9. GLOSSARY AND ABBREVIATIONS

Acronym	Description
1TL	First Trunkline
ABARES	Australian Bureau of Agricultural and Resource Economics and Sciences
ABN	Australian Business Number
AEP	Australian Energy Producers
AFMA	Australian Fisheries Management Authority
AHS	Australian Hydrographic Service
AHV	Anchor Handling Vessel
AHO	Australian Hydrographic Office
AIMS	Australian Institute of Marine Science
AIS	Automatic Identification System
ALARP	As low as reasonably practicable
AMOSC	Australian Marine Oil Spill Centre
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
ARMCANZ	Agriculture and Resource Management Council of Australia and New Zealand
ANZECC	Australian and New Zealand Environment and Conservation Council
ASV	Accommodation Support Vessel
AUSREP	Australian Ship Reporting System
AUV	Autonomous underwater vehicles
bbl	Barrel unit
BDV	Blowdown valve
BIA	Biologically Important Area
BoM	Bureau of Meteorology
BOP	Blowout Preventer
BP	Boiling Point
BTAC	Buurabalayji Thalanyji Aboriginal Corporation
BTEX	Benzene, toluene, ethylbenzene and xylenes
BWCMP	Blue Whale Conservation Management Plan
CAES	Catch and Effort System
CCE	Common Cause Effect
CCR	Central Control Room
CEFAS	Centre for environment, fisheries and aquaculture science
CFA	Commonwealth Fisheries Association
CHARM	Chemical Hazard and Risk Management
CIMT	Corporate Incident Management Team
CITV	Chemical Injection Throttle Valve

Acronym	Description
cm	Centimetres
CMMS	Computerised Maintenance Management System
CMT	Crisis management Team
CoP	Cessation of Production
CP	Cathodic protection
CS	Cost Sacrifice
CSIRO	Commonwealth Scientific and Industrial Research Organisation
Cth	Commonwealth
CV	Company Values
CVI	Close Visual Inspections
CVS	Contractor Verification Service
DAA	Department of Aboriginal Affairs
DAWE	Department of Agriculture, Water and the Environment
dB	Decibel
DCCEEW	Department of Climate Change, Energy, the Environment and Water
DCLM	Department of Conservation and Land Management
DEC	Department of Environment and Conservation
DEWHA	Department of the Environment, Water, Heritage and the Arts
DGPS	Differential Global Surface Positioning System
DISER	Department of Industry, Science, Energy and Resources
DMIRS	Department of Mining, Industry Regulation and Safety
DNP	Director of National Parks
DoD	Department of Defence
DoEE	Department of the Environment and Energy
DoT	Department of Transport
DP	Dynamic positioning
DPIRD	Department of Primary Industry and Regional Development
DPLH	Department of Planning, Lands and Heritage
DSEWPaC	Department of Sustainability, Environment, Water, Population and Communities
DWT	Dead Weight Tonnage
EDS	Emergency Disconnect Sequences
EET	Emission Estimation Techniques
EEZ	Exclusive Economic Zone
EFL	Electrical Flying Lead
EIO	East Indian Ocean
EMBA	Environment that may be affected
ENVID	Environmental Risk Identification Studies

Acronym	Description
EP	Environment Plan
EPBC Act	Environment Protection and Biodiversity Conservation Act
EPOs	Environmental performance outcomes
EPS	Environment Performance Standards
EoFL	End of field life
ERP	Emergency Response Plan
ESD	Emergency Shutdown
ESDev	Ecologically Sustainable Development
EVP	Executive Vice President
FEED	Front End Engineering and Design
FEWD	Formation Evaluation While Drilling
FFS	Fit for Services
FPSO	Floating Production Storage and Offloading
FRC	Fast Rescue Craft
GHG	Greenhouse Gas
GP	Good Industry Practice
GSM	Grid Stability Module
GVI	General Visual Inspections
GWA	Goodwyn Alpha
HAT	Highest Astronomical Tide
HAZID/ENVID	Hazard identification studies
HFL	Hydraulic Flying Lead
HIGF	Horizontal Induced Gas Floatation
HIPPS	High Integrity Pressure Protection System
HP	High Pressure
HPU	Hydraulic Power Unit
HQ	Hazard Quotient
HSE	Health, Safety and Environment
HSEC	Health, Safety and Environment Coordinator
HSEQ	Health, Safety, Environment and Quality
HVAC	Heating, ventilation and air conditioning
ICLDP	Incident and Crisis Leaders Development Program
ILUAs	Indigenous Land Use Agreements
IUCN	International Union for the Conservation of Nature
IMCRA	Integrated Marine and Coastal Regionalisation of Australia
IMMR	Inspection, monitoring, maintenance and repair
IMS	Invasive Marine Species

Acronym	Description
IMSMP	Invasive Marine Species Management Plan
IPIECA	International Petroleum Industry Environmental Conservation Association
ISO	International Organisation of Standardisation
ISSoW	Integrated Safe System of Work
ISV	IMMR support vessel
JRCC	Joint Rescue Coordination Centre
KEF	Key Ecological Feature
Kg	Kilogram
KGP	Karratha Gas Plant
km	Kilometre
KPI	Key performance Indicator
L	Litres
LAT	Lowest Astronomical Tide
LBL	Long Baseline
LCS	Legislation, Codes and Standards
LNG	Liquefied natural gas
LOA	Length Overall
LP	Low Pressure
LTO	Licence to Operate
LW	Lambert West
LWI	Light Well Intervention
m3	Cubic metres
MAEs	Major Accident Events
MAH	Monocyclic Aromatic Hydrocarbons
MBES	Multibeam Echo Sounder
MC	Measurement Criteria
MCS	Master Control Station
MEEs	Major Environmental Events
MEG	Monoethylene glycol
MFO	Marine Fauna Observer
MLCS	Mid-line Connector System
MNES	Matters of Environmental Significance
MoC	Management of Change
MODU	Mobile Offshore Drilling Unit
MOPO	Manual of Permitted Operation
MoU	Memorandum of Understanding
MPAs	Marine Protected Areas

Acronym	Description
MPPE	Macro Porous Polymer Extraction
MSIN	Maritime Safety Information Notifications
MSPS	Management System Performance Standards
MW	Megawatts
NAC	Nanda Aboriginal Corporation
NCVA	National Conservation Values Atlas
NDC	Nationally Determine Contributions
NDT	Non Destructive Testing
NGA	Nganhurra
NGERS	National Greenhouse and Energy Reporting
NIMS	Non-Indigenous Marine Species
NLPG	National Light Pollution Guidelines
NMFS	National Marine Fisheries Service
nm	Nautical miles
NNC	Not Normally Crewed
NOAA	National Oceanic and Atmospheric Administration
NOPSEMA	National Offshore Petroleum Safety and Environmental Management Authority
NOPTA	National Offshore Petroleum Titles Administrator
NORM	Naturally occurring radioactive material
NPI	National Pollutant Inventory
NRC	North Rankin Complex
NRV	Non-return Valve
NTA	Native Title Act 1993 (Cth)
NTGAC	Nganhurra Thanardi Garrbu Aboriginal Corporation
NTM	Notice to Mariners
NW	North-west
NWBM	Non Water Based Muds
NWMR	North West Marine Region
NWS	North West Shelf
NWSP	North West Shelf Province
NZE	Net Zero Emissions
OA	Operational Area
OCIMF	Oil Companies International Marine Forum
OCNS	Offshore Chemical Notification Scheme
OIM	Offshore Installation Manager
OIW	Oil in water
OMDAMP	Offshore Marine Discharges Adaptive Management Plan

Acronym	Description
OPEP	Oil Pollution Emergency Plan
OPEX	Operational expenditure
OPGGS Act	Offshore Petroleum and Greenhouse Gas Storage Act 2006 (Cth)
OPP	Offshore Project Proposal
OSPAR Convention	Convention for the Protection of the Marine environment of the North-East Atlantic
OSREC	Oil Spill Response Skills Enhancement Course
OSRO	Oil Spill Response Organisation
OVID	Offshore Vessel Inspection Database
OWS	Oily Water Separator
PAA	Petroleum Activities Area
PAP	Petroleum Activities Program
PAH	Polycyclic aromatic hydrocarbon
PBA	Pre-emptive baseline areas
PBC	Prescribed Bodies Corporates
PER	Public Environment Report
PFW	Produced Formation Water
PHD	Process historian database

APPENDIX A: WOODSIDE POLICIES

Environment and Biodiversity Policy

OBJECTIVE

Woodside recognises the intrinsic value of nature and the importance of conserving biodiversity and ecosystem services to support the sustainable development of our society. We are committed to doing our part. We understand and embrace our responsibility to undertake activities in an environmentally sustainable way.

PRINCIPLES

Woodside commits to:

- Implementing a systematic approach to the management of the impacts and risks of our operating activities on an ongoing basis, including emissions and air quality, discharge and waste management, water management, biodiversity and protected areas.
- Applying the mitigation hierarchy principle (avoid, minimise, restore) and a continuous improvement approach to ensure we maintain compliance, improve resource use efficiency and reduce our environmental impacts.
- Embedding environmental and biodiversity management, and opportunities, in our business planning and decision making processes.
- Complying with relevant laws and regulations and applying responsible standards where laws do not exist.
- Not undertaking new exploration or development of hydrocarbons within the boundaries of natural sites on the UNESCO World Heritage List (as specified at 1 December 2022). Existing activity may continue if compatible with maintenance of the listed outstanding universal values.
- Not undertaking new exploration or development of hydrocarbons within IUCN Protected Areas (as specified at 1 December 2022) unless compatible with management plans in place for the area. Existing activity may continue if compatible with management plans in place for the area.
- Achieving net zero deforestation[1] associated with new projects that take a Final Investment Decision (FID) after 1 December 2022.
- Developing Biodiversity Action Plans for all new major projects (CAPEX >USD$2 billion) that take a FID after 1 December 2022.
- Supporting positive biodiversity outcomes in regions and areas in which we operate.
- Setting targets and publicly reporting on our environmental and biodiversity performance.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2023.

[1] Definition of Forest: 'trees higher than 5 metres and a canopy cover of more than 10 percent on the land to be cleared'.

Risk Management Policy

OBJECTIVES

Woodside recognises that risk is inherent in our business and the effective management of risk is vital to deliver our strategic objectives, continued growth and success. We are committed to managing risks in a proactive and effective manner as a source of competitive advantage.

Our approach protects us against potential negative impacts, enables us to take risk for reward and improves our resilience against emerging risks. The objective of our risk management framework is to provide a single consolidated view of risks across the company to understand our full risk exposure and prioritise risk management and governance.

The success of our approach lies in the responsibility placed on everyone at all levels to proactively identify, assess and treat risks relating to the objectives they are accountable for delivering.

PRINCIPLES

Woodside achieves these objectives by:

- Applying a structured and comprehensive framework for the identification, assessment and treatment of current risks and response to emerging risks;
- Ensuring line of sight of financial and non-financial risks at appropriate levels of the organisation;
- Demonstrating leadership and commitment to integrating risk management into our business activities and governance practices;
- Recognising the value of stakeholder engagement, best available information and proactive identification of potential changes in external and internal context;
- Embedding risk management into our critical business processes and control framework;
- Understanding our exposure to risk and tolerance for uncertainty to inform our decision making and assure that Woodside is operating with due regard to the risk appetite endorsed by the Board; and
- Evaluating and improving the effectiveness and efficiency our approach.

APPLICABILITY

The Managing Director of Woodside is accountable to the Board of Directors for ensuring this Policy is effectively implemented.

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venturers engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2023.

Climate Policy

BACKGROUND

The Intergovernmental Panel on Climate Change has stated that "it is unequivocal that human influence has warmed the atmosphere, ocean and land". An objective of the Paris Agreement is to hold "the increase in the global average temperature to well below 2ºC above pre-industrial levels" and to pursue "efforts to limit the temperature increase to 1.5ºC". Many countries have set targets to reduce greenhouse gas emissions, including by changing the way they produce and consume energy.

OBJECTIVE

Woodside's objective is to thrive in this energy transition as a low cost, lower carbon energy provider.

PRINCIPLES

Woodside aims to achieve the objective by:

- Setting science-based[1] near, mid, and long-term net emissions reduction targets that are consistent with Paris-aligned[2] scenarios, covering equity scope 1 and 2 emissions, both operated and non-operated.[3]
- Developing and operating oil and gas projects in a manner that is consistent with these targets. This includes the deployment of lower-emission technologies (Design Out), supporting efficient operations (Operate Out) and use of robust offsets (Offset) as methods to reduce and offset greenhouse gas emissions.
- Investing in new energy products and lower carbon services to reduce customers' emissions (part of Woodside's Scope 3 emissions), including but not limited to hydrogen, ammonia and carbon capture, utilisation and storage.
- Publishing transparent climate-related disclosures aligned to the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) or other recognised global reporting standards.
- Aligning our advocacy to the principles of this Climate Policy.

[1] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "science-based" (published 2021) which states "targets are considered 'science-based' if they are in line with what the most recent climate science sets out is necessary to meet the goals of the Paris Agreement—limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius.". See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures-prototype.pdf (Appendix A).

[2] Woodside is using the draft Prototype IFRS Sustainability Disclosure Standard definition of "Paris-aligned scenarios" (published 2021) which states "scenarios consistent with limiting global warming to below 2 degrees Celsius above pre-industrial levels and pursuing efforts to limit warming to 1.5 degrees Celsius." See https://www.ifrs.org/content/dam/ifrs/groups/trwg/trwg-climate-related-disclosures-prototype.pdf (Appendix A).

[3] Equity emissions means the share of the total emissions arising from an activity that are attributable to Woodside in proportion to Woodside's ownership interest in the activity, irrespective of whether Woodside operates the activity. Operated emissions are the total emissions arising from an activity that Woodside operates, irrespective of Woodside's ownership interest.

APPLICABILITY

Responsibility for the application of this Policy rests with all Woodside employees, contractors and joint venture participants engaged in activities under Woodside operational control. Woodside managers are also responsible for promotion of this Policy in non-operated joint ventures.

This Policy will be reviewed regularly and updated as required.

Reviewed by the Woodside Energy Group Ltd Board in December 2023.

APPENDIX B: RELEVANT REQUIREMENTS

The below table refers to Commonwealth Legislation related to the project.

Commonwealth Legislation	Legislation Summary
Air Navigation Act 1920 Air Navigation Regulations 1947 Air Navigation (Aerodrome Flight Corridors) Regulations 1994 Air Navigation (Aircraft Engine Emissions) Regulations 1995 Air Navigation (Aircraft Noise) Regulations 1984 Air Navigation (Fuel Spillage) Regulations 1999	This Act relates to the management of air navigation.
Australian Maritime Safety Authority Act 1990	This Act establishes a legal framework for the Australian Maritime Safety Authority (AMSA), which represents the Australian Government and international forums in the development, implementation and enforcement of international standards including those governing ship safety and marine environment protection. AMSA is responsible for administering the Marine Orders in Commonwealth waters.
Australian Radiation Protection and Nuclear Safety Act 1998	This Act relates to the protection of the health and safety of people, and the protection of the environment from the harmful effects of radiation.
Biosecurity Act 2015 Quarantine Regulations 2000 Biosecurity Regulation 2016 Australian Ballast Water Management Requirements 2017 Biosecurity Amendment (Biofouling Management) Regulations 2021	This Act provides the Commonwealth with powers to take measures of quarantine, and implement related programs as are necessary, to prevent the introduction of any plant, animal, organism or matter that could contain anything that could threaten Australia's native flora and fauna or natural environment. The Commonwealth's powers include powers of entry, seizure, detention and disposal. This Act includes mandatory controls on the use of seawater as ballast in ships and the declaration of sea vessels voyaging out of and into Commonwealth waters. The Regulations stipulate that all information regarding the voyage of the vessel and the ballast water is declared correctly to the quarantine officers. The Biofouling Management Regulations requires ships to report information about biofouling management and the voyage history of the ship in the past 12 months through a pre-arrival report.
Environment Protection and Biodiversity Conservation Act 1999 Environment Protection and Biodiversity Conservation Regulations 2000	This Act protects matters of national environmental significance (NES). It streamlines the national environmental assessment and approvals process, protects Australian biodiversity and integrates management of important natural and culturally significant places. Under this Act, actions that may be likely to have a significant impact on matters of NES must be referred to the Commonwealth Environment Minister.
Environment Protection (Sea Dumping) Act 1981 Environment Protection (Sea Dumping) Regulations 1983	This Act provides for the protection of the environment by regulating dumping matter into the sea, incineration of waste at sea and placement of artificial reefs.
Industrial Chemicals (Notification and Assessment Act) 1989 Industrial Chemicals (Notification and Assessment) Regulations 1990	This Act creates a national register of industrial chemicals. The Act also provides for restrictions on the use of certain chemicals which could have harmful effects on the environment or health.

Commonwealth Legislation	Legislation Summary
National Environment Protection Measures (Implementation) Act 1998 National Environment Protection Measures (Implementation) Regulations 1999	This Act and Regulations provide for the implementation of National Environment Protection Measures (NEPMs) to protect, restore and enhance the quality of the environment in Australia and ensure that the community has access to relevant and meaningful information about pollution. The National Environment Protection Council has made NEPMs relating to ambient air quality, the movement of controlled waste between states and territories, the national pollutant inventory, and used packaging materials.
National Greenhouse and Energy Reporting Act 2007 National Greenhouse and Energy Reporting (Safeguard Mechanism) Rule 2015	This Act and associated Rule establishes the legislative framework for the NGER scheme for reporting greenhouse gas emissions and energy consumption and production by corporations in Australia.
Navigation Act 2012 Marine order 12 – Construction – subdivision and stability, machinery and electrical installations Marine order 30 - Prevention of collisions Marine order 47 – Offshore Industry units Marine order 57 - Helicopter operations Marine order 91 - Marine pollution prevention—oil Marine order 93 - Marine pollution prevention—noxious liquid substances Marine order 94 - Marine pollution prevention—packaged harmful substances Marine order 96 - Marine pollution prevention—sewage Marine order 97 - Marine pollution prevention—air pollution	This Act regulates navigation and shipping including Safety of Life at Sea (SOLAS). The Act will apply to some activities of the MODU and project vessels. This Act is the primary legislation that regulates ship and seafarer safety, shipboard aspects of marine environment protection and pollution prevention.
Offshore Petroleum and Greenhouse Gas Storage Act 2006 Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 Offshore Petroleum and Greenhouse Gas Storage (Resource Management and Administration) Regulations 2011 Offshore Petroleum and Greenhouse Gas Storage (Safety) Regulations 2009	This Act is the principal Act governing offshore petroleum exploration and production in Commonwealth waters. Specific environmental, resource management and safety obligations are set out in the Regulations listed.
Ozone Protection and Synthetic Greenhouse Gas Management Act 1989 Ozone Protection and Synthetic Greenhouse Gas Management Regulations 1995	This Act provides for measures to protect ozone in the atmosphere by controlling and ultimately reducing the manufacture, import and export of ozone depleting substances (ODS) and synthetic greenhouse gases, and replacing them with suitable alternatives. The Act will only apply to Woodside if it manufactures, imports or exports ozone depleting substances.
Protection of the Sea (Powers of Intervention) Act 1981	This Act authorises the Commonwealth to take measures for the purpose of protecting the sea from pollution by oil and other noxious substances discharged from ships and provides legal immunity for persons acting under an AMSA direction.

Commonwealth Legislation	Legislation Summary
Recycling and Waste Reduction (Mandatory Product Stewardship—Mercury-added Products) Rules 2021 (Minamata Convention on Mercury 2017)	This Convention is an agreement to protect human and environmental health from the effects of releases of mercury and mercury-containing compounds to the environment. The Convention was ratified by Australia in December 2021 and is implemented in Commonwealth law under the Recycling and Waste Reduction (Mandatory Product Stewardship – Mercury added Products) Rules 2021).
Protection of the Sea (Prevention of Pollution from Ships) Act 1983 Protection of the Sea (Prevention of Pollution from Ships) (Orders) Regulations 1994 Marine order 91 - Marine pollution prevention—oil Marine order 93 - Marine pollution prevention—noxious liquid substances Marine order 94 - Marine pollution prevention—packaged harmful substances Marine order 95 - Marine pollution prevention—garbage Marine order 96 - Marine pollution prevention—sewage Maritime Legislation Amendment (Prevention of Air Pollution from Ships) Act 2007 MARPOL Convention	This Act relates to the protection of the sea from pollution by oil and other harmful substances discharged from ships. Under this Act, discharge of oil or other harmful substances from ships into the sea is an offence. There is also a requirement to keep records of the ships dealing with such substances. The Act applies to all Australian ships, regardless of their location. It applies to foreign ships operating between 3 nautical miles (nm) off the coast out to the end of the Australian Exclusive Economic Zone (200 nm). It also applies within the 3 nm of the coast where the State/Northern Territory does not have complementary legislation. All the Marine Orders listed, except for Marine Order 95, are enacted under both the Navigation Act 2012 and the Protection of the Sea (Prevention of Pollution from Ships) Act 1983. This Act is an amendment to the Protection of the Sea (Prevention of Pollution from Ships) Act 1983. This amended Act provides the protection of the sea from pollution by oil and other harmful substances discharged from ships.
Protection of the Sea (Harmful Antifouling Systems) Act 2006 Marine order 98—(Marine pollution—anti-fouling systems)	This Act relates to the protection of the sea from the effects of harmful anti-fouling systems. It prohibits the application or reapplication of harmful anti-fouling compounds on Australian ships or foreign ships that are in an Australian shipping facility.
Aboriginal and Torres Strait Islander Heritage Protection Act 1984	This Act seeks “to preserve and protect places, areas and objects of particular significance” to Aboriginal people. Under the Section 9 and 10 provisions of the Act, the Minister for the Environment may declare significant Aboriginal areas temporarily or permanently protected if they are considered under threat. Similar declarations regarding Aboriginal objects can be made under Section 12. Under Section 22 of the Act, the contravention of any of these declarations is an offence. Additionally, the discovery of any Aboriginal remains must be reported to the Minister under Section 20. Damage or interference with Aboriginal objects or places is not an offence under the ATSIHO Act except within Victoria under Section 21U.
Underwater Cultural Heritage Act 2018 Underwater Cultural Heritage Guidance for Offshore Developments DRAFT Guidelines to Protect Underwater Cultural Heritage.	The Act prescribes penalties for damage to protected Underwater Cultural Heritage without a permit under Section 30 or in contravention of a permit under Section 28. Protected Underwater Cultural Heritage is prescribed in Section 16 to automatically include the remains and associated artefacts of any vessel or aircraft that has been in Australian waters for 75 years, whether known or unknown. This protection is also extended to Underwater Cultural Heritage in Commonwealth waters specified by the Environment Minister under Section 17. Without a declaration under this section, Aboriginal Underwater Cultural Heritage is not protected under the UCH Act.

APPENDIX C: EPBC ACT PROTECTED MATTERS SEARCH TOOL REPORTS

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 04-Dec-2023

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	23
Listed Migratory Species:	38

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	67
Whales and Other Cetaceans:	28
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	1
Habitat Critical to the Survival of Marine Turtles:	1

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	34
Key Ecological Features (Marine):	2
Biologically Important Areas:	8
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat may occur within area
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Species or species habitat known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Species or species habitat known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Ephalophis greyi Mangrove Sea Snake [1127]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Species or species habitat known to occur within area
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platurus as Pelamis platurus Yellow-bellied Sea Snake [93517]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa sahulensis Australian Humpback Dolphin [87942]		Species or species habitat may occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat may occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Continental Slope Demersal Fish Communities	North-west

Biologically Important Areas

Scientific Name	Behaviour	Presence
Marine Turtles		
Chelonia mydas		
Green Turtle [1765]	Internesting buffer	Known to occur
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Natator depressus		
Flatback Turtle [59257]	Internesting buffer	Known to occur
Seabirds		
Ardenna pacifica		
Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sharks		
Rhincodon typus		
Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda		
Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda		
Pygmy Blue Whale [81317]	Migration	Known to occur

Scientific Name	Behaviour	Presence
Megaptera novaeangliae		
Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 04-Dec-2023

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	24
Listed Migratory Species:	41

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	74
Whales and Other Cetaceans:	28
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	1
Habitat Critical to the Survival of Marine Turtles:	3

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	None
Regional Forest Agreements:	None
Nationally Important Wetlands:	None
EPBC Act Referrals:	37
Key Ecological Features (Marine):	2
Biologically Important Areas:	11
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside a Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area.

Feature Name
Commonwealth Marine Areas (EPBC Act)
Commonwealth Marine Areas (EPBC Act)

Listed Threatened Species [Resource Information]

Status of Conservation Dependent and Extinct are not MNES under the EPBC Act.
Number is the current name ID.

Scientific Name	Threatened Category	Presence Text
BIRD		
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
FISH		

Scientific Name	Threatened Category	Presence Text
Thunnus maccoyii Southern Bluefin Tuna [69402]	Conservation Dependent	Breeding known to occur within area
MAMMAL		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
REPTILE		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Congregation or aggregation known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Congregation or aggregation known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Congregation or aggregation known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area
SHARK		

Scientific Name	Threatened Category	Presence Text
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis		
Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat may occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Congregation or aggregation known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Congregation or aggregation known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat likely to occur within area
Dugong dugon Dugong [28]		Species or species habitat known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Congregation or aggregation known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Natator depressus Flatback Turtle [59257]	Vulnerable	Congregation or aggregation known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat may occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis Australian Humpback Dolphin [87942]		Species or species habitat may occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat likely to occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat may occur within area
Anous stolidus Common Noddy [825]		Species or species habitat may occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Fish		

Scientific Name	Threatened Category	Presence Text
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Continental Slope Demersal Fish Communities	North-west

Biologically Important Areas

Scientific Name	Behaviour	Presence
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Internesting buffer	Known to occur
Chelonia mydas Green Turtle [1765]	Internesting buffer	Known to occur
Eretmochelys imbricata Hawksbill Turtle [1766]	Internesting buffer	Known to occur
Natator depressus Flatback Turtle [59257]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Seabirds		
Ardenna pacifica Wedge-tailed Shearwater [84292]	Breeding	Known to occur
Sterna dougallii Roseate Tern [817]	Breeding	Known to occur
Sternula nereis Fairy Tern [82949]	Breeding	Known to occur
Sharks		
Rhincodon typus Whale Shark [66680]	Foraging	Known to occur
Whales		
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Distribution	Known to occur
Balaenoptera musculus brevicauda Pygmy Blue Whale [81317]	Migration	Known to occur
Megaptera novaeangliae Humpback Whale [38]	Migration (north and south)	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 20-Feb-2024

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	1
National Heritage Places:	2
Wetlands of International Importance (Ramsar	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	3
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	53
Listed Migratory Species:	62

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at https://www.dcceew.gov.au/parks-heritage/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	1
Commonwealth Heritage Places:	2
Listed Marine Species:	103
Whales and Other Cetaceans:	32
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	9
Habitat Critical to the Survival of Marine Turtles:	4

Extra Information

This part of the report provides information that may also be relevant to the area you have

State and Territory Reserves:	24
Regional Forest Agreements:	None
Nationally Important Wetlands:	1
EPBC Act Referrals:	190
Key Ecological Features (Marine):	6
Biologically Important Areas:	37
Bioregional Assessments:	None
Geological and Bioregional Assessments:	None

Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Endangered	Species or species habitat may occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Endangered	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Malurus leucopterus edouardi White-winged Fairy-wren (Barrow Island), Barrow Island Black-and-white Fairy-wren [26194]	Vulnerable	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Pezoporus occidentalis Night Parrot [59350]	Endangered	Species or species habitat may occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
[Phaethon rubricauda westralis](#) Red-tailed Tropicbird (Indian Ocean), Indian Ocean Red-tailed Tropicbird [91824]	Endangered	Species or species habitat known to occur within area
[Pterodroma mollis](#) Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
[Rostratula australis](#) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
[Sternula nereis nereis](#) Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
[Thalassarche carteri](#) Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
[Thalassarche impavida](#) Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
[Tringa nebularia](#) Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area
FISH		
[Milyeringa veritas](#) Cape Range Cave Gudgeon, Blind Gudgeon [66676]	Vulnerable	Species or species habitat known to occur within area
[Ophisternon candidum](#) Blind Cave Eel [66678]	Vulnerable	Species or species habitat known to occur within area
[Thunnus maccoyii](#) Southern Bluefin Tuna [69402]	Conservation Dependent	Breeding known to occur within area
MAMMAL		
[Balaenoptera borealis](#) Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Bettongia lesueur Barrow and Boodie Islands subspecies Boodie, Burrowing Bettong (Barrow and Boodie Islands) [88021]	Vulnerable	Translocated population known to occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat known to occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Isoodon auratus barrowensis Golden Bandicoot (Barrow Island) [66666]	Vulnerable	Species or species habitat known to occur within area
Lagorchestes conspicillatus conspicillatus Spectacled Hare-wallaby (Barrow Island) [66661]	Vulnerable	Species or species habitat known to occur within area
Lagorchestes hirsutus Central Australian subspecies Mala, Rufous Hare-Wallaby (Central Australia) [88019]	Endangered	Translocated population known to occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Osphranter robustus isabellinus Barrow Island Wallaroo, Barrow Island Euro [89262]	Vulnerable	Species or species habitat likely to occur within area
Petrogale lateralis lateralis Black-flanked Rock-wallaby, Moororong, Black-footed Rock Wallaby [66647]	Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Rhinonicteris aurantia (Pilbara form)		
Pilbara Leaf-nosed Bat [82790]	Vulnerable	Species or species habitat known to occur within area
REPTILE		
Aipysurus apraefrontalis		
Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus foliosquama		
Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Caretta caretta		
Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas		
Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Ctenotus zastictus		
Hamelin Ctenotus [25570]	Vulnerable	Species or species habitat likely to occur within area
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Liasis olivaceus barroni		
Pilbara Olive Python [66699]	Vulnerable	Species or species habitat known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
SHARK		
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat likely to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis clavata		
Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis		
Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat likely to occur within area
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sphyrna lewini		
Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat known to occur within area

Listed Migratory Species		[Resource Information]
Scientific Name	Threatened Category	Presence Text
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica		
Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calonectris leucomelas		
Streaked Shearwater [1077]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons Little Tern [82849]		Species or species habitat may occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat known to occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Eubalaena australis as Balaena glacialis australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mobula alfredi as Manta alfredi Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat known to occur within area
Mobula birostris as Manta birostris Giant Manta Ray [90034]		Species or species habitat known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat likely to occur within area

Scientific Name	Threatened Category	Presence Text
Pristis zijsron		
Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa sahulensis as Sousa chinensis		
Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations)		
Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Migratory Terrestrial Species		
Hirundo rustica		
Barn Swallow [662]		Species or species habitat may occur within area
Motacilla cinerea		
Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava		
Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
[Calidris melanotos](#) Pectoral Sandpiper [858]		Species or species habitat may occur within area
[Charadrius leschenaultii](#) Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
[Charadrius veredus](#) Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
[Glareola maldivarum](#) Oriental Pratincole [840]		Species or species habitat may occur within area
[Limnodromus semipalmatus](#) Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area
[Limosa lapponica](#) Bar-tailed Godwit [844]		Species or species habitat known to occur within area
[Numenius madagascariensis](#) Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
[Pandion haliaetus](#) Osprey [952]		Breeding known to occur within area
[Thalasseus bergii](#) Greater Crested Tern [83000]		Breeding known to occur within area
[Tringa nebularia](#) Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area

Commonwealth Lands [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Commonwealth Land Name	State
Unknown	
Commonwealth Land - [52236]	WA

Commonwealth Heritage Places [Resource Information]

Name	State	Status
Natural		
Learmonth Air Weapons Range Facility	WA	Listed place
Ningaloo Marine Area - Commonwealth Waters	WA	Listed place

Listed Marine Species [Resource Information]

Scientific Name	Threatened Category	Presence Text
Bird		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area overfly marine area
Ardenna carneipes as Puffinus carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica as Puffinus pacificus		
Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Bubulcus ibis as Ardea ibis		
Cattle Egret [66521]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Calidris acuminata Sharp-tailed Sandpiper [874]	Vulnerable	Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Vulnerable	Species or species habitat known to occur within area overfly marine area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area overfly marine area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area overfly marine area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat likely to occur within area
Chalcites osculans as Chrysococcyx osculans Black-eared Cuckoo [83425]		Species or species habitat known to occur within area overfly marine area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area overfly marine area
Chroicocephalus novaehollandiae as Larus novaehollandiae Silver Gull [82326]		Breeding known to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area overfly marine area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat known to occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area overfly marine area
Hydroprogne caspia as Sterna caspia Caspian Tern [808]		Breeding known to occur within area
Limnodromus semipalmatus Asian Dowitcher [843]	Vulnerable	Species or species habitat may occur within area overfly marine area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area overfly marine area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area overfly marine area

Scientific Name	Threatened Category	Presence Text
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area overfly marine area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Onychoprion anaethetus as Sterna anaethetus Bridled Tern [82845]		Breeding known to occur within area
Onychoprion fuscatus as Sterna fuscata Sooty Tern [90682]		Breeding known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Species or species habitat known to occur within area
Phaethon lepturus fulvus Christmas Island White-tailed Tropicbird, Golden Bosunbird [26021]	Endangered	Species or species habitat may occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis as Rostratula benghalensis (sensu lato) Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area overfly marine area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area

Scientific Name	Threatened Category	Presence Text
Sternula albifrons as Sterna albifrons Little Tern [82849]		Species or species habitat may occur within area
Sternula nereis as Sterna nereis Fairy Tern [82949]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalasseus bengalensis as Sterna bengalensis Lesser Crested Tern [66546]		Breeding known to occur within area
Thalasseus bergii as Sterna bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]	Endangered	Species or species habitat likely to occur within area overfly marine area
Fish		
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammal		
Dugong dugon Dugong [28]		Breeding known to occur within area
Reptile		
Aipysurus apraefrontalis Short-nosed Sea Snake, Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area

Scientific Name	Threatened Category	Presence Text
Aipysurus duboisii Dubois' Sea Snake, Dubois' Seasnake, Reef Shallows Sea Snake [1116]		Species or species habitat may occur within area
Aipysurus foliosquama Leaf-scaled Sea Snake, Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus laevis Olive Sea Snake, Olive-brown Sea Snake [1120]		Species or species habitat may occur within area
Aipysurus mosaicus as Aipysurus eydouxii Mosaic Sea Snake [87261]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Sea Snake, Mjoberg's Sea Snake [1121]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Species or species habitat known to occur within area
Emydocephalus annulatus Eastern Turtle-headed Sea Snake [1125]		Species or species habitat may occur within area
Ephalophis greyae as Ephalophis greyi Mangrove Sea Snake [93738]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Port Darwin Sea Snake, Black-ringed Mangrove Sea Snake [1100]		Species or species habitat may occur within area

Scientific Name	Threatened Category	Presence Text
Hydrophis czeblukovi Fine-spined Sea Snake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Sea Snake, Bar-bellied Sea Snake [1104]		Species or species habitat may occur within area
Hydrophis kingii as Disteira kingii Spectacled Sea Snake [93511]		Species or species habitat may occur within area
Hydrophis macdowelli as Hydrophis mcdowelli MacDowell's Sea Snake, Small-headed Sea Snake, [75601]		Species or species habitat may occur within area
Hydrophis major as Disteira major Olive-headed Sea Snake [93512]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Sea Snake, Ornate Reef Sea Snake [1111]		Species or species habitat may occur within area
Hydrophis peronii as Acalyptophis peronii Horned Sea Snake [93509]		Species or species habitat may occur within area
Hydrophis platurus as Pelamis platurus Yellow-bellied Sea Snake [93517]		Species or species habitat may occur within area
Hydrophis stokesii as Astrotia stokesii Stokes' Sea Snake [93510]		Species or species habitat may occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area

Whales and Other Cetaceans		[Resource Information]
Current Scientific Name	Status	Type of Presence
Mammal		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dolphin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Indopacetus pacificus Longman's Beaked Whale [72]		Species or species habitat may occur within area

Current Scientific Name	Status	Type of Presence
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia sima Dwarf Sperm Whale [85043]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]		Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area

Current Scientific Name	Status	Type of Presence
Sousa sahulensis Australian Humpback Dolphin [87942]		Species or species habitat known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Australian Marine Parks	[Resource Information]
Park Name	Zone & IUCN Categories
Dampier	Habitat Protection Zone (IUCN IV)
Gascoyne	Habitat Protection Zone (IUCN IV)
Argo-Rowley Terrace	Multiple Use Zone (IUCN VI)

Park Name	Zone & IUCN Categories
Dampier	Multiple Use Zone (IUCN VI)
Gascoyne	Multiple Use Zone (IUCN VI)
Montebello	Multiple Use Zone (IUCN VI)
Dampier	National Park Zone (IUCN II)
Gascoyne	National Park Zone (IUCN II)
Ningaloo	Recreational Use Zone (IUCN IV)

Habitat Critical to the Survival of Marine Turtles		
Scientific Name	Behaviour	Presence
Aug - Sep		
Natator depressus		
Flatback Turtle [59257]	Nesting	Known to occur
Dec - Jan		
Chelonia mydas		
Green Turtle [1765]	Nesting	Known to occur
Nov-Feb		
Caretta caretta		
Loggerhead Turtle [1763]	Nesting	Known to occur
Nov - May		
Eretmochelys imbricata		
Hawksbill Turtle [1766]	Nesting	Known to occur

EPBC Act Referrals

[Resource Information]

Title of referral	Reference	Referral Outcome	Assessment Status
Browse to North West Shelf Development, Indian Ocean, WA	2018/8319		Approval
Gorgon Gas Development	2003/1294		Post-Approval
North West Shelf Project Extension, Carnarvon Basin, WA	2018/8335		Approval

Title of referral	Reference	Referral Outcome	Assessment Status
Project Highclere Cable Lay and Operation	2022/09203		Completed
Action clearly unacceptable			
Highlands 3D Marine Seismic Survey	2012/6680	Action Clearly Unacceptable	Completed
Controlled action			
'Van Gogh' Petroleum Field Development	2007/3213	Controlled Action	Post-Approval
Construct and operate LNG & domestic gas plant including onshore and offshore facilities - Wheatston	2008/4469	Controlled Action	Post-Approval
Develop Jansz-Io deepwater gas field in Permit Areas WA-18-R, WA-25-R and WA-26-	2005/2184	Controlled Action	Post-Approval
Development of Angel gas and condensate field, North West Shelf	2004/1805	Controlled Action	Post-Approval
Development of Browse Basin Gas Fields (Upstream)	2008/4111	Controlled Action	Completed
Development of Coniston/Novara fields within the Exmouth Sub-basin	2011/5995	Controlled Action	Post-Approval
Development of Stybarrow petroleum field incl drilling and facility installation	2004/1469	Controlled Action	Post-Approval
Echo-Yodel Production Wells	2000/11	Controlled Action	Post-Approval
Enfield full field development	2001/257	Controlled Action	Post-Approval
Equus Gas Fields Development Project, Carnarvon Basin	2012/6301	Controlled Action	Completed
Eramurra Industrial Salt Project	2021/9027	Controlled Action	Assessment Approach
Eramurra Industrial Salt Project, near Karratha, WA	2019/8448	Controlled Action	Completed
Gorgon Gas Development 4th Train Proposal	2011/5942	Controlled Action	Post-Approval
Greater Enfield (Vincent) Development	2005/2110	Controlled Action	Post-Approval
Light Crude Oil Production	2001/365	Controlled Action	Post-Approval

Title of referral	Reference	Referral Outcome	Assessment Status
Controlled action			
Perdaman Urea Project, near Karratha, WA	2018/8383	Controlled Action	Post-Approval
Pluto Gas Project	2005/2258	Controlled Action	Completed
Pluto Gas Project Including Site B	2006/2968	Controlled Action	Post-Approval
Pyrenees Oil Fields Development	2005/2034	Controlled Action	Post-Approval
The Scarborough Project - FLNG & assoc subsea infrastructure, Carnarvon Basin	2013/6811	Controlled Action	Post-Approval
Vincent Appraisal Well	2000/22	Controlled Action	Post-Approval
Not controlled action			
'Goodwyn A' Low Pressure Train Project	2003/914	Not Controlled Action	Completed
'Van Gogh' Oil Appraisal Drilling Program, Exploration Permit Area WA-155-P(1)	2006/3148	Not Controlled Action	Completed
Bollinger 2D Seismic Survey 200km North of North West Cape WA	2004/1868	Not Controlled Action	Completed
Bultaco-2, Laverda-2, Laverda-3 and Montesa-2 Appraisal Wells	2000/103	Not Controlled Action	Completed
Carnarvon 3D Marine Seismic Survey	2004/1890	Not Controlled Action	Completed
Cazadores 2D seismic survey	2004/1720	Not Controlled Action	Completed
Construction and operation of an unmanned sea platform and connecting pipeline to Varanus Island for	2004/1703	Not Controlled Action	Completed
Controlled Source Electromagnetic Survey	2007/3262	Not Controlled Action	Completed
Development of Halyard Field off the west coast of WA	2010/5611	Not Controlled Action	Completed
Development of Mutineer and Exeter petroleum fields for oil production, Permit	2003/1033	Not Controlled Action	Completed
Drilling of an exploration well Gats-1 in Permit Area WA-261-P	2004/1701	Not Controlled Action	Completed

Title of referral	Reference	Referral Outcome	Assessment Status
Not controlled action			
Eagle-1 Exploration Drilling, North West Shelf, WA	2019/8578	Not Controlled Action	Completed

Key Ecological Features [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 125 m depth contour	North-west
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Exmouth Plateau	North-west
Glomar Shoals	North-west

Biologically Important Areas

Scientific Name	Behaviour	Presence
Dugong		
Dugong dugon Dugong [28]	Breeding	Known to occur
Dugong dugon Dugong [28]	Calving	Known to occur
Dugong dugon Dugong [28]	Foraging (high density seagrass beds)	Known to occur
Dugong dugon Dugong [28]	Nursing	Known to occur
Marine Turtles		
Caretta caretta Loggerhead Turtle [1763]	Internesting buffer	Known to occur

Scientific Name	Behaviour	Presence
Caretta caretta Loggerhead Turtle [1763]	Nesting	Known to occur
Chelonia mydas Green Turtle [1765]	Aggregation	Known to occur
Chelonia mydas Green Turtle [1765]	Basking	Known to occur

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

Acknowledgements

This database has been compiled from a range of data sources. The department acknowledges the following custodians who have contributed valuable data and advice:

-Office of Environment and Heritage, New South Wales

APPENDIX D: CULTURAL HERITAGE SEARCHES

Aboriginal Cultural Heritage Inquiry System

List of Aboriginal Cultural Heritage (ACH) Register

Search Criteria

No Aboriginal Cultural Heritage (ACH) Register in Shapefile - Pluto Operations and Drilling - Petroleum Activities Area. Warning: Search area complex so results may be inaccurate. Contact DPLH for assistance.

Disclaimer

Aboriginal heritage holds significant value to Aboriginal people for their social, spiritual, historical, scientific, or aesthetic importance within Aboriginal traditions, and provides an essential link for Aboriginal people to their past, present and future. In Western Australia Aboriginal heritage is protected under the *Aboriginal Heritage Act 1972*.

All Aboriginal cultural heritage in Western Australia is protected, whether or not the ACH has been reported or exists on the Register.

The information provided is made available in good faith and is predominately based on the information provided to the Department of Planning, Lands and Heritage by third parties. The information is provided solely on the basis that readers will be responsible for making their own assessment as to the accuracy of the information. If you find any errors or omissions in our records, including our maps, it would be appreciated if you provide the details to the Department via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form and we will make every effort to rectify it as soon as possible.

Terminology

ID: ACH on the Register is assigned a unique ID by the Department of Planning, Lands and Heritage using the format: ACH-00000001. For ACH on the former Register the ID numbers remain unchanged and use the new format. For example the ACH ID of the place Swan River was previously '3536' and is now 'ACH-00003536'.

Access and Restrictions:

- **Boundary Reliable (Yes/No):** Indicates whether to the best knowledge of the Department, the location and extent of the ACH boundary is considered reliable.
- **Boundary Restricted = No:** Represents the actual location of the ACH as understood by the Department..
- **Boundary Restricted = Yes:** To preserve confidentiality the exact location and extent of the place is not displayed on the map. However, the shaded region (generally with an area of at least 4km²) provides a general indication of where the ACH is located. If you are a landowner and wish to find out more about the exact location of the place, please contact the Department of Planning, Lands and Heritage.
- **Culturally Sensitive = No:** Availability of information that the Department of Planning, Lands and Heritage holds in relation to the ACH is not restricted in any way.
- **Culturally Sensitive = Yes:** Some of the information that the Department of Planning, Lands and Heritage holds in relation to the ACH is restricted if it is considered culturally sensitive information. This information will only be made available if the Department of Planning, Lands and Heritage receives written approval from the people who provided the information. To request access please contact via https://achknowledge.dplh.wa.gov.au/ach-enquiry-form.
- **Culturally Sensitive Nature:**
  - **No Gender / Initiation Restrictions:** *Anyone* can view the information.
  - **Men only:** Only *males* can view restricted information.
  - **Women only:** Only *females* can view restricted information.

Status:

- **Register:** Aboriginal cultural heritage places that are assessed as meeting Section 5 of the *Aboriginal Heritage Act 1972*.
- **Lodged:** Information which has been received in relation to an Aboriginal cultural heritage place, but is yet to be assessed under Section 5 of the *Aboriginal Heritage Act 1972.*
- **Historic:** Aboriginal heritage places assessed as not meeting the criteria of Section 5 of the *Aboriginal Heritage Act 1972*. Includes places that no longer exist as a result of land use activities with existing approvals.

Place Type: The type of Aboriginal cultural heritage place. For example an artefact scatter place or engravings place.
Legacy ID: This is the former unique number that the former Department of Aboriginal Sites assigned to the place.

NOPSEMA
Australia's offshore energy regulator

FORM

Recordable Environmental Incident Monthly Report

Document No: N-03300-FM0928 A198750

Date: 10/01/2024

Due Date: By the 15th day of the following month.

Send completed form to: submissions@nopsema.gov.au via secure file transfer at https://securefile.nopsema.gov.au/filedrop/submissions

Reference: Regulation 50

Please check the following boxes if applicable to this report **Nil Incident Report:** ☐ **Final report for this activity:** ☐

Titleholder name:		**Titleholder business address:**		**Title of environment plan for the activity:**	
Activity type: (e.g. drilling, seismic, production)		**Month, Year:**		**Facility name and type :** (e.g. MODU, Seismic Vessel, FPSO)	
Contact person:		**Email:**		**Phone:**	
Incident date	**All material facts and circumstances** (including release volumes to environment if applicable)	**Performance outcome(s) and/or standard(s) breached**	**Action taken to avoid or mitigate any adverse environmental impacts of the incident**	**Corrective action taken, or proposed, to stop, control or remedy this incident**	**Action taken, or proposed, to prevent a similar incident occurring in future**

Note 1: As at 28 February 2014, amendments to the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations changed from environmental performance objective to environmental performance outcome. If you are reporting against an EP accepted under the old Regulations please report against the environmental performance objective for that activity.

Note 2: This form may be submitted in conjunction with the 'Injuries and Fatalities – Monthly Summary Report' Form available at www.nopsema.gov.au

Privacy Notice

NOPSEMA collects your contact details for the purpose of administering the OPGGSA and associated regulations. NOPSEMA will not use or disclose your personal information for any other purpose without your consent, unless it is required or authorised by law, or relates to NOPSEMA's enforcement activities. Your personal information may be disclosed to the following organisations, entities or individuals:

- individuals who make a request under the *Freedom of Information Act 1982*
- the Australian National Audit Office and other privately appointed auditors
- NOPSEMA's legal advisors.

NOPSEMA may occasionally be required to disclose information to overseas recipients in order to discharge its functions or exercise its powers, or to perform its necessary business activities. Information about how you can access, or seek correction to, your personal information is contained in NOPSEMA's APP Privacy Policy at www.nopsema.gov.au/privacy. If you have an enquiry or a complaint about your privacy, please contact NOPSEMA's Privacy Contact Officer on 08 6188 8700 or by email at privacy@nopsema.gov.au.

FORM

Report of an accident, dangerous occurrence or environmental incident

Document No: N-03300-FM0831 A159980

Date: 07/09/2023

For instructions and general guidance in the use of this form, please see the last page.

Part 1 is required within 3 days of a notified incident.
Part 2 is required within 30 days of notified incident.

What was the date and time of the initial verbal incident notification to NOPSEMA?			
Date		**Time**	

NOTE: It is a requirement to request permission to interfere with the site of an accident or dangerous occurrence. Refer OPGGS(S)R, Reg. 2.49.

What is the date and time of this written incident report?			
Date		**Time**	

What type of incident is being reported?	*Please tick appropriate incident type*	
Accident or dangerous occurrence		Complete parts 1A, 1B & part 2
Environmental Incident		Complete parts 1A, 1C
BOTH (Accident or dangerous occurrence AND environmental incident)		Complete ALL parts (1A, 1B, 1C, 2)

Please tick all applicable (one or more categories) *To use electronically: MS Word 2007-10 – click in check box*

Categories *Please select one or more*	Accidents	Death or Serious injury Lost time injury ≥3 days	☐ ☐

Part 1A – Information required within 3 days of an accident, dangerous occurrence or environmental incident

General information – all incidents

1.	**Where did the incident occur?**	Facility / field / title name		
		Site name and location *Latitude/longitude*		
2.	**Who is the registered operator/titleholder or other person that controls the works site or activity?**	Name		
		Business address		
		Business phone no.		
3.	**When did the incident occur?**	Time and time zone		
		Date		
4.	**Did anyone witness the incident?**	Yes or No *If yes, provide details below*		
	Witness details	Witness no. 1	Witness no. 2	Witness no. 3
	Full name			
	Phone no. (Business hours)			
	Phone no. (Home) (Mobile)			
	Email (Business) (Private)			
	Postal address			
	NB: If more witnesses, copy and insert this section (4) here, and add extra witness numbers appropriately			
5.	**Details of person submitting this information**	Name		
		Position		
		Email		
		Telephone no.		
6.	**Brief description of incident**			
7.	**Work or activity being undertaken at time of incident**			

Part 1A – Information required within 3 days of an accident, dangerous occurrence or environmental incident

General information – all incidents

8.	**What are the internal investigation arrangements?**					
9.	**Was there any loss of containment of any fluid (liquid or gas)?**	Yes or No *If Yes, provide details below*				
		Type of fluid (liquid or gas) *If hydrocarbon release, please complete item no.15 as well*	Hydrocarbon ☐ *Please specify*_____ Non-hydrocarbon ☐ *Please specify*_____			
		Estimated quantity *Liquid (L), Gas (kg)*				
		Estimation details	Calculation	☐	Measurement	☐
			*Please specify*_____			
		Composition *Percentage and description*				
		Known toxicity to people and/or environment	Toxicity to people			
			Toxicity to environment			
		How was the leak/spill detected?	F&G detection ☐ CCTV ☐		Visual ☐ Other ☐	
		Did ignition occur?	No ☐ Yes ☐		Immediate ☐ Delayed ☐	
			If yes, what was the likely ignition source		Hotwork ☐ Spark electrical source ☐ Spark metallic contact ☐ Hot surface ☐ Other ☐	
10.	**Has the release been stopped and/or contained?**	Yes or No				
		Duration of the release *hh:mm:ss*				
		Estimated rate of release *Litres or kg per hour*				
11.	**Location of release**	What or where is the location of the release?				
		What equipment was involved in the release?				
		Is this functional location listed as safety-critical equipment?				

Part 1A – Information required within 3 days of an accident, dangerous occurrence or environmental incident

General information – all incidents

12.	**Weather conditions** *Please complete as appropriate*	Ambient temperature C°				
		Relative humidity %				
		Wind speed m/s *NB: for enclosed areas use* Air change per hour				
		Wind direction e.g. from SW				
		Significant wave height m				
		Swell m				
		Current speed m/s				
		Current direction e.g. from SW				
13.	**Hydrocarbon release details** *If hydrocarbon fluid (liquid or gas) was released, please complete this section as well*	System of hydrocarbon release	Process ☐ Drilling ☐ Subsea / Pipeline ☐		Utilities ☐ Well related ☐ Marine ☐	
		Estimated inventory in the isolatable system *Litres or kg*				
		System pressure and size of piping or vessel *diameter (d in mm)* *length (l in m)* *or volume (V in L)*	Pressure MPag			
			Size Piping (d) and Piping (l) or Vessel (V)			
		Estimated equivalent hole diameter *d in mm*				

Part 1B - Complete for accidents or dangerous occurrences

Accidents and dangerous occurrences information

	Was NOPSEMA notified through the dedicated notification phone line? *Phone No.* 1300 674 472		Yes	☐	No	☐
15.	**Action taken to make the work-site safe**	Was permission given by a NOPSEMA inspector to interfere with the site? OPGGS(S)R 2.49.	Yes	☐	No	☐
		Action taken				
		Details of any disturbance of the work site				

Part 1B - Complete for accidents or dangerous occurrences

Accidents and dangerous occurrences information

16.	**Was an emergency response initiated?**		Yes	☐	No	☐
		Type of response	Manual Automatic alarm	☐ ☐	Muster Evacuation	☐ ☐
		How effective was the emergency response?				

17.	**Was anyone killed or injured?** *Provide details below*		Yes	☐	No	☐		
	Injured persons (IP)	**Casualty no. 1**						
	If different from item 2. Employer name		Employer address					
	Employer phone no.		Employer email					
	IP full name							
	IP date of birth		Sex	M	☐	F	☐	
	IP residential address							
	IP phone no. (Work)		IP phone no. (Home) (Mobile)					
	IP occupation/job title		Contractor or core crew					
	Details of injury							
	Based on TOOCS (refer last page) Nature of injury	a. Intracranial injury b. Fractures c. Wounds, lacerations, amputations, internal organ damage	☐ ☐ ☐	d. Burn e. Nerve or spinal cord injury f. Joint, ligament, muscle or tendon injury g. Other _____	☐ ☐ ☐ ☐			
	Part of body	G1. Head or face G2. Neck G3. Trunk G4. Shoulder or arm	☐ ☐ ☐ ☐	G5. Hip or leg G6. Multiple locations G7. Internal systems G8. Other _____	☐ ☐ ☐ ☐			
	Mechanism of injury	G0. Falls, stepping, kneeling, sitting on object G1. Hitting object G2. Being hit or trapped	☐ ☐ ☐	G3. Exposure to sound or pressure G4. Muscular stress G5. Heat, cold or radiation G6/7 Chemical, biological substance G8. Other _____	☐ ☐ ☐ ☐ ☐			
	Agency of injury	1. Machinery or fixed plant 2. Mobile plant or transport 3. Powered equipment 4. Non-power equipment	☐ ☐ ☐ ☐	5/6. Chemicals, materials, substances 7. Environmental agencies 8. Human or animal agencies 9. Other _____	☐ ☐ ☐ ☐			

Part 1B - Complete for accidents or dangerous occurrences

Accidents and dangerous occurrences information

	Details of job being undertaken					
	Day and hour of shift	Day *e.g. 5th day of 7 (5 / 7)*		Hour *e.g. 3rd hour of 12 (3 / 12)*		
	NB: If more casualties, please copy/paste this section (19) for each additional casualty and insert here					
18.	**Was there any serious damage?** *Provide details below*			Yes	☐	No ☐
	Details	**Item 1**		**Item 2**		**Item 3**
	Equipment damaged					
	Extent of damage					
19.	**Will the equipment be shut down?** *Yes or No*					
	If yes, for how long?					
	NB: If more equipment seriously damaged, please copy/paste this section as required					
20.	**Will the facility be shut down?**	Yes or No *If yes provide details below*				
	Facility shutdown	Date				dd/mm/yyyy
		Time				24-hour clock
		Duration				days / hours / minutes
21.	**Immediate action taken/intended, if any, to prevent recurrence of incident.**	**Action**		**Responsible party**		**Completion date** *Actual or intended*
22.	**What were the immediate causes of the incident?**

Part 1C – Complete for environmental incidents

Environmental Impacts

23.	**What is the current environment plan for this incident?**	Environment plan		
24.	**Has the incident resulted in an impact to the environment?**	Yes or No *If yes, provide details below*		
		Incident details *e.g. estimated area of impact, nature/significance of impact*		
		ENVIRONMENTAL RECEPTORS		
		Open ocean ☐ Shoreline ☐ Population centre ☐ Stakeholders ☐ Other sensitivity ☐ *e.g. conservation area, nesting beach*	Macroalgae ☐ Coral Reef ☐ Benthic invertebrates ☐ Seagrass ☐ Mangrove ☐	
		Further details		

	Details	**Environment 1**	**Environment 2**	**Environment 3**
	Location of receiving environments *Lat/Long*			
	Date & time of impact			
	Action taken to minimise exposure			
	Specify each matter protected under Part 3 of the EPBC Act impacted			

NB: If more environments were damaged, please copy/paste this section (Item E3) and add extra data

25.		Yes or No *If yes, provide details*	

Part 1C – Complete for environmental incidents

Environmental Impacts

	Are any environments at risk? ***Including as a result of spill response measures***	Details *e.g. zone of potential impact*				
		AT RISK ENVIRONMENTS				
		Open ocean	☐	Macroalgae	☐	
		Shoreline	☐	Coral Reef	☐	
		Population Centre	☐	Benthic Invertebrates	☐	
		Stakeholders	☐	Seagrass	☐	
		Other sensitivity *e.g. conservation area, nesting beach*	☐	Mangrove	☐	

	Details	**Environment 1**	**Environment 2**	**Environment 3**
	Estimated location of 'at-risk' environments			
	Estimated impact date & time			
	Action required to minimise exposure			
	Specify each matter protected under Part 3 of the EPBC Act at risk			

NB: If more environments at risk of damage, please copy/paste this section (Item E2) and add extra data

26.	**Was an oil pollution emergency plan activated?**	Yes or No	
		If yes, what action has been implemented /planned?	
		If yes, how effective is/was the spill response?	
27.	**Was an environmental monitoring program initiated?**	Yes or No	
		If yes, what actions have been implemented and/or planned?	

28.	**Did the incident result in the death or injury of any fauna?**	Yes or No (If yes provide details of species in the table below)		
	Injured fauna	**Species 1**	**Species 2**	**Species 3**
	Species name (common or scientific name)			
	Number of individuals killed or injured	Killed: Injured:	Killed: Injured:	Killed: Injured:

NB: If more species were injured or killed, please copy/paste this section (Item E4) and add extra data

29.	**Actions taken to avoid or mitigate any adverse**	**Action**	**Responsible party**	**Completion date** *Actual or intended*

Part 1C – Complete for environmental incidents

Environmental Impacts

	environmental impacts of the incident.			
	NB: If more actions, please add extra rows as required			
30.	**Corrective actions taken, or proposed, to stop, control or remedy the incident.**	**Action**	**Responsible party**	**Completion date** *Actual or intended*
	NB: If more actions, please add extra rows as required			
31.	**Actions taken, or proposed, to prevent a similar incident occurring in the future.**	**Action**	**Responsible party**	**Completion date** *Actual or intended*
	NB: If more actions, please add extra rows as required			

Attachments

Are you attaching any documents?			Yes or No *If yes, provide details below*	
No.	**ID**	**Revision**	**Date**	**Title/Description**
Insert or delete rows as required				

Part 2 – Information required within 30 days of accident or dangerous occurrence

NOPSEMA acknowledges that in many circumstances an operator may not have completed an investigation within 3 days of an accident or first detection of a dangerous occurrence and agrees that these items must be provided within 30 days unless otherwise agreed, in writing with NOPSEMA. In circumstances where an investigation has been completed within 3 days, and these items are available (supplemented, as required by any attachments) this part should also be completed at that time.

32.	**Has the investigation been completed?**	Yes or No	
	Root cause analysis *What were the root causes?*	Root cause 1	
		Root cause 2	
		Root cause 3	
		Other root causes	
	Full report *Describe investigation in detail, including who conducted the investigation and in accordance with what standard/procedure with reference to attachments listed in the 'attachments table' (following) as applicable*		

33.	**Actions to prevent recurrence of same or similar incident**	**Action**	**Responsible party**	**Completion date** *Actual or intended*
	NB: Add or delete rows as appropriate			

Attachments (Insert/delete rows as required)

Are you attaching any documents?			Yes or No *If yes, provide details below*	
No.	**ID**	**Revision**	**Date**	**Title/description**

Instructions and general guidance for use:

1. The use of this form is voluntary and is provided to assist operators and titleholders to comply with their obligations to give notice and provide reports of incidents to NOPSEMA under the applicable legislation.
2. Accidents, dangerous occurrences or environmental incidents can all be reported using this same form.
3. The applicable legislation for incident reporting is:
    a. Offshore Petroleum and Greenhouse Gas Storage (Safety) Regulations 2009 [OPGGS(S)R]; and
    b. Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 [OPGGS(E)R], for facilities located in Commonwealth waters; or
    c. for facilities located in designated coastal waters, the relevant State or Territory Act and associated Regulations where there is a current conferral of powers to NOPSEMA.
4. In the context of this form an incident is a reportable incident as defined under:
    a. OPGGSA, Schedule 3, Clause 82.
    b. OPGGS(E)R, regulation 4.
5. This form should be used in conjunction with NOPSEMA Guidance Notes available on the NOPSEMA website:
    a. N-03300-GN0099 Notification and Reporting of Accidents and Dangerous Occurrences
    b. N-03300-GN0926 Notification and Reporting of Environmental Incidents
6. Part 1 requires completion for all incidents; then ALSO complete part 2 if the incident is an accident or dangerous occurrence.
7. NOPSEMA considers that a full report will contain copies of documentary material referenced and/or relied on in the course of completing this form, which may include (but not be limited to) as appropriate: witness statements, management system documents, drawings, diagrams and photographs, third party reports (audit, inspection, material analysis etc.), internal records and correspondence.
8. This form is intended to be completed electronically using Microsoft Word by completing the unshaded cells which will expand as required to accept the information required and the check boxes where relevant (NB: check boxes may appear shaded and have reduced functionality in MS Word versions prior to 2010).
9. The completed version of this form (and any attachments, where applicable) should be emailed to:

    submissions@nopsema.gov.au

    or submitted via secure file transfer at: https://securefile.nopsema.gov.au/filedrop/submissions as soon as practicable, but in any case, within three days of the incident.

TABLE OF CONTENTS

APPENDIX F

CONSULTATION APPROACH

For the Pluto Facility Operations Environment Plan, Woodside has taken a broad and proactive tiered consultation approach over a period of up to 5 months.

This approach was aimed at raising public awareness of the consultation opportunity and enable self-identification. It included a social media campaign and advertising in national, state, regional and Indigenous newspapers.

The tiered consultation approach discharges regulation 25 of the Environment Regulations' requirements. The approach is proactive, extended, has enabled self-identification, and has raised broad awareness of Woodside's activities related to this EP.

Consultation Tiered Approach

Regulation 25	Woodside's consultation approach assessed and identified relevant persons, enabled two-way dialogue and engagement, and included email and phone call follow up. The approach taken satisfies the requirements of regulation 25 to give relevant persons sufficient information and allow a reasonable period of time for consultation (see Section 5 of this EP).
Proactive	To raise awareness of the consultation process, and to enable grass-roots consultation, Woodside undertook advertised regional consultation roadshows and facilitated consultation at regional community events.
Extended	A reasonable consultation period was provided to enable an informed assessment of possible consequences on functions, interests or activities. Consultation with stakeholders extended beyond the initial period as required.
Self-Identification	Broad communication activities were undertaken to build awareness of consultation and enable self-identification, supported by targeted education materials.
Broad Understanding	Broad proactive communication activities were undertaken with the public to raise awareness of Woodside's activities.

Building on the Existing Consultation Approach

For this EP, Woodside has built on its consultation methodology and undertaken additional consultation activities throughout the consultation period to ensure a reasonable period of time and sufficient information has been provided to relevant persons so that they can make an informed assessment of the possible consequences of the activity on their functions, interests or activities.

The approach included:

- A consultation period of up to 5 months
- Undertaking proactive consultation activities to provide sufficient information to relevant persons
- Raising awareness of the consultation process and opportunity to provide feedback
- Driving participation in the consultation process.

An overview of this approach is shown below:

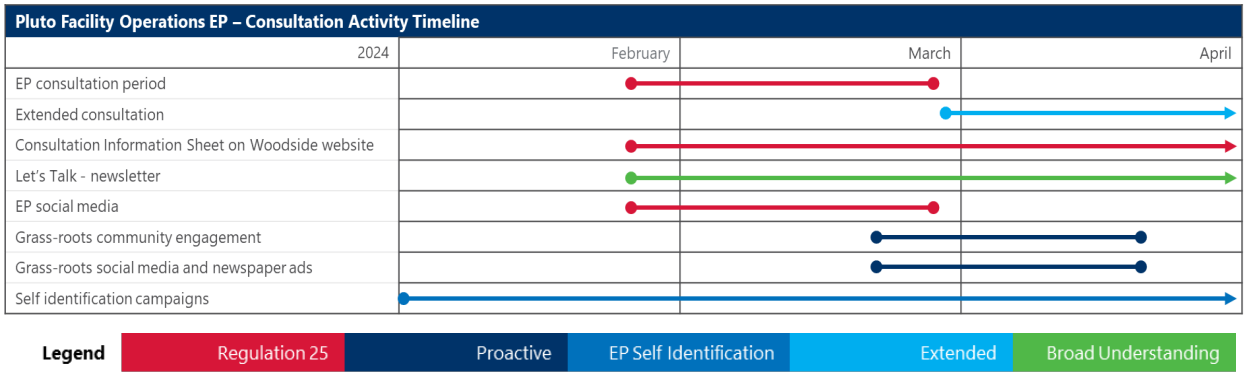

Figure: Pluto Facility Operations Consultation Activity

Traditional Custodian Consultation Approach

Woodside has meaningful long-term relationships with relevant Traditional Custodians specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement.

To this end, consultation on any particular EP, including this EP, happens before, during and after the designated consultation period in a more holistic manner allowing for an understanding of the bigger picture and accommodating cultural requirements.

For the past 12 months, where requested, Woodside has been working with nominated representative bodies to develop Consultation Agreement Frameworks which aim to enable each group to be consulted in a manner appropriate to their needs.

NGO Consultation Approach

Woodside has an established history of consulting with environmental non-government organisations (NGOs) as part of its EP consultation. In its methodology **(Section 5.3.4, Table 5-2)**, NGOs are considered "Other non-government groups or organisations" and "Research institutes and local conservation groups or organisations". Relevant person identification for these categories is based on registered non-government groups or organisations with current targeted public website material specific to the proposed activity at the time of developing the EP and who have demonstrated functions, interests or activities relevant to the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation.

So that NGOs were given sufficient information and a reasonable period of time to consult, Woodside:

- Advertised the consultation period (social and traditional media)
- Directly consulted NGOs
- Participated in regional community events (which were advertised) in the Pilbara which could be attended by any NGOs including local groups (if NGOs attended these sessions, they did not identify themselves).

NGO Response

Woodside witnessed a pattern in NGO responses to the consultation process and information provided. Woodside received feedback and request for further information on the last day of

consultation. The delayed responses followed an initial four week consultation period, and generally assert that Woodside has not met regulatory requirements as it has not provided sufficient information or a reasonable period of time for consultation. One further NGO self-identified a month following consultation closing.

RELEVANCY ASSESSMENT

Assessment of Relevant Persons for the Proposed Activity

The result of Woodside's assessment of relevant persons in accordance with regulation 25 (1) of the Environment Regulations is outlined below at **Table 1** and **Table 2**.

Persons or organisations that Woodside assessed as not relevant but nonetheless chose to contact at its discretion in accordance with **Section 5.3.4** in the EP or self-identified and Woodside assessed as not relevant are summarised below at **Table 1** and **Table 3**.

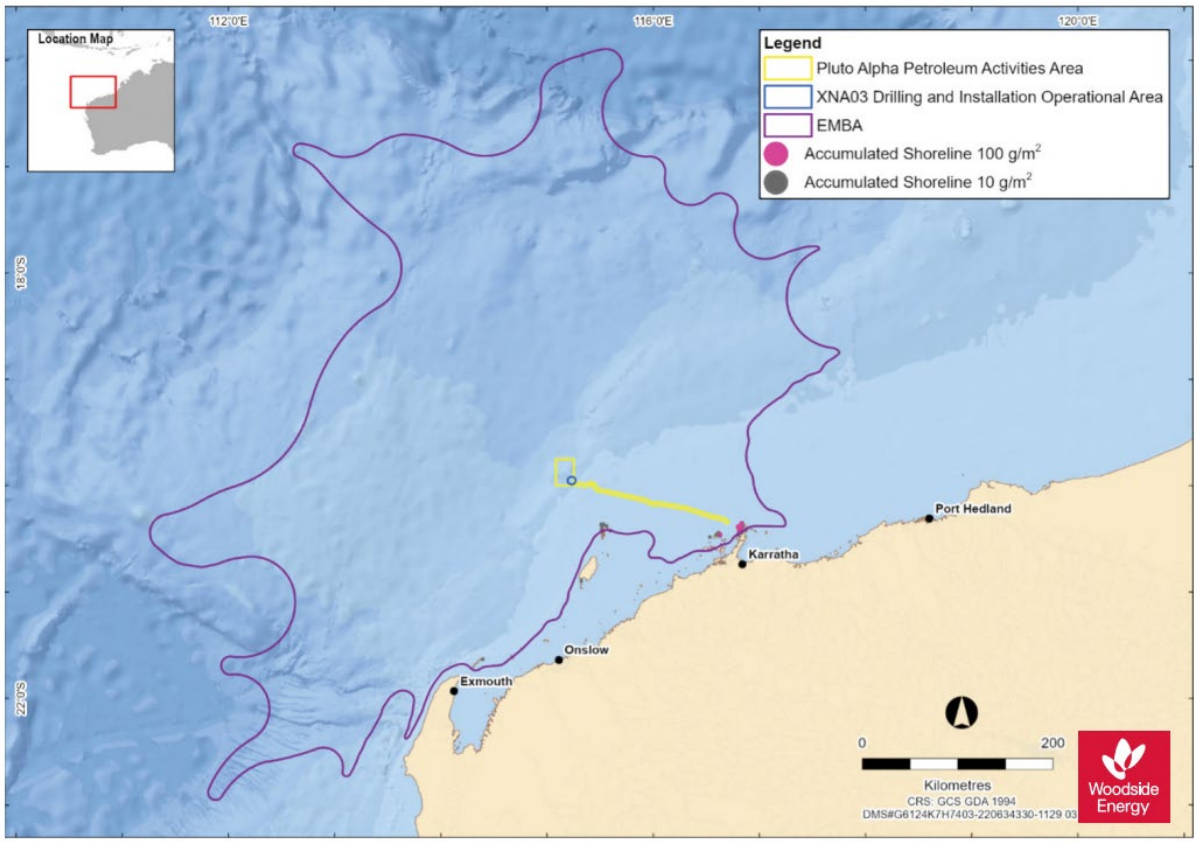

Figure 1: Operational Area and EMBA for this EP

Table 1: Assessment of Relevance

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth and WA State Government Departments or Agencies – Marine			
Australian Border Force (ABF)	Responsible for coordinating maritime security	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ABF's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Communications and Media Authority (ACMA)	Regulator for communications and media	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. ACMA's responsibilities may be relevant to the activity as there may be telecommunications lines that intersect the Operational Area.	Yes
Australian Fisheries Management Authority (AFMA)	Responsible for managing Commonwealth fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area. The North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA. AFMA's responsibilities may be relevant to the activity as the North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Australian Hydrographic Office (AHO)	Responsible for maritime safety and Notices to Mariners	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AHO's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine Safety	Statutory agency for vessel safety and navigation	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Safety's responsibilities may be relevant to the activity as there are proposed vessel activities.	Yes
Australian Maritime Safety Authority (AMSA) – Marine	Legislated responsibility for oil pollution response in Commonwealth waters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. AMSA – Marine Pollution's responsibilities may be relevant to the activity as the proposed activity	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Pollution		has a hydrocarbon spill risk which may require AMSA response in Commonwealth waters.	
Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries	Responsible for implementing Commonwealth policies and programs to support agriculture, fishery, food and forestry industries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area. The North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA. DAFF – Fisheries' responsibilities may be relevant to the activity as the North West Slope Trawl Fishery and the Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Department of Defence (DoD)	Responsible for defending Australia and its national interests	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(a) of the Environment Regulations. DoD's responsibilities may be relevant to the activity as defence training areas lie within the EMBA.	Yes
Department of Primary Industries and Regional Development (DPIRD)	Responsible for managing State fisheries	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Fish Trawl Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery are active in the Operational Area. The Exmouth Gulf Prawn Managed Fishery, West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Nickol Bay Prawn Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Fish Trawl Fishery, Specimen Shell Managed Fishery, West Coast Deep Sea Crustacean Managed Fishery have been active in the EMBA within the last 5 years. DPIRD's responsibilities may be relevant to the activity as the government department responsible for State fisheries.	Yes
Department of Transport (DoT)	Legislated responsibility for oil pollution response in State waters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has a hydrocarbon spill risk, which may require DoT response in State waters.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Department of Planning, Lands and Heritage (DPLH)	Responsible for state level land use planning and management, and oversight of Aboriginal cultural heritage and built heritage matters	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes
Western Australian Museum	Manages 200 shipwreck sites of the 1,500 known to be located off the Western Australian coast	Woodside has applied its methodology for 'Historical cultural heritage groups or organisations' under regulation 25(1)(d) of the Environment Regulations. There is known shipwrecks overlapping the EMBA which the Western Australian Museum may be responsible for.	Yes
Pilbara Ports Authority	Responsible for the operation of the Port of Dampier	Woodside has applied its methodology for 'Government departments / agencies – marine' under regulation 25(1)(b) of the Environment Regulations. The proposed activity has the potential to impact Pilbara Ports Authority's responsibilities as the EMBA overlaps the Pilbara Ports Authority's area of responsibility.	Yes
Commonwealth and WA State Government Departments or Agencies – Environment			
Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)	DAFF administers, implements and enforces the Biosecurity Act 2015. The Department requests to be consulted where an activity has the potential to transfer marine pests. DAFF also has inspection and reporting requirements to ensure that all conveyances (vessels, installations and aircraft) arriving in Australian territory comply with international health regulations and that any	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DAFF – Biosecurity's responsibilities may be relevant to the proposed activities in the EMBA in the prevention of introduced marine species.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
	biosecurity risk is managed. The Dept requests to be consulted where an activity involves the movement of aircraft or vessels between Australia and offshore petroleum activities either inside or outside Australian territory.		
Department of Climate Change, Energy, the Environment and Water (DCCEEW)	Responsible for implementing Commonwealth policies and programs to support climate change, sustainable energy use, water resources, the environment and our heritage. Administers the *Underwater Cultural Heritage Act 2018* in collaboration with the States, Northern Territory and Norfolk Island, which is responsible for the protection of shipwrecks, sunken aircraft and other types of underwater heritage and their associated artefacts in Commonwealth waters.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DCCEEW's responsibilities may be relevant to the proposed activities in the EMBA as there are potential environmental impacts from the proposed activity. There is known Maritime Cultural Heritage overlapping the EMBA.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Director of National Parks (DNP)	Responsible for the management of Commonwealth parks and conservation zones.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. DNP's responsibilities may be relevant to the activity as DNP requires an awareness of activities that occur within AMPs, and an understanding of potential impacts and risks to the values of parks (NOPSEMA guidance note: N-04750-GN1785 A620236, June 2020). Titleholders are required to consult DNP on offshore petroleum and greenhouse gas exploration activities if they occur in, or may impact on the values of marine parks, including where potential spill response activities may occur in the event of a spill (i.e. scientific monitoring).	Yes
Ningaloo Coast World Heritage Advisory Committee (NCWHAC)	Supports the DBCA to manage the Ningaloo Coast World Heritage Area.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(a) of the Environment Regulations. The NCWHAC's responsibilities may be relevant to the activity as the EMBA overlaps the Ningaloo Marine Park.	Yes
Department of Biodiversity, Conservation and Attractions (DBCA)	Responsible for managing WA's parks, forests and reserves to achieve wildlife conservation and provide sustainable recreation and tourism opportunities.	Woodside has applied its methodology for 'Government departments / agencies – environment' under regulation 25(1)(b) of the Environment Regulations. The DBCA's responsibilities may be relevant to the activity as EMBA overlaps WA parks, forests or reserves. Activities have the potential to impact marine tourism in the EMBA.	Yes
Commonwealth and State Government Departments or Agencies – Industry			
Department of Industry, Science and Resources (DISR)	Department of relevant Commonwealth Minister.	Required to be consulted under regulation 25(1)(a) of the Environment Regulations.	Yes
Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)	Department of relevant State Minister.	Required to be consulted under regulation 25(1)(c) of the Environment Regulations.	Yes
Commonwealth Commercial fisheries and representative bodies			
North West Slope Trawl Fishery	Commonwealth commercial fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.	
Southern Bluefin Tuna Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the last 5 years. Woodside does not consider that the proposed activity will present a risk to licence holders, given since 1992, the majority of Australian catch has concentrated in south-eastern Australia. (Patterson et al., 2022). In addition, given fishing methods by licence holders for species fished in this fishery (Australia has a 35% share of total global allowable catch of Southern Bluefin Tuna, which is value-added through tuna ranching near Port Lincoln (South Australia), or fishing effort in New South Wales (Australian Southern Bluefin Tuna Industry Association).	No
Western Deepwater Trawl Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps EMBA and has been active in the EMBA within the last 5 years.	Yes
Western Skipjack Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given the fishery spans the Australian Fishing Zone west of Victoria and the Torres Strait. The Fishery is not currently active and no fishing has occurred since 2009 (Patterson et al., 2022). In addition, interactions are not expected given the species' pelagic distribution fishing methods for species fished by licence holders.	No
Western Tuna and Billfish Fishery	Commonwealth commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, it has not been active in the Operational Area or EMBA within the last 5 years.	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Commonwealth Fisheries Association (CFA)	Represents the interests of commercial fishers with licences in Commonwealth waters	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The North West Slope Trawl Fishery is active in the Operational Area. The North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA. CFA's functions may be relevant to the activity as the North West Slope Trawl Fishery is active in the Operational Area and the North West Slope Trawl Fishery and Western Deepwater Trawl Fishery are active in the EMBA.	Yes
Australian Southern Bluefin Tuna Industry Association (ASBTIA)	Represents the interests of the Southern Bluefin Tuna Fishery and Western Skipjack Fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Southern Bluefin Tuna Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Southern Bluefin Tuna Fishery, the ASBTIA has also been assessed as not relevant. The Southern Bluefin Tuna Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Southern Bluefin Tuna Fishery, the ASBTIA has also been assessed as not relevant. Woodside has provided information to the ASBTIA at its discretion in line with Section 5.3.4 on AFMA advice that it expects all Commonwealth fishers who have entitlements to fish within the proposed area to be consulted, which can be through the relevant fishing industry associations.	No
Tuna Australia	Represents the interests of the Western Tuna and Billfish Fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Western Tuna and Billfish Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Western Tuna and Billfish Fishery, Tuna Australia has also been assessed as not relevant. The Western Tuna and Billfish Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Western Tuna and Billfish Fishery, Tuna Australia has also been assessed as not relevant. Woodside has provided information to Tuna Australia at its discretion in line with Section 5.3.4 on AFMA advice that it expects all Commonwealth fishers who have entitlements to fish within the proposed area to be consulted, which can be through the relevant fishing industry associations.	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Pearl Producers Association (PPA)	Peak representative organisation of The Australian South Sea Pearling Industry, with members in Western Australia and the Northern Territory	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The Pearl Oyster Managed Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the Pearl Oyster Managed Fishery, the PPA has also been assessed as not relevant.	No
State Commercial fisheries and representative bodies			
Marine Aquarium Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area, WAFIC has advised there is no need to consult this fishery given the proposed activities operate in depths~180-850m which is outside the depth of the hand collection and diving methods used by this fishery. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
South West Coast Salmon Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in the Operational Area or EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given fishers are active south of Perth and from the beach (previous WAFIC advice). Further, no fishing occurs north of the Perth Metropolitan Area and therefore, no effort occurs within the Operational Area or EMBA.	No
Mackerel Managed Fishery (Area 2)	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Pilbara Crab Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	Yes
West Coast Deep Sea Crustacean Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area, it has not been active in the Operational Area within the last 5 years. The fishery overlaps the EMBA and has been active in the EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Specimen Shell Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years.	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Abalone Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in the Operational Area or EMBA within the last 5 years.	No
Pearl Oyster Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in the Operational Area or EMBA within the last 5 years.	No
Land Hermit Crab Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area and EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Onslow Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
		As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	
Western Australian Sea Cucumber Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area and EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Exmouth Gulf Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps the EMBA and has been active in the EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Gascoyne Demersal Scalefish Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area and EMBA.	No
West Coast Demersal Scalefish Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area and EMBA.	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
West Coast Rock Lobster Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. Although the fishery overlaps the EMBA, the fishery has not been active in the EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given fishers are active south of Perth and from the beach (previous WAFIC advice). Further, no fishing occurs north of the Perth Metropolitan Area and therefore, no effort occurs within the Operational Area or EMBA.	No
Nickol Bay Prawn Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area. The fishery overlaps the EMBA and has been active in the EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Exmouth Gulf Beach Seine and Mesh Net Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery does not overlap the Operational Area and EMBA.	No
WA North Coast Shark Managed Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. Although the fishery overlaps the Operational Area and EMBA, the fishery has not been active in the Operational Area or EMBA within the last 5 years. Woodside does not consider that the activity will present a risk to licence holders, given fishers are active south of Perth and from the beach (previous WAFIC advice). Further, no fishing occurs north of the Perth Metropolitan Area and therefore, no effort occurs within the Operational Area or EMBA.	No

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Demersal Scalefish Fishery: Pilbara Trawl Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	Yes
Pilbara Trap Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. While Woodside assessed the fishery as relevant in the Operational Area and EMBA, WAFIC has advised there is no need to consult this fishery given the proposed activities. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	No
Pilbara Line Fishery	State commercial fishery	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The fishery overlaps the Operational Area and EMBA and has been active in the Operational Area and EMBA within the last 5 years. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for Unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would however be undertaken only in the event of an unplanned emergency scenario.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Western Australian Fishing Industry Council (WAFIC)	Represents the interests of commercial fishers with licences in State waters.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d) of the Environment Regulations. The West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (area 2), Marine Aquarium Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Trawl Managed Fishery, Pilbara Line Fishery and Specimen Shell Managed Fishery have been active in the Operational Area within the last 5 years. The Exmouth gulf Prawn Managed Fishery, West Australian Sea Cucumber Fishery, Hermit Crab Fishery, Mackerel Managed Fishery (Area 2), Marine Aquarium Fish Managed Fishery, Nickol Bay Prawn Managed Fishery, Onslow Prawn Managed Fishery, Pilbara Crab Managed Fishery, Pilbara Trawl Managed Fishery, Pilbara Line Fishery, Specimen Shell Managed Fishery and West Coast Deep Sea Crustacean Managed Fishery have been active in the EMBA within the last 5 years. WAFIC's functions may be relevant to the activity as the peak representative body for State fisheries. WAFIC issued consultation materials to relevant commercial fisheries licence holders. Woodside acknowledges WAFIC's consultation guidance and has applied this by consulting, via WAFIC, fisheries that are assessed as having a potential for interaction in the Operational Area. As per WAFIC's Commercial Fishing Consultation Framework for the Offshore Oil and Gas Sector and Consultation Approach for unplanned Events, consultation with State fisheries relevant to the EMBA of the proposed activity would be undertaken only in the event of an unplanned emergency scenario.	Yes
Western Rock Lobster Council	Represents the interests of the Western Rock Lobster Managed Fishery.	Woodside has applied its methodology for 'Commercial fisheries (Commonwealth and State) and peak representative bodies' under regulation 25(1)(d). The West Coast Rock Lobster Managed Fishery has been assessed as not relevant to the proposed activity. As the peak representative body for the West Coast Rock Lobster Managed Fishery, the Western Rock Lobster Council has also been assessed as not relevant.	No
Recreational marine users and representative bodies			
Gascoyne Recreational Marine Users	Gascoyne-based dive, tourism and charter operators	Woodside has applied its methodology for 'Recreational marine users and representative bodies' under regulation 25(1)(d) of the Environment Regulations. Andro Maritime Services Australia, Aquatic Adventure Exmouth, Birds Eye View, Blue Horizon Charters, Blue Lightning Charters, Cape Immersion Tours, Coastal Adventure Tours, Coral Bay	Yes

	producers in Australia.	AEP's responsibilities are identified as having an intersect with Woodside's planned activities in the EMBA.	
Traditional Custodians and nominated representative corporations			
Murujuga Aboriginal Corporation (MAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. MAC is the Nominated Representative Corporation under the Burrup and Maitland Industrial Estates Agreement (BMIEA), which is coastally adjacent to the EMBA. The EMBA does not overlap the Murujuga National Park. MAC was established to represent the members of competing Native Title claims over Murujuga, collectively known as the Ngarda Ngarli and comprising Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo people. The determination of the competing Native Title claims resulted in no native title being found over the lands subject to the BMIEA or below the low water mark. MAC also owns and co-manages the Murujuga National Park, is responsible for the Dampier Archipelago National Heritage Place and is progressing the World Heritage nomination of the Murujuga Cultural Landscape.	Yes
Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. The NTGAC and YAC are the Registered Native Title Bodies Corporate holding native title on behalf of the Baiyungu, Thalanyji and Yinggarda people. The NTGAC is also party, with the WA State Government, to the Ningaloo Conservation Estate Indigenous Land Use Agreement (the ILUA), which is coastally adjacent to the EMBA. The NTGAC is responsible for the joint management of the inner Ningaloo Marine Park (State Waters), the Cape Range National Park and new conservation areas extending along the Ningaloo Coast, which runs in parallel to the outer Ningaloo Marine Park in Commonwealth waters. The NTGAC's nominated representative is the Yamatji Marlpa Aboriginal Corporation (YMAC) and the NTGAC executive officer and contact officer pursuant to the Corporations (Aboriginal and Torres Strait Islander) Act 2006 is employed by YMAC. Woodside has therefore consulted the NTGAC, via YMAC.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Thalanyji native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which BTAC is the Registered Native Title Body Corporate. BTAC is also party to the Macedon ILUA which is coastally adjacent to the EMBA.	Yes
Yinggarda Aboriginal Corporation (YAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Gnulli, Gnulli #2 and Gnulli #3 - Yinggarda, Baiyungu and Thalanyji People native title claim, which the Baiyungu, Thalanyji and Yinggarda people are party to, overlaps the EMBA. The NTGAC and YAC are the Registered Native Title Bodies Corporate holding native title on behalf of the Baiyungu, Thalanyji and Yinggarda people. The Yinggarda Aboriginal Corporation's nominated representative is Gumala Aboriginal Corporation.	Yes
Kariyarra Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Kariyarra native title claim does not overlap the EMBA. The claim is coastally adjacent to the EMBA, for which the Kariyarra Aboriginal Corporation is the Registered Native Title Body Corporate. The Kariyarra Aboriginal Corporation is also party to the Kariyarra and State ILUA, which is coastally adjacent to the EMBA.	Yes
Wirrawandi Aboriginal Corporation (WAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Yaburara & Mardudhunera People native title claim, for which WAC is the Registered Native Title Body Corporate, overlaps the EMBA. WAC is party to the Cape Preston Project Deed (YM Mardie ILUA), which overlaps the EMBA.	Yes
Robe River Kuruma Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Robe River Kuruma Aboriginal Corporation is party to the Cape Preston West Export Facility ILUA and the RTIO Kuruma Marthudunera People ILUA, which are coastally adjacent to the EMBA.	Yes

Person or Organisation	Summary of responsibilities and/or functions, interests or activities	Assessment of relevance	Relevant person
Ngarluma Aboriginal Corporation (NAC)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma/Yindjibarndi People native title claim, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Bodies Corporate, overlaps the EMBA. NAC is also party to the Anketell Port, Infrastructure Corridor and Industrial Estates ILUA and the RTIO Ngarluma Indigenous Land Use Agreement (Body Corporate Agreement), which are coastally adjacent to the EMBA.	Yes
Yindjibarndi Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma/Yindjibarndi People native title claim, for which NAC and the Yindjibarndi Aboriginal Corporation are the Registered Native Title Bodies Corporate, overlaps the EMBA.	Yes
Wanparta Aboriginal Corporation	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarla and Ngarla #2 (Determination Area A) native title claim does not overlap and is not adjacent to the EMBA. Woodside has voluntarily consulted with Wanparta Aboriginal Corporation, which is the registered Native Title Body Corporate, under regulation 25(1)(e) of the Environment Regulations.	No
Native Title Representative Bodies			
Yamatji Marlpa Aboriginal Corporation (YMAC)	Native Title Representative Body	Woodside has applied its methodology for 'Native Title Representative Bodies' under regulation 25(1)(d) of the Environment Regulations. YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders. The NTGAC's nominated representative is YMAC. Woodside has therefore consulted the NTGAC via YMAC. Woodside contacted YMAC to seek guidance with respect to the appropriate Traditional Custodian group(s) to engage with respect to the proposed activity where this was not clear. YMAC's functions may be relevant to the proposed activity in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation.	Yes

Self-identified First Nations groups			
Ngarluma Yindjibarndi Foundation Ltd (NYFL)	Representative Aboriginal Corporation	Woodside has applied its methodology for 'Traditional Custodians and Nominated Representative Corporations' under regulation 25(1)(d) of the Environment Regulations. The Ngarluma and Yindjibarndi People, the NWS JVs and Woodside entered into an agreement on 22 December 1998 (Agreement). NYFL was subsequently incorporated under the terms of the Agreement to act as trustee for the trust established to benefit the Ngarluma and Yindjibarndi People and the Roebourne Aboriginal Community. Subsequent to that, the Ngarluma people settled their native title claim and established their nominated representative corporation, the Ngarluma Aboriginal Corporation (PBC); and the Yindjibarndi people settled their native title claim and established their nominated representative corporation, the Yindjibarndi Aboriginal Corporation (PBC). The Ngarluma Aboriginal Corporation and the Yindjibarndi Aboriginal Corporation are the appropriate representative bodies for consultation in relation to cultural interests. NYFL's functions may be relevant to the proposed activity in relation to its functions under the Agreement.	Yes
Local government and community representative groups or organisations			
Shire of Exmouth	Local government governed by the *Local Government Act 1995* representing the suburbs and localities of Exmouth, Learmonth and North West Cape.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Exmouth's area of responsibility overlaps the EMBA.	Yes
Shire of Ashburton	Local government governed by the *Local Government Act 1995* representing the suburbs and localities of Onslow, Pannawonica, Paraburdoo and Tom Price.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Ashburton's area of responsibility overlaps the EMBA.	Yes
City of Karratha	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Baynton, Baynton West,	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The City of Karratha's area of responsibility overlaps the EMBA.	Yes

	Bulgarra, Cossack, Dampier, Gap Ridge, Karratha, Karratha Industrial Estate, Jingarri, Madigan, Millars Well, Nickol, Pegs Creek, Point Samson, Roebourne, Whim Creek and Wickham.		
Town of Port Hedland	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Cooke Point, Port Hedland, Pretty Pool, Redbank, South Hedland, Wedgefield and Yandeyarra.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Town of Port Hedland's area of responsibility does not overlap the EMBA.	No
Shire of Shark Bay	Local government governed by the Local Government Act 1995 representing the suburbs and localities of Billabong, Denham, Monkey Mia, Nanga, Overlander, Useless Loop	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Shire of Shark Bay's area of responsibility does not overlap the EMBA.	No
Exmouth Community Liaison Group (CLG)	The Exmouth CLG represents the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth region.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Base Marine, Bgahwan Marine, Cape Conservation Group Inc., DBCA, Department of Defence, Department of Transport, Exmouth Bus Charter, Exmouth Chamber of Commerce and Industry, Exmouth District High School, Exmouth Freight and Logistics, Exmouth Game Fishing Club, Exmouth Tackle and Camping Supplies, Exmouth Visitors Centre, Exmouth Volunteer Marine Rescue, Fat Marine, Gascoyne Development Commission, Gun Marine Services, Ningaloo Lodge, Offshore Unlimited, Shire of Exmouth, BHP Petroleum, Santos, Community Member The Exmouth CLG's area of responsibility under its terms of reference overlaps the EMBA.	Yes

Karratha Community Liaison Group (CLG)	The Karratha CLG is the recognised community group that represents the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Pilbara region.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Karratha CLG's area of responsibility under its terms of reference does not overlap the EMBA. WA Police, Karratha Health Care, Development WA, Ngarluma Yindjibarndi Foundation Ltd (NYFL)*, Department of Education, Pilbara Ports Authority, Regional Development Australia, Pilbara Development Commission, Dampier Community Association, City of Karratha, Karratha & Districts Chamber of Commerce and Industry, Horizon Power, Murujuga Aboriginal Corporation (MAC)*, Department of Local Government, Sport and Cultural Industries **NFYL and MAC were consulted directly as described above.* The Karratha CLG's area of responsibility under its terms of reference overlaps the EMBA.	Yes
Onslow Chamber of Commerce and Industry	Independent not-for-profit organisation responsible for promoting the interests of its members in the business community in the town of Onslow and surrounding areas.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Onslow Chamber of Commerce and Industry's interests have the potential to be impacted by the proposed activities.	Yes
Port Hedland Chamber of Commerce and Industry	Independent not-for-profit organisation responsible for promoting the interests of its members in the business community in the town of Port Hedland and surrounding areas.	Woodside has applied its methodology for 'Local government and community representative groups or organisations' under regulation 25(1)(d) of the Environment Regulations. The Port Hedland Chamber of Commerce and Industry's interests do not have the potential to be impacted by the proposed activities.	No
Other non-government groups or organisations			
Australian Conservation Foundation (ACF)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that ACF's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact ACF at its discretion in line with Section 5.3.7 of the EP.	No

Australian Marine Conservation Society (AMCS)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that AMCS's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact AMCS at its discretion in line with Section 5.3.7 of the EP.	No
Conservation Council of Western Australia (CCWA)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that CCWA's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact CCWA at its discretion in line with Section 5.3.7 of the EP.	No
Greenpeace Australia Pacific (GAP)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that GAP's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact GAP at its discretion in line with Section 5.3.7 of the EP.	No
350 Australia (350A)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that 350A's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact 350A at its discretion in line with Section 5.3.7 of the EP.	No
Australasian Centre for Corporate Responsibility (ACCR)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that ACCR's public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact ACCR at its discretion in line with Section 5.3.7 of the EP.	No
Friends of Australian Rock Art. Inc (FARA)	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations.	Yes

		Woodside has assessed that FARA's public website material demonstrates an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP).	
Market Forces	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that Market Forces' public website material does not demonstrate an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.2 of the EP). Woodside chose to contact Market Forces at its discretion in line with Section 5.3.7 of the EP.	No
Telstra	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under Regulation 25(1)(d) of the Environment Regulations to determine Telstra's relevance for the proposed activity. There are known Telstra communication cables that intersect within the Operational Area.	Yes
Vocus	Non-government organisation	Woodside has applied its methodology for 'Other non-government groups or organisations' under Regulation 25(1)(d) of the Environment Regulations to determine Vocus' relevance for the proposed activity. There are known Vocus communication cables that intersect within the Operational Area.	Yes
Doctors for the Environment Australia (DEA)	Non-government organisation	During the course of preparing this EP, DEA self-identified, provided comment on another EP and requested to receive more information about the activities under this EP. Woodside has applied its methodology for 'Other non-government groups or organisations or individuals' under regulation 25(1)(d) of the Environment Regulations. Woodside has assessed that DEA's feedback demonstrates an interest with the potential risks and impacts associated with planned activities in accordance with the intended outcome of consultation (as set out in Section 5.3.4).	Yes
Research institutes and local conservation groups or organisations			
Cape Conservation Group (CCG)	Local conservation group focused on protecting the terrestrial and marine environment of the North West Cape	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations. CCG's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps North West Cape.	Yes
Protect Ningaloo	Local conservation group focused on protecting the	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d) of the Environment Regulations.	Yes

	Exmouth Gulf and Ningaloo Reef and Cape Range	Protect Ningaloo's conservation activities have the potential to intersect with the EMBA as the EMBA overlaps North West Cape and Ningaloo Reef.	
University of Western Australia (UWA)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by UWA that intersects within the EMBA. Woodside chose to contact UWA at its discretion in line with Section 5.3.7 of the EP.	No
Curtin University	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by Curtin University that intersects within the EMBA. Woodside chose to contact Curtin University at its discretion in line with Section 5.3.7 of the EP.	No
Edith Cowan University (ECU)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by ECU that intersects within the EMBA. Woodside chose to contact ECU at its discretion in line with Section 5.3.7 of the EP.	No
Murdoch University	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by Murdoch University that intersects within the EMBA. Woodside chose to contact Murdoch University at its discretion in line with Section 5.3.7 of the EP.	No
Commonwealth Scientific and Industrial Research Organisation (CSIRO)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by CSIRO that intersects within the EMBA. Woodside chose to contact CSIRO at its discretion in line with Section 5.3.7 of the EP.	No
Australian Institute of Marine Science (AIMS)	Research institute	Woodside has applied its methodology for 'Research institutes and local conservation groups or organisations' under regulation 25(1)(d). There is no known research being undertaken by AIMS that intersects within the EMBA. Woodside chose to contact AIMS at its discretion in line with Section 5.3.7 of the EP.	No
Other			
Save Our Songlines (SOS) and/ or [Individual 1]	Representatives of Non-Government Organisation	Woodside has applied its methodology for 'Traditional Custodians and nominated representative corporations' and 'Other non-government groups or organisations' under regulation 25(1)(d) to determine Save Our Songlines (SOS) and/ or [Individual 1] relevance for the proposed activity.	Yes

	Save Our Songlines and/ or [Individual 1]	Save Our Songlines and/ or [Individual 1] stated interest is to stop or pause Scarborough gas and to stop new industry on the Burrup; and oppose planned expansion of the Burrup Hub industry by Woodside, Perdaman and Yara. In addition, their stated interests also include the protection of Murujuga rock art. As Save Our Songlines have raised concerns relating to the processing of greenhouse gases on Murujuga, Woodside considers that Save Our Songlines and/ or [Individual 1] are relevant for this activity.	

CONSULTATION ACTIVITIES

Pluto Facility Operations EP Consultation Activities

Woodside has been conducting extensive consultation with relevant persons and other parties for this EP since February 2024 when consultation commenced with interested and affected stakeholders as part of a planned, integrated and consistent approach to stakeholder engagement for Woodside's proposed activities.

A broad consultation process has been undertaken with relevant persons for the Pluto Facility Operations EP. Consultation aims to be inclusive, transparent, voluntary, respectful and two-way. Consultation was undertaken by email, letter, phone calls (where required), meetings (where required), and through advertising.

Discharging Regulation 25 of the Environment Regulations

Woodside advertised the planned activities proposed for this EP in national, state and relevant local newspapers (see Record of Consultation, reference 4). Regional newspapers do not require subscription and are available (and in some cases delivered) directly to households. All communities within or adjacent to the EMBA had access to this information via this media. No direct comments or feedback were received from the advertisements.

Newspaper	Coverage	Publication dates
The Australian	National	28 February 2024
The West Australian	Regional (WA)	28 February 2024
Pilbara News	Local (WA)	28 February 2024
North West Telegraph	Local (WA)	28 February 2024
Koori Mail	Indigenous	28 February 2024
National Indigenous Times	Indigenous	26 February 2024

A Consultation Information Sheet was provided to relevant persons and persons Woodside chose to contact (see Section 5.3.7 in the EP), which included details such as an activity overview, maps, a summary of key risks and/or impacts and management measures (Record of Consultation, reference 1.1).

An updated Consultation Information Sheet was provided to relevant persons and persons Woodside chose to contact (see Section 5.3.7), which included an update regarding planned activities (Record of Consultation, reference 1.3).

Since the commencement of the initial consultation period in February 2024, the Consultation Information Sheet has been available on Woodside's website and the updated Consultation Information Sheet since March 2024. The Woodside Consultation Information Sheets include a toll-free 1800 phone number and Woodside's feedback email address (feedback@woodside.com.au).

The Woodside Consultation Activities webpage (that is accessible on the Consultation Information Sheet, via a QR code, banners at community events, and via social media content and advertisements) includes Consultation Information Sheets for the EPs on which Woodside is currently consulting, including this EP. The website page also features a subscribe field for EP-focussed communications from Woodside.

Additional targeted information was provided to relevant marine users including AHO and AMSA – Marine Safety (Record of Consultation, reference 2.4). This information included maps and additional information relevant to the specific category of persons. The relevant persons had a 30-day period in which to provide feedback.

Where appropriate, Woodside conducted phone calls and meetings with relevant persons.

Where appropriate, targeted follow-up emails were sent to relevant persons who had not provided a response prior to the close of the target feedback period.

Woodside considered relevant person responses and assessed the merits and relevance of objections and claims about the potential adverse impact of the proposed activity set out in the EP, in accordance with the intended outcome of consultation (see Section 5.2 in the EP).

Consultation activities undertaken with relevant persons are summarised at Appendix F, Table 2.

Engagement undertaken with persons or organisations Woodside assessed as not relevant but chose to contact (see Section 5.3.7 in the EP) or self-identified and Woodside assessed as not relevant are summarised at Appendix F, Table 3.

From February 2024, Woodside commenced a geotargeted sponsored social media campaign (Record of Consultation, reference 4.9) to various local government authorities within or coastally adjacent to the EMBA for the proposed activities. The campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations on how they can find out about Woodside's proposed activities by visiting Woodside's website.

Proactive Consultation

Community engagement

From March 2024, Woodside held a number of Community information sessions where this EP Consultation Information Sheet was available and discussed. See tables in Record of Consultation, reference 5.1 and 5.2. Woodside published advertisements ahead of these sessions and events in relevant local newspapers and on social media to support attendance.

Date	Location	Event (if applicable)
22 March 2024	Roebourne Woodside office	Community Consultation Roadshow
23 March 2024	Karratha Shopping Centre	Community Consultation Roadshow
24 March 2024	Dampier	Dampier Beachside Markets
3 and 10 April 2024	North West Shelf Visitor Centre	Community Information Session
5 May 2024	Dampier	Dampier Beachside Markets
15 June 2024	Karratha	WA Day Festival
26 and 27 June 2024	Karratha	Pilbara Summit

Community Liaison Group Engagement

The Exmouth and Karratha Community Liaison Groups (CLGs) represent the interests of a range of local government, industry and community organisations in relation to oil and gas matters in the Exmouth and Karratha region. Woodside regularly meets with the two CLGs to discuss a range of issues including consultation of specific EPs.

Let's Talk – EP Newsletter

In March 2024, Woodside launched its first EP-focussed newsletter as a new communication avenue to reach existing and potential stakeholders. Woodside is building on its existing consultation approach, providing additional resources to inform relevant persons about its EP consultation. The newsletter aims to provide periodic updates to relevant persons about EP consultation activities, case studies on effective consultation with relevant persons and other EP focussed updates such as upcoming events where Woodside personnel will be consulting with the local community. It is distributed in a variety of locations as well as across digital platforms including on woodside.com, and social media platforms. People can also subscribe to receive it (Record of Consultation, reference 5.6).

Social Media Platform	Geotargeted Reach	Let's Talk Social Media Campaign Dates	Impact
Facebook and Instagram	18-70 year olds Pilbara – Karratha, Dampier, Roebourne Regional Fishing Marine users Traditional Custodians Local communities	18 March – 3 April 2024	Reach: 158,167 Frequency: 3.94 Impressions: 623,845 Link clicks: 854 CTR%: 0.14%

Let's Talk Newsletter – Social Media Campaign

Woodside also publishes the Karratha Community Update newsletter which includes a QR code and encourages people to go to the Woodside Consultation Activities webpage to subscribe and find information about EPs (Record of Consultation, reference 5.4).

Extended Consultation

In addition to the initial 30 day consultation period, Woodside continues to receive, assess and respond to feedback and comments from relevant persons during preparation of the EP.

For this EP, Woodside addressed and responded to relevant persons for a period of up to 5 months.

Self-Identification

Social media campaign - Are you a relevant person?

In October 2023 Woodside commenced a targeted social media campaign, both organic and sponsored, aimed at community members of key towns within the Kimberley, Pilbara, Gascoyne and Murchison regions. The campaign delivered targeted information to several profiled relevant person groups via story and feed content with text and a short accessible video (Record of Consultation, reference 4.10).

The campaign aims to support self-identification and provides information about Woodside's consultation with relevant persons when preparing EPs and encourages participation in the consultation process.

Six different videos with specific information to potential relevant persons groups were launched on Facebook and Instagram:

- Local communities – volunteering
- Local communities - apprentices/trainees
- Commercial fishing
- Recreational fishing
- Recreational marine users
- Traditional Owners.

Results as at April 2024 are as follows:

Categories	Reach	Frequency	Impressions	Clicks	Click-through rate %
Marine Users	389,383	4.37	1,701,418	2,298	0.14%

Are you a Relevant Person campaign – March to April 2024

The commercial fisheries, recreational fisheries and Traditional Owners videos are available on the Woodside Consultation Activities webpage.

Traditional Custodian Specific Consultation

In addition to the approaches above, including community information sessions, additional activities were undertaken with relevant Traditional Custodians, which were specifically designed to provide for effective engagement with Traditional Custodians and so that information was provided in a form that was readily accessible and appropriate (Section 5.5 in the EP). Consultation undertaken specifically with Traditional Custodians for this Environment Plan includes:

- Direct engagement with nominated representative bodies via the contact listed on the ORIC website, requesting advice on how they would like to be engaged and asking whether other members and/or individuals should be consulted. This has resulted in:
  - Meetings with directors, elders and any nominated representatives, on country or in Perth
  - Requests and offers of resourcing to enable and support consultation
  - Exchange of written feedback and correspondence
  - Summary Consultation Information Sheet, developed and reviewed by Indigenous representatives in collaboration with technical experts to ensure content is appropriate to the intended recipients, was provided to relevant Traditional Custodian groups (Record of Consultation, reference 1.2) and phone calls to provide context to the consultation made.

Ongoing efforts were made to engage and develop relationships with these bodies via a variety of means such as email, phone calls, alternative contacts, texts, social media and in some cases physical visits.

Consultation meetings with attendees decided by Traditional Custodian groups, supported by senior Woodside representatives, subject matter experts, First Nations Relations advisers with skills and experience in community engagement. Meetings are developed through a two-way consultation process to enable effective information sharing via:

- Mutually agreed agenda
- Encouraging Traditional Custodian attendees to control the pace of the meeting and pause at any time to ask questions, seek clarification or provide feedback
- Visual aids such as posters, presentations, simplified technical videos and real-world pictures and footage
- Emphasis on potential planned and unplanned risks and impacts of the activity
- Ample opportunity for questions and feedback
- Discussion about ongoing relationship development and opportunities
- Distribution of hard-copy Consultation Information Sheets (Record of Consultation, reference 1.1) and Summary Consultation Information Sheets (Record of Consultation, reference 1.2)
- Meeting all costs such as sitting fees, travel, legal support and executive support and other support required
- Advertising in Indigenous publications such as the National Indigenous Times and Koori Mail (Record of Consultation, reference 4.1 and 4.2).

Woodside ran a geotargeted sponsored social media campaign (Record of Consultation, reference 4.9) to various communities that are coastally adjacent to the EMBA for the proposed activities.

The wide-reaching campaign brought the proposed activity to the attention of persons who may be interested and advised persons or organisations how they can find out about Woodside's proposed activities by visiting Woodside's website, which details the intent of consultation with relevant persons under the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)*. The campaign reached more than two million people across various regions as shown in Record of Consultation, reference 4.9.

These social media posts were developed with input from Indigenous representatives. Social media is a highly effective means to engage Indigenous audiences as outlined in Indigenous Digital Life (Professor Carlson, 2021). Advertisements used language and information appropriate to Indigenous audiences. Feedback from community engagements indicates a high level of penetration for this technique.

Woodside has employed a diverse range of techniques to allow relevant persons to become aware of the proposed activity and how it may affect their functions, interests or activities, and to understand their ability to provide feedback. The combination of PBC engagement meetings, traditional print media, social media and face-to face community interaction was designed with input from Indigenous representatives and adapted to the audience, so that it provides a wide-ranging opportunity to consult.

The black numbering **(N)** in Table 2 and Table 3 denotes an item raised by persons and organisations. The green numbering **(N)** denotes Woodside's response to that item.

Table 2: Consultation Report with Relevant Persons and Organisations

Commonwealth and WA State Government Departments or Agencies – Marine		
Australian Border Force (ABF)		
Summary of information provided and record of consultation for this EP: • On 26 February 2024, Woodside emailed ABF advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.* • On 18 March 2024, Woodside sent an email reminder to ABF, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website. • On 27 March 2024, Woodside provided an activity update to ABF regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ABF for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: • Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024. • Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, The Pilbara News, The Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback. • Consultation Information provided to ABF on 26 February 2024 based on their functions, interests or activities. • Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.		

- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided ABF with the opportunity to provide feedback over a 5 month period.

Australian Communications and Media Authority (ACMA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed ACMA advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet, a map of the Submarine Communication Cables and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 27 February 2024, ACMA responded and thanked Woodside for the opportunity to comment on this EP (SI Report, reference 3.1) and:
  - **(1)** confirmed the operational areas are not in the vicinity of existing protection zones.
  - **(2)** noted Woodside is aware of submarine cables in the area operated by Telstra and recently installed cables operated by Vocus.
  - **(3)** recommended that Woodside contact the AHO for further assistance identifying submarine cables that may be impacted by the proposed activities.
  - **(4)** advised no additional consultation is required for this activity.
- On 29 February 2024, Woodside emailed ACMA (SI Report 3.2) and:
  - **(1)** acknowledged the advice regarding the protection zones.
  - **(2)** confirmed consultation information was provided to Telstra and Vocus.
  - **(3)** noted that AHO can be contacted for further assistance identifying submarine cables.
  - **(4)** noted that ACMA does not require additional consultation for this activity.
- On 27 March 2024, Woodside provided an activity update to ACMA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Operational areas are not in the vicinity of any existing protection zones.	**(1)** **Woodside assessment:** Woodside noted ACMA's confirmation that the operational areas was not in the vicinity of existing protection zones. **Woodside response:** Woodside acknowledged the advice regarding existing protection zones.	**(1)** Not required.
(2) Operational areas are in the vicinity of submarine cables.	**(2)** **Woodside assessment:** Woodside noted ACMA's advice that the operational areas was in the vicinity of submarine cables. **Woodside response:** Woodside confirmed it consulted with Telstra and Vocus.	**(2)** Not required.

(3) Contact the AHO for further assistance identifying cables.	**(3)** **Woodside assessment:** Woodside noted ACMA's recommendation to contact the AHO for further assistance identifying cables. **Woodside response:** Woodside confirmed that the AHO could be contacted should further assistance be required to identify submarine cables.	**(3)** Not required.
(4) No further consultation required for this activity.	**(4)** **Woodside assessment:** Woodside accepts that ACMA does not require further consultation. **Woodside response:** Woodside noted that ACMA does not require further consultation.	**(4)** Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with ACMA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, The Pilbara News, The Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to ACMA on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to ACMA over a 5 month period.

Australian Fisheries Management Authority (AFMA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AFMA advising of the proposed activity (Record of Consultation, reference 2.3), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 4 March 2024, AFMA emailed to thank Woodside and:

- **(1)** Advised it had no specific comments on the proposal
- **(2)** Encouraged Woodside to consult directly with potentially impacted stakeholders: North West Slope Trawl Fishery, Western Deepwater Trawl Fishery, Commonwealth Fisheries Association (CFA) and Western Australia Fishing Industry Council (WAFIC) (SI Report, reference 1.1).

- **(1,2)** On 6 March 2024, Woodside responded thanking AFMA for its email and confirmed it had provided information to relevant fishery licence holders and representative organisations (SI Report, reference 1.2).
- On 6 March 2024, AFMA emailed to thank Woodside (SI Report, reference 1.3).
- On 27 March 2024, Woodside provided an activity update to AFMA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) AFMA advised it had no specific comment on the proposal.	**(1)** **Woodside assessment:** Woodside noted AFMA had no comments on the proposal. **Woodside response:** Woodside thanked AFMA for its feedback.	**(1)** Not required.
(2) Woodside to consult directly with potentially impacted stakeholders.	**(2)** **Woodside assessment:** Woodside recognises AFMA's recommendation to consult with relevant fishing operators. **Woodside response:** Woodside confirmed it had consulted individual Commonwealth fishing operators in the area, as well as relevant representative bodies. Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders.	**(2)** Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.10 of this EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AFMA for the purpose of regulation 25 is

complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, The Pilbara News, The Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to AFMA on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to AFMA over a 5 month period.

Australian Hydrographic Office (AHO)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AHO advising of the proposed activity (Record of Consultation, reference 2.4), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, Woodside sent an email reminder to AHO, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AHO regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside will notify the AHO no less than four working weeks before activities commence, as referenced as PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AHO for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, The Pilbara News, The Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to AHO on 26 February 2024 based on their functions, interests or activities.

- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided AHO with the opportunity to provide feedback over a 5 month period.

Australian Maritime Safety Authority (AMSA) - Marine Safety

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AMSA – Marine Safety advising of the proposed activity (Record of Consultation, reference 2.4), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to AMSA – Marine Safety, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AMSA – Marine Safety regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 22 April 2024, AMSA – Marine Safety emailed Woodside (SI Report, reference 35.1) and:
  - **(1)** provided a map of vessel traffic plot for the area.
  - **(2)** requested Woodside notify AMSA's Response Centre (ARC) 24-48 hours before operations commence.
  - **(3)** reminded Woodside to contact the AHO no less than four working weeks before operations commence.
  - **(4)** reminded Woodside that vessels should exhibit appropriate lights and shapes to reflect the nature of operation.
  - **(5)** advised that Woodside should evaluate and implement adequate anti-collision measures, which may include but are not limited to:
    - additional warnings and/or lights to attract attention.
    - installation of Automatic Identification System (AIS) units.
    - offshore guard vessel/s that can monitor traffic, and take early action to alert a vessel approaching the area of operations.
  - **(1)** provided contact details to obtain shipping data.
- On 22 April 2024, Woodside thanked AMSA- Marine Safety for its feedback (SI Report, reference 35.2) and:
  - **(1)** noted the map provided and the contact details to obtain shipping data.
  - **(2)** confirmed it will notify AMSA's Response Centre (ARC) 24-48 hours before operations commence.
  - **(3)** it will notify the AHO no less than 4 weeks before operations commence.
  - **(4)** confirmed that vessels should exhibit appropriate lights and shapes to reflect the nature of operation.
  - **(5)** confirmed it will evaluate and implement adequate anti-collision measures.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

(1) Provided a map of vessel traffic and contact details for obtaining shipping data.	**(1)** **Woodside assessment:** Woodside noted AMSA's spatial data gateway and the map provided. **Woodside response:** Woodside thanked AMSA for providing the map.	**(1)** Not required.
(2) Requested the ARC be notified 24-48 hours before operations commence.	**(2)** **Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-7 of this EP. **Woodside response:** Woodside confirmed it will notify the ARC 24-48 hours before operations commence.	**(2)** Woodside will notify the ARC at least 24–48 hours before operations commence for each survey, as referenced as PS 1.11 in this EP.
(3) Requested the AHO be contacted no less than 4 weeks before operations commence.	**(3)** **Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-7 of this EP. **Woodside response:** Woodside confirmed it will notify the AHO 4 weeks before operations commence.	**(3)** Woodside will notify the AHO no less than four working weeks before operations commence, as referenced as PS 1.10 in this EP.
(4) Vessels should exhibit appropriate lights and shapes to reflect nature of operations.	**(4)** **Woodside assessment:** Woodside complies with the International Rules for Preventing Collisions at Sea. **Woodside response:** Woodside confirmed vessels would exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea.	**(4)** Section 6 of the EP contains a number of controls that address AMSA's feedback on lighting and compliance with the international rule for preventing collisions at sea, specifically safety zones are established, vessels are required to comply with marine orders and the facility's collision prevention system will be implemented.
(5) Woodside to evaluate and implement adequate anti-collision measures.	**(5)** **Woodside assessment:** Woodside complies with the International Rules for Preventing Collisions at Sea. **Woodside response:** Woodside confirmed vessels would exhibit appropriate lights and shapes to reflect the nature of operations and the obligation to comply with the International Rules for Preventing Collisions at Sea.	**(5)** Section 6 of the EP contains a number of controls that address AMSA's feedback on lighting and compliance with the international rule for preventing collisions at sea, specifically safety zones are established, vessels are required to comply with marine orders and the facility's collision prevention system will be implemented.

While feedback was received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA – Marine Safety for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, The Pilbara News, The Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to AMSA – Marine Safety on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to AMSA – Marine Safety over a 5 month period.

Australian Maritime Safety Authority (AMSA) – Marine Pollution

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed AMSA – Marine Pollution advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, Woodside sent an email reminder to AMSA – Marine Pollution, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AMSA – Marine Pollution regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 3 May 2024, Woodside emailed AMSA – Marine Pollution and provided copies of the two oil Pollution First Strike Plans: the revised Pluto Facility Operations and the new Xena-03 Tie-Back (SI Report, reference 40.1). Woodside received an out of office message and forwarded the correspondence to the contact provided (SI Report, reference 40.2).
- On 5 May 2024, AMSA acknowledged the email and advised it will submit comments should it have any.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

While feedback was received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has addressed oil pollution planning and response at Appendix H. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AMSA – Marine Pollution for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, The Pilbara News, The Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to AMSA – Marine Pollution on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided AMSA – Marine Pollution with the opportunity to provide feedback over a 5 month period.

Department of Agriculture, Fisheries and Forestry (DAFF) – Fisheries

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DAFF - Fisheries advising of the proposed activity (Record of Consultation, reference 2.5), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to DAFF - Fisheries, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DAFF - Fisheries regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth

		relevant fishery licence holders (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.10 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DAFF - Fisheries for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, The Pilbara News, The Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DAFF - Fisheries on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided DAFF – Fisheries with the opportunity to provide feedback over a 5 month period.

Department of Defence (DoD)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DoD advising of the proposed activity (Record of Consultation, reference 2.6), provided a Consultation Information Sheet, a map of the defence zones and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to DoD, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DoD regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	Woodside will notify the AHO no less than four working weeks before operations commence as referenced as PS 1.10 in the EP.

	Revision process (see Section 7.2.5 of this EP).	Where the activities overlap a defence area, DoD will be notified of the activity start date no less than five weeks before the scheduled commencement date, see PS 1.13 in the EP. Notifying the AHO provides DoD with information of the PAP through maritime safety information. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DoD for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DoD on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided DoD with the opportunity to provide feedback over a 5 month period.

Department of Primary Industries and Regional Development (DPIRD)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DPIRD advising of the proposed activity (Record of Consultation, reference 2.3), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to DPIRD, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DPIRD regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 28 March 2024, DPIRD thanked Woodside for the update (SI Report, reference 28.1).
- **(1)** On 2 April 2024, Woodside emailed DPIRD acknowledging their response (SI Report, reference 28.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) DPIRD thanked Woodside for the update provided.	**(1)** **Woodside assessment:** Woodside noted DPIRD received the consultation information and had no specific comment on the proposed activity. **Woodside response:** Woodside thanked DPIRD for its response.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has consulted DPIRD, WAFIC, and individual licence holders (via WAFIC). Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-7 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DPIRD for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DPIRD on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to DPIRD over a 5 month period.

Department of Transport (DoT)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DoT advising of the proposed activity (Record of Consultation, reference 2.7), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- **(1)** On 6 March 2024, DoT responded thanking Woodside for the update (SI Report, reference 7.1).
- (1) On 6 March 2024, Woodside thanked DoT for their response (SI Report, reference 7.2).
- On 27 March 2024, Woodside provided an activity update to DoT regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(1)** On 15 April 2024, DoT responded, thanking Woodside for the update (SI Report, reference 7.3).
- On 3 May 2024, Woodside emailed DoT and provided copies of the two oil Pollution First Strike Plans: the revised Pluto Facility Operations and the new Xena-03 Tie-Back (SI Report, reference 7.4).
- **(2)** On 14 June 2024, DoT emailed Woodside regarding the First Strike Plans (FSP) and requested clarification regarding a mention of Pilbara Ports Authority (PPA) being the control agency in Dampier Port Limits (SI Report, reference 7.5).
- On 26 June 2024, Woodside responded thanking DoT for its review of the FSPs (SI Report, reference 7.6). Woodside:
  - (2) Advised that as the Pluto Operations trunkline hydrocarbon spill scenario arose at the State/Commonwealth boundary and therefore had the potential to contact port waters, Woodside would add PPA into the notifications table of the FSP and retain a mention of PPA being the control agency in Dampier Port Limits. However, the spill scenario was not applicable to the Xena-03 Tie-Back FSP, therefore Woodside would remove the mention for that FSP.
- **(2)** On 27 June 2024, DoT emailed to thank Woodside for the clarification and confirmed it had no further queries (SI Report, reference 7.7).
- (2) On 27 June 2024, Woodside emailed to thank DoT for confirming it was comfortable with the amendments (SI Report, reference 7.8).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) DoT thanked Woodside for the update.	**(1)** **Woodside assessment:** Woodside noted DoT's response. **Woodside response:** Woodside thanked DoT for its feedback.	**(1)** Not required.
(2) DoT asked for clarification regarding the control agency for Dampier Port Limits in the FSPs.	**(2)** **Woodside assessment:** Woodside acknowledged DoT's clarification request and amended the mention of PPA in relation to the Xena-03 Tie-Back FSP. **Woodside response:** Woodside advised it had removed mention of PPA as the control agency in Dampier Port Limits from the Xena-03 Tie-Back FSP and confirmed that DoT was comfortable with the amendment.	**(2)** Woodside has updated the Xena-03 Tie-Back Oil Pollution First Strike Plan (Appendix J).
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its	Woodside will consult DoT if there is a spill impacting State water from the proposed activity, as referenced in the OSPRMA

	Management of Change and Revision process (see Section 7.2.5 of this EP).	(Appendix H). Woodside will provide DoT with a copy of the accepted Oil Pollution First Strike Plan, as referenced in the OSPRMA (Appendix H). No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DoT for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DoT on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to DoT over a 5 month period.

Department of Planning, Lands and Heritage (DPLH)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DPLH advising of the proposed activity (Record of Consultation, reference 2.8), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 29 February 2024, Woodside emailed DLPH a list of the State Shipwrecks relevant to this activity (Record of Consultation, reference 2.8.1).
- **(1)** On 6 March 2024, DPLH emailed Woodside and confirmed the Land Use Management Division had no comments or feedback on the activities under this EP (SI Report, reference 6.1).
- **(1)** On 6 March 2024, Woodside thanked DPLH for its feedback and noted the Land Use Management Division had no comment on the activities under this EP (SI Report, reference 6.2).
- On 27 March 2024, Woodside provided an activity update to DPLH regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1)	**(1)**	**(1)**

The Land Use Management Division had no comments or feedback on the activities.	**Woodside assessment:** Woodside noted DPLH Land Use Management Division had no comment or feedback. **Woodside response:** Woodside thanked DPLH for its feedback and noted the Land Use Management Division had no comment.	Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	The EP demonstrates that there are no known underwater heritage sites or shipwrecks within the PAP and identifies that there are no credible impacts to the values of any underwater heritage or shipwrecks as a result of planned activities (Section 4.9.6 of this EP). While impacts to underwater heritage sites or shipwrecks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8.2 and Section 6.8.3 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DPLH for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DPLH on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to DPLH over a 5 month period.

Western Australian Museum

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed Western Australian Museum advising of the proposed activity (Record of Consultation, reference 2.9), provided a Consultation Information Sheet, a list of State Shipwrecks and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Western Australian Museum, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Western Australian Museum regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Australian Museum for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Western Australian Museum on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Western Australian Museum with the opportunity to provide feedback over a 5 month period.

Pilbara Ports Authority

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed Pilbara Ports Authority advising of the proposed activity (Record of Consultation, reference 2.1), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Pilbara Ports Authority, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 20 March 2024, Pilbara Ports Authority emailed Woodside (SI Report, reference 24.1) and:

- **(1)** confirmed it has no comment on this EP.
- **(2)** noted the EMBA encroaches on port waters at the Port of Dampier and is adjacent to port waters of Port of Ashburton, Port of Varanus Island, Port of Cape Preston East and Port of Cape Preston West.

- On 22 March 2024, Woodside thanked Pilbara Ports Authority for its response (SI Report, reference 24.2). and:
  - **(1)** noted that Pilbara Ports Authority has no comment on this EP
  - **(2)** confirmed the EMBA overlaps Port of Dampier and notes the advice from Pilbara Ports Authority regarding ports in waters adjacent to the EMBA.

- On 27 March 2024, Woodside provided an activity update to Pilbara Ports Authority regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Pilbara Ports Authority advised it had no comment on the activities.	**(1)** **Woodside assessment:** Woodside noted Pilbara Ports Authority had no comment. **Woodside response:** Woodside thanked Pilbara Ports Authority for its feedback and noted it had no comment.	**(1)** Not required.
(2) The EMBA overlaps Port Dampier port waters and is adjacent to other port waters.	**(2)** **Woodside assessment:** Woodside noted Pilbara Ports Authority's advice regarding port waters adjacent to the EMBA. **Woodside response:** Woodside confirmed the EMBA overlaps Port of Dampier and noted the advice from Pilbara Ports Authority regarding ports in waters adjacent to the EMBA.	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Ports Authority for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the

North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to Pilbara Ports Authority on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to Pilbara Ports Authority over a 5 month period.

Commonwealth and WA State Government Departments or Agencies – Environment

Department of Agriculture, Fisheries and Forestry (DAFF) – Biosecurity (marine pests, vessels, aircraft and personnel)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DAFF - Biosecurity advising of the proposed activity (Record of Consultation, reference 2.5), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to DAFF - Biosecurity, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DAFF - Biosecurity regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Vessels are required to comply with the *Australian Biosecurity Act 2015*, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's Invasive Marine Species Management Plan (see Section 7.2.3). No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DAFF - Biosecurity for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DAFF - Biosecurity on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided DAFF - Biosecurity with the opportunity to provide feedback over a 5 month period.

Department of Climate Change, Energy, the Environment and Water (DCCEEW)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DCCEEW advising of the proposed activity (Record of Consultation, reference 2.10), provided a Consultation Information Sheet, a list of Commonwealth Shipwrecks and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to DCCEEW, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DCCEEW regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DCCEEW for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to DCCEEW on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided DCCEEW with the opportunity to provide feedback over a 5 month period.

Director of National Parks (DNP)

Historical Engagement:

- On 17 March 2022, Woodside emailed DNP a copy of the Pluto Baseline Offshore Water Quality and Sediment Sampling Report, as per previous correspondence request (SI Report, reference 33.1).
- On 13 September 2022, Woodside emailed DNP requesting feedback on the report provided (SI Report, reference 33.2).
- On 9 November 2022, Woodside emailed DNP to follow up (SI Report, reference 33.3).
- On 30 November 2022, DNP emailed Woodside to organise a meeting to discuss the Offshore Water Quality and Sediment Sampling Report (SI Report, reference 33.4).
- On 13 December 2022, Woodside met virtually with Parks Australia Authorisation and Assessments team under the DNP and talked through the results of the Pluto Baseline Offshore Water Quality and Sediment Sampling Report (SI Report, reference 33.5)
- On 19 December 2022, Woodside emailed DNP following the meeting regarding the Pluto Baseline Offshore Water Quality and Sediment Sampling Report with a summary of the discussion. It also provided information about the 5 year revision of this EP and submission timeframes. Woodside acknowledged the revised guidance for consultation on activities within Marine Parks (SI Report, reference 33.6).

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DNP advising of the proposed activity (Record of Consultation, reference 2.11), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, Woodside sent an email reminder to DNP, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DNP regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 13 July 2024, DNP emailed Woodside and confirmed the operational area overlaps the Montebello Marine Park (MP) but the well locations are outside of the MP (SI report, reference 33.7). DNP noted:
  - **(2)** To assist in the preparation of an EP for petroleum activities, NOPSEMA has worked closely with Parks Australia to develop and publish a guidance note that outlines what titleholders need to consider and evaluate. Titleholders should ensure the EP:
    - Identifies and manages all impacts and risks on Australian marine park values (including ecosystem values) and had considered all options to avoid or reduce them to as low as reasonably practicable.

- Clearly demonstrates the activity would not be inconsistent with the North-west Marine Parks Network Management Plan 2018.

- **(3)** Class approval for the Multiple Use Zone of the Montebello MP required an accepted EP.
- **(2)** The specific values for the Montebello MP.
- **(4)** The requirements for emergency responses .

- On 17 July 2024, Woodside responded thanking DNP for its email (SI Report, reference 33.8) and:
  - **(2)** Confirmed Woodside had taken into consideration the Petroleum Activities and Australian Marine Parks guidance note to ensure the EP:
    - Identified and managed all impacts and risks on AMP values (including ecosystem values) to an acceptable level.
    - Clearly demonstrated that the activities would not be inconsistent with the North-west Marine Parks Network Management Plan 2018.
  - **(1)** Confirmed a small portion of the Pluto facility operational area overlaps the Montebello MP and the wells are located outside of the MP.
  - **(3)** Noted the class approval for the Multiple Use Zone of the Montebello MP requires an accepted EP.
  - **(2)** Noted the specific values for the Montebello MP.
  - **(4)** Noted the emergency response requirements and confirmed it will notify DNP if details regarding the activities change.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) The operational area overlaps the Montebello MP.	**(1)** **Woodside assessment:** A small portion of the Pluto facility Operational Area overlaps the Montebello MP, and the export pipeline Operational Area is 13 km east of the Dampier MP. **Woodside response:** Woodside confirmed the overlap and the wells are located outside the Montebello MP.	**(1)** Not required.
(2) Ensure the EP identify and manage all impacts and risks on AMP values, and clearly demonstrate that activities will not be inconsistent with the management plan.	**(2)** **Woodside assessment:** The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values. **Woodside response:** Woodside confirmed it had taken into consideration the Petroleum Activities and Marine Parks guidance note to ensure the EP identified and managed all risks on AMP values, and clearly demonstrated that activities will not be inconsistent with the management plan.	**(2)** The EP demonstrates how Woodside will identify and manage all impacts and risks on Australian marine park values (including ecosystem values) to an ALARP and acceptable level and that the activity is not inconsistent with the management plan (see Section 6.8 of the EP).
(3) The class approval requires an accepted	**(3)** **Woodside assessment:** Woodside is aware of its obligations under the class	**(3)** Not required.

EP.	approval for the Multiple Use Zone of the Montebello MP. **Woodside response:** Woodside noted the class approval requires an accepted EP.	
(4) Emergency response requirements.	**(4)** **Woodside assessment:** Woodside noted the requirements. **Woodside response:** Woodside will notify DNP if details regarding the activities change and noted the emergency response requirements.	**(4)** Woodside will provide notification of significant change, as appropriate, to relevant persons as referenced in Table 7-7 in the EP. Woodside will ensure DNP is made aware of any incidences within a marine park for the activity, as per the commitment in the Oil Pollution First Strike Plan (Appendix I).
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DNP for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DNP on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to DNP over a 5 month period.

Ningaloo Coast World Heritage Advisory Committee (NCWHAC)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed NCWHAC advising of the proposed activity (Record of Consultation, reference 2.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to NCWHAC, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to

the Consultation Information Sheet on Woodside's website.

- On 27 March 2024, Woodside provided an activity update to NCWHAC regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NCWHAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to NCWHAC on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided NCWHAC with the opportunity to provide feedback over a 5 month period.

Department of Biodiversity, Conservation and Attractions (DBCA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DBCA advising of the proposed activity (Record of Consultation, reference 2.12), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 1 March 2024, DBCA responded thanking Woodside for providing information on this EP (SI Report, reference 5.1). DBCA noted:
  - **(1)** the operations were in the vicinity of reserves managed by DBCA and given the ecological importance of areas potentially affected by a hydrocarbon release from the proposed activities, it was considered important that the baseline values and state of the potentially affected environment are appropriately understood and documented prior to operations commencing.
  - **(2)** it would like to have confidence that Woodside has established appropriate baseline survey data on the current state of areas supporting important ecological values and any current contamination if present within the area of potential impact of hydrocarbon releases.
  - **(3)** it undertakes monitoring in marine parks and reserves and published monitoring reports which are available on its website, however Woodside should be aware

this monitoring is targeted to inform DBCA's values and objectives and is not necessarily suitable to provide baseline information for oil spill risk assessment and management planning.
- **(4)** it recommends Woodside refer to the Department of Climate Change, Energy, the Environment and Water's *National Light Pollution Guidelines for Wildlife* as a best-practice industry standard for managing potential impacts of light pollution on marine fauna.
- **(5)** in the event of a hydrocarbon release, it is requested that Woodside notify DBCA's Pilbara regional office as soon as practicable on (08) 9182 2000.
- **(6)** it will not implement an oiled wildlife management response on behalf of a petroleum operator except as part of a whole of government response mandated by regulatory decision makers.
- **(7)** Woodside should refer to the Department of Transport's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled *Marine Oil Pollution: Response and Consultation Arrangements*. **(7)** Not required. Woodside noted and referred to DoT's web content.

- On 14 March 2024, Woodside responded thanking DBCA for its feedback (SI Report, reference 5.2). Woodside:
  - **(1)** Confirmed it maintained knowledge and an understanding of areas of ecological importance within and adjacent to operational areas.
  - **(2,3)** Advised its oil spill scientific monitoring program would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release.
  - **(4)** Confirmed it had considered DCCEEW's National Light Pollution Guidelines with respect to vessel activities. The impact assessment determined that the impacts of lighting were as low as reasonably practicable.
  - **(5)** Advised it had incorporated the DBCA Pilbara regional office telephone number as part of the notifications listed in the Oil Pollution First Strike Plan.
  - **(6)** Noted that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.

