental-offsets-policy) and is consistent with international practice for impact assessment (see bottom of page 16 https://www.unepfi.org/fileadmin/documents/biodiversity_offsets.pdf and principle 7 of https://www.iaia.org/uploads/pdf/SP3%20Biodiversity%20Ecosystem%20Services%2018%20Jan.pdf).</i></p> <p><i>These standards, and many more like them apply to setting the acceptable levels of impact of the project as a whole - no net loss of biodiversity."</i></p>	<p>The Australian Government's <i>Environmental Protection and Biodiversity Conservation Act 1999 Environmental Offsets Policy, October 2012</i>, refers to 'environmental offsets' as measures that compensate for all residual adverse impacts of an action on the environment. The policy states that for assessments under the EPBC Act, offsets are only required if residual impacts are significant, with significance to be as defined in the <i>Matters of National Environmental Significance (MNES) – Significant impact guidelines 1.1</i>.</p> <p>The residual impacts of Scarborough to all MNES has been assessed to not be significant under the significant impact guidelines.</p> <p>In terms of cumulative impacts, in section 8.2.2 ('Receptor-based Cumulative Impacts'), the cumulative impacts from Pluto, Equus, Fisheries and Shipping were assessed, and it was identified that the aspects that were common to those activities related to vessel movements (i.e. physical presence – displacement, light emissions and vessel discharges). Cumulative assessment has been undertaken which indicates that residual impacts to species (including MNES) are low.</p>	A seventh paragraph was added to section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') which describes obligations under the <i>Environmental Protection and Biodiversity Conservation act 1999 Environmental Offsets Policy</i> .

6	Possible Spam	eupoqala@eerr.namnerbca.com	Spurious web link provided.	Comment appears to be spam. This comment is not relevant and has not been addressed further.	No changes made to the document.
7	Private		<i>"Great to see another project in the planning. W/A and communities like Exmouth need these projects to go ahead to create secure long-term jobs."</i>	Woodside is pleased to note that independent economic modelling indicates its Burrup Hub proposals, of which Scarborough is a key component, will support the creation of an average 4,000 full-time equivalent jobs per annum nationally over a 40-year time-frame. Almost half of these will be located in northern Western Australia.	Woodside considers that no modification to the document is necessary.
8	Anonymous		<i>"It's great to see these projects going ahead and delivering much needed employment opportunities and opportunities for local businesses under the company's local content policy. In particular the Exmouth community has suffered from all this activity happening offshore for many years now yet very little economic benefit to the town or meaningful contracts for the town and its community. "</i>	Woodside welcomes community support for the proposed development of the Scarborough gas field and will work with communities to identify opportunities for local content and employment.	Woodside considers that no modification to the document is necessary.

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
			"Get it going as soon as possible and push as much work through Exmouth as practicable. Don't let the loud voices of the minorities drown out the support of the silent majority. The Exmouth community wants it and it is in line with the shire council's strategic plans."		
9	Private		"The Scarborough development proposal is an excellent opportunity for further expansion of Australia's gas resource potential. This development should be fully endorsed by all Australians for the benefit of all Australians."	Woodside is pleased to note that independent economic modelling indicates its Burrup Hub proposals, of which Scarborough is a key component, will boost Australia's Gross Domestic Product by \$414 billion between now and 2063 while tax and royalties payments are estimated to total \$82 billion.	Woodside considers that no modification to the document is necessary.
10	Private		"What capping plan is in place to meet highest risk i.e. a spill results from a leaking well? We know from Macondo failings majority of loss / risk resulted from spill. Why has little been done by operators / regulators to assure that a faster safer capping system is not in place for offshore projects, i.e. a system designed around a Xmas tree that can be kept on site in the field to be able to respond to cap and kill a well in hrs vs days or weeks of spillage that could result to meet worst case needs? There are systems available; e.g. Abel Engineering well control specialists etc. Why is such a safer better cheaper faster response system not to be used?"	The OPP process, is in place to allow the regulator to make an assessment of the environmental acceptability of proposed offshore projects. Following OPP acceptance, activity specific Environment Plans (EPs) (and other permissioning documents such as Well Operations Management Plans (WOMPs) will be required to be prepared and accepted. Broadly, the purpose of EPs will be for the titleholder to confirm that the impacts and risks are within the scope of that accepted under the OPP, and to identify the control measures that will manage the impacts and risks ALARP. The EP will describe the level of performance for these control measures during activities and including emergency situations. An emergency response plan which identifies source control options including capping systems, will be developed and submitted as a part of the activity's EPs. At this stage of the approval process, there will be consideration of source control methods and technology in order to demonstrate that the impacts and risks will be managed to ALARP levels. Hydrocarbons of the Scarborough, Jupiter and Thebe reservoirs contain no measurable liquid condensate fraction. It is therefore expected that there would be no, or negligible, liquid component in a loss of containment scenario. In the event of a loss of well control, the response strategy detailed in the EP will be based on the risk, and the properties of the released hydrocarbons.	On review of the merit of this comment, Woodside considers that the concern raised is adequately addressed and no modification to the document is required.
11	Private		"I think that this project should go ahead with the caveat that cheaper gas is made available for Western Australia. What would be even better is that the AU government develops the fields, undertake all production and distribution / sales of LNG. That way Australia would have a sustainable income for years to come. Not only that all future exploration and development of fields should be under the control of the Australian government not a foreign government or company. With this then could be the Australian engineering rig/ship building capability to ensure jobs and growth for Australia."	Woodside is proposing to expand the Pluto LNG facility to process Scarborough gas and work is underway on the design of a domestic gas plant at Pluto to facilitate supply to Western Australia. As an Australian company, Woodside has a proud history of developing resources and delivering long term benefits to the country. Independent economic modelling indicates tax and royalties payments from the proposed Burrup Hub projects will add up to \$82 billion. Woodside has also developed an Australian Industry Participation Plan for the proposed Scarborough development. This plan has been approved by the Australian Government and is designed to maximise opportunities for Australian businesses.	Woodside considers that no modification to the document is necessary.

Proposed Program of Ongoing Engagement with Traditional Custodians

This Program of Ongoing Engagement with Traditional Custodians (“Program”) has been developed to demonstrate Woodside’s commitment to ongoing engagement and support of Traditional Custodians’ capacity to care for and manage Country, including Sea Country, and has been directly informed by Traditional Custodians’ feedback regarding their capacity to engage and consult on Environment Plans.

It is a living document designed to evolve with ongoing consultation and feedback from Traditional Custodians and, at a minimum, will be subject to annual review. In addition to this Program, Woodside will continue to participate in, and support collective industry engagement with Traditional Owners on the development of a future, sustainable, industry wide Program. Through the Program, Woodside actively supports Traditional Custodians’ capacity for, and involvement in, ongoing engagement and feedback on environment plans.

The Program has been developed so that Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the possible consequences of an activity to be carried out under an environment plan on their functions, interests and activities as they relate to cultural values. This feedback will be evaluated in conjunction with Traditional Custodians and, where necessary, avoidance or mitigation strategies will be developed in collaboration with Traditional Custodians. How the Program is implemented with specific Traditional Custodians will depend on their stated needs and priorities.

The Program is underpinned by Woodside’s First Nations Communities Policy (woodside.com), the objective of which is to ensure Woodside partners and engages with First Nations communities to create positive economic, social and cultural outcomes that leave a lasting legacy. Woodside does this through building respectful relationships and partnerships with First Nations communities where we are active, in the areas where they are most interested in. We acknowledge the unique connection that First Nations communities have to land, waters and the environment.

The Program will include, as agreed with relevant communities, reasonable commitment to:

1. Support for ongoing dialogue and engagement

Woodside will support the capacity of Traditional Custodians to participate in ongoing dialogue and engagement about the environment plans and to enable the ongoing and future identification of cultural values potentially impacted by Woodside’s activities. Woodside further commits to agreeing consultation protocols with individual Traditional Custodians to ensure the material provided is appropriate in level of detail such that the potential for cultural impact from Woodside activities can be determined and as required measures can be adopted to avoid or minimise impact.

In addition, Woodside will receive feedback on cultural values from an individual person or organisation that identifies as a Traditional Custodian, at any stage during the development and implementation of activities. This feedback will be evaluated, in conjunction with the Traditional Custodian individual or group and if required, control measures will be put in place to avoid impacts to cultural values, or where avoidance is not possible, to minimise and mitigate the impacts to an acceptable level.

Where cultural values are identified post activity completion, any controls relevant to value management will be implemented during the next relevant activity.

2. Support for the identification and recording of cultural features

Woodside will support Traditional Custodians to record and articulate their Sea Country values and will invest in cultural assessments codesigned with Traditional Custodians, where required, to inform potential risks to cultural values from our petroleum activities.

This may include supporting cultural mapping by Traditional Custodians to identify and map significant cultural features including archaeological sites and other cultural values. The scoping of the mapping process will be codesigned with Traditional Custodians.

Woodside understands that cultural knowledge remains the intellectual property of Traditional Custodians and will agree with Traditional Custodians at the outset how that information from surveys will be used to feedback into and inform the environment plan's design and implementation.

In addition, Woodside applies the Cultural Heritage Management Procedure 2019, updated in 2023, to the Program which:

- provides a process for the identification, protection, and management of Cultural Heritage taking into account relevant standards, in particular, the United Nations Declaration on the Rights of Indigenous Peoples, the Charter for the Protection and Management of the Archaeological Heritage, the Convention for the Safeguarding of the Intangible Cultural Heritage, and the Convention on the Protection of the Underwater Cultural Heritage;
- applies to underwater cultural heritage and, consistent with current practice, provides for the commissioning of (where appropriate) both archaeological and ethnographic assessments of cultural values over the submerged landscape; and
- the process includes the following:
 - early engagement with relevant Traditional Custodians
 - identification of potential heritage, this could include desktop and field surveys undertaken with the Traditional Custodians.
- the development of cultural management strategies; and, where it is determined cultural heritage may be impacted, the development of Cultural Heritage Management Plans codesigned with Traditional Custodians and implemented by Woodside's First Nations team which:
 - focus on avoidance or minimisation of impacts; and
 - provide regular reviews and for inclusion of new information and further development of the Cultural Heritage Management Plan.

Woodside is committed to continue to receive feedback on cultural values for the life of an environment plan, the inclusion of new information and the development of avoidance or mitigation strategies in collaboration with Traditional Custodians. This information will be recorded via the Woodside Management of Knowledge Process and any potential impacts to the accepted Environment Plan evaluated via the Woodside Management of Change Process.

3. Building capacity for the ongoing protection of country

Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups. This is guided by Woodside's Indigenous Affairs Strategy 2019 ("Strategy"), which is designed to enable the building and maintaining of relationships with Traditional Custodians to leave a lasting legacy, including strengthening of Traditional Custodians' capacity to care for and manage Country, including Sea Country. The Strategy was developed with inputs from Traditional Custodians and contains four pillars that direct Woodside's social investment, policies relating to economic development, procurement and employment, and Woodside's agreement making and implementation of agreements. The pillars are:

1. Culture and Heritage Management: support social outcomes through protection, recognition and respect for culture and heritage;
2. Economic Participation: provide training, jobs, and business opportunities;

3. Capability and capacity: ensure strong corporate governance, leadership development and education initiatives to support self-determination; and
4. Safer and Healthier Communities: partner with Aboriginal people and service providers to maximise safer and healthier community outcomes.

Woodside is committed to an ongoing relationship between Woodside and the Traditional Custodian groups. Through consultation with Traditional Custodians Woodside will continue to:

- establish support for Indigenous ranger programs via social investment;
- establish support for Indigenous oil spill response capability via investigating training models;
- establish support for identification and recording of cultural values and the management of that information by Traditional Custodians;
- establish support for programs identified by the Traditional Custodians as important to them and as agreed by Woodside.

4. Support for capacity and capability in relation to governance

Pillar 3 of the Indigenous Affairs Strategy 2019 focuses on ensuring strong corporate governance, leadership development and education initiatives to support self-determination. To enable this, Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups, including in relation to governance and management systems.

The nature of this support will be informed by the individual needs of Traditional Custodian groups, but may include:

- funding or other support for community meetings, particularly where consultation with representative bodies lies outside of that body's core business and cultural authority or mandate needs to be secured,
- resourcing internal expertise so that information is managed consistently and internally, including ensuring appropriate record keeping of consultation to provide stakeholders with a lasting record of discussions, and
- development or upgrade of IT systems to manage information.

5. Program Reporting and Review of Effectiveness

Woodside will undertake an annual review of the Program to assess its effectiveness and adapt the Program accordingly. The annual review will also include an assessment of appropriateness of the methods used to undertake ongoing consultation with Traditional Custodians.

Progress of the Program will be reported annually in line with annual sustainability reporting via the Woodside website.

6. Current Status

Following distribution of this proposed Program, Woodside is now participating in a number of specific ongoing consultation activities with Traditional Custodian Relevant Persons. Specific ongoing activities are tabulated below:

Traditional Custodian Relevant Person	Ongoing Consultation Description	Forward Plan	Estimated Timeframes
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	BTAC proposed a Collaboration Agreement in May 2023, Woodside agreed in principle, and exchanged correspondence to understand details of the proposal. The Collaboration Agreement would enable support for BTAC to undertake an ethnographic assessment to articulate values, and ensure appropriate cost recovery.	Woodside and BTAC have executed a Costs Acceptance Letter. Woodside provided a draft Consultation Agreement to BTAC in February 2024. Woodside will follow up with BTAC to progress the Agreement.	Woodside will follow up with BTAC regarding the draft proposed Consultation Agreement monthly for at least six months or until the Agreement is in place.
Yamatji Marlpa Aboriginal Corporation (YMAC)	In June 2023, YMAC provided Woodside a proposed draft Framework Agreement, and a proposal to fund in-house expertise to support consultation and implement the Collaboration Framework. In July 2023, Woodside agreed in principle to the proposed Collaboration Framework and the funding proposal and requested a meeting to work together on details. Woodside provided the Proposed Program of Ongoing Consultation to complement the proposed Collaboration Framework.	Woodside provided a draft Consultation Agreement to YMAC for NTGAC, who are represented by YMAC, in February 2024. Woodside will follow up with YMAC to progress the Agreement	Woodside will follow up with WAC regarding the draft Consultation Agreement monthly for at least six months or until the Agreement is in place.
Wirrawandi Aboriginal Corporation (WAC)	In August 2023, WAC proposed a Framework Agreement with Woodside to provide a streamlined, formalised approach to consultation between WAC and Woodside. Woodside has confirmed receipt of the proposed framework from WAC.	Woodside provided a draft Consultation Agreement to WAC in March 2024. WAC have previously advised that they do not object to Woodside progressing environmental plans on the proviso that both parties enter into an Agreement suitable to each party. Woodside will follow up with WAC to progress the Agreement.	Woodside will follow up with WAC regarding the draft Consultation Agreement monthly for at least six months or until the Agreement is in place.
Ngarluma Aboriginal Corporation (NAC)	In September 2023, NAC proposed a Joint Working Group to practically manage consultation processes. It was proposed that the group would meet monthly for 2023 and quarterly thereafter, meetings would include NAC CEO and NAC Directors and potentially independent SME/s, the proposal was that Woodside draft a Framework Agreement, and included a request for funding for this approach. Woodside provided in-principle support for the proposal.	Woodside provided a draft Consultation Agreement to NAC in March 2024. Woodside will follow up with NAC to progress the Agreement.	Woodside will follow up with NAC regarding the draft Consultation Agreement monthly for at least six months or until the Agreement is in place.
Nganhurra Thanardi Garrru Aboriginal Corporation (NTGAC)	In a meeting during August 2023, NTGAC proposed a Framework Agreement. This included terms for ongoing engagement such as frequency of consultation, participation, and content. NTGAC has also requested Woodside provide funding for an in-house environmental scientist to review material. Woodside agreed in principle to this approach, and has requested a first draft of the Framework Agreement for consideration. Woodside have agreed to pay for YMAC's	Woodside has been responding to queries from NTGAC regarding various Environment Plans, who have passed information provided by Woodside onto their Environmental Scientist. Woodside provided a draft Consultation Agreement to NTGAC via YMAC in February 2024. Woodside will follow up with NAC to progress the Agreement.	Woodside will follow up with NTGAC regarding the draft Consultation Agreement monthly for at least six months or until the Agreement is in place.

	in-house scientist to attend NTGAC meetings to advise NTGAC.		
Yinggarda Aboriginal Corporation (YAC)	In August 2023, YAC requested Woodside provide a draft Framework Agreement for their consideration. Woodside has provided a draft Framework Agreement to YAC for review.	Woodside provided a draft Consultation Agreement to YAC in March 2024. YAC have advised that they will seek direction from the YAC Board on the proposal, and seek agreement from the YAC Board regarding the proposed fee schedule. Woodside will follow up with YAC to progress the Agreement.	Woodside will follow up with YAC regarding the draft Consultation Agreement monthly for at least six months or until the Agreement is in place.
Robe River Kuruma Aboriginal Corporation (RRKAC)	RRKAC have noted that they are insufficiently resourced to engage further and respond to Woodside regarding EPs. Woodside assesses that a Framework Agreement could address this.	Woodside has on several occasions written to RRKAC offering to fund consultation meetings. Woodside will offer RRKAC a Framework Agreement which will propose funding, scope of work and timeframes to assist with consultation and ongoing consultation. If RRKAC are open to the proposal, it is intended to put forward a draft Framework Agreement to RRKAC within the next 2 months.	Woodside will follow up with RRKAC monthly for at least six months, seeking to progress a Framework Agreement.
Ngarluma Yindjibarndi Foundation Limited (NYFL)	NYFL and Woodside have an existing Agreement in place which enables quarterly communication about Woodside activities. NYFL has said they are working with other First Nations organisation and representative Bodies developing a Framework Agreement. Woodside issued a	Woodside provided a draft Consultation Agreement to NYFL in March 2024. NYFL responded with a quote for an initial review of the draft terms of agreement.	Woodside will continue to follow up monthly with NYFL for at least six months, seeking to progress the draft Consultation Agreement.
Kariyarra Aboriginal Corporation (KAC)	In September 2023 KAC proposed an agreement which would include meeting arrangements, ongoing consultations, specialist advice and contact protocols.	Woodside support funding request that are reasonable and will seek to reach agreement on a funding proposal put forward by KAC. Woodside agrees that a Framework Agreement is a sound tool to set out ongoing consultation with KAC, funding arrangements and social investment opportunities that KAC would want explored. Woodside provided a draft Consultation Agreement to KAC in February 2024. Woodside will follow up with KAC to progress the Agreement.	Woodside will follow up with KAC regarding the draft Consultation Agreement monthly for at least six months or until the Agreement is in place.

EXECUTIVE SUMMARY

Woodside Energy Scarborough Pty Ltd (Woodside) has developed its oil spill preparedness and response position for the Scarborough Offshore Facility and Trunkline Operations, hereafter known as the Petroleum Activities Program (PAP).

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP detailed in the Environment Plan (EP). This document then details Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary	Reference to additional detail
Worst Case Credible Scenario	<p>Credible Scenario-01 (CS-01): Instantaneous Release of 250 m³ of Marine Diesel (MDO) outside Mermaid Sound from a vessel collision. 20° 21' 3.28" S, 116° 42' 5.58" E.</p> <p>Instantaneous release of 250 m³ MDO.</p> <p>5% residual component of 12.5 m³.</p>	Section 2.2
	<p>Credible Scenario-02 (CS-02): Instantaneous Release of 250 m³ of MDO within Montebello AMP from a vessel collision. 20° 03' 1.44" S, 115° 31' 35.04" E.</p> <p>Instantaneous release of 250 m³ MDO.</p> <p>5% residual component of 12.5 m³.</p>	
	<p>Credible Scenario-03 (CS-03): Instantaneous Surface Release of 470 m³ of MDO due to a loss of structural integrity at the FPU Location. 19° 53' 54.72" S, 113° 14' 19.56" E.</p> <p>Instantaneous surface release of 470 m³ MDO.</p> <p>5% residual component of 23.5 m³.</p>	
	<p>Credible Scenario-04 (CS-04): Loss of well containment due to a failure at the wellheads and/or Xmas trees.</p> <p>Subsea release of 423 MMscf per day (at virgin reservoir pressure/ day one of production) of dry gas for an estimated 65.3 days until well kill.</p> <p>Negligible liquid component at atmospheric pressures.</p>	
Hydrocarbon Properties	<p>MDO</p> <p>MDO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 54% should evaporate over several days (265 °C < BP < 380 °C). Approximately 5% of the oil is shown to be persistent. The aromatic content of the oil is approximately 3%.</p> <p>Dry gas</p> <p>The Scarborough reservoir properties are dry gas, primarily methane (approximately 95%) and nitrogen (approximately 4%), with some ethane, CO₂ contents and limited heavier hydrocarbon components. No liquid hydrocarbons are expected at atmospheric conditions. Furthermore, worst case discharge rate ('blowout' rate) modelling predicts that the gas plume will not breach the water's surface.</p>	Section 6.8.2 of the EP Appendix A of the First Strike Plan

1 INTRODUCTION

1.1 Overview

Woodside Energy Scarborough Pty Ltd (Woodside) has developed its oil spill preparedness and response position for the Scarborough Offshore Facility and Trunkline Operations activity, hereafter known as the Petroleum Activities Program (PAP). This document details Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The Scarborough Offshore Facility and Trunkline Operations Environment Plan (EP)
- Oil Pollution Emergency Arrangements (OPEA) (Australia)
- The Scarborough Offshore Facility and Trunkline Operations Oil Pollution Emergency Plan (OPEP) including:
 - First Strike Plan (FSP)
 - Relevant Operations Plans
 - Relevant Tactical Response Plans (TRPs)
 - Relevant Supporting Plans
 - Data Directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP detailed in the EP. This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the PAP is shown in Figure 3-3 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, detailing the selected response techniques for this PAP. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the Oil Pollution FSP is underway. The IAP includes inputs from the operational monitoring and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 details the interaction between Woodside's response, planning, preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the PAP.

The Scarborough Offshore Facility and Trunkline Operations First Strike Plan then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities if an incident were to occur.

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

- Section 1. INTRODUCTION
- Section 2. RESPONSE PLANNING PROCESS
 - identification of worst-case credible scenario(s) (WCCS)
 - spill modelling for WCCS.
- Section 3. IDENTIFY RESPONSE PROTECTION AREAS (RPAs)
 - areas predicted to be contacted at concentration >100 g/m².
- Section 4. NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)
 - pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
 - selected response techniques prioritised and carried forward for ALARP assessment.
- Section 5. HYDROCARBON SPILL ALARP PROCESS
 - determines the response need based on predicted consequence parameters
 - details the environmental performance of the selected response options based on need
 - sets the environmental performance outcomes, environmental performance standards and measurement criteria.
- Section 6. ALARP EVALUATION
 - evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP
 - provides a detailed ALARP assessment of selected control measure options against:
 - predicted cost associated with implementing the option.
 - predicted change to environmental benefit.
 - predicted effectiveness / feasibility of the control measure.
- Section 7. ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES
 - evaluation of impacts and risks from implementing selected response options.
- Section 8. ALARP CONCLUSION
- Section 9. ACCEPTABILITY CONCLUSION

2.1.1 Response Planning Assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

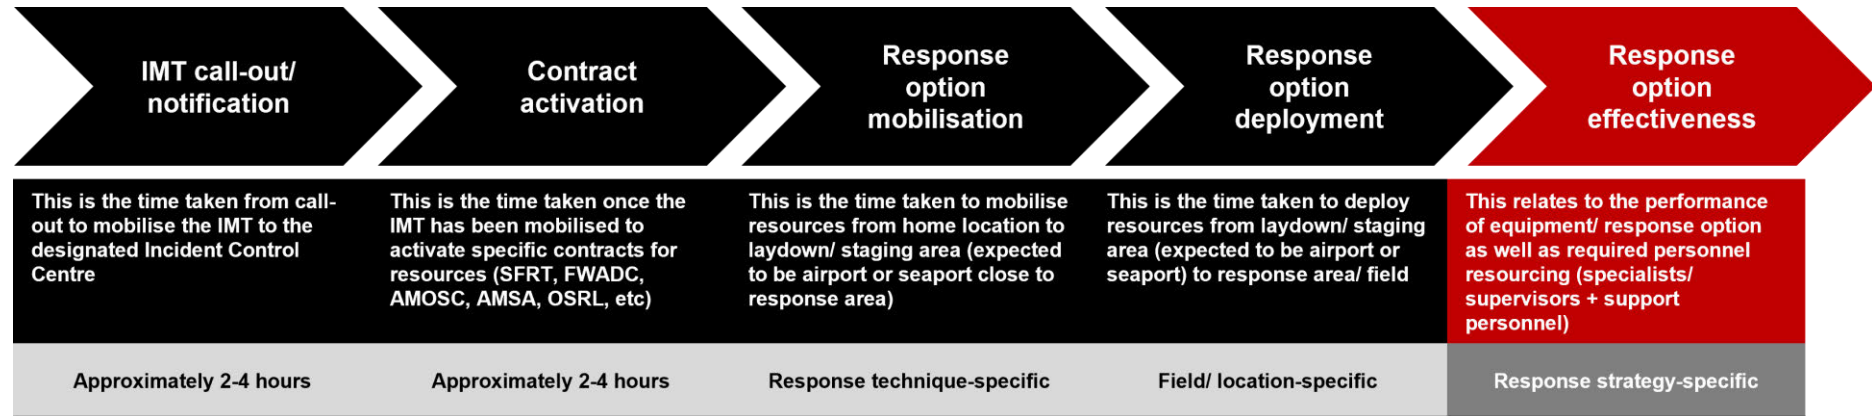

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

2.2 Environment plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the PAP have been identified during the risk assessment process (Section 6 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Four unplanned events or credible spill scenarios for the PAP have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the PAP. The WCCS for the activity is then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCS, Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCS.

Stochastic modelling has been completed for a worst-case spill scenarios of an instantaneous surface release of MDO, representing loss of vessel fuel tank integrity after a collision, at two locations: 250 m³ of MDO outside Mermaid Sound (CS-01) and 250 m³ of MDO within Montebello Marine Park (CS-02). A third scenario has been modelled for the instantaneous surface release of 470 m³ MDO following a loss of structural integrity at the Floating Production Unit (FPU) location in the Scarborough field (CS-03). Credible Scenario 4 (CS-04) is a loss of well containment of dry gas, so no hydrocarbon spill modelling was undertaken for this scenario.

The instantaneous surface release of 250 m³ of MDO outside Mermaid Sound scenario (CS-01) is considered to determine the WCCS for response planning purposes as it is the only scenario with floating and shoreline hydrocarbons contacting shoreline receptors above thresholds. Whilst CS-02 and CS-03 do not contact shorelines above shoreline hydrocarbon thresholds, they are included for planning purposes as they contact offshore receptors above entrained hydrocarbon thresholds. CS-04 has no or negligible liquid hydrocarbon component so the dry gas will dissolve into the immediate water surrounding a spill causing only localised disturbance. Other credible scenarios have smaller volumes of hydrocarbons and so are considered to be within the risk profile and spill response capability requirements of the WCCS.

Table 2-1: Petroleum Activities Program credible spill scenarios

Credible Spill Scenarios	Scenario selected for planning purposes	Scenario description	Maximum credible volume released (liquid m ³)	Incident level	Hydrocarbon type	Residual proportion	Residual volume (m ³)
Instantaneous Release of 250 m ³ of MDO outside Mermaid Sound (CS-01)	Yes	Instantaneous release of 250 m ³ of MDO outside Mermaid Sound	250	2	MDO	5.0 %	12.5
Instantaneous Release of 250 m ³ of MDO within Montebello AMP (CS-02)	Yes	Instantaneous Release of 250 m ³ of MDO within Montebello AMP	250	2	MDO	5.0 %	12.5
Instantaneous surface release of 470 m ³ of MDO following a loss of structural integrity at the FPU location (CS-03)	Yes	Instantaneous Surface Release of 470 m ³ of MDO following a loss of structural integrity at the FPU Location	470	2	MDO	5.0 %	23.5
Loss of well containment due to a failure at the wellheads and/or Xmas trees (CS-04)	Yes	Loss of well containment due to a failure at the wellheads and/or Xmas trees (CS-04)	No or negligible liquid hydrocarbon	3	Dry gas	N/A	N/A
Loss of containment during bunkering	No	Loss of containment during bunkering at the FPU or trunkline route	50	1	MDO	5.0 %	2
Topside loss of containment	No	Topside loss of containment at the FPU	220	2	MDO	5.0 %	11
Subsea infrastructure loss of containment	No	Loss of containment from the trunkline, riser, infield flowlines or subsea equipment	No or negligible liquid hydrocarbon	1	Dry gas	N/A	N/A
Accommodation Support Vessel loss of structural integrity	No	Slow leak of MDO after sinking of the ASV from a loss of structural integrity	Slow leak	1	MDO	5.0 %	N/A

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6 of the EP.

Marine Diesel (CS-01, CS-02, CS-03)

Marine Diesel Oil (MDO) is typically classed as an International Tanker Owners Pollution Federation (ITOPF) Group I/II oil. Group I oils are non-persistent and tend to dissipate completely through evaporation within a few hours and do not normally form emulsions.

MDO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (boiling point <180°C); a further 35% should evaporate within the first 24 hours (180°C < boiling point <265°C); and a further 54% should evaporate over several days (265°C < boiling point <380°C). About 5% of the oil is shown to be persistent. The aromatic content of the oil is about 3%.

The mass balance forecast for the constant-wind case for MDO shows that about 41% of the oil is predicted to evaporate within 24 hours. Under these calm conditions the majority of the remaining oil on the water surface weathers at a slower rate due to comprising the longer-chain compounds with higher boiling points. Evaporation of the residual compounds slows significantly and is then subject to more gradual decay through biological and photochemical processes.

Under the variable-wind case, where the winds are of greater strength, entrainment of MDO into the water column is indicated to be significant. Approximately 24 hours after the spill, around 72% of the oil mass is forecast to have entrained and a further 24% is forecast to have evaporated, leaving only a small proportion of the oil floating on the water surface (<1%). The residual compounds will tend to remain entrained beneath the surface under conditions that generate wind waves (approximately > 6 m/s).

The increased level of entrainment in the variable-wind case results in a higher percentage of biological and photochemical degradation, where the decay of the floating slicks and oil droplets in the water column occurs at an approximate rate of 2.4% per day with an accumulated total of ~16% after seven days, in comparison to a rate of ~0.2% per day and an accumulated total of 1.3% after seven days in the constant-wind case. Given the large proportion of entrained oil and the tendency for it to remain mixed in the water column, the remaining hydrocarbons decay and/or evaporate over time scales of several weeks to a few months. This long weathering duration will extend the area of potential effect, requiring the break-up and dispersion of the slicks and droplets to reduce concentrations below the thresholds considered in this study.

Dry gas (CS-04)

The Scarborough reservoir properties are dry gas, primarily methane (approximately 95%) and nitrogen (approximately 4%), with some ethane, CO₂ contents and limited heavier hydrocarbon components. No liquid hydrocarbons are expected at atmospheric conditions. Furthermore, worst case discharge rate ('blowout' rate) modelling predicts that the gas plume will not breach the water's surface.

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a

range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

A total of 200 replicate simulations were completed for each of the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (50 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and environmental impacts

Hydrocarbon	Surface hydrocarbon (g/m ²)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m ²)
Diesel	10	50	100	100

2.3.2 Deterministic modelling

Deterministic modelling is undertaken where initial stochastic modelling has indicated that floating oil is present at an impact threshold of 50 g/m² and/or where there are shoreline accumulations at an impact threshold of 100 g/m². The deterministic modelling outputs are then used to scale the required capability for the offshore (containment and recovery and dispersant) and/or shoreline responses.

Whilst modelling for this activity predicts that there may be some floating hydrocarbons present at the 50 g/m² threshold at Dampier Archipelago (CS-01), Montebello Marine Park (CS-02) and in open waters, together with some shoreline contact above 100 g/m², many standard response techniques requiring deterministic analysis are not feasible for spills of MDO e.g. dispersant application and containment and recovery. Stochastic modelling has therefore been used to scale the response.

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Thresholds to determine the EMBA are used to predict and assess environmental impacts and inform the Scientific Monitoring Program (SMP), however they do not appropriately represent the thresholds at which an effective response can be implemented. Additional response thresholds are used for response planning and

to determine areas where response techniques would be most effective. The modelling is then used to assess the nature and scale of a response.

In the event of an actual response, modelling would be reviewed for suitability and additional modelling would be conducted using real-time data and field information to inform CIMT decisions.

The modelling outputs are presented at response planning thresholds for surface hydrocarbons for the WCCS. Surface spill concentrations are expressed as grams per square metre (g/m^2). The thresholds used are derived from oil spill response planning literature and industry guidance and are summarised in the following subsections.