- On 27 March 2024, Woodside provided an activity update to DBCA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Baseline values are understood and documented prior to commencement of activities.	**(1)** **Woodside assessment:** Woodside determined that areas of ecological importance, including marine parks and island conservation reserves, would not be impacted by planned activities. **Woodside response:** Woodside reaffirmed that areas of ecological importance in the proximity of the EP Operational Areas would be not impacted by planned activities.	**(1)** The EP demonstrates that the proposed activities are outside the boundaries of a proclaimed State Marine Park and identifies that there are no credible impacts to the values of any State Marine Parks as a result of planned activities (Section 4.8 and Section 6.7 of the EP). While impacts to Commonwealth Marine Parks are possible in the event of an unplanned hydrocarbon spill, Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and

		controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Sections 6.9 of the EP.
(2) Establish the appropriate baseline survey data on the current state of the areas.	**(2)** **Woodside assessment:** Woodside confirmed it maintained knowledge and an understanding of areas of ecological importance adjacent to Operational Areas and its oil spill scientific monitoring program provides for a quantitative assessment of overall impacts in the event of an unplanned hydrocarbon release. **Woodside response:** Woodside responded that it utilises an information system to track current existing environment knowledge that is regularly updated. Woodside advised its oil spill scientific monitoring program provides for a quantitative assessment of overall impacts in the event of an unplanned hydrocarbon release.	**(2)** Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to environmental baseline studies database is completed and documented as described in this EP.
(3) Acquire the necessary information to implement a Before-After Control Impact (BACI) framework.	**(3)** **Woodside assessment:** Woodside reviewed the request about implementing a BACI framework and noted its oil spill scientific monitoring program (SMP) would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release. **Woodside response:** Woodside advised its oil spill scientific monitoring program (SMP) would provide for a quantitative assessment of the overall environmental impacts in the event of an unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors.	**(3)** Under the Oil Spill Scientific Monitoring Program preparedness, an annual review and update to environmental baseline studies database is completed and documented as described in this EP.
(4) Refer to DCCEEW's National Light Pollution Guidelines for Wildlife.	**(4)** **Woodside assessment:** Woodside noted DCCEEW's National Light Pollution Guidelines for Wildlife and that its impact assessment for light emissions is based on these recommendations. **Woodside response:** Woodside confirmed it had considered DCCEEW's National Light Pollution Guidelines for Wildlife and that lighting associated with this EP is required as a priority for safe operation.	**(4)** Woodside's impact assessment for light emissions is based on recommendations of the National Light Pollution Guidelines for Wildlife (see Section 6.7.11).
(5)	**(5)**	**(5)**

Notify DBCA's Pilbara office as soon as practicable in the event of a hydrocarbon release.	**Woodside assessment:** Woodside noted DBCA's 'Incidents and Emergency Response' process and need to include DBCA's Pilbara's contact information in Oil Pollution First Strike Plan. **Woodside response:** Woodside confirmed the DBCA Pilbara number had been incorporated as part of the Oil Pollution First Strike Plan.	DBCA's Pilbara phone number has been incorporated into the Oil Pollution First Strike Plan for this EP (see Appendix I).
(6) No oiled wildlife management response will be implemented except as part of a mandated government response.	**(6)** **Woodside assessment:** Woodside accepts that DBCA would not implement an oiled wildlife management response and notes its own Oiled Wildlife Response is included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP. **Woodside response:** Woodside confirmed that DBCA would not implement an oiled wildlife management response on behalf of a petroleum operator.	**(6)** Woodside's Oiled Wildlife Response is included in the Oil Spill Preparedness and Response Mitigation Assessment for this EP (see Appendix H).
(7) Refer to the Department of Transport's guidance note: *Marine Oil Pollution: Response and Consultation Arrangements*.	**(7)** **Woodside assessment:** Woodside appreciated the recommendation to refer to DoT's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements. **Woodside response:** Woodside noted the DoT's web content regarding marine pollution and the Offshore Petroleum Industry Guidance Note of 2020 titled Marine Oil Pollution: Response and Consultation Arrangements.	**(7)** Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DBCA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to DBCA on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to DBCA over a 5 month period.

Commonwealth and State Government Departments or Agencies – Industry

Department of Industry, Science and Resources (DISR)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed DISR advising of the proposed activity (Record of Consultation, reference 2.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to DISR, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to DISR regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DISR for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to DISR on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided DISR with the opportunity to provide feedback over a 5 month period.

Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)		
Summary of information provided and record of consultation for this EP: • On 26 February 2024, Woodside emailed DEMIRS advising of the proposed activity (Record of Consultation, reference 2.13), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.* • On 18 March 2024, Woodside sent an email reminder to DEMIRS, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website. • On 27 March 2024, Woodside provided an activity update to DEMIRS regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DEMIRS for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically: • Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024. • Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback. • Consultation Information provided to DEMIRS on 26 February 2024 based on their functions, interests or activities. • Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community. • Woodside has sent a follow up email seeking feedback on the proposed activities. • Woodside has provided DEMIRS with the opportunity to provide feedback over a 5 month period.		
Commonwealth Commercial fisheries and representative bodies		
North West Slope and Trawl Fishery		
Summary of information provided and record of consultation for this EP: • On 26 February 2024, Woodside emailed North West Slope and Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation,		

reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- On 18 March 2024, Woodside sent an email reminder to North West Slope and Trawl Fishery individual licence holders, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to North West Slope and Trawl Fishery individual licence holders regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.10 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with North West Slope and Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to North West Slope and Trawl Fishery on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided North West Slope and Trawl Fishery with the opportunity to provide feedback over a 5 month period.

Western Deepwater Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed Western Deepwater Trawl Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Western Deepwater Trawl Fishery individual licence holders, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Western Deepwater Trawl Fishery individual licence holders regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.10 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Deepwater Trawl Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Western Deepwater Trawl Fishery on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.

- Woodside has provided Western Deepwater Trawl Fishery with the opportunity to provide feedback over a 5 month period.

Commonwealth Fisheries Association (CFA)

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside emailed CFA advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, Woodside sent an email reminder to CFA, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to CFA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted AFMA, DAFF - Fisheries, CFA, Tuna Australia, ASBTIA, North West Slope Trawl Fishery and Western Deepwater Trawl Fishery individual licence holders. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries, and individual Commonwealth relevant fishery licence holders (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.10 of this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CFA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to CFA on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.

- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided CFA with the opportunity to provide feedback over a 5 month period.

State Commercial fisheries and representative bodies

Mackerel Managed Fishery (Area 2)

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Mackerel Managed Fishery (Area 2) individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).
- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-7 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Mackerel Managed Fishery (Area 2) for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the

North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to Mackerel Managed Fishery (Area 2), via WAFIC, on 29 February 2024 based on their functions, interests or activities.
- Woodside has provided Mackerel Managed Fishery (Area 2), via WAFIC, with the opportunity to provide feedback over a 5 month period.

Pilbara Crab Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Pilbara Crab Managed Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).
- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-7 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Crab Managed Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to Pilbara Crab Managed Fishery, via WAFIC, on 29 February 2024 based on their functions, interests or activities.
- Woodside has provided Pilbara Crab Managed Fishery, via WAFIC, with the opportunity to provide feedback over a 5 month period.

Onslow Prawn Managed Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Onslow Prawn Managed Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).
- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-7 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Onslow Prawn Managed Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Onslow Prawn Managed Fishery, via WAFIC, on 29 February 2024 based on their functions, interests or activities.

- Woodside has provided Onslow Prawn Managed Fishery, via WAFIC, with the opportunity to provide feedback over a 5 month period.

Pilbara Trawl Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Pilbara Trawl Managed Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).
- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-7 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Trawl Managed Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Pilbara Trawl Managed Fishery, via WAFIC, on 29 February 2024 based on their functions, interests or activities.
- Woodside has provided Pilbara Trawl Managed Fishery, via WAFIC, with the opportunity to provide feedback over a 5 month period.

Pilbara Line Fishery

Summary of information provided and record of consultation for this EP:

- On 29 February 2024, WAFIC, on behalf of Woodside, emailed Pilbara Line Managed Fishery individual licence holders advising of the proposed activity (SI Report, reference 12.3), and provided a Consultation Information Sheet.
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).
- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received.	Woodside has consulted DPIRD, WAFIC and individual relevant licence holders via WAFIC. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-7 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara Line Managed Fishery for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Pilbara Line Managed Fishery, via WAFIC, on 29 February 2024 based on their functions, interests or activities.
- Woodside has provided Pilbara Line Managed Fishery, via WAFIC, with the opportunity to provide feedback over a 5 month period.

Western Australian Fishing Industry Council (WAFIC)

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed WAFIC advising of the proposed activity (Record of Consultation, reference 2.15), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 28 February 2024, Woodside emailed WAFIC to initiate consultation with relevant individual licence holders for this activity (SI Report, reference 12.1).
- **(1)** On 28 February 2024, Woodside telephoned WAFIC to review the list of relevant fisheries identified by Woodside.
- (1) On 28 February 2024, Woodside emailed WAFIC with the agreed list of relevant fisheries for this activity and an updated consultation email for individual licence holders (SI Report, reference 12.2).
- **(1)** On 29 February 2024, WAFIC emailed Woodside advising the consultation information had been sent to five relevant fisheries and confirmed it will provide feedback after the consultation period closes (SI Report, reference 12.3).
- (1) On 29 February 2024, Woodside emailed WAFIC to acknowledge the distribution of information (SI Report, reference 12.4).
- On 19 March 2024, Woodside emailed WAFIC following up on the proposed activities and noted WAFIC does not usually send consultation reminders to individual licence holders (SI Report, reference 12.5).
- On 28 March 2024, Woodside provided an activity update to WAFIC regarding wells location coordinates and included an updated Consultation Information Sheet (SI report, reference 12.6). Woodside enquired whether the update should be sent to relevant fisheries.
- **(2)** On 2 April 2024, WAFIC emailed Woodside reporting that no feedback had been received for this activity and did not consider necessary to distribute the update (SI Report, reference 12.7).
- (2) On 3 April 2024, Woodside thanked WAFIC for the feedback and noted the advice regarding the update to relevant fisheries (SI Report, reference 12.8).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Consultation material delivered to relevant fisheries.	**(1)** **Woodside assessment:** Woodside reviewed WAFIC's update on outreach to relevant fisheries which gave them sufficient information to make an informed assessment of possible consequences of the activity on their functions, interests or activities per regulation 25 of the Environment Regulations. **Woodside response**: Woodside noted consultation information had been distributed to relevant fisheries via WAFIC.	**(1)** Not required.
(2) No feedback received from licence holders for this activity.	**(2)** **Woodside assessment:** Woodside accepted WAFIC's advice that there was no feedback on the activity and that it was not necessary to distribute the update to	**(2)** Not required.

	licence holders. **Woodside response:** Woodside noted WAFIC had no further comments and its advice regarding the update distribution.	
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the potential for interaction with State-managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to DPIRD and WAFIC (see Table 7-7 of this EP) prior to the commencement and at the completion of the activity, as referenced at PS 1.10 in this EP. No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAFIC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to WAFIC on 28 February 2024 based on their functions, interests or activities.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to WAFIC over a 5 month period.

Recreational marine users and representative bodies

Gascoyne Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside sent a letter to individual Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 2.16), provided a Consultation Information Sheet, and a QR code to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 28 February 2024, Woodside emailed individual Gascoyne Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 2.17),

provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- **(1)** On 28 February 2024, an individual Recreational Marine User emailed Woodside (SI Report, reference 13.1) and confirmed they would maintain safe distances as per their operations and AMSA regulations.
- On 18 March 2024, Woodside sent a letter reminder to individual Gascoyne Recreational Marine Users, following up on the proposed activity (Record of Consultation, reference 3.3) and included a QR code to the Consultation Information Sheet on Woodside's website.
- On 19 March 2024, Woodside sent an email reminder to individual Gascoyne Recreational Marine Users, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- **(1)** On 25 March 2024, Woodside emailed the individual Recreational Marine User confirming that exclusion zones would be communicated by AMSA and marine notices prior to activities commencing.
- On 27 March 2024, Woodside provided an activity update to Gascoyne Recreational Marine Users regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 28 March 2024, Woodside provided an activity update to Gascoyne Recreational Marine Users regarding wells location coordinates and included a QR code to the updated Consultation Information Sheet (Record of Consultation, reference 3.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) An individual Recreational Marine User advised they would maintain safe navigation as per AMSA regulations.	**(1)** **Woodside assessment:** Woodside acknowledges that the individual Recreational Marine User has the information it needs to maintain safe navigation. **Woodside response**: Woodside confirmed exclusion zones will be communicated by AMSA and marine notices prior to activities commencing.	**(1)** Woodside will notify AMSA at least 24–48 hours before activities commence, as referenced as PS 1.11 in this EP.
While feedback has been received, there were no objections or claims.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Gascoyne Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Gascoyne Recreational Marine Users on 26 and 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up letter and email seeking feedback on the proposed activities.
- Woodside has provided Gascoyne Recreational Marine Users with the opportunity to provide feedback over a 5 month period.

Pilbara/Kimberley Recreational Marine Users

Summary of information provided and record of consultation for this EP:

- On 26 February 2024, Woodside sent a letter to individual Pilbara/Kimberley Recreational Marine Users advising of the proposed activity (Record of Consultation, reference 2.16), provided a Consultation Information Sheet, and a QR code to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent a letter reminder to individual Pilbara/Kimberley Recreational Marine Users, following up on the proposed activity (Record of Consultation, reference 3.3) and included a QR code to the Consultation Information Sheet on Woodside's website.
- On 28 March 2024, Woodside provided an activity update to Pilbara/Kimberley Recreational Marine Users regarding wells location coordinates and included a QR code to the updated Consultation Information Sheet (Record of Consultation, reference 3.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Pilbara/Kimberley Recreational Marine Users for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to Pilbara/Kimberley Recreational Marine Users on 26 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up letter seeking feedback on the proposed activities.
- Woodside has provided Pilbara/Kimberley Recreational Marine Users with the opportunity to provide feedback over a 5 month period.

Recfishwest

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Recfishwest advising of the proposed activity (Record of Consultation, reference 2.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to Recfishwest, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- **(1)** On 26 March 2024, Recfishwest emailed to thank Woodside for the consultation information (SI Report, reference 27.1) and requested to be kept informed as activities progress, given the proximity to areas accessed by the charter industry and recreational fishers.
- **(1)** On 27 March 2024, Woodside thanked Recfishwest for its response (SI Report, reference 27.2) and confirmed it will keep Recfishwest informed prior to and on completion of activities.
- On 27 March 2024, Woodside provided an activity update to Recfishwest regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(2)** On 28 March 2024, Recfishwest emailed Woodside and confirmed having no further comments following the update received (SI Report, reference 27.3).
- **(2)** On 2 April 2024, Woodside thanked Recfishwest for its feedback (SI Report, reference 27.4).
- On 15 April 2024, Woodside met with Recfishwest to provide an update on its activities. While the presentation was centred on decommissioning, it included information about this EP and Woodside's consultation approach (SI Report, reference 27.5). No feedback was provided on this EP.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Recfishwest requested to be kept informed as activities progress.	**(1)** **Woodside assessment:** Woodside acknowledges Recfishwest's request to be informed as activities progress and agrees to keep Recfishwest informed prior to and on completion of activities. **Woodside response**: Woodside confirmed it would keep Recfishwest informed prior to and on completion of activities, given that the areas surrounding the operation is accessed by recreational fishers and the charter industry.	**(1)** Woodside will provide notifications to Recfishwest (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.10 of this EP.

(2) Recfishwest confirmed having no further comments for this activity.	**(2)** **Woodside assessment:** Woodside noted Recfishwest had no further comments. **Woodside response**: Woodside thanked Recfishwest for its feedback.	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Recfishwest for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Recfishwest on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to Recfishwest over a 5 month period.

Marine Tourism WA

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Marine Tourism WA advising of the proposed activity (Record of Consultation, reference 2.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Marine Tourism WA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Marine Tourism WA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Marine Tourism WA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Marine Tourism WA on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Marine Tourism WA with the opportunity to provide feedback over a 5 month period.

WA Game Fishing Association

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed WA Game Fishing Association advising of the proposed activity (Record of Consultation, reference 2.17), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to WA Game Fishing Association, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to WA Game Fishing Association regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims	Woodside has consulted Recfishwest, Marine Tourism WA, WA Game Fishing	No additional measures or controls are

received despite follow up.	Association and individual recreational marine users. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WA Game Fishing Association for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to WA Game Fishing Association on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided WA Game Fishing Association with the opportunity to provide feedback over a 5 month period.

Titleholders and Operators

Chevron Australia/ Osaka Gas Gorgon/ Tokyo Gas Gorgon/ JERA Gorgon

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Chevron Australia advising of the proposed activity (Record of Consultation, reference 2.18), provided a Consultation Information Sheet, GIS shape files and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.* Woodside asked that the consultation information be forwarded to Chevron's Joint Venture participants Osaka Gas Gorgon, Tokyo Gas Gorgon and Jera Gorgon for feedback.
- On 18 March 2024, Woodside sent an email reminder to Chevron Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Chevron regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 9 April 2024, Chevron emailed Woodside (SI Report, reference 36.1) and:
  - **(1)** confirmed it has no issues with the planned activities.
  - **(2)** requested Woodside to provide additional information should the activities be undertaken during cyclone season, including cyclone anchor configuration, mooring design, anchor analysis and risk mitigation.

- On 2 May 2024, Woodside emailed Chevron (SI Report, reference 36.2) and:
  - **(1)** thanked Chevron for its feedback.
  - **(2)** advised drilling is not currently planned to occur in cyclone season.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Chevron confirmed it has no issues regarding the activities.	**(1)** **Woodside assessment:** Woodside noted Chevron had no issues with the activities. **Woodside response:** Woodside thanked Chevron for its feedback and confirming it has no issues with the activities.	**(1)** Not required.
(2) Requested further information should activities be undertaken during cyclone season	**(2)** **Woodside assessment:** Woodside noted that drilling is not currently planned to occur in cyclone season and will notify Chevron with mooring design information in the form of the mooring analysis if required. **Woodside response:** Woodside advised that should drilling occur with a moored MODU during cyclone season, it will provide Chevron with mooring design information.	**(2)** Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Chevron Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Chevron Australia on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.

- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside addressed and responded to Chevron Australia over a 5 month period.

Western Gas

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Western Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, Woodside sent an email reminder to Western Gas, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Western Gas regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Gas for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Western Gas on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Western Gas with the opportunity to provide feedback over a 5 month period.

Exxon Mobil Australia Resources Company

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Exxon Mobil Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Exxon Mobil Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Exxon Mobil Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exxon Mobil Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Exxon Mobil Australia on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Exxon Mobil Australia with the opportunity to provide feedback over a 5 month period.

Shell Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Shell Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Shell Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Shell Australia regarding wells location coordinates and included an updated Consultation Information Sheet

(Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Shell Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Shell Australia on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Shell Australia with the opportunity to provide feedback over a 5 month period.

BP Developments Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed BP Developments Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to BP Developments Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to BP Developments Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 5 April 2024, BP Developments Australia emailed Woodside to acknowledge the consultation information received and confirmed it had no objections to the activities (SI Report, reference 31.1).
- **(1)** On 8 April 2024, Woodside thanked BP Developments Australia for its feedback and confirming it had no objections to the activities (SI Report, reference 31.2).

Summary of Feedback, Objection or	Assessment of Merits of Feedback, Objection or Claim and Woodside's	Inclusion in Environment Plan

Claim	Response	
(1) BP Developments Australia confirmed it had no objections to the activities.	**(1)** **Woodside assessment:** Woodside noted BP Developments Australia had no objections to this EP. **Woodside response:** Woodside thanked BP Developments Australia for its feedback.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with BP Developments Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to BP Developments Australia on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to BP Developments Australia over a 5 month period.

Carnarvon Energy

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Carnarvon Energy advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Carnarvon Energy, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Carnarvon Energy regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Carnarvon Energy for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Carnarvon Energy on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Carnarvon Energy with the opportunity to provide feedback over a 5 month period.

PE Wheatstone

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed PE Wheatstone advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 18 March 2024, Woodside sent an email reminder to PE Wheatstone, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to PE Wheatstone regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	No additional measures or controls are required.

	Revision process (see Section 7.2.5 of this EP).	

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with PE Wheatstone for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to PE Wheatstone Gas on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided PE Wheatstone with the opportunity to provide feedback over a 5 month period.

Kyushu Electric Wheatstone

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Kyushu Electric Wheatstone advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Kyushu Electric Wheatstone, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Kyushu Electric Wheatstone regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Kyushu Electric Wheatstone for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Kyushu Electric Wheatstone on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Kyushu Electric Wheatstone with the opportunity to provide feedback over a 5 month period.

Eni Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Eni Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Eni Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Eni Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 19 April 2024, Eni Australia emailed Woodside to advise it has no concerns regarding the activity (SI Report, reference 34.1).
- **(2)** Requested to be updated of any material changes (SI Report, reference 34.1).
- **(1,2)** On 22 April 2024, Woodside thanked Eni Australia for its feedback and confirmed it will provide Eni Australia with significant updates with respect to the proposed activities when relevant (SI Report, reference 34.2).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Eni Australia advised it no concerns regarding this activity.	**(1)** **Woodside assessment:** Woodside noted Eni Australia had no concerns regarding this activity. **Woodside response:** Woodside thanked Eni Australia for its feedback.	**(1)** Not required.
(2) Requested to be updated of any material changes.	**(2)** **Woodside assessment:** Woodside will provide notifications to Eni and relevant stakeholders as outlined in Table 7-7 of this EP. **Woodside response:** Woodside confirmed it will contact Eni Australia with activity updates when relevant.	**(2)** Woodside will provide notification of significant change, as appropriate, to Eni Australia, as referenced in Table 7-7 of the EP.

While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Eni Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Eni Australia on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Eni Australia with the opportunity to provide feedback over a 5 month period.

Finder Energy

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Finder Energy advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- **(1)** On 1 March 2024, Finder Energy emailed Woodside and advised it had no objections or feedback for this activity (SI Report, reference 8.1).
- **(1)** On 6 March 2024, Woodside thanked Finder Energy for its feedback (SI Report, reference 8.2).
- On 27 March 2024, Woodside provided an activity update to Finder Energy regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(1)** On 28 March 2024, Finder Energy emailed Woodside and confirmed it had no objections or comments following the update received (SI Report, reference 8.3).
- **(1)** On 2 April 2024, Woodside thanked Finder Energy for its feedback (SI Report, reference 8.4).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Finder Energy advised it had no	**(1)** **Woodside assessment:** Woodside noted Finder Energy had no objections or	**(1)**

objections or feedback for this activity.	feedback for this activity. **Woodside response:** Woodside thanked Finder Energy for its feedback.	Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Finder Energy for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Finder Energy on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to Finder Energy over a 5 month period.

Jadestone Energy

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Jadestone Energy advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Jadestone Energy, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Jadestone Energy regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	No additional measures or controls are required.

	Revision process (see Section 7.2.5 of this EP).	

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Western Gas for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Jadestone Energy on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Jadestone Energy with the opportunity to provide feedback over a 5 month period.

KUFPEC

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed KUFPEC advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to KUFPEC, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 26 March 2024, KUFPEC emailed Woodside (SI Report, reference 25.1) and:
  - **(1)** asked Woodside to confirm the location coordinates of Xena-03 well.
  - **(2)** requested to be kept informed of any planned offshore interactions.
- On 27 March 2024, Woodside emailed KUFPEC (SI Report, reference 25recfishwest.2) and:
  - **(1)** advised of an update to 4 well coordinates, including the Xena-03 well.
  - **(2)** confirmed it will inform KUFPEC prior to and on completion of activities.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) KUFPEC asked for confirmation on the Xena-03 well location.	**(1)** **Woodside assessment:** Woodside reviewed the information provided on the Consultation Information Sheet and the planned well locations to answer	**(1)** Not required.

	KUFPEC's question. **Woodside response:** Woodside provided KUFPEC with an update on 4 well locations, including Xena-03.	
(2) KUFPEC requested to be kept informed of offshore activities as part of this EP.	**(2)** **Woodside assessment:** Woodside will provide notifications to KUFPEC and relevant stakeholders as outlined in Table 7-7 of this EP. **Woodside response:** Woodside confirmed it will inform KUFPEC prior to and on completion of activities.	**(2)** Woodside will provide notifications to KUFPEC (see Table 7-7 of this EP) ten days before activity commences, and following completion of activities, as referenced as PS 1.10 of this EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with KUFPEC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to KUFPEC on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to KUFPEC over a 5 month period.

Santos NA Energy Holdings / Santos Ltd / Santos WA Northwest / Santos Offshore / Santos WA Southwest / Santos (BOL) / Santos WA PVG

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Santos advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- **(1)** On 8 March 2024, Santos emailed Woodside and advised it had no comments for this EP (SI Report, reference 9.1).
- **(1)** On 1 March 2024, Woodside thanked Santos for its feedback (SI Report, reference 9.2).

- On 27 March 2024, Woodside provided an activity update to Jadestone Energy regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Santos advised it had no comments on this EP.	**(1)** **Woodside assessment:** Woodside noted Santos had no comments for this EP. **Woodside response:** Woodside thanked Santos for its feedback.	**(1)** Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Santos for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Santos on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to Santos over a 5 month period.

Coastal Oil and Gas / Fox Resources

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Coastal Oil and Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 29 February 2024, Woodside received a system generated email notification advising the email address used is not working. Woodside attempted to find new contact details for Coastal Oil and Gas.
- On 11 March 2024, Woodside emailed Fox Resources (Record of Consultation, reference 2.20) as the key Principal of Coastal Oil and Gas advising of the proposed activity, provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the*

community.

- On 18 March 2024, Woodside sent an email reminder to Fox Resources, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Fox Resources regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Coastal Oil and Gas / Fox Resources for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Coastal Oil and Gas / Fox Resources Australia on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Coastal Oil and Gas / Fox Resources with the opportunity to provide feedback over a 5 month period.

Bounty Oil and Gas

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Bounty Oil and Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Bounty Oil and Gas, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Bounty Oil and Gas regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Bounty Oil and Gas for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Bounty Oil and Gas on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Bounty Oil and Gas with the opportunity to provide feedback over a 5 month period.

OMV Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed OMV Australia advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- 2024, Woodside sent an email reminder to OMV Australia, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to OMV Australia regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	No additional measures or controls are required.

	Revision process (see Section 7.2.5 of this EP).	

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with OMV Australia for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to OMV Australia on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided OMV Australia with the opportunity to provide feedback over a 5 month period.

KATO Energy / KATO Corowa

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed KATO advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to KATO, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to KATO regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with KATO for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to KATO on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided KATO with the opportunity to provide feedback over a 5 month period.

INPEX Alpha

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed INPEX Alpha advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to INPEX Alpha, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to INPEX Alpha regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with INPEX Alpha for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to INPEX Alpha on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.

- Woodside has provided INPEX Alpha with the opportunity to provide feedback over a 5 month period.

JX Nippon O&G Exploration (Australia)

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed JX Nippon O&G Exploration advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to JX Nippon O&G Exploration, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to JX Nippon O&G Exploration regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with JX Nippon O&G Exploration for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to JX Nippon O&G Exploration on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided JX Nippon O&G Exploration with the opportunity to provide feedback over a 5 month period.

Vermilion Oil & Gas

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Vermilion Oil & Gas advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation

Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- On 18 March 2024, Woodside sent an email reminder to Vermilion Oil & Gas, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Vermilion Oil & Gas regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Vermilion Oil & Gas for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Vermilion Oil & Gas on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Vermilion Oil & Gas with the opportunity to provide feedback over a 5 month period.

Beagle No.1

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Beagle No.1 advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 18 March 2024, Woodside sent an email reminder to Beagle No.1, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to beagle No.1 regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Beagle No.1 for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Beagle No.1 on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Beagle No.1 with the opportunity to provide feedback over a 5 month period.

JX Nippon O&G Exploration Australia

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed JX Nippon advising of the proposed activity (Record of Consultation, reference 2.19), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, Woodside sent an email reminder to JX Nippon, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to JX Nippon regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and	No additional measures or controls are required.

	Revision process (see Section 7.2.5 of this EP).	

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with JX Nippon for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to JX Nippon on 28 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided JX Nippon with the opportunity to provide feedback over a 5 month period.

Peak Industry Representative bodies

Australian Energy Producers (AEP)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed AEP advising of the proposed activity (Record of Consultation, reference 2.21), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- On 18 March 2024, Woodside sent an email reminder to AEP, following up on the proposed activity (Record of Consultation, reference 3.1) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AEP regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with AEP for the purpose of regulation 25 is

complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to AEP on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided AEP with the opportunity to provide feedback over a 5 month period.

Traditional Custodians and nominated representative corporations

Murujuga Aboriginal Corporation (MAC)

MAC is established under the Burrup and Maitland Industrial Estates Agreement and is the representative body for the Traditional Custodians for Murujuga being the Ngarluma, the Mardudhunera, the Yaburara, the Yindjibarndi and the Wong-Goo-Tt-Oo peoples (collectively Ngarda-Ngarli). MAC is the cultural authority for Murujuga and is responsible for the management and protection of its cultural values.

Historical Engagement:

- **(1)** On 1 September 2023, MAC emailed a letter to Woodside (SI Report, reference 14.1) noting the following:
  - The women in its Circle of Elders are the right people to consult with.
  - MAC notes that it would be extremely unusual for knowledge to be held by an individual without surrounding groups knowing about it.
  - The Circle of Elders represent the Ngarda-Ngarli; the collective term for the Traditional Custodians who look after Murujuga Country.
- **(1)** On 14 December 2023, Woodside met with the MAC Board, Circle of Elders and CEO in Karratha (SI Report, reference 14.2) to discuss accepted EPs as well as upcoming EPs being submitted in 2024. The meeting also reconfirmed MAC as the cultural authority over Murujuga and spoke to the specific authority of its senior law men and women.

Summary of information provided and record of consultation for this EP:

- On 1 March 2024, Woodside emailed MAC advising of the proposed activity (Record of Consultation, reference 2.27), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that MAC and its members may have within the EMBA, information on how MAC would like to engage, and requested that MAC provide information to other individuals as required.
- On 23 April 2024, Woodside emailed MAC to follow up on this activity, to offer further information, answer queries or attend a meeting if required (SI Report, reference 14.3).
- On 23 April 2024, MAC emailed Woodside indicating it did not recall seeing the original notification, acknowledging the lack of resources for the workload, and indicated it

would consider the matter and respond (SI Report, reference 14.4).

- On 23 April 2024, Woodside emailed MAC and offered assistance to make the process easier (SI Report, reference 14.5).
- On 23 April 2024, MAC emailed Woodside (SI Report, reference 14.6) and raised the following:
  - **(2)** The lack of broader-scale bathymetric information on the submerged landscape and the potential for impact on jinna (songlines).
  - **(3)** That MAC had no specific knowledge of tangible or intangible heritage that may be impacted.
  - **(4)** The size of the EMBA and management procedures in place to protect cultural values in addition to environmental values.
  - **(5)** That the EP capture a process for engaging with MAC to protect cultural, heritage and Outstanding Universal Values in the event of an incident.
  - **(6)** That it recommended Woodside also consult Ngarluma Aboriginal Corporation.
- On 26 April 2024, Woodside emailed MAC advising it would seek information to respond to MAC's feedback (SI Report, reference 14.7).
- On 8 May 2024, Woodside emailed MAC to provide further information including:
  - **(2)** Woodside's continued support to work with MAC to undertake mapping of areas significant to MAC.
  - **(2)** Woodside's continued support to undertake further ethnographic surveys focussed on jinna at MAC's convenience.
  - **(3)** That Woodside welcomed MAC's advice on identifying cultural features and values in the absence of information from further surveys and mapping.
  - **(4)** How the EMBA is determined.
  - **(5)** How Woodside uses modelling to develop response plans in the unlikely event of an incident, including notification requirements to Traditional Custodians.
  - **(6)** That Woodside has also consulted with Ngarluma Aboriginal Corporation on this activity.

Ongoing Relationship:

- Woodside has continued consultation with MAC on other activities unrelated to this EP.
- Woodside continues to pursue an ongoing two-way relationship with MAC on future opportunities to work together.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) On 1 September 2023, MAC advised that it was the appropriate body corporate and cultural authority over Murujuga.	**(1)** **Woodside assessment:** Woodside accepts and respects MAC's position as the appropriate body corporate and cultural authority over Murujuga. **Woodside response:** Woodside continues to consult and engage with MAC as the appropriate body corporate and cultural authority over Murujuga.	**(1)** Not required.
(2) On 23 April 2024, MAC raised that there was a lack of broader-scale bathymetric information for the trunkline area and the	**(2)** **Woodside Assessment:** Woodside acknowledges MAC's position that there is a lack of bathymetric information. Woodside notes that this EP is for continued operation of existing infrastructure. The EP includes the Unexpected Finds	**(2)** Cultural features and heritage values including jinna (songlines) are identified and assessed in Sections 4.9 and 6.11 of the EP.

impact on jinna (songlines).	Procedure (Section 7.6) which addresses the risk of discovery of potential underwater cultural material. **Woodside Response:** Woodside has previously proposed to MAC that MAC work to determine a scope of works to determine further bathymetric information on the area. This proposal is under consideration by MAC and Woodside remains supportive of undertaking this work. Woodside also remains supportive of conducting further ethnographic surveys with MAC, following the initial phase of works in 2020 which focussed on jinna and their connection from Murujuga to inland areas.	
(3) On 23 April 2024, MAC advised they have no specific knowledge of tangible or intangible heritage that might be impacted.	**(3)** **Woodside Assessment:** Woodside uses multiple sources of information including publicly available literature, heritage databases and feedback from consultation in order to identify tangible and intangible cultural features of the environment, as described in Sections 4.9 and 6.11. **Woodside Response:** Woodside recognises the difficulty MAC faces in identifying tangible and intangible heritage on the submerged continental shelf in the absence of bathymetric mapping and ethnographic assessment of the results. In June 2023 Woodside proposed a project to MAC that would undertake mapping of areas identified by MAC as a priority in understanding this landscape. MAC has not accepted this proposal and through several meetings with MAC between July 2023 and February 2024 Woodside understands that MAC intends to issue a modified proposal to conduct this work.	**(3)** Cultural features and heritage values are identified and assessed in Sections 4.9 and 6.11 of the EP.
(4) On 23 April 2024, MAC noted the size of the EMBA and management procedures in place to protect cultural values.	**(4)** **Woodside Assessment**: Woodside aligns with industry guidance in developing the EMBA. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA. Woodside welcomes any advice MAC provides on identifying cultural features or heritage values within the EMBA. **Woodside Response:** The EMBA for this activity is determined by a highly unlikely release of marine diesel as the result of damage to the production facility or vessel collision. Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event	**(4)** Woodside has addressed oil spill preparedness and response strategy in Appendix H.

	of a hydrocarbon spill, as demonstrated in Sections 6.9 of the EP, and Appendix I.	
(5) On 23 April 2024, MAC advocated for a process for engagement to protect cultural heritage and Outstanding Universal values in the event of an incident.	**(5)** **Woodside Assessment:** Woodside accepts MAC's advice on the need for engagement in the event of an incident. **Woodside Response:** Consultation with relevant Traditional Custodian representatives, including MAC, in the event of an incident is already anticipated under our oil spill response plan.	**(5)** Woodside has addressed oil spill preparedness and response strategy in Appendix H.
(6) On 23 April 2024, MAC advised that Woodside should consult with Ngarluma Aboriginal Corporation.	**(5)** **Woodside Assessment:** Woodside accepts MAC's advice on the need to consult with NAC. **Woodside Response:** Woodside has consulted with NAC as a relevant person for this EP.	**(5)** Woodside has consulted with NAC as outlined in Appendix F.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with MAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to MAC on 1 March 2024 based on their functions, interests or activities. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity in a digestible, plain English format.
- Woodside sought direction on MAC's preferred method of consultation.
- Woodside asked MAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. MAC identified Ngarluma Aboriginal Corporation (NAC) as a relevant group to consult. Woodside is already consulting with NAC on this EP.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided MAC with the opportunity to provide feedback over a 5-month period.

- Woodside engages with ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of the EP). Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on MAC's functions, interests or activities.

Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)

NTGAC is established under the Native Title Act 1993 by the Baiyungu people to represent the Baiyungu people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- **(1)** On 17 July 2023, in response to consultation requests on activities not relevant to this EP, NTGAC/YMAC provided Woodside with a proposed consultation framework for PBC's to consult with oil and gas companies (SI Report, reference 15.1). It requested that Woodside run a strategic planning workshop with NTGAC to discuss the consultation framework and determine the best way to implement it.
- On 24 July 2023, Woodside replied to NTGAC/YMAC's email of 17 July 2023 confirming it supported the proposed workshop and suggested it be jointly run. Woodside requested a preparation meeting (SI Report, reference 15.2).
- **(1)** On 25 July 2023, Woodside emailed NTGAC/YMAC its planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 15.3).
- **(1)** On 15 August 2023, Woodside presented to NTGAC/YMAC about several activities unrelated to this EP (SI Report reference 15.4). At the meeting, a proposed framework for consultation was discussed. It was proposed Woodside fund an independent consultant to write a general project report.
- **(1)** On 31 August 2023, Woodside emailed NTGAC/YMAC confirming outcomes of the meeting held on 15 August 2023, including that YMAC would provide a first draft of a consultation agreement (SI Report, reference 15.5).
- **(1)** On 14 December 2023, Woodside emailed YMAC a Program of Ongoing Consultation and advised that Woodside wanted to progress negotiations on consultation frameworks with groups represented by YMAC (including NTGAC) (SI Report, reference 15.6). Woodside proposed the protocol include (among other things):
  - The procedures Woodside will follow when a submission requires consultation.
  - Initial and ongoing consultation in relation to activities.
  - Agreement as to how Woodside will provide NTGAC with the information NTGAC requires to make free, prior and informed decisions about Woodside's EPs.
  - Agreement as to how NTGAC will provide feedback and how that can best be represented in EPs.
  - An agreed schedule of rates for NTGAC's participation in consultation.
  - How the outputs of the consultations will be managed.
- On 21 December 2023, Woodside emailed NTGAC/YMAC a list of upcoming activities, including this activity (SI Report, reference 15.7).
- **(1)** On 28 February 2024, Woodside emailed NTGAC/YMAC a letter (SI Report, reference 15.8) setting out the draft terms of an agreement between NTGAC and Woodside, the agreement (among other things) included the following topics:
  - Sufficient Information

- Reasonable Period
- Provision of Information
- Objection or claims
- Publications
- Cost and termination.

- On 29 February 2024, NTGAC/YMAC emailed Woodside acknowledging receipt of the information (SI Report, reference 15.9).

Summary of information provided and record of consultation for this EP:

- On 20 March 2024, Woodside emailed NTGAC via YMAC advising of the proposed activity (Record of Consultation, reference 2.28), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that NTGAC and its members may have within the EMBA, information on how NTGAC would like to engage, and requested that NTGAC provide information to other individuals as required.
- On 26 March 2024, NTGAC/YMAC emailed Woodside with an out of office message advising the recipient was on leave until 2 April 2024 and providing a contact for urgent queries (SI Report, reference 15.10).
- On 12 April 2024, Woodside emailed NTGAC/YMAC to offer further information and any assistance required including a meeting or discussion (SI Report, reference 15.11). No reply was received.
- On 16 May 2024, Woodside emailed NTGAC via YMAC to seek the availability of the Board to meet with Woodside to consult on Environment Plans (SI Report, reference 15.12).
- On 21 May 2024, NTGAC via YMAC emailed Woodside to confirm the Board would meet in July, that the agenda was quite full and they would update Woodside to confirm the Board's availability (SI Report, reference 15.13).
- On 21 May 2024, Woodside emailed NTGAC via YMAC to acknowledge their email and advise Woodside was keen to plan meeting requests around the Board's availability (SI Report, reference 15.14).
- On 21 May 2024, NTGAC via YMAC emailed Woodside with acknowledgement and thanks (SI Report, reference 15.15).
- On 19 June 2024, Woodside emailed NTGAC via YMAC to follow up on the opportunity to meet the Board and consult on Environment Plans (SI Report, reference 15.16). No response has been received.
- On 27 June 2024, Woodside emailed NTGAC via YMAC seeking an update on their review of the draft consultation agreement sent in February 2024 (SI Report 15.17).
- **(1)** On 28 June 2024, NTGAC via YMAC emailed Woodside (SI Report, reference 15.18) to advise:
  - NTGAC was keen to progress the Consultation Agreement and would revise the draft provided by Woodside.
  - A meeting date for the Board was being sought at which the Agreement and upcoming EPs could be discussed.
  - A cost estimate was provided.
- **(1)** On 1 July 2024 Woodside emailed NTGAC via YMAC to provide a Word copy of the draft agreement as requested and to offer further support if required (SI Report,

reference 15.19).

- On 10 July 2024, NTGAC via YMAC emailed Woodside confirming receipt of the draft agreement and confirming they would review the Agreement and provide a meeting date as soon as possible (SI Report, reference 15.20).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) NTGAC via YMAC to develop first draft of a Consultation Agreement.	**(1)** **Woodside assessment:** Woodside is supportive of a sustainable consultation framework and has a commitment to ongoing consultation with Traditional Custodians for the life of an EP. **Woodside response:** Separate from consultation for this activity under regulation 25 of the Environment Regulations, Woodside has sent a draft agreement to NTGAC via YMAC in February 2024. This would be used to frame ongoing consultation to occur as part of Woodside's commitment to consultation post regulation 25 of the Environment Regulations. The draft agreement is under review by NTGAC/YMAC.	**(1)** Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs (Appendix G). This includes continued engagement regarding NTGAC and Woodside's proposed draft Consultation Agreement and potential opportunities for alignment with NTGAC's Strategic Plan. Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as required by the implementation strategy as set out in regulation 35(7) of the Environment Regulations.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NTGAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to NTGAC on 20 March 2024 based on their functions, interests or activities. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity in a digestible, plain English format.

- Woodside sought direction on NTGAC's preferred method of consultation.
- Woodside asked NTGAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided NTGAC with the opportunity to provide feedback over a 5 month period.
- Woodside engages with ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of the EP).
- Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NTGAC's functions, interests or activities.

Buurabalayji Thalanyji Aboriginal Corporation (BTAC)

BTAC is established under the Native Title Act 1993 by the Thalanjyi people to represent the Thalanjyi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 20 February 2023, BTAC emailed Woodside (SI Report reference 16.1) a letter in relation to another project but relevant to all Woodside activities, including the footprint of this activity. BTAC stated that the Thalanyi people:
  - **(1)** Had interests extending out to islands off the Pilbara coast such as the Montebello islands, Barrow Island and the Mackerel Islands.
  - **(2)** Had an enduring deep connection to sea country north of Onslow but needed support to articulate this in a format suitable for consultation.
  - **(3)** Required support from Woodside to obtain technical advice about risks to Sea Country.
  - **(4)** Requested Woodside support BTAC's ranger program to carry out response planning and management activities.
  - **(5)** Required a consultation or engagement framework with Woodside that included resourcing for BTAC's participation in consultation and management planning processes.
- **(2, 3)** On 17 March 2023, Woodside emailed BTAC a letter in relation to another EP. Among other things, Woodside offered to provide resources necessary for BTAC to obtain independent expert environmental management advice. Woodside also offered to support BTAC acquire anthropological advice (SI Report, reference 16.2).
- **(5)** On 19 June 2023, BTAC emailed Woodside on another activity and discussed draft consultation framework principles and consultation rates (SI Report reference 16.3).
- **(5)** On 10 July 2023, Woodside emailed BTAC acknowledging that Woodside commits to a program of ongoing consultation and will be governed by a framework agreement (SI Report reference 16.4).
- **(5)** On 26 July 2023, Woodside emailed BTAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report reference 16.5).
- On 28 July 2023, Woodside and BTAC met virtually. The outcomes of this meeting were captured in an email (SI Report, reference 16.6). Matters included:
  - **(5)** Woodside's agreement to prepare a draft framework agreement for consideration.

- **(5)** Funding for future engagement.
- **(2)** Cultural values mapping of offshore areas and capacity building.

- On 31 July 2023, Woodside emailed three letters to BTAC, two of which related to other Woodside activities (SI Report reference 16.7). The third letter outlined support for an ethnographic assessment to:
  - **(2)** Identify sea country values generally sufficient to inform all Woodside EPs.
  - **(1)** Support work necessary to clarify or define the offshore areas that are relevant to the Thalanyji People.
  - Propose the delivery of interim reports if this will enable prioritising matters considered most critical by BTAC.
  - **(2)** Confirm Woodside will be responsible for reasonable costs to complete the assessment.
  - Confirm BTAC retains intellectual property.

- **(5)** On 14 September 2023, BTAC emailed two letters to Woodside (SI Report, reference 16.8):
  - Support for ongoing engagement and consultation for Environment Plan through a consultation agreement.
  - Cost recovery to assist consultation for NOPSEMA-related matters.

- **(5)** On 20 September 2023, BTAC emailed Woodside, requesting a response from Woodside to its letter of 14 September 2023 and seeking an update on the status of the consultation agreement (SI Report reference 16.9).
- **(5)** On 22 September 2023, Woodside emailed BTAC a signed copy of its costs recovery letter, the list of activities for which Woodside has consulted BTAC, and advised that the draft consultation agreement was under review (SI Report reference 16.10).
- On 26 September 2023, BTAC responded to Woodside's email of 22 September 2023 and confirmed BTAC would be assisted by a legal representative (SI Report reference 16.11).
- **(5)** On 13 October 2023, BTAC's legal representative emailed Woodside and, among other things, advised BTAC required an indemnity clause in the proposed consultation agreement against any court action arising from its consultation on Woodside EPs (SI Report reference 16.12).
- **(5)** On 2 November 2023, Woodside emailed BTAC's legal representative noting it would not agree to the request to indemnify BTAC against any court proceedings resulting from consultation. Woodside re-iterated its wish to progress the consultation agreement and deliver on its commitment to map BTAC's sea country values (SI Report reference 16.13).
- **(5)** On 18 November 2023, in response to requests from BTAC's legal representative, Woodside provided further information about its response to BTAC'S indemnification request. Among other things, Woodside explained that it could harm genuine engagement. Woodside again noted its commitment to build an ongoing relationship with BTAC (SI Report reference 16.14).
- On 27 November 2023, Woodside attended and presented to the BTAC Common Law Holders meeting (SI Report, reference 16.15). Matters discussed included:
  - **(2)** Woodside's offer to fund Sea Country mapping, which BTAC had yet to take up.
  - **(5)** Progress of a consultation agreement between BTAC and Woodside.

- On 7 December 2023, Woodside emailed BTAC and attached correspondence sent to the previous CEO (SI Report, reference 16.16). The correspondence included

information about:

- **(2)** Woodside's support for articulating and understanding sea country values, including ethnographic/anthropological mapping.
- **(4)** Woodside's commitment to engage in ongoing consultation for the purpose of ongoing monitoring, management and emergency response.
- **(3)** Woodside's support for BTAC to obtain independent environmental management advice.
- **(1)** Information about BTAC's interest in archaeological sites on nearshore islands including the Montebello and Barrow Islands.

- **(2, 3)** On 7 December 2023, BTAC emailed Woodside accepting the offer to take up sea country mapping and research. BTAC requested a meeting in the week of 15 January 2024 to plan for upcoming activities (SI Report reference 16.17).
- On 8 December 2023, Woodside exchanged emails about financial matters relating to the consultation agreement. Woodside noted it required itemised estimates for services (SI Report, references 16.18, 16.19).
- On 17 January 2024, Woodside met with BTAC (SI Report reference 16.20) and discussed (among other things):
  - **(2)** Sea country mapping
  - BTAC prefer early notice on EPs, if possible.
  - **(4)** BTAC keen on employment/training opportunities and opportunities for rangers.
  - BTAC to form a committee for consultation on EPs.
- **(4)** On 17 January 2024, Woodside emailed BTAC information about training pathways as discussed at the meeting with BTAC on 17 January 2024 (SI Report reference 16.21.
- **(2)** On 8 February 2024, Woodside emailed BTAC following up on a quote for Woodside to support BTAC articulating sea country values (SI Report reference 16.22).
- **(5)** On 8 February 2024, BTAC emailed Woodside noting that they have a consultant generating a scope of work for articulating sea country values which will allow BTAC to understand costings (SI Report reference 16.23).
- On 8 February 2024, Woodside emailed BTAC acknowledging their response (SI Report reference 16.24).
- **(5)** On 28 February 2024, Woodside emailed BTAC with a letter (SI Report reference 16.25) setting out the draft terms of a consultation agreement between BTAC and Woodside. The agreement included topics such as: sufficient information, reasonable period, provision of information, objections or claims, publications, and cost and termination.
- On 28 February 2024, BTAC's legal representative emailed Woodside querying funding for legal advice for BTAC (SI Report reference 16.26).
- **(5)** On 28 February 2024, Woodside emailed BTAC's legal representative, noting that BTAC had been seeking a draft Framework Agreement from Woodside, apologising for the delay in providing the draft to BTAC, and that the rate for engagement could be set out in the agreement. In relation to legal advice, Woodside re-iterated that a cost estimate was required and noted that the legal representative's refusal to provide an estimate could be interfering with progressing matters with BTAC. (SI Report reference 16.27)

Summary of information provided and record of consultation for this EP:

- On 1 March 2024, Woodside emailed BTAC (via a legal representative) advising of the proposed activity (Record of Consultation, reference 2.29), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft

policy for managing gender-restricted information. The email requested information on the interests that BTAC and its members may have within the EMBA, information on how BTAC would like to engage, and requested that BTAC provide information to other individuals as required.

- On 5 March 2024, BTAC (via a legal representative) emailed Woodside to request a face-to-face meeting for consultation on this activity, that that no meaningful consultation would talk place until this occurred, and that BTAC would respond shortly to Woodside's email on 28 February 2024 which included a draft consultation agreement for BTAC's review (SI Report reference 16.28).
- On 6 March 2024, Woodside emailed BTAC via a legal representative to indicate its willingness to meet face-to-face and to request a suitable meeting date (SI Report reference 16.29).
- On 11 March 2024, BTAC via a legal representative emailed Woodside to advise it had appointed two liaison committees consisting of BTAC Board members, (a Woodside NOPSEMA Engagement Committee and Macedon ILUA Committee), and requested Woodside meet with the ILUA Committee in the first instance (SI Report reference 16.30).
- On 26 March 2024, Woodside emailed BTAC another notification of this activity and attached a summary information sheet (SI Report reference 16.31).
- On 27 March 2024, BTAC via a legal representative emailed Woodside in response to another activity but attaching the initial email and response from this activity, advising BTAC wished to consult in a face-to-face meeting (SI Report reference 16.32).
- On 27 March 2024, Woodside emailed BTAC via a legal representative thanking BTAC for its email and indicating it would await BTAC's advice on a suitable meeting date (SI Report, reference 16.33).
- Between 15 – 22 April 2024, BTAC and Woodside exchanged emails (SI Report, references 16.34, 16.35, 16.36, 16.37, 16.38) to confirm Woodside would attend a meeting with BTAC Directors on 22 May 2024.
- On 22 May 2024, Woodside and BTAC met for the purpose of consulting on EPs, including this activity (SI Report, reference 16.39). Matters discussed included:
  - An overview of the Pluto Operations activity including the EMBA and possible impacts. No questions were raised.
  - **(3)** BTAC queried support to engage a third-party independent expert to interpret EPs due to an internal lack of expertise.
  - **(2)** Woodside's ongoing commitment to support BTAC to articulate their sea country values. Woodside is awaiting BTAC's advice on their vision for this work.
  - Woodside's interest in understanding BTAC's thoughts on any additional steps for the management of heritage.
  - **(4)** BTAC's interest in training and employment opportunities, particularly for mature candidates. BTAC will provide a list of people seeking employment while Woodside committed to providing information on training opportunities.
- **(4)** On 27 May 2024, Woodside and BTAC exchanged emails on training and employment opportunities (SI Report, references 16.40, 16.41, 16.42).
- On 28 May 2024, BTAC's legal representative emailed Woodside advising he had been instructed to manage all future meetings between the BTAC Board and Woodside and seeking a meeting to discuss a matter unrelated to this EP (SI Report, reference 16.43).
- **(2)** On 13 June 2024, Woodside emailed BTAC to request an update on how Woodside can assist BTAC to articulate sea country values, and offering continued support for this work and an ethnographic survey (SI Report, reference 16.44).
- **(4)** On 18 June 2024, Woodside emailed BTAC with a contact for employment opportunities (SI Report, reference 16.45).
- **(2)** On 19 June 2024, BTAC emailed Woodside a letter in response to the offer to support work to articulate sea country values (SI Report, reference 16.46). The letter

outlined:

- A proposed cultural mapping program to translate cultural values associated with the Thalanyji Area of Interest and appropriately manage impacts to Country.
- That Thalanyji hold data sovereignty of the cultural mapping.
- A scope of works.
- A request that Woodside provide a draft agreement to formalise the cultural mapping program.

- **(2)** On 19 June 2024, Woodside emailed BTAC to provide a focal person for the work on sea country values and committed to engaging with BTAC on the Cultural Mapping Program (SI Report, reference 16.47).
- On 5 July 2024, BTAC emailed Woodside to follow-up on its email/letter of 19 June 2024 (SI Report, reference 16.48).
- On 5 July 2024, Woodside replied to BTAC's email and said it would respond to BTAC's email/letter of 19 June 2024 by the end of the month (SI Report, reference 16.49).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) BTAC stated that its interests include archaeological sites identified on nearshore islands including the Montebello Islands, Barrow Island and the Mackerel Islands.	**(1)** **Woodside Assessment:** Given the EMBA for this activity extends to nearshore areas coastally adjacent to the Thalanyji native title determination area, these values may be relevant in the event of an unplanned hydrocarbon release. Woodside will engage with Traditional Custodians whose interests may be affected in the event of a hydrocarbon release, as outlined in Appendix H. **Woodside Response:** Woodside has sought to engage BTAC in further assessments of sea country values. BTAC has not provided further detail regarding heritage value of places or cultural features of the Operational Area or the EMBA.	**(1)** Existing controls considered sufficient as described in Section 6.9 and Appendix H.
(2) BTAC has a cultural obligation to care for the environmental values of sea country but needed support to articulate these in a format suitable for consultation.	**(2)** **Woodside Assessment:** Woodside assessed BTAC's cultural obligation to care for the environmental values of sea country to represent potential cultural values. **Woodside Response:** Woodside updated relevant sections in the EP to record BTAC's interests and potential cultural values, assessed the potential impact on these and included controls. Woodside agreed to support the articulation and recording of sea country values. This offer has been taken up and progress has commenced towards the desired outcome. The draft Collaboration Agreement at	**(2)** Woodside updated Section 4.9 to record BTAC's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.11. The proposed Consultation Agreement **(5)** enables an ethnographic survey to be undertaken at a later date but is not required to discharge regulation 25 of the Environment Regulations requirements. Should feedback be

	(5) below includes support for recording and articulation of Sea Country values.	received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5).
(3) Requested Woodside supports BTAC in obtaining technical advice relating to proposed activities.	**(3)** **Woodside Assessment:** In February 2024, BTAC engaged a consultant who is completing a scope of work to inform BTAC of costings for articulating sea country values (see **(2)** above). Woodside considers it beneficial for Thalanyji to have technical advice to ensure the delivery of an outcome that does justice to the work involved to record the sea country values. **Woodside Response:** Woodside has offered financial support for technical advice and other support, which has been accepted. The draft Collaboration Agreement (see **(6)** below) includes technical support for recording of sea country values.	**(3)** Not required.
(4) Expressed desire to be involved in local emergency response capability, potentially via an Indigenous Ranger Program. Interested in opportunities for employment/training.	**(4)** **Woodside Assessment:** Woodside considers value in having rangers on the ground trained up in the highly unlikely event of an oil spill. It would be beneficial to an immediate response in an emergency situation. **Woodside Response:** Woodside has offered to support BTAC to engage in management and emergency response. In January 2024 Woodside provided BTAC with information about a training/employment program.	**(4)** The Program for Ongoing Engagement with Traditional Custodians (**Appendix G**) includes consideration of programs to support Indigenous Rangers, and support for Indigenous oil spill response capabilities.
(5) BTAC proposed a Consultation Agreement as an appropriate mechanism to provide ongoing feedback to Woodside regarding its activities. This would include cost recovery to assist consultation for NOPSEMA-related matters.	**(5)** **Woodside Assessment:** This aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. **Woodside Response:** Separate from consultation under regulation 25 of the Environment Regulations, Woodside has drafted a consultation agreement between BTAC and Woodside. The agreement was sent to BTAC in February 2024. The agreement includes support for recording and articulation of Sea	**(5)** As identified in Section 7.10 of this EP, Woodside will continue to consult following acceptance of the EP, as required by the implementation strategy as set out in regulation 35(7) of the Environment Regulations. This includes continued engagement regarding the Collaboration Agreement that Woodside seeks with BTAC, a draft of which includes support for BTAC to define and articulate sea values,

	Country values. Woodside has signed a cost acceptance letter and has informed BTAC it will financially support consultation meetings. Information about costs is also contained in the draft consultation agreement.	provision of ongoing feedback and cost recovery.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with BTAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on BTAC's preferred method of consultation. Woodside has offered to coordinate meetings at the location of BTAC's choosing, with BTAC nominated representatives. BTAC has exchanged multiple correspondence on a consultation agreement with Woodside and has nominated a May meeting date with the Board. As sufficient information and a reasonable period have been provided, any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Summary Sheets developed by Indigenous staff to BTAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that BTAC could request the particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside has provided BTAC with the opportunity to provide feedback over a 4 month period, demonstrating a "reasonable period" of consultation. Woodside asked BTAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified. Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on BTAC's functions, interests or activities.

Yinggarda Aboriginal Corporation (YAC)

YAC is established under the Native Title Act 1993 by the Yinggarda people to represent the Yinggarda people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 19 July 2023, Woodside emailed YAC via GAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information (SI Report, reference 17.1). This email also reiterated Woodside's request that YAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 26 July 2023, Woodside emailed YAC via GAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 17.2).
- **(1, 2)** On 4 August 2023, YAC legal representative emailed Woodside requesting Woodside submit a consultation agreement for YAC's consideration and provide funding (SI Report, reference 17.3).
- **(2)** On 10 August 2023, YAC legal representative emailed Woodside (SI Report, reference 17.4) noting that the YAC Board had not had the opportunity to form a view of what feedback it wished to provide Woodside. The email requested appropriate resources and time, including legal advice, be approved by Woodside to allow YAC to consider NOPSEMA matters.
- On 11 August 2023, Woodside emailed YAC via its legal representative (SI Report, reference 17.5) outlining:
  - **(2)** the process required for funding approval
  - **(1)** that Woodside would shortly send through a Draft Consultation Agreement.
- **(1,2)** On 14 August 2023, YAC via its legal representative emailed Woodside stating it looked forward to receiving the consultation agreement for consideration and agreed to the arrangements for resourcing (SI Report, reference 17.6).
- **(1)** On 13 September 2023, YAC via legal representative emailed Woodside in response to another activity, advising that in the absence of a draft consultation agreement it was unable to respond in substance to matters raised (SI Report, reference 17.7).
- **(1)** On 14 September 2023, Woodside emailed YAC via its legal representative a proposed consultation framework (SI Report, reference 17.8).
- On 14 September 2023, YAC via its legal representative confirmed receipt of the consultation framework and advised it would seek direction from the YAC board (SI Report, reference 17.9).
- On 13 October 2023, YAC's legal representative emailed Woodside (SI Report, reference 17.10). Among other things, it noted, YAC required an indemnity and hold harmless clause be included in the Framework Agreement to protect against potential exposure to activist litigation.
- On 2 November 2023, Woodside emailed YAC's legal representative advising it did not agree to the request to indemnify YAC against activist litigation (SI Report, reference 17.11).
- On 2 November 2023, YAC via legal representative emailed Woodside requesting information on Woodside's position on indemnification in the consultation agreement

(SI Report, reference 17.12).

- On 18 November 2023, Woodside emailed YAC via legal representative with further information about why it would not indemnify YAC as requested in the 13 October 2023 email (SI Report, reference 17.13). Among other things, Woodside explained it could harm genuine engagement.
- **(1,2)** On 8 March 2024 Woodside emailed YAC via a legal representative (SI Report, reference 17.14) with a draft consultation agreement for consideration by YAC and an invitation for YAC to propose a schedule of rates and other details relating to engagement. The draft agreement included:
  - Aims of consultation.
  - Proposed consultation agreement details.
  - A consultation meeting framework.
- **(2)** On 12 March 2024, YAC via a legal representative emailed Woodside a proposed schedule of rates and indicated it would wait for a response before putting the consultation agreement before the YAC Board (SI Report, reference 17.15).

Summary of information provided and record of consultation for this EP:

- On 26 March 2024, Woodside emailed YAC via a legal representative advising of the proposed activity (Record of Consultation, reference 2.30), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that YAC and its members may have within the EMBA, information on how YAC would like to engage, and requested that YAC provide information to other individuals as required.
- **(2)** On 27 March 2024, YAC via a legal representative emailed Woodside confirming YAC wished to consult on the activity and required its proposed Schedule of Fees to be accepted before proceeding with consultation (SI Report, reference 17.16).
- On 27 March 2024, Woodside emailed YAC via a legal representative advising it would follow up the status of Woodside's response (SI Report, reference 17.17).
- **(2)** On 4 April 2024, Woodside emailed YAC via a legal representative advising that Woodside had reviewed the Proposed Schedule Rates and asked for the date of the next Board meeting. (SI Report, reference 17.18).
- **(2)** On 8 April 2024, YAC via its legal representative emailed Woodside (SI Report, reference 17.19) advising the next YAC Board meeting would be held on 9 May 2024. The legal representative asked if Woodside would fund the cost of the meeting, how much time Woodside would require and asked for a list of matters for discussion to enable the preparation of a cost estimate for legal fees.
- **(2)** On 10 May 2024, Woodside emailed YAC via its legal representative (SI Report, reference 17.20) a request to meet with Yinggarda either during or outside of a Board meeting, for 3 hours at YAC's preferred location. Woodside agreed to fund the meeting and requested a cost estimate. Proposed matters for discussion included:
  - EP consultation: overview and EPs current at the time of meeting.
  - Upcoming consultation.
  - Matters Yinggarda would like to discuss.
  - Actions arising and next steps.
- On 20 June 2024, Woodside emailed YAC via legal representative, following up on the 10 May email and an email on another activity, to ask if the YAC Board would like to meet with Woodside for the purpose of consultation (SI Report, reference 17.21).

- On 20 June 2024, YAC via legal representative emailed Woodside to confirm approval to proceed with a meeting between Woodside and the YAC Board (SI Report, reference 17.22).
- On 20 June 2024, Woodside emailed YAC via legal representative to acknowledge the upcoming meeting (SI Report, reference 17.23).
- On 12 July 2024, Woodside emailed YAC offering support for the YAC Board meeting (SI Report, reference 17.24).
- On 15 July 2024, YAC phoned Woodside to enquiry about availability to attend its Board meeting on 18 July 2023 (SI Report, reference 17.25).
- On 16 July 2024, YAC confirmed details about its meeting and provided details about costs (SI Report, reference 17.26).
- On 16 July 2024, Woodside replied to YAC's email regarding details for the meeting on 18 July 2024 (SI Report, reference 17.27).
- On 18 July 2024, Woodside met with the YAC Board (SI Report, reference 17.28). Matters discussed relating to this EP included:
  - **(3)** Support for education and training including ranger programs.
  - **(1)** Possibility of setting up workshops to discuss the formalisation of an agreement between Woodside and YAC.
- **(3)** On 26 July 2024, Woodside emailed YAC. Among other things, Woodside said it would keep YAC informed about ranger initiatives (SI Report, reference 17.29)

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) YAC requested a consultation agreement with Woodside and stated that it was unable to respond substantially until Woodside has provided a draft Consultation Framework Agreement.	**(1)** **Woodside assessment:** An agreement with YAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and will frame ongoing consultation processes. **Woodside response:** Woodside will finalise an agreement with YAC, although Woodside does not consider YAC's request for a consultation agreement as a pre-requisite for consultation under regulation 25 of the Environment Regulations. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has also provided a reasonable period and opportunity for consultation. The draft agreement sent to YAC in September 2023, will be used to frame ongoing consultation during the life of the EP. Woodside are waiting on a response from YAC.	**(1)** Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented, the draft agreement with YAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians (Appendix G).
(2) YAC requested resourcing to engage in ongoing consultation.	**(2)** **Woodside assessment:** Woodside supports reasonable requests for resourcing. **Woodside response:** Woodside will cover agreed costs for the purpose of	**(2)** The Consultation Agreement will support any reasonable requests for funding for the purposes of consultation.

	meeting for consultation on EPs. The proposed agreement outlined in **(1)**, would be an effective mechanism to address resourcing for ongoing consultation.	
(3) YAC has enquired about support for education and training including ranger programs.	**(3)** **Woodside assessment:** Woodside considers value in having rangers on the ground trained up in the highly unlikely event of an oil spill. It would be beneficial to an immediate response in an emergency situation. **Woodside response:** Woodside looks forward to hearing about YAC's plans for a ranger program and will keep YAC informed about Woodside's consideration of ranger initiatives.	**(3)** The Program for Ongoing Engagement with Traditional Custodians (**Appendix G**) includes consideration of programs to support Indigenous Rangers, and support for Indigenous oil spill response capabilities.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with YAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on YAC's preferred method of consultation. Woodside has offered to coordinate meetings at the location of YAC's choosing, with YAC nominated representatives. YAC has exchanged multiple correspondence on a consultation agreement with Woodside and has nominated a May meeting date with the Board. As sufficient information and a reasonable period have been provided, any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Summary Sheets developed by Indigenous staff to YAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that YAC could request the particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside has provided YAC with the opportunity to provide feedback over a 4 month period, demonstrating a "reasonable period" of consultation.

Woodside asked YAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5. of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on YAC's functions, interests or activities.

Kariyarra Aboriginal Corporation (Kariyarra)

Kariyarra is established under the Native Title Act 1993 by Kariyarra people to represent the Kariyarra people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- **(1)** On 31 August 2023, KAC via legal representative emailed Woodside (SI Report, reference 37.1) about an unrelated EP and indicated it required Woodside to meet costs for:
  - Engagement with KAC for consultation purposes
  - The preparation of an engagement protocol.
- **(1)** Between 10 – 13 September 2023, Woodside and KAC via legal representative exchanged emails (SI Report, references 37.2, 37.3, 37.4, 37.5) in relation to consultation costs and advised that:
  - **(2)** Kariyarra has sea rights referenced in its native title evidence.
- On 28 September 2023, KAC's legal representative emailed Woodside (SI Report, reference 37.6) and provided a single figure non-itemised quote. The email included a letter dated 22 September, referring to another activity more broadly setting out:
  - **(1)** Proposed negotiations for a consultation protocol and co-management agreement.
  - **(2)** Values and interests in sea country.
  - **(2)** Traditional fishing and gathering rights in the ocean.
  - **(3)** Presence of mythic snakes.
- **(1)** Between 20 -26 October 2023, several emails were exchanged (SI Report, references 37.7 – 37.13) relating to costs. KAC's legal representative stated Woodside's proposed cost structure was inadequate and would confer with the EDO.

- On 14 November 2023, KAC's legal representative stated it had taken its concerns to the EDO (SI Report, reference 37.14).
- On 22 November 2023, Woodside emailed KAC (SI Report, reference 37.15) on an unrelated activity, and noted it was keen to progress the consultation protocol and to meet with KAC. Woodside offered to fund the consultation protocol and a full day meeting but required a breakdown of reasonable costs for the work required.
- **(1)** On 23 November 2023, KAC via legal representative emailed Woodside (SI Report, reference 37.16) requesting a draft consultation protocol and suggesting several dates for a meeting between KAC and Woodside.
- **(1)** On 23 November 2023, KAC via legal representative emailed Woodside seeking payment for costs already incurred by KAC (SI Report, reference 37.17).
- **(1)** On 29 November 2024, KAC and Woodside communicated via email and phone regarding details for the upcoming meeting (SI Report references 37.18 – 37.21). During the exchange, Woodside confirmed it would not pay legal costs incurred prior to the meeting and requested information about the agenda.
- On 5 December 2023, Woodside and KAC met in Port Hedland (SI Report, reference 37.22). It was agreed that KAC and Woodside would hold a workshop in early 2024 to consult on current EPs and would finalise a framework agreement for ongoing consultation and partnership. At the meeting Woodside:
  - **(1)** Discussed an Engagement Protocol.
  - Spoke about consultation on EPs including the regulatory context, EMBA, controls and measures to protect the environment, and ongoing consultation.
  - Provided information about what it was seeking to understand from KAC.
  - **(4)** KAC asked how Woodside maintains the validity of controls over periods of time, sighting turtles as an example in terms of whether current controls would be sufficient in the future.
  - **(4)** Woodside noted that there is ongoing monitoring and it would apply its Management of Change and Revision process to address controls.
  - **(4)** Noted which EPs were the subject of ongoing consultation, including this EP.
  - **(4)** Spoke about planned and unplanned risks.
  - KAC gave a presentation to Woodside on its sea country rights and duties:
  - **(2)** Accessing sea country for fishing, trapping, crabbing catching turtle, hunting dugong, using stingray barbs for spears and collecting shellfish.
  - **(2)** Visiting offshore islands at low tide.
  - Passing on traditional knowledge to children.
  - **(3)** Totems.
  - **(2, 7)** Intangible heritage including the Yinta (associated with Sea Country).
  - **(2)** Having duties to look after and protect all KAC's sea country.

  KAC outlined its consultation requirements to Woodside:
  - **(2)** Co-designed and co-managed approach to protecting sea country.
  - On-going input into EPs.
  - **(1)** An agreement with Woodside.
  - **(5)** Funding for sea rangers.
  - A positive and collaborative relationship.
  - **(1)** The need for an agreement that addresses resourcing issues.

  (1,2, 3, 5) Woodside acknowledged KAC's views on consultation requirements.

- **(1)** On 13 December 2023, KAC via legal representative emailed Woodside (SI Report, reference 37.23) the outcomes of the 5 December meeting, confirming availability for a workshop in March 2024 and that KAC and Woodside aim to reach agreement on an engagement protocol by mid-2024.
- On 20 December 2023, Woodside phoned KAC (SI Report, reference 37.24) to follow up on the 5 December 2023 meeting and ask if there was any other information, it could provide KAC. KAC asked if it could receive more information about how cultural values are recorded in an EP. KAC also asked if Woodside could resend the Program of Ongoing Engagement document. Woodside responded it would send an email with the requested information.
- **(2, 3)** On 20 December 2023, Woodside emailed KAC via its legal representative (SI Report, reference 37.25) following up on the 5 December 2023 meeting outcomes and phone call discussion that day. The email included details on how Woodside records and manages all cultural information and values provided by KAC.
- On 20 December 2023, KAC emailed Woodside via legal representative (SI Report, reference 37.26). KAC asked Woodside to note its:
  - **(6)** cultural interest in coastal landforms and coastal native vegetation. **(6)** Woodside has assessed impacts and risks to coastal landforms and coastal native vegetation in the EP.
  - **(7)** cultural interest in cultural heritage sites and intangible cultural heritage associated with the coast and the ocean. **(7)** Woodside avoids disturbance to cultural heritage sites and values. Heritage values, risks and mitigation measures are recorded in the EP.
- **(1)** On 13 January 2024, KAC via legal representative emailed Woodside a letter (SI Report, reference 37.27) outlining proposed costs to settle an agreement with the KAC Board.
- **(1)** On 21 February 2024, Woodside emailed KAC via legal representative (SI Report, reference 37.28) discussing costings and attached a letter with the terms of a draft agreement noting:
  - Level of information to satisfy KAC to make informed decisions on the proposed activities.
  - Reasonable period for consultation.
  - How information would be provided.
  - Feedback, objections, and claims ad how KAC would provide these.
  - Reasonable costs and expenses to be agreed.
  - How the agreement would be terminated.

Summary of information provided and record of consultation for this EP:

- On 6 March 2024, Woodside emailed Kariyarra via a legal representative advising of the proposed activity (Record of Consultation, reference 2.31), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that Kariyarra and its members may have within the EMBA, information on how Kariyarra would like to engage, and requested that Kariyarra provide information to other individuals as required.
- **(1)** On 10 March 2024, KAC via legal representative emailed Woodside (SI Report, reference 37.29) a draft consultation agreement for Woodside to review.
- **(1)** On 12 March 2024, Woodside emailed KAC via its legal representative (SI Report, reference 37.30) to acknowledge receipt of the draft agreement and note it would review and return to KAC in the future.

- **(1)** On 4 April 2024, Woodside emailed KAC via its legal representative advising Woodside had reviewed the draft agreement and provided some amendments for KAC's consideration (SI Report 37.31).
- **(1)** On 4 April 2024, KAC via legal representative emailed Woodside advising the amendments were not acceptable (SI Report, reference 37.32). Woodside is reviewing this.
- On 5 April 2024, Woodside emailed KAC via legal representative with a reminder of consultation for this activity and notification of an unrelated activity (SI Report, reference 37.33).
- On 26 June 2024, Woodside emailed KAC via legal representative to ask if there were further instructions from KAC on the draft agreement and proposed amendments (SI Report, reference 37.34).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) KAC have requested a consultation agreement with Woodside that includes Woodside meeting consultation costs.	**(1)** **Woodside assessment:** A consultation agreement with KAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians and would be effective mechanism to address resourcing. **Woodside response:** Woodside will finalise the draft agreement with KAC which was sent to KAC in February 2024. It will be used to frame ongoing consultation during the life of the EP	**(1)** Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented. The draft agreement with KAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10 of the EP.
(2) KAC has outlined its Sea Country rights and duties, including: Looking after and protecting sea country, mentioning fishing, trapping, crabbing, catching turtle, hunting dugong, and using stingray barbs for spears and collecting shellfish.	**(2)** **Woodside assessment:** Woodside recognises that KAC may have Sea Country values within the EMBA for this EP. **Woodside response:** Woodside understands cultural and environmental values are intrinsically linked; in addition to the specific controls for cultural features and heritage values outlined in Section 6.11, the controls and performance standards in Section 6.7, 6.8 and 6.9 will ensure impacts to cultural features and heritage values, including marine species and habitats, are acceptable and ALARP.	**(2)** Woodside recognises KAC's connection to Sea Country (Section 4.9.4). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.11 of the EP.

(3) At a face-to-face meeting on 5 December 2023, KAC gave a presentation about its sea country rights and duties, including its cultural obligation to look after and protect sea country and secret habitat totems such as mythic snakes.	**(3)** **Woodside assessment:** Woodside respects KAC's position that it has cultural obligations to look after country and cultural knowledge about sea country including totems. **Woodside response:** Woodside has noted KAC's values and interests in Sea Country in Section 4.9.4.	**(3)** Woodside recognises KAC's connection to Sea Country (Section 4.9.4).
(4) At a face-to-face meeting on 5 December 2023, KAC: Asked how the validity of current controls are maintained.	**(4)** **Woodside assessment:** Management of changes are in accordance with regulations 38 and 39 of the Environment Regulations. Appropriate controls and currency of those controls remain valid through applying new advice from external stakeholders and understanding changes in the environment. **Woodside response:** Woodside applies its Management of Change and Revision process to address controls.	**(4)** Management of Change and Revision process (refer to Section 7.2.5. of this EP).
(5) At a face-to-face meeting on 5 December 2023, KAC noted it was interested in funding for ranger programs.	**(5)** **Woodside Assessment:** Woodside is supportive of ongoing engagement with Traditional Custodians through ranger programs. **Woodside Response:** Woodside's Program of Ongoing Engagement is the appropriate framework to address ongoing engagement through opportunities such as a Ranger Program.	**(5)** Opportunities for ongoing engagement with Traditional Owners is able to be addressed under Woodside's Program of Ongoing Engagement (Appendix G).
(6) On 20 December 2023, KAC mentioned: Impacts on coastal landforms and coastal native vegetation.	**(6)** **Woodside assessment:** Woodside accepts that KAC has an interest in the impacts on coastal landforms and coastal native vegetation. **Woodside response:** Assessment of the impacts and risks associated with coastal landforms and coastal native vegetation have been captured in Section 4.9 and Section 6.11.	**(6)** Woodside recognises KAC's connection to Sea Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.11 of the EP.
(7) On 20 December 2023, KAC mentioned:	**(7)** **Woodside assessment:** Woodside seeks to avoid damage or disturbance to	**(7)** Woodside recognises KAC's connection to Sea

Tangible and intangible heritage associated with the coast and the ocean.	cultural heritage (including intangible heritage) and assesses cultural heritage impacts, including both direct and indirect impacts and risks associated with PAPs. Mitigation can include any measure or control aimed at ensuring the viability of the intangible cultural heritage and its intergenerational transmission. **Woodside response:** Woodside understands cultural and environmental values are intrinsically linked; in addition to the specific controls for cultural features and heritage values, the controls and performance standards in section 6 will reduce impacts to cultural features and heritage values, including marine species and habitats.	Country (Section 4.9). Potential impacts on Cultural Features and Heritage Values are assessed in Section 6.11 of the EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with KAC for the purposes of regulation 25 is complete. Sufficient information and reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient information:

- Woodside sought direction on KAC's preferred method of consultation. Woodside has offered to coordinate meetings at the location of KAC's choosing, with KAC nominated representatives. KAC has exchanged correspondence with Woodside on a consultation agreement and a draft agreement is with KAC for their consideration. As sufficient information and a reasonable period have been provided, any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Summary Sheets developed by Indigenous staff to KAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that KAC could request the particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the

North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Woodside has provided KAC with the opportunity to provide feedback over a 4 month period, demonstrating a "reasonable period" of consultation.

Woodside asked KAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on KAC's functions, interests or activities.

Wirrawandi Aboriginal Corporation (WAC)

WAC is established under the Native Title Act 1993 by the Mardudhunera and Yaburara people to represent the Mardudhunera and Yaburara people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- **(1)** On 19 July 2023, Woodside met with WAC on activities unrelated to this activity. During the meeting WAC queried the use of rangers in the event of an incident (SI Report, reference 18.1).
- (1) On 20 July 2023, Woodside emailed WAC and confirmed its support for a ranger program and further discussions regarding opportunities for ongoing engagement (SI Report, reference 18.2).
- On 26 July 2023, Woodside emailed WAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 18.3).
- **(2)** On 31 August 2023, WAC emailed a letter to Woodside proposing a framework agreement to provide a streamlined, formalised approach to consultation between WAC and Woodside (SI Report, reference 18.4), and indicated interest in a ranger program.
- **(2)** On 11 September 2023, WAC emailed Woodside a copy of its letter of 31 August, and requested Woodside and WAC enter into a framework agreement to provide for ongoing meaningful consultation (SI Report, reference 18.5).
- (2) On 20 October 2023, Woodside met with WAC to discuss unrelated EPs. During the meeting Woodside reiterated that WAC could consult on any EP in which it had a cultural interest. Woodside acknowledged WAC was in the process of a corporate restructure which may impact WAC's response times (SI Report, reference 18.6).
- On 28 February 2024, Woodside emailed WAC seeking the contact point for WAC (SI Report, reference 18.7).

Summary of information provided and record of consultation for this EP:

- On 5 March 2024, Woodside emailed WAC advising of the proposed activity (Record of Consultation, reference 2.32), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that WAC and its members may have within the EMBA, information on how WAC would like to engage, and requested that WAC provide information to other individuals as required.
- (2) On 6 March 2024, Woodside emailed WAC (SI Report, reference 18.8) with a letter setting out the draft terms of an agreement between WAC and Woodside, the

agreement (among other things) included the following topics:

- Sufficient Information.
- Reasonable Period.
- Provision of Information.
- Objection or claims.
- Publications.
- Cost and termination.

- **(2)** On 6 March 2024, WAC emailed Woodside requesting a word copy of the draft terms of agreement sent 6 March 2024 (SI Report, reference 18.9).
- On 6 March 2024, Woodside emailed WAC a word copy of the draft terms of agreement (SI Report, reference 18.10).
- On 5 April 2024, Woodside emailed WAC to follow up on whether WAC required more information, and to offer a meeting or a discussion on this activity and another activity (SI Report, reference 18.11).
- On 18 April 2024, Woodside emailed WAC to follow up on an unrelated activity and to offer to meet with WAC via their preferred method of consultation to discuss EPs (SI Report, reference 18.12). No response has been received to date.

Ongoing Engagement

- WAC attended Woodside's Quarterly Heritage Meeting held in July.
- Woodside continues to engage with WAC on other activities.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) WAC has expressed an interest in social investment opportunities including a Ranger Program.	**(1)** **Woodside Assessment:** Woodside is supportive of ranger programs and progressing opportunities for ongoing engagement. **Woodside Response:** Woodside's Program of Ongoing Engagement is the appropriate framework to address ongoing engagement through opportunities such as a Ranger Program.	**(1)** Support for a ranger program is able to be addressed as part of Woodside's Program of Ongoing Engagement (Appendix G).
(2) WAC has requested that Woodside and WAC enter into a framework agreement to provide for ongoing meaningful	**(2)** **Woodside Assessment:** Woodside has confirmed and accepts that WAC is seeking to establish a framework agreement for the purposes of ongoing consultation with Woodside.	**(2)** Although consultation for the purpose of regulations 25 of the Environment Regulations is complete, Woodside will continue to engage

consultation a desire for ongoing engagement and partnership through a Framework Agreement.	**Woodside Response:** Separate from consultation under regulation 25 of the Environment Regulations, Woodside has sent a draft consultation agreement in March 2024 and will work with WAC to finalise the agreement.	with WAC through ongoing engagement and continue to progress the consultation agreement as part of Woodside's Program of Ongoing Engagement (Appendix G).
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with WAC for the purposes of regulation 25 is complete. Sufficient information and reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient information:

- Woodside sought direction on WAC's preferred method of consultation. Woodside has offered to coordinate meetings at the location of WAC's choosing, with WAC nominated representatives. WAC has exchanged correspondence with Woodside on a consultation agreement and a draft agreement is with WAC for their consideration. As sufficient information and a reasonable period have been provided, any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Summary Sheets developed by Indigenous staff to WAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that WAC could request the particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside has provided WAC with the opportunity to provide feedback over a 4 month period, demonstrating a "reasonable period" of consultation.

Woodside asked WAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received

after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on WAC's functions, interests or activities.

Robe River Kuruma Aboriginal Corporation (RRKAC)

RRKAC is established under the Native Title Act 1993 by the Robe River Kuruma people to represent the Robe River Kuruma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- **(1)** On 11 August 2023, RRKAC emailed Woodside in response to another matter and in addition requested ongoing consultation and training opportunities for rangers to prepare rangers for caring for sea and coastal country (SI Report, reference 19.1).
- **(1)** On 14 August 2023, Woodside emailed RRKAC and requested a meeting to discuss training opportunities for rangers (SI Report, reference 19.2).
- **(1)** On 10 September 2023, Woodside emailed RRKAC's ranger focal point to organise a meeting to discuss training opportunities for rangers. Woodside also offered financial support to fund a marine scientist for another activity unrelated to this EP (SI Report, reference 19.3).
- On 10 September 2023, RRKAC and Woodside exchanged emails on an October date, time and location for a ranger meeting (SI Report, references 19.4, 19.5).
- **(2)** On 15 September 2023, RRKAC emailed Woodside in relation to another activity and advised it would require Woodside to fund additional resources (SI Report, reference 19.6).
- **(2)** On 18 September 2023, Woodside sent two emails to RRKAC clarifying that Woodside could provide funding for consultation activities and requested RRKAC provide quotes. The emails included a Proposed Program of Ongoing Engagement with Traditional Custodians and information about Woodside's vendor onboarding process. (SI Report, references 19.7, 19.8).
- **(1)** On 3 October 2023, Woodside met with RRKAC to discuss opportunities for Woodside to support ranger programs (SI Report, reference 19.9).
- On 14 November 2023, Woodside emailed RRKAC offering to meet and discuss support for RRKAC to engage in consultation (SI Report, reference 19.10).
- On 19 December 2023, Woodside emailed RRKAC reiterating that Woodside is available if RRKAC required further information on any Woodside project (SI Report, reference 19.11).
- On 11 January 2024, Woodside and RRKAC (SI Report, reference 19.12) discussed these matters during a telephone call:
  - RRKAC had recently employed new personnel, and once these people had settled in would be happy to consult with Woodside on relevant EPs.
  - **(3)** RRKAC noted that some RRKAC country is on the coast (and would be affected by an oil spill or another such environmental incident) but felt the EMBAs were too broad and covered areas too big and unfeasible.

Summary of information provided and record of consultation for this EP:

- On 5 March 2024, Woodside emailed RRKAC advising of the proposed activity (Record of Consultation, reference 2.33), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing

gender-restricted information. The email requested information on the interests that RRKAC and its members may have within the EMBA, information on how RRKAC would like to engage, and requested that RRKAC provide information to other individuals as required.

- On 5 March 2024, RRKAC emailed Woodside responding to another activity, noting it expected to fill a team position that would enable it to respond to EP matters (SI Report, reference 19.13).
- On 5 March 2024, Woodside emailed RRKAC to acknowledge the email (SI Report, reference 19.14).
- On 18 March 2024, Woodside emailed RRKAC to follow up on proposed activities including this one, and asking if there was an opportunity to meet with the Board and interested members (SI Report, reference 19.15).
- **(1,2)** On 20 March 2024, Woodside and RRKAC held an online meeting. Woodside outlined the purpose of engagement with Traditional Owner groups and PBC's, consultation on Environment Plans, feedback on heritage and cultural values, opportunities for engagement programs such as rangers and opportunities for future meetings (SI Report, reference 19.16).
- **(3)** On 26 March 2024, Woodside emailed RRKAC (SI Report, reference 19.17) to follow up on the meeting, and to outline the upcoming activities for consultation, that reasonable financial support is available for meetings for the purpose of consultation, to ask for guidance on its preferred next steps, and to provide Woodside's Program of Ongoing Engagement.
- On 26 March 2024, Woodside emailed RRKAC (SI Report, reference 19.18) to resend the initial consultation email about this activity and included the Summary Information Sheet.
- On 5 April 2024, Woodside emailed RRKAC to follow up on previous emails on this activity and to ask if RRKAC required more information (SI Report, reference 19.19). No response has been received.
- On 5 July 2024, RRKAC emailed Woodside (SI Report, reference 19.20) in response to another activity and raised:
  - **(2)** its lack of resourcing as an issue for consultation
  - **(4)** the potential for a bathymetric survey of the coastal shelf as a large-scale project with all affected groups
- **(4)** On 5 July 2024, Woodside emailed RRKAC and said it would enquire within Woodside about the potential of a bathymetric surveying project (SI report, reference 19.21).
- **(4)** On 29 July 2024, Woodside emailed RRKAC regarding bathymetric surveys and suggested that RRKAC and Woodside meet to discuss opportunities to use publicly available data to assist in generating information that might be useful to RRKAC (SI Report, reference 19.22)

Ongoing Engagement

- Woodside continues to engage RRKAC on other activities.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) RRKAC is interested in training	**(1)** **Woodside Assessment:** Woodside supports ongoing engagement with	**(1)** Ongoing interest in a ranger program is able to be addressed under Woodside's Program of

opportunities for rangers.	Traditional Custodians through their Program of Ongoing Engagement. **Woodside Response:** Separate from consultation under regulation 25 of the Environment regulations, Woodside has responded to RRKAC's interest with information on ranger programs.	Ongoing Engagement (Appendix G).
(2) RRKAC noted it is insufficiently resourced to fully engage and respond regarding EPs.	**(2)** **Woodside assessment:** Woodside supports ongoing engagement for the life of an EP. **Woodside response:** Woodside supports reasonable requests for resourcing and has provided support for meetings for the purpose of consultation.	**(2)** Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G).
(3) RRKAC noted that some RRKAC country is on the coast (and would be affected by an oil spill or another such environmental incident), it felt that that the EMBAs are too broad and cover areas too big and unfeasible.	**(3)** **Woodside assessment:** Woodside aligns with industry guidance in developing the EMBA. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA. **Woodside response:** Woodside considers it adopts appropriate controls, as demonstrated in Sections 6.8 and 6.9 of the EP, and Appendix H.	**(3)** Woodside has addressed oil spill response in Appendix H.
(4) RRKAC raised the potential of a bathymetric survey of the coastline, working with all relevant coastal groups.	**(4)** **Woodside Assessment:** Woodside does not have plans to conduct regional bathymetric surveys but there are publicly available datasets covering coastal regions. **Woodside Response:** Woodside is seeking a meeting with RRKAC to find ways to interpret existing data sets to generate information which may be useful to RRKAC.	**(4)** Not required.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.
Outcomes of Consultation		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with RRKAC for the purposes of regulation 25		

is complete. Sufficient information and reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient information:

- Woodside sought direction on RRKAC's preferred method of consultation. Woodside has offered to coordinate meetings at the location of RRKAC's choosing, with RRKAC nominated representatives. As sufficient information and a reasonable period have been provided, any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Summary Sheets developed by Indigenous staff to RRKAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that RRKAC could request the particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside has provided RRKAC with the opportunity to provide feedback over a 4 month period, demonstrating a "reasonable period" of consultation.

Woodside asked RRKAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on RRKAC's functions, interests or activities.

Ngarluma Aboriginal Corporation (NAC)

NAC is established under the Native Title Act 1993 by the Ngarluma people to represent the Ngarluma people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 18 July 2023, Woodside emailed NAC NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also requested NAC advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email. (SI Report, reference 38.1)

- On 26 July 2023, Woodside emailed NAC Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 38.2).
- **(1)** On 3 November 2024, NAC emailed Woodside with a draft consultation protocol (SI Report, reference 38.3).

Summary of information provided and record of consultation for this EP:

- On 1 March 2024, Woodside emailed NAC advising of the proposed activity (Record of Consultation, reference 2.34), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that NAC and its members may have within the EMBA, information on how NAC would like to engage, and requested that NAC provide information to other individuals as required.
- **(1)** On 1 March 2024, Woodside emailed NAC a draft consultation agreement for review (SI Report, reference 38.4). NAC did not respond.
- **(1)** On 26 April 2024, Woodside emailed NAC to follow up on the draft consultation agreement and asked for an update from NAC on its review of the agreement (SI Report, reference 38.5).
- On 20 May 2024, Woodside emailed NAC to follow up on the status of the consultation agreement, to request feedback and offered to meet to discuss EPs. NAC did not reply (SI Report, reference 38.6).

Ongoing Engagement

Woodside continues to engage NAC on other activities.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) NAC is seeking to establish a draft consultation protocol with Woodside.	**(1)** **Woodside assessment:** A consultation agreement with NAC aligns with Woodside's Program of Ongoing Engagement with Traditional Custodians **Woodside response:** In March 2024, Woodside emailed NAC a draft consultation agreement for review. Woodside has followed up with NAC since then but is yet to receive a response.	**(1)** Woodside's program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs is currently being implemented. The draft agreement with NAC (among other things) will set out the process for ongoing engagement. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). Woodside will continue to consult following acceptance of the EP, as set out in **Section 7.10** of the EP.
While feedback was received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NAC for the purposes of regulation 25 is complete. Sufficient information and reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient information:

- Woodside sought direction on NAC's preferred method of consultation. Woodside has offered to coordinate meetings at the location of NAC's choosing, with NAC nominated representatives. As sufficient information and a reasonable period have been provided, any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Summary Sheets developed by Indigenous staff to NAC. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that NAC could request the particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside has provided NAC with the opportunity to provide feedback over a 4 month period, demonstrating a "reasonable period" of consultation.
- Woodside asked NAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5. of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on NAC's functions, interests or activities.

Yindjibarndi Aboriginal Corporation

YAC is established under the Native Title Act 1993 by the Yindjibarndi people to represent the Yindjibarndi people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 18 July 2023, Woodside emailed Yindjibarndi NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Yindjibarndi advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. No response was received to this email (SI Report, reference 20.1).
- On 26 July 2023, Woodside emailed Yindjibarndi Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 20.2).
- **(1)** On 1 August 2023, Yindjibarndi emailed Woodside advising Ngarluma Yindjibarndi Foundation Ltd (NYFL) would manage oil and gas matters on its behalf. (SI Report, reference 20.3).

Summary of information provided and record of consultation for this EP:

- On 6 March 2024, Woodside emailed Yindjibarndi via NYFL advising of the proposed activity (Record of Consultation, reference 2.35), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that Yindjibarndi and its members may have within the EMBA, information on how Yindjibarndi would like to engage, and requested that Yindjibarndi provide information to other individuals as required.

See NYFL on behalf of Yindjibarndi below for record of further engagement.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Yindjibarndi has instructed Woodside that it will be represented by NYFL in ongoing discussion about EPs.	**(1)** **Woodside assessment:** Woodside accepts Yindjibarndi's right to be represented at their own choosing. **Woodside response:** Woodside will engage with NYFL on behalf of Yindjibarndi for ongoing consultation related to this activity.	**(1)** Ongoing consultation will be undertaken as set out in Section 7.10 of the EP.
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional controls or measure required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Yindjibarndi for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:

Sufficient Information:

- Woodside sought direction on Yindjibarndi's preferred method of consultation. As sufficient information and a reasonable period have been provided (see below), any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Information Sheet and Consultation Summary Sheets developed by Indigenous staff to Yindjibarndi. These set out details of the proposed activity,

the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.

- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the information and request for feedback be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that Yindjibarndi can request that particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside commenced consultation with Yindjibarndi in March 2024.
- Woodside has responded to Yindjibarndi over 4 months, demonstrating a "reasonable period" of consultation.
- Woodside asked Yindjibarndi if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5. of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on Yindjibarndi functions, interests or activities.

Native Title Representative Bodies

Yamatji Marlpa Aboriginal Corporation (YMAC)

YMAC is the Native Title Representative Body for the Yamatji and Pilbara regions of Western Australia. As such, they are not a Prescribed or Registered Native Title Body Corporate but exist to assist native title claimants and holders.

Historical Engagement:

YMAC is the Native Title Representative Body (NTRB) for the Yamatji and Pilbara regions. NTRBs exist to provide assistance to native title claimants and holders in regard to their native title rights. No native title has been recognised over the EMBA, however YMAC is identified in the North West Marine Parks Network Management Plan as the contact for identifying cultural values in nearby Australian Marine Parks.

- On 13 March 2023, Woodside emailed YMAC an enquired whether YMAC considers itself a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs and, if so, whether that relevance is limited to a facilitation function in its capacity as a representative of Traditional Owner groups/corporations that overlap or adjacent to the environment that may be affected (EMBA) of a particular activity (SI Report, reference 22.1).

- **(1)** On 20 March 2023, YMAC replied to confirm that in its view it is a 'relevant person' under regulation 25(1) of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation. YMAC does not intend to provide substantive comment on the content of EPs (SI Report, reference 22.2.)
- **(1)** On 20 March 2023, Woodside emailed YMAC to thank it for its reply and to advise that this would be included in Woodside's EPs (SI Report, reference 22.3).
- On 20 March 2023, YMAC emailed Woodside confirming it agreed to being included in reporting (SI Report, reference 22.4)
- **(2)** On 12 June 2023, YMAC emailed Woodside on behalf of itself and its clients (SI Report, reference 22.5). The email included a draft consultation framework and a proposal to fund in-house expertise to support consultations and administration of the consultation framework.
- On 12 June 2023, Woodside emailed YMAC, thanking it for the documents and informing it that Woodside would respond shortly (SI Report, reference 22.6).
- On 25 July 2023, Woodside emailed YMAC: (SI Report, reference 22.7)
  - **(2)** Agreeing in principle to the draft consultation framework and funding proposal but seeking further discussion on details.
  - **(2)** Stating that Woodside is open to considering an industry funded position at YMAC to support the work they are facilitating.
  - Attaching Woodside's Program for Ongoing Engagement with Traditional Custodians.
  - Seeking a meeting with YMAC in relation to the draft consultation framework at YMAC's earliest convenience.
- On 14 December 2023, Woodside emailed YMAC following up on the consultation framework and providing suggestions for content to be included (SI Report, reference 22.8).
- On 21 December 2023, Woodside emailed YMAC providing a list of upcoming activities including this activity, as requested by YMAC (SI Report, reference 22.9).
- **(2)** On 28 February 2024, Woodside emailed YMAC with a letter setting out the draft terms of an agreement between NTGAC and Woodside (SI Report, reference 22.10). The agreement (among other things) included the following topics:
  - Sufficient Information.
  - Reasonable Period.
  - Provision of Information.
  - Objection or claims.
  - Publications
  - Cost and termination.
- On 29 February 2024, YMAC emailed Woodside acknowledging receipt of the information (SI Report, reference 22.11).
- On 11 March 2024, Woodside emailed NTGAC via YMAC requesting the appropriate person to send correspondence regarding this activity and attached the Summary Information Sheet (SI Report, reference 22.12).
- On 11 March 2024, Woodside emailed NTGAC via YMAC to ask if a previous contact provided was still current for NTGAC (SI Report, reference 22.13).
- On 13 March 2024, Woodside emailed NTGAC via YMAC to resend correspondence asking for a relevant contact for this activity after a previous email bounced back (SI Report, reference 22.14).

Summary of information provided and record of consultation for this EP:

- On 20 March 2024, Woodside emailed YMAC as the representative for NTGAC, advising of the proposed activity (Record of Consultation, reference 2.37), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that NTGAC and its members may have within the EMBA, information on how NTGAC would like to engage, and requested that NTGAC provide information to other individuals as required.
- On 26 March 2024, NTGAC/YMAC emailed Woodside with an out of office message advising the recipient was on leave until 2 April 2023 and providing a contact for urgent queries (SI Report, reference 22.15).
- On 12 April, Woodside emailed NTGAC/YMAC to offer further information and any assistance required including a meeting or discussion (SI Report, reference 22.16).
- On 16 May 2024, Woodside emailed NTGAC/YMAC to seek the availability of the Board to meet with Woodside to consult on Environment Plans (SI Report, reference 22.17).
- On 21 May 2024, NTGAC/YMAC emailed Woodside to confirm the Board would meet in July, that the agenda was quite full and they would update Woodside to confirm the Board's availability (SI Report, reference 22.18).
- On 21 May 2024, Woodside emailed NTGAC/YMAC to acknowledge its email and advise Woodside was keen to plan meeting requests around the Board's availability (SI Report, reference 22.19).
- On 21 May 2024, NTGAC/YMAC emailed Woodside with acknowledgement and thanks (SI Report, reference 22.20).
- On 19 June 2024, Woodside emailed NTGAC via YMAC to follow up on the opportunity to meet the Board and consult on Environment Plans (SI Report, reference 22.21).
- **(2)** On 27 June 2024, Woodside emailed NTGAC via YMAC seeking an update on its review of the draft consultation agreement sent in February 2024 (SI Report 22.22).
- **(2)** On 28 June 2024, NTGAC via YMAC emailed Woodside (SI Report, reference 22.23) to advise:
  - NTGAC was keen to progress the Consultation Agreement and would revise the draft provided by Woodside
  - A meeting date for the Board was being sought at which the Agreement and upcoming EPs could be discussed
  - A cost estimate was provided.
- On 1 July 2024 Woodside emailed NTGAC via YMAC to provide a Word copy of the draft agreement as requested and to offer further support if required (SI Report, reference 22.24).
- On 10 July 2024, NTGAC via YMAC emailed Woodside confirming receipt of the draft agreement and confirming it would review the Agreement and provide a meeting date as soon as possible (SI Report, reference 22.25).

Ongoing Engagement

Woodside continues to engage NTGAC/YMAC on other activities.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

(1) YMAC has provided feedback that in its view it is a 'relevant person' under regulation 25 of the Environment Regulations for the purposes of consultation on EPs only in relation to its facilitation and coordination function as a Native Title Representative Body under applicable federal legislation and does not intend to provide substantive comment on the content of EPs.	**(1)** **Woodside assessment:** Woodside accepts YMAC's feedback that it is a relevant person only in relations to its facilitation and coordination function as a representative body. **Woodside response:** Woodside has consulted with YMAC in relation to its facilitation and coordination as a Native Title Representative Body under applicable federal legislation and has accepted YMAC's advice that it does not intend to provide substantive comment on the content of EPs.	**(1)** Not required
(2) YMAC has provided feedback that it is seeking an industry funded position to support consultations for this and other activities. YMAC has provided a draft consultation framework to assist the consultation process.	**(2)** **Woodside assessment:** Woodside has assessed that its Program of Ongoing Engagement with Traditional Custodians will support ongoing consultation with YMAC and/or the groups its represents. **Woodside response:** In February 2024, Woodside sent a draft framework agreement to YMAC as the representative of NTGAC and two other groups. The agreement would frame ongoing consultation, address appropriate support for resourcing, separate from consultation under regulation 25 of the Environment Regulations.	**(2)** Woodside will continue to engage with YMAC in relation to its request for an industry funded position and put a proposal to YMAC in December 2023 for a Framework Agreement, and in February 2024 sent the draft terms of agreement between NTGAC and two other groups represented by YMAC and Woodside. This is described further in the Program of Ongoing Engagement with Traditional Custodians, Appendix G.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with YMAC for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to YMAC on behalf of NTGAC on 20 March 2024 based on their functions, interests or activities. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity in a digestible, plain English format.
- Woodside sought direction on YMAC's preferred method of consultation.
- Woodside asked YMAC if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided YMAC with the opportunity to provide feedback over a 4 month period.
- Woodside engages with ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP). Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on YMAC's functions, interests or activities.

Self-identified First Nations Groups

Ngarluma Yindjibarndi Foundation Ltd (NYFL)

NYFL was created to act as Trustee for the Trust under the Northwest Shelf Agreement 1998 struck between the Ngarluma and Yindjibarndi registered native title claimants, the NWS JVs and Woodside, prior to the resolution of the Ngarluma and Yindjibarndi native title claim. Its purpose is to carry on the business of enterprise development, investment and social welfare.

In 1999 the Ngarluma and Yindjibarndi native title claim was settled with the Federal Court appointing, at the request of the common law native title holders, the Ngarluma Aboriginal Corporation (NAC) as PBC to represent the communal interests of the Ngarluma people and the Yindjibarndi Aboriginal Corporation (YAC) as PBC to represent the communal interests of the Yindjibarndi people. Woodside consulted both NAC and YAC as relevant persons in the course of preparing this EP.

NYFL self-identified and has advised it is relevant for this EP.

Historical Engagement:

- On 19 July 2023, Woodside emailed NYFL NOPSEMA's Consultation Guideline, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also requested that NYFL advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult. NYFL did not respond (SI Report, reference 23.1).
- On 26 July 2023, Woodside emailed NYFL Woodside's planned Program of Ongoing Engagement with Traditional Custodians (SI Report, reference 23.2)
- **(1)** On 26 July 2023, NYFL emailed Woodside in response to Woodside's planned Program of Ongoing Engagement with Traditional Custodians, noting it was a good start particularly with the inclusion of Traditional Owner feedback. **(2)** NYFL indicated it required assistance with resourcing (SI Report, reference 23.3).

Summary of information provided and record of consultation for this EP:

- On 6 March 2024, Woodside emailed NYFL advising of the proposed activity (Record of Consultation, reference 2.38), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-

restricted information. The email requested information on the interests that NYFL and its members may have within the EMBA, information on how NYFL would like to engage, and requested that NYFL provide information to other individuals as required.

- **(1, 2)** On 6 March 2024, NYFL emailed Woodside with a letter (SI Report, reference 23.4) setting out the terms on which NYFL consults with industry on EPs. Noting it required resourcing.
- (1,2) On 6 March 2024, Woodside emailed NYFL with a letter (SI Report, reference 23.5) setting out the draft terms of an agreement between NYFL and Woodside, the agreement (among other things) included the following topics:
  - Sufficient Information
  - Reasonable Period.
  - Provision of Information.
  - Objection or claims.
  - Publications
  - Cost and termination.
- **(1)** On 14 March 2024, NYFL emailed Woodside acknowledging receipt of the proposed agreement (SI Report, reference 23.6).
- **(2)** On 19 March 2024, NYFL emailed Woodside attaching a quote to review the agreement sent on 6 March 2024 (SI Report, reference 23.7).
- On 5 April 2024, Woodside emailed NYFL following up on the initial notification sent to NYFL relating to this EP (SI Report, reference 23.8).
- **(2)** On 5 April 2024, NYFL emailed Woodside noting it had previously responded to Woodside on 6 March 2024 and noted that Woodside had not responded to its quote to progress a consultation agreement (SI Report, reference 23.9).
- On 5 April 2024, Woodside replied to NYFL's email and said it would review the information (SI Report, reference 23.10).
- **(1)** On 12 April 2024, NYFL emailed Woodside requesting a response about EP consultation going forward (SI Report, reference 23.11).
- On 12 April 2024, Woodside emailed NYFL acknowledging it had not responded and would respond to NYFL within the week (SI Report, reference 23.12).
- On 17 April 2024, NYFL emailed Woodside noting it was attending to sorry business and as per cultural protocols would require time within the community and engagement would be delayed until appropriate to re-commence (SI Report, reference 23.13).
- **(2)** On 10 May 2024, Woodside emailed NYFL a response to its request for funding to review Woodside's draft consultation agreement. Woodside declined the amount quoted but reiterated its commitment to covering reasonable costs for EP consultation (SI Report, reference 23.14).
- On 17 June 2024, Woodside emailed NYFL information about an unrelated EP (SI Report, reference 23.15).
- **(1,2)** On 17 June 2024, NYFL emailed Woodside a letter responding to an unrelated EP (SI Report, reference 23.16). In the letter NYFL noted:
  - Woodside had declined to provide funding requested by NYFL to review a proposed consultation agreement.
  - That NYFL maintained that an interim Consultation Agreement remained the appropriate mechanism for consultation between Woodside and NYFL.
- (2) On 3 July 2024, Woodside emailed NYFL and offered to meet to discuss how Woodside could reasonably ensure NYFL was adequately resourced for consultation (SI Report, reference 23.17).

- **(2)** On 3 July 2024, NYFL emailed Woodside noting that it had provided Woodside with an estimate of costs to review and progress a consultation agreement but Woodside had declined to cover this. NYFL asked Woodside to advise if there had been a shift in position and it would set up a time to meet (SI Report, reference 23.18).

Ongoing Engagement

Woodside continues to engage NYFL on other activities.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
NYFL self-identified and advised Woodside they are a relevant person for activities.	**Woodside assessment:** NYFL was created to act as Trustee for the Northwest Shelf Agreement 1998. NYFL's membership is made up of Ngarluma people and Yindjibarndi people, membership is not open to any person who is not accepted as Ngarluma or Yindjibarndi. Woodside has also consulted with Ngarluma and Yindjibarndi Aboriginal Corporations individually. Ngarluma and Yindjibarndi Aboriginal Corporations were appointed by the Federal Court, at the request of the Ngarluma and Yindjibarndi common law native title holders as PBCs to represent the communal interests of the Ngarluma and Yindjibarndi people respectively. Ngarluma and Yindjibarndi Aboriginal Corporations are representative of all Ngarluma and Yindjibarndi people regardless of membership. **Woodside response:** Woodside has responded to NYFL's self-identification and consulted with them as a relevant person.	NYFL has been consulted with in accordance with the methodology described in Section 5 of the EP.
(1) NYFL supports a consultation agreement with Woodside.	**(1)** **Woodside assessment:** Separate from consultation under regulation 25 of the Environment Regulations, Woodside is open to engaging with a joint First Nations framework for consultation, however, notes that this is not required to undertake and/or complete consultation in the course of preparing this EP. Sufficient information to allow informed assessment has already been provided by other means, including summary sheets developed by Indigenous staff. Woodside has an existing engagement framework in place with NYFL which enables regular (quarterly) communication about Woodside activities. Woodside supports reasonable requests for resourcing. A consultation agreement would be an effective mechanism to address resourcing. **Woodside response:** In March, Woodside sent a draft consultation framework to NYFL.	**(1)** Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on environment plans. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes continued engagement regarding the proposed Framework Agreement which would be applied to ongoing consultation for this activity. Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10 of the EP.

(2) NYFL has stated that it requires resourcing for expert advice. It has also provided Woodside with a quote for costs relating to reviewing Woodside's draft consultation agreement. a	**(2)** **Woodside assessment** The draft consultation agreement (See Point **(1)** above), would be an effective mechanism to address resourcing for expert advice as agreed between NYFL and Woodside. Woodside supports reasonable requests for resourcing to support consultation. Woodside has reviewed a quote provided by NYFL to review the draft consultation agreement and believes it is excessive. **Woodside response:** Woodside supports reasonable requests to engage experts. Woodside has sought a meeting with NYFL to discuss how Woodside can reasonably ensure NYFL is adequately resourced for consultation. So far NYFL has declined this invitation.	**(2)** See point **(1)** above. The proposed agreement may address any reasonable requests for funding.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Based on the engagement to date, no additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with NYFL for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to NYFL and on behalf of Yindjibarndi on 6 March 2024 based on their functions, interests or activities. These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity in a digestible, plain English format.
- Woodside sought direction on NYFL's preferred method of consultation.
- Woodside asked NYFL if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided NYFL with the opportunity to provide feedback over a 4 month period.
- Woodside engages with ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5.2 of the EP). Woodside considers the measures and controls described in this EP address the potential

impact from the proposed activity on NYFL's functions, interests or activities.

Local government and community representative groups or organisations

Shire of Exmouth

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Shire of Exmouth advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Shire of Exmouth, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Shire of Exmouth regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Shire of Exmouth for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Shire of Exmouth on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Shire of Exmouth with the opportunity to provide feedback over a 5 month period.

City of Karratha

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed City of Karratha advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to City of Karratha, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to City of Karratha regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with City of Karratha for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to City of Karratha on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided City of Karratha with the opportunity to provide feedback over a 5 month period.

Exmouth Community Liaison Group (CLG)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Exmouth CLG individual members advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Exmouth CLG, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.

- On 6 March 2024, Woodside presented to the Exmouth CLG on Woodside activities, including this EP. Woodside presented a slide that listed Environment Plans on which the CLG members had recently been consulted and Environment Plans currently under consultation (SI report, reference 32.1). No feedback was provided on this EP. 12 individuals attended the meeting representing:
  - Exmouth Volunteer Marine Rescue
  - Gascoyne Development Commission
  - Shire of Exmouth
  - PHI Helicopters
  - Exmouth Freight and Logistics
  - Exmouth Chamber of Commerce and Industry
  - Ningaloo Coast World Heritage Advisory Council
  - WA Country Health Service
  - Santos.
- On 27 March 2024, Woodside provided an activity update to Exmouth CLG regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 2 April 2024, Woodside's presentation was emailed to all Exmouth CLG members, regardless of their attendance at the meeting.

Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Exmouth CLG for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Exmouth CLG on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.

- Woodside has provided Exmouth CLG with the opportunity to provide feedback over a 5 month period.

Karratha Community Liaison Group (CLG)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Karratha CLG individual members advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Karratha CLG, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 22 March 2024, Woodside presented to the Karratha CLG on Woodside activities, including this EP. Woodside presented slides which listed Environment Plans on which the CLG members had recently been consulted and Environment Plans currently under consultation (SI report, reference 32.1). Woodside also presented on how Woodside consults relevant persons in the course of preparing our EPs and provided information on relevant persons and EMBAs. The slides included a QR and URL to Consultation Activities page of the Woodside website, and upcoming consultation opportunities in Roebourne, Karratha and Dampier from the 22 March to 24 March 2024. No feedback was provided on this EP. Seven Karratha CLG members attended the meeting representing:
  - City of Karratha
  - Dampier Community Association
  - Department of Education
  - Murujuga Aboriginal Corporation
  - Karratha and Districts Chamber of Commerce and Industry
  - Karratha Central Health.
- On 27 March 2024, Woodside provided an activity update to Karratha CLG regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Karratha CLG for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Karratha CLG on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Karratha CLG with the opportunity to provide feedback over a 5 month period.

Onslow Chamber of Commerce and Industry (CCI)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Onslow CCI advising of the proposed activity (Record of Consultation, reference 2.22), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Onslow CCI, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Onslow CCI regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Onslow CCI for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Onslow CCI on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.

- Woodside has provided Onslow CCI with the opportunity to provide feedback over a 5 month period.

Shire of Ashburton

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Shire of Ashburton advising of the proposed activity (Record of Consultation, reference 2.23), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Shire of Ashburton, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Shire of Ashburton regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 28 March 2024, Shire of Ashburton emailed Woodside its standard response letter (SI Report, reference 30.1) and:
  - **(1)** confirmed it has no objections to the activities under this EP.
  - **(2)** the Shire expects that Woodside will identify, manage and mitigate all possible impacts and risks in line with relevant regulatory frameworks.
  - **(3)** the Shire requires Woodside to brief the Shire's Local and District Emergency Management Committees on its planned responses to such events before any activities commence.
  - **(4)** asked that Woodside has communicated with appropriate emergency management agencies at either/or National, State, District and Local levels on potential hazards and risks around the activity; collaboration and/or cooperation on risk mitigation; considered impacted areas response capacity and capability and sustainability of response activities and escalation triggers.
  - **(5)** the Shire anticipates that Woodside has undertaken their own emergency management planning to mitigate risk and recover from a risk related incident, has engaged with external emergency management agencies to ensure emergency management plans are aligned with outcomes to respond and/or recovery from the incident.
  - **(6)** the Shire anticipates that Woodside has engaged with the community regarding what may happen in areas that are affected by the proposed activities.
  - **(7)** asked that Woodside considers the Shire operated Pilbara Regional Waste Management Facility (PRWMF) for its decommissioning, recycling and waste disposal purposes.
  - **(8)** the Shire appreciates the opportunity to comment on the proposed activities and requests that Woodside provide the Shire with further updates as the proposal progresses.
- On 2 April 2024, Woodside responded thanking the Shire of Ashburton for its comments (SI Report, reference 30.2) and noted:
  - **(1)** the Shire raised no objections to the proposed activities.
  - **(2)** Woodside is required to manage environmental impacts and risks to the environment that may be affected (EMBA) by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023, through the implementation of the EP. Woodside's proposed EP will be submitted to the National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA) for assessment and acceptance.
  - **(3)** Woodside confirmed it will provide notifications to relevant stakeholders as required as per its oil spill response arrangements.

- **(4,5)** Woodside has an Oil Pollution First Strike Plan in place for all EPs which details potential impacts, notifications and response mitigations that may be executed to manage an emergency event.
- **(6)** Woodside consults relevant persons in the course of preparing an EP, and as per Woodside's ongoing consultation approach, feedback and comments from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP.
- **(7)** the Shire's interest in ongoing local content opportunities.
- **(8)** Woodside will continue to provide the Shire with updates on the proposed activities when relevant.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) The Shire confirmed it has no objections to the activities.	**(1)** **Woodside assessment:** Woodside noted the Shire of Ashburton has no objections to the activities covered under this EP. **Woodside response:** Woodside thanked the Shire of Ashburton and acknowledged its feedback.	**(1)** Not required.
(2) Identify, manage and mitigate all possible impacts and risks.	**(2)** **Woodside assessment:** Woodside is required to manage environmental impacts and risks in accordance with the Environment Regulations. **Woodside response:** Woodside confirmed it is required to manage environmental impacts and risks to the environment by the proposed activities to ALARP, as per the Environment Regulations.	**(2)** Existing controls considered sufficient as described in Section 6 of this EP.
(3) Brief the Shire's Local and District Emergency Management Committee.	**(3)** **Woodside assessment:** Woodside briefed the Shire's Local and District Emergency Management Committee on 21 November 2023. **Woodside response:** Woodside confirmed it will provide notifications to relevant stakeholders as required as per its oil spill response arrangements.	**(3)** Not required.
(4) Communicate with appropriate national and state emergency management agencies.	**(4)** **Woodside assessment:** Woodside had undertaken emergency management planning and consults with relevant emergency management agencies to ensure alignment of its emergency management plans. **Woodside response:** Woodside has an Oil Pollution First Strike Plan in place for this EP which details potential impacts, notifications and response mitigations that may be executed to manage an emergency event.	**(4)** In the course of developing this EP, Woodside has developed oil spill preparedness and response positions (see Appendix H of this EP).

(5) Undertake emergency management planning.	**(5)** **Woodside assessment:** Woodside has considered emergency planning for EPs. **Woodside response:** Woodside develops oil spill preparedness and response positions tailored for individual projects. Woodside consults with the relevant external management agencies to ensure all emergency management plans are aligned with effective outcomes.	**(5)** In the course of developing this EP, Woodside has developed oil spill preparedness and response positions (see Appendix H of this EP).
(6) Engage with the community.	**(6)** **Woodside assessment:** Woodside consults relevant persons in the course of preparing an EP, as required by the Environment Regulations. **Woodside response:** Woodside consults relevant persons in the course of preparing an EP, and as per Woodside's ongoing consultation approach, feedback and comments from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP.	**(6)** Woodside consults relevant persons in the course of developing an EP as described in Section 5.3 of this EP.
(7) Consider the PRWMF for future decommissioning works.	**(7)** **Woodside assessment:** Woodside noted the Shire's interest in ongoing local content opportunities. **Woodside response:** Woodside noted the Shire's interest in ongoing local content opportunities.	**(7)** Not required.
(8) Provide updates as proposal progresses.	**(8)** **Woodside assessment:** Woodside will provide the Shire of Ashburton with updates on the activities. **Woodside response:** Woodside will continue to provide the Shire with updates on the proposed activities when relevant.	**(8)** Woodside engages in ongoing consultation and will provide notifications of significant change, as appropriate, to relevant persons as referenced at Section 7 in this EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.
Outcomes of Consultation		
Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Shire of Ashburton for the purpose of		

regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Shire of Ashburton on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to Shire of Ashburton over a 5 month period.

Other non-government groups or organisations

Friends of Australian Rock Art Inc. (FARA)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed FARA advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to FARA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to FARA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- On 29 March 2024, FARA emailed a letter to Woodside referencing 19 March 2024 correspondence (Record of Consultation, reference 2.40) and noted:
  - **(1)** receipt of correspondence on 19 March 2024 regarding this EP with response needed by 29 March 2024.
  - **(2)** its functions, interests and activities including the protection and preservation of rock art and the impacts of industrial development and climate change on this and physical and cultural heritage landscape.
  - **(3)** its current objectives and activities include support of the Murujuga Aboriginal Corporation Cultural Management Plan to protect the cultural heritage landscape and reduce the industrial footprint on Murujuga and secure a World Heritage Listing for the Burrup; and ongoing gas production counters its objectives.
  - **(4)** the gas processed on the Burrup Peninsula is the primary cause of industrial air emissions which harms Murujuga rock art, disrupts the cultural heritage landscape and contributes to climate change.
  - **(5)** Woodside is required to address the indirect consequences of the operations in the EP, according to the Environment Regulations and the EPBC Act Indirect Consequences Policy.
  - **(1,2)** its functions, interests and activities are affected by the indirect consequences, therefore, is a relevant person for this EP.
  - **(1)** Woodside is required to provide sufficient information and a reasonable period for consultation.
  - **(1)** Woodside only provided a 10-day consultation period which does not meet the requirements.

- **(4,5)** the Consultation Information Sheet does not address the impacts, risks and consequences of processing gas or indirect consequences, nor does it evaluate these.
- **(6)** it has a list of information required to assess possible consequences of activity related to Pluto Operations EP, including:
  - **(4, 5)** the impacts on Murujuga rock art and what Woodside determines as ALARP and acceptable level of impact.
  - **(7)** how Woodside is meeting its statutory obligations under the WA Aboriginal Heritage Act.
  - **(4)** disclosure of rock art monitoring or studies commissioned by Woodside to investigate the impact of industrial pollution on rock art.
  - **(4)** evidence of Woodside's engagement with peer-reviewed scientific research provided by FARA and consultation with experts tied to this research.
  - **(4)** what actions Woodside will take if scientific monitoring shows industrial pollution, including Pluto gas processing, is damaging rock art.
  - **(4)** if regulatory regimes for Pluto and North West Shelf LNG facilities will include measures that prevent impacts on the Burrup.
  - **(8)** information on climate scenarios expected to occur if Pluto operations continue.
  - **(9)** what Woodside considers to be acceptable climate impact scenarios and measures it will take to ensure impacts are ALARP.
  - **(10)** what other stakeholders with interests similar to FARA have been consulted and how their matters have been considered and addressed.
  - **(11)** how Traditional Owners and Custodians have had opportunities to exercise rights to Free Prior and Informed Consent related to Pluto Operations.
  - **(4,5)** the impact on the Murujuga cultural heritage landscape due to the processing of Pluto gas.
  - **(12)** how FARA's prior concerns and requests have been addressed by Woodside and what changes have been considered.
- **(4,5)** it needs the information on the impacts that may occur on Murujuga rock art and broader Burrup landscape and what Woodside has determined as ALARP.
- **(13)** it wants to know how Woodside made determinations and how it will manage operations as required by the Regulations.
- **(14)** FARA requires additional consultation time to engage qualified experts to review EP and advise it.
- **(15)** the peer-reviewed scientific reports previously provided to Woodside demonstrate the impact of atmospheric pollution on rock art and are relevant for this EP as Pluto Operations will extend the duration of pollution and potentially increase the intensity.
- **(16)** it has not received a satisfactory response on information previously provided to Woodside and there is an expectation that it will be addressed in EP and made publicly available to support transparency.
- **(17)** FARA wants further consultation prior to another EP submission along with the expectation that feedback in this email and previous submissions is included in the public section of the EP.
- **(1,2)** it looks forward to Woodside providing sufficient information and time for FARA to assess consequences as part of relevant person consultation process.

- On 14 May 2024, Woodside sent an email to thank FARA for consulting on the Pluto Facility Operations EP and provided response to its claims, objections and additional information request (SI Report, reference 39.1).
  - Woodside acknowledged FARA specifically requested information on climate scenarios related to Pluto operations and noted current correspondence is undated and received on 29 March 2024.
  - **(1)** affirmed that initial consultation information and Consultation Information Sheet was sent to FARA on 27 February 2024 with follow-up on 19 March 2024 and activity update on 27 March 2024. Feedback was requested to be provided by 29 March 2024.
  - **(2)** noted FARA's assessment of its functions, interests and activities but also recognised the statement provided is broader than FARA's published statement: "FARA works to protect, preserve and promote Australian rock art in general, and in particular the petroglyphs found in the Dampier Archipelago (including Murujuga/Burrup Peninsula) in the Pilbara region of Western Australia" (FARA website, FARA - Friends of Australian Rock Art - FARA | Friends of Australian Rock Art accessed May

2024).

- **(3)** noted FARA's statement on its current objectives and activities, and shared that some of the statements appear to be broader than those on FARA's website, some lack specificity and not all have been accurately verified.
- **(4)** provided that the statutory regime related to offshore emissions includes both State and Commonwealth legislation which is applied to the relevant proponents for onshore processing facilities.
    - atmospheric emissions tied to onshore processing and nearby domestic gas users are managed under requirements of the *WA Environmental Protection Act 1986,* State and Federal Aboriginal Heritage legislation and the Federal EPBC Act.
    - for Pluto LNG Gas Plant, approvals include Ministerial Conditions and associated management plans addressing greenhouse gas emissions, air quality and cultural heritage which are approved by EPA or Minister of Environment on EPA's advice.
    - approvals related to the Pluto LNG Gas Plant and Karratha Gas Plant publicly report compliance against those approvals.
    - approval documents for the aforementioned plants are generally available and existing, so they are not new for this 5 yearly Operations EP review.
    - Woodside is involved with the monitoring of industrial emissions and strategies related to Murujuga rock art and supports the Murujuga Rock Art Strategy through membership of the Murujuga Rock Art Reference Group and funding for Murujuga Rock Art Monitoring Program.
    - it supports the establishment of and coordinated approach for an atmospheric deposition monitoring program under the Strategy and provides data to the effort from the Woodside Atmospheric and Ambient Air Quality Monitoring Programs.
    - expects findings of the Murujuga Rock Art Strategy to be implemented if required by appropriate regulatory measures.
    - there is State and Federal legislation to manage onshore processing facilities, including environment and cultural heritage.
    - noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started.
- **(5)** Indirect impacts from the petroleum activities program are considered and addressed in the Pluto Operations EP which will be publicly available on NOPSEMA website during assessment.
- **(6)** Noted FARA's request for additional information to assess gas processing activities on its functions, interests or activities.
- **(7)** referred FARA to Woodside website for its approach to Aboriginal cultural heritage management, including the pluto-construction-phase-cultural-heritage-management-plan.pdf (woodside.com).
- **(8)** for climate scenario tied to Pluto Operations, Woodside referred FARA to its Woodside's Climate Transition Action Plan and 2023 Progress Report noting pages 44 and 45 regarding global demand for oil and gas, pages 46 and 47 for the evolving role of natural gas in domestic and international markets and pages 52 and 53 for scenario analysis of Woodside's portfolio.
- **(9)** for acceptable climate impact scenarios, Woodside referred to Climate Transition Action Plan and 2023 Progress Report to provide information on Decarbonisation Strategy (pages 13-41), and specifically page 24 to 25 regarding large scale abatement and the vision for Pluto net zero.
- **(10)** noted undertaking a relevancy assessment for every EP to determine who is a relevant person and provided additional consultation activities including the advertising of the Operations EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers as well as a social media campaign across Facebook and Instagram.
- **(11)** confirmed that Woodside consulted with First National relevant persons for Pluto Operations, including Traditional Custodians of Murujuga.
- **(12)** recognised there is previous correspondence between Woodside and FARA and referred FARA to previous responses.
- **(13)** noted that the Operations EP and relevant appendices including relevant person consultation, reports, analyses and modelling, will be public on NOPSEMA

website after submission and assessment.
- **(14)** confirmed that feedback can continue to be provided during the life of an EP, including after consultation has closed on the EP, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to feedback and comments from relevant persons throughout the life of the EP.
- **(15)** noted that emissions associated with Operations EP relate to the existing Pluto LNG Gas Plant approvals and referred back to first reference of **(4)** for review of Ministerial conditions and commitments and assessment of indirect impacts to rock art and cultural heritage values. Research to date on impacts of industrial emissions on rock art is inconclusive and additional research is underway by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. Woodside is a member of the Murujuga Rock Art Stakeholder Reference Group and noted it expects findings of Murujuga Rock Art Strategy to be implemented if required via appropriate regulatory measures. It also provided a link to Woodside's consideration of publications related to Murujuga rock art, referencing section 4, page 311 Appendices - North West Shelf Project Extension Environmental Review Document (woodside.com)
- **(16)** confirmed peer-reviewed scientific reports related to potential emission impacts on Murujuga's rock art have been considered and referred back to points covered above in first reference to **(4)** and **(5)**. The Operations EP will be made available on NOPSEMA website during assessment.
- **(17)** noted assumption that reference to another EP was a typo and that FARA was consulted with for the Pluto Facility Operations EP in line with Regulation 25. Per FARA's request, Woodside will publish FARA's feedback in full in the Operations EP.

- On 24 May 2024, Woodside received an email, letter and paper from FARA in relation to this EP and another EP (SI Report, reference 39.2). The letter reiterated points raised in previous letters including:
  - **(1, 2)** FARA is a relevant person and has raised concerns regarding indirect impacts of this EP on Murujuga rock art as a result of LNG processing and gas use on the Burrup Peninsula.
  - **(6)** Woodside has not yet provided sufficient information to FARA to make an informed assessment.
  - **(15)** Attached the April 2024 report entitled The Effects of Acidic Pollution on the Rock Art of Murujuga by Benjamin Smith and the Murujuga Rock Art Conservation Project which contains an analysis of the MRAMP campaign. Combined with other reports and studies it shows that atmospheric emissions are causing conditions which are harmful to rock art and increased emissions will increase harmful levels. FARA looks forward to Woodside's response. A lack of scientific certainty should not prevent the adoption of precautionary avoidance and mitigation measures.
  - FARA reiterates its opposition to the proposed activities.

- **(1, 16)** On 28 May 2024, Woodside emailed FARA thanking it for the new information and stating it would assess it (SI Report, reference 39.3). Furthermore, it stated:
  - FARA has been assessed as being a relevant person for both this EP and another EP. Woodside has consulted with FARA in accordance with section 25 of the Regulations and FARA has been provided with consultation information for both EPs.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Consultation information received on the 19 March 2024.	**(1)** **Woodside assessment:** Woodside confirms initial consultation information and Consultation Information Sheet was sent to FARA on 27 February 2024 with	**(1)** FARA has been given sufficient information and a reasonable period in which to make an

	follow-up on 19 March 2024 and activity update on 27 March 2024. **Woodside response:** Woodside provided FARA with background dates to demonstrate 30-day consultation period was provided. FARA has been provided with sufficient information and a reasonable period for consultation.	informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(2) Dedicated to protection and preservation of rock art and impact caused by industrial development.	**(2)** **Woodside assessment:** Woodside is aware of FARA's work to preserve rock art and physical and cultural heritage landscape but notes the FARA-provided statement is broader than its published statement. **Woodside response:** Woodside noted FARA's functions, interests and activities and issues of concern, but also recognised its statement tied to these is broader than its published statement.	**(2)** Not required.
(3) Supports plan to protect cultural heritage from industry as part of objectives and activities and continued gas processing counters this.	**(3)** **Woodside assessment:** Woodside noted FARA's current objectives and activities, but also recognised some statements are broader than what is covered on FARA's website, some lack specificity and not all have been verified as accurate. **Woodside response:** Woodside notes FARA's statement on its current objectives and activities, but also notes use of broader statements compared to the FARA website and that some statements lack specificity and not all have been verified as accurate.	**(3)** Not required.
(4) Gas processing at Pluto LNG facility harms rock art, cultural heritage landscape and affects climate change.	**(4)** **Woodside assessment:** Woodside cited State and Commonwealth legislation that to applied to onshore processing facilities and manage atmospheric emissions tied to onshore processing and address greenhouse gas emissions, air quality and cultural heritage. It also acknowledges its involvement with monitoring of industrial emissions and the Murujuga Rock Art Strategy as a member of the Murujuga Rock Art Reference Group and funder of the Murujuga Rock Art Monitoring Program. **Woodside response:** Woodside referenced existing State and Commonwealth legislation that manages atmospheric emissions tied to onshore processing and approvals related to Pluto LNG Gas Plant. This includes Ministerial Conditions and associated management plans addressing greenhouse gas emissions, air quality and cultural heritage which are approved by the EPA or Minister of	**(4)** Not required.

	Environment. It also noted its historic and present work to support the Murujuga Rock Art Strategy and monitor industrial emissions. Climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started.	
(5) Indirect consequences of Pluto operations must be addressed in the EP.	**(5)** **Woodside assessment:** Woodside considers and addresses indirect consequences in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (the Regulations). **Woodside response:** Indirect consequences will be considered and addressed in the Operations EP, which will be publicly available on the NOPSEMA website during assessment.	**(5)** Consideration of indirect emissions associated with the activity is described in Section 6.7.10 of the EP.
(6) Requires additional information to assess consequences of Pluto Operations activity.	**(6)** **Woodside assessment:** Woodside reviewed FARA's request for additional information to assess gas processing activities on its functions, interests or activities. **Woodside response:** Woodside provided a response to each information request.	**(6)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(7) Wants to know how Woodside meets statutory requirements under WA Aboriginal Heritage Act.	**(7)** **Woodside assessment:** Woodside has information about its approach to Aboriginal cultural heritage management on Woodside.com. **Woodside response**. Woodside provided FARA with link to the Cultural Heritage Management Plan for Pluto LNG.	**(7)** Not required.
(8) What are climate scenarios tied to continuing Pluto Operations.	**(8)** **Woodside assessment:** Woodside noted its Climate Transition Action Plan and 2023 Progress Report provides information. **Woodside response:** Woodside referred to its Climate Transition Action Plan and 2023 Progress Report to address global demand for oil and gas (pages 44-45), evolving role of natural gas (pages 46-47) and scenario analysis of its portfolio (pages 52-53).	**(8)** Not required.

(9) What are acceptable climate impact scenarios and measures for ALARP impact.	**(9)** **Woodside assessment:** Woodside's recognises its Climate Transaction Action Plan and 2023 Progress Report covers climate impact scenarios. **Woodside response:** Woodside referred to its Climate Transition Action Plan and 2023 Progress Report to provide information on Decarbonisation Strategy (pages 13-41), and specifically page 24 to 25 regarding large scale abatement and the vision for Pluto net zero.	**(9)** Not required.
(10) Request for information on dealings with similar-interest stakeholders.	**(10)** **Woodside assessment:** Woodside conducts a relevancy assessment for every EP to determine who is a relevant person and has a planned outreach effort to contact relevant persons and organisations. **Woodside response:** Woodside confirmed that beyond directly contracting relevant persons and organisations, including FARA, it advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran a social media campaign across Facebook and Instagram. Matters raised during consultation are addressed in this EP.	**(10)** Assessment of relevant persons is described in Appendix F, Table 1 of the EP.
(11) How Traditional Owners and Custodians exercise rights related to Pluto Operations.	**(11)** **Woodside assessment:** Woodside consults with First Nations relevant persons for all EPs. **Woodside response:** Woodside confirmed it has consulted with First Nations relevant persons for Pluto Operations, including Traditional Custodians of Murujuga and in the broader environment that may be affected by the EP activity to understand their functions, interests or actions. Woodside also noted that under the *United Nations Declaration on the Rights of Indigenous Persons* that cultural heritage and other communal rights of Indigenous people must be managed through consultation with representative institutions. Direct consultation with individual First Nations persons outside of this process has the potential to undermine the cultural authority of recognised elders and democratically elected representatives. This process of understanding communally held beliefs has recently been confirmed by the Federal Court in the *Munkara v Santos* matter.	**(11)** Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.

(12) How its past concern and requests have been addressed.	**(12)** **Woodside assessment:** Woodside recognises there is previous correspondence with FARA for reference. **Woodside response:** Woodside referred FARA to its previous responses to FARA's previous correspondence.	**(12)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(13) Requires information on what Woodside considers ALARP and its management.	**(13)** **Woodside assessment:** Woodside recognises that this EP and relevant appendices will be public on NOPSEMA website after submission and assessment. **Woodside response:** Woodside noted that this EP and relevant appendices, including relevant person consultation, reports, analyses and modelling, will be public on NOPSEMA website after submission and assessment. It also referred WR (4) and (5).	**(13)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(14) Requests additional consultation time to engage qualified experts.	**(14)** **Woodside assessment:** Woodside notes that feedback can be provided throughout the life of an EP, including after consultation period has closed. **Woodside response:** Woodside advised that feedback can continue to be provided during the life of an EP, including after consultation has closed on the EP, during EP assessment, and after an EP has been accepted by NOPSEMA. Woodside continues to receive, assess and respond to feedback and comments from relevant persons throughout the life of the EP. Should feedback be received following the acceptance of an EP that identifies a measure or control that requires implementation or updates to meet the intended outcome of consultation, Woodside will apply its Management of Change and Review process as appropriate.	**(14)** FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP. Woodside engages in ongoing consultation with stakeholders, as described in Section 7.10 of the EP.
(15) Peer-reviewed scientific reports show impact of atmospheric pollution on rock art.	**(15)** **Woodside assessment:** Woodside notes that research to date on industrial emissions impacts on rock art has not been conclusive, but further research is being led by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. It expects future findings of the Murujuga Rock Art Strategy will be implemented if required via appropriate	**(15)** Consideration of indirect emissions associated with the activity is described in Section 6.7.10 of the EP.

	regulatory measures. **Woodside response:** Woodside responded that emissions tied to the Operations EP relate to emissions within the scope and duration of existing Pluto LNG Gas Plant approval and the Ministerial conditions and commitments in place are included in point **(4)** above in correspondence summary. It noted that research to date on industrial emissions impacts on rock art has not been conclusive, but further research is being led by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. As a member of the Murujuga Rock Art Stakeholder Reference Group, it expects future findings of the Murujuga Rock Art Strategy will be implemented if required via appropriate regulatory measures. For additional information on Woodside's consideration of publications relating to Murujuga rock art, it recommended page 311 Appendices - North West Shelf Project Extension Environmental Review Document (woodside.com)	
(16) Expects a satisfactory response on information provided and wants it addressed publicly in EP.	**(16)** **Woodside assessment:** Woodside noted consideration of peer-reviewed scientific reports related to potential emission impacts on Murujuga's rock art. **Woodside response:** Woodside confirmed that peer-reviewed scientific reports of which it is aware relating to potential emissions impacts on Murujuga's rock art have been considered in Woodside's assessments for the Operations EP. The Operations EP which is currently being prepared and which will be made available on the NOPSEMA website during assessment. It also referred back to first references of points **(4)** and **(5)** in email summary above.	**(16)** Not required.
(17) Expects further consultation and FARA feedback to be included in public section of EP.	**(17)** **Woodside assessment:** Woodside complies with Regulation 25 of the Environment Regulations and consulted FARA in accordance with that. **Woodside response:** For the Operations EP, Woodside has complied with Regulation 25 of the Environment Regulations in its consultation with FARA and Woodside will publish FARA's feedback in the EP.	**(17)** Woodside engages in ongoing consultation with stakeholders as described in Section 7.10 of the EP.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it	Woodside considers the measures and controls in the EP are appropriate.

	will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with FARA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to FARA on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has addressed and responded to FARA over a 5 month period.