2.3.3.1 Surface hydrocarbon concentrations

Table 2-3: Surface hydrocarbon thresholds for response planning

Surface hydrocarbon threshold (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
>10	Predicted minimum threshold for commencing operational monitoring ¹	Code 3 – Dull metallic colours	5 to 50
50	Predicted minimum floating oil threshold for containment and recovery and surface dispersant application ²	Code 4 – Discontinuous true oil colour	50 to 200
100	Predicted optimum floating oil threshold for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon threshold (g/m^2)	Description	National Plan Guidance on Oil Contaminated Foreshores	Mass per area (m^3/km^2)
100	Predicted minimum shoreline accumulation threshold for shoreline assessment operations	Stain	>100
250	Predicted minimum threshold for commencing shoreline clean-up operations	Level 3 – Thin Coating	200 to 1000

The surface thickness of oil at which dispersants are typically effective is approximately $100 \text{ g}/\text{m}^2$. However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so that overall the average thickness is 0.1 mm or approximately $100 \text{ g}/\text{m}^2$ (ITOPF 2011). Additionally, the recommended rate of application for surface dispersant is typically one part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (International Petroleum Industry Environment Conservation Association [IPIECA] 2015).

Guidance from the Australian Maritime Safety Authority (AMSA, 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code (BAOAC) 3, approx. $5 - 50 \mu\text{m}$) with dispersant

¹ Operational monitoring will be undertaken from the outset of a spill whether or not this threshold has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport (WA DoT) or AMSA.

² At $50 \text{ g}/\text{m}^2$, containment and recovery and surface dispersant application operations are not expected to be particularly effective. This threshold represents a conservative approach to planning response capability and containing the spread of surface oil.

from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant. Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from the National Oceanic and Atmospheric Administration (NOAA) in the United States is found in the document: *Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013* (NOAA 2013). This guide outlines advice for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a, 2014b).

Figure 2-5 from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA, 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Windrows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

From this information and other relevant sources (Allen and Dale, 1996; EMSA, 2012; Spence, 2018) the surface threshold of 50 g/m² was chosen as an average/equilibrium thickness (50 g/m² is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or windrows).

Figure 2-5: Proportion of total area coverage (AMSA, 2014)

Figure 2-6 illustrates the general relationships between on-water response techniques and slick thickness. Windrows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

Figure 2-6: Oil thickness versus potential response options (from Allen and Dale 1996)

Wind and waves influence the feasibility of response operations, dropping the effectiveness significantly because of entrainment and/or splash-over as short period waves develop beyond two to three feet (0.6 to 0.9 m) in height. Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-4: Surface hydrocarbon viscosity thresholds

Surface viscosity (cSt)	Description	European Maritime Safety Authority	Viscosity at sea temperature (cSt)
5,000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5,000-10,000

*Measured at sea surface temperature

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: "It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern "Concentrate, UK Type 2/3" dispersants at an oil viscosity of about 1000 or 2000 mPa (1000 – 2000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2000 or 5000 mPa (2000 – 5000 cSt), could be applied to all oils."

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5000 mPa (5000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5000 cSt at sea temperature are generally possible to disperse, while 5000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

Spills of MDO will not reach the 10,000 cSt threshold for the duration of the spill and dispersant is not deemed to provide a net environmental benefit for response to a spill of MDO. The thresholds described above are compared with the modelling results for the WCCS (**Table 2-5**).

2.3.4 Spill modelling results

Details of the scenario and modelling inputs and results are included in **Table 2-5**.

The volumes as presented in **Table 2-5** are the worst-case volumes resulting from the stochastic modelling and have been used to determine appropriate level of response.

Table 2-5: Worst case credible scenario modelling results

Scenario description	Results			
	CS-01	CS-02	CS-03	CS-04
WCCS – total volume released Refer to Section 2.2.1 for detailed hydrocarbon characteristics	Instantaneous Release of 250 m³ of MDO outside Mermaid Sound Hydrocarbon release resulting from a collision with a third-party vessel - Loss of containment from the IMMR vessel fuel tank within the Trunkline Operational Area. Instantaneous release of 250 m ³ of MDO.	Instantaneous Release of 250 m³ of MDO within Montebello AMP Hydrocarbon release resulting from a collision with a third-party vessel - Loss of containment from the IMMR vessel fuel tank within the Trunkline Operational Area. Instantaneous release of 250 m ³ of MDO.	Instantaneous surface release of 470 m ³ of MDO following a loss of structural integrity at the FPU location. Instantaneous release of 470 m ³ of MDO.	Loss of well containment due to a failure at the wellheads and/or Xmas trees.
WCCS – residual volume remaining post-weathering	5% residual component of 12.5 m ³	5% residual component of 12.5 m ³	5% residual component of 23.5 m ³	N/A – dry gas with no liquid hydrocarbons
Location	20° 21' 3.28" S, 116° 42' 5.58" E	20° 03' 1.44" S, 115° 31' 35.04" E	19° 53' 54.72" S, 113° 14' 19.56" E	N/A – dry gas
Modelling results				
Surface area of hydrocarbons (>50 g/m²)	Deterministic modelling was not undertaken so spatial area information is not available. Surface hydrocarbon concentrations greater than 50 g/m ² are predicted at Dampier Archipelago after 7 hours, however, offshore response techniques, i.e. containment and recovery, and surface dispersant application, are not considered appropriate for spills of MDO.	Deterministic modelling was not undertaken so spatial area information is not available. Surface hydrocarbon concentrations greater than 50 g/m ² are predicted at Montebello Marine Park after 1 hour, however, offshore response techniques, i.e. containment and recovery, and surface dispersant application, are not considered appropriate for spills of MDO.	Deterministic modelling was not undertaken so spatial area information is not available. Surface hydrocarbon concentrations greater than 50 g/m ² are not predicted at any RPA for the duration of the spill.	N/A – dry gas
Surface area of hydrocarbons (>50 g/m² and <15,000 cSt)	N/A	N/A	N/A	N/A – dry gas
Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a concentration of 10 g/m²)	Dampier Archipelago - 0.25 days	Montebello MP – 1 hour	No contact at threshold	N/A – dry gas
Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a concentration of 100 g/m²)	Dampier Archipelago - 0.75 days (55 m ³) Keast Island - 0.75 days (20 m ³)	No contact at threshold	No contact at threshold	N/A – dry gas
Maximum cumulative hydrocarbon volume accumulated at any individual shoreline receptor (at a concentration of 100 g/m²).	Dampier Archipelago – 55 m ³	No contact at threshold	No contact at threshold	N/A – dry gas
Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors contacted by accumulated hydrocarbons (at a concentration of 100 g/m²)	Dampier Archipelago – 55 m ³	No contact at threshold	No contact at threshold	N/A – dry gas
Minimum time to entrained/dissolved hydrocarbon contact with the offshore edges of any receptor polygon (at a threshold of 100 ppb)	Dampier Archipelago – 0.21 days	Montebello MP – 1 hour	Gascoyne MP – 2.96 days	N/A – dry gas
The full list of response protection areas (RPAs) predicted from modelling is available in Table 3-1				

From the above modelling results, the volumes and timeframes for CS-01 have been selected as the basis for response planning.

3 IDENTIFY RESPONSE PROTECTION AREAS

In a response, operational monitoring programs (OMPs) – including trajectory modelling and vessel/aerial observations – would be used to predict Response Protection Areas (RPAs) that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

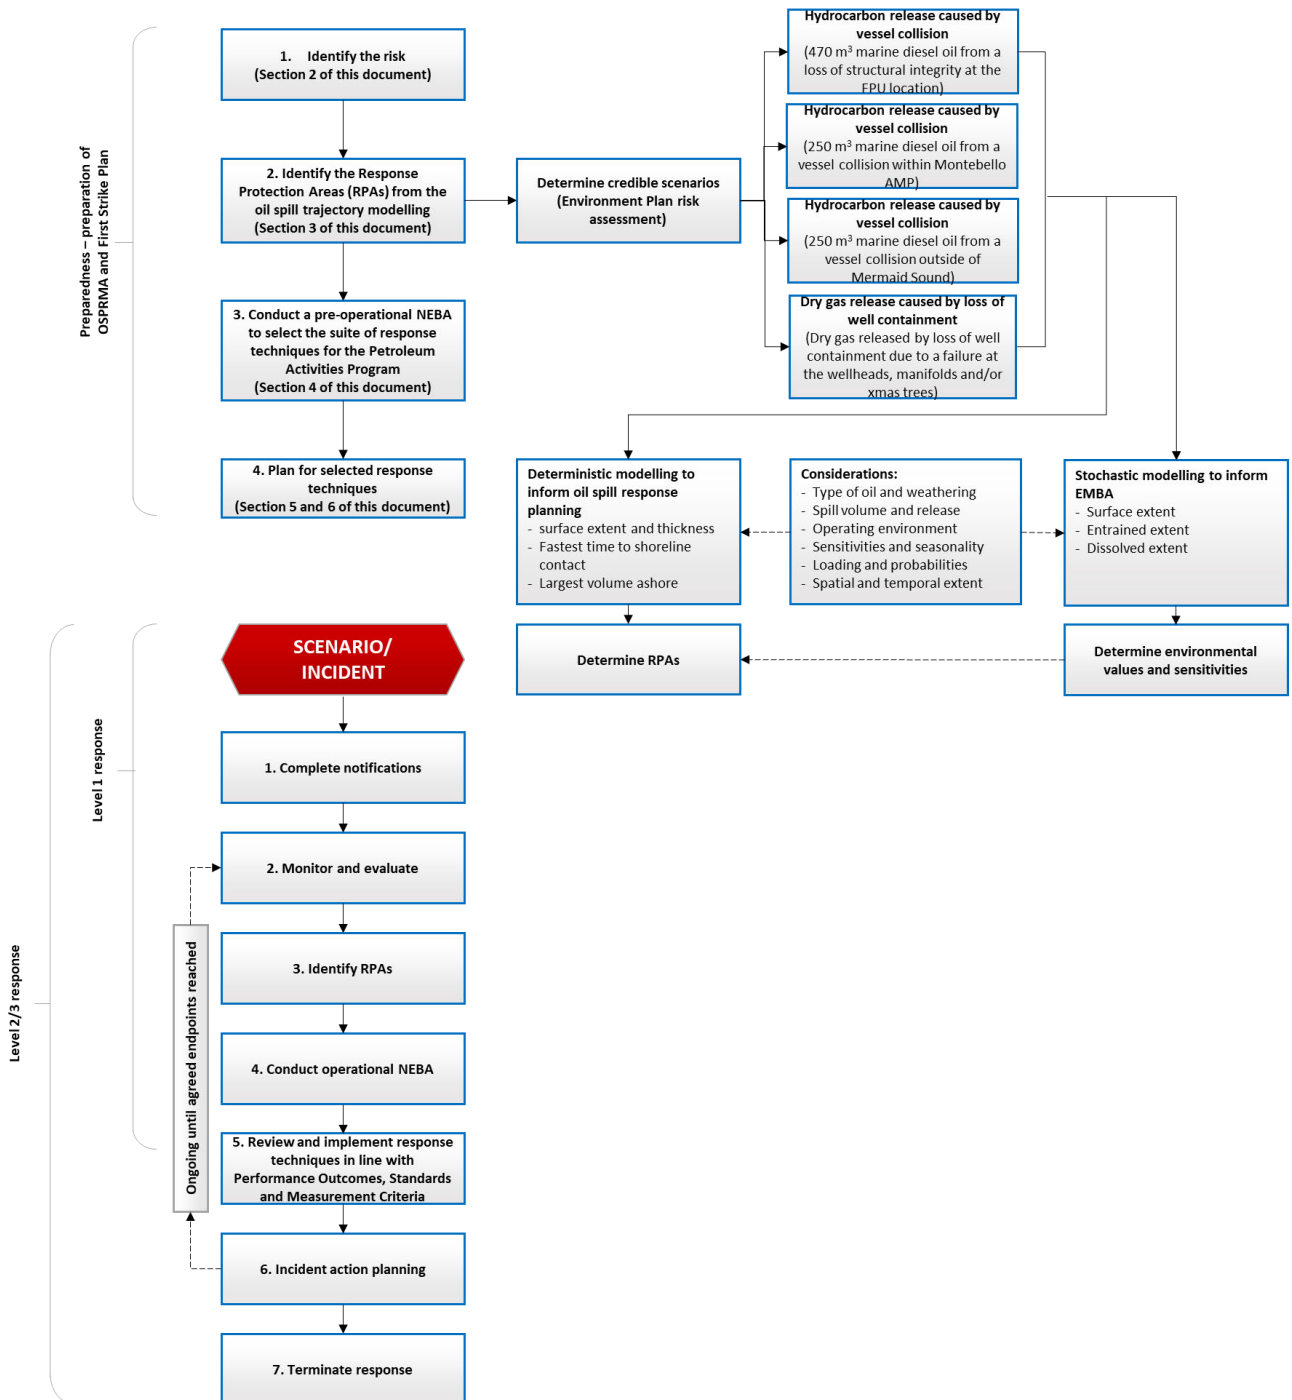

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 6 of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact thresholds
- receptors within the EMBA which meet any of the following:
 - priority protection criteria/ categories
 - International Union of Conservation of Nature (IUCN) marine protected area categories
 - high conservation value habitat and species
 - important socio-economic/heritage value.

3.2 Identify Response Protection Areas

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response thresholds (Section 2.3.3). The figures outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6 of the EP, only those which a shoreline response could feasibly be conducted (accumulation > 100 g/m² for shoreline assessment and/or contact with surface slicks >10 g/m² for operational monitoring) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines locations which were identified from the modelling runs for the WCCS but does not constitute the full list of Priority Protection Areas (PPAs) potentially contacted from stochastic modelling (as per EMBA definition) (see Section 4 of the EP). Other RPA outliers were identified from the modelling and have been included in the assessment of capability in Sections 5 and 6.

Additional sensitive receptors are presented the existing environment description (Section 4 of the EP) and impact assessment section (Section 6 of the EP) for each respective spill scenario. The pre-operational NEBA (Section 4) includes the results from the stochastic modelling to allow consideration of all feasible response techniques in the planning phase, therefore additional receptors are also included in the pre-operational NEBA.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

Table 3-1: Response Protection Areas (RPAs) from stochastic modelling

Response protection area	Conservation status	IUCN protection category	Minimum time to shoreline contact (above 100 g/m ²) in days ⁽³⁾	Maximum shoreline accumulation (above 100 g/m ²) in m ³ ⁽⁴⁾	Minimum time to shoreline contact (above 100 g/m ²) in days ⁽⁵⁾	Maximum shoreline accumulation (above 100 g/m ²) in m ³ ⁽⁶⁾	Minimum time to shoreline contact (above 100 g/m ²) in days ⁽⁷⁾	Maximum shoreline accumulation (above 100 g/m ²) in m ³ ⁽⁸⁾	Minimum time to shoreline contact (above 100 g/m ²) in days ⁽⁹⁾	Maximum shoreline accumulation (above 100 g/m ²) in m ³ ⁽¹⁰⁾

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed in the planning/preparedness process and would also be followed in a response.

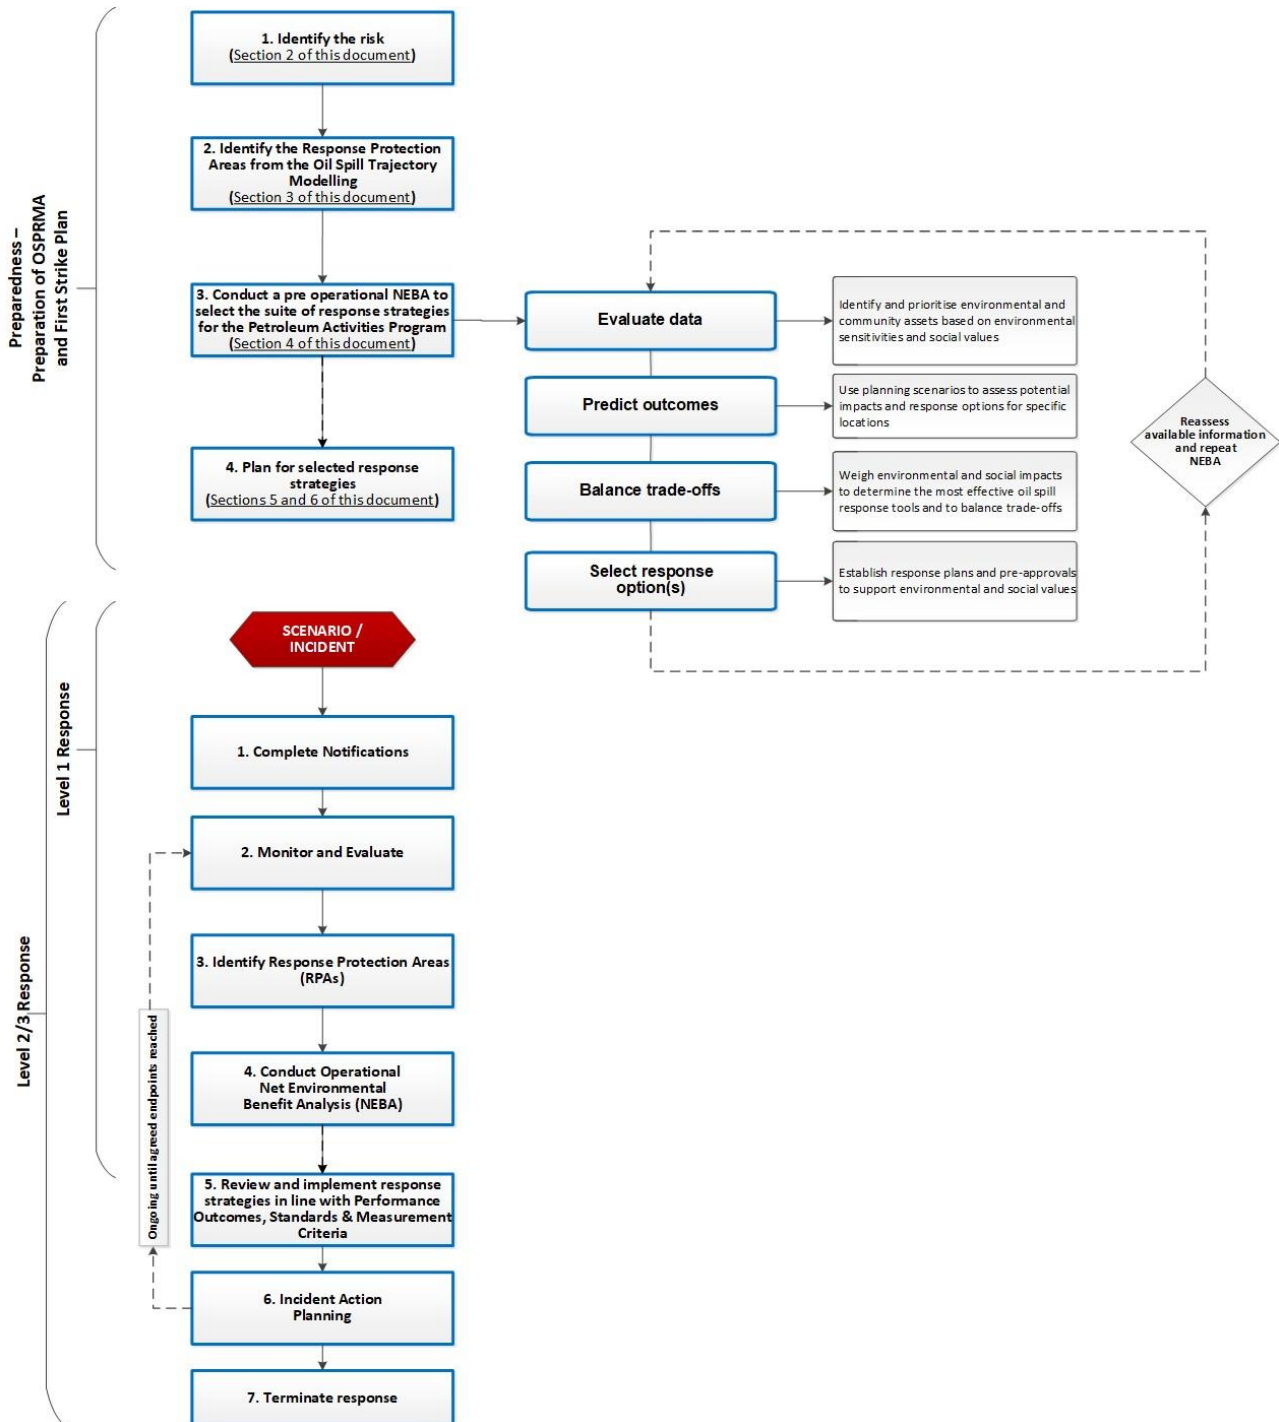

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response thresholds (Section 2.3.3) and the surface concentrations (Section 2.3.3.1) from the modelling.

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this PAP are contained in **ANNEX A: Net Environmental Benefit Analysis detailed outcomes**.

4.2 Stage 1: Evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed using trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the PAP.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in Table 2-5 and Table 3-1.

4.3 Stage 2: Predict Outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness of a response.

4.4 Stage 3: Balance trade-offs

Woodside considers environmental impacts and response feasibility/ effectiveness to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the feasibility/ effectiveness of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in **ANNEX A: Net Environmental Benefit Analysis detailed outcomes**.

4.5 Stage 4: Select Best Response Options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released, and the sensitivities of the receptors (both ecological and socio-economic), may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- Operational monitoring
- Source control
 - remotely operated vehicle (ROV) intervention
 - debris clearance and/or removal

- capping stack
- relief well drilling
- Source control via vessel SOPEP
- Surface dispersant application:
 - aerial dispersant application
 - vessel dispersant application
- Mechanical dispersion
- In-situ burning
- Containment and recovery
- Shoreline protection and deflection:
 - protection
 - deflection
- Shoreline clean-up:
 - Phase 1 – mechanical clean-up
 - Phase 2 – manual clean-up
 - Phase 3 – final polishing
- Oiled wildlife response (including hazing).

Support functions may include:

- Waste management
- Post spill/scientific monitoring.

Table 4-1 and Table 4-2 include scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

Table 4-1: Response technique evaluation – Instantaneous Release of MDO (CS-01, CS-02, CS-03)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: MDO				
Operational Monitoring	<p>Will be effective in tracking the location of the spill, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include:</p> <ul style="list-style-type: none"> OM01 Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. OM02 Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. OM03 Monitoring of hydrocarbon presence, properties, behaviour and weathering in water – from outset of spill. OM04 Pre-emptive assessment of sensitive receptors at risk – triggered once OM01, OM02 and OM03 inform likely RPAs at risk. OM05 Shoreline assessment – once OM02, OM03 and OM04 inform if any RPAs have been impacted. 	<p>Monitoring of a MDO spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and WA DoT. Practicable techniques that could be used for this scenario include predictive modelling (OM01), surveillance and reconnaissance (OM02) and monitoring of hydrocarbon presence in water (OM03).</p> <p>Modelling predicts impact of the Dampier Archipelago, Gidley Island, Cape Bruguieres, Keast Island, and Legendre Island shoreline receptors at threshold (CS-01), therefore, pre-emptive assessment of sensitive receptors at risk (OM04) and monitoring of contaminated resources (OM05) will be utilised.</p>	Yes	<p>Monitoring the spill will be necessary to:</p> <ul style="list-style-type: none"> validate trajectory and weathering models determine the behaviour of the oil in water determine the location and state of the slick provide forecasts of spill trajectory determine appropriate response techniques determine effectiveness of response techniques confirm impact pathways to receptors provide regulatory agencies with required information.
Source control via vessel SOPEP	Controlling the spill of diesel at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of diesel from a vessel collision (CS-01 and CS-02) or loss of structural integrity on the FPU (CS-03) will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	Yes	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	<p>Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors.</p> <p>Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders.</p> <p>Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons.</p> <p>Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil.</p> <p>Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.</p>	<p>Whilst modelling for CS-02 predicts that floating oil will reach the minimum feasible threshold at which to commence surface dispersant application (>50 g/m²) within the Montebello AMP, this technique is not suitable for MDO spills as this hydrocarbon is prone to rapid spreading and evaporation and are not considered effective when applied on thin surface films such as MDO as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment.</p> <p>The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.</p>	No	The application of dispersant to MDO is unnecessary as the diesel will rapidly evaporate and would thus unnecessarily introduce additional chemical substances to the marine environment. The additional entrainment would also increase exposure of subsea species and habitats to hydrocarbons.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	<p>Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly.</p> <p>The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon.</p> <p>Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area.</p> <p>The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.</p>	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved.	<p>Use of in-situ burning as a response technique for MDO is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading.</p> <p>In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved.</p> <p>Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase the release of atmospheric pollutants.</p>	No	Diesel characteristics are not appropriate for the use of in-situ burning and would unnecessarily cause an increase the release of atmospheric pollutants.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5 with a 50-100% coverage of 100 g/m ² to 200 g/m ² .	<p>Whilst modelling predicts that floating oil will reach the minimum feasible threshold at which to commence containment and recovery (50 g/m²) within the Montebello Marine Park, this technique is not suitable for MDO spills as it is prone to rapid spreading and evaporation and is deemed unsuitable for effective containment and recovery operations.</p> <p>The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.</p>	No	Containment and recovery would be an inappropriate response technique for a spill of MDO. Corraling a volatile hydrocarbon such as MDO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled diesel would have been subject to rapid evaporation prior to the commencement of containment and recovery operations.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of at-risk areas.	<p>Real-time Operational Monitoring activities (OM01, OM02 and OM03) will be used to track surface hydrocarbons moving towards shorelines. Where feasible, pre-emptive assessments of sensitive receptors at risk (OM04) and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DoT (for Level 2/3 spills).</p> <p>For CS-01, first shoreline accumulation (> 100 g/m²) is predicted on day 0.75 at Dampier Archipelago (55 m³) and Keast Island (20 m³). Feasibility of deploying this technique prior to shoreline contact will be assessed based on real-time monitoring.</p> <p>For scenarios CS-2 and CS-03, no shoreline receptors will be contacted at threshold.</p> <p>Access to sensitive areas may cause more negative impact than benefit.</p>	Yes (CS-01)	<p>The modelling undertaken for CS-01 predicts that shoreline receptors would be contacted by floating oil concentrations above 100 g/m².</p> <p>RPA's predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event.</p> <p>For RPA's deemed to be at risk based on real-time modelling during a spill event, shoreline protection and deflection techniques will be employed to minimise hydrocarbon accumulation providing a net environmental benefit.</p>
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m ² .	<p>Real-time Operational Monitoring activities (OM01, OM02 and OM03) will be used to indicate shorelines at risk of hydrocarbon contact. Pre-emptive assessments of sensitive receptors at risk (OM04), shoreline assessments (OM05) and existing TRPs will be utilised to guide shoreline clean-up operations, in agreement with WA DoT (for Level 2/3 spills).</p> <p>For CS-01, first shoreline accumulation (> 100 g/m²) is predicted on day 0.75 at Dampier Archipelago (55 m³) and Keast Island (20 m³).</p> <p>The modelling for CS-02 and CS-03 predicts that no shoreline receptors will be contacted at threshold – any minor contact is significantly below any threshold concentration that would allow a response to be feasible.</p> <p>Through shoreline assessment, verify that sensitive sites will benefit from clean-up activities as the response itself may cause more negative impact than benefit through disturbance of habitats and species.</p>	Yes (CS-01)	<p>The modelling undertaken for CS-01 predicts that shoreline receptors would be contacted by floating oil concentrations above 100 g/m².</p> <p>Response Protection Areas predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event.</p> <p>If RPA's are at risk, based on real-time monitoring and modelling during a spill event, shoreline clean-up techniques will be deployed to expedite clean-up of the impacted sites.</p> <p>Removal of hydrocarbons will help shorten the recovery window unless shoreline type is of a sensitive nature.</p> <p>This technique can help prevent remobilisation of hydrocarbon and impact on shorelines.</p>
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	<p>Operational Monitoring will be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife is at risk of contamination, oiled wildlife response will be undertaken in accordance with the Oiled Wildlife Response Operational Plan as and where required. In addition, any rehabilitation would only be undertaken by trained specialists.</p> <p>Due to the likely volatile atmospheric conditions surrounding a diesel spill, response options may be limited to hazing to maximise the safety of response personnel.</p> <p>For CS-01, first shoreline accumulation (> 100 g/m²) is predicted from day 0.75 at Dampier Archipelago and Keast Island. The modelling undertaken for CS-02 and CS-03 predicts that no shoreline areas will be impacted thus it is unlikely that this technique would be required.</p>	Yes	<p>The modelling undertaken for CS-01 predicts above 100 g/m² for Dampier Archipelago, Gidley Island, Cape Bruguieres, Keast Island, and Legendre Island receptors.</p> <p>In the event that wildlife is at risk of contamination, oiled wildlife response will be undertaken as and where required.</p>

Table 4-2: Response technique evaluation – Dry gas release (CS-04)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: Dry gas				
Operational Monitoring	For a dry gas release, established (liquid hydrocarbon) spill monitoring techniques are not applicable. Monitoring the gas plume via the ROV sonar tool may be effective, in conjunction with other well information, in determining appropriate source control techniques.	Monitoring the gas plume may be feasible where safe access via the ROV can be achieved and line of (sonar) sight is achievable to observe the gas plume. Outputs may be used to guide decision making on the use of source control techniques including options for safe and effective capping stack deployment, and relief well execution. Although modelling of the gas release for CS-04 predicts the plume will not breach the water's surface, gas monitoring at the surface is a feasible practice and may be undertaken via the support vessels' gas monitoring equipment.	Yes	If feasible and safe, monitoring the gas plume via ROV and gas monitoring at the surface may: <ul style="list-style-type: none"> determine the behaviour of the plume monitor the surface plume (if water's surface is breached) determine appropriate source control response techniques inform on effectiveness of response techniques verify safety of response personnel guide SIMOPS.
Source control via Xmas tree intervention	It may be possible to isolate flow from the tree, depending on the nature of the leak.	The installed tree system incorporates several isolation valves, both hydraulically actuated and manually operated, which could be used to prevent or reduce flow depending on the nature of the leak. ROV intervention to close subsea valves is a routine and standard operation.	Yes	The use of source control intervention via ROV may be feasible and would reduce quantity of methane released.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack could be an effective way to limit the quantity of hydrocarbon entering the marine environment, depending on the nature of the leak/failure. Debris clearance tools could, in some scenarios, be useful.	Woodside has developed a project specific capping stack deployment plan and also commissioned an independent, capping stack landing study for the Scarborough wells (Wild Well Control Inc (WWCI), 2021). The study indicates that deployment of the capping stack is feasible. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement.	Yes	Conventional/vertical capping stack deployment with a heavy lift vessel is feasible once metocean conditions (wind, waves etc) are appropriate for safe deployment. Since the produced gas does not breach the sea surface, the response to the incident should not be unduly hampered by plume conditions.
Source control via relief well drilling	A subsea release of methane will be stopped approximately 65.3 days after the initiation of a relief well response.	If required, relief well drilling is a widely accepted and utilised technique.	Yes	Relief well drilling is a proven technique employed to control a loss of well containment event should the other containment measures be unsuccessful.
Surface dispersant application	Not applicable for a dry gas loss of well containment (LOWC).	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
Mechanical dispersion	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
In-situ burning	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
Containment and recovery	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
Shoreline protection and deflection	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
Shoreline clean-up	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
Oiled wildlife response	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488* (2021) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/SIMA, Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

- It considers the Response Planning Need identified in terms of surface area (km²) and available surface hydrocarbon volumes (m³) against existing Woodside capability.
- It considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
 - predicted cost associated with adopting the control measure
 - predicted change/environmental benefit
 - predicted effectiveness/feasibility of the control measure.
- It evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

- A structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique.
- The analysis of alternate, additional, and improved control measures meets one of the following criteria:
 - all identified, reasonably practicable control measures have been adopted; or
 - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
 - no reasonably practical additional, alternative, and/or improved control measures have been identified.
- Where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned.
- Higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or unreasonable control measure.
- Cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the ALARP assessment, the following terms and definitions have been used:

- Response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably.
- Cost is defined as the time, effort and/or complexity of financial, safety, design/ storage/ installation, capital/ lease, and/or operations/ maintenance required to adopt a control measure.

- Environmental impact is the comparison against standard environmental values and sensitivities' impacts using positive or negative criteria from the NEBA Impact Ranking Classification Guidance in Annex A.

5.1 Operational Monitoring

Operational Monitoring includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

The table below provides the operations monitoring plans that support the successful execution of this response technique.

Table 5-1: Description of supporting operational monitoring plans

ID	Title
OM01	Predictive modelling of hydrocarbons to assess resources at risk
OM02	Surveillance and reconnaissance to detect hydrocarbons and resources at risk
OM03	Monitoring of hydrocarbon presence, properties, behaviour and weathering in water
OM04	Pre-emptive assessment of sensitive receptors at risk
OM05	Shoreline assessment

Woodside maintains an *Operational Monitoring Operational Plan*. If shoreline contact is predicted, RPAs will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey will be completed to guide effective shoreline clean-up operations. This plan includes the process for the IMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Dampier, Onslow and Exmouth to the spill event location means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Dampier. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Exmouth and Onslow.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Floating surface oil in sufficient concentrations for effective operational monitoring is expected:
 - for CS-01 with surface concentrations of 10 g/m² up to ~19 km from the vessel collision location outside of Mermaid Sound
 - for CS-02 with surface concentrations of 10 g/m² up to ~43 km from the vessel collision location within the Montebello AMP
 - for CS-03 with surface concentrations of 10 g/m² up to ~105 km from the loss of structural integrity at the FPU location.
- The shortest timeframe that shoreline contact from floating oil is predicted is 0.75 days (Dampier Archipelago and Keast Island) for CS-01. No shore contact at response threshold is predicted for CS-02 or CS-03.
- The time to contact for oil at concentrations of entrained hydrocarbons greater than 100 ppb at shoreline receptors is 5 hours at Dampier Archipelago (CS-01), 1 hour at Montebello AMP (CS-02), and 71 hours at Gascoyne MP (CS-03).
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support functions. These should be reviewed and updated regularly.
- Response operations may take up to 7-8 days based on the predicted time to complete shoreline clean-up operations.