Telstra

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Telstra advising of the proposed activity (Record of Consultation, reference 2.25), provided a Consultation Information Sheet, a map of the Submarine Communications Cables and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 12 March 2024, Telstra emailed Woodside requesting to be contacted regarding an email received (SI Report, reference 10.1).
- On 12 March 2024, Woodside asked Telstra to confirm which activity its email related to (SI Report, reference 10.2).
- On 13 March 2024, Telstra confirmed contacting Woodside in relation to this EP (SI Report, reference 10.3).
- On 13 March 2024, Woodside enquired about Telstra's request (SI Report, reference 10.4).
- **(1)** On 14 March 2024, Telstra requested to be contacted to understand the impact of the activities on its network (SI Report, reference 10.5).
- **(1)** On 25 March 2024, Woodside advised the North West Shelf cable operated by Telstra is in the vicinity of the operational area and the new activities are located approximately 12km from the nearest cable (SI Report, reference 10.6). A map of the Submarine Communications Cables was attached, as previously provided to Telstra.
- **(2)** On 2 April 2024, Telstra forwarded its Duty of Care brochure and requested Woodside contact Telstra should the network be impacted by the activities (SI Report, reference 10.7).
- **(2)** On 3 April 2024, Woodside confirmed it will contact Telstra should the network be impacted by the activities covered under this EP (SI Report, reference 10.8).

- On 27 March 2024, Woodside provided an activity update to Telstra regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Impact of activities on Telstra's network.	**(1)** **Woodside assessment:** Woodside reviewed the map of the Submarine Communications Cables to provide a detailed response. **Woodside response:** Woodside provided another copy of the map and advised the North West Shelf cable operated by Telstra is in the vicinity of the operational area and the new activities are located approximately 12km from the nearest cable.	**(1)** Not required.
(2) Telstra requested to be notified.	**(2)** **Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-7 of this EP. **Woodside response:** Woodside confirmed it will contact Telstra should the network be impacted by the activities.	**(2)** Woodside will provide notification of significant change, as appropriate, to Telstra, as referenced in Table 7-7 of the EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Telstra for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Telstra on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has addressed and responded to Telstra over a 5 month period.

Vocus

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 2.25), provided a Consultation Information Sheet, a map of the Submarine Communications Cables and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Vocus, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Vocus regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Vocus for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to Vocus on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Vocus with the opportunity to provide feedback over a 5 month period.

Doctors for the Environment Australia (DEA)

Summary of information provided and record of consultation for this EP:

- On 24 April 2024, during the course of preparing the EP, DEA self-identified by emailing NOPSEMA and including a feedback letter addressed to Woodside regarding this EP (SI Report, reference 41.1) and:

- **(1)** referred to another EP and Woodside's intention to seek 5-year extension to Pluto Facility Operations EP.
- **(2)** understood Woodside was undertaking consultation with relevant persons for both EPs under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) prior to NOPSEMA assessment.
- **(2)** considered itself to be a relevant person and Woodside is required to consult it.
- **(3)** noted that Woodside is required by regulations 11A(2) and (3) of the environment regulations to provide relevant persons with "sufficient information" to assess the possible consequences of the activities on its functions, interests or activities and provide "reasonable period" for consultation.
- **(4)** DEA provided statements related to its interests, functions, activities and resources including:
    - background on DEA as an independent, non-government organisation of medical doctors and students in Australian States and Territories that has a voice in the sphere of environmental health.
    - reference to annual reports that articulate its strategy and impact goals to reducing fossil fuel combustion and cutting global greenhouse gas emissions this decade.
    - resources including health reports, fact sheets and submissions.
    - consultation-relevant fact sheets "How Climate Change Affects Your Health: The Facts, How Climate Change Affects Mental Health in Australia" and "Asthma and Indoor Gas Appliances."
    - submissions including the Senate Inquiry Duty of Care Intergenerational Equity Bill and Protecting the Spirit of Sea Country Bill 2023.
    - support of phasing-out gas in households and policies and programs to phase out use of Gas in Australia.
    - Support of global emissions reduction aligned with the Paris Agreement with DEA arguments found in its Future Gas Strategy consultation paper.
- **(5)** understands a range of different pathways and energy scenarios may be considered to align with globally agreed temperature goals and each has different levels of certainty, risk profiles and public health outcomes, so DEA supports position of the United Nations, IEA and other authorities that there should be no new fossil fuel resource developments that are not already under production. It considers that Woodside projects are not consistent with findings and wants more information to understand and evaluate health implications.
- **(6)** noted the consultation helps the proponent and environment in improving an EP's content and it looks forward to receiving more information and opportunity to comment.
- **(3,6)** noted that consultation required under regulation 11A of the Environment Regulations, a proponent is required to provide DEA with "sufficient information" to make an informed assessment and provide a "reasonable period" for consultation.
- **(7)** referenced NOPSEMA's "Guidance Note: Environment Plan content requirements" dated September 2020 (EP Content Guidance) and "Guideline: Consultation in the course of preparing an environment plan" dated 12 May 2023 (Consultation Guideline) state that consultation in relation to any EP for development activities should assist the proponent to understand the external context, define "acceptable levels" of environmental impact and risk, and inform appropriate control measures.
- **(8)** did not feel that Woodside's published consultation material for another EP or this EP provided "sufficient information" as it did not address indirect impacts related to greenhouse gas emissions, climate change impacts and health impacts associated with gas usage. Nor did it sufficiently address local air pollution impacts from Woodside's gas processing facilities.
- **(5,8)** cited Woodside's estimate of total lifecycle emissions from the development – 878m tonnes – and that indirect consequences on climate change and health impacts of air pollution from fuel combustion are significant.
- **(4)** described itself as an environmental organisation and provided background on how its functions, interests and activities are directed:

  - protecting the natural environment so that human health may be protected
  - understanding the intimate relationship between health of the environment and human health
  - drawing attention to health impacts of global warming from GHG emissions, air pollution from fossil fuel combustion as well as direct health impacts associated with use of gas in household and industrial settings.
- **(5)** believed its interests and objective would be impacted by the Operation EP in at least the following ways:
  - health impacts in Australia and elsewhere as a consequence of climate change
  - health impacts for workers and the local community as a result of Woodside's LNG processing operations
  - health and wellbeing impacts for Aboriginal peoples who experience impacts to cultural heritage and Sea Country as a result of Woodside's gas processing operations and climate change and ocean acidification more generally
  - health and wellbeing impacts associated with the use of gas in domestic and commercial settings, both in Western Australia and elsewhere where the gas is exported
  - health considerations arising from carbon pollution mitigation options such as the use of offsets, carbon capture and storage, direct mitigation, or other abatement methods
  - impacts and implications for healthcare professionals and health care systems arising from the health impacts mentioned above.
- **(5,6,8)** noted that regulation 11A of the Environment Regulations requires proponents to provide DEA with sufficient information to make informed assessment of the project and possible negative consequences to the above interests and activities.
- noted indirect impacts from GHG emissions from another activity and climate change and air pollution from burning fossil fuels were not considered or provided.
- **(9)** noted that climate change impacts, including from Scope 3 emissions that will result from another activity, fall under the scope of indirect consequences which must be assessed in accord with the approved NOPSEMA Program under the EPBC Act, and separately, as part of the broader environment that must be considered by NOPSEMA in accordance with the Environment Regulations.
- **(3,5,8)** considered that Woodside has not provided DEA with sufficient information to make an informed assessment of consequences on its functions, interests and activities.
- **(10)** provided examples of information DEA requires to make an assessment including:
  - Woodside's analysis of impacts
  - Woodside's analysis of impacts including independent health impact assessments, baseline health studies or other analysis including:
  - health impacts from use of gas produced by Australian and overseas projects
  - health impacts arising from climate impacts that are attributable to emissions from these projects
  - health impacts from climate change and other effects
  - identification of groups or communities disproportionately affected by impacts
  - health and wellbeing effects of both direct and indirect impacts of the projects to sea country and cultural heritage
  - health and wellbeing impacts for the local community and others who may be exposed to, or impacted by airborne emissions and other effects of Woodside's gas processing and export facilities, or other infrastructure associated with the projects
  - health impact on workers involved in the construction and production phase of the projects and the gas processing facilities over the period they will be utilised for these projects
  - Information regarding mitigation measures

  - Information about what mitigation measures are proposed (if any) by Woodside to address impacts that have been identified, including what effects these mitigation measures are likely to have, how they will be implemented
  - Details the implementation strategy and monitoring, recording and reporting arrangements in relation to the described indirect and direct environmental impacts and risks of the activities, including how they will be reviewed and evaluated.
  - Details on how the proposed mitigation measures and implementation strategy will be subject to enforceable regulatory requirements or otherwise regulated.
  - Information about what other mitigation options have been considered by Woodside (if any) but are not proposed for implementation.
  - Information regarding Woodside's evaluation and selection process for mitigation measures, including how decisions have been made and what criteria have been applied to the consideration by Woodside of what mitigation measures will be implemented.
  - Information to demonstrate how the chosen mitigation measures will achieve the required outcome of 'as low as reasonably practicable and acceptable' residual impacts.
  - Information on residual impacts and risks
  - Information to specify what residual health risks, impacts and outcomes Woodside believes will occur as a result of the projects after the application of proposed mitigation measures
  - Details of what residual impacts Woodside considers to be acceptable, in the context of the regulatory requirement for 'as low as reasonably practicable and acceptable'
  - Information on relevant person consultation in relation to health impacts and effects
  - What efforts Woodside has made to identify and consult with persons or organisations who may be impacted by health effects of the activities as relevant persons under the regulations.
  - What relevant persons Woodside has consulted with who may be impacted by health effects of the activities and what concerns or issues have been raised in the process of such consultation to date.

- **(3,5,8,10)** shared why the above information is needed for DEA to make an informed assessment as it wants to respond in an evidenced-based manner and direct its activities to better protect the health of communities from such impacts and prepare the health sector for climate change impacts.
- **(3,5,8,10)** requested the above information as part of consultation and it should include reports, analyses, assessments, modelling and/or other documents used by Woodside.
- **(11)** noted that Woodside has made general statements related to its Climate Transaction Action Plan and 2023 Progress Report (the Report) and given majority of this project's emissions will be from Scope 3 emissions which the Report sets only a 5 Mtpa abatement target. It does not describe the health outcomes or impacts from its proposed activities.
- **(3)** noted Regulation 11A of the Environment Regulations requires a "reasonable period" for consultation.
- **(3,5,8)** noted Woodside has not provided "sufficient information" to DEA and further time will be needed to review information when provided.
- **(3)** referenced EP Content Guidance note that specifies consultation time should be based on complexity and volume of information provided and practicalities of DEA's available personnel and resources. After receiving requested information, it can determine the length of time needed for consultation. It noted that the 30 day period for public exhibition of certain EPs specified under Regulation 11B(1)(a) of the Environment Regulations is unlikely to be sufficient for the purposes of consultation under Regulation 11A. This is because the consultation envisaged by Regulation 11A is required to be more rigorous than public exhibitions.
- **(3)** noted the EP Content Guidance and Consultation Guidelines state that under Regulation 11A, consultation should demonstrate two-way communication, transparency, collaboration and inclusiveness. It continued that Regulation 16(b) requires proponents to provide feedback to DEA on its comments.
- **(12)** reiterated that any EP for the project should not be accepted until the requirements of Regulation 11A are met, including consultation requirements with DEA

identified in this document.
  - **(3,5,6,8,12)** noted it looked forward to receiving more information so consultation can commence in accordance with Regulation 11A of the Environment Regulations.

- On 14 May 2024, Woodside responded to DEA's email from 24 April 2024 (SI Report, reference 41.2) and:
  - **(1)** noted receipt of DEA's letter which related to this EP and another EP.
  - **(2)** Woodside consulted DEA for the other EP starting in August 2023. Consultation for this EP closed on 29 March 2024. Woodside outlined its EP feedback process and Management of Change and Review process. Based on feedback for the Pluto Operations EP, DEA has been assessed as being a relevant person for the Pluto Operations EP.
  - **(3)** confirmed it consults relevant persons during EP preparation in accordance with Regulation 25 of the Environment Regulations.
  - **(4)** noted DEA's statements and document reference but makes no comment as to the factual accuracy or otherwise of these documents.
  - **(5)** referred DEA to Section 4.2 Global demand for oil and gas (on pages 44 and 45) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. Woodside referred DEA to publicly available information and noted that more granular detail relating to GHG emissions will be set out and assessed in the respective EPs. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).
  - **(6)** provided background on consultation activities including advertisements in The Australian, The West Australian, regional newspapers and Indigenous newspapers between 26 – 28 February 2024, a social media campaign across Facebook and Instagram in February 2024, community events with subject matter experts and information and tailored roadshow in the Pilbara during March and April 2024. The Pluto Operations EP consultation information sheet was published 26 February 2024.
  - **(7)** confirmed it refers to NOPSEMA's guidance materials when undertaking consultation.
  - **(8)** noted that GHG information for another EP is already publicly published. The statutory regime relating to onshore emissions includes various State and Commonwealth legislation which manages potential impacts and risks to environment and cultural features, and legislation is applied to the relevant proponents for the onshore processing facilities.
  - **(9)** recommended review of Section 3.1 Climate strategy (on page 14), Section 3.5 Scope 3 emissions (on page 32 and 33) and Section 3.6 Scope 3 targets (on pages 34 - 40) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. The EPs will assess both direct and indirect impacts and risks associated with the Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. Direct and indirect emissions with the potential to result in climate change impacts will be considered.
  - **(10)** noted that emissions associated with onshore gas processing are subject to a range of legislative requirements including those which consider and manage potential to impact on human health (for example Part IV environmental impact assessment and associated air quality monitoring management (refer to summary point **(5)** above), as well as broader World Health Organisation requirements and National Environment Protection Measure limits and specific health and safety related regulations.). Woodside does not provide drafts of EPs while in development or under assessment for a number of reasons, including the potential for content to change. Allowing access to publicly available versions enables stakeholders to access and comment on the same information, assists with version control and removes potential for confusion. The EP will be made publicly available on NOPSEMA's website once it has been submitted and is under assessment.
  - **(11)** noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Although the direct and indirect GHG emissions associated with

Scarborough and Pluto cannot be linked to climate change impacts to the environment, a contextual evaluation of climate change impacts will be provided in the EPs. Encouraged DEA to read Woodside's suite of climate disclosures including Woodside's Climate Report 2021, Climate Report 2022 and Climate Transition Action Plan and 2023 Progress Report.
- **(12)** Woodside disagreed with the assertion that the Project should not be accepted as Woodside had engaged in consultation with DEA in accordance with Regulation 25.

- On 12 June 2024, DEA emailed Woodside in response to Woodside's letter dated 14 May 2024 (SI Report, reference 41.3). DEA:
  - **(1)** Welcomed Woodside's acknowledgement that DEA is a relevant person for this EP and another Woodside EP.
  - **(3)** Did not consider that information provided to date was sufficient in terms of consultation, in particular regarding climate and health impacts. DEA stated that consultation requirements of the Regulations have not been met.
  - **(13)** Further stated that given the limited information provided by Woodside, and DEA's voluntary capacity, the information in the letter should not be taken to reflect DEA's complete position or complete submissions on the proposal and that DEA reserved the right to make further submissions as capacity and information became available.
  - **(14)** Claimed that as well as climate change harming human health:
    - Oil and gas developments result in direct health harms from pollution including cancer, reproductive harms, impairment of normal human growth and development, birth defects, respiratory and cardiovascular disease and deaths as well as interference with the body's communication system of hormones regulating growth, behaviour, metabolism and reproductive function; and
    - The destruction of sites of spiritual significance to First Nations people by fossil fuel developments compounds psychosocial harms.
  - **(15)** Advised that any emissions produced from now will need to be removed from the atmosphere at a later date. At a minimum:
    - Woodside's assessment of climate impacts associated with these projects should consider impact on global emissions over at least a 100 year period and preferably longer;
    - Woodside must show how it will cause carbon drawdown (CDR) to remove all emissions that will be produced by the projects from the atmosphere in the long term, and enforceable measures must be imposed by the regulator to ensure this takes place.
  - **(16)** Claimed Woodside's CTAP and 2023 Progress Report (and climate plans in general) could not be relied upon as a basis for assessment of the acceptability of carbon pollution or climate change impacts of the proposed activities because:
    - The plans and targets are unenforceable;
    - The CTAP and 2023 Progress Report amounts to greenwash because it does not address numerous requirements of the UN standards and ISO Guidelines for Net Zero;
    - The plans have repeatedly been rejected as insufficient by a majority of Woodside's shareholders.
  - **(17)** Asserted that reliance on the Federal safeguarding mechanism as a means to align with Australian national emissions goals is inappropriate because of:
    - Australia's national emission reduction goals and legislated carbon emissions budget are not aligned with the temperature goals of the Paris Agreement;
    - Ongoing project emissions beyond 2030 reduction targets;
    - Emissions that will result from these projects in other countries outside of Australia;

  - Potential use of low integrity undisclosed offsets.
- **(18)** Claimed that if comparisons to Australia's emissions reduction targets and budget are to be used, then the total emissions from the proposed activities (not just domestic emissions) should be compared with Australia's abatement efforts and policies.
- **(19)** Stated it did not accept the argument that the total emissions from the proposals are an insignificant contribution to the global carbon budget and therefore should not be considered unacceptable as if this were true, Australia's entire national abatement efforts to 2030, including abatement from all sources, is also insignificant.
- **(20)** Stated that Woodside must adhere to the UN and ISO's guidelines in relation to its proposed activities as part of any assessment on the impacts on the climate and on DEA's activities and interests under the Regulations.
- **(21)** Stated that it looked forward to Woodside providing further information to address DEA's concerns and demonstrating that the impacts of the proposed activities will be managed to a level that is acceptable to DEA.

- On 4 July 2024, Woodside emailed DEA (SI Report, reference 41.4). Woodside advised that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with DEA over the next month. Woodside also acknowledged receipt of DEA's letter dated 12 June 2024 and advised it would be responding shortly.
- On 9 July 2024, Woodside responded to DEA's letter dated 12 June 2024 (SI Report, reference 41.5). Woodside:
  - **(1)** noted DEA's comments regarding relevant person status.
  - **(3)** noted further information on emissions will be included in the revised EP and reiterated that in accordance with regulation 25 of the Environment Regulations, Woodside's consultation process provided relevant persons with sufficient information to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities. Woodside assesses any objections or claims received and adopts appropriate measures so that the activity is carried out in a manner whereby environmental impacts and risks are reduced to as low as reasonably practicable (ALARP).
  - Noted that DEA's public position is that all new coal, oil and gas projects should be banned, and provided public statements from DEA that indicate that is it fundamentally opposed to fossil fuels. Woodside also noted connections between DEA and other NGOs who have campaigns against Woodside.
  - **(5)** advised that in terms of climate and health impacts associated with this EP, climate change impacts are the result of global GHGs and cannot be attributed to any one activity or project. Emissions associated with the projects are negligible in the context of existing and future anticipated global GHG emissions. In addition, gas can play a role towards the energy transition.
  - Directed DEA to the IPCC's Sixth Assessment Report (AR6) in 2023 and Woodside's approach to climate change (Section 5.3 'Managing Physical Risk' and Section 6.3 'A Just Transition' of Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report) for information on GHG emissions in a global and Australian context.
  - **(13)** Noted that, based on DEA's website, DEA's members cite a significant volume of studies, scientific research and videos to inform its position on human impacts from climate change demonstrating that DEA has access to information, and capacity and understanding of that information. Woodside also noted that a number of DEA's members attended Woodside's 2024 AGM.
  - **(14)** Reiterated that climate change impacts are the result of global GHG emissions and cannot be attributed to any one project.
  - Gas can play a role in the energy transition.
  - Stated that the proposed petroleum activities were not anticipated to result in the destruction of sites of spiritual significance to First Nations people.
  - **(15)** Noted DEA's comments regarding the need for emissions produced from now on needing to be removed at a later date, and advised DEA that additional information was also available within Woodside's CTAP and 2023 Progress Report regarding decarbonisation technology development and the role of removal credits

over time in support of our net zero aspiration (pages 28 and 29).
- **(16, 17)** Stated it does not agree with DEA's position that the Federal Safeguarding Mechanism is misaligned with the goals of the Paris Agreement and that scope 3 international emissions should be considered against Australia's targets, as they are subject (where relevant) to customer nations' Paris NDCs
- **(18)** Advised that emissions arising from the consumption of Scarborough gas along with other feed sources in customer markets will be considered under domestic and international emissions control frameworks. Anticipated customers of gas from the Scarborough Project are in countries that have ratified the Paris Agreement. Under the Paris Agreement and global GHG accounting conventions, each country is responsible for accounting for, reporting and reducing emissions that physically occur in its jurisdiction.
- **(19)** Stated it did not accept the position that if the emissions associated with the project are insignificant, so too are Australia's national abatement efforts.
- **(20)** Stated it does not agree with DEA's position that ISO net zero guidelines must be applied to the proposed activities. Section 2.3.6 of the EP defines criteria for demonstration of acceptability.
- **(21)** Stated it does not agree with DEA's position that impacts of the proposed activity must be acceptable to DEA, referring to the purpose of consultation and that acceptability is determined by NOPSEMA under the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth).
- **(21)** Advised the acceptability of the proposed activities will be determined by NOPSEMA pursuant to the OPGGS (E) Regulations.

- On 10 July 2024, DEA thanked Woodside for the clarification and for Woodside's complete, considered and prompt response to DEA's request (SI Report, reference 41.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Referred to another EP and Pluto Operations EP.	**(1)** **Woodside Assessment:** Acknowledged DEA's reference to another EP and Pluto Operations EP and that it had previously responded to issues raised by DEA on another EP. **Woodside Response:** Noted that DEA letter related to another EP and Pluto Operations EP.	**(1)** Not required.
(2) Understood Woodside is consulting on both EPs.	**(2)** **Woodside Assessment:** Woodside reviewed previous consultation with DEA for another EP and that consultation closed on Pluto Operations EP on 29 March 2024. **Woodside Response:** Woodside noted previous consultation with DEA took place for another EP and that consultation closed on Pluto Operations EP on 29 March 2024. It also noted that consultation continues during the life of an EP and has a Management of Change and Review process in place should any feedback be received after EP acceptance identifies a measure or control that	**(2)** Assessment of relevant persons is described in Appendix F, Table 1 of the EP.

	requires implementation or updates to meet intended outcome of consultation. Based on feedback for this EP, DEA has been assessed as being a relevant person.	
(3) Woodside must provide relevant persons with sufficient information and reasonable period for consultation.	**(3)** **Woodside Assessment:** Woodside consults relevant persons in accordance with Regulation 25 of the Environment Regulations and assessed DEA as a relevant person for this EP after receiving feedback. **Woodside Response:** Woodside confirmed it consults relevant persons in accordance with Regulation 25 of the Environment Regulations to provide sufficient information and a reasonable period allowing them to make an informed assessment on their functions, interests or activities. Woodside assessed DEA as a relevant person for this EP after receiving feedback.	**(3)** DEA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(4) Provided background information on interests, functions and activities.	**(4)** **Woodside Assessment:** Woodside acknowledges DEA's statements and document references but makes no comment as to the factual accuracy or otherwise of these documents. **Woodside Response:** Woodside notes DEA's statements and document references but makes no comment as to the factual accuracy or otherwise of these documents.	**(4)** Not required.
(5) Supports position of no development of new fossil fuel resources.	**(5)** **Woodside Assessment:** Woodside recognises there is global demand for oil and gas and natural gas. **Woodside Response:** Woodside referred DEA to Section 4.2 Global demand for oil and gas (on pages 44 and 45) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. It noted that more granular detail relating to GHG emissions will be set out and assessed in the EP.	**(5)** Not required.
(6) Wants further information and	**(6)** **Woodside Assessment:** Woodside had consultation efforts in place including newspaper advertising campaign, social media campaign, community events	**(6)** DEA has been given sufficient information and a reasonable period in which to make an

opportunity to comment.	and a tailored roadshow to support consulting relevant persons in the course of preparing this EP. **Woodside Response:** Woodside provided sufficient information and reasonable period of time for relevant persons to make an informed assessment of the proposed activities. Consultation activities included advertisements in The Australian, The West Australian, regional newspapers and Indigenous newspapers between 26 – 28 February 2024, a social media campaign across Facebook and Instagram in February 2024, community events with subject matter experts and information and tailored roadshow in the Pilbara during March and April 2024. The Pluto Operations EP consultation information sheet was published 26 February 2024.	informed assessment of the possible consequences of the activity on its functions, interests or activities, as described in Section 5.4 of the EP.
(7) Noted usage of NOPSEMA guidance materials to support consultation.	**(7)** **Woodside Assessment:** Woodside refers to NOPSEMA's guidance materials. **Woodside Response:** Woodside confirmed it refers to NOPSEMA's guidance material for its consultation methodology.	**(7)** Woodside's consultation methodology is described in Section 5 of the EP.
(8) Consultation materials do not address indirect impacts of GHG emissions, climate change images and health impacts.	**(8)** **Woodside Assessment:** Woodside noted information related to these concerns is available across a number of mostly publicly available sources; Commonwealth and State legislation which manages potential environment and culture features impacts and risks; Ministerial Conditions and associated management plans which address GHG emissions, air quality and cultural heritage and are approved by EPA or Minister for Environment; and generally publicly available approval documents for Pluto LNG and Karratha Gas Plant which are not new as they've been in place for existing operations. State and Federal legislation also manages the physical presence of onshore processing facilities, including in relation to environment and cultural heritage. For anthropogenic climate change, Woodside noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. **Woodside Response:** Woodside referenced Commonwealth and State legislation which manages potential environment and culture features impacts and risks that is applied to onshore processing facilities. Atmospheric emissions	**(8)** Not required.

	tied to onshore processing, including the Pluto LNG and Karratha Gas Plant, are managed under the *WA Environmental Protection Act 1986,* State and Federal Aboriginal Heritage Legislation and the Federal EPBC Act. Pluto LNG is subject to approvals including relevant Ministerial Conditions and associated management plans (mostly publicly available) which address GHG emissions, air quality and cultural heritage and are approved by EPA or Minister for Environment. Approval documents for Pluto LNG and Karratha Gas Plant are generally publicly available and are not new as it has been in place for existing operations. State and Federal legislation also manages the physical presence of onshore processing facilities, including in relation to environment and cultural heritage. For anthropogenic climate change, Woodside noted that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started.	
(9) Climate change impacts, including Scope 3, must be assessed with approved. NOPSEMA program.	**(9)** **Woodside Assessment:** Woodside has information available in its Climate Transition Action Plan. **Woodside Response:** Woodside recommended review of Section 3.1 Climate strategy (on page 14), Section 3.5 Scope 3 emissions (on page 32 and 33) and Section 3.6 Scope 3 targets (on pages 34 - 40) of Woodside's Climate Transition Action Plan and 2023 Progress Report available at Woodside's Climate Transition Action Plan and 2023 Progress Report. The EPs will assess both direct and indirect impacts and risks associated with the Petroleum Activities Program (PAP), having regard to the nature and scale of the proposed PAP. Direct and indirect emissions with the potential to result in climate change impacts will be considered.	**(9)** Not required.
(10) Provided list of needed information to make assessment.	**(10)** **Woodside Assessment:** Woodside acknowledged there are publicly available documents to provide DEA with information it is seeking and noted the legislative requirements as well as broader requirements including those of the World Health Organisation that onshore gas processing is subject to. **Woodside Response:** Woodside noted that emissions associated with onshore gas processing are subject to a range of legislative requirements including those which consider and manage potential to impact on human health. In	**(10)** Not required.

	addition, it referred DEA to access publicly available documents which provide additional detail. The EP will be made publicly available on NOPSEMA's website once it has been submitted and is under assessment.	
(11) Woodside only makes general statements around health, safety and environment.	**(11)** **Woodside Assessment:** Woodside notes that it has a suite of climate disclosures available for DEA to read and that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. **Woodside Response:** Woodside responded that climate change impacts cannot be attributed to any one activity or one project, as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Although the direct and indirect GHG emissions associated with Scarborough and Pluto cannot be linked to climate change impacts to the environment, a contextual evaluation of climate change impacts will be provided in the EPs. It encouraged DEA to read Woodside's suite of climate disclosures including Woodside's Climate Report 2021, Climate Report 2022 and Climate Transition Action Plan and 2023 Progress Report.	**(11)** GHG emissions are considered in Section 6.7.10 of the EP.
(12) EP should not be accepted until Regulation 11A requirements are met.	**(12)** **Woodside Assessment:** Woodside disagrees with this assertion. **Woodside Response:** Woodside responded that it disagreed with this assertion and that DEA had engaged in consultation with Woodside in accordance with Regulation 25.	**(12)** Not required.
(13) Due to the limited information provided by Woodside, and DEA's voluntary capacity, the information in DEA's consultation responses should not be taken to reflect its complete position or complete submissions on this EP. DEA reserves the right to make further submissions as capacity and information	**(13)** **Woodside assessment:** Woodside has provided DEA with sufficient information. Woodside does not accept DEA's comments regarding capacity as its members appear to have had at their disposal a significant amount of information and DEA members also attended Woodside's AGM. **Woodside response:** Based on DEA's website, its members cite a significant volume of studies, scientific research and videos which demonstrate that DEA has access to information, and capacity and understanding of the information. A	**(13)** Not required.

become available.	number of DEA members also attended Woodside's 2024 Annual General Meeting.	
(14) As well as climate change harming human health: Oil and gas developments result in direct health harms from pollution including cancer, reproductive and human growth harms, disease and deaths etc; The destruction of sites of spiritual significance to First Nations people by fossil fuel developments compounds psychosocial harms.	**(14)** **Woodside assessment:** Climate change impacts cannot be attributed to any one project and proposed activities are not anticipated to result in the destruction of sites of spiritual significance to First Nations people. **Woodside response:** Climate change impacts are the result of global GHG emissions and cannot be attributed to any one project. Gas can play a role in the energy transition. The proposed petroleum activities for this EP are not anticipated to result in the destruction of sites of spiritual significance to First Nations people.	**(14)** Potential impacts of climate change are described in Section 6.7.6 of the EP, and potential impacts of atmospheric emissions are assessed in Section 6.7.7 of the EP. Potential impacts on cultural features and heritage values are assessed in Section 4.9 of the EP
(15) Any emissions produced from now will need to be removed from the atmosphere at a later date. At a minimum: Woodside's assessment of climate impacts associated with these projects should consider impact on global emissions over at least a 100 year period and preferably longer; Woodside must show how it will cause carbon drawdown (CDR) to remove all emissions that will be produced by the projects from the atmosphere in the long term, and enforceable measures must be imposed by the regulator to ensure this takes place.	**(15)** **Woodside assessment:** Woodside acknowledged DEA's comments regarding the need for emissions produced from now to be removed. **Woodside response:** Additional information is available in Woodside's CTAP and 2023 Progress Report, specifically Section 3.3, regarding decarbonisation technology development (pages 26-27) and Section 3.4 specific to carbon credits and the role of removal credits over time in support of our net zero aspiration (pages 28 and 29).	**(15)** Not required.
(16)	**(16)** **Woodside assessment:** Woodside does not agree with DEA's position.	**(16)** Not required.

The CTAP and 2023 Progress Report (and climate plans in general) cannot be relied upon as a basis for assessment of the acceptability of carbon pollution or climate change impacts of the proposed activities because: The plans and targets are unenforceable; The Report amounts to greenwash because it does not address numerous requirements of the UN standards and ISO Guidelines for Net Zero; The plans have repeatedly been rejected by Woodside's shareholders.	**Woodside response:** Woodside is targeting a reduction of net equity Scope 1 and 2 GHG emissions of 15% by 2025 and 30% by 2030, with an aspiration of net zero by 2050 or sooner; referred DEA to section 3.3 of Woodside's CTAP and 2023 Progress Report; does not agree with DEA's claim regarding greenwash.	
(17) Reliance on the Federal SGM as a means to align with Australian national emissions goals is inappropriate because of: Australia's national emission reduction goals and legislated carbon emissions budget are not aligned with the temperature goals of the Paris Agreement; Ongoing project emissions beyond 2030 reduction targets; Emissions that will result from these projects in other countries outside of Australia; Potential use of low integrity undisclosed offsets.	**(17)** **Woodside assessment:** Woodside does not agree with DEA's position. **Woodside response:** Emissions associated with anticipated third party consumption of Scarborough gas outside Australia are subject (where relevant) to the relevant customer nation's Paris NDCs.	**(17)** Not required
(18)	**(18)**	**(18)**

If comparisons to Australia's emissions reduction targets and budget are to be used, then the total emissions from the proposed activities (not just domestic emissions) should be compared with Australia's abatement efforts and policies.	**Woodside's assessment:** Woodside does not agree with DEA's comments. **Woodside's response:** Emissions arising from the consumption of Pluto along with other feed sources in customer markets will be considered under domestic and international emissions control frameworks. Anticipated customers of gas from Pluto are in countries that have ratified the Paris Agreement. Under the Paris Agreement and global GHG accounting conventions, each country is responsible for accounting for, reporting and reducing emissions that physically occur in its jurisdiction.	Not required
(19) DEA does not accept the argument that the total emissions from the proposals (i.e. this EP and another Woodside EP) is an insignificant contribution to the global carbon budget and therefore should not be considered unacceptable as, if this were true, Australia's entire national abatement efforts to 2030, including abatement from all sources, is also insignificant.	**(19)** **Woodside assessment:** Woodside does not agree with DEA's position. **Woodside response:** Woodside does not accept DEA's position. It is not appropriate to conflate emissions associated with the project's lifecycle, including those originating internationally, with Australia's abatement efforts or targets.	**(19)** Not required
(20) Woodside must adhere to the UN's and the ISO's guidelines in relation to its proposed activities as part of any assessment on the impacts on the climate and on DEA's activities and interests under the Regulations.	**(20)** **Woodside assessment:** Woodside does not agree with DEA's position. **Woodside response:** Woodside acknowledged DEA's comments but does not agree with DEA's position and referred DEA to Section 2.3.6 of the EP which defines criteria for demonstration of acceptability.	**(20)** Section 2.3.6 of the EP defines criteria for demonstration of acceptability.
(21) Woodside should provide further information to address DEA's concerns and demonstrate that the impacts of the proposed activities will be managed to a level that is acceptable to DEA.	**(21)** **Woodside assessment:** Woodside is required to manage impacts of the proposed activities in accordance with the OPGGS (Environment) Regulations and determined by NOPSEMA. **Woodside response:** The acceptability of the proposed activities will be determined by NOPSEMA pursuant to the OPGGS (Environment) Regulations.	**(21)** Section 2.3.6 of the EP defines criteria for demonstration of acceptability.

Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with DEA for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- DEA self-identified for this EP on 24 April 2024.
- Woodside has addressed and responded to DEA over a 3 month period.

Research institutes and local conservation groups or organisations

Cape Conservation Group (CCG)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed CCG advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to CCG, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to CCG regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with CCG for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Consultation Information provided to CCG on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided CCG with the opportunity to provide feedback over a 5 month period.

Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Protect Ningaloo, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Protect Ningaloo regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Protect Ningaloo for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.4 of the EP. Specifically:

- Consultation Information Sheet publicly available on the Woodside website since Friday 23 February 2024.
- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, the Australian and the West Australian (28 February 2024) advising of the proposed activities and requesting feedback.

- Consultation Information provided to Protect Ningaloo on 27 February 2024 based on their functions, interests or activities.
- Woodside has provided a link to NOPSEMA's brochure Consultation on offshore petroleum environment plans: Information for the community.
- Woodside has sent a follow up email seeking feedback on the proposed activities.
- Woodside has provided Protect Ningaloo with the opportunity to provide feedback over a 5 month period.

Other

Save our Songlines (SoS)

Historical Engagement:

- On 25 July 2023, Woodside met with EDO, SoS, and/or [Individual 1] , and/or [Individual 2] on an activity not relevant to this activity (SI Report reference 26.1). During the meeting, SoS and/or [Individual 1] and/or [Individual 2] stated that they are broadly concerned about:
  - **(1)** impact on the whales and other animals.
  - **(2)** the Songlines (unspecified) and the energy lines (unspecified).
- **(3)** On 25 July 2023, EDO on behalf of SoS, and/or [Individual 1] and/or [Individual 2] emailed Woodside in response to another activity not related to this activity (SI Report, reference 26.2) requesting a response to questions relating to the dept of wells, freshwater, migratory patterns of whales, dugongs and turtles, and seagrass distribution.
- **(1, 3)** On 27 July 2023, Woodside responded to EDO's email of 25 July 2023 in relation to another activity (SI Report, reference 26.3) providing information in response to the interest SoS, and/or [Individual 1] , and/or [Individual 2] had in marine mammals, seagrass, and the meeting of saltwater and freshwater.
- On 13 December 2023, Woodside emailed EDO in relation to another activity, and also requested EDO respond as to who their client was (SI Report, reference 26.4).
- On 18 December 2023, the EDO emailed Woodside, confirming that the EDO was currently acting only for [Individual 1] , not [Individual 2] or SoS (SI Report, reference 26.5).

Summary of information provided and record of consultation for this EP:

- On 26 March 2024, Woodside emailed SoS and/or [Individual 1] advising of the proposed activity (Record of Consultation, reference 2.39), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that SoS and its members may have within the EMBA, information on how SoS would like to engage, and requested that SoS provide information to other individuals as required.
- On 26 March 2024, EDO on behalf of SoS and/or [Individual 1] emailed Woodside acknowledging the information for this activity and noting they would obtain instructions (SI Report, reference 26.6).
- **(4)** On 29 April 2024 EDO emailed Woodside to confirm SoS and/or [Individual 1] would like to consult on this activity and that a written comment would be provided (SI Report, 26.7).
- **(4)** On 2 May 2024, Woodside emailed EDO to advise the consultation period for SoS and/or [Individual 1] would be extended until 9 May 2024 to enable them to

provide a written response to the activity (SI Report, reference 26.8).

- On 2 May 2024, EDO on behalf of SoS and/or [Individual 1] emailed Woodside (SI Report, reference 26.9) to clarify they understood the 26 April to be the date to confirm interest in consultation, rather than the end of consultation, and confirmed they would provide a written response as soon as possible.
- On 9 May 2024, SoS and/or [Individual 1] emailed Woodside (SI Report, reference 26.10) with comments relating to this activity and another unrelated activity and noted there was no culturally sensitive information included. The letter outlines [Individual 1] feedback including:
  - **(5)** An overview of [Individual 1] function interests and activities including:
    - [Individual 1] connection to Murujuga and cultural responsibilities.
    - [Individual 1] opposition to all industry on Murujuga.
    - That [Individual 1] holds information that is critical for Woodside to understand the impacts of the activity and that [Individual 1] may also have feedback on proposed mitigation measures.
  - **(6)** [Individual 1] concern that the sacred rock art at Murujuga is at risk from emissions from the Pluto and Scarborough facilities
  - **(7)** That [Individual 1] would like Woodside to consider GHG emissions as a potential impact or risk in the EP.
  - **(8)** [Individual 1] is concerned about the cumulative impacts of any industry on Murujuga which:
    - restricts access to Murujuga.
    - affects cultural practices.
    - contributes to cultural genocide by creating irreplaceable, irreversible cultural damage.
    - Affects the environment.
  - **(9)** That climate change should be considered as an impact.
  - **(10)** That [Individual 1] is concerned about drilling a new well and seabed disturbance and specifically:
    - The disturbance of underwater cultural heritage, what surveys Woodside has conducted and how these aspects will be managed.
    - The impacts of drilling noise and pollution on marine life, songlines, the seabed and the ecosystem.
    - That mitigation measures are not strong enough.
  - **(11)** That activities are offshore from culturally significant islands, including Rosemary Island which is a women's island to which [Individual 1] has a major connection and that Rosemary Island:
    - holds a connection to songlines.
    - Is a main breeding ground and habitat for turtles, which are culturally significant.
    - That erosion on the island caused by climate change, vessel traffic and fishing prevent turtles laying eggs and incubating properly.
    - Can only be protected by stopping use of the Pluto facility, and asks how Woodside will protect the island and the species reliant on the island.
  - **(12)** That consultation of relevant persons needs to be consistent. Specifically:
    - Offering the same level of support.
    - Consulting in two stages, information provision, then response.

- Providing assurance that culturally sensitive information will not be shared.

- **(13)** That the environment and cultural values are one, that Dreaming stories come from the animals depicted on the rock art and will live forever, that the connection and songlines are being disrupted.
- **(14)** That there are other individuals that Woodside should speak to about these activities but [Individual 1] is not comfortable identifying these people.

- On 14 May 2024, Woodside emailed SoS and/or [Individual 1] to thank them for their feedback, confirm that Woodside would reply shortly, and request an attachment that was missing from the original email (SI Report, reference 26.11).
- On 16 May 2024, EDO emailed Woodside to attach the Border Affidavit as requested (SI Report, reference 26.12).
- On 29 May 2024, Woodside emailed EDO a response to their 9 May 2024 letter outlining:
  - **(5)** that Woodside acknowledged [Individual 1] was a Mardudhunera person, a Traditional Custodian of Murujuga and opposed to industry at Murujuga
  - **(6)** the management of emissions under a range of Federal and State legislation and Woodside's support of the monitoring of emissions in relation to rock art.
  - **(7)** the assessment of emissions and the controls in the EP to reduce GHG emissions to ALARP and acceptable levels.
  - **(8)** the commitment to facilitating access to Murujuga to Traditional Custodians.
  - **(9)** the consideration of climate change impacts through the assessment of GHG emissions.
  - **(10)** the consideration of tangible and intangible heritage in the EP.
  - **(11)** that Woodside notes [Individual 1] connection to Rosemary Island.
  - **(12)** Woodside's methodology in identifying relevant persons for the purpose of consultation and commitment to engaging with Traditional Custodians through their preferred method of engagement.
  - **(13)** Woodside's efforts to understand and record the nature of the cultural values provided through consultation.
  - **(14)** Woodside's willingness to consult with Traditional Custodians, including those who self-identify as relevant.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) In a previous unrelated EP, cultural features associated with whales was raised.	**(1)** **Woodside Assessment:** Woodside understands that some species hold spiritual and cultural importance to SoS and/or [Individual 1] . **Woodside Response:** During consultation on a previous EP, Woodside discussed controls put in place to manage impacts and risks relating to their spiritual and cultural connection to the environment. Woodside has implemented controls to reduce potential risks and impacts to ecological and cultural values to ALARP and to an acceptable level.	**(1)** Assessment of potential impacts to cultural values are described in section 6 of the EP.
(2)	**(2)**	**(2)**

In a previous unrelated EP, it was noted there were cultural features associated with Songlines, dreaming and energy lines.	**Woodside Assessment:** Woodside understands that Songlines and energy lines to hold personal spiritual and cultural value individually (rather than communally) to SoS and/or [Individual 1] . Woodside has consistently sought to understand the nature of these values to ensure impacts to these values can be minimised. SoS and/or [Individual 1] has declined to provide further information on these values. **Woodside Response:** In any event, Woodside has sought to include controls that seek to reduce risks and impacts to ALARP and acceptable levels.	Woodside has considered SoS's and/or [Individual 1] feedback and updated Section 4.9 to record topics of interest and cultural values, including Songlines and energy lines. These are assessed in Section 6.11 with appropriate controls implemented. At this stage, Woodside has not been provided with specific information on these potential values to enable a more fulsome assessment.
(3) In a previously unrelated EP, an interest in marine mammals, seagrass, and the meeting of freshwater and saltwater was demonstrated.	**(3)** **Woodside Assessment:** SoS and/or [Individual 1] has not expressly confirmed their interests, rather, have raised topics of interest to them during consultation for another activity. Woodside has considered SoS's and/or [Individual 1] topics of interest and shared relevant information in relation to a previous EP, with SoS and/or [Individual 1] relating to these interests, including controls put in place to manage risks and impacts to them. **Woodside Response:** Woodside has updated Section 4.9 to record the interests and assessed them in Section 6.10 implementing appropriate controls.	**(3)** Woodside has considered topics raised by SoS and/or [Individual 1] and updated Section 4.9 to record these. These are assessed in 6.11 with appropriate controls implemented.
(4) A representative for SoS and/or [Individual 1] has confirmed they wish to consult on this activity and will do so in writing.	**(4)** **Woodside Assessment:** Woodside understands that SoS and/or [Individual 1] will provide feedback in writing for this activity. **Woodside Response:** Woodside extended the consultation period for SoS and/or [Individual 1] until 9 May 2024 to enable them to provide their written response.	**(4)** Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).
(5) In a letter on 9 May 2024, SoS and/or [Individual 1] advised of cultural responsibilities and a connection to Murujuga and that they held critical information for Woodside.	**(5)** **Woodside Assessment:** SoS and/or [Individual 1] refer to an affidavit filed in September 2023 which articulates the connection and some of the cultural responsibilities. The content of this affidavit has been considered in Section 4.9.4 of this EP. SoS and/or [Individual 1] also refer to other cultural responsibilities, but these are not specified. Woodside has consistently sought	**(5)** Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change

	to understand the nature of these values to ensure impacts to these values can be minimised. SoS and/or [Individual 1] has declined to provide further information on these values. **Woodside Response:** Woodside has considered the connection and cultural responsibilities articulated in the referenced affidavit in Section 4.9.4**,** and assessed these in Section 6.11 implementing appropriate controls.	and Revision process (see Section 7.2.5 of this EP).
(6) In a letter on 9 May 2024, SoS and/or [Individual 1] advised that rock art is at risk from the emissions by the activity.	**(6)** **Woodside Assessment:** The presence of industry on the Burrup Peninsula has generated concerns that emissions may lead to an accelerated weathering of rocks on which rock art is present which may reduce the visibility or destroy the rock art. Research to date on the impacts of emissions on rock art has not been conclusive, and there are currently no set air quality thresholds for the protection of rock art. The WA Government is currently implementing the Murujuga Rock Art Strategy, which plans to develop a long-term framework to guide the management and protection of the rock art located on the Dampier Archipelago and the Burrup Peninsula. Woodside actively supports the implementation of the Murujuga Rock Art Strategy through membership of the Murujuga Rock Art Reference Group and provides funding associated with the Murujuga Rock Art Monitoring Program. **Woodside Response:** Woodside has considered the potential risks to rock art from the activity in Section 6.11.	**(6)** Woodside has considered potential risks to rock art in Section 6.11 with appropriate controls implemented.
(7) In a letter on 9 May 2024, SoS and/or [Individual 1] asked Woodside to consider GHG emissions as a potential impact or risk in the EP.	**(7)** **Woodside Assessment:** GHG emissions are considered in Section 6.7.10 of the EP. No new information regarding GHG emissions has been provided in this letter. **Woodside Response:** Woodside has considered GHG emissions and potential impacts or risks in Section 6.7.10.	**(7)** Woodside has addressed the topic raised by SoS and/or [Individual 1] in Section 6.7.10.
(8) In a letter on 9 May 2024, SoS and/or [Individual 1] listed concerns regarding the cumulative impact of all industry on Murujuga, including restricted access to Murujuga, affected cultural practices,	**(8)** **Woodside Assessment:** Intangible heritage such as cultural practices and Traditional Custodian access to significant areas are addressed in Section 4.9. of this EP. No additional or new information is provided in this letter. Through the management measures adopted in Section 6 of this EP the activities subject to this EP will avoid any potential irreplaceable, irreversible cultural	**(8)** Woodside has considered topics raised by SoS and/or [Individual 1] and updated Section 4.9 to record these. These are assessed in 6.11 with appropriate controls implemented.

and industry's contribution to cultural genocide by creating irreplaceable, irreversible cultural damage.	damage that Woodside has been advised of. **Woodside Response:** Woodside has considered cultural practices and access to country in Section 4.9.	
(9) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined concerns with climate change and asked that climate change be considered as an impact.	**(9)** **Woodside Assessment:** Potential climate change impacts are considered in Section 6.7.10 of the EP. **Woodside Response:** Woodside has considered potential climate change impacts in Section 6.7.10 of the EP.	**(9)** Woodside has considered potential climate change impacts in Section 6.7.10.
(10) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined concerns with drilling and seabed disturbance including the disturbance of underwater cultural heritage, the impacts of drilling noise and pollution, and the strength of mitigation measures. SoS and/or [Individual 1] asked what surveys Woodside has conducted for underwater cultural heritage and how these aspects will be managed.	**(10)** **Woodside Assessment:** Drilling and seabed disturbance is located at approximately 177 m water depth. The ancient landscape, which was exposed to human habitation during the periods of occupation of the Australian continent extends to a depth of 125 m below current sea level. Therefore, no potential for impacts to tangible underwater cultural heritage is anticipated. Intangible heritage including sea country values is considered in Section 4.9.4 of this EP. This letter does not include any additional values of the environment not already addressed. **Woodside Response:** Woodside has considered intangible cultural heritage in Section 4.9.4. Due to the water depth of seabed disturbance, no impacts to tangible cultural heritage are anticipated.	**(10)** Woodside has considered topics raised by SoS and/or [Individual 1] and updated Section 4.9.4 to record these. These are assessed in Section 6.11 with appropriate controls implemented.
(11) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined the significance of offshore islands, including Rosemary Island, and asked how Woodside will protect the island and the species reliant on the island.	**(11)** **Woodside Assessment:** Rosemary Island is within the EMBA. Rosemary Island provides nesting habitat for turtles. Rosemary Island also has a number of rock art sites. **Woodside Response:** Woodside has updated Section 4.9.4 to capture the significance of Rosemary Island. Consideration of risk, impacts and mitigations to Rosemary Island and the receptors associated with the island are addressed in Sections 6.8, 6.9 and 6.11.	**(11)** Woodside has updated the EP to capture feedback regarding the significance of Rosemary Island in Section 4.9.4. Assessment of risks and mitigation measures to islands and associated species, including Rosemary Island and turtles are addressed in Section 6.8, 6.9, 6.11.
(12) In a letter on 9 May 2024, SoS and/or [Individual 1] advised that consultation should be consistent with all relevant	**(12)** **Woodside Assessment:** Woodside applies its methodology for 'Traditional Custodians and nominated representative corporations' and 'Other non-government groups or organisations' under regulation 25(1)(d) of the	**(12)** Woodside outlines its Consultation Approach and assessment of relevant persons in Appendix F.

persons.	Environment Regulations to determine relevant persons for consultation. **Woodside Response:** Woodside consults with all relevant persons for each activity. Woodside has meaningful long-term relationships with relevant Traditional Custodians specifically tailored to provide for effective engagement which is continuous and is not confined to individual EPs, instead covering all EPs and other issues that are relevant at the time of engagement.	
(13) In a letter on 9 May 2024, SoS and/or [Individual 1] outlined that the environment and cultural values are one, and the connection and songlines are being disrupted.	**(13)** **Woodside Assessment:** Woodside understands that SoS and/or [Individual 1] references to Songlines and energy lines relate to personal spiritual value individually (rather than communally) to SoS and/or [Individual 1] . Woodside has consistently sought to understand the nature of these values to ensure impacts to these values can be minimised. SoS and/or [Individual 1] has declined to provide further information on these values. **Woodside Response:** In any event, Woodside has sought to include controls that seek to reduce risks and impacts to ALARP and acceptable levels.	**(13)** Section 4.9 records topics of interest and cultural values, including Songlines and energy lines. These are assessed in Section 6.11.
(14) In a letter on 9 May 2024, SoS and/or [Individual 1] advised there were other individuals who should be consulted but states that they are not comfortable to identify them.	**(14)** **Woodside Assessment:** Woodside has applied its process for the identification of relevant persons. It is unclear if the other individuals mentioned by SoS and/or [Individual 1] have been identified through this process. Woodside has also advertised publicly to invite comment from relevant persons. **Woodside Response:** Woodside has sought to engage with all of the relevant persons it has identified, or who have self-identified as such for this EP. Woodside welcomes any person who wishes to provide feedback on this EP to do so through the means provided on the consultation factsheet.	**(14)** Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received from additional parties after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside has assessed the objections or claims raised by SoS and/or [Individual 1] . No additional measures or controls are required.
Outcomes of Consultation Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with SoS and/or [Individual 1] for the purpose of regulation 25 is complete. Sufficient information and a reasonable period have been provided, as described in Section 5.5 of the EP. Specifically:		

Sufficient Information:

- Woodside sought direction on SoS and/or [Individual 1] preferred method of consultation. As sufficient information and a reasonable period have been provided, any meetings are ongoing engagement post regulation 25 of the Environment Regulations consultation.
- Provided Consultation Summary Sheets developed by Indigenous staff to SoS and/or [Individual 1] . These set out details of the proposed activity, the location of the activity, the timing of the activity as well as the potential risks and impacts of the activity with controls in a digestible, plain English format.
- Articulated planned and unplanned environmental risks and impacts, with proposed controls.
- Confirmed the purpose of consultation and set out in detail what was being sought through consultation.
- Asked for the consultation and information sheets to be distributed to members and individuals as required.
- Provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans" and Guideline "Guideline: Consultation in the course of preparing an environment plan".
- Advised that SoS and/or [Individual 1] could request the particular information provided in the consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period:

- Woodside published advertisements in national, state and relevant local newspapers including the National Indigenous Times (26 February 2024), the Koori Mail, the North West Telegraph, the Pilbara News, The Australian and The West Australian (28 February 2024) advising of the proposed activities and requesting feedback.
- Woodside has provided SoS and/or [Individual 1] with the opportunity to provide feedback over a 4 month period, demonstrating a "reasonable period" of consultation.

Woodside asked SoS and/or [Individual 1] if it was aware of any other Traditional Custodian groups or individuals with whom Woodside should consult. None were identified.

Woodside engages in ongoing consultation, beyond that required by regulation 25 of the Environment Regulations, throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of the EP).

Woodside considers the measures and controls described in this EP address the potential impact from the proposed activity on SoS and/or [Individual 1] functions, interests or activities.

Table 3: Engagement Report with Persons and Organisations Assessed as Not Relevant

Commonwealth Commercial fisheries and representative bodies		
Australian Southern Bluefin Tuna Industry Association (ASBTIA)		
Summary of information provided and record of consultation for this EP: • On 26 February 2024, Woodside emailed ASBTIA advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.* • On 18 March 2024, Woodside sent an email reminder to ASBTIA, following up on the proposed activity (Record of Consultation, reference 3.2) and included a link to the Consultation Information Sheet on Woodside's website. • On 27 March 2024, Woodside provided an activity update to ASBTIA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While ASBTIA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ASBTIA to provide feedback during the consultation process.		
Tuna Australia		
Summary of information provided and record of consultation for this EP: • On 27 February 2024, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 2.14), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.* • On 28 February 2024, Tuna Australia emailed Woodside (SI Report, reference 11.1) and: - **(1)** provided its industry position statement. - **(2)** requested a service agreement to assist Woodside meeting its consultation requirements. **(2)** The consultation regulations do not require Woodside to enter into service agreements in order to engage in consultation or for an EP to be complete. • **(1)** On 3 April 2024, Woodside thanked Tuna Australia for providing its position statement and provided an activity update regarding wells location coordinates and		

included an updated Consultation Information Sheet (SI Report, reference 11.2).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
(1) Provided its industry position statement.	**(1)** **Woodside assessment:** Woodside previously received and reviewed the position statement. **Woodside response:** Woodside thanked Tuna Australia for sending its position statement.	**(1)** Not required.
(2) Recommended entering into a Service Agreement to support consultation.	**(2)** **Woodside assessment:** The Environment Regulations do not require the entry into a fee for service agreement in order to meet Environment Plan consultation requirements. **Woodside response:** Woodside responded to Tuna Australia during consultation on another EP. Woodside respects that, for a relevant person, consultation is voluntary. Woodside advised Tuna Australia the level of feedback provided by an organisation, if any, was at the person or organisation's discretion, and Woodside was open to suggestions from Tuna Australia on ways to improve efficiency and simplicity for feedback.	**(2)** Not required.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While Tuna Australia is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Tuna Australia to provide feedback during the consultation process.		
Other non-government groups or organisations		
350 Australia (350A)		
Summary of information provided and record of consultation for this EP: • On 27 February 2024, Woodside emailed 350A advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and		

a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.

- On 19 March 2024, Woodside sent an email reminder to 350A, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to 350A regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).
- **(1)** On 28 March 2023, 350A emailed Woodside stating it had not been consulted adequately on the Scarborough Offshore Facility and Trunkline (Operations) EP (SI Report, reference 29.1).
- **(1)** On 2 April 2024, Woodside responded to 350A seeking clarification as to whether it was providing feedback on this EP as it had already consulted 350A on the Scarborough Operations EP (SI Report, reference 29.2).
- On 10 May 2024, Woodside emailed 350A to advise consultation for this EP has closed (SI Report, reference 29.3).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) 350A stated it has not been consulted adequately on Scarborough Offshore Facility and Trunkline (Operations) EP.	**(1)** **Woodside assessment:** The activities covered under the Scarborough Offshore Facility and Trunkline (Operations) EP are not relevant for this EP. Woodside consulted 350A for the Scarborough Offshore Facility and Trunkline (Operations) EP separately. **Woodside response:** Woodside sought clarification from 350A on which EP the feedback relates to.	**(1)** Not required.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While 350A is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for 350A to provide feedback during the consultation process.

Australian Conservation Foundation (ACF)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed ACF advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and

a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*

- On 19 March 2024, Woodside sent an email reminder to ACF, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to ACF regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While ACF is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACF to provide feedback during the consultation process.

Australian Marine Conservation Society (AMCS)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed AMCS advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to AMCS, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to AMCS regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While AMCS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable

period outside of regulatory requirements for AMCS to provide feedback during the consultation process.

Conservation Council of Western Australia (CCWA)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed CCWA advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to CCWA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to CCWA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While CCWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CCWA to provide feedback during the consultation process.

Greenpeace Australia Pacific (GAP)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed GAP advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to GAP, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to GAP regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims	Woodside engages in ongoing consultation throughout the life of an EP. Should	No additional measures or controls are

received despite follow up.	feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	required.

Outcomes of Consultation

While GAP is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for GAP to provide feedback during the consultation process.

Australasian Centre for Corporate Responsibility (ACCR)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed ACCR advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to ACCR, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to ACCR regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While ACCR is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACCR to provide feedback during the consultation process.

Market Forces

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Market Forces advising of the proposed activity (Record of Consultation, reference 2.24), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Market Forces, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.

- On 27 March 2024, Woodside provided an activity update to Market Forces regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Market Forces is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Market Forces to provide feedback during the consultation process.

Research institutes and local conservation groups or organisations

University of Western Australia (UWA)

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed UWA advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 19 March 2024, Woodside sent an email reminder to UWA, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to UWA regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While UWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for UWA to provide feedback during the consultation process.

Curtin University		
Summary of information provided and record of consultation for this EP: • On 27 February 2024, Woodside emailed Curtin University advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.* • On 19 March 2024, Woodside sent an email reminder to Curtin University, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website. • On 27 March 2024, Woodside provided an activity update to Curtin University regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While Curtin University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Curtin University to provide feedback during the consultation process.		
Edith Cowan University (ECU)		
Summary of information provided and record of consultation for this EP: • On 27 February 2024, Woodside emailed ECU advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*. • On 19 March 2024, Woodside sent an email reminder to ECU, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website. • On 27 March 2024, Woodside provided an activity update to ECU regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and,	No additional measures or controls are required.

	where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	

Outcomes of Consultation

While ECU is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ECU to provide feedback during the consultation process.

Murdoch University

Summary of information provided and record of consultation for this EP:

- On 27 February 2024, Woodside emailed Murdoch University advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 19 March 2024, Woodside sent an email reminder to Murdoch University, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website.
- On 27 March 2024, Woodside provided an activity update to Murdoch University regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.

Outcomes of Consultation

While Murdoch University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Murdoch University to provide feedback during the consultation process.

Western Australian Marine Science Institution (WAMSI)

Summary of information provided and record of consultation for this EP:

- On 18 March 2024, Woodside emailed WAMSI advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*
- On 2 April 2024, Woodside sent an email reminder to WAMSI, following up on the proposed activity and provided an activity update regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.8).

Summary of Feedback, Objection or	Assessment of Merits of Feedback, Objection or Claim and Woodside's	Inclusion in Environment Plan

Claim	Response	
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While WAMSI is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WAMSI to provide feedback during the consultation process.		
Commonwealth Scientific and Industrial Research Organisation (CSIRO)		
Summary of information provided and record of consultation for this EP: • On 27 February 2024, Woodside emailed CSIRO advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.* • On 19 March 2024, Woodside sent an email reminder to CSIRO, following up on the proposed activity (Record of Consultation, reference 3.3) and included a link to the Consultation Information Sheet on Woodside's website. • On 27 March 2024, Woodside provided an activity update to CSIRO regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.6).		
Summary of Feedback, Objection or Claim	**Assessment of Merits of Feedback, Objection or Claim and Woodside's Response**	**Inclusion in Environment Plan**
No feedback, objections or claims received despite follow up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While CSIRO is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for CSIRO to provide feedback during the consultation process.		
Australian Institute of Marine Science (AIMS)		
Summary of information provided and record of consultation for this EP: • On 27 February 2024, Woodside emailed AIMS advising of the proposed activity (Record of Consultation, reference 2.26), provided a Consultation Information Sheet, and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community.*		

- On 8 March 2024, AIMS emailed Woodside (SI Report, reference 4.1) and:
  - **(1)** confirmed it has no operations occurring in the area.
  - **(2)** requested to be informed if the activity location changes.
- **(1,2)** On 12 March 2024, Woodside thanked AIMS for its feedback and confirmed it will provide AIMS with updates (SI Report, reference 4.2).
- On 27 March 2024, Woodside provided an activity update to AIMS regarding wells location coordinates and included an updated Consultation Information Sheet (Record of Consultation, reference 3.5).
- **(1)** On 8 April 2024, AIMS emailed Woodside and confirmed the activities will not disrupt AIMS operations (SI Report, reference 4.3).
- **(1)** On 9 April 2024, Woodside thanked AIMS for reviewing the information (SI Report, reference 4.4).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AIMS confirmed the activities will not disrupt its operations.	**(1)** **Woodside assessment:** Woodside noted AIMS feedback. **Woodside response:** Woodside thanked AIMS for confirming it has no operations in the area.	**(1)** Not required.
(2) AIMS requested to be notified.	**(2)** **Woodside assessment:** Woodside will provide notifications to relevant stakeholders as outlined in Table 7-7 of this EP. **Woodside response:** Woodside confirmed it will contact AIMS should the activity location change.	**(2)** Woodside will provide notification of significant change, as appropriate, to AIMS, as referenced in Table 7-7 of the EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	Woodside considers the measures and controls in the EP are appropriate.

Outcomes of Consultation

While AIMS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AIMS to provide feedback during the consultation process.

Traditional Custodians

Wanparta Aboriginal Corporation (Wanparta)

Wanparta is established under the Native Title Act 1993 by the Ngarla people to represent the Ngarla people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- On 26 July 2023, Woodside emailed Wanparta Woodside's planned Program of Ongoing Engagement with Traditional Custodians and confirming Woodside's preference to attend the 31 August 2023 board meeting (SI Report, reference 21.1).
- On 31 August 2023, Woodside met with the Wanparta Board and members in South Hedland (SI Report, reference 21.2). Woodside presented on activities unrelated to this activity, and also described the Environment Plan framework, referring to the Offshore Petroleum and Greenhouse Gas Storage Act (Environment) Regulations, NOPSEMA's role as regulator and general contents of Environment Plans.
- At the 31 August 2023 meeting (SI Report, reference 21.2) Wanparta asked/noted:
  - **(1)** Wanparta stated that water is extremely important to Ngarla people, and they feel a responsibility to look after the ocean and lore.
  - **(2)** Wanparta asked about ranger group involvement in spill response.
    - **(1)** Woodside responded that it would get back to the team with regards to training and involvement.
  - Wanparta would like to engage in an annual meeting with Woodside.
- On 4 October 2023, Woodside emailed Wanparta (SI Report, reference 21.3) following up with a summary of a phone call on the same day. The outcomes of the phone discussion were:
  - **(2)** Wanparta's interest in a Wanparta Ranger program.
  - **(3)** Wanparta's interest in EP funding.
  - Wanparta's interest in a Karratha Gas Plant visit, as well as possible school visits and Perth Office visits.
  - Wanparta's request for updates on EPs unrelated to this one.
  - Woodside's query into Wanparta's thoughts on a formal process for consultation on future EPs.
- On 6 October 2023, Wanparta emailed Woodside advising that the Board would consider these items at its 4 October 2023 meeting and would revert shortly after (SI Report, reference 21.4).
- **(2)** On 10 November 2023, Wanparta emailed Woodside with a Ngarla Ranger Proposal for Woodside's consideration (SI Report, reference 21.5).
- On 10 November 2023, Woodside called Wanparta (SI Report, reference 21.6) and discussed:
  - **(2)** Ngarla Ranger Proposal
  - **(3)** Further funding request for management of EP's
  - Proposed meeting location and date - parties agreed for Woodside to host the Wanparta Board on February 23rd 2024 at the Karratha Gas Plant
- **(2)** On 12 November 2023, Woodside emailed Wanparta confirming receipt of the Ranger Proposal (SI Report, reference 21.7).

- **(3)** On 13 November 2023, Wanparta emailed Woodside with a written request for funding to assist ongoing consideration of Environmental Plans (SI Report, reference 21.8).
- **(3)** Between 22-30 November 2023, Woodside and Wanparta exchanged emails regarding funding to assist with consultation meetings, and the availability of Directors for a meeting on 23 February 2024 (SI Report, references 21.9, 21.10, 21.11).
- Between 8 – 15 February 2024, Woodside and Wanparta exchanged emails confirming logistics of consultation and site visit meetings in Karratha for week of 26 February 2024 (SI Report, references 21.12, 21.13, 21.14, 21.15).
- On 20 February 2024, Wanparta emailed Woodside informing of a death in the community and requesting a re-schedule of the meeting (SI Report, reference 21.16).
- On 21 February 2024, Woodside acknowledged and agreed to a re-schedule (SI Report, reference 21.17).
- On 23 February 2024, Wanparta emailed Woodside with suggested dates for a re-scheduled meeting in April 2024 (SI Report, reference 21.18).
- On 26 February 2024, Woodside emailed Wanparta confirming availability for the proposed April meeting and noting logistics (SI Report, reference 21.19).

Summary of information provided and record of consultation for this EP:

- On 28 February 2024, Woodside emailed Wanparta advising of the proposed activity (Record of Consultation, reference 2.36), providing a Summary Information Sheet (including a link to the detailed information sheet on Woodside's website), and links to the NOPSEMA consultation brochure and guidelines, and draft policy for managing gender-restricted information. The email requested information on the interests that Wanparta and its members may have within the EMBA, information on how Wanparta would like to engage, and requested that Wanparta provide information to other individuals as required.

Ongoing Engagement:

- Between 16-22 April, Woodside and Wanparta exchanged emails regarding logistics and funding for a meeting for consultation on this activity and a site visit with the Wanparta Board. (SI Report, references, 21.20-21.29)
- On 24 April 2024, Woodside met with Wanparta at Murujuga. Woodside presented an overview of EPs and ongoing consultation in 2024, and provided information on this activity, Aboriginal employment, and ranger programs. Wanparta informed Woodside that there were no issues following the discussion (SI Report, reference 21.30).
- On 7 May 2024, Wanparta emailed Woodside following the meeting on 24 April 2024 (SI Report, reference 21.31). Wanparta advised:
  - **(4)** The Ngarla People have a deep spiritual connection to sea country. **(4)** Woodside recognises Wanparta's interests and potential cultural values and these have been recorded in the EP.
  - **(5)** The Ngarla peoples' totem species – the octopus, stingray, spiny bream fish and kestrel – is of great significance. **(5)** Woodside recognises Wanparta's interests and potential cultural values and these have been recorded in the EP.
  - **(6)** The protection and management of marine life and healthy ocean plays a significant role in their lore, culture and customs. **(6)** Woodside recognises Wanparta's interests and potential cultural values and these have been recorded in the EP.
  - **(7)** That they request Woodside attends an annual Board meeting with Wanparta for the purposes of progressing ongoing and meaningful consultation. **(7)** Woodside supports ongoing consultation with Wanparta through their preferred method of consultation.
  - **(8)** That Wanparta requires immediate consultation the parameters of the activity change. **(8)** Woodside will provide notification to Wanparta in the event of significant change.

- On 30 May 2024, Woodside emailed Wanparta following up on its meeting on 24 April 2024. (SI Report, reference 21.32). In the email Woodside:
  - **(5)** acknowledged the significance of the Ngarla People's totem species – the octopus, stingray, spiny bream fish and kestrel.
  - **(6)** acknowledged the protection and management of marine life for Ngarla People to continue practising lore, culture and custom.
  - **(7)** welcomed the opportunity to attend the annual Board meeting
  - **(8)** would provide timely updates on any changes to the Pluto Facility Operations.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) During face-to-face engagement related to other activities Wanparta provided feedback on the importance of water and the ocean.	**(1)** **Woodside Assessment:** Woodside assessed Wanparta's interest in water to represent potential cultural values. **Woodside Response:** Wanparta's interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including controls, have been assessed.	**(1)** Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values and assessed potential impact on these, including controls, in Section 6.11.
(2) Wanparta has expressed interest in a range of social investment opportunities including a ranger program and have provided a Ranger Program proposal for Woodside's consideration.	**(2)** **Woodside Assessment:** Woodside supports ongoing engagement with Traditional Custodians through their Program of Ongoing Engagement. **Woodside Response:** Separate from consultation under regulation 25 of the Environment regulations, Woodside has discussed a ranger program with Wanparta and their proposal is under consideration.	**(2)** Ranger programs are able to be addressed as part of Woodside's Program of Ongoing Engagement (Appendix G).
(3) Wanparta expressed an interest in funding to assist in consultation.	**(3)** **Woodside Assessment:** Woodside supports resourcing for Traditional Custodians to allow for consultation on proposed activities. **Woodside Response:** Woodside has agreed to provide support to Wanparta for consultation purposes.	**(3)** Not required.
(4) On 7 May 2024, Wanparta advised of its connection to sea country.	**(4)** **Assessment:** Woodside assessed Wanparta's connection to sea country to represent potential cultural values. **Woodside Response:** Wanparta's interests and potential cultural values have been recorded in the EP, the potential impact on the interests and values, including	**(4)** Woodside recognises that Wanparta holds Sea Country rights and interests that need to be protected (Section 4.9).

	controls, have been assessed.	
(5) On 7 May 2024, Wanparta advised of the significance of their totem species including the octopus, stingray, spiny bream fish and kestrel.	**(5)** **Woodside assessment:** Woodside respects Wanparta's cultural connections and knowledge, including their totem species. **Woodside response:** Woodside has noted the Wanparta's values and interests in their totem species in Section 4.9.4.	**(5)** Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values.
(6) On 7 May 2024, Wanparta advised of the importance of the protection of marine life and ocean to its lore, culture and customs.	**(6)** **Woodside assessment:** Woodside respects Wanparta's position that they have cultural obligations to protect marine life and ocean. **Woodside response:** Woodside has noted the Wanparta's values and interests in Sea Country in Section 4.9.4.	**(6)** Woodside updated Section 4.9 to record Wanparta's interests and potential cultural values.
(7) On 7 May 2024, Wanparta requested Woodside attend an annual Board Meeting for the purpose of ongoing consultation.	**(7)** **Woodside Assessment:** Woodside supports ongoing consultation with Traditional Custodians. **Woodside Response:** Woodside supports ongoing consultation with Wanparta through their preferred method of consultation.	**(7)** Not required.
(8) On 7 May 2024, Wanparta requested it be advised on any change in activity parameters.	**(8)** **Woodside assessment:** Woodside will provide notification to Wanparta in the event of significant change. **Woodside response:** Woodside has outlined this requirement in Table 7-7 of the EP.	**(8)** Woodside will provide notification of significant change, as appropriate, to Wanparta, as referenced in Table 7-7 of the EP.
While feedback has been received, there were no objections or claims.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.5 of this EP).	No additional measures or controls are required.
Outcomes of Consultation		
While Wanparta is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Wanparta to provide feedback during the consultation process.

Woodside Energy

CONSULTATION

INFORMATION SHEET

February 2024

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

Woodside consults relevant persons in the course of preparing an environment plan (EP) to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that could be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. This is the intended outcome of consultation.

Woodside's aim is to ensure the activity is carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD), by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level. Woodside wants relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Overview

Woodside will submit a five-year revision of the Operations EP for the Pluto Facility (Pluto) located in Commonwealth waters, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (regulations). The Operations EP currently covers the operation of a fixed platform (Pluto) and subsea infrastructure connected to the Pluto, Xena and Pyxis reservoirs. The Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Location and Operations

The Pluto platform and associated subsea infrastructure is located in Production Licenses WA-1-IL and WA-34-L. The export pipeline and flowline are within Pipeline Licenses WA-17-PL and WA 16 PL, respectively (see **Figure 1**).

The Xena-03 well is located in Production Licence WA 34 L, around 15km from the Pluto Platform and around 190km west north-west of Dampier. The Xena-03 well will be located around 2 km from the existing Xena-02 well and tied back to the existing Pluto production systems.

The Pluto facility commenced production in 2012. The facility produces wet gas and condensate, which is transported for processing at the onshore Pluto LNG Plant via a 180km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from a fixed operator console at the Pluto onshore Central Control Room (CCR), which is constantly manned.

Installation of a water handling module on the platform is underway to enable the processing and discharge of produced water at the platform. Wet gas will be processed through the water handling module and transported onshore, with treated water discharged overboard.

Table 1 summarises the activities, which will be managed under the Operations EP.

Proposed Activity Overview – Production / Operations

The production scope includes the following activities to be undertaken during the next five-year period:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) activities
- Commissioning and operation of the water handling module
- Non-routine and unplanned activities and incidents associated with the above.

Future decommissioning of infrastructure will be subject to separate future EPs.

Production

Production commenced from the Pluto facility in 2012 and is currently expected to continue until at least 2031. Production is planned to commence from the Xena-03 well around Q3 2025.

Inspection

Inspection of infrastructure is the process of physical verification and assessment of subsea components to detect changes compared to its installed state. Typical site inspection activities include visual surveys via a remotely operated vehicle, side scan sonar surveillance, cathodic protection measurements and ultrasonic pipe condition checks.

Monitoring

Monitoring is the surveillance of the physical and chemical environment around subsea infrastructure. Monitoring activities may include process composition, corrosion probes, corrosion mitigation checks, and metocean and geological monitoring.

Maintenance

Maintenance of infrastructure is required at regular and/or planned intervals to maintain performance reliability and prevent deterioration or failure of equipment. Maintenance activities may include cycling of valves and leak pressure testing.

Repair

Repair activities are those required when a subsea system or component is degraded or damaged as defined by design codes.

Vessels

Operations support vessels will be used to undertake IMMR of subsea infrastructure. The vessel size and type will be dependent on the work scope. The vessels will not anchor during IMMR activities unless there is an unexpected event or an emergency. An Accommodation Support Vessel (ASV) may be required for short periods (typically less than 1 month) to support planned maintenance campaigns, shutdown maintenance or major projects.

1 Pluto Facility Operations Environment Plan | February 2024

Proposed Activity Overview – Drilling and Tie-Back

The scope for this EP includes drilling, completion, subsea installation (including minor changes to existing infrastructure) along with commissioning activities to bring in gas from the Xena-03 well to the Pluto platform. This includes directly installing infrastructure from the installation vessel in the relevant location.

Other contingent activities that Woodside may need to perform include well abandonment, re-spud, side-track, well suspension, well intervention, wireline logging, leaving wellhead assembly in situ, sediment mobilisation and relocation, venting, well test/unload and emergency disconnect sequence.

Drilling, subsea installation and commissioning activities

Woodside plans to drill one new well in the Xena field (Xena-03) and to install an associated wellhead and Xmas tree. Xena-03 will be connected to the existing Pyxis Hub subsea infrastructure. The well will be located at approximately 177 m water depth. Other activities include:

- Pre-commissioning and cold-commissioning (non-hydrocarbon) activities associated with subsea infrastructure including leak testing of the flexibles, subsea control systems verification and function-testing of valves to verify the production system and electric and hydraulic flying leads are ready for entry into the commissioning phase; and
- Well start-up and commissioning (initial start-up) of the Xena 03 well involving slow and gradual build up to maximum well gas production rates and then well performance testing such as Multi-Rate Testing, simulated emergency shut down (ESD) of the well followed by Pressure Build-Up Testing.

Drilling activities are currently anticipated to commence around Q2 2025, subsea installation and commissioning activities are currently anticipated around Q3 2025.

The timing and duration of the proposed activities is subject to approvals, project schedule requirements, vessel availability, weather or unforeseen circumstances.

Project vessels

Activities will be completed using a range of vessels. Operations will use support vessels to undertake inspection, monitor, maintenance and repair of subsea infrastructure. The vessel size and type will be dependent on the work scope.

The proposed Xena-03 drilling and tie-back will be performed using a moored, dynamically positioned (DP) or hybrid (DP/moored) mobile offshore drilling unit (MODU). During the subsea installation campaign, a construction/primary installation vessel will perform installation activities.

The project will be supported by other vessels, such as general support vessels, cargo vessels, anchor handling vessels and multiservice construction vessels during drilling activities. Support vessels will be used to transport equipment and materials between the MODU/installation vessel and port.

Drilling operations for the production well are currently expected to take around 60 days to complete.

Installation of subsea infrastructure and pre-commissioning is anticipated to commence when the relevant new production well has been drilled and is expected to have a cumulative duration of about three weeks. Drilling and installation of subsea infrastructure may be performed over multiple campaigns.

The support and installation vessels will operate on DP and will not anchor/moor on the seabed. It is anticipated vessels will operate 24 hours per day for the duration of drilling and tie-back activities.

Communications with mariners

The location of Pluto is marked on nautical charts and the platform is surrounded by a 500 m radius petroleum safety zone (PSZ). A 4 km radius Operational Area will be applied around the Xena-03 drill centre.

A temporary 500 m safety exclusion zone will apply around the MODU and subsea installation vessel to manage vessel movements.

Commercial fishers and other marine users are permitted to use the Operational Area but should take care when entering and remain clear of the safety exclusion zones. The wells will continue to be marked on navigational charts.

Assessment

Woodside has undertaken an assessment to identify potential risks to the marine environment and relevant persons, considering timing, duration, location and potential impacts arising from the planned activities. Mitigation and management measures will be implemented and are summarised in **Table 3.** Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental and social impacts associated with the proposed activities. Woodside is seeking any interest or comments you may have to inform Woodside's decision making.

Joint Venture

Woodside Burrup Ltd is the Titleholder for this activity on behalf of the Pluto LNG joint venture partners, Tokyo Gas Pluto Pty Ltd and Kansai Electric Power Australia Pty Ltd.

We welcome your feedback by 29 March 2024.

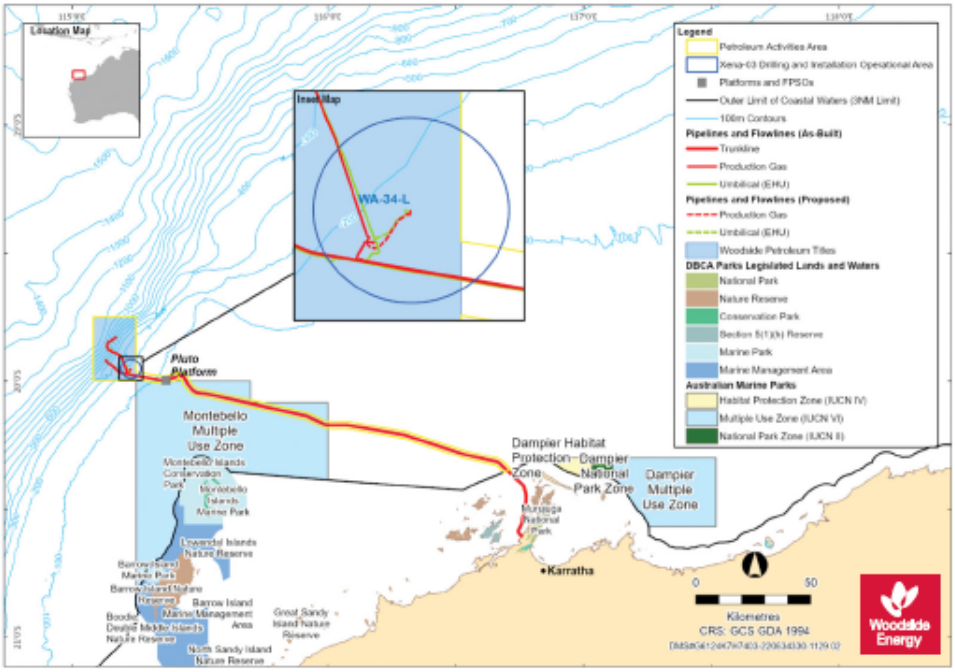

Figure 1. Pluto Facility and Operational Areas.

Table 1. Activity summary

Pluto Operations Facility Environment Plan	
Facility type	• Fixed platform, processing equipment, pipelines
Production License Areas	• WA-1-IL, WA-34-L
Pipeline Licenses	• WA-16-PL, WA-17-PL
Approximate water depth	• ~80–960 m
Activities Summary	Routine Operations: • routine production • routine IMMR of the platform and associated subsea infrastructure including pigging of the flowlines and pipeline • well unloading and clean-up • installation and use of the water handling unit • non-routine and unplanned activities and incidents associated with the above • supporting activities associated with the activities (e.g. vessel operations, helicopter transfers, etc.) Xena-03 Drilling and Tie-back: • drill one new well (Xena-03) in the Xena field • tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform • pre-commissioning and commissioning activities
Infrastructure	• Platform, wells, Xmas trees, umbilicals, spools, jumpers, manifolds, flowlines, riser, chemical supply lines and the export pipeline (see **Table 2** for their approximate location)
Vessels	• MODU type could be Moored, Dynamically Positioned (DP) or hybrid moored/DP (required for Xena-03 drilling activity) • Primary Installation Vessel (required for Xena-03 subsea installation activity) • Vessel for routine IMMR and Xmas tree installation, isolation testing or contingent activities • Support vessels including heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and other general supply/support vessels appropriate to the nature of petroleum activities

Pluto Operations Facility Environment Plan	
Key dates	Routine Operations: • Ongoing
Approximate duration of Xena-03 Drilling and Tie-back	• Drilling: Activities are currently anticipated to take around 60 days to complete • Subsea installation: Activities are currently anticipated to have a cumulative duration of around three weeks (including mobilisation, demobilisation and contingency) • Timing and duration of activities is subject to change due to project schedule requirements, MODU/vessel availability, unforeseen circumstances and weather constraints
Operational Areas and Exclusion zones	The Operational Area for Routine Operations comprises: • The platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform • The export pipeline (PITL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m corridor either side of the pipeline • Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure Xena-03 Drilling and Tie-Back: • The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities • Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities
Distance to nearest town	• ~ 160 km north-west of Dampier
Distance to nearest marine park/ nature reserve	• The Operational Area overlaps the Montebello Australian Marine Park Multiple Use Zone (IUCN category VI)

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where Pluto Facility Operations (including Xena-03 drilling and tie-back activities) could potentially have an environmental consequence (direct or indirect). The broadest extent of the EMBA takes into consideration planned and unplanned activities. For this EP, the EMBA has been developed by combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. For this EP, the modelling scenarios that inform the EMBA are a loss of well integrity, loss of pipeline integrity or a vessel collision. The EMBA is depicted in **Figure 2**.

The EMBA does not represent the extent of the predicted impact of the highly unlikely unplanned release of hydrocarbons. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time of the release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of the release.

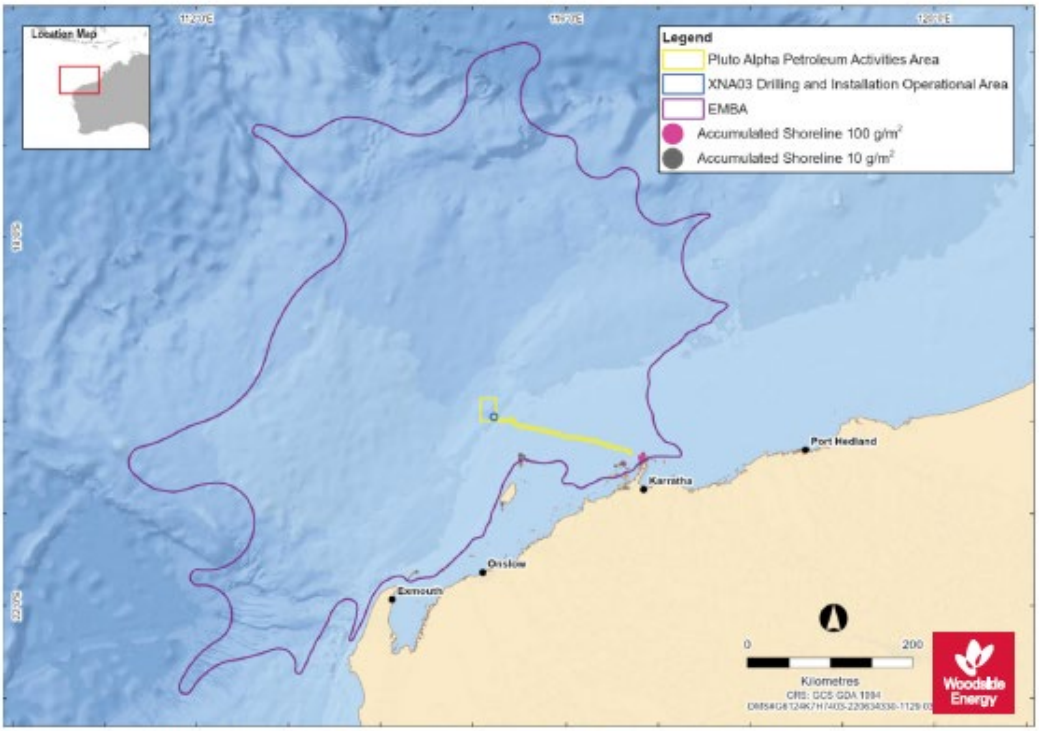

Figure 2: Environment that May Be Affected by the Pluto Facility Operations Petroleum Activities Program including Xena-03 drilling and tie-back

Mitigation and Management Measures

Woodside has undertaken an assessment to identify potential impacts and risks to the environment arising from the proposed activities considering timing, duration, location. Mitigation and management measures for proposed activities are outlined in **Table 3**. Further details will be provided in the EP.

Table 3. Summary of key risks and/or impacts and management measures associated with Pluto Facility Operations, including Xena-03 drilling and tie-back.

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Planned Activities (Routine and Non-routine)			

Physical Presence: Interaction with Other Marine Users	**Operations**
	Presence of the Pluto facility, subsea infrastructure and routine IMMR activities excluding and/or displacing other users from the Petroleum Safety Zone (PSZ) and Operational Area respectively.
	
	Drilling and Tie-back Activities
	Physical presence of anchor system, mobile offshore drilling unit (MODU), support vessels, anchor handling vessels, installation vessels, and associated safety exclusion zones.
		Operations
		Potential isolated social impact resulting from interaction with other sea users such as:
		• Commercial fisheries
		• Tourism and recreation
		• Commercial vessels/ shipping
		
		Drilling and Tie-back Activities
		Temporary displacement of commercial fishing activities.
			• Implement a 500 m PSZ around the platform.
			• Establish a 500 m safety exclusion zone around MODU and the installation vessel which is communicated to marine users
			• Notifying the Australian Hydrographic Office (AHO) of location of permanent new infrastructure to enable update of maritime charts
			• Continued consultation relating to the Petroleum Activities Program
			• Implement Pluto's collision prevention system to alert marine vessels of the facility location which reduces the likelihood of adverse interaction with other marine users
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			  • Activity support vessel surveillance

Physical Presence: Disturbance to Seabed	**Operations** Presence of Pluto facility and subsea infrastructure modifying marine habitats. Subsea operations, IMMR activities resulting in disturbance to seabed. **Drilling and Tie-back Activities** Disturbance to seabed during drilling operations. Disturbance to seabed during subsea installation.	**Operations** Localised modification of seabed habitat (formation of artificial reef) within Operational Area. Potential minor, localised modification of seabed habitat within the Operational Areas. **Drilling and Tie-back Activities** Loss or damage to benthic habitats and communities.	• Monitoring and maintenance of subsea infrastructure to manage scour and flowline movement within integrity envelope • Monitoring and maintenance of redundant infrastructure in accordance with the IMMR process • Vessels used for IMMR will not anchor under routine operations • Reasonable attempt(s) at removal of wellhead will be undertaken in the event of a re-spud • Positioning technology used to place seabed infrastructure within the design footprint to reduce seabed disturbance • Project-specific Basis of Well Design, which includes an assessment of seabed sensitivity • Wet parked items will be tracked and removed from the seabed • Pre-lay survey undertaken prior to installation of flowlines
Routine Acoustic Emissions: Generation of Noise during Routine Operations	Noise generated from operational activities from: • facility and associated infrastructure • vessels • helicopters • IMMR activities • Positioning equipment	Localised behavioural impacts to marine fauna around vessels and Pluto platform.	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Acoustic Emissions: Generation of Noise during Tie-back Activities	Noise during Tie-back Activities generated from: • drilling, (hybrid MODU and DP) • vessels and helicopters • positioning equipment	Potential impacts to marine mammals, reptiles and fish, varying from behavioural responses to physiological impact (TTS).	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions • Implement adaptive management procedures as required

Routine and Non-Routine Discharges: Discharge of Hydrocarbons and Chemicals	**Operations**
	Discharge of subsea control fluids.
	Potential non-routine hydraulic fluid discharge.
	Discharge of hydrocarbons remaining in subsea pipelines/ flowlines and equipment as a result of subsea intervention works.
	Discharge of chemicals remaining in subsea infrastructure and equipment or the use of chemicals for subsea IMMR activities.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
	Drilling and Tie-back Activities
	Discharge of flexible jumper and flying leads precommissioning fluids to the marine environment.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
		Operations
		Potential slight short-term, localised decrease in water quality at release location during IMMR activities.
		Drilling and Tie-back Activities
		Potential short-term impacts on marine biota.
		Potential slight short-term, localised decrease in water quality at release location during installation activities.
			• Marine discharges managed according to regulatory requirements
			• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Flushing and isolation of subsea infrastructure where practicable during IMMR disconnection activities to reduce releases to the environment
			• Monitoring subsea control fluid use, investigating material discrepancies to identify potential integrity failures
			• Other controls include:
			  • Chemical Selection and Assessment
			  • Development and application of robust procedures

Routine and Non-Routine Discharges: Produced Water (PW)	Discharge of PW during routine and non-routine operations.	Potential minor, short term impact to water quality, marine sediments and marine biota.	• Marine discharges managed according to regulatory requirements • Online monitoring and procedural controls in place for PW discharge • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Woodside internal guidance and procedures are adhered to • Implement adaptive monitoring and management
Routine and Non-Routine Marine Wastewater Discharges: Discharge of Sewage, Putrescible Waste, Grey Water, Bilge Water, Drain Water, Cooling Water and Brine	**Operations** Discharge of sewage, grey water and putrescible waste from the platform and support vessels to the marine environment. Discharge of deck, bilge and drain water from the platform and support vessels to the marine environment. Discharge brine and cooling water from platform and support vessels to the marine environment. **Drilling and Tie-back Activities** Routine offshore discharge from MODU and vessels of sewage, grey water, waste, bilge water and deck drainage.	**Operations** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location. **Drilling and Tie-back Activities** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location.	• Marine discharges managed according to regulatory requirements • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Where there is the potential for loss of primary containment of oil and chemicals on the platform, MODU or vessels, bunding or closed drainage systems are in place to contain spills

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-routine Atmospheric Emissions	**Operations** Operational fuel combustion, flaring and fugitive emissions. Operational emissions associated with energy generation, onshore processing of Pluto gas, third party transportation, regassification and combustion by end users. **Drilling and Tie-back Activities** Contingent venting of gas during drilling (e.g. well kick). Vessel and helicopter emissions.	Potential slight short-term, localised air quality changes, limited to the airshed local to the facility.	• Comply with legislative and regulatory requirements for marine air pollution and emissions reporting • Robust well control procedures to minimise risk of well kick during drilling • Maintain flare to maximise efficiency of combustion
Routine Light Emissions: Light Emissions from the Platform and Project Vessels	**Operations** Light emissions from facility, MODU and support vessels. Light emissions from facility during flaring. **Drilling and Tie-back Activities** Light emissions during drilling including flaring, from support vessels, primary installation vessel as well as subsea vehicles.	Negligible, localised potential for behavioural disturbance of species near Pluto platform and vessels including fish, marine reptiles and seabirds.	• Lighting limited to the minimum required for navigational and safety requirements, except for emergency events • Well unloading acceptance criteria that define the well objectives will be established, minimising light from flaring • Implementation of a Seabird Management Plan

Routine and Non-Routine Discharges: Drill Cuttings, Drilling Fluids and Well Removal Fluids during drilling and tie-back activities	Routine discharge of water-based muds (WBM) drill cuttings to the seabed and the marine environment.
	Non-routine discharge of treated non-water-based muds (NWBM) drill cuttings to the marine environment.
	Non-routine discharge of wash water from mud pits and vessel tank wash fluids during drilling and tie-back.
	Routine discharge of well clean-out fluids during drilling and tie-back.
	Non-routine discharge of well annular fluids during drilling and tie-back.
	Non-routine discharge of WBM and cement cuttings to the marine environment during drilling out of a cement plug.
	Non-routine discharge of grit and flocculant during removal of well infrastructure.
		Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• NWBM base oils selected based on expected toxicity
			• NWBM will be used where written justification process has been followed and bulk NWBM will be retained for disposal onshore or maintained on rig for re-use
			• Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met the fluid will be returned to shore
			• Drill cuttings returned to the MODU will be discharged below the water line to reduce carriage and dispersion to other areas
			• Other controls include:
			  ◦ Restrict overboard discharge of NWBM
			  ◦ Measure oil content in displacement, brine, workover or intervention fluids, pit and tank wash
			  ◦ Permit to Work system
			  ◦ Solid Control Equipment
			  ◦ Woodside Engineering Standard for Rig Equipment

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-Routine Discharges: Cement, Cementing Fluids, Subsea Well Fluids, Unused Bulk Product and Subsea Chemicals during drilling and tie-back activities	Routine discharge of cement and cementing fluids, to the seabed and the marine environment during drilling and tie-back. Routine discharge of subsea well fluids (inc. blow-out preventer (BOP)) and well construction activity control fluids) during drilling and tie-back. Non-routine discharge of unused bulk products during drilling and tie-back.	Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met, fluids will be returned to shore • During well unloading and completion activities, if produced water is not flared, it will be processed through a water treatment package prior to discharge to the environment • Options for use of excess bulk cement, bentonite or barite will be managed and only discharged to the marine environment as a last option
Unplanned Events (Accidents / Incidents) – Routine Operations (i.e. no drilling or subsea installation activities)			
Unplanned Hydrocarbon Release: Loss of Well Containment	Release of hydrocarbons resulting from loss of subsea well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Well operated in compliance with the accepted well operation management plan (WOMP) including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity **Spill response arrangements** • Arrangements supporting the Oil Pollution Emergency Plan (OPEP) will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Pipeline and Riser Loss of Containment	Release of hydrocarbons resulting from loss of export pipeline containment. Release of hydrocarbons resulting from loss of containment of subsea flowlines and infrastructure.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of pipeline and riser containment** • The pipeline, flowline and riser design include a range of measures that specifically aid in minimising the risk of external damage • Maintain well integrity to contain reservoir fluids within the well envelope to avoid an incident • Maintain emergency shutdown (ESD) system and critical external and internal communication systems to facilitate prevention and response to accidents and emergencies **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Loss of Structural Integrity	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of structural integrity** • Maintain structural integrity to ensure availability of critical systems during a major accident or environment event and prevent structural failures from contributing to escalation • Maintain control of ignition sources and passive fire protection to prevent loss of structural integrity • Maintain topsides hydrocarbon-containing infrastructure integrity **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Unplanned Hydrocarbon Release: Loss of Structural Integrity	A loss of marine vessel separation between a vessel and the platform may result in a loss of hydrocarbon containment from the Pluto facility and/or the release of fuel from the vessel.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of marine vessel separation** • Maintaining collision warning systems and navigational aids to alert facility of a potential collision with a vessel, and to alert vessels so that they may avoid collisions with the facility **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Topsides Loss of Containment	Hydrocarbon release from topsides process equipment o the marine environment and atmosphere.	Potential moderate short-term impacts to the marine environment: • Disruption to marine fauna, including protected species and/or impacts to water quality	**Preventing topsides loss of containment** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP are raised for unplanned releases within event reporting system
Unplanned Hydrocarbon Release: Loss of Control of Suspended Load from Platform	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of control of suspended load** • Maintain platform lifting equipment to prevent failure or dropped/swinging loads that could result in an incident
Unplanned Events (Accidents / Incidents) – Drilling and subsea installation			
Unplanned Hydrocarbon Release: Loss of Well Integrity During Drilling Operations	Loss of hydrocarbons to marine environment due to loss of well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Hydrocarbon Release: Vessel Collision	Loss of hydrocarbons to marine environment due to a vessel collision (e.g. project vessels or other marine users).	Potential minor, short-term impact on marine species, habitats and protected areas.	**Preventing vessel collision**
			• Comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements
			• Establish temporary safety exclusion zones around vessels which are communicated to marine users to reduce the likelihood of collision
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			Spill response arrangements
			• Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned
			• Emergency response activities would be implemented in line with the OPEP

Unplanned Discharges: Release of Hydrocarbons During Bunkering, Transfer, Storage and Use	Accidental discharge of marine diesel to the marine environment during bunkering, transfer, storage or use on the facility, MODU or vessels.	Potential slight, short-term local impacts to marine species and habitats.	**Preventing unplanned hydrocarbon release due to bunkering** • Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas bunded or secondarily contained when they are not being handled or temporarily moved • Appropriate bunkering equipment kept and maintained • Compliance with Contractor procedures for the management of bunkering/helicopter operations to reduce the likelihood and potential severity of a spill **Spill response arrangements** • Maintain and locate spill kits in proximity to hydrocarbon storage and deck areas for use to contain and recover deck spills • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP • Incident reports are raised for unplanned releases within event reporting system
Unplanned Discharges: Deck and Subsea Spills	Accidental discharge of hydrocarbons/ chemicals from MODU, installation vessel and project vessels deck activities and equipment, from subsea ROV hydraulic leaks. Unplanned release of chemicals or hydraulic fluid due to failure of subsea equipment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas are bunded or secondarily contained when they are not being handled/moved temporarily • Spill kits positioned in high-risk locations around vessels and the MODU (near potential spill points such as transfer stations) • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Installation vessels have self-containing hydraulic oil drip tray management system • Woodside Engineering Standard for Rig Equipment (incl third party equipment such as ROVs) **Spill response arrangements** • First strike plan • Shipboard Oil Pollution Emergency Plan (SOPEP)

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Discharge: Drilling/ Project Fluids	Accidental discharge of project fluids (WBM/NWBM/ base oil) and cement to marine environment due to failure of slip joint packers, bulk transfer hose/fitting, emergency disconnect system or from drilling and installation operations.	Potential slight, short-term local impacts to marine species and habitats.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Marine riser's telescopic joint to be comprised of a minimum of two packers (one hydraulic and one pneumatic) and pressure tested
			• No overboard disposal of bulk NWBM
			• Compliance with Contractor procedures for the transfer and management of drilling fluids to reduce the likelihood and severity of a spill
			• Other controls include:
			  • Oil % content in displacement, brine, workover or intervention fluids, pit and tank wash
			  • PTW system
			  • Solid Control Equipment

Unplanned Discharges: Loss of Hazardous and Non-Hazardous Waste	Incorrect disposal or accidental discharge of non hazardous and hazardous waste to the marine environment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes • Implement Waste Management Plan, which provides for safe handling and transportation, segregation and storage and appropriate classification of waste generated • Solid waste/equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Incident reports are raised for unplanned releases within event reporting system
Physical Presence: Seabed disturbance from dropped objects or loss of station keeping leading to anchor drag	Dropped objects resulting in the disturbance of benthic habitat. Loss of station keeping of the MODU leading to anchor drag and the disturbance of benthic habitat. Dropped objects over live infrastructure. Dropped objects during vessel transfers or installation activities.	Potential slight, short-term local impacts to marine species and habitats.	• MODU/installation vessel inductions include control measures for dropped object prevention • Equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Implement project-specific mooring design, with sufficient capability, testing and inspection
Physical Presence: Interactions with Marine Fauna	Physical presence of project/ support vessels resulting in collision with marine fauna.	Potential injury or death of marine fauna (single animal), including protected species.	• Comply with regulatory requirements for interactions with marine fauna to reduce the likelihood of a collision occurring
Physical Presence: Introduction of Invasive Marine Species (IMS)	Invasive species in vessel ballast tanks or on vessels/ submersible equipment.	Potential introduction of IMS possibly resulting in an alteration of the localised environment and potential reduction in native species through predation, competition or interspecies breeding.	• Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements, as applicable • Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **29 March 2024** via:

E: Feedback@woodside.com.au

Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

http://www.woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

1.2 Summary Information Sheet

Woodside Energy

CONSULTATION

SUMMARY INFORMATION SHEET

Februrary 2024

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

When preparing an environment plan (EP), Woodside needs to notify relevant persons and obtain their input. This helps confirm current measures or identify additional measures that may need to be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. Woodside wants to give relevant persons whose functions, interests or activities may be affected by the proposed activity the opportunity to identify themselves and provide feedback on our proposed activity.

This summary information sheet provides a high-level overview of the Pluto Facility Operations environment plan. Further details, including an assessment of the potential impacts and risks to the environment, as well as mitigation and management measures, are available within the Pluto Facility Operations Environment Plan Consultation Information Sheet (February 2024) which can be found at:

http://www.woodside.com/what-we-do/consultation-activities

Overview

Woodside plans to submit a five-year revision of the Operations EP for the Pluto Facility. Operations commenced in 2012.

The Pluto platform is located in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.

The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

A map showing the location of the activities is provided below.

Work Method

Key features of the Pluto Facilities include:

- A fixed platform with five decks, separated by two major vertical trusses. The platform has a pedestal crane, a flare boom, helideck and accommodation facilities. A water handling module is currently being installed to enable overboard discharge of treated produced water.
- The export pipeline and associated 6-inch chemical supply line, extending from the offshore platform to the onshore LNG Plant.
- Subsea infrastructure connecting wells at the Pluto, Xena and Pyxis reservoirs to the platform via production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers.

Summary of key activities includes:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
- The Xena-03 Drilling and Tie-Back project, which includes:
  - drilling one new well (Xena-03) in the Xena field
  - tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform
  - pre-commissioning and commissioning activities.

During normal operations, vessels will typically be limited to supply/support vessels and IMMR vessels. It is anticipated vessels will operate 24 hours per day for the duration of activities.

The Xena-03 Drilling and Tie-Back project is anticipated to commence with drilling in Q2 2025 and installation in Q3 2025.

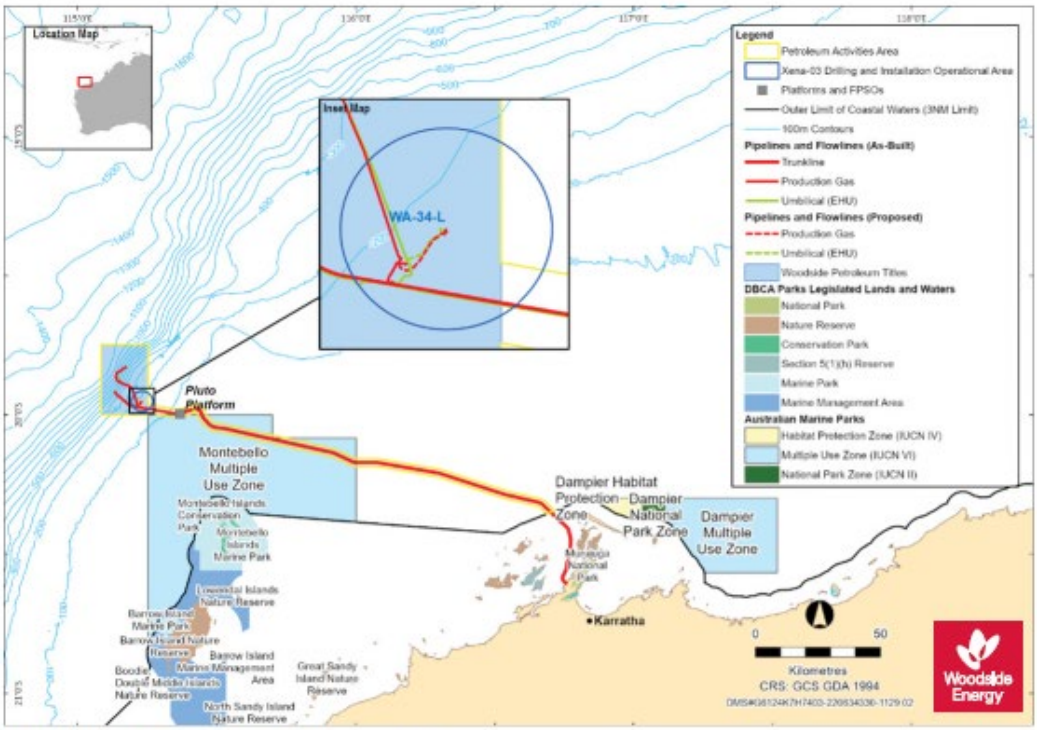

Figure 1 Pluto Facility Operational Area and Drilling Operational Area.

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where Pluto Facility Operations (including Xena-03 drilling and tie-back activities) could potentially have an environmental consequence (direct or indirect). The broadest extent of the EMBA takes into consideration planned and unplanned activities. For this EP, the EMBA has been developed by combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. For this EP, the modelling scenarios that inform the EMBA are a loss of well integrity, loss of pipeline integrity or a vessel collision. The EMBA is depicted in **Figure 2**.

The EMBA does not represent the extent of the predicted impact of the highly unlikely unplanned release of hydrocarbons. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time of the release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of the release.

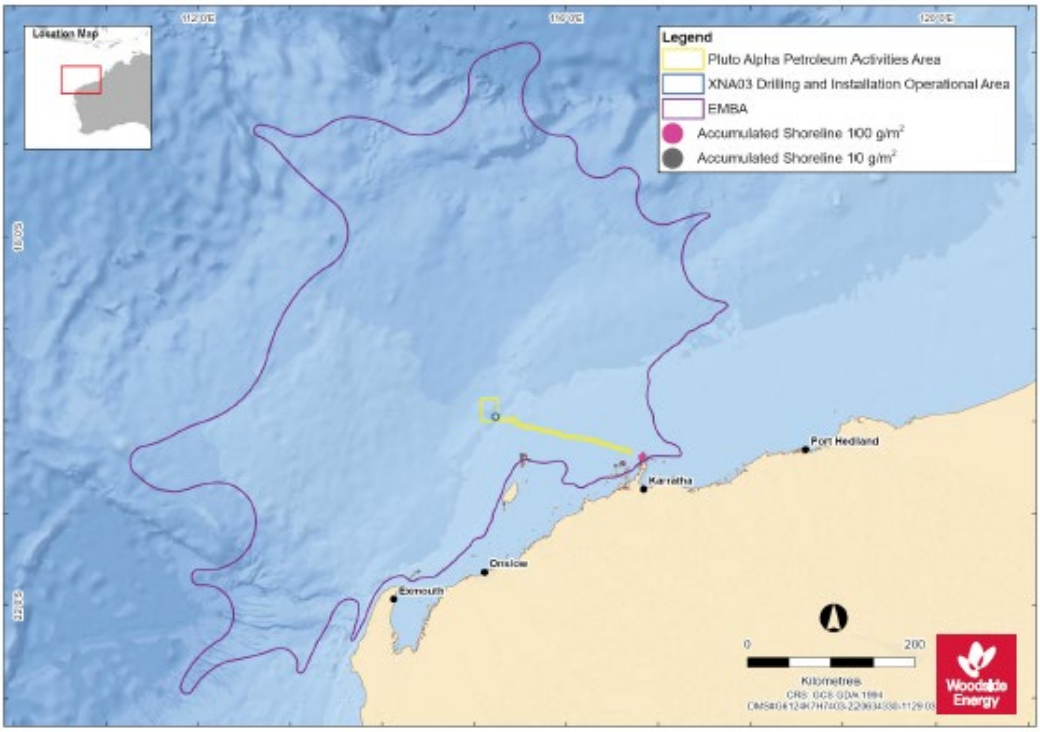

Figure 2. Environment that May Be Affected (EMBA) by the Pluto Facility operations Petroleum Activities Program including Xena-03 drilling and tie-back.

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activities, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth)* and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

1.3 Updated Consultation Information Sheet

Woodside Energy

CONSULTATION

INFORMATION SHEET

February 2024

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

Woodside consults relevant persons in the course of preparing an environment plan (EP) to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that could be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. This is the intended outcome of consultation.

Woodside's aim is to ensure the activity is carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD), by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level. Woodside wants relevant persons whose functions, interests or activities may be affected by the proposed activity to have the opportunity to provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Overview

Woodside will submit a five-year revision of the Operations EP for the Pluto Facility (Pluto) located in Commonwealth waters, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (regulations). The Operations EP currently covers the operation of a fixed platform (Pluto) and subsea infrastructure connected to the Pluto, Xena and Pyxis reservoirs. The Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Location and Operations

The Pluto platform and associated subsea infrastructure is located in Production Licenses WA-1-L and WA-34-L. The export pipeline and flowline are within Pipeline Licenses WA-17-PL and WA 16 PL, respectively (see **Figure 1**).

The Xena-03 well is located in Production Licence WA 34 L, around 15km from the Pluto Platform and around 190km west north-west of Dampier. The Xena-03 well will be located around 2 km from the existing Xena-02 well and tied back to the existing Pluto production systems.

The Pluto facility commenced production in 2012. The facility produces wet gas and condensate, which is transported for processing at the onshore Pluto LNG Plant via a 180km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from a fixed operator console at the Pluto onshore Central Control Room (CCR), which is constantly manned.

Installation of a water handling module on the platform is underway to enable the processing and discharge of produced water at the platform. Wet gas will be processed through the water handling module and transported onshore, with treated water discharged overboard.

Table 1 summarises the activities, which will be managed under the Operations EP.

Proposed Activity Overview – Production / Operations

The production scope includes the following activities to be undertaken during the next five-year period:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) activities
- Commissioning and operation of the water handling module
- Non-routine and unplanned activities and incidents associated with the above.

Future decommissioning of infrastructure will be subject to separate future EPs.

Production

Production commenced from the Pluto facility in 2012 and is currently expected to continue until at least 2031. Production is planned to commence from the Xena-03 well around Q3 2025.

Inspection

Inspection of infrastructure is the process of physical verification and assessment of subsea components to detect changes compared to its installed state. Typical site inspection activities include visual surveys via a remotely operated vehicle, side scan sonar surveillance, cathodic protection measurements and ultrasonic pipe condition checks.

Monitoring

Monitoring is the surveillance of the physical and chemical environment around subsea infrastructure. Monitoring activities may include process composition, corrosion probes, corrosion mitigation checks, and metocean and geological monitoring.

Maintenance

Maintenance of infrastructure is required at regular and/or planned intervals to maintain performance reliability and prevent deterioration or failure of equipment. Maintenance activities may include cycling of valves and leak pressure testing.

Repair

Repair activities are those required when a subsea system or component is degraded or damaged as defined by design codes.

Vessels

Operations support vessels will be used to undertake IMMR of subsea infrastructure. The vessel size and type will be dependent on the work scope. The vessels will not anchor during IMMR activities unless there is an unexpected event or an emergency. An Accommodation Support Vessel (ASV) may be required for short periods (typically less than 1 month) to support planned maintenance campaigns, shutdown maintenance or major projects.

Proposed Activity Overview – Drilling and Tie-Back

The scope for this EP includes drilling, completion, subsea installation (including minor changes to existing infrastructure) along with commissioning activities to bring in gas from the Xena-03 well to the Pluto platform. This includes directly installing infrastructure from the installation vessel in the relevant location.

Other contingent activities that Woodside may need to perform include well abandonment, re-spud, side-track, well suspension, well intervention, wireline logging, leaving wellhead assembly in situ, sediment mobilisation and relocation, venting, well test/unload and emergency disconnect sequence.

Drilling, subsea installation and commissioning activities

Woodside plans to drill one new well in the Xena field (Xena-03) and to install an associated wellhead and Xmas tree. Xena-03 will be connected to the existing Pyxis Hub subsea infrastructure. The well will be located at approximately 177 m water depth. Other activities include:

- Pre-commissioning and cold-commissioning (non-hydrocarbon) activities associated with subsea infrastructure including leak testing of the flexibles, subsea control systems verification and function-testing of valves to verify the production system and electric and hydraulic flying leads are ready for entry into the commissioning phase; and
- Well start-up and commissioning (initial start-up) of the Xena 03 well involving slow and gradual build up to maximum well gas production rates and then well performance testing such as Multi-Rate Testing, simulated emergency shut down (ESD) of the well followed by Pressure Build-Up Testing.

Drilling activities are currently anticipated to commence around Q2 2025, subsea installation and commissioning activities are currently anticipated around Q3 2025.

The timing and duration of the proposed activities is subject to approvals, project schedule requirements, vessel availability, weather or unforeseen circumstances.

Project vessels

Activities will be completed using a range of vessels. Operations will use support vessels to undertake inspection, monitor, maintenance and repair of subsea infrastructure. The vessel size and type will be dependent on the work scope.

The proposed Xena-03 drilling and tie-back will be performed using a moored, dynamically positioned (DP) or hybrid (DP/moored) mobile offshore drilling unit (MODU). During the subsea installation campaign, a construction/primary installation vessel will perform installation activities.

The project will be supported by other vessels, such as general support vessels, cargo vessels, anchor handling vessels and multiservice construction vessels during drilling activities. Support vessels will be used to transport equipment and materials between the MODU/installation vessel and port.

Drilling operations for the production well are currently expected to take around 60 days to complete.

Installation of subsea infrastructure and pre-commissioning is anticipated to commence when the relevant new production well has been drilled and is expected to have a cumulative duration of about three weeks. Drilling and installation of subsea infrastructure may be performed over multiple campaigns.

The support and installation vessels will operate on DP and will not anchor/moor on the seabed. It is anticipated vessels will operate 24 hours per day for the duration of drilling and tie-back activities.

Communications with mariners

The location of Pluto is marked on nautical charts and the platform is surrounded by a 500 m radius petroleum safety zone (PSZ). A 4 km radius Operational Area will be applied around the Xena-03 drill centre.

A temporary 500 m safety exclusion zone will apply around the MODU and subsea installation vessel to manage vessel movements.

Commercial fishers and other marine users are permitted to use the Operational Area but should take care when entering and remain clear of the safety exclusion zones. The wells will continue to be marked on navigational charts.

Assessment

Woodside has undertaken an assessment to identify potential risks to the marine environment and relevant persons, considering timing, duration, location and potential impacts arising from the planned activities. Mitigation and management measures will be implemented and are summarised in **Table 3.** Further details will be provided in the EP.

In preparing the EP, Woodside's intent is to minimise environmental and social impacts associated with the proposed activities. Woodside is seeking any interest or comments you may have to inform Woodside's decision making.

Joint Venture

Woodside Burrup Ltd is the Titleholder for this activity on behalf of the Pluto LNG joint venture partners, Tokyo Gas Pluto Pty Ltd and Kansai Electric Power Australia Pty Ltd.

We welcome your feedback by 29 March 2024.

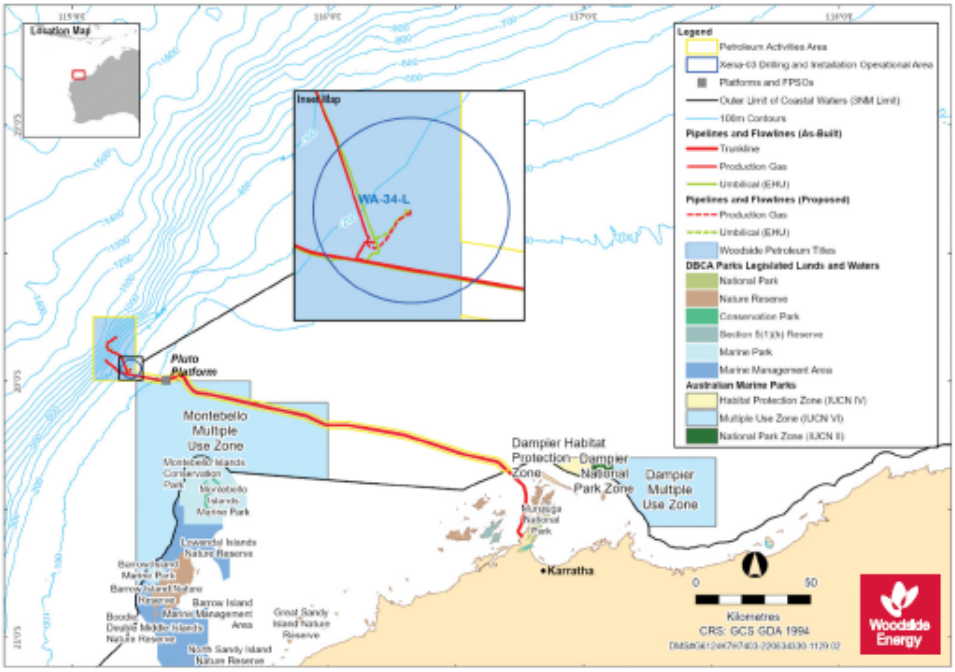

Figure 1. Pluto Facility and Operational Areas.

Table 1. Activity summary

Pluto Operations Facility Environment Plan	
Facility type	• Fixed platform, processing equipment, pipelines
Production License Areas	• WA-1-IL, WA-34-L
Pipeline Licenses	• WA-16-PL, WA-17-PL
Approximate water depth	• ~80–960 m
Activities Summary	Routine Operations: • routine production • routine IMMR of the platform and associated subsea infrastructure including pigging of the flowlines and pipeline • well unloading and clean-up • installation and use of the water handling unit • non-routine and unplanned activities and incidents associated with the above • supporting activities associated with the activities (e.g. vessel operations, helicopter transfers, etc.) Xena-03 Drilling and Tie-back: • drill one new well (Xena-03) in the Xena field • tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform • pre-commissioning and commissioning activities
Infrastructure	• Platform, wells, Xmas trees, umbilicals, spools, jumpers, manifolds, flowlines, riser, chemical supply lines and the export pipeline (see **Table 2** for their approximate location)
Vessels	• MODU type could be Moored, Dynamically Positioned (DP) or hybrid moored/DP (required for Xena-03 drilling activity) • Primary Installation Vessel (required for Xena-03 subsea installation activity) • Vessel for routine IMMR and Xmas tree installation, isolation testing or contingent activities • Support vessels including heavy lift vessel(s) (HLVs), multi-service construction vessel(s), anchor handling vessel(s) and other general supply/support vessels appropriate to the nature of petroleum activities

Pluto Operations Facility Environment Plan	
Key dates	Routine Operations: • Ongoing
Approximate duration of Xena-03 Drilling and Tie-back	• Drilling: Activities are currently anticipated to take around 60 days to complete • Subsea installation: Activities are currently anticipated to have a cumulative duration of around three weeks (including mobilisation, demobilisation and contingency) • Timing and duration of activities is subject to change due to project schedule requirements, MODU/vessel availability, unforeseen circumstances and weather constraints
Operational Areas and Exclusion zones	The Operational Area for Routine Operations comprises: • The platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform • The export pipeline (PITL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m corridor either side of the pipeline • Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure Xena-03 Drilling and Tie-Back: • The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities • Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements • An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities
Distance to nearest town	• ~ 160 km north-west of Dampier
Distance to nearest marine park/ nature reserve	• The Operational Area overlaps the Montebello Australian Marine Park Multiple Use Zone (IUCN category VI)

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where Pluto Facility Operations (including Xena-03 drilling and tie-back activities) could potentially have an environmental consequence (direct or indirect). The broadest extent of the EMBA takes into consideration planned and unplanned activities. For this EP, the EMBA has been developed by combining numerous modelling outputs based on highly unlikely releases of hydrocarbons to the environment. For this EP, the modelling scenarios that inform the EMBA are a loss of well integrity, loss of pipeline integrity or a vessel collision. The EMBA is depicted in **Figure 2**.

The EMBA does not represent the extent of the predicted impact of the highly unlikely unplanned release of hydrocarbons. Rather, the EMBA represents the merged area of many possible paths that a highly unlikely hydrocarbon release could travel, depending on the weather and ocean conditions at the time of the release. This means that in the highly unlikely event that a hydrocarbon release does occur, the whole EMBA will not be affected. The specific and minimal part of the EMBA that is affected will only be known at the time of the release.

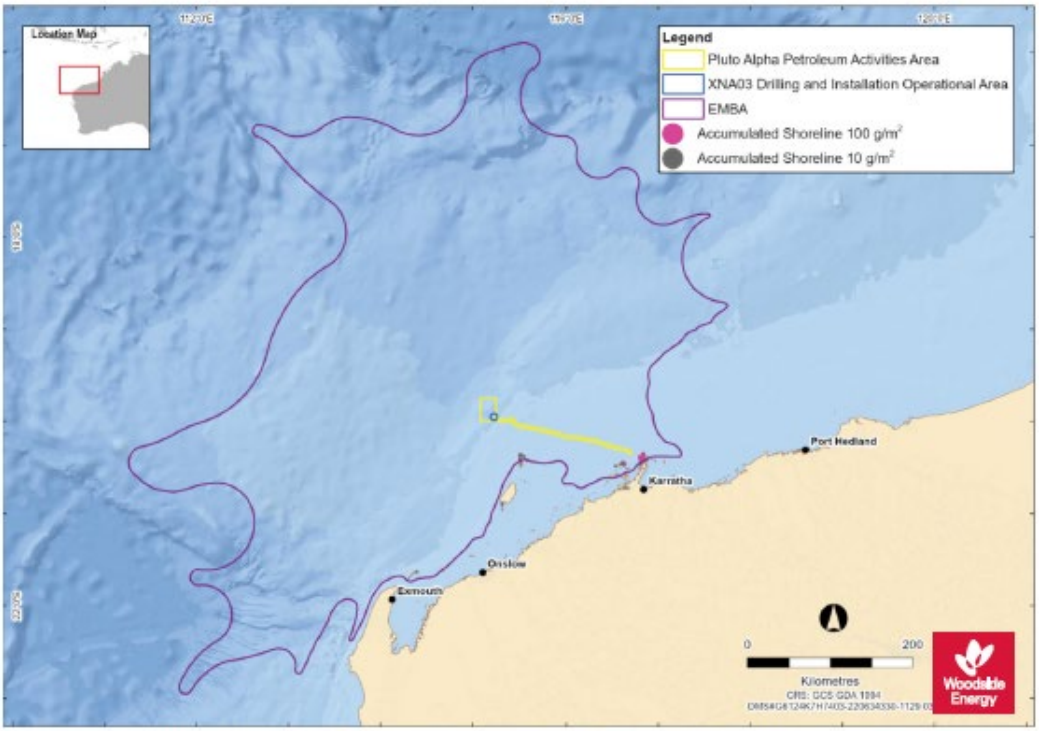

Figure 2: Environment that May Be Affected by the Pluto Facility Operations Petroleum Activities Program including Xena-03 drilling and tie-back

Mitigation and Management Measures

Woodside has undertaken an assessment to identify potential impacts and risks to the environment arising from the proposed activities considering timing, duration, location. Mitigation and management measures for proposed activities are outlined in **Table 3**. Further details will be provided in the EP.

Table 3. Summary of key risks and/or impacts and management measures associated with Pluto Facility Operations, including Xena-03 drilling and tie-back.

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Planned Activities (Routine and Non-routine)			

Physical Presence: Interaction with Other Marine Users	**Operations**
	Presence of the Pluto facility, subsea infrastructure and routine IMMR activities excluding and/or displacing other users from the Petroleum Safety Zone (PSZ) and Operational Area respectively.
	
	Drilling and Tie-back Activities
	Physical presence of anchor system, mobile offshore drilling unit (MODU), support vessels, anchor handling vessels, installation vessels, and associated safety exclusion zones.
		Operations
		Potential isolated social impact resulting from interaction with other sea users such as:
		• Commercial fisheries
		• Tourism and recreation
		• Commercial vessels/ shipping
		
		Drilling and Tie-back Activities
		Temporary displacement of commercial fishing activities.
			• Implement a 500 m PSZ around the platform.
			• Establish a 500 m safety exclusion zone around MODU and the installation vessel which is communicated to marine users
			• Notifying the Australian Hydrographic Office (AHO) of location of permanent new infrastructure to enable update of maritime charts
			• Continued consultation relating to the Petroleum Activities Program
			• Implement Pluto's collision prevention system to alert marine vessels of the facility location which reduces the likelihood of adverse interaction with other marine users
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			  • Activity support vessel surveillance

Physical Presence: Disturbance to Seabed	**Operations** Presence of Pluto facility and subsea infrastructure modifying marine habitats. Subsea operations, IMMR activities resulting in disturbance to seabed. **Drilling and Tie-back Activities** Disturbance to seabed during drilling operations. Disturbance to seabed during subsea installation.	**Operations** Localised modification of seabed habitat (formation of artificial reef) within Operational Area. Potential minor, localised modification of seabed habitat within the Operational Areas. **Drilling and Tie-back Activities** Loss or damage to benthic habitats and communities.	• Monitoring and maintenance of subsea infrastructure to manage scour and flowline movement within integrity envelope • Monitoring and maintenance of redundant infrastructure in accordance with the IMMR process • Vessels used for IMMR will not anchor under routine operations • Reasonable attempt(s) at removal of wellhead will be undertaken in the event of a re-spud • Positioning technology used to place seabed infrastructure within the design footprint to reduce seabed disturbance • Project-specific Basis of Well Design, which includes an assessment of seabed sensitivity • Wet parked items will be tracked and removed from the seabed • Pre-lay survey undertaken prior to installation of flowlines
Routine Acoustic Emissions: Generation of Noise during Routine Operations	Noise generated from operational activities from: • facility and associated infrastructure • vessels • helicopters • IMMR activities • Positioning equipment	Localised behavioural impacts to marine fauna around vessels and Pluto platform.	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Acoustic Emissions: Generation of Noise during Tie-back Activities	Noise during Tie-back Activities generated from: • drilling, (hybrid MODU and DP) • vessels and helicopters • positioning equipment	Potential impacts to marine mammals, reptiles and fish, varying from behavioural responses to physiological impact (TTS).	• Comply with regulatory requirements for interactions with marine fauna to prevent adverse interactions • Implement adaptive management procedures as required

Routine and Non-Routine Discharges: Discharge of Hydrocarbons and Chemicals	**Operations**
	Discharge of subsea control fluids.
	Potential non-routine hydraulic fluid discharge.
	Discharge of hydrocarbons remaining in subsea pipelines/ flowlines and equipment as a result of subsea intervention works.
	Discharge of chemicals remaining in subsea infrastructure and equipment or the use of chemicals for subsea IMMR activities.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
	Drilling and Tie-back Activities
	Discharge of flexible jumper and flying leads precommissioning fluids to the marine environment.
	Discharge of minor fugitive hydrocarbon from subsea equipment.
		Operations
		Potential slight short-term, localised decrease in water quality at release location during IMMR activities.
		Drilling and Tie-back Activities
		Potential short-term impacts on marine biota.
		Potential slight short-term, localised decrease in water quality at release location during installation activities.
			• Marine discharges managed according to regulatory requirements
			• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Flushing and isolation of subsea infrastructure where practicable during IMMR disconnection activities to reduce releases to the environment
			• Monitoring subsea control fluid use, investigating material discrepancies to identify potential integrity failures
			• Other controls include:
			  • Chemical Selection and Assessment
			  • Development and application of robust procedures

Routine and Non-Routine Discharges: Produced Water (PW)	Discharge of PW during routine and non-routine operations.	Potential minor, short term impact to water quality, marine sediments and marine biota.	• Marine discharges managed according to regulatory requirements • Online monitoring and procedural controls in place for PW discharge • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Woodside internal guidance and procedures are adhered to • Implement adaptive monitoring and management
Routine and Non-Routine Marine Wastewater Discharges: Discharge of Sewage, Putrescible Waste, Grey Water, Bilge Water, Drain Water, Cooling Water and Brine	**Operations** Discharge of sewage, grey water and putrescible waste from the platform and support vessels to the marine environment. Discharge of deck, bilge and drain water from the platform and support vessels to the marine environment. Discharge brine and cooling water from platform and support vessels to the marine environment. **Drilling and Tie-back Activities** Routine offshore discharge from MODU and vessels of sewage, grey water, waste, bilge water and deck drainage.	**Operations** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location. **Drilling and Tie-back Activities** Potential slight, localised increase in water temperature, salinity and short-term water quality changes around discharge location.	• Marine discharges managed according to regulatory requirements • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Where there is the potential for loss of primary containment of oil and chemicals on the platform, MODU or vessels, bunding or closed drainage systems are in place to contain spills

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-routine Atmospheric Emissions	**Operations** Operational fuel combustion, flaring and fugitive emissions. Operational emissions associated with energy generation, onshore processing of Pluto gas, third party transportation, regassification and combustion by end users. **Drilling and Tie-back Activities** Contingent venting of gas during drilling (e.g. well kick). Vessel and helicopter emissions.	Potential slight short-term, localised air quality changes, limited to the airshed local to the facility.	• Comply with legislative and regulatory requirements for marine air pollution and emissions reporting • Robust well control procedures to minimise risk of well kick during drilling • Maintain flare to maximise efficiency of combustion
Routine Light Emissions: Light Emissions from the Platform and Project Vessels	**Operations** Light emissions from facility, MODU and support vessels. Light emissions from facility during flaring. **Drilling and Tie-back Activities** Light emissions during drilling including flaring, from support vessels, primary installation vessel as well as subsea vehicles.	Negligible, localised potential for behavioural disturbance of species near Pluto platform and vessels including fish, marine reptiles and seabirds.	• Lighting limited to the minimum required for navigational and safety requirements, except for emergency events • Well unloading acceptance criteria that define the well objectives will be established, minimising light from flaring • Implementation of a Seabird Management Plan

Routine and Non-Routine Discharges: Drill Cuttings, Drilling Fluids and Well Removal Fluids during drilling and tie-back activities	Routine discharge of water-based muds (WBM) drill cuttings to the seabed and the marine environment.
	Non-routine discharge of treated non-water-based muds (NWBM) drill cuttings to the marine environment.
	Non-routine discharge of wash water from mud pits and vessel tank wash fluids during drilling and tie-back.
	Routine discharge of well clean-out fluids during drilling and tie-back.
	Non-routine discharge of well annular fluids during drilling and tie-back.
	Non-routine discharge of WBM and cement cuttings to the marine environment during drilling out of a cement plug.
	Non-routine discharge of grit and flocculant during removal of well infrastructure.
		Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• NWBM base oils selected based on expected toxicity
			• NWBM will be used where written justification process has been followed and bulk NWBM will be retained for disposal onshore or maintained on rig for re-use
			• Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met the fluid will be returned to shore
			• Drill cuttings returned to the MODU will be discharged below the water line to reduce carriage and dispersion to other areas
			• Other controls include:
			  ◦ Restrict overboard discharge of NWBM
			  ◦ Measure oil content in displacement, brine, workover or intervention fluids, pit and tank wash
			  ◦ Permit to Work system
			  ◦ Solid Control Equipment
			  ◦ Woodside Engineering Standard for Rig Equipment

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Routine and Non-Routine Discharges: Cement, Cementing Fluids, Subsea Well Fluids, Unused Bulk Product and Subsea Chemicals during drilling and tie-back activities	Routine discharge of cement and cementing fluids, to the seabed and the marine environment during drilling and tie-back. Routine discharge of subsea well fluids (inc. blow-out preventer (BOP)) and well construction activity control fluids) during drilling and tie-back. Non-routine discharge of unused bulk products during drilling and tie-back.	Potential impacts to marine biota, as well as localised reduction in water quality with potential effects on both water quality and benthic communities.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Fluids contaminated with hydrocarbons will be treated to meet specified discharge limits prior to discharge or contained. If discharge specifications are not met, fluids will be returned to shore • During well unloading and completion activities, if produced water is not flared, it will be processed through a water treatment package prior to discharge to the environment • Options for use of excess bulk cement, bentonite or barite will be managed and only discharged to the marine environment as a last option
Unplanned Events (Accidents / Incidents) – Routine Operations (i.e. no drilling or subsea installation activities)			
Unplanned Hydrocarbon Release: Loss of Well Containment	Release of hydrocarbons resulting from loss of subsea well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Well operated in compliance with the accepted well operation management plan (WOMP) including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity **Spill response arrangements** • Arrangements supporting the Oil Pollution Emergency Plan (OPEP) will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Pipeline and Riser Loss of Containment	Release of hydrocarbons resulting from loss of export pipeline containment. Release of hydrocarbons resulting from loss of containment of subsea flowlines and infrastructure.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of pipeline and riser containment** • The pipeline, flowline and riser design include a range of measures that specifically aid in minimising the risk of external damage • Maintain well integrity to contain reservoir fluids within the well envelope to avoid an incident • Maintain emergency shutdown (ESD) system and critical external and internal communication systems to facilitate prevention and response to accidents and emergencies **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Loss of Structural Integrity	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of structural integrity** • Maintain structural integrity to ensure availability of critical systems during a major accident or environment event and prevent structural failures from contributing to escalation • Maintain control of ignition sources and passive fire protection to prevent loss of structural integrity • Maintain topsides hydrocarbon-containing infrastructure integrity **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure
Unplanned Hydrocarbon Release: Loss of Structural Integrity	A loss of marine vessel separation between a vessel and the platform may result in a loss of hydrocarbon containment from the Pluto facility and/or the release of fuel from the vessel.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of marine vessel separation** • Maintaining collision warning systems and navigational aids to alert facility of a potential collision with a vessel, and to alert vessels so that they may avoid collisions with the facility **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP
Unplanned Hydrocarbon Release: Topsides Loss of Containment	Hydrocarbon release from topsides process equipment o the marine environment and atmosphere.	Potential moderate short-term impacts to the marine environment: • Disruption to marine fauna, including protected species and/or impacts to water quality	**Preventing topsides loss of containment** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • Checks completed during well operations to establish a minimum acceptable standard of well integrity • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP are raised for unplanned releases within event reporting system
Unplanned Hydrocarbon Release: Loss of Control of Suspended Load from Platform	Surface or subsea release from flowline, pipeline and riser to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of control of suspended load** • Maintain platform lifting equipment to prevent failure or dropped/swinging loads that could result in an incident
Unplanned Events (Accidents / Incidents) – Drilling and subsea installation			
Unplanned Hydrocarbon Release: Loss of Well Integrity During Drilling Operations	Loss of hydrocarbons to marine environment due to loss of well containment.	Potential significant impacts to the marine environment: • Long-term impacts to sensitive nearshore areas of offshore islands and coastal shorelines • Disruption to marine fauna, including protected species • Potential medium-term interference with or displacement of other sea users	**Preventing loss of well control** • Wells drilled in compliance with the accepted WOMP including implementation of barriers to prevent a loss of well control • An approved Source Control Emergency Response Plan will be prepared prior to drilling each well including feasibility and specific considerations for relief well • Subsea BOP specification, installation and testing compliant with internal Woodside Standards and international requirements **Spill response arrangements** • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Hydrocarbon Release: Vessel Collision	Loss of hydrocarbons to marine environment due to a vessel collision (e.g. project vessels or other marine users).	Potential minor, short-term impact on marine species, habitats and protected areas.	**Preventing vessel collision**
			• Comply with regulatory requirements for the prevention of vessel collisions and safety and emergency arrangements
			• Establish temporary safety exclusion zones around vessels which are communicated to marine users to reduce the likelihood of collision
			• Other controls include:
			  • Activity support vessel on standby as required (during drilling)
			  • Notice to Mariners
			  • Notify Australian Maritime Safety Authority (AMSA)
			Spill response arrangements
			• Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned
			• Emergency response activities would be implemented in line with the OPEP

Unplanned Discharges: Release of Hydrocarbons During Bunkering, Transfer, Storage and Use	Accidental discharge of marine diesel to the marine environment during bunkering, transfer, storage or use on the facility, MODU or vessels.	Potential slight, short-term local impacts to marine species and habitats.	**Preventing unplanned hydrocarbon release due to bunkering** • Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas bunded or secondarily contained when they are not being handled or temporarily moved • Appropriate bunkering equipment kept and maintained • Compliance with Contractor procedures for the management of bunkering/helicopter operations to reduce the likelihood and potential severity of a spill **Spill response arrangements** • Maintain and locate spill kits in proximity to hydrocarbon storage and deck areas for use to contain and recover deck spills • Arrangements supporting the OPEP will be tested to ensure the OPEP can be implemented as planned • Emergency response activities would be implemented in line with the OPEP • Incident reports are raised for unplanned releases within event reporting system
Unplanned Discharges: Deck and Subsea Spills	Accidental discharge of hydrocarbons/ chemicals from MODU, installation vessel and project vessels deck activities and equipment, from subsea ROV hydraulic leaks. Unplanned release of chemicals or hydraulic fluid due to failure of subsea equipment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution • Liquid chemical and fuel storage areas are bunded or secondarily contained when they are not being handled/moved temporarily • Spill kits positioned in high-risk locations around vessels and the MODU (near potential spill points such as transfer stations) • Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process • Installation vessels have self-containing hydraulic oil drip tray management system • Woodside Engineering Standard for Rig Equipment (incl third party equipment such as ROVs) **Spill response arrangements** • First strike plan • Shipboard Oil Pollution Emergency Plan (SOPEP)

Potential Impact/ Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Preliminary Draft Mitigation and/or Management Measure

Unplanned Discharge: Drilling/ Project Fluids	Accidental discharge of project fluids (WBM/NWBM/ base oil) and cement to marine environment due to failure of slip joint packers, bulk transfer hose/fitting, emergency disconnect system or from drilling and installation operations.	Potential slight, short-term local impacts to marine species and habitats.	• Chemicals selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process
			• Marine riser's telescopic joint to be comprised of a minimum of two packers (one hydraulic and one pneumatic) and pressure tested
			• No overboard disposal of bulk NWBM
			• Compliance with Contractor procedures for the transfer and management of drilling fluids to reduce the likelihood and severity of a spill
			• Other controls include:
			  • Oil % content in displacement, brine, workover or intervention fluids, pit and tank wash
			  • PTW system
			  • Solid Control Equipment

Unplanned Discharges: Loss of Hazardous and Non-Hazardous Waste	Incorrect disposal or accidental discharge of non hazardous and hazardous waste to the marine environment.	No lasting effect, localised impact to the marine environment.	• Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes • Implement Waste Management Plan, which provides for safe handling and transportation, segregation and storage and appropriate classification of waste generated • Solid waste/equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Incident reports are raised for unplanned releases within event reporting system
Physical Presence: Seabed disturbance from dropped objects or loss of station keeping leading to anchor drag	Dropped objects resulting in the disturbance of benthic habitat. Loss of station keeping of the MODU leading to anchor drag and the disturbance of benthic habitat. Dropped objects over live infrastructure. Dropped objects during vessel transfers or installation activities.	Potential slight, short-term local impacts to marine species and habitats.	• MODU/installation vessel inductions include control measures for dropped object prevention • Equipment dropped to the marine environment will be recovered where safe and practicable to do so • Where retrieval is not reasonably practicable and/ or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title • Implement project-specific mooring design, with sufficient capability, testing and inspection
Physical Presence: Interactions with Marine Fauna	Physical presence of project/ support vessels resulting in collision with marine fauna.	Potential injury or death of marine fauna (single animal), including protected species.	• Comply with regulatory requirements for interactions with marine fauna to reduce the likelihood of a collision occurring
Physical Presence: Introduction of Invasive Marine Species (IMS)	Invasive species in vessel ballast tanks or on vessels/ submersible equipment.	Potential introduction of IMS possibly resulting in an alteration of the localised environment and potential reduction in native species through predation, competition or interspecies breeding.	• Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements, as applicable • Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the Operational Area

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **29 March 2024** via:

E: Feedback@woodside.com.au

Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

http://www.woodside.com/what-we-do/consultation-activities

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) and to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

www.woodside.com

Woodside Energy

2. INITIAL CONSULTATION

2.1 Email sent to Australian Border Force (ABF), Australian Maritime Safety Authority (AMSA) Marine Pollution, Pilbara Ports Authority (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**	
Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems

Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: v. Xena tie-in v. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.2 Email sent to Australian Communications and Media Authority (ACMA) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. Also attached is a map of the submarine communications cables in the operational area. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	Pluto Facility Operations Environment Plan

Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: x. Xena tie-in x. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback

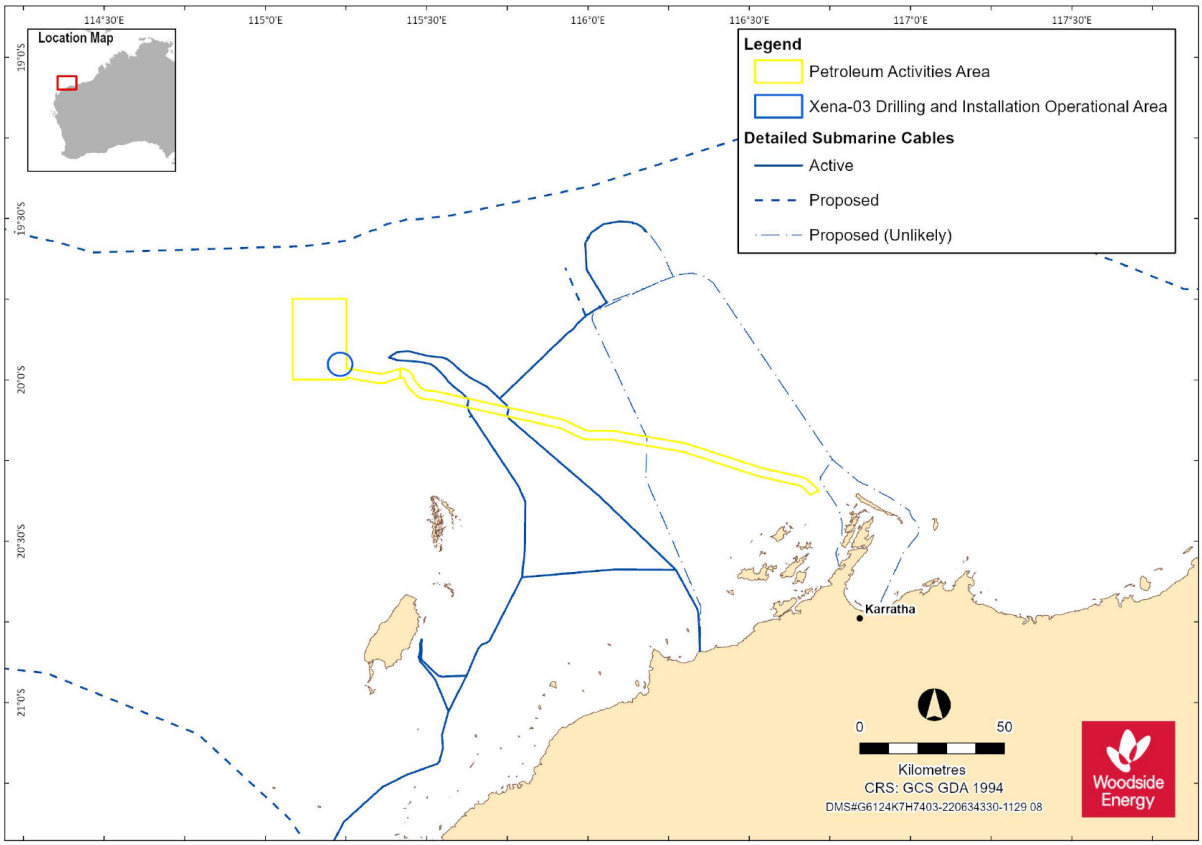
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.2.1 Submarine Communications Cables



2.3 Email sent to Australian Fisheries Management Authority (AFMA), Department of Primary Industries and Regional Development (DPIRD) (26 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations Environment Plan

Environment Plan	Pluto Facility Operations Environment Plan	
Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: v. Xena tie-in v. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Relevant Fisheries	**Commonwealth fisheries** **Operational Areas:** North-West Slope Trawl Fishery. **EMBA:** North-West Slope Trawl Fishery, Western Deepwater Trawl Fishery.