5.1.2 Environmental performance based on need

Table 5-2: Environmental Performance – Operational Monitoring

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.10)
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool.	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside.	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation.	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7.	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside COP daily to improve the accuracy of other Operational Monitoring techniques.	1, 3B, 4
3	Satellite imagery	3.1	Contract in place with 3 rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3 rd party provider will confirm availability of an initial acquisition within 2 hours.	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3 rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3 rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Operational Monitoring techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response.	1, 3C, 4
4	Aerial surveillance	4.1	2 trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	1 aircraft available for two sorties per day, available for the duration of the response from day 1.	1, 3C, 4
		4.3	Observer to compile report during flight as per First Strike Plan. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support SCAT, containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Hydrocarbon detections in water	5.1	<p>Activate 3rd party service provider as per first strike plan. Deploy resources within 3 days:</p> <ul style="list-style-type: none"> • 3 specialists in water quality monitoring • 2 monitoring systems and ancillaries • 1 vessel for deploying the monitoring systems with a dedicated winch, A-frame or Hiab and ancillaries to deploy the equipment. 	1, 2, 3C, 3D, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.10)
		5.2	Water monitoring services available and employed during response.	1, 3C, 4
		5.3	Preliminary results of water sample as per contractor's implementation plan within 7 days of receipt of samples at the accredited lab.	
		5.4	Daily fluorometry reports as per service provider's implementation plan will be provided to IMT to validate modelling and monitor presence/ absence of entrained hydrocarbons.	
6	Pre-emptive assessment of sensitive receptors	6.1	Within 24 hours, in liaison with WA DoT (for Level 2/3 incidents), deployment of 1 specialist(s) from resource pool in establishing the status of sensitive receptors.	1, 2, 3B, 3C, 4
		6.2	Daily reports provided to CIMT on the status of the receptors to prioritise Response Protection Areas (RPAs) and maximise effective utilisation of resources.	1, 3B, 4
7	Shoreline assessment	7.1	Within 24 hours, in liaison with WA DoT (for Level 2/3 incidents), deployment of 1 specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts.	1, 2, 3B, 3C, 4
		7.2	SCAT reports provided to IMT daily detailing the assessed areas to maximise effective utilisation of resources.	1, 3B, 4
		7.3	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations.	1

The control measures and capability of Woodside and its third-party service providers are shown to support Operational Monitoring activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Operational Monitoring operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

5.2 Source Control via Vessel SOPEP

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the PAP vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by IMO Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer MDO and thus minimise the release.

5.2.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the PAP which are detailed in Section 6.8 of the EP. The vessel master's roles and responsibilities are described in EP Section 7.3.

Performance standards for each contracted PAP vessel are detailed in the vessel's specific SOPEP.

These standards maintain availability of sufficient resources and are adequately tested for successful implementation of the SOPEP in the event of a hydrocarbon spill.

5.3 Source control and well intervention

The worst-case scenario for a loss of well containment is considered to be loss of well control due to a 'tree off' scenario. This scenario would result in an uncontrolled flow of dry gas from the well as outlined in the EP. In the event of a loss of well containment, the primary response would be source control and well intervention.

The Woodside Source Control Emergency Response Planning Guideline has been developed as part of the Woodside assurance plans and in alignment with the guidelines in the *NOPSEMA Source Control Planning and Procedures Information Paper* (N-04750-IP1979 A787102). It includes the process for the CIMT to mobilise resources for Subsea First Response Toolkit (SFRT) support, and capping support. This plan has pre-identified vessel specifications and contracts required for SFRT debris clearance work.

Woodside is a signatory to a MoU between Australian offshore operators to provide mutual aid to facilitate and expedite mobilising a MODU and drilling a relief well if a loss of well containment incident were to occur. The MoU commits the signatories to share rigs, equipment, personnel and services to assist another operator in need. Moored and Dynamically Positioned (DP) MODUs are suitable for the Scarborough wells.

Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. Circumstances that limit the safe execution of this control measure include lower explosive limit (LEL) concentrations, volatile concentrations of hydrocarbons in the atmosphere, weather window, waves and/or sea states (>1.5m waves) and high ambient temperatures. As the dry gas plume for the PAP is not predicted to breach the water's surface, LEL concentrations and volatile concentrations of hydrocarbons in the atmosphere are unlikely to pose a safety issue for response personnel. Gas monitoring will, however, be undertaken in line with standard protocol.

5.3.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Prior to any source control activities, Woodside will implement protocols seeking to ensure that the site is safe including subsea ROV surveys and surface air monitoring.
- Hydrocarbons will flow from the well until one of the following interventions can be made:
 - closure of the tubing retrievable safety valve (TRSV) if present (only present after installation of the completion)
 - intervention with a capping stack
 - a relief well is drilled and first attempt at well kill within 65.3 days.
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support functions. These should be reviewed and updated regularly.
- The duration of the release may be up to 65.3 days.

In addition, a number of assumptions are required to estimate the response need for source control. These assumptions have been described in the table below.

Table 5-3: Response Planning Assumptions – Source Control

Response planning assumptions	
Capping stack feasibility	Woodside has developed a project specific capping stack deployment plan and also commissioned an independent, capping stack landing study for the Scarborough wells (WWCI, 2021). The study indicates that the safe deployment of a capping stack is feasible.
Safety considerations	<p>Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site, in accordance with the Woodside Management System (WMS). Personnel safety issues may include:</p> <ul style="list-style-type: none"> • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Feasibility considerations	<p>Woodside's primary source control options would be ROV intervention and capping stack deployment. Relief well drilling operations may be needed to provide an option to permanently abandon the well after the well flow is stopped.</p> <p>The following approaches outline Woodside's hierarchy approach for selecting suitable MODU's for relief well operations;</p> <ul style="list-style-type: none"> • primary – review internal drilling programs and MODU availability to source appropriate rig(s) operating within Australia with an approved Safety Case • alternate – source and contract MODUs through Australian Energy Producers (AEP) (formerly Australian Petroleum Production & Exploration Association (APPEA)) Memorandum of Understanding (MoU) that is operating within Australia with an approved Safety Case • contingency – source and contract a MODU outside Australia with an approved Australian Safety Case.

5.3.2 Environmental performance based on need

Table 5-4: Environmental Performance – Source Control

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		Performance Standard	Measurement Criteria (Section 5.10)	
8	Subsea First Response Toolkit (SFRT)	8.1	Oceanering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	1, 3B, 3C
		8.2	Intervention vessel with minimum requirement of a working class ROV and operator.	1, 3C
		8.3	Mobilised to site for deployment within 11 days.	1, 3B, 3C
		8.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
9	Well intervention	9.1	Frame agreements with ROV providers in place to be mobilised upon notification. ROV equipment deployed within 7 days.	1, 3B, 3C
		9.2	Source control vessel will have the following minimum specifications: <ul style="list-style-type: none"> active heave compensated crane, rated to at least 150 T in shallower water and 250 T in deeper water. at least 90 m in length deck has water/electricity supply deck capacity to hold at least 110 T of capping stack. 	1, 3B, 3C
		9.3	Identify source control vessel availability within 24 hours and begin contracting process. Vessel mobilised to site for deployment within 16 days for conventional capping.	1, 3B, 3C
		9.4	Well intervention attempt made using ROV and SFRT within 11 days.	1, 3B, 3C
		9.5	Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once safety and metocean conditions are suitable.	1, 3C
		9.6	Contract in place for access to equipment and staff to assist with the mobilisation, deployment, and operation of the capping stack and well intervention equipment.	1, 3B, 3C
		9.7	MODU mobilised to site for relief well drilling within 21 days.	1, 3C
		9.8	First well kill attempt completed within 65.3 days.	1, 3B, 3C
		9.9	Open communication line(s) to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
		9.10	Monthly monitoring of the availability of MODUs through existing market intelligence including current Safety Case history.	3C
10	Support vessels	10.1	Access to 24/7 vessel tracking software to monitor availability of suitable vessels to meet specifications for source control.	3C
		10.2	Frame agreements for installation support vessels (ISVs) require vessels maintain in-force Safety Case approvals covering ROV operations and provide support in the event of an emergency.	1, 3B, 3C
		10.3	MODU and vessel contracts include clause outlining requirement for support in the event of an emergency	1, 3C
11	Safety case	11.1	Woodside will prioritise MODU or vessel(s) for intervention work(s) that have an existing Safety Case.	1, 3C
		11.2	Woodside Planning, Logistics, and Safety Officers (on-roster/ call 24/7) to assist in expediting the Safety Case assessment process as far as practicable.	1, 3C

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Environmental Performance Outcome	To stop the flow of hydrocarbons into the marine environment		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)
	11.3	Woodside will maintain minimum safe operating standards that can be provided to MODU and vessel operators for Safety Case guidance.	1, 3C

The resulting source control capability has been assessed against the WCCS. The range of techniques provide a feasible and viable approach to well intervention and, if necessary, relief well drilling operations to stop the well flowing.

The health and safety, financial, capital and operations/maintenance costs of implementing the alternative, additional or improved control measures identified and not carried forward are considered disproportionate to the insignificant environmental benefit gained and/or not reasonably practicable for this PAP.

Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in **Section 6.3.8**.

5.4 Shoreline Protection and Deflection

The placement of containment, protection or deflection booms on and near a shoreline is a response technique to reduce the potential volume of hydrocarbons contacting or spreading along shorelines, which may reduce the scale of shoreline clean-up. Hydrocarbons contained by the booms would be collected where practicable. Shorelines would be protected where accessible via vessel or shore. Where hydrocarbon contact has already occurred, there may still be value in deploying protection equipment to limit further accumulations and preventing remobilisation of stranded hydrocarbons.

Shoreline protection and deflection equipment would be mobilised to selected locations, where the following conditions were met:

- Sea-states and hydrocarbon characteristics are safe to deploy protection and deflection measures,
- Oil trajectory has been identified as heading towards identified RPAs.

5.4.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact from floating oil above threshold is predicted to be 0.75 days at Dampier Archipelago (55 m³) and Keast Island (20 m³) for CS-01. No shore contact at response threshold is predicted for CS-02 or CS-03.
- Pre-emptive assessment and shoreline assessments (OM04 and OM05) will be mobilised to RPAs contacted at 100 g/m², which occurs from day 0.75 at Dampier Archipelago and Keast Island.
- The duration of the spill will be instantaneous with shoreline response operations extending to 7 to 8 days based on the predicted time to complete shoreline clean-up operations.
- Arrangements for support organisations who provide specialist services (trained personnel, protection and deflection equipment) and/or resources and should be tested regularly.
- TRPs for RPAs along with other relevant plans, procedures and support documents need to be in place for Operational and Support functions. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for shoreline protection and deflection. These assumptions have been described in the table below.

Table 5-5: Response Planning Assumptions – Shoreline Protection and Deflection

Response Planning Assumptions	
Safety considerations	<p>Shoreline protection and deflection operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include:</p> <ul style="list-style-type: none"> • hydrocarbon gas and/or liquid exposure • safe for deployment and conditions within range of vessels • high ambient temperatures.
Shoreline Protection and Deflection	<p>One Shoreline Protection and Deflection operation may include:</p> <ul style="list-style-type: none"> • quantity of shoreline sealing boom (as outlined in TRP) • quantity of fence or curtain boom (as outlined in TRP) • 1-2 trained supervisors • 8-10 personnel/ labour hire <p>Specific details of each operation would be tailored to the TRP implemented (where available).</p>

5.4.2 Environmental performance based on need

Table 5-6: Environmental Performance – Shoreline protection and deflection

Environmental Performance Outcome		To stop hydrocarbons encountering particularly sensitive areas		
Control measure		Performance Standard		Measurement Criteria (Section 5.10)
12	Response teams	12.1	In liaison with WA DoT (for Level 2/3 incidents), relevant Tactical Response Plans (TRPs) will be identified in the First Strike plan for activation within 12 hours of the release.	1, 3A, 3C, 4
		12.2	In liaison with WA DoT (for Level 2/3 incidents), mobilise teams to RPAs within 24 hours. Teams to contaminated RPAs comprised of: <ul style="list-style-type: none"> 1-2 trained specialists per operation 8-10 personnel/labour hire personnel sourced through resource pool. 	1, 2, 3B, 3C, 4
		12.3	In liaison with WA DoT (for Level 2/3 incidents), 1 operation mobilised within 24 hours to each identified RPA.	1, 3A, 3B, 4
		12.4	12 trained personnel available within 24 hours sourced through resource pool.	1, 2, 3A, 3B, 3C, 4
		12.5	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
		12.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline operations: <ul style="list-style-type: none"> All personnel in a response will receive an operational/safety briefing before commencing operations. Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel. 	1, 3B, 4
13	Response equipment	13.1	Equipment mobilised from closest stockpile within 24 hours.	1, 3A, 3C, 4
		13.2	Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours.	1, 3C, 3D, 4
		13.3	Supplementary equipment mobilised from OSRL within 48 hours.	
		13.4	Woodside maintains integrated fleet of vessels. Additional vessels can be sourced through existing contracts/frame agreements.	1, 3A, 3C, 4
14	Management of environmental impact of the response risks	14.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified.	1
		14.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines.	

The resulting shoreline protection and deflection capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline protection and deflection at identified RPAs.

Under optimal conditions, the capability available meets the need identified by day 3. It indicates that, the shoreline protection and deflection capability has the following expected performance:

- The shortest predicted timeframe for shoreline contact from floating oil is 0.75 days at Dampier Archipelago (55 m³) and Keast Island (20 m³) for CS-01. No shore contact at response threshold is predicted for CS-02 or CS-03.

- Existing capability allows for mobilisation and deployment of 1-2 protection and deflection operations within 24 hours (if required). Whilst modelling predicts contact at a further 6 RPAs above response threshold within 24-48 hours (Table 3-1), it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Port Hedland, and the management of response generated waste. From previous assessment of accommodation in this region, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.4.

5.5 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- phase one (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- phase two (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches
- phase three (final treatment or polishing) involving removal of the remaining residues of oil.

As phase one typically involves recovery of floating and pooled oil, and phase three removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The *Shoreline Clean-up Operational Plan* details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The *Shoreline Clean-up Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response thresholds.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance *Response assessment and termination of cleaning for oil contaminated foreshores* (AMSA 2015).

5.5.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest predicted timeframe for shoreline contact from floating oil above feasible response threshold is 0.75 days at Dampier Archipelago (55 m³) and Keast Island (20 m³) for CS-01 with shoreline accumulation peaking on day 2. No shore contact at response threshold is predicted for CS-02 or CS-03.
- The nature of the spill is instantaneous, with shoreline response operations extending to 7-8 days based on the predicted time to complete shoreline clean-up operations.
- Pre-emptive assessment and shoreline assessments (OM04 and OM05) will be mobilised to RPAs with shoreline contact.
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, labour hire, shoreline clean-up, and site management equipment) and/or resources and should be tested regularly.
- TRPs for RPAs along with other relevant plans, procedures and support documents should be in developed and in place for Operational and Support functions. These should be reviewed and updated regularly.

In addition, assumptions are required to estimate the response need for shoreline clean-up. These assumptions have been described in the table below.

Table 5-7: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	<p>Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include:</p> <ul style="list-style-type: none"> • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Manual shoreline clean-up operation (Phase 2)	<p>One, manual shoreline clean-up operation (Phase 2) may include:</p> <ul style="list-style-type: none"> • 1–2 x trained supervisor • 8–10 x personnel/ labour hire • supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	<p>Surface Threshold</p> <ul style="list-style-type: none"> • Lower – 100 g/m²–100% coverage of 'stain' – cannot be scratched off easily on coarse sediments or bedrock. Expected trigger to undertake detailed shoreline survey. • Optimum – 250 g/m²– 25% coverage of 'coat' – can be scratched off with a fingernail on coarse sediments. Expected trigger to commence clean-up operations.
Efficiency (m ³ oil recovered per person per day)	<p>Manual shoreline clean-up (Phase 2) – approximately 0.25–1 m³ oil recovered per person per 10 hour day is based on moderate to high coverage of oil (100 g/m²–1000 g/m²) with manual removal using shovels/rakes, etc. from studies of previous response operations and exercises.</p>

Table 5-8: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	<p>Remote and inaccessible shorelines for personnel, vehicles and machinery.</p> <p>Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover.</p> <p>Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques.</p> <p>High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.</p>	<p>Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.</p>	<p>May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline.</p> <p>May also be used for buried or reworked hydrocarbons where other techniques may not recover these.</p>
Manual recovery	<p>Use of manpower to collect hydrocarbons from the shoreline.</p> <p>Use of this form of clean-up is based on type of shoreline.</p>	<p>Remote and inaccessible shorelines for vehicles and machinery.</p> <p>Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually.</p> <p>Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually.</p> <p>Areas where nesting and breeding fauna cannot or should not be disturbed.</p>	<p>Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage than allowing them to recover naturally.</p> <p>For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.</p>	<p>May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).</p>

All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (OSCA)	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.5.2 Environmental performance based on need

Table 5-9: Environmental Performance – Shoreline Clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)	
15	Shoreline responders	15.1	In liaison with WA DoT (for Level 2/3 incidents), deployment of shoreline clean-up teams to contaminated RPAs comprised of: <ul style="list-style-type: none"> • 1-2 trained specialists per operation • 8-10 personnel/labour hire • personnel sourced through resource pool within 24 hours of request from the IMT. 	1, 2, 3A, 3B, 3C, 4
		15.2	Relevant Tactical Response Plans (TRPs) will be identified in the first strike plan for activation within 24 hours of a release.	1, 3A, 3C, 4
		15.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs.	1, 3A, 3B
		15.4	All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates.	
		15.5	In liaison with WA DoT (for Level 2/3 incidents), mobilise and deploy 1-2 shoreline clean-up operations within 24 hours.	1, 2, 3A, 3C, 4
		15.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: <ul style="list-style-type: none"> • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel. 	1, 3B, 4
		15.7	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
16	Shoreline clean up equipment	16.1	Contract in place with 3 rd party providers to access equipment.	1, 3A, 3C, 4
		16.2	Equipment mobilised from closest stockpile within 24 hours.	
		16.3	Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours.	1, 3C, 3D, 4
		16.4	Supplementary equipment mobilised from OSRL within 48 hours.	
17	Management of environmental impact of the response risks	17.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified.	1
		17.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines.	
		17.3	Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves.	
		17.4	Removal of vegetation will be limited to moderately or heavily oiled vegetation.	
		17.5	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations.	
		17.6	Oversight by trained personnel who are aware of the risks.	
		17.7	Trained unit leaders will brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline.	

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's existing capability will cover all required shoreline clean-up operations for the PAP by day 4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Existing capability allows for mobilisation and deployment of 1-2 shoreline clean-up operations within 24 hours (if required). Whilst a further 6 RPAs are predicted to be contacted above response threshold (Table 3-1) within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus unlikely that these could all be contacted from a single release.

Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stages of the response. In addition, given the natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is managing risks and impacts to ALARP.

The capability available has limitations identified for this activity. The shoreline clean-up capability has the following performance (if required during a response):

- Woodside has the capacity to mobilise and deploy up to 15–20 shoreline clean-up teams within 7 days at up to 6-10 RPAs using existing labour hire contracts with Woodside, AMOSC, Core Group, AMSA and OSRL team leads.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would not meet the available capability until day 4, with the response completed by day 7-8.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between cost, time and effectiveness.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Onslow and Dampier and management of response generated waste. From previous assessment of accommodation in Onslow and Dampier, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.5.

5.6 Oiled wildlife response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as the Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the *Oiled Wildlife Operational Plan*, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA, 2022a) and the WA OWR Manual (DBCA, 2022b). The *Oiled Wildlife Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA, 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DoT *State Hazard Plan – Maritime Environmental Emergencies* (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DoT. The WA OWR Manual (DBCA, 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA, 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for wildlife, for level 2/3 spills, and will also lead the oiled wildlife response under the control of the DoT. DBCA is the State Government agency responsible for administering the *Biodiversity Conservation Act 2016 (WA) (BC Act)* which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.6.1 Response need based on predicted consequence parameters

Wildlife response protection areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal thresholds for floating and shoreline oil for the external coating of wildlife to be 10 g/m² for floating, and 100 g/m² for shoreline accumulation. It should however be noted that toxicity thresholds for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m² for floating, and 100 g/m² for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of the following:

- presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- greatest probability of shoreline accumulation
- shortest timeframe to contact.

At the time of a spill, identification and allocation of wildlife response protection areas should also take into consideration any key biological activities.

For WA, although somewhat out-dated, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife], 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-10: Key at-risk species potentially in Priority Protection Areas and open ocean

Species	Dampier Archipelago	Gidley Island	Keast Island	Legendre Island	Cape Bruguieres	Angel Island	Rosemary Island	Cohen Island	Montebello MP	Gascoyne MP	Hammersley Shoal	Madeleine Shoal
Marine turtles	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓		
Whale sharks	✓	✓	✓			✓	✓		✓	✓		
Seabirds and/or migratory shorebirds	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓		
Cetaceans – migratory whales	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓		
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Dugongs	✓	✓	✓	✓		✓	✓	✓				
Sharks and rays	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

The following statements identify the key parameters upon which a wildlife response need can be based:

- For CS-01, floating hydrocarbon at $>10 \text{ g/m}^2$ is predicted at:
 - Dampier Archipelago within 6 hours
 - Hammersley Shoal within 17 hours
 - Madeleine Shoal within 18 hours
 - Legendre Island within 19 hours
 - Rosemary Island within 28 hours
 - Cape Bruguieres within 29 hours
 - Keast Island within 38 hours
- For CS-02, floating hydrocarbon at $>10 \text{ g/m}^2$ is predicted at:
 - Montebello MP within 1 hour
 - Gascoyne MP within 58 hours
- For CS-03, floating hydrocarbon at $>10 \text{ g/m}^2$ is not predicted for the duration of the spill.
- The shortest timeframe for shoreline accumulation at response thresholds ($>100 \text{ g/m}^2$) is predicted to be 0.75 days at Dampier Archipelago (55 m^3) and Keast Island (20 m^3) for CS-01. There is no shoreline impact predicted at response thresholds for CS-02 and CS-03.
- At sea, there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be between low and medium, as defined in the WAOWRP (DBCA, 2022a) (Table 5-11).

Table 5-11: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside *Oiled Wildlife Operational Plan*.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison, to the shoreline, there are likely to be less wildlife impacted by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and integration with scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response requiring preventative actions and/or wildlife rescue is likely, and formal hand over to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, capture,

intake and treatment, require a higher degree of planning, approval (licenses) and skills. These activities will be planned for and carried out under the IAP as outlined in the *Oiled Wildlife Operational Plan* and in accordance with the WAOWRP (DBCA, 2022a) and WA OWR Manual (DBAC, 20022b).

5.6.2 Environmental performance based on need

Table 5-12: Environmental Performance – Oiled Wildlife Response

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the <i>Biodiversity Conservation Act 2016 (WA)</i> .		
Control measure		Performance Standard	Measurement Criteria (Section 5.10)	
18	Wildlife response arrangements	18.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations.	1, 3A, 4
		18.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by relevant Operational Monitoring techniques (OM01-05) and in liaison with DBCA.	1
19	Wildlife response equipment	19.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 3D, 4
		19.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 3D, 4
20	Wildlife responders	20.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an Oiled Wildlife Response Management course.	1, 2, 3B
		20.2	Maintain contract with AMOSC for immediate access to trained oiled wildlife response specialists.	1, 3B, 3C
		20.3	Maintain contract with OSRL to access additional trained OWR specialists.	1, 3B, 3C
		20.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
21	Management of environmental impacts of response risks	21.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance to:

- undertake OWR first strike response including
 - mobilisation of operational monitoring (OM01-05) to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons
- confirm availability and mobilisation of trained OWR personnel to supervise OWR activities
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

5.7 Waste Management

Waste management is considered a support technique to wildlife response, containment and recovery and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- liquids (hydrocarbons and contaminated liquids) collected during shoreline clean-up and oiled wildlife operations
- solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during shoreline clean-up and oiled wildlife operations.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004 (WA) and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- banded if storing liquid wastes.

Processes will be in place for transfers of bulk liquid wastes and include

- inspection of transfer hose undertaken prior to transfer
- watchman equipped with radio visually monitors loading hose during transfer
- tank gauges monitored throughout operation to prevent overflow.

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.7.1 Response need based on predicted consequence parameters

Table 5-13: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m ³ oil recovered (multiplier)	Shoreline clean-up (manual) – approximately 5-10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – approximately 1 m ³ of oily solid and liquid waste generated for each wildlife unit cleaned.

5.7.2 Environmental performance based on need

Table 5-14: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure		Performance Standard		Measurement Criteria (Section 5.10)
22	Waste Management	22.1	Contract with waste management services for transport, removal, treatment and disposal of waste.	1, 3A, 3B, 3C, 4
		22.2	Access to at least 124 m ³ of solid and liquid waste storage available within 24 hours upon activation of 3 rd party contract.	
		22.3	Access to up to 2400 m ³ by within 7 days.	
		22.4	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		22.5	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		22.6	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	1, 3A, 3B
		22.7	Waste management to be conducted in accordance with Australian laws and regulations.	1, 3A, 3B, 3C, 4
		22.8	Waste management services available and employed during response.	
23	Management of environmental impacts of response risks	23.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

The largest shoreline volumes ashore are predicted during day 1 and 2 at a maximum volume of 90 m³ and 86 m³ respectively, with between 413 m³ and 2099 m³ of waste expected across all shoreline clean-up operations up to and including day 7. The capability available meets the need identified by day 4. It should be noted that the shoreline volumes predicted by modelling are based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stages of the response. In addition, given the natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is managing risks and impacts to ALARP.

It indicates that the waste management capability has the following expected performance:

- Shoreline and nearshore operations may generate up to 2099 m³ over seven days of operations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.6.
- Woodside's waste contractor has access to approximately 120,000 m³ to treat overall waste volumes. The waste management requirements are within Woodside's and its service providers' existing capacity.

5.8 Scientific monitoring

A scientific monitoring program (SMP) would be activated following a Level 2 or 3 unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors. This would consider receptors at risk (ecological and socio-economic) for the entire predicted EMBA and, in particular, any identified Pre-emptive Baseline Areas (PBAs) for the credible spill scenario(s) or other identified unplanned hydrocarbon releases associated with the Petroleum Activities Program (PAP) (refer to Table 2-1: PAP credible spill scenarios).

The outputs of the stochastic hydrocarbon spill modelling are used to assess the environmental risk, in terms of delineating which areas of the marine environment are predicted to be exposed to hydrocarbons exceeding environmental threshold concentrations (refer to Table 2-2, Section 2.3.1.1). The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA. The PAP worst-case credible spill scenarios, CS-01, CS-02 and CS-03, define the EMBA and are the basis of the SMP approach presented in this section.

It should be noted that the resulting SMP receptor locations differ from the RPAs presented and discussed in Section 3 of this document due to the applicability of different hydrocarbon threshold levels. The SMP would be informed by the data collected via the Operational Monitoring Program (OMP) studies, however, it differs from the OMP in being a long-term program independent of, and not directing, the operational oil spill response or monitoring of impacts from response activities (refer to Section 5.1) for operational monitoring overview).

Key objectives of the Woodside oil spill scientific monitoring program are:

- assess the extent, severity and persistence of the environmental impacts from the spill event
- monitor subsequent recovery of impacted key species, habitats and ecosystems.

The SMP comprises ten targeted environmental monitoring programs to assess the condition of a range of physico-chemical (water and sediment) and biological (species and habitats) receptors including EPBC Act listed species, environmental values associated with protected areas and socio-economic values, such as fisheries. The ten SMPs are as follows:

- SM01 – assessment of the presence, quantity and character of hydrocarbons in marine waters (linked to OM01 to OM03)
- SM02 – assessment of the presence, quantity and character of hydrocarbons in marine sediments (linked to OM01 and OM05)
- SM03 – assessment of impacts and recovery of subtidal and intertidal benthos
- SM04 – assessment of impacts and recovery of mangroves/saltmarsh habitat
- SM05 – assessment of impacts and recovery of seabird and shorebird populations
- SM06 – assessment of impacts and recovery of nesting marine turtle populations
- SM07 – assessment of impacts to pinniped colonies including haul-out site populations
- SM08 – desktop assessment of impacts to other non-avian marine megafauna
- SM09 – assessment of impacts and recovery of marine fish (linked to SM03)
- SM10 – assessment of physiological impacts to important fish and shellfish species (fish health and seafood quality/safety) and recovery.

These SMPs have been designed to cover all key tropical and temperate habitats and species within Australian waters and broader, if required. A planning area for scientific monitoring is also identified to acknowledge potential hydrocarbon contact below the environmental threshold concentrations and beyond the EMBA. This planning area has been set with reference to the entrained low exposure value of 10 ppb detailed in NOPSEMA Bulletin #1 Oil Spill Modelling (2019), as shown in Figure 5-1.

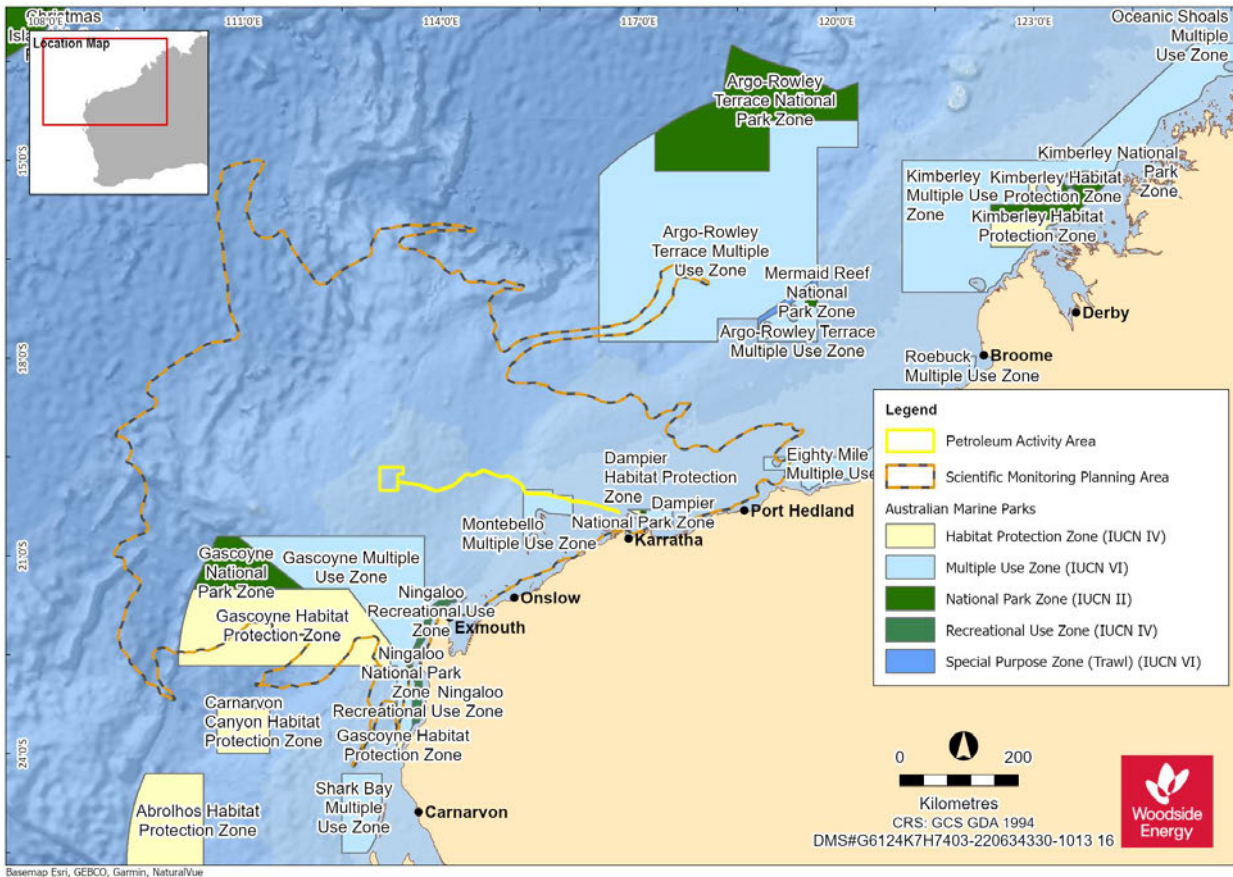

Figure 5-1: The planning area for scientific monitoring based on the area potentially contacted by the low (below ecological impact) entrained hydrocarbon threshold of 10 ppb in the event of the worst-case credible spill scenarios (CS-01, CS-02, and CS-03).

Please note that Figure 5-1 represents the overall combined extent of the oil spill model outputs based on a total of 200 replicate simulations per scenario over an annual period and therefore represents the largest spatial boundaries of all oil spill combinations, not the spatial extent of a single spill.