Feedback
Should you require notification prior to, and on completion of, the proposed activities, or have feedback specific to the proposed activities described, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.4 Email sent to Australian Hydrographic Office (AHO), Australian Maritime Safety Authority (AMSA) Marine Safety (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:
- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. Also attached are a map of the shipping lanes and GIS shape files. These are also available on our website. Feedback
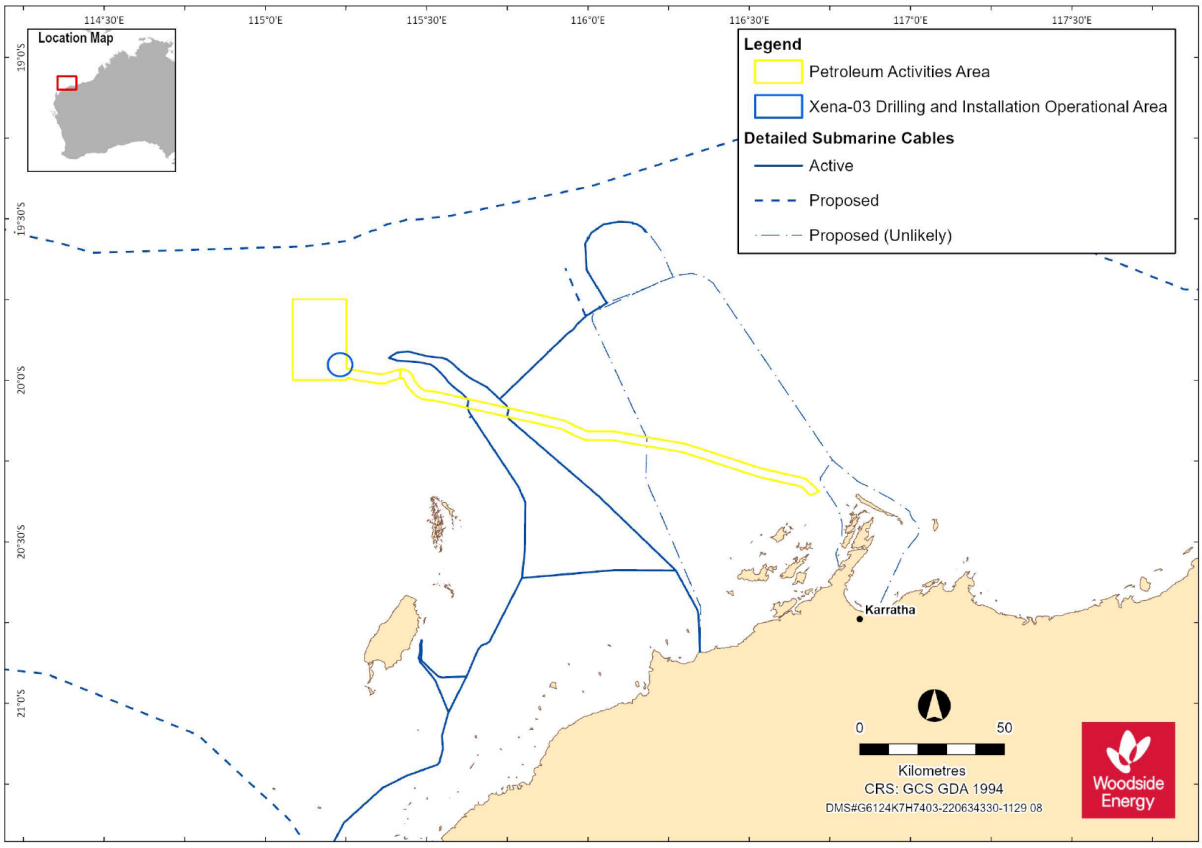
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

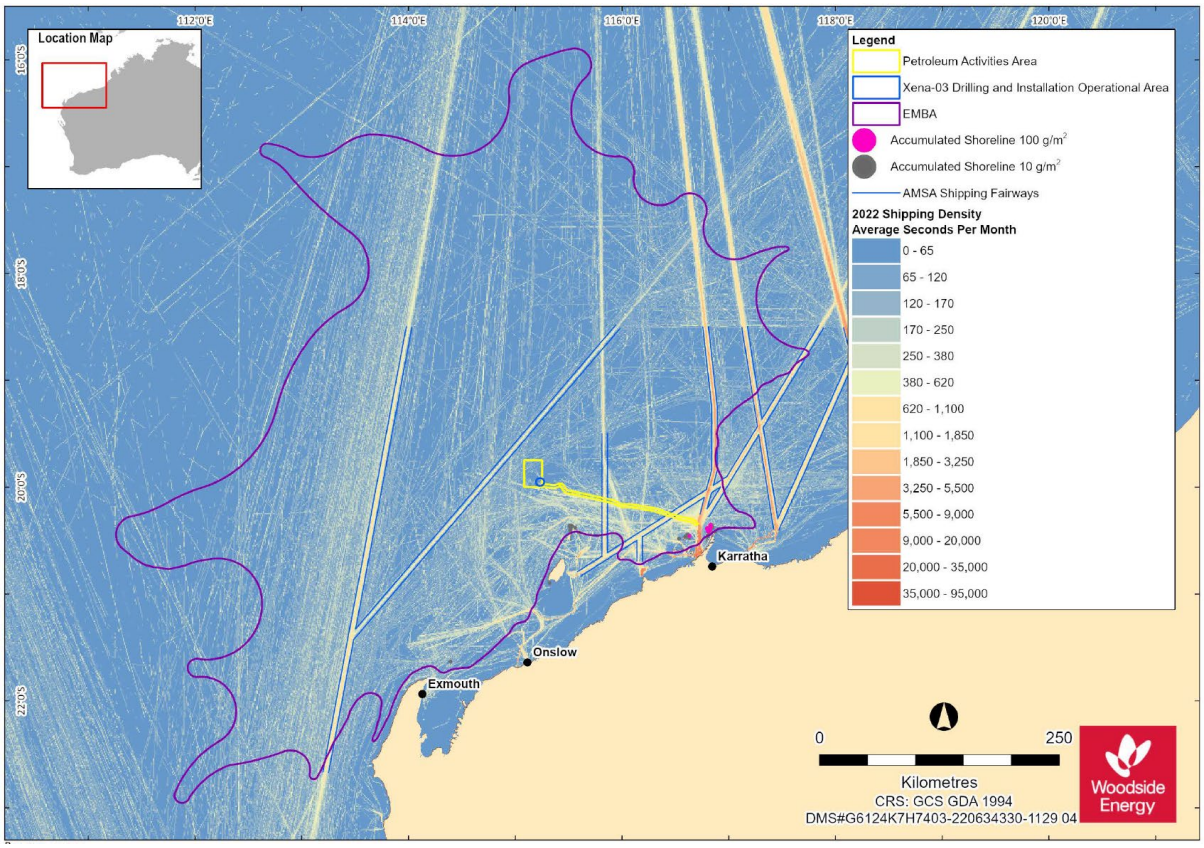
Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

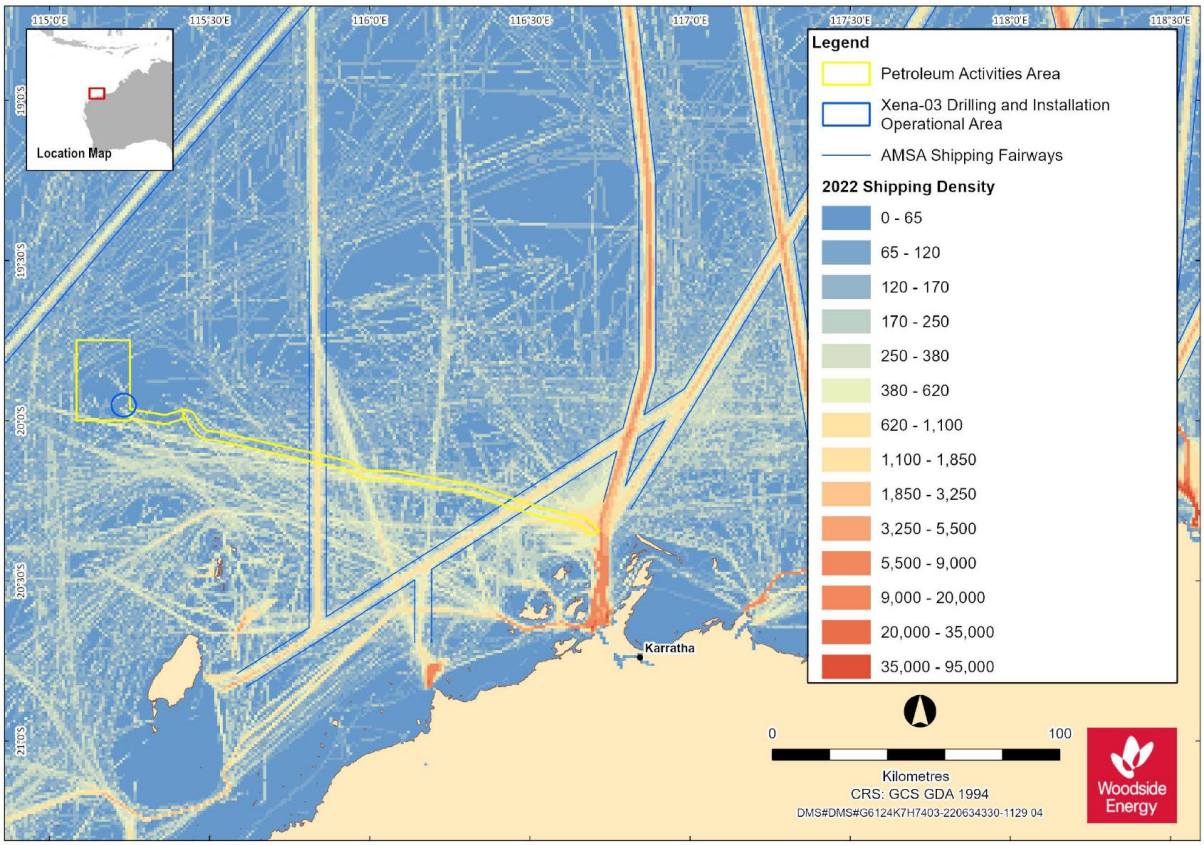
NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.4.1 Submarine Communications Cables



2.4.2 Shipping Lanes





2.5 Email sent to Department of Agriculture, Fisheries and Forestry (DAFF) Fisheries and Biosecurity (26 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Area described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Relevant Fisheries	**Commonwealth fisheries** **Operational Areas:** North-West Slope Trawl Fishery. **EMBA:** North-West Slope Trawl Fishery, Western Deepwater Trawl Fishery.	

Biosecurity

With respect to biosecurity matters, please note the following information below:

Environment description:	
The operational areas for Pluto routine operations and Xena-03 drilling and tie-back are located in water depths of approximately 80-960 m within the North-West Marine Region (NWMR). Within the NWMR, the Pluto export pipeline lies within the North West Shelf Province, while the platform and subsea infrastructure lie across the boundary of the North West Shelf Province and the deeper waters of the Northwest Province.	
Potential biosecurity risk	***Biosecurity risk mitigation and/or management***
Accidental introduction and establishment of non-indigenous species	All vessels will manage their ballast water in compliance with Australian Ballast Water Management Requirements under the *Biosecurity Act 2015*) to prevent the introduction of IMS. Internationally sourced project vessels will manage their biosecurity risk associated with biofouling in compliance with Australian Biofouling Management Requirements. Woodside's IMS risk assessment process will be applied to MODU, project vessels and relevant immersible equipment undertaking the Petroleum Activities Program. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced.

Woodside recognises the requirement to manage biosecurity risk to domestic conveyances, the requirements under the Biosecurity Control Act 2015, and the mechanism for exemption under the Biosecurity (Exposed Conveyances - Exceptions from Biosecurity Control) Determination 2016.

Woodside notes the specified timeframes for pre-arrival reporting using the Maritime and Aircraft Reporting System (MARS), and for submission of the supplied "Questionnaire for Biosecurity Exemptions for Biosecurity Control Determination".

Woodside works closely with our suppliers and contractors to address the risks and assure awareness of the obligations outlined above.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.6 Email sent to Department of Defence (DoD) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)

- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. Also attached is a map of the defence zones. You can also subscribe to receive updates on our consultation activities by subscribing here.

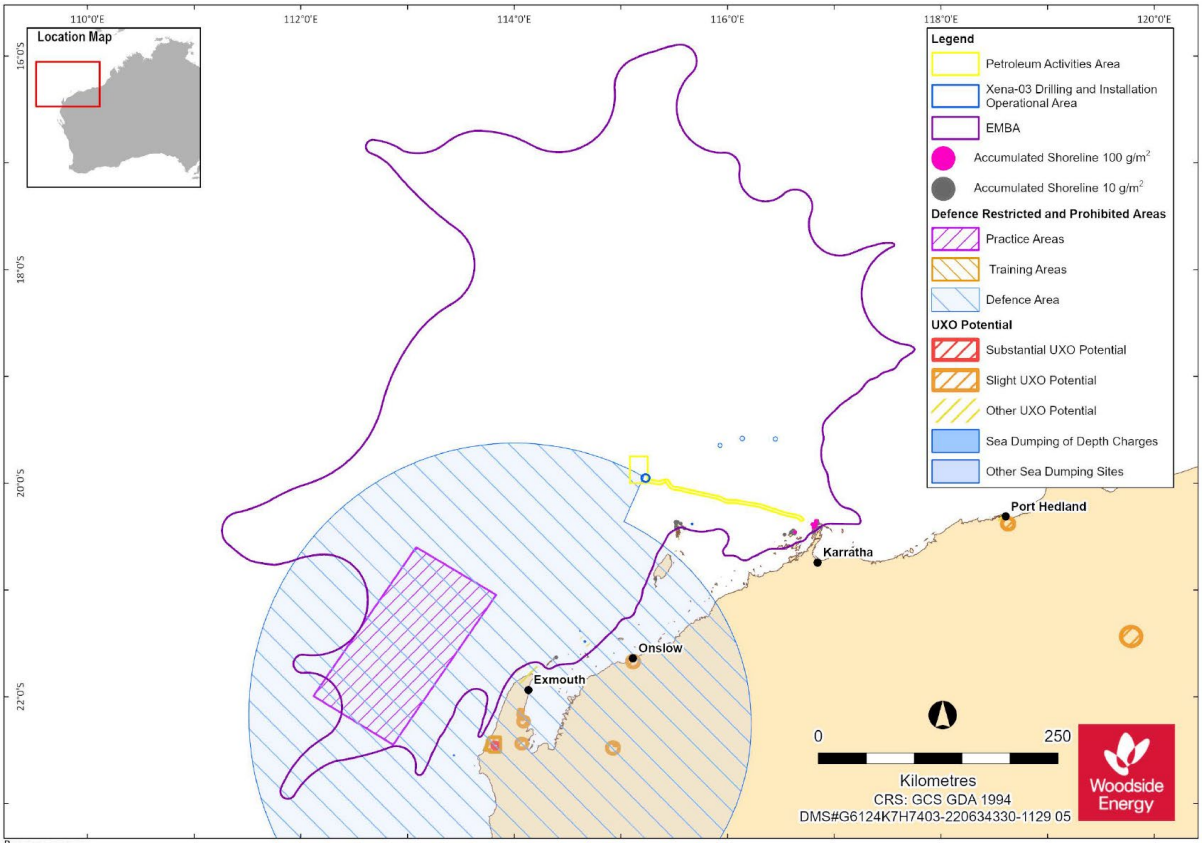
2.6.1 Defence Zones



2.7 Email sent to Department of Transport (DoT) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could

potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

If there is a risk of a spill impacting State waters, Woodside will further consult the Department of Transport as outlined in the Department of Transport Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements (July 2020).

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

2.8 Email sent to Department of Planning, Lands and Heritage (DPLH) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Given the proximity of the proposed activities with Marine Parks, Woodside is consulting with the Department of Biodiversity, Conservation and Attractions (DBCA) for this EP. Woodside is also consulting with the Western Australian Museum and provided relevant shipwreck information for this EP.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

2.9 Email sent to Western Australian Museum (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

As per the Underwater Cultural Heritage Act 2018 (Cwth), Woodside will contact the Commonwealth regulator – the Department of Climate Change, Energy, the Environment and Water (DCCEEW) regarding this EP.

Woodside also refers to the Commonwealth Government's Underwater Cultural Heritage (UCH) Guidance document regarding assessments and the draft Guidelines for Working in Near and Offshore Environment to Protect Underwater Cultural Heritage.

Any additional identification for non-Aboriginal UCH within the project areas will be done during EP development if not previously completed within the project areas during ongoing operations.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. Also attached is a list of shipwrecks in State waters within the EMBA. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**	
Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025

Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: v. Xena tie-in v. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.11 Email sent to Director of National Parks (DNP) (26 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Australian Marine Parks

We note Australian Government Guidance on consultation activities and confirm that:

- A small portion of the facility Operational Area overlaps the Montebello AMP, and
- The export pipeline Operational Area is 13 km east of the Dampier AMP.
- We have assessed potential impacts to AMPs in the development of the proposed EP revisions and believe that planned activities have no potential to impact the values of the Marine Parks.
- For this EP, the worst-case credible spill scenario is a hydrocarbon release from a loss of well control, or a vessel collision, releasing crude oil to the environment. Through review of hydrocarbon spill modelling, and with consideration of a 50 ppb dissolved and 100 ppb entrained hydrocarbon threshold, the following AMPs may be contacted in the event of a spill:
  - Montebello AMP
  - Dampier AMP
  - Argo-Rowley Terrace AMP
  - Gascoyne AMP
  - Ningaloo AMP
- A Commonwealth Government-approved oil spill response plan will be in place for the duration of the activities, which will include notification to relevant agencies and organisations as to the nature and scale of the event, as soon as practicable following an occurrence. The Director of National Parks will be advised if an environmental incident occurs that may impact on the values of any Marine Park.

Woodside is aware of and will consider the 'Petroleum Activities and Australian Marine Parks' guidance note developed and published jointly by DNP and NOPSEMA, while preparing this EP to ensure that the EP:

- Identifies and manages all impacts and risks on AMP values (including ecosystem values) to an acceptable level and has considered all options to avoid or reduce them to as low as reasonably practicable (ALARP),
- Clearly demonstrates that the activities will not be inconsistent with the North-west Marine Parks Network Management Plan 2018.

If there is a change in activities which results in an overlap or new impact to a marine park Woodside will notify DNP.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations whom are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly

unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.12 Email sent to Ningaloo Coast World Heritage Advisory Committee (NCWHAC), Department of Biodiversity, Conservation and Attractions (DBCA) (26 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit

- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

2.14 Email sent to North West Slope Trawl Fishery, Western Deepwater Trawl Fishery, Commonwealth Fisheries Association (CFA), Australian Southern Bluefin Tuna Industry Association (ASBTIA), Tuna Australia (26 and 27 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback
Should you require notification prior to, and on completion of, the proposed activities, or have feedback specific to the proposed activities described, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.15 Email sent to Western Australian Fishing Industry Council (WAFIC) (28 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Dear Stakeholder

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones
Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. You can also choose to receive updates on our consultation activities by subscribing on our website woodside.com.

2.17 Email sent to Gascoyne Recreational Marine Users, Recfishwest, Marine Tourism WA, WA Game Fishing Association (28 February 2024)

Woodside is planning to submit a five-year revision of the Operations Environment Plan (EP) for the Pluto Facility.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported onshore via a 180 km long export pipeline. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Operational Areas and Exclusion Zones

Infrastructure is located within the Operational Areas described below. This area is where Woodside vessels can be expected to be operating to undertake routine operations:

- The riser platform and the area within a 500 m radius operational area around the platform
- The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline Licence WA-17-PL and a 1500 m operational area corridor either side of the pipeline
- Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m operational area around the subsea infrastructure.

The Xena-03 Drilling and Tie-Back activity will take place within an Operational Area that includes the Xena-03 well location and the area within a 4000 m radius.

Exclusion zones, which are established for navigational safety and fishing vessels are not allowed to enter, will include:

- The 500 m-radius Petroleum Safety Zone (PSZ) around the platform, and
- A temporary 500 m-radius safety exclusion zone around vessels conducting drilling and installation activities.

An interactive map showing the location of the proposed activities will be available on the Woodside website and will be updated throughout the proposed activities.

Environment that May be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could

potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A Consultation Information Sheet is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.20 Email sent to Fox Resources (11 March 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP). As we've been unable to reach Coastal Oil and Gas NL via email, we are reaching out to you, given your role as the key Principal of Coastal Oil and Gas NL.

Please let us know if fxr@foxresources.com.au should be used moving forward for outreach to Coastal Oil and Gas NL for consultation, or if another email is preferred.

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**

Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025
Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: v. Xena tie-in v. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

2.21 Email sent Australian Energy Producers (AEP) (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.23 Email sent to Shire of Ashburton (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

Woodside is required to manage environmental impacts and risks to the EMBA by its proposed activities to As Low As Reasonably Practicable (ALARP) and to an acceptable level, as required by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Environment Regulations), through the implementation of the EP. Woodside will submit the proposed EP to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA).

Preparedness and Response
In the course of developing the EP, Woodside will develop the oil spill preparedness and response position tailored to this activity including the drafting of the Oil Pollution First Strike Plan which details the potential impacts, notifications and response mitigations that may be executed to manage an emergency event. Woodside consults with the relevant jurisdictional authorities and controlling agencies, including the Western Australian Department of Transport (DoT), the Australian Maritime Safety Agency (AMSA) and, in some circumstances, relevant port authorities, during the plan drafting process to inform mitigation management measures in place for the proposed activities. Woodside may also consult with other relevant external emergency management agencies, including LEMC, to ensure emergency management plans are aligned with effective outcomes.

In addition to the jurisdictional authorities and controlling agencies, the plan includes standard emergency notifications to agencies including NOPSEMA, the Department of Climate Change, Energy, the Environment and Water (DCCEEW), the Director of National Parks (DNP), and the WA Department of Biodiversity, Conservation and Attractions (DBCA). Where applicable, notification information for relevant Shires is also included in the Oil Pollution First Strike Plan.

Cultural heritage
Woodside routinely utilises the Department of Planning, Land and Heritage Aboriginal Cultural Heritage Inquiry System as part of the EP development process and includes the results of these inquiry system searches as an appendix to each EP.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Feedback:

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

As per Woodside's ongoing consultation approach, feedback and comments received from relevant persons continue to be assessed and responded to, as required, throughout the life of an EP, including during its assessment and once accepted, in accordance with the intended outcome of consultation.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Please let us know if the Shire would like to receive start and end of activity notifications.

2.24 Email sent to Australian Conservation Foundation (ACF), Australian Marine Conservation Society (AMCS), Conservation Council of Western Australia (CCWA), Greenpeace Australia Pacific (GAP), 350 Australia (350A), Australasian Centre for Corporate Responsibility (ACCR), Friends of Australian Rock Art (FARA), Market Forces (27 February 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

	and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: v. Xena tie-in v. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **Wednesday 29 March 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.26.1 Email sent to WAMSI (18 March 2024)

Woodside is planning to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported via a 180 km long export pipeline to the onshore Pluto facility. Operations began in 2012.

The following proposed activities will continue at the Facility:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above.

In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Environment that May be Affected (EMBA)
Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity. The EMBA is the largest spatial extent where unplanned events could potentially have an environmental consequence. For this EP, it is determined by a highly unlikely release of hydrocarbons to the environment due to a loss of well integrity, loss of pipeline integrity or a vessel collision.

A **Consultation Information Sheet** is attached, which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our website. You can also subscribe to receive updates on our consultation activities by subscribing here.

Activity: Pluto Facility Operations

Environment Plan	**Pluto Facility Operations Environment Plan**	
Summary of activities	Ongoing Operations	Drilling and tie-back
	Continued wet gas and condensate production at the Pluto, Xena and Pyxis reservoir.	Drilling and tie-back of the Xena-03 well into the existing Pluto production systems
Permit Area	Activities will occur within Production License WA-1-IL and WA-34-L.	Activities will occur within Production License WA-34-L
Location	160 km north west of Dampier, Western Australia	190 km west north west of Dampier, Western Australia
Approx. Water Depth (m)	80-960 m	176 m
Schedule	Production Commenced: 2012 Routine Operations: Ongoing	Drilling expected in Q2 2025 Subsea installation expected in Q3 2025

Operational Areas / Exclusion Zones	The riser platform and the area within a 500 m Petroleum Safety Zone (PSZ) around the platform. The export pipeline (P1TL) and associated 6-inch chemical supply line covered by Pipeline License WA-17-PL and a 1500 m corridor either side of the pipeline. Pluto, Xena and Pyxis subsea facilities (including wells, production and pigging manifolds, production jumpers, spools, flowlines and flexible jumpers) and an area within 1500 m around the subsea infrastructure.	The Operational Area includes a radius of 4000 m from the Xena-03 well to allow vessels to undertake drilling activities. Temporary 500 m safety exclusion zone around vessels conducting drilling and installation activities to manage vessel movements.
Infrastructure	Key infrastructure includes, but is not limited to: i. Riser platform i. Pluto A and B flowlines i. Export pipeline (Commonwealth)	Key infrastructure includes, but is not limited to: x. Xena tie-in x. One subsea Xmas tree and wellhead
Vessels	Operations support vessels will be used to undertake IMMR of subsea infrastructure.	Mobile offshore drilling unit (MODU), support and installation vessels.

Feedback
If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **17 April 2024.**

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential)

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

NOPSEMA has published a brochure entitled *Consultation on offshore petroleum environment plans – Information for the Community* to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

2.27 Email sent to Murujuga Aboriginal Corporation (1 March 2024)

Hi there [Individual 3]

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) plant via a 180 km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore central control room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Murujuga Aboriginal Corporation (MAC) and its members may have in the environment that may be affected (EMBA) by this activity. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are seeking information and guidance from MAC in relation to the following:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible. Woodside will continue to take feedback from you for the life of the Environmental Plans.

Consultation Information
The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.

Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me or via the details below:
Woodside Energy - Feedback@woodside.com, by calling 1800 442 977.
NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.
Please also feel free to forward this email and the attached documents to MAC members and other people and/or organisations who you think may be interested. As you are aware, Woodside would be happy to speak with MAC members, the MAC Board, Circle of Elders, office holders and other interested parties with your guidance.
I look forward to hearing from you.

Kind regards

2.28 Email sent to Nganhurra Thanardi Garrbu Aboriginal Corporation (20 March 2024)

Good afternoon

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
    - The Xena-03 Drilling and Tie-Back project, which includes drilling one new well (Xena-03) in the Xena field. tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform pre-commissioning and commissioning activities.

Regarding Nganhurra Thanardi Garrbu Aboriginal Corporation. Woodside is seeking to understand the nature of the interests that Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Thursday 18th April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me on the details below:

Woodside Energy Feedback@woodside.com or by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to Nganhurra Thanardi Garrbu Aboriginal Corporation, Traditional Owners and other people and organisations who you think may be interested as required. Woodside would be happy to speak with Elders, office holders and other interested parties as requested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

2.29 Email sent to Buurabalayji Thalanyji Aboriginal Corporation (1 March 2024)

Hi [Individual 4]

I hope this email finds you well.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.
The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.
The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that BTAC and its members may have in the EMBA by this activity. The EMBA is the total area over which unplanned events could have environmental impacts. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to Jo Lanagan (Included in this email):

Woodside Energy – Feedback@woodside.com by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to BTAC Members and other people and organisations who you think may be interested as required. Woodside would be happy to speak with BTAC Members, the BTAC Board, elders and office holders and other interested parties.

I will be away on annual leave until 28-March-24, hence including Jo Lanagan in this email.

Kind regards,

2.30 Email sent to Yinggarda Aboriginal Corporation (26 March 2024)

Dear [Individual 5] and [Individual 6] I hope all is travelling well for you both.

I am writing to notify you that Woodside is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012. Please see further information in this link: Pluto Facility Operations EP

Overview:

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR) of the platform and associated subsea infrastructure
- Commissioning and operation of the water handling unit

- Non-routine and unplanned activities and incidents associated with the above
  - The Xena-03 Drilling and Tie-Back project, which includes:
  - drilling one new well (Xena-03) in the Xena field
  - tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform
  - pre-commissioning and commissioning activities

With reference to Yinggarda Aboriginal Corporation (YAC), Woodside is seeking to understand the nature of the interests that YAC Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Thursday 25 April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement please also let me know.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.

- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

In addition to contacting me directly, you can also provide feedback directly to:

Woodside Energy Feedback@woodside.com or by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and the attached documents to Yinggarda Traditional Owners and other people and organisations who you think may be interested as required. Woodside would be happy to speak with Elders, office holders and other interested parties as requested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

2.31 Email sent to Kariyarra Aboriginal Corporation (6 March 2024)

Good morning [Individual 7]

By way of Introductions. My name is [Individual 8] and am the First Nations Engagement Adviser with Woodside Energy and am emailing updates whilst [Individual 9] is on Leave.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.
The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.
The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Kariyarra Aboriginal Corporation and its members may have in the EMBA by this activity. The EMBA is the total area over which unplanned events could have environmental impacts. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Wednesday 3rd April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.

2.34 Email sent to Ngarluma Aboriginal Corporation (1 March 2024)

Wayiba [Individual 11]

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) plant via a 180 km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore central control room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Ngarluma Aboriginal Corporation (NAC) and its members may have in the environment that may be affected (EMBA) by this activity. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are seeking information and guidance from NAC in relation to the following:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024. We sent you a draft consultation agreement today for your review. Jeff has mentioned previously that NAC do not wish for any consultation to take place until this agreement is in place. That being said we will be guided by NAC as to how consultation may proceed in the interim. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible. Please note, Woodside will continue to take feedback from you for the life of the Environmental Plans.

Consultation Information
The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand

consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me or via the details below:
Woodside Energy - Feedback@woodside.com, by calling 1800 442 977.
NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.
Please also feel free to forward this email and the attached documents to NAC members and other people and organisations who you think may be interested. Woodside would be happy to speak with NAC members, the NAC Board, Elders and office holders and other interested parties.
I look forward to hearing from you.

Kind regards

2.35 Email sent to Yindjibarndi Aboriginal Corporation (6 March 2024)

Good morning [Individual 12]

By way of Introductions. My name is [Individual 8] and am the First Nations Engagement Adviser with Woodside Energy and will be sending through Environment Plans whilst [Individual 13] and [Individual 9] are on Leave.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production
- Routine inspection, monitoring, maintenance and repair (IMMR)of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
    - The Xena-03 Drilling and Tie-Back project, which includes drilling one new well (Xena-03) in the Xena field tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform pre-commissioning and commissioning activities.

Regarding Ngarluma Yindjibarndi Foundation Ltd. Woodside is seeking to understand the nature of the interests that Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Wednesday 3rd April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement.

Feedback can also be made directly to me on the details below:

Woodside Energy Feedback@woodside.com or by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to Ngarluma and Yindjibarndi Traditional Owners and other people and organisations who you think may be interested as required. Woodside would be happy to speak with Elders, office holders and other interested parties as requested.

I look forward to your response and please feel free to call and send through guidance on next steps.

Kind regards

2.36 Email sent to Wanparta Aboriginal Corporation (28 February 2024)

Hi [Individual 14]

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate fromthe Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) Plant via a 180 km long export pipeline.
The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore Central Control Room.
The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Wanparta Aboriginal Corporation and its members may have in the EMBA by this activity. The EMBA is the total area over which unplanned events could have environmental impacts. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 29th March 2024 and please also advise of your preferred method of consultation. If there is any support or specific

information that you require as part of our engagement, please let me know as soon as possible.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to Wanparta Aboriginal Corporation Members and other people and organisations who you think may be interested as required. Woodside would be happy to speak with Wanparta Aboriginal Corporation Members, the Wanparta Aboriginal Corporation Board, elders and office holders and other interested parties.

I look forward to hearing from you.

Kind regards

2.37 Email sent to Yamatji Marlpa Aboriginal Corporation (20 March 2024)

Good afternoon

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations Environment Plan for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview The Pluto platform is in 80 m water depth, and the associated subsea infrastructure is in water depths ranging from 80m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia.

Summary of activities:

- Routine production

- Routine inspection, monitoring, maintenance and repair (IMMR)of the platform and associated subsea infrastructure.
- Commissioning and operation of the water handling unit
- Non-routine and unplanned activities and incidents associated with the above
    - The Xena-03 Drilling and Tie-Back project, which includes drilling one new well (Xena-03) in the Xena field. tie back to the existing Pyxis Hub infrastructure and remotely operated Pluto platform pre-commissioning and commissioning activities.

Regarding Nganhurra Thanardi Garrbu Aboriginal Corporation. Woodside is seeking to understand the nature of the interests that Members may have in this activity. We are interested in hearing:

1. How could these activities impact your cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. We will continue to take feedback from you for the life of the Environmental Plans.

5. We would like to understand how you would like to build a relationship with Woodside Energy.

6. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Thursday 18th April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement.

2.39 Email sent to Save our Songlines (26 March 2024)

Hi there [Individual 16] and [Individual 17]

I'm forwarding this information as I understand all communication for [Individual 1] should be directed to you.

Please be advised that Woodside Energy is planning to submit a five-year revision of the Operations EP for the Pluto Facility Operations that commenced in 2012 Pluto Facility Operations EP

Overview

The Pluto platform is in 80m water depth, and the associated subsea infrastructure is located in water depths ranging from ~80 m to 960 m, in Commonwealth waters around 160 km north-west of Dampier, Western Australia. The facility produces wet gas and condensate from the Pluto, Xena and Pyxis reservoirs. The gas and condensate are transported for processing at the onshore liquefied natural gas (LNG) plant via a 180 km long export pipeline. The Pluto platform is a not-normally-manned facility, with remote operation from the Pluto onshore central control room.

The Pluto Facility Operations EP is being revised and resubmitted to integrate drilling, subsea installation, commissioning (drilling and tie-back) and production from the Xena-03 well into the existing Pluto production systems.

Woodside is seeking to understand the nature of the interests that Save Our Songlines (SoS) and its members may have in the environment that may be affected (EMBA) by this activity. The EMBA is set out in the attached Summary Information Sheets and consultation information sheets. We are seeking information and guidance from SoS in relation to the following:

1. How could these activities impact your members cultural values, interests, and activities - does protecting the environment do enough to protect your cultural values?

2. Do you have any concerns about the proposed activities and what do you think we should do about them?

3. Is there anything you would like considered in the Environmental Plans?

4. Whether there are any other individuals, groups, or organisations you think we should talk to?

If you would like to speak with us, please let me know by Friday 26th April 2024 and please also advise of your preferred method of consultation. If there is any support or specific information that you require as part of our engagement, please let me know as soon as possible. Woodside will continue to take feedback from you for the life of the Environmental Plans.

Consultation Information
The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled Consultation on offshore petroleum environment plans – Information for the Community to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation. Please click on the italicised text above to access this document.
Publications below (please see Document Hub | NOPSEMA):

- Brochure: Consultation on offshore petroleum environment plans brochure.pdf (nopsema.gov.au)
- Guideline: Guideline: Consultation in the course of preparing an environment plan (nopsema.gov.au); and
- Policy: Draft policy for managing gender-restricted information PL2098.pdf (nopsema.gov.au).

Feedback can also be made directly to me or via the details below:
Woodside Energy - Feedback@woodside.com, by calling 1800 442 977.

NOPSEMA - Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please also feel free to forward this email and the attached documents to SoS members and other people and/or organisations who you think may be interested.

I look forward to hearing from you.

Kind regards

2.40 Email from FARA – 29 March 2024

fara
Friends of Australian Rock Art

[Contact details]

[Contact details]

RE: FARA Relevant Person Consultation on Pluto Facility Operations Environment Plan

1) We refer to your correspondence received on 19 March 2024 regarding Woodside's intention to seek a 5-year extension to the Pluto Facility Operations Environment Plan (Pluto Operations EP) and your request for comment to be. received by 29 March 2024.

FARA's Functions, Interests and Activities

2) As you are aware, FARA's functions, interests and activities relate to the protection and preservation of the rock art and surrounding physical and cultural heritage landscape from the impacts of industrial development, including; direct impacts from industrial development; indirect impacts from industrial emissions; impacts on visitors to the area (including Aboriginal peoples, researchers, and recreational visitors); and future impacts of climate change to this heritage landscape.

3) FARA's current objectives and activities include support for:
   a) the Murujuga Aboriginal Corporation Cultural Management Plan action of "reducing the industrial footprint with an ultimate goal of zero industry on Murujuga";
   b) more recent calls from Traditional Custodians for a moratorium on further industrial development on Murujuga;
   c) urgent protection of the Murujuga cultural heritage landscape under the *Aboriginal and Tores Strait Islander Heritage Protection Act*;
   d) World Heritage Listing of the whole of the Burrup; and
   e) Traditional Custodians to exercise rights to Free, Prior and Informed Consent (FPIC) in relation to industrial development.

   FARA considers the ongoing operation of gas processing facilities, including the processing of Pluto gas contemplated by the Pluto Operations EP to be inconsistent with these objectives.

WINNER Community Organisation

[Contact details]

Indirect consequences of the Pluto Operations EP

4) While it is not clear from Woodside's consultation documents, FARA understands that gas and other hydrocarbons produced from the Pluto gas field will be processed at the Pluto LNG facility and North West Shelf LNG facilities on the Burrup Peninsula. Gas processing at these facilities is the primary cause of industrial air emissions on the Burrup Peninsula which FARA believes is causing irreversible harm to the Murujuga rock art. The physical presence of these facilities presents a significant and ongoing disruption to the cultural heritage landscape and its National and World heritage values. Fugitive emissions of methane, and downstream combustion emissions from gas produced from the Pluto field also contribute to anthropogenic climate change. These are examples of indirect consequences of the Pluto Operations EP.

5) Woodside is required, according to the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (the Regulations) and the EPBC Act Indirect Consequences Policy, to consider and address the indirect consequences of the Pluto Operations in the EP.

Relevant person consultation with FARA on the Pluto Operations EP

6) As FARA's functions, interests and activities as described above and elsewhere are affected by these indirect consequences, FARA is a 'Relevant Person' for the purposes of consultation in accordance with regulations (Regulations). As such, FARA has a right to be consulted on the Operations EP for the Pluto Operations EP and seeks to exercise that right.

7) Woodside is required by regs 11A(2) and (3) of the Environment Regulations to:
   a. provide FARA with "sufficient information" to allow it to make an informed assessment of the possible consequences of the activities on its functions, interests or activities; and
   b. provide a "reasonable period" for consultation.

8) The information that has been provided to FARA on the Pluto Operations EP, and the 10-day period provided for feedback do not meet these requirements.

Information requirements for Relevant Person consultation with FARA

9) The Consultation Information Sheet on the Pluto Operations EP provided to FARA and other parties does not mention the impacts and consequences of processing gas and other hydrocarbons from the Pluto gas field on the Burrup Peninsula, or other indirect consequences of the proposed operations. There is no evaluation of the impacts or risks in the consultation document and no indication of what mitigation measures Woodside proposes in respect of these impacts.

10) FARA has previously described to Woodside the nature of information that FARA requires to assess possible consequences of Woodside's gas processing operations on its functions, activities and interests. The following list provides examples of the kinds of information that FARA requires in relation to the Pluto Operations EP.

a) Information on **how the precautionary principle has been applied** by Woodside in the assessment of impacts on the rock art and in developing and applying management responses
b) Information on what **pollution control measures and technology** will be utilised by Woodside at the Pluto and North West Shelf LNG facilities and how this has been selected, including independent feasibility studies and analysis relating to the application of best-available pollution control technology to Woodside's operations;
c) Information on what the **results and outcomes** of these measures will be on the pollution entering the Burrup airshed, including information on what the duration, concentration, and chemical composition of pollution entering to the air shed will be from Pluto gas processed at each facility.
d) Information on the **resultant airborne pollution concentrations** that Woodside expects will occur in the vicinity of petroglyphs which are potentially affected by this pollution, **and relevant exposure levels and duration**, taking into consideration cumulative and synergistic effects where this pollution is combined with pollution from other sources, and prevailing environmental conditions in the airshed.
e) Information detailing what Woodside believes or understands will be the **long-term physical consequences** of its operations on the Murujuga rock art, including the processing of Pluto gas on the Burrup **over the full duration of the proposed Pluto operations.**
f) Description of **what level of impact on the rock art Woodside considers to be as low as reasonably practicable and acceptable**, for the purpose of meeting the regulatory requirement, and how this level of acceptable impact has been determined by Woodside.
g) Information regarding **how Woodside is meeting or intends to meet its statutory obligations** under the WA Aboriginal Heritage Act for the Pluto and North West Shelf LNG facilities, and what authorisations exist under that Act for Woodside's indirect impacts on the Murujuga rock art as a consequence of industrial pollution.
h) Information and disclosure of **rock art monitoring or other studies** undertaken or commissioned by Woodside to investigate the impacts of industrial pollution on petroglyphs, and **any other scientific or technical information** which is relied upon by Woodside to reach the conclusion that ongoing Pluto operations will not have adverse consequences for the rock art.
i) Evidence of Woodside's **understanding and engagement with** peer-reviewed scientific research previously provided to Woodside by FARA and other parties demonstrating impacts of industrial pollution on rock art, and **evidence of consultation** with experts who have undertaken this research, including as Relevant Persons under the regulations.
j) Information on **what specific action will be taken** by Woodside if ongoing scientific monitoring of the rock art demonstrates that industrial pollution, including from the processing of Pluto gas on the Burrup is adversely impacting the rock art, and what the **outcome of this action** will be for the rock art.

k) Information on how current and proposed regulatory regimes for the Pluto and North West Shelf LNG facilities will include **enforceable measures that prevent impacts** from the processing of Pluto gas and other hydrocarbons on the Burrup.
l) Information on the **global and local climate scenarios Woodside expects to occur** if the Pluto operations continue as proposed.
m) Information on what **climate impact scenarios Woodside considers to be acceptable, and what specific verifiable and additional abatement measures** Woodside will take to meet emissions reduction targets to ensure that Woodside's climate impacts are managed to as low as reasonably practicable and acceptable levels.
n) Information on what other stakeholders with similar or overlapping functions, interests or activities to FARA's have been consulted and **how matters raised by such parties have been considered and addressed** by Woodside.
o) Information about how Traditional Owners and Custodians have been provided with opportunities to **exercise rights to Free Prior and Informed Consent** regarding the ongoing Pluto Operations.
p) Information on how ongoing processing of Pluto gas will occur in a way that does not **continue or perpetuate the physical disruption of the Murujuga cultural heritage landscape** (including National and World heritage values) which is currently occurring due to the presence and ongoing operation of Woodside's gas processing operations on the Burrup.
q) Information about **how concerns previously raised by FARA's have been addressed by Woodside** and what operational or other changes have been considered or contemplated in responding to those concerns and requests.

11) This information is required to enable FARA to be consulted as a Relevant Person under the Regulations, because it is essential to understanding the nature of impacts that may occur on the Murujuga rock art and broader physical and cultural landscape of the Burrup, what Woodside has determined are reasonably practicable and acceptable levels of impact, how Woodside has made these determinations, and how Woodside intends to manage its operations to ensure that these outcomes are met as required under the Regulations.

Reasonable period for Relevant Person consultation with FARA

12) In addition to these information requirements, once they are met FARA requires additional time to engage suitably qualified experts to analyse the information and advise FARA on the nature of impacts on FARA's functions, activities and interests. Because this area is a specialist field of science requiring interpretation of specific technical information, it is not reasonable to expect that informed assessment of the possible consequences of the activities on FARA's functions, interests or activities can have occurred within the timeframes that Woodside has stipulated for this EP, even if all information needs were met.

Information previously provided to Woodside by FARA

13) FARA has previously provided Woodside with a number of peer-reviewed scientific reports and other evidence demonstrating impacts on the Murujuga rock art resulting from atmospheric air pollution. Woodside's LNG processing

facilities are the primary source of this atmospheric pollution that is impacting the rock art, and the Pluto Operations EP will cause this pollution to continue for a longer duration and potentially a greater intensity. As such, the information previously provided by FARA to Woodside is relevant to the Pluto Operations EP.

14) FARA has not received satisfactory response to this information and evidence from Woodside in the context of other Relevant Person consultation processes. As such, it is our expectation that previously supplied information and evidence will be addressed by Woodside in the Pluto Operations EP, and that this information and Woodside's response will be made publicly available.

Next Steps

15) FARA reiterates that further consultation must be undertaken by Woodside prior to submitting a draft Scarborough Operations EP to NOPSEMA for approval. If a draft EP is submitted by Woodside, then it is FARA's expectation that the feedback contained in this document and previous submissions from FARA is included in full in the public section of the EP to allow for transparency regarding the inadequacy of consultation with FARA.

16) We look forward to Woodside providing FARA with sufficient information and a reasonable period of time to enable FARA to assess the possible consequences of the Pluto Operations EP on our functions, activities and interests, as part of the relevant person consultation process.

Yours sincerely,

3. ADDITIONAL CONSULTATION

3.1 Email sent to Australian Border Force (ABF), Australian Hydrographic Office (AHO), Australian Maritime Safety Authority (AMSA) Marine Pollution, AMSA Marine Safety, Department of Agriculture, Fishery and Forestry (DAFF), Department of Defence (DoD), Department of Primary Industries and Regional Development (DPIRD), Western Australian Museum, Pilbara Ports Authority, Department of Climate Change, Energy, the Environment and Water (DCCEEW), Director of National Parks (DNP), Department of Industry, Science and Resources (DISR), Department of Energy, Mines, Industry Regulation and Safety (DEMIRS), Chevron, Osaka Gas Gorgon, Tokyo Gas Gorgon and JERA Gorgon, Western Gas, Exxon Mobil Australia, Shell Australia, BP Developments Australia, Carnarvon Energy, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia, Jadestone Energy, KUFPEC Australia, Vermilion Oil & Gas, Fox Resources, Bounty Oil and Gas, OMV Australia, KATO Energy / KATO Corowa, INPEX Alpha, Beagle No.1, JX Nippon O&G Exploration Australia, Australian Energy Producers (AEP) (18 March 2024)

Woodside previously consulted you on its plans to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia. In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Information on the proposed activities is provided in the email below and in the Consultation Information Sheet which is available on our website.

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **29 March 2024.**

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

3.2 Email sent to North West Slope Trawl Fishery, Western Deepwater Trawl Fishery, Commonwealth Fisheries Association (CFA),

Australian Southern Bluefin Tuna Industry Association (ASBTIA) (18 March 2024)

Woodside previously consulted you on its plans to submit a five-year revision of the Pluto Facility Operations Environment Plan (EP).

The Pluto platform is in Production Licence WA-1-IL and WA-34-L, located in Commonwealth waters approximately 160 km north west of Dampier, Western Australia. In addition, Woodside proposes to conduct drilling, subsea installation and commissioning (tie-back), and production from the Xena-03 well into the existing Pluto production systems.

Further information on the proposed activities is provided in the email below and in the Consultation Information Sheet which is available on our website.

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com or 1800 442 977 by **29 March 2024.**

Please let us know if you request that particular information that you provide in the consultation not be published. If so, we will make your request known to NOPSEMA so that the information is not included when the EP is published on NOPSEMA's website.

Subject to EP acceptance, please let us know if you would like start and end of notifications for the proposed activity.

PLUTO FACILITY OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing and operating LNG and oil projects in Australia. Our focus is the safety, reliability, efficiency and environmental performance of our operations and activities.

Woodside consults so that feedback from relevant persons is considered and used to inform the revision of the Pluto Facility Operations Environment Plan.

Our activities

The Pluto facility is a not-normally-crewed facility that has been in production since 2012 and is located offshore in Commonwealth waters approximately 160 km north west of Dampier.

Woodside plans to continue producing wet gas and condensate from the Pluto, Xena and Pyxis reservoirs and is submitting a five-year revision to the operational Environment Plan. The Environment Plan for the Pluto facility will cover routine operations and integrate drilling, subsea installation, commissioning (drilling and tieback) and production from the Xena-03 well into the existing Pluto production systems.

We are seeking input from relevant persons whose functions, interests or activities may be affected by continued operations.

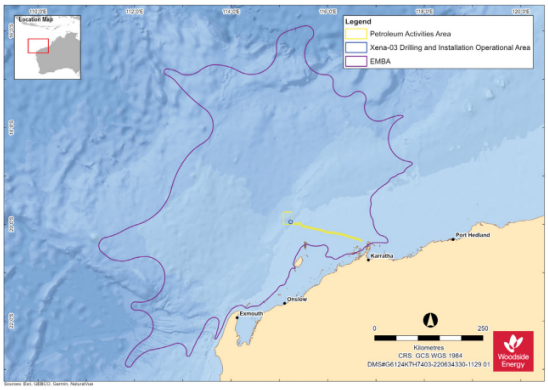
The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environmental Plan, is determined by modelling a highly unlikely event of a hydrocarbon release to the environment.

The EMBA represents the merged area of many possible modelled paths that a highly unlikely hydrocarbon release could travel if left unmitigated and depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected.

We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be impacted by our activities, we would like to hear from you by **Wednesday, 29 March 2024.**



Want to know more or provide input?

4.1 The National Indigenous Times (26 February 2024)

Professor Andrew Gunstone.

Allies must be brave & push back

ANDREW GUNSTONE

On January 26, I had my most confronting speaking experience in more than three decades.

I had accepted an invitation from the Anglesea Lions Club to be a keynote speaker at their event.

I advised I would speak on "truth-telling" and provided information on my roles — including co-chair of Reconciliation Victoria and associate deputy vice- chancellor reconciliation at Federation University — and sent links to some of my publications written over several decades.

It was very clear what I would speak about.

I arrived looking forward to having some engaging conversations about truth-telling and reconciliation. Instead, midway through my speech, when I mentioned the word "invasion", many in the audience started aggressively booing and heckling me. These comments included "p... off", "shut up", and "f... off", and were so loud I was forced to halt my speech.

I was even more shocked, though, at the complete lack of support from the club. Rather than explaining to the audience I was an invited speaker, speaking on my area of expertise, and that they could either listen to me or leave, the club's president instead told me I could not continue my speech.

Even more concerningly, he pulled me from the microphone.

As I walked off the stage, I continued to be loudly booed and heckled. I was concerned for my personal safety, with people screaming at me from close quarters.

At no time during this ordeal did anyone from the club intervene to protect me by telling the audience to stop their appalling behaviour.

While several people approached me later, including members of the Anglesea Lions Club, to privately apologise for the actions of the crowd and the club's president, the only person who made a public apology was Peter Yates AM, the other keynote speaker. It was disappointing, though, that none of these people who apologised to me afterwards supported me at the time the crowd and organisers were preventing me from speaking. The club president also later came up to me to apologise for grabbing my arm, but then criticised me for being "political" by using the word "invasion".

This claim was repeated by him, and also made by the local Liberal MP, in news articles. What they both failed to understand, though, was I was not being "political", but simply stating the truth.

"Political", along with "woke", is often used to try to shut down discussions on truth-telling. There have been three news articles about this event. Only the first reached out to me for comment. Of the other two, one included several quotes from the local Liberal State MP, and the second was written by a journalist.

Despite both being at the event, neither talked to me, but instead made hurtful and inaccurate claims, minimised the crowd and organisers' behaviour, and sensationalised rather than sought understanding.

It is important to position this specific event in Anglesea within a broader context.

Several behaviours demonstrated at this event — racism, exclusion, silencing, violence, bystander apathy, white privilege, and white fragility — are directed towards Indigenous peoples every day of the year, very often in far, far worse circumstances.

Non-Indigenous allies must genuinely increase our efforts to strongly advocate against these disgusting, appalling practices. Further, these disgraceful behaviours have considerably worsened following the First Nations Voice to Parliament referendum in October. The Anglesea event is but one example of a clearly observable trend whereby many non-Indigenous opponents of the Voice are trying to create momentum from the referendum defeat to push back against hard-won transformational gains made over the past several decades in reconciliation, truth, and justice.

Local governments are abolishing Welcomes to Country and Acknowledgements of Country.

State political parties are backflipping on previous commitments to engage with treaties and truth-telling.

Patriotic fervour is being whipped up against any organisations that fail to jingoistically support "Australia Day".

Appalling levels of structural and individual racism towards Indigenous peoples, both online and in person, continue to increase.

Indigenous peoples across the country are undertaking inspirational and transformational work on Voice, Treaty, and Truth, including the First Peoples Assembly of Victoria with Treaty, and the Yoorrook Justice Commission with truth-telling.

This extraordinary work, though, along with our ongoing national reconciliation journey, is under considerable threat from these racist and divisive practices.

I strongly urge all non-Indigenous allies to genuinely help push back against these practices, and continue to have brave conversations about reconciliation, truth, and justice.

Professor Andrew Gunstone is a leading authority on reconciliation. He is associate deputy vice-chancellor reconciliation and Professor of Indigenous Studies at Federation University, where he established and leads the National Centre for Reconciliation, Truth, and Justice. He is also co-chair of Reconciliation Victoria and sits on several national reconciliation committees.

Aurukun honours top citizens

KOOLKAN Aurukun State School principal Baressa Frazer was awarded the Aurukun Citizen of the Year and Police Liaison Officer Chantelle Walmbeng was awarded Junior Citizen of the Year at a ceremony in the community on February 17.

Aurukun Mayor Keri Tamwoy said the annual Aurukun Shire Council awards recognised people who had shown community leadership for the Wik, Wik Waya and Kugu people.

"I congratulate Baressa and Chantelle who are outstanding role models for the youth of Aurukun and are determined that our younger generation will have a better future on their homelands," Mayor Tamwoy said.

"Baressa is a strong, elegant and passionate Wik woman who is a tireless advocate for Aurukun's children.

"She has returned to her community to lead local education as the principal of Koolkan Aurukun State School where she connects teachers and employees to culture and community.

Koolkan Aurukun State School principal Baressa Frazer.

Aurukun's Young Citizen of the Year Chanelle Walmbeng receives her award from Deputy Mayor Craig Koomeeta.

Passion

"Her passion and knowledge of culture, language and community is invaluable, and she teaches both children and adults with a gentle strength.

"Baressa has researched, designed and is implementing a Wik pedagogy at Koolkan Aurukun State School, collaborating with the Language Group, Elders and the APN Rangers to bring this theory into action.

"The work is monumental and is creating a pathway for Aurukun students to successfully learn while keeping their culture alive.

"Chantelle was an active founding member of the PCYC Kang Kang Youth Leadership team where she volunteered her time and was a part of many community initiatives.

"She became the Police Liaison Officer for PCYC Aurukun in March 2023 while completing Year 12, becoming the youngest PLO in Queensland.

"In this role Chantelle has demonstrated a commitment to learn and shows up every day for work on time.

"In her free time she has been attending Koolkan Aurukun State School to assist in the mornings and to support the young people of Aurukun in achieving an education.

"The young leader is speaking at the Say NO to Domestic Violence conference in Cairns this month about her life experiences and the support to reduce domestic violence in the community.

"Chantelle's leadership and willingness to take on new challenges such as the Bronze Duke of Edinburgh Award will ensure she is a force for change in the Aurukun community for years to come."

AMA backing for Kimberley stance on drink register

SARAH CRAWFORD

WA's peak body for doctors has backed the Kimberley's biggest primary healthcare provider that has decided to not refer patients to the Banned Drinkers Register against their will.

Australian Medical Association WA president Michael Page said he supported, "in general" the stance by Kimberley Aboriginal Medical Service to not refer patients to the BDR.

"Fundamentally our view is that the role of the doctor is to provide judgment-free care and patients should be safe in the knowledge that anything they share with the doctors will be kept confidential," Dr Page said.

"If patients are not secure in the knowledge that the relationship they have with their doctor is sacrosanct it undermines our practice. I think that would be bad for the health of the community."

A revamped BDR was introduced to parts of regional WA in December and gave new powers to police, medical practitioners and social workers to refer people on to the BDR which prohibits them from purchasing takeaway alcohol for three months or more.

Latest figures show 843 people have been placed on the BDR in the Kimberley, Goldfields, Pilbara, Carnarvon and Gascoyne Junction.

Police have placed 586 people on the BDR for alcohol-related offences while a further 257 Banned Drinking Orders have been issued by the Director of Liquor Licensing through barring notices, prohibition orders and voluntary referrals. However, no doctor or social worker has so far referred a patient to Liquor Licensing for a BDO.

Dr Page said there had been "very little to no consultation" with the medical profession before the legislation was introduced. "There are very few if any genuine medical reasons that someone would need to go on a register like that. It is a very heavy-handed way of treating what is a medical problem," he said.

Meanwhile KAMS medical director Dr Lorraine Anderson questioned if Aboriginal people were being disproportionately targeted by the BDR because they were more likely to socialise and drink in public and therefore attract the attention of police.

Dr Anderson stopped short of saying the BDR was racist but said it did not reflect the real nature of problem drinking.

"We are talking about banned drinkers being a reflection of the population of the Kimberley, but we know that's not right. This is targeting the people who are sitting outside and drinking where people can see them and that's, on average, that is the Aboriginal people of the Kimberley."

Dr Anderson said KAMS did not oppose alcohol restriction but that alone was not the answer.

"If if there's a Banned Drinkers Register, it needs to be backed up with a whole pile of infrastructure and a whole pile of money that goes with preventing people from having withdrawals from alcohol," she said.

Kimberley Aboriginal Medical Service director Dr Lorraine Anderson.

Dr Anderson said current alcohol and drug services were already over-stretched including Broome-based Milliya Rumurra, which has 22 beds but needs 12 more to keep up with demand.

"Forget about the Banned Drinkers Register they are already operating at capacity," she said.

"They need funding for more beds, they need capital funding for a bigger building and ongoing funding to run the rehab and provide wrap-around support. They are well-placed to be able to provide low to medium-level detox services but they need the funding to do it."

The Broome Advertiser recently reported on a woman placed on the BDR who had resorted to drinking hand sanitiser because she not buy alcohol.

Minister for Racing and Gaming Paul Papalia said the Government was working on a suite of strategies to combat the problem.

New digital newspaper, out Nightly

Seven West Media has this week launched Australia's new national digital newspaper, The Nightly.

With a focus on politics and business, The Nightly will be free and publish each weeknight at 6pm AEDT. It will also have a 24/7 news website and app with breaking news alerts and subscriber emails.

SWM WA chief executive Maryna Fewster said the landmark digital news platform would bring quality journalism to Australians for free.

Run from WA and using our time difference, it will have the full backing of the media company, with contributors including Seven stars such as David Koch, Mark Riley, Michael Usher and Gemma Acton.

Sporting stars including AFL great Leigh Matthews and cricketing icons Justin Langer and Mitchell Johnson, will also write for The Nightly.

In an Australian first, every edition of The Nightly's evening digital newspaper will feature two pages of content produced by editors of The New York Times International Report, a branded publication featuring the best articles from The New York Times. Ms Fewster said the free publication had been developed in response to a clear need.

NBAC bid to save service

SAM JONES

In a move aimed at preserving essential services for locals, Ngarliyarndu Bindirri Aboriginal Corporation has announced plans to take over the Roebourne post office service effective March 5.

The decision comes in the wake of the post shop's closure on February 28 due to the retirement of its licensee, leaving a void in vital services for Roebourne residents.

NBAC chief executive Francois Langlois told Ngaarda Media the post shop was a vital service for many in the community. "Our plan is to co-locate the post office counter next to our Centrelink offices in the front office and our office," he said.

"We need to do a little bit of refurbishment and redo some work to our premises before that can start.

"Australia Post has been very kind to us in relocating what they call a mobile van which will be able to operate the post office services for the next eight weeks or so until we're finalised and finish all the refurbishment we need to do in preparation for having everything within our premises."

The closure of the post office raised concerns in the community, given its role as a hub for various essential services.

Roebourne residents relied on the post office for banking services, purchasing pay-as-you-go electricity cards, mobile phone transactions, bill payments and receiving crucial government communications.

With the closure, many residents, particularly those less tech savvy, faced challenges accessing these services locally. The transition extends beyond preserving essential services.

NBAC, a 98 per cent self-funded organisation, aims to not only sustain the post office but also contribute to the local economy.

Through its social enterprises, Brida and Handy Hands, NBAC has created more than 200 local jobs, with Indigenous employees making up more than 55 per cent of the workforce. In the last eight years, NBAC has injected more than $60 million in wages directly into the City of Karratha.

4.5 The Australian (28 February 2024)

Putin 'ordered Navalny killed to prevent swap'

THOMAS GROVE

Russian opposition leader Alexei Navalny's death in an Arctic penal colony followed a proposal to trade him and two unnamed American citizens held by Moscow for a Russian hit man imprisoned in Germany, Navalny's foundation said on Monday.

In a video posted on the official YouTube channel of Navalny's Anti-Corruption Foundation, Maria Pevchikh, the group's head of investigations, said he was killed after Russian President Vladimir Putin became aware of the potential swap and acted to prevent it.

Ms Pevchikh said the foundation had been involved in efforts to win Navalny's freedom but didn't provide evidence to back her assertions in her seven-minute statement.

Among the US citizens being held in Russia are Wall Street Journal reporter Evan Gershkovich and former US marine Paul Whelan, both of whom have been designated as wrongfully detained by the US government, which has said it is working to negotiate their release.

Ms Pevchikh said Putin couldn't "tolerate Navalny being free". Navalny, who died on February 16, was Putin's most ardent critic and spent years investigating and exposing alleged corruption by the Kremlin elite. He had a large following across Russia.

US President Joe Biden has said Putin was responsible for Navalny's death, but the Kremlin has denied state involvement.

Kremlin spokesman Dmitry Peskov told the Financial Times that he wasn't aware of any swap agreement. Privately, US and German officials said they made no offer to Putin.

The Journal said in a statement: "We know the US government is taking the efforts to free Evan seriously, and we cannot comment further."

A Whelan family spokesman said he didn't have enough information to comment on what Navalny's foundation had said.

In an interview with former Fox News host Tucker Carlson earlier this month, Putin indicated that he was seeking a swap deal that would allow the repatriation of Vadim Krasikov, an agent of Russia's Federal Security Service, or FSB, who was convicted in 2021 of killing a Chechen dissident in Berlin. After Carlson asked about the possible return of Gershkovich, who was detained by FSB officers last year, Putin said he would consider a swap for an unnamed "patriot" who had killed "a bandit" in a European capital, widely seen as describing Krasikov.

Gershkovich, who was accredited as a foreign correspondent by Russia's Foreign Ministry at the time he was detained, has been held for nearly a year on an FSB allegation that he was engaged in espionage – an accusation the Journal, the US government and his family vehemently deny.

Mr Whelan, a corporate security executive has been held in Russia since late 2018 on espionage charges that he, his family and the US government also vehemently deny. He was convicted in 2020 and sentenced to serve 16 years in a penal colony.

"Putin was clearly told that the only way to get Krasikov is to exchange him for Navalny," Pevchikh said.

She said Putin decided "Since they are willing to offer Krasikov in principle, then I just need to get rid of the bargaining chip. Then offer someone else when the time comes." She said possible deals were being discussed since last year, and referenced a report in the Journal that said Navalny could be part of hostage-exchange talks with the Kremlin.

Pevchikh said she had information that on February 15, talks were in "their final stage". The next day, Russia's prison service said Navalny lost consciousness and later died after he had been let out of his cell in the prison known as Polar Wolf. Authorities later said he had died of natural causes.

On Monday, Navalny spokeswoman Kira Yarmysh said they were in the process of arranging a public memorial event for the politician. After Navalny's body was returned to his mother at the weekend, the question remains whether the Kremlin will allow a public outpouring of sentiment.

Navalny's foundation said the proposal to swap the opposition leader for Krasikov was taken to Putin by Roman Abramovich, a sanctioned Russian oligarch who has acted as a middleman in other prisoner exchanges between Russia and Ukraine.

Hungarian Prime Minister Viktor Orban in parliament in Budapest; and Swedish leader Ulf Kristersson after the vote

ANNE BEADE
ANDRAS ROSTOVANYI
STOCKHOLM AND BUDAPEST

Hungary has ratified Sweden's bid to join NATO, clearing the final obstacle for an enlargement of the military alliance spurred by Russia's invasion of Ukraine.

The parliamentary vote ends more than a year of delays that left fellow NATO partners furious as Ukraine battled Russian troops.

Swedish Prime Minister Ulf Kristersson hailed a "historic day", while NATO chief Jens Stoltenberg said Sweden would make the alliance "stronger and safer".

Russia's invasion two years ago prompted Sweden and neighbouring Finland to apply to join the bloc, ending a longstanding stance of non-alignment in both countries.

Speaking about Russia's potential reaction at a press conference, Mr Kristersson said: "The only thing we can expect with any certainty is that they don't like Sweden becoming a member of NATO, nor Finland."

While Finland became the 31st member of the alliance last April, Sweden's bid had been held up. Turkey only ratified it last month. Overnight on Monday, Hungary finally followed, with 188 members of parliament voting in favour and six against Sweden's accession.

"Today is a historic day ... Sweden stands ready to shoulder its responsibility for Euro-Atlantic security," Mr Kristersson said on X. Mr Stoltenberg welcomed Sweden as the 32nd NATO ally, saying its "membership will make us all stronger and safer".

People in Sweden also cheered the approval. Jimmy Dahllöf, 35, said Sweden would be "safer ... bringing us closer to our European neighbours".

Earlier on Monday, Hungarian Prime Minister Viktor Orban had asked MPs to approve Sweden's bid. "The Swedish-Hungarian military co-operation and Sweden's accession to NATO will strengthen Hungary's security," he told parliament.

Only the far-right Our Homeland movement was against the ratification. Now that parliament has approved the Nordic nation's bid, the President is expected to sign it in the coming days. Sweden will then be invited to accede to the Washington Treaty and officially become NATO's 32nd member.

"Nordic countries will have a common defence for the first time in 500 years ... we remain friends, and we become allies", Mr Kristersson said.

Though repeatedly saying it supported Swedish membership in principle, Hungary kept prolonging the process by asking Stockholm to stop "vilifying" the Hungarian government. Budapest accused Swedish officials of being "keen to bash Hungary" on rule-of-law issues. After a meeting on Friday between Mr Orban and Mr Kristersson in Budapest, the nationalist Hungarian leader announced that the two had clarified "our mutual good intentions".

Hungary also signed a deal to acquire four Swedish-made fighter jets, expanding its existing fleet of 14 Jas-39 Gripen fighters.

After Russia's invasion of Ukraine, most NATO members were keen to quickly approve the membership bids of both Finland and Sweden. For Sweden, Ankara cited security concerns, before moving ahead with the ratification.

In Hungary's delay, some exports saw a strategy to wring concessions from Brussels to unlock billions of euros in frozen funds.

Others argued it underlined Mr Orban's closeness to the presidents of Russia and Turkey.

AFP

Macron doesn't exclude sending troops to Ukraine

PARIS: French President Emmanuel Macron on Monday announced new steps to boost Ukraine in its fight against the Russian invasion, saying not even the sending of Western ground troops was ruled out to achieve Europe's goal of defeating Moscow.

Speaking after hosting a meeting of two dozen European leaders to discuss Ukraine, Mr Macron painted a grim picture of a Russia whose positions he said were "hardening" both at home and on the battlefield.

"We are convinced that the defeat of Russia is indispensable to security and stability in Europe," he said.

Russia, he said, was showing a "more aggressive attitude not just in Ukraine but in general".

While there was "no consensus" on the sending of Western ground troops to Ukraine, "nothing should be excluded. We will do whatever it takes to ensure that Russia cannot win this war," he said.

Mr Macron said the new coalition would be set up to supply Ukraine with "missiles and bombs of medium and long range to carry out deep strikes".

There was a "broad consensus to do more and quicker", he added. "Nothing can be excluded to achieve our objective. Russia cannot win that war."

German Chancellor Olaf Scholz and Polish President Andrzej Duda were among some 25 European heads of state and government at the conference. Other states sent ministers, with Foreign Secretary David Cameron in Paris for Britain.

AFP

Milei bans they-them from military

BUENOS AIRES: The government of President Javier Milei, a conservative libertarian, has banned gender-inclusive language in Argentina's armed forces.

The purpose of the ban was to "eliminate incorrect language use which can lead to misinterpretation ... affecting the execution of orders and the conduct of military operations," said a resolution published on the defence ministry's X account.

So-called inclusive language was never officially approved in the military, but in 2020 then defence minister Agustin Rossi vowed the government would not disregard "cultural changes in gender relations." This led to such unofficial distinctions as "soldado" for male members of the military and "soldada" for female ones, in line with the Spanish language rule of attaching a gender to every noun – with words ending in "o" generally masculine and in "a" feminine.

There has been a recent trend in Spanish-speaking countries towards more gender inclusive language, for example in the use of plural nouns which are masculine even if a group is composed of mixed genders – think "amigos" (friends) now often referred to as "amig@s" or "amigxs."

The new government directive states that in the military, Spanish must be used "according to the rules fixed by the Royal Spanish Academy and the regulations and manuals in force in the armed forces".

Mr Milei who has described himself as an ultra-libertarian "anarcho-capitalist", holds conservative stances on issues such as abortion and climate change.

He has railed against so-called "gender ideology," a term loosely used by conservatives worldwide to oppose same-sex social rights, abortion and transgender rights. His government has shut down its anti-discrimination agency.

Anger as Dior runs from HK catwalk

RICHARD LLOYD PARRY

Christian Dior has cancelled a catwalk show in Hong Kong, in another blow to the territory's efforts to re-establish itself as a business and cultural destination following anti-government protests, the arrest of democracy activists and economic difficulties in China.

The fashion show to be held on March 23 at the site of Hong Kong's old airport, Kai Tak, was "indefinitely postponed" on Friday.

"We have just received notification from the organiser that the event will be postponed," a government spokesperson told Reuters. "Postponements of large-scale events often happen. We continue to welcome large-scale events to be held in Hong Kong."

But with no new date set, the abrupt change of plan suggests a loss of confidence by a major luxury brand at a time when Hong Kong's pro-Beijing government is trying to return to normal after five years of political tumult and the pandemic.

Although no reason was given for the cancellation, Dior has had a chequered past with China. Last year it was accused of being racially insensitive after a model using her fingers to pull back her left eye, which was widely interpreted as a "slanted-eye pose".

"If Dior truly respects the Asia market, it should have the basic respect and humbleness, instead of trying to weather publicity crises by pretending it didn't know," state newspaper Global Times said in an editorial. "Such an attitude will eventually cause irreparable damage to its reputation. We hope Dior can face the mistake and give a sincere apology and response to the Asian society and make some clear explanations how it would prevent similar mistakes in the future."

'It's like Hong Kong is being fooled. This will generate a lot of speculation'

DOREEN KONG
HONG KONG POLITICIAN

The crisis came less than two years after Dior angered the Chinese market by running a photo featuring a stern-looking Asian woman with a Dior bag. Critics said then the woman had "spooky eyes" and a "gloomy face". Chinese photographer Chen Man apologised for her "lack of consideration", and Dior, which removed the photo, said it had always respected the feelings of the Chinese people.

Dior was also accused of cultural appropriation when it introduced a skirt and claimed it was an original creation even though it resembled a traditional Chinese design, drawing protests from Chinese consumers.

In November, Louis Vuitton held a similar show for 1000 guests. The Dior show was meant to have been on a similar scale, and to have presented the brand's men's autumn collection designed by Kim Jones, its artistic director.

It had been presented by the government as one of 80 "mega events" intended to impart "joy and pride" to Hongkongers and to increase the territory's prominence as a business and tourist destination, following the pandemic and the suppression of political opposition under the National Security Law.

This month another event in the program, a friendly match featuring Inter Miami football team, ended in anger and controversy after Lionel Messi, the team's main attraction, failed to take part in a match.

Fans paid as much as $HK4880 ($955) for tickets for the game, which was promoted using Messi's image. But after he was ruled out on ground of injury the club's owner, David Beckham, was booed by a jeering crowd.

"Why would there be a delay at such a critical moment?" Hong Kong politician Doreen Kong said to the South China Morning Post of the Dior show.

"The lack of an explanation is not good for Hong Kong. It's like Hong Kong is being fooled. This will generate a lot of speculation. If Hong Kong wants to be a hub of mega events but they are all postponed or the stars don't make an appearance, who will visit Hong Kong for its events?"

WHY NEW BUILDING BOOST IS A GRAN SLAM

EXCLUSIVE JAKE DIETSCH

Interest in granny flats has exploded, with inquiries increasing 500 per cent since the State Government relaxed rules about building them in a bid to tackle Perth's housing shortage.

Planning Minister John Carey last month announced granny flats will, from April, no longer require council planning approval, can be built on blocks smaller than 350sqm and will be allowed on homes with strata titles.

Council-issued building permits to ensure safety must still be obtained.

Granny Flats WA managing director Mike Nicholls said there had already been uptick of "at least 500 per cent" in inquiries, with 300 per cent the usual number of people signing contracts.

"People who had expressed interest but were concerned about the approval process time, have now been buoyed by the thought that it could be a much faster turnaround," Mr Nicholls said.

"There were perceived barriers and those announcements did spur people towards making the decision to build a granny flat where previously they thought they couldn't."

Mr Nicholls said his company was looking at increasing builds from 80 to 250 a year in the next 12 months — and would hire more staff to do so.

The changes allowing homes with strata to have granny flats and rent them out had especially fuelled demand, he said.

"There has also been a lot of inquiries from people looking

5. COMMUNITY ENGAGEMENT

5.1 Roebourne, Karratha and Dampier Roadshow (22 March – 24 March 2024)

Location	Roebourne, Karratha and Dampier Roadshow
Activity	Community information sessions
Location	22 March 2024 - Woodside Roebourne office 23 March 2024 - Karratha Shopping Centre 24 March 2024 - Dampier Beachside Markets
Date	22 - 24 March 2024
Description of the consultation	Woodside hosted community consultation sessions in Roebourne, Karratha and Dampier to enable community members to understand Woodside's proposed activities and how it may affect them, ask questions, and provide their feedback. Woodside Corporate Affairs, First Nations and Environment representatives were available to answer questions. A number of Environment Plan Consultation Information Sheets were available to attendees including the Pluto Facility Operations Environmental Plan Consultation Information Sheet. An iPad with consultation/feedback subscription prompt was made available with approximately 12 signs people subscribing.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in the Pilbara News on 13 March and 20 March (Record of Consultation, reference 5.1.1). • Social - Geotargeted social media campaign advertising in Karratha (Reach 22,095), Port Hedland (reach 26,487), and Roebourne (reach 22,134) (+80 kms) from 6 to 16 September 2023 (Record of Consultation, reference 5.1.3). • Social - organic • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website), Scarborough Project banner were displayed stand along with current EP factsheets. • Hard copy posters were also put up at high traffic areas including Lo's Café in Karratha and the Ieramugadu Store Maya in Roebourne. (Record of Consultation, reference 5.1.2 and 5.1.5).
Estimated number of individuals / organisations consulted	Woodside spoke to many community members, recording 32 meaningful conversations. Over 500 community members (Dampier Community Association) attended the event
Summary of Feedback, Objection or Claim	
• General queries about employment and local content opportunities. • General interest in Pluto Train 2 progress and Scarborough project and trunkline location. • Comments on Red Dog Village accommodation. Woodside staff discussed that the average local economy spend was $120 per person, per week. • Positive commentary to see Woodside active in the community and good sentiment toward the company as a respected local employer. • Interest in taking further information such as the Karratha Community Update (newsletter) and EP newsletter (Let's Talk). Approximately 25 copies of each were distributed over the 3 days. • Woodside social investment activities and community funding opportunities. • Environment Plan awareness building with multiple conversations on "What is an Environment Plan?" and "What is an EMBA?".	

- Query around impacts to whales due to noise from drilling and seismic surveys. Woodside staff discussed whale migration research, vessel whale spotters and the controls that Woodside puts in place during drilling and seismic activities. Community member took consultation information sheets and was referred to the consultation page on the Woodside website for further information and opportunity to provide feedback.
- Query on the location of the Scarborough Energy Project and proximity to the Montebello Islands. Woodside staff discussed that the FPU would be located 201 km from the Montebello Marine Park using the potential risks and controls as per the Scarborough Trunkline Operations (State Waters) Environment Plan consultation information sheet.
- General comment on climate change and the impacts from fossil fuels. Woodside staff advised that Woodside are working on emissions reduction and new energy options including solar power and carbon capture.
- Comment from a Woodside employee partner about Karratha Gas Plant hosting a family day for employees.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no objections or claims.
The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2**).

5.1.1 Pilbara News (13 and 20 March 2024)

Chance to argue case in political processes

The duo at WA's Parliament House.

KATYA MINNS

Young people in the Pilbara are being called to become the next generation of youth leaders in an opportunity to represent their electorate and participate in democratic processes.

In its 29th year, the 2024 Y WA Youth Parliament program has opened applications for people aged 15-25 who wish to gain experience in government and policy development.

Participants will have the opportunity to draft, debate and advocate for mock youth-focused legislation on topics they're passionate about and present to Members of Parliament.

In 2023, Port Hedland local Erin Hayes joined Karratha's Emer O'Brien to represent the Pilbara electorate, travelling to Perth to present their Bill focusing on sex-based discrimination. "I was in the women's committee and we wrote a Bill on education and health reform talking about menstrual justice, such as providing free period products at a higher standard than what we currently have, and menstrual leave," Ms Hayes said.

"It's an apolitical program so you don't have to express what side of politics you're on, you're more focused on the issues that you're passionate about.

"It's kind of like a really respectful way to have debates."

After first hearing about the program through a teacher's forum at the school where she taught politics, Ms Hayes applied for the 2023 Y WA Youth Parliament and encourages other young people to do the same.

"It was amazing, I got to meet people that were like-minded and got to talk about things we're really passionate about," she said.

"It's given me more experience as I still want to work in politics in some aspects. I think it would be really great if more local people from the Pilbara could participate." More information on how to apply can be found on the Y's Youth Parliament website.

Applications close on March 24.

Emer O'Brien and Erin Hayes during the 2023 Y WA Youth Parliament.

Monitoring upped at KHC

The Karratha Health Campus is among the hospitals trialling new security measures.

New 24/7 security support at campus

ROSS MCRAE

The Karratha Health Campus has been selected as one of the pilot sites for the WA Government's $434,000 investment in a state-of-the-art security hub for regional hospitals.

The new security hub, operating out of a State-wide CCTV operations room co-located within the WA Country Health Service Command Centre in Perth, will provide 24/7 real-time monitoring and support for some of the most isolated hospitals in regional WA, including Karratha.

It aims to enhance safety, deter anti-social behaviour, and provide greater support for frontline healthcare staff.

"Any kind of aggressive behaviour towards healthcare staff is completely unacceptable, and the State Government remains committed to doing all we can to keep staff safe at work," WA Health Minister Amber-Jade Sanderson said.

WACHS chief executive Jeff Moffet acknowledged the concerning rise in violence and aggressive incidents against healthcare workers in regional areas, with an average of two assaults a day occurring.

"It's important we continue to do all we can to keep staff and patients safe," he said.

WACHS noted that the pilot sites, such as Karratha, were chosen based on their overall risk profile for incidents at the site, local crime rates, proximity to immediate police response and isolation.

"This specialised technology will be operated around the clock by security specialists and will provide another layer of security for our frontline healthcare workers," Ms Sanderson said.

Mr Moffet said the new advanced security monitoring will complement existing measures such as on-the-ground CCTV, security personnel, duress alarms and access control systems.

Other pilot sites include Hedland, Kununurra, Meekatharra, Collie, Bridgetown and Halls Creek with further sites to be added throughout 2024.

The inclusion of Hedland Health Campus comes in the wake of a high-profile incident in July 2022, when an Aboriginal woman, who was a known suicide risk and had been receiving mental health treatment, took her own life inside the hospital after being left alone in a room, despite staff being aware of her high risk.

Woodside North West
March 30 at 7:00 AM ·

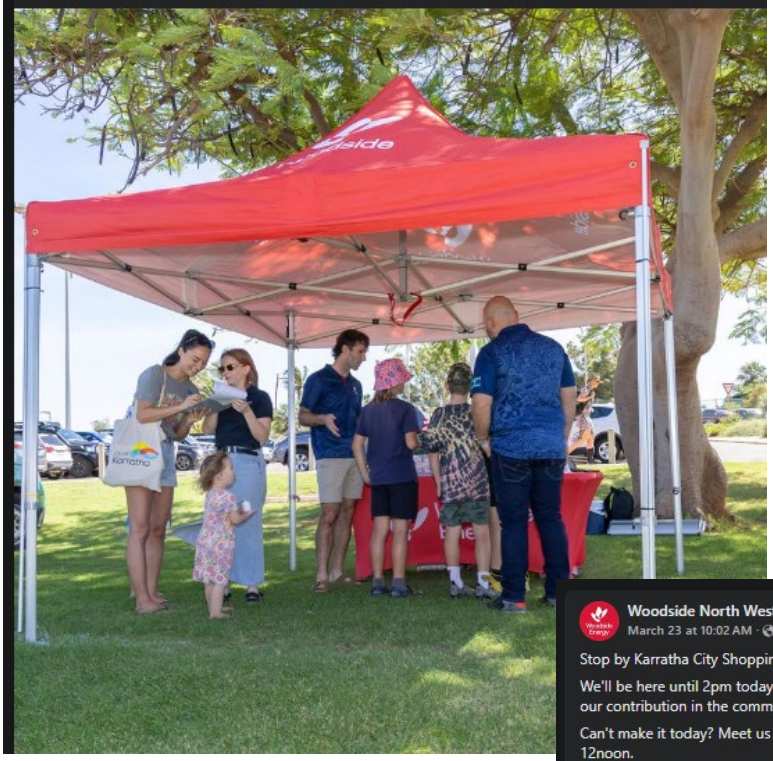
👀 Did you see us out and about last weekend?

We enjoyed chatting with many locals about our planned and proposed activities and operations, our community contribution and employment pathways.

If you have questions about our activities on land and sea, we will be at the North West Shelf Visitor Centre on Wednesday, April 3.

We welcome your input and wish to provide you with opportunities to share information and discuss your functions, activities or interests which may be affected by our proposed activities. Your information could assist us in developing our Environment Plans.

The North West Shelf Visitor Centre will be open from 10am - 2pm Tuesday to Friday these school holidays.



Woodside North West
March 23 at 10:02 AM ·

Stop by Karratha City Shopping Centre and say hello to our friendly team.

We'll be here until 2pm today to share information about our planned and proposed activities, our contribution in the community and employment pathways.

Can't make it today? Meet us at Dampier Beachside Markets tomorrow, Sunday 24 March 9am - 12noon.

We'd like to consult relevant persons in the course of preparing our Environment Plans to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse effects of the proposed activity on the environment.

We welcome your input and wish to provide you with the opportunity to share information and discuss your functions, activities or interests which may be affected by our proposed projects.

Woolies admits to underpaying

EMILY WOODS

Woolworths has lauded itself as an "exemplary employer" and "a model accused" in court as the supermarket giant admitted underpaying more than $1 million to about 1200 workers.

Two days after Woolworths' boss was threatened with jail for holding the Senate in contempt, the company faced Melbourne Magistrates Court where it pleaded guilty to more than 1000 charges.

Woolworths is facing a maximum penalty of more than $10 billion over the offending, prosecutors said last week. Barrister Kathleen Crennan, acting for the Wage Inspectorate Victoria, said the regulator was contacted in February 2022 by lawyers for Woolworths after it undertook a review of its payroll systems.

The supermarket chain discovered it was not paying some employees their long service leave entitlements after they left Woolworths, due to discrepancies in how those payments were being calculated.

Ms Crennan said the inspectorate investigated and found the underpayments occurred for former Woolworths and Woolstar workers on 3617 occasions between January 2020 and July 2022. The regulator took the case to court and charged Woolworths for those who were underpaid sums of more than $250, which resulted in about $1m in unpaid leave for 1227 former Victorian staff.

Woolworths' barrister Saul Holt KC admitted it was an "interesting week" to be discussing the supermarket in open court. "But Woolworths is much more than some headlines and a senate inquiry," he said.

He said Woolworths was described as "a model accused" by the prosecution, as it had self-reported and self-investigated the underpayments to the regulator.

"Woolworths is an exemplary employer," he said, adding it was a major employer of young people aged under 25.

Mr Holt said the proposed $10b maximum penalty was "extraordinary" and asked the magistrate not to dole out such a penalty as it could discourage other employers from self-reporting.

Woolworths has since paid back most of the underpaid after alerting them via text message, email and post, and paid those they could not get in contact with into their last known bank account, he said.

Magistrate Nahrain Warda asked why it took so long for Woolworths to discover the payroll issues, given it had changed systems in 2016. "Why is it not until 2020 that the testing is, in essence, to ensure there are no anomalies? One would think that would be ongoing," she said.

"Woolworths can't escape from the fact that over that period those anomalies were not picked up, that should not have occurred and would not have occurred now because we know more," Mr Holt replied. Woolworths will be sentenced April 24.

Gerry Georgatos.

Campaign to let children in care tell their stories

NATASHA CLARK

Suicide prevention expert Gerry Georgatos says it is critical that children in State care are allowed to share their stories with the public through the media.

The death by suicide of a 10-year-old Indigenous boy from the Kimberley in State care earlier this month has prompted Mr Georgatos to pioneer the Let Them Speak campaign.

"The power of the media is second to none; without it, we can't effect change," Mr Georgatos said.

"Governments cannot be swayed unless the narrative is in the public domain."

Under the Children and Community Services Act (2004), it is illegal to broadcast or publish anything that could identify any child who is, or has been, the subject of a protection order.

Though the 10-year-old's death has been widely reported, critical details, such as the child's name, cannot be revealed.

"We can't have deaths happening that we can't speak to, and we skirted the line with this one," Mr Georgatos said.

"We've come close to breaking the law by speaking with publications."

He has been working with the boy's grieving family every day since the loss of their beloved brother and son.

Mr Georgatos said the child's parents had returned clean drug and alcohol samples over the past year. Despite this, he had no contact with his parents for eight months before his death.

"As a suicide prevention researcher, I can argue that a year clean is a powerful protective factor," he said.

"The usual practice is to return kids to their families after the parents have returned clean drug and alcohol testing samples for three to six months.

> My focus is on keeping children safely at home, where this is possible. A recommendation to bring a child into the care of the State is only made as a last resort.
> Sabine Winton

"If that had happened in this case, at the six-month mark, that boy would still be alive today."

However, Early Child Protection and Prevention of Family and Domestic Violence Minister Sabine Winton said it would be inappropriate for a minister to provide comment on an individual case.

"The safety and wellbeing of children is always the highest priority of the Cook Government," she said.

"My focus is on keeping children safely at home, where this is possible.

"A recommendation to bring a child into the care of the State is only made as a last resort and a final decision rests with the Children's Court of Western Australia."

When asked for a response to demands by advocates that the Children and Community Services Act be reformed, Ms Winton said: "It is reviewed every five years."

For Mr Georgatos, the minister's response is unacceptable. He knows the ripple effect that publishing such stories can have.

In 2019, Mr Georgatos obtained permission from the then director-general of the Department of Communities, Michelle Andrews, for a young woman he was supporting, Tah-Shae, to share her experience of being placed in 72 foster homes in a 12-year period with the West Australian.

Tah-Shae detailed the sexual abuse, bullying and neglect she experienced while in State care.

The impact of her story sparked a wider public conversation about the merits of placing children, specifically Indigenous children, in State care.

"The impact of her telling her experiences while in care was an eye-opener to the dire circumstances many endure," Mr Georgatos said.

"Public consciousness gained insight. Without the public understanding (regarding) the gaps and unmet needs, there is less likelihood of addressing systemic disarray."

Mr Georgatos remains optimistic about his campaign to open up the State care system to more public scrutiny but admits it needs more support from powerful figures to gain traction.

"The Let Them Speak campaign is in its infancy but has begun," he said. "The next steps must be backed by a multitude of voices across the nation, calling for every State and Territory to reform their laws and guarantee unfettered rights for those affected to speak to the media.

"Everyone should be able to tell their story if they want to. I refuse to accept censorship by omission."

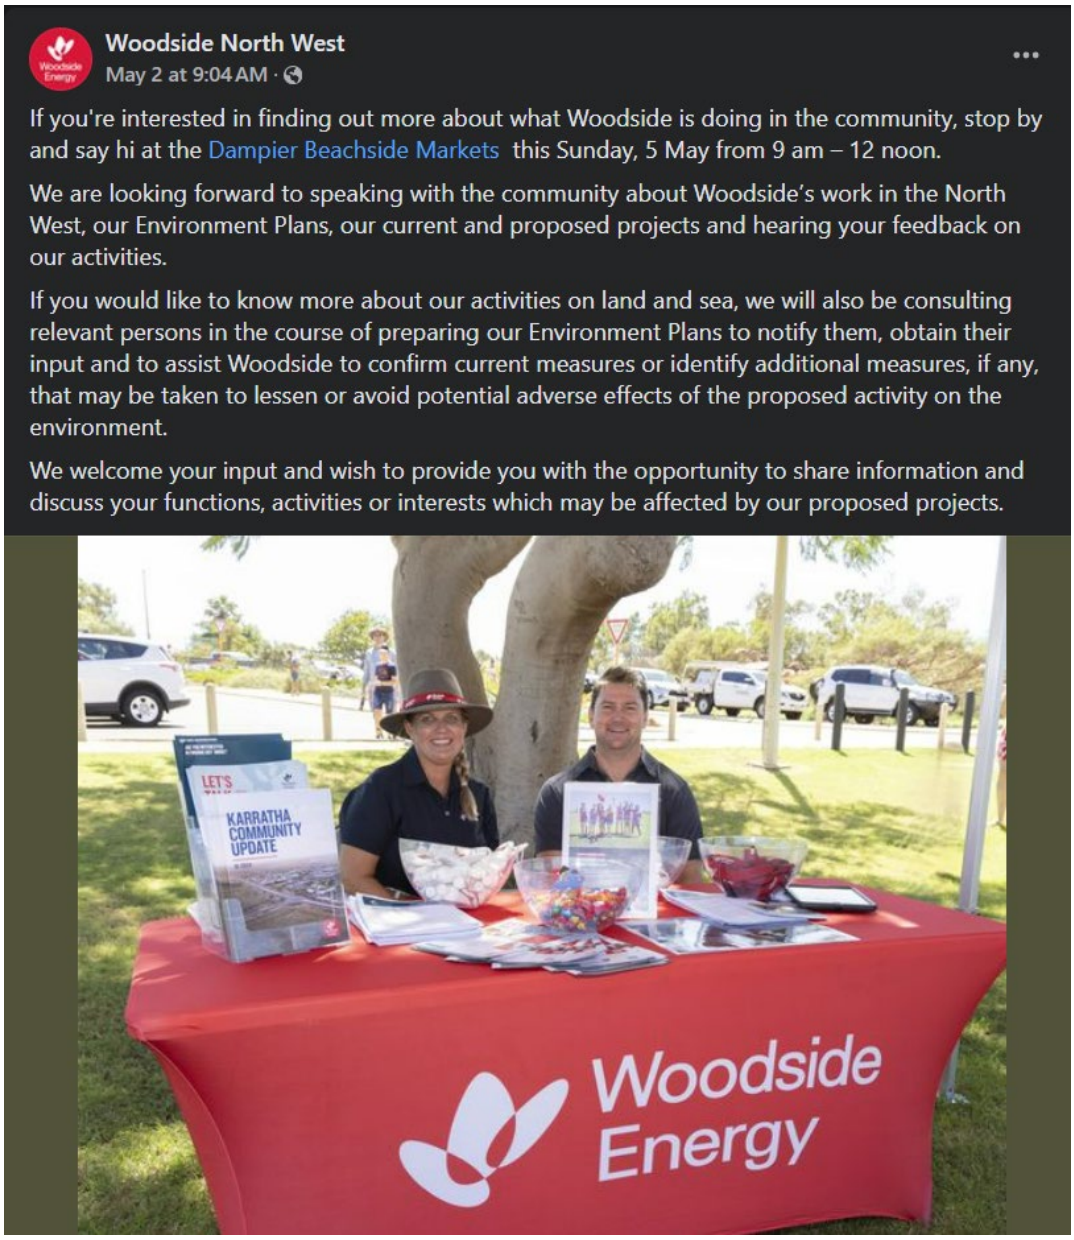
5.3.3 Social Media post (2 May 2024)



5.3.4 Social Media story (3 May 2024)

5.3.5 Lo's Cafe Community notice board (26 April 2024)

5.3.6 Market stand (5 May 2024)

5.4 Exmouth Community Markets (19 May 2024)

Location	**Exmouth**
Activity	**Community markets – Woodside stand**
Date	Sunday, 19 May 2024 (8am to 12pm)
Description of the consultation	Woodside hosted a stand at the Exmouth Community Markets, held at Federation Park. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. Woodside's 'Let's Talk' – a monthly information sheet on the company's Australian activities. In addition, information on the Scarborough Energy Project, Browse to NWS Project, Browse Carbon Capture and Storage (CCS) concept, Woodside's Climate Transition Action Plan, leaflets providing QR codes to Woodside's

	Annual Report and Sustainability , as well as our Reconciliation Action Plan were available. Environment Plan Consultation Information Sheets available to attendees included: • Pluto Facility Operations EP
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Geotargeted social media campaign advertising in Exmouth and surrounding areas (+80 kms) from 4 May to 18 May. • Directly inviting local Community Liaison Group • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside's stand along with the EP factsheets and Project information sheets mentioned above. A selection of images are in this email.
Estimated number of individuals / organisations consulted	Over 300 people attended the markets. Woodside had meaningful conversations with approximately 30 people. These people identified as being Exmouth community members, visitors to Exmouth (residents of the East Coast of Australia, residents of Perth, residents of Karratha), and a few transient backpackers from various overseas locations.

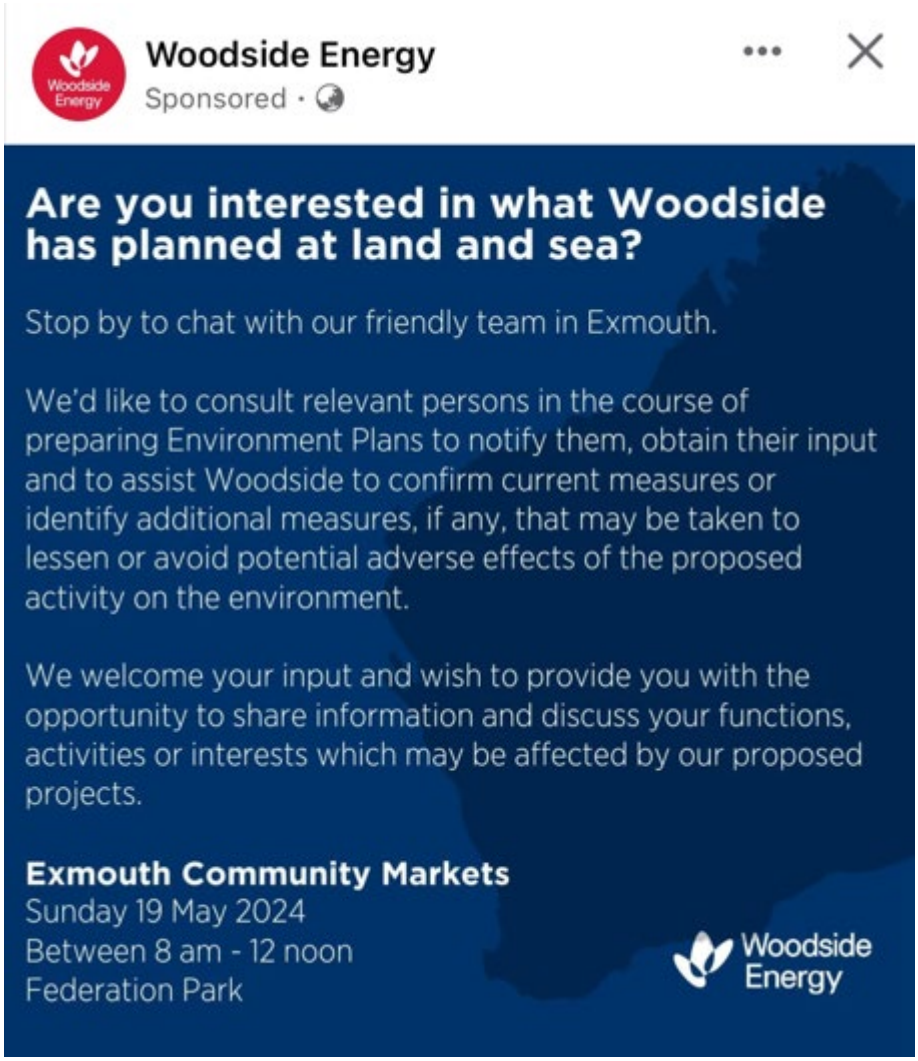
Summary of Feedback, Objection or Claim

- Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback.
- General interest in Woodside activities.
- No specific queries on the EPs.
- Stakeholders identifying themselves as Woodside shareholders interested in project updates, particularly on Scarborough, Browse to NWS Project, as well as the company's climate strategy and climate transition plans.
- Queries from Exmouth residents around employment and local content opportunities.
- General queries on the progress of the Scarborough Energy Project and Browse to North West Project, with two stakeholders seeking more information on Browse CCS
- Queries on Western Australia's domestic gas reservation policy and the existing domestic gas commitments for Woodside's activities.
- Concern from one Exmouth resident with business links to Eastern Australia over the costs of flights between Exmouth and the East Coast.
- General queries on the location of Woodside assets in relation to Exmouth and Woodside's footprint in Exmouth.
- Local residents interested in understanding current social investment programs and opportunities.
- Interest to understand how Woodside undertakes community consultation.
- A transient worker and an Exmouth local expressed a preference for the sunscreen giveaway to be made with reef-safe ingredients.(This feedback has been forwarded to the Woodside focal point)
- One stakeholder expressed their opposition to oil and gas and voiced a desire for companies like Woodside to invest in geo-thermal energy instead.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no specific objections or claims to a particular Woodside project or activity.

Objections to the resources industry was expressed by two stakeholders.
The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation.

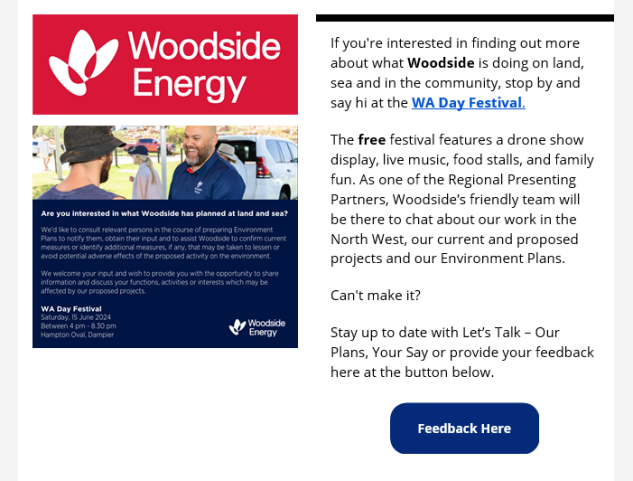


5.5 WA Day Festival (15 June 2024)

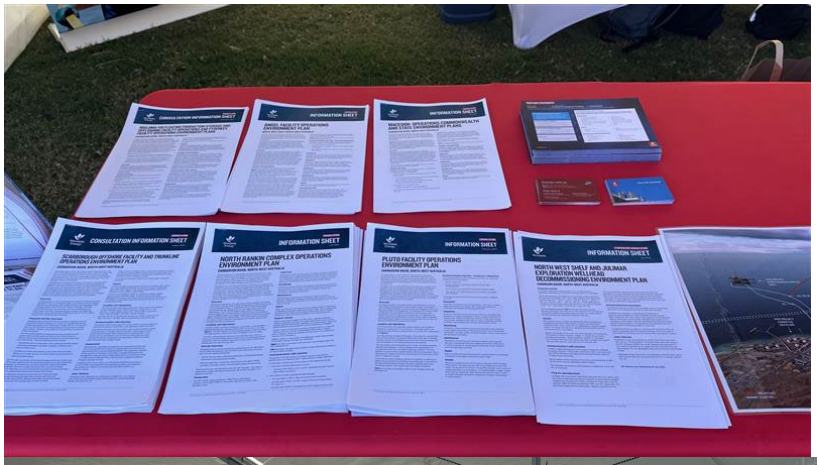
Location	Dampier
Activity	WA Day Festival
Date	15 June 2024
Description of the consultation	Woodside hosted a stand at the WA Day Festival organised by Celebrate WA. The event featured a drone show, food stalls, live music, sideshow stalls and interactive exhibits. The stand was staffed by members from Woodside's Corporate Affairs, First Nations and Environment team. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website. A number of Environment Plan Consultation Information Sheets were available to attendees including the Pluto Facility Operations EP.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: • Advertisement in the KDCCI e-newsletter distributed 5 June 2024. • Social media posts were published inviting public to attend on Woodside North West Facebook page (**Appendix F, reference 5.4.1**). • Celebrate WA advertised the event via TV commercials, radio advertisement and in print. • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside's stand along with current EP factsheets. (**Appendix F, reference 5.4.2**).
Estimated number of individuals / organisations consulted	Over 2000 community members (Celebrate WA) attended the event. Woodside spoke to many community members, recording 15 meaningful conversations.
Summary of Feedback, Objection or Claim	
• General queries around employment and volunteer opportunities. • General positive commentary from community members working at Woodside or on Woodside projects.	

• General interest in Scarborough and Browse progress and the future of gas in the energy transition. • General query around tax contributions. • EP approval process discussed and why we want to talk to community. No concerns raised.
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response
Whilst feedback was received, there were no objections or claims. The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2**).

5.5.1 Social media posts

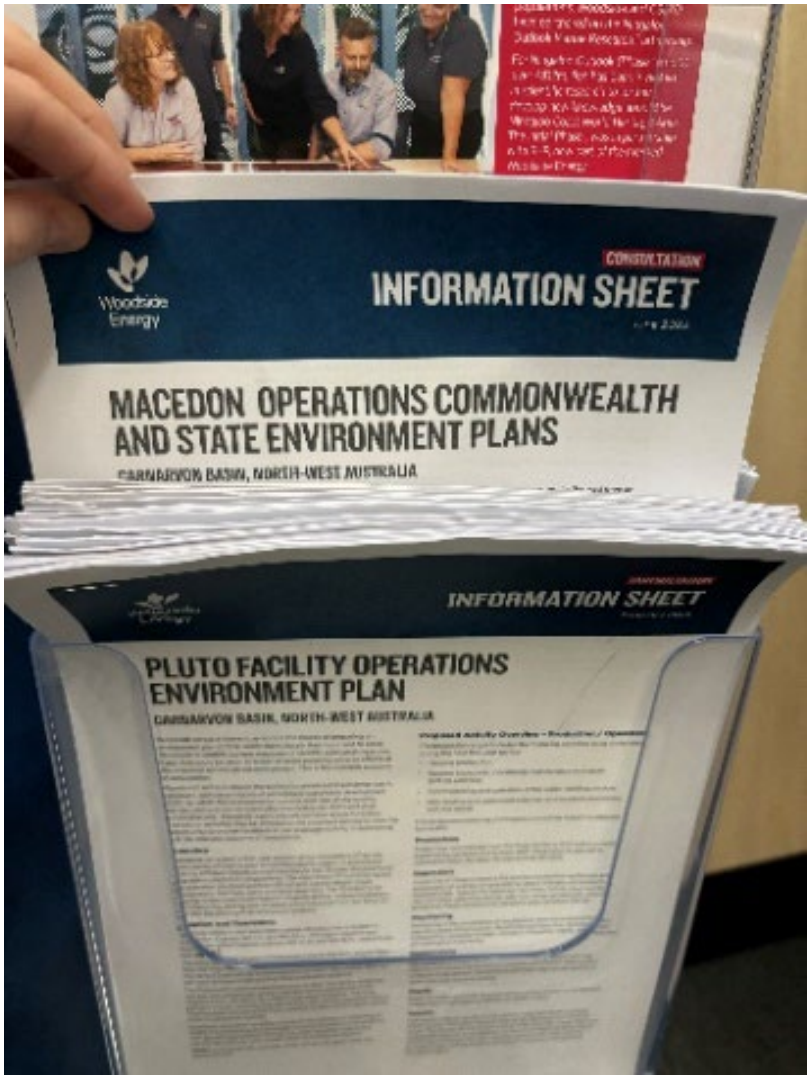


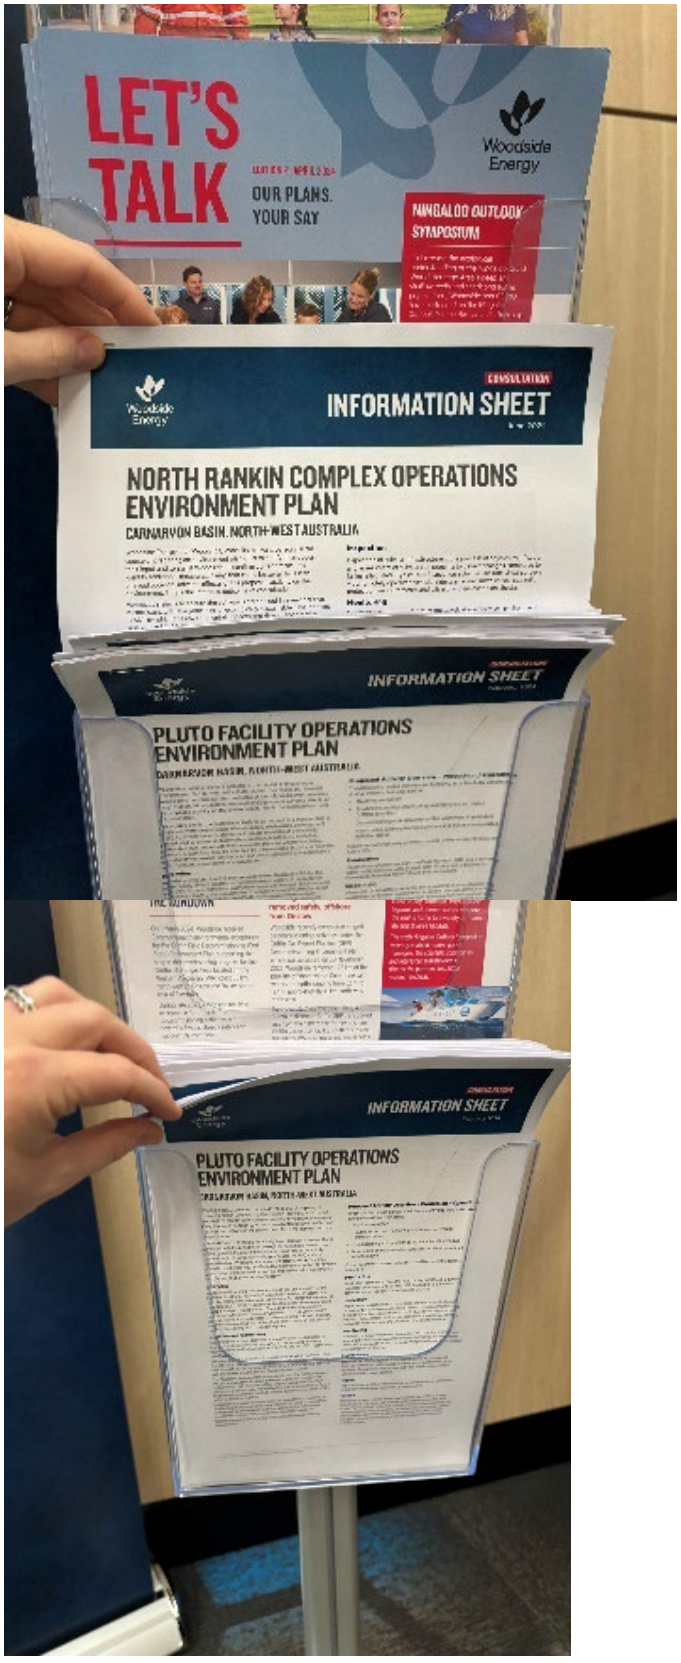
5.5.2 Market stand



5.6 Pilbara Summit (26-27 June 2024)

Location	Karratha
Activity	Pilbara Summit 2024
Date	25-26 June 2024
Description of the consultation	Woodside hosted a stand at Pilbara Summit 2024, a sold-out conference established to raise the profile of issues and opportunities in the Pilbara region. The event provides the opportunity for the Pilbara region's industry, investors, businesses, community, and government representatives to connect. The stand was staffed by members from Woodside's Corporate Affairs, Government Affairs, First Nations, Supply Chain and New Energy teams. Woodside displayed a QR code on the stand, linked to the Let's Talk EP newsletter on the Woodside consultation page of the website. A pull-up banner was on display focusing on engagement on our plans at land and sea with a QR code to the consultation page on the Woodside website. A number of Environment Plan Consultation Information Sheets were available to attendees including the Pluto Facility Operations EP.
Advertising and invitations	No advertising was undertaken. The Vice President for North West Shelf delivered a speech during the conference, which highlighted the important role the that Woodside will continue to play in the energy transition. In addition a presentative from Woodside's CCS team was part of a panel discussion on Decarbonisation – moving to net zero discussing the role of CCS, opportunities for growth, new business and the best approach to renewable and lower carbon industries. Attendees were invited to find out more about Woodside's projects, developments or environment plans by speaking team members on the Woodside conference stand or to visit Woodside's town office based in The Quarter.
Estimated number of individuals / organisations consulted	Over 600 people attended in person event over 2 days
Summary of Feedback, Objection or Claim • Approximately 10 conversations occurred around new energy opportunities and plans, local content, social investment, EMBAs (relating to EPs) and approvals in general. • No feedback was received regarding Woodside's Environment Plans.	
Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response	
This session forms part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see **Section 5.2** of the EP).	





5.7 Let's Talk – Our Plans, Your Say

Let's Talk Newsletter Hard Copy Distribution – March 2024 Edition

Date	Location	Event (if applicable)
28 February 2024	Karratha	KDCCI Business Breakfast
6 March 2024	Exmouth	Exmouth Chamber of Commerce and Industry office Exmouth Community Liaison Group
7 March 2024	Exmouth	Gascoyne Development Commission office Exmouth Shire office
8 March 2024	Karratha	KDCCI International Women's Day
13 – 15 March 2024	Perth	AOG Energy Conference
22-24 March 2024	Karratha, Dampier, Roebourne	Regional Woodside Environment Plan consultation roadshow
3 April 2024	Karratha	Employees at the Woodside Karratha Gas Plant
10 April 2024	Perth	Meeting with WAFIC
17 April 2024	Karratha	KDCCI Business After Hours
24 April 2024	Perth	Employees at the Woodside MY Building Woodside Annual General Meeting

LET'S TALK

MARCH 2024

OUR PLANS, YOUR SAY

Woodside Energy

WELCOME

Welcome to the first edition of Let's Talk – a platform to stay connected on Woodside Energy's Australian happenings and the stories behind our activities and operations. Dive in and explore to learn more about what Woodside has planned on land and sea; when, where and how we're engaging on our activities; and how you can provide feedback to us. If you or your organisation have functions, interests, or activities that may be affected by our planned activities, we want to hear from you.

To stay updated, subscribe for future editions click here or visit

www.woodside.com/what-we-do/consultation-activities

THE RUNDOWN

In December 2023, The Scarborough Energy Project received secondary Commonwealth environmental approvals for key offshore work scopes. The project is now well underway (over 50% complete) with the commencement of relevant offshore construction activities.

Woodside also received environmental approvals in November and December 2023 enabling in-field works for decommissioning activities at the Griffin (65 km northwest of Onslow) and Stybarrow fields (51 km to the northwest of the North West Cape).

As part of the decommissioning of the Enfield field, Woodside received environmental approvals in July 2023 for the removal of the Nganhurra riser turret mooring (RTM) from the permit area off the coast of Exmouth.

The Nganhurra RTM is a metal structure, about 83 metres long, on which Woodside previously moored an oil producing facility.

The RTM allowed the facility to rotate with weather while moored and also brought subsea production lines from the Enfield oil field to a Floating Production Storage and Offloading facility. Enfield ceased production in November 2018 and the RTM was removed as part of decommissioning activities at the field, which also included the permanent plugging and abandonment of 18 former production wells.

The decommissioning concept for the Nganhurra RTM was matured over more than two years of careful planning and detailed engineering, undertaken in conjunction with a range of specialist contractors.

> In late 2023, Woodside safely and successfully completed activities in the Environment Plan, including lifting the RTM in one piece out of the water and placing it on a barge for transportation to the Australian Marine Complex (AMC) at Henderson.

The RTM is now in its final stages of deconstruction at the AMC, expected to be completed by April 2024. More than 95% of the Nganhurra RTM will be recycled or re-used, supporting local employment and contracting opportunities.

LET'S TALK

TALKING POINT

Woodside safely completes marine survey

A marine seismic survey conducted by Woodside Energy in December 2023 applied controls to avoid interaction with whales as part of the environment planning process.

Once the Environment Plan for the activity was accepted by the Regulator, Woodside conducted the survey from 2 December to 31 December 2023.

The survey was undertaken with a range of standard and project-specific controls designed to reduce interactions with marine fauna including a dedicated spotter vessel with trained Marine Fauna Observers operating during daylight hours and the use of a Passive Acoustic Monitoring system to detect the presence of vocalising whales.

A shut down zone was in place for whales detected within 2 km of the acoustic source and for sea turtles spotted within 100 m of the acoustic source.

There were also specific controls in place relating to whale species of potential cultural significance, such as pygmy blue whales and humpback whales.

This included an extended 'limits of visibility' shutdown zone if these whale species or large unidentified whales were detected by observers, within their limits of vision.

Weekly project update reports were published on the Woodside website during the survey to provide information on cetacean or marine turtle observations. These reports confirmed that marine fauna continued to move through the area during the survey. They also confirmed that no pygmy blue whale or sea turtles were sighted during the survey.

COMMUNITY SPOTLIGHT

The Scarborough Energy Project

The Scarborough Energy Project will provide a boost to the WA economy and communities, growing jobs and bringing work through the supply chain, with a focus on the Pilbara region.

A second processing train, Pluto Train 2, is being constructed within the existing Pluto LNG facility located near Karratha in the Pilbara Region of Western Australia and is currently set to process about five million tonnes per annum of Scarborough gas. The project is providing various opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Scarborough Energy Project has injected more than $90 million locally and contracted over 65 Karratha businesses.

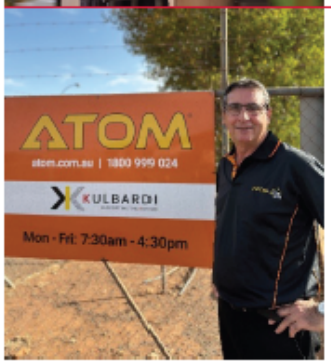
Local business spotlight: ATOM

We're spotlighting local, family-owned business: ATOM. The company name stands for Aqua Terra Oil & Mineral. ATOM has recently been contracted to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best which is why its 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Terry Klowss, Bechtel's Site Manager for Pluto Train 2 said, "ATOM's 100% local workforce helps us ensure our partnerships are benefiting local people – this is something that is very important to us at Bechtel."



> "Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha."

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980. In the same decade, Woodside commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

With access to more than one million products, ATOM is one of Australia's fastest growing industrial and safety supply business.

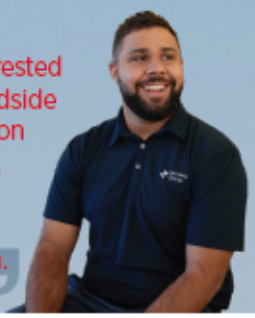
Burrup Road, Dampier, WA, 6713

"If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team."



HAVE YOUR SAY

Woodside consults relevant persons in the course of preparing our Environment Plans. This is to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse impacts of the proposed activity on the environment.

We welcome your input so please contact us if you'd like to discuss your functions, interests or activities which may be affected by our proposed activities.

Environment Plan	Activity Type	Location	Consultation Dates
Pluto Facility Operations	Operations	~190km north-west of Dampier	February – March 2024
North Rankin Complex Operations	Operations	~135 km offshore from Dampier	April – May 2024
Scarborough Trunkline Operations (State)	Operations	~30km north of Dampier	April – May 2024

You can access our consultation information, provide feedback and subscribe for updates by visiting **www.woodside.com/what-we-do/consultation-activities** or click **here.**

PROGRESS SNAPSHOT

You can view Environment Plans for approved projects and activities by visiting: **info.nopsema.gov.au/home/approved_projects_and_activities** or click **here**.

Environment Plan	Activity type	Date Accepted	Status
Stybarrow Decommissioning and Field Management	Decommissioning	8 January 2024	Work intended to commence in 2024
Stybarrow Plug and Abandonment	Decommissioning	21 December 2023	In progress
WA-34-L Pyxis Drilling and Subsea Installation (Revision)	Project	21 December 2023	Work intended to commence in 2024
Griffin State Pre-Decommissioning	Decommissioning	20 December 2023	Completed
Scarborough Seabed Intervention and Trunkline Installation	Project	13 December 2023	In progress
Scarborough WA-61-L and WA-62-L Subsea Infrastructure Installation	Project	8 December 2023	In progress

Griffin Decommissioning and Field Management	Decommissioning	21 November 2023	In progress
Nganhurra Operations Cessation	Decommissioning	27 July 2023	Completed

LET'S TALK

What's an Environment Plan?

A Titleholder must have an accepted Environment Plan (EP) in order to carry out certain petroleum activities. An EP sets out information about the proposed activity, how the activity may potentially impact the environment, measures to mitigate potential risks and impacts to as low as reasonably practical (ALARP) and acceptable levels, a record of consultation undertaken by the Titleholder, preparedness for emergencies and information on how environmental performance will be monitored and reported.

When an EP is being developed, a Titleholder:

- Engages in consultation with relevant persons and organisations.
- Provides information on its activities.
- Engages in dialogue with persons being consulted (where appropriate).
- Responds to claims or objections about the activity.

Consultation is an important part of environmental management.

Consultation on Environment Plans

Consultation provides an opportunity for persons who wish to provide feedback or raise concerns about:

- The potential adverse impacts of the activity on their functions, interests or activities, to seek information about the activity.
- How the Titleholder intends to manage the activity so that the risks and impacts are managed to ALARP and acceptable levels.

Information provided by the relevant person may assist the Titleholder to better put in place measures to manage the risks and impacts of an activity.

Commonwealth Waters

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) is Australia's independent regulator for health and safety, structural and well integrity, and environment management for offshore petroleum and greenhouse gas storage activities in Commonwealth waters.

EPs submitted to NOPSEMA for assessment are made available on the NOPSEMA website.

Woodside consults in the course of preparing Commonwealth EPs in accordance with section 25 of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023*. Consultation methodologies are designed to:

- Identify relevant persons.
- Provide them with sufficient information and a reasonable period of time to allow them to make an informed assessment of the possible consequences of the proposed activity on their functions, interests or activities.
- Assist Titleholders to consider and adopt appropriate measures in response to claims or objections raised during consultation.

Woodside identifies relevant persons for consultation in accordance with section 25 of the Environment Regulations. Alternatively persons who wish to consult can self-identify, in accordance with regulation 25 of the Environment Regulations.

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest area where a petroleum activity could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned activities and unplanned events. Woodside's assessment of relevant persons is based on the EMBA assessed for the activity.

State Waters

The Department of Energy, Mines Industry Regulation and Safety (DEMIRS) is the regulator for activities in State waters in Western Australia. Woodside follows a similar process to identify relevant persons to consult for State EPs. However consultation for State EPs is based on activities in the operational area, not unplanned events in the EMBA. For State EPs, only EP summaries are made public on the DEMIRS website once the EP has been approved.

Are you a Relevant Person?

Recently, Woodside launched an information campaign online and on social media focusing on the Kimberley, Pilbara, Gascoyne and Murchison areas to build a greater understanding of how members of those communities can get involved in consultation and the environmental planning process.

A series of short videos were shared on Woodside's website and on social media with targeted information for different community members including commercial fishers, marine users and traditional custodians.

In the videos, Woodside tells community members about our EPs and asks viewers who might be relevant to our activities to self-identify and participate in consultation.

The campaign is still running and provides suggestions as to ways to get into contact with Woodside and learn more about our EPs.

LET'S TALK

EDITION 2 | APRIL 2024

OUR PLANS, YOUR SAY

Woodside Energy

THE RUNDOWN

On 1 March 2024, Woodside received Commonwealth environmental acceptance for the Griffin Field Decommissioning (End State) Environment Plan, supporting the staged decommissioning program for the Griffin oil and gas field, located off the Western Australian (WA) coast 65 km north-west of Onslow and 94 km north-east of Exmouth.

During late 2023, Woodside received acceptance for other Griffin decommissioning activities, with several activities already safely and successfully completed.

WHAT IS DECOMMISSIONING?

Decommissioning involves managing infrastructure that is no longer required in a timely, safe, and culturally and environmentally responsible manner.

GRIFFIN FIELD – FAST FACTS

- Field discovered 1989
- Production period 1994 – 2009
- Gas produced for the WA domestic gas market - 62 trillion cubic feet
- Barrels of oil produced - 167 million

Griffin gas export pipeline removed safely, offshore from Onslow

Woodside recently completed staged decommissioning activities under the Griffin Gas Export Pipeline (GEP) Decommissioning Environment Plan, which was accepted on 30 November 2023. Woodside removed ~25 km of the pipeline offshore within Commonwealth waters at depths ranging from 52 m to 127 m, approximately 41 km north-west of Onslow.

During production, the 62 km long and 30 cm in diameter Griffin GEP transported gas from the field to the former onshore Griffin gas export facility south of Onslow for use by WA businesses and households.

The decommissioning of the pipeline's WA State waters section and related onshore infrastructure requires separate state approvals. Woodside will engage local stakeholders to understand their views on potential decommissioning options for this pipeline portion.

Woodside is now undertaking a post-removal assessment of the Commonwealth section of the Griffin pipeline to inform future decommissioning activities in the region. Woodside will continue to assess decommissioning options case-by-case, guided by science, consultation, and legislative requirements.

NINGALOO OUTLOOK SYMPOSIUM

To increase the ecological understanding of the Ningaloo Coast World Heritage Area's deep and shallow reefs and shark and turtle populations, Woodside and CSIRO have partnered on the Ningaloo Outlook Marine Research Partnership.

For Ningaloo Outlook (Phase 1 and 2) over A$12million has been invested in scientific research to further develop new knowledge about the Ningaloo Coast World Heritage Area. The initial Phase 1 was in partnership with BHP, now part of the merged Woodside Energy.

The 300 km long Ningaloo Reef is the largest fringing coral reef on the west coast of any continent. With shallow lagoons and deeper waters offshore, the reef is home to a variety of marine life and diverse habitats.

The sixth **Ningaloo Outlook Symposium** recently enabled marine park managers, the scientific community and interested stakeholders to discuss the partnership's 2023 research findings.

Click here to view footage shown at the 2024 Ningaloo Outlook symposium.

COMMUNITY SPOTLIGHT

Support for Murujuga

Woodside is proud to be a signatory of Murujuga Aboriginal Corporation's (MAC) Statement of Intent as part of our unwavering support for World Heritage Listing over the Murujuga Cultural Landscape, and our ongoing support for the protection and management of Murujuga's outstanding heritage values. We are committed to and support the protection of Aboriginal cultural heritage and continue to work closely with Traditional Custodians in the areas we operate.

Woodside was one of 11 signatories to the MAC Statement of Intent at a ceremony held at Hearson Cove on Murujuga Country. Other parties to the Statement of Intent included MAC (as the representative body for five Traditional Custodian groups, being Ngarluma, Yaburara, Yindjibarndi, Mardudhunera and Wong-Goo-tt-oo peoples), the Government (Premier, Environment Minister and Aboriginal Affairs Minister), Commonwealth Government (Environment Minister), Rio Tinto, Pardaman, Yara Pilbara, Horizon Power and the City of Karratha.

The Statement of Intent sets out the guiding principles for MAC, government and industry parties to work together to negotiate a cooperative Strategic Head Agreement in relation to the management, protection, and conservation of the Murujuga Cultural Landscape in support of the World Heritage nomination of this landscape.

Woodside takes its responsibility to protect and manage cultural heritage seriously, including through taking reasonable and practical measures across our operations and growth projects to minimise our emissions.

TALKING POINT

Supporting Science at Scott Reef

Out on the edge of Australia's continental shelf sits the north and south reefs and sandy islet of Scott Reef.

Located about 425 km north-west of Broome, to reach Scott Reef a boat would need to travel from the closest point on the WA coast for 270 km across the Indian Ocean.

Scott Reef and other reefs in the Pilbara and Kimberley were considered "poorly understood" by the Australian Institute of Marine Science (AIMS) three decades ago. However, over the last 30 years, more than 50 expeditions by numerous marine scientists have led to extensive research and understanding of Scott Reef.

In 1993, Woodside supported AIMS' extensive survey of coral and fish communities. This led to the establishment of a long-term monitoring program in 1994, which continues today. The Scott Reef coral reef monitoring program is globally one of the few continuous programs providing insight into the health and condition of resident corals and fish.

Woodside partnered with the WA Museum in 1998, contributing to research on oceanography and the biology and ecology of the resident species. The partnership has enabled long-term research to understand the reef's health and how it changes through time. WA Museum scientists visited Scott Reef in 1984 to carry out extensive surveys to sample fauna. Then, in 2006 returned with Woodside's support and catalogued 1,897 marine life species, including 262 new discoveries.

The WA Museum partnership included the Woodside Collection Project, focused on the marine life of the Dampier Archipelago and Kimberley. Over 55,000 specimens were collected and 700 new species were identified as part of the large Australian biodiversity project.

The wide-ranging Scott Reef research projects have revealed important insights into a complex ecosystem and have delivered a wealth of knowledge to support Woodside's long-term environmental planning and management.

Woodside is consulting on the Browse State Wellhead Decommissioning Environment Plan (EP), involving decommissioning options for three historical wellheads in WA State waters, approximately 430 km north of Broome. **View the consultation information sheet.**

In preparing the EP, Woodside's intent is to minimise environmental and social impacts and is seeking stakeholder input to inform Woodside's development of the EP.

Click here to watch Journeys of Discovery - Coral Reefs.

COMMUNITY CONVERSATIONS

Upcoming engagement opportunities

DAMPIER
5 May 2024 | 9:00am – 12:00pm
Dampier Beachside Markets, Hampton Oval

EXMOUTH
19 May 2024 | 8:00am – 12:00pm
Exmouth Community Markets, Federation Park

Dates and times subject to change.

Woodside is consulting with local communities at local events so you can easily come and chat us to us about our operations, decommissioning activities, or proposed projects.

Recently our team talked with community members at the Karratha Shopping Centre and the Dampier Beachside Markets about Environment Plans for the Scarborough State Trunkline Operations and Pluto Operations. We also meet quarterly with Community Liaison Groups in Karratha and Exmouth where we communicate updates and consult with community members on a range of relevant topics.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team and follow the **Woodside North West Facebook page** for updates. You can also read our recent **Karratha Community Update here.**

HAVE YOUR SAY

Woodside consults relevant persons while preparing our Environment Plans to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse impacts of the proposed activity on the environment.

We welcome your input so please contact us if you'd like to discuss your functions, interests or activities which may be affected by our proposed activities.

Environment Plan	Activity Type	Location	Consultation Dates
Browse State Wellhead Decommissioning	Decommissioning	430 km north of Broome	25 March – 3 May 2024
North Rankin Complex Operations	Operations	135 km offshore of Dampier	22 April – 22 May 2024
WA-550-P Exploration Drilling	Exploration	190 km north-west of Dampier	-May – June 2024
Angel Carbon Capture and Storage Geophysical and Geotechnical Surveys	Survey	125 km north-west of Dampier	-May – June 2024
North West Shelf Phase 1 Plug & Abandonment	Decommissioning	~117 km north-west of Dampier	-May – June 2024
Julimar Operations	Operations	160 km north-west of Dampier	-May – June 2024

LET'S TALK

EMBAs AND OIL SPILL MODELLING

Let's talk about EMBAs – what they are, and just as importantly, what they're not.

When Woodside talks to community members about our activities, we're often asked about the areas marked on our consultation material referred to as the "Environment that May Be Affected" (EMBA).

EMBAs are an important part of preparing the environmental and emergency response strategies that underpin the planning for our offshore activities.

They are produced as part of our extensive oil spill modelling and response planning. They represent the largest spatial area where a petroleum activity could potentially have a direct or indirect environmental impact.

Understanding the EMBA

The EMBA represents the largest, merged area of many potential paths that a highly unlikely oil spill could travel based on predictions around weather, currents, and other conditions at the time. An EMBA is not a predicted impact of a single oil spill, which would be much smaller, and the extent and path of the impact would only be known at the time it occurred.

This means the area the EMBA covers includes locations where planned activities and unplanned events could potentially occur.

Oil Spill Modelling

While offshore oil spills are extremely rare, it is important oil and gas companies are still ready to prepare for and respond to them. There are several different approaches to oil spill modelling, and Woodside uses these in combination for information about where an oil spill could move, how quickly, and the possible effect of using methods to manage a potential oil spill.

To calculate this, our oil spill modelling involves running many (sometimes hundreds) computer simulations of the same scenario to predict the behaviour of oil under different conditions.

Each simulation is subject to a range of variables, including weather and sea conditions, tides, and times of year. In the model, the oil responds to these conditions and behaves differently in each individual simulation.

Every individual simulation is overlayed on top of the next, allowing statistical analysis of the possible area the oil spill could travel in the highly unlikely event that a spill occurs. The smooth boundary drawn around all these computer simulations of the spill creates the EMBA.

The models process the information based on an assumption there is no emergency response, which would of course not be the case in a real emergency.

Oil spill modelling helps us develop our oil spill emergency management plans and assists in preparedness and response planning. Woodside conducts regular emergency response training exercises involving multiple facets of the business so our teams are ready to respond should they ever need to.

The many simulations used to underpin our planning are estimates and predictions only. It is not possible to exactly predict the outcome until the exact weather and other conditions are known if an oil spill event occurs.

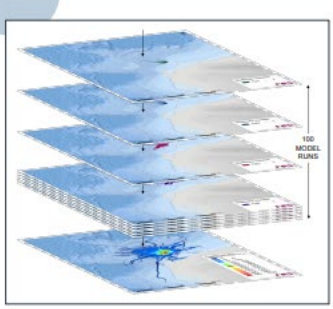

Figure 1: The first stage in EMBA creation is running computer simulations (model runs). Figure 1 shows the model runs for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

Emergency Management Plans

The emergency management plan informed by the oil spill modelling is submitted to both State and Commonwealth regulators for approval along with all other planning documents for our activities.

Woodside, in more than 60 years, has not experienced any significant uncontrolled release of oil or gas to the environment as a result of loss of well control.

Nevertheless, our extensive planning continues, drawing on international good practice, so the impacts and risks associated with our activities are detailed, evaluated and managed to a level that is as low as reasonably practicable.

We are committed to continuous improvement and share our expertise with our peers and take the lessons learned from other operators to incorporate into our management processes.

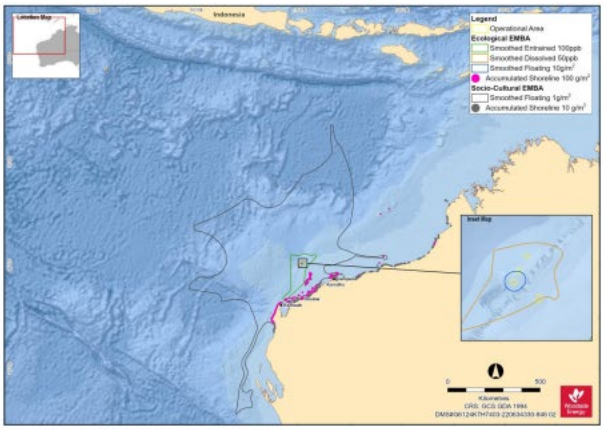

Figure 2: The EMBA is a culmination of all the computer simulations with a smooth boundary. Figure 2 shows the final EMBA for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

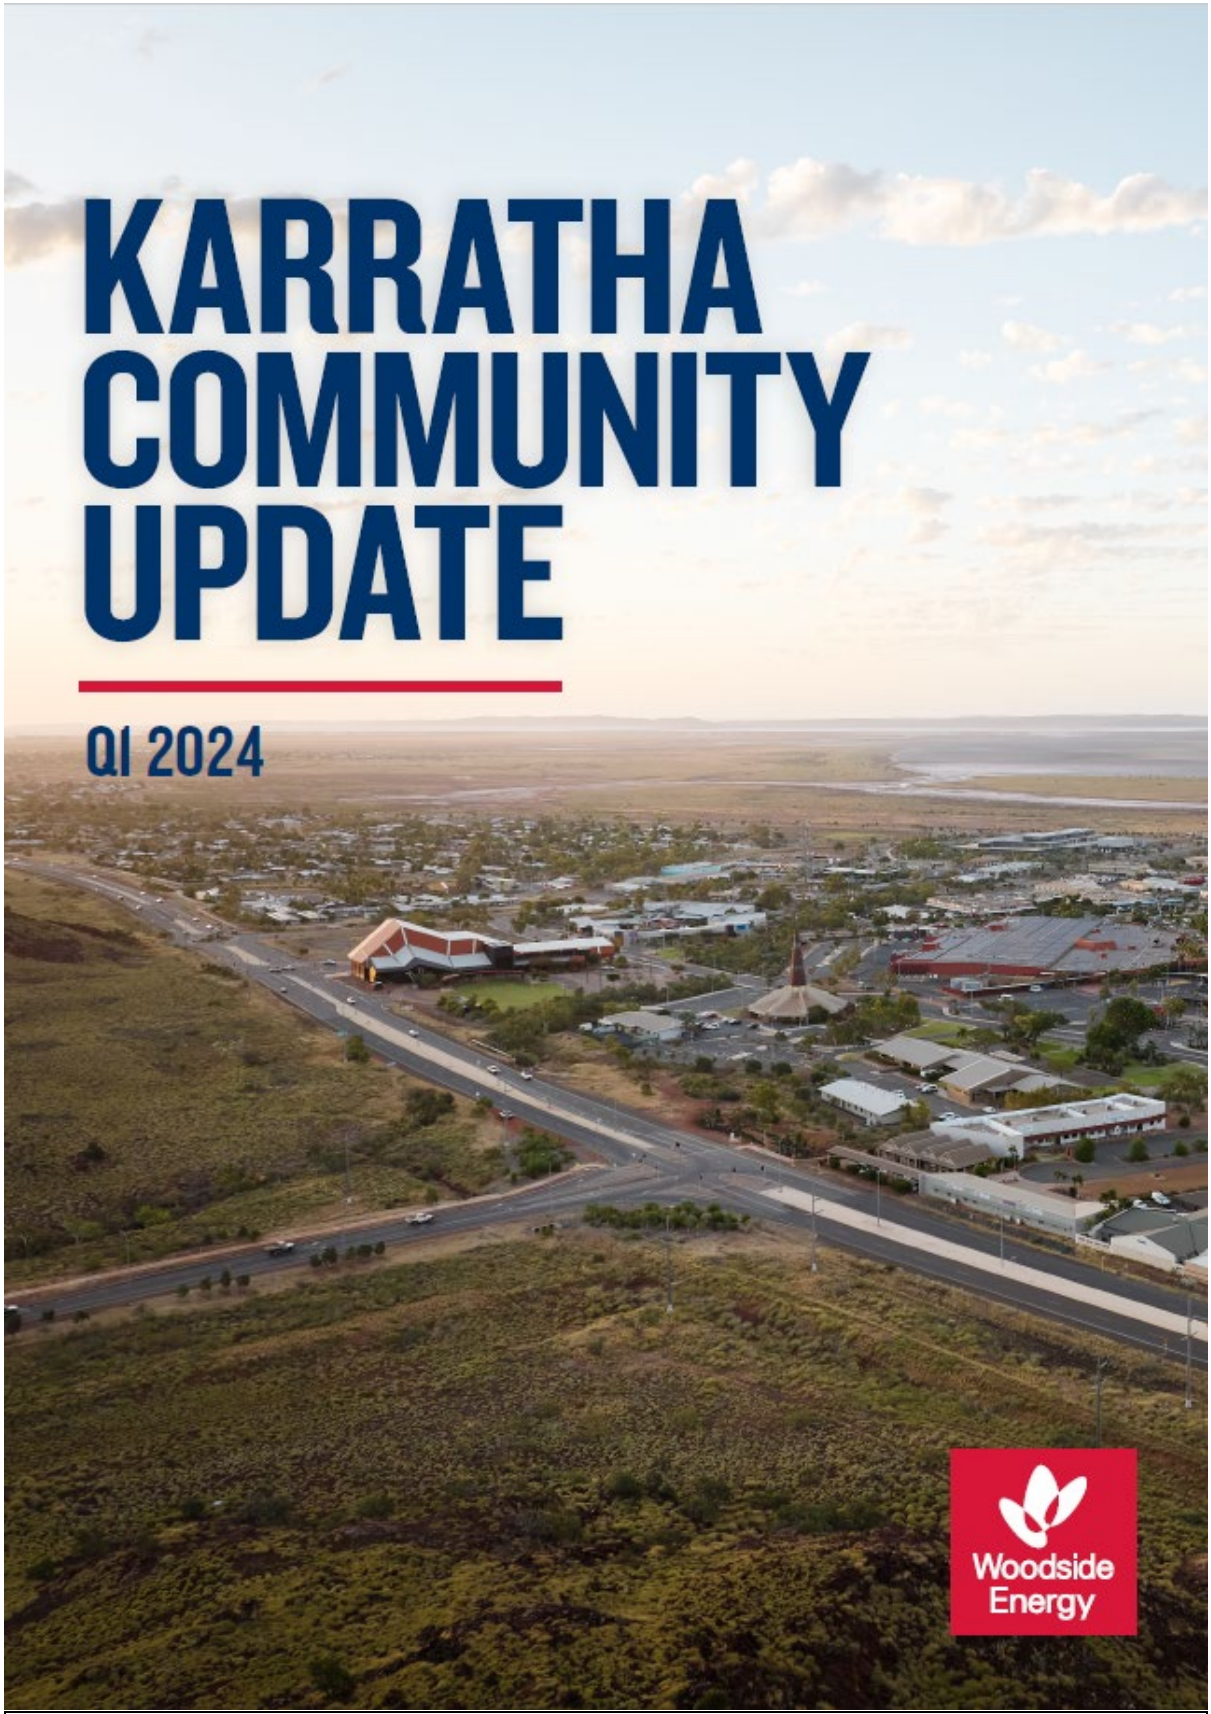
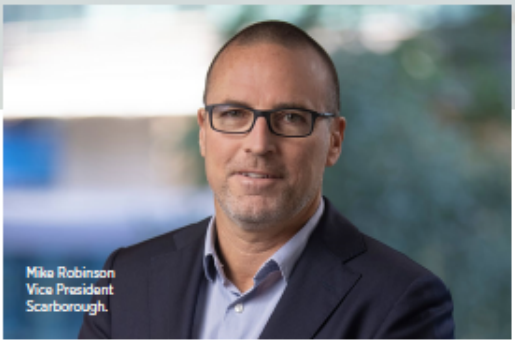
5.8 Karratha Community Update Newsletter



Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.



Mike Robinson
Vice President
Scarborough.

Graduating apprentices and trainees at Red Earth Arts Precinct.

The Scarborough Energy Project will see gas from the Scarborough fields piped approximately 430 km to be processed onshore at the Pluto LNG facility, where Pluto Train 2 is currently under construction. Scarborough gas will also be processed through the existing Pluto Train 1 plant following modifications, which are expected to commence in late 2024.

The Project is now more than 55% complete[1], and in March 2024, Pluto Train 2 achieved a key milestone, the arrival of the first modules in Karratha. This year, a total of 51 modules will be delivered to Pluto for installation.

This year, Woodside also celebrates its 70th anniversary and the North West Shelf Project marks 40 years of domestic gas production and 35 years of LNG exports from Karratha. Over this period, we have provided reliable energy to Australia and the world from the community we continue to call home. Karratha is where the Woodside story began and the Scarborough Energy Project will build on the legacy of supporting the world's energy needs from this region.

We are proud of the Scarborough Energy Project and what it will deliver for the Karratha community and the nation.

Mike Robinson
Vice President Scarborough

[1] The completion percentage excludes the Pluto Train 1 modifications project.

Celebrating success: Woodside Training Academy Graduation and Awards

The Karratha Gas Plant-based Woodside Training Academy has seen more than 750 apprentices and trainees commence their learning journey with Woodside since it opened its doors in 2010.

The Academy plays an integral role in hosting those who are building their employable skills and experience, supporting the development of local workforce capabilities.

This March, Woodside welcomed 21 apprentices and trainees into roles across its Burrup assets. The Woodside Training Academy Graduation and Awards held at Red Earth Arts Precinct saw the graduating cohort celebrated for their achievements in completing their training. The event also recognised and awarded the outstanding performance of particular individuals throughout their training process. The award recipients were selected for their dedication, commitment and consistent demonstration of Woodside's values.

An additional 33 apprentices, trainees and pre-pathway trainees, including 17 school leavers from the Karratha area, have been recruited by Woodside's training partner, Programmed Training Services and are being hosted by Woodside in 2024. We're proud to have close to 100 apprentices and trainees learning their craft at the Woodside Training Academy and offshore assets this year.

Woodside extends investment in education initiative

Woodside was recently joined in Karratha by the WA Minister for Education Dr. Tony Buti MLA and Kevin Michel MLA to share news of our ongoing collaboration with schools in the local community.

Together with our joint venture partners, we were pleased to announce our extended support for education in the City of Karratha after signing five-year community partnership agreements for the ongoing delivery of the Karratha and Roebourne Education Initiative (KREI).

The extension builds on more than 15 years of investment by the Woodside-operated North West Shelf Project to bridge the gap between the opportunities and resources available to students residing in the Pilbara and their metropolitan peers, and support students on their pathway to employment.

The renewed agreements with the Department of Education and St Luke's College increases funding provided for programming at local high schools and extends that support to primary schools in the community.

The funding will enable the delivery of quality educational opportunities, including ATAR revision seminars, additional STEM curriculum, student leadership programs, employment and career pathway planning, and teacher development.

Western Australia's Minister for Education, Hon Dr Tony Buti MLA, said he is thrilled support for the initiative will continue for years to come, benefitting even more students in the Pilbara.

"It has proved to be a very successful partnership over the years helping many students achieve their best and guiding them to a range of careers," Minister Buti said.

Woodside CEO, Meg O'Neill, said the renewed agreements reflected Woodside's commitment to improving capability and capacity in its host communities.

"The initiative has delivered strong educational outcomes and its success is a testament to what can be achieved when we work collaboratively with a student-centred approach," she said.

Baynton West Primary School Principal Lisa Ledger, WA Minister for Education Hon Dr Tony Buti MLA, Woodside Energy Corporate Affairs Manager North West Amanda Fuery, Pilbara Education Regional Office Program Coordinator Amanda Lawrence, Member for Pilbara Kevin Michel MLA and students from Baynton West Primary School.

Apprentice takes home Citizen of the Year

Meet Rhian. She's a fourth-year, Programmed Electrical Instrumentation Apprentice at Karratha Gas Plant and was recently named the City of Karratha's Citizen of the Year.

Rhian joined the Karratha Volunteer Fire and Rescue Service to meet people and make friends when she first moved to Karratha. She now holds a senior position and is on-call 24/7 with requests for jobs, including road crash rescues, house fires, HAZMAT incidents and assisting the local police.

But Rhian's contribution to the community doesn't stop at fire and rescue. Five years ago, she joined St John Ambulance as an Emergency Medical Technician volunteer.

She's attended more than 800 jobs in and around Karratha, and she also helped at the 2019-2020 Black Summer fire in QLD. Rhian also volunteers at community events like Speedway, Karratha's FeNaCING festival, Santa lolly runs, youth cadets and school visits.

"I just love giving back to the community and helping people in times of need. It's what I enjoy doing in my spare time. Some people play sport. I volunteer," said Rhian.

Electrical Instrumentation Apprentice and City of Karratha Citizen of the Year, Rhian

Indigenous Collegiate leads cargo loading

As the Woodside-operated North West Shelf Project prepares to mark 35 years of delivering LNG cargoes to our international customers, another achievement was recently recognised at Karratha Gas Plant.

In January, an LNG cargo was loaded at Karratha Gas Plant's berths by a team made up entirely of Indigenous employees.

The team consisted of nine members from Storage and Loading, including Operations Support Trainees through to Maintenance Technicians and Supervisors. The vessel was also piloted by Woodside and Australia's first Indigenous master mariner.

Woodside's Indigenous Liaisons Coach, Josh Hill, said the activity demonstrated the progress Woodside has made in creating employment opportunities for First Nation's people.

"It was inspiring to see and reflects Woodside's work to increase Indigenous recruitment and provide career support for members of the Indigenous Collegiate," he said.

Pluto Train 2 modules arriving in Karratha.

Making significant progress on the Scarborough Energy Project

The Scarborough Energy Project's Pluto Train 2 achieved a major milestone with the first three modules now safely installed on site in Karratha.

The modules, which arrived in February 2024, weigh a combined total of more than 4,000 metric tonnes, equivalent to the weight of 30 houses or 24 Boeing 787 Dreamliner aircraft. The modules were transported from Pilbara Ports to the construction site at the existing Pluto LNG facility using 21 specialised hydraulic transporters with 126 axles and 504 wheels.

Our CEO, Meg O'Neill, said the delivery of the first Pluto Train 2 module was a key milestone towards the delivery of the Scarborough Energy Project, which will help meet the growing demand for the low-cost, lower-carbon, reliable energy the world needs today and into the future.

"The safe and timely arrival of the module is a testament to the hard work and dedication of the Woodside team and our lead contractor Bechtel," she said.

The Scarborough Energy Project will contribute significantly to the Australian economy and create thousands of job opportunities during its construction phase.

The Project is already benefiting local Karratha businesses, including almost 30 Indigenous businesses that have been engaged. It is also supporting Woodside's investment in social contribution partnerships that provide positive impacts for those living in the Karratha community.

Scan the QR code or click here to see the arrival of the modules in Karratha .

Local businesses set to benefit from the Scarborough Energy Project

The Scarborough Energy Project, including Pluto Train 2 is providing opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Project has injected more than $90 million locally and contracted with close to 70 Karratha businesses.

Local, family-owned business, ATOM is one of these businesses. ATOM was recently awarded a contract to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best, which is why their 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha.

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980, where during the same decade, we commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader of ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

Darren Wilson, ATOM Karratha Branch Manager.

APPENDIX G: ONGOING ENGAGEMENT WITH TRADITIONAL OWNERS

Proposed Program of Ongoing Engagement with Traditional Custodians

This Program of Ongoing Engagement with Traditional Custodians ("Program") has been developed to demonstrate Woodside's commitment to ongoing engagement and support of Traditional Custodians' capacity to care for and manage Country, including Sea Country, and has been directly informed by Traditional Custodians' feedback regarding their capacity to engage and consult on Environment Plans.

It is a living document designed to evolve with ongoing consultation and feedback from Traditional Custodians and, at a minimum, will be subject to annual review. In addition to this Program, Woodside will continue to participate in, and support collective industry engagement with Traditional Owners on the development of a future, sustainable, industry wide Program. Through the Program, Woodside actively supports Traditional Custodians' capacity for, and involvement in, ongoing engagement and feedback on environment plans.

The Program has been developed so that Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the possible consequences of an activity to be carried out under an environment plan on their functions, interests and activities as they relate to cultural values. This feedback will be evaluated in conjunction with Traditional Custodians and, where necessary, avoidance or mitigation strategies in will be developed in collaboration with Traditional Custodians. How the Program is implemented with specific Traditional Custodians will depend on their stated needs and priorities

The Program is underpinned by Woodside's First Nations Communities Policy (woodside.com), the objective of which is to ensure Woodside partners and engages with First Nations communities to create positive economic, social and cultural outcomes that leave a lasting legacy. Woodside does this through building respectful relationships and partnerships with First Nations communities where we are active, in the areas where they are most interested in. We acknowledge the unique connection that First Nations communities have to land, waters and the environment.

The Program will include, as agreed with relevant communities, reasonable commitment to:

1. **Support for ongoing dialogue and engagement**

Woodside will support the capacity of Traditional Custodians to participate in ongoing dialogue and engagement about the environment plans and to enable the ongoing and future identification of cultural values potentially impacted by Woodside's activities. Woodside further commits to agreeing consultation protocols with individual Traditional Custodians to ensure the material provided is appropriate in level of detail such that the potential for cultural impact from Woodside activities can be determined and as required measures can be adopted to avoid or minimise impact.

In addition, Woodside will receive feedback on cultural values from an individual person or organisation that identifies as a Traditional Custodian, at any stage during the development and implementation of activities. This feedback will be evaluated, in conjunction with the Traditional Custodian individual or group and if required, control measures will put in place to avoid impacts to cultural values, or where avoidance is not possible, to minimise and mitigate the impacts to an acceptable level.

Where cultural values are identified post activity completion, any controls relevant to value management will be implemented during the next relevant activity.

2. Support for the identification and recording of cultural features

Woodside will support Traditional Custodians to record and articulate their Sea Country values and will invest in cultural assessments codesigned with Traditional Custodians, where required, to inform potential risks to cultural values from our petroleum activities.

This may include supporting cultural mapping by Traditional Custodians to identify and map significant cultural features including archaeological sites and other cultural values. The scoping of the mapping process will be codesigned with Traditional Custodians.

Woodside understands that cultural knowledge remains the intellectual property of Traditional Custodians and will agree with Traditional Custodians at the outset how that information from surveys will be used to feedback into and inform the environment plan's design and implementation.

In addition, Woodside applies the Cultural Heritage Management Procedure 2019, updated in 2023, to the Program which*:*

- provides a process for the identification, protection, and management of Cultural Heritage taking into account relevant standards, in particular, the United Nations Declaration on the Rights of Indigenous Peoples, the Charter for the Protection and Management of the Archaeological Heritage, the Convention for the Safeguarding of the Intangible Cultural Heritage, and the Convention on the Protection of the Underwater Cultural Heritage;
- applies to underwater cultural heritage and, consistent with current practice, provides for the commissioning of (where appropriate) both archaeological and ethnographic assessments of cultural values over the submerged landscape; and
- the process includes the following:
    - early engagement with relevant Traditional Custodians
    - identification of potential heritage, this could include desktop and field surveys undertaken with the Traditional Custodians.
- the development of cultural management strategies; and, where it is determined cultural heritage may be impacted, the development of Cultural Heritage Management Plans codesigned with Traditional Custodians and implemented by Woodside's First Nations team which:
    - focus on avoidance or minimisation of impacts; and
    - provide regular reviews and for inclusion of new information and further development of the Cultural Heritage Management Plan.

Woodside is committed to continue to receive feedback on cultural values for the life of an environment plan, the inclusion of new information and the development of avoidance or mitigation strategies in collaboration with Traditional Custodians. This information will be recorded via the Woodside Management of Knowledge Process and any potential impacts to the accepted Environment Plan evaluated via the Woodside Management of Change Process.

3. Building capacity for the ongoing protection of country

Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups. This is guided by Woodside's Indigenous Affairs Strategy 2019 ("Strategy"), which is designed to enable the building and maintaining of relationships with Traditional Custodians to leave a lasting legacy, including strengthening of Traditional Custodians' capacity to care for and manage Country, including Sea Country. The Strategy was developed with inputs from Traditional Custodians and contains four pillars that direct Woodside's social investment, policies relating to economic development, procurement and employment, and Woodside's agreement making and implementation of agreements. The pillars are:

1. Culture and Heritage Management: support social outcomes through protection, recognition and respect for culture and heritage;
2. Economic Participation: provide training, jobs, and business opportunities;

3. Capability and capacity: ensure strong corporate governance, leadership development and education initiatives to support self-determination; and
4. Safer and Healthier Communities: partner with Aboriginal people and service providers to maximise safer and healthier community outcomes.

Woodside is committed to an ongoing relationship between Woodside and the Traditional Custodian groups. Through consultation with Traditional Custodians Woodside will continue to:

- establish support for Indigenous ranger programs via social investment;
- establish support for Indigenous oil spill response capability via investigating training models;
- establish support for identification and recording of cultural values and the management of that information by Traditional Custodians;
- establish support for programs identified by the Traditional Custodians as important to them and as agreed by Woodside.

4. Support for capacity and capability in relation to governance

Pillar 3 of the Indigenous Affairs Strategy 2019 focuses on ensuring strong corporate governance, leadership development and education initiatives to support self-determination. To enable this, Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups, including in relation to governance and management systems.

The nature of this support will be informed by the individual needs of Traditional Custodian groups, but may include:

- funding or other support for community meetings, particularly where consultation with representative bodies lies outside of that body's core business and cultural authority or mandate needs to be secured,
- resourcing internal expertise so that information is managed consistently and internally, including ensuring appropriate record keeping of consultation to provide stakeholders with a lasting record of discussions, and
- development or upgrade of IT systems to manage information.

5. Program Reporting and Review of Effectiveness

Woodside will undertake an annual review of the Program to assess its effectiveness and adapt the Program accordingly. The annual review will also include an assessment of appropriateness of the methods used to undertake ongoing consultation with Traditional Custodians.
Progress of the Program will be reported annually in line with annual sustainability reporting via the Woodside website.

6. Current Status

Following distribution of this proposed Program, Woodside is now participating in a number of specific ongoing consultation activities with Traditional Custodian Relevant Persons. Specific ongoing activities are tabulated below:

Traditional Custodian Relevant Person	Ongoing Consultation Description	Forward Plan	Estimated Timeframes
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	BTAC proposed a Collaboration Agreement in May 2023, Woodside agreed in principle, and exchanged correspondence to understand details of the proposal. The Collaboration Agreement would enable support for BTAC to undertake an ethnographic assessment to articulate values, and ensure appropriate cost recovery	Woodside and BTAC have executed a Costs Acceptance Letter. Woodside has developed a Collaboration Agreement which is currently under internal Woodside review. Once settled internally it will be put to BTAC for their consideration.	The draft Collaboration Agreement will be provided to BTAC for consideration in November 2023. Woodside will follow up on a monthly basis for at least six months with BTAC once they are in receipt of the draft proposed Collaboration Agreement from Woodside, or until the Agreement is in place.
Yamatji Marlpa Aboriginal Corporation (YMAC)	In June 2023, YMAC provided Woodside a proposed draft Framework Agreement, and a proposal to fund in-house expertise to support consultation and implement the Collaboration Framework. In July 2023, Woodside agreed in principle to the proposed Collaboration Framework and the funding proposal and requested a meeting to work together on details. Woodside provided the Proposed Program of Ongoing Consultation to complement the proposed Collaboration Framework.	Woodside will continue to communicate with YMAC, seeking to collaborate and reach agreement on the proposed Collaboration Framework and funding agreement. At the point of EP submission, Woodside is seeking a meeting with YMAC at YMAC's earliest convenience.	Woodside will follow up with YMAC on a monthly basis for at least six months, seeking to progress the Collaboration Framework and funding agreement.
Wirrawandi Aboriginal Corporations (WAC)	In August 2023, WAC proposed a Framework Agreement with Woodside to provide a streamlined, formalised approach to consultation between WAC and Woodside. Woodside has confirmed receipt of the proposed framework from WAC.	Woodside is in contact with the WAC CEO and is currently developing a response to the proposed Framework Agreement put forward by WAC. WAC do not object to Woodside progressing environmental plans on the proviso that both parties enter into an Agreement suitable to each party. WAC have suggested a timeframe to settle the Agreement over the next 2-3 months. Woodside will be aiming to reach agreement within a shorter timeframe.	Ongoing Framework Agreement settled in 2023.
Ngarluma Aboriginal Corporation (NAC)	In September 2023, NAC proposed a Joint Working Group to practically manage consultation processes. It was proposed that the group would meet monthly for 2023 and quarterly thereafter, meetings would include NAC CEO and NAC Directors and potentially independent SME/s, the proposal was that Woodside draft a Framework Agreement, and included a request for funding for this approach. Woodside provided in-principle support for the proposal.	Woodside has provided in-principle support for NAC's proposal and is currently developing a draft Framework Agreement which once settled internally will be sent to NAC for their response.	In accordance with NAC's proposed timeframe, Woodside aims to prepare a draft Framework Agreement, settle internally and then meet to discuss in 2023.
Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	In a meeting during August 2023, NTGAC proposed a Framework Agreement. This included terms for ongoing	Woodside and NTGAC/YMAC have agreed in writing to develop a Framework Agreement. Woodside have been responding to queries from NTGAC who have passed	Woodside will follow up with NTGAC on a monthly basis for at least six months, seeking to

	engagement such as frequency of consultation, participation, and content. NTGAC has also requested Woodside provide funding for an in-house environmental scientist to review material. Woodside agreed in principle to this approach, and has requested a first draft of the Framework Agreement for consideration. Woodside have agreed to pay for YMAC's in-house scientist to attend NTGAC meetings to advise NTGAC.	information provided by Woodside onto their Environmental Scientist. Woodside are awaiting a proposed draft of a Framework Agreement and general report. YMAC's preference is to prepare the drafts, Woodside have offered to assist with drafting and remain ready to respond on receipt of documents.	progress the Framework Agreement and General report.
Yinggarda Aboriginal Corporation (YAC)	In August 2023, YAC requested Woodside provide a draft Framework Agreement for their consideration. Woodside has provided a draft Framework Agreement to YAC for review.	Woodside's Proposal suggests meeting with YAC every 3 months to progress matters. The Proposal suggests committing to work continuing between meetings with each party nominating focal points. A Scope of Work and schedule of rates is included to re-imburse the cost of ongoing consultation. Woodside's Proposal includes timeframes for anticipated milestones and has suggested the Proposal be in place for an initial 2-year period. Woodside has provided the draft Framework Agreement to YAC; they have advised that they will seek direction from the YAC Board on the proposal.	Woodside will continue following up with YAC on a monthly basis for at least six months, seeking to progress the Framework Agreement.
Robe River Kuruma Aboriginal Corporation (RRKAC)	RRKAC have noted that they are insufficiently resourced to engage further and respond to Woodside regarding EPs. Woodside assesses that a Framework Agreement could address this.	Woodside has on several occasions written to RRKAC offering to fund consultation meetings. Woodside will offer RRKAC a Framework Agreement which will propose funding, scope of work and timeframes to assist with consultation and ongoing consultation. If RRKAC are open to the proposal, it is intended to put forward a draft Framework Agreement to RRKAC within the next 2 months.	Woodside will follow up with RRKAC monthly for at least six months, seeking to progress a Framework Agreement.
Ngarluma Yindjibarndi Foundation Limited (NYFL)	NYFL and Woodside have an existing Agreement in place which enables quarterly communication about Woodside activities. NYFL has said they are working with other First Nations organisation and representative Bodies developing a Framework Agreement.	Woodside has not yet seen a draft of the Framework Agreement. Woodside's expectation is that it will outline principles of engagement, details of resourcing, timeframes to meet agreed outcomes etc. Woodside look forward to receiving a draft Agreement and will engage with NYFL to settle on the details of any proposal.	Woodside will continue to follow up monthly with NYFL for at least six months, seeking to progress a Framework Agreement.
Yindjibarndi Aboriginal Corporation	Yindjibarndi have advised that they are represented by NYFL for consultation on oil and gas matters. NYFL and Woodside have met to discuss the consultation framework to be used by NYFL as representatives of Yindjibarndi. Woodside will seek to use the Framework Agreement proposed by NYFL (above) for ongoing consultation with Yindjibarndi.	Per NYFL above.	Per NYFL above.
Kariyarra Aboriginal Corporation (KAC)	In September 2023 KAC proposed an agreement which would include meeting arrangements, ongoing consultations, specialist advice and contact protocols.	Woodside support funding request that are reasonable and will seek to reach agreement on a funding proposal put forward by KAC. Woodside agrees that a Framework Agreement is a sound tool to set out ongoing consultation with KAC, funding arrangements and social investment opportunities that KAC would want explored. Woodside will propose a first draft of an agreement and put to KAC in the	Woodside will continue to follow up monthly with KAC for at least six months, seeking to progress a Framework Agreement.

		first instance. Woodside will prepare a draft agreement within the next two months to for KAC's consideration.	
Bardi and Jawi Niimidiman Aboriginal Corporation (BJNAC)	In June 2023, BJNAC provided Woodside a draft resourcing protocol for consultation. Woodside noted that the draft protocol was drafted with a focus on land based activities that fall within the BJNAC native title determination, as opposed to offshore activities. In October 2023, BJNAC and Woodside met to review the resourcing protocol, which resulted in some small changes being agreed. BJNAC and Woodside agreed that both organisations were on the same page for ongoing consultation.	Woodside supports funding request that are reasonable.. Woodside agrees that the resourcing protocol is a sound tool to set out ongoing consultation with BJNAC, funding arrangements and employment, training and contracting opportunities that BJNAC want to explore. Woodside is awaiting BJNAC's revised protocol.	Woodside will continue to follow up monthly with BJNAC for at least six months, seeking to progress a Resourcing Protocol.
Karajarri Traditional Lands Association (KTLA)	.On 19 April 2023 and 2 May 2023, KTLA said they would seek funding support from Woodside and were developing paperwork/proposal for sending to Woodside.	Woodside supports funding requests that are reasonable. Woodside is awaiting KTLA's proposal.	Woodside will continue to follow up monthly with KTLA for at least six months, seeking to progress a Framework Agreement.

APPENDIX H: OIL SPILL PREPAREDNESS AND RESPONSE MITIGATION ASSESSMENT

Oil Spill Preparedness and Response Mitigation Assessment for Pluto Facility Operations

Corporate HSE

Hydrocarbon Spill Preparedness

July 2024
Revision 0b

TABLE OF CONTENTS

TABLE OF FIGURES

TABLES

EXECUTIVE SUMMARY

Woodside Burrup Pty Ltd (Woodside) has developed its oil spill preparedness and response position for the Pluto Facility Operations, hereafter known as the Petroleum Activities Program (PAP).

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to as low as reasonably practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP detailed in the Environment Plan (EP). This document then details Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary	Reference to additional detail
Worst Case Credible Scenarios (WCCS)	Major Environmental Event-01 (MEE-01): long-term (77-day) subsurface release of Pluto Condensate caused by a loss of well containment from PLA02 well at 19° 54' 48.266" S, 115° 7' 54.151" E. 59,459 m^3 over 77 days of Pluto condensate. 2.53% residual component of 1504.3 m^3	Section 2.2.
	MEE-02b: loss of containment of the export pipeline at a location near-shore, releasing 607 metric tons (662 standard m^3) of Pluto condensate, with gas, over 8 hours at 20° 21' 0.81" S, 116° 42' 12.41" E. 0.5 % residual component of 3.31 m^3	
	Credible Scenario-05 (CS-05): Loss of vessel containment releasing 1000 m^3 of Marine Gas Oil (MGO) over 1 hour at the PLA platform 19° 59' 46.5" S 115° 22' 5.6" E. 5% residue of 50 m^3	
Hydrocarbon properties	**Pluto Condensate** Pluto Condensate (API 70.9) contains a high proportion (~68% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. The unweathered mixture has a dynamic viscosity of 0.7032 cP. The pour point of the whole oil (< 15 °C) ensures that it will remain in a liquid state over the annual temperature range observed on the Northwest Shelf. The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 67.97% of the oil mass should evaporate within the first 12 hours (BP < 180°C); a further 18.48% should evaporate within the first 12-24 hours (180°C < BP < 265 °C); and a further 10.05% should evaporate over several days (265 °C < BP < 380 °C). **Eris-1 Condensate** Eris-1 Condensate (API 41.3) contains a high proportion (~[66% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. The unweathered mixture has a dynamic viscosity of 0.4.922 cP. The pour point of the whole oil (< 15 °C) ensures that it will remain in a liquid state over the annual temperature range observed on the Northwest Shelf. The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about 14.97% of the oil mass should evaporate within the first 12 hours (BP < 180°C); a further	Section 6.7 of the EP Appendix A of the Oil Pollution First Strike Plan

<tr><td></td><td colspan="4">48.43% should evaporate within the first 12-24 hours (180°C < BP < 265 °C); and a further 26.6% should evaporate over several days (265 °C < BP < 380 °C).

Marine Gas Oil

Marine Diesel Oil (MGO) is typically classed as an International Tanker Owners Pollution Federation (ITOPF) Group I/II oil. Group I oils are non-persistent and tend to dissipate completely through evaporation within a few hours and do not normally form emulsions.

From modelling results it is predicted that around 6% of the release will be subject to a fairly rapid evaporation when on or around the surface of the water and around 95% in total is available to evaporate over time. It is predicted only 50m^3 of product would remain after several days from the bunkering scenario and there is no predicted shoreline contact or accumulation.</td><td></td></tr>
<tr><td>Modelling results</td><td colspan="4">Stochastic modelling

A quantitative, stochastic assessment has been undertaken for credible spill scenarios to help assess the environmental risk of a hydrocarbon spill.

A total of 100 replicate simulations were completed for the modelled condensate scenarios and 200 for the MGO scenario to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter.</td><td>Section 2.3</td></tr>
<tr><td></td><td colspan="4">Deterministic modelling

Deterministic modelling was then undertaken for scenario MEE-02b as the worst-case credible scenario (WCCS) to contact shoreline receptors to establish the following for response planning purposes:

• Minimum time to commencement of oil accumulation at any shoreline receptor (at a threshold of 100 g/m^2)
• Maximum cumulative oil volume accumulated at any individual shoreline receptor (at concentrations in excess of 100 g/m^2)
• Maximum cumulative oil volume accumulated across all shoreline receptors (at concentrations in excess of 100 g/m^2)

Stochastic modelling has been included below for MEE-01 and CS-05 to inform spill contact.</td><td></td></tr>
<tr><td></td><td></td><td>MEE-01: loss of well containment from PLA02 well - 59,459 m^3 loss of Pluto condensate over 77 days</td><td>MEE-02b: Hydrocarbon release the export pipeline – 607 tonnes 662 standard m^3) of Pluto condensate over 8 hours</td><td>CS-05: Loss of vessel containment releasing 1000 m^3 MGO over 1 hour</td><td></td></tr>

1 INTRODUCTION

1.1 Overview

Woodside Burrup Pty Ltd (Woodside) has developed its oil spill preparedness and response position for the Pluto Facility Operations, hereafter known as the Petroleum Activities Program (PAP). This document outlines Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023 (Cth) (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The Pluto Facility Operations Environment Plan (EP)
- Oil Pollution Emergency Arrangements (OPEA) (Australia)
- The Pluto Facility Operations Oil Pollution Emergency Plan (OPEP) including
  - First Strike Plan (FSP)
  - relevant operations plans
  - relevant Tactical Response Plans (TRPs)
  - relevant supporting plans
  - data directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to as low as reasonably practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP detailed in the EP. This document then details Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the PAP is shown in Figure 3-1 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, detailing the selected response techniques for this PAP. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the Oil Pollution FSP is underway. The IAP includes inputs from the operational monitoring and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 details the interaction between Woodside's response, planning/ preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the PAP.

The Pluto Facility Operations Oil Pollution First Strike Plan then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities, if an incident were to occur.

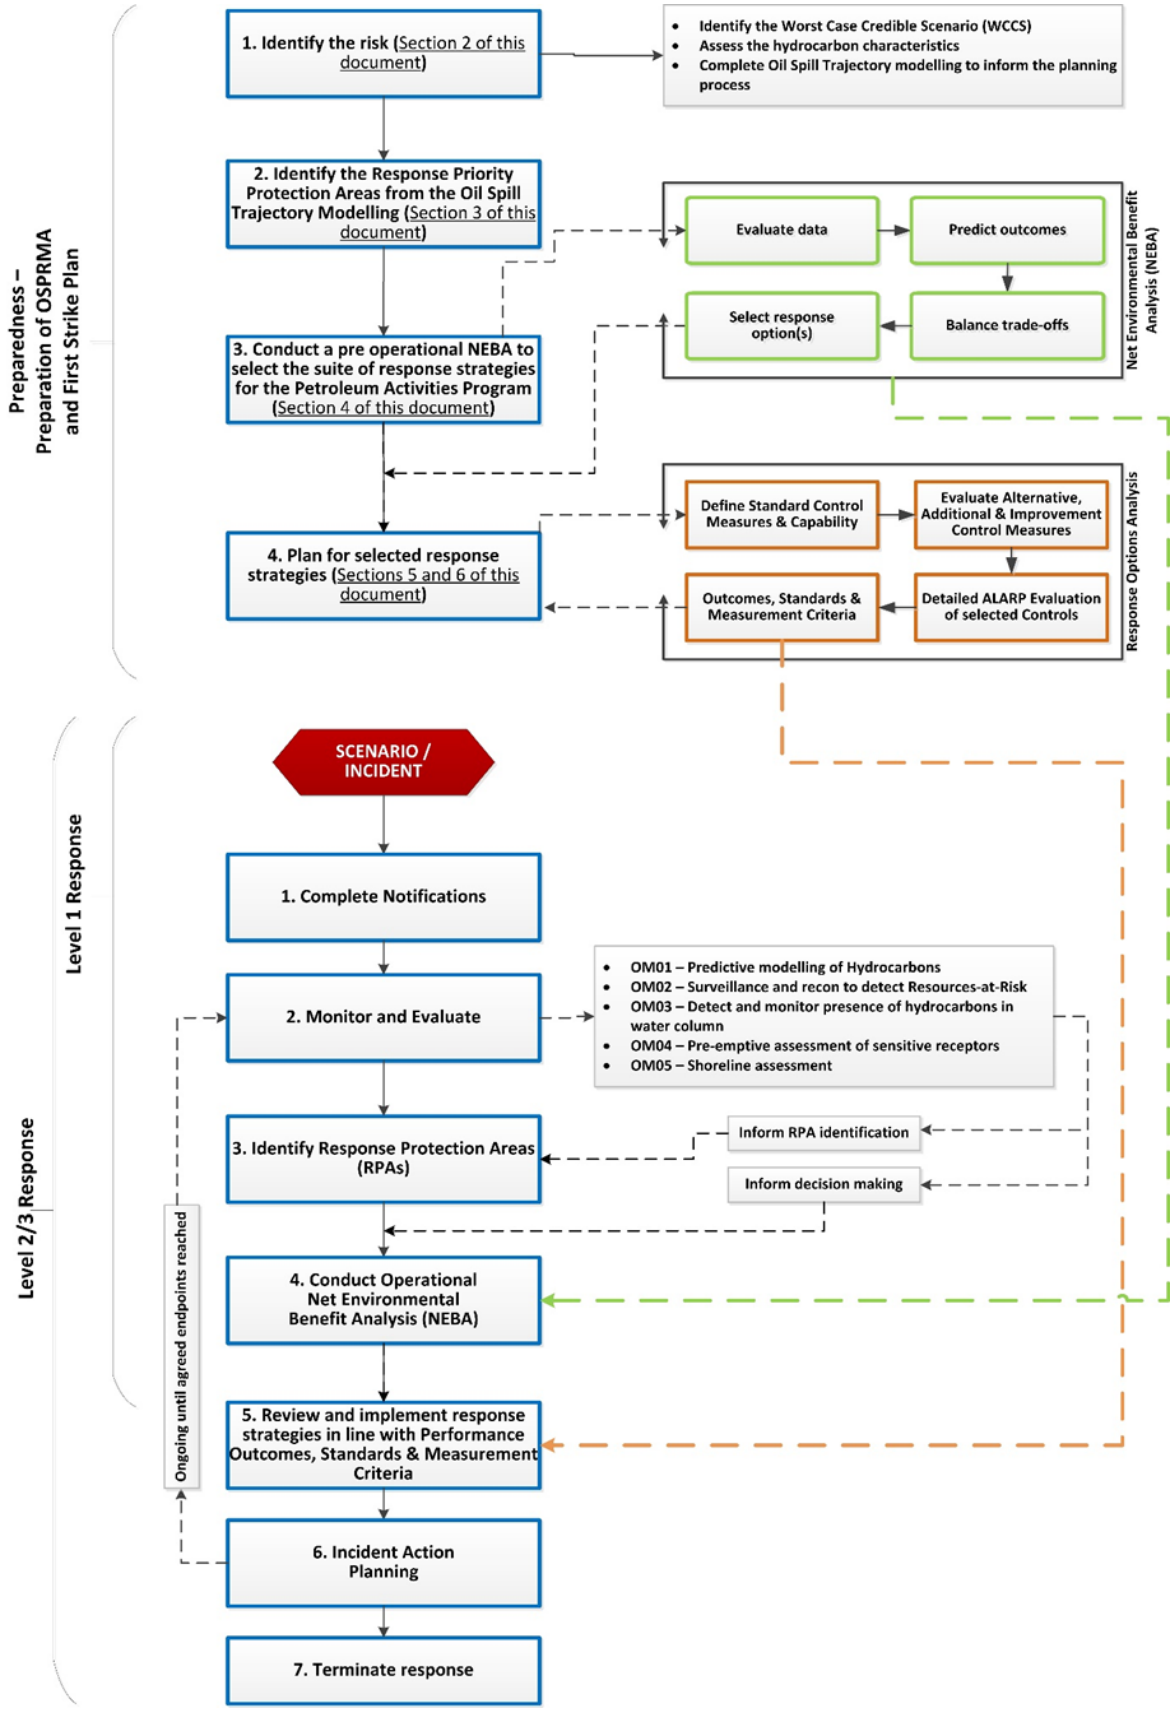

Figure 2-1: Response planning and selection process

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

Section 1. INTRODUCTION

Section 2. RESPONSE PLANNING PROCESS

- identification of worst-case credible scenario(s) (WCCS)
- spill modelling for WCCS.

Section 3. IDENTIFY RESPONSE PROTECTION AREAS (RPAs)

- areas predicted to be contacted at concentration >100 g/m^2.

Section 4. NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

- pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
- selected response techniques prioritised and carried forward for ALARP assessment.

Section 5. HYDROCARBON SPILL ALARP PROCESS

- determines the response need based on predicted consequence parameters
- details the environmental performance of the selected response options based on need
- sets the environmental performance outcomes, environmental performance standards and measurement criteria.

Section 6. ALARP EVALUATION

- evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP
- provides a detailed ALARP assessment of selected control measure options against:
  - predicted cost associated with implementing the option
  - predicted change to environmental benefit
  - predicted effectiveness / feasibility of the control measure.

Section 7. ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

- evaluation of impacts and risks from implementing selected response options.

Section 8. ALARP CONCLUSION

Section 9. ACCEPTABILITY CONCLUSION

2.1.1 Response Planning Assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

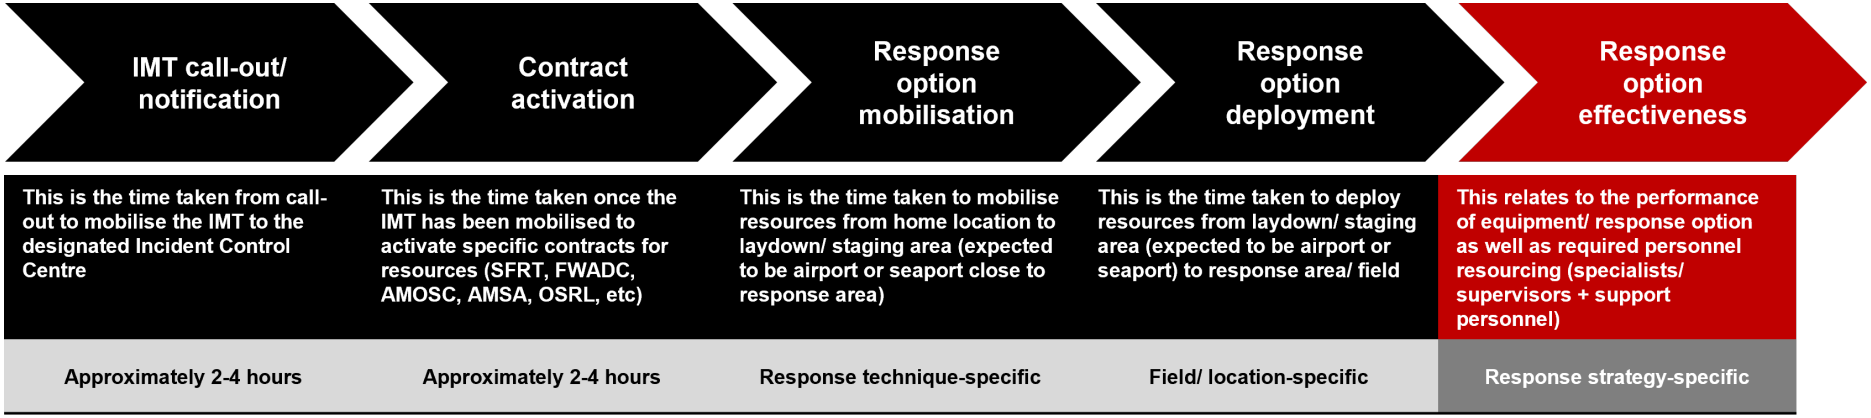

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

2.2 Environment plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the PAP have been identified during the risk assessment process (Section 4 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Six unplanned events or credible spill scenarios for the PAP have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the PAP. The WCCS(s) for the activity are then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCS(s), Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCS(s).

The LOWC scenario at PLA02 platform (MEE-01) has been modelled and is considered to determine the WCCS for source control response planning purposes. Although the release volumes are smaller for the trunkline subsea release (MEE-02b), this results in larger shoreline loading and has therefore been selected for response planning and scaling of the shoreline response.

Table 2-1: PAP credible spill scenarios

Credible Spill Scenarios	Scenario selected for planning purposes	Scenario description	Maximum credible volume released (liquid m^3)[1]	Incident level	Hydrocarbon type	Residual proportion	Residual volume (m^3)
CS-01	No	A long-term (64-day) release of Eris-1 condensate caused by a loss of well containment during drilling at the Xena-03 well. The release occurring at the sea surface for 5 days, evolving to release from seabed level for the remaining 59 days	Spilled volume: 46,631 m^3 (1880 m^3 at the surface, 44,751 m^3 subsea) Release depth: 0 m for 5 days, 178 m for 59 days	3	Eris-1 Condensate	Surface: 10.01% Seabed: 3.39%	Surface: 4,666.78 m^3 Seabed: 1,580.79 m^3
MEE-01 (WCCS)	Yes	A long-term (77-day) subsurface release of Pluto Condensate caused by a loss of well containment from PLA02 well	Spilled volume: 59,459 m^3 Release depth: 829 m Spill duration: 77 Days	3	Pluto Condensate	2.53%	1504.31 m^3
MEE-02a	No	Loss of containment of the export trunkline at 29 km from Pluto A	Spilled volume: 479 metric tons (632 standard m^3) Release depth: 78 m Spill duration: 8 hours	1/2	Pluto Condensate	0.5%	3.16 m^3
MEE-02b (WCCS)	Yes	Loss of containment of the export trunkline at a location near-shore	Spilled volume: 607 metric tons (662 standard m^3) Release depth: 41 m Spill duration: 8 hours	1/2	Pluto Condensate	0.5%	3.31 m^3
CS-05	No	Loss of vessel containment at the PLA platform	Spilled volume: 1000 m^3 Release depth: surface Spill duration: 1 hour	1/2	MGO	5.0%	50 m^3

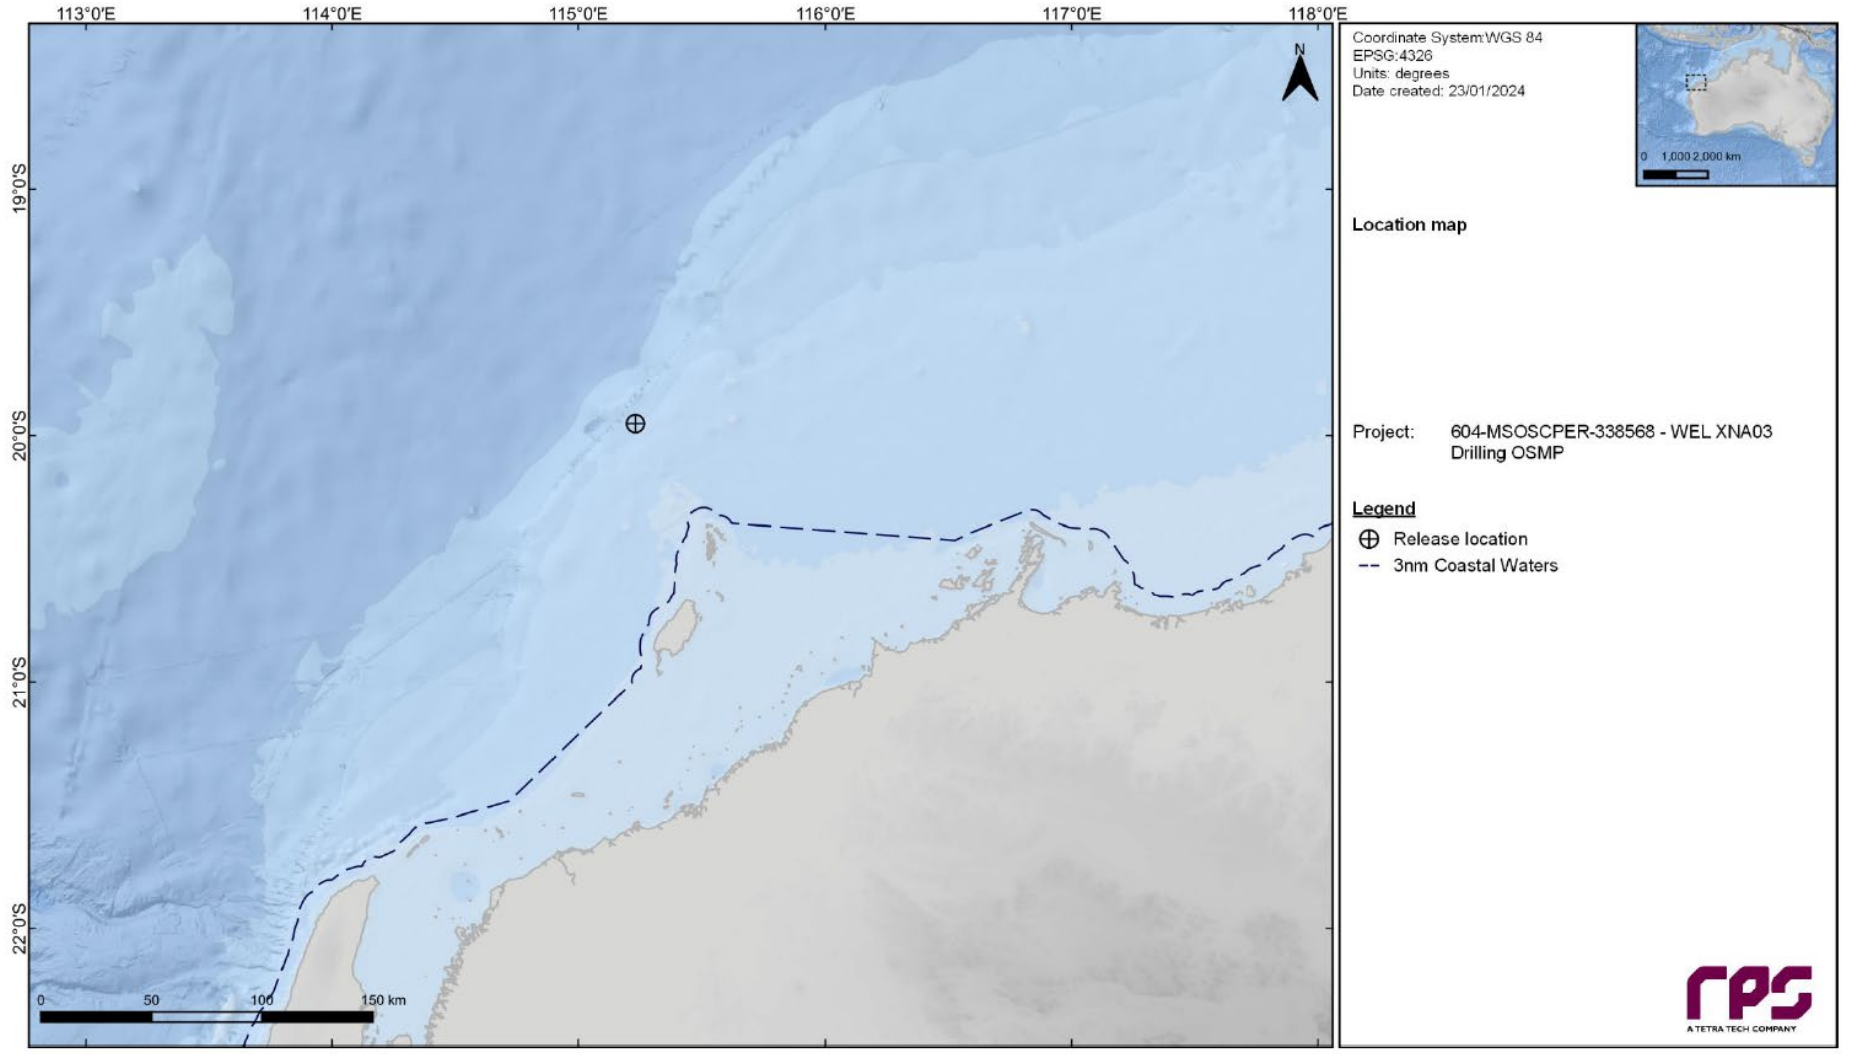

Figure 2-3: Location of CS-01 – A release of Eris-1 condensate (46,631 m^3) caused by a loss of well containment during drilling at the Xena-03 well

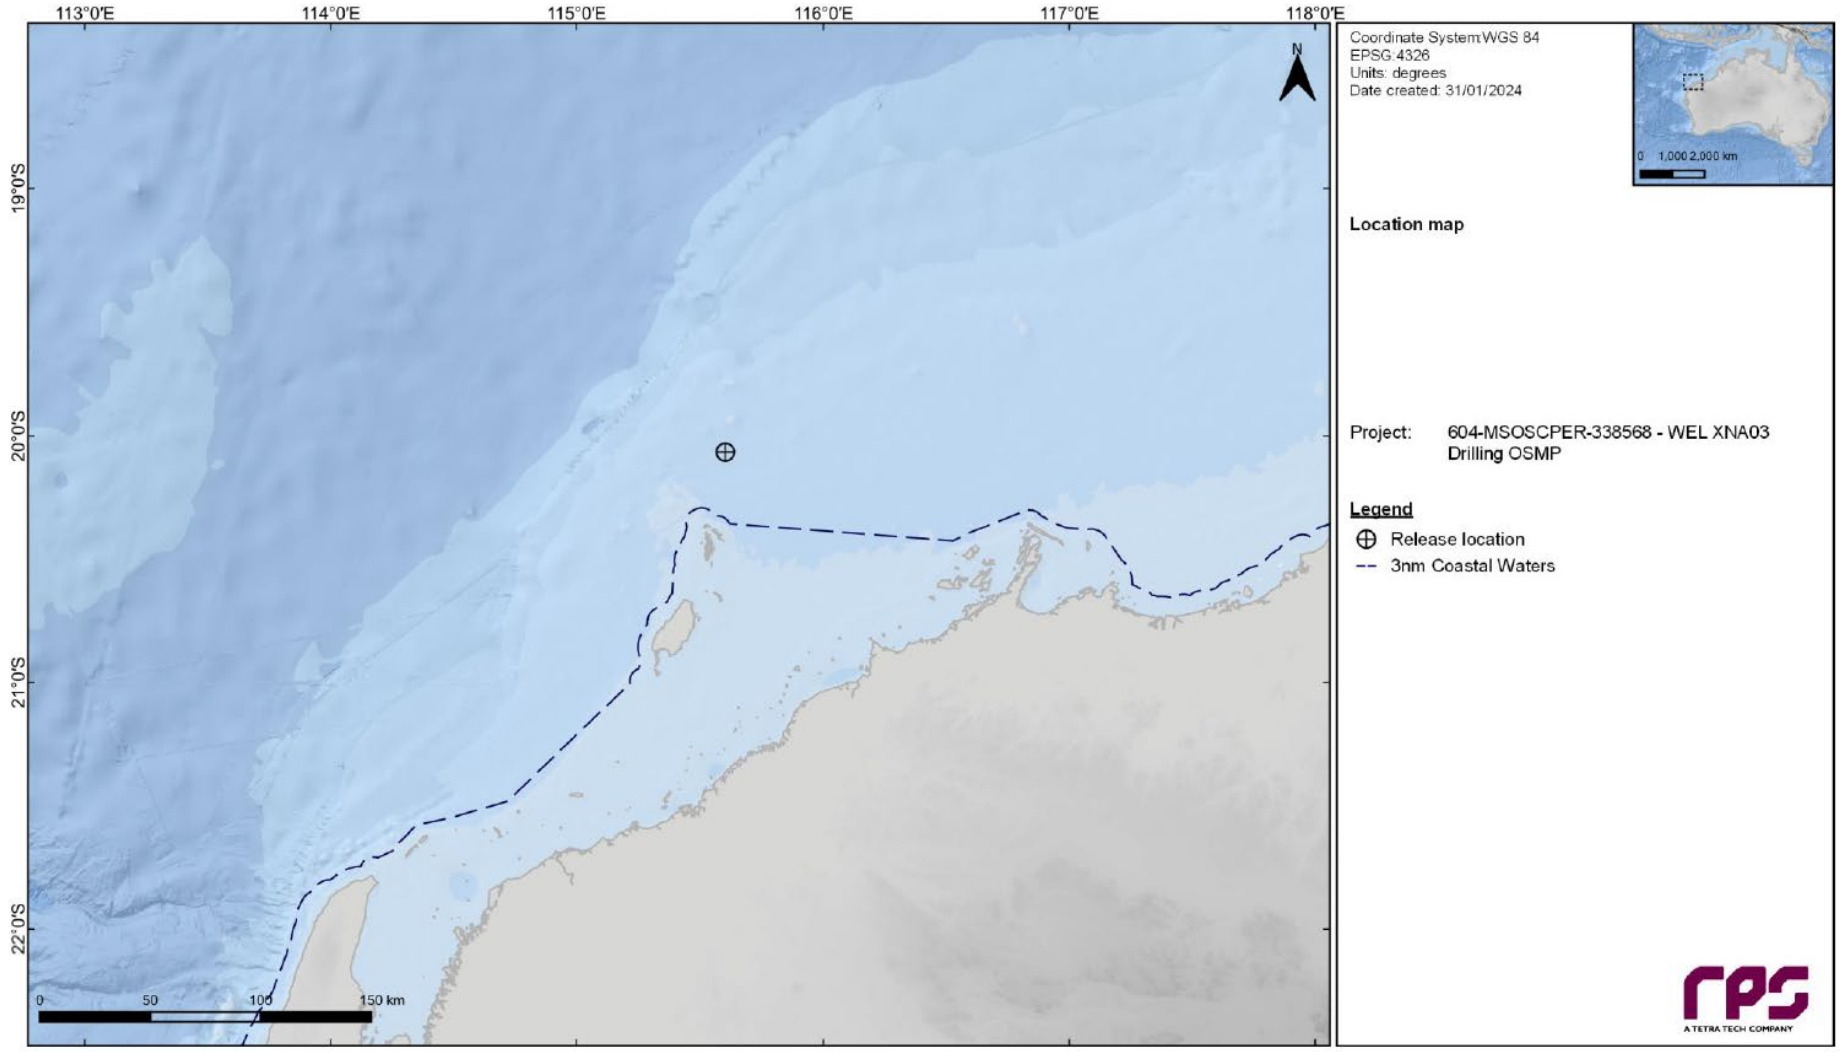

Figure 2-5: Location of MEE-02a – Loss of containment of the export trunkline at 29 km from Pluto A, releasing 479 metric tons of Pluto condensate, with gas, over 8 hours

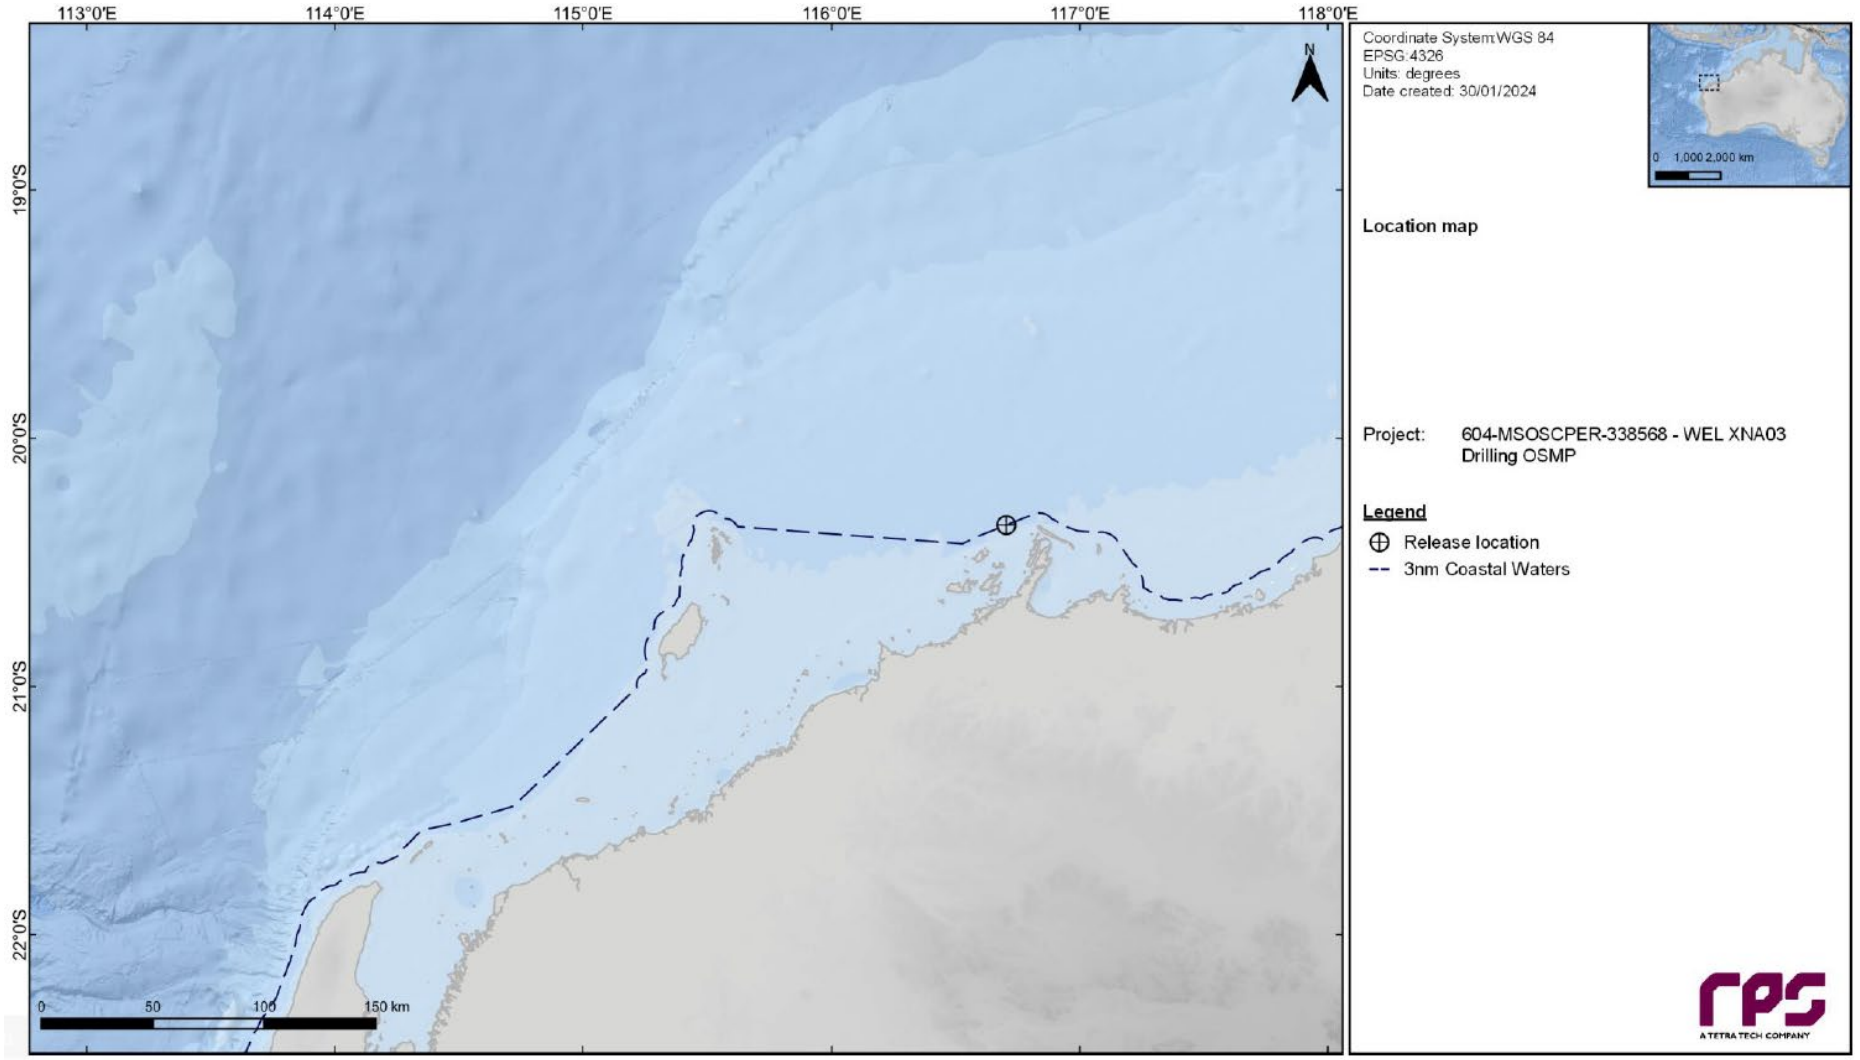

Figure 2-6: Location of MEE-02b- Loss of containment of the export trunkline at the State Water boundary (3nm), releasing 607 metric tons of Pluto condensate, with gas, over 8 hours.

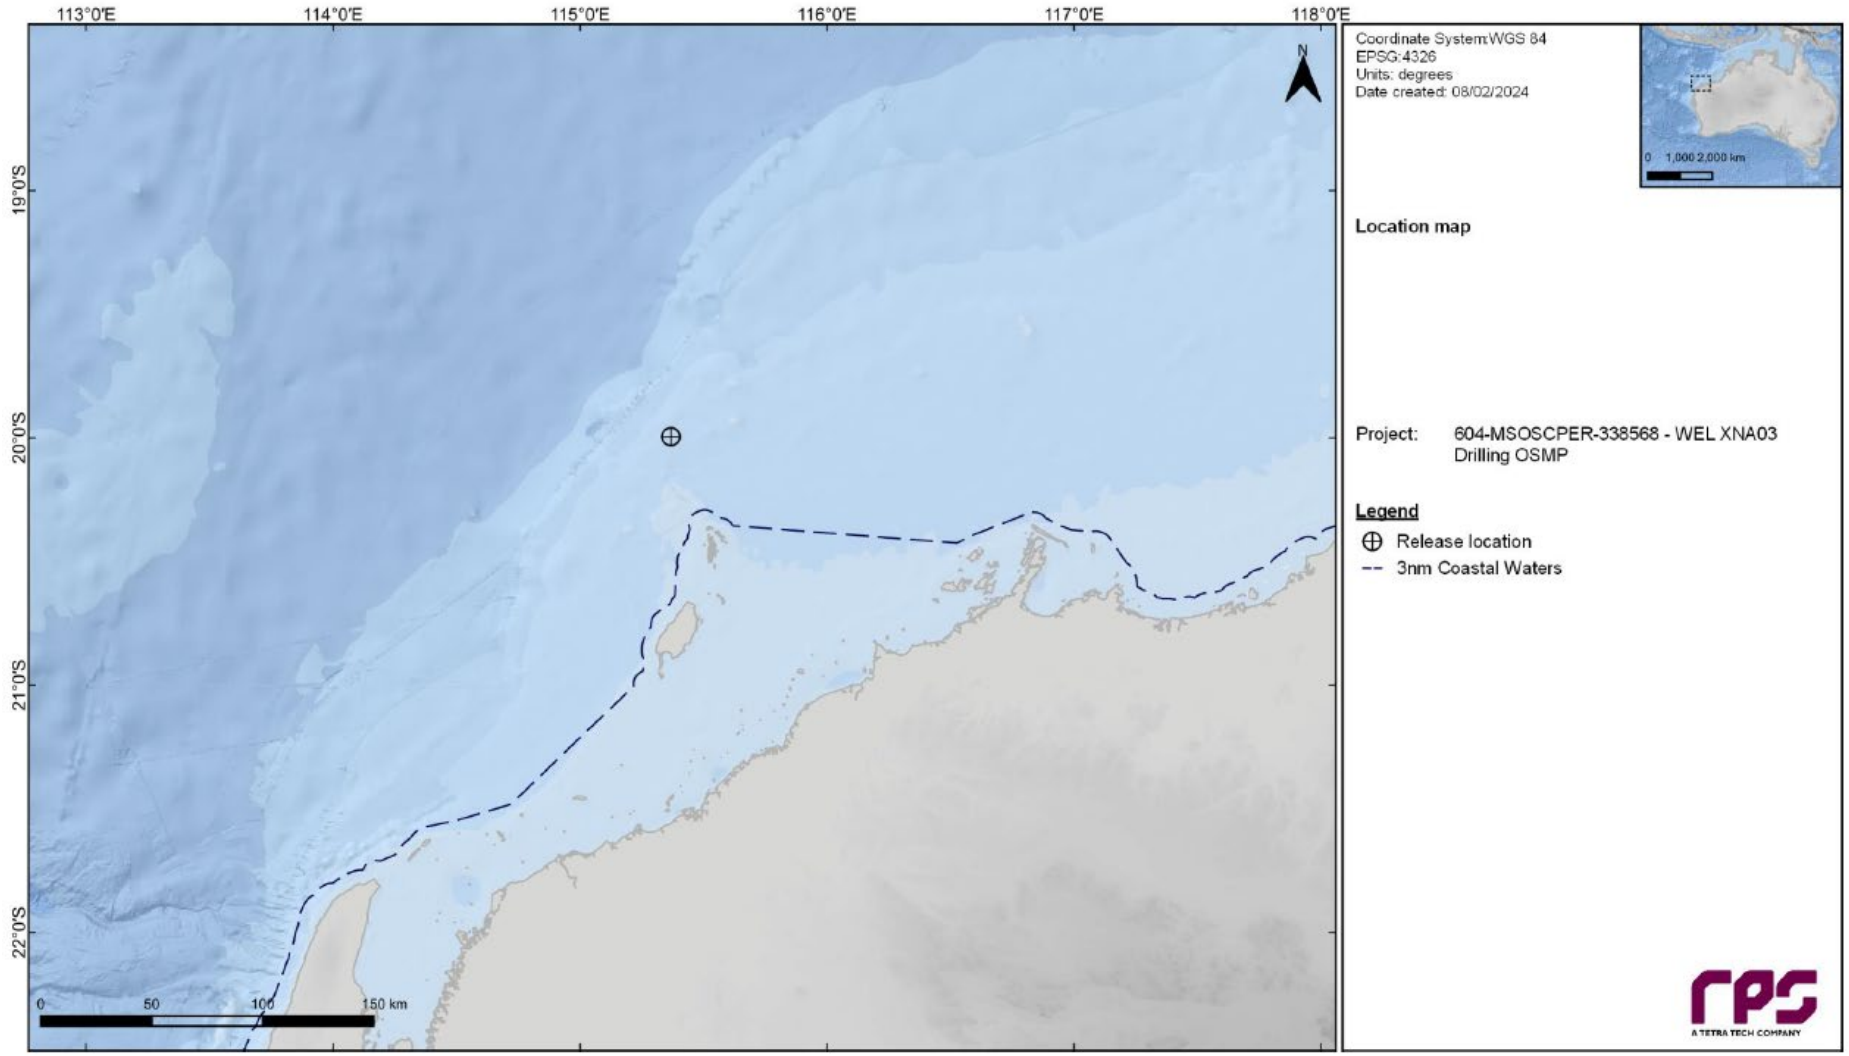

Figure 2-7: Location of CS-05 – Loss of vessel containment at the PLA platform, releasing 1000 m^3 of Marine Gas Oil (MGO) over 1 hour

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6.7.3 of the EP.

Pluto Condensate – Operations activities (MEE-01, MEE-02a and MEE-02b)

Pluto Condensate (API 70.9°) contains a relatively high proportion (~68% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. These compounds are expected to persist in the marine environment.

The unweathered mixture has a dynamic viscosity of 0.7032 cP. The pour point of the whole oil (<15 °C) ensures that it will remain in a liquid state over the annual temperature range observed on the North West Shelf. The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere. Evaporation rates will increase with temperature, but in general about ~68% of the oil mass should evaporate within the first 12hours (BP < 180 °C); a further ~19% should evaporate within the first 12-24hours (180°C < BP < 265 °C); and a further ~10% should evaporate over several days (265 °C < BP < 380°C).

Soluble aromatic hydrocarbons contribute approximately 9.83% by mass of the whole oil, with a large proportion (6.93%) in the C4-C10 range of hydrocarbons. These compounds will evaporate slowly, leaving the potential for dissolution of a proportion of them into the water.

Eris-1 Condensate – Tie-back activities (CS-01)

Eris-1 Condensate (surface API 41.3°, seabed API 58.2°) contains a relatively high proportion (~66% by mass) of hydrocarbon compounds that will not evaporate at atmospheric temperatures. These compounds are expected to persist in the marine environment.

The unweathered mixture has a dynamic viscosity of 0.4.922 cP at the surface and 0.68 cP at the seabed. The pour point of the whole oil (<15 °C) ensures that it will remain in a liquid state over the annual temperature range observed on the North West Shelf. The mixture is composed of hydrocarbons that have a wide range of boiling points and volatilities at atmospheric temperatures, and which will begin to evaporate at different rates on exposure to the atmosphere.

Evaporation rates at the surface will increase with temperature, but in general about ~15% of the oil mass should evaporate within the first 12hours (BP < 180 °C); a further ~49% should evaporate within the first 12-24hours (180°C < BP < 265 °C); and a further ~27% should evaporate over several days (265 °C < BP < 380°C). Evaporation rates at the seabed will increase with temperature, but in general about 65.99% of the oil mass should evaporate within the first 12hours (BP < 180 °C); a further 21.6% should evaporate within the first 12-24hours (180°C < BP < 265 °C); and a further 9.02% should evaporate over several days (265 °C < BP < 380°C).

Soluble aromatic hydrocarbons contribute approximately 9.85% (surface) and 9.84% (seabed) by mass of the whole oil, with a large proportion (6.72%) in the C4-C10 range of hydrocarbons. These compounds will evaporate slowly, leaving the potential for dissolution of a proportion of them into the water.

Marine Gas Oil

Marine Gas Oil (MGO) is typically classed as an International Tanker Owners Pollution Federation (ITOPF) Group I/II oil. Group I oils are non-persistent and tend to dissipate completely through evaporation within a few hours and do not normally form emulsions.

From modelling results it is predicted that around 6% of the release will be subject to a fairly rapid evaporation when on or around the surface of the water and around 95% in total is available to evaporate over time. It is predicted only 50 m^3 of product would remain after several days from the bunkering scenario and there is no predicted shoreline contact or accumulation.

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

A total of 100 replicate simulations were completed for each of the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (25 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and environmental impacts

Hydrocarbon	Surface hydrocarbon (g/m^2)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m^2)
Condensate	10	50	100	100
Diesel	10	50	100	100

2.3.2 Deterministic modelling

Woodside uses deterministic modelling results to evaluate risks and impacts and response capability requirements. These results are provided in both shapefile and data table format with each row of the data table representing a 1 km^2 cell. This cell size has been used as it represents the approximate area a single containment and recovery operation or surface dispersant operation (single sortie or vessel spraying) can effectively treat in one ten (10) hour day. Smaller cell sizes have been considered but would not change the response need as the potential distance between cells would not allow multiple cells to be treated per day by

response operations. Additionally, a 1 km^2 cell is expected to allow averaging of threshold concentrations and mass across the spatial extent to represent a conservative approach (patches of oil and windrows) to response planning that simulates operational monitoring feedback in a real event.

Deterministic modelling was carried out on CS-01 and CS-02 as the WCCSs and used for response planning purposes. A sample of the deterministic results is provided below as an indication of the data format and content.

- Column A and B provide the latitude and longitude of the cell
- Column C is the elapsed time since the release occurred
- Column D represents the average concentration across the cell in g/m2
- Column E represents the viscosity of the hydrocarbon in centistokes (cSt) at sea surface temperature
- Column F and G represents the mass of hydrocarbon across the entire cell in kg and tons respectively.

Table 2-3: Example deterministic modelling data

Latitude	Longitude	Time_hour	Conc_gm^2	Visc_cSt	Mass_kg	Mass_tons
A	B	C	D	E	F	G
-19.711226	115.814366	6	6.413877	81.007389	6429.693282	6.413877
-19.702194	115.814366	6	1.740181	81.300190	1744.571745	1.740181
-19.720258	115.823922	6	1.869578	76.440503	1874.078751	1.869578
-19.711226	115.823922	6	51.471109	80.668490	51597.969472	51.471109
-19.702194	115.823922	6	4.734574	80.068396	4746.515274	4.734574
-19.720258	115.833477	6	4.879617	58.780817	4891.356945	4.879617
-19.711226	115.833477	6	36.161301	70.992921	36250.382543	36.161301

The deterministic modelling data provides an indication of the response need by displaying the potential surface area and volume treated or recovered by response operations. Existing capability is reviewed to approximate the surface area and volumes that can be treated or removed and a range of alternate, improved and additional options to reduce risks and impacts to ALARP are considered.

Woodside recognises no single response technique will treat all available subsea or surface oil and a combination of response techniques will be required for the identified scenario. Even with the significant resources available to Woodside through existing capability and third-party resources, the primary offshore response techniques of surface dispersant application and containment and recovery will only treat or recover a minor proportion (<30%) of the available surface hydrocarbons based on previous response experience.

Woodside is committed to a realistic, scalable response capability commensurate to the level of risk and able to be practically implemented and feasibly sustained.

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Thresholds to determine the EMBA are used to predict and assess environmental impacts and inform the Scientific Monitoring Program (SMP), however they do not appropriately represent the thresholds at which an effective response can be implemented. Additional response thresholds are used for response planning and to determine areas where response techniques would be most effective. The deterministic modelling is then used to assess the nature and scale of a response.

In the event of an actual response, existing deterministic modelling would be reviewed for suitability and additional modelling would be conducted using real-time data and field information to inform IMT decisions.

The deterministic spill modelling outputs are presented at response planning thresholds for surface hydrocarbons for the WCCS. Surface spill concentrations are expressed as grams per square metre (g/m^2). The thresholds used are derived from oil spill response planning literature and industry guidance and are summarised below.

2.3.3.1 Surface hydrocarbon concentrations

Table 2-4: Surface hydrocarbon thresholds for response planning

Surface hydrocarbon threshold (g/m^2)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m^3/km^2)
>10	Predicted minimum threshold for commencing operational monitoring[1]	Code 3 – Dull metallic colours	5 to 50
50	Predicted minimum floating oil threshold for containment and recovery and surface dispersant application [2]	Code 4 – Discontinuous true oil colour	50 to 200
100	Predicted optimum floating oil threshold for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon threshold (g/m^2)	**Description**	**National Plan Guidance on Oil Contaminated Foreshores**	**Mass per area (m^3/km^2)**
100	Predicted minimum shoreline accumulation threshold for shoreline assessment operations	Stain	>100
250	Predicted minimum threshold for commencing shoreline clean-up operations	Level 3 – Thin Coating	200 to 1000

The surface thickness of oil at which dispersants are typically effective is approximately 100 g/m^2. However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so that overall the average thickness is 0.1 mm (or approximately 100 g/m^2) (ITOPF, 2011). Additionally, the recommended rate of application for surface dispersant is typically one-part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (International Petroleum Industry Environment Conservation Association [IPIECA] 2015).

Guidance from the Australian Maritime Safety Authority (AMSA, 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten-fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code (BAOAC) 3, approximately 5 – 50 µm) with dispersant from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant.

[1] Operational monitoring will be undertaken from the outset of a spill whether or not this threshold has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport (WA DoT) or AMSA.

[2] At 50 g/m^2, containment and recovery and surface dispersant application operations are not expected to be particularly effective. This threshold represents a conservative approach to planning response capability and containing the spread of surface oil.

Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from the National Oceanic and Atmospheric Administration (NOAA) in the United States is found in the document: *Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013 (NOAA 2013).* This guide outlines advice for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a and 2014b).

Figure 2-8 from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA, 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Windrows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

From this information and other relevant sources (Allen and Dale, 1996, EMSA, 2012, Spence, 2018) the surface threshold of 50 g/m^2 was chosen as an average/equilibrium thickness (50 g/m^2 is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or windrows).

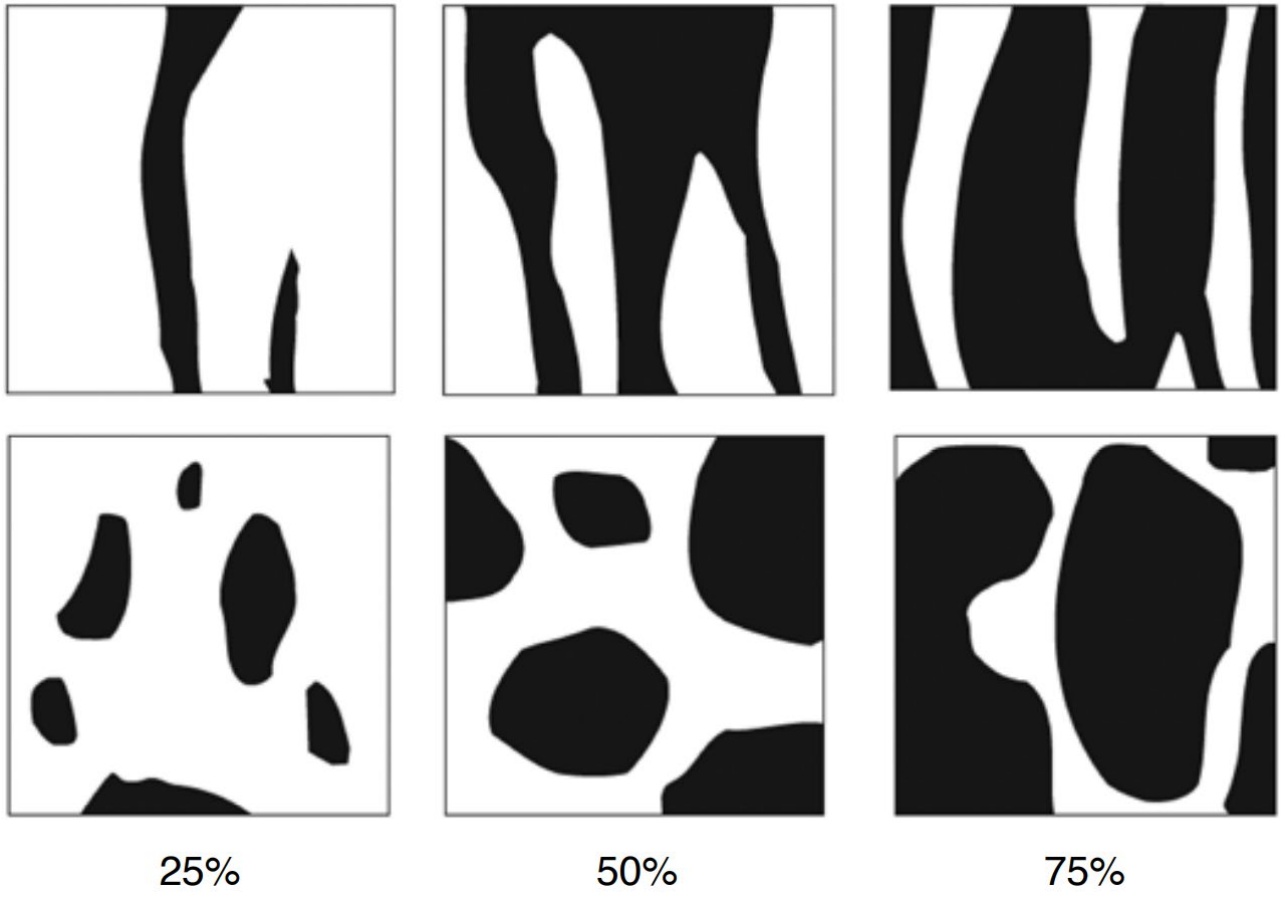

Figure 2-8: Proportion of total area coverage (AMSA, 2014)

Figure 2-9 illustrates the general relationships between on-water response techniques and slick thickness. Windrows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

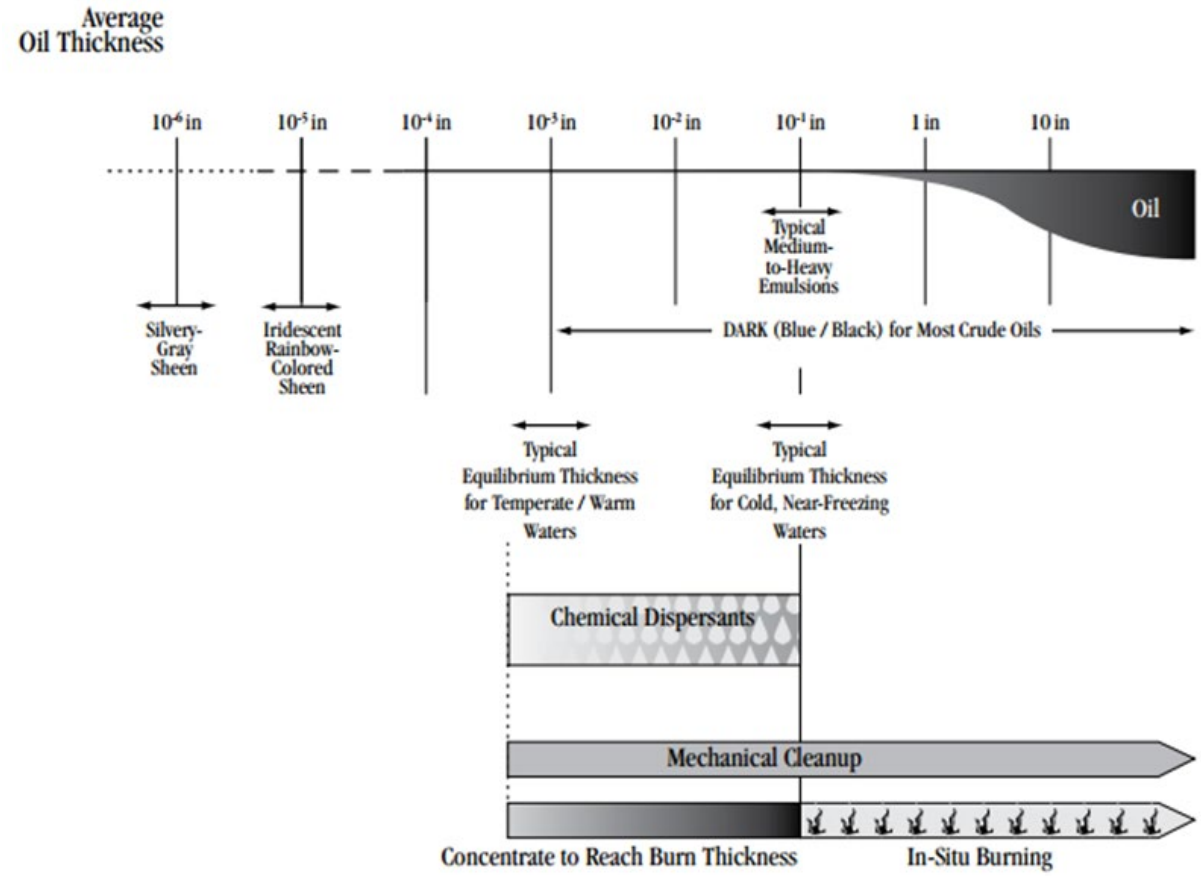

Figure 2-9: Oil thickness versus potential response options (from Allen and Dale 1996)

Wind and waves influence the feasibility of response operations, dropping the effectiveness significantly because of entrainment and/or splash-over as short-period waves develop beyond two to three feet (0.6 to 0.9 m) in height. Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.

Effective dispersion requires a threshold amount of surface mixing energy (typically a few knots of wind and a light chop) to be effective. At higher wind and sea conditions, dispersant evaporation and wind-drift will limit chemical dispersion application effectiveness and there is a point (~25-kt winds, 10-ft waves) at which natural dispersion forces become greater, particularly for light oils. Because of droplet size versus slick thickness constraints and application dose-rate limitations, dispersants work best on slick thicknesses of a few thousandths (approximately 50 g/m^2) to hundredths of an inch (approximately 250 g/m^2). Improved dispersants, higher dose rates, and multiple-pass techniques may extend the thickness limitation to 0.1 inch (2.5 mm) or more.

As offshore response operations (surface dispersant and containment and recovery) are intended to be undertaken at the thickest part of the slick, 50 g/m^2 and 100 g/m^2 (aligning with the lower limit of BAOAC 4 and midpoint of BAOAC 5) have been utilised by Woodside in deterministic modelling to identify the most likely locations for surface dispersant application and containment and recovery operations.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-5: Surface hydrocarbon viscosity thresholds

Surface viscosity (cSt)	Description	European Maritime Safety Authority	Viscosity at sea temperature (cSt)
5000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5000-10,000

*Measured at sea surface temperature

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: “It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern ‘Concentrate, UK Type 2/3’ dispersants at an oil viscosity of about 1000 or 2000 mPa (1000 – 2000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2000 or 5000 mPa (2000 – 5000 cSt), could be applied to all oils.”

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5000 mPa (5000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5000 cSt at sea temperature are generally possible to disperse, while 5000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

Spills of Pluto Condensate and MGO will not reach the 10,000 cSt threshold for the duration of the spill and dispersant is thus not deemed to provide a net environmental benefit for a spill arising from this PAP. The thresholds described above are compared with the modelling results for the WCCS (Table 2-6).

2.3.4 Spill modelling results

Details of the scenario and modelling inputs and results are included along with deterministic and stochastic modelling results in Table 2-6.

The selected deterministic runs used to represent the WCCS are:

- Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a threshold of 10 g/m^2).
- Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a threshold of 100 g/m^2).
- Maximum cumulative hydrocarbon volume accumulated at any individual shoreline receptor (at a threshold of 100 g/m^2).
- Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors (at a threshold of 100 g/m^2).
- Minimum time to entrained/dissolved hydrocarbon contact with the offshore edges of any receptor polygon (at a threshold of 100 ppb).

Table 2-6: Worst case credible scenario modelling results

Scenario description	Results				
	CS-01 (stochastic)	**MEE-01 (stochastic)**	**MEE-02a (stochastic)**	**MEE-02b (deterministic)**	**CS-05 (stochastic)**
WCCS – total volume released Refer to Section 2.2.1 for detailed hydrocarbon characteristics	Hydrocarbon release of Eris-1 condensate caused by a loss of well containment during drilling at the Xena-03 well Total released - 46,631 m^3 over 64 days Surface – 1,880 m^3 over 5 days Subsurface – 44,751 m^3 over 59 days	Hydrocarbon release of Pluto condensate caused by a loss of well containment from PLA02 well during operations. Subsurface – 59,459 m^3 over 77 days (WCCS)	Hydrocarbon release caused by a loss of containment of the subsea export pipeline at 29 km from Pluto A, releasing 479 metric tons of Pluto condensate, with gas, over 8 hours. Subsurface – 479 metric tons (632 standard m^3) over 8 hours	Hydrocarbon release caused by a loss of containment of the export pipeline at the State Water boundary (3nm), releasing 607 metric tons of Pluto condensate, with gas, over 8 hours. Subsurface – 607 metric tons (662 standard m^3) over 8 hours (WCCS)	Hydrocarbon release of MGO cause by a loss of vessel containment following a vessel collision at the PLA platform 1000 m^3 over one hour (WCCS)
WCCS – residual volume remaining post-weathering	Surface – 10.01% residue Subsurface – 3.39% residue	2.53% residue	0.5% residue	0.5% residue	5% residue

The full list of response protection areas (RPAs) predicted from modelling is available in Table 3-1					

From the above modelling results, Run 37, Q1 and Run 48, Q2 deterministic results for MEE-02b have been used as the basis for response planning and are included in Section 4.2

From analysis of the stochastic and deterministic results, modelling predicts the following:

- The subsea release results in insufficient concentrations for effective surface dispersant and containment and recovery operations due to rapid spreading and weathering of the surface oil. Furthermore, the spill is predicted to move beyond the pre-defined Zone of Application for surface dispersants including movement into WA State waters by approximately Day 1.
- The release results in sufficient concentrations for effective shoreline response at a few receptors.
- Weathering predictions for the release indicate a low residual portion of hydrocarbons (0.5%).
- Response operations cannot be implemented if the safety of response personnel cannot be guaranteed. Safety circumstances that limit the execution of this control measure include volatile concentrations of hydrocarbons in the atmosphere, high winds (>20 knots), waves and/or sea states (>1.5m waves) and high ambient temperatures.

3 IDENTIFY RESPONSE PROTECTION AREAS

In a response, operational monitoring programs (OMPs) – including trajectory modelling and vessel/aerial observations – would be used to predict RPAs that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

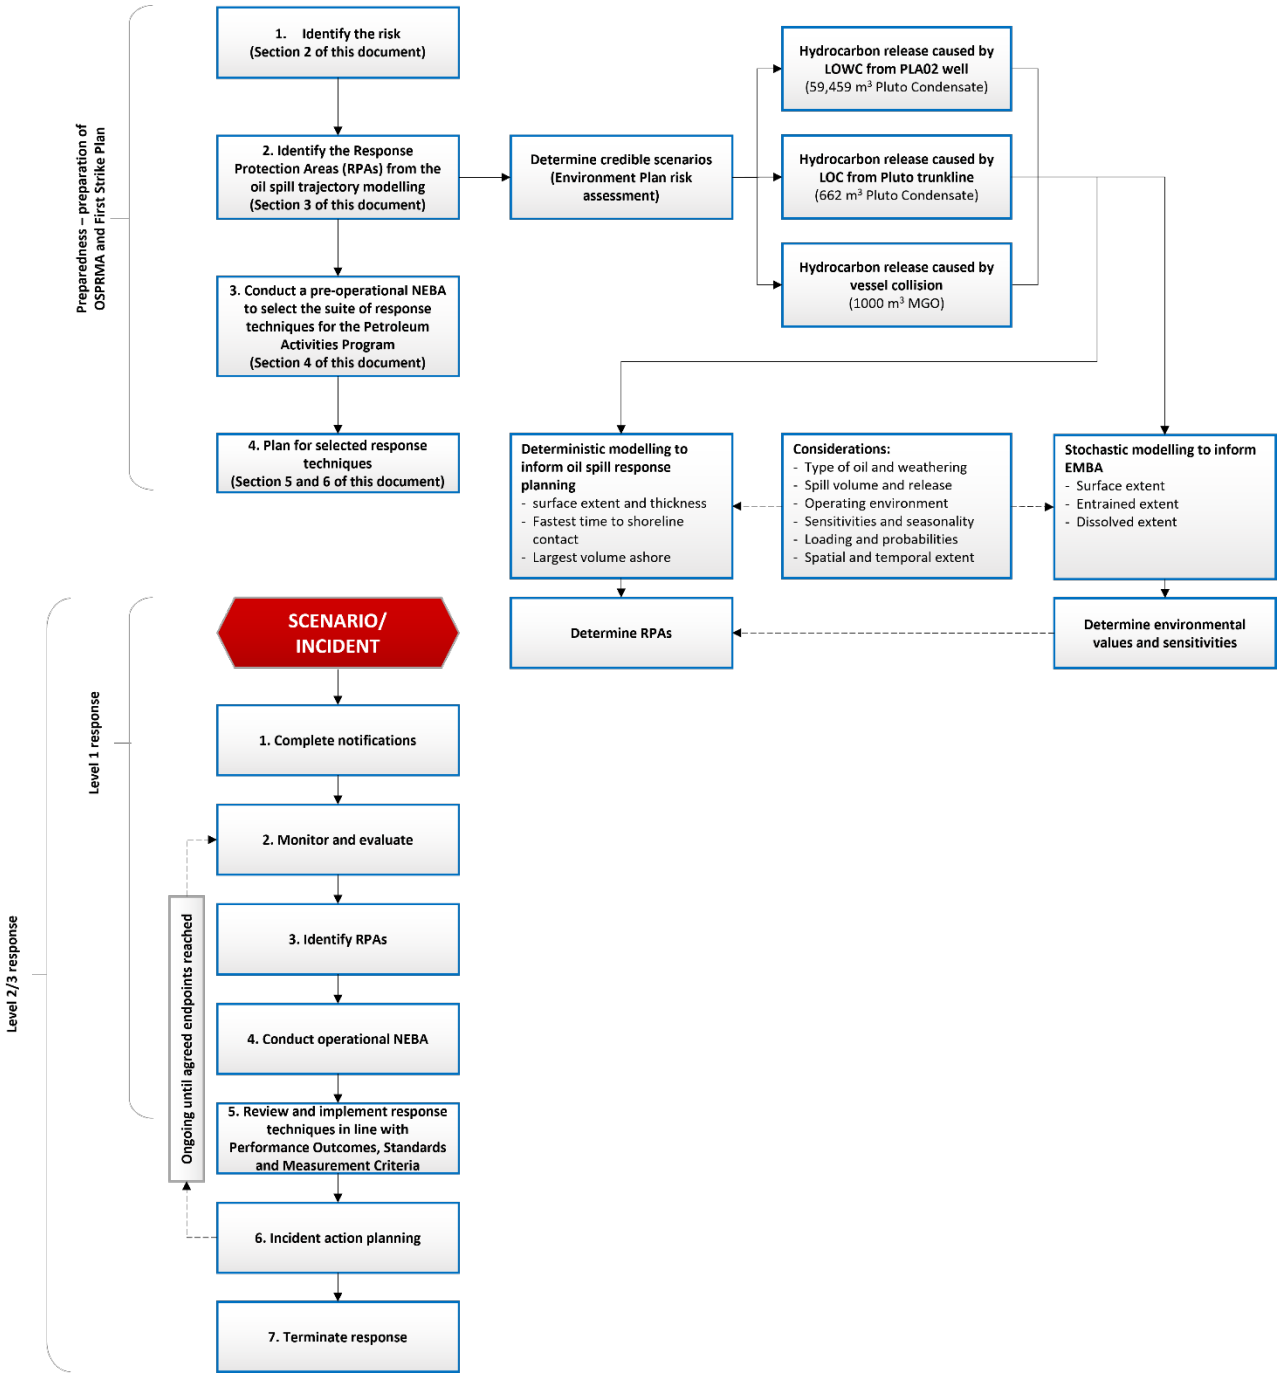

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 4 of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact thresholds
- receptors within the EMBA which meet any of the following:
  - priority protection criteria/categories
  - International Union of Conservation of Nature (IUCN) marine protected area categories
  - high conservation value habitat and species
  - important socio-economic/heritage value.

3.2 Identify Response Protection Areas

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response thresholds (**Section 2.3.3**). The figures outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6 of the EP, only those which a shoreline response could feasibly be conducted (accumulation > 100 g/m^2 for shoreline assessment and/or contact with surface slicks >10 g/m^2 for operational monitoring) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines locations which were identified from the modelling runs for the WCCS but does not constitute the full list of RPAs potentially contacted from stochastic modelling (as per EMBA definition) (see Section 4 of the EP). Other RPA outliers were identified from the modelling and have been included in the assessment of capability in Sections 5 and 6.

Additional sensitive receptors are presented the existing environment description (Section 4 of the EP) and impact assessment section (Section 6.7 of the EP) for each respective spill scenario. The pre-operational NEBA (Section 4) includes the results from the stochastic modelling to allow consideration of all feasible response techniques in the planning phase, therefore additional receptors are also included in the pre-operational NEBA.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

Table 3-1: Response Protection Areas (RPAs) from deterministic modelling

Response protection area	Conservation status	IUCN protection category	Minimum time to shoreline contact (above 100 g/m^2) in days [3]	Maximum shoreline accumulation (above 100 g/m^2) in m^3 [4]
Cape Bruguieres	National Heritage Property	N/A	32 hours (4 m^3)	4 m^3 (32 hours)
Dampier Archipelago	Nature reserve and National Heritage Place	IUCN Ia – Strict Nature Reserve IUCN II – National Park IUCN IV – Habitat/Species Management Area IUCN VI – Multiple Use Zone	21 hours (9 m^3)	9 m^3 (21 hours)
Cohen Island	Nature reserve	IUCN Ia – Strict Nature Reserve	30 hours (<1 m^3)	5 m^3 (31 hours)
Keast Island	Nature reserve	IUCN Ia – Strict Nature Reserve	32 hours (3 m^3)	3 m^3 (32 hours)
Legendre Island	Nature reserve	IUCN Ia – Strict Nature Reserve	22 hours (6 m^3)	6 m^3 (22 hours)

[3] This volume and time represent the first time to contact on defined shoreline polygon and the maximum volume ashore for that 24 hour period.
[4] This volume and time represent the maximum volume ashore on defined shoreline polygon for any 24 hour time period

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed in the planning/preparedness process and would also be followed in a response.

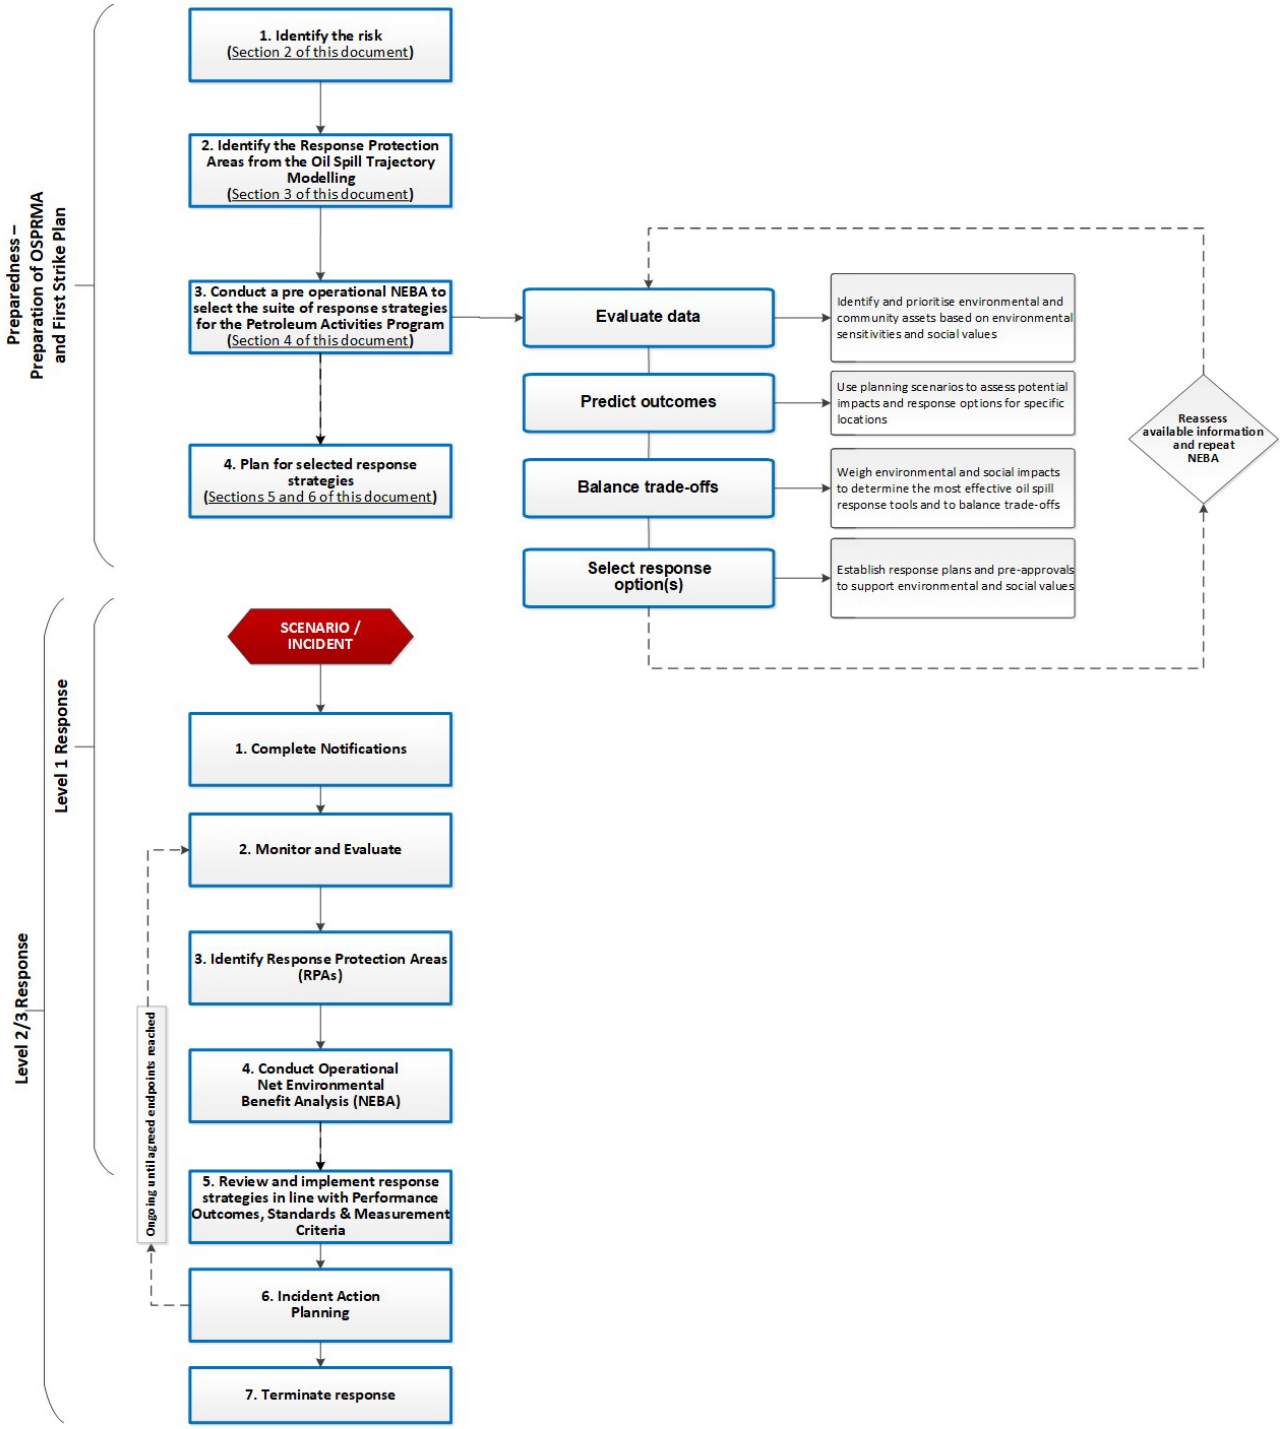

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response thresholds and the surface concentrations (**Table 2-4** and **Table 3-1**) from the modelling.

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this PAP are contained in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.2 Stage 1: Evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed using trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the PAP.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in **Table 2-4** and **Table 3-1**.

4.3 Stage 2: Predict Outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/ effectiveness of a response.

4.4 Stage 3: Balance trade-offs

Woodside considers environmental impacts and response feasibility/ effectiveness to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the feasibility/ effectiveness of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in ANNEX A: Net Environmental Benefit Analysis detailed outcomes.

4.5 Stage 4: Select Best Response Options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released, and the sensitivities of the receptors (both ecological and socio-economic), may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- Operational monitoring
- Source control
  - Remotely operated vehicle (ROV) intervention
  - debris clearance and/or removal
  - capping stack

  - containment dome
  - relief well drilling
- Source control via vessel SOPEP
- Subsea dispersant injection
- Surface dispersant application:
  - aerial dispersant application
  - vessel dispersant application
- Mechanical dispersion
- In-situ burning
- Containment and recovery
- Shoreline protection and deflection:
  - protection
  - deflection
- Shoreline clean-up:
  - Phase 1 – mechanical clean-up
  - Phase 2 – manual clean-up
  - Phase 3 – final polishing
- In-situ burning
- Oiled wildlife response (including hazing).

Support functions may include:

- Waste management
- Post spill/ scientific monitoring

Table 4-1, Table 4-2,

Table 4-3 include scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

Table 4-1: Response technique evaluation – loss of well containment

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: Pluto condensate (MEE-01) and Eris-1 Condensate during tie-back (CS-01)				
Techniques feasible during operations phase (MEE-01)				
Operational Monitoring	Will be effective in tracking the location of the spill, informing when it has entered State waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • OM01 Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • OM02 Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • OM03 Monitoring of hydrocarbon presence, properties, behaviour and weathering in water – from outset of spill. • OM04 Pre-emptive assessment of sensitive receptors at risk – triggered once OM01, OM02 and OM03 inform likely RPAs at risk. • OM05 Shoreline assessment – once OM02, OM03 and OM04 inform which RPAs have been impacted.	Monitoring of a condensate spill is a feasible response technique and an essential element of all spill response incidents. Outputs will be used to guide decision making on the use of other monitoring/response techniques and providing required information to regulatory agencies including AMSA and Western Australia Department of Transport (WA DoT).	**Yes**	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the behaviour of the oil in water • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via blowout preventer (BOP) intervention using ROV and hotstab	Not applicable – production wells do not have blowout preventers in place and thus intervention and/or hotstab are not feasible response techniques.	Not applicable – production wells do not have blowout preventers in place and thus intervention and/or hotstab are not feasible response techniques.	**N/A**	Not applicable – production wells do not have blowout preventers in place and thus intervention and/or hotstab are not feasible response techniques.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack would be an effective way to limit the quantity of hydrocarbon entering the marine environment.	Capping the Pluto well is considered feasible based on worst-case discharge rates. Though all capping stack deployment technologies are unproven, in the event of a loss of well containment, the use of a proven subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack would be attempted with a heavy lift vessel. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The location of suitable vessels for capping stack deployment are monitored monthly. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames. Landing force analysis through computational fluid dynamic (CFD) modelling confirms the ability to land the capping stack on the Xmas tree.	**Yes**	Conventional/vertical capping stack deployment with a heavy lift vessel will be attempted at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew. Circumstances that limit the safe execution of this control measure include lower explosive limit (LEL) concentrations, volatile concentrations of hydrocarbons in the atmosphere, weather window, waves and/or sea states and high ambient temperatures.
Source control via relief well drilling	A loss of well containment is predicted to be over 77 days for MEE-01. Relief well drilling will be a feasible option to stop the release.	For a loss of well containment, relief well drilling will be a feasible means of controlling a loss of well containment event.	**Yes**	Relief well drilling is a feasible technique employed to control a loss of well containment event. Relief well drilling is a widely accepted and utilised technique.
Subsea dispersant injection	Application of subsea dispersant may reduce the scale and extent of hydrocarbons reaching the surface and thus may reduce spill volumes contacting predicted RPAs. SSDI can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals and fish, which may be otherwise unaffected. Entrained oil plume likely to be increased resulting in greater spatial extent of entrained oil.	The goal of SSDI is to decrease the volume of oil that rises to the water surface and to reduce exposure to floating and entrained/dissolved oil. Based on the stochastic modelling analysis, no shoreline accumulation is predicted to occur following a LOWC of condensate during drilling or operation activities. The use of SSDI would not be required in order to deploy a capping stack and unnecessary use of SSDI would increase the complexity of SIMOPS operations around the wellhead. Given the preceding information and that there is conflicting evidence on the efficacy of SSDI, despite the considerable amount of research and experimental work completed since the Deepwater Horizon spill (Quigg et al. 2021), the use of SSDI is considered unwarranted and would not provide net environmental or safety benefits.	**No**	Due to the modelling predicting no shoreline exposure at RPAs, together with the minimal surface exposure and this technique not being required to facilitate other source control techniques, the use of SSDI is not deemed appropriate. The application of subsea dispersant would unnecessarily introduce additional chemical substances to the marine environment and further increase exposure of subsea ecosystems to entrained hydrocarbons.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Surface dispersants are not generally considered a feasible response technique when applied to thin surface films such as condensate, as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon. EMSA (2010) recommends thin layers of spilled hydrocarbons should not be treated with surface dispersant, including surface slicks with Bonn Agreement Oil Appearance Codes (BAOAC) 1-3. Modelling LOWC spill for the Pluto Facility Operations drilling project predicts that floating oil will be prone to rapid spreading and evaporation and will not reach the required threshold (>50 g/m^2) for surface dispersant to be effective within any RPA. The volatile nature of condensates modelled (Eris-1 and Pluto) is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon spill, thus this response technique is deemed unsuitable for this activity.	**No**	Condensate will rapidly evaporate and disperse, resulting in spill thicknesses too thin to effectively treat with surface dispersant. The use of surface dispersant could unnecessarily introduce additional chemical substances to the marine environment.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	**No**	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved and where calm metocean conditions can be ensured. Use of this technique would also cause an increase the release of atmospheric pollutants.	There is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which would be difficult to achieve. Furthermore, this technique may be prevented from being undertaken due to personnel safety issues arising from predicted high local concentrations of atmospheric volatiles.	**No**	The safety concerns and the predicted low effectiveness associated with implementing an in-situ burning response outweigh the potential environmental benefit.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5. It has the potential to reduce the magnitude, probability, extent, contact and accumulation of hydrocarbon on shorelines receptors when suitable encounter rates can be achieved. It also has the potential to reduce the magnitude and extent of contact with submerged receptors by removing oil before further natural entraining/dissolving of hydrocarbons occurs.	Modelling of a LOWC spill of either Eris-1 or Pluto condensate for the Pluto Facility Operations drilling project predicts that floating oil will be prone to rapid spreading and evaporation and will not reach the required threshold (>50 g/m^2) for containment and recovery to be feasible within any RPA. The volatile nature of condensates is also likely to lead to unsafe conditions near release location.	**No**	Containment and recovery would be an ineffective response technique as it requires a hydrocarbon thickness of BAOAC 4-5 with a 50-100% coverage of 100-200 g/m^2. Modelling does not predict any surface hydrocarbons above 50 g/m^2, thus this response strategy is considered ineffective.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of sensitive resources and can be used to corral oil into slicks thick enough to skim effectively.	Stochastic modelling predicted that no shoreline receptors would be contacted by hydrocarbons at any threshold in the event of a LOWC from the Pluto Facility during drilling or operation activities. Therefore, shoreline response strategies, such as shoreline protection and deflection, are not applicable as hydrocarbons are unlikely to accumulate on the shoreline.	**No**	The modelling undertaken predicts no contact to any shoreline receptor at any threshold following a LOWC scenario.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	Stochastic modelling predicted that no shoreline receptors would be contacted by hydrocarbons at any threshold in the event of a LOWC from the Pluto Facility during drilling or operation activities. Therefore, shoreline response strategies are not applicable as hydrocarbons are unlikely to accumulate on the shoreline.	**No**	The modelling undertaken predicts no contact to any shoreline receptor at any threshold following a LOWC scenario.
Oiled wildlife	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	In the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Oiled Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists. Due to the likely volatile atmospheric conditions surrounding a Pluto Condensate spill, response options may be limited to hazing to ensure the safety of response personnel.	**Yes**	This technique may prevent impact to and/or treat oiled wildlife providing net environmental benefit.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Additional techniques feasible during tie-back activities (CS-01)				
Source control via blowout preventer (BOP) intervention using ROV and hotstab	Controlling a loss of well containment at source via BOP intervention would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	In the event of the worst-case scenario with a loss of well containment during drilling and tie-back activities, remotely operated vehicle (ROV) operations to locally operate the BOP would be attempted.	**Yes**	The use of source control intervention via ROV may be feasible during drilling and tie-back activities (depending on local concentration of atmospheric volatiles) and would reduce quantity of hydrocarbons entering the marine environment.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack would be an effective way to limit the quantity of hydrocarbon entering the marine environment.	Woodside will have a project specific source control emergency response plan (SCERP) for the Xena-03 tie-back activities which will include an assessment of capping stack landing feasibility. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement. The location of suitable vessels for capping stack deployment are monitored monthly. The supply arrangements and reliability to achieve the required mobilisation time will be revalidated prior to spud. Consideration to mobilise the capping stack from the supplier on a suitable vessel but then hand over to another vessel to conduct the capping activity will also be made to meet response time frames.	**Yes**	Conventional/ vertical capping stack deployment may be feasible during the tie-back activity phase. This would be considered, at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew and factors that may influence a safe deployment such as plume radius and acceptable environmental conditions e.g. wind speed, wave height, current and plume radius.
Source control via relief well drilling	A loss of well containment is predicted to be over 64 days for CS-01. Relief well drilling will be a feasible option to stop the release.	For a loss of well containment, relief well drilling will be a feasible means of controlling a loss of well containment event.	**Yes**	Relief well drilling is a feasible technique employed to control a loss of well containment event. Relief well drilling is a widely accepted and utilised technique.

Table 4-2: Response technique evaluation – loss of containment from subsea export pipeline

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: Pluto condensate (MEE-02b)				
Operational Monitoring	Will be effective in tracking the location of the spill, informing when it has entered State Waters, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • OM01 Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • OM02 Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • OM03 Monitoring of hydrocarbon presence, properties, behaviour and weathering in water – from outset of spill. • OM04 Pre-emptive assessment of sensitive receptors at risk – triggered once OM01, OM02 and OM03 inform likely RPAs at risk. • OM05 Shoreline assessment – once OM02, OM03 and OM04 inform which RPAs have been impacted.	Monitoring of a Pluto condensate spill is a feasible response technique and an essential element of all spill response incidents. Outputs will be used to guide decision making on the use of other monitoring/response techniques and providing required information to regulatory agencies including AMSA and Western Australia Department of Transport (WA DoT).	**Yes**	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the behaviour of the oil in water • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via emergency shutdown (ESD) valves	Controlling a loss of containment at source via the ESD valves is an effective way to reduce the amount of hydrocarbon released into the marine environment in the event of a hydrocarbon release.	In the event of the worst-case scenario with a loss of containment from the export pipeline, the use of ESD valves would be attempted.	**Yes**	Source control from the facility will be the main technique employed to control a loss of containment event of the export pipeline.
Source control via ROV	Controlling a loss of containment at source via ROV would an effective way to actuate the subsea valves in the event of a hydrocarbon release.	In the event of the worst-case scenario with a loss of containment from the export pipeline, the use of ROV operations to actuate the subsea vales would be attempted in the event of failure of valve operation.	**Yes**	Source control via ROV will be a secondary technique employed in the event that ESD valves are not effective.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce VOCs in some circumstances therefore reducing potential health and safety risk to responders.	Surface dispersants are not generally considered a feasible response technique when applied to thin surface films such as condensate, as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon. EMSA (2010) recommends thin layers of spilled hydrocarbons should not be treated with surface dispersant, including surface slicks with Bonn Agreement Oil Appearance Codes (BAOAC) 1-3.	**No**	Pluto Condensate will rapidly evaporate and disperse, resulting in spill thicknesses too thin to effectively treat with surface dispersant. The use of surface dispersant could unnecessarily introduce additional chemical substances to the marine environment.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
	Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	Modelling of a Pluto Condensate spill for the Pluto Facility Operations drilling project predicts that floating oil will be prone to rapid spreading and evaporation and will not reach the required threshold (>50 g/m^2) for surface dispersant to be effective within any RPA. The volatile nature of Pluto Condensate is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon spill, thus this response technique is deemed unsuitable for this activity.		
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area. The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.	**No**	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved and where calm metocean conditions can be ensured. Use of this technique would also cause an increase the release of atmospheric pollutants.	There is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which would be difficult to achieve. Furthermore, this technique may be prevented from being undertaken due to personnel safety issues arising from predicted high local concentrations of atmospheric volatiles.	**No**	The safety concerns and the predicted low effectiveness associated with implementing an in-situ burning response outweigh the potential environmental benefit.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5. It has the potential to reduce the magnitude, probability, extent, contact and accumulation of hydrocarbon on shorelines receptors when suitable encounter rates can be achieved. It also has the potential to reduce the magnitude and extent of contact with submerged receptors by removing oil before further natural entraining/dissolving of hydrocarbons occurs.	Modelling of a Pluto Condensate spill for the Pluto Facility Operations drilling project predicts that floating oil will be prone to rapid spreading and evaporation and will not reach the required threshold (>50 g/m^2) for containment and recovery to be feasible within any RPA. The volatile nature of Pluto Condensate is also likely to lead to unsafe conditions near release location.	**No**	Containment and recovery would be an ineffective response technique as it requires a hydrocarbon thickness of BAOAC 4-5 with a 50-100% coverage of 100-200 g/m^2. Modelling does not predict any surface hydrocarbons above 50 g/m^2, thus this response strategy is considered ineffective.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of sensitive resources and can be used to corral oil into slicks thick enough to skim effectively.	If real-time Operational Monitoring activities (OM01, OM02 and OM03) indicate surface hydrocarbons are moving toward shorelines, pre-emptive assessments of sensitive receptors at risk (OM04) and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DoT (for Level 2/3 spills). For MEE-02b, deterministic modelling predicts first shoreline accumulation from floating surface hydrocarbon will occur within 24 hours (15 m^3 at Dampier Archipelago and Legendre Island) Protection strategies can be used for targeted protection of sensitive resources. Access to sensitive areas may cause more negative impact than benefit.	**Yes**	RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are deemed to be at risk, based on real-time modelling during a spill event, shoreline protection and deflection techniques will be employed to minimise hydrocarbon accumulation providing net environmental benefit.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m^2.	If real-time Operational Monitoring activities (OM01, OM02 and OM03) indicate hydrocarbons will contact shorelines, pre-emptive assessments of sensitive receptors at risk (OM04), shoreline assessments (OM05) and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DoT (for Level 2/3 spills). For MEE-02b, deterministic modelling predicts first shoreline accumulation from floating surface hydrocarbon will occur within 24 hours (15 m^3 at Dampier Archipelago and Legendre Island) Can reduce or prevent impact on sensitive receptors in most cases. Must ensure, through shoreline assessment, that sensitive sites will benefit from clean-up activities as the response itself may cause more negative impact than benefit through disturbance of habitats and species.	**Yes**	Response Protection Areas predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event. If RPAs are at risk, based on real-time modelling during a spill event, shoreline clean-up techniques will be deployed to expedite clean-up of the impacted sites. Removal of hydrocarbons will help shorten the recovery window unless shoreline type is of a sensitive nature. This technique can help prevent remobilisation of hydrocarbon and impact on shorelines.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	In the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Oiled Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists. Due to the likely volatile atmospheric conditions surrounding a Pluto Condensate spill, response options may be limited to hazing to ensure the safety of response personnel.	**Yes**	This technique may prevent impact to and/or treat oiled wildlife providing net environmental benefit.

Table 4-3: Response technique evaluation – vessel collision

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: Marine Gas Oil (MGO) (CS-05)				
Operational Monitoring	Will be effective in tracking the location of the spill, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include: • OM01 Predictive modelling of hydrocarbons – used throughout spill. 'Ground-truthed' using the outputs of all other monitoring techniques. • OM02 Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. • OM03 Monitoring of hydrocarbon presence, properties, behaviour and weathering in water – from outset of spill. • OM04 Pre-emptive assessment of sensitive receptors at risk – triggered once OM01, OM02 and OM03 inform likely RPAs at risk. OM05 Shoreline assessment – once OM02, OM03 and OM04 inform if any RPAs have been impacted.	Monitoring of a marine diesel spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and WA DoT. Practicable techniques that could be used for this scenario include predictive modelling (OM01), surveillance and reconnaissance OM02) and monitoring of hydrocarbon presence in water (OM03). Modelling does not predict impact of any shoreline receptors at threshold, however, pre-emptive assessment of sensitive receptors at risk (OM04) and monitoring of contaminated resources (OM05) would be utilised if any sensitive shoreline receptors are deemed to be at risk of impact.	**Yes**	Monitoring the spill will be necessary to: • validate trajectory and weathering models • determine the behaviour of the oil in water • determine the location and state of the slick • provide forecasts of spill trajectory • determine appropriate response techniques • determine effectiveness of response techniques • confirm impact pathways to receptors • provide regulatory agencies with required information.
Source control via vessel SOPEP	Controlling the spill of diesel at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of diesel from a vessel collision will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	**Yes**	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether or not it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors. Dispersant can also enhance biodegradation and may reduce VOCs in some circumstances therefore reducing potential health and safety risk to responders. Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons. Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil. Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.	This technique is not suitable for MGO spills as this hydrocarbon is prone to rapid spreading and evaporation and are not considered effective when applied on thin surface films such as marine diesel as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment. Further, modelling for CS-05 does not predict that floating oil will reach the minimum feasible threshold for surface dispersant application (>50 g/m^2) The volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.	**No**	The application of dispersant to marine diesel is not appropriate as the diesel will rapidly evaporate and would thus unnecessarily introduce additional chemical substances to the marine environment. The additional entrainment would also increase exposure of subsea species and habitats to hydrocarbons.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel's prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly. The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon. Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area.	**No**	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
		The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.		
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved.	Use of in-situ burning as a response technique for marine diesel is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading. In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved. Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase the release of atmospheric pollutants.	**No**	Diesel characteristics are not appropriate for the use of in-situ burning and would unnecessarily cause an increase the release of atmospheric pollutants.
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5 with a 50-100% coverage of 100 g/m^2 to 200 g/m^2.	Modelling of an MGO spill predicts that floating oil will be prone to rapid spreading and evaporation and will not reach the required threshold (>50 g/m^2) for containment and recovery to be feasible within any RPA. The volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.	**No**	Containment and recovery would be an inappropriate response technique for a spill of MGO. Corralling a volatile hydrocarbon such as MGO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled diesel would have been subject to rapid evaporation prior to the commencement of containment and recovery operations.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of at-risk areas.	Stochastic modelling predicts that no shoreline receptors will be contacted by hydrocarbons at any threshold. An MGO spill would be prone to rapid spreading and evaporation. Furthermore, the volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	**No**	In addition to safety issues and the rapid spreading and evaporation of the diesel, the modelling undertaken predicts that no shoreline receptors would be contacted by floating oil concentrations at any of the assessed thresholds.
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m2.	Stochastic modelling predicts that no shoreline receptors will be contacted by hydrocarbons at any threshold. An MGO spill would be prone to rapid spreading and evaporation. Furthermore, the volatile nature of MGO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon. Operational monitoring will, however, be deployed from the outset of a spill to track the spill location and fate in real-time.	**No**	In addition to safety issues, the modelling undertaken predicts that no shoreline receptors would be contacted by floating oil concentrations at a recoverable threshold and a spill of marine diesel is unlikely to accumulate at concentrations appropriate for shoreline clean-up techniques.
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	Due to the likely volatile atmospheric conditions surrounding a diesel spill, response options may be limited to hazing to ensure the safety of response personnel. The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. Monitor and evaluate will, however, be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken in accordance with the Oiled Wildlife Response Operational Plan as and where required. In addition, any rehabilitation could only be undertaken by trained specialists.	**Yes**	The modelling undertaken predicts that no sensitive areas will be impacted thus it is unlikely that this technique would be required. However, in the event that wildlife are at risk of contamination, oiled wildlife response will be undertaken as and where required.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488* (2021) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/SIMA, Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

1. It considers the Response Planning Need identified in terms of surface area (km^2) and available surface hydrocarbon volumes (m^3) against existing Woodside capability.
2. It considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
    - predicted cost associated with adopting the control measure
    - predicted change/environmental benefit
    - predicted effectiveness/feasibility of the control measure.
3. It evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

1. A structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique.
2. The analysis of alternate, additional, and improved control measures meets one of the following criteria:
    - all identified, reasonably practicable control measures have been adopted; or
    - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
    - no reasonably practical additional, alternative, and/or improved control measures have been identified.
3. Where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned.
4. Higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or unreasonable control measure.
5. cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the ALARP assessment, the following terms and definitions have been used:

- Response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably.
- Cost is defined as the time, effort and/or complexity of financial, safety, design/storage/installation, capital/lease, and/or operations/maintenance required to adopt a control measure.

- Environmental impact is the comparison against standard environmental values and sensitivities impacts using positive or negative criteria from the NEBA Impact Ranking Classification Guidance in Annex A.

5.1 Operational Monitoring

Operational Monitoring includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

The table below provides the operations monitoring plans that support the successful execution of this response technique.

Table 5-1: Description of supporting operational monitoring plans

ID	Title
OM01	Predictive modelling of hydrocarbons to assess resources at risk
OM02	Surveillance and reconnaissance to detect hydrocarbons and resources at risk
OM03	Monitoring of hydrocarbon presence, properties, behaviour and weathering in water
OM04	Pre-emptive assessment of sensitive receptors at risk
OM05	Shoreline assessment

Woodside maintains an *Operational Monitoring Operational Plan*. If shoreline contact is predicted, RPAs will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey will be completed to guide effective shoreline clean-up operations. This plan includes the process for the IMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Dampier, Onslow and Exmouth to the spill event locations means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Dampier. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Exmouth, Onslow, Karratha, and Port Hedland.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Floating surface oil in sufficient concentrations for effective operational monitoring (>10 g/m^2) is expected to be present after 1 hour (CS-05) or 43 hours (CS-01) at Montebello Marine Park. .
- The shortest timeframe that shoreline contact at response threshold (>100 g/m^2) is predicted within 24 hours at Dampier Archipelago and Legendre Island (MEE-02b only).
- The time to contact for oil at concentrations of entrained hydrocarbons greater than 100 ppb is 1 hour within Montebello Marine Park (CS-05).
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for operational and support functions. These should be reviewed and updated regularly.
- The duration of the spill may extend up to 59 and 77 days for CS-01 and MEE-01 respectively, and up to 8 hours for MEE-02b and CS-05 with response operations extending to 5 days (MEE-02b) based on the predicted time to complete shoreline clean-up operations.