5.8.1 Scientific Monitoring Deployment Considerations

Scientific Monitoring Deployment Considerations	
Existing baseline studies for sensitive receptor locations predicted to be affected by a spill	<p>PBAs of the following two categories:</p> <ul style="list-style-type: none"> • PBAs within the predicted <10-day hydrocarbon contact time prediction: The approach is to conduct a desktop review of available and appropriate baseline data for key receptors for locations (if any) that are potentially impacted within 10 days of a spill and look to conduct baseline data collection to address data gaps and demonstrate spill response preparedness. Planning for baseline data acquisition is typically commenced pre-PAP and execution of studies undertaken with consideration of weather, receptor type, seasonality and temporal assessment requirements. • PBAs >10 days to predicted hydrocarbon contact in the event of an unplanned hydrocarbon release from a vessel collision outside of Mermaid Sound (CS-01), a vessel collision within Montebello MP (CS-02), and a loss of structural integrity at the FPU location (CS-03). SMP activation (as per the Scarborough Offshore Facility and Trunkline Operations First Strike Plan) directs the SMP team to follow the steps outlined in the SMP Operational Plan. The steps include checking the availability and type of existing baseline data, with particular reference to any PBAs identified as >10 days to hydrocarbon contact. Such information is used to identify response phase PBAs and plan for the activation of SMPs for pre-emptive (i.e. pre-hydrocarbon contact) baseline assessment.
Pre-emptive Baseline in the event of a spill	Activation of SMPs in order to collect baseline data at sensitive receptor locations with predicted hydrocarbon contact time >10 days (as documented in ANNEX C).
Survey platform suitability and availability	In the event of the SMP activation, suitable survey platforms are available and can support the range of equipment and data collection methodologies to be implemented in nearshore and offshore marine environments.
Trained personnel to implement SMPs suitable and available	Access to trained personnel and the sampling equipment contracted for scientific monitoring via a dedicated scientific monitoring program standby contract.
Metocean conditions	<p>The following metocean conditions have been identified to implement SMPs:</p> <ul style="list-style-type: none"> • Waves <1 m for nearshore systems • Waves <1.5 m for offshore systems • Winds <20 knots • Daylight operations only <p>SMP implementation will be planned and managed according to HSE risk reviews and the metocean conditions on a day to day basis by SMP operations.</p>

5.8.2 Response planning assumptions

Response Planning Assumptions	
Pre-emptive Baseline Areas (PBAs)	<p>PBAs identified through the application of defined hydrocarbon impact thresholds during the Quantitative Spill Risk Assessment process and a consideration of the minimum time to contact at receptor locations fall into two categories:</p> <ul style="list-style-type: none"> • PBAs for which baseline data exist or are planned for and data collection may commence pre-PAP (\leq 10 days minimum time to contact). • PBAs (> 10 days minimum time to contact) for which baseline data may be collected in the event of an unplanned hydrocarbon release. Response phase PBAs are prioritised for SMP activities due to vulnerability (i.e. time to contact and environmental sensitivity) to potential impacts from hydrocarbon contact and an identified need to acquire baseline data. <p>Time to hydrocarbon contact of >10 days has been identified as a minimum timeframe within which it is feasible to plan and mobilise applicable SMPs and commence collection of</p>

	<p>baseline (pre-hydrocarbon contact) data, in the event of an unplanned hydrocarbon release from the Scarborough Offshore Facility and Trunkline Operations.</p> <p>Pre-emptive Baseline Areas for the Scarborough Offshore Facility and Trunkline Operations facility are identified and listed in ANNEX D, Table D-1. The PBAs together with the situational awareness (from the operational monitoring) are the basis for the response phase SMP planning and implementation.</p>
Pre-spill	<p>A review of existing baseline data for receptor locations with potential to be contacted by floating or entrained hydrocarbons at environmental thresholds within ≤ 10 days has identified the following locations based on the combined EMBA for the credible spill scenarios (CS-01, CS-02 and CS-03):</p> <ul style="list-style-type: none"> • Rankin Bank ¹¹ • Dampier Archipelago • Barrow, Lowendal and Montebello Island groups • Barrow Island MMA and Montebello State Marine Park • Pilbara Islands – Middle and Southern Island Groups • Ningaloo Coast and the Muiron Islands (State Marine Park, MMA and WHA) <p>Australian Marine Parks (AMPs) potentially affected include:</p> <ul style="list-style-type: none"> • Dampier AMP • Montebello AMP • Gascoyne AMP • Ningaloo AMP. <p>Note: The AMPs are located in offshore, open waters where hydrocarbon exposure is possible on surface waters and in the upper water column (entrained hydrocarbons) only.</p>
In the event of a spill	<p>Receptor locations with >10 days to hydrocarbon contact, as well as the wider area, will be investigated and identified by the SMP team (in the Environment Unit of the CIMT) as the spill event unfolds and as the situational awareness provided by the OMPs permits delineation of the spill affected area (for example, updates to the spill trajectory tracking). The full list is presented in Annex D, based on the PAP credible spill scenario(s) (Table 2-1).</p> <p>No additional receptor locations were predicted to be contacted between >10 days and 20 days.</p> <p>The unfolding spill affected area predictions and confirmation of appropriate baseline data will determine the selection of receptor locations and SMPs to be activated in order to gather pre-emptive (pre-hydrocarbon contact) data. Refer to ANNEX C for further details on scientific monitoring plan implementation and delivery). The timing of SMP activation and mobilisation of the individual SMPs to undertake data collection will be decided and documented by the Woodside SMP team following the process outlined in the SMP Operational Plan.</p> <p>In the event key receptors within geographic locations that are potentially impacted after 10 days following a spill event or commencement of the spill and where adequate and appropriate baseline data are not available, there will be a response phase effort to collect baseline data for the following purposes:</p> <ul style="list-style-type: none"> • Priority will be given to the collection of baseline data for receptors predicted to be within the spill affected area prior to hydrocarbon contact. The process is initiated with the investigation of available baseline and time to hydrocarbon contact (>10 days which is sufficient time to mobilise SMP teams and acquire data before hydrocarbon contact). • Collect baseline data for receptors predicted to be outside the spill affected area so reference datasets for comparative analysis with impacted receptor types can be assessed post-spill.

¹¹ Floating oil will contact submerged features in open ocean locations; therefore, only entrained hydrocarbon contact is predicted at ≤ 10 days. Predicted upper water column entrained hydrocarbons may extend to approximately 20 m depth and contact the submerged shoal benthic communities.

Baseline data	<p>A summary of the spill affected area and receptor locations as defined by the EMBA for the PAP credible spill scenarios is presented Section 2.3.</p> <p>The key receptors at risk by location and corresponding SMPs based on the EMBA for the PAP are presented in ANNEX D, as per credible spill event scenario(s). This matrix maps the receptors at risk with their location and the applicable SMPs that may be triggered in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors. Receptor locations and applicable SMPs are colour coded to highlight possible time to contact based on receptor types and locations.</p> <p>The status of baseline studies relevant to the PAP are tracked by Woodside through the maintenance of a Corporate Environment Environmental Baseline Database (managed by the Woodside Biodiversity and Science Team), as well as accessing external databases such as the Department of Water and Environmental Regulation (WA) Index of Marine Surveys for Assessment (IMSA)[1] (refer to ANNEX C: Oil Spill Scientific Monitoring Program).</p>
---------------	---

5.8.3 Summary – scientific monitoring

The resulting scientific monitoring capability has been assessed against the PAP credible spill scenario(s). The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. All known reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The SMP's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

5.8.4 Response planning: need, capability and gap – scientific monitoring

The receptor locations identified in Annex D provide the basis of the SMPs likely to be selected and activated. Once the Woodside SMP Delivery team and the SMP standby contractor have been stood up and the exact nature and scale of the spill becomes known, the SMPs to be activated will be confirmed as per the process set out in the SMP Operational.

Scope of SMP Operations in the event of a hydrocarbon spill

Receptor locations of interest for the SMP during the response phase are:

- Rankin Bank
- Dampier Archipelago
- Barrow, Lowendal and Montebello Island groups
- Barrow Island MMA and Montebello State Marine Park
- Pilbara Islands – Middle and Southern Island Groups
- Ningaloo coast and the Muiron Islands (State Marine Park, MMA and WHA).

Documented baseline studies are available for certain receptor locations including the Dampier Archipelago, Montebello Islands, Barrow Island, Lowendal Islands, Rankin Bank, Pilbara Islands – Middle and Southern Island Groups, and Ningaloo coast and the Muiron Islands (Annex D, Table D-2). The SMP approach in the response phase would still deploy SMP teams to maximise the opportunity to collect pre-emptive baseline data at sensitive receptor locations, i.e., the sections of the WA Coast not immediately contacted by hydrocarbons. As the exact locations where hydrocarbon contact occurs may be unpredictable, SM01 would be mobilised as a priority to detect hydrocarbons and track the leading edge of the spill to verify where hydrocarbon contact occurs which will assist in prioritising deployment of SMP resources to obtain pre-emptive baseline data.

The ALARP assessment for the SMP (Section 6.8) considers alternate, additional, and/or improved control measures on each selected response technique.

5.8.5 Environmental performance based on need

Table 5-15: Scientific monitoring

Environmental Performance Outcome		Woodside can demonstrate preparedness to stand up the SMP to quantitatively assess and report on the extent, severity, persistence and recovery of sensitive receptors impacted from the spill event	
Control measure		Performance Standard	Measurement Criteria
24	<ul style="list-style-type: none"> Woodside has an established and dedicated SMP team comprising the Biodiversity and Science Team and additional Environment Advisers within the HSEQ Business Group. 	24.1 SMP team comprises a pool of competent Environment Advisers (stand up personnel) who receive training regarding the SMP, SMP activation and implementation of the SMP on an annual basis	<ul style="list-style-type: none"> Training materials Training attendance registers Process that maps minimum qualification and experience with key SMP role competency and a tracker to manage availability of competent people for the SMP team including redundancy and rostering
25	<ul style="list-style-type: none"> Woodside has a SMP standby contractor to provide scientific personnel to resource a base capability of one team per SMP (SM01-SM10, see Table C-2, ANNEX C) as detailed in Woodside's SMP Implementation Plan, to implement the oil spill scientific monitoring programs. The availability of relevant personnel is reported to Woodside monthly via a simple report on the base-loading availability of people for each of the SMPs comprising field work for data collection (SMP resourcing report register). In the event of a spill and the SMP is activated, the base-loading availability of scientific personnel will be provided by SMP standby contractor for the individual SMPs and where gaps in resources are identified, SMP standby contractor/Woodside will seek additional personnel (if needed) from other sources including Woodside's Environmental Services Panel. 	25.1 Woodside maintains the capability to mobilise personnel required to conduct scientific monitoring programs SM01 – SM10 (except desktop based SM08): <ul style="list-style-type: none"> Personnel are sourced through the existing standby contract with SMP standby, as detailed within the SMP Implementation Plan. SMP Implementation Plan describes the process for standing up and implementing the scientific monitoring programs. SMP team stand up personnel receive training regarding the stand up, activation and implementation of the SMP on an annual basis 	<ul style="list-style-type: none"> Hydrocarbon Spill Preparedness (HSP) Internal Control Environment (ICE) tracks the quarterly review of the Oil Spill Contracts Master. SMP resource report of personnel availability provided by SMP contractor on monthly basis (SMP resourcing report register). Training materials Training attendance registers Competency criteria for SMP roles SMP annual arrangement testing and reporting
26	<ul style="list-style-type: none"> Roles and responsibilities for SMP implementation are captured in Table C-1 (Annex C) and the SMP team (as per the organisational structure of the CIMT) is outlined in the Oil Spill Scientific Monitoring Program Operational Plan. Woodside has a defined Crisis and Incident Management structure including Source Control, Operations, Planning and Logistics Sections to manage a loss of well control response. SMP Team structure, interface with SMP standby contractor (standby SMP contractor) and linkage to the CIMT is presented in Figure C-1, ANNEX C Woodside has a defined Command, Control and Coordination structure for Incident and Emergency Management that is based on the ICS framework. Woodside utilises online incident management software to coordinate and track key incident management Sections. This includes specialist modelling programs, geographic information systems (GIS), as well as communication flows within the Command, Control and Coordination structure. SMP activated via the Oil Pollution First Strike Plan. Step by step process for activation of individual SMPs provided in the SMP Operational Plan. All decisions made regarding SMP logged in the online incident management software (SMP team members trained in its use.). SMP component input to the CIMT Incident Action Plan (IAP) as per the identified CIMT timed sessions and the SMP IAP logged on the online incident management software. Woodside Biodiversity and Science Team provide awareness training on the activation and stand-up of the SMP for the Environment Advisers in Woodside who are listed on the SMP team on an annual basis. Woodside Biodiversity and Science Team provide awareness training on the activation and stand-up of the SMP for the SMP standby contractor. Woodside Biodiversity and Science Team co-ordinates an annual SMP arrangement testing exercise with the SMP standby contractor. 	26.1 <ul style="list-style-type: none"> Woodside have established an SMP organisational structure and processes to stand up and deliver the SMP. 	<ul style="list-style-type: none"> Oil Spill Scientific Monitoring Program Operational Plan SMP Implementation Plan SMP annual arrangement testing and reporting
27	<ul style="list-style-type: none"> Chartered and mutual aid vessels. Suitable vessels would be secured from the Woodside support vessels, regional fleet of vessels operated by Woodside and other operators and the regional charter market. Vessel suitability will be guided by the need to be equipped to operate grab samplers, drop camera systems and water sampling equipment (the individual vessel requirements are outlined in the relevant SMP methodologies (refer to Table C-2, ANNEX C). Nearshore mainland waters may use the same approach as for open water. Smaller vessels may be used where available and appropriate. Suitable vehicles and machinery for onshore access to nearshore SMP locations would be provided by Woodside's transport services contract and sourced from the wider market. Dedicated survey equipment requirements for scientific monitoring range from remote towed video and drop camera systems to capture seabed images of benthic communities to intertidal/onshore surveying tools such as quadrats, theodolites and spades/trowels, cameras and binoculars (specific survey equipment requirements are outlined in the relevant SMP methodologies (refer to Table C-2, ANNEX C)). Equipment would be sourced through the existing SMP standby contract with SMP standby contractor for SMP resources and if additional surge capacity is required this would be available through the other Woodside Environmental Services Panel Contractors and specialist contractors. SMP standby contractor can also address equipment redundancy through either individual or multiple suppliers. MoUs are in place with one marine sampling equipment companies and one analytical laboratory (SMP resourcing report register). Availability of SMP equipment for offshore/onshore scientific monitoring team mobilisation is within one week to ten days of the commencement of a hydrocarbon release. This meets the SMP mobilisation lead time that will support meeting the response objective of 'acquire, where practicable, the environmental baseline data prior to hydrocarbon contact required to support the post-response SMP. 	27.1 Woodside maintains standby SMP capability to mobilise equipment required to conduct scientific monitoring programs SM01 – SM10 (except desktop based SM08): <ul style="list-style-type: none"> Equipment is sourced through the existing standby contract with SMP standby contractor, as detailed within the SMP Implementation Plan. 	<ul style="list-style-type: none"> HSP Internal Control Environment tracks the quarterly review of the Oil Spill Contracts Master. 5.9 Incident Management System

The Incident Management System (IMS) is both a control measure and a measurement criterion. As a control measure, the function of the IMS is to prompt, facilitate and record the completion of three key response planning processes detailed below. As a measurement criterion, the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used for the PAP.

As the IMS does not directly remove hydrocarbons spilt into the marine environment, there is no direct relationship to the response planning need.

5.9.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based Incident Commander (IC) may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident, the CIMT IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.9.2 Operational NEBA process

In the event of a response, Woodside will confirm that the response techniques adopted at the time of Environment Plan/Oil Pollution Emergency Plan (EP/OPEP) acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response. An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities, the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Oil Pollution Emergency Arrangements (Australia). In effect, the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.9.3 Consultation process

Woodside will consult relevant persons/organisations during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

5.9.4 Environmental performance based on need

Table 5-16: Environmental Performance – Incident Management System

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)	
31 Operational SIMA	31.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A	
	31.2	Record the evidence and justification for any deviation from the planned response activities.		
	31.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.		
32 Stakeholder engagement	32.1	Prompt and record all notifications (including government notifications) for relevant persons/ organisations in the region		
	32.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.		
	32.3	Undertake communications in accordance with: <ul style="list-style-type: none"> • External Communication and Continuous Disclosure Procedure • External Stakeholder Engagement Procedure 		
33 Personnel required to support any response	33.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.	1, 3B	
	33.2	A duty roster of trained and competent people will be maintained to confirm minimum manning requirements are met all year round.	3C	
	33.3	Immediately activate the CIMT with personnel filling one or more of the following roles: <ul style="list-style-type: none"> • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief. 	1, 2, 3B, 3C, 4	
	33.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.		
	33.5	Security and Emergency Management advisors will be integrated into CIMT to monitor performance of all functional roles.		
	33.6	Continually communicate the status of the spill and support Woodside to determine the most appropriate response by delivering on the responsibilities of their role.		
	33.7	Follow the OPEA, Operational Plans, FSPs, support plans and the IAPs developed.	1, 2, 3A, 4	
	33.8	Contribute to Woodside's response in accordance with the aims and objectives set by the Incident Commander.	1, 2, 3B, 3C, 4	

This document is protected by copyright. 5.10 Measurement criteria for all response techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The performance tables in the previous sections identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Emergency and Crisis Management Procedure. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Emergency and Crisis Management Procedure defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down.

The Incident Action Plan (IAP) process formally documents and communicates the:

- incident objectives
- status of assets
- operational period objectives
- response techniques (defined during response planning)
- the effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, and development and execution of the IAP.

2. The Security and Emergency Management Competency Dashboard

The Security and Emergency Management Competency Dashboard (the Dashboard) records the number of trained and competent responders that are available across Woodside, and some external providers, to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such, the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-2 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

Woodside's pool of trained responders is composed of, but not limited to, personnel from the following organisations:

- Woodside
- Australian Marine Oil Spill Centre (AMOSC) Core Group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- AMSA
- Woodside contracted workforce.

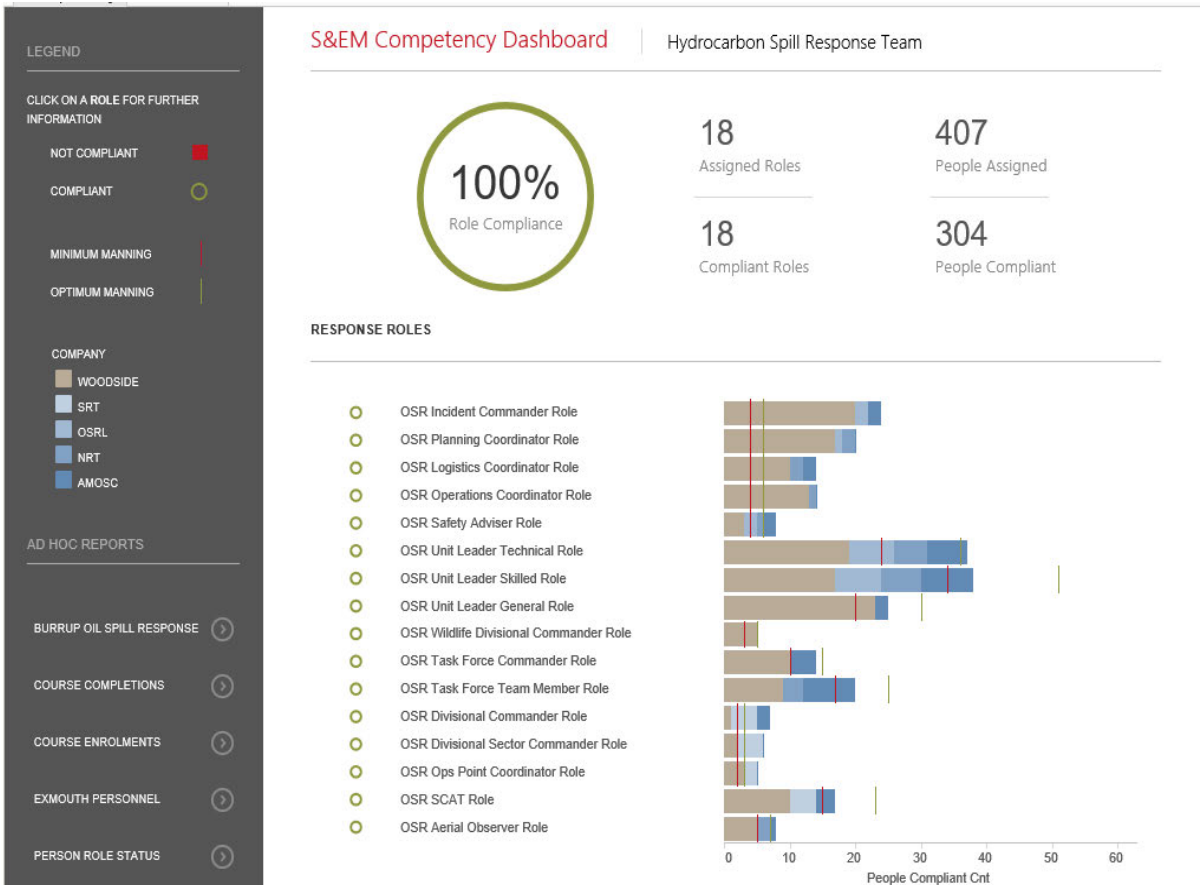

Figure 5-2: Example screenshot of the HSP competency dashboard

The Dashboard is one of Woodside’s key means of monitoring its readiness to respond. It also demonstrates Woodside’s ability to meet the requirements of the environmental performance standards that relate to certain response roles.

Figure 5-3 shows deeper dive into the Operations Point Coordinator role and the training modules required to show competence.

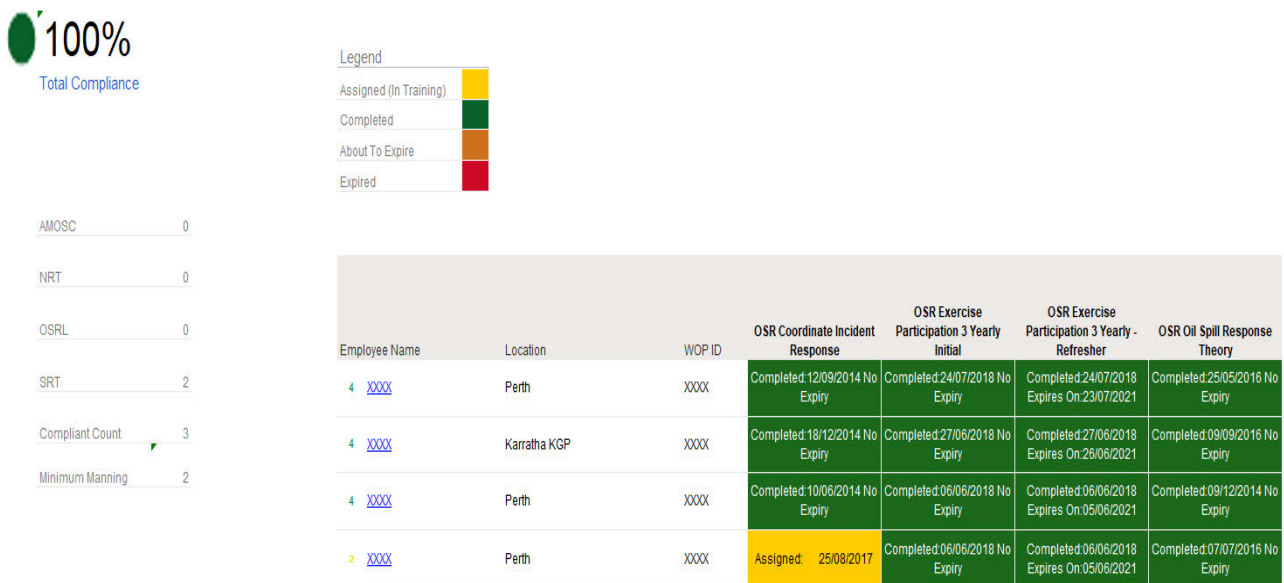

Figure 5-3: Example screenshot for the Operation Point Coordinator role

No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

3. The Hydrocarbon Spill Preparedness ICE Assurance Process

The Hydrocarbon Spill Response Team has developed a Hydrocarbon Spill Preparedness Internal Control Environment (ICE) process to align and feed into the Woodside Management System Assurance process for a hydrocarbon spill. The process tracks compliance over four key control areas:

- a) Plans – confirms all plans (including Oil Pollution Emergency Arrangements, first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.
- b) Competency – confirms the competency dashboard is up to date and minimum numbers of required personnel are maintained across CIMT, CMT and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements, is also tracked. The Testing of Arrangements (ToA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to meet compliance requirements.
- c) Capability – tracks and monitors the capability that could be required in a hydrocarbon incident, including integrated fleet¹² vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.
- d) Compliance and Assurance – confirms all regulator inspection outcomes are actioned and closed out, the global legislation register is up to date and that the key assurance components are tracked and managed. Assurance activities (including audits) conducted on memberships with key Oil Spill Response Organisations (OSROs), including AMOSC and OSRL, are also tracked and recorded in the ICE.

The ICE assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported monthly through the S&EM Business Group.

The completion of the assurance checks (over and above the ICE process) is also applied via the Woodside Integrated Risk and Compliance System (WiRCs) and subject to the requirements of Woodside's Provide Assurance Procedure.

4. The Hydrocarbon Spill Preparedness and Response Procedure

This procedure sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment.

This procedure details the:

- requirement for an Oil Pollution Emergency Plan (OPEP) to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable) including:
 - defining how spill scenarios are developed on an activity specific basis
 - developing and maintaining all hydrocarbon spill related plans
 - ensuring the ongoing maintenance of training and competency for personnel
 - developing the testing of spill response arrangements
 - maintaining access to identified equipment and personnel
- planning for hydrocarbon spill response preparedness
- accountabilities for hydrocarbon spill response preparedness
- spill training requirements
- requirements for spill exercising / testing of spill response arrangements
- spill equipment and services requirements.

The procedure also details the roles and responsibilities of the dedicated Woodside Hydrocarbon Spill Preparedness team. This team is responsible for:

- assuring that Woodside hydrocarbon spill responders meet competency requirements
- establishing the competency requirements, annual training schedule and a training register of trained personnel

¹² The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response

- establishing and maintaining the total numbers of trained personnel required to provide an effective response to any hydrocarbon spill incident
- ensuring equipment and services contracts are maintained
- establishing OPEPs
- establishing OPEAs
- determining priority response receptor
- determining ALARP
- ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

6 ALARP EVALUATION

This Section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Operational Monitoring – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Operational Monitoring – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to Aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system is approximately A\$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No

6.1.1.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to operational monitoring data used to inform all other response techniques. No improvement required.	Woodside considers no improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approximately A\$25,000.	This option is not adopted as the current capability meets the need.	No
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility and additional needs are met from Woodside-owned stocks in King Bay Support Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A\$200 per day or A\$6000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	No
Additional trained aerial observers.	Current capability meets need. Woodside has access to a pool of trained, competent observers at strategic locations to allow timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Aviation standards and guidelines confirm all aircraft crews are competent for their roles. Woodside maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations maintain training and competency.	Cost for additional trained aerial observers would be A\$2000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	No

6.1.1.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented

Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A\$50,000 for 24hr access plus an initial A\$5,000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No
Nighttime aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The images would be of low quality and as such the variable is not adopted.	Flights will only occur when deemed safe by the pilot. The risk of night operations is disproportionate to the benefit gained, as images from sensors (IR, UV, etc). will be low quality. Flight time limitations will be adhered to.	No improvement can be made without risk to personnel health and safety and breaching Woodside's Golden Safety Rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	No
Faster mobilisation time (for water quality monitoring).	Due to the restriction on accessing the spill location on day one, there is no environmental benefit in having vessels available from day one. The cost of having dedicated equipment and personnel is disproportionate to the environmental benefit. The availability of vessels and personnel meets the response need. Shortening the timeframes for vessel availability would require dedicated response vessels on standby in KBSF.	Operations are not feasible on day one as the hydrocarbon will take time to surface, and volatility has potential to cause health concerns within the first 24 hours of the response.	The cost and organisational complexity of employing two dedicated response vessels (approximately A\$15m per year per vessel) is considered disproportionate to the potential environmental benefit to be realised by adopting this delivery options. Cost for purchase of equipment is approximately A\$200,000. Ongoing costs per annum for cost of hire and pre-positioning for life of asset/activity would be larger than the purchase cost. Dedicated equipment and personnel, living locally and on short notice to mobilise. The cost would be approximately A\$1 m per annum, which is disproportionate to the incremental benefit this would provide, assets are already available on day one. two integrated fleet vessels are available from day one, however these could be tasked with other operations.	This option is not adopted as the area could not be accessed earlier due to safety considerations. Additionally, the cost and complexity of implementation outweighs the benefits.	No

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.2 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved control measure options have been assessed against the base capability described in Section 5. Those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.2.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.2.1.1 Alternative Control Measures

Alternative Control Measures considered					
<i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.2.1.2 Additional Control Measures

Additional Control Measures considered					
<i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.2.1.3 Improved Control Measures

Improved Control Measures considered					
<i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.2.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.3 Source Control – ALARP Assessment

Woodside has based its response planning on the worst-case scenario (as described in Section 2.2). This includes the following selection of source control and well intervention techniques:

- direct remotely operated vehicle (ROV) intervention on Xmas tree
- debris clearance and/or removal
- capping stack
- relief well drilling.

6.3.1 ROV Intervention

Following confirmation of an emergency event, Woodside would mobilise inspection class ROVs to assess the status of the wellhead and Xmas tree. Work class ROVs for well intervention are available through the existing frame agreements.

As Woodside holds frame agreements for vessels along with contracts for ROV providers and pilots, inspection activities using ROVs are expected to commence within seven days of an emergency event.

A hydraulic accumulator contained as part of the SFRT can be mobilised and deployed with well intervention attempted within 11 days.

Table 6-1: ROV timings

	Estimate ROV inspection duration for Scarborough wells(days)
Source and mobilise vessel with work class ROV	2 days
Liaise with Regulator regarding risks and impacts*	4 days
Undertake ROV Inspection	1 day
TOTAL	7 days*

* Based on timings from the Report into the Montara Commission of Enquiry, submission and discussion of revised documentation for limited activities inside the Petroleum Safety Zone (water deluge operations) to manage personnel risks and impacts was up to 20 days.

6.3.1.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661), confirming that vessels conducting subsea intervention operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements to be in place. In the event of an emergency, Woodside has access to suitable installation support vessels (ISVs) for well intervention through existing frame agreements. The frame agreements for ISV vessels require the vessels to maintain in-force Safety Case approval covering a range of subsea activities. This would cover the requirement for intervention operations such as subsea manifold installation, maintenance and repair, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case scenario from those presented in Figure 6-3 for implementing this response would be “no Safety Case revision required”. Timeframes for well intervention are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the “no Safety Case” revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.3.2 Debris clearance and/or removal

The Woodside Source Control Response Procedure details the mobilisation and resource requirements for implementing this strategy. Debris clearance may be required as a prerequisite to deployment of the capping stack. The AMOSC SFRT would be mobilised from Fremantle. The mobilisation of the SFRT would

take place in parallel with mobilisation of the capping stack to allow initial ROV surveys and debris clearance to have commenced before the arrival of the capping stack. The SFRT comprises ROV-deployed cutters and tools that are used to remove damaged or redundant items from the wellhead and allow improved access to the well. The SFRT can be mobilised and deployed with well intervention attempted within 11 days.

6.3.2.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting debris clearance and removal operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place. In the event of an emergency, Woodside has access to suitable ISVs for these operations through existing frame agreements. The frame agreements for ISVs require the vessels to maintain in-force Safety Case approval covering a range of subsea activities. This would cover the requirement for debris clearance and removal operations such as subsea manifold installation, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario, from those presented in Figure 6-3 for implementing this response would be “no Safety Case revision required”. Timeframes for debris clearance and removal equipment deployment are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the “No Safety Case” revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.3.3 Capping stack

The Woodside Source Control Emergency Response Planning Guideline details the mobilisation and resource requirements for implementing capping stack deployment. A capping stack is designed to be installed on a subsea well and provides a temporary means of sealing the well, until a permanent well kill can be performed through either a relief well or well re-entry.

In the event of a loss of well containment, the use of a subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, an ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack with a heavy lift vessel with a 150 T crane capacity in shallower waters or 250 T crane in deeper waters could be feasible.

Woodside assumes that sourcing conventional capping stack deployment vessels would be per the Woodside Source Control Emergency Response Guideline. This has pre-identified vessel specifications for the capping stack deployment. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement.

A capping stack can be mobilised to site within 16 days. Woodside will monitor the conditions around the wellsite and deployment for a well intervention attempt will be undertaken once plume size is acceptable and safety and metocean conditions are suitable.

6.3.3.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting deployment of the capping stack are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place.

The 16-day timeframe to mobilise the vessel is based on the following assumptions:

- An existing frame agreement vessel is located outside the region with approved Australian Safety Case.
- A Safety Case revision and scope of validation is required.
- The vessel meets the technical requirements for deploying capping stack as per the Source Control Emergency Response Planning Guideline.

- The vessel has an active heave compensated crane, rated to at least 150 T for shallow waters or 250 T in deeper waters and at least 90 m in length and a deck capacity to hold at least 110 T of capping stack.

Timeframes for capping stack deployment detailed in Figure 6-2 and Figure 6-3 would be implemented concurrently with the actions required for the Safety Case revision development scenarios detailed in Figure 6-3 and Table 6-3. To reduce uncertainty in the regulatory approval timeframe, Woodside is collaborating with the AEP Drilling Industry Steering Committee (DISC) and a contracted ISV vessel operator to develop a generic Safety Case revision that contemplates a capping stack deployment. This Safety Case revision will be used to reduce uncertainty in permissioning timeframes in the event a capping stack deployment is required. Woodside will execute a capping stack response within the timeframes detailed in Figure 6-2, dependent upon presence of required safety and metocean conditions. Woodside has considered a broad range of alternate, additional, and improved options as outlined later in Section 6.3.5.

6.3.4 Relief Well drilling

The options analysis detailed in this section considers options to source, contract and mobilise a MODU and obtain necessary regulatory approvals to meet timelines for relief well drilling. The screening for relief well drilling MODUs is based on the following three approaches and is illustrated in Figure 6-1:

- Primary – review internal Woodside drilling programs and MODU availability to source an appropriate MODU operating within Australia with an approved Safety Case
- Alternate – source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case
- Contingency – source and contract a MODU outside Australia with an approved Australian Safety Case.

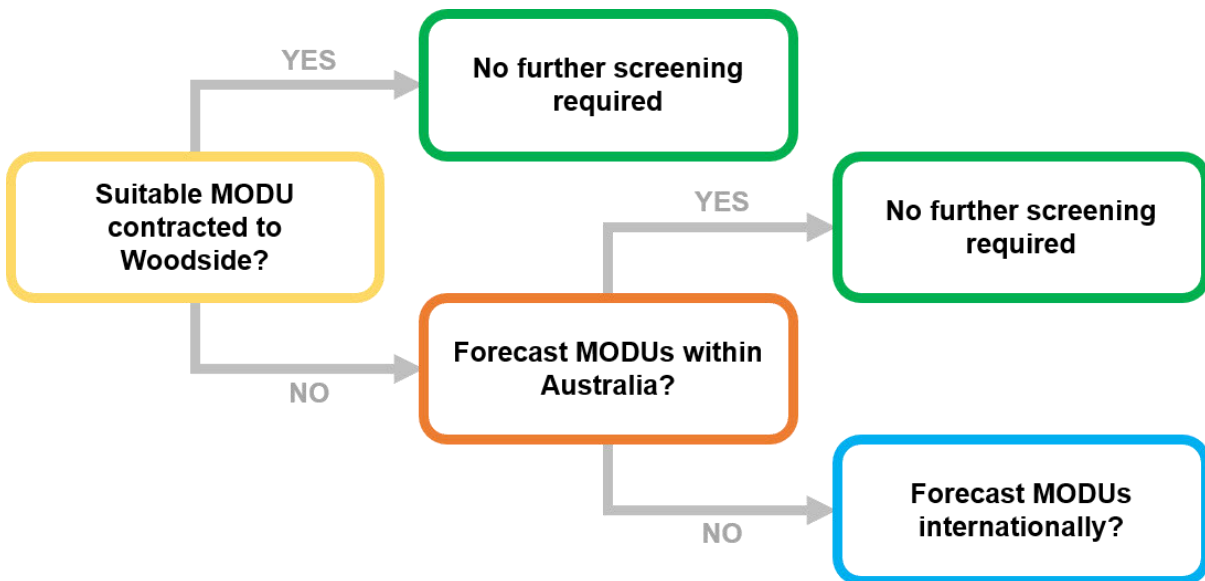

Figure 6-1: Scarborough Operations process for sourcing relief well MODU

Screening of a relief well MODU from international waters is undertaken only if required, i.e. there is low confidence in local (Australian) availability. The capability, location and Australian Safety Case status is assessed for each Woodside contracted MODU. In the event the Woodside contracted MODUs are unsuitable, screening is extended to all MODUs operating in Australian Waters.

Based on the detail provided, the primary and alternate approaches are expected to be achieved within the 21-day period.

The internal and external availability of MODUs, plus MODU activities of registered operators and MODUs with approved Safety Cases, are tracked by Woodside on a monthly basis to allow the best available options to be sourced and utilised in the event of the worst-case scenario.

If the above forecast indicates a gap in availability of a suitable MODU for relief well drilling within Australia, screening would be extended to MODUs with a valid Safety Case outside Australia. If an international

MODU with an Australian Safety Case is not identified, an internal review will be undertaken, NOPSEMA notified, and the issue tabled at the AEP DISC. A review of the significance of the change in risk will be undertaken in accordance with Woodside’s environment management of change requirements and relevant regulatory triggers. The aforementioned lookahead process would allow two years’ warning of any potential gap. Woodside will seek to execute relief well drilling in the fastest possible timeframe.

The detail of these arrangements demonstrates that the risks have been reduced to ALARP and an acceptable level through the control measures and performance standards outlined in Section 5.3.

6.3.4.1 Relief Well drilling timings

The duration of a blowout (from initiation to a successful kill) is assessed as 65.3 days for the Scarborough Operations PAP. Relief wells for other wells within the field are expected to be similar duration.

Details on the steps and time required to drill a relief well is shown in Table 6-2. DP and moored MODUs are suitable for the Scarborough Operations PAP. A moored MODU has been used as the basis for the time estimate below.

To validate the effectiveness of the relief MODU supply arrangements through the AEP MoU, an exercise to test the 21-day mobilisation period forms part of Woodside’s three-yearly Hydrocarbon Spill Arrangements Testing Schedule. Testing of these arrangements are facilitated by an external party and includes suspension of the assisting operator’s activities, contracting the MODU, vessel Safety Case revision and transit to location.

Table 6-2: Relief well drilling timings

Estimate Relief Well duration for Scarborough wells (days) – moored	
Source and contract MODU comprising the following stages:	21 days total:
<i>Activate MOU. Secure and suspend well. Complete relief well design. Secure relief well materials.</i>	8 days
<i>Transit to location based on mobilisation from North West Shelf region.</i>	2 days
<i>Backload and loadout bulks and equipment, complete internal assurance of relief well design.</i>	2 days
<i>Contingency for unforeseen event (e.g. longer transit from another area, problems in securing well, cyclone event)</i>	9 days
Pre-spud survey	Already included
Relief well construction:	24.8 days
Intersect and well kill comprising the following stages:	19.5 days total:
<i>Drill out shoe, conduct formation integrity test and drill towards intersection point</i>	1.5 days
<i>Execute well-specific ranging plan to intersect blowout well bore in minimum timeframe, with highest possible accuracy.</i>	15 days
<i>Pump kill weight drilling fluid per the relief well plan. Confirm the well is static with no further flow.</i>	0.5 days
<i>Contingency for unforeseen technical issues (e.g. more ranging runs required to make intersect, additional mud circulations required to execute kill)</i>	2.5 days
	65.3 days

Woodside has considered a broad range of alternate, additional, and improved options as outlined in Section 6.3.5.

Intersect and kill duration is estimated at 19.5 days. This is a moderately conservative estimate. During the intersect process, the relief well will be incrementally drilled and logged to accurately approach and locate the existing well bore. This will result in the highest probability of intersecting the well on the first attempt and thus will reduce the overall time to kill the well.

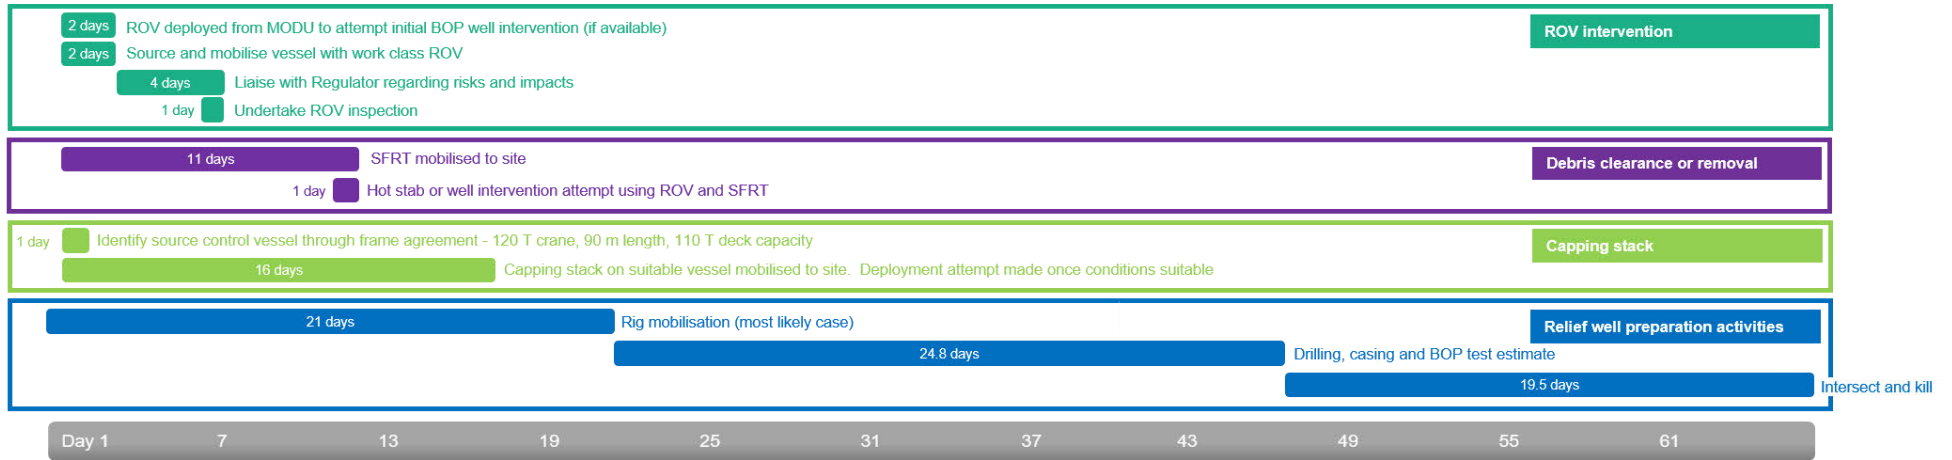

Figure 6-2: Source control and well intervention response strategy deployment timeframes for Scarborough wells.

6.3.4.2 Safety Case considerations

Woodside recognises that it will not be the Operator or holder of the Safety Case for the MODU and/or vessels involved in relief well activities. If a revision to the Operator's Safety Case is required for relief well drilling, Woodside has identified measures to enable timely response and optimise preparedness as far as practicable that can be undertaken to expedite a straightforward Safety Case revision for a MODU/vessel to commence drilling a relief well. Performance standards associated with these measures have been included in **Section 5.3**.

These include:

- access to Safety and Risk discipline personnel with specialist knowledge
- monthly monitoring internal and external MODUs and vessel availability in the region and extended area through contracted arrangements, with a two-year lookahead
- prioritisation of MODUs/vessels with current or historical contracting arrangements with Woodside maintaining records of previous contracting arrangements and companies, and all current contracts for vessels and MODUs that are required to support Woodside in the event of an emergency
- leverage mutual aid arrangements such as the AEP MOU for vessel and MODU support
- Woodside Planning and Logistics, and Safety Officers (on-Roster/Call 24/7) who can articulate need for, and deliver Woodside support, in key delivery tasks including those sitting with potential outside operators
- ongoing strategic industry engagement and collaboration with NOPSEMA to work toward time reductions in regulatory approvals for emergency events.

Woodside has identified three Safety Case revision development and submission scenarios for a MODU and plotted these alongside the relief well preparation activities in Figure 6-3. The assumptions for each of the cases are detailed in subsequent Table 6-3.

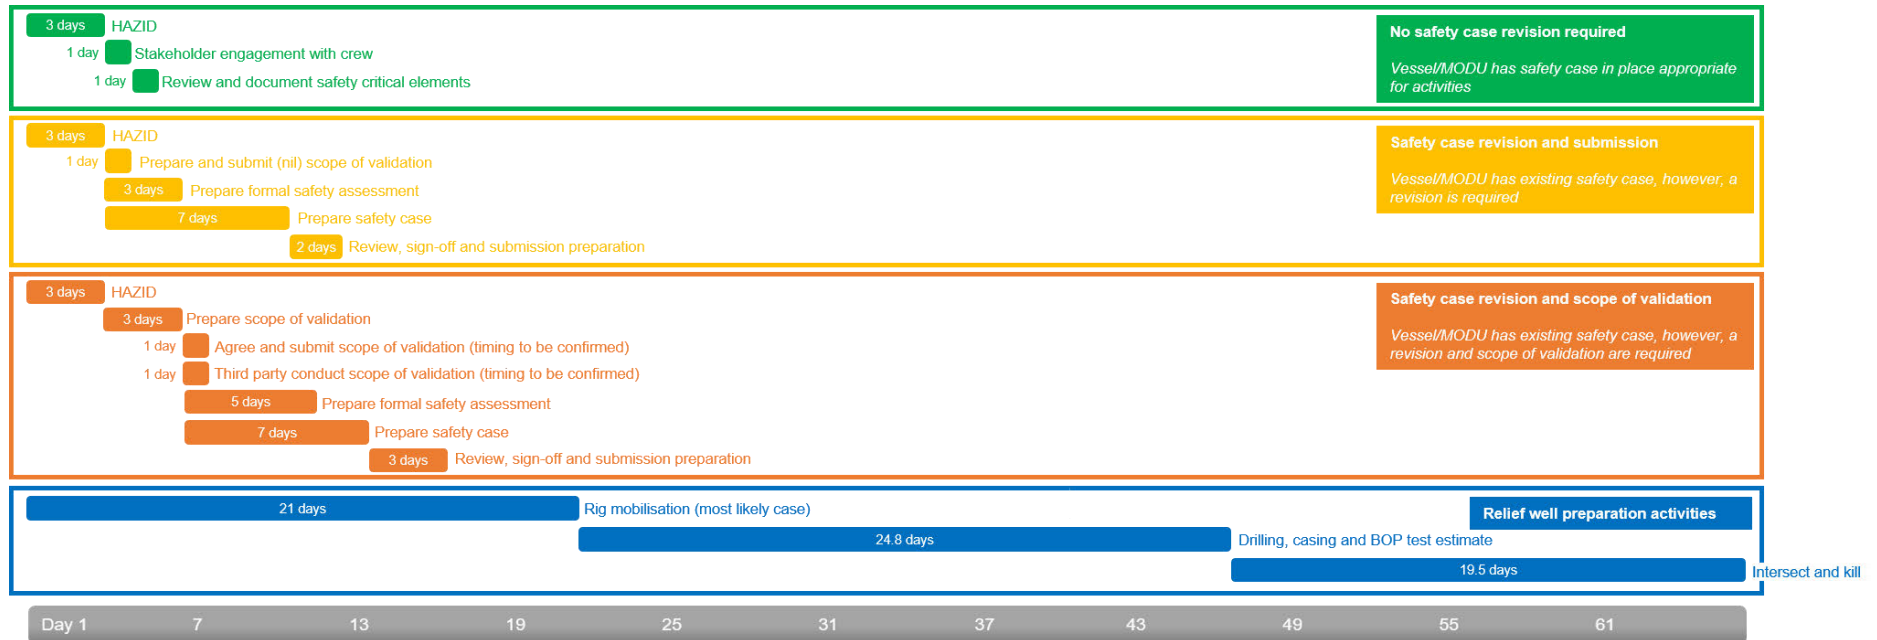

Figure 6-3: Timeline showing Safety Case revision timings alongside other relief well preparation activity timings for Scarborough Wells

All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Table 6-3: Safety Case revision conditions and assumptions

Case	No Safety Case revision required	Safety Case revision and submission	Safety Case revision and scope of validation
Description	Vessel/MODU has a Safety Case in place appropriate for activities.	Vessel/MODU has an existing Safety Case, however, a revision is required.	Vessel/MODU has an existing Safety Case, however, a revision is required plus scope of validation.
Conditions/assumptions	Assumes that existing vessel/MODU Safety Case covers working under the same conditions or the loss of containment is not severe enough to result in any risk on the sea surface.	Safety Case timing assumes vessel/MODU selected and crew are available for workshops and Safety Case studies.	Safety case timing assumes vessel/ MODU selected and crew are available for workshops and Safety Case studies.
		Assumes nil scope of validation. This assumes that the vessel for source control allows for working in a hydrocarbon environment and control measures are already in place in the existing Safety Case. For MODU, it assumes that the relief well equipment is already part of the MODU facility and MODU Safety Case.	Validation will be required for new facilities only. The time needed for the validator to complete the review (from the last document received) and prepare validation statement is undetermined. This is not accounted for here as the Safety Case submission is not dependent on the validation statement, however the Safety Case acceptance is.
		Assumes Safety Case preparation is undertaken 24/7.	Assumes Safety Case preparation is undertaken 24/7.

6.3.5 Source Control – Control Measure Options Analysis

The assessment described in Section 6.3.1, 6.3.2, 6.3.3 and 6.3.4 outline the primary, alternate and contingency approaches respectively that Woodside would implement for relief well drilling.

Woodside has outlined the options considered against the activation, mobilisation (improved options), deployment (alternate and additional options) process described in Section 2.1.1 that provides an evaluation of:

- predicted cost associated with adopting the option
- predicted change/environmental benefit
- predicted effectiveness/feasibility of the option.

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. The control measure options are defined as:

- Alternative control measures are potentially more effective and/or novel control measures that are evaluated as replacements for an adopted control
- Additional control measures are evaluated in terms of their ability to reduce an impact or risk when added to the existing suite of control measures
- Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility.

Options where there is not a clear justification for their inclusion or exclusion may be subject to a detailed assessment.

6.3.6 Activation/Mobilisation – Control Measure Options Analysis

This section details the assessment of alternative, additional or improved control measures that were considered to meet the selected level of performance in Section 5.3 and reduce the risk to ALARP. The alternative, additional and improved control measures that have been assessed and selected are highlighted in green and the relevant performance of the selected control is cross referenced. Items highlighted in red have been considered and rejected on the basis that they are not feasible or the costs are disproportionate compared to the environmental benefit.

6.3.6.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Standby MODU shared for all Woodside activities	A standby MODU shared across all Woodside activities is likely to provide a moderate environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to 10 days (to 11 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities.	This option is not considered feasible for all Woodside activities as there are a large range of well depths, complexities, geologies and geophysical properties across all Woodside's operations. The large geographic area of Woodside activities also means that the MODU is unlikely to be in the correct location at the right time when required.	Even with costs shared across Woodside operations, the costs (approximately A\$219 m per annum, A\$1,095 bn over the five years) of maintaining a shared MODU are considered disproportionate to the environmental benefit potentially achieved by reducing mobilisation times by up to 10 days.	The costs and complexity of having a MODU and maintaining this arrangement for the duration of the PAP are disproportionate to the environmental benefit gained above finding a MODU through the MoU agreement for all spill scenarios.	No
Standby MODU shared across AEP MOU Titleholders	A standby MODU shared across all titleholders who are signatories to the AEP MoU is likely to provide a minor environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to seven days (to 14 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities.	This option is not considered feasible for many titleholders due to the remote distances in Australia as well as a substantial range of well depths, types, complexities, geologies and geophysical properties across a range of Titleholders.	As the environmental benefit is only considered minor and the reduction in timing would only be for the mobilisation period (reduction from 21 days to 14 days) the costs are considered disproportionate to the minor benefit gained.	The costs and complexity of having a MODU and maintaining a shared arrangement for the duration of the PAP are disproportionate to the environmental benefit gained above finding a MODU through the MoU agreement for all spill scenarios.	No

6.3.6.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Implement and maintain minimum standards for Safety Case development	Woodside's contingency planning consideration would be to source a rig from outside Australia with an existing Safety Case. This would require development and approval of a Safety Case revision for the rig and activities prior to commencing well kill operations.	This option is considered feasible and would require Woodside to develop minimum standards for safe operations for relevant Safety Case input along with maintaining key resources to support review of Safety Cases. Woodside would not be the operator for relief well drilling and would therefore not develop or submit the Safety Case revision. Woodside's role as Titleholder would be to provide minimum standard for safe operations that MODU operators would be required to meet and/or exceed.	Woodside has outlined control measures and performance standards regarding template Safety Case documentation and maintenance of resources and capability for expedited Safety Case review.	This option has been selected based on its feasibility, low cost and the potential environmental benefits it would provide.	Yes

6.3.6.3 Improved Control Measures

Improved Control Measures considered

Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Monitor internal drilling programs for rig availability	Woodside may be conducting other campaigns that overlap with the PAP, potentially providing availability of a relief well drilling rig within Woodside. The environmental benefit of monitoring other drilling programs internally is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	Woodside monitors MODU availability through market intelligence services. Woodside will continually monitor other drilling and exploration activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	Associated cost of implementation is minimal to the environmental benefit gained. Related control measures and performance standards are included in Section 5.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes
Monitor external activity for rig availability	The environmental benefit achieved by monitoring drilling programs and rig movements across industry provides the potential for increased availability of suitable rigs for relief well drilling. Additional discussions with other titleholders may be undertaken to potentially gain faster access to a rig and reduce the time taken to kill the well and, therefore, the volume of hydrocarbons released.	Woodside will source a relief well drilling rig in accordance with the AEP MOU on rig sharing in the unlikely event this is required. Woodside will continually engage with other Titleholders and Operators regarding activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations. Commercial and operational provisions do not allow Woodside to discuss current and potential drilling programs in detail with other titleholders.	Associated cost of implementation is moderate to the environmental benefit gained.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes
Monitor status of Registered Operators/ Approved Safety cases for rigs	Woodside can monitor the status of Registered Operators for rigs operating within Australia (and therefore Safety Case status). Woodside can monitor monthly the status of Registered Operators for rigs operating within Australia (and therefore Safety Case status). This allows for a prioritised selection of rigs in the event of a response with priority given to those with an existing Safety Case.	The environmental benefit of monitoring rigs is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbons released to the environment.	The cost is minimal.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes

6.3.7 Deployment Options Analysis

6.3.7.1 Alternative Control Measures

Alternative Control Measures considered

Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.3.7.2 Additional Control Measures

Additional Control Measures considered

Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Offset capping alternative to conventional capping stack deployment	While the use of an offset capping system could reduce the quantity of hydrocarbon entering the marine environment, the mobilisation lead times for both a capping system and required vessels/ support equipment, would minimise any environmental benefit gained over conventional capping.	<p>The base case considerations for offset installation equipment (OIE) requires a coordinated response by four to seven vessels working simultaneously outside of the 500m exclusion zone, introducing complex SIMOPS issues. Due to the OIE's scale, fabrication of equipment (e.g. mooring anchors) outside of the contractor's scope of supply is likely to require engagement of international suppliers, further increasing complexity and uncertainty in associated time frames.</p> <p>Screening indicates that mobilising some components of the OIE (which are based in Italy) can only be done by sea and is likely to erode any time savings realised through killing the well via a relief well.</p> <p>The March 2019 OSRL exercise in Europe tested deployment of the OIE. It highlighted that a >600 T crane vessel would be required for deployment to allow for a useable hook-height for the crane to conduct the lift of the carrier. Vessels with such capability and a current Australian vessel Safety Case are not locally or readily available.</p>	Due to risks, uncertainty and complexity of this option, and the inability to realise any environmental gains, any cost would be disproportionate to the benefits gained.	<p>Woodside has confidence in availability of suitable relief well MODUs across the required drilling time frame thus the OIE would provide no advantage.</p> <p>Implementation of OIE has been assessed as a complex and unfeasible SIMOPS operation, precluded by a combination of the site-specific metocean and worst-case discharge conditions at the Scarborough location.</p> <p>Implementation of a novel technology such as OIE culminates in low certainty of success while at the same time increasing associated health and safety risks.</p> <p>As such, the primary source control response and ALARP position remains drilling a relief well.</p>	No
Dual vessel capping stack deployment	While the use of dual vessel to deploy the capping system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the feasibility issues surrounding a dual vessel capping deployment together with mobilisation lead times for both a capping system and required vessels and support equipment, would minimise any environmental benefit gained over conventional capping.	A dual vessel deployment is somewhat feasible provided a large enough deck barge can be located. Deck barges of 120m are not, however, very common and will present a logistical challenge to identify and relocate to the region. Further, the longer length barges may need mooring assist to remain centred over the well. The capping stack would be handed off from a crane vessel to the anchor handler vessel (AHV) work wire outside of the exclusion zone. The AHV would then manoeuvre the barge into the plume to get the capping stack over the well. In this method, the barge would be in the plume, but the AHV and all personnel would be able to maintain a safe position outside of the gas zone. The capping stack would be lowered on the AHV work wire so a crane would not be required on the barge.	Due to there being minimal environmental benefits gained by the prolonged lead times needed to execute this technique, plus a potential increase in safety issues, any cost would be disproportionate to the benefits gained.	Given there is minimal environmental benefit and an increase in safety issues surrounding SIMOPS and deployment in shallow waters, this option would not provide an environmental or safety benefit.	No
Subsea Containment System alternative to capping stack deployment	While the use of a subsea containment system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the system is unlikely to be feasibly deployed and activated for at least 90 days	The timing for mobilisation, deployment and activation of the subsea containment system is likely to be >90 days which is longer than the expected 65.3 days relief well drilling operations based on the location, size and scale of the equipment required,	Woodside has investigated the logistics of reducing this timeframe by pre-positioning equipment but the costs of purchasing dedicated equipment by Woodside for this PAP are not considered reasonably practical and are considered	This option would not provide an environmental benefit.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

	following a blowout due to equipment requirements and logistics. No environmental benefit is therefore predicted given the release duration is 65.3 days before drilling of a relief well under the adopted control measure.	including seabed piles that can only be transported by vessel.	disproportionate to the environmental benefit gained.		
Contract in place with Wild Well Control Inc and Oceaneering	Woodside has an agreement in place with Wild Well Control Inc and Oceaneering to provide trained personnel in the event of an incident. This will make competent personnel available in the shortest possible timeframe.	Having contracts in place to access trained, competent personnel in the event of an incident would reduce mobilization times. This option is considered reasonably practicable.	Minimal cost implications – Woodside has standing contract in place to provide assistance across all activities.	This control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	Yes

6.3.7.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Maintaining relief well drilling supplies	There is not predicted to be any reduction in relief well timing or spill duration from Woodside maintaining stocks of drilling supplies (mud, casing, cement, etc.)	It would be feasible to source some relief well drilling supplies such as casing but the actual composition of the cement and mud required will need to be specific to the well. This option is also not deemed necessary as the lead time for sourcing and mobilising these supplies is included in the 21 days for sourcing and mobilising a rig.	The capital cost of Woodside purchasing relevant drilling supplies is expected to be approximately A\$600,000 with additional costs for storage and ongoing costs for replenishment. These costs are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	No

6.3.8 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - implement and maintain minimum standards for Safety Case development
 - contract in place with Wild Well Control Inc and Oceaneering to supply trained, competent personnel
- improved
 - monitor internal drilling programs for MODU availability
 - monitor external activity for MODU availability
 - monitor status of Registered Operators / Approved Safety cases for MODUs.

6.4 Shoreline Protection and Deflection – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Existing Capability – Shoreline Protection and Deflection

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.4.2 Response Planning: Scarborough Project Offshore Facility and Trunkline Operations activity – Shoreline Protection and Deflection

Planning for shoreline protection is based upon identification of RPAs from deterministic modelling and the logistics associated with deploying protection at these locations. The response planning scenarios indicate that this would require effective mobilisation to priority shorelines and maintenance of protection until operational monitoring confirms that the locations are no longer at risk. Woodside has identified the RPAs from deterministic modelling results provided from specific scenarios.

The control measures selected provide capability to mobilise shoreline protection equipment within 24 hours (if required). Stochastic modelling scenarios indicate that first shoreline impact at Dampier Archipelago and Keast Island within 0.75 days for CS-01. No shoreline contact is expected at 100 g/m² threshold from CS-02 and CS-03. The existing capability is considered sufficient to mobilise and deploy protection at RPAs within 72 hours, guided by the ongoing operational monitoring. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in Table 3-1.

Tactical response plans exist for many of the RPAs identified. The plans identify values and sensitivities that would be protected at location. To allow for the best use of available shoreline protection and deflection resources, operational monitoring (OM01 and OM02) will inform the response, targeting RPAs where contact is predicted above response threshold levels.

Table 6-4 below outlines the capability required (number of RPAs predicted to be impacted) against the capability available (number of shoreline protection and deflection operations that can be mobilised and deployed). As can be seen from the table below, Woodside's capability meets the response planning need identified for shoreline protection and deflection operations at identified RPAs within 72 hours.

Table 6-4: Response Planning – Shoreline Protection and Deflection

Scarborough Project Offshore Facility and Trunkline Operations activity		Day	Day	Day	Day	Day	Day	Day	Week	Week	Week	Month	Month
		1	2	3	4	5	6	7	2	3	4	2	3
	Oil on shoreline (from deterministic modelling of CS-01) m ³	90	86	3	0	0	0	0	0	0	0	0	0
A Capability Required													
A1	Number of RPAs contacted (> 100 g/m ²) – CS-01	3	4	1	0	0	0	0	0	0	0	0	0
B Capability Available (operations per day)													
B1	SPD operations available – per day (lower)	0	1	1	2	2	4	6	70	70	70	330	330
B2	SPD operations available – per day (upper)	1	2	3	4	6	8	10	84	84	848	336	336
C Capability Gap (operations per day)													
C1	SPD operations gap – per day (lower)	3	3	0	-2	-2	-4	-6	-70	-70	-70	-330	-330
C2	SPD operations gap – per day (upper)	4	2	-2	-4	-6	-8	-10	-84	-84	-848	-336	-336

A1 – the number of Response Protection Areas contacted by surface hydrocarbons above 100 g/m²

B1 and B2 – the upper and lower number of shoreline protection and deflection operations available (based on response planning assumptions in Section 5.3),

C1 and C2 – the gap between the upper and lower number of shoreline protection and deflection operations required in A1 compared to the operations available in B1 and B2

Table 6-5: Indicative Tactical response plan, aims and methods for identified RPAs

Tactical Response Plan	Response aims and methods
Legendre Island – Dampier	<p>First Response objective: Ongoing operational monitoring and evaluation of hydrocarbon spill to adapt aims and response tactics to evolving nature of the incident and to assist in locating relevant booming areas.</p> <p>Second Response objective: Protection of sensitive shorelines (mangrove) at Legendres Island through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/ weather conditions</p> <p>Third Response objective: Clean-up impacted shoreline. Manual clean-up techniques, use of mechanical recovery methods and techniques where appropriate.</p> <p>Fourth response aim: Collection and specialist cleaning/ rehabilitation of oiled wildlife</p> <p>NOTES:</p> <ul style="list-style-type: none"> • Relevant permissions must be sought from DBCA to carry out any response operations within the limits of the area. • In the event that the existing Woodside equipment stockpile at the King Bay Supply Base becomes exhausted, Woodside has an MoU with AMSA and the DoT to provide surplus equipment from their stockpile. Additionally, Woodside is a member of both AMOSC and OSRL and has the ability to call upon their relevant technical advisory services and equipment stockpiles 24/7. • This TRP should be considered a draft until it has been verified and tested.
Rosemary Island – Dampier	<p>First response objective: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas.</p> <p>Second response objective: Recovery of floating oil at sea where possible through the use of skimming systems and other appropriate recovery devices to reduce shoreline impact.</p> <p>Third response objective: Protection of sensitive shorelines at Rosemary Island through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions.</p> <p>Fourth response objective: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate.</p> <p>NOTES:</p> <ul style="list-style-type: none"> • Relevant permissions must be sought from DBCA to carry out any response operations within the limits of the area. • In the event that the existing Woodside equipment stockpile at the King Bay Supply Base becomes exhausted, Woodside has an MOU with AMSA and the DoT to provide surplus equipment from their stockpile. 	<ul style="list-style-type: none"> dependent on seasonality presence of sensitive receptors, the strategies to either protect or clean-up the shorelines will be decided through NEBA.
<p>Dampier Archipelago – Inshore Waters of Mermaid Sound/ Dampier Archipelago (applicable to RPAs including; Gidley Island, Keast Island, Cape Bruguieres, Angel Island and Cohen Island)</p>	<p>First response objective: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas.</p> <p>Second response objective: Recovery of floating oil at sea where possible through the use of skimming systems and other appropriate recovery devices to reduce shoreline impact.</p> <p>Third response objective: Protection of sensitive shorelines within Dampier Archipelago through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions.</p> <p>Fourth response objective: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate.</p> <p>NOTES:</p> <ul style="list-style-type: none"> Relevant permissions must be sought from DBCA to carry out any response operations within the limits of the area. In the event that the existing Woodside equipment stockpile at the King Bay Supply Base becomes exhausted, Woodside has an MoU with AMSA and the DoT to provide surplus equipment from their stockpile. Additionally, Woodside is a member of both AMOSC and OSRL and has the ability to call upon their relevant technical advisory services and equipment stockpiles 24/7. This TRP should be considered a draft until it has been verified and tested.