5.1.2 Environmental performance based on need

Table 5-2: Environmental Performance – Operational Monitoring

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside COP daily to improve the accuracy of other Operational Monitoring techniques.	1, 3B, 4
		2.5	For unmanned facility/ vessel deploy tracking buoy within 48 hours	1, 3A, 3C, 4
3	Satellite imagery	3.1	Contract in place with 3rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3rd party provider will confirm availability of an initial acquisition within 2 hours	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Operational Monitoring techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response	1, 3C, 4
4	Aerial surveillance	4.1	1 trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	1 aircraft available for two sorties per day, available for the duration of the response from day 1.	1, 3C, 4
		4.3	Observer to compile report during flight as per First Strike Plan. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support SCAT, containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Hydrocarbon detections in water	5.1	Activate 3rd party service provider as per first strike plan. Deploy resources within 3 days: • 3 specialists in water quality monitoring • 2 monitoring systems and ancillaries	1, 2, 3C, 3D, 4

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
			• 1 vessel for deploying the monitoring systems with a dedicated winch, A-frame or Hiab and ancillaries to deploy the equipment.	
		5.2	Water monitoring services available and employed during response	1, 3C, 4
		5.3	Preliminary results of water sample as per contractor's implementation plan within 7 days of receipt of samples at the accredited lab	
		5.4	Daily fluorometry reports as per service provider's implementation plan will be provided to IMT to validate modelling and monitor presence/ absence of entrained hydrocarbons.	
6	Pre-emptive assessment of sensitive receptors	6.1	Mobilisation within 24 hours in consultation with WA DoT (for Level 2/3 incidents), of 2 specialists from resource pool in establishing the status of sensitive receptors.	1, 2, 3B, 3C, 4
		6.2	Daily reports provided to CIMT on the status of the receptors to prioritise Response Protection Areas (RPAs) and maximise effective utilisation of resources.	1, 3B, 4
7	Shoreline assessment	7.1	Mobilisation within 24 hours, in consultation with WA DoT (for Level 2/3 incidents), of 2 x specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts at greater than 100 g/m^2.	1, 2, 3B, 3C, 4
		7.2	SCAT reports provided to CIMT daily detailing the assessed areas to maximise effective utilisation of resources	1, 3B, 4
		7.3	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations	1

The control measures and capability of Woodside and its third-party service providers are shown to support Operational Monitoring activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Operational Monitoring operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

5.2 Source control and well intervention

The worst-case scenario for a Pluto production well is considered to be to be loss of well containment due to a 'tree off' scenario (MEE-01). The worst case scenario during Xena-03 well drilling operations would be a loss of containment resulting in an uncontrolled flow from the well (CS-01). Both scenarios are detailed in the EP. In the event of a loss of well containment for either MEE-01 or CS-01, the primary response would be source control and well intervention.

The Woodside Source Control Emergency Response Planning Guideline has been developed as part of the Woodside assurance plans and in alignment with the guidelines in the *NOPSEMA Source Control Planning and Procedures Information Paper* (N-04750-IP1979 A787102). It includes the process for the CIMT to mobilise resources for Subsea First Response Toolkit (SFRT) support, and capping support. This plan has pre-identified vessel specifications and contracts required for SFRT debris clearance work.

Woodside is a signatory to the Australian Energy Producers' (AEP) MoU between Australian offshore operators to provide mutual aid to facilitate and expedite mobilising a MODU and drilling a relief well, if a loss of well containment incident was to occur. The MoU commits the signatories to share rigs, equipment, personnel, and services to assist another operator in need. Moored and dynamically positioned (DP) MODUs are suitable for the Pluto and Xena wells.

Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. Circumstances that limit the safe execution of this control measure include lower explosive limit (LEL) concentrations, volatile concentrations of hydrocarbons in the atmosphere, weather window, waves and/or sea states (>1.5m waves) and high ambient temperatures. Gas monitoring will be undertaken in line with standard protocol.

5.2.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Prior to any source control activities, Woodside will implement protocols seeking to ensure that the site is safe including subsea ROV surveys and surface air monitoring.
- Hydrocarbons will flow from the well until one of the following interventions can be made:
  - closure of the Tubing Retrievable Safety Valve (TRSV)
  - intervention with a capping stack.
  - a relief well is drilled and first attempt at well kill within 77 days (MEE-01) or 64 days (CS-01)
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for operational and support functions. These should be reviewed and updated regularly.
- The duration of the spill may extend up to 77 days (MEE-01) or 64 days (CS-01) with response operations extending until a capping stack has been installed or successful relief well is completed. Modelling does not predict shoreline contact for either MEE-01 or CS-01.

In addition, a number of assumptions are required to estimate the response need for source control. These assumptions have been described in the table below.

Table 5-3: Response Planning Assumptions – Source Control

Response planning assumptions	
Safety considerations	Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site, in accordance with the Woodside Management System (WMS). Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Feasibility considerations	Woodside's primary source control option would be ROV intervention if the BOP remains in place and is operable (CS-01). Relief well drilling for the Pluto Facility Operations and Xena wells , coupled with capping stack deployment (if conditions permit and the safety of the intervention personnel can be guaranteed), would also be attempted. The following approaches outline Woodside's hierarchy for relief well operations; • primary – review internal drilling programs and MODU availability to source appropriate rig(s) operating within Australia with an approved Safety Case • alternate – source and contract MODU through AEP MoU that is operating within Australia with an approved Safety Case • contingency – source and contract a MODU outside Australia with an approved Australian Safety Case.

5.2.2 Environmental performance based on need

Table 5-4: Environmental Performance – Source Control

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
8	Subsea First Response Toolkit (SFRT)	8.1	Oceaneering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	1, 3B, 3C
		8.2	Intervention vessel with minimum requirement of a working class ROV and operator.	1, 3C
		8.3	Mobilised to site for deployment within 11 days.	1, 3B, 3C
		8.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
9	Well intervention	9.1	Frame agreements with ROV providers in place to be mobilised upon notification. ROV equipment deployed within 7 days.	1, 3B, 3C
		9.2	Source control vessel will have the following minimum specifications: • active heave compensated crane, rated to at least 150 T in shallower water and 250 T in deeper water. • at least 90 m in length • deck has water/electricity supply • deck capacity to hold at least 110 T of capping stack.	1, 3B, 3C
		9.3	Identify source control vessel availability within 24 hours and begin contracting process. Vessel mobilised to site for deployment within 16 days for conventional capping.	1, 3B, 3C
		9.4	ROV available on MODU ready for deployment within 48 hours to attempt initial BOP well intervention (CS-01 only).	1, 3B, 3C
		9.5	Hot Stab and/or well intervention attempt made using ROV and SFRT within 11 days.	1, 3B, 3C
		9.6	Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once plume size is acceptable and safety and metocean conditions are suitable.	1, 3C
		9.7	Wild Well Control Inc (WWCI) equipment and staff available all year round to assist with the mobilisation, deployment, and operation of the capping stack and well intervention equipment.	1, 3B, 3C
		9.8	MODU mobilised to site for relief well drilling within 21 days.	1, 3C
		9.9	First well kill attempt completed within 64 days (CS-01) and 77 days (MEE-01).	1, 3B, 3C
		9.10	Open communication line(s) to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
		9.11	**CS-01:** Relief well peer review undertaken during well design which includes screening and identification of suitable MODU(s) with in-force Australian Safety Cases for relief well drilling	1, 3C
		9.12	Monthly monitoring of the availability of MODUs through existing market intelligence including current Safety Case history.	3C

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
		9.13	**CS-01:** Prior to entering the reservoir, reconfirm that pre-identified/screened MODU(s) remain available for relief well drilling.	1, 3C
10	Support vessels	10.1	Access to 24/7 tracking software to monitor availability of suitable vessels to meet specifications for source control.	3C
		10.2	Frame agreements for installation support vessels (ISVs) require vessels to maintain in-force Safety Case approvals covering ROV operations and provide support in the event of an emergency.	1, 3B, 3C
		10.3	MODU and vessel contracts include clause outlining requirement for support in the event of an emergency	1, 3C
11	Safety Case	11.1	Woodside will prioritise MODU or vessel(s) for intervention work(s) that have an existing Safety Case	1, 3C
		11.2	Woodside Planning, Logistics, and Safety Officers (on roster/Call 24/7) to assist in expediting the Safety Case assessment process as far as practicable.	1, 3C
		11.3	Woodside will maintain minimum safe operating standards that can be provided to MODU and vessel operators for Safety Case guidance..	1, 3C

The resulting source control capability has been assessed against the WCCS. The range of techniques provide a feasible and viable approach to well intervention and, if necessary, relief well drilling operations to stop the well flowing.

The health and safety, financial, capital and operations/maintenance costs of implementing the alternative, additional or improved control measures identified and not carried forward are considered disproportionate to the insignificant environmental benefit gained and/or not reasonably practicable for this PAP.

Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.2.

5.3 Source Control via Vessel SOPEP

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the PAP vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by IMO Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer MGO and thus minimise the release.

5.3.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the PAP which are detailed in Section 6.7 of the EP. The vessel master's roles and responsibilities are described in EP Section 7.5.

Performance standards for each contracted PAP vessel are detailed in the vessel's specific SOPEP.

These standards ensure that sufficient resources are available and are adequately tested to ensure implementation of the SOPEP in the event of a hydrocarbon spill.

5.4 Shoreline Protection and Deflection

The placement of containment, protection or deflection booms on and near a shoreline is a response technique to reduce the potential volume of hydrocarbons contacting or spreading along shorelines, which may reduce the scale of shoreline clean-up. Hydrocarbons contained by the booms would be collected where practicable.

Shorelines would be protected where accessible via vessel or shore. Where hydrocarbon contact has already occurred, there may still be value in deploying protection equipment to limit further accumulations and preventing remobilisation of stranded hydrocarbons.

Shoreline protection and deflection equipment would be mobilised to selected locations, where the following conditions were met:

- Sea-states and hydrocarbon characteristics are safe to deploy protection and deflection measures,
- Oil trajectory has been identified as heading towards identified RPAs.

5.4.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact at response threshold (>100 g/m^2) is predicted within 24 hours at Dampier Archipelago and Legendre Island (MEE-02b only).
- Pre-emptive assessment and shoreline assessments (OM04 and OM05) will be mobilised prior to shoreline contact at 100 g/m^2, which occurs within 24 hours at Dampier Archipelago and Legendre Island (MEE-02b only).
- The duration of the spill may extend up to 59 and 77 days for CS-01 and MEE-01 respectively, and up to 8 hours for MEE-02b and CS-05 with response operations extending to 5 days (MEE-02b) based on the predicted time to complete shoreline clean-up operations.
- Arrangements for support organisations who provide specialist services (trained personnel, protection and deflection equipment) and/or resources and should be tested regularly.
- TRPs for RPAs along with other relevant plans, procedures and support documents need to be in place for operational and support functions. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for shoreline protection and deflection. These assumptions have been described in the table below.

Table 5-5: Response Planning Assumptions – Shoreline Protection and Deflection

Response Planning Assumptions	
Safety considerations	Shoreline protection and deflection operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • safe for deployment and conditions within range of vessels • high ambient temperatures.
Shoreline Protection and Deflection	One Shoreline Protection and Deflection operation may include; • quantity of shoreline sealing boom (as outlined in TRP) • quantity of fence or curtain boom (as outlined in TRP) • 1-2 trained supervisors • 8-10 personnel/ labour hire Specific details of each operation would be tailored to the TRP implemented (where available).

5.4.2 Environmental performance based on need

Table 5-6: Environmental Performance – Shoreline protection and deflection

Environmental Performance Outcome		To stop hydrocarbons encountering particularly sensitive areas		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
12	Response teams	12.1	In liaison with WA DoT (for Level 2/3 incidents), relevant Tactical Response Plans (TRPs) will be identified in the First Strike plan for activation.	1, 3A, 3C, 4
		12.2	In liaison with WA DoT (for Level 2/3 incidents), mobilise teams to RPAs within 24 hours. Teams to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • personnel sourced through resource pool.	1, 2, 3B, 3C, 4
		12.3	In liaison with WA DoT (for Level 2/3 incidents), 1 operation mobilised within 24 hours to each identified RPA.	1, 3A, 3B, 4
		12.4	12 trained personnel available within 24 hours sourced through resource pool.	1, 2, 3A, 3B, 3C, 4
		12.5	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s)	1, 3A, 3B
		12.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline operations: • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel.	1, 3B, 4
13	Response equipment	13.1	Equipment mobilised from closest stockpile within 24 hours.	1, 3A, 3C, 4
		13.2	Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours.	1, 3C, 3D, 4
		13.3	Supplementary equipment mobilised from OSRL within 48 hours.	
		13.4	Woodside maintains integrated fleet of vessels. Additional vessels can be sourced through existing contracts/frame agreements	1, 3A, 3C, 4
14	Management of environmental impact of the response risks	14.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		14.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	

The resulting shoreline protection and deflection capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline protection and deflection at identified RPAs.

Under optimal conditions, the capability available meets the need identified within 72 hours. It indicates that, the shoreline protection and deflection capability has the following expected performance:

- Deterministic modelling scenarios indicate that first shoreline impact within 24 hours at Dampier Archipelago and Legendre Island for the Pluto Facility Operations export pipeline loss of containment scenario near the State Water boundary (MEE-02b).
- Existing capability allows for mobilisation and deployment of 1-2 protection and deflection operations within 24 hours (if required).
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Port Hedland, and the management of response generated waste. From previous assessment of accommodation in this

region, Woodside estimates that current accommodation can cater for a range of 500 - 700 personnel per day for an ongoing operation.

- TRPs have been developed for identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.4.

5.5 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- phase one (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- phase two (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches
- phase three (final treatment or polishing) involving removal of the remaining residues of oil.

As phase one typically involves recovery of floating and pooled oil, and phase three removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The *Shoreline Clean-up Operational Plan* details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The *Shoreline Clean-up Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response thresholds.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance *Response assessment and termination of cleaning for oil contaminated foreshores* (AMSA 2015).

5.5.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact at response threshold (>100 g/m^2) is predicted within 24 hours at Dampier Archipelago and Legendre Island (MEE-02b only).
- The duration of the spill may extend up to 59 and 77 days for CS-01 and MEE-01 respectively, and up to 8 hours for MEE-02b and CS-05 with response operations extending to 5 days (MEE-02b) based on the predicted time to complete shoreline clean-up operations.
- Pre-emptive assessment and shoreline assessments (OM04 and OM05) will be mobilised to RPAs with predicted shoreline contact.
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, labour hire, shoreline clean-up, and site management equipment) and/or resources and should be tested regularly.
- TRPs for RPAs along with other relevant plans, procedures and support documents should be in developed and in place for operational and support functions. These should be reviewed and updated regularly.

In addition, assumptions are required to estimate the response need for shoreline clean-up. These are described in the table below.

Table 5-7: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include: • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Manual shoreline clean-up operation (Phase 2)	One, manual shoreline clean-up operation (Phase 2) may include: • 1–2 trained supervisor • 8–10 personnel/ labour hire • supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	Surface Threshold • Lower – 100 g/m^2–100% coverage of 'stain' – cannot be scratched off easily on coarse sediments or bedrock. Expected trigger to undertake detailed shoreline survey • Optimum – 250 g/m^2 – 25% coverage of 'coat' – can be scratched off with a fingernail on coarse sediments. Expected trigger to commence clean-up operations
Efficiency **(m^3 oil recovered per person per day)**	Manual shoreline clean-up (Phase 2) – approximately 0.25–1 m^3 oil recovered per person per 10 hour day is based on moderate to high coverage of oil (100 g/m^2–1000 g/m^2) with manual removal using shovels/rakes, etc. from studies of previous response operations and exercises.

Table 5-8: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	Remote and inaccessible shorelines for personnel, vehicles and machinery. Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover. Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques. High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.	Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.	May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline. May also be used for buried or reworked hydrocarbons where other techniques may not recover these.
Manual recovery	Use of manpower to collect hydrocarbons from the shoreline. Use of this form of clean-up is based on type of shoreline.	Remote and inaccessible shorelines for vehicles and machinery. Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually. Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually. Areas where nesting and breeding fauna cannot or should not be disturbed.	Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage then allowing them to recover naturally. For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.	May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (OSCA)	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.5.2 Environmental performance based on need

Table 5-9: Environmental Performance – Shoreline Clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
15	Shoreline responders	15.1	In liaison with WA DoT (for Level 2/3 incidents), deployment of shoreline clean-up teams to contaminated RPAs comprised of: • 1-2 trained specialists per operation • 8-10 personnel/labour hire • Personnel sourced through resource pool within 48 hours of request from the IMT.	1, 2, 3A, 3B, 3C, 4
		15.2	Relevant Tactical Response Plans (TRPs) will be identified in the first strike plan for activation within 24 hours of a release.	1, 3A, 3C, 4
		15.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs	1, 3A, 3B
		15.4	All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates.	
		15.5	In liaison with WA DoT (for Level 2/3 incidents), mobilise and deploy 1-2 shoreline clean-up operations within 24 hours. .	1, 2, 3A, 3C, 4
		15.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: • All personnel in a response will receive an operational/safety briefing before commencing operations. • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel	1, 3B, 4
		15.7	Open communication line to be maintained between CIMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
16	Shoreline clean up equipment	16.1	Contract in place with 3rd party providers to access equipment.	1, 3A, 3C, 4
		16.2	Equipment mobilised from closest stockpile within 24 hours.	
		16.3	Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours.	1, 3C, 3D, 4
		16.4	Supplementary equipment mobilised from OSRL within 48 hours.	
17	Management of environmental impact of the response risks	17.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified	1
		17.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines	
		17.3	Vehicular access will be restricted on dunes, turtle nesting beaches an in mangroves	
		17.4	Removal of vegetation will be limited to moderately or heavily oiled vegetation.	
		17.5	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations.	
		17.6	Oversight by trained personnel who are aware of the risks.	
		17.7	Trained unit leaders will brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline.	

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's existing capability can cover all required shoreline clean-up operations for the PAP within 72 hours.

Existing capability allows for mobilisation and deployment of 1-2 shoreline clean-up operations within 24 hours (if required).

The capability available meets the need identified for this activity. The shoreline clean-up capability has the following expected performance (if required during a response):

- Woodside has the capacity to mobilise and deploy up to 15–20 shoreline clean-up teams within 7 days at up to 6-10 RPAs using existing labour hire contracts with Woodside, AMOSC, Core Group, AMSA and OSRL team leads.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would meet the available capability within 48 hours, with the response completed by day 5.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between cost, time and effectiveness. The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Port Hedland and management of response generated waste. From previous assessment of accommodation in this region, Woodside estimates that current accommodation can cater for a range of 500 - 700 personnel per day for an ongoing operation.
- TRPs have been developed for all identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.5

5.6 Oiled wildlife response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/ reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the *Oiled Wildlife Operational Plan*, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA, 2022a) and the WA OWR Manual (DBCA, 2022b). The *Oiled Wildlife Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA, 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DoT *State Hazard Plan – Maritime Environmental Emergencies* (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DoT. The WA OWR Manual (DBCA, 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA, 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for oiled wildlife response for level 2/3 spills and will also lead the oiled wildlife response under the control of the DoT. DBCA is the State Government agency responsible for administering the *Biodiversity Conservation Act 2016 (WA) (BC Act)*, which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.6.1 Response need based on predicted consequence parameters

Wildlife response protection areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal thresholds for floating and shoreline oil for the external coating of wildlife to be 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation. It should however be noted that toxicity thresholds for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m^2 for floating, and 100 g/m^2 for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of the following:

- presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- greatest probability of shoreline accumulation
- shortest timeframe to contact.

At the time of a spill, identification and allocation of wildlife response protection areas should also take into consideration any key biological activities. Additional detail regarding species and their key

biological activities within the vicinity of the PAP are described in Section 4.6 of the Pluto Facility Operations EP.

For WA, although somewhat outdated, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife], 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-10: Key at-risk species potentially in Priority Protection Areas and open ocean

Species	Dampier Archipelago	Keast Island	Legendre Island	Cape Bruguieres	Cohen Island	Montebello MP
Marine turtles	✓	✓	✓	✓	✓	✓
Whale sharks		✓	✓	✓	✓	✓
Seabirds and/or migratory shorebirds	✓	✓	✓	✓	✓	✓
Cetaceans – migratory whales	✓	✓	✓	✓	✓	✓
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓	✓
Dugongs		✓	✓	✓	✓	
Sharks and rays	✓	✓	✓	✓	✓	✓

The following statements identify the key parameters upon which a wildlife response need can be based:

- The minimum time to floating contact receptors at >10 g/m^2 was 1 hour at Montebello Marine Park (CS-05).
- The minimum time to shoreline contact at response thresholds (>100 g/m^2) is 21 hours to the Dampier Archipelago and Legendre Island.
- At sea there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and scientific monitoring are more likely to be the focus of response efforts.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, the potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be medium, as defined in the WAOWRP (DBCA, 2022a) (**Table 5-11)**.

Table 5-11: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside *Oiled Wildlife Operational Plan*.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison to the shoreline, there are likely to be less wildlife impacted by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and integration with scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response requiring preventative actions and/or wildlife rescue is likely, and formal handover to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, capture, intake and treatment, require a higher degree of planning, approval (licenses) and skills. These activities will be planned for and carried out under the IAP as outlined in the *Oiled Wildlife Operational Plan* and in accordance with the WAOWRP (DBCA, 2022a) and WA OWR Manual (DBAC, 20022b).

The oiled wildlife response technique targets key wildlife populations at risk within Commonwealth open waters and the nearshore waters as described in Section 4 of the EP.

5.6.2 Environmental performance based on need

Table 5-12: Environmental Performance – Oiled Wildlife Response

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the *Biodiversity Conservation Act 2016 (WA)*.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
18	Wildlife response arrangements	18.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations	1, 3A, 4
		18.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by relevant Operational Monitoring techniques (OM01-05) and in liaison with DBCA	1
19	Wildlife response equipment	19.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 3D, 4
		19.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 3D, 4
20	Wildlife responders	20.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an Oiled Wildlife Response Management course.	1, 2, 3B
		20.2	Maintain contract with AMOSC for immediate access to trained OWR specialists	1, 3B, 3C
		20.3	Maintain contract with OSRL to access additional trained oiled wildlife response specialists	1, 3B, 3C
		20.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
21	Management of environmental impacts of response risks	21.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance to:

- undertake OWR first strike response including mobilisation of operational monitoring (OM01-05) to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons
- confirm availability and mobilisation of trained OWR personnel to supervise OWR activities
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

5.7 Waste Management

Waste management is considered a support technique to wildlife response, containment and recovery and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- liquids (hydrocarbons and contaminated liquids) collected during shoreline clean-up and oiled wildlife operations
- solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during shoreline clean-up and oiled wildlife operations.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004 (WA) and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- bunded if storing liquid wastes.

Processes will be in place for transfers of bulk liquid wastes and include:

- inspection of transfer hose undertaken prior to transfer
- watchman equipped with radio visually monitors loading hose during transfer
- tank gauges monitored throughout operation to prevent overflow.

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.7.1 Response need based on predicted consequence parameters

Table 5-13: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m^3 oil recovered (multiplier)	Shoreline clean-up (manual) – approximately 5-10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – approximately 1 m^3 of oily solid and liquid waste generated for each wildlife unit cleaned

5.7.2 Environmental performance based on need

Table 5-14: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
22	Waste Management	22.1	Contract with waste management services for transport, removal, treatment and disposal of waste	1, 3A, 3B, 3C, 4
		22.2	Access to at least 124 m^3 of solid and liquid waste storage available within 24 hours upon activation of 3rd party contract.	
		22.3	Access to up to 675 m^3 of solid and liquid waste storage available by end of day 4.	
		22.4	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		22.5	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		22.6.	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	1, 3A, 3B
		22.7	Waste management to be conducted in accordance with Australian laws and regulations	1, 3A, 3B, 3C, 4
		22.8	Waste management services available and employed during response	
23	Management of environmental impacts of response risks	23.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

Given the largest shoreline volumes ashore are predicted within 24 hours (MEE-02b) at a maximum volume of 15 m^3, and up to 341 m^3 of waste is expected across all shoreline clean-up operations, the capability available exceeds the need identified.

It indicates that the waste management capability has the following expected performance:

- Shoreline and nearshore operations may generate 74 to 341 m^3 over 5 days of clean-up operations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.7.
- Woodside's waste contractor has access to approximately 120,000 m^3 to treat overall waste volumes. The waste management requirements are within Woodside's and its service providers existing capacity.

5.8 Scientific monitoring

A scientific monitoring program (SMP) would be activated following a Level 2 or 3 unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors. This would consider receptors at risk (ecological and socio-economic) for the entire predicted EMBA and in particular, any identified Pre-emptive Baseline Areas (PBAs) for the credible spill scenario(s) or other identified unplanned hydrocarbon releases associated with the PAP (refer to Table 2-1: PAP credible spill scenarios).

The outputs of the stochastic hydrocarbon spill modelling are used to assess the environmental risk, in terms of delineating which areas of the marine environment are predicted to be exposed to hydrocarbons exceeding environmental threshold concentrations (refer to Table 2-6, Section 2.3.1.1). The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA. The PAP worst-case credible spill scenarios CS-01, MEE-01, MEE-02a, MEE02b and CS-05 (**Table 2-1**) define the EMBA and are the basis of the SMP approach presented in this section.

It should be noted that the resulting SMP receptor locations differ from the RPAs presented and discussed in Section 3 of this document due to the applicability of different hydrocarbon threshold levels. The SMP would be informed by the data collected via the Operational Monitoring Program (OMP) studies, however, it differs from the OMP in being a long-term program independent of, and not directing, the operational oil spill response or monitoring of impacts from response activities (refer to **Section 5.1**) for operational monitoring overview).

Key objectives of the Woodside oil spill scientific monitoring program are:

- assess the extent, severity and persistence of the environmental impacts from the spill event
- monitor subsequent recovery of impacted key species, habitats and ecosystems.

The SMP comprises ten targeted environmental monitoring programs to assess the condition of a range of physico-chemical (water and sediment) and biological (species and habitats) receptors including EPBC Act listed species, environmental values associated with protected areas and socio-economic values, such as fisheries. The ten SMPs are as follows:

- SM01 – assessment of the presence, quantity and character of hydrocarbons in marine waters (linked to OM01 to OM03)
- SM02 – assessment of the presence, quantity and character of hydrocarbons in marine sediments (linked to OM01 and OM05)
- SM03 – assessment of impacts and recovery of subtidal and intertidal benthos
- SM04 – assessment of impacts and recovery of mangroves/saltmarsh habitat
- SM05 – assessment of impacts and recovery of seabird and shorebird populations
- SM06 – assessment of impacts and recovery of nesting marine turtle populations
- SM07 – assessment of impacts to pinniped colonies including haul-out site populations
- SM08 – desktop assessment of impacts to other non-avian marine megafauna
- SM09 – assessment of impacts and recovery of marine fish (linked to SM03)
- SM10 – assessment of physiological impacts to important fish and shellfish species (fish health and seafood quality/safety) and recovery.

These SMPs have been designed to cover all key tropical and temperate habitats and species within Australian waters and broader, if required. A planning area for scientific monitoring is also identified to acknowledge potential hydrocarbon contact below the environmental threshold concentrations and beyond the EMBA. This planning area has been set with reference to the entrained low exposure value of 10 ppb detailed in NOPSEMA Bulletin #1 Oil Spill Modelling (2019), as shown in **Figure 5-1**.

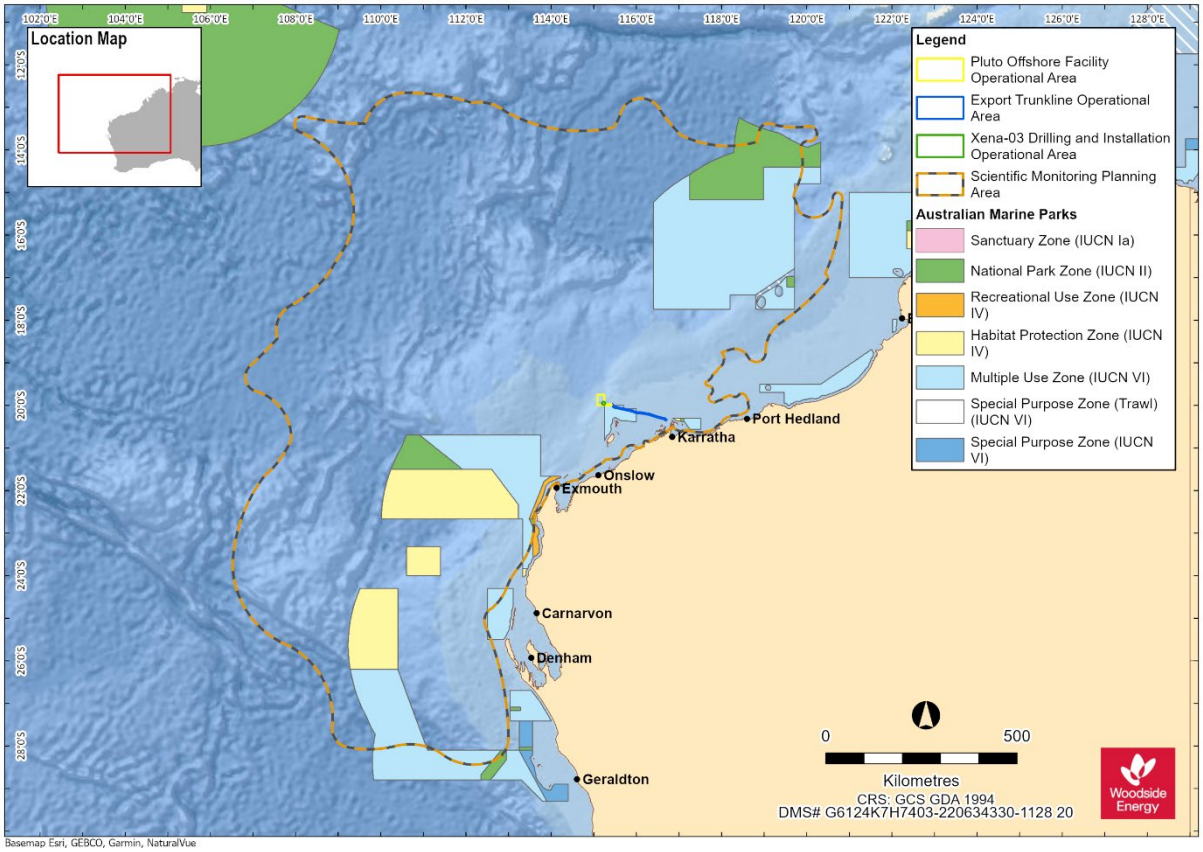

Figure 5-1: The planning area for scientific monitoring based on the area potentially contacted by the low (below ecological impact) entrained hydrocarbon threshold of 10 ppb in the event of the worst-case credible spill scenarios.

Please note that Figure 5-1 represents the overall combined extent of the oil spill model outputs based, on a total of 100 replicate simulations over an annual period each for CS-01, MEE-01, MEE-02a and MEE-02b, and 200 replicate simulations over an annual period for CS-05 and therefore represents the largest spatial boundaries of 100-200 oil spill combinations, not the spatial extent of a single spill.

5.8.1 Scientific Monitoring Deployment Considerations

Scientific monitoring deployment considerations	
Existing baseline studies for sensitive receptor locations predicted to be affected by a spill	PBAs of the following two categories: • PBAs within the predicted <10-day hydrocarbon contact time prediction: The approach is to conduct a desktop review of available and appropriate baseline data for key receptors for locations (if any) that are potentially impacted within 10 days of a spill and look to conduct baseline data collection to address data gaps and demonstrate spill response preparedness. Planning for baseline data acquisition is typically commenced pre-PAP and execution of studies undertaken with consideration of weather, receptor type, seasonality and temporal assessment requirements. • PBAs >10 days to predicted hydrocarbon contact in the event of an unplanned hydrocarbon release from the PAP. SMP activation (as per the Pluto Facility Operations First Strike Plan) directs the SMP team to follow the steps outlined in the SMP Operational Plan. The steps include: checking the availability and type of existing baseline data, with particular reference to any PBAs identified as >10 days to hydrocarbon contact. Such information is used to identify response phase PBAs and plan for the activation of SMPs for pre-emptive (i.e. pre-hydrocarbon contact) baseline assessment.
Pre-emptive Baseline in the event of a spill	Activation of SMPs in order to collect baseline data at sensitive receptor locations with predicted hydrocarbon contact time >10 days (as documented in ANNEX C).
Survey platform suitability and availability	In the event of the SMP activation, suitable survey platforms are available and can support the range of equipment and data collection methodologies to be implemented in nearshore and offshore marine environments.
Trained personnel to implement SMPs suitable and available.	Access to trained personnel and the sampling equipment contracted for scientific monitoring via a dedicated scientific monitoring program standby contract.
Metocean conditions	The following metocean conditions have been identified to implement SMPs: • Waves <1 m for nearshore systems • Waves <1.5 m for offshore systems • Winds <20 knots • Daylight operations only SMP implementation will be planned and managed according to HSE risk reviews and the metocean conditions on a day to day basis by SMP operations.

5.8.2 Response planning assumptions

Response Planning Assumptions	
PBAs	PBAs identified through the application of defined hydrocarbon impact thresholds during the Quantitative Spill Risk Assessment process and a consideration of the minimum time to contact at receptor locations fall into two categories: • PBAs for which baseline data exist or are planned for and data collection may commence pre-PAP (≤ 10 days minimum time to contact). • PBAs (> 10 days minimum time to contact) for which baseline data may be collected in the event of an unplanned hydrocarbon release. Response phase PBAs are prioritised for SMP activities due to vulnerability (i.e. time to contact and environmental sensitivity) to potential impacts from hydrocarbon contact and an identified need to acquire baseline data. Time to hydrocarbon contact of >10 days has been identified as a minimum timeframe within which it is feasible to plan and mobilise applicable SMPs and commence collection

	of baseline (pre-hydrocarbon contact) data, in the event of an unplanned hydrocarbon release from the Pluto Operations Facility. Pre-emptive Baseline Areas for the Pluto Operations facility are identified and listed in ANNEX D, Table D-1. The PBAs together with the situational awareness (from the operational monitoring) are the basis for the response phase SMP planning and implementation.
Pre-spill	A review of existing baseline data for receptor locations (refer to Annex D) with potential to be contacted by surface, dissolved or entrained hydrocarbons at environmental thresholds within ≤10 days, relating to the credible hydrocarbon release for Pluto Facility Operations has identified the following: • Rankin Bank[5] • Dampier Archipelago • Barrow, Lowendal and Montebello Island groups • Barrow Island MMA and Montebello State Marine Park Australian Marine Parks (AMPs) potentially affected include: • Dampier AMP • Montebello AMP Note: The AMPs are located in offshore, open waters where hydrocarbon exposure is possible on surface waters and in the upper water column (entrained hydrocarbons) only.
In the event of a spill	Receptor locations with >10 days to hydrocarbon contact, as well as the wider area, will be investigated and identified by the SMP team (in the Environment Unit of the CIMT) as the spill event unfolds and as the situational awareness provided by the OMPs permits delineation of the spill affected area (for example, updates to the spill trajectory tracking). The full list is presented in Annex D, based on the PAP credible spill scenario(s) (Table 2-1). To address the initial focus in a response phase SMP planning situation, receptor locations predicted to be contacted >10 days have been identified as follows: • Ningaloo Coast and the Muiron Islands (State Marine Park, MMA and WHA) • Pilbara Islands – Middle and Southern Island Groups • Glomar Shoal • Gascoyne AMP • Ningaloo AMP • Argo-Rowley Terrace AMP The unfolding spill affected area predictions and confirmation of appropriate baseline data will determine the selection of receptor locations and SMPs to be activated in order to gather pre-emptive (pre-hydrocarbon contact) data. Refer to ANNEX C for further details on scientific monitoring plan implementation and delivery). The timing of SMP activation and mobilisation of the individual SMPs to undertake data collection will be decided and documented by the Woodside SMP team following the process outlined in the SMP Operational Plan. In the event key receptors within geographic locations that are potentially impacted after 10 days following a spill event or commencement of the spill and where adequate and appropriate baseline data are not available, there will be a response phase effort to collect baseline data for the following purposes: i. Priority will be given to the collection of baseline data for receptors predicted to be within the spill affected area prior to hydrocarbon contact. The process is initiated with the investigation of available baseline and time to hydrocarbon contact (>10 days which is sufficient time to mobilise SMP teams and acquire data before hydrocarbon contact). With reference to the Pluto Facility Operations facility, priority would be

[5] Only entrained hydrocarbon contact is predicted at ≤ 10 days. This is based upon predicted upper water column entrained hydrocarbons which may extend to approximately 20 m depth and contact the submerged shoal benthic communities.

	focused on Ningaloo Coast and the Muiron Islands (State Marine Park, MMA and WHA), Pilbara Islands – Middle and Southern Island Groups and Glomar Shoal. ii. Collect baseline data for receptors predicted to be outside the spill affected area so reference datasets for comparative analysis with impacted receptor types can be assessed post-spill.
Baseline data	A summary of the spill affected area and receptor locations as defined by the EMBA for the PAP credible spill scenario(s) is presented Section 2. The key receptors at risk by location and corresponding SMPs based on the EMBA for the PAP are presented in ANNEX D, as per credible spill event scenario(s). This matrix maps the receptors at risk with their location and the applicable SMPs that may be triggered in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors. Receptor locations and applicable SMPs are colour coded to highlight possible time to contact based on receptor types and locations. The status of baseline studies relevant to the PAP are tracked by Woodside through the maintenance of a Corporate Environment Environmental Baseline Database (managed by the Woodside Biodiversity and Science Team), as well as accessing external databases such as the Department of Water and Environmental Regulation (WA) Index of Marine Surveys for Assessment (IMSA)[1] (refer to ANNEX C: Oil Spill Scientific

5.8.3 Summary – scientific monitoring

The resulting scientific monitoring capability has been assessed against the PAP credible spill scenario(s). The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. All known reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The SMP's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

5.8.4 Response planning: need, capability and gap – scientific monitoring

The receptor locations identified in Annex D provide the basis of the SMPs likely to be selected and activated. Once the Woodside SMP Delivery team and the SMP standby contractor have been stood up and the exact nature and scale of the spill becomes known, the SMPs to be activated will be confirmed as per the process set out in the SMP Operational.

Scope of SMP Operations in the event of a hydrocarbon spill

Receptor locations of interest for the SMP during the response phase are:

- Rankin Bank and Glomar Shoal
- Dampier Archipelago
- Barrow, Lowendal and Montebello Island groups
- Barrow Island MMA and Montebello State Marine Park

Documented baseline studies are available for certain receptor locations including Rankin Bank and Glomar Shoal (Annex D, Table D-2). The SMP approach in the response phase would still deploy SMP teams to maximise the opportunity to collect pre-emptive data at sensitive receptor locations i.e., the sections of the WA Coast not immediately contacted by hydrocarbons. As the exact locations where hydrocarbon contact occurs may be unpredictable, SM01 would be mobilised as a priority to detect hydrocarbons and track the leading edge of the spill to verify where hydrocarbon contact occurs which will assist in prioritising deployment of SMP resources to obtain pre-emptive baseline data.

The ALARP assessment for the SMP (Section 6.8) considers alternate, additional, and/or improved control measures on each selected response technique.

[1] https://biocollect.ala.org.au/imsa#max%3D20%26sort%3DdateCreatedSort

5.8.5 Environmental performance based on need

Table 5-15: Scientific monitoring

Environmental Performance Outcome		Woodside can demonstrate preparedness to stand up the SMP to quantitatively assess and report on the extent, severity, persistence and recovery of sensitive receptors impacted from the spill event		
Control measure		**Performance Standard**		**Measurement Criteria**
24	• Woodside has an established and dedicated SMP team comprising the Biodiversity and Science Team and additional Environment Advisers within the HSEQ Business Group.	24.1	SMP team comprises a pool of competent Environment Advisers (stand up personnel) who receive training regarding the SMP, SMP activation and implementation of the SMP on an annual basis	• Training materials • Training attendance registers • Process that maps minimum qualification and experience with key SMP role competency and a tracker to manage availability of competent people for the SMP team including redundancy and rostering
25	• Woodside has a SMP standby contractor to provide scientific personnel to resource a base capability of one team per SMP (SM01-SM10, see Table C-2, ANNEX C) as detailed in Woodside's SMP Implementation Plan, to implement the oil spill scientific monitoring programs. The availability of relevant personnel is reported to Woodside monthly via a simple report on the base-loading availability of people for each of the SMPs comprising field work for data collection (SMP resourcing report register. • In the event of a spill and the SMP is activated, the base-loading availability of scientific personnel will be provided by SMP standby contractor for the individual SMPs and where gaps in resources are identified, SMP standby contractor/Woodside will seek additional personnel (if needed) from other sources including Woodside's Environmental Services Panel.	25.1	Woodside maintains the capability to mobilise personnel required to conduct scientific monitoring programs SM01 – SM10 (except desktop based SM08): • Personnel are sourced through the existing standby contract with SMP standby, as detailed within the SMP Implementation Plan. • SMP Implementation Plan describes the process for standing up and implementing the scientific monitoring programs. • SMP team stand up personnel receive training regarding the stand up, activation and implementation of the SMP on an annual basis	• Hydrocarbon Spill Preparedness (HSP) Internal Control Environment (ICE) tracks the quarterly review of the Oil Spill Contracts Master. • SMP resource report of personnel availability provided by SMP contractor on monthly basis (SMP resourcing report register). • Training materials • Training attendance registers • Competency criteria for SMP roles • SMP annual arrangement testing and reporting
26	• Roles and responsibilities for SMP implementation are captured in Table C-1 (Annex C) and the SMP team (as per the organisational structure of the CIMT) is outlined in the Oil Spill Scientific Monitoring Program Operational Plan. Woodside has a defined Crisis and Incident Management structure including Source Control, Operations, Planning and Logistics Sections to manage a loss of well control response. • SMP Team structure, interface with SMP standby contractor (standby SMP contractor) and linkage to the CIMT is presented in Figure C-1, ANNEX C • Woodside has a defined Command, Control and Coordination structure for Incident and Emergency Management that is based on the ICS framework. • Woodside utilises online incident management software to coordinate and track key incident management Sections. This includes specialist modelling programs, geographic information systems (GIS), as well as communication flows within the Command, Control and Coordination structure. • SMP activated via the Oil Pollution First Strike Plan. • Step by step process for activation of individual SMPs provided in the SMP Operational Plan. • All decisions made regarding SMP logged in the online incident management software (SMP team members trained in its use). • SMP component input to the CIMT Incident Action Plan (IAP) as per the identified CIMT timed sessions and the SMP IAP logged on the online incident management software. • Woodside Biodiversity and Science Team provide awareness training on the activation and stand-up of the SMP for the Environment Advisers in Woodside who are listed on the SMP team on an annual basis. • Woodside Biodiversity and Science Team provide awareness training on the activation and stand-up of the Scientific Monitoring Programme (SMP) for the SMP standby contractor. • Woodside Biodiversity and Science Team co-ordinates an annual SMP arrangement testing exercise which the SMP standby contractor.	26.1	• Woodside have established an SMP organisational structure and processes to stand up and deliver the SMP.	• Oil Spill Scientific Monitoring Program Operational Plan • SMP Implementation Plan • SMP annual arrangement testing and reporting

27	• Chartered and mutual aid vessels. • Suitable vessels would be secured from the Woodside support vessels, regional fleet of vessels operated by Woodside and other operators and the regional charter market. • Vessel suitability will be guided by the need to be equipped to operate grab samplers, drop camera systems and water sampling equipment (the individual vessel requirements are outlined in the relevant SMP methodologies (refer to Table C-2, ANNEX C). • Nearshore mainland waters may use the same approach as for open water. Smaller vessels may be used where available and appropriate. Suitable vehicles and machinery for onshore access to nearshore SMP locations would be provided by Woodside's transport services contract and sourced from the wider market. • Dedicated survey equipment requirements for scientific monitoring range from remote towed video and drop camera systems to capture seabed images of benthic communities to intertidal/onshore surveying tools such as quadrats, theodolites and spades/trowels, cameras and binoculars (specific survey equipment requirements are outlined in the relevant SMP methodologies (refer to Table C-2, ANNEX C)). Equipment would be sourced through the existing SMP standby contract with SMP standby contractor for SMP resources and if additional surge capacity is required this would be available through the other Woodside Environmental Services Panel Contractors and specialist contractors. SMP standby contractor can also address equipment redundancy through either individual or multiple suppliers. MoUs are in place with one marine sampling equipment companies and one analytical laboratory (SMP resourcing report register). • Availability of SMP equipment for offshore/onshore scientific monitoring team mobilisation is within one week to ten days of the commencement of a hydrocarbon release. This meets the SMP mobilisation lead time that will support meeting the response objective of 'acquire, where practicable, the environmental baseline data prior to hydrocarbon contact required to support the post-response SMP.	27.1	Woodside maintains standby SMP capability to mobilise equipment required to conduct scientific monitoring programs SM01 – SM10 (except desktop based SM08): • Equipment is sourced through the existing standby contract with SMP standby contractor, as detailed within the SMP Implementation Plan.	• HSP Internal Control Environment tracks the quarterly review of the Oil Spill Contracts Master. • SMP standby monthly resource reports of equipment availability provided by SMP contractor (SMP resourcing report register). • SMP annual arrangement testing and reporting
28	Woodside's SMP approach addresses the pre-PAP acquisition of baseline data for Pre-emptive Baseline Areas (PBAs) with ≤10 days if required following a baseline gap analysis process. Woodside maintains knowledge of Environmental Baseline data through: • documentation of annual reviews of the Woodside Baseline Environmental Studies Database, and specific activity baseline gap analyses. • accessing external databases such as IMSA (refer to ANNEX C: Oil Spill Scientific Monitoring Program).	28.1	• Annual reviews of environmental baseline data • PAP specific Pre-emptive Baseline Area baseline gap analysis	• Annual review/update of Woodside Baseline Environmental Studies Database • Desktop review to assess the environmental baseline study gaps completed prior to EP submission • Accessing baseline knowledge via the SMP annual arrangement testing

Environmental Performance Outcome		SMP plan to acquire response phase monitoring targeting pre-emptive baseline data achieved		
Control measure		**Performance Standard**		**Measurement Criteria**
29	Woodside's SMP approach addresses: • scientific data acquisition for PBAs >10 days to hydrocarbon contact and activated in the response phase and • transition into post-response SMP monitoring.	29.1	**Pre-emptive Baseline Area (PBA) baseline data acquisition in the response phase** If baseline data gaps are identified for PBAs predicted to have hydrocarbon contact in >10 days, there will be a response phase effort to collect baseline data. Priority in implementing SMPs will be given to receptors where pre-emptive baseline data can be acquired or improved. SMP team (within the Environment Unit of the CIMT) contribute SMP component of the CIMT Planning Section in development of the IAP.	• Response SMP plan • Woodside's online Incident Management System Records • SMP component of the IAP.
		29.2	**Post Spill contact** For the receptors contacted by the spill where baseline data are available, SMPs to assess and monitor receptor condition will be implemented post spill (i.e. after the response phase):	• SMP planning document • SMP Decision Log • IAPs

Environmental Performance Outcome		Implementation of the SMP (response and post-response phases)		
Control measure		**Performance Standard**		**Measurement Criteria**
30	• Scientific monitoring will address quantitative assessment of environmental impacts of a level 2 or 3 spill or any release event with the potential to contact sensitive environmental receptors. The SMP comprises ten targeted environmental monitoring programs as listed in Section 5.8. • SMP supporting documentation: 1. Oil Spill Scientific Monitoring Operational Plan; (2) SMP Implementation Plan and (3) SMP Process and Methodologies Guideline • The Oil Spill Scientific Monitoring Operational Plan details the process of SMP selection, input to the IAP to trigger operational logistic support services. Methodology documents for each of the ten SMPs are accessible detailing equipment, data collection techniques and the specifications required for the survey platform support. • The SMP standby contractor holds a Woodside SMP implementation plan which details activation processes, linkage with the Woodside SMP team and the general principles for the planning and mobilisation of SMPs to deliver the individual SMPs activated. Monthly resourcing report are issued by the SMP standby contractor via the SMP resourcing report. All SMP documents and their status are tracked via SMP document register.	30.1	**Implementation of SM01** SM01 will be implemented to assess the presence, quantity and character of hydrocarbons in marine waters during the spill event in nearshore areas.	Evidence SM01 has been triggered: • Documentation as per requirements of the SMP Operational Plan • Woodside's online Incident Management System Records. • SMP component of the IAP • SMP data records from field
		30.2	**Implementation of SM02-SM10** SM02-SM10 will be implemented in accordance with the objectives and activation triggers as per Table C-2 of Annex C.	Evidence SMPs have been triggered: • Documentation as per requirements of the SMP Operational Plan • Woodside's online Incident Management System Records. • SMP component of the IAP • SMP Data records from field
		30.3	**Termination of SMP plans** The Scientific Monitoring Program will be terminated in accordance with termination triggers for the SMP's detailed in Table C-2 of Annex C, and the Termination Criteria Decision-tree for Oil Spill Environmental Monitoring (Figure C-3 of Annex C):	Evidence of Termination Criteria triggered: • Documentation and approval by relevant persons/ organisations to end SMPs for specific receptor types.

5.9 Incident Management System

The Incident Management System (IMS) is both a control measure and a measurement criterion. As a control measure the function of the IMS is to prompt, facilitate and record the completion of three key response planning processes detailed below. As a measurement criterion, the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used for the PAP.

As the IMS does not directly remove hydrocarbons spilt into the marine environment, there is no direct relationship to the response planning need.

5.9.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based Incident Commander (IC) may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident the CIMT IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.9.2 Operational NEBA process

In the event of a response Woodside will confirm that the response techniques adopted at the time of Environment Plan/ Oil Pollution Emergency Plan (EP/ OPEP) acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response. An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Oil Pollution Emergency Arrangements (Australia). In effect the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.9.3 Consultation process

Woodside will consult relevant persons/ organisations during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

5.9.4 Environmental performance based on need

Table 5-16: Environmental Performance – Incident Management System

Environmental Performance Outcome		To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure		**Performance Standard**		**Measurement Criteria (Section 5.10)**
31	Operational SIMA	31.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A
		31.2	Record the evidence and justification for any deviation from the planned response activities.	
		31.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.	
32	Stakeholder engagement	32.1	Prompt and record all notifications (including government notifications) for relevant persons/ organisations in the region	
		32.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.	
		32.3	Undertake communications in accordance with: • External Communication and Continuous Disclosure Procedure • External Stakeholder Engagement Procedure	
33	Personnel required to support any response	33.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.	1, 3B
		33.2	A duty roster of trained and competent people will be maintained to confirm that minimum manning requirements are met all year round.	3C
		33.3	Immediately activate the IMT with personnel filling one or more of the following roles: • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief	1, 2, 3B, 3C, 4
		33.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.	
		33.5	Security and Emergency Management advisors will be integrated into CIMT to monitor performance of all functional roles.	
		33.6	Continually communicate the status of the spill and support Woodside to determine the most appropriate response by delivering on the responsibilities of their role.	
		33.7	Follow the OPEA, Operational Plans, FSPs, support plans and the IAPs developed.	1, 2, 3A, 4
		33.8	Contribute to Woodside's response in accordance with the aims and objectives set by the Incident Commander.	1, 2, 3B, 3C, 4

5.10 Measurement criteria for all response techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The performance tables in the previous sections identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Emergency and Crisis Management Procedure. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Emergency and Crisis Management Procedure defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down.

The Incident Action Plan (IAP) process formally documents and communicates the:

- incident objectives
- status of assets
- operational period objectives
- response techniques (defined during response planning)
- the effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, and development and execution of the IAP.

2. The Security and Emergency Management Competency Dashboard

The Security and Emergency Management competency dashboard records the number of trained and competent responders that are available across Woodside, and some external providers, to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such, the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-2 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

Woodside's pool of trained responders is composed of, but not limited to, personnel from the following organisations:

- Woodside
- Australian Marine Oil Spill Centre (AMOSC) Core Group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- AMSA
- Woodside contracted workforce.

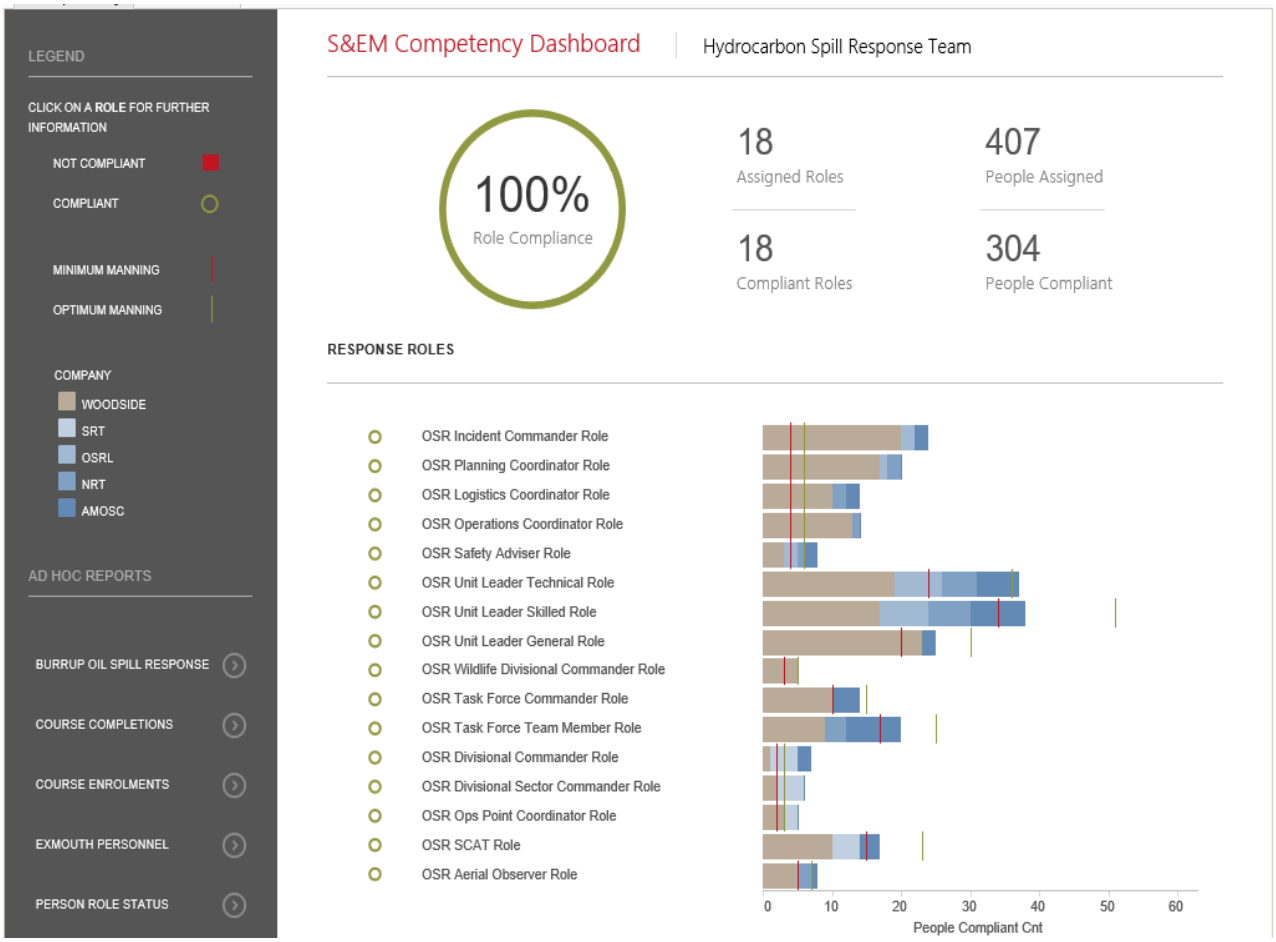

Figure 5-2: Example screenshot of the HSP competency dashboard

The Dashboard is one of Woodside's key means of monitoring its readiness to respond. It also demonstrates Woodside's ability meet the requirements of the environmental performance standards that relate to certain response roles.

Figure 5-3 shows deeper dive into the Operations Point Coordinator role and the training modules required to show competence.

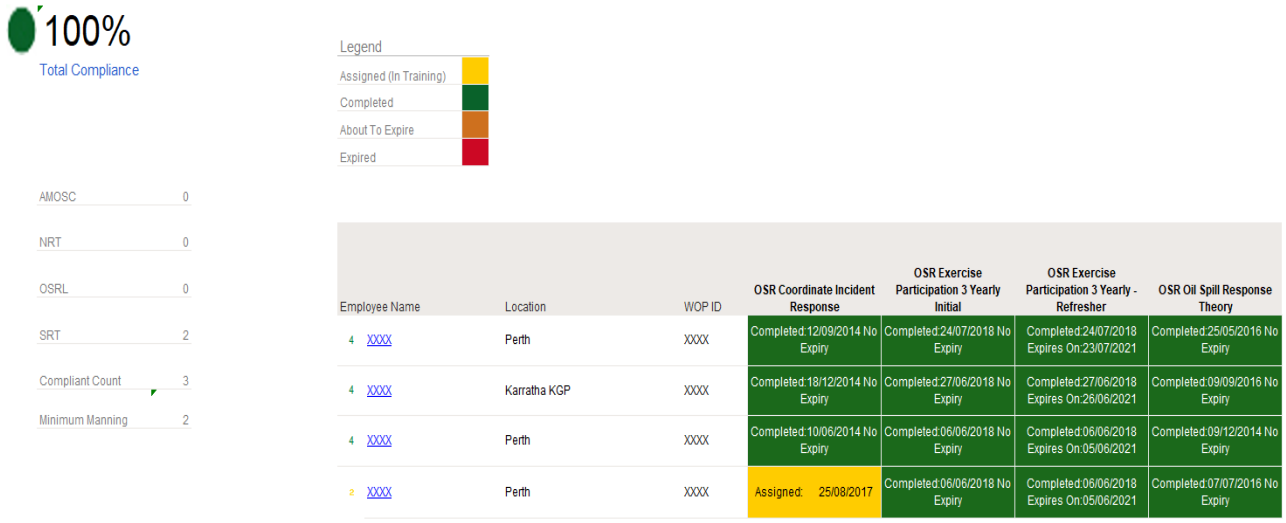

Figure 5-3: Example screenshot for the Operations Point Coordinator role

3. The Hydrocarbon Spill Preparedness ICE Assurance Process

The Hydrocarbon Spill Response Team has developed a Hydrocarbon Spill Preparedness Internal Control Environment (ICE) process to align and feed into the Woodside Management System Assurance process for hydrocarbon spill. The process tracks compliance over four key control areas:

a) **Plans** – confirms all plans (including: Oil Pollution Emergency Arrangements, first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.

b) **Competency** – confirms the competency dashboard is up to date and minimum numbers of required personnel are maintained across CIMT, CMT and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements is also tracked. The Testing of Arrangements (ToA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to meet compliance requirements.

c) **Capability** – tracks and monitors the capability that could be required in a hydrocarbon incident, including integrated fleet[6] vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.

d) **Compliance and Assurance** – confirms all regulator inspection outcomes are actioned and closed out, the global legislation register is up to date and that the key assurance components are tracked and managed. Assurance activities (including audits) conducted on memberships with key Oil Spill Response Organisations (OSROs), including AMOSC and OSRL are also tracked and recorded in the ICE.

The ICE assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported monthly through the S&EM Business Group.

The completion of the assurance checks (over and above the ICE process) is also applied via the Woodside Integrated Risk and Compliance System (WiRCs) and subject to the requirements of Woodside's Provide Assurance Procedure.

4. The Hydrocarbon Spill Preparedness and Response Procedure

This procedure sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment.

This procedure details the:

- requirement for an Oil Pollution Emergency Plan (OPEP) to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable) including:
  - defining how spill scenarios are developed on an activity specific basis
  - developing and maintaining all hydrocarbon spill related plans
  - ensuring the ongoing maintenance of training and competency for personnel
  - developing the testing of spill response arrangements
  - maintaining access to identified equipment and personnel.
- planning for hydrocarbon spill response preparedness
- accountabilities for hydrocarbon spill response preparedness
- spill training requirements
- requirements for spill exercising / testing of spill response arrangements
- spill equipment and services requirements.

The procedure also details the roles and responsibilities of the dedicated Woodside Hydrocarbon Spill Preparedness team. This team is responsible for:

[6] The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response

- assuring that Woodside hydrocarbon spill responders meet competency requirements.
- establishing the competency requirements, annual training schedule and a training register of trained personnel.
- establishing and maintaining the total numbers of trained personnel required to provide an effective response to any hydrocarbon spill incident.
- ensuring equipment and services contracts are maintained
- establishing OPEPs
- establishing OPEAs
- priority response receptor determination
- ALARP determination
- ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

6 ALARP EVALUATION

This Section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Operational Monitoring – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Operational Monitoring – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to Aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system is approximately A$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	**No**

6.1.1.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to operational monitoring data used to inform all other response techniques. No improvement required.	Woodside considers no improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approximately A$25,000.	This option is not adopted as the current capability meets the need.	**No**
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility and additional needs are met from Woodside-owned stocks in King Bay Support Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A$200 per day or A$6000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	**No**
Additional trained aerial observers.	Current capability meets need. Woodside has access to a pool of trained, competent observers at strategic locations to allow timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Aviation standards and guidelines confirm all aircraft crews are competent for their roles. Woodside maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations maintain training and competency.	Cost for additional trained aerial observers would be A$2000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	**No**

6.1.1.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A$50,000 for 24hr access plus an initial A$5,000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	**No**
Nighttime aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The images would be of low quality and as such the variable is not adopted.	Flights will only occur when deemed safe by the pilot. The risk of night operations is disproportionate to the benefit gained, as images from sensors (IR, UV, etc). will be low quality. Flight time limitations will be adhered to.	No improvement can be made without risk to personnel health and safety and breaching Woodside's Golden Safety Rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	**No**
Faster mobilisation time (for water quality monitoring).	Due to the restriction on accessing the spill location on day one, there is no environmental benefit in having vessels available from day one. The cost of having dedicated equipment and personnel is disproportionate to the environmental benefit. The availability of vessels and personnel meets the response need. Shortening the timeframes for vessel availability would require dedicated response vessels on standby in KBSF.	Operations are not feasible on day one as the hydrocarbon will take time to surface, and volatility has potential to cause health concerns within the first 24 hours of the response.	The cost and organisational complexity of employing two dedicated response vessels (approximately A$15m per year per vessel) is considered disproportionate to the potential environmental benefit to be realised by adopting this delivery options. Cost for purchase of equipment is approximately A$200,000. Ongoing costs per annum for cost of hire and pre-positioning for life of asset/activity would be larger than the purchase cost. Dedicated equipment and personnel, living locally and on short notice to mobilise. The cost would be approximately A$1 m per annum, which is disproportionate to the incremental benefit this would provide, assets are already available on day one. two integrated fleet vessels are available from day one, however these could be tasked with other operations.	This option is not adopted as the area could not be accessed earlier due to safety considerations. Additionally, the cost and complexity of implementation outweighs the benefits.	**No**

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected

6.2 Source Control – ALARP Assessment

Woodside has based its response planning on the worst-case scenarios for Xena-03 drilling activities (CS-01) and Pluto Facility Operations (MEE-01) as described in **Table 2-1**. This includes the following selection of primary source control and well intervention techniques which would be conducted concurrently:

- direct remotely operated vehicle (ROV) intervention on BOP (CS-01) or Xmas tree (MEE-01)
- debris clearance and/or removal
- capping stack
- relief well drilling.

6.2.1 ROV Intervention

Following confirmation of an emergency event, Woodside would mobilise inspection class ROVs to assess the status of the wellhead and Xmas tree. For CS-01, the ROV available on the MODU can be deployed for this purpose within 48 hours. Work class ROVs for well intervention are available through the existing frame agreements.

As Woodside holds frame agreements for vessels along with contracts for ROV providers and pilots, inspection activities using ROVs are expected to commence within seven days of an emergency event.

A hydraulic accumulator contained as part of the SFRT can be mobilised and deployed with well intervention attempted within 11 days.

Table 6-1: ROV timings

	Estimate ROV inspection duration for Xena-03 tie-back activities (days) – CS-01	Estimate ROV inspection duration for Pluto Facility Operations (days) – MEE-01
Source and mobilise vessel with work class ROV	2 days	2 days
Liaise with Regulator regarding risks and impacts*	4 days	4 days
Undertake ROV Inspection	1 day	1 day
TOTAL	**7 days***	**7 days***

** Based on timings from the Report into the Montara Commission of Enquiry, submission and discussion of revised documentation for limited activities inside the Petroleum Safety Zone (water deluge operations) to manage personnel risks and impacts was up to 20 days.*

6.2.1.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661), confirming that vessels conducting subsea intervention operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements to be in place. In the event of an emergency, Woodside has access to suitable installation support vessels (ISVs) for well intervention through existing frame agreements. The frame agreements for ISV vessels require the vessels to maintain in-force Safety Case approval covering a range of subsea activities. This would cover the requirement for intervention operations such as subsea manifold installation, maintenance and repair, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case scenario from those presented in **Figure 6-4** and **Figure 6-5** for implementing this response would be “no Safety Case revision required”. Timeframes for well intervention are detailed in Figure 6-2 and **Figure 6-3** would be implemented concurrently to the actions required by the “no Safety Case” revision scenario detailed in **Figure 6-4** and **Figure 6-5**, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.2.2 Debris clearance and/or removal

The Woodside Source Control Response Procedure details the mobilisation and resource requirements for implementing this strategy. Debris clearance may be required as a prerequisite to deployment of the capping stack. The AMOSC SFRT would be mobilised from Fremantle. The mobilisation of the SFRT would take place in parallel with mobilisation of the capping stack to allow initial ROV surveys and debris clearance have commenced before the arrival of the capping stack. The SFRT comprises ROV-deployed cutters and tools that are used to remove damaged or redundant items from the wellhead and allow improved access to the well. The SFRT can be mobilised and deployed with well intervention attempted within 11 days.

6.2.2.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting debris clearance and removal operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place. In the event of an emergency, Woodside has access to suitable ISVs for these operations through existing frame agreements. The frame agreements for ISVs require the vessels to maintain in-force Safety Case approval covering a range of subsea activities. This would cover the requirement for debris clearance and removal operations such as subsea manifold installation, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario, from those presented in **Figure 6-4** and **Figure 6-5** for implementing this response would be “no Safety Case revision required”. Timeframes for debris clearance and removal equipment deployment are detailed in Figure 6-2 and **Figure 6-3** would be implemented concurrently to the actions required by the “No Safety Case” revision scenario detailed in **Figure 6-4** and **Figure 6-5**, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.2.3 Capping stack

The Woodside Source Control Emergency Response Planning Guideline details the mobilisation and resource requirements for implementing capping stack deployment. A capping stack is designed to be installed on a subsea well and provides a temporary means of sealing the well, until a permanent well kill can be performed through either a relief well or well re-entry.

In the event of a loss of well containment, the use of a subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, an ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack with a heavy lift vessel with a 150 T crane capacity in shallower waters or 250 T crane in deeper waters could be feasible.

Woodside assumes that sourcing conventional capping stack deployment vessels would be per the Woodside Source Control Emergency Response Planning Guideline. This plan has pre-identified vessel specifications for the capping stack deployment. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement.

A capping stack can be mobilised to site within 16 days. Woodside will monitor the conditions around the wellsite and deployment for a well intervention attempt will be undertaken once plume size is acceptable and safety and metocean conditions are suitable.

6.2.3.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting deployment of the capping stack are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place.

The 16-day timeframe to mobilise the vessel is based on the following assumptions:

- An existing frame agreement vessel, located outside the region with approved Australian Safety Case
- A Safety Case revision and scope of validation is required

- The vessel meets the technical requirements for deploying capping stack as per the Source Control Emergency Response Planning Guideline
- The vessel has an active heave compensated crane, rated to at least 150 T for shallow waters or 250 T in deeper waters and at least 90 m in length and a deck capacity to hold at least 110 T of capping stack.

Timeframes for capping stack deployment detailed in Figure 6-2 and **Figure 6-3** would be implemented concurrently with the actions required for the Safety Case revision development scenarios detailed in **Figure 6-4**, **Figure 6-5** and **Table 6-3**. Woodside will execute the capping stack response within the timeframes detailed in Figure 6-2 and **Figure 6-3** , dependent upon presence of required safety and metocean conditions. Woodside has considered a broad range of alternate, additional, and improved options as outlined later in Section 6.2.5.

6.2.4 Relief Well drilling

The options analysis detailed in this section considers options to source, contract and mobilise a MODU and obtain necessary regulatory approvals to meet timelines for relief well drilling. The screening for relief well drilling MODUs is based on the following three approaches and is illustrated in Figure 6-1:

- Primary – review internal Woodside drilling programs and MODU availability to source an appropriate MODU operating within Australia with an approved Safety Case.
- Alternate – source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case.
- Contingency – source and contract a MODU outside Australia with an approved Australian Safety Case.

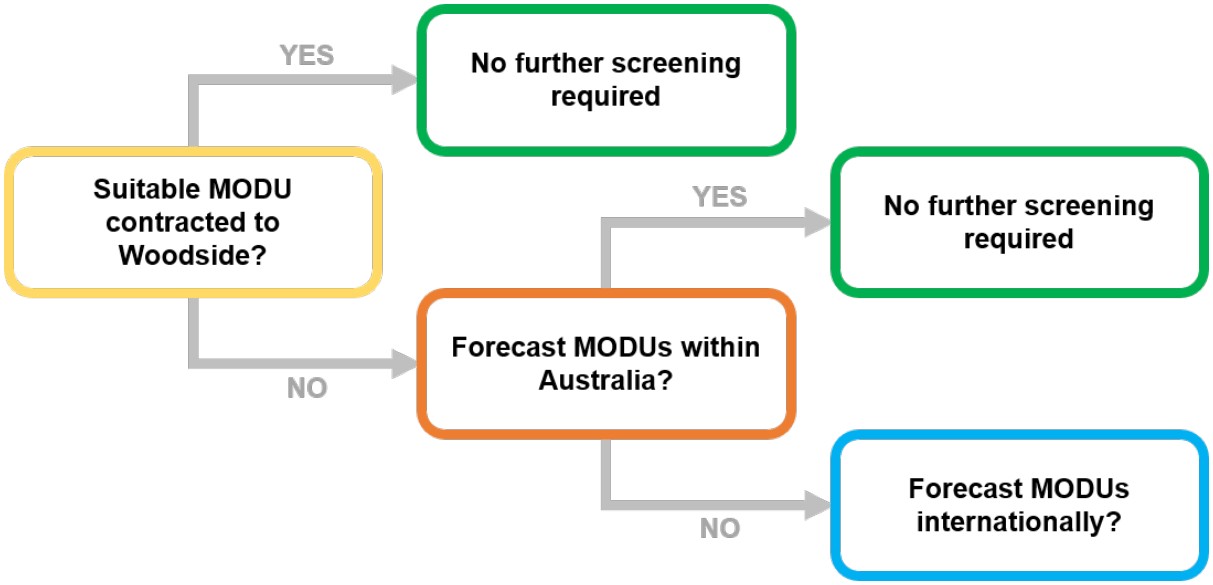

Figure 6-1: Pluto Facility Operations process for sourcing relief well MODU

Screening of a relief well MODU from international waters is undertaken only if required, i.e. there is low confidence in local (Australian) availability. The capability, location and Australian Safety Case status is assessed for each Woodside contracted MODU. In the event the Woodside contracted MODUs are unsuitable, screening is extended to all MODUs operating in Australian Waters.

Based on the detail provided, the primary and alternate approaches are expected to be achieved within the 21-day period.

The internal and external availability of MODUs, plus MODU activities of registered operators and MODUs with approved Safety Cases, are tracked by Woodside to allow the best available options to be sourced and utilised in the event of the worst-case scenario.

If the above forecast indicates a gap in availability of a suitable MODU for relief well drilling within Australia, screening would be extended to MODUs with a valid Safety Case outside Australia. If an international MODU with an Australian Safety Case is not identified, an internal review will be

undertaken, NOPSEMA notified and the issue tabled at the AEP DISC. A review of the significance of the change in risk will be undertaken in accordance with Woodside's environment management of change requirements and relevant regulatory triggers. The aforementioned lookahead process would allow two years' warning of any potential gap.

The detail of these arrangements demonstrates that the risks have been reduced to ALARP and an acceptable level through the control measures and performance standards outlined in Section 5.2.

6.2.4.1 Relief Well drilling timings

The duration of a blowout (from initiation to a successful kill) is assessed as 64 days for the Xena-03 drilling operations (CS-01) and 77 days for the Pluto Facility Operations (MEE-01). Relief wells for other wells within the field are expected to be similar duration.

Details on the steps and time required to drill a relief well is shown in **Table 6-2**. DP and moored MODUs are suitable for the Pluto Facility Operations PAP. A moored MODU has been used as the basis for the time estimate below.

To validate the effectiveness of the relief MODU supply arrangements through the AEP MoU, an exercise to test the 21-day mobilisation period forms part of Woodside's three-yearly Hydrocarbon Spill Arrangements Testing Schedule. Testing of these arrangements are facilitated by an external party and includes suspension of the assisting operator's activities, contracting the MODU, vessel Safety Case revision and transit to location.

Table 6-2: Relief well drilling timings

Estimated Relief Well Duration	Moored days: Xena-03 drilling (CS-01)	Moored days: Pluto Operations (MEE-01)	
Rig Mobilisation			
Secure and suspend well. Complete Relief well design. Secure relief well materials.	8.0	8.0	21 days
Transit to location based on mobilisation from within the region	2.0	2.0	
Backload and loadout bulks and equipment, complete internal assurance of relief well design.	2.0	2.0	
Contingency for unforeseen event	9.0	9.0	
Mooring activities and relief well construction operations	**29.0**	**42.0**	
Intersection & well kill comprising the following stages:			
Drill out shoe, conduct formation integrity test and drill towards intersection point	1.5	1.5	14 days
Execute well-specific ranging plan to accurately intersect wellbore in minimum timeframe	9.5	9.5	
Pump kill weight drilling fluid per the relief well plan. Confirm well is static with no further flow	0.5	0.5	
Contingency for unforeseen technical issues	2.5	2.5	
Total Discharge Duration	**64 days**	**77 days**	

Woodside has considered a broad range of alternate, additional, and improved options as outlined in Section 6.2.5.

Intersect and kill duration is estimated at 14 days. This is a moderately conservative estimate. During the intersect process, the relief well will be incrementally drilled and logged to accurately approach and locate the existing well bore. This will result in the highest probability of intersecting the well on the first attempt and thus will reduce the overall time to kill the well.

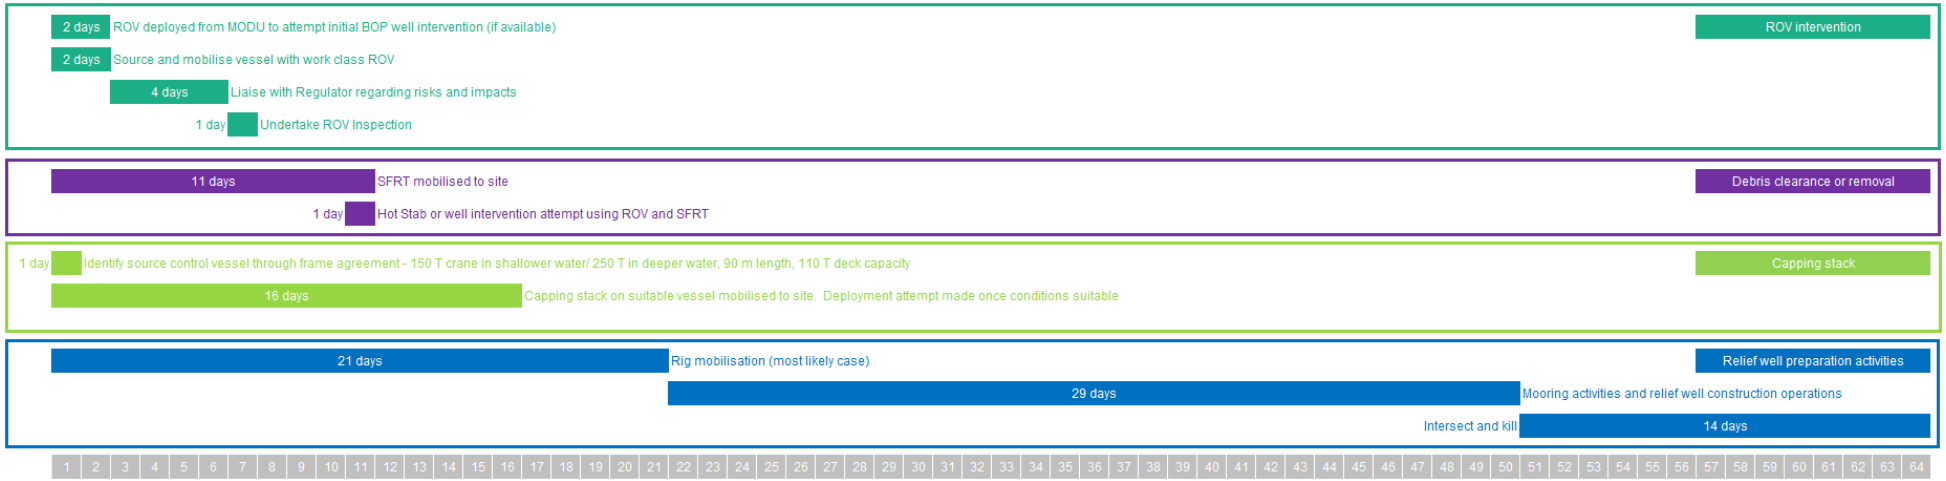

Figure 6-2: Source control and well intervention response strategy deployment timeframes for Xena-03 drilling – CS-01

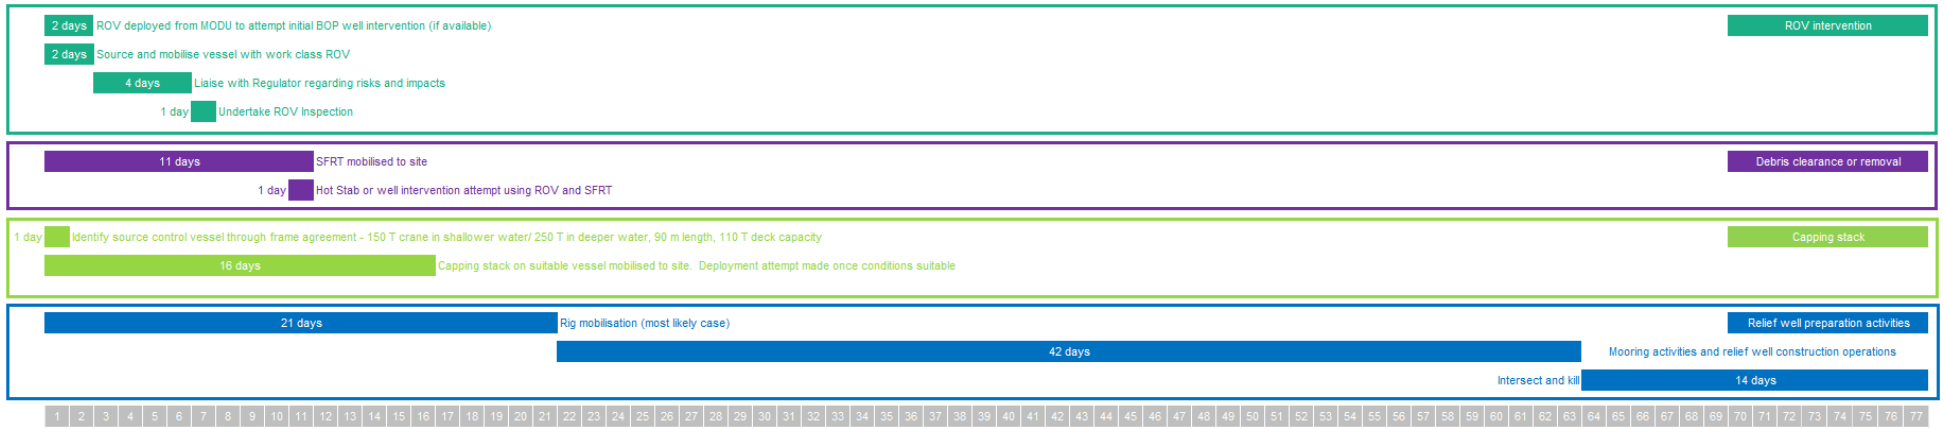

Figure 6-3: Source control and well intervention response strategy deployment timeframes for Pluto Facility Operations – MEE-01

6.2.4.2 Safety Case considerations

Woodside recognises that it will not be the Operator or holder of the Safety Case for the MODU and/or vessels involved in relief well activities. If a revision to the Operator's Safety Case is required for relief well drilling, Woodside has identified measures to enable timely response and optimise preparedness as far as practicable that can be undertaken to expedite a straightforward Safety Case revision for a MODU/ vessel to commence drilling a relief well. Performance standards associated with these measures have been included in Section 5.2.

These include;

- access to Safety and Risk discipline personnel with specialist knowledge.
- monitoring internal and external MODUs and vessel availability in the region and extended area through contracted arrangements, with a two-year lookahead.
- prioritisation of MODUs/vessels with current or historical contracting arrangements with Woodside maintaining records of previous contracting arrangements and companies and all current contracts for vessels and MODUs that are required to support Woodside in the event of an emergency.
- leverage mutual aid arrangements such as the AEP MOU for vessel and MODU support.
- Woodside Planning and Logistics, and Safety Officers (on-roster/ call 24/7) who can articulate need for, and deliver Woodside support, in key delivery tasks including those sitting with potential outside operators
- ongoing strategic industry engagement and collaboration with NOPSEMA to work toward time reductions in regulatory approvals for emergency events.

Woodside has identified three Safety Case revision development and submission scenarios for a MODU and plotted these alongside the relief well preparation activities in **Figure 6-4** and **Figure 6-5**. The assumptions for each of the cases are detailed in subsequent **Table 6-3**.

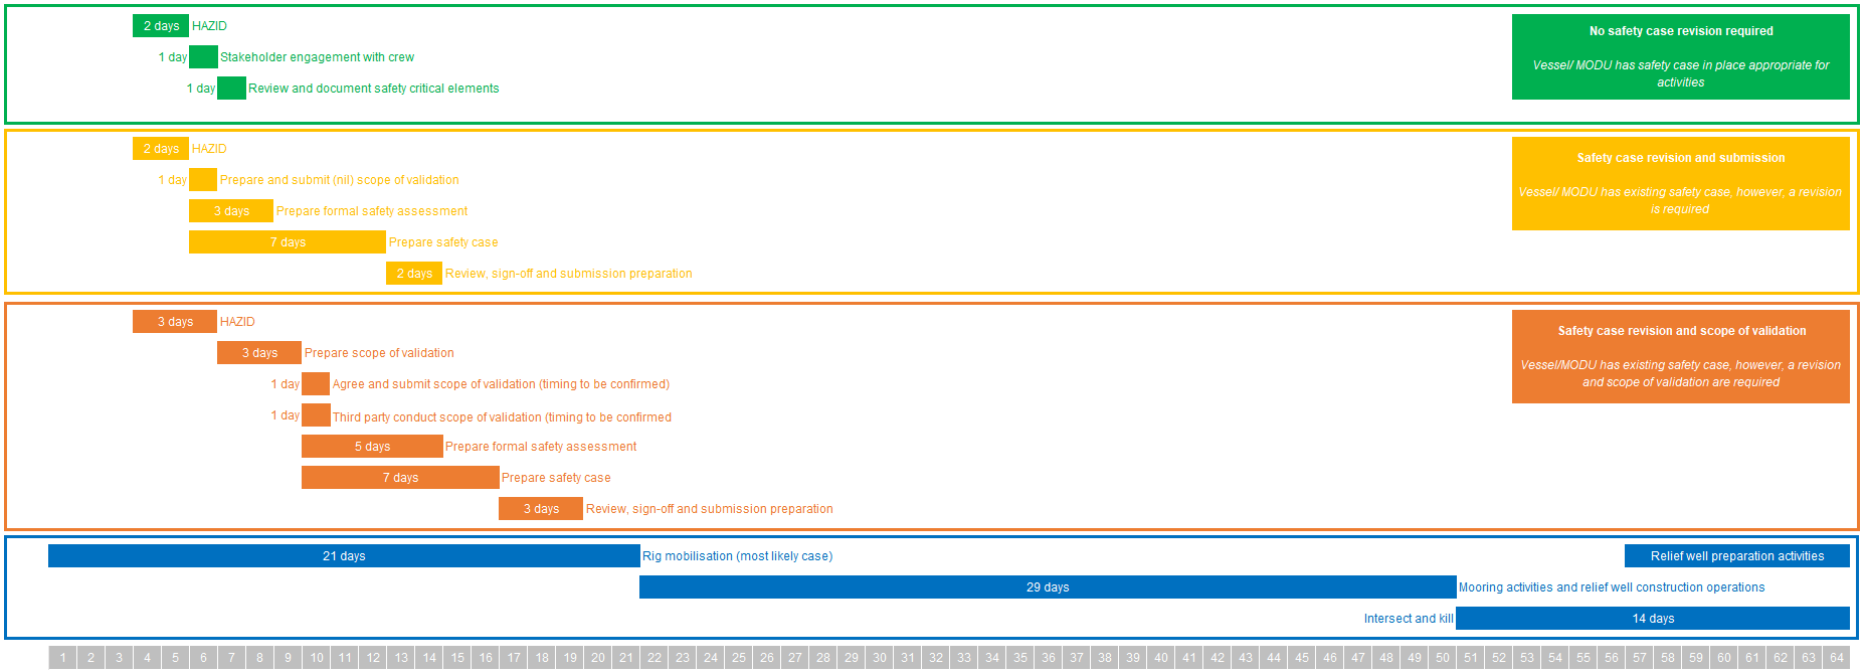

Figure 6-4: Timeline showing Safety Case revision timings alongside other relief well preparation activity timings for Xena-03 drilling – CS-01

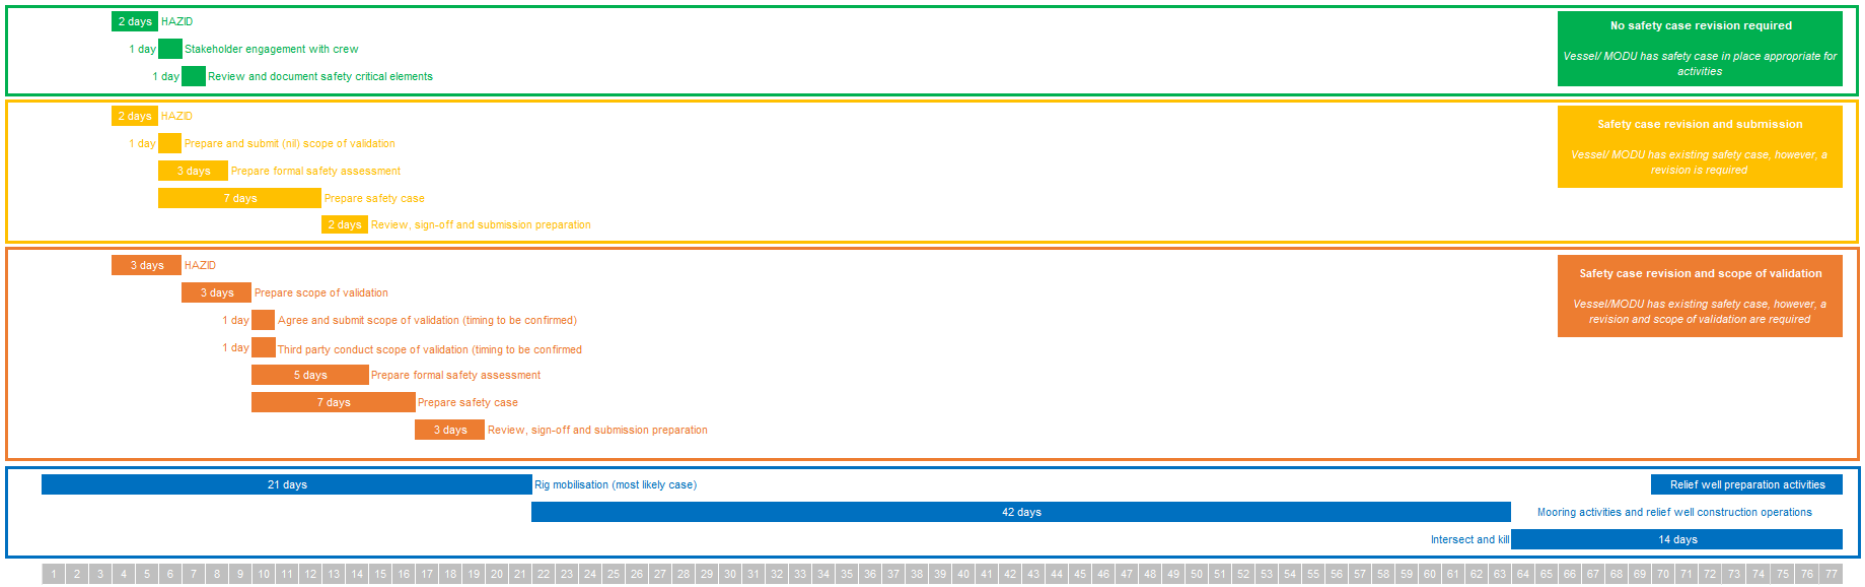

Figure 6-5: Timeline showing Safety Case revision timings alongside other relief well preparation activity timings for PLA02 (Pluto Facility Operations well)

Table 6-3: Safety case revision conditions and assumptions

Case	No Safety Case revision required	Safety Case revision and submission	Safety Case revision and scope of validation
Description	Vessel/MODU has a Safety Case in place appropriate for activities.	Vessel/MODU has an existing Safety Case, however, a revision is required.	Vessel/MODU has an existing Safety Case, however, a revision is required plus scope of validation.
Conditions/ assumptions	Assumes that existing vessel/ MODU Safety Case covers working under the same conditions or the loss of containment is not severe enough to result in any risk on the sea surface.	Safety case timing assumes vessel/ MODU selected and crew are available for workshops and Safety Case studies.	Safety case timing assumes vessel/ MODU selected and crew are available for workshops and Safety Case studies.
		Assumes nil scope of validation. This assumes that the vessel for source control allows for working in a hydrocarbon environment and control measures are already in place in the existing Safety Case. For MODU, it assumes that the relief well equipment is already part of the MODU facility and MODU Safety Case.	Validation will be required for new facilities only. The time needed for the validator to complete the review (from the last document received) and prepare validation statement is undetermined. This is not accounted for here as the Safety Case submission is not dependent on the validation statement, however the Safety Case acceptance is.
		Assumes Safety Case preparation is undertaken 24/7.	Assumes Safety Case preparation is undertaken 24/7.

6.2.5 Source Control – Control Measure Options Analysis

The assessment described in Section 6.2.1, 6.2.2, 6.2.3 and 6.2.4 outline the primary, alternate and contingency approaches respectively that Woodside would implement for relief well drilling**.**

Woodside has outlined the options considered against the activation, mobilisation (improved options), deployment (alternate and additional options) process described in Section 2.1.1 that provides an evaluation of:

- predicted cost associated with adopting the option
- predicted change/environmental benefit
- predicted effectiveness/feasibility of the option.

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. The control measure options are defined as:

- Alternative control measures are potentially more effective and/or novel control measures that are evaluated as replacements for an adopted control.
- Additional control measures are evaluated in terms of their ability to reduce an impact or risk when added to the existing suite of control measures.
- Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility.

Options where there is not a clear justification for their inclusion or exclusion may be subject to a detailed assessment.

6.2.6 Activation/Mobilisation – Control Measure Options Analysis

This section details the assessment of alternative, additional or improved control measures that were considered to meet the selected level of performance in Section 5 and reduce the risk to ALARP. The alternative, additional and improved control measures that have been assessed and selected are highlighted in green and the relevant performance of the selected control is cross referenced. Items highlighted in red have been considered and rejected on the basis that they are not feasible or the costs are disproportionate compared to the environmental benefit.

6.2.6.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Standby MODU shared for all Woodside activities	A standby MODU shared across all Woodside activities is likely to provide a moderate environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to 10 days (to 11 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities.	This option is not considered feasible for all Woodside activities as there are a large range of well depths, complexities, geologies and geophysical properties across all Woodside's operations. The large geographic area of Woodside activities also means that the MODU is unlikely to be in the correct location at the right time when required.	Even with costs shared across Woodside operations, the costs (approximately A$219 m per annum, A$1,095 bn over the five years) of maintaining a shared MODU are considered disproportionate to the environmental benefit potentially achieved by reducing mobilisation times by up to 10 days.	The costs and complexity of having a MODU and maintaining this arrangement for the duration of the PAP are disproportionate to the environmental benefit gained above finding a MODU through the MOU agreement for all spill scenarios.	**No**
Standby MODU shared across AEP MOU Titleholders	A standby MODU shared across all titleholders who are signatories to the AEP MOU is likely to provide a minor environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to seven days (to 14 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities.	This option is not considered feasible for many titleholders due to the remote distances in Australia as well as a substantial range of well depths, types, complexities, geologies and geophysical properties across a range of Titleholders	As the environmental benefit is only considered minor and the reduction in timing would only be for the mobilisation period (reduction from 21 days to 14 days) the costs are considered disproportionate to the minor benefit gained.	The costs and complexity of having a MODU and maintaining a shared arrangement for the duration of the PAP are disproportionate to the environmental benefit gained above finding a MODU through the MOU agreement for all spill scenarios.	**No**

6.2.6.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Implement and maintain minimum standards for Safety Case development	Woodside's contingency planning consideration would be to source a rig from outside Australia with an existing Safety Case. This would require development and approval of a Safety Case revision for the rig and activities prior to commencing well kill operations.	This option is considered feasible and would require Woodside to develop minimum standards for safe operations for relevant Safety Case input along with maintaining key resources to support review of Safety Cases. Woodside would not be the operator for relief well drilling and would therefore not develop or submit the Safety Case revision. Woodside's role as Titleholder would be to provide minimum standard for safe operations that MODU operators would be required to meet and/or exceed.	Woodside has outlined control measures and performance standards regarding template Safety Case documentation and maintenance of resources and capability for expedited Safety Case review.	This option has been selected based on its feasibility, low cost and the potential environmental benefits it would provide.	**Yes**

6.2.6.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Monitor internal drilling programs for rig availability	Woodside may be conducting other campaigns that overlap with the PAP, potentially providing availability of a relief well drilling rig within Woodside. The environmental benefit of monitoring other drilling programs internally is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	Woodside monitors vessel and MODU availability through market intelligence services for location. Woodside will continually monitor other drilling and exploration activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	Associated cost of implementation is minimal to the environmental benefit gained. Woodside has outlined control measures and performance standards.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**
Monitor external activity for rig availability	The environmental benefit achieved by monitoring drilling programs and rig movements across industry provides the potential for increased availability of suitable rigs for relief well drilling. Additional discussions with other Petroleum Titleholders may be undertaken to potentially gain faster access to a rig and reduce the time taken to kill the well and therefore volume of hydrocarbons released.	Woodside will source a relief well drilling rig in accordance with the AEP MOU on rig sharing in the unlikely event this is required. Commercial and operational provisions do not allow WEL to discuss current and potential drilling programs in detail with other Petroleum Titleholders.	Associated cost of implementation is moderate to the environmental benefit gained. Woodside will continually engage with other Titleholders and Operators regarding activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**
Monitor status of Registered Operators/ Approved Safety cases for rigs	Woodside can monitor the status of Registered Operators for rigs operating within Australia (and therefore Safety Case status) on a monthly basis. This allows for a prioritised selection of rigs in the event of a response with priority given to those with an existing Safety Case.	The environmental benefit of monitoring rigs is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	The cost is minimal.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	**Yes**

6.2.7 Deployment Options Analysis

6.2.7.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical alternative control measures identified					

6.2.7.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Offset capping alternative to conventional capping stack deployment	While the use of an offset capping system could reduce the quantity of hydrocarbon entering the marine environment, deployment of an offset capping deployment in the water depths at the Pluto Facility Operations (829 m) is not deemed feasible – maximum safe water depths are stated by OSRL to be 600 m. Additionally, the mobilisation lead times for both a cap and required vessels/ support equipment, would minimise any environmental benefit gained for both PLA02 and Xena-03 wells.	Technical feasibility: • The base case considerations for OIE requires a coordinated response by 4 to 7 vessels working simultaneously outside of the 500m exclusion zone. In the event of a worst-case shallow water gas discharge, the 10% LEL modelled radius extends beyond the area of activity required for the OIE deployment thereby introducing health and safety risk to any vessels required for the initial deployment of the carrier and subsequent operations with ROV during capping operations. Though manageable for single vessels, it is prohibitive for operations requiring SIMOPs with numerous vessels working at 180 degrees from one another. • Water depth is also a key consideration as buoyancy modules have not been proven for use in 829 m water depth (PLA02) or with the expected worst-case gas blowout rates. Other factors: • Due to the OIE's size and scale, fabrication of equipment, e.g. mooring anchors, outside of the contractor's scope of supply is likely to require engagement of international suppliers, further increasing complexity and uncertainty in associated time frames. • Screening indicates that mobilising some components of the OIE, based in Italy, can only be done so by sea and is likely to erode any time savings realised through killing the well via a relief well. The March 2019 OSRL exercise in Europe tested deployment of the OIE and highlighted that it will require a 600+MT crane vessel for deployment to ensure there is useable hook height for the crane to conduct the lift of the carrier. Vessels with such capability and a current Australian vessel Safety Case are not locally or readily available.	Due to risks, uncertainty and complexity of this option, and the inability to realise any environmental gains, any cost would be disproportionate to the benefits gained.	Woodside has confidence in availability of suitable relief well MODUs across the required drilling time frame thus the OIE would provide no advantage. Implementation of OIE has been assessed as a complex and unfeasible SIMOPs operation, precluded by a combination of the site-specific metocean and worst-case discharge conditions at the Pluto location. Implementation of a novel technology such as OIE culminates in low certainty of success while at the same time increasing associated health and safety risks. As such the primary source control response and ALARP position remains drilling a relief well.	**No**

Dual vessel capping stack deployment	While the use of dual vessel to deploy the capping system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, mobilisation lead times for both a cap and required vessels and support equipment, would minimise any environmental benefit.	A dual vessel deployment is somewhat feasible provided a large enough deck barge can be located. Deck barges of 120 m are not, however, very common and will present a logistical challenge to identify and relocate to the region. Furthermore, the longer length barges may need mooring assist to remain centred over the well. The capping stack would be handed off from a crane vessel to the anchor handler vessel (AHV) work wire outside of the exclusion zone. The AHV would then manoeuvre the barge into the plume to get the capping stack over the well. In this method, the barge would be in the plume, but the AHV and all personnel would be able to maintain a safe position outside of the gas zone. The capping stack would actually be lowered on the AHV work wire so a crane would not be required on the barge.	Due to there being minimal environmental benefits gained by the prolonged lead times needed to execute this technique, plus a potential increase in safety issues, any cost would be disproportionate to the benefits gained.	Given there is minimal environmental benefit and an increase in safety issues surrounding SIMOPS and deployment in shallow waters, this option would not provide an environmental or safety benefit.	**No**
Subsea Containment System alternative to capping stack deployment	While the use of a subsea containment system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the system is unlikely to be feasibly deployed and activated for at least 90 days following a blowout due to equipment requirements and logistics. No environmental benefit is therefore predicted given the release durations of 64 days (CS-01) and 77 days (MEE-01) before drilling of a relief well under the adopted control measure.	The timing for mobilisation, deployment and activation of the subsea containment system is likely to be longer (>90 days), than the expected 64 days (CS-01) and 77 days (MEE-01) relief well drilling timing based on the location, size and scale of the equipment required, including seabed piles that can only be transported by vessel.	Woodside has investigated the logistics of reducing this timeframe by pre-positioning equipment but the costs of purchasing dedicated equipment by Woodside for this PAP is not considered reasonably practical and are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	**No**
Pre-drilling top-holes	This option represents additional environmental impacts associated with discharge of additional drill cuttings and fluids along with benthic habitat disturbance. It is also not expected to result in a significant decrease in relief well timings	This option is not considered feasible due to the uncertainties related to the location and trajectory of the intervention well, which may vary according to the actual conditions at the time the loss of containment event occurs. Additionally, there is only expected to be a minor reduction in timing for this option of 1-2 days based on the drilling schedule. Duration to drill and kill may be reduced by 1-2 days, but top-hole may have to be relocated, due to location being unsafe or unsuitable and further works will be required each year to maintain the top holes.	Utilising an existing MODU and pre-drilling top-hole for relief well commencement would significantly increase costs associated the PAP. Estimated cost over the program's life is approximately A$555,000 per day over the PAP based on 2-4 days of top-hole drilling (plus standby time) for the 5 wells as the worst-case scenarios.	This option would not provide an environmental benefit due to the additional environmental impacts coupled with a lack of improved relief well timings.	**No**
Purchase and maintain mooring system	Purchasing and maintaining a mooring system could provide a moderate environmental benefit as it may reduce equipment sourcing time. However, due to the continued need for specialists to install the equipment plus sourcing a suitable vessel, the timeframe reduction would be minimal.	Woodside is not a specialist in installing and maintaining moorings so would require specialists to come in to install the moorings and would also require specialist vessels to be sourced to undertake the work.	The cost of purchasing, storing and maintaining pre-lay mooring systems with anchors, chains, buoys and ancillary equipment is considered grossly disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit as timeframe reductions would be minimal.	**No**
Contract in place with Wild Well Control and Oceaneering	Woodside has an agreement in place with Wild Well Control Inc and Oceaneering to provide trained personnel in the event of an incident. This will ensure that competent personnel are available in the shortest possible timeframe.	Having contracts in place to access trained, competent personnel in the event of an incident would reduce mobilization times. This option is considered reasonably practicable.	Minimal cost implications – Woodside has standing contract in place to provide assistance across all activities.	This control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	**Yes**

6.2.7.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Maintaining relief well drilling supplies	There is not predicted to be any reduction in relief well timing or spill duration from Woodside maintaining stocks of drilling supplies (mud, casing, cement, etc.)	It would be feasible to source some relief well drilling supplies such as casing but the actual composition of the cement and mud required will need to be specific to the well. This option is also not deemed necessary as the lead time for sourcing and mobilising these supplies is included in the 21 days for sourcing and mobilising a rig.	The capital cost of Woodside purchasing relevant drilling supplies is expected to be approximately A$600 k with additional costs for storage and ongoing costs for replenishment. These costs are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	**No**

6.2.8 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - implement and maintain minimum standards for Safety Case development
  - contract in place with Wild Well Control and Oceaneering to supply trained, competent personnel
- improved
  - monitor internal drilling programs for MODU availability
  - monitor external activity for MODU availability
  - monitor status of registered operators / approved Safety cases for MODUs.

6.3 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved control measure options have been assessed against the base capability described in Section 5. Those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.3.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.3.1.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.3.1.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.3.1.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.3.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected.

6.4 Shoreline Protection and Deflection - ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Existing Capability – Shoreline Protection and Deflection

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.4.2 Response Planning: Pluto Facility Operations – Shoreline Protection and Deflection

Planning for shoreline protection is based upon identification of RPAs from deterministic modelling and the logistics associated with deploying protection at these locations. The response planning scenarios indicate that this would require effective mobilisation to priority shorelines and maintenance of protection until operational monitoring confirms that the locations are no longer at risk. Woodside has identified the RPAs from deterministic modelling results provided from specific scenarios.

The control measures selected provide capability to mobilise shoreline protection equipment within 24 hours (if required). Deterministic modelling indicates that first shoreline impact at Dampier Archipelago and Legendre Island within 24 hours for the Pluto Facility Operations export pipeline loss of containment scenario (MEE-02b). The existing capability is considered sufficient to mobilise and deploy protection at RPAs within 72 hours, guided by the ongoing operational monitoring. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in Table 3-1.

Tactical response plans exist for many of the RPAs identified. The plans identify values and sensitivities that would be protected at location. To allow for the best use of available shoreline protection and deflection resources, operational monitoring (OM01 and OM02) will inform the response, targeting RPAs where contact is predicted above response threshold levels.

Table 6-4 below outlines the capability required (number of RPAs predicted to be impacted) against the capability available (number of shoreline protection and deflection operations that can be mobilised and deployed). As can be seen from the table below, Woodside's capability meets the response planning need identified for shoreline protection and deflection operations at identified RPAs within 72 hours.

Table 6-4: Response Planning – Shoreline Protection and Deflection

Pluto Facility Operations - export pipeline loss of containment		Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3
	Oil on shoreline (from deterministic modelling) m^3	15	12	0	0	0	0	0	0	0	0	0	0
A	Capability Required												
A1	Number of RPAs contacted (> 100 g/m^2)	2	3	0	0	0	0	0	0	0	0	0	0
B	Capability Available (operations per day)												
B1	SPD operations available – per day (lower)	0	1	1	2	2	4	6	70	70	70	330	330
B2	SPD operations available – per day (upper)	1	2	3	4	6	8	10	84	84	848	336	336
C	Capability Gap (operations per day)												
C1	SPD operations gap – per day (lower)	2	2	-1	-2	-2	-4	-6	-70	-70	-70	-330	-330
C2	SPD operations gap – per day (upper)	3	4	-3	-4	-6	-8	-10	-84	-84	-84	-336	-336

A1– the number of Response Protection Areas contacted by surface hydrocarbons above 100 g/m^2
B1 and B2 – the upper and lower number of shoreline protection and deflection operations available (based on response planning assumptions in Section 5.4),
C1 and C2 – the gap between the upper and lower number of shoreline protection and deflection operations required in A1 compared to the operations available in B1 and B2

Table 6-5: Indicative Tactical response plan, aims and methods for identified RPAs

Tactical Response Plan	Response aims and methods
Dampier Archipelago – applicable to RPAs including: Keast Island, Cape Bruguieres, and Cohen Island)	**First response objective:** Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas. **Second response objective**: Recovery of floating oil at sea where possible through the use of skimming systems and other appropriate recovery devices to reduce shoreline impact. **Third response objective:** Protection of sensitive shorelines within Dampier Archipelago through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions. **Fourth response objective**: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate. NOTES: • Relevant permissions must be sought from DBCA to carry out any response operations within the limits of the area. • In the event that the existing Woodside equipment stockpile at the King Bay Supply Base becomes exhausted, Woodside has an MoU with AMSA and the DoT to provide surplus equipment from their stockpile. Additionally, Woodside is a member of both AMOSC and OSRL and has the ability to call upon their relevant technical advisory services and equipment stockpiles 24/7. This TRP should be considered a draft until it has been verified and tested.
Legendre Island – Dampier	**First Response objective:** Ongoing operational monitoring and evaluation of hydrocarbon spill to adapt aims and response tactics to evolving nature of the incident and to assist in locating relevant booming areas. **Second Response objective:** Protection of sensitive shorelines (mangrove) at Legendres Island through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/ weather conditions. **Third Response objective:** Clean-up impacted shoreline. Manual clean-up techniques, use of mechanical recovery methods and techniques where appropriate. **Fourth response aim:** Collection and specialist cleaning/ rehabilitation of oiled wildlife NOTES: • Relevant permissions must be sought from DBCA to carry out any response operations within the limits of the area. • In the event that the existing Woodside equipment stockpile at the King Bay Supply Base becomes exhausted, Woodside has an MoU with AMSA and the DoT to provide surplus equipment from their stockpile. Additionally, Woodside is a member of both AMOSC and OSRL and has the ability to call upon their relevant technical advisory services and equipment stockpiles 24/7. This TRP should be considered a draft until it has been verified and tested.

Pre-emptive mobilisation of equipment and personnel would commence as soon as practicable prior to oil contact. Additional resources would be mobilised depending on the scale of the event to increase the length or number of shorelines being protected.

A shoreline protection and deflection response would be launched only when operational monitoring operations identify a spill heading towards RPA(s) and there is sufficient time for deployment prior to shoreline contact.

6.4.3 Shoreline Protection and Deflection – Control Measure Options Analysis

6.4.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Pre-position equipment at Response Protection Areas (RPAs)	Additional environmental benefit of having equipment prepositioned is considered minor as the RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event making it impractical to preposition equipment in advance. Equipment is currently available to protect RPAs, however, deployment may be constrained by levels of volatile hydrocarbons arising from a condensate or MGO spill.	The incremental environmental benefit associated with these delivery options is unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release, the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment.	Total cost to preposition protection/ deflection packages at each site of potential impact would be approximately A$6100 per package per day.	This option is not adopted as pre-positioning shoreline protection and deflection capability is not considered practicable due to uncertainty of the sites that may be contacted during a real spill event and the predicted time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of condensate and MGO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	**No**

6.4.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Supplemented stockpiles of equipment to protect additional shorelines	Additional equipment would increase the number of receptor areas that could be protected from hydrocarbon contact. However, current availability of personnel and equipment is capable of protecting up to 30 km of shoreline, commensurate with the scale and progressive nature of shoreline impact. Additional stocks would be made available from international sources if long term up scaling were necessary. A reduction in environmental consequence from a 'B' rating is unlikely to be realised as a result of having more equipment available locally.	The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised. Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options. The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment.	Total cost for purchase supplemental protection and deflection equipment would be approximately A$455,000 per package.	This option is not adopted as addition shoreline protection and deflection capability is not considered practicable in the time frame prior to contact. Whilst modelling for this activity predicts contact at 8 RPAs within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of condensate and MGO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	**No**
Additional trained personnel	The level of training and competency of the response personnel allows the shoreline protection and deflection operation to be delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders. Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will	Additional specialist personnel would cost A$2000 per person per day.	This option is not adopted as the existing capability meets the need. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of condensate and MGO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the	**No**

		receive a full operational/safety briefing prior to commencing operations.		current capability is considered to reduce the risk to ALARP.	

6.4.3.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster response/ mobilisation time	Modelling predicts floating or shoreline accumulation at threshold on day 1 at Dampier Archipelago and Legendre Island (MEE-02b), thus faster response times are not practicable.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.	The cost of establishing a local stockpile of new mitigation equipment (including protection and deflection boom) closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as addition shoreline protection and deflection capability is not considered practicable in the time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of Pluto Condensate, faster mobilisation is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	**No**

6.4.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected.

6.5 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing Capability – Shoreline Clean-up

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.5.2 Response planning: Pluto Facility Operations – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's capability can cover all required shoreline clean-up operations for the PAP.

Modelling predicts shoreline contact within 24 hours at Dampier Archipelago (9 m^3) and Legendre Island (6 m^3) for the MEE-02b. No shoreline contact is expected at 100 g/m^2 threshold from any other modelled scenario. The largest volumes ashore are Dampier Archipelago with approximately 9 m^3 predicted within 24 hours. These volumes assume no treatment of floating surface oil by containment and recovery or shoreline protection and deflection prior to contact so are considered very conservative. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in **Table 3-1**.

These figures have been combined into a single response planning need scenario that provides a worst-case scenario for planning purposes as outlined below. Given all other shoreline contact scenarios identified from modelling are longer time frames and lesser volumes, demonstration of capability against this need will enable Woodside to meet requirements for any other outcome.

The potential scale and remoteness of a response coupled with the uncertainty of which locations will be affected precludes the stockpiling or prepositioning of equipment specific to shorelines. The most significant constraint is accommodation and transport of personnel in Dampier to undertake clean-up operations and to manage wastes generated during the response effort. From previous assessment of facilities in Dampier, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.5.3.

Table 6-6: Response Planning – Shoreline Clean-up

	Shoreline Clean-up (Phase 2)	Day 1	Day 2	Day 3	Day 4	Day 5	Day 6	Day 7	Week 2	Week 3	Week 4	Month 2	Month 3	Month 4
	Oil on shoreline (from deterministic modelling) m^3													
	Shoreline accumulation (above 100 g/m^2) - m^3	15	12	0	0	0	0	0	0	0	0	0	0	0
	Oil remaining following response operations - m^3	15	4	5	2	1	0	0	0	0	0	0	0	0
A	**Capability Required (number of operations)**													
A1	SCU operations required (lower)	2	0	0	0	0	0	0	0	0	0	0	0	0
A2	SCU operations required (upper)	2	1	1	0	0	0	0	0	0	0	0	0	0
B	**Capability Available (number of operations)**													
B1	SCU operations available - Stage 2 - Manual (lower)	0	1	3	5	8	12	15	105	105	105	560	560	560
B2	SCU operations available - Stage 2 - Manual (upper)	0	2	5	8	10	15	20	140	140	140	560	560	560
C	**Capability Gap**													
C1	SHC operations gap (lower)	2	-1	-3	-5	-8	-12	-15	-105	-105	-105	-560	-560	-560
C2	SHC operations gap (upper)	2	-1	-4	-8	-10	-15	-20	-140	-140	-140	-560	-560	-560

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m^2
B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.5),
C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2

6.5.3 Shoreline Clean-up – Control measure options analysis

6.5.3.1 Alternative Control Measures

Alternative Control Measures considered *Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical alternative control measures identified					

6.5.3.2 Additional Control Measures

Additional Control Measures considered *Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Additional trained personnel available	The level of training and competency of the response personnel allows the shoreline clean-up operation to be delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside *People & Global Capability Surge Labour Requirement Plan*. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders. Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety briefing prior to commencing operations.	Additional specialist personnel would cost A$2000 per person per day.	Larger numbers of additional personnel may also be detrimental to sensitive shoreline areas. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of Pluto Condensate, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	**No**
Additional trained personnel deployed	Maintaining a span of control of 200 competent personnel is deemed manageable and appropriate for this activity. Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but modelling predicts ongoing stranding of hydrocarbons over a period of weeks. Managing a smaller, targeted response is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will reduce the risk of increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	The figure of 200 personnel is broken down to include on 1-2 trained supervisors managing 8-10 personnel/labour hire responders. This allows for multiple operational teams to operate along the extended shoreline at different locations. Typically, an additional 30-50% of the tactical workforce is required to support ongoing operations including on-scene control, logistics, safety/medical/welfare and transport. Personnel on site will include members with the appropriate specialties to efficiently clean-up the shoreline. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors.	Additional specialist personnel would cost A$2000 per person per day.	Larger numbers of additional personnel may also be detrimental to sensitive shoreline areas. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of Pluto Condensate, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	**No**

6.5.3.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster response/ mobilisation time	Modelling predicts floating or shoreline accumulation at threshold within 24 hours at Dampier Archipelago and Legendre Island (MEE-02b), thus faster response times are not practicable.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as additional shoreline clean-up capability is not considered practicable in the time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of Pluto Condensate, faster mobilisation is not expected to	**No**

		response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.		provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	

6.5.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected.

6.6 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Oiled Wildlife Response

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.6.2 Oiled Wildlife Response – Control Measure Options Analysis

6.6.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	**No**

6.6.2.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements allow these resources to be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories. Provides response equipment and personnel within 48 hours. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit. These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted; and to scale up the response if required to treat widespread contamination. Current capability meets the needs required within 48 hours of the spill and there is no additional environmental benefit in adopting the improvements.	Although hydrocarbon contact above wildlife response threshold concentrations with offshore waters and shorelines is expected from day one(CS-01MEE-02b and CS-05), given the low likelihood of such an event occurring and that the current capability meets the need within 48 hours, thus the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit. Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by operational monitoring, and under the direction of DBCA in nearshore areas. The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.	Additional wildlife response resources could total A$1700 per operational site per day.	This option is not adopted as the existing capability meets the need within 48 hours.	**No**
Additional trained wildlife responders	Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas. The potential environmental benefit of training additional personnel is expected to be low.	Current numbers meet the needs required (from day 2) and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors. Additional equipment and facilities would be required to support ongoing response, depending on the scale of the event and the impact to wildlife and may be sourced via existing contracts with OSROs. Materials for holding facilities, portable	Additional wildlife response personnel cost A$2000 per person per day	This option is not adopted as the existing capability meets the need from day 2.	**No**

		pools, enclosures and rehabilitation areas would be sourced as required.			

6.6.2.3 Improved Control Measures

Improved Control Measures considered *Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
Faster mobilisation time for wildlife response	This control measure provides increased effectiveness through faster mobilisation of specialists. Some net environmental benefit is expected if teams could be mobilised by day 1, however, the volatile nature of a spill of condensate or MGO may preclude access on day 1 for response personnel.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need from day 2.	**No**

6.6.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected.

6.7 Waste Management – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.7.1 Existing Capability – Waste Management

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.7.2 Waste Management – Control Measure Options Analysis

6.7.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.7.2.2 Additional Control Measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Woodside's waste service provider's storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with AMOSC/ OSRL. Existing arrangements meet identified need for the PAP from day 4 onwards.	Cost for increased waste disposal capability would be approximately A$1300 per m^3. Cost for increased onshore temporary waste storage capability would be approximately A$40 per unit per day.	This option is not adopted as the existing capability meets the need.	**No**

6.7.2.3 Improved Control Measures

Improved Control Measures considered
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia's licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted.	**No**

	and transport will allow continuous response operations to occur. This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.				

6.7.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - none selected
- improved
  - none selected.

6.8 Scientific Monitoring – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.8.1 Existing Capability – Scientific Monitoring

Woodside's existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside's direct control.

6.8.2 Scientific Monitoring – Control Measure Options Analysis

6.8.2.1 Alternative Control Measures

Alternative Control Measures considered
Alternative control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Analytical laboratory facilities closer to the likely spill affected area	The environmental consideration of having access to suitable laboratory facilities in Karratha to carry out the hydrocarbon analysis would provide faster turnaround in reporting of results only by a matter of days (as per the time to transport samples to laboratories).	SM01 water quality monitoring requires water samples to be transported to NATA-rated laboratories in Perth or over to the East coast. Consider the benefit of laboratory access and transportation times to deliver water samples and complete lab analysis. There is a time lag from collection of water samples to being in receipt of results and confirming hydrocarbon contact to sensitive receptors.	Laboratory facilities and staff available at locations closer to the spill affected area can reduce reporting times only to a moderate degree (days) with associated high costs of maintaining capability do not improve the environmental benefit.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	**No**
Dedicated contracted SMP vessel (exclusive to Woodside)	Would provide faster mobilisation time of scientific monitoring resources, however, the environmental benefit associated with faster mobilisation time would be minor compared to selected options.	Chartering and equipping additional vessels on standby for scientific monitoring has been considered. The option is reasonably practicable, but the sacrifice (charter costs and organisational complexity) is significant, particularly when compared with the anticipated availability of vessels and resources within in the required timeframes. The selected delivery provides capability to meet the scientific monitoring objectives, including collection of pre-emptive data where baseline knowledge gaps are identified for receptor locations where spill predictions of time to contact are >10 days.	The cost and organisational complexity of employing a dedicated response vessel is considered disproportionate to the potential environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	**No**

6.8.2.2 Additional control measures

Additional Control Measures considered
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures

Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Determine baseline data needs and provide implementation plan in the event of an unplanned hydrocarbon release	Address resourcing needs to collect post spill (pre-contact) baseline data as spill expands in the event of a loss of containment from a vessel collision from the PAP activities.	As part of Woodside's Scientific Monitoring Program, the following are considered and incorporated into the spill response approach and the SMP Standby Service contract: • Woodside relies on existing environmental baseline for receptors which have predicted hydrocarbon contact (above environment threshold) <10 days and acquiring pre-emptive data in the event of a loss of well control from the PAP activities based on receptors predicted to have hydrocarbon contact >10 days. • It provide appropriate baseline for key receptors for all geographic locations that are potentially impacted <10 days of spill event. • It addresses resourcing needs to collect pre-emptive baseline as spill expands in the event	No cost associated with baseline for SM01.	This control measure is adopted as the costs and complexity are not disproportionate to any environmental benefit that might be realised.	**Yes**

		of a condensate or MGO from the PAP activities. • For SM01 pre-emptive baseline is not required as marine water quality is assumed to be pristine.			

6.8.2.3 Improved Control Measures considered

Improved Control Measures considered *Improved control measures, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control*					
Option considered	**Environmental consideration**	**Feasibility**	**Approximate Cost**	**Assessment conclusions**	**Implemented**
No reasonably practical improved control measures identified					

6.8.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP.

- alternative
  - none selected
- additional
  - determine baseline data needs and provide implementation plan in the event of an unplanned hydrocarbon release
- improved
  - none selected.

6.8.4 Operational Plan

Key actions from the Scientific Monitoring Program Operational Plan for implementing the response are outlined in **Table 6-7**.

Table 6-7: Scientific monitoring program operational plan actions

Responsibility	Action
Activation	
CIMT Planning (CIMT Planning – Environment Unit)	Mobilises SMP Lead/Manager and SMP Coordinator to the CIMT Planning Section.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager and SMP Coordinator)	Constantly assesses all outputs from OM01, OM02 and OM03 (**Annex B**) to determine receptor locations and receptors at risk. Confirm sensitive receptors likely to be exposed to hydrocarbons, timeframes to specific receptor locations and which SMPs are triggered. Review baseline data for receptors at risk.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager and SMP Coordinator)	SMP co-ordinator stands up SMP Standby contractor. Stands up subject matter experts, if required.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Establish if, and where, pre-contact baseline data acquisition is required. Determines practicable baseline acquisition program based on predicted timescales to contact and anticipated SMP mobilisation times. Determines scope for preliminary post-contact surveys during the Response Phase. Determines which SMP activities are required at each location based on the identified receptor sensitivities.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	If response phase data acquisition is required, stand up the contractor SMP teams for data acquisition and instruct them to standby awaiting further details for mobilisation from the CIMT.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	SMP standby contractor, to prepare the Field Implementation Plan. Prepare and obtain sign-off of the Response Phase SMP work plan and Field Implementation Plan. Update the IAP.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Liaise with CIMT Logistics, and determine the status and availability of aircraft, vessels and road transportation available to transport survey personnel and equipment to point of departure. Engage with SMP standby contractor, SMP Manager and CIMT Logistics Section to establish mobilisation plan, secure logistics resources and establish ongoing logistical support operations, including: • vessels, vehicles and other logistics resources • vessel fit-out specifications (as detailed in the Scientific Monitoring Program Operational Plan) • equipment storage and pick-up locations • personnel pick-up/airport departure locations • ports of departure

Responsibility	Action
	• land based operational centres and forward operations bases, accommodation and food requirements.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Confirm communications procedures between Woodside SMP team, SMP standby contractor, SMP Team Leads and Operations Point Coordinator.
Mobilisation	
CIMT Logistics	Engage vessels and vehicles and arrange fitting out as specified by the mobilisation plan. Confirm vessel departure windows and communicate with the Service Provider's SMP Manager. Agree SMP mobilisation timeline and induction procedures with the Division and Sector Command Point(s).
CIMT Logistics	Coordinate with SMP standby contractor to mobilise teams and equipment according to the logistics plan and Sector Induction procedures.
SMP Survey Team Leads	SMP Survey Team Leader(s) coordinate on-ground/on-vessel mobilisations and support services with the Sector Command point(s).

6.8.5 ALARP and Acceptability Summary

ALARP and Acceptability Summary		
Scientific Monitoring		
ALARP Summary	X	All known reasonably practicable control measures have been adopted.
	X	No additional, alternative and improved control measures would provide further benefit.
		No reasonably practical additional, alternative, and/or improved control measure exists.
	The resulting scientific monitoring capability has been assessed against the credible spill scenarios. The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. All known reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness considered medium. The SMP's main objectives can be met, with the addition of one alternative control measures to provide further benefit.	
Acceptability Summary	• The control measures selected for implementation manage the potential impacts and risks to ALARP. • In the event of a hydrocarbon spill for the PAP, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. • Scientific Monitoring control and activities are compliant with relevant environmental legislation and regulations, including the EPBC Act. • Throughout the PAP, relevant Australian standards and codes of practice will be followed to evaluate the impacts from a loss of well control. • Consultation undertaken for the PAP did not receive feedback regarding concerns for Scientific Monitoring activities in response to a hydrocarbon spill. • The level of impact and risk to the environment has been considered with regards to the principles of ESD and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for credible case scenarios, and uncertainty has not been used as a reason for postponing control measures.	
On the basis from the impact assessment above and in Section 6.8 of the EP, Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing scientific monitoring activities to a level that is ALARP and acceptable.		

7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment so these impacts and risks have been considered and specific measures are put in place to continually review and manage further impacts and risks to ALARP and an acceptable level. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Please refer to the EP for details regarding how these risks are being managed as they are not discussed further in this document. These risks include:

- atmospheric emissions
- routine and non-routine discharges
- physical presence, proximity to other vessels (shipping and fisheries)
- routine acoustic emissions vessels
- lighting for night work/navigational safety
- invasive marine species
- collision with marine fauna
- disturbance to seabed.

Additional impacts and risks associated with the control measures not included within the scope of the EP include:

- drill cuttings and drilling fluids environmental impact assessment for relief well drilling
- vessel operations and anchoring
- presence of personnel on the shoreline
- Human presence (manual cleaning)
- vegetation cutting
- additional stress or injury caused to wildlife
- secondary contamination from the management of waste.

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

Table 7-1: Analysis of risks and impacts

	Environmental Value						
	Soil and Groundwater	Marine Sediment Quality	Water Quality	Air Quality	Ecosystems/ Habitat	Species	Socio-Economic
Operational monitoring	✓		✓	✓		✓	
Source control		✓	✓	✓	✓		
Shoreline protection and deflection	✓	✓			✓	✓	✓
Shoreline clean-up	✓	✓			✓	✓	✓
Oiled wildlife				✓	✓	✓	
Scientific monitoring	✓	✓	✓	✓			
Waste management	✓	✓	✓				✓

7.3 Evaluation of impacts and risks from implementing response techniques

Drill cuttings and drilling fluids environmental impact assessment for relief well drilling

The identified potential impacts associated with the discharge of drill cuttings and fluids during a relief well drilling activity include a localised reduction in water and seabed sediment quality, and potential localised changes to benthic biota (habitats and communities).

Direct and indirect ecological impact pathways are identified for drill cuttings and drilling fluids as follows:

- temporary increase in total suspended solids (TSS) in the water column;
- attenuation of light penetration as an indirect consequence of the elevation of TSS and the rate of sedimentation;
- sediment deposition to the seabed leading to the alteration of the physio-chemical composition of sediments, and burial and potential smothering effects to sessile benthic biota; and
- potential contamination and toxicity effects to benthic and in-water biota from drilling fluids.

Potential impacts from the discharge of cuttings range from the complete burial of benthic biota in the immediate vicinity of the well site due to sediment deposition, smothering effects from raised sedimentation concentrations as a result of elevated TSS, changes to the physico-chemical properties of the seabed sediments (particle size distribution and potential for reduction in oxygen levels within the surface sediments due to organic matter degradation by aerobic bacteria) and subsequent changes to the composition of infauna communities to minor sediment loading above background and no associated ecological effects. Predicted impacts are generally confined to within a few hundred metres of the discharge point (International Association of Oil and Gas Producers 2016) (i.e. within the EMBA for a hydrocarbon spill event).

The discharge of drill cuttings and unrecoverable fluids from relief well drilling is expected to increase turbidity and TSS levels in the water column, leading to an increased sedimentation rate above ambient levels associated with the settlement of suspended sediment particles near to the seabed or below sea surface, depending on location of discharge. Cuttings with retained (unrecoverable) drilling fluids are discharged below the water line at the MODU location, resulting in drill cuttings and drilling fluids rapidly diluting, as they disperse and settle through the water column. The dispersion and fate of the cuttings is determined by particle size and density of the retained (unrecoverable) drilling fluids, therefore, the sediment particles will primarily settle in proximity to the well locations with potential for localised spread downstream (depending on the speed of currents throughout the water column and seabed) (IOGP

2016). The finer particles will remain in suspension and will be transported further before settling on the seabed.

These conclusions were supported by discharge modelling which was undertaken by Woodside in support of the Greater Enfield Development EP. Modelling results indicating that the TSS plume of suspended cuttings will typically disperse to the south-west while oscillating with the tide and diminish rapidly with increasing distance from the well locations. Maximum TSS concentrations predicted for 100 m; 250 m and 1 km distances from the wellsite were 7, 5 and 1 mg/L, respectively. Furthermore, water column concentrations below 10 mg/L remain within 235 m of the discharge location for each modelled well. For all well discharge locations (outside of direct discharge sites), TSS concentration did not exceed 10 mg/l. Nelson et al. (2016) identified <10 mg/L as a no effect or sub-lethal minimal effect concentration.

The low sensitivity of the deep-water benthic communities/habitats within and in the vicinity of relief well locations, combined with the relatively low toxicity of water based muds (WBM) and non-water based muds (NWBMs), there being no bulk discharges of NWBM and the highly localised nature and scale of predicted physical impacts to seabed biota indicate that any localised impact would likely be of a slight magnitude (especially when considering the broader consequence of the LOWC event that a relief well drilling activity would be responding too).

Vessel operations and anchoring

Typical booms used in shoreline protection and deflection operations are designed to float, meaning that fauna capable of diving, such as cetaceans, marine turtles and sea snakes can readily avoid contact with the boom. Impacts to species that inhabit the water column such as sharks, rays and fish are not expected. Additionally, some fauna, such as cetaceans, are likely to detect and avoid the spill area, and are not expected to be present in the proximity of containment and recovery operations.

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline protection and deflection, and shoreline surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- damage to vegetation/habitat to gain access to areas of shoreline oiling;
- damage or disturbance to wildlife during shoreline surveys;
- removal of surface layers of intertidal sediments (potential habitat depletion)
- excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as mangroves and turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- liquids (recovered oil/water mixture), collected during shoreline clean-up and oiled wildlife response operations
- semi-solids/solids (oily solids), collected during shoreline clean-up and oiled wildlife response operations
- debris (e.g. seaweed, sand, woods, plastics), collected during shoreline clean-up and oiled wildlife response operations.

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination of previously uncontaminated areas and/ or impacts to wildlife through contact with or ingestion of waste materials and contamination risks if not disposed of correctly onshore.

Cutting back vegetation could allow additional oil to penetrate the substrate and may also lead to localised habitat loss. However, any loss is expected to be localised in nature and lead to an overall net environmental benefit associated with the response by reducing exposure of wildlife to oiling.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- capturing wildlife
- transporting wildlife
- stabilisation of wildlife
- cleaning and rinsing of oiled wildlife
- rehabilitation (e.g. diet, cage size, housing density)
- release of treated wildlife.

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to manage and mitigate further injury and the removal of water proofing feathers. Finally, during the release phase it is important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (Performance Standard (PS) 14.1, PS 17.1).
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 14.2, PS 17.2).

Presence of personnel on the shoreline

- Oversight by trained personnel who are aware of the risks (PS 17.6).
- Trained unit leader’s brief personnel of the risks prior to operations (PS 17.7).

Human Presence

- Shoreline access route (foot, car, vessel and helicopter) with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 7.3, PS 17.5).
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves (PS 17.3).

Waste generation

- All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates (PS 15.4).
- Removal of vegetation will be limited to moderately or heavily oiled vegetation (PS 17.4).
- Teams will segregate liquid and solid wastes at the earliest opportunity (PS 23.1).

Additional stress or injury caused to wildlife

- Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 21.1).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be disproportionate to the environmental benefit gained from its adoption, it has been rejected. Where this is not considered to be the case, the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
    - All known, reasonably practicable control measures have been adopted.
    - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
    - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/impact are deemed acceptable by relevant persons/organisations and are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
    - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans
    - National Water Quality Management Strategy and supporting guidelines for marine water quality)
    - conditions of approval set under other legislation
    - national and international requirements for managing pollution from ships
    - national biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining an acceptable level. Where these are inconsistent with mandatory/legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

10 GLOSSARY AND ABBREVIATIONS

10.1 Glossary

Term	Description / Definition
ALARP	Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
Availability	The availability of a control measure is the percentage of time that it can perform its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform its required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with PAP.
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the PAP.
Dependency	The degree of reliance on other systems for the control measure to be able to perform its intended function.
Environment that may be affected	The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon threshold concentrations.
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
Major Environment Event	The events with potential environment, reputation, social or cultural consequences of category C or higher (as per Woodside's operational risk matrix) which are evaluated against credible worst-case scenarios which may occur when all controls are absent or have failed.
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed so they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure must achieve to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
Preparedness	Measures taken before an incident to improve the effectiveness of a response
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (WHA, Commonwealth or State marine reserve or park) containing one or more receptor type

Term	Description / Definition
Receptor Sensitivities	This is a classification scheme to categorise receptor sensitivity to an oil spill. The Environmental Sensitivity Index (ESI) is a numerical classification of the relative sensitivity of a particular environment (particularly different shoreline types) to an oil spill. Refer to the Woodside Oil Pollution Emergency Arrangements (Australia) for more details.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
Survivability	Whether or not a control measure is able to survive a potentially damaging event is relevant for all control measures that are required to function after an incident has occurred.
Threshold	Hydrocarbon threshold concentrations applied to the risk assessment to evaluate hydrocarbon spills. These are defined as: surface hydrocarbon concentration – ≥10 g/m^2, dissolved – ≥50 ppb and entrained hydrocarbon concentrations – ≥100 ppb.
Zone of Application	The zone in which Woodside may elect to apply dispersant. The zone is determined based on a range of considerations, such as hydrocarbon characteristics, weathering and metocean conditions. The zone is a key consideration in the Net Environmental Benefit Analysis for dispersant use.

10.2 Abbreviations

Abbreviation	Meaning
ADIOS	Automated Data Inquiry for Oil Spills
AEP	Australian Energy Producers (formerly APPEA)
ALARP	As low as reasonably practicable
AMOSC	Australian Marine Oil Spill Centre
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
AUV	Autonomous Underwater Vehicle
BAOAC	Bonn Agreement Oil Appearance Code
BOP	Blowout Preventer
cSt	Centistokes
CIMT	Corporate Incident Management Team
DM	Duty Manager
DoT	Western Australia Department of Transport
DBCA	Western Australia Department of Biodiversity, Conservation and Attractions
DWER	Western Australia Department of Water and Environmental Regulation
EMBA	Environment that May Be Affected
EMSA	European Maritime Safety Agency
EP	Environment Plan
Environment Regulations	Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023
ESI	Environmental Sensitivity Index
ESD	Emergency Shut Down
ESP	Environmental Services Panel
FPSO	Floating Production Storage Offloading
FSP	First Strike Plan
FST	Functional Support Team
GIS	Geographic Information System
GPS	Global Positioning System
HSP	Hydrocarbon Spill Preparedness
IAP	Incident Action Plan
IC	Incident Commander
ICS	Incident Command System
IMS	Incident Management System
IMT	Incident Management Team
IPIECA	International Petroleum Industry Environment Conservation Association
ITOPF	International Tanker Owners Pollution Federation
IUCN	International Union for Conservation of Nature
KBSF	King Bay Supply Facility
KSAT	Kongsberg Satellite

Abbreviation	Meaning
LOWC	Loss of Well Containment
MODU	Mobile Offshore Drilling Unit
MoU	Memorandum of Understanding
NEBA	Net Environmental Benefit Analysis
NOAA	National Oceanic and Atmospheric Administration
NRT	National Response Team
OILMAP	Oil Spill Model and Response System
OMP	Operational Monitoring Program
OPEA	Oil Pollution Emergency Arrangements
OPEP	Oil Pollution Emergency Plan
OPGGSA	Offshore Petroleum and Greenhouse Gas Storage Act
OSRL	Oil Spill Response Limited
OSTM	Oil Spill Trajectory Modelling
OWR	Oiled Wildlife Response
OWRP	Oiled Wildlife Response Plan
PAP	Petroleum Activities Program
PEARL	People, Environment, Asset, Reputation, and Livelihood
PBA	Pre-emptive Baseline Areas
PPB	Parts per billion
PPM	Parts per million
ROV	Remotely Operated Vehicle(s)
RPA	Response Protection Area
SCAT	Shoreline Contamination Assessment Techniques
S&EM	Security and Emergency Management
SIMA	Spill Impact Mitigation Assessment
SIMAP	Integrated Oil Spill Impact Model System
SSDI	Subsea Dispersant Injection
SFRT	Subsea First Response Toolkit
SMP	Scientific monitoring program
SOP	Standard Operating Procedure
TRP	Tactical Response Plan
UAS	Unmanned Aerial Systems
UAV	Unmanned Aerial Vehicles
VOC	Volatile Organic Compound
WHA	World Heritage Area
Woodside	Woodside Energy Limited
WCC	Woodside Communication Centre
WWCI	Wild Well Control Inc
WCCS	Worst Case Credible Scenario
ZoA	Zone of Application

ANNEX A: NET ENVIRONMENTAL BENEFIT ANALYSIS DETAILED OUTCOMES

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an oil spill from the PAP for a loss of containment of Pluto condensate from the export pipeline (MEE-02b). The complete list of potential receptor locations within the EMBA within the PAP is included in Section 6 of the EP.