Pre-emptive mobilisation of equipment and personnel would commence as soon as practicable prior to oil contact. Additional resources would be mobilised depending on the scale of the event to increase the length or number of shorelines being protected.

A shoreline protection and deflection response would be launched only when operational monitoring operations identify a spill heading towards RPA(s) and there is sufficient time for deployment prior to shoreline contact.

6.4.3 Shoreline Protection and Deflection – Control Measure Options Analysis

6.4.3.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position equipment at Response Protection Areas (RPAs)	<p>Additional environmental benefit of having equipment prepositioned is considered minor as the RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event making it impractical to preposition equipment in advance.</p> <p>Equipment is currently available to protect RPAs, however, deployment may be constrained by levels of volatile hydrocarbons arising from an MDO spill.</p>	<p>The incremental environmental benefit associated with these delivery options is unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options.</p> <p>Considering the highly unlikely nature of a significant hydrocarbon release, the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the environmental benefit that might be realised.</p> <p>Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options.</p> <p>The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment.</p>	Total cost to preposition protection/ deflection packages at each site of potential impact would be approximately A\$6100 per package per day.	This option is not adopted as pre-positioning shoreline protection and deflection capability is not considered practicable due to uncertainty of the sites that may be contacted during a real spill event and the predicted time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.4.3.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Supplemented stockpiles of equipment to protect additional shorelines	<p>Additional equipment would increase the number of receptor areas that could be protected from hydrocarbon contact. However, current availability of personnel and equipment is capable of protecting up to 30 km of shoreline, commensurate with the scale and progressive nature of shoreline impact. Additional stocks would be made available from international sources if long term up scaling were necessary.</p> <p>A reduction in environmental consequence from a 'B' rating is unlikely to be realised as a result of having more equipment available locally.</p>	<p>The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised.</p> <p>Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options.</p> <p>The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment.</p>	Total cost for purchase supplemental protection and deflection equipment would be approximately A\$455,000 per package.	This option is not adopted as addition shoreline protection and deflection capability is not considered practicable in the time frame prior to contact. Whilst modelling for this activity predicts contact at 8 RPAs within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No
Additional trained personnel	The level of training and competency of the response personnel allows the shoreline protection and deflection operation to be delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	<p>Additional personnel required to sustain an extended response can be sourced through the Woodside People & Global Capability Surge Labour Requirement Plan. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders.</p> <p>Response personnel are trained and exercised regularly in shoreline response techniques and</p>	Additional specialist personnel would cost A\$2000 per person per day.	This option is not adopted as the existing capability meets the need. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current	No

		methods. All personnel involved in a response will receive a full operational/safety briefing prior to commencing operations.		capability is considered to reduce the risk to ALARP.	
--	--	---	--	---	--

6.4.3.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/mobilisation time	Modelling predicts floating or shoreline accumulation at threshold at day 0.75 at Dampier Archipelago and Keast Island (CS-01), thus faster response times are not practicable.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.	The cost of establishing a local stockpile of new mitigation equipment (including protection and deflection boom) closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as addition shoreline protection and deflection capability is not considered practicable in the time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of MDO, faster mobilisation is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.4.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.5 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing Capability – Shoreline Clean-up

Woodside’s existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside’s direct control.

6.5.2 Response planning: Scarborough Project Offshore Facility and Trunkline Operations activity – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside’s capability can cover all required shoreline clean-up operations for the PAP.

Modelling predicts shoreline contact from day 0.75 at Dampier Archipelago (55 m³) and Keast Island (20 m³) for the CS-01. No shoreline contact is expected at 100 g/m² threshold from CS-02 and CS-03. The largest volumes ashore are Dampier Archipelago with approximately 55 m³ predicted on day 0.75. These volumes assume no treatment of floating surface oil by containment and recovery or shoreline protection and deflection prior to contact so are considered very conservative. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in Table 3-1.

These figures have been combined into a single response planning need scenario that provides a worst-case scenario for planning purposes as outlined below. It should be noted that whilst modelling for this activity predicts contact at eight RPAs within 24-48 hours, this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Given all other shoreline contact scenarios identified from modelling are longer time frames and lesser volumes, demonstration of capability against this need will enable Woodside to meet requirements for any other outcome.

The potential scale and remoteness of a response coupled with the uncertainty of which locations will be affected precludes the stockpiling or prepositioning of equipment specific to shorelines. The most significant constraint is accommodation and transport of personnel in Dampier to undertake clean-up operations and to manage wastes generated during the response effort. From previous assessment of facilities in Dampier, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.5.3.

Table 6-6: Response Planning – Shoreline Clean-up

Shoreline Clean-up (Phase 2)	Day	Day	Day	Day	Day	Day	Day	Day	Week	Week	Week	Month	Month	Month
	1	2	3	4	5	6	7	2	3	4	2	3	4	
Oil on shoreline (from deterministic modelling) m ³														
Shoreline accumulation (above 100 g/m ²) – m ³	90	86	3	0	0	0	0	0	0	0	0	0	0	0
Oil remaining following response operations – m ³	90	26	35	15	6	2	1	0	0	0	0	0	0	0
A Capability Required (number of operations)														
A1 SCU operations required (lower)	11	3	4	2	1	0	0	0	0	0	0	0	0	0
A2 SCU operations required (upper)	13	4	5	2	1	0	0	0	0	0	0	0	0	0
B Capability Available (number of operations)														
B1 SCU operations available – Stage 2 – Manual (lower)	0	1	3	5	8	12	15	105	105	105	560	560	560	
B2 SCU operations available – Stage 2 – Manual (upper)	0	2	5	8	10	15	20	140	140	140	560	560	560	
C Capability Gap														
C1 SHC operations gap (lower)	11	2	1	-3	-7	-12	-15	-105	-105	-105	-560	-560	-560	
C2 SHC operations gap (upper)	13	2	0	-6	-9	-15	-20	-140	-140	-140	-560	-560	-560	

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m²

B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.5),

C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2

6.5.3 Shoreline Clean-up – Control measure options analysis

6.5.3.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified.					

6.5.3.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional trained personnel available	The level of training and competency of the response personnel allows the shoreline clean-up operation to be delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside <i>People & Global Capability Surge Labour Requirement Plan</i> . Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders. Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety briefing prior to commencing operations.	Additional specialist personnel would cost A\$2000 per person per day.	Whilst modelling for this activity predicts contact at 8 RPAs within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Larger numbers of additional personnel may also be detrimental to sensitive shoreline areas. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No
Additional trained personnel deployed	Maintaining a span of control of 200 competent personnel is deemed manageable and appropriate for this activity. Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but modelling predicts ongoing stranding of hydrocarbons over a period of weeks. Managing a smaller, targeted response is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will reduce the risk of increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	The figure of 200 personnel is broken down to include on 1-2 trained supervisors managing 8-10 personnel/labour hire responders. This allows for multiple operational teams to operate along the extended shoreline at different locations. Typically, an additional 30-50% of the tactical workforce is required to support ongoing operations including on-scene control, logistics, safety/medical/welfare and transport. Personnel on site will include members with the appropriate specialties to efficiently clean-up the shoreline. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors.	Additional specialist personnel would cost A\$2000 per person per day.	Whilst modelling for this activity predicts contact at 8 RPAs within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Larger numbers of additional personnel may also be detrimental to sensitive shoreline areas. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.5.3.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/mobilisation time	Modelling predicts floating or shoreline accumulation at threshold at day 0.75 at Dampier	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected	This option is not adopted as additional shoreline clean-up capability is not considered practicable in the time frames prior to contact. Safety factors have	No

	<p>Archipelago and Keast Island (CS-01), thus faster response times are not practicable.</p>	<p>required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation.</p> <p>Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.</p>	<p>hydrocarbon stranding areas is not commensurate with the need.</p>	<p>also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of MDO, faster mobilisation is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.</p>	
--	--	--	---	--	--

6.5.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.6 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Oiled Wildlife Response

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.6.2 Oiled Wildlife Response – Control Measure Options Analysis

6.6.2.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	No

6.6.2.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	<p>The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements allow these resources to be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories.</p> <p>Provides response equipment and personnel by day 2. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit.</p> <p>These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted, and to scale up the response if required to treat widespread contamination.</p> <p>Current capability meets the needs required within 48 hours of the spill and there is no additional environmental benefit in adopting the improvements.</p>	<p>Although hydrocarbon contact above wildlife response threshold concentrations (>100 g/m²) with shoreline is expected from day 1 (CS-01), given the low likelihood of such an event occurring and that the current capability meets the need within 48 hours of the spill, the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit.</p> <p>Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by operational monitoring, and under the direction of DBCA in nearshore areas.</p> <p>The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.</p>	Additional wildlife response resources could total A\$1700 per operational site per day.	This option is not adopted as the existing capability meets the need from day 2.	No
Additional trained wildlife responders	<p>Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas.</p> <p>The potential environmental benefit of training additional personnel is expected to be low.</p>	<p>Current numbers meet the needs required (within 48 hours of the spill) and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors.</p> <p>Additional equipment and facilities would be required to support ongoing response, depending on the scale of the event and the impact to wildlife and may be sourced via existing contracts with OSROs. Materials for holding facilities, portable</p>	Additional wildlife response personnel cost A\$2000 per person per day	This option is not adopted as the existing capability meets the need from day 2.	No

		pools, enclosures and rehabilitation areas would be sourced as required.			
--	--	--	--	--	--

6.6.2.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster mobilisation time for wildlife response	This control measure provides increased effectiveness through faster mobilisation of specialists. Some net environmental benefit is expected if teams could be mobilised by day 1, however, the volatile nature of a spill of MDO may preclude access on day 1 for response personnel.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A\$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need from day 2.	No

6.6.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected

6.7 Waste Management – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.7.1 Existing Capability – Waste Management

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.7.2 Waste Management – Control Measure Options Analysis

6.7.2.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified.					

6.7.2.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Woodside's waste service provider's storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with AMOSC/ OSRL. Existing arrangements meet identified need for the PAP from day 4 onwards.	Cost for increased waste disposal capability would be approximately A\$1300 per m ³ . Cost for increased onshore temporary waste storage capability would be approximately A\$40 per unit per day.	This option is not adopted as the existing capability meets the need.	No

6.7.2.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia's licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted.	No

	<p>and transport will allow continuous response operations to occur.</p> <p>This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.</p>				
--	--	--	--	--	--

6.7.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.8 Scientific Monitoring – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.8.1 Existing Capability – Scientific Monitoring

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.8.2 Scientific Monitoring – Control Measure Options Analysis

6.8.2.1 Alternative Control Measures

Alternative Control Measures considered					
<i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Analytical laboratory facilities closer to the likely spill affected area	The environmental consideration of having access to suitable laboratory facilities in Karratha to carry out the hydrocarbon analysis would provide faster turnaround in reporting of results only by a matter of days (as per the time to transport samples to laboratories).	SM01 water quality monitoring requires water samples to be transported to NATA-rated laboratories in Perth or over to the East coast. Consider the benefit of laboratory access and transportation times to deliver water samples and complete lab analysis. There is a time lag from collection of water samples to being in receipt of results and confirming hydrocarbon contact to sensitive receptors.	Laboratory facilities and staff available at locations closer to the spill affected area can reduce reporting times only to a moderate degree (days) with associated high costs of maintaining capability do not improve the environmental benefit.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	No
Dedicated contracted SMP vessel (exclusive to Woodside)	Would provide faster mobilisation time of scientific monitoring resources, however, the environmental benefit associated with faster mobilisation time would be minor compared to selected options.	Chartering and equipping additional vessels on standby for scientific monitoring has been considered. The option is reasonably practicable, but the sacrifice (charter costs and organisational complexity) is significant, particularly when compared with the anticipated availability of vessels and resources within in the required timeframes. The selected delivery provides capability to meet the scientific monitoring objectives, including collection of pre-emptive data where baseline knowledge gaps are identified for receptor locations where spill predictions of time to contact are >10 days.	The cost and organisational complexity of employing a dedicated response vessel is considered disproportionate to the potential environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	No

6.8.2.2 Additional control measures

Additional Control Measures considered					
<i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Determine baseline data needs and provide implementation plan in the event of an unplanned hydrocarbon release	Address resourcing needs to collect post spill (pre-contact) baseline data as spill expands in the event of a loss of containment from a vessel collision from the PAP activities.	As part of Woodside's Scientific Monitoring Program, the following are considered and incorporated into the spill response approach and the SMP Standby Service contract: <ul style="list-style-type: none"> Woodside relies on existing environmental baseline for receptors which have predicted hydrocarbon contact (above environment threshold) <10 days and acquiring pre-emptive data in the event of a loss of well control from the PAP activities based on receptors predicted to have hydrocarbon contact >10 days. It provide appropriate baseline for key receptors for all geographic locations that are potentially impacted <10 days of spill event. 	No cost associated with baseline for SM01.	This control measure is adopted as the costs and complexity are not disproportionate to any environmental benefit that might be realised.	Yes

		<ul style="list-style-type: none"> It addresses resourcing needs to collect pre-emptive baseline as spill expands in the event of a spill of MDO from the PAP activities. For SM01, pre-emptive baseline is not required as marine water quality is assumed to be pristine. 			
--	--	---	--	--	--

6.8.2.3 Improved Control Measures considered

Improved Control Measures considered					
<i>Improved, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.8.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - determine baseline data needs and provide implementation plan in the event of an unplanned hydrocarbon release
- improved
 - none selected.

6.8.4 Operational Plan

Key actions from the Scientific Monitoring Program Operational Plan for implementing the response are outlined in **Table 6-7**.

Table 6-7: Scientific monitoring program operational plan actions

Responsibility	Action
Activation	
CIMT Planning (CIMT Planning – Environment Unit)	Mobilises SMP Lead/Manager and SMP Coordinator to the CIMT Planning Section.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager and SMP Coordinator)	Constantly assesses all outputs from OM01, OM02 and OM03 (Annex B) to determine receptor locations and receptors at risk. Confirm sensitive receptors likely to be exposed to hydrocarbons, timeframes to specific receptor locations and which SMPs are triggered. Review baseline data for receptors at risk.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager and SMP Coordinator)	SMP co-ordinator stands up SMP Standby contractor. Stands up subject matter experts, if required.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Establish if, and where, pre-contact baseline data acquisition is required. Determines practicable baseline acquisition program based on predicted timescales to contact and anticipated SMP mobilisation times. Determines scope for preliminary post-contact surveys during the Response Phase. Determines which SMP activities are required at each location based on the identified receptor sensitivities.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	If response phase data acquisition is required, stand up the contractor SMP teams for data acquisition and instruct them to standby awaiting further details for mobilisation from the CIMT.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	SMP standby contractor, to prepare the Field Implementation Plan. Prepare and obtain sign-off of the Response Phase SMP work plan and Field Implementation Plan. Update the IAP.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Liaise with CIMT Logistics, and determine the status and availability of aircraft, vessels and road transportation available to transport survey personnel and equipment to point of departure. Engage with SMP standby contractor, SMP Manager and CIMT Logistics Section to establish mobilisation plan, secure logistics resources and establish ongoing logistical support operations, including: <ul style="list-style-type: none"> • vessels, vehicles and other logistics resources • vessel fit-out specifications (as detailed in the Scientific Monitoring Program Operational Plan) • equipment storage and pick-up locations • personnel pick-up/airport departure locations • ports of departure

6.8.5 ALARP and Acceptability Summary

ALARP and Acceptability Summary		
Scientific Monitoring		
ALARP Summary	X	All known reasonably practicable control measures have been adopted.
		No additional, alternative and improved control measures would provide further benefit.
		No reasonably practical additional, alternative, and/or improved control measure exists.
<p>The resulting scientific monitoring capability has been assessed against the credible spill scenarios. The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts.</p> <p>All known reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness considered medium. The SMP's main objectives can be met, with the addition of one alternative control measures to provide further benefit.</p>		
Acceptability Summary		<ul style="list-style-type: none"> • The control measures selected for implementation manage the potential impacts and risks to ALARP. • In the event of a hydrocarbon spill for the PAP, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. • Scientific Monitoring control and activities are compliant with relevant environmental legislation and regulations, including the EPBC Act. • Throughout the PAP, relevant Australian standards and codes of practice will be followed to evaluate the impacts from a loss of well control. • Consultation undertaken for the PAP did not receive feedback regarding concerns for Scientific Monitoring activities in response to a hydrocarbon spill. • The level of impact and risk to the environment has been considered with regards to the principles of ESD and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for credible case scenarios, and uncertainty has not been used as a reason for postponing control measures.
<p>On the basis from the impact assessment above and in Section 6.8 of the EP, Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing scientific monitoring activities to a level that is ALARP and acceptable.</p>		

7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment so these impacts and risks have been considered and specific measures are put in place to continually review and manage further impacts and risks to ALARP and an acceptable level. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Please refer to the EP for details regarding how these risks are being managed as they are not discussed further in this document. These risks include:

- atmospheric emissions
- routine and non-routine discharges
- physical presence, proximity to other vessels (shipping and fisheries)
- routine acoustic emissions vessels
- lighting for night work/navigational safety
- invasive marine species
- collision with marine fauna
- disturbance to seabed.

Additional impacts and risks associated with the control measures not included within the scope of the EP include:

- drill cuttings and drilling fluids environmental impact assessment for relief well drilling
- vessel operations and anchoring
- presence of personnel on the shoreline
- Human presence (manual cleaning)
- vegetation cutting
- additional stress or injury caused to wildlife
- secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

Table 7-1: Analysis of risks and impacts

	Environmental Value						
	Soil and Groundwater	Marine Sediment Quality	Water Quality	Air Quality	Ecosystems/Habitat	Species	Socio-Economic
Operational monitoring		✓	✓		✓	✓	
Source control		✓	✓	✓	✓	✓	✓

Shoreline clean-up	✓	✓	✓		✓	✓	✓
Oiled wildlife					✓	✓	
Scientific monitoring		✓	✓		✓	✓	✓
Waste management	✓			✓	✓	✓	✓

7.3 Evaluation of impacts and risks from implementing response techniques

Drill cuttings and drilling fluids environmental impact assessment for relief well drilling

The identified potential impacts associated with the discharge of drill cuttings and fluids during a relief well drilling activity include a localised reduction in water and seabed sediment quality, and potential localised changes to benthic biota (habitats and communities).

Direct and indirect ecological impact pathways are identified for drill cuttings and drilling fluids as follows:

- temporary increase in total suspended solids (TSS) in the water column
- attenuation of light penetration as an indirect consequence of the elevation of TSS and the rate of sedimentation
- sediment deposition to the seabed leading to the alteration of the physio-chemical composition of sediments, and burial and potential smothering effects to sessile benthic biota
- potential contamination and toxicity effects to benthic and in-water biota from drilling fluids.

Potential impacts from the discharge of cuttings range from the complete burial of benthic biota in the immediate vicinity of the well site due to sediment deposition, smothering effects from raised sedimentation concentrations as a result of elevated TSS, changes to the physico-chemical properties of the seabed sediments (particle size distribution and potential for reduction in oxygen levels within the surface sediments due to organic matter degradation by aerobic bacteria) and subsequent changes to the composition of infauna communities to minor sediment loading above background and no associated ecological effects. Predicted impacts are generally confined to within a few hundred metres of the discharge point (International Association of Oil and Gas Producers 2016) (i.e. within the EMBA for a hydrocarbon spill event).

The discharge of drill cuttings and unrecoverable fluids from relief well drilling is expected to increase turbidity and TSS levels in the water column, leading to an increased sedimentation rate above ambient levels associated with the settlement of suspended sediment particles near to the seabed or below sea surface, depending on location of discharge. Cuttings with retained (unrecoverable) drilling fluids are discharged below the water line at the MODU location, resulting in drill cuttings and drilling fluids rapidly diluting, as they disperse and settle through the water column. The dispersion and fate of the cuttings is determined by particle size and density of the retained (unrecoverable) drilling fluids, therefore, the sediment particles will primarily settle in proximity to the well locations with potential for localised spread downstream (depending on the speed of currents throughout the water column and seabed) (IOGP 2016). The finer particles will remain in suspension and will be transported further before settling on the seabed.

These conclusions were supported by discharge modelling which was undertaken by Woodside in support of the Greater Enfield Development EP. Modelling results indicating that the TSS plume of suspended cuttings will typically disperse to the south-west while oscillating with the tide and diminish rapidly with increasing distance from the well locations. Maximum TSS concentrations predicted for 100 m, 250 m and 1 km distances from the wellsite were 7, 5 and 1 mg/L, respectively. Furthermore, water column concentrations below 10 mg/L remain within 235 m of the discharge location for each modelled well. For all well discharge locations (outside of direct discharge sites), TSS concentration did not exceed 10 mg/l. Nelson et al. (2016) identified <10 mg/L as a no effect or sub-lethal minimal effect concentration.

The low sensitivity of the deep-water benthic communities/habitats within and in the vicinity of relief well locations, combined with the relatively low toxicity of water based muds (WBM) and non-water based muds (NWBMs), there being no bulk discharges of NWBM and the highly localised nature and scale of predicted physical impacts to seabed biota, indicate that any localised impact would likely be of a slight magnitude (especially when considering the broader consequence of the loss of well containment event that a relief well drilling activity would be responding too).

Vessel operations and anchoring

Typical booms used in shoreline protection operations are designed to float, meaning that fauna capable of diving, such as cetaceans, marine turtles and sea snakes can readily avoid contact with the boom. Impacts to species that inhabit the water column such as sharks, rays and fish are not expected. Additionally, some fauna, such as cetaceans, are likely to detect and avoid the spill area, and are not expected to be present in the proximity of containment and recovery operations.

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline protection and surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- damage to vegetation/habitat to gain access to areas of shoreline oiling
- damage or disturbance to wildlife during shoreline surveys
- removal of surface layers of intertidal sediments (potential habitat depletion)
- excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as mangroves and turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- liquids (recovered oil/water mixture), collected during shoreline clean-up and oiled wildlife response operations
- semi-solids/solids (oily solids), collected during shoreline clean-up and oiled wildlife response operations
- debris (e.g. seaweed, sand, woods, plastics), collected during shoreline clean-up and oiled wildlife response operations.

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination of previously uncontaminated areas and/ or impacts to wildlife through contact with or ingestion of waste materials.

Cutting back vegetation could allow additional oil to penetrate the substrate and may also lead to localised habitat loss. However, any loss is expected to be localised in nature and lead to an overall net environmental benefit associated with the response by reducing exposure of wildlife to oiling.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- capturing wildlife
- transporting wildlife
- stabilisation of wildlife
- cleaning and rinsing of oiled wildlife
- rehabilitation (e.g. diet, cage size, housing density)
- release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases, there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to manage and mitigate further injury and the removal of water proofing feathers. Finally, during the release phase it is important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed, the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (Performance Standard (PS) 14.1, PS 17.1).
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 14.2, PS 17.2).

Presence of personnel on the shoreline

- Oversight by trained personnel who are aware of the risks (PS 17.6).
- Trained unit leaders will brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline (PS 17.7).

Human Presence

- Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 7.3, PS 17.5).
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves (PS 17.3).

Waste generation

- All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates (PS 15.4).
- Removal of vegetation will be limited to moderately or heavily oiled vegetation (PS 17.4).
- Teams will segregate liquid and solid wastes at the earliest opportunity (PS 23.1).

Additional stress or injury caused to wildlife

- Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 21.1).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be disproportionate to the environmental benefit gained from its adoption, it has been rejected. Where this is not considered to be the case, the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
 - All known, reasonably practicable control measures have been adopted.
 - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
 - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/impact are deemed acceptable by relevant persons/organisations and are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
 - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans
 - National Water Quality Management Strategy and supporting guidelines for marine water quality)
 - conditions of approval set under other legislation
 - national and international requirements for managing pollution from ships
 - national biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

10 GLOSSARY AND ABBREVIATIONS

10.1 Glossary

Term	Description / Definition
ALARP	Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
Availability	The availability of a control measure is the percentage of time that can perform its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform its required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with PAP.
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the PAP.
Dependency	The degree of reliance on other systems for the control measure to be able to perform its intended function.
Environment that may be affected	The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon threshold concentrations.
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
Major Environment Event	The events with potential environment, reputation, social or cultural consequences of category C or higher (as per Woodside's operational risk matrix) which are evaluated against credible worst-case scenarios which may occur when all controls are absent or have failed.
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed so they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure must achieve to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
Preparedness	Measures taken before an incident to improve the effectiveness of a response
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (WHA, Commonwealth or State marine reserve or park) containing one or more receptor type.

Term	Description / Definition
Receptor Sensitivities	This is a classification scheme to categorise receptor sensitivity to an oil spill. The Environmental Sensitivity Index (ESI) is a numerical classification of the relative sensitivity of a particular environment (particularly different shoreline types) to an oil spill. Refer to the Woodside Oil Pollution Emergency Arrangements (Australia) for more details.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
Survivability	Whether or not a control measure is able to survive a potentially damaging event is relevant for all control measures that are required to function after an incident has occurred.
Threshold	Hydrocarbon threshold concentrations applied to the risk assessment to evaluate hydrocarbon spills. These are defined as: surface hydrocarbon concentration – ≥ 10 g/m ² , dissolved – ≥ 50 ppb and entrained hydrocarbon concentrations – ≥ 100 ppb.
Zone of Application	The zone in which Woodside may elect to apply dispersant. The zone is determined based on a range of considerations, such as hydrocarbon characteristics, weathering and metocean conditions. The zone is a key consideration in the Net Environmental Benefit Analysis for dispersant use.

10.2 Abbreviations

Abbreviation	Meaning
ADIOS	Automated Data Inquiry for Oil Spills
AEP	Australian Energy Producers (formerly APPEA)
ALARP	As low as reasonably practicable
AMOSOC	Australian Marine Oil Spill Centre
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
AUV	Autonomous Underwater Vehicle
BAOAC	Bonn Agreement Oil Appearance Code
BOP	Blowout Preventer
cST	Centistokes
CIMT	Corporate Incident Management Team
DM	Duty Manager
DoT	Western Australia Department of Transport
DBCA	Western Australia Department of Biodiversity, Conservation and Attractions (former Western Australian Department of Parks and Wildlife)
DWER	Western Australia Department of Water and Environmental Regulation
EMBA	Environment that May Be Affected
EMSA	European Maritime Safety Agency
EP	Environment Plan
Environment Regulations	Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023
ESI	Environmental Sensitivity Index
ESD	Emergency Shut Down
ESP	Environmental Services Panel
FPSO	Floating Production Storage Offloading
FSP	First Strike Plan
GIS	Geographic Information System
GPS	Global Positioning System
HSP	Hydrocarbon Spill Preparedness
IAP	Incident Action Plan
IC	Incident Commander
ICS	Incident Command System
IMS	Incident Management System
IMT	Incident Management Team
IPIECA	International Petroleum Industry Environment Conservation Association
ITOPF	International Tanker Owners Pollution Federation
IUCN	International Union for Conservation of Nature
KBSF	King Bay Supply Facility
KSAT	Kongsberg Satellite

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an oil spill from the PAP for CS-01, CS-02 and CS-03. The complete list of potential receptor locations within the EMBA within the PAP is included in Section 4 of the EP.

The locations utilised for the NEBA were limited to the identified RPAs of the PAP identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- Surface contact (>50 g/m²)
- Shoreline accumulation (>100 g/m²) at any time
- Entrained contact (>100 ppb) within 14 days

The detailed NEBA assessment outcomes are shown below. The Scarborough Project Offshore Facility and Trunkline Operations preoperational NEBAs contain the full assessments.

Table A-1: NEBA assessment technique recommendations for MDO oil – CS-01, CS-02, CS-03 (combined NEBA)

Receptor	Operational Monitoring	Containment and recovery	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source Control (Vessel)

Overall assessment

Sensitive receptor (sites identified in EP)	Operational Monitoring	Containment and recovery	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source Control (Vessel)
Is this response Practicable?	Yes	No	No	Potentially	Potentially	Potentially	No	Yes	No	No	Yes
NEBA identifies response potentially of net environmental benefit?	Yes	No	No	Potentially	Potentially	Potentially	No	Yes	No	No	Yes

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

		Degree of impact ¹³		Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	3P	Major	Likely to prevent: <ul style="list-style-type: none"> behavioural impact to biological receptors behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations. 	Decrease in duration of impact by > 5 years	N/A
	2P	Moderate	Likely to prevent: <ul style="list-style-type: none"> significant impact to a single phase of reproductive cycle of biological receptors detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. 	Decrease in duration of impact by 1–5 years	N/A
	1P	Minor	Likely to prevent impacts on: <ul style="list-style-type: none"> significant proportion of population or breeding stages of biological receptors socio-economic receptors such as: <ul style="list-style-type: none"> significant impact to the sensitivity of protective designation; or significant and long-term impact to business/industry. 	Decrease in duration of impact by several seasons (< 1 year)	N/A
	0	Non-mitigated spill impact	No detectable difference to unmitigated spill scenario.		
Negative	1N	Minor	Likely to result in: <ul style="list-style-type: none"> behavioural impact to biological receptors behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations. 	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	Moderate	Likely to result in: <ul style="list-style-type: none"> significant impact to a single phase of reproductive cycle for biological receptors; or detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region. 	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))
	3N	Major	Likely to result in impacts on: <ul style="list-style-type: none"> significant proportion of population or breeding stages of biological receptors socio-economic receptors resulting in either: <ul style="list-style-type: none"> significant impact to the sensitivity of protective designation; or significant and long-term impact to business/industry. 	Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

¹³ NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: OPERATIONAL MONITORING ACTIVATION AND TERMINATION CRITERIA

Table B-1: Operational monitoring objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational Monitoring Operational Plan – 01 (OM01)</p> <p>Predictive Modelling of Hydrocarbons to Assess Resources at Risk</p>	<p>OM01 focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. OM01 utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk.</p> <p>The objectives of OM01 are to:</p> <ul style="list-style-type: none"> • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options to reduce risks to ALARP 	<p>OM01 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The criteria for the termination of OM01 are:</p> <ul style="list-style-type: none"> • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by OM02 surveillance observations) predicts no additional natural resources will be impacted

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational Monitoring Operational Plan – 02 (OM02)</p> <p>Surveillance and reconnaissance to detect hydrocarbons and resources at risk</p>	<p>OM02 aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill.</p> <p>The objectives of OM02 are:</p> <ul style="list-style-type: none"> • Verify spill modelling results and recalibrate spill trajectory models (OM01). • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase. 	<p>OM02 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The termination triggers for the OM02 are:</p> <ul style="list-style-type: none"> • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results (OM01) do not predict surface exposures at visible levels.
<p>Operational Monitoring Operational Plan – 03 (OM03)</p> <p>Monitoring of hydrocarbon presence, properties, behaviour and weathering in water</p>	<p>OM03 will measure surface, entrained and dissolved hydrocarbons in the water column to inform decision-making for spill response activities.</p> <p>The specific objectives of OM03 are as follows:</p> <ul style="list-style-type: none"> • Detect and monitor for the presence, quantity, properties, behaviour and weathering of surface, entrained and dissolved hydrocarbons. • Verify predictions made by OM01 and observations made by OM02 about the presence and extent of hydrocarbon contamination. <p>Data collected in OM03 will also be used for the purpose of longer-term water quality monitoring during SM01.</p>	<p>OM03 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The criteria for the termination of OM03 are as follows:</p> <ul style="list-style-type: none"> • The hydrocarbon release has ceased. • Response activities have ceased. • Concentrations of hydrocarbons in the water are below available ANZECC/ ARMCANZ (2018) trigger values for 99% species protection.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational Monitoring Operational Plan – 04 (OM04)</p> <p>Pre-emptive assessment of sensitive receptors at risk</p>	<p>OM04 aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk.</p> <p>The primary objective of OM04 is to confirm understanding of the status and characteristics of environmental resources predicted by OM01 and OM02 to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources.</p> <p>Indirectly, qualitative/semi-quantitative pre-contact information collected by OM04 on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs.</p> <p>OM04 would be undertaken in liaison with WA DoT as the control agency once the oil is in State Waters (if a Level 2/3 incident).</p>	<p>Triggers for commencing OM04 include:</p> <ul style="list-style-type: none"> • Contact of a sensitive habitat or shoreline is predicted by OM01, OM02 and/or OM03. • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed under OM05). 	<p>The criteria for the termination of OM04 at any given location are:</p> <ul style="list-style-type: none"> • Locations predicted to be contacted by hydrocarbons have been contacted. • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate).
<p>Operational monitoring operational plan – 05 (OM05)</p> <p>Monitoring of contaminated resources</p>	<p>OM05 aims to implement surveys to assess the condition of wildlife and habitats contacted by hydrocarbons at sensitive habitat and shoreline locations.</p> <p>The primary objectives of OM05 are:</p> <ul style="list-style-type: none"> • Record evidence of oiled wildlife (mortalities, sub-lethal impacts, number, extent, location) and habitats (mortalities, sub-lethal impacts, type, extent of cover, area, hydrocarbon character, thickness, mass and content) throughout the response and clean-up at locations contacted by hydrocarbons to inform and prioritise clean-up efforts and resources, while minimising the potential impacts of these activities. <p>Indirectly, the information collected by OM05 may also support the assessment of environmental impacts, as determined through subsequent SMPs.</p> <p>OM05 would be undertaken in liaison with WA DoT as the control agency once the oil is in State Waters (if a Level 2/3 incident).</p>	<p>OM05 will be triggered when a sensitive habitat or shoreline is predicted to be contacted by hydrocarbons by OM01, OM02 and/or OM03.</p>	<p>The criteria for the termination of OM05 at any given location are:</p> <ul style="list-style-type: none"> • No additional response or clean-up of wildlife or habitats is predicted. • Spill response and clean-up activities have ceased. <p>OM05 survey sites established at sensitive habitat and shoreline locations will continue to be monitored during SM02.</p> <p>The formal transition from OM05 to SM02 will begin on cessation of spill response and clean-up activities.</p>

ANNEX C: OIL SPILL SCIENTIFIC MONITORING PROGRAM

Oil spill environmental monitoring

The following provides some further detail on Woodside's oil spill scientific monitoring Program and includes the following:

- The organisation, roles and responsibilities of the Woodside oil spill scientific monitoring team and external resourcing.
- A summary table of the ten scientific monitoring programs as per the specific focus receptor, objectives, activation triggers and termination criteria.
- Details on the oil spill environmental monitoring activation and termination decision-making processes.
- Baseline knowledge and environmental studies knowledge access via geo-spatial metadata databases.
- An outline of the reporting requirements for oil spill scientific monitoring programs.

Oil Spill Scientific Monitoring – Delivery Team Roles and Responsibilities

Woodside Oil Spill Scientific Monitoring Delivery Team

The Woodside science team are responsible for the delivery of the oil spill scientific monitoring. The roles and responsibilities of the Woodside scientific monitoring delivery team are presented in Table C-1 and the organisational structure and Corporate Incident Management Team (CIMT) linkage provided in Figure C-1.

Woodside Oil Spill Scientific monitoring program – External Resourcing

In the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors, scientific monitoring personnel and scientific equipment to implement the appropriate SMPs will be provided by SMP Standby contractor who hold a standby contract for SMP via the Woodside Environmental Services Panel (ESP). If additional resources are required other consultancy capacity within the Woodside ESP will be utilised (as needed and may extend to specialist contractors such as research agencies engaged in long-term marine monitoring programs). In consultation with the SMP Standby Contractor and/or specialist contractors, the selection, field sampling and approach of the SMPs will be determined by the nature and scale of the spill.

Table C-1: Woodside and Environmental Service Provider – Oil Spill Scientific Monitoring Program Delivery Team Key Roles and Responsibilities

Role	Location	Responsibility
Woodside Roles		
SMP Lead/Manager	Onshore	<ul style="list-style-type: none"> Approves the SMPs activated based on operational monitoring data provided by the Planning Section Provides advice to the CIMT in relation to scientific monitoring Provides technical advice regarding the implementation of scientific monitoring Approves detailed sampling plans prepared for SMPs Directs liaison between statutory authorities, advisors and government agencies in relation to SMPs.
SMP Co-Ordinator	Onshore	<ul style="list-style-type: none"> Activates the SMPs based on operational monitoring data provided by the Planning Section Sits in the Planning Section of the CIMT. Liaises with other CIMT Sections to deliver required logistics, resources and operational support from Woodside to support the Environmental Service Provider in delivering on the SMPs. Acts as the conduit for advice from the SMP Lead/Manager to the Environmental Service Provider Manages the Environmental Service Provider's implementation of the SMPs Liaises with the Environmental Service Provider on delivery of the SMPs Arranges all contractual matters, on behalf of Woodside, associated with the Environmental Service Provider's delivery of the SMPs.
Environmental Service Provider Roles		
SMP Standby Contractor – SMP Duty Manager/Project Manager (SMP Liaison Officer)	Onshore	<ul style="list-style-type: none"> Coordinates the delivery of the SMPs Provides costings, schedule and progress updates for delivery of SMPs Determines the structure of the Environmental Service Provider's team to necessitate delivery of the SMPs Verifies that HSE Plans, detailed sampling plans and other relevant deliverables are developed and implemented for delivery of the SMPs Directs field teams to deliver SMPs Arranges all contractual matters, on behalf of Environmental Service Provider, associated with the delivery of the SMPs to Woodside Manages sub-consultant delivery to Woodside Provides required personnel and equipment to deliver the SMPs.
SMP Field Teams	Offshore – Monitoring Locations	<ul style="list-style-type: none"> Delivers the SMPs in the field consistent with the detailed sampling plans and HSE requirements, within time and budget. Early communication of time, budget, HSE risks associated with delivery of the SMPs to the Environmental Service Provider – Project Manager Provides start up, progress and termination updates to the Environmental Service Provider – Project Manager (will be led in-field by a party chief).

Table C-2: Oil Spill Environmental Monitoring: Scientific Monitoring Program – Objectives, Activation Triggers and Termination Criteria

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
Scientific monitoring program 1 (SM01) Assessment of Hydrocarbons in Marine Waters	<p>SM01 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine waters following the spill and the response.</p> <p>The specific objectives of SM01 are as follows:</p> <ul style="list-style-type: none"> Assess and document the extent, severity and persistence of hydrocarbon contamination with reference to observations made during surveillance activities and / or in-water measurements made during operational monitoring; and Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs. 	<p>SM01 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors</p>	<p>SM01 will be terminated when:</p> <ul style="list-style-type: none"> Operational monitoring data relating to observations and / or measurements of hydrocarbons on and in water have been compiled, analysed and reported; and The report provides details of the extent, severity and persistence of hydrocarbons which can be used for analysis of impacts recorded for sensitive receptors monitored under other SMPs. <p>SMP monitoring of sensitive receptor sites:</p> <ul style="list-style-type: none"> Concentrations of hydrocarbons in water samples are below NOPSEMA guidance note (201914) concentrations of 1 g/m² for floating, 10 ppb for entrained and dissolved; and Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in water have been documented at sensitive receptor sites monitored under other SMPs.
Scientific monitoring program 2 (SM02) Assessment of the Presence, Quantity and Character of Hydrocarbons in Marine Sediments	<p>SM02 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine sediments following the spill and the response.</p> <p>The specific objectives of SM02 are as follows:</p> <ul style="list-style-type: none"> Determine the extent, severity and persistence of hydrocarbons in marine sediments across selected sites where hydrocarbons were observed or recorded during operational monitoring; and Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs. 	<p>SM02 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> Response activities have ceased; and Operational monitoring results made during the response phase indicate that shoreline, intertidal or sub-tidal sediments have been exposed to surface, entrained or dissolved hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation). 	<p>SM02 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of:</p> <ul style="list-style-type: none"> Concentrations of hydrocarbons in sediment samples are below ANZECC/ ARMCANZ (201315) sediment quality guideline values (SQGVs) for biological disturbance; and Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in sediments have been documented.
Scientific monitoring program 3 (SM03) Assessment of Impacts and Recovery of Subtidal and Intertidal Benthos	<p>The objectives of SM03 are:</p> <ul style="list-style-type: none"> Characterize the status of intertidal and subtidal benthic habitats and quantify any impacts to functional groups, abundance and density that may be a result of the spill; and Determine the impact of the hydrocarbon spill and subsequent recovery (including impacts associated with the implementation of response options). <p>Categories of intertidal and subtidal habitats that may be monitored include:</p> <ul style="list-style-type: none"> Coral reefs Seagrass Macro-algae Filter-feeders <p>SM03 will be supported by sediment contamination records (SM02) and characteristics of the spill derived from OMPs.</p>	<p>SM03 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of PBAs of receptor locations identified by time to hydrocarbon contact >10 days, to target receptors and sites where it is possible to acquire pre-hydrocarbon contact baseline; and Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for subtidal and intertidal benthic habitat. 	<p>SM03 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of:</p> <ul style="list-style-type: none"> Overall impacts to benthic habitats from hydrocarbon exposure have been quantified. Recovery of impacted benthic habitats has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 4 (SM04) Assessment of Impacts and Recovery of Mangroves / Saltmarsh	<p>The objectives of SM04 are:</p> <ul style="list-style-type: none"> Characterize the status of mangroves (and associated salt marsh habitat) at shorelines exposed/contacted by spilled hydrocarbons; Quantify any impacts to species (abundance and density) and mangrove/saltmarsh community structure; and 	<p>SM04 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; and 	<p>SM04 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of:</p> <ul style="list-style-type: none"> Impacts to mangrove and saltmarsh habitat from hydrocarbon exposure have been quantified. Recovery of impacted mangrove/saltmarsh habitat has been evaluated.

¹⁵ Simpson SL, Batley GB and Chariton AA (2013). Revision of the ANZECC/ARMCANZ Sediment Quality Guidelines. CSIRO and Water Science Report 08/07. Land and Water, pp. 132.

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
	<ul style="list-style-type: none"> Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options). <p>SM03 will be supported by sediment sampling undertaken in SM02 and characteristics of the spill derived from OMPs.</p>	<ul style="list-style-type: none"> Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for mangrove/saltmarsh habitat. 	<ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 5 (SM05) Assessment of Impacts and Recovery of Seabird and Shorebird Populations	<p>The Objectives of SM05 are to:</p> <ul style="list-style-type: none"> Collate and quantify impacts to avian wildlife from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population level; and Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to seabirds and shorebird populations at targeted breeding colonies / staging sites / important coastal wetlands where hydrocarbon contact was recorded. 	<p>SM05 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Operational monitoring predicts shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at important bird colonies / staging sites / important coastal wetland locations; or Records of dead, oiled or injured bird species made during the hydrocarbon spill or response. 	<p>SM05 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Impacts to seabird and shorebird populations from hydrocarbon exposure have been quantified. Recovery of impacted seabird and shorebird populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 6 (SM06) Assessment of Impacts and Recovery of Nesting Marine Turtle Populations	<p>The objectives of SM06 are to:</p> <ul style="list-style-type: none"> To quantify impacts of hydrocarbon exposure or contact on marine turtle nesting populations (including impacts associated with the implementation of response options); Collate and quantify impacts to adult and hatchling marine turtles from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels (including impacts associated with the implementation of response options); and Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to nesting marine turtle populations at known rookeries (including impacts associated with the implementation of response options). 	<p>SM06 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Predicted shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known marine turtle rookery locations; or Records of dead, oiled or injured marine turtle species made during the hydrocarbon spill or response. 	<p>SM06 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Impacts to nesting marine turtle populations from hydrocarbon exposure have been quantified. Recovery of impacted nesting marine turtle populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 7 (SM07) Assessment of Impacts to Pinniped Colonies including Haul-out Site Populations	<p>The objectives of SM07 are to:</p> <ul style="list-style-type: none"> Quantify impacts on pinniped colonies and haul-out sites as a result of hydrocarbon exposure/contact. Collate and quantify impacts to pinniped populations from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels. 	<p>SM07 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Identified shoreline contact of hydrocarbons ((at or above 0.5 g/m² surface, ≥5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known pinniped colony or haul-out site(s) (i.e. most northern site is the Houtman Abrolhos Islands); or Records of dead, oiled or injured pinniped species made during the hydrocarbon spill or response. 	<p>SM07 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Impacts to pinniped populations from hydrocarbon exposure have been quantified. Recovery of pinniped populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 8 (SM08) Desk-Based Assessment of Impacts to Other Non-Avian Marine Megafauna	<p>The objective of SM08 is to provide a desk-based assessment which collates the results of OM02 and OM05 where observations relate to the mortality, stranding or oiling of mobile marine megafauna species not addressed in SM06 or SM07, including:</p> <ul style="list-style-type: none"> Cetaceans; Dugongs; 	<p>SM08 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring reports records of dead, oiled or injured non-avian marine megafauna during the spill/ response phase.</p>	<p>SM08 will be terminated when the results of the post-spill monitoring have quantified impacts to non-avian megafauna.</p>

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
	<ul style="list-style-type: none"> Whale sharks and other shark and ray populations; Sea snakes; and Crocodiles. <p>The desk-based assessment will include population analysis to infer potential impacts to marine megafauna species populations.</p>		<ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 9 (SM09) Assessment of Impacts and Recovery of Marine Fish associated with SM03 habitats	<p>The objectives of SM09 are:</p> <ul style="list-style-type: none"> Characterise the status of resident fish populations associated with habitats monitored in SM03 exposed/contacted by spilled hydrocarbons; Quantify any impacts to species (abundance, richness and density) and resident fish population structure (representative functional trophic groups); and Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options). 	<p>SM09 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented with SM03.</p>	<p>SM09 will be undertaken and terminated concurrent with monitoring undertaken for SM03, as per the SMP termination criteria process</p> <ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 10 (SM10) SM10 - Assessment of physiological impacts important fish and shellfish species (fish health and seafood quality/safety) and recovery	<p>SM10 aims to assess any physiological impacts to important commercial fish and shellfish species (assessment of fish health) and if applicable, seafood quality/safety. Monitoring will be designed to sample key commercial fish and shellfish species and analyse tissues to identify fish health indicators and biomarkers, for example:</p> <ul style="list-style-type: none"> Liver Detoxification Enzymes (ethoxyresorufin-O-deethylase (EROD) activity) PAH Biliary Metabolites Oxidative DNA Damage Serum SDH Other physiological parameters, such as condition factor (CF), liver somatic index (LSI), gonado-somatic index (GSI) and gonad histology, total weight, length, condition, parasites, egg development, testes development, abnormalities. Seafood tainting may be included (where appropriate) using applicable sensory tests to objectively assess targeted finfish and shellfish species for hydrocarbon contamination. <p>Results will be used to make inferences on the health of commercial fisheries and the potential magnitude of impacts to fishing industries.</p>	<p>SM10 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring (OM01, OM02 and OM05) indicates the following:</p> <ul style="list-style-type: none"> The hydrocarbon spill will or has intersected with active commercial fisheries or aquaculture activities. Commercially targeted finfish and/or shellfish mortality has been observed/recorded. Commercial fishing or aquaculture areas have been exposed to hydrocarbons (≥ 0.5 g/m² surface and ≥ 5 ppb for entrained/dissolved hydrocarbons); and Taste, odour or appearance of seafood presenting a potential human health risk is observed. 	<p>SM10 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Physiological impacts to important commercial fish and shellfish species from hydrocarbon exposure have been quantified. Recovery of important commercial fish and shellfish species from hydrocarbon exposure has been evaluated. Impacts to seafood quality/safety (if applicable) have been assessed and information provided to the relevant persons/ organisations and regulators for the management of any impacted fisheries. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.

Activation Triggers and Termination Criteria

Scientific monitoring program – Activation

The Woodside oil spill scientific monitoring team will be stood up immediately with the occurrence of a hydrocarbon spill (actual or suspected) Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors via the first strike plan for the petroleum activity programme. The presence of any level of hydrocarbons in the marine environment triggers the activation of the oil spill scientific monitoring program (SMP). This is to consider the full range of eventualities relating to the environmental, socio-economic and health consequences of the spill in the planning and execution of the SMP. The activation process also takes into consideration the management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the EPBC Act) potentially exposed to hydrocarbons. With the first 24-48 hours of a spill event, such information will be sourced and evaluated as part of the SMP planning process guided by Appendix D (identified receptors vulnerable to hydrocarbon contact), the information presented in the Existing Environment section of the EP as well as other information sources such as the Woodside Baseline Environmental Studies Database.

The starting point for decision-making on what SMPs are activated and spatial extent of monitoring activities will be based on the predictive modelling results (OM01) in the first 24-48 hours until more information is made available from other operational monitoring activities such as aerial surveillance and shoreline surveys. Pre-emptive Baseline Areas (WHA, CMRs and State Marine Parks encompassing key ecological and socio-economic values) are a key focus of the SMP activation decision-making process, particularly, in the early spill event/response phase. As the operational monitoring progresses and further situational awareness information becomes available, it will be possible to understand the nature and scale of the spill. The SMP activation and implementation decision-making will be revisited daily to account for the updates on spill information. One of the priority focus areas in the early phase of the incident will be to identify and execute pre-emptive SMP assessments at key receptor locations, as required. The SMP activation and implementation decision tree is presented in Figure C-2.

Scientific monitoring Program – Termination

The basis of the termination process for the active SMPs (SMPs 1-10) will include quantification of impacts, evaluation of recovery for the receptor at risk and consultation with relevant authorities, persons and organisations. Termination of each SMP will not be considered until the results (as presented in annual SMP reports for the duration of each program) indicate that the target receptor has returned to pre-spill condition.

Once the SMP results indicate impacted receptor(s) have returned to pre-spill condition (as identified by Woodside) a termination decision-making process will be triggered and steps will be undertaken as follows:

- Woodside will engage expert opinion on whether the receptor has returned to pre-spill condition (based on monitoring data). Subject Matter Expert (SMEs) will be engaged (via the Woodside SME scientific monitoring terms of reference to review program outcomes, provide expert advice and recommendations for the duration of each SMP).
- Where expert opinion agrees that the receptor has returned to pre-spill condition, findings will then be presented to the relevant authorities, persons and organisations (as defined by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulation 11A). Stakeholder identification, planning and engagement will be managed by Woodside's Reputation Functional Support Team (FST) and follow the Stakeholder Management FST. These guidelines outline the FST roles and responsibilities, competencies, communications and planning processes. An assessment of the merits of any objection to termination will be documented in the SMP final report.
- Woodside will decide on termination of SMP based on expert opinion and merits of any relevant persons'/ organisations' objections. The final report following termination will include: monitoring results, expert opinion and consultation, including merits of any objections.
- Termination of SMPs will also consider applicable management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the EPBC Act).

The SMP termination decision-making process will be applied to each active SMP and an iterative process of decision steps continued until each SMP has been terminated (refer to decision-tree diagram for SMP termination criteria, Figure C-3).

SMP ACTIVATION & IMPLEMENTATION DECISION PROCESS

Receptors at Risk and Baseline Knowledge

To assess the baseline studies available and suitability for oil spill scientific monitoring, Woodside maintains knowledge of environmental baseline studies through the upkeep and use of its Environmental Knowledge Management System.

Woodside's Environmental Knowledge Management System is a centralised platform for scientific information on the existing environment, marine biodiversity, Woodside environmental studies, key environmental impact topics, key literature and web-based resources. The system comprises several data directories and an environmental baseline database, as well as folders within the 'Corporate Environment' server space. The environmental baseline database was set up to support Woodside's SMP preparedness and as a SMP resource in the event of an unplanned hydrocarbon spill. The environmental baseline database is subject to updates including annual reviews completed as part of SMP standby contract. This database is accessed pre-PAP to identify PBAs where hydrocarbon contact is predicted to occur <10 days.

In addition to Woodside's Environmental Knowledge Management System, many relevant baseline datasets are held by other organisations (e.g. other oil and gas operators, government agencies, state and federal research institutions and non-governmental organisations). To understand the present status of environmental baseline studies a spatial environmental metadata database for Western Australia (Industry-Government Environmental Metadata, IGEM) was established. IGEM is a collaboration comprising oil and gas operators (including Woodside), government and research agencies and other organisations. IGEM held data were integrated into the DWER IMSA¹⁶ in 2020. IMSA is an online portal for information about marine-based environmental surveys in Western Australia. IMSA is a project of DWER for the systematic capture and sharing of marine data created as part of an environmental impact assessment (EIA).

In the event of an unplanned hydrocarbon release, Woodside intends to interrogate the information on baseline studies status as held by the various databases (e.g. Woodside Environmental Knowledge Management System, IMSA and other sources of existing baseline data) to identify Pre-emptive Baseline Areas (PBAs), i.e., receptors at risk where hydrocarbon contact is predicted to be >10 days, and baseline data can be collected before hydrocarbon contact.

Reporting

For the scientific monitoring program relevant regulators will be provided with:

- Annual reports summarising the SMPs deployed and active, data collection activities and available findings; and
- Final reports for each SMP summarising the quantitative assessment of environmental impacts and recovery of the receptor once returned to pre-spill condition and termination of the monitoring program.

The reporting requirements of the scientific monitoring program will be specific to the individual SMPs deployed and terms of responsibilities, report templates, schedule, quality assurance/ quality control (QA/QC) and peer-review will be agreed with the contractors engaged to conduct the SMPs. Compliance and auditing mechanisms will be incorporated into the reporting terms.

CONTROL AGENCIES AND INCIDENT CONTROLLERS

Source	Location	Level	Control Agency	Incident Controller
Spill from facility including subsea infrastructure Note: pipe laying and accommodation vessels are considered a "facility" under Australian regulations	Commonwealth waters	1	Woodside	Person In Charge (PIC) with support from Onshore Team Leader (OTL)
		2/3	Woodside	Corporate Incident Management Team (CIMT) Incident Commander
	State waters	1	Woodside	CIMT IC
		2/3	Western Australia Department of Transport (DoT)	DoT Incident Controller
	Within port limits	1	Woodside	CIMT IC
		2/3	DoT	DoT Incident Controller
Spill from vessel Note: SOPEP should be implemented in conjunction with this document	Commonwealth waters	1	Australian Marine Safety Authority (AMSA)	Vessel Master
		2/3	AMSA	AMSA (with response assistance from Woodside)
	State waters	1	DoT	DoT Incident Controller
		2/3	DoT	DoT Incident Controller
	Within port limits	1	Port Authority	Port Harbour Master
		2/3	Port Authority/ DoT	Port Harbour Master/ DoT Incident Controller

SPILLS IN STATE/ PORT WATERS

In the event of a hydrocarbon spill (hereafter 'spill') where Woodside Energy Ltd ('Woodside') is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport (DoT). In the event that Woodside is the responsible party for a spill that occurs within port limits, Woodside will notify the Port Authority and DoT for all spill levels.

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DoT Incident Management Team (IMT) ([APPENDIX F – Woodside Liaison Officer resources to DoT](#)). DoT/ Port Authority's role as the Controlling Agency in State waters/ within port limits does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State waters/ within port limits, or to commence the initial response actions to a spill prior to DoT establishing incident control in line with DoT *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note:

https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside's Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer's command structure within DoT can be seen at [APPENDIX E – Woodside Incident Management Structure](#).

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in [APPENDIX D – Coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines](#).

RESPONSE PROCESS OVERVIEW

For guidance on credible scenarios and hydrocarbon characteristics, refer to APPENDIX A							
ALL INCIDENTS	Notify the Woodside Communication Centre (WCC) on: [REDACTED]						
	Incident Controller or delegate to make relevant notifications in Table 1-1 of this Oil Pollution First Strike Plan.						
LEVEL 1	<table border="1"> <thead> <tr> <th>FACILITY INCIDENT</th> <th>VESSEL INCIDENT</th> </tr> </thead> <tbody> <tr> <td>Coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.</td> <td>Notify AMSA or Port Authority (if within port limits) and coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan Remember to download each Operational Plan.</td> </tr> </tbody> </table>	FACILITY INCIDENT	VESSEL INCIDENT	Coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.	Notify AMSA or Port Authority (if within port limits) and coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan Remember to download each Operational Plan.		
	FACILITY INCIDENT	VESSEL INCIDENT					
Coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.	Notify AMSA or Port Authority (if within port limits) and coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan Remember to download each Operational Plan.						
If the spill escalates such that the site cannot manage the incident, inform the WCC on: [REDACTED] and escalate to a level 2/3 incident.							
LEVEL 2/3	<table border="1"> <thead> <tr> <th>FACILITY INCIDENT</th> <th>VESSEL INCIDENT</th> </tr> </thead> <tbody> <tr> <td>Handover control to CIMT and notify DoT or Port Authority (if within port limits)</td> <td>Handover control to AMSA or Port Authority (if within port limits) and stand up CIMT to assist.</td> </tr> <tr> <td>Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.</td> <td>If requested by AMSA/Port Authority: Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.</td> </tr> </tbody> </table>	FACILITY INCIDENT	VESSEL INCIDENT	Handover control to CIMT and notify DoT or Port Authority (if within port limits)	Handover control to AMSA or Port Authority (if within port limits) and stand up CIMT to assist.	Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.	If requested by AMSA/Port Authority: Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.
	FACILITY INCIDENT	VESSEL INCIDENT					
	Handover control to CIMT and notify DoT or Port Authority (if within port limits)	Handover control to AMSA or Port Authority (if within port limits) and stand up CIMT to assist.					
Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.	If requested by AMSA/Port Authority: Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.						
Create an Incident Action Plan (IAP) for ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational Net Environmental Benefit Analysis (NEBA) see the OSPRMA Appendix A.	If requested by AMSA/Port Authority: Create an IAP for ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational NEBA see the OSPRMA Appendix A.						

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a Woodside representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant vessel Emergency Response Plans and/or Bridging Documents

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	CIMT IC	[REDACTED]	Verbally notify WCC of event and estimated volume and hydrocarbon type.	Verbal	
Within 2 hours	Woodside Site Rep (WSR), Corporate Incident Management Team Duty Manager (CIMT DM) or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA ¹)	Incident notification office	[REDACTED]	Verbally notify NOPSEMA for spills >80L. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DEMIRS).	■	
Within 3 days	WSR, CIMT DM or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DEMIRS). NOPSEMA [REDACTED] NOPTA [REDACTED] DEMIRS [REDACTED]	■	
As soon as practicable	CIMT IC or Delegate	Woodside	Environment Unit Leader	As per roster	Verbally notify Environment Unit Leader of event and seek advice on relevant performance standards from EP.	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT IC or Delegate	DoT	DoT Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[REDACTED]	Verbally notify DoT MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha. Follow up with a written Marine Pollution Report (POLREP) as soon as practicable following verbal notification. Additionally, DoT to be notified if spill is likely to extend into WA State waters. Request DoT to provide liaison to Woodside IMT.	■	
As soon as practicable if spill arises in or is likely to extend into port limits.	CIMT IC or Delegate	Pilbara Ports Authority (PPA)	PPA Dampier Vessel Traffic Services (VTS)	[REDACTED]	Any spill within or close to the Dampier Port boundary should be reported immediately to the PPA Dampier VTS.	Verbal/■	
As soon as practicable	CIMT IC or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks	Marine Park Compliance Duty Officer	[REDACTED]	The Marine Park Compliance Duty Officer is notified in the event of oil pollution within a marine park, or where an oil spill response action must be taken within a marine park, so far as reasonably practicable, prior to response action being taken. This notification should include: <ul style="list-style-type: none"> • titleholder details • time and location of the incident • proposed response arrangements and locations as per the OPEP • contact details for the response coordinator • confirmation of access to relevant monitoring and evaluation reports when available. 	Verbal	
As soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land	CIMT IC or Delegate	DBCA	Duty Officer	[REDACTED]	Phone call notification to Pilbara regional office.	Verbal	

¹ Notification to NOPSEMA must be from a Woodside Representative.

or waters managed by WA Department of Biodiversity, Conservation and Attractions (DBCA)				██████████ ██████████			
As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons/organisations such as, but not limited to, commercial fishers and tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for the Scarborough Offshore Facility and Trunkline Operations activity. Relevant persons/organisations will be re-assessed throughout the response period.	Verbal initially	
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the OSPRMA for the Scarborough Offshore Facility and Trunkline Operations activity. Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially	
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL							
"Without delay" as per Protection of the Sea (Prevention of Pollution from Ships) Act 1983 (Cth) s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Response Coordination Centre (RCC)	██████████ ██████████	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with written Harmful Substances Report (POLREP – AMSA) as soon as practicable.	██████████	
ADDITIONAL LEVEL 2/3 NOTIFICATIONS							
As soon as practicable	CIMT IC or Delegate	Australian Marine Oil Spill Centre (AMOSC)	AMOSC Duty Manager	██████████	Notify AMOSC that a spill has occurred and follow-up with an email from the CIMT IC/ Deputy CIMT IC/CMT Leader to formally activate AMOSC. Determine what resources are required consistent with the AMOS Plan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	██████████	
As soon as practicable	CIMT IC or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	██████████	Contact OSRL duty manager and request assistance from technical advisor in Perth. Send the completed notification form to OSRL as soon as practicable.	██████████	
					For mobilisation of resources, send the mobilisation form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside. OSRL can advise the names on the call out authority list, if required.	██████████	
As soon as practicable if extra personnel are required for incident support	CIMT IC or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	██████████ ██████████	Activate the contract with MSRC (in full) for the provision of up to 30 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal	

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Dry gas					
Operational monitoring – tracking buoy (OM02)	Yes	No	ALL	If a vessel is on location, consider the need to deploy the oil spill tracking buoy. If no vessel is on location, consider the need to mobilise oil spill tracking buoys from the King Bay Supply Base (KBSB) Stockpile. If a surface sheen is visible from the facility, deploy the satellite tracking buoy within two hours.	Operations	WITHIN 24 HOURS: Tracking buoy deployed within 2 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02 of The Operational Monitoring Operational Plan). Deploy tracking buoy in accordance with Link .
Operational monitoring – predictive modelling (OM01)	Yes	No	ALL	MDO: Undertake initial modelling using the Rapid Assessment Oil Spill Tool and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in Appendix A . Dry gas (Level 2/3): If feasible, existing worst-case discharge modelling will be verified with available real-time data.	Situation or Environment	WITHIN 24 HOURS: Initial modelling within 6 hours using the Rapid Assessment Tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk (OM01 of The Operational Monitoring Operational Plan). <i>Planning Section to download immediately and follow steps.</i>
	Yes	No	ALL	MDO: Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response [REDACTED].	Situation	WITHIN 24 HOURS: Detailed modelling within 4 hours of RPS Response receiving information from Woodside.	
Operational monitoring – aerial surveillance (OM02)	Yes	No	ALL	MDO: Instruct Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8 . Dry gas (Level 2/3): overflights only feasible if gas detection indicates it is safe to do so.	Logistics – Aviation	WITHIN 24 HOURS: 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02 of The Operational Monitoring Operational Plan). <i>Planning Section to download immediately and follow steps.</i>
Operational monitoring – satellite tracking (OM02)	Yes	No	ALL	The Situation Unit Leader to action satellite imagery services. This may be obtained via: <ul style="list-style-type: none"> • AMOSC Duty Manager: [REDACTED] • OSRL Duty Manager: [REDACTED] • KSAT: [REDACTED] • Others identified by CIMT. 	Situation	WITHIN 24 HOURS: Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Operational monitoring – monitoring hydrocarbons in water (OM03)	Yes	No	ALL	MDO: Consider the need to mobilise resources to undertake water quality monitoring (OM03).	Planning or Environment	WITHIN 72 HOURS: Water quality assessment access and capability. Daily fluorometry reports will be provided to IMT.	Detecting and Monitoring for the Presence and Properties of Hydrocarbons in the Marine Environment (OM03 of The Operational Monitoring Operational Plan).
Operational monitoring – pre-emptive assessment of receptors at risk (OM04)	Yes	No	ALL	MDO: Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk (OM04).	Planning or Environment	WITHIN 24 HOURS: In agreement with WA DoT, deployment of 1 specialist for each of the Response Protection Areas (RPA) with predicted impacts.	Pre-emptive Assessment of Sensitive Receptors (OM04 of The Operational Monitoring Operational Plan).
Operational monitoring – shoreline assessment (OM05)	Yes	No	ALL	MDO: Consider the need to mobilise resources to undertake shoreline assessment surveys (OM05).	Planning or Environment	WITHIN 24 HOURS: In agreement with WA DoT, deployment of 1 specialist trained in Shoreline Clean-up Assessment Technique (SCAT) for each of the RPAs with predicted impacts.	Shoreline Assessment (OM05 of The Operational Monitoring Operational Plan).
Surface dispersant	No	No	N/A	This response strategy is not recommended.			
Containment and recovery	No	No	N/A	This response strategy is not recommended.			
Mechanical dispersion	No	No	N/A	This response strategy is not recommended.			
In-situ burning	No	No	N/A	This response strategy is not recommended.			
Shoreline protection and deflection	Yes	No	L2/3	Equipment from Woodside, Pilbara Port Authority (PPA) (if within port limits), AMOSC and AMSA Western Australian Stockpiles mobilised. Consideration of mobilisation of interstate/international shoreline protection equipment (i.e. OSRL).	Operations and Planning	WITHIN 24 HOURS: In agreement with WA DoT, activate relevant Tactical Response Plans (TRPs) within 12 hours. In agreement with WA DoT, mobilise teams to RPAs within 24 hours of operational monitoring predicting impacts.	Protection and Deflection Operational Plan. <i>Logistics Section to download immediately and follow steps.</i>

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Dry gas					
	Yes	No				In agreement with WA DoT, equipment mobilised from closest stockpile within 24 hours. WITHIN 48 HOURS: Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours. Supplementary equipment mobilised from OSRL within 48 hours.	
Shoreline clean-up	Yes	No	L2/3	Equipment from Woodside, and/or PPA (if within port limits) AMOSC and AMSA Western Australian Stockpiles and relevant personnel mobilised. Consideration of mobilisation of interstate/international shoreline clean-up equipment and relevant personnel (i.e. OSRL).	Logistics and Planning	WITHIN 24 HOURS: Relevant Tactical Response Plans (TRPs) will be identified in the First Strike Plan for activation within 24 hours of a release. In liaison with WA DoT (for Level 2/3 incidents), mobilise and deploy 1-2 shoreline clean-up operations within 24 hours. In agreement with WA DoT, equipment mobilised from closest stockpile within 24 hours. Access to ~124 m ³ of solid and liquid waste storage available within 24 hours upon activation of 3 rd party contract. WITHIN 48 HOURS: Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours. Supplementary equipment mobilised from OSRL within 48 hours.	Shoreline Clean-up Operational Plan. <i>Logistics Section to download immediately and follow steps.</i>
Oiled wildlife response	Yes	No	L2/3	If oiled wildlife is a potential impact, request AMOSC to mobilise containerised oiled wildlife first strike kits and relevant personnel. Refer to relevant Tactical Response Plan for potential wildlife at risk. Mobilise AMOSC oiled wildlife containers. Consider whether additional equipment is required from local suppliers.	Logistics and Planning	WITHIN 24 HOURS: Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by relevant Operational Monitoring techniques (OM01-05) and in liaison with DBCA.	Oiled Wildlife Response Operational Plan.
Scientific monitoring (type II)	Yes	No	L2/3	Notify Woodside science team of spill event.	Environment		Oil Spill Scientific Monitoring Programme – Operational Plan.
Source Control Techniques							
Well Intervention - SFRT	No	Yes	L2/3	Dry Gas: As per Source Control Emergency Response Plan.	Operations, Logistics and Planning (source control)	WITHIN 48 HOURS: Remotely Operated Vehicle (ROV) on Mobile Offshore Drilling Unit (MODU) ready for deployment within 48 hours.	Subsea First Response Toolkit (SFRT) Operational Plan Source Control Emergency Response Plan.
Subsea Dispersant	No	No	N/A	Not applicable for a diesel spill or dry gas release.			
Capping Stack	No	Yes	L2/3	Dry Gas: Conventional/vertical capping stack deployment with a heavy lift vessel will be attempted at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew and consideration to the factors that may influence a safe deployment such as plume and environmental conditions (e.g. wind speed, wave height and current).	Operations, Logistics and Planning (source control)	DAY 16: Capping stack deployed by a chartered construction vessel.	SFRT and Capping Stack Operational Plan. Source Control Emergency Response Plan.
Relief Well	No	Yes	L2/3	Dry Gas: As per Source Control Emergency Response Plan.	Operations, Logistics and Planning (source control)	WITHIN 24 HOURS: Identify source control vessel availability within 24 hours. ROV on MODU ready for deployment within 48 hours. MODU mobilised to location.	Source Control Emergency Response Plan.