The locations utilised for the NEBA were limited to the identified RPAs of the PAP identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- Surface contact (>50 g/m^2)
- Shoreline accumulation (>100 g/m^2) at any time
- Entrained contact (>100 ppb) within 14 days

The detailed NEBA assessment outcomes are shown below. The Pluto Facility Operations preoperational NEBAs contains the full assessments.

Table A-1: NEBA assessment technique recommendations for loss of containment of Pluto condensate from the export pipeline (MEE-02b)

Receptor	Operational Monitoring	Containment and recovery	Dispersant application: sub-sea	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Well control and intervention
Cape Bruguieres	Yes	No	No	No	Yes	Yes	Potentially	Potentially	Yes	No	No	No

NEBA identifies response potentially of net environmental benefit?	Yes	No	No	No	Yes	Yes	Potentially	Potentially	Yes	No	No	No

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

			Degree of impact[7]	Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	**3P**	**Major**	Likely to prevent: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-today business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations.	Decrease in duration of impact by > 5 years	N/A
	2P	**Moderate**	Likely to prevent: • significant impact to a single phase of reproductive cycle of biological receptors • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors.	Decrease in duration of impact by 1–5 years	N/A

	1P	**Minor**	Likely to prevent impacts on:
			• significant proportion of population or breeding stages of biological receptors
			• socio-economic receptors such as:
			  ○ significant impact to the sensitivity of protective designation; or
			  ○ significant and long-term impact to business/industry.
				Decrease in duration of impact by several seasons (< 1 year)	N/A

	0	**Non-mitigated spill impact**	**No detectable difference to unmitigated spill scenario.**		
Negative	**1N**	**Minor**	Likely to result in: • behavioural impact to biological receptors • behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations.	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	**Moderate**	Likely to result in: • significant impact to a single phase of reproductive cycle for biological receptors; or • detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region.	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))

	3N	**Major**	Likely to result in impacts on:
			• significant proportion of population or breeding stages of biological receptors
			• socio-economic receptors resulting in either:
			  ○ significant impact to the sensitivity of protective designation; or
			  ○ significant and long-term impact to business/industry.
				Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

.

[7] NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: OPERATIONAL MONITORING ACTIVATION AND TERMINATION CRITERIA

Table B-1: Operational monitoring objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Operational Monitoring Operational Plan – 01 (OM01) Predictive Modelling of Hydrocarbons to Assess Resources at Risk	OM01 focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. OM01 utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk. The objectives of OM01 are to: • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options to reduce risks to ALARP	OM01 will be triggered immediately following a level 2/3 hydrocarbon spill.	The criteria for the termination of OM01 are: • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by OM02 surveillance observations) predicts no additional natural resources will be impacted

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Operational Monitoring Operational Plan – 02 (OM02) Surveillance and reconnaissance to detect hydrocarbons and resources at risk	OM02 aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill. The objectives of OM02 are: • Verify spill modelling results and recalibrate spill trajectory models (OM01). • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase.	OM02 will be triggered immediately following a level 2/3 hydrocarbon spill.	The termination triggers for the OM02 are: • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results (OM01) do not predict surface exposures at visible levels.
Operational Monitoring Operational Plan – 03 (OM03) Monitoring of hydrocarbon presence, properties, behaviour and weathering in water	OM03 will measure surface, entrained and dissolved hydrocarbons in the water column to inform decision-making for spill response activities. The specific objectives of OM03 are as follows: • Detect and monitor for the presence, quantity, properties, behaviour and weathering of surface, entrained and dissolved hydrocarbons. • Verify predictions made by OM01 and observations made by OM02 about the presence and extent of hydrocarbon contamination. Data collected in OM03 will also be used for the purpose of longer-term water quality monitoring during SM01.	OM03 will be triggered immediately following a level 2/3 hydrocarbon spill.	The criteria for the termination of OM03 are as follows: • The hydrocarbon release has ceased. • Response activities have ceased. • Concentrations of hydrocarbons in the water are below available ANZECC/ ARMCANZ (2018) trigger values for 99% species protection.

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
Operational Monitoring Operational Plan – 04 (OM04) Pre-emptive assessment of sensitive receptors at risk	OM04 aims to undertake a rapid assessment of the presence, extent and current status of shoreline sensitive receptors prior to contact from the hydrocarbon spill, by providing categorical or semi-quantitative information on the characteristics of resources at risk. The primary objective of OM04 is to confirm understanding of the status and characteristics of environmental resources predicted by OM01 and OM02 to be at risk, to further assist in making decisions on the selection of appropriate response actions and prioritisation of resources. Indirectly, qualitative/semi-quantitative pre-contact information collected by OM04 on the status of environmental resources may also aid in the verification of environmental baseline data and provide context for the assessment of environmental impacts, as determined through subsequent SMPs. OM04 would be undertaken in liaison with WA DoT as the control agency once the oil is in State Waters (if a Level 2/3 incident).	Triggers for commencing OM04 include: • Contact of a sensitive habitat or shoreline is predicted by OM01, OM02 and/or OM03. • The pre-emptive assessment methods can be implemented before contact from hydrocarbons (once a receptor has been contacted by hydrocarbons it will be assessed under OM05).	The criteria for the termination of OM04 at any given location are: • Locations predicted to be contacted by hydrocarbons have been contacted. • The location has not been contacted by hydrocarbons and is no longer predicted to be contacted by hydrocarbons (resources should be reallocated as appropriate).
Operational monitoring operational plan – 05 (OM05) Monitoring of contaminated resources	OM05 aims to implement surveys to assess the condition of wildlife and habitats contacted by hydrocarbons at sensitive habitat and shoreline locations. The primary objectives of OM05 are: • Record evidence of oiled wildlife (mortalities, sub-lethal impacts, number, extent, location) and habitats (mortalities, sub-lethal impacts, type, extent of cover, area, hydrocarbon character, thickness, mass and content) throughout the response and clean-up at locations contacted by hydrocarbons to inform and prioritise clean-up efforts and resources, while minimising the potential impacts of these activities. Indirectly, the information collected by OM05 may also support the assessment of environmental impacts, as determined through subsequent SMPs. OM05 would be undertaken in liaison with WA DoT as the control agency once the oil is in State Waters (if a Level 2/3 incident).	OM05 will be triggered when a sensitive habitat or shoreline is predicted to be contacted by hydrocarbons by OM01, OM02 and/or OM03.	The criteria for the termination of OM05 at any given location are: • No additional response or clean-up of wildlife or habitats is predicted. • Spill response and clean-up activities have ceased. OM05 survey sites established at sensitive habitat and shoreline locations will continue to be monitored during SM02. The formal transition from OM05 to SM02 will begin on cessation of spill response and clean-up activities.

ANNEX C: OIL SPILL SCIENTIFIC MONITORING PROGRAM

Oil spill environmental monitoring

The following provides some further detail on Woodside's oil spill scientific monitoring Program and includes the following:

- The organisation, roles and responsibilities of the Woodside oil spill scientific monitoring team and external resourcing.
- A summary table of the ten scientific monitoring programs as per the specific focus receptor, objectives, activation triggers and termination criteria.
- Details on the oil spill environmental monitoring activation and termination decision-making processes.
- Baseline knowledge and environmental studies knowledge access via geo-spatial metadata databases.
- An outline of the reporting requirements for oil spill scientific monitoring programs.

Oil Spill Scientific Monitoring – Delivery Team Roles and Responsibilities

Woodside Oil Spill Scientific Monitoring Delivery Team

The Woodside science team are responsible for the delivery of the oil spill scientific monitoring. The roles and responsibilities of the Woodside scientific monitoring delivery team are presented in Table C-1 and the organisational structure and Corporate Incident Management Team (CIMT) linkage provided in Figure C-1.

Woodside Oil Spill Scientific monitoring program – External Resourcing

In the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors, scientific monitoring personnel and scientific equipment to implement the appropriate SMPs will be provided by SMP Standby contractor who hold a standby contract for SMP via the Woodside Environmental Services Panel (ESP). If additional resources are required other consultancy capacity within the Woodside ESP will be utilised (as needed and may extend to specialist contractors such as research agencies engaged in long-term marine monitoring programs). In consultation with the SMP Standby Contractor and/or specialist contractors, the selection, field sampling and approach of the SMPs will be determined by the nature and scale of the spill.

Table C-1: Woodside and Environmental Service Provider – Oil Spill Scientific Monitoring Program Delivery Team Key Roles and Responsibilities

Role	Location	Responsibility
Woodside Roles		
SMP Lead/Manager	Onshore	• Approves the SMPs activated based on operational monitoring data provided by the Planning Section • Provides advice to the CIMT in relation to scientific monitoring • Provides technical advice regarding the implementation of scientific monitoring • Approves detailed sampling plans prepared for SMPs • Directs liaison between statutory authorities, advisors and government agencies in relation to SMPs.
SMP Co-Ordinator	Onshore	• Activates the SMPs based on operational monitoring data provided by the Planning Section • Sits in the Planning Section of the CIMT. • Liaises with other CIMT Sections to deliver required logistics, resources and operational support from Woodside to support the Environmental Service Provider in delivering on the SMPs. Acts as the conduit for advice from the SMP Lead/Manager to the Environmental Service Provider • Manages the Environmental Service Provider's implementation of the SMPs • Liaises with the Environmental Service Provider on delivery of the SMPs • Arranges all contractual matters, on behalf of Woodside, associated with the Environmental Service Provider's delivery of the SMPs.
Environmental Service Provider Roles		
SMP Standby Contractor – SMP Duty Manager/Project Manager (SMP Liaison Officer)	Onshore	• Coordinates the delivery of the SMPs • Provides costings, schedule and progress updates for delivery of SMPs • Determines the structure of the Environmental Service Provider's team to necessitate delivery of the SMPs • Verifies that HSE Plans, detailed sampling plans and other relevant deliverables are developed and implemented for delivery of the SMPs • Directs field teams to deliver SMPs • Arranges all contractual matters, on behalf of Environmental Service Provider, associated with the delivery of the SMPs to Woodside • Manages sub-consultant delivery to Woodside • Provides required personnel and equipment to deliver the SMPs.
SMP Field Teams	Offshore – Monitoring Locations	• Delivers the SMPs in the field consistent with the detailed sampling plans and HSE requirements, within time and budget. • Early communication of time, budget, HSE risks associated with delivery of the SMPs to the Environmental Service Provider – Project Manager • Provides start up, progress and termination updates to the Environmental Service Provider – Project Manager (will be led in-field by a party chief).

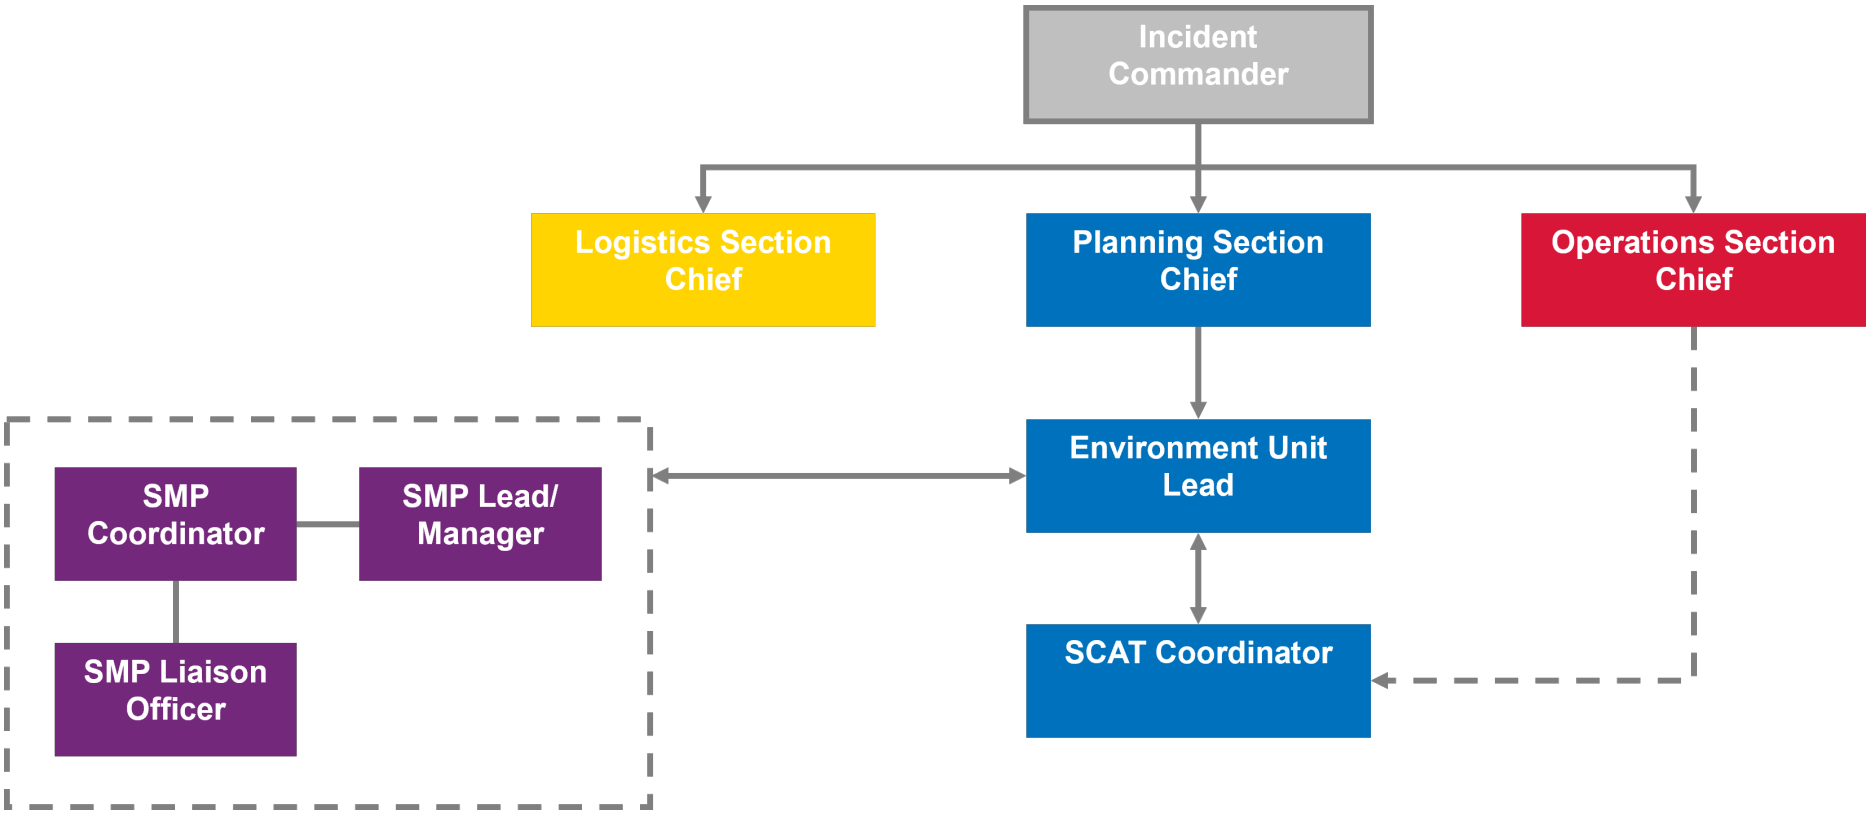

Figure C-1: Woodside Oil Spill Scientific Monitoring Program Delivery Team and Linkage to Corporate Incident Management Team (CIMT) organisational structure

Table C-2: Oil Spill Environmental Monitoring: Scientific Monitoring Program – Objectives, Activation Triggers and Termination Criteria

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
Scientific monitoring program 1 (SM01) **Assessment of Hydrocarbons in Marine Waters**	SM01 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine waters following the spill and the response. The specific objectives of SM01 are as follows: • Assess and document the extent, severity and persistence of hydrocarbon contamination with reference to observations made during surveillance activities and / or in-water measurements made during operational monitoring; and • Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs.	SM01 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors	SM01 will be terminated when: • Operational monitoring data relating to observations and / or measurements of hydrocarbons on and in water have been compiled, analysed and reported; and • The report provides details of the extent, severity and persistence of hydrocarbons which can be used for analysis of impacts recorded for sensitive receptors monitored under other SMPs. SMP monitoring of sensitive receptor sites: • Concentrations of hydrocarbons in water samples are below NOPSEMA guidance note (20198) concentrations of 1 g/m2 for floating, 10 ppb for entrained and dissolved; and • Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in water have been documented at sensitive receptor sites monitored under other SMPs.
Scientific monitoring program 2 (SM02) **Assessment of the Presence, Quantity and Character of Hydrocarbons in Marine Sediments**	SM02 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine sediments following the spill and the response. The specific objectives of SM02 are as follows: • Determine the extent, severity and persistence of hydrocarbons in marine sediments across selected sites where hydrocarbons were observed or recorded during operational monitoring; and • Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs.	SM02 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: • Response activities have ceased; and • Operational monitoring results made during the response phase indicate that shoreline, intertidal or sub-tidal sediments have been exposed to surface, entrained or dissolved hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation).	SM02 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of: • Concentrations of hydrocarbons in sediment samples are below ANZECC/ ARMCANZ (20139) sediment quality guideline values (SQGVs) for biological disturbance; and • Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in sediments have been documented.
Scientific monitoring program 3 (SM03) **Assessment of Impacts and Recovery of Subtidal and Intertidal Benthos**	The objectives of SM03 are: • Characterize the status of intertidal and subtidal benthic habitats and quantify any impacts to functional groups, abundance and density that may be a result of the spill; and • Determine the impact of the hydrocarbon spill and subsequent recovery (including impacts associated with the implementation of response options). Categories of intertidal and subtidal habitats that may be monitored include: • Coral reefs • Seagrass • Macro-algae • Filter-feeders SM03 will be supported by sediment contamination records (SM02) and characteristics of the spill derived from OMPs.	SM03 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: • As part of a pre-emptive assessment of PBAs of receptor locations identified by time to hydrocarbon contact >10 days, to target receptors and sites where it is possible to acquire pre-hydrocarbon contact baseline; and • Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for subtidal and intertidal benthic habitat.	SM03 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of: • Overall impacts to benthic habitats from hydrocarbon exposure have been quantified. • Recovery of impacted benthic habitats has been evaluated. • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 4 (SM04) **Assessment of Impacts and Recovery of Mangroves / Saltmarsh**	The objectives of SM04 are: • Characterize the status of mangroves (and associated salt marsh habitat) at shorelines exposed/contacted by spilled hydrocarbons; • Quantify any impacts to species (abundance and density) and mangrove/saltmarsh community structure; and	SM04 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: • As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; and	SM04 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of: • Impacts to mangrove and saltmarsh habitat from hydrocarbon exposure have been quantified. • Recovery of impacted mangrove/saltmarsh habitat has been evaluated.

[9] Simpson SL, Batley GB and Chariton AA (2013). Revision of the ANZECC/ARMCANZ Sediment Quality Guidelines. CSIRO and Water Science Report 08/07. Land and Water, pp. 132.

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
	• Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options). SM03 will be supported by sediment sampling undertaken in SM02 and characteristics of the spill derived from OMPs.	• Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for mangrove/saltmarsh habitat.	• Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 5 (SM05) **Assessment of Impacts and Recovery of Seabird and Shorebird Populations**	The Objectives of SM05 are to: • Collate and quantify impacts to avian wildlife from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population level; and • Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to seabirds and shorebird populations at targeted breeding colonies / staging sites / important coastal wetlands where hydrocarbon contact was recorded.	SM05 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: • As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; • Operational monitoring predicts shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at important bird colonies / staging sites / important coastal wetland locations; or • Records of dead, oiled or injured bird species made during the hydrocarbon spill or response.	SM05 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: • Impacts to seabird and shorebird populations from hydrocarbon exposure have been quantified. • Recovery of impacted seabird and shorebird populations has been evaluated. • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 6 (SM06) **Assessment of Impacts and Recovery of Nesting Marine Turtle Populations**	The objectives of SM06 are to: • To quantify impacts of hydrocarbon exposure or contact on marine turtle nesting populations (including impacts associated with the implementation of response options); • Collate and quantify impacts to adult and hatchling marine turtles from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels (including impacts associated with the implementation of response options); .and • Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to nesting marine turtle populations at known rookeries (including impacts associated with the implementation of response options).	SM06 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has: • As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; • Predicted shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known marine turtle rookery locations; or • Records of dead, oiled or injured marine turtle species made during the hydrocarbon spill or response.	SM06 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: • Impacts to nesting marine turtle populations from hydrocarbon exposure have been quantified. • Recovery of impacted nesting marine turtle populations has been evaluated. • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 7 (SM07) **Assessment of Impacts to Pinniped Colonies including Haul-out Site Populations**	The objectives of SM07 are to: • Quantify impacts on pinniped colonies and haul-out sites as a result of hydrocarbon exposure/contact. • Collate and quantify impacts to pinniped populations from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels.	SM07 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has: • As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; • Identified shoreline contact of hydrocarbons ((at or above 0.5 g/m² surface, ≥5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known pinniped colony or haul-out site(s) (i.e. most northern site is the Houtman Abrolhos Islands); or • Records of dead, oiled or injured pinniped species made during the hydrocarbon spill or response.	SM07 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: • Impacts to pinniped populations from hydrocarbon exposure have been quantified. • Recovery of pinniped populations has been evaluated. • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 8 (SM08) **Desk-Based Assessment of Impacts to Other Non-Avian Marine Megafauna**	The objective of SM08 is to provide a desk-based assessment which collates the results of OM02 and OM05 where observations relate to the mortality, stranding or oiling of mobile marine megafauna species not addressed in SM06 or SM07, including: • Cetaceans; • Dugongs;	SM08 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring reports records of dead, oiled or injured non-avian marine megafauna during the spill/ response phase.	SM08 will be terminated when the results of the post-spill monitoring have quantified impacts to non-avian megafauna.

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
	• Whale sharks and other shark and ray populations; • Sea snakes; and • Crocodiles. The desk-based assessment will include population analysis to infer potential impacts to marine megafauna species populations.		• Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 9 (SM09) **Assessment of Impacts and Recovery of Marine Fish associated with SM03 habitats**	The objectives of SM09 are: • Characterise the status of resident fish populations associated with habitats monitored in SM03 exposed/contacted by spilled hydrocarbons; • Quantify any impacts to species (abundance, richness and density) and resident fish population structure (representative functional trophic groups); and • Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options).	SM09 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented with SM03.	SM09 will be undertaken and terminated concurrent with monitoring undertaken for SM03, as per the SMP termination criteria process • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 10 (SM10) **SM10 - Assessment of physiological impacts important fish and shellfish species (fish health and seafood quality/safety) and recovery**	SM10 aims to assess any physiological impacts to important commercial fish and shellfish species (assessment of fish health) and if applicable, seafood quality/safety. Monitoring will be designed to sample key commercial fish and shellfish species and analyse tissues to identify fish health indicators and biomarkers, for example: • Liver Detoxification Enzymes (ethoxyresorufin-O-deethylase (EROD) activity) • PAH Biliary Metabolites • Oxidative DNA Damage • Serum SDH • Other physiological parameters, such as condition factor (CF), liver somatic index (LSI), gonado-somatic index (GSI) and gonad histology, total weight, length, condition, parasites, egg development, testes development, abnormalities. • Seafood tainting may be included (where appropriate) using applicable sensory tests to objectively assess targeted finfish and shellfish species for hydrocarbon contamination. Results will be used to make inferences on the health of commercial fisheries and the potential magnitude of impacts to fishing industries.	SM10 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring (OM01, OM02 and OM05) indicates the following: • The hydrocarbon spill will or has intersected with active commercial fisheries or aquaculture activities. • Commercially targeted finfish and/or shellfish mortality has been observed/recorded. • Commercial fishing or aquaculture areas have been exposed to hydrocarbons (≥0.5 g/m² surface and ≥5 ppb for entrained/dissolved hydrocarbons); and • Taste, odour or appearance of seafood presenting a potential human health risk is observed.	SM10 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of: • Physiological impacts to important commercial fish and shellfish species from hydrocarbon exposure have been quantified. • Recovery of important commercial fish and shellfish species from hydrocarbon exposure has been evaluated. • Impacts to seafood quality/safety (if applicable) have been assessed and information provided to the relevant persons/ organisations and regulators for the management of any impacted fisheries. • Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.

Activation Triggers and Termination Criteria

Scientific monitoring program – Activation

The Woodside oil spill scientific monitoring team will be stood up immediately with the occurrence of a hydrocarbon spill (actual or suspected) Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors via the first strike plan for the petroleum activity programme. The presence of any level of hydrocarbons in the marine environment triggers the activation of the oil spill scientific monitoring program (SMP). This is to consider the full range of eventualities relating to the environmental, socio-economic and health consequences of the spill in the planning and execution of the SMP. The activation process also takes into consideration the management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the EPBC Act) potentially exposed to hydrocarbons. With the first 24-48 hours of a spill event, such information will be sourced and evaluated as part of the SMP planning process guided by Appendix D (identified receptors vulnerable to hydrocarbon contact), the information presented in the Existing Environment section of the EP as well as other information sources such as the Woodside Baseline Environmental Studies Database.

The starting point for decision-making on what SMPs are activated and spatial extent of monitoring activities will be based on the predictive modelling results (OM01) in the first 24-48 hours until more information is made available from other operational monitoring activities such as aerial surveillance and shoreline surveys. Pre-emptive Baseline Areas (WHA, CMRs and State Marine Parks encompassing key ecological and socio-economic values) are a key focus of the SMP activation decision-making process, particularly, in the early spill event/response phase. As the operational monitoring progresses and further situational awareness information becomes available, it will be possible to understand the nature and scale of the spill. The SMP activation and implementation decision-making will be revisited daily to account for the updates on spill information. One of the priority focus areas in the early phase of the incident will be to identify and execute pre-emptive SMP assessments at key receptor locations, as required. The SMP activation and implementation decision tree is presented in Figure C-2.

Scientific monitoring Program – Termination

The basis of the termination process for the active SMPs (SMPs 1-10) will include quantification of impacts, evaluation of recovery for the receptor at risk and consultation with relevant authorities, persons and organisations. Termination of each SMP will not be considered until the results (as presented in annual SMP reports for the duration of each program) indicate that the target receptor has returned to pre-spill condition.

Once the SMP results indicate impacted receptor(s) have returned to pre-spill condition (as identified by Woodside) a termination decision-making process will be triggered and steps will be undertaken as follows:

- Woodside will engage expert opinion on whether the receptor has returned to pre-spill condition (based on monitoring data). Subject Matter Expert (SMEs) will be engaged (via the Woodside SME scientific monitoring terms of reference to review program outcomes, provide expert advice and recommendations for the duration of each SMP.
- Where expert opinion agrees that the receptor has returned to pre-spill condition, findings will then be presented to the relevant authorities, persons and organisations (as defined by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulation 25). Identification of relevant persons/ organisations, planning and engagement will be managed by Woodside's Public Information Functional Support Team (FST) .. These guidelines outline the FST roles and responsibilities, competencies, communications and planning processes. An assessment of the merits of any objection to termination will be documented in the SMP final report.
- Woodside will decide on termination of SMP based on expert opinion and merits of any relevant persons/ organisation objections. The final report following termination will include: monitoring results, expert opinion and consultation, including merits of any objections.
- Termination of SMPs will also consider applicable management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the EPBC Act).

The SMP termination decision-making process will be applied to each active SMP and an iterative process of decision steps continued until each SMP has been terminated (refer to decision-tree diagram for SMP termination criteria, Figure C-3).

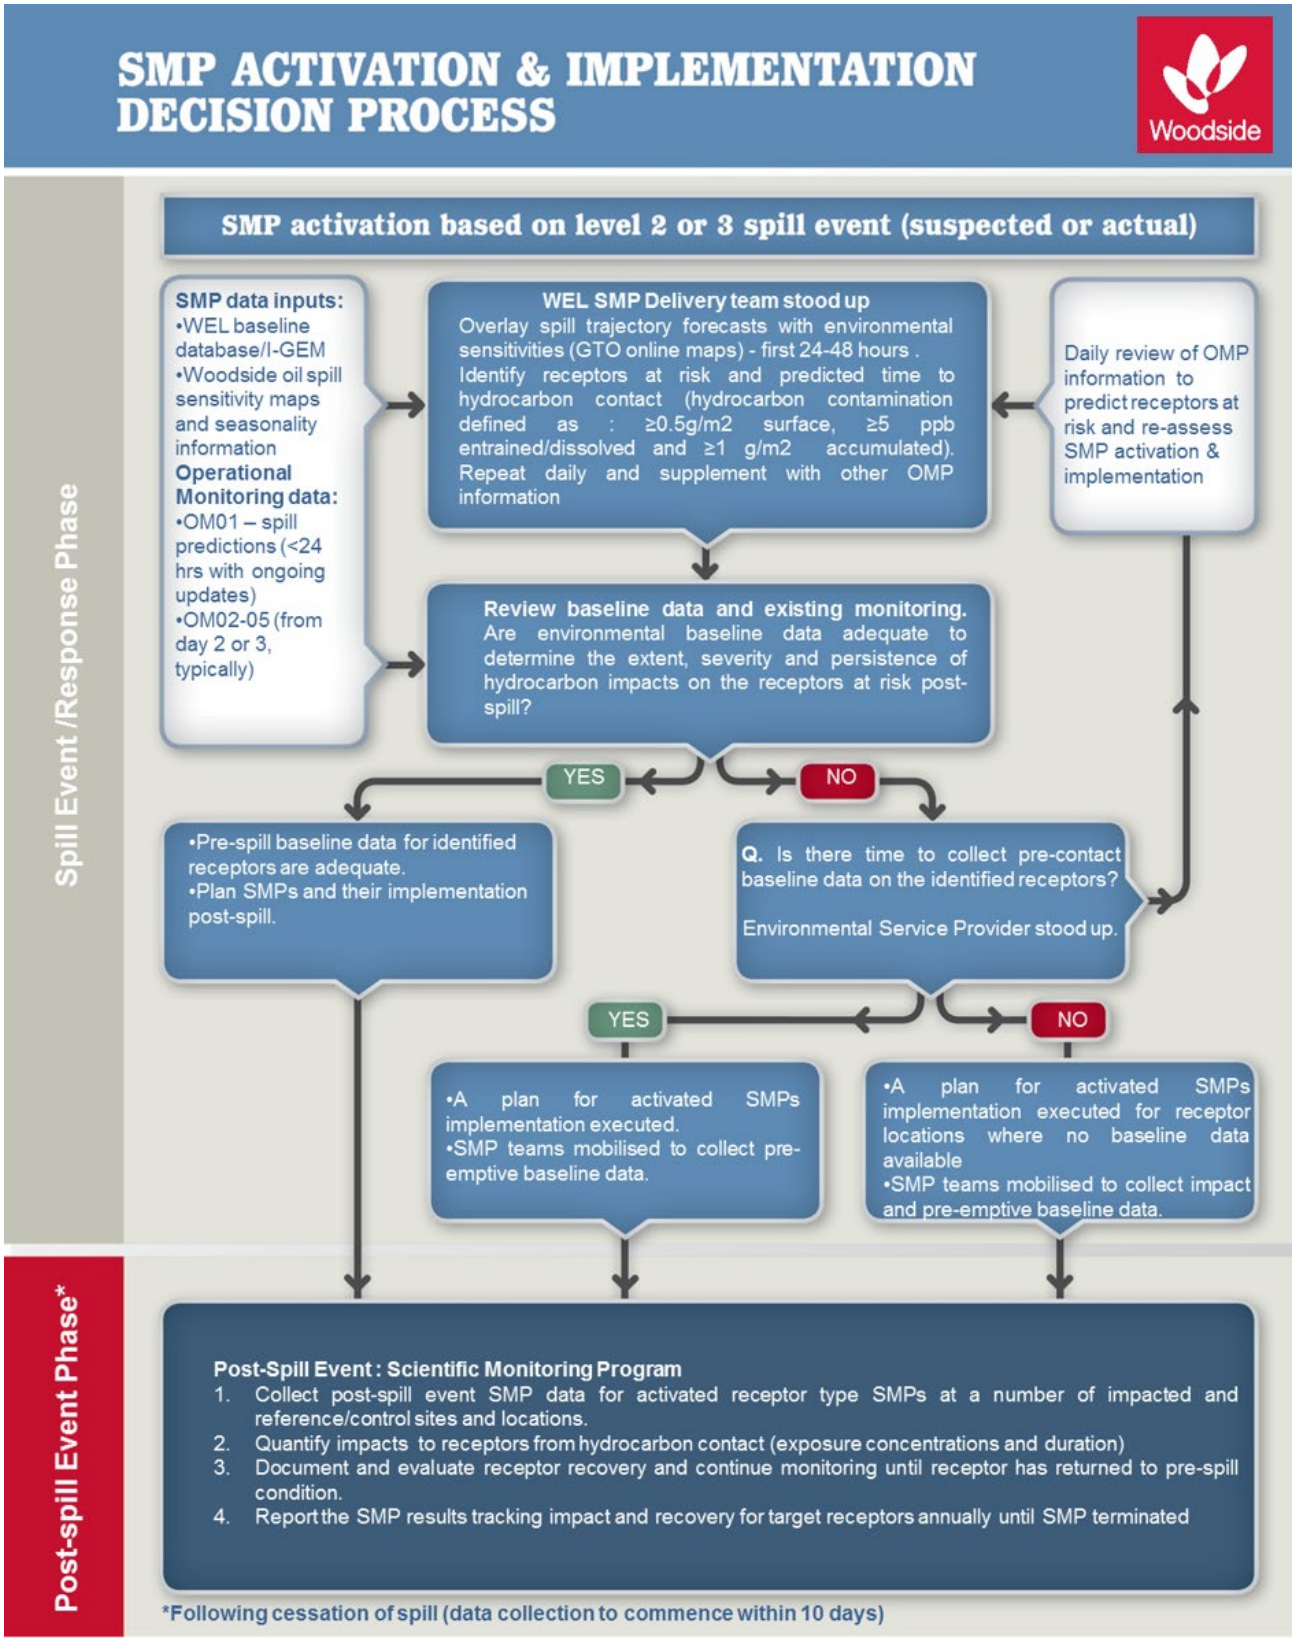

Figure C-2: Activation and implementation decision-tree for oil spill environmental monitoring

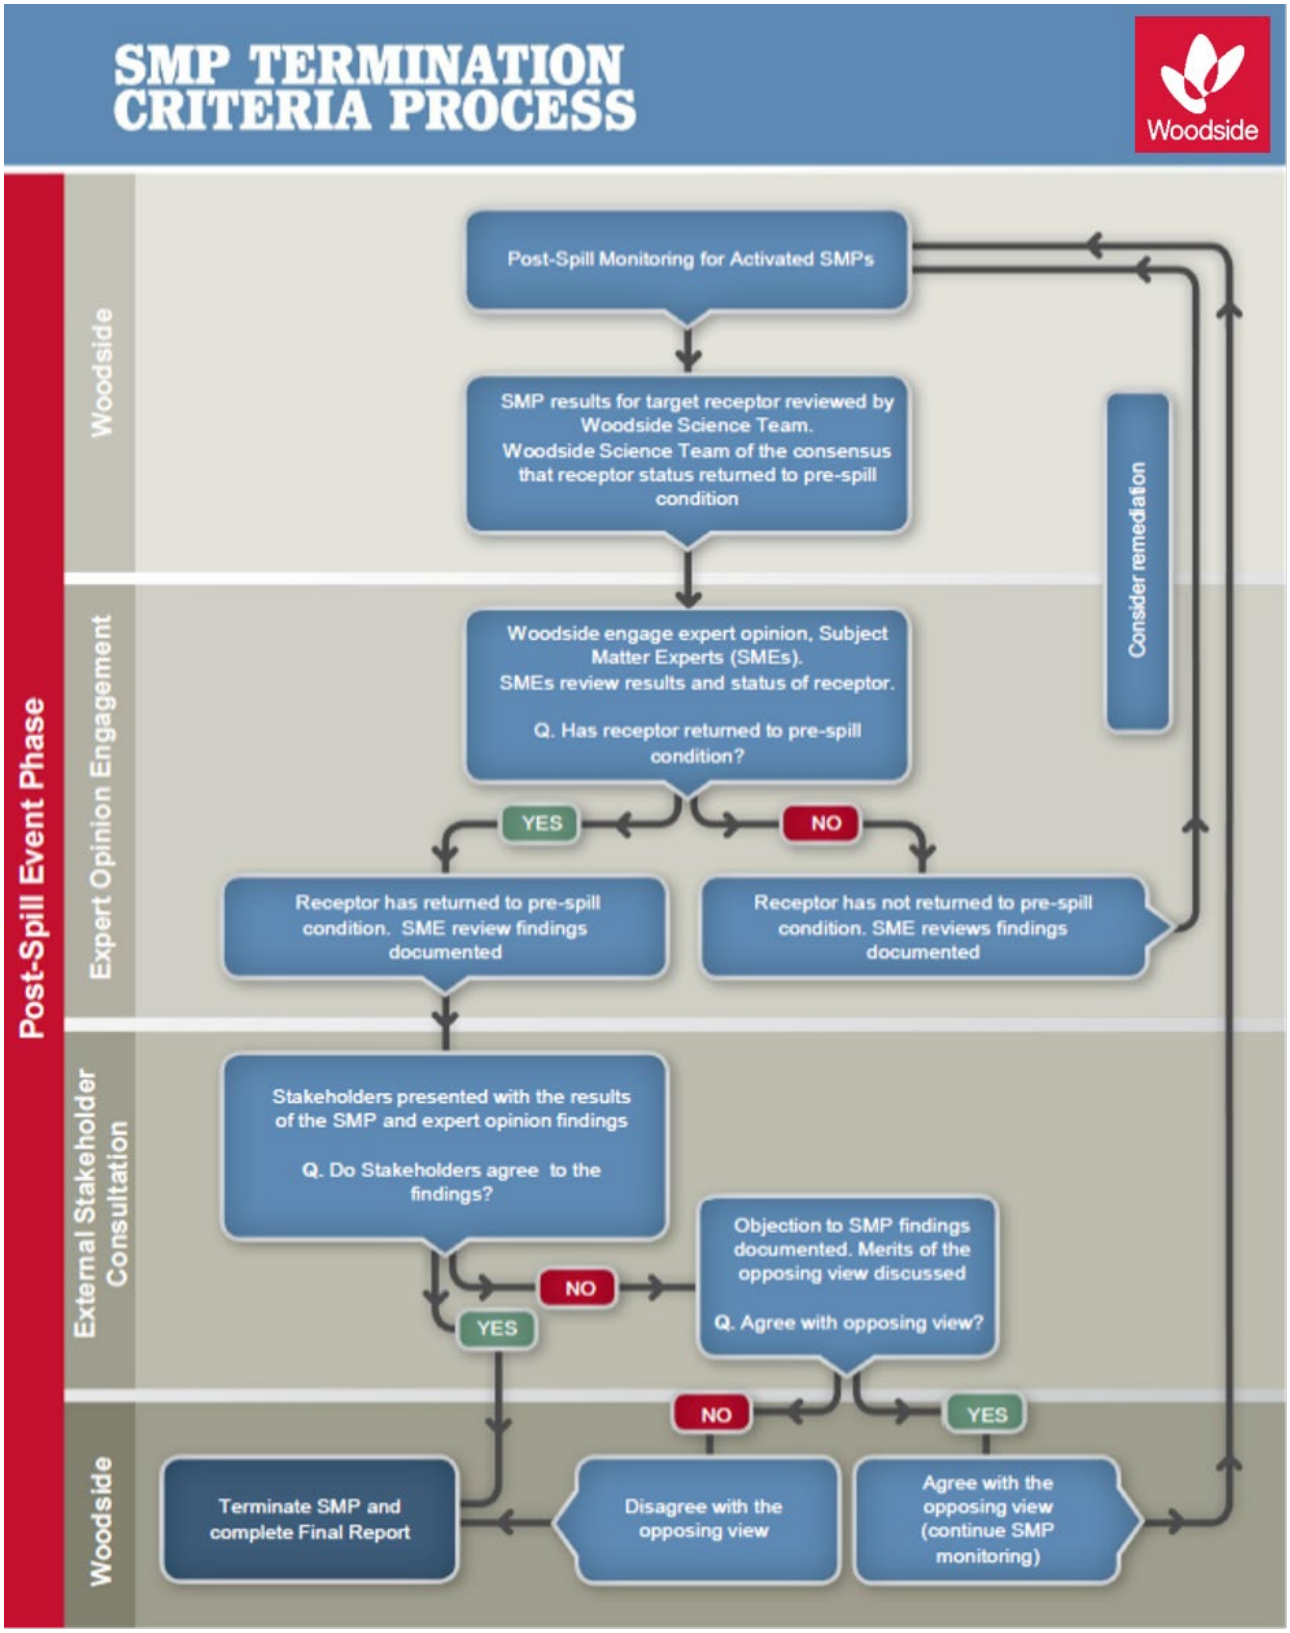

Figure C-3: Termination criteria decision-tree for oil spill environmental monitoring

Receptors at Risk and Baseline Knowledge

To assess the baseline studies available and suitability for oil spill scientific monitoring, Woodside maintains knowledge of environmental baseline studies through the upkeep and use of its Environmental Knowledge Management System.

Woodside's Environmental Knowledge Management System is a centralised platform for scientific information on the existing environment, marine biodiversity, Woodside environmental studies, key environmental impact topics, key literature and web-based resources. The system comprises several data directories and an environmental baseline database, as well as folders within the 'Corporate Environment' server space. The environmental baseline database was set up to support Woodside's SMP preparedness and as a SMP resource in the event of an unplanned hydrocarbon spill. The environmental baseline database is subject to updates including annual reviews completed as part of SMP standby contract. This database is accessed pre-PAP to identify PBAs where hydrocarbon contact is predicted to occur <10 days.

In addition to Woodside's Environmental Knowledge Management System, many relevant baseline datasets are held by other organisations (e.g. other oil and gas operators, government agencies, state and federal research institutions and non-governmental organisations). To understand the present status of environmental baseline studies a spatial environmental metadata database for Western Australia (Industry-Government Environmental Metadata, IGEM) was established. IGEM is a collaboration comprising oil and gas operators (including Woodside), government and research agencies and other organisations. IGEM held data were integrated into the DWER IMSA[10] in 2020. IMSA is an online portal for information about marine-based environmental surveys in Western Australia. IMSA is a project of DWER for the systematic capture and sharing of marine data created as part of an environmental impact assessment (EIA).

In the event of an unplanned hydrocarbon release, Woodside intends to interrogate the information on baseline studies status as held by the various databases (e.g. Woodside Environmental Knowledge Management System, IMSA and other sources of existing baseline data) to identify Pre-emptive Baseline Areas (PBAs), i.e., receptors at risk where hydrocarbon contact is predicted to be >10 days, and baseline data can be collected before hydrocarbon contact.

Reporting

For the scientific monitoring program relevant regulators will be provided with:

- Annual reports summarising the SMPs deployed and active, data collection activities and available findings; and
- Final reports for each SMP summarising the quantitative assessment of environmental impacts and recovery of the receptor once returned to pre-spill condition and termination of the monitoring program.

The reporting requirements of the scientific monitoring program will be specific to the individual SMPs deployed and terms of responsibilities, report templates, schedule, quality assurance/ quality control (QA/QC) and peer-review will be agreed with the contractors engaged to conduct the SMPs. Compliance and auditing mechanisms will be incorporated into the reporting terms.

	Receptor areas identified as Pre-emptive Baseline Areas (based on criteria of surface contact and/or entrained hydrocarbon contact ≤10 days (Offshore Australian Marine Parks contacted by hydrocarbons in this timeframe also noted)
	Receptor areas identified as Pre-Emptive Baseline Areas in the response phase >10 days (based on criteria of surface contact and/or entrained hydrocarbon contact >10 days)
	Receptor areas that may be identified as impact or reference sites in the event of major hydrocarbon release and would be identified as part of the SMP planning process

Table D-2: Baseline studies for the SMPs applicable to identified Pre-emptive Baseline Areas for the PAP

Major Baseline	Proposed Scientific monitoring operational plan and Methodology	Rankin Bank & Glomar Shoal	Barrow, Lowendal Montebello and Islands	Montebello AMP	Dampier Archipelago
Benthic Habitat (Coral Reef)	**SM03** Quantitative assessment using image capture using either diver held camera or towed video. Post analysis into broad groups based on taxonomy and morphology.	**Studies:**			
		1. Glomar Shoal and Rankin Bank Environmental Survey Report, 2013, quantitatively surveyed benthic habitats and communities. AIMS report to Woodside. Scientific Publication - Biodiversity and spatial patterns of benthic habitat and associated demersal fish communities at two tropical submerged reef ecosystems, 2018. 2. Rankin Bank Environmental Survey Extension, 2014, Habitat assessment of an area southeast of Rankin Bank. 3. Glomar Shoal and Rankin Bank surveys, 2017. GWF-2 Monitoring Programme. Quantitatively surveyed benthic habitats and communities. 4. Temporal Studies survey of Rankin Bank and Glomar Shoal, 2018.	Barrow Island: East and West Coast baseline and monitoring for soft sediment, limestone pavement and coral assemblages (Chevron) Barrow, Montebello and Lowendal Islands: 1. Benthic community monitoring as part of DBCA Western Australian Marine Monitoring Program (2015-ongoing). 2. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013).	Coral Reefs & Filter Feeders 1. Montebello Marine Park, 2019, Identification and qualitative descriptions of benthic habitat. 2. Montebello Australian Marine Parks – 2019 – Baseline survey on benthic habitats. 3. Pluto Trunkline within Montebello Marine Park – Monitoring marine communities.	1. Coral Monitoring, Mermaid Sound. URS on behalf of Chevron, 2004. 2. Scarborough Trunkline Marine Habitat Survey 2018. 5. Benthic community monitoring as part of DBCA's Dampier Archipelago Marine Monitoring Program (2007-ongoing). 6. WA Museum study on the Scleractinian corals collected in 1998. (Griffith 2004). 7. Regional Biodiversity — Pilbara Seabed Biodiversity Mapping & Characterisation (2016). 9. Distribution, patterns and key processes of major marine communities and large marine fauna – DBCA Pluto Offset Program D. 11. Study of the spatial and temporal distribution of coral assemblages at Dampier Archipelago (Cape Preston to Delambre Island), using 871 datasets dating back to the early 1970s. Sites surveyed in May 2017.
		Methods:			
		1. Towed video transects, photo quadrats using towed video system. 2. Towed video transects, photo quadrats using towed video system. 3. Towed video transects, photo quadrats using towed video system. 4. Towed video transects, photo quadrats using towed video system.	Barrow Island: Coral habitat – mapping, rapid visual assessment, size-class frequency, photoquadrats – live coral cover and survival, tagged corals – growth and survival and coral recruitment Benthic macro-invertebrate surveys – video belt transects Barrow, Montebello and Lowendal Islands: 1. Fixed long-term monitoring sites. Diver video transect. 2. Towed video, benthic trawl and sled.	1.ROV Transects 2. Benthic habitat mapping, multibeam acoustic swathing. 3. ROV video.	1. Towed Video. 2. Towed video, 5. Diver swum – belt transects, photo quadrats. 6. Coral collection for taxonomic records. 7. Towed video, benthic trawl and sled. 9. Collection of fish, coral, mangrove and seagrass samples from reefs along the WA coast, including reefs within the proposed Dampier Archipelago Marine Park. Samples subject to genetic testing. 11. Photo quadrants and recruitment tiles

Pluto Facility Operations – Oil Pollution First Strike Plan

Corporate HSE

Hydrocarbon Spill Preparedness

July 2024
Revision 9b

TABLE OF CONTENTS

CONTROL AGENCIES AND INCIDENT CONTROLLERS

Source	Location	Level	Control Agency	Incident Controller
Spill from facility including subsea infrastructure *Note: pipe laying and accommodation vessels are considered a "facility" under Australian regulations*	Commonwealth waters	1	Woodside	Person In Charge (PIC) with support from Onshore Team Leader (OTL)
		2/3	Woodside	Corporate Incident Management Team (CIMT) Duty Manager
	State waters	1	Woodside	CIMT Duty Manager
		2/3	Department of Transport (DoT)	DoT Incident Controller
	Within port limits	1	Woodside	CIMT Duty Manager
		2/3	DoT	DoT Incident Controller
Spill from vessel Note: SOPEP should be implemented in conjunction with this document	Commonwealth waters	1	Australian Marine Safety Authority (AMSA)	Vessel Master
		2/3	AMSA	AMSA (with response assistance from Woodside)
	State waters	1	DoT	DoT Incident Controller
		2/3	DoT	DoT Incident Controller
	Within port limits	1	Port Authority	Port Harbour Master
		2/3	Port Authority/ DoT	Port Harbour Master/ DoT Incident Controller

SPILLS IN STATE WATERS

In the event of a hydrocarbon spill (hereafter 'spill') where Woodside Burrup Pty Ltd ('Woodside') is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport (DoT). In the event that Woodside is the responsible party for a spill that occurs within port limits, Woodside will notify the Port Authority and DoT for all spill levels.

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DoT IMT (APPENDIX F – Woodside Liaison Officer resources to DoT). DoT/ Port Authority's role as the Controlling Agency in State waters does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State Waters/ within port limits, or to commence the initial response actions to a spill prior to DoT establishing incident control in line with DoT *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note:

https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside's Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer's command structure within DoT can be seen at APPENDIX E – Woodside Incident Management structure.

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in APPENDIX D – Coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines.

RESPONSE PROCESS OVERVIEW

	For guidance on credible scenarios and hydrocarbon characteristics, refer to APPENDIX A	
ALL INCIDENTS	Notify the Woodside Communication Centre (WCC) on: [3]	
	Incident Controller or delegate to make relevant notifications in **Table 1-1** of this Oil Pollution First Strike Plan.	
LEVEL 1	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.	Notify AMSA or Port Authority (if within port limits) and coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan Remember to download each Operational Plan.
	If the spill escalates such that the site cannot manage the incident, inform the WCC on: [3] and escalate to a level 2/3 incident.	
LEVEL 2/3	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Handover control to CIMT and notify DoT or Port Authority (if within port limits).	Handover control to AMSA or Port Authority (if within port limits) and stand up CIMT to assist.
	Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.	If requested by AMSA/ Port Authority: Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.
	Create an Incident Action Plan (IAP) for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational Net Environmental Benefit Analysis (NEBA) see the OSPRMA Appendix A.	If requested by AMSA/ Port Authority: Create an IAP for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational NEBA see the OSPRMA Appendix A.

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a WEL representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant vessel Emergency Response Plans and/or Bridging Documents

Timing	By	To	Name	Contact	Instruction	Form	Complete? (ü)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	Duty Manager	[3]	Verbally notify WCC of event and estimated volume and hydrocarbon type.	Verbal	
Within 2 hours	Woodside Site Rep (WSR), Corporate Incident Management Team Duty Manager (CIMT DM) or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA[1])	Incident notification office	[4]	Verbally notify NOPSEMA for spills >80L. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DEMIRS).	Link	
Within 3 days	WSR, CIMT DM or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DEMIRS) NOPSEMA [4] NOPTA [5] DEMIRS [6]	[4]	
As soon as practicable	CIMT DM or Delegate	Woodside	Environment Duty Manager	As per roster	Verbally notify Duty Environment of event and seek advice on relevant performance standards from EP	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT DM or Delegate	WA Department of Transport	DoT Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[7]	Verbally notify DoT MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha. Follow up with a written POLREP as soon as practicable following verbal notification. Additionally, DoT to be notified if spill is likely to extend into WA State waters. Request DoT to provide liaison to Woodside IMT.	[7]	
As soon as practicable if spill arises in or is likely to extend into port limits.	CIMT IC or Delegate	Pilbara Ports Authority (PPA)	PPA Dampier Vessel Traffic Services (VTS)	[16]	Any spill within or close to the Dampier Port boundary should be reported immediately to the PPA Dampier VTS.	Verbal/ [16]	
As soon as practicable	CIMT DM or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks	Marine Park Compliance Duty Officer	[8]	The Marine Park Compliance Duty Officer is notified in the event of oil pollution within a marine park, or where an oil spill response action must be taken within a marine park, so far as reasonably practicable, prior to response action being taken. This notification should include: • titleholder details • time and location of the incident • proposed response arrangements and locations as per the OPEP • contact details for the response coordinator • confirmation of access to relevant monitoring and evaluation reports when available.	Verbal	
As soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land or waters managed by WA Department of Biodiversity, Conservation and Attractions	CIMT DM or Delegate	WA Department of Biodiversity, Conservation and Attractions (DBCA)	Duty Officer	[9]	Phone call notification	Verbal	

[1] Notification to NOPSEMA must be from a Woodside Representative.

As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons such as, but not limited to, commercial fishers or tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for Pluto Facility Operations. Relevant persons/ organisations will be re-assessed throughout the response period.	Verbal initially	
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for Pluto Facility Operations. Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially	
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL							
"Without delay" as per *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* (Cth) s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Response Coordination Centre (RCC)	[10]	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with written Harmful Substances Report (POLREP – AMSA) as soon as practicable.	[10]	
ADDITIONAL LEVEL 2/3 NOTIFICATIONS							
As soon as practicable	CIMT DM or Delegate	AMOSC	AMOSC Duty Manager	[11]	Notify AMOSC that a spill has occurred and follow-up with an email from the CIMT IC/ Deputy CIMT IC/CMT Leader to formally activate AMOSC. Determine what resources are required consistent with the AMOS Plan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	[11]	
As soon as practicable	CIMT DM or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	[12]	Contact OSRL Duty Manager and request assistance from technical advisor in Perth. Send the completed notification form to OSRL as soon as practicable.	[12]	
					For mobilisation of resources, send the mobilisation form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside. OSRL can advise the names on the call out authority list, if required.	[12]	
As soon as practicable if extra personnel are required for incident support	CIMT DM or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	[13]	Activate the contract with MSRC (in full) for the provision of up to 30 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal	

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Spill type			Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MGO (CS-05)	Condensate (trunkline) (MEE-02b)	Condensate (LOWC) (MEE-01)					
Operational monitoring – tracking buoy (OM02)	Yes	Yes	Yes	ALL	If a vessel is on location, consider the need to deploy the oil spill tracking buoy. If no vessel is on location, consider the need to mobilise oil spill tracking buoys from the King Bay Supply Base (KBSB) Stockpile. If a surface sheen is visible from the facility, deploy the satellite tracking buoy within two hours.	Operations	**WITHIN 24 HOURS:** Tracking buoy deployed within 2 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02) of The Operational Monitoring Operational Plan. Deploy tracking buoy in accordance with Link.
Operational monitoring – predictive modelling (OM01)	Yes	Yes	Yes	ALL	Undertake initial modelling using the Rapid Assessment Oil Spill Tool and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in **Appendix A.**	Situation or Environment	**WITHIN 24 HOURS:** Initial modelling within 6 hours using the Rapid Assessment Tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk (OM01 of The Operational Monitoring Operational Plan). *Planning Section to download and follow steps*
	Yes	Yes	Yes	ALL	Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response ([14]).	Situation	**WITHIN 24 HOURS:** Detailed modelling within 4 hours of RPS Response receiving information from Woodside.	
Operational monitoring – aerial surveillance (OM02)	Yes	Yes	Yes	ALL	Instruct Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8.	Logistics – Aviation	**WITHIN 24 HOURS:** 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02 of The Operational Monitoring Operational Plan). *Planning Section to download and follow steps*
Operational monitoring – satellite tracking (OM02)	Yes	Yes	Yes	ALL	The Situation Unit Leader to action satellite imagery services. This may be obtained via: • AMOSC Duty Manager: [11] • OSRL Duty Manager: [12] • KSAT:[15] • Others identified by CIMT.	Situation	**WITHIN 24 HOURS:** Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Operational monitoring – monitoring hydrocarbons in water (OM03)	Yes	Yes	Yes	ALL	Consider the need to mobilise resources to undertake water quality monitoring (OM03).	Planning or Environment	**WITHIN 72 HOURS:** Water quality assessment access and capability. Daily fluorometry reports will be provided to IMT.	Detecting and Monitoring for the Presence and Properties of Hydrocarbons in the Marine Environment (OM03 of The Operational Monitoring Operational Plan).
Operational monitoring – pre-emptive assessment of receptors at risk (OM04)	Potentially	Yes	Potentially	ALL	**MEE-02b:** Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk (OM04).	Planning or Environment	**WITHIN 24 HOURS:** In agreement with WA DoT, deployment of 1 specialist for each of the Response Protection Areas (RPA) with predicted impacts.	Pre-emptive Assessment of Sensitive Receptors (OM04 of The Operational Monitoring Operational Plan).
Operational monitoring – shoreline assessment (OM05)	Potentially	Yes	Potentially	ALL	**MEE-02b:** Consider the need to mobilise resources to undertake shoreline assessment surveys (OM05).	Planning or Environment	**WITHIN 24 HOURS:** In agreement with WA DoT, deployment of 1 specialist trained in Shoreline Clean-up Assessment Technique (SCAT) for each of the RPAs with predicted impacts.	Shoreline Assessment (OM05 of The Operational Monitoring Operational Plan).
Surface dispersant	No	No	No	ALL	This response strategy is not recommended for spills of volatile hydrocarbons such as MGO and Pluto Condensate.			
Containment and recovery	No	No	No	ALL	This response strategy is not recommended for spills of volatile hydrocarbons such as MGO and Pluto Condensate.			
Mechanical dispersion	No	No	No	ALL	This response strategy is not recommended for spills of volatile hydrocarbons such as MGO and Pluto Condensate.			
In-situ burning	No	No	No	ALL	This response strategy is not recommended for spills of volatile hydrocarbons such as MGO and Pluto Condensate.			

Technique	Spill type			Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MGO (CS-05)	Condensate (trunkline) (MEE-02b)	Condensate (LOWC) (MEE-01)					
Shoreline protection and deflection	**No**	**Yes**	**No**	**ALL**	**MEE-02b:** Equipment from Woodside, PPA (if within port limits), AMOSC and AMSA Western Australian Stockpiles mobilised. Consideration of mobilisation of interstate/international shoreline protection equipment (i.e. OSRL).	Operations and Planning	**WITHIN 24 HOURS:** In agreement with WA DoT, activate relevant Tactical Response Plans (TRPs) within 12 hours. In agreement with WA DoT, mobilise teams to RPAs within 24 hours of operational monitoring predicting impacts. In agreement with WA DoT, equipment mobilised from closest stockpile within 24 hours. **WITHIN 48 HOURS:** Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours. Supplementary equipment mobilised from OSRL within 48 hours.	Protection and Deflection Operational Plan *Logistics Section to download and follow steps*
Shoreline clean-up	**No**	**Yes**	**No**	**ALL**	**MEE-02b:** Equipment from Woodside, PPA (if within port limits), AMOSC and AMSA Western Australian Stockpiles and relevant personnel mobilised. Consideration of mobilisation of interstate/international shoreline clean-up equipment and relevant personnel (i.e. OSRL).	Logistics and Planning	**WITHIN 24 HOURS:** Relevant Tactical Response Plans (TRPs) will be identified in the First Strike Plan for activation within 24 hours of a release. In liaison with WA DoT (for Level 2/3 incidents), mobilise and deploy 1-2 shoreline clean-up operations within 24 hours. In agreement with WA DoT, equipment mobilised from closest stockpile within 24 hours. Access to ~124 m^3 of solid and liquid waste storage available within 24 hours upon activation of 3rd party contract. Access to 675 m^3 of solid and liquid waste storage available by end of day 4. **WITHIN 48 HOURS:** Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours. Supplementary equipment mobilised from OSRL within 48 hours.	Shoreline Clean-up Operational Plan *Logistics Section to download and follow steps*
Oiled wildlife response	**Yes**	**Yes**	**Yes**	**ALL**	If oiled wildlife is a potential impact, request AMOSC to mobilise containerised oiled wildlife first strike kits and relevant personnel. Refer to relevant Tactical Response Plan for potential wildlife at risk. Mobilise AMOSC Oiled Wildlife Containers. Consider whether additional equipment is required from local suppliers.	Logistics and Planning	**WITHIN 24 HOURS:** Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by relevant Operational Monitoring techniques (OM01-05) and in liaison with DBCA.	Oiled Wildlife Response Operational Plan
Scientific monitoring (type II)	**Yes**	**Yes**	**Yes**	**ALL**	Notify Woodside science team of spill event.	Environment		Oil Spill Scientific Monitoring Programme – Operational Plan
SOURCE CONTROL TECNIQUES								
Subsea First Response Toolkit	**N/A**	**N/A**	**Yes**	**L2/3**	Equipment from Oceaneering support staff all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	Operations – Source Control Unit	SFRT equipment mobilised to site for deployment within 11 days.	Source Control Emergency Response Planning Guideline
Subsea Dispersant	**N/A**	**N/A**	**No**	**L2/3**	This response strategy is not recommended.			
Capping Stack	**N/A**	**N/A**	**Yes**	**L2/3**	Wild Well Control Inc (WWCI) staff available all year round to assist with the mobilisation, deployment, and operation of the capping stack and well intervention equipment.	Operations – Source Control Unit	**WITHIN 24 HOURS:** Identify source control vessel availability within 24 hours.	

Technique	Spill type			Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MGO (CS-05)	Condensate (trunkline) (MEE-02b)	Condensate (LOWC) (MEE-01)					
							Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once plume size is acceptable and safety and metocean conditions are suitable.	
Relief Well	**N/A**	**N/A**	**Yes**	**L2/3**	Relief MODU supply arrangements through the AEP MoU. Wild Well Control Inc (WWCI) staff available all year round to assist with the mobilisation, deployment, and operation well intervention equipment.	Operations – Source Control Unit	**WITHIN 24 HOURS** Identify source control vessel availability within 24 hours. MODU mobilised to site for relief well drilling within 21 days, with drilling to be completed within 77 days (LOWC during Pluto Facility Operations activities) or 64 days (LOWC for Xena-03 activities).	

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on hydrocarbon spill modelling results, the sensitive receptors outlined in **Table 3-1** are identified as priority protection areas, as they have the potential to be contacted by hydrocarbon at or above impact threshold levels within 48 hours of a spill. These arise from MEE-02b only (see **Table A-1**) and thus receptor distances are measured from the closest point of the trunkline Operational Area.

Table 3-1: Receptors for priority protection with potential impact within 48 Hours

Receptor	Distance and direction from trunkline Operational Area (km)	Minimum time to shoreline contact (above 100 g/m^2) in hours	Maximum shoreline accumulation (above 100 g/m^2) in m^3	Tactical Response Plans
Cape Bruguieres	12.7 km south-southeast	32 hours (4 m^3)	4 m^3 (32 hours)	Mermaid Sound - Dampier Archipelago Inshore Waters
Dampier Archipelago	Adjacent	21 hours (9 m^3)	9 m^3 (21 hours)	
Cohen Island	9.9 km southeast	30 hours (<1 m^3)	5 m^3 (31 hours)	
Keast Island	12.7 km southeast	32 hours (3 m^3)	3 m^3 (32 hours)	
Legendre Island	11.9 km east-southeast	22 hours (6 m^3)	6 m^3 (22 hours)	Legendre Island – Dampier

Hydrocarbon spill modelling results indicate no additional sensitive receptors have the potential to be contacted by hydrocarbons at response thresholds (>100 g/m^2) beyond 48 hours of a spill. In a real event, oil spill trajectory modelling specific to the spill will be required to determine the regional sensitive receptors to be contacted beyond 48 hours of a spill.

Tactical Response plans for these and other locations can be accessed via this link and include the details of potential forward operating bases and staging areas.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the Pluto Facility Operational Area and identifies priority protection areas.

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location. **Table 3-2** indicates the assets within the vicinity of the PLA02 Operations Area.

Table 3-2: Assets in the vicinity of the Pluto Facility Operations Area Operational Area

Asset	Distance and Direction from PLA02 well	Operator
Wheatstone platform	26.1 km east-southeast	Chevron
Angel platform	159.2 km northeast	Woodside
John Brookes	61.8 km	Santos
Goodwyn Alpha platform	87.2 km northeast	Woodside
North Rankin Complex	110.2 km northeast	Woodside
Reindeer wellhead platform	123.8 km east-southeast	Santos
Stag A	126.7 km southeast	Jadestone

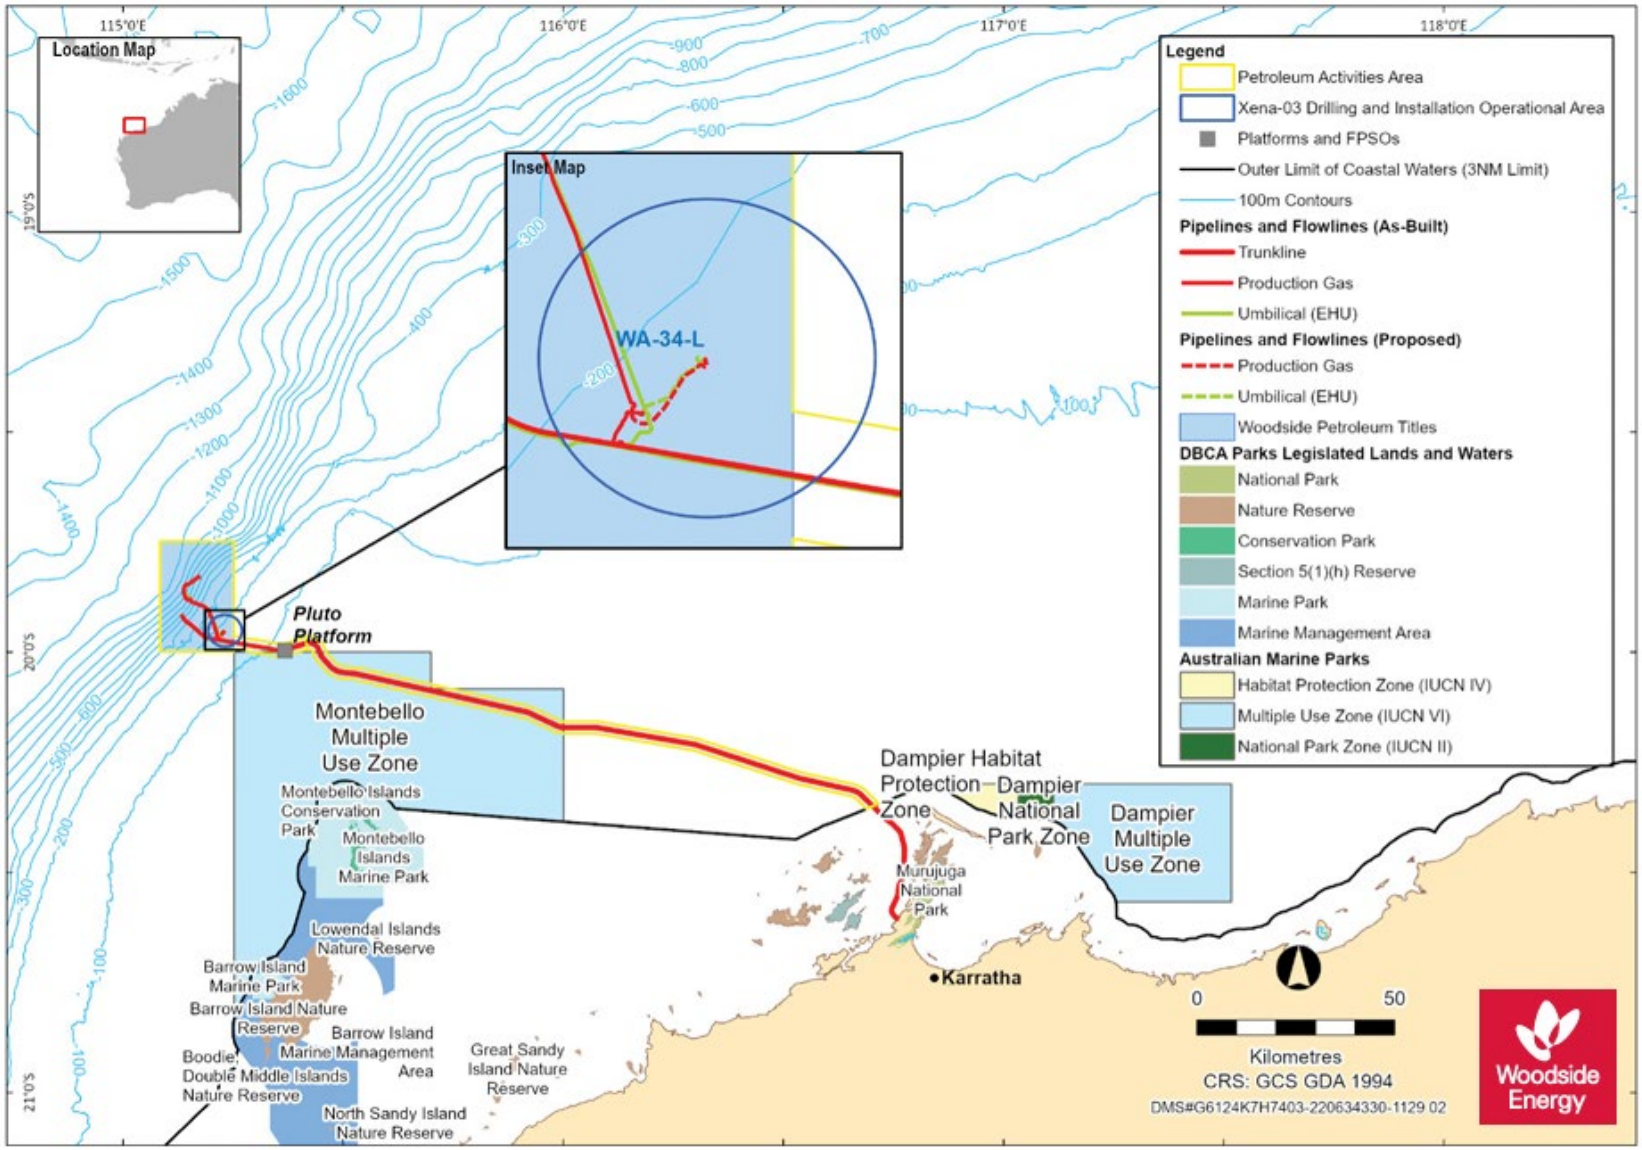

Figure 3-1: Operational area

4. DISPERSANT APPLICATION

Dispersant is not considered an appropriate response strategy for this activity as described in the Pluto Facility Operations Environment Plan Appendix D (Woodside's Oil Spill Preparedness and Response Mitigation Assessment).

APPENDIX A – CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A - 1: Credible spill scenarios and hydrocarbon information

Scenario	Product	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue[2]
CS-01: *A long-term (64-day) release of Eris-1 loss of well containment during drilling at the Xena-03 well*	*Eris-1 Condensate*	Total: 46,631 m^3 1880 m^3 (surface) 44,751 m^3 (subsea)	Surface: 10.01% (188.2 m^3) Seabed: 3.39% (1517.1 m^3)	12 hours (BP < 180 °C)	Surface: 14.97% Seabed: 65.99%	*Martin Linge Condensate API 42.2*
				24 hours (180 °C < BP < 265 °C)	Surface 48.43% Seabed: 21.6%	
				Several days (265 °C < BP < 380 °C)	Surface: 26.6% Seabed: 9.02%	
MEE-01 (WCCS): L*ong-term (77-day) subsurface release of Pluto Condensate caused by a loss of well containment from PLA02 well*	*Pluto Condensate*	59,459 m^3	2.53% (1504 m^3)	12 hours (BP < 180 °C)	67.97%	*NWS Condensate API 62.6*
				24 hours (180 °C < BP < 265 °C)	18.48%	
				Several days (265 °C < BP < 380 °C)	10.05%	
MEE-02a: *Loss of containment of the export pipeline at 29 km from Pluto A*	*Pluto Condensate*	479 tons (632 standard m^3)	0.5% (3.16 m^3)	12 hours (BP < 180 °C)	76%	*NWS Condensate API 62.6*
				24 hours (180 °C < BP < 265 °C)	14%	
				Several days (265 °C < BP < 380 °C)	9.5%	
MEE-02b (WCCS): *Loss of containment of the export pipeline at a location near-shore*	*Pluto Condensate*	607 tons (662 standard m^3)	0.5% (3.31 m^3)	12 hours (BP < 180 °C)	76%	*NWS Condensate API 62.6*
				24 hours (180 °C < BP < 265 °C)	14%	
				Several days (265 °C < BP < 380 °C)	9.5%	
CS-05: L*oss of vessel containment at the PLA platform*	*Marine Gas Oil*	1000 m^3	5.0% (50 m^3)	12 hours (BP < 180 °C)	6%	*Diesel Fuel Oil (Southern USA 1). API of 37.2*
				24 hours (180 °C < BP < 265 °C)	34.6%	
				Several days (265 °C < BP < 380 °C)	54.4%	

[2] Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380°C distillation cuts were included in selection process.

APPENDIX B – NOTIFICATION FORMS

Table B - 1: Notification forms

No.	Form Name	Link

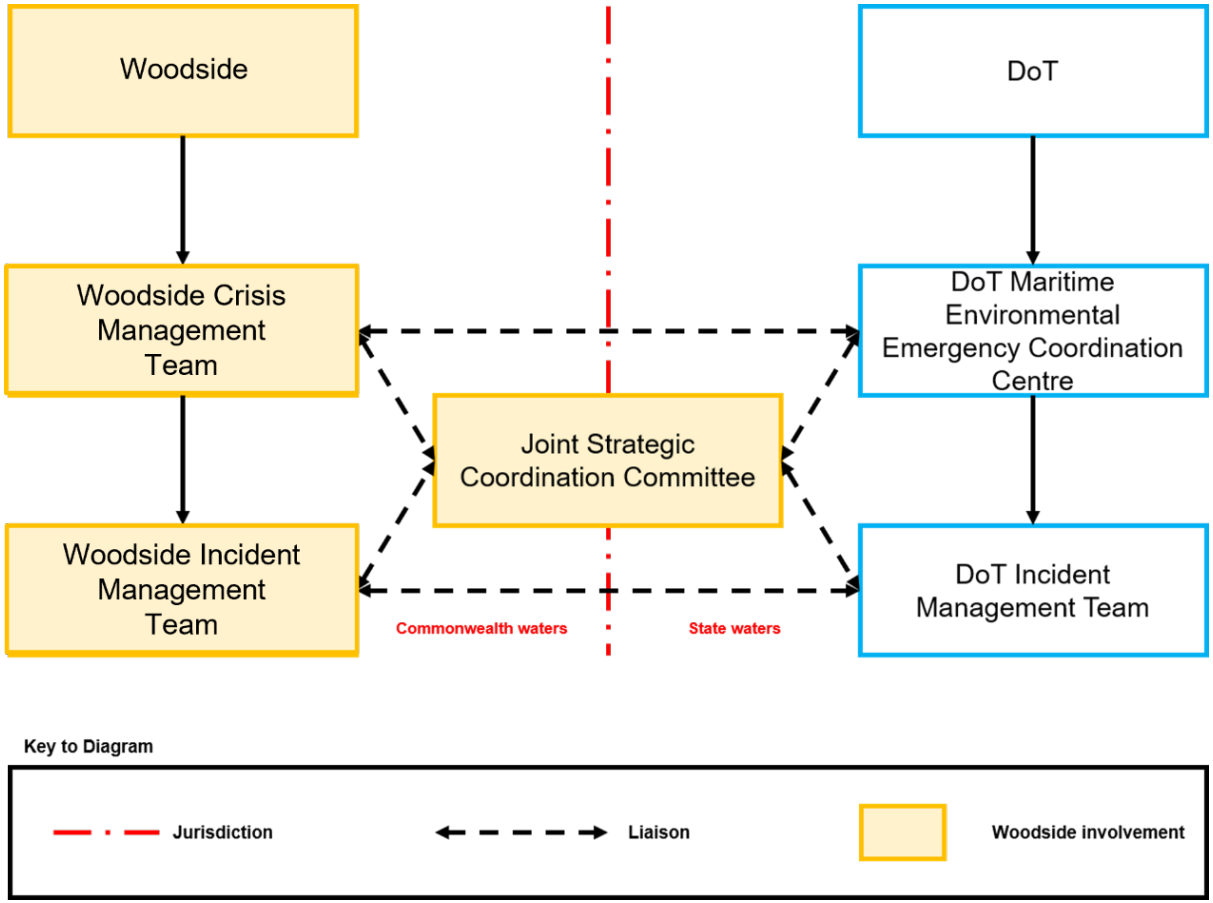
APPENDIX D – COORDINATION STRUCTURE FOR A CONCURRENT HYDROCARBON SPILL IN BOTH COMMONWEALTH AND STATE WATERS/ SHORELINES[3]



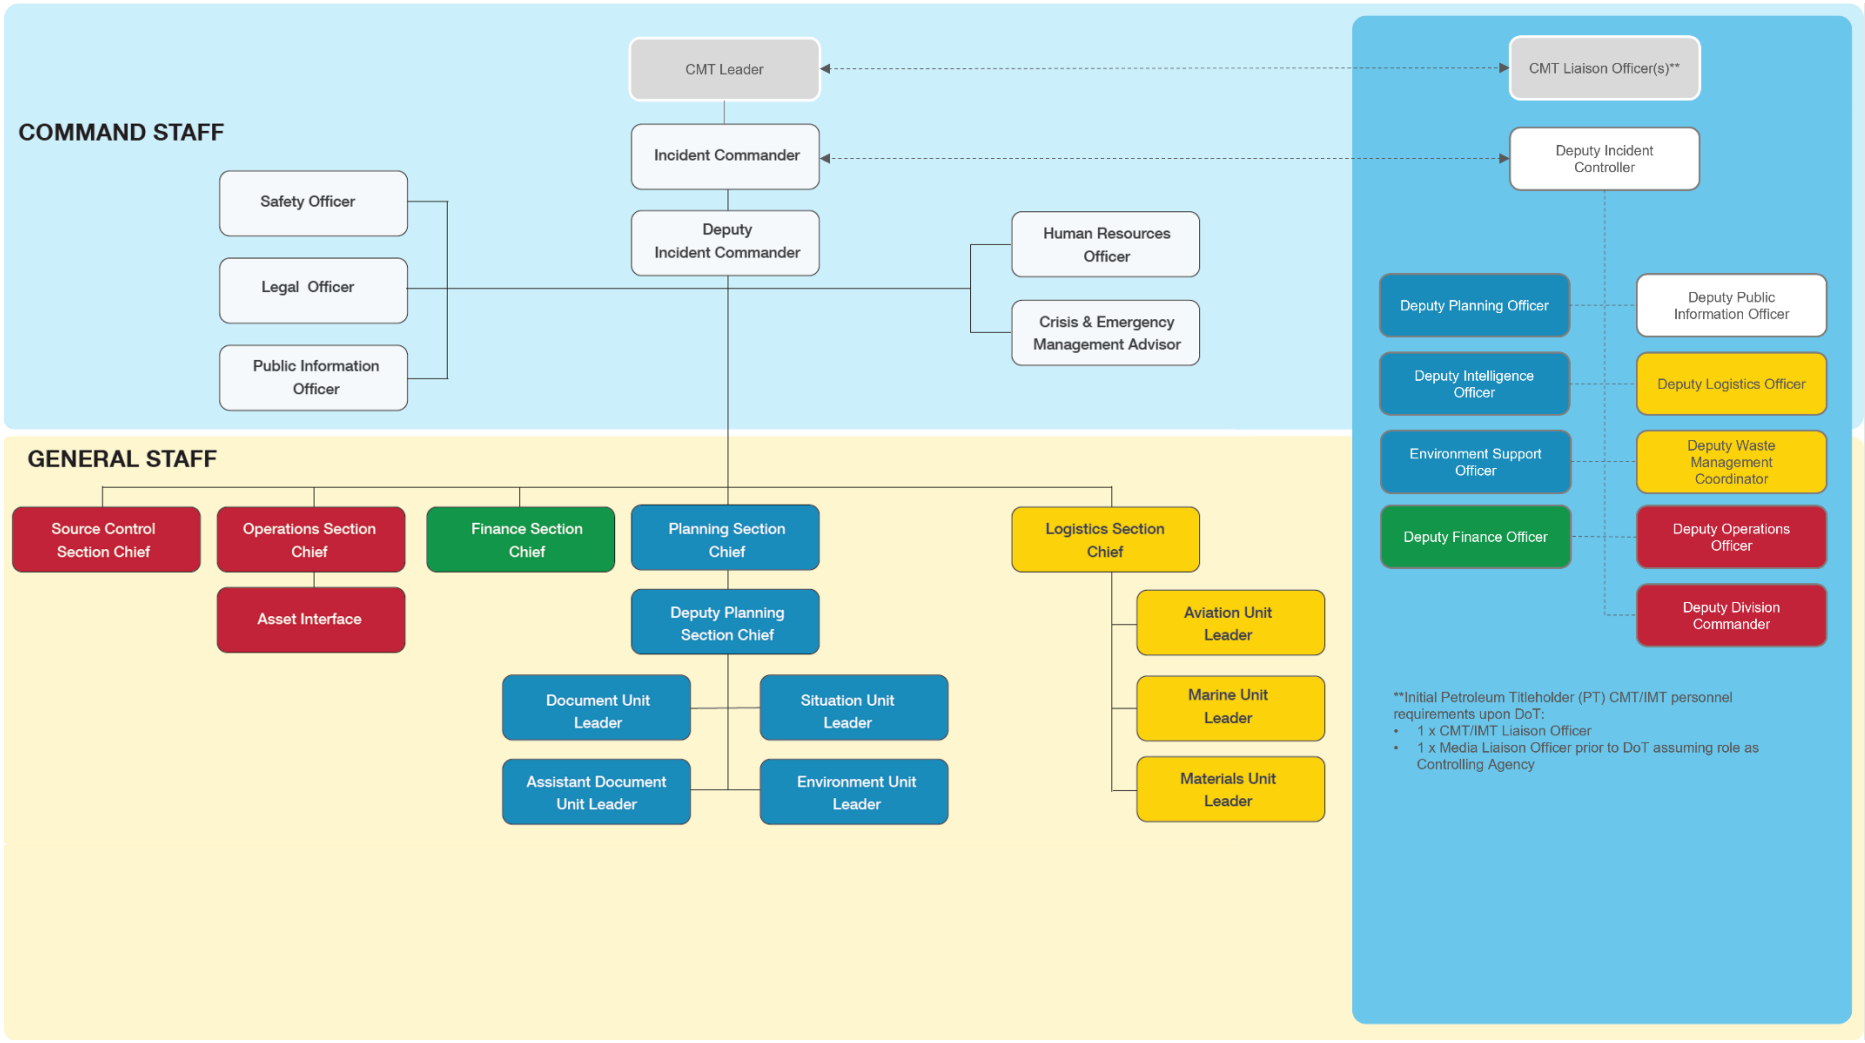
The Control Agency for a hydrocarbon spill in Commonwealth waters resulting from an offshore petroleum activity is Woodside (the Petroleum Titleholder).

The Control Agency/Hazard Management Agency (HMA) for a hydrocarbon spill in State waters/shorelines resulting from an offshore petroleum activity is DoT. DoT will appoint an Incident Controller and form a separate IMT to only manage the spill within State waters/shorelines.

[3] Adapted from DoT Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements July 2020. Note: For full structure up to Commonwealth Cabinet/Minister refer to Marine Oil Pollution: Response and Consultation Arrangements Section 6.5, Figure 4.

APPENDIX E – WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside incident management structure for hydrocarbon spill (including Woodside Liaison Officers command structure within DoT IMT if required).



APPENDIX F – WOODSIDE LIAISON OFFICER RESOURCES TO DOT

In the event that DoT is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DoT IMT. In the event the PPA is the Control Agency within the Dampier Port Limits, Woodside will make available similar roles as requested.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DoT Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the State Marine Pollution Coordinator (SMPC), and that the remaining initial cohort will attend no later than 8 am on the day following the request being formally made to Woodside by the SMPC. For Woodside personnel designated to serve in DoT's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside Liaison Role[4]	Key Duties	#
DoT Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	• Provide a direct liaison between the CMT and the MEECC. • Facilitate effective communications and coordination between the CIMT Leader and SMPC. • Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures.	1
DoT IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	• Provide a direct liaison between the PT IMT and DoT IMT. • Facilitate effective communications and coordination between the PT IC and the DoT IC. • Offer advice to the DoT IC on matters pertaining to PT incident response policies and procedures. • Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DoT IMT.	1
DoT IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	• As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. • Facilitate the provision of relevant modelling and predications from the PT IMT. • Assist in the interpretation of modelling and predictions originating from the PT IMT. • Facilitate the provision of relevant situation and awareness information originating from the DoT IMT to the PT IMT. • Facilitate the provision of relevant mapping from the PT IMT. • Assist in the interpretation of mapping originating from the PT IMT. • Facilitate the provision of relevant mapping originating from the DoT IMT to the PT IMT.	1

[4] *These positions would be mobilised, in consultation with DoT, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [11].*

Area	Role	Woodside Liaison Role[4]	Key Duties	#
DoT IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	• As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. • Assist in the interpretation of the PT OPEP and relevant TRP plans. • Facilitate in requesting, obtaining and interpreting environmental monitoring data originating from the PT IMT. • Facilitate the provision of relevant environmental information and advice originating from the DoT IMT to the PT IMT.	1
DoT IMT Planning-Plans/ Resources	Deputy Planning Officer	Deputy Planning Section Chief	• As part of the Planning Team, assist the Planning Officer in the performance of their duties in relation to the interpretation of existing response plans and the development of incident action plans and related sub plans. • Facilitate the provision of relevant IAP and sub plans from the PT IMT. • Assist in the interpretation of the PT OPEP from the PT. • Assist in the interpretation of the PT IAP and sub plans from the PT IMT. • Facilitate the provision of relevant IAP and sub plans originating from the DoT IMT to the PT IMT. • Assist in the interpretation of the PT existing resource plans. • Facilitate the provision of relevant components of the resource sub plan originating from the DoT IMT to the PT IMT. **(Note this individual must have intimate knowledge of the relevant PT OPEP and planning processes)**	1
DoT IMT Public Information-Media/ Community Engagement	Deputy Public Information Officer	Deputy Public Information Officer	• As part of the Public Information Team, provide a direct liaison between the PT Media team and DoT IMT Media team. • Facilitate effective communications and coordination between the PT and DoT media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DoT Information and Warnings team. • Offer advice to the DoT Media Coordinator on matters pertaining to PT media policies and procedures. • Facilitate effective communications and coordination between the PT and DoT Community Liaison teams. • Assist in the conduct of joint community briefings and events. • Offer advice to the DoT Community Liaison Coordinator on matters pertaining to the PT community liaison policies and procedures. • Facilitate the effective transfer of relevant information obtained from through the Contact Centre to the PT IMT.	1

Area	Role	Woodside Liaison Role[4]	Key Duties	#
DoT IMT Logistics	Deputy Logistics Officer	Deputy Logistics Section Chief	• As part of the Logistics Team, assist the Logistics Officer in the performance of their duties in relation to the provision of supplies to sustain the response effort. • Facilitate the acquisition of appropriate supplies through the PTs existing OSRL, AMOSC and private contract arrangements. • Collects Request Forms from DoT to action via PT IMT. **(Note this individual must have intimate knowledge of the relevant PT logistics processes and contracts)**	1
DoT IMT Finance-Accounts/ Financial Monitoring	Deputy Finance Officer	Deputy Finance Section Chief	• As part of the Finance Team, assist the Finance Officer in the performance of their duties in relation to the setting up and payment of accounts for those services acquired through the PTs existing OSRL, AMOSC and private contract arrangements. • Facilitate the communication of financial monitoring information to the PT to allow them to track the overall cost of the response. • Assist the Finance Officer in the tracking of financial commitments through the response, including the supply contracts commissioned directly by DoT and to be charged back to the PT.	1
DoT IMT Operations	Deputy Operations Officer	Deputy Operations Section Chief	• As part of the Operations Team, assist the Operations Officer in the performance of their duties in relation to the implementation and management of operational activities undertaken to resolve an incident. • Facilitate effective communications and coordination between the PT Operations Section and the DoT Operations Section. • Offer advice to the DoT Operations Officer on matters pertaining to PT incident response procedures and requirements. • Identify efficiencies and assist to resolve potential conflicts around resource allocation and simultaneous operations of PT and DoT response efforts.	1
DoT IMT Operations – Waste Management	Deputy Waste Management Coordinator	Deputy Waste Coordinator (Materials)	• As part of the Operations Team, assist the Waste Management Coordinator in the performance of their duties in relation to the provision of the management and disposal of waste collected in State waters. • Facilitate the disposal of waste through the PT's existing private contract arrangements related to waste management and in line with legislative and regulatory requirements. • Collects Request Forms from DoT to action via PT IMT.	1
DoT FOB Operations Command	Deputy Division Commander	FOB Deputy Incident Commander	• As part of the Field Operations Team, assist the Division Commander in the performance of their duties in relation to the oversight and coordination of field operational activities undertaken in line with the IMT Operations Section's direction. • Provide a direct liaison between the PT FOB and DoT FOB.	1

Area	Role	Woodside Liaison Role[4]	Key Duties	#
			• Facilitate effective communications and coordination between the PT Division Commander and the DoT Division Commander. • Offer advice to the DoT Division Commander on matters pertaining to PT incident response policies and procedures. • Assist the Safety Coordinator deployed in the FOB in the performance of their duties, particularly as they relate to PT employees or contractors. • Offer advice to the Safety Coordinator deployed in the FOB on matters pertaining to PT safety policies and procedures.	
			Total	11

APPENDIX G – DOT LIAISON OFFICER RESOURCES TO WOODSIDE

Once DoT activates a State waters/shorelines IMT, DoT will make available the following roles to Woodside.

Area	DoT Liaison Role	Personnel Sourced from:	Key Duties	#
Woodside CIMT	DoT Liaison Officer (prior to DoT assuming Controlling Agency)/ Deputy Incident Controller – State waters (after DoT assumes Controlling Agency)	DoT	• Facilitate effective communications between DoT's SMPC/ Incident Controller and the Petroleum Titleholder's appointed CMT Leader / Incident Controller. • Provide enhanced situational awareness to DoT of the incident and the potential impact on State waters. • Assist in the provision of support from DoT to the Petroleum Titleholder. • Facilitate the provision technical advice from DoT to the Petroleum Titleholder Incident Controller as required.	1
Woodside Public Information – Media	DoT Media Liaison Officer	DoT	• Provide a direct liaison between the PT Media team and DoT IMT Media team. • Facilitate effective communications and coordination between the PT and DoT media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DoT Information & Warnings team. • Offer advice to the PT Media Coordinator on matters pertaining to DoT and wider Government media policies and procedures.	1
			Total DoT Personnel Initial Requirement to Woodside	2

APPENDIX J: XENA-03 DRILLING AND TIE-BACK FIRST STRIKE PLAN

Xena-03 Tie-back – Oil Pollution First Strike Plan

Corporate HSE

Hydrocarbon Spill Preparedness

July 2024
Revision 0a

TABLE OF CONTENTS

CONTROL AGENCIES AND INCIDENT CONTROLLERS

Source	Location	Level	Control Agency	Incident Controller
Spill from facility including subsea infrastructure *Note: pipe laying and accommodation vessels are considered a "facility" under Australian regulations*	Commonwealth waters	1	Woodside	Person In Charge (PIC) with support from Onshore Team Leader (OTL)
		2/3	Woodside	Corporate Incident Management Team (CIMT) Duty Manager
	State waters	1	Woodside	CIMT Duty Manager
		2/3	Department of Transport (DoT)	DoT Incident Controller
	Within port limits	1	Woodside	CIMT Duty Manager
		2/3	DoT	DoT Incident Controller
Spill from vessel Note: SOPEP should be implemented in conjunction with this document	Commonwealth waters	1	Australian Marine Safety Authority (AMSA)	Vessel Master
		2/3	AMSA	AMSA (with response assistance from Woodside)
	State waters	1	DoT	DoT Incident Controller
		2/3	DoT	DoT Incident Controller
	Within port limits	1	Port Authority	Port Harbour Master
		2/3	Port Authority/ DoT	Port Harbour Master/ DoT Incident Controller

SPILLS IN STATE WATERS

In the event of a hydrocarbon spill (hereafter 'spill') where Woodside Burrup Pty Ltd ('Woodside') is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport (DoT).

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DoT IMT (APPENDIX F – Woodside Liaison Officer resources to DoT). DoT role as the Controlling Agency in State waters does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State Waters or to commence the initial response actions to a spill prior to DoT establishing incident control in line with DoT *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note:

https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside's Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer's command structure within DoT can be seen at APPENDIX E – Woodside Incident Management structure.

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in APPENDIX D – Coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines.

RESPONSE PROCESS OVERVIEW

	For guidance on credible scenarios and hydrocarbon characteristics, refer to APPENDIX A	
ALL INCIDENTS	Notify the Woodside Communication Centre (WCC) on: [3]	
	Incident Controller or delegate to make relevant notifications in **Table 1-1** of this Oil Pollution First Strike Plan.	
LEVEL 1	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.	Notify AMSA and coordinate pre-identified tactics in **Table 2-1** of this Oil Pollution First Strike Plan Remember to download each Operational Plan.
	If the spill escalates such that the site cannot manage the incident, inform the WCC on: [3] and escalate to a level 2/3 incident.	
LEVEL 2/3	**FACILITY INCIDENT**	**VESSEL INCIDENT**
	Handover control to CIMT and notify DoT	Handover control to AMSA and stand up CIMT to assist.
	Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.	If requested by AMSA: Commence quick revalidation of the recommended strategies in **Table 2-1** taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.
	Create an Incident Action Plan (IAP) for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the pre-operational Net Environmental Benefit Analysis (NEBA) see the related Pluto Facility Operations OSPRMA Appendix A	If requested by AMSA: Create an IAP for all ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the pre-operational NEBA see the related Pluto Facility Operations OSPRMA Appendix A

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a WEL representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant vessel Emergency Response Plans and/or Bridging Documents

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	Duty Manager	[3]	Verbally notify WCC of event and estimated volume and hydrocarbon type.	Verbal	
Within 2 hours	Woodside Site Rep (WSR), Corporate Incident Management Team Duty Manager (CIMT DM) or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA[1])	Incident notification office	[4]	Verbally notify NOPSEMA for spills >80L. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DEMIRS).	Link	
Within 3 days	WSR, CIMT DM or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DEMIRS) NOPSEMA [4] NOPTA [5] DEMIRS [6]	[4]	
As soon as practicable	CIMT DM or Delegate	Woodside	Environment Duty Manager	As per roster	Verbally notify Duty Environment of event and seek advice on relevant performance standards from EP	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT DM or Delegate	WA Department of Transport	DoT Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[7]	Verbally notify DoT MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha. Follow up with a written POLREP as soon as practicable following verbal notification. Additionally, DoT to be notified if spill is likely to extend into WA State waters. Request DoT to provide liaison to Woodside IMT.	[7]	
As soon as practicable	CIMT DM or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks	Marine Park Compliance Duty Officer	[3]	The Marine Park Compliance Duty Officer is notified in the event of oil pollution within a marine park, or where an oil spill response action must be taken within a marine park, so far as reasonably practicable, prior to response action being taken. This notification should include: • titleholder details • time and location of the incident • proposed response arrangements and locations as per the OPEP • contact details for the response coordinator • confirmation of access to relevant monitoring and evaluation reports when available.	Verbal	
As soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land or waters managed by WA Department of Biodiversity, Conservation and Attractions	CIMT DM or Delegate	WA Department of Biodiversity, Conservation and Attractions (DBCA)	Duty Officer	[4]	Phone call notification	Verbal	
As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons such as, but not limited to, commercial fishers or tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the related Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for Pluto Facility Operations.	Verbal initially	

[1] Notification to NOPSEMA must be from a Woodside Representative.

					Relevant persons/ organisations will be re-assessed throughout the response period.		
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the related OSPRMA for Pluto Facility Operations. Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially	
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL							
"Without delay" as per *Protection of the Sea (Prevention of Pollution from Ships) Act 1983* (Cth) s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Response Coordination Centre (RCC)	[10]	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with written Harmful Substances Report (POLREP – AMSA) as soon as practicable.	[10]	
ADDITIONAL LEVEL 2/3 NOTIFICATIONS							
As soon as practicable	CIMT DM or Delegate	AMOSC	AMOSC Duty Manager	[11]	Notify AMOSC that a spill has occurred and follow-up with an email from the CIMT IC/ Deputy CIMT IC/CMT Leader to formally activate AMOSC. Determine what resources are required consistent with the AMOS Plan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	[11]	
As soon as practicable	CIMT DM or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	[12]	Contact OSRL Duty Manager and request assistance from technical advisor in Perth. Send the completed notification form to OSRL as soon as practicable.	[12]	
					For mobilisation of resources, send the Mobilisation Form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside. OSRL can advise the names on the call out authority list, if required.	[12]	
As soon as practicable if extra personnel are required for incident support	CIMT DM or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	[13]	Activate the contract with MSRC (in full) for the provision of up to 30 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal	

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MGO CS-05	Condensate CS-01					
Operational monitoring –tracking buoy (OM02)	Yes	Yes	ALL	If a vessel is on location, consider the need to deploy the oil spill tracking buoy. If no vessel is on location, consider the need to mobilise oil spill tracking buoys from the King Bay Supply Base (KBSB) Stockpile. If a surface sheen is visible from the facility, deploy the satellite tracking buoy within two hours.	Operations	**WITHIN 24 HOURS:** For manned facility/vessel, tracking buoy deployed within 2 hours. **WITHIN 48 HOURS:** For unmanned facility/vessel, deploy tracking buoy within 48 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02) of The Operational Monitoring Operational Plan. Deploy tracking buoy in accordance with Link.
Operational monitoring – predictive modelling (OM01)	Yes	Yes	ALL	Undertake initial modelling using the Rapid Assessment Oil Spill Tool and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in **Appendix A.**	Situation or Environment	**WITHIN 24 HOURS:** Initial modelling within 6 hours using the Rapid Assessment Tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk (OM01 of The Operational Monitoring Operational Plan). *Planning Section to download and follow steps*
	Yes	Yes	ALL	Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response ([14]).	Situation	**WITHIN 24 HOURS:** Detailed modelling within 4 hours of RPS Response receiving information from Woodside.	
Operational monitoring – aerial surveillance (OM02)	Yes	Yes	ALL	Instruct Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8.	Logistics – Aviation	**WITHIN 24 HOURS:** 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02 of The Operational Monitoring Operational Plan). *Planning Section to download and follow steps*
Operational monitoring – satellite tracking (OM02)	Yes	Yes	ALL	The Situation Unit Leader to action satellite imagery services. This may be obtained via: • AMOSC Duty Manager: [11] • OSRL Duty Manager: [12] • KSAT:[15] • Others identified by CIMT.	Situation	**WITHIN 24 HOURS:** Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Operational monitoring – monitoring hydrocarbons in water (OM03)	Yes	Yes	ALL	Consider the need to mobilise resources to undertake water quality monitoring (OM03).	Planning or Environment	**DAY 3:** Water quality assessment access and capability Daily fluorometry reports will be provided to IMT.	Detecting and Monitoring for the Presence and Properties of Hydrocarbons in the Marine Environment (OM03 of The Operational Monitoring Operational Plan).
Operational monitoring – pre-emptive assessment of receptors at risk (OM04)	Potentially	Potentially	ALL	Modelling does not predict shoreline contact at response threshold (>100 g/m^2) any receptors. Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk (OM04).	Planning or Environment	In agreement with WA DoT, deployment of 2 specialists for each of the Response Protection Areas (RPA) with predicted impacts.	Pre-emptive Assessment of Sensitive Receptors (OM04 of The Operational Monitoring Operational Plan).
Operational monitoring – shoreline assessment (OM05)	Potentially	Potentially	ALL	Modelling does not predict shoreline contact at response threshold (>100 g/m^2) any receptors. Consider the need to mobilise resources to undertake shoreline assessment surveys (OM05).	Planning or Environment	In agreement with WA DoT, deployment of 2 specialists trained in Shoreline Clean-up Assessment Technique (SCAT) for each of the RPAs with predicted impacts.	Shoreline Assessment (OM05 of The Operational Monitoring Operational Plan).
Surface dispersant	No	No	N/A	This response strategy is not recommended for Eris-1 condensate or marine gas oil (MGO) as there is no surface expression predicted above response threshold (>50 g/m^2). The addition of dispersant is not considered to have a net environmental benefit.			
Containment and recovery	No	No	N/A	This response strategy is not recommended for Eris-1 condensate or MGO as there is no surface expression predicted above response threshold (>50 g/m^2). Containment and recovery of condensate or MGO poses a significant safety risk due to low flash points. Corralling low			

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MGO CS-05	Condensate CS-01					
				flash point substances should be avoided, therefore, this response technique is not feasible.			
Mechanical dispersion	**No**	**No**	**N/A**	This response strategy is not recommended.			
In-situ burning	**No**	**No**	**N/A**	This response strategy is not recommended.			
Shoreline protection and deflection	**No**	**No**	**N/A**	This response strategy is not recommended for Eris-1 condensate or MGO as there is no shoreline accumulation predicted above response threshold (>100 g/m^2) at any RPA.			
Shoreline clean-up	**No**	**No**	**N/A**	This response strategy is not recommended for Eris-1 condensate or MGO as there is no shoreline accumulation predicted above response threshold (>100 g/m^2) at any RPA.			
Oiled wildlife response	**Yes**	**Yes**	**ALL**	If oiled wildlife is a potential impact, request AMOSC to mobilise containerised oiled wildlife first strike kits and relevant personnel. Refer to relevant Tactical Response Plan for potential wildlife at risk. Mobilise AMOSC Oiled Wildlife Containers. Consider whether additional equipment is required from local suppliers.	Logistics and Planning		Oiled Wildlife Response Operational Plan
Scientific monitoring (type II)	**Yes**	**Yes**	**ALL**	Notify Woodside science team of spill event.	Environment		Oil Spill Scientific Monitoring Programme – Operational Plan
SOURCE CONTROL TECNIQUES							
Subsea First Response Toolkit	**N/A**	Yes	**L2/3**	Debris clearance equipment to be mobilised prior to deployment of capping stack (if feasible).	Source Control	**WITHIN 48 HOURS:** Remotely Operated Vehicle (ROV) on Mobile Offshore Drilling Unit (MODU) ready for deployment within 48 hours. SFRT equipment mobilised to site for deployment within 11 days.	Source Control Emergency Response Planning Guideline Activity Source Control Emergency Response Plan
Subsea Dispersant	**N/A**	No	**N/A**	This response strategy is not recommended. Whilst the Eris-1 well is in water depths of 178 m, which greater than the 100 m minimum water depth recognised for feasible use of subsea dispersant, modelling predicts that the LOWC scenario will not result in any surface or shoreline oil at any RPA for the duration of the spill event. The use of subsea dispersant would increase dispersed/ entrained hydrocarbon levels and exposure of subsea biota to potentially higher toxicity substances and thus not provide a net environmental benefit.			
Capping Stack	**N/A**	Yes	**L2/3**	Conventional/vertical capping stack deployment with a heavy lift vessel will be attempted if plume radius is ~25 m and environmental conditions permit (wind speed, wave height, current and plume radius).	Source Control	**WITHIN 24 HOURS:** Identify source control vessel availability within 24 hours. Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once plume size is acceptable and safety and metocean conditions are suitable.	
Relief Well	**N/A**	Yes	**L2/3**	Undertake tactics per Source Control Emergency Response Plan (SCERP).	Source Control	**WITHIN 24 HOURS** Identify source control vessel availability within 24 hours. MODU mobilised to location within 21 days, with drilling to be completed within 64 days.	

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on hydrocarbon spill modelling results, no sensitive receptors are predicted to be contacted at response threshold (>100 g/m^2) for the duration of the spill event.

Hydrocarbon spill modelling results indicate the following sensitive receptors may have the potential to be contacted by hydrocarbons below response threshold (>10 g/m^2):

- Montebello Islands including Marine Park, and Hermite Island – 10.4 days, 2 m^3
- Barrow Island including Boodie, Double and Middle Islands Nature Reserves – 77.9 days, <1 m^3
- Muiron Islands and MMA – 35.2 days, <1 m^3

In a real event, oil spill trajectory modelling specific to the spill will be required to determine the regional sensitive receptors to be contacted.

Tactical Response plans for these and other locations can be accessed via this link and include the details of potential forward operating bases and staging areas.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the Xena-03 Tie-back Operational Area and identifies priority protection areas.

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location. **Table 3-1** indicates the assets within the vicinity of the Xena-03 Tie-back Operational Area.

Table 3-1: Assets in the vicinity of the Xena-03 Tie-back Operational Area

Asset	Distance and direction from Xena-03 well	Operator
Wheatstone platform	17.6 km east	Chevron
Angel platform	153 km north-northwest	Woodside
John Brookes	56.3 km south-southwest	Santos
Goodwyn Alpha platform	81.7 km northwest	Woodside
North Rankin Complex	104.8 km northwest	Woodside
Reindeer wellhead platform	114.8 km east-southeast	Santos
Stag A	116.8 km south-east	Jadestone

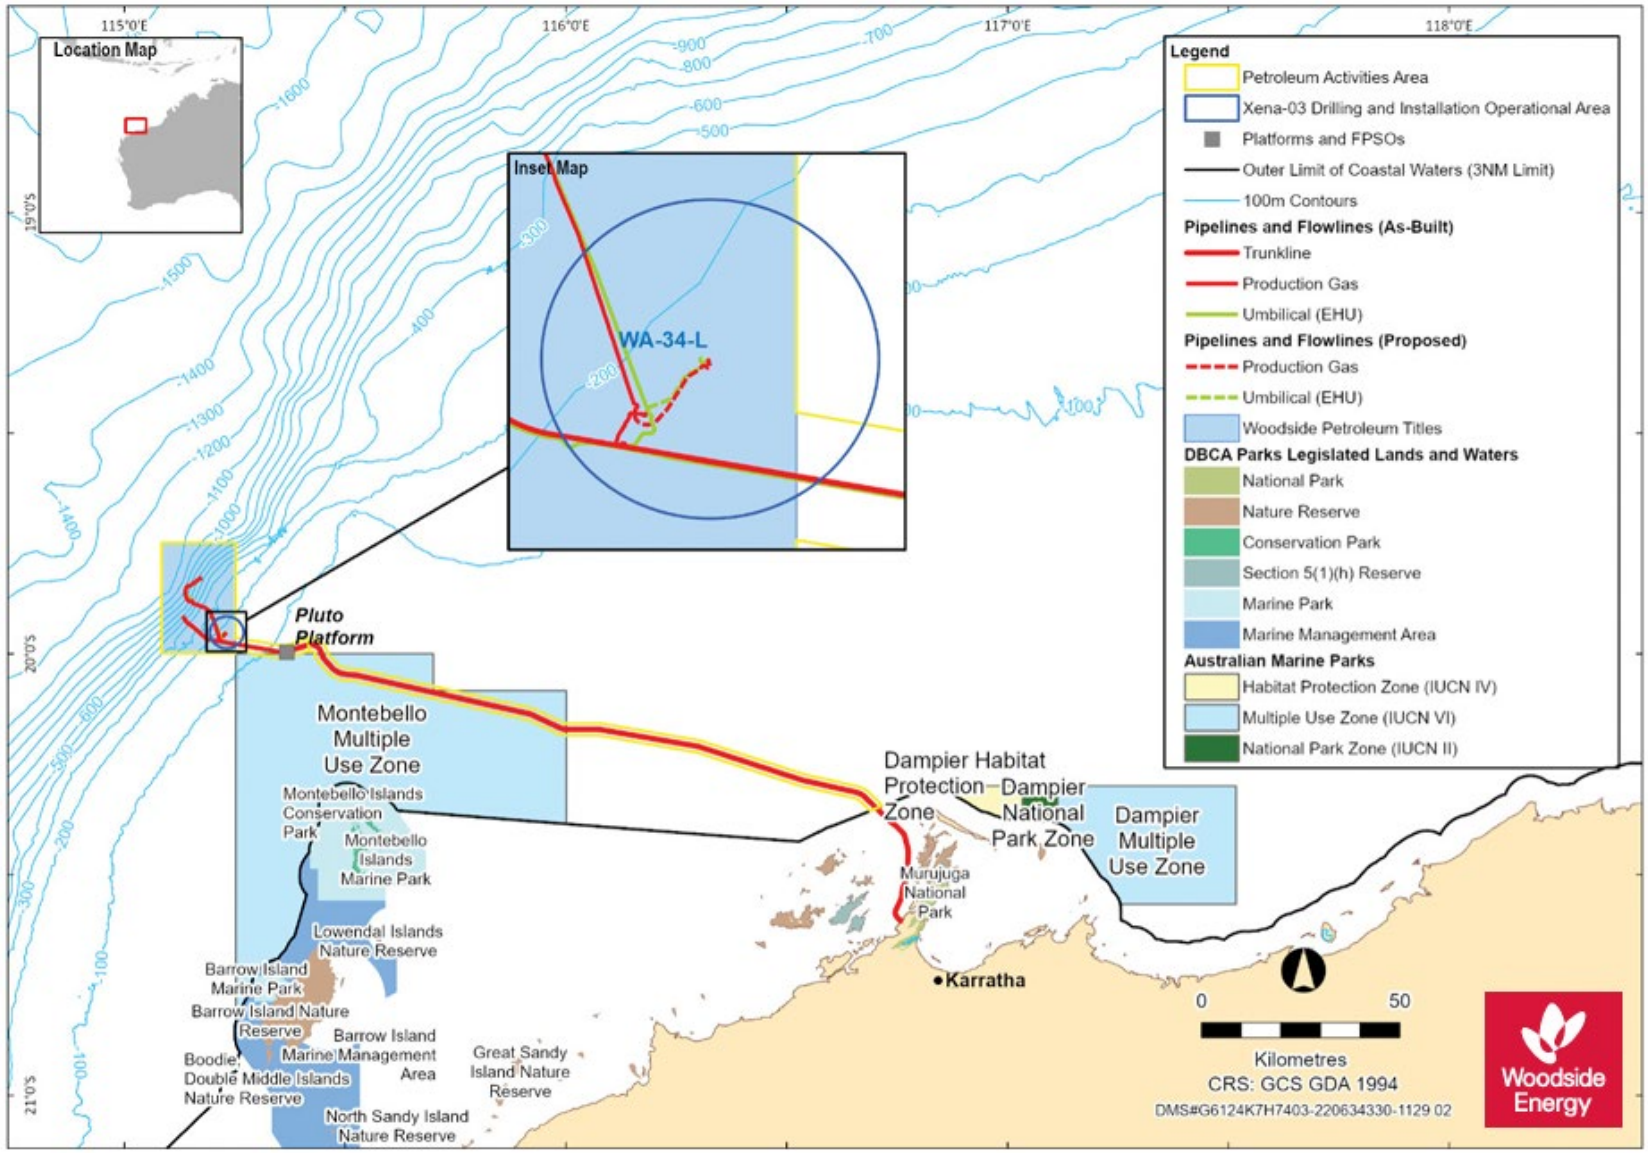


Figure 3-1: Operational area

4. DISPERSANT APPLICATION

Dispersant is not considered an appropriate response strategy for this activity as described in the related Pluto Facility Operations Environment Plan Appendix D (Woodside's Oil Spill Preparedness and Response Mitigation Assessment).

APPENDIX A – CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A - 1: Credible spill scenarios and hydrocarbon information

Scenario	Product	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue[2]
CS-01 (WCCS): *A long-term (64-day) release of Eris-1 loss of well containment during drilling at the Xena-03 well*	*Eris-1 Condensate*	Total: 46,631 m^3 1880 m^3 (surface) 44,751 m^3 (subsea)	Surface: 10.01% (188.2 m^3) Seabed: 3.39% (1517.1 m^3)	12 hours (BP < 180 °C)	Surface: 14.97% Seabed: 65.99%	*Martin Linge Condensate API 42.2*
				24 hours (180 °C < BP < 265 °C)	Surface 48.43% Seabed: 21.6%	
				Several days (265 °C < BP < 380 °C)	Surface: 26.6% Seabed: 9.02%	
CS-05: Loss of vessel containment at the PLA platform	*Marine Gas Oil*	1000 m^3	5.0% (50 m^3)	12 hours (BP < 180 °C)	6%	*Diesel Fuel Oil (Southern USA 1). API of 37.2*
				24 hours (180 °C < BP < 265 °C)	34.6%	
				Several days (265 °C < BP < 380 °C)	54.4%	

[2] Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380°C distillation cuts were included in selection process.

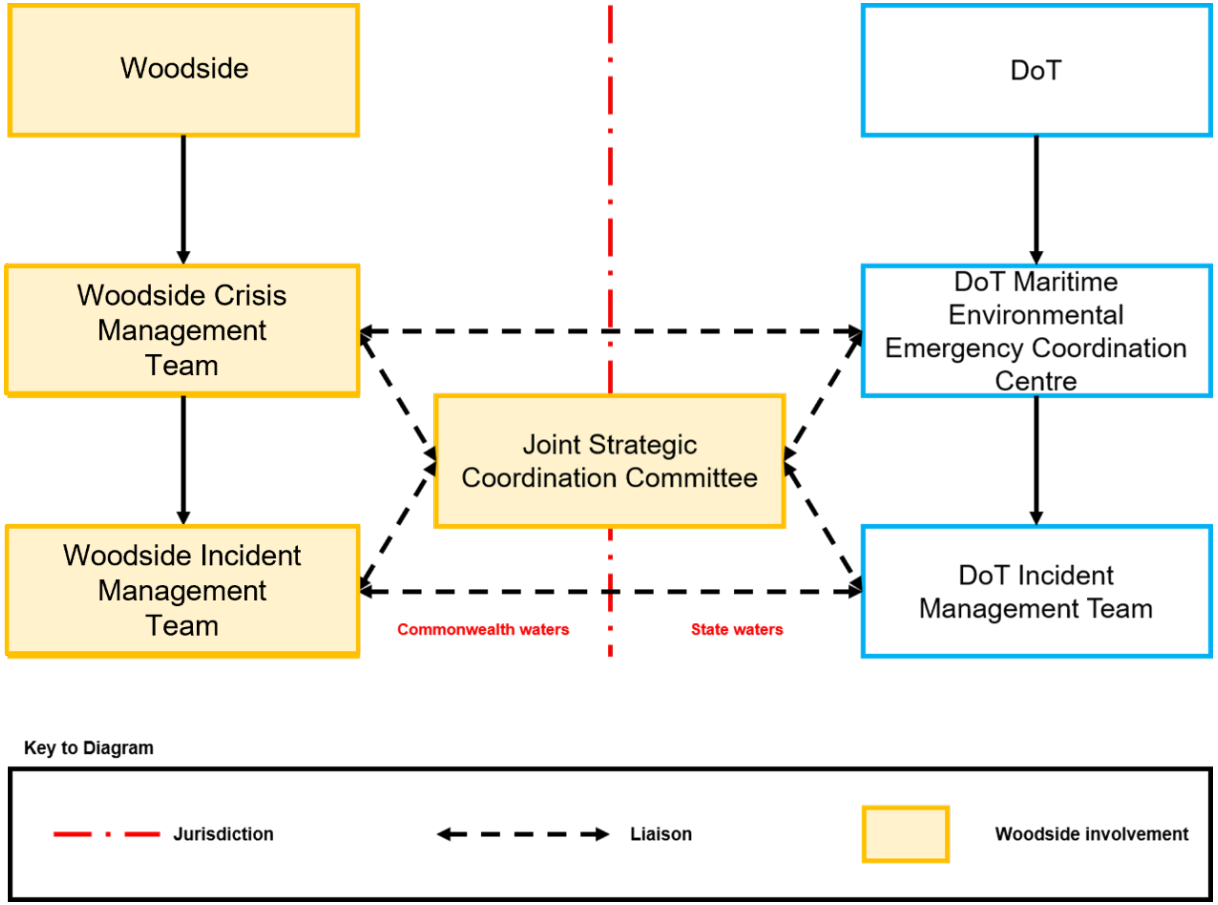
APPENDIX D – COORDINATION STRUCTURE FOR A CONCURRENT HYDROCARBON SPILL IN BOTH COMMONWEALTH AND STATE WATERS/ SHORELINES[3]



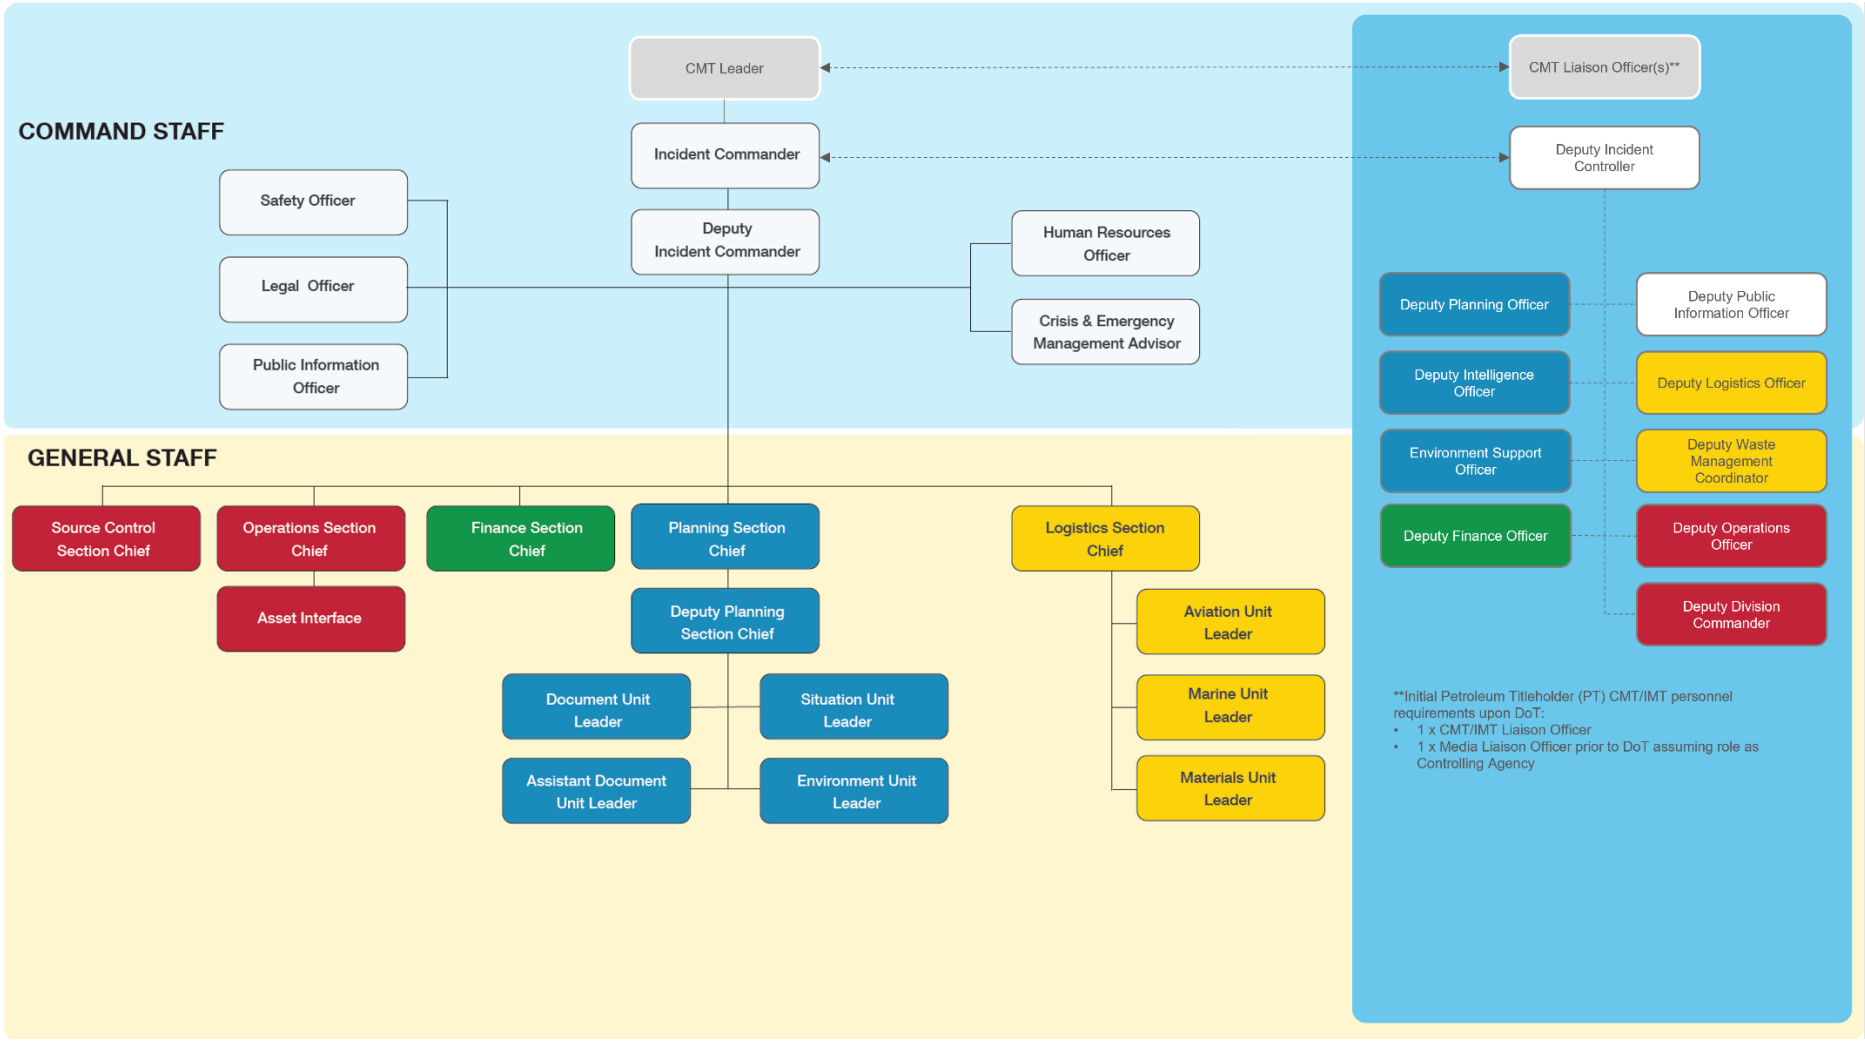
The Control Agency for a hydrocarbon spill in Commonwealth waters resulting from an offshore petroleum activity is Woodside (the Petroleum Titleholder).

The Control Agency/Hazard Management Authority (HMA) for a hydrocarbon spill in State waters/shorelines resulting from an offshore petroleum activity is DoT. DoT will appoint an Incident Controller and form a separate IMT to only manage the spill within State waters/shorelines.

[3] Adapted from DoT Offshore Petroleum Industry Guidance Note, Marine Oil Pollution: Response and Consultation Arrangements July 2020. Note: For full structure up to Commonwealth Cabinet/Minister refer to Marine Oil Pollution: Response and Consultation Arrangements Section 6.5, Figure 4.

APPENDIX E – WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside incident management structure for hydrocarbon spill (including Woodside Liaison Officers command structure within DoT IMT if required).



APPENDIX F – WOODSIDE LIAISON OFFICER RESOURCES TO DOT

In the event that DoT is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DoT IMT.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DoT Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the State Marine Pollution Coordinator (SMPC), and that the remaining initial cohort will attend no later than 8 am on the day following the request being formally made to Woodside by the SMPC. For Woodside personnel designated to serve in DoT's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside Liaison Role[4]	Key Duties	#
DoT Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	• Provide a direct liaison between the CMT and the MEECC. • Facilitate effective communications and coordination between the CIMT Leader and State Marine Pollution Coordinator (SMPC). • Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures.	1
DoT IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	• Provide a direct liaison between the PT IMT and DoT IMT. • Facilitate effective communications and coordination between the PT IC and the DoT IC. • Offer advice to the DoT IC on matters pertaining to PT incident response policies and procedures. • Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DoT IMT.	1
DoT IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	• As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. • Facilitate the provision of relevant modelling and predications from the PT IMT. • Assist in the interpretation of modelling and predictions originating from the PT IMT. • Facilitate the provision of relevant situation and awareness information originating from the DoT IMT to the PT IMT. • Facilitate the provision of relevant mapping from the PT IMT. • Assist in the interpretation of mapping originating from the PT IMT. • Facilitate the provision of relevant mapping originating from the DoT IMT to the PT IMT.	1

[4] *These positions would be mobilised, in consultation with DoT, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [11]*

Area	Role	Woodside Liaison Role[4]	Key Duties	#
DoT IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	• As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. • Assist in the interpretation of the PT OPEP and relevant TRP plans. • Facilitate in requesting, obtaining and interpreting environmental monitoring data originating from the PT IMT. • Facilitate the provision of relevant environmental information and advice originating from the DoT IMT to the PT IMT.	1
DoT IMT Planning-Plans/ Resources	Deputy Planning Officer	Deputy Planning Section Chief	• As part of the Planning Team, assist the Planning Officer in the performance of their duties in relation to the interpretation of existing response plans and the development of incident action plans and related sub plans. • Facilitate the provision of relevant IAP and sub plans from the PT IMT. • Assist in the interpretation of the PT OPEP from the PT. • Assist in the interpretation of the PT IAP and sub plans from the PT IMT. • Facilitate the provision of relevant IAP and sub plans originating from the DoT IMT to the PT IMT. • Assist in the interpretation of the PT existing resource plans. • Facilitate the provision of relevant components of the resource sub plan originating from the DoT IMT to the PT IMT. **(Note this individual must have intimate knowledge of the relevant PT OPEP and planning processes)**	1
DoT IMT Public Information-Media/ Community Engagement	Deputy Public Information Officer	Deputy Public Information Officer	• As part of the Public Information Team, provide a direct liaison between the PT Media team and DoT IMT Media team. • Facilitate effective communications and coordination between the PT and DoT media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DoT Information and Warnings team. • Offer advice to the DoT Media Coordinator on matters pertaining to PT media policies and procedures. • Facilitate effective communications and coordination between the PT and DoT Community Liaison teams. • Assist in the conduct of joint community briefings and events. • Offer advice to the DoT Community Liaison Coordinator on matters pertaining to the PT community liaison policies and procedures. • Facilitate the effective transfer of relevant information obtained from through the Contact Centre to the PT IMT.	1

Area	Role	Woodside Liaison Role[4]	Key Duties	#
DoT IMT Logistics	Deputy Logistics Officer	Deputy Logistics Section Chief	• As part of the Logistics Team, assist the Logistics Officer in the performance of their duties in relation to the provision of supplies to sustain the response effort. • Facilitate the acquisition of appropriate supplies through the PTs existing OSRL, AMOSC and private contract arrangements. • Collects Request Forms from DoT to action via PT IMT. **(Note this individual must have intimate knowledge of the relevant PT logistics processes and contracts)**	1
DoT IMT Finance-Accounts/ Financial Monitoring	Deputy Finance Officer	Deputy Finance Section Chief	• As part of the Finance Team, assist the Finance Officer in the performance of their duties in relation to the setting up and payment of accounts for those services acquired through the PTs existing OSRL, AMOSC and private contract arrangements. • Facilitate the communication of financial monitoring information to the PT to allow them to track the overall cost of the response. • Assist the Finance Officer in the tracking of financial commitments through the response, including the supply contracts commissioned directly by DoT and to be charged back to the PT.	1
DoT IMT Operations	Deputy Operations Officer	Deputy Operations Section Chief	• As part of the Operations Team, assist the Operations Officer in the performance of their duties in relation to the implementation and management of operational activities undertaken to resolve an incident. • Facilitate effective communications and coordination between the PT Operations Section and the DoT Operations Section. • Offer advice to the DoT Operations Officer on matters pertaining to PT incident response procedures and requirements. • Identify efficiencies and assist to resolve potential conflicts around resource allocation and simultaneous operations of PT and DoT response efforts.	1
DoT IMT Operations – Waste Management	Deputy Waste Management Coordinator	Deputy Waste Coordinator (Materials)	• As part of the Operations Team, assist the Waste Management Coordinator in the performance of their duties in relation to the provision of the management and disposal of waste collected in State waters. • Facilitate the disposal of waste through the PT's existing private contract arrangements related to waste management and in line with legislative and regulatory requirements. • Collects Request Forms from DoT to action via PT IMT.	1
DoT FOB Operations Command	Deputy Division Commander	FOB Deputy Incident Commander	• As part of the Field Operations Team, assist the Division Commander in the performance of their duties in relation to the oversight and coordination of field operational activities undertaken in line with the IMT Operations Section's direction. • Provide a direct liaison between the PT FOB and DoT FOB.	1

Area	Role	Woodside Liaison Role[4]	Key Duties	#
			• Facilitate effective communications and coordination between the PT Division Commander and the DoT Division Commander. • Offer advice to the DoT Division Commander on matters pertaining to PT incident response policies and procedures. • Assist the Safety Coordinator deployed in the FOB in the performance of their duties, particularly as they relate to PT employees or contractors. • Offer advice to the Safety Coordinator deployed in the FOB on matters pertaining to PT safety policies and procedures.	
			Total	11

APPENDIX G – DOT LIAISON OFFICER RESOURCES TO WOODSIDE

Once DoT activates a State waters/shorelines IMT, DoT will make available the following roles to Woodside.

Area	DoT Liaison Role	Personnel Sourced from:	Key Duties	#
Woodside CIMT	DoT Liaison Officer (prior to DoT assuming Controlling Agency)/ Deputy Incident Controller – State waters (after DoT assumes Controlling Agency)	DoT	• Facilitate effective communications between DoT's SMPC/ Incident Controller and the Petroleum Titleholder's appointed CMT Leader / Incident Controller. • Provide enhanced situational awareness to DoT of the incident and the potential impact on State waters. • Assist in the provision of support from DoT to the Petroleum Titleholder. • Facilitate the provision technical advice from DoT to the Petroleum Titleholder Incident Controller as required.	1
Woodside Public Information – Media	DoT Media Liaison Officer	DoT	• Provide a direct liaison between the PT Media team and DoT IMT Media team. • Facilitate effective communications and coordination between the PT and DoT media teams. • Assist in the release of joint media statements and conduct of joint media briefings. • Assist in the release of joint information and warnings through the DoT Information & Warnings team. • Offer advice to the PT Media Coordinator on matters pertaining to DoT and wider Government media policies and procedures.	1
			Total DoT Personnel Initial Requirement to Woodside	2

APPENDIX K: WOODSIDE MASTER EXISTING ENVIRONMENT

Description of the Existing Environment

THIS PAGE HAS BEEN INTENTIONALLY LEFT BLANK

TABLE OF CONTENTS

TABLE OF FIGURES

TABLE OF TABLES

1. INTRODUCTION

1.1 Purpose

This document applies, where indicated in the relevant Environment Plan, to Woodside Energy Ltd. (Woodside) activities and operations.

1.2 Scope

This document describes the existing environment within the Woodside areas of activity located in Commonwealth waters off north-western Western Australia (WA), with a focus on the North-west Marine Region (NWMR) (**Figure 1-1**). This document includes details of the particular and relevant values and sensitivities of the environment as required by the Commonwealth Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 in order to inform the impact and risk evaluation of Woodside's activities within the NWMR. Furthermore, the key values of the South-west Marine Region (SWMR) and the North Marine Region (NMR) are summarised to encompass areas outside the NWMR. This is with reference to the environment that may be affected (EMBA), as defined and described in individual EPs, for unplanned hydrocarbon spill risks. Additional information appropriate to the nature and scale of the impacts and risks of activities that may interact with the environment will be used to further inform impact and risk assessments and included in the Description of the Existing Environment of individual EPs.

This document is informed by a variety of resources that includes: a search of the Department of Agriculture, Water and the Environment (DAWE) Protected Matters Search Tool (PMST) for the marine bioregions (NWMR, SWMR and NMR) and the three PMST reports provided in **Appendix A**; State (WA)/Commonwealth Marine Park Management Plans, the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) Species Profile and Threats Database (SPRAT), Part 13 statutory instruments (recovery plans, conservation advices and wildlife conservation plans for listed threatened and migratory species); and peer reviewed scientific publications, as well as Woodside and Joint Venture (JV) funded studies and other titleholder funded study findings available in the public domain.

1.3 Review and Revision

The information presented in this document is reviewed and updated, where relevant, on at least an annual basis to address any relevant changes, which includes but is not limited to the status of EPBC Act listed species, Part 13 Instruments, policies and guidelines and recently published scientific literature.

1.4 Regional Context

Where relevant, the physical, biological and social environments within the areas of interest are discussed with reference to the three marine bioregions of Australia—NWMR, SWMR and NMR (**Table 1-1)**. The NWMR is the focal marine bioregion for the Description of the Existing Environment as this is currently the location of most of Woodside's activities.

Table 1-1. Description of the Marine Bioregions

Marine Bioregion	Description
North-west	The NWMR includes all Commonwealth waters (from 3 nautical mile [nm] from the Territorial Sea Baseline [TSB] to the 200 nm Exclusive Economic Zone [EEZ] boundary) extending from the WA/Northern Territory (NT) border to Kalbarri, south of Shark Bay in WA, covering an area of approximately 1.07 million square kilometres and includes extensive areas of shallower waters on the continental shelf, as well as deep areas of abyssal plain where water depths are 5000 m or greater.
South-west	The SWMR comprises Commonwealth waters from the eastern end of Kangaroo Island in SA to Shark Bay in WA. The region spans approximately 1.3 million square kilometres of temperate and subtropical waters and abuts the coastal waters of SA and WA.
North	The NMR comprises Commonwealth waters from west Cape York Peninsula to the NT/WA border). The region covers approximately 625,689 square kilometres of tropical waters in the Gulf of Carpentaria and Arafura and Timor seas, and abuts the coastal waters of Queensland and the NT.