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on stochastic hydrocarbon spill modelling results, only CS-01 is predicted to result in shoreline contact at feasible response thresholds (>100 g/m²). The sensitive receptors outlined in **Table 3-1** are identified as priority protection areas, as they have the potential to be contacted by hydrocarbon at or above impact threshold levels within ~48 hours of a spill.

Table 3-1: Receptors for Priority Protection with Potential Impact within ~48 Hours

Receptor	Distance and Direction from Operational Area (km)	Minimum time to shoreline contact (above 100 g/m ²) in days	Maximum shoreline accumulation (above 100 g/m ²) in m ³	Tactical Response Plans
Dampier Archipelago	Adjacent to Trunkline Operational Area (State Waters end)	0.75	55	Mermaid Sound - Dampier Archipelago Inshore Waters
Keast Island	8.54 km east of Trunkline Operational Area (State Waters end)	0.75	20	
Gidley Island	8.97 km south-east of Trunkline Operational Area (State Waters end)	1.63	12	
Cape Bruguieres	6 km south-east of Trunkline Operational Area (State Waters end)	1.25	48	
Angel Island	12.10 km south-east of Trunkline Operational Area (State Waters end)	2.46	3	
Cohen Island	5.83 km east of Trunkline Operational Area (State Waters end)	1.29	5	
Rosemary Island	15.80 km south-west of Trunkline Operational Area (State Waters end)	1.21	21	Rosemary Island – Dampier
Legendre Island	9.53 km east of Trunkline Operational Area (State Waters end)	0.83	15	Legendre Island – Dampier

Tactical Response plans for these and other locations can be accessed via this [link](#) and include the details of potential forward operating bases and staging areas.

Oil Spill Trajectory Modelling specific to the spill event will be required to determine the regional sensitive receptors to be contacted beyond 48 hours of a spill.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the Scarborough Offshore Facility and Trunkline Operations Operational Areas (collectively referred to as the Petroleum Activities Area (PAA)).

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location. **Table 3-2** indicates the assets within the vicinity of the PAA.

Table 3-2: Assets within 50 km of the Scarborough Project PAA

Asset	Distance and Direction from PAA	Operator
Wheatstone Platform	10 km north	Chevron
Pluto Platform	2 km north	Woodside
Stag Platform	5 km south	Jadestone
Reindeer Platform	15 km north	Santos
Goodwyn Platform	48 km north	Woodside
Campbell Platform and Sinbad platform (Varanus hub)	50 km south	Santos

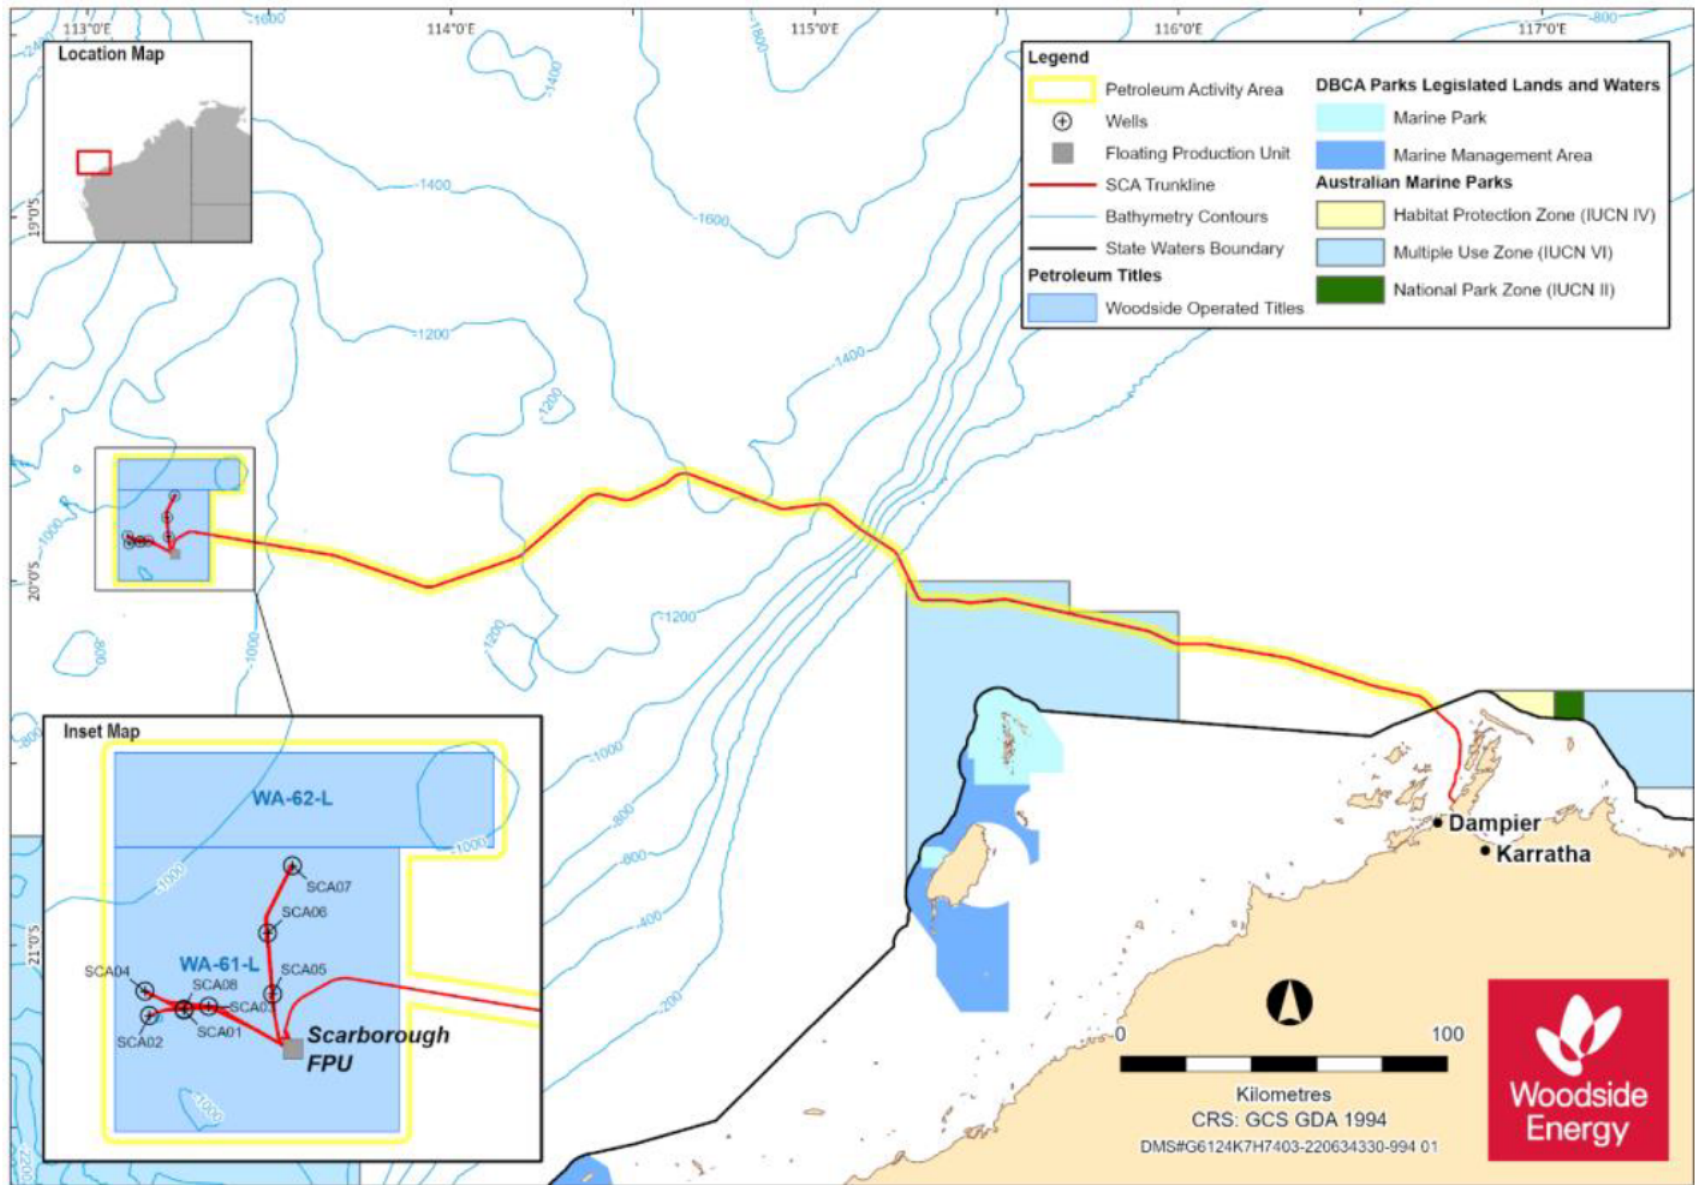

Figure 3-1: Petroleum Activity Area and regional sensitive receptors

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

4. DISPERSANT APPLICATION

Dispersant is not considered an appropriate response strategy for this activity as described in the Scarborough Offshore Facility and Trunkline Operations Environment Plan Appendix D (Woodside's Oil Spill Preparedness and Response Mitigation Assessment).

APPENDIX A – CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A - 1: Credible spill scenarios and hydrocarbon information

Scenario	Product	API gravity	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue ²
CS-01 <i>Instantaneous Release of 250 m³ of Marine Diesel outside Mermaid Sound</i>	MDO	0.829 @ 25°C	250 m ³	5% (12.5 m ³)	12 hours (BP < 180 °C)	6.0%	<i>Diesel Fuel Oil (Southern USA 1). API of 37.2</i>
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	
CS-02 <i>Instantaneous Release of 250 m³ of Marine Diesel within Montebello AMP</i>	MDO	0.829 @ 25°C	250 m ³	5% (12.5 m ³)	12 hours (BP < 180 °C)	6.0%	<i>Diesel Fuel Oil (Southern USA 1). API of 37.2</i>
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	
CS-03 <i>Instantaneous Release of 470 m³ of Marine Diesel at the FPU Location</i>	MDO	0.829 @ 25°C	470 m ³	5% (23.5 m ³)	12 hours (BP < 180 °C)	6.0%	<i>Diesel Fuel Oil (Southern USA 1). API of 37.2</i>
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	
CS-04 <i>Loss of well containment due to a failure at the wellheads and/or Xmas trees</i>	Dry Gas	N/A	No liquid hydrocarbon	N/A	N/A	N/A	N/A
					N/A	N/A	
					N/A	N/A	

² Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380°C distillation cuts were included in selection process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX B – NOTIFICATION FORMS

APPENDIX D – COORDINATION STRUCTURE FOR A CONCURRENT HYDROCARBON SPILL IN BOTH COMMONWEALTH AND STATE WATERS/ SHORELINES³

The Control Agency for a hydrocarbon spill in Commonwealth waters resulting from an offshore petroleum activity is Woodside (the Petroleum Titleholder).

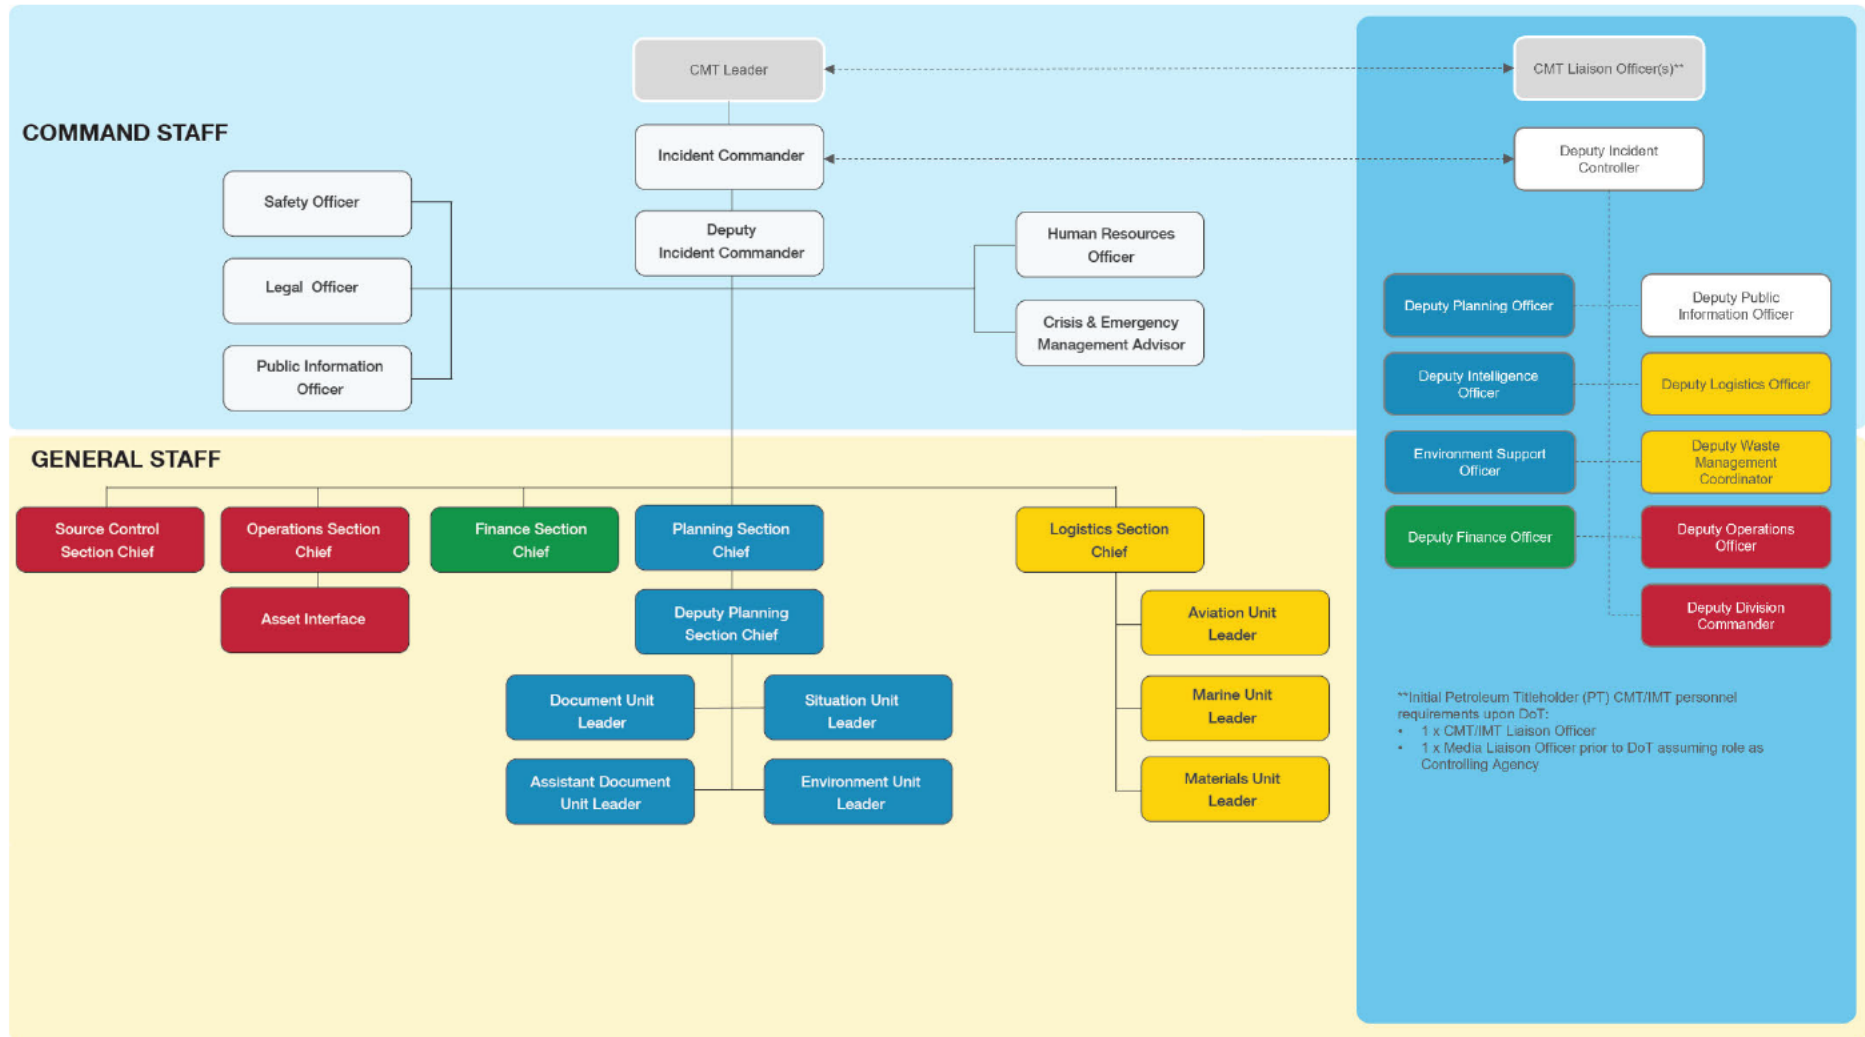

The Control Agency/Hazard Management Agency (HMA) for a hydrocarbon spill in State waters/shorelines resulting from an offshore petroleum activity is DoT. DoT will appoint an Incident Controller and form a separate IMT to only manage the spill within State waters/shorelines.

³ Adapted from DoT Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements July 2020. Note: For full structure up to Commonwealth Cabinet/Minister refer to Marine Oil Pollution: Response and Consultation Arrangements Section 6.5, Figure 4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX E – WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside incident management structure for hydrocarbon spill (including Woodside Liaison Officers command structure within DoT IMT if required).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX F – WOODSIDE LIAISON OFFICER RESOURCES TO DOT

In the event that the DoT is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DoT IMT. In the event the PPA is the Control Agency within the Dampier Port limits, Woodside will make available similar roles as requested.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DoT Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the SMPC, and no later than 8 am on the day following the request being formally made. For Woodside personnel designated to serve in DoT's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside Liaison Role ⁴	Key Duties	#
DoT Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	<ul style="list-style-type: none"> Provide a direct liaison between the CMT and the MEECC. Facilitate effective communications and coordination between the CIMT Leader and State Marine Pollution Coordinator (SMPC). Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures. 	1
DoT IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	<ul style="list-style-type: none"> Provide a direct liaison between the PT IMT and DoT IMT. Facilitate effective communications and coordination between the PT IC and the DoT IC. Offer advice to the DoT IC on matters pertaining to PT incident response policies and procedures. Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DoT IMT. 	1
DoT IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	<ul style="list-style-type: none"> As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. Facilitate the provision of relevant modelling and predications from the PT IMT. Assist in the interpretation of modelling and predictions originating from the PT IMT. Facilitate the provision of relevant situation and awareness information originating from the DoT IMT to the PT IMT. Facilitate the provision of relevant mapping from the PT IMT. Assist in the interpretation of mapping originating from the PT IMT. Facilitate the provision of relevant mapping originating from the DoT IMT to the PT IMT. 	1

⁴ These positions would be mobilised, in consultation with DoT, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [REDACTED]

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside Liaison Role ⁴	Key Duties	#
DoT IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	<ul style="list-style-type: none"> As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. Assist in the interpretation of the PT OPEP and relevant TRP plans. Facilitate in requesting, obtaining and interpreting environmental monitoring data originating from the PT IMT. Facilitate the provision of relevant environmental information and advice originating from the DoT IMT to the PT IMT. 	1
DoT IMT Planning-Plans/ Resources	Deputy Planning Officer	Deputy Planning Section Chief	<ul style="list-style-type: none"> As part of the Planning Team, assist the Planning Officer in the performance of their duties in relation to the interpretation of existing response plans and the development of incident action plans and related sub plans. Facilitate the provision of relevant IAP and sub plans from the PT IMT. Assist in the interpretation of the PT OPEP from the PT. Assist in the interpretation of the PT IAP and sub plans from the PT IMT. Facilitate the provision of relevant IAP and sub plans originating from the DoT IMT to the PT IMT. Assist in the interpretation of the PT existing resource plans. Facilitate the provision of relevant components of the resource sub plan originating from the DoT IMT to the PT IMT. <p>(Note this individual must have intimate knowledge of the relevant PT OPEP and planning processes)</p>	1
DoT IMT Public Information-Media/ Community Engagement	Deputy Public Information Officer	Deputy Public Information Officer	<ul style="list-style-type: none"> As part of the Public Information Team, provide a direct liaison between the PT Media team and DoT IMT Media team. Facilitate effective communications and coordination between the PT and DoT media teams. Assist in the release of joint media statements and conduct of joint media briefings. Assist in the release of joint information and warnings through the DoT Information and Warnings team. Offer advice to the DoT Media Coordinator on matters pertaining to PT media policies and procedures. Facilitate effective communications and coordination between the PT and DoT Community Liaison teams. Assist in the conduct of joint community briefings and events. Offer advice to the DoT Community Liaison Coordinator on matters pertaining to the PT community liaison policies and procedures. Facilitate the effective transfer of relevant information obtained from through the Contact Centre to the PT IMT. 	1

Area	Role	Woodside Liaison Role ⁴	Key Duties	#
DoT IMT Logistics	Deputy Logistics Officer	Deputy Logistics Section Chief	<ul style="list-style-type: none"> As part of the Logistics Team, assist the Logistics Officer in the performance of their duties in relation to the provision of supplies to sustain the response effort. Facilitate the acquisition of appropriate supplies through the PTs existing OSRL, AMOSC and private contract arrangements. Collects Request Forms from DoT to action via PT IMT. <p>(Note this individual must have intimate knowledge of the relevant PT logistics processes and contracts)</p>	1
DoT IMT Finance-Accounts/ Financial Monitoring	Deputy Finance Officer	Deputy Finance Section Chief	<ul style="list-style-type: none"> As part of the Finance Team, assist the Finance Officer in the performance of their duties in relation to the setting up and payment of accounts for those services acquired through the PTs existing OSRL, AMOSC and private contract arrangements. Facilitate the communication of financial monitoring information to the PT to allow them to track the overall cost of the response. Assist the Finance Officer in the tracking of financial commitments through the response, including the supply contracts commissioned directly by DoT and to be charged back to the PT. 	1
DoT IMT Operations	Deputy Operations Officer	Deputy Operations Section Chief	<ul style="list-style-type: none"> As part of the Operations Team, assist the Operations Officer in the performance of their duties in relation to the implementation and management of operational activities undertaken to resolve an incident. Facilitate effective communications and coordination between the PT Operations Section and the DoT Operations Section. Offer advice to the DoT Operations Officer on matters pertaining to PT incident response procedures and requirements. Identify efficiencies and assist to resolve potential conflicts around resource allocation and simultaneous operations of PT and DoT response efforts. 	1
DoT IMT Operations – Waste Management	Deputy Waste Management Coordinator	Deputy Waste Coordinator (Materials)	<ul style="list-style-type: none"> As part of the Operations Team, assist the Waste Management Coordinator in the performance of their duties in relation to the provision of the management and disposal of waste collected in State waters. Facilitate the disposal of waste through the PT's existing private contract arrangements related to waste management and in line with legislative and regulatory requirements. Collects Request Forms from DoT to action via PT IMT. 	1
DoT FOB Operations Command	Deputy Division Commander	FOB Deputy Incident Commander	<ul style="list-style-type: none"> As part of the Field Operations Team, assist the Division Commander in the performance of their duties in relation to the oversight and coordination of field operational activities undertaken in line with the IMT Operations Section's direction. Provide a direct liaison between the PT FOB and DoT FOB. 	1

APPENDIX G – DOT LIAISON OFFICER RESOURCES TO WOODSIDE

Once DoT activates a State waters/shorelines IMT, DoT will make available the following roles to Woodside.

Area	DoT Liaison Role	Personnel Sourced from:	Key Duties	#
Woodside CIMT	DoT Liaison Officer (prior to DoT assuming Controlling Agency)/ Deputy Incident Controller – State waters (after DoT assumes Controlling Agency)	DoT	<ul style="list-style-type: none"> Facilitate effective communications between DoT’s SMPC/Incident Controller and the Petroleum Titleholder’s appointed CMT Leader/Incident Controller. Provide enhanced situational awareness to DoT of the incident and the potential impact on State waters. Assist in the provision of support from DoT to the Petroleum Titleholder. Facilitate the provision technical advice from DoT to the Petroleum Titleholder Incident Controller as required. 	1
Woodside Public Information – Media	DoT Media Liaison Officer	DoT	<ul style="list-style-type: none"> Provide a direct liaison between the PT Media team and DoT IMT Media team. Facilitate effective communications and coordination between the PT and DoT media teams. Assist in the release of joint media statements and conduct of joint media briefings. Assist in the release of joint information and warnings through the DoT Information & Warnings team. Offer advice to the PT Media Coordinator on matters pertaining to DoT and wider Government media policies and procedures. 	1
Total DoT Personnel Initial Requirement to Woodside				2

The Scarborough OPP describes the scope of the project and its component activities, at a level comprehensive enough to facilitate thorough evaluation of environmental impacts and risks and appropriate setting of EPOs. However, in accordance with NOPSEMA guidance, it is acknowledged that an OPP is prepared at an early stage in project development, before detailed planning of component activities has occurred. More detailed descriptions of the component activities are therefore expected in subsequent EPs.

Refinement or modifications to methods or timing for individual project activities may occur after an OPP acceptance and before the submission of EPs. These refinements or modifications to the accepted project cannot be new activities and cannot significantly change the overall environmental impacts and risks of the project as described in the accepted OPP shows which scopes from the Scarborough OPP may have progressed in level of definition from the time the Scarborough OPP was authored.

Section 4 of the Scarborough OPP provides a detailed description of the entire Scarborough project, including the Petroleum Activities Program covered by this EP.

Concordance of activities described in the Scarborough Offshore Project Proposal with those included in this Environment Plan

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
Introduction	The OPP states that Woodside is targeting a final investment decision (FID) in 2020 to be ready for first cargo in 2024.	FID occurred in November 2021, and first cargo planned for 2026.	No	Yes	No	No relevance to environmental impact/risks. Achieving these milestones is subject to regulatory approvals and commercial arrangements being finalised.
4.4.2.1	With respect to reservoir monitoring methodology, the OPP states that “Pressure and saturation changes in the reservoir will be monitored over the life of the Project. Data will be used to inform decisions regarding reservoir management.”	Reservoir monitoring methods have since been further defined to include gravimetry, a process involving installation of concrete pads on the seabed which are used to periodically support a passive gravity meter and enable determination a field-wide measurement of	Yes	No	No	This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP. Section 6.7.2 of the EP has assessed the impact/consequence of seabed disturbance from subsea infrastructure (including gravimetry concrete pads) to have a maximum impact significance level of ‘D’ (Minor) based on impact potential for the most sensitive receptor (KEFs). The impact significance levels for receptors are consistent with the levels rated in the Scarborough OPP.

		<p>gravity (refer to Section 3.10).</p> <p>The extent of seabed disturbance caused by gravimetry concrete pads across WA-61-L and WA-62-L is up to 530 m² (concrete pads are each ~2 m² in area). Although this area was not specifically included in the OPP seabed disturbance calculations, it is encompassed in the contingency area included in the 0.234 km² total disturbance estimate. This area was used as a basis for impact assessment in the OPP. Hence there is no change in impact from the OPP.</p>				As part of consultation for this EP, all relevant stakeholders have been consulted on the activity, including the gravimetry scope.
4.4.2.3	The OPP states that FPU Mooring radius is 1400 m.	Mooring horizontal distance from fairlead chain stopper to pile up to 1770 m.	Yes	No	No	Seabed disturbance assessment in (Section 6.7.2) is independent of mooring horizontal distance length.
4.4.2.3	The OPP states that FPU deck dimensions are 2 @ 70x 70 x 13 m, and draft is 28 m.	3 decks. Middle (largest) deck is 78 x 101 m, with draft of 32 m.	Yes	No	No	No relevance to environmental impact/risks.
4.4.6.1	The OPP states that chemicals stored on the FPU include acids and solvents, hydrate	FPU also stores scale inhibitor, deoiler/ demulsifier, biocide, oxygen scavenger,	Yes	No	No	Chemical selection in line with Section 3.9.15.5

	and corrosion inhibitor, surfactants, lubricating fluid and greases, hydraulic oils and fluids, paints, specialised cleaning fluids, seawater system treatment chemicals”	divalent cation removal, antifoam, inorganic scale remover				
7.1.1.1	The OPP states that FPU light emissions are generally metal halide, halogen or fluorescent bright white	This has been changed to LED fixtures.	Yes	No	No	No relevance to environmental impact/risks. There are no relevant receptors of light emissions.
7.1.3.2	The OPP states that average annual total scope 1 and Scope 3 GHG emissions are 28.42 MtCO ₂ -e in an average year.	Estimates updated with most recent available information and aligned to most recent regulatory framework, for an estimate of 34 MtCO ₂ -e.	Yes	No	No	<p>This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP.</p> <p>These changes are best understood by comparing material differences between Table 6- from the EP and Table 7-20 from the OPP.</p> <p>The estimate for annual direct emissions has increased from 0.46 to 0.61 MtCO₂e. This is due to a number of factors:</p> <ul style="list-style-type: none"> The OPP estimate is based on an average year of production, whereas the updated EP estimate is the highest expected annual emissions in the five-year life of the EP. Higher emissions are expected during the early phases of operation (i.e., the duration of this EP) due to start-up and high

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
						<p>production/export rates. This is expected to change over time in line with production profile</p> <ul style="list-style-type: none"> • Design development since the OPP was published has resulted in an increased production rate expected in early field life. • Assumptions related to design and equipment have been updated to reflect latest engineering information, and methodology used to estimate emissions associated with fuel gas combustion on the facility was changed from NGERS Method 2 to the more conservative Method 1. <p>The annual estimate of GHG emissions for onshore processing has slightly increased from 2.84 in the OPP to 2.88 MtCO₂e in the EP. Design development since the OPP has resulted in higher expected maximum onshore processing rate (8.55 t LNG and 1.35 t Domgas as described in 6.7.6) which has now been applied.</p> <p>The estimate for annual third party transport of products, regasification, distribution and end use has increased from 25.11 in the OPP to 30 MtCO₂e in the EP due to increased expected LNG and Domgas production rate associated with Scarborough gas following onshore processing.</p>

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
						The total emissions for life of the development remain at 878 MtCO ₂ -e, as stated in the OPP. This assumption is based on a constant processing rate offshore and is inclusive of Thebe and Jupiter fields which may be tied in to the Scarborough FPU in future and is therefore selected as the most appropriate bounds for the assessment
7.1.4.1	The OPP states the expected underwater noise source levels.	Updated underwater noise modelling was conducted, providing underwater noise source levels specific to the FPU and associated operations.	Yes	No	No	This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP. The underwater noise source levels described in the EP do not differ significantly from those described in the OPP, and provide a more accurate representative of the noise sources for this scope.
7.2.6.1	The OPP states that credible loss of hydrocarbon to sea during bunkering is 8 m ³ MDO.	Credible bunkering loss of containment has been reassessed as 50 m ³ , based on more stringent application of AMSA guidance (AMSA 2023)	Yes	No	No	This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP. This is not the governing hydrocarbon loss of containment scenario for this scope, hence the assessment of this risk is covered under the governing scenario (loss of structural integrity of the FPU).