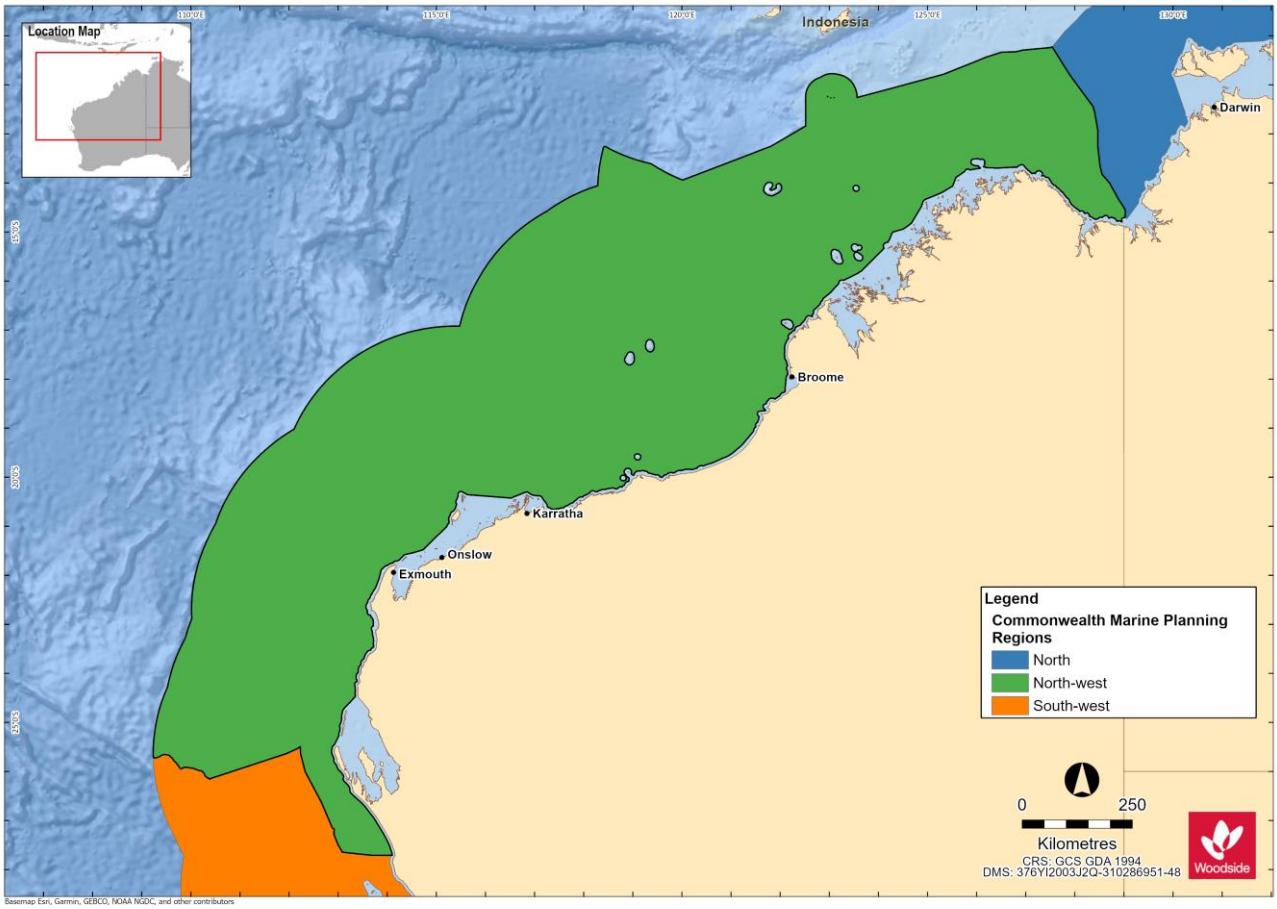


Figure 1-1. Marine Bioregions: North-west (NWMR), South-west (SWMR) and North (NMR)

2. PHYSICAL ENVIRONMENT

2.1 Regional Context

The key physical characteristics of the NWMR, SWMR and NMR are presented in **Table 2-1**.

Table 2-1 Key physical characteristics of the NWMR, SWMR and NMR

Bioregion	Key Characteristics
North-west Marine Region	The NWMR experiences a tropical monsoonal climate towards the northern extent of the region, transitioning to tropical arid and subtropical arid within the central and southern areas of the region (DSEWPAC, 2012a).
	The NWMR is part of the Indo-Australian Basin, the ocean region between the north-west coast of Australia and the Indonesian islands of Java and Sumatra. Dominant currents in the Region include: the South Equatorial Current, the Indonesian Throughflow; the Eastern Gyral Current, and the Leeuwin Current (DEWHA, 2007a).
	The seafloor of the NWMR consists of four general feature types: continental shelf; continental slope; continental rise; and abyssal plain and is distinguished by a range of topographic features including canyons, plateaus, terraces, ridges, reefs, and banks and shoals.
South-west Marine Region	The SWMR contains both subtropical and temperate climates, with overall light climatic cycles.
	The SWMR experiences complex and unusual oceanographic patterns, driven largely by the Leeuwin Current and its associated currents that have a significant influence on biodiversity distribution and abundance.
	The major seafloor features of the SWMR include a narrow continental shelf on the west coast to the waters off south-west WA, and a wide continental shelf dominated by sandy carbonate sediments of marine origin in the Great Australian Bight, the region also contains a steep, muddy continental slope, many canyons and large tracts of abyssal plains (DSEWPAC, 2012b).
North Marine Region	The NMR experiences a tropical monsoonal climate with complex weather cycles, including high temperatures and heavy seasonal yet variable rainfall and cyclones, which can be both destructive (loss of seagrass and mangroves) and constructive (mobilisation of sediment into coastal habitats).
	The NMR comprises Commonwealth waters from west Cape York Peninsula to the NT–WA border, covering tropical waters in the Gulf of Carpentaria and Arafura and Timor seas. Currents in the NMR are driven largely by strong winds and tides, with only minor influences from oceanographic currents such as the Indonesian Throughflow and the South Equatorial Current (DSEWPAC, 2012c).
	The seafloor of the NMR consists mainly of a wide continental shelf, as well as other geomorphological features such as shoals, banks, terraces, valleys, shallow canyons and limestone pinnacles.

2.2 Marine Systems of the North-west Marine Region.

The NWMR can be divided into three large scale ecological marine systems on the basis of the influence of major ocean currents, seafloor features and eco-physical processes (e.g. climate, tides, freshwater inflow) upon the Region (DSEWPAC, 2012a). The three large scale marine systems approximate the Woodside activity areas within the NWMR (**Figure 2-1**). The key characteristics of each marine system are outlined below in **Table 2-2**.

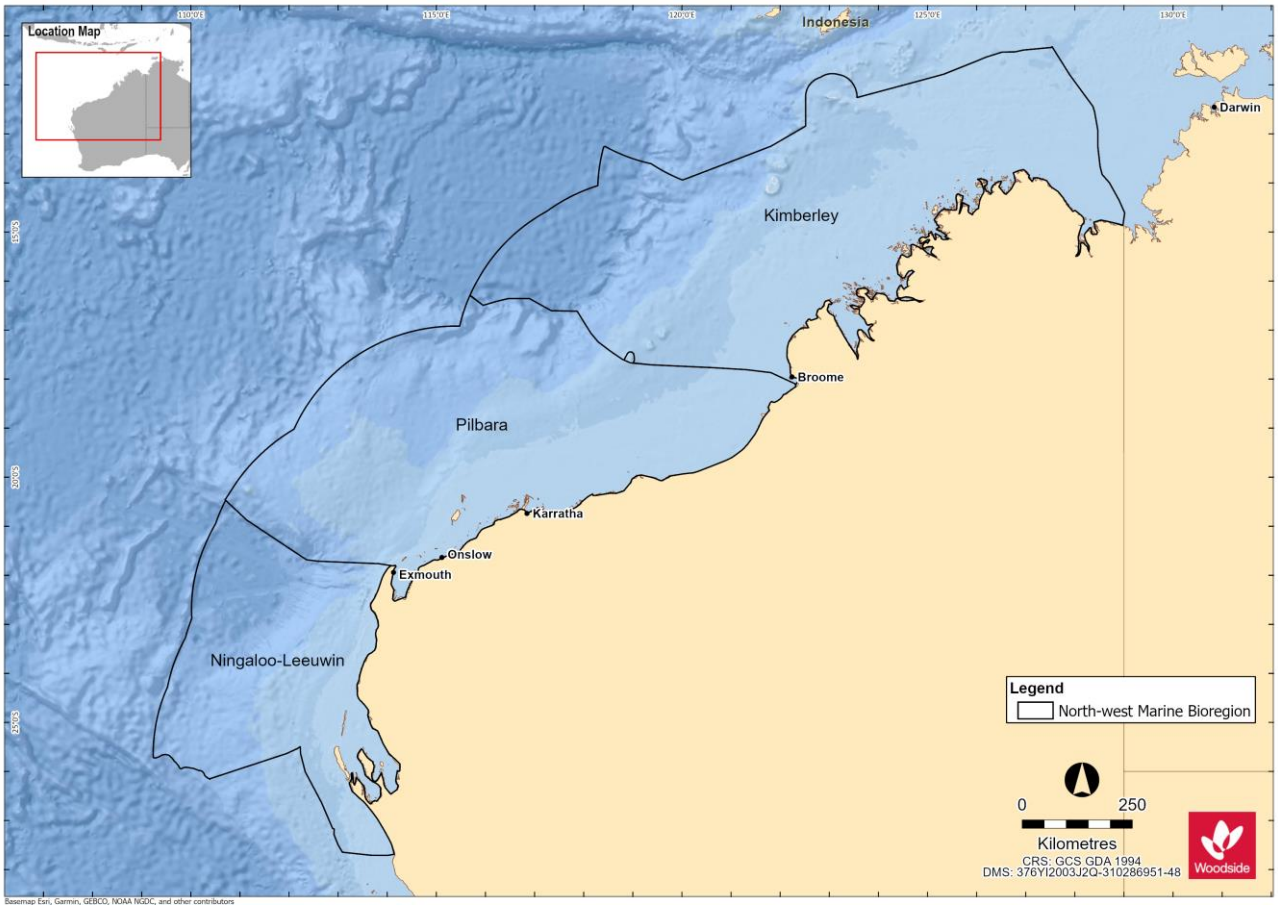

Figure 2-1. The marine systems of the North-west Marine Region (NWMR)

Table 2-2. Key characteristics of the Marine Systems of the NWMR

Note: Woodside areas align with the marine systems as described in DEWHA (2007a)

Marine System	Woodside Activity Area	Key Characteristics
Kimberley	Browse	Tropical monsoonal climate Strong influence from Indonesian Throughflow Predominantly tropical Indo-Pacific species Subject to episodic offshore cyclonic activity, rarely crossing the coast Large tidal regimes Freshwater input from terrestrial monsoonal run-off Turbid coastal waters (i.e. light limited systems) Dominated by shelf environments Predominantly hard substrates in inner to mid-shelf environments Includes a number of shelf-edge atolls (i.e. Scott Reef, Rowley Shoals)
Pilbara	North-west Shelf (NWS) / Scarborough	Tropical arid climate Transition between Indonesian Throughflow and Leeuwin Current dominated areas Predominantly tropical species High cyclone activity with frequent crossing of the coast Transitional tidal zone Internal tide activity Large areas of shelf and slope Dry coast with ephemeral freshwater inputs
Ningaloo-Leeuwin	North-west Cape	Subtropical arid climate Leeuwin Current consolidates Transitional tropical/temperate faunal area Higher water clarity in near-shore and offshore environments Narrow shelf and slope Marginal tidal range Seasonal wind forcing more dominant influence on marine environment

2.3 Meteorology and Oceanography

This section describes the general meteorological conditions and oceanography for the NWMR and provides further detail for the three Woodside activity areas. The NWMR is influenced by a complex system of ocean currents that change between seasons and between years, which generally result in its surface waters being warm and nutrient-poor, and of low salinity (DEWHA, 2007a). The mix of bathymetric features, complex topography and oceanography across the whole north-west marine environment has created and supports a globally important marine biodiversity hotspot (Wilson, 2013).

Table 2-3 NWMR climate and oceanography summary

Receptor	Description
Meteorology	
Seasonal patterns	The NWMR associated land mass of the Australian continent is characterised as a hot and humid summer climate zone. The broader NWMR experiences variations of a tropical or monsoon climate. In the far north-west (Kimberley), there is a hot summer season from December to March and a milder winter season between April and November. The Pilbara area is described as having a tropical arid climate with high cyclone activity (DEWHA, 2007a). The Pilbara and North-west Cape has a hot summer season from October to April and a milder winter season between May and September with transition periods between the summer and winter regimes.
Air temperature and rainfall	In summer (between September and March), maximum daily temperatures range from 31ºC to 33ºC. During winter (May to July), mean daily temperatures range from 18ºC to 31ºC (BOM[1]), refer to **Figure 2-2a** and **b**. Rainfall in the region typically occurs during the summer, with highest falls observed late in the season. This is often associated with the passage of tropical low-pressure systems and cyclones.
Wind	Wind patterns in north-west WA are dictated by the seasonal movement of atmospheric pressure systems. During summer, high-pressure cells produce prevailing winds from the north-west and south-west, which vary between 10 and 13 ms^{-1}. During winter, high-pressure cells over central Australia produce north-easterly to south-easterly winds with average speeds of between 6 and 8 ms^{-1}. Refer to **Figure 2-3a** and **b**.
Tropical cyclones	The NWS and Pilbara coast (within the NWMR) experiences more cyclonic activity than any other region of the Australian mainland coast (BOM, 2021a). Tropical cyclone activity typically occurs between November and April and is most frequent in the region during December to March (i.e. considered the peak period), with an average of about one cyclone per month (BOM, 2021a). Refer to **Figure 2-4**.
Oceanography	
Ocean temperature	Waters in NWMR are tropical year-round, with sea surface temperature in open shelf waters reaching ~26°C in summer and dropping to ~22°C in winter. Nearshore temperatures (as recorded for the NWS area) fluctuate more widely on an annual basis from ~17°C in winter to ~31°C in summer (Chevron Australia, 2010). Refer to **Figure 2-5a** and **b**.
Currents	The major surface currents influencing north-west WA flow towards the poles and include the Indonesian Throughflow, the Leeuwin Current, the South Equatorial Current, and the Eastern Gyral Current. The Ningaloo Current, the Holloway Current, the Shark Bay Outflow, and the Capes Current are seasonal surface currents in the region. Below these surface currents are several subsurface currents, the most important of which are the Leeuwin Undercurrent and the West Australian Current. These subsurface currents flow towards the equator in the opposite direction to surface currents (DEWHA, 2007a). Refer to **Figure 2-6**. The offshore waters of the NWMR are characterised by surface and subsurface boundary currents that flow along the continental shelf/slope and are enhanced through inflows from the ocean basins and are an important conduit for the poleward heat and mass transport along the west coast (Wijeratne *et al.*, 2018). Local physical oceanography is strongly influenced by the large-scale water movements of the Indonesian Throughflow (Liu *et al*. 2015; Sutton *et al*. 2019). Typically, a warm and well-mixed oligotrophic surface layer and a cooler and more nutrient rich, deeper water layer (Menezes *et al*. 2013).
Waves	Sea surface waves within the NWMR, generally reflect the direction of the synoptic winds and flow predominately from the south-west in the summer and east in winter (Pearce *et al.*, 2003). The NWS within the NWMR is a known area of internal wave generation. Both internal tides and internal waves are thought to be more prevalent during summer months due to the increased stratification of the water column (DEWHA, 2007a). Along the continental slope of the NWMR, strong internal waves and interaction between semi-diurnal tidal currents and seabed topographic features facilitates upwelling events and localised productivity events (Holloway, 2001).
Tides	Tides on the NWS (NWMR) increase as the water moves from deep towards the shallower coast. The highest offshore tides are experienced at the border of the Browse and Canning basins. The smallest tides are experienced at the Exmouth Plateau, near the coast. Tides of NWS (NWMR) are predominantly semi-diurnal (two highs and two lows each day), but with increasing importance of the diurnal (once per day) inequality at the southern and northern extremities of the NWS.

[1] http://www.bom.gov.au/jsp/ncc/climate_averages/temperature/index.jsp, accessed 21 January 2021.

Receptor	Description
	The tide range—represented by the Mean Spring Range (MSR)—increases northwards along the coast from 1.4 m at North-west Cape (Point Murat) to 7.7 m at Broome, before decreasing again (apart from local amplification in King Sound and Collier Bay) to about 5 m off Cape Londonderry. The MSR then increases again through Joseph Bonaparte Gulf and on up 5.5 m at Darwin (RPS, 2016).

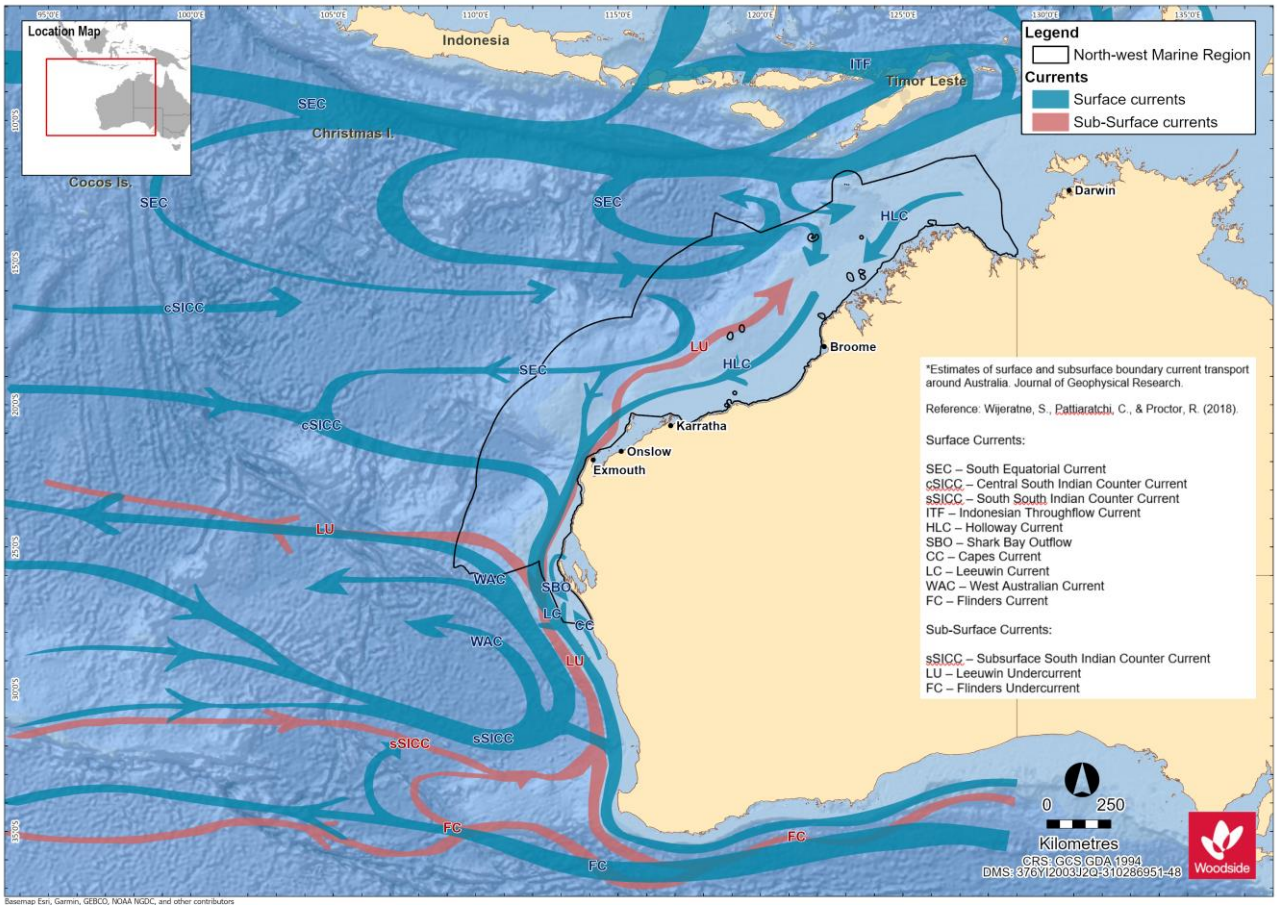

Figure 2-6. Ocean surface and sub-surface currents of the NWMR and wider region

2.3.1 Browse

Table 2-4 Summary meteorology and oceanography for Browse (refer to Appendix B for supporting metocean figures)

Receptor	Description
Meteorology	
Seasonal patterns	The Browse area overlapping the Kimberley marine system experiences tropical monsoon climate with two distinct seasons: the wet season from December to March and dry season from April to November.
Air temperature	The mean annual air temperature recorded at Troughton Island between 2010 and 2020 ranged from 30.1ºC in 2011 to 32.6ºC in 2016 and highest mean monthly air temperatures were recorded for the months of November and December (BOM, 2021b).
Rainfall	Rainfall recorded from Troughton Island in the Browse basin ranged from barely detectable (<1 mm) mean monthly level to >100 mm in December to March, with the highest rainfall recorded for January. Reflecting the wet monsoon season of the Kimberley marine system (BOM, 2021c).
Wind	The dry season experiences high pressure systems that bring east to south-easterly winds with average wind speeds during the season of approximately 16.6 km/hr and maximum wind gusts of 65 km/hr. In contrast the wet season brings predominately westerly winds with average wind speeds approximately 17 km/hr and maximum gusts exceeding 100 km/hr (generally associated with tropical cyclones (MetOcean Engineers, 2005).
Oceanography	
Currents	Surface currents exhibit seasonal directionality, with flow to the south-west during March to June and more variable outside this period (Woodside, 2019). This is consistent with the stronger Leeuwin Current flow during winter months, with more variable currents driven by local wind stress during periods of weaker Leeuwin Current flow.

2.3.2 North West Shelf / Scarborough

Table 2-5 Summary meteorology and oceanography for the North West Shelf and Scarborough (refer to Appendix B for supporting metocean figures)

Receptor	Description
Meteorology	
Seasonal patterns	The NWS and Scarborough areas experience the monsoonal climate of the wider NWMR with a distinct wet and dry seasonal regime and transitions periods between seasons.
Air temperature	Air temperatures as measured at the North Rankin A platform on NWS ranged from a maximum average of 39.5ºC in summer to a minimum average temperature of 15.6ºC in winter (Woodside, 2012).
Rainfall	Rainfall patterns annually reveal the wet season with highest rainfalls during the late summer, often associated with the passage of tropical low-pressure systems and cyclones. Rainfall in the dry season is typically extremely low. (Pearce *et al.* 2003).
Wind	Winds are typically from the southwest during the wet season (summer) and tending from the south-east during the dry season (winter). The summer south-westerly winds are driven by high pressure cells that pass from west to east over the Australian continent. During the winter period, the relative position of the high-pressure cells shifts further north, leading to prevailing south-easterly winds from the mainland (Pearce *et al.* 2003).
Oceanography	
Currents	The large-scale ocean currents of the NWMR, primarily the Indonesian Throughflow and Leeuwin Current (and Holloway Current), are the primary influence on the NWS and Scarborough areas. The ITF and Leeuwin Current are strongest during the late summer and winter and flow reversals to the north-east, typically short-lived and weak, when there are strong south-westerly winds can generate localised upwelling on the shelf edge (Holloway and Nye, 1985; James *et al.* 2004 and Condie *et al.* 2006).

2.3.3 North-west Cape

Table 2-6 Summary meteorology and oceanography for the North-west Cape (refer to Appendix B for supporting metocean figures)

Receptor	Description
Meteorology	
Seasonal patterns	The climate of the NWMR is dry tropical exhibiting a hot summer season and a mild winter season. There are often distinct transition periods between the summer and winter regimes, characterised by periods of relatively low winds.
Air temperature	Air temperatures in the North-west Cape area range from high summer temperatures (maximum average of 37.5ºC) and mild winter temperatures (minimum average of 12.2ºC).
Rainfall	Rainfall typically occurs during the summer, with highest rainfall during later summer and autumn, often associated with the passage of tropical low-pressure systems and cyclones. Rainfall is typically low in winter.
Wind	Winds vary seasonally, generally from the south-west quadrant during summer months and the south, south-east quadrant during the autumn and winter months. The summer south-westerly winds are driven by high pressure cells that pass from west to east over the Australian continent. Winds typically weaken and are more variable during the transitional period between the summer and winter seasons, generally between April to August.
Oceanography	
Currents	Surface currents exhibit seasonal directionality, with flow to the south-west during March to June and more variable outside this period (Woodside, 2016). This is consistent with the stronger Leeuwin Current flow during winter months, with more variable currents driven by local wind stress during periods of weaker Leeuwin Current flow.

2.4 Physical Environment of NWMR

Based on the Integrated Marine and Coastal Regionalisation of Australia (IMCRA) Version 4.0, there are eight provincial bioregions that occur within the NWMR, which are based on patterns of demersal fish diversity, benthic habitat and oceanographic data (Commonwealth of Australia, 2006), **Figure 2-7**. Of the eight provincial bioregions that occur within the NWMR, these include four offshore (~65% of total NWMR area) and four shelf (~35% of total NWMR area) bioregions (Baker *et al.,* 2008).

The NWMR is a tropical carbonate margin that comprises an extensive area of shelf, slope and abyssal plain/deep ocean floor, as well as complex areas of bathymetry such as plateau, terraces and major canyons (Harris *et al.*, 2005). A series of reefs are located on the outer shelf/slope of the NWMR, including Ashmore, Cartier, Scott and Seringapatam reefs (Baker *et al*., 2008). The distribution of seafloor geomorphic features has been systematically mapped over much of the Australian margin and adjacent seafloor. The mapped area can be divided into 10 geomorphic regions, of which the NWMR overlays two; the Western Margin and Northern Margin (Harris *et al.*, 2005). Most of the region consists of either continental slope (61%) or continental shelf (28%) (DEWHA, 2007a) with more than 40% of the NWMR having a water depth less than 200 m. The shallow shelf is contrasted by features such as the Cuvier and Argo abyssal plains, which reach depths more than five kilometres. A unique feature of the region is the significant narrowing of the continental shelf around North-west Cape (approximately 7 km wide) from the broad continental shelf in the north of the region (approximately 400 km wide at Joseph Bonaparte Gulf) (DEWHA, 2007a), **Figure 2-8.**

The geological history of the region, as well as its geomorphology and oceanography, has influenced the composition and distribution of sediments (DEWHA, 2007a). The sedimentology of the NWMR is dominated by marine carbonates, which show a broad zoning and fining with water depth. Main trends of the NWMR sediments include a tropical carbonate shelf that is dominated by sand and gravel, an outer shelf/slope zone that is dominated by mud and a relatively homogenous rise and abyssal plain/deep ocean floor that is dominated by non-carbonate mud (Baker *et al.,* 2008), **Figure 2-9**.

The distribution and resuspension of sediments on the inner shelf is strongly influenced by the strength of tides across the continental shelf as well as episodic events such as cyclones. Further offshore, on the mid to outer shelf and on the slope itself, sediment movement is primarily influenced by ocean currents and internal tides (DEWHA, 2007a).

This variation in bathymetry and interactions with oceanographic processes provides a diversity of habitats to marine fauna and flora within the NWMR.

2.5 Air quality

The ambient air quality of all three marine regions is largely unpolluted due to the extent of the open ocean area, the activities currently carried out in each and the relative remoteness of each region.

3.2 Part 13 Statutory Instruments for EPBC Act Listed Threatened and Migratory Species in the NWMR, SWMR and NMR

A screening process was conducted to identify which EPBC Act listed threatened and migratory species, and associated Part 13 statutory instruments, are relevant in the context of the assessment of impacts and risks associated with petroleum activities in each of the Woodside activity areas, using the following criteria:

- overlap between the Woodside activity areas with habitat critical for the survival of marine turtles, and with BIAs (overlapping the marine environment) for any listed threatened species as reported in the PMST searches;
- published literature, unpublished reports and/or credible anecdotal information (e.g. feedback from stakeholders) indicating species presence/occurrence within the Woodside activity areas;
- temporal overlap between the likely timing of petroleum activities and peak periods for key behaviours (e.g. breeding, nesting, calving, resting, foraging, migration); and
- environmental aspects associated with petroleum activities have been identified as a key threat to a species in a Part 13 statutory instrument (e.g. anthropogenic noise, light emissions, marine debris).

Relevant EPBC Act threatened and migratory species and their Part 13 statutory instruments are listed in **Table 3-4**. For the full list of EPBCA Act listed species for each marine bioregion refer to the PMST reports (**Appendix A**).

Table 3-4 Summary of MNES identified by the EPBC Act Protected Matters Search Tool (PMST) to be considered for impact or risk evaluation for Woodside operations

Species	EPBC Act Part 13 Statutory Instrument
All vertebrate marine fauna	Threat Abatement Plan for the impacts of marine debris on vertebrate marine life (Commonwealth of Australia, 2018)
Marine Mammals	
Blue whale	Conservation Management Plan for the Blue Whale: A Recovery Plan under the *Environment Protection and Biodiversity Conservation Act 1999* 2015–2025 (Commonwealth of Australia, 2015a)
Southern right whale	Conservation Management Plan for the Southern Right Whale: A Recovery Plan under the *Environment Protection and Biodiversity Conservation Act 1999* 2011–2021 (DSEWPAC, 2012d)
Sei whale	Conservation Advice *Balaenoptera borealis* sei whale (Threatened Species Scientific Committee, 2015a)
Humpback whale	Conservation Advice *Megaptera novaeangliae* humpback whale (Threatened Species Scientific Committee, 2015b)
Fin whale	Conservation Advice *Balaenoptera physalus* fin whale (Threatened Species Scientific Committee, 2015c)
Australian sea lion	Recovery Plan for the Australian Sea Lion (*Neophoca cinerea*) 2013 (DSEWPAC, 2013a) (due to expire in October 2023) Conservation Advice *Neophoca cinerea* Australian Sea Lion (Threatened Species Scientific Committee, 2020a) (in effect under the EPBC Act from 23-Dec-2020)
Marine Reptiles	
All marine turtle species (loggerhead, green, leatherback, hawksbill, flatback, olive ridley)	Recovery Plan for Marine Turtles in Australia 2017-2027 (Commonwealth of Australia, 2017)
Short-nosed sea snake	Approved Conservation Advice for *Aipysurus apraefrontalis* (Short-nosed Sea Snake) (DSEWPAC, 2011a)
Leaf-scaled sea snake	Approved Conservation Advice for *Aipysurus foliosquama* (Leaf-scaled Sea Snake) (DSEWPAC, 2011b)
Fishes, Sharks, Rays and Sawfishes	
Grey nurse shark (west coast population)	Recovery Plan for the Grey Nurse Shark (*Carcharias taurus*) 2014 (DOE, 2014)
White shark	Recovery Plan for the White Shark (*Carcharodon carcharias*) 2013 (DSEWPAC, 2013b)
Whale shark	Conservation Advice *Rhincodon typus* whale shark (Threatened Species Scientific Committee, 2015d)
All sawfishes (largetooth, green, dwarf, speartooth, narrow)	Sawfish and River Sharks Multispecies Recovery Plan (Commonwealth of Australia, 2015b)

Species	EPBC Act Part 13 Statutory Instrument
Seabirds	
Migratory seabird species	Draft Wildlife Conservation Plan for Migratory Seabirds (Commonwealth of Australia, 2019)
Southern giant petrel	National recovery plan for threatened albatrosses and giant petrels 2011–2016 (DSEWPAC, 2011c)
Indian yellow-nosed albatross	National recovery plan for threatened albatrosses and giant petrels 2011–2016 (DSEWPAC, 2011c)
Abbott's booby	Conservation Advice for the Abbott's booby - *Papasula abbotti* (Threatened Species Scientific Committee, 2020b)
Australian fairy tern	Approved Conservation Advice for *Sterna nereis nereis* (Fairy Tern) (DSEWPAC, 2011d)
Australian lesser noddy	Conservation Advice *Anous tenuirostris melanops* Australian lesser noddy (Threatened Species Scientific Committee, 2015e)
Soft-plumaged petrel	Conservation Advice *Pterodroma mollis* soft-plumaged petrel (Threatened Species Scientific Committee, 2015f)
Shorebirds	
Migratory shorebird species	Wildlife Conservation Plan for Migratory Shorebirds (Commonwealth of Australia, 2015c)
Eastern curlew, far eastern curlew	Conservation Advice *Numenius madagascariensis* eastern curlew (DOE, 2015a)
Curlew sandpiper	Conservation Advice *Calidris ferruginea* curlew sandpiper (DOE, 2015b)
Great knot	Conservation Advice *Calidris tenuirostris* Great knot (Threatened Species Scientific Committee, 2016a)
Red knot, knot	Conservation Advice *Calidris canutus* Red knot (Threatened Species Scientific Committee, 2016b)
Bar-tailed godwit (*menzbieri*)	Conservation Advice *Limosa lapponica menzbieri* Bar-tailed godwit (northern Siberia) (Threatened Species Scientific Committee, 2016c)
Greater sand plover	Conservation Advice *Charadrius leschenaultii* Greater sand plover (Threatened Species Scientific Committee, 2016d)
Lesser sand plover	Conservation Advice *Charadrius mongolus* Lesser sand plover (Threatened Species Scientific Committee, 2016e)

4. HABITAT AND BIOLOGICAL COMMUNITIES

4.1 Regional context

The NWMR habitats range from nearshore benthic primary producer habitats such as seagrass beds, coral communities and mangrove forests, to offshore soft sediment seabed habitats and submerged and emergent reef systems. These habitats support biological communities that range from low density sessile and mobile benthos, such as sponges, molluscs and echinoids (with noted areas of sponge hotspot diversity) in offshore soft sediment habitat (DSEWPAC, 2012a) to complex, diverse, remote coral reef systems.

Benthic primary producer habitats, such as seagrass beds, coral communities and mangrove forests within the SWMR, are described as a mixture of tropical and temperate species, due to the seasonal influences of the tropical waters carried south by the Leeuwin Current and the temperate waters carried north by the Capes Current (DSEWPAC, 2012b).

The NMR shares similar habitat types to the NWMR. The predominant habitat of the region includes soft muddy sediments on relatively flat terrain. Other habitat types include seagrasses, reefs, shoals and coastal habitats such as mangroves and coastal wetlands (Rochester *et al.*, 2007).

The summary of key habitats and biological communities provided in the following sub-sections is focused on the primary features of relevance to the activity areas within the NWMR – primarily the offshore habitats of the continental shelf and slope, submerged shoals and banks, and remote oceanic reef systems of recognised conservation value.

4.2 Biological Productivity of NWMR

Primary productivity of the NWMR is generally low and appears to be largely driven by offshore influences (Brewer *et al.*, 2007), with periodic upwelling events and cyclonic influences driving coastal productivity with nutrient recycling and advection. Seasonal weather patterns also influence the delivery of nutrients from deep-water to shallow water. Cyclones and north-westerly winds during the North-west monsoon (approximately November–March) and the strong offshore winds of the South-east monsoon (approximately April–September) facilitate the upwelling and mixing of nutrients from deep-water to shallow water environments (Brewer *et al.*, 2007).

The Indonesian Throughflow (ITF) has an important effect on productivity in the northern areas of the Region. Generally, its deep, warm and low nutrient waters suppress upwelling of deeper comparatively nutrient-rich waters, thereby forcing the highest rates of primary productivity to occur at depths associated with the thermocline. When the ITF is weaker, the thermocline lifts bringing deeper, more nutrient-rich waters into the photic zone and hence resulting in conditions favourable to increased productivity (DEWHA, 2007a). Similarly, the Leeuwin Current has a significant role in determining primary productivity in the southern areas of the NWMR. As with the ITF, the overlying warm oligotrophic waters of the Leeuwin Current suppress upwelling. A subsurface chlorophyll maximum is therefore formed at a depth in the water column where nutrients and light are sufficient for photosynthesis to proceed. Seasonal changes in the strength of the Leeuwin Current influence primary productivity levels and seasonal interactions between the Leeuwin and Ningaloo currents in the south of the NWMR are believed to be particularly important (DEWHA, 2007a).

Internal tides (defined as internal waves generated by the barotropic tide) are a striking characteristic of many parts of the NWMR and are associated with highly stratified water columns. Internal waves (solitons), which can raise cooler, generally more nutrient rich water higher in the water column, are generated between water depths of 400 m and 1000 m where bottom topography results in a significant change in water depth over a relatively short distance. Cyclones are episodic events in the NWMR that contribute to spikes in productivity through enrichment of surface water layers due to enhanced vertical mixing of the water column. Temporary increases in primary productivity as a result of cyclones generally last between one and two weeks, and it is believed that the impacts of

cyclones are generally limited to waters less than 100 m deep and affect benthic communities more substantially than pelagic systems (DEWHA, 2007a).

Water depth also has a significant overriding influence over productivity in the marine environment, due to its influence on light availability. This is reflected by distinct onshore and offshore assemblages of major pelagic groups of phytoplankton, microzooplankton, mesoplankton and ichthyoplankton. Productivity booms are thought to be triggered by seasonal changes to physical drivers or episodic events, as detailed above, which result in rapid increases in primary production over short periods, followed by extended periods of lower primary production. The trophic systems in the NWMR are able to take advantage of blooms in primary production, enabling nutrients generated to be used by different groups of consumers over long periods (DEWHA, 2007a).

Little detailed information is available about the trophic systems in the NWMR. The utilisation of available nutrients is thought to differ between pelagic and benthic environments, influenced by water depth and vertical migration of some species groups in the water column. In the pelagic system, it is thought that approximately half of the nutrients available are utilised by microzooplankton (e.g. protozoa) with the remainder going to macro/meso-zooplankton (e.g. copepods). As primary and secondary consumers, gelatinous zooplankton (e.g. salps, coelenterates) and jellyfish are thought to play an important role in the food web, contributing a significant proportion of biomass in the marine system during and for periods after booms in primary productivity. Salps are semi-transparent, barrel-shaped marine animals that can reproduce quickly in response to bursts in primary productivity and provide a food source for many pelagic fish species (DEWHA, 2007a).

4.3 Planktonic Communities in the NWMR

The NWMR has two distinct phytoplankton assemblages; a tropical oceanic community in offshore waters and a tropical shelf community confined to the NWS (Hallegraeff, 1995). MODIS (Moderate Resolution Imaging Spectrometer) satellite datasets from the NWMR indicates that chlorophyll (and thus phytoplankton) levels are low in summer months (December to March) and higher in the winter months (Schroeder *et al.*, 2009). Low chlorophyll levels during summer months may be a result of lower plankton productivity during the wet season or lower nutrient inputs from warm surface waters dominant during summer. However, it is likely that much of the primary production is taking place below the surface, where the MODIS imagery does not penetrate (Schroeder *et al.*, 2009). The winter months are relatively cloud free and surface chlorophyll is high throughout most of the region.

Zooplankton and may include organisms that complete their lifecycle as plankton (e.g. copepods, euphausiids) as well as larval stages of other taxa such as fishes, corals and molluscs. Peaks in zooplankton such as mass coral spawning events (typically in March and April) (Rosser and Gilmour, 2008) and fish larvae abundance (CALM, 2005a) can occur throughout the year. Spatial and temporal patterns in the distribution and abundance of macro-zooplankton on the North-west Shelf are influenced by sporadic climatic and oceanographic events, with large inter-annual changes in assemblages (Wilson *et al.*, 2003). Amphipods, euphausiids, copepods, mysids and cumaceans are among the most common components of the zooplankton in the region (Wilson *et al.*, 2003).

4.3.1 Browse

Phytoplankton within the Browse activity area is expected to reflect the conditions of the NWMR. There is a tendency for offshore phytoplankton communities in the NWMR to be characterised by smaller taxa (e.g. bacteria), whereas shelf waters are dominated by larger taxa such as diatoms (Hanson *et al.*, 2007).

Zooplankton within the activity area may include organisms that complete their lifecycle as plankton (e.g. copepods, euphausiids) as well as larval stages of other taxa such as fishes, corals and molluscs. Peaks in zooplankton such as mass coral spawning events (typically in March and April) (Rosser and Gilmour, 2008; Simpson *et al.*, 1993) and fish larvae abundance (CALM, 2005a) can occur throughout the year.

The influence of the Indonesian Throughflow restricts upwelling across the Kimberley System (approximately equates to the Browse activity area). However, small-scale topographically associated current movements and upwellings are thought to occur, which inject nutrients into specific locations within the system and result in 'productivity hot-spots'. Similarly, internal waves, generated at the shelf break (e.g. west of Browse Island and around submerged cliffs) play a role in making nutrients available in the photic zone. Productivity within shallow nearshore waters is driven primarily by tidal movement and terrestrial runoff whereby nutrients are mixed by tidal action and new inputs of organic matter come from the land.

4.3.2 North-west Shelf / Scarborough

Plankton communities within the NWS / Scarborough activity area are expected to reflect conditions of the NWMR. Within the Pilbara system of the NWMR (approximately equates to the NWS / Scarborough activity area). Internal tides along the NWS and Exmouth Plateau result in the drawing of deeper cooler waters into the photic zone, stirring up nutrients and triggering primary productivity. Broadly the greatest productivity within this sub-system is found around the 200 m isobath associated with the shelf break.

4.3.3 North-west Cape

Waters of the North-west Cape experience a relatively high diversity of phytoplankton groups including diatoms, coccolithophorids and dinoflagellates. During the warmer months blooms of *Trichodesmium* occur in the region, these have been observed particularly on the frontal systems around Point Murat (Heyward *et al*., 2000).

Average Leeuwin Current phytoplankton biomass is characteristic of low productivity oceanic waters like the Indian, Pacific and Atlantic Oceans (Hanson *et al.*, 2005). However, the Canyons linking the Cuvier Abyssal Plain and Cape Range Peninsula KEF are connected to the Commonwealth waters adjacent to Ningaloo Reef, and may also have connections to Exmouth Plateau. The canyons are thought to interact with the Leeuwin Current to produce eddies inside the heads of the canyons, resulting in waters from the Antarctic intermediate water mass being drawn into shallower depths and onto the shelf (Brewer *et al.* 2007). These waters are cooler and richer in nutrients and strong internal tides may also aid upwelling at the canyon heads (Brewer *et al.* 2007). The narrow shelf width (about 10 kilometres) near the canyons facilitates nutrient upwelling and relatively high productivity. This high primary productivity leads to high densities of primary consumers, such as micro and macro-zooplankton, such as amphipods, copepods, mysids, cumaceans, euphausiids (Brewer *et al.*, 2007).

4.4 Habitats and Biological Communities in the NWMR

4.4.1 Offshore Habitats and Biological communities

The NWMR has a large area of continental shelf and continental slope, with a range of bathymetric features such as canyons, plateaus, terraces, ridges, reefs, banks and shoals. The marine environment in this region is typified by tropical to sub-tropical marine ecosystems with diverse habitats from soft sediments, canyons, remote coral reefs and limestone pavement.

The key habitats and biological communities representative of the broader NWMR are summarised in **Table 4-1**.

The key habitats and biological communities representative of the broader SWMR and NMR are summarised in **Table 4-2** and **Table 4-3**.

4.4.2 Shoreline habitats and biological communities

The NWMR encompasses offshore and coastal waters, islands and mainland shoreline habitats typified by mangroves, tidal flats, saltmarshes, sandy beaches, and smaller areas of rocky shores. Each of these shoreline types has the potential to support different flora and fauna assemblages due to the different physical factors (e.g. waves, tides, light, etc.) influencing the habitat.

The key shoreline habitats representative of the broader NWMR are summarised in **Table 4-1**.

The key shoreline habitats representative of the broader SWMR and NMR are summarised in **Table 4-2** and **Table 4-3**.

Table 4-1 Habitats and biological communities within the NWMR

Habitat/Community	Browse	NWS / Scarborough	North-west Cape	Reference
Offshore habitats and biological communities				
Soft sediment with infauna	The offshore environment of the NWMR comprises predominately of seabed habitats dominated by soft sediments (sandy and muddy substrata with occasional patches of coarser sediments) and sparse benthic biota. The benthic communities inhabiting the predominantly soft, fine sediments of the offshore habitats are characterised by infauna such as polychaetes, and sessile and mobile epifauna such as crustacea (shrimp, crabs and squat lobsters) and echinoderms (starfish, cucumbers).The density of benthic fauna is typically lower in deep-sea sediment habitats (greater than 200 m) than in shallower coastal sediment habitats, but the diversity of communities may be similar.			
Soft sediment with hard substrate outcropping	A unique seafloor feature combining both soft sediment and hard substrates, including outcrops, terraces, continental slope, and escarpments. This habitat is found in offshore areas of the NWMR, often associated with key ecological features such as the Ancient coastline at 125 m depth contour KEF.			**Section 9**
	Ancient Coastline at 125 m Depth Contour KEF Continental Slope Demersal Fish Communities KEF	Ancient Coastline at 125 m Depth Contour KEF Continental Slope Demersal Fish Communities KEF	Ancient Coastline at 125 m Depth Contour KEF Continental Slope Demersal Fish Communities KEF	**Section 9**
Coral Reef	Coral reef habitats within the NWMR have a high species diversity that includes corals, and associated reef species such as fishes, crustaceans, invertebrates, and algae. Coral reef habitats of the offshore environment of the NWMR include remote oceanic reef systems, large platform reefs, submerged banks and shoals.			
	Browse Island Scott Reef Seringapatam Reef Ashmore Reef Cartier Island Hibernia Reef	Rowley Shoals (including Mermaid Reef, Clerke Reef, Imperieuse Reef) Glomar Shoal Rankin Bank	-	**Section 10**
Seagrass and Macroalgae communities	Seagrass beds and benthic macroalgae reefs are a main food source for many marine species and also provide key habitats and nursery grounds (Heck Jr. *et al.*, 2003; Wilson *et al.*, 2010). In the northern half of Western Australia, these habitats are restricted to sheltered and shallow waters, including around offshore reef systems, due to large tidal movement, high turbidity, large seasonal freshwater run-off and cyclones.			
	Scott Reef Seringapatam Reef Ashmore Reef	Rowley Shoals (including; Mermaid Reef, Clerke Reef, Imperieuse Reef)		**Section 10**
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water, by passing the water over specialised filtration structures (DEWHA, 2008). Filter feeders generally live in areas that have strong currents and hard substratum, often associated with deeper environments of the shoals and banks in the offshore NWMR.			
	Lower outer reef slopes of the oceanic reef	Glomar Shoal Rankin Bank	Cape Range canyon system	**Section 10**

Habitat/Community	Browse	NWS / Scarborough	North-west Cape	Reference
	systems such as Scott Reef	Ancient coastline at 125 m depth contour KEF		
Sandy Beaches	Sandy beaches are dynamic environments, naturally fluctuating in response to external forcing factors (e.g. waves, currents, etc). Sandy beaches vary in length, width and gradient, and in sediment type, composition, and grain size throughout the NWMR, being found around islands and reefs in the offshore areas of the region.			
	Browse Island Scott Reef (Sandy Islet) Ashmore Reef Cartier Island	Montebello Islands Lowendal Islands Barrow Island	Muiron Islands	**Section 10**
Nearshore/coastal habitats and biological communities				
Coral Reef	Coral reef habitats typically found in nearshore regions of the NWMR include the fringing reefs around coastal islands and the mainland shore.			
	Kimberley East Holothuria and Long reefs Bonaparte and Buccaneer Archipelagos Montgomery Reef Adele complex (Beagle, Mavis, Albert, Churchill reefs, Adele Island)	Dampier Archipelago Montebello, Lowendal and Barrow Island Groups	Ningaloo Reef Exmouth Gulf Shark Bay	**Section 10**
Seagrass and Macroalgae communities	Seagrass beds and benthic macroalgae reefs are a main food source for many marine species and also provide key habitats and nursery grounds (Heck Jr. *et al.*, 2003; Wilson *et al.*, 2010). In the nearshore areas of the NWMR, these habitats are restricted to sheltered and shallow waters due to large tidal movement, high turbidity, large seasonal freshwater run-off and cyclones. These areas include in bays and sounds and around reef and island groups.			
	King Sound	Roebuck Bay Dampier Archipelago Montebello, Lowendal and Barrow Island Groups	Ningaloo Reef Exmouth Gulf Shark Bay	**Section 10**
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water, by passing the water over specialised filtration structures (DEWHA, 2007a). Filter feeders generally live in areas that have strong currents and hard substratum. Conversely, higher diversity infauna are mainly associated with soft unconsolidated sediment and infauna communities are considered widespread and well represented along the continental shelf and upper slopes of the NWMR. In nearshore areas of the NWMR, these species are generally found around reef systems.			
	-	Deeper habitats of Rankin Bank and Glomar Shoal	Deeper habitats of Ningaloo Reef and the protected sponge zone in the south	

Habitat/Community	Browse	NWS / Scarborough	North-west Cape	Reference
Mangroves	Mangroves grow in intertidal mud and sand, with specially adapted aerial roots (pneumatophores) that provide for gas exchange during low tide (McClatchie *et al.*, 2006). Mangrove forests can help stabilise coastal sediments, provide a nursery ground for many species of fish and crustacean, and provide shelter or nesting areas for seabirds (McClatchie *et al.*, 2006). Mangroves are confined to shoreline habitats, in nearshore areas of the NWMR.			
	Dampier Peninsula (including Carnot Bay, Beagle Bay and Pender Bay)	Pilbara Coastline (including; Ashburton River Delta, Coolgra Point, Robe River Delta, Yardie Landing, Yammadery Island and the Mangrove Islands) Montebello, Lowendal and Barrow Island Groups Roebuck Bay	Shark Bay Mangrove Bay, Cape Range Peninsula Exmouth Gulf	
Saltmarshes	Saltmarshes communities are confined to shoreline habitats and are typically dominated by dense stands of halophytic plants such as herbs, grasses, and low shrubs. The diversity of saltmarsh plant species increases with increasing latitude (in contrast to mangroves). The vegetation in these environments is essential to the stability of the saltmarsh, as they trap and bind sediments. The sediments are generally sandy silts and clays and can often have high organic material content.			
	-	Eighty Mile Beach Roebuck Bay	Shark Bay	
Sandy Beaches	Sandy beaches are dynamic environments, naturally fluctuating in response to external forcing factors (e.g. waves, currents, etc). Sandy beaches vary in length, width and gradient, and in sediment type, composition, and grain size throughout the NWMR. Sandy beaches are important for both resident and migratory seabirds and shorebirds and can also provide an important habitat for turtle nesting and breeding. They are located along many coastlines of the nearshore environments of the NWMR.

Table 4-2 Habitats within the SWMR

Habitat/Community	Location
Offshore	
Soft sediment with infauna	Most of the SWMR seafloor is composed of soft unconsolidated sediments, but due to large variations in bathymetry there are marked differences in sedimentary composition and benthic assemblage structure across the region. Despite the prevalence of these habitats in the SWMR, very little is known about the composition or distribution of the region's sedimentary infauna (DEWHA, 2008b)
Soft sediment with hard substrate outcropping	A unique seafloor feature combining both soft sediment and hard substrates, including outcrops, terraces, continental slope, and escarpments.
	Perth Canyon Marine Park Ancient coastline at 90-120 m depth contour KEF Diamantina Fracture Zone Naturaliste Plateau
Coral Reef	To date, studies and understanding of the corals within the SWMR have concentrated on the shallow water areas in State Waters. Within the deeper Commonwealth waters of the SWMR little is known of the distribution of corals.
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water, by passing the water over specialised filtration structures (DEWR, 2007). Filter feeders generally inhabit deeper habitat (below the photic zone) that have strong currents and hard substratum
	Ancient coastline at 90-120 m depth Diamantina Fracture Zone Naturaliste Plateau Perth Canyon Marine Park South-west Corner Marine Park
Nearshore	
Coral Reef	The northern extent of the SWMR coincides loosely with the disappearance of abundant and diverse coral from coastal habitats. To the south of Shark Bay, abundant corals occur predominantly around offshore islands, with corals at inshore sites occurring in very isolated patches of non-reef coral communities, usually of reduced species richness.
	Houtman Abrolhos Islands Rottnest Island
Seagrass and Macroalgae communities	Within the SWMR, macroalgae and seagrass communities are noted for their extent, species richness and endemism. The clear waters of the region allow light to reach greater depths, with some species found at much greater depths than usual (down to 120 m) (DEWR, 2007). Of the known species there are more than 1000 species of macro-algae and 22 species of seagrass consisting of tropical and temperate species. Seagrass and macro-algae occur in areas with sheltered bays and in the inter-reef lagoons along exposed sections of the coast.
	Houtman Abrolhos Islands Jurien Marine Park Shoalwater Islands Marine Park Geographe Marine Park Cockburn Sound Rottnest Island

Habitat/Community	Location
	Commonwealth marine environment within and adjacent to the west-coast inshore lagoons KEF Commonwealth marine environment within and adjacent to Geographe Bay KEF Commonwealth marine environment surrounding the Recherche Archipelago KEF
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water, by passing the water over specialised filtration structures (DEWR, 2007). Filter feeders generally live in areas that have strong currents and hard substratum.
	Houtman Abrolhos Islands Recherche Archipelago
Mangroves	Mangroves grow in intertidal mud and sand, with specially adapted aerial roots (pneumatophores) that provide for gas exchange during low tide (McClatchie *et al.*, 2006). Mangrove forests can help stabilise coastal sediments, provide a nursery ground for many species of fish and crustacean, and provide shelter or nesting areas for seabirds (McClatchie *et al.*, 2006). Mangroves are confined to shoreline habitats, in nearshore areas of the SWMR.
	Houtman Abrolhos Islands
Sandy Beaches	Sandy beaches within the SWMR are important for both resident and migratory seabirds and shorebirds and can also host breeding populations of the Australian sea lion. They are found along many coastlines of the nearshore environments of the SWMR. In addition to this, beaches in the SWMR provide a variety of socio-economic values including tourism, commercial and recreational fishing, and support other recreational activities.
	Houtman Abrolhos Islands Marmion Marine Park Ngari Capes Marine Park Walpole and Nornalup Inlets Marine Park

Table 4-3 Habitats and Biological Communities within the NMR

Habitat/Community	Location
Offshore habitats and biological communities	
Soft sediment with infauna	Most of the offshore environment of the NMR is characterised by relatively flat expanses of soft sediment seabed. The soft sediments of the region are characterised by moderately abundant and diverse communities of infauna and mobile epifauna dominated by polychaetes, crustaceans, molluscs, and echinoderms.
Soft sediment with hard substrate outcropping	A unique seafloor feature combining both soft sediment and hard substrates, including outcrops, terraces, continental slope, and escarpments. The variability in substrate composition may contribute to the presence of unique ecosystems. Species present include sponges, soft corals and other sessile filter feeders associated with hard substrate sediments.
	Carbonate bank and terrace system of the Van Diemen Rise KEF Pinnacles of the Bonaparte Basin KEF
Coral Reef	Offshore coral reefs within the NMR is generally associated with a series of submerged shoals and banks. The shoals/banks in the region support tropical marine biota consistent with that found on emergent reef systems of the Indo West Pacific region such as Ashmore Reef, Cartier Island, Seringapatam Reef and Scott Reef (Heyward *et al.,* 1997)
	Pinnacles of the Bonaparte Basin KEF Evans Shoal Tassie Shoal Blackwood Shoal
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water, by passing the water over specialised filtration structures (DEWHA, 2007b). Filter feeders generally live in areas that have strong currents and hard substratum and typically associated with the deeper habitats of the submerged shoals and banks, and canyon features.
	Carbonate bank and terrace system of the Van Diemen Rise KEF Pinnacles of the Bonaparte Basin KEF Tributary Canyons of the Arafura Depression KEF Evans Shoal Tassie Shoal Goodrich Bank
Nearshore	
Coral Reef	Within the NMR corals occur both as reefs and in non-reef coral communities. Nearshore reefs include patch reefs and fringing reefs sparsely distributed within the region. Coral reefs within the NMR provides breeding and aggregation areas for many fish species including mackerel and snapper and offer refuges for sea snakes and apex predators such as sharks.
	Submerged coral reefs of the Gulf of Carpentaria KEF Darwin Harbour
Seagrass and Macroalgae communities	Seagrasses provide key habitats in the NMR. They stabilise coastal sediments and trap and recycle nutrients. They provide nursery grounds for commercially harvested fish and prawns and provide feeding grounds for dugongs and green turtles. Seagrass distribution in the region is largely associated with sheltered small bays and inlets including shallow waters surrounding inshore islands.
	Field Island The mainland coastline adjacent to Kakadu National Park

Habitat/Community	Location
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals, and gorgonians are animals that feed by actively filtering suspended matter and food particles from water, by passing the water over specialised filtration structures (DEWHA, 2007b). Filter feeders generally live in areas that have strong currents and hard substratum.
	Cape Helveticus
Mangroves	Mangroves grow in intertidal mud and sand, with specially adapted aerial roots (pneumatophores) that provide for gas exchange during low tide (McClatchie *et al.*, 2006). Mangroves provide habitat for waterbirds and support many commercially and recreationally important fish and crustacean species for parts of their life cycles. They buffer the coast from large tidal movements, storm surges and flooding.
	Tiwi Islands Darwin Harbour The mainland coastline adjacent to the Daly River
Sandy Beaches	Sandy beaches vary in length, width and gradient, and in sediment type, composition, and grain size throughout the NMR and are important for both resident and migratory seabirds and shorebirds. Sandy beaches can also provide an important habitat for turtle nesting. They are located along many coastlines of the nearshore environments of the islands and mainland shores of the NMR.
	Tiwi Islands Cobourg Peninsula Joseph Bonaparte Gulf

5. FISHES, SHARKS AND RAYS

5.1 Regional Context

Western Australian waters provide important habitat for listed fishes, sharks, and rays including areas that support key life stages such as breeding, foraging, and migration routes for fish species. Pelagic and demersal fishes occupy a range of habitats throughout each of the regions, from coral reefs to open offshore waters, and are an extremely important component of ecosystems, providing a link between primary production and higher predators, with many species being of conservation value and important for commercial and recreational fishing.

The fish fauna in the NWMR is diverse. Of the approximately 500 shark species found worldwide, 94 are found in the region (DEWHA, 2008). Approximately 54 species of syngnathids (seahorses, seadragons, pipehorses and pipefishes) and one species of solenostomids (ghostpipefishes) are also known to occur in the NWMR or adjacent State waters (DSEWPAC, 2012a).

The fish fauna of the SWMR includes more than 900 species occupying a large variety of habitats. However, only three species of bony fishes known to occur in the region are listed under the EPBC Act as threatened or marine species, and seven listed species of shark (DSEWPAC, 2012b).

The NMR is considered an important area for the sawfish and river shark species group, with five species of sawfishes and river sharks listed under the EPBC Act known to occur in the region (DSEWPAC, 2012c). Approximately 28 species of syngnathids and two species of solenostomids are listed marine and known to occur in the NMR, however there is a paucity of knowledge on the distribution, relative abundance and habitats of these species in the region (DEWHA, 2008).

The following sections focus on the fish species (including sharks and rays) listed as threatened or migratory that are known to occur within the NWMR. In addition, listed, conservation dependent fish and shark species for the NWMR are described. A detailed account of commercial and recreational fisheries that operate in the region is provided in **Section 11**.

Table 5-1 outlines the threatened and migratory fish species that may occur within the NWMR, with their conservation status and relevant recovery plans and/or conservation advice. **Table 5-2** provides information for species of fish that are listed as conservation dependent that may occur within the NWMR, NMR and SWMR. Note that currently there are no approved Conservation Advices in place for any of these five species.

Table 5-1 Fish species (including sharks and rays) identified by the EPBC Act PMST for the NWMR

Species Name	Common Name	*Environment Protection and Biodiversity Conservation Act 1999*			WA *Biodiversity Conservation Act 2016*	EPBC Act Part 13 Statutory Instrument

Table 5-2 EPBC Act listed Conservation Dependent species of fishes and sharks that may occur in the NWMR, NMR and SWMR

Species Name	Common Name	Likely Occurrence / Distribution	Listing Advice
Hoplostethus atlanticus	Orange roughy, Deep-sea perch, Red roughy	SWMR	No conservation listing advice for this species. Refer to the Marine bioregional plan for the SWMR (DSEWPAC, 2012b) for further information
Thunnus maccoyii	Southern bluefin tuna	NWMR and SWMR	Threatened Species Scientific Committee (2010)
Sphyrna lewini	Scalloped hammerhead	NWMR, NMR and SWMR	Threatened Species Scientific Committee (2018)
Centrophorus zeehaani	Southern dogfish, Endeavour dogfish, Little gulper shark	SWMR	Threatened Species Scientific Committee (2013)
Galeorhinus galeus	School shark, Eastern school shark, Snapper shark, Tope, Soupfin shark	SWMR	Threatened Species Scientific Committee (2009)

5.2 Protected Sharks, Sawfishes and Rays in the NWMR

The EPBC Act Protected Matters search (**Appendix A**) identified seven species of shark and five species of river shark or sawfish listed as threatened and/or migratory within the NWMR. In addition, two species of ray (the reef manta ray and giant manta ray) are listed as migratory within the region (refer **Table 5-2**).

5.2.1 Sharks and Sawfishes

The shark species known to occur within the NWMR include: the whale shark, grey nurse shark, white shark, shortfin mako, and longfin mako (**Table 5-2**).

Five species of river shark or sawfish known to occur in the NWMR and include: the narrow sawfish, northern river shark, freshwater sawfish, green sawfish and dwarf sawfish (**Table 5-2**).

There are identified BIAs within the NWMR for the whale shark, freshwater sawfish, green sawfish, and dwarf sawfish (refer **Section 5.3.2**).

Table 5-2 Information on the threatened shark and sawfish species within the NWMR

Species	Preferred Habitat and Diet	Habitat Location
Whale shark	Preferred habitat: They have a widespread distribution in tropical and warm temperate seas, both oceanic and coastal (Last and Stevens, 2009). The species is widely distributed in Australian waters. Diet: Whale sharks are planktivorous sharks and feed on a variety of planktonic organisms including krill, jellyfish, and crab larvae (Last and Stevens, 2009).	Ningaloo Reef is the main known aggregation site for whale sharks in Australian waters and has the largest density of whale sharks per kilometre in the world (Martin, 2007). Refer **Table 5-3** for the BIA summary for the whale shark.
Grey nurse shark (west coast population)	Preferred habitat: Most commonly found in temperate waters on, or close to, the bottom of the continental shelf, from close inshore to depths of about 200 m (McAuley, 2004). Diet: A variety of teleost and elasmobranch fishes and some cephalopods (Gelsleichter *et al.*, 1999; Smale, 2005).	Details of movement patterns of the western sub-population are unclear (McAuley, 2004) and key aggregation sites have not been formally identified within the NWMR (Chidlow *et al.*, 2006). The NWMR represents the northern limit of the west coast population.

Species	Preferred Habitat and Diet	Habitat Location
White shark	Preferred habitat: The species typically occurs in temperate coastal waters between the shore and the 100 m depth contour; however, adults and juveniles have been recorded diving to depths of 1000 m (Bruce *et al.*, 2006; Bruce, 2008). Diet: Smaller white sharks (less than 3 m in length) feed primarily on teleost and elasmobranch fishes, broadening their diet as larger sharks to include marine mammals (Last and Stevens, 2009).	There are no known aggregation sites for white sharks in the NWMR, and this species is most often found south of North-west Cape, in low densities (DSEWPAC, 2012a). Given the migratory nature of the species, most likely has a broad distribution within the NWMR. No BIAs identified for NWMR.
Shortfin mako	Preferred habitat: The shortfin mako shark is a pelagic species with a circumglobal, wide-ranging oceanic distribution in tropical and temperate seas (Mollet *et al.*, 2000). Tagging studies indicate shortfin makos spend most of their time in water less than 50 m deep but with occasional dives up to 880 m (Abascal *et al.*, 2011; Stevens *et al.*, 2010). Diet: Feeds on a variety of prey, such as teleost fishes, other sharks, marine mammals, and marine turtles (Campana *et al.*, 2005).	Given the migratory nature of the species, most likely has a broad distribution within the NWMR. No BIAs identified for NWMR.
Longfin mako	Preferred habitat: A pelagic species with a wide-ranging oceanic distribution in tropical and temperate seas (Mollet *et al.*, 2000). Diet: Primarily teleost fishes and cephalopods (primarily squid) (Last and Stevens, 2009).	Records on longfin mako sharks are sporadic and their complete geographic range is not well known (Reardon *et al.*, 2006). Given the migratory nature of the species, most likely has a broad distribution within the NWMR. No BIAs identified for NWMR.
Mackerel/Porbeagle shark	Preferred habitat: The porbeagle shark primarily inhabits offshore waters around the edge of the continental shelf. They occasionally move into coastal waters, but these movements are temporary (Campana and Joyce, 2004; Francis *et al.*, 2002). The porbeagle shark is known to dive to depths exceeding 1300 m (Campana *et al.*, 2010; Saunders *et al.*, 2011). Diet: Primarily teleost fish, elasmobranchs, and cephalopods (primarily squid) (Joyce *et al.*, 2002; Last and Stevens, 2009).	In Australia, the species occurs in waters from southern Queensland to south-west Australia (Last and Stevens, 2009). Distribution within the NWMR is unknown, but there are several records for this species on the NWS in the Atlas of Living Australia (ALA).
Oceanic whitetip shark	Preferred habitat: The oceanic whitetip shark is globally distributed in warm-temperate and tropical oceans (Andrzejaczek *et al.*, 2018). The species may occur in tropical and sub-tropical offshore and coastal waters around Australia. They primarily occupy pelagic waters in the upper 200 m of the water column; however, they have been observed diving to depths of around 1000 m, potentially associated with foraging behaviour (Howey-Jordan *et al.*, 2013; D'Alberto *et al.*, 2017). The species is highly migratory, travelling large distances between shallow reef habitats in coastal waters and oceanic waters (Howey-Jordan *et al.*, 2013). The species does exhibit a strong preference for warm and shallow waters above 120 m. Diet: Opportunistic feeders and generally target a variety of finfishes and pelagic squid, depending on habitat. Target pelagics such as tuna in open ocean as noted by the large bycatch numbers in the long line fisheries.	Given the migratory nature of the species, most likely has a broad distribution within the NWMR. No BIAs identified for NWMR.

Species	Preferred Habitat and Diet	Habitat Location
Narrow sawfish	Preferred habitat[1]: Shallow coastal, estuarine, and riverine habitats, however it may occur in waters up to 40 m deep (D'Anastasi *et al.*, 2013). Diet: Shoaling fishes, such as mullet, as well as molluscs and small crustaceans (Cliff and Wilson, 1994).	Shallow coastal waters of the Pilbara and Kimberly coasts (Last and Stevens, 2009).
Northern river shark	Preferred habitat[1]: Rivers, tidal sections of large tropical estuarine systems and macrotidal embayments, as well as inshore and offshore marine habitats (Pillans *et al.*, 2009; Thorburn and Morgan, 2004). Adults have been recorded only in marine environments. Juveniles and sub-adults have been recorded in freshwater, estuarine and marine environments (Pillans *et al.*, 2009). Diet: Variety of fish and crustaceans (Stevens *et al.*, 2005)	Within the NWMR records have come from both the west and east Kimberley, including King Sound, the Ord and King rivers, West Arm of Cambridge Gulf and also from Joseph Bonaparte Gulf (Thorburn and Morgan, 2004; Stevens *et al.*, 2005; Thorburn, 2006; Field *et al.*, 2008; Pillans *et al.*, 2008, Whitty *et al.*, 2008; Wynen *et al.*, 2008).
Largetooth (Freshwater) sawfish	Preferred habitat: Sandy or muddy bottoms of shallow coastal waters, estuaries, river mouths and freshwater rivers, and isolated water holes. Diet: Shoaling fishes, such as mullet, as well as molluscs and small crustaceans (Cliff and Wilson, 1994).	Refer **Table 5-3** for the BIA summary for the freshwater sawfish.
Green sawfish	Preferred habitat[1]: Inshore coastal environments including estuaries, river mouths, embayments, and along sandy and muddy beaches, as well as offshore marine habitat (Stevens *et al.*, 2005; Thorburn *et al.*, 2003). Diet: Schools of baitfish and prawns (Poganoski *et al.*, 2002), molluscs and small crustaceans (Cliff and Wilson, 1994).	Refer **Table 5-3** for the BIA summary for the green sawfish.
Dwarf sawfish	Preferred habitat[1]: Shallow (2 to 3 m) silty coastal waters and estuarine habitats, occupying relatively restricted areas and moving only small distances (Stevens *et al.*, 2008) Diet: Shoaling fish such as mullet, molluscs, and small crustaceans (Cliff and Wilson, 1994).	Refer **Table 5-3** for the BIA summary for the dwarf sawfish.

1 Preferred habitat as described within the Sawfish and River Sharks Multispecies Recovery Plan (Commonwealth of Australia, 2015b).

5.2.2 Rays

Rays are commonly found in the NWMR. Two listed and migratory species of ray known to occur within the NWMR: the reef manta ray and giant manta ray.

No BIAs for either the reef or giant manta ray species have been identified in the NWMR.

Table 5-3 Information on migratory ray species within the NWMR

Species	Preferred Habitat and Diet	Habitat Location
Reef manta ray	Preferred habitat: The reef manta ray is commonly sighted within productive nearshore environments, such as island groups, atolls or continental coastlines. However, the species has also been recorded at offshore coral reefs, rocky reefs, and seamounts (Marshall *et al.*, 2009). Diet: Feed on planktonic organisms including krill and crab larvae.	A resident population of reef manta rays has been recorded at Ningaloo Reef. No BIAs identified for NWMR.
Giant manta ray	Preferred habitat: The species primarily inhabits near-shore environments along productive coastlines with regular upwelling, but they appear	The Ningaloo Coast is an important area for giant manta rays from March to August (Preen *et al.*, 1997).

Species	Preferred Habitat and Diet	Habitat Location
	to be seasonal visitors to coastal or offshore sites including offshore island groups, offshore pinnacles and seamounts (Marshall *et al.*, 2011). Diet: Feed on planktonic organisms including krill and crab larvae.	No BIAs identified for NWMR.

5.3 Fish, Shark and Sawfish Biological Important Areas in the NWMR

A review of the National Conservation Values Atlas identified Biologically Important Areas (BIAs) for four species of shark and sawfish (whale shark, freshwater sawfish, green sawfish and dwarf sawfish) within the NWMR. The BIAs for the whale shark and the sawfish species include foraging, nursing and pupping areas. These are described in **Table 5-4**.

Table 5-4 Fish, whale shark and sawfish BIAs within the NWMR

Species	Woodside Activity Area			BIAs		
	Browse	NWS/S	NWC	Pupping	Nursing	Foraging
Whale shark	✓	✓	✓	No pupping BIA identified within the NWMR	No nursing BIA identified within the NWMR	Foraging (high density) in Ningaloo Marine Park and adjacent Commonwealth waters (March–July) Foraging northward from Ningaloo along the 200 m isobath (July – Nov).
Green sawfish	✓	✓	-	Pupping in Cape Keraudren (pupping occurs in summer in a narrow area adjacent to shoreline) Pupping in Willie Creek Pupping in Roebuck Bay Pupping in Cape Leveque Pupping in waters adjacent to Eighty Mile Beach Pupping (likely) in Camden Sound. Figure 5-1 Whale shark BIAs for the NWMR and tagged whale shark tracks

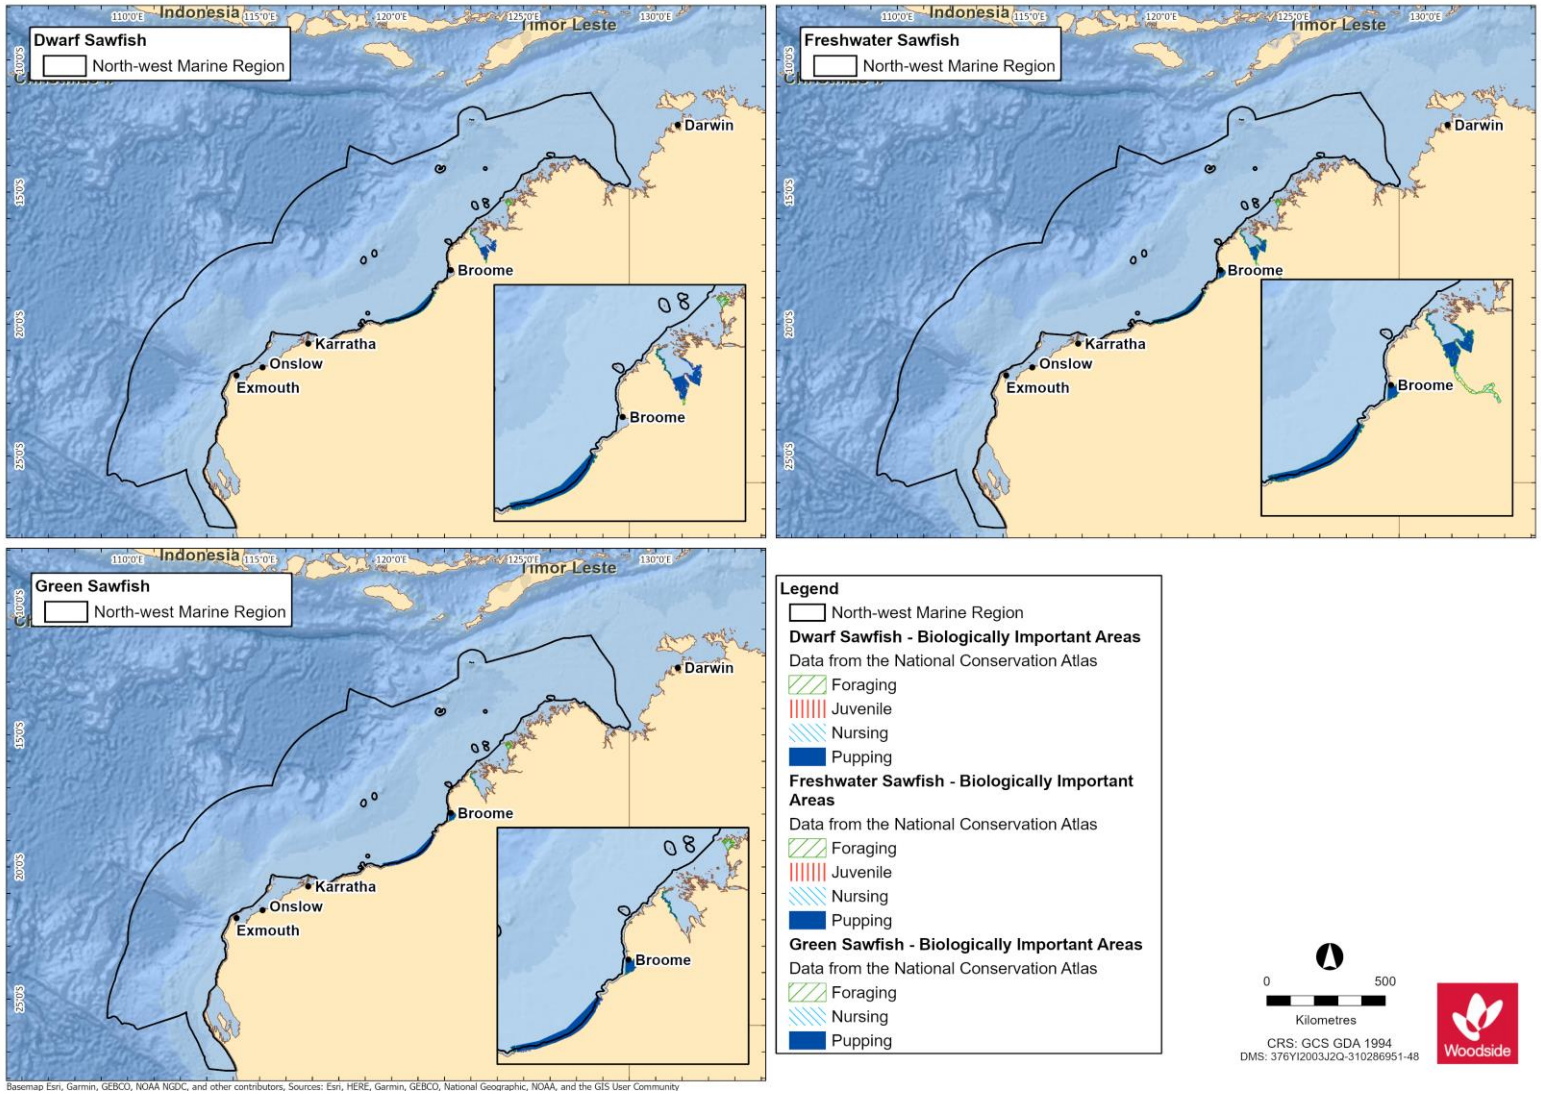

Figure 5-2 Sawfish BIAs for the NWMR

5.4 Fish Assemblages of the NWMR

5.4.1 Regional Context for Fish Assemblages of NWMR

The NWMR contains a diverse range of fishes of tropical Indo-west Pacific affinity (Allen *et al.*, 1988). The region is characterised by the highest level of endemism and species diversity compared with other areas of the Australian continental slope. Last *et al.* (2005) recorded 1431 species from the three bioregions encompassing the continental slope, whilst also acknowledging some information gaps.

The NWMR is known for its demersal slope fish assemblages; the continental slope of the Timor Province and the North-west Transition supports more than 418 and 505 species of demersal fishes respectively, of which 64 are considered to be endemic. This is the second richest area for demersal fish species across the entire Australian continental slope. Conversely, the broad Southern Province, which covers most of southern Australia, supports 463 species, only 26 possibly being endemic. The continental slope demersal fish assemblages of the NWMR have been identified as a KEF (DEWHA, 2008), as described in **Section 9**.

The NWMR also features a diversity of pelagic fishes (those living in the pelagic zone) and bentho-pelagic fishes, including tuna, billfish, bramids, lutjanids, serranids and some sharks (DEWHA, 2007a). These species feed on salps and jellyfish, and more often on secondary consumers such as squid and bait fish. Water depth provides an indication of the level of interaction between pelagic and benthic communities within the NWMR; in waters deeper than 1000 m, for instance, the trophic system is pelagically-driven and benthic communities rely on particulates that fall to the seafloor (DEWHA, 2007a).

Pelagic fishes play an important ecological role within the NWMR; small pelagic fishes, such as lantern fish, inhabit a range of marine environments, including inshore and continental shelf waters and form a vital link in and between many of the region's trophic systems, feeding on pelagic phytoplankton and zooplankton and providing a food source for a wide variety of predators including large pelagic fishes, sharks, seabirds and marine mammals (Bulman, 2006; Mackie *et al.*, 2007). Large pelagic fishes, such as tuna, mackerel, swordfish, sailfish and marlin, are found mainly in oceanic waters and occasionally on the continental shelf (Brewer *et al.*, 2007). Both juvenile and adult phases of the large pelagic species are highly mobile and have a wide geographic distribution, although the juveniles more frequently inhabit warmer or coastal waters (DEWHA, 2008).

5.4.2 Listed Fish Species in the NWMR

The family Syngnathidae is a group of bony fishes that includes seahorses, pipefishes, pipehorses and seadragons. Along with syngnathids, members of the related Solenostomidae family (ghost pipefishes) are also found in the NWMR (DSEWPAC, 2012a).

There are 44 solenostomid and syngnathid species that are listed marine species that may occur within the NWMR, although no species is currently listed as threatened or migratory, according to the PMST report (**Appendix A**).

Syngnathids live in nearshore and inner shelf habitats, usually in shallow coastal waters, among seagrasses, mangroves, coral reefs, macroalgae dominated reefs, and sand or rubble habitats (Dawson, 1985; Lourie *et al.*, 1999, Lourie *et al.*, 2004; Vincent, 1996). Two species, the winged seahorse (*Hippocampus alatus*) and western pipehorse (*Solegnathus sp. 2*) have been identified in deeper waters of the NWMR (up to 200 m) (DSEWPAC, 2012a), however, these species were not identified by the Protected Matters search of the NWMR.

Knowledge about the distribution, abundance and ecology of both syngnathids and solenostomids in the NWMR is limited. No BIAs for syngnathids and solenostomids have been identified in the NWMR.

5.4.3 Browse

The proposed Browse activity area includes biologically important habitat for the whale shark and three sawfish species:

- whale shark (foraging northward from Ningaloo along the 200 m isobath (July – Nov),
- freshwater sawfish (pupping, nursing and foraging areas),
- green sawfish (pupping, nursing and foraging areas); and
- dwarf sawfish (pupping, nursing and foraging areas).

BIAs for the shark and sawfish species are outlined in **Table 5-4** and **Figure 5-1**.

The proposed Browse activity area has partial overlap with the Continental slope demersal fish communities KEF.

5.4.4 NWS / Scarborough

The NWS / Scarborough activity area includes biologically important habitat for the whale shark and three sawfish species:

- whale shark (foraging northward from Ningaloo along the 200 m isobath (July – Nov),
- freshwater sawfish (pupping, nursing and foraging areas),
- green sawfish (pupping, nursing and foraging areas); and
- dwarf sawfish (pupping, nursing and foraging areas).

BIAs for the whale shark and sawfish species are outlined in **Table 5-4** and **Figure 5-1**.

The NWS / Scarborough activity area has partial overlap with the Continental slope demersal fish communities KEF. The continental slope between North-west Cape and the Montebello Trough has more than 500 fish species, 76 of which are endemic, which makes it the most diverse slope bioregion in Australia (Last *et al.*, 2005).

5.4.5 North-west Cape

The North-west Cape activity area includes biologically important foraging habitat for the whale shark:

- whale shark, including:
  - Foraging (high density) in Ningaloo Marine Park and adjacent Commonwealth waters (March–July); and
  - Foraging northward from Ningaloo along the 200 m isobath (July – Nov).

BIAs for the whale shark are outlined in **Table 5-4** and **Figure 5-1**.

The North-west Cape activity area coincides with part of the Continental slope demersal fish communities KEF.

6. MARINE REPTILES

6.1 Regional Context for Marine Reptiles

The NWMR contains important habitat for listed marine reptiles, including areas that support key life stages such as nesting, internesting, migration and foraging for marine turtle species, and habitats supporting resident sea snake and crocodile populations.

Six of the seven marine turtle species occur in Australian waters, and all six (the green turtle, hawksbill turtle, loggerhead turtle, flatback turtle, leatherback turtle and olive ridley turtle) occur in the NWMR and NMR.

There are 25 listed species of sea snake reported within or adjacent to the NWMR (Guinea, 2007a; Udyawer *et al*., 2016), of which four are endemic to reef habitats in the remote parts of the region. Nineteen (19) listed sea snake species are known to occur in the NMR, as reported in the Protected Matters search (**Appendix A**).

There are significantly fewer marine reptile species that frequently occur within the SWMR and presently include three species of listed marine turtle and one sea snake species. Other species of sea snake may occur because of the southward-flowing Leeuwin Current, as vagrants in the region (DSEWPAC, 2012b).

The following sections focus on the listed marine reptile species known to occur within the NWMR.

Table 6-1 outlines the threatened and migratory marine reptile species that occur within the NWMR, with their conservation status and relevant recovery plans and/or conservation advice.

Table 6-1 Marine reptile species identified by the EPBC Act PMST as potentially occurring within or utilising habitats in the NWMR for key life cycle stages

Species Name	Common Name	*Environment Protection and Biodiversity Conservation Act 1999*			WA *Biodiversity Conservation Act 2016*	EPBC Act Part 13 Statutory Instrument
		Threatened Status	Migratory Status	Listed	Conservation Status

Eretmochelys imbricata	Hawksbill turtle	Vulnerable	Migratory	Marine	Vulnerable	
Natator depressus	Flatback turtle	Vulnerable	Migratory	Marine	Vulnerable	
Lepidochelys olivacea	Olive ridley turtle	Endangered	Migratory	Marine	Vulnerable	
Aipysurus apraefrontalis	Short-nosed sea snake	Critically endangered	N/A	Marine	Critically endangered	Approved Conservation Advice for *Aipysurus apraefrontalis* (Short-nosed Sea Snake) (DSEWPAC, 2011a)
Aipysurus foliosquama	Leaf-scaled sea snake	Critically endangered	N/A	Marine	Critically endangered	Approved Conservation Advice for *Aipysurus foliosquama* (Leaf-scaled Sea Snake) (DSEWPAC, 2011b)
Crocodylus porosus	Salt-water crocodile	N/A	Migratory	Marine	Other protected fauna	N/A

6.2 Marine Turtles in the NWMR

According to the Protected Matters search (**Appendix A**) six species of marine turtle known to occur within the NWMR are listed as threatened and migratory (three Vulnerable and three Endangered) under the EPBC Act—the green (*Chelonia mydas*), hawksbill (*Eretmochelys imbricata*), flatback (*Natator depressus*), loggerhead (*Caretta caretta*), leatherback (*Dermochelys coriacea*) and olive ridley (*Lepidochelys olivacea*) turtle (DSEWPAC, 2012a) (refer **Table 6-1**).

The NWMR supports globally significant breeding populations of four marine turtle species: the green, hawksbill, flatback and loggerhead turtle. Olive ridley turtles are known to forage within the NWMR, but there are only occasional records of the species nesting in the region. Leatherback turtles regularly forage over Australian continental shelf waters within the NWMR but there are also no records of the species nesting in the region (DSEWPAC, 2012a).

The six marine turtle species reported for the NWMR also occur within the NMR.

Three marine turtle species; the green, loggerhead, and leatherback turtle, have presumed feeding areas within the SWMR; however, no known nesting areas exist within the region (DSEWPAC, 2012b).

Discrete genetic stocks have evolved within each marine turtle species. This is the result of marine turtles returning to the location where they hatched. These genetically distinct stocks are defined by the presence of regional breeding aggregations. Stocks are composed of multiple rookeries in a region and are delineated by where there is little or no migration of individuals between nesting areas. Turtles from different stocks typically overlap at feeding grounds (Commonwealth of Australia, 2017). There are 17 genetic stocks across both the NWMR and NMR (nine in the NWMR, six in the NMR, and two overlapping both regions). Of these 17 genetic stocks, nine are known to occur within Woodside's three areas of activity (**Table 6-2**).

6.2.1 Life Cycle Stages

Marine turtles are highly migratory during non-reproductive life phases and have high site fidelity during breeding and nesting life phases. Majority of their lives are spent in the ocean, but the adult female marine turtles will come ashore to lay eggs in the sand above the high water mark on natal beaches (Commonwealth of Australia, 2017). **Figure 6-1** summarises the generalised life cycle of marine turtles. Species-specific life cycle information is outlined within the Recovery Plan for Marine Turtles of Australia (Commonwealth of Australia, 2017).

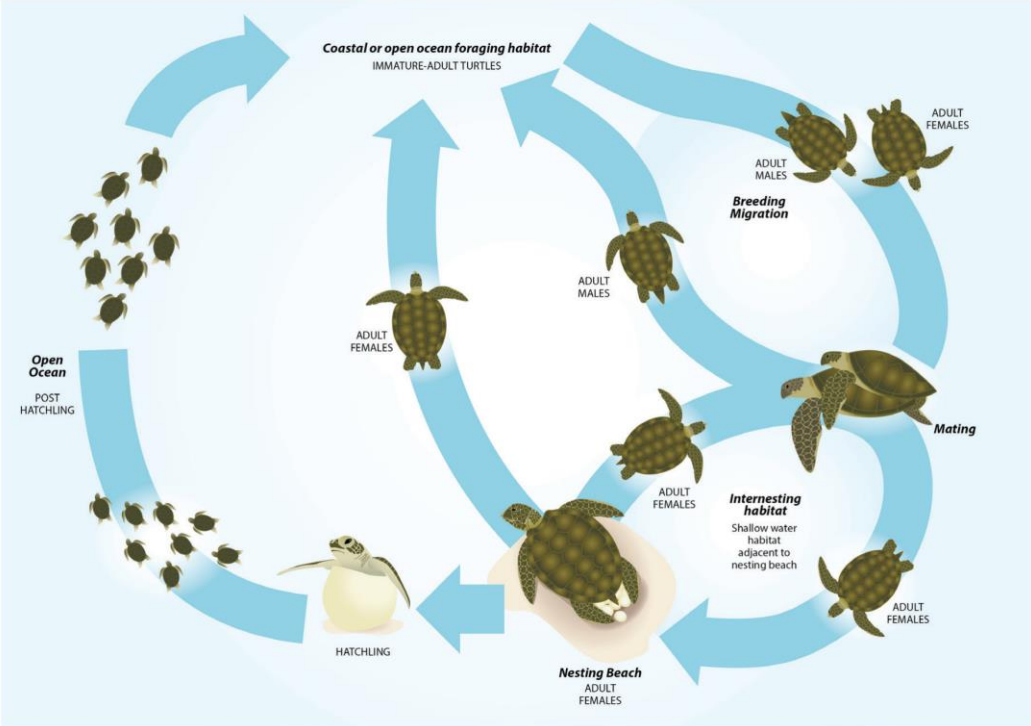

Figure 6-1 Generalised life cycle of marine turtles (Commonwealth of Australia, 2017)

6.2.2 Habitat Critical to Survival for Marine Turtles in the NWMR

The Recovery Plan for Marine Turtles of Australia (Commonwealth of Australia, 2017) identifies habitat critical to the survival of a species for marine turtle stocks under the EPBC Act. Habitat critical to survival is defined by the EPBC Act *Significant Impact Guidelines 1.1 – Matters of National Environmental Significance* as areas necessary:

- for activities such as foraging, breeding or dispersal;
- for the long-term maintenance of the species (including the maintenance of species essential to the survival of the species);
- to maintain genetic diversity and long term evolutionary development; and
- for the reintroduction of populations or recovery of the species.

The Recovery Plan for Marine Turtles of Australia (Commonwealth of Australia, 2017) has identified nesting locations and associated internesting areas as habitat critical to survival for four marine turtle species within the NWMR and these are identified, described and mapped in **Table 6-2** and **Figure 6-2**. No habitat critical to survival has been identified within the NWMR for olive ridley or leatherback turtles.

Table 6-2 outlines the relevant genetic stock, habitat critical to survival and key life cycle stage seasonality of the four species of marine turtles within the NWMR.

Table 6-2 Genetic stock, habitat critical to survival and key life cycle stage seasonality of the four species of marine turtles within the NWMR

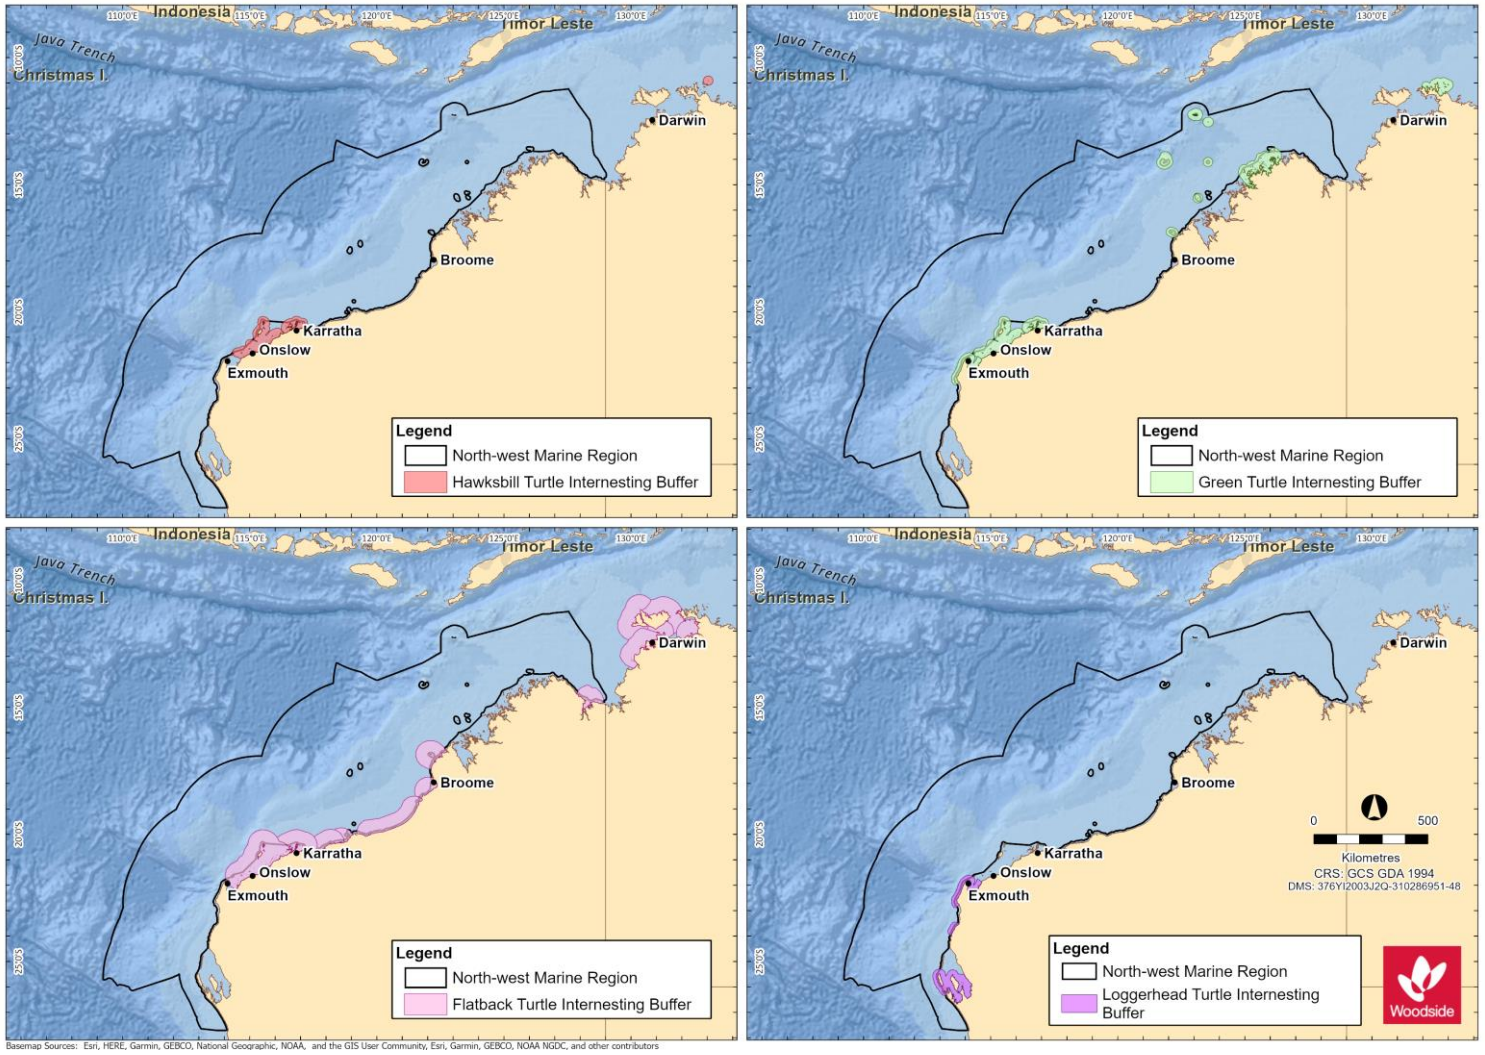

Figure 6-2 Marine turtle species habitat critical to survival (nesting beaches and internesting buffers) for the NWMR

6.3 Marine Turtle Biological Important Areas in the NWMR

A review of the National Conservation Values Atlas (DAWE, 2020[2]) identified BIAs for the four marine turtle species that occur within the NWMR. These are described in **Table 6-3**. Note that nesting and internesting BIAs are not listed in **Table 6-3** as they are defined as in the Recovery Plan as habitat critical to survival for marine turtles nesting beaches and internesting areas (refer **Table 6-2**).

Green turtle	✓	✓	✓	No mating BIA identified within the NWMR.	Foraging inshore areas of Barrow Island Foraging at Montgomery Reef Foraging at Montebello Islands Foraging at Dixon Island Foraging around Ashmore Reef Foraging at Seringapatam Reef and Scott Reef Foraging in the De Grey River area to Bedout Island Foraging around the Islands between Cape Preston and Onslow and inshore of Barrow Island Foraging around Dampier Archipelago (islands to the west of the Burrup Peninsula) Foraging at Legendre Island and Huay Island Foraging around Delambre Island Foraging in the Joseph Bonaparte Gulf Foraging in waters adjacent to James Price Point	Green turtles can migrate more than 2600 km between their feeding and nesting grounds. Individual turtles foraging in the same area do not necessarily take the same migration route (Limpus *et al.*, 1992). Ferreira et al. (2021) broadly identified two migratory corridors, one used by the NWS stock-Pilbara and another used by the NWS stock-Kimberley and the Scott-Browse stock with some overlap at the northern and southern extents respectively. This study showed that the foraging distribution of green turtles from two stocks in WA expands throughout north-west and northern Australian coastal waters, including the NT and Queensland.
Hawksbill turtle	✓	✓	✓	No mating BIA identified within the NWMR.	Foraging around the Lowendal Island group Foraging at Delambre Island Foraging around Dixon Island Foraging in the De Grey River area to Bedout Island Foraging around the islands between Cape Preston and	Individuals may migrate up to 2400 km between their nesting and foraging grounds (DSEWPAC, 2012a).

[3] Migration BIA does not exist for Marine Turtles – general information provided.

Species	Woodside Activity Area			BIAs		
	Browse	NWS/S	NWC	Mating	Foraging	Migration[3]
					Onslow and inshore of Barrow Island Foraging around the islands of the Dampier Archipelago (to the west of the Burrup Peninsula) Foraging at Ashmore Reef	
Flatback turtle	✓	✓	-	Lacepede Islands Mating at Montebello Islands Mating at Dampier Archipelago (islands to the west of the Burrup Peninsula) Mating at Barrow Island A year-round internesting buffer biologically important area (BIA) of 80 km is located north and north-west of the Montebello Islands, extending 20 km further than the habitat critical to survival. However, use level for this BIA has been defined as very low (Commonwealth of Australia, 2017) and the habitat critical to survival internesting buffer is the legally recognised area of protection under the EPBC Act *Significant Impact Guidelines 1.1 – Matters of National Environmental Significance* Refer to the Marine Bioregional Plan for the North-west Marine Region (DSEWPAC, 2012a) for locations of seasonal 80 km internesting buffer BIAs for flatback turtles	Foraging at the islands between Cape Preston and Onslow and inshore of Barrow Island. Foraging at Montebello Islands Foraging at Dampier Archipelago (islands to the west of the Burrup Peninsula) Foraging at Legendre Island and Huay Island Foraging at Delambre Island Foraging in the Joseph Bonaparte Depression Foraging in waters adjacent to James Price Point	There is evidence that some flatback turtles undertake long-distance migrations between breeding and feeding grounds (Limpus *et al.*, 1983). However, flatback turtles generally do not have a pelagic phase to their lifecycle. Instead, hatchlings grow to maturity in shallow coastal waters thought to be close to their natal beaches (DSEWPAC, 2012a).

Species	Woodside Activity Area			BIAs		
	Browse	NWS/S	NWC	Mating	Foraging	Migration[3]
Loggerhead turtle	✓	✓	-	No mating BIA identified within the NWMR	Foraging in the De Grey River area to Bedout Island Foraging on the Western Joseph Bonaparte Depression Foraging in the waters adjacent to James Price Point	Adult loggerhead turtles dispersing from Dirk Hartog Island beaches (near Shark Bay) have remained within WA waters from southern WA to the Kimberley. Turtles dispersing from the North-west Cape–Muiron Islands nesting area have ranged north as far as the Java Sea and the north-western Gulf of Carpentaria, and to south-west WA (DSEWPAC, 2012).
Olive ridley turtle	✓	✓	-	No mating BIA identified within the NWMR	Foraging in the Western Joseph Bonaparte Depression and Gulf Foraging in the Dampier Archipelago (islands to the west of the Burrup Peninsula)	Migration routes and distances between nesting beaches and foraging areas are not known for Australian olive ridley turtles.

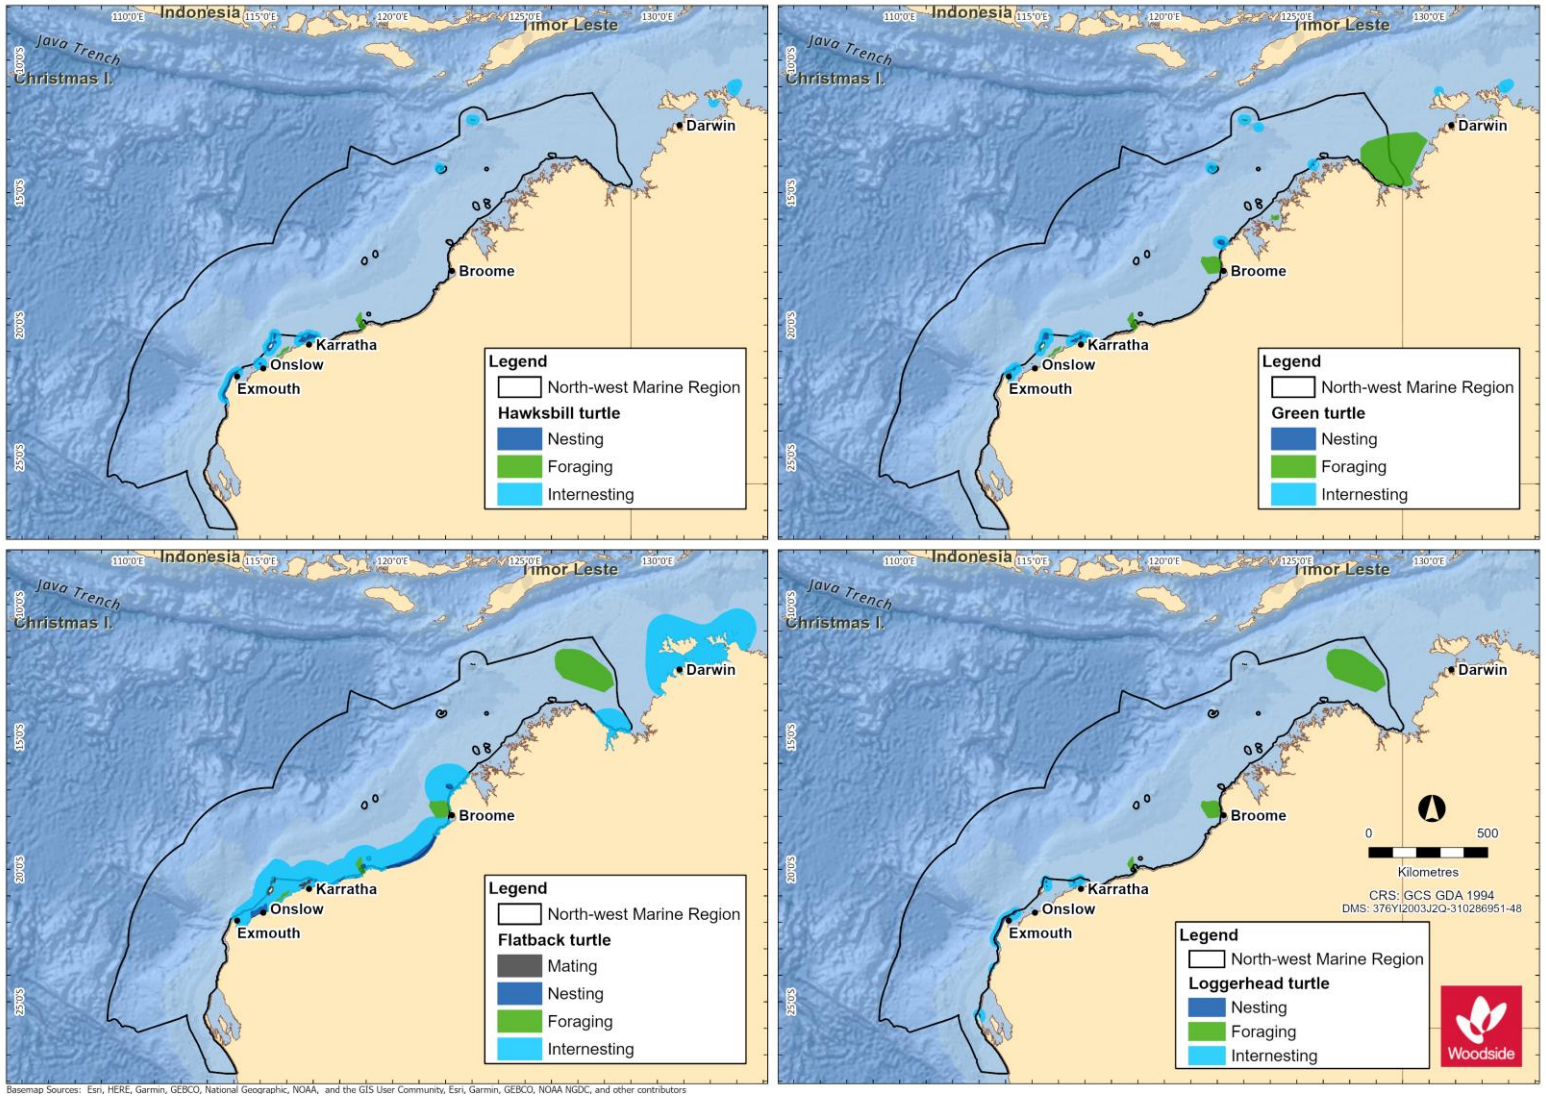

Figure 6-3 Marine turtle species BIAs within the NWMR

6.4 Marine Turtle Summary for NWMR

Six of the seven marine turtle species occur within the Woodside activity areas. Across all three areas, globally significant breeding populations of four marine turtle species; the green, hawksbill, flatback and loggerhead turtle, have been recorded.

However, offshore waters do not represent biologically important habitat for marine turtles in any of the three Woodside activity areas. Isolated records of transient individuals (on post-nesting migration) are expected, but there is no evidence of important habitat or behaviours for marine turtles in offshore, open water environment of the NWS, in general.

6.4.1 Browse

The proposed Browse activity area includes major nesting areas that support globally significant breeding populations of two marine turtle species:

- the green turtle, including two distinct genetic stocks (Ashmore Reef and Scott Reef-Browse Island); and
- the flatback turtle, Cape Domett genetic stock.

Locations of habitat critical for each of the two species are outlined in **Table 6-2** and **Figure 6-2**.

BIAs for the green and flatback turtle are outlined in **Table 6-3** and **Figure 6-3**.

Table 6-4 Marine turtle key information for Browse activity area

Species / Genetic Stock	Key Information
Green Turtle	
Ashmore Reef Stock (G-AR)	The G-AR stock nests in a localised area of the Indian Ocean in the Ashmore Reef and Cartier Island AMP areas. Population estimates are not available for Ashmore Reef, although annual breeding numbers are thought to be in the low hundreds (Whiting, 2000). Designated habitat critical for the G-AR stock are the nesting locations of Ashmore Reef and Cartier Reef, and an internesting buffer of 20 km radius around these rookeries, year-round with peak internesting activity occurring December to January (refer Table 6 of the Recovery Plan). Juvenile and adult turtles forage within the tidal/sub-tidal habitats of offshore islands and coastal waters with coral reef, mangrove, sand, rocky reefs, and mudflats where there are algal turfs or seagrass meadows present (Commonwealth of Australia, 2017).
Scott Reef-Browse Island Stock (G-ScBr)	The G-ScBr stock is a discrete unit known to nest at only two locations within the north-east Indian Ocean—Sandy Islet and Browse Island. There is currently very limited data available for the G-ScBr stock, therefore population numbers are not known. Designated habitat critical for the G-ScBr stock are the nesting locations of Sandy Islet and Browse Island, and an internesting buffer of 20 km radius around these rookeries, for the period November to March (refer Table 6 of the Recovery Plan). Surveys conducted at Scott Reef in 2006, 2008 and 2009 indicate that the summer months from late November to February are the preferred breeding season for green turtles at Sandy Islet (Guinea, 2009). Satellite tagging studies (Pendoley, 2005; Guinea, 2011) have provided an indication of the behaviour and migratory routes of adult green turtles leaving Scott Reef. Most animals appear to swim through South Reef lagoon and disperse toward the Western Australian mainland via two distinct post-nesting migration pathways; travelling east and north toward the Bonaparte Archipelago and then north along the coast to foraging areas in NT waters, or travelling south to Cape Leveque and then south along the coast to the Turtle Islands off the mouth of the De Grey River in the Pilbara region (Ferreira *et al*., 2021).

Species / Genetic Stock	Key Information
Flatback Turtle	
Cape Domett Stock (F-CD)	Cape Domett is an important high density nesting area. Combined with a smaller site at Lacrosse Island, the F-CD stock is one of the largest flatback turtle stocks in Australia. Average nesting abundance at Cape Domett is estimated at 3250 females per year (Whiting *et al.*, 2008). Designated habitat critical for the F-CD stock are the nesting locations of Cape Domett and Lacrosse Island, and an internesting buffer of 60 km radius around these rookeries, year-round with peak internesting activity occurring July to September. Extending further than the habitat critical internesting buffer, an internesting buffer BIA of 80 km is located at Cape Domett and Lacrosse Island.

6.4.2 North-west Shelf / Scarborough

The NWS / Scarborough activity area includes major nesting areas that support globally significant breeding populations of three marine turtle species, representing four discreet genetic stocks:

- the green turtle, NWS genetic stock;
- the hawksbill turtle, WA genetic stock; and
- the flatback turtle, South-west Kimberley stock and Pilbara genetic stocks.

Locations of habitat critical for each of the four species are outlined in **Table 6-2** and **Figure 6-2**.

BIAs for the green, hawksbill, and flatback are outlined in **Table 6-3** and **Figure 6-3**.

Table 6-5 Marine turtle key information for NWS / Scarborough activity area

Species / Genetic Stock	Key Information
Green Turtle	
NWS Stock (G-NWS)	The G-NWS stock is one of the largest green turtle stocks in the world and the largest in the Indian Ocean. The G-NWS stock is estimated at approximately 20,000 individuals (DSEWPAC, 2012a) and the trend for the stock is reported as stable (Commonwealth of Australia, 2017). Major rookeries of the G-NWS stock within the NWS / Scarborough activity area are located at Barrow Island and the Montebello Islands. These areas are designated habitat critical for the stock and include an internesting buffer of 20 km radius around these rookeries, November to March.
Hawksbill Turtle	
Western Australia Stock (H-WA)	The H-WA stock is the largest in the Indian Ocean. The majority of the nesting for this stock is located in the Pilbara. The Dampier Archipelago has the largest nesting aggregation recorded. In particular, Rosemary Island supports the most significant hawksbill turtle rookery in the WA region and one of the largest in the Indian Ocean; approximately 500-1000 females nest on the island annually, more than at any other WA rookery (Pendoley, 2005; Pendoley *et al*., 2016). Major rookeries of the H-WA stock within the NWS / Scarborough activity area are located at Rosemary Island, Delambre Island and the Montebello Islands. These areas are designated habitat critical for the stock and include an internesting buffer of 20 km radius around these rookeries, October to February.
Flatback Turtle	
South-west Kimberley Stock (F-swKim)	The genetic relationship between this nesting aggregation and the Cape Domett and Pilbara stocks is currently under review. Population numbers of the F-swKim stock are unknown. Major rookeries of the F-swKim stock are located at Eighty Mile Beach and Eco Beach. These areas are designated habitat critical for the stock and include an internesting buffer of 60 km radius around these rookeries, October to March.

Species / Genetic Stock	Key Information
Pilbara Stock (F-Pil)	The extent of genetic relatedness of flatback turtles along the WA coast is currently under review. Population numbers of the F-Pil stock are unknown. This stock nests on many islands in the Pilbara and southern Kimberley, with major rookeries at Mundabullangana Beach, Delambre Island and Barrow Island. These areas are designated habitat critical for the F-Pil stock and include an internesting buffer of 60 km radius around these rookeries, October to March. Extending further than the habitat critical internesting buffer, a year-round internesting buffer BIA of 80 km is located north and north-west of the Montebello Islands. However, use level for this BIA has been defined as very low (Commonwealth of Australia, 2017) and the habitat critical internesting buffer is the legally recognised area of protection under the EPBC Act *Significant Impact Guidelines 1.1 – Matters of National Environmental Significance*. Post-nesting satellite tracking indicates foraging occurs along the WA coast in water shallower than 130 m and within 315 km of shore (Commonwealth of Australia, 2017).

6.4.3 North-west Cape

The North-west Cape activity area includes major nesting areas that support globally significant breeding populations of two marine turtle species, representing two discreet genetic stocks:

- the green turtle, NWS genetic stock; and
- the loggerhead turtle, Western Australia genetic stock.

Locations of habitat critical for each of the two species are outlined in **Table 6-2** and **Figure 6-2**.

BIAs for the green and loggerhead turtles are outlined in **Table 6-3** and **Figure 6-3**.

A 2018 survey, including on-beach monitoring of the Muiron Islands and Ningaloo Coast from North-west Cape to Bungelup (Rob *et al.*, 2019), supports the concept that North-west Cape and the Muiron Islands are major important nesting areas for green and loggerhead turtles, as identified in the Recovery Plan (Commonwealth of Australia, 2017).

Table 6-6 Marine turtle key information for North-west Cape activity area

Species / Genetic Stock	Key Information
Green Turtle	
NWS Stock (G-NWS)	The G-NWS stock is one of the largest green turtle stocks in the world and the largest in the Indian Ocean. The G-NWS stock is estimated at approximately 20,000 individuals (DSEWPAC, 2012a) and the trend for the stock is reported as stable (Commonwealth of Australia, 2017). There is one major rookery of the G-NWS stock located within the North-west Cape activity area. Located on the mainland coast of the North-west Cape, this area is designated habitat critical for the stock and includes an internesting buffer of 20 km radius around the rookery, November to March.
Loggerhead Turtle	
Western Australia Stock (LH-WA)	The LH-WA stock is one of the largest in the world (Limpus, 2009). The trend for the stock is reported as stable (Commonwealth of Australia, 2017). Major rookeries of the LH-WA stock are located at Dirk Hartog Island, Muiron Islands and Gnaraloo Bay. These areas are designated habitat critical for the stock and include an internesting buffer of 20 km radius around these rookeries, November to May. Dirk Hartog Island in the Shark Bay Marine Park, with an average of 122 nests per day over 2.1 km (Reinhold and Whiting, 2014), is recognised as the most important loggerhead turtle rookery in WA (Commonwealth of Australia, 2016; as cited in Rob *et al.*, 2019).

6.5 Sea Snakes

Sea snakes are commonly found in the NWMR and NMR, but less so in the SWMR, and occupy three broad habitat types: shallow water coral reef and seagrass habitats, deepwater soft bottom habitats away from reefs, and surface water pelagic habitats (Guinea, 2007a).

There are 25 listed species of sea snake reported within or adjacent to the NWMR (Guinea, 2007a; Udyawer *et al*., 2016), of which four are endemic to reef habitats in the remote parts of the region:

- dusky sea snake (*Aipysurus fuscus*);
- large headed sea snake (*Hydrophis pacificus*);
- short-nosed sea snake (*Aipysurus apraefrontalis*); and
- leaf-scaled sea snake (*Aipysurus foliosquama*).

The short-nosed sea snake and the leaf-scaled sea snake are listed threatened species (Critically Endangered) under the EPBC Act **(Table 6-7**).

There is currently limited knowledge about the ranges and distribution patterns of sea snake species in the NWMR, in addition to a lack of understanding of population status and threats. Recent findings of *A. apraefrontalis* and *A. foliosquama* in locations outside of their previously defined ranges have highlighted the lack of information on species distributions in the NWMR (Udyawer *et al.*, 2016). Udyawer *et al.* (2020) used a correlative modelling approach to understand habitat associations and identify suitable habitats for five sea snake species (*A. apraefrontalis, A. foliosquama, A. fuscus, A. l. pooleorum* and *A. tenuis*). Species-specific habitat suitability was modelled across 804,244 km^2 of coastal waters along the NWS, and the resulting habitat suitability maps enabled the identification of key locations of suitable habitat for these five species (refer **Table 6-6**).

No habitat critical to survival or BIAs for sea snake species have been identified in the NWMR. While the Ashmore Reef and Cartier Island AMPs have been recognised for their high diversity and density of sea snakes (DSEWPAC, 2012a), surveys have revealed a steep decline in sea snake numbers at Ashmore Reef (Guinea, 2007b; Lukoschek *et al.*, 2013). Leaf-scaled and short-nosed sea snakes have been absent from surveys at Ashmore Reef since 2001, despite an increase in survey intensity (Guinea, 2006, 2007b; Guinea and Whiting, 2005; Lukoschek *et al.*, 2013). The reason for the decline is unknown.

Table 6-7 Information on the two threatened sea snake species within the NWMR

Species	Preferred Habitat and Diet	Habitat Location
Short-nosed sea snake	Preferred habitat: Primarily on the reef flats or in shallow waters of the outer reef edges to depths of 10 m (Minton *et al*., 1975). Typically, movement is restricted to within 50 m of reef flat habitat (Guinea and Whiting, 2005). Diet: Primarily fishes and eels.	The short-nosed sea snake has been recorded from Exmouth Gulf to the reefs of the Sahul Shelf, although most records come from Ashmore and Hibernia reefs (Guinea and Whiting, 2005). Key locations of suitable habitat: Ashmore Reef, Exmouth Gulf, Muiron Islands, Montebello Islands (Udyawer *et al.*, 2020).
Leaf-scaled sea snake	Preferred habitat: The leaf-scaled sea snake occurs in shallow protected areas of reef flats, typically in water depth less than 10 m. Diet: Primarily shallow water coral-associated wrasse, gudgeons, clinids and eels (McCosker, 1975; Voris, 1972; Voris and Voris, 1983)	The leaf-scaled sea snake has only been recorded at Ashmore and Hibernia reefs (Guinea and Whiting, 2005), indicating it has a very limited distribution. Key locations of suitable habitat: Ashmore Reef, Shark Bay, Exmouth Gulf, Barrow Island and Montebello Islands (Udyawer *et al.*, 2020).

6.6 Crocodiles

The salt-water crocodile (*Crocodylus porosus*) is a listed migratory species under the EPBC Act known to occur within the NWMR. The species is found in most major river systems of the Kimberley, including the Ord, Patrick, Forrest, Durack, King, Pentecost, Prince Regent, Lawley, Mitchell, Hunter, Roe and Glenelg rivers. The largest populations occur in the rivers draining into the Cambridge Gulf and the Prince Regent River and Roe River systems. There have also been isolated records in rivers of the Pilbara region, around Derby near Broome and as far south as Carnarvon on the mid-west coast.

No BIAs for salt-water crocodile have been identified in the NWMR.

7. MARINE MAMMALS

7.1 Regional Context

The offshore waters of WA include important habitat for marine mammals, including areas that support key life stages such as breeding, foraging, and migration. Of the 45 species of cetacean occurring in Australian waters, 27 species occur regularly in the waters of the NWMR, nine species in the waters of the NMR and 33 species in the SWMR. The waters of the NWMR and the NMR also support significant populations of dugong (DSEWPAC, 2012a, c).

The NWMR is an important migratory pathway between feeding grounds in the Southern Ocean and breeding grounds in tropical waters of the NWMR for several cetacean species (DSEWPAC, 2012a). Numerous large mysticetes (baleen whale) species, in particular the humpback whale, are known to utilise the region for migration and calving, and the pygmy blue whale for foraging and as a migration pathway between southern feeding and northern breeding/feeding areas, north of the equator.

The SWMR is an important area for numerous marine mammal species including pinniped species, large, migratory whale species and resident coastal whale and dolphin species (DSEWPAC, 2012b).

The NMR and adjacent areas are important for several species of cetacean, particularly inshore dolphin species. These species, and other marine mammals, rely on the waters of the NMR and adjacent coastal areas for breeding and foraging. However, there is little knowledge of the seasonal movements, migrations and breeding seasonality for many of the marine mammal species in the NMR due to lack of extensive surveys (DSEWPAC, 2012c).

Table 7-1 outlines the threatened and migratory marine mammal species that may occur within the NWMR, with their conservation status and relevant recovery plans and/or conservation advice.

Table 7-1 Marine mammal species identified by the EPBC Act PMST as occurring within the NWMR

Species Name	Common Name	*Environment Protection and Biodiversity Conservation Act 1999*			WA *Biodiversity Conservation Act 2016*	EPBC Act Part 13 Statutory Instrument

7.2 Cetaceans in the NWMR

Cetaceans are generally widely distributed and highly mobile. In general, distribution patterns reflect seasonal feeding areas, characterised by high productivity, and migration routes associated with reproductive patterns. The NWMR is thought to be an important migratory pathway between feeding grounds in the Southern Ocean and breeding grounds in tropical waters for several cetacean species (DSEWPAC, 2012a).

From the Protected Matters search, 34 EPBC Act listed species were recorded as potentially occurring or having habitat within the NWMR (**Appendix A**). Of those, 12 cetacean species are listed as threatened and/or migratory, including baleen whales, toothed whales and dolphins that occur within the NWMR (**Table 7-2**).

7.3 Dugongs in the NWMR

The dugong is listed as migratory under the EPBC Act. Dugongs inhabit seagrass meadows in coastal waters, estuarine creeks and streams, and reef systems (DSEWPAC, 2012a).

Some of the coastal waters adjacent to the NWMR support significant populations of dugongs, including Shark Bay, Exmouth Gulf, in and adjacent to Ningaloo Reef, in coastal waters along the Kimberley coast, and on the edge of the continental shelf at Ashmore Reef (DEWHA, 2008).

Although the patterns of dugong movement in WA are not well understood, it is thought that dugongs move in response to availability of seagrass (Marsh *et al.*, 1994; Preen *et al.*, 1997) and water temperature.

There are a number of BIAs for dugong within and adjacent to waters of the NWMR (refer **Section 7.5**).

7.4 Pinnipeds in the NWMR

The Australian sea lion is listed as a species that may occur, or may have habitat within the NWMR (Protected Matters search - **Appendix A**). It is included here as the Australian sea lion is the only pinniped endemic to Australia (Strahan, 1983) and has been recorded within the southern extent of the NWMR at Shark Bay, WA (Kirkwood *et al.*, 1992). The most northern known breeding colony is at the Houtman Abrolhos Islands in the SWMR. The Australian sea lion's breeding range extends from the Houtman Abrolhos Islands, WA to The Pages Island, east of Kangaroo Island, SA. The Australian sea lion was listed as endangered in 2020 (Threatened Species Scientific Committee, 2020a). An assessment of the status and trends in abundance of this endemic, coastal pinniped species (Goldsworthy *et al.* 2021) documented an overall reduction in pup abundance over three generations, providing strong evidence that the species meets IUCN endangered criteria.

There are no BIAs for the Australian sea lion in the NWMR.

Table 7-2 Information on the threatened/migratory marine mammal species within the NWMR

Species	Key Information
Baleen whales (Mysticeti)	
Humpback whale	In Australian waters two genetically distinct populations migrate annually along the west (Group IV) and east coasts (Group V) between May and November. In WA, the migration pathway for the Group IV population (also known as Breeding Stock D) extends from Albany to the Kimberley coastline, passing through the NWMR (Threatened Species Scientific Committee, 2015b). Since the 1982 moratorium on commercial whaling population numbers have recovered significantly; from approximately 2000 to 3000 individuals in 1991, to between 19,200–33,850 individuals in 2008 (Bannister and Hedley, 2001; Bejder *et al.*, 2019; Hedley *et al.*, 2011). Aerial surveys off the WA coast undertaken between 2000 and 2008 produced a population estimate for the Group IV population of 26,100 individuals (CI 20,152–33,272) in 2008 (Salgado Kent *et al.*, 2012). Current population growth for the Group IV population is estimated to be between 9.7 and 13% per annum (Threatened Species Scientific Committee, 2015b). Using the Salago-Kent *et al.* (2012) estimate of 26,100 individuals and an annual population growth rate of ~10%, current population size could be in excess of 75,000 individuals (Woodside, 2019). The Group IV population migrates northward from their Antarctic feeding grounds around May each year, reaching the NWMR around early June. The southward migration subsequently starts in mid-September, around the time of breeding and calving (typically August to September) (Threatened Species Scientific Committee, 2015b). Within the NWMR there are key calving areas between Broome and the northern end of Camden Sound, and resting areas in the southern Kimberley region, Exmouth Gulf and Shark Bay. In particular, high numbers of humpback whales are observed in Camden Sound and Pender Bay from June to September each year (Threatened Species Scientific Committee, 2015b). There are reports of neonates further south, suggesting that the calving areas may be poorly defined. Aerial photogrammetric surveys in 2013 and 2015 recorded large numbers of humpback whale calves along North-west Cape, with estimated minimum relative calf abundance of 463–603 in 2013 and 557–725 in 2015 (Irvine *et al.*, 2018). The majority of calves sighted in both years (85% in 2013; 94% in 2015) were neonates, and these observations indicate that a minimum of approximately 20% of the expected number of calves of this population are born near, or south of, North-west Cape. Thus, the calving grounds for the Group IV population extend south from Camden Sound to at least North-west Cape, 1000 km south-west of the currently recognized calving area (Irvine *et al.*, 2018). There are BIAs for migration and breeding and calving for the humpback whale along the WA coast and within the NWMR (refer **Table 7-3** and **Figure 7-1**).
Blue whale	There are two recognised sub-species of blue whale in the Southern Hemisphere, both of which are recorded in Australian waters. These are the southern (or 'true') blue whale (*Balaenoptera musculus*) and the 'pygmy' blue whale (*Balaenoptera musculus brevicauda*) (Commonwealth of Australia, 2015a). In general, southern blue whales occur in waters south of 60°S and pygmy blue whales occur in waters north of 55°S (i.e. not in the Antarctic). On this basis, nearly all blue whales sighted in the NWMR are likely to be pygmy blue whales. The East Indian Ocean (EIO) pygmy blue whale population is seasonally distributed from Indonesia (a potential breeding ground) to south-west of Australia and east across the Great Australian Bight and Bonney Upwelling to beyond the Bass Strait (Blue Planet Marine, 2020). Migration seems to be variable, with some individuals appearing as resident to areas of high productivity and others undertaking migrations across long distances (Commonwealth of Australia, 2015a). McCauley *et al.* (2018) describe three migratory stages around Australia for the EIO pygmy blue whale population: a 'southbound migratory stage' where whales travel southwards from Indonesian waters offshore from the WA coastline, mostly from October to December but possibly into January of the following year; a protracted 'southern Australian stage' (January to June) where animals spread across southern waters of the Indian Ocean and south of Australia; and a 'northbound migratory stage' (April to August) where animals travel north back to Indonesia again. There are currently insufficient data to accurately estimate population numbers of the pygmy blue whale in Australian waters (Blue Planet Marine, 2020; Commonwealth of Australia, 2015a). There are, however, two estimates of population size of the EIO pygmy blue whale for WA. McCauley and Jenner (2010) calculated the population to be between 662 and 1559 individuals in 2004 based on passive acoustics (whale vocalisations), and Jenner *et al.* (2008) (based on photographic mark and recapture) calculated between 712 and 1754 individuals, but both estimates did not account for animals

Species	Key Information
	travelling further west into the Indian Ocean (McCauley *et al.*, 2018). More recent passive acoustic data estimates a 4.3% growth rate that applies to the proportion of EIO pygmy blue whales seasonally present in offshore water of the south-eastern Australia and may not reflect the full population but does imply an increasing population (McCauley *et al.*, 2018). The pygmy blue whale is typically present in the Perth Canyon from November to June, with an observed peak between March and May (Commonwealth of Australia, 2015a; Blue Planet Marine, 2020). The pygmy blue whale feeds in the Perth Canyon at depths of 200 to 300 m, which overlaps the typical distribution of krill (200–500 m water depth (day) to surface (night) (McCauley *et al.*, 2004; Commonwealth of Australia, 2015a). Other possible feeding grounds off the WA coast include the wider area around the Perth Canyon, and possible foraging areas off the Ningaloo Coast and at Scott Reef (Commonwealth of Australia, 2015a). Refer **Table 7-3** and **Figure 7-2** for the location and type of BIAs for blue whales in the NWMR. There is a migratory BIA for the pygmy blue whale within WA waters, which extends for most of the length of the NWMR within offshore waters.
Bryde's whale	The Bryde's whale is the least migratory of its genus and is restricted geographically from the equator to approximately 40°N and S, or the 20° isotherm (Bannister *et al.*, 1996). The species is known to exhibit inshore and offshore forms in other international locations that vary in morphology and migratory behaviours (Bannister *et al.*, 1996). This appears to also be the case within Australian waters. Bryde's whales have been identified as occurring in both oceanic and inshore waters, with the only key localities recognised in WA being in the Houtman Abrolhos Islands and north of Shark Bay (Bannister *et al.*, 1996). Data suggests offshore whales migrate seasonally, heading towards warmer tropical waters during the winter; however, information about migration within the NWMR is not well known (McCauley and Duncan, 2011). McCauley (2011) detected Bryde's whales using acoustic loggers deployed in and around Scott Reef from 2006 to 2009. Other acoustic logger data of Bryde's whale vocalisations recorded between Ningaloo and north of Darwin showed no apparent trends or seasonality (McCauley, 2011). There are no identified BIAs for this species in the National Conservation Values Atlas.
Southern right whale	The southern right whale occurs primarily in waters between about 20°S and 60°S and moves from high latitude feeding grounds in summer to warmer, low latitude, coastal locations in winter (Bannister *et al.*, 1996). Southern right whales aggregate in calving areas along the south coast of WA outside of the NWMR. However, there have been sightings in waters of the NWMR as far north as Ningaloo (Bannister and Hedley, 2001), and a stranding record exists for the far north Kimberley coast (ALA, 2020). Southern right whale calving grounds are found at mid to lower latitudes and are occupied during the austral winter and early-mid spring. They are regularly present on the southern Australian coast from about mid-May to mid-November, and peak periods for mating are from mid-July through August. Mating occurs within these breeding grounds as evidenced by many observations of intromission and mating behaviours. Southern right whales in south-western Australia appear to be increasing at the maximum biological rate but there is limited evidence of increase in south-eastern Australian waters (DSEWPAC, 2012d). There are no identified BIAs for this species in the NWMR.
Antarctic minke whale	The Antarctic minke whale is distributed worldwide and has been recorded off all Australian states (but not in the NT), feeding in cold waters and migrating to warmer waters to breed. It is thought that the Antarctic minke whale migrates up the WA coast to about 20°S to feed and possibly breed (Bannister *et al.*, 1996); however, detailed information about timing and location of migrations and breeding grounds within the NWMR is not well known. In the high latitudinal winter breeding grounds in other regions, the species appears to be distributed off the continental shelf edge. No population estimates are available for Antarctic minke whales in Australian waters. There are no identified BIAs for this species in the National Conservation Values Atlas.
Sei whale	The sei whale is a baleen whale with a worldwide oceanic distribution and is expected to seasonally migrate between low latitude wintering areas and high latitude summer feeding grounds (Bannister *et al.*, 1996; Prieto *et al.*, 2012). There are no known mating or calving areas in Australian waters. The species has a preference for deep waters, typically occurs in oceanic basins and continental slopes (Prieto *et al.*, 2012), and exhibits a migration pathway influenced by seasonal feeding and breeding patterns. Sei whales have been infrequently recorded in Australian waters (Bannister *et al.*, 1996). Reliable estimates of the sei whale population size in Australian waters are currently not possible due to a lack of dedicated surveys and their elusive characteristics. Similarly, the extent of occurrence and area of occupancy of sei whales in Australian waters cannot be calculated due to the

Species	Key Information
	rarity of sighting records. They will typically travel in small pods of three to five individuals, with some segregation by age, sex and reproductive status. Calving grounds are presumed to exist in low latitudes with mating and calving potentially occurring during winter months (Threatened Species Scientific Committee, 2015a). There are no known mating or calving areas in Australian waters, and there are no identified BIAs for this species in the National Conservation Values Atlas.
Fin whale	The fin whale is a large baleen whale distributed worldwide. Fin whales migrate annually between high latitude summer feeding grounds and lower latitude over-wintering areas (Bannister *et al.*, 1996) and follow oceanic migration paths. The species is uncommonly encountered in coastal or continental shelf waters. Australian Antarctic waters are important feeding grounds for fin whales but there are no known mating or calving areas in Australian waters (Morrice *et al.*, 2004). The species has been observed in groups of six to 10 individuals, as well as in pairs and alone (Threatened Species Scientific Committee, 2015c). Accurate distribution patterns are not known within Australian waters and the majority of data are from stranding events. Fin whales have been recorded vocalising off the Perth Canyon, WA, between January and April 2000 (McCauley *et al.*, 2000). It is currently not possible to accurately estimate the population size of fin whales in Australian waters predominantly due to the species' behaviour and local ecology, as the proportion of time they spend at the surface varies greatly depending on these factors. In addition, natural fluctuations of fin whales in Australian waters are unknown; however, long-range movements do appear to be prey-related. A recent study by Aulich *et al.* (2019) used passive acoustic monitoring as a tool to identify the migratory movements of fin whales in Australian waters. On the west coast, the earliest arrival of these animals occurred at Cape Leeuwin in April, and between May and October they migrated along the WA coastline to the Perth Canyon, which likely acts as a way-station for feeding (Aulich *et al.*, 2019). Some whales were found to continue migrating as far north as Dampier (Aulich *et al.*, 2019). There are no identified BIAs for this species in the National Conservation Values Atlas.
Toothed whales (Odontoceti)	
Sperm whale	Sperm whales are the largest of the toothed whales and are distributed worldwide in deep waters (greater than 200 m) off continental shelves and sometimes near shelf edges (Bannister *et al.*, 1996). The species tends to inhabit offshore areas at depths of 600 m or more and is uncommon in waters less than 300 m deep (Ceccarelli *et al.*, 2011). There is limited information about sperm whale distribution in Australian waters, however, they are usually found in deep offshore waters, with more dense populations close to continental shelves and canyons. In the open ocean, there is a generalised movement of sperm whales southwards in summer, and corresponding movement northwards in winter, particularly for males. Detailed information about the distribution and migration patterns of sperm whales off the WA coast is not available. Females with young may reside within the NWMR all year round, males may migrate through the region and the species may be associated with canyon habitats (Ceccarelli *et al.*, 2011). Sperm whales have been recorded in deep waters off North-west Cape and appear to occasionally venture into shallower waters in other areas. Twenty-three (23) sightings of sperm whales (variable pod sizes, ranging from one to six animals) were recorded by marine mammal observers (MMOs) during the North West Cape MC3D marine seismic survey (December 2016 to April 2017) (Woodside, 2020). These animals were observed in deep, continental slope waters of the Montebello Saddle (maximum distance of approximately 90 km from North-west Cape), and the waters overlying the Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula KEF. The deep waters above the gully/saddle on the inner edge of the plateau (the Montebello Saddle) are thought to be important for sperm whales that may feed in the region (based on 19th Century whaling records; Townsend, 1935). There are no identified BIAs for this species in the NWMR.
Killer whale	The preferred habitat of killer whales includes oceanic, pelagic and neritic (relatively shallow waters over the continental shelf) regions, in both warm and cold waters. Killer whales appear to be more common in cold, deep waters; however, they have been observed along the continental slope and shelf, particularly near seal colonies, as well as in shallow coastal areas of WA (Bannister *et al.*, 1996; Thiele and Gill, 1999). The total number of killer whales in Australian waters is unknown, however, it may be that the total number of mature animals within waters around the continent is less than 10,000. Killer whales are known to make seasonal movements, and probably follow regular migratory routes, but no information is available for the

Species	Key Information
	species in Australian waters. Killer whales are top-level carnivores, and there are reports from around Australia of attacks on dolphins, juvenile humpback whales, blue whales, sperm whales, dugongs and Australian sea lions (Bannister *et al.*, 1996). Killer whales are known to target humpback whales, particularly calves, off Ningaloo Reef during the humpback southern migration season (Pitman *et al.*, 2015). Overall, observations suggest that humpback calves are a predictable, plentiful, and readily taken prey source for killer whales off Ningaloo Reef for at least five months of the year. Additionally, there are records of killer whales attacking dugongs in Shark Bay (Anderson and Prince, 1985). However, there are no recognised key localities or important habitats for killer whales within the NWMR (DSEWPAC, 2012a). There are no identified BIAs for this species in the NWMR.
Australian snubfin dolphin	Stranding and museum specimen records indicate that Australian snubfin dolphins occur only in waters off northern Australia, from approximately Broome on the west coast to the Brisbane River on the east coast (Parra *et al.*, 2002). Aerial and boat-based surveys indicate that Australian snubfin dolphins occur mostly in protected shallow waters close to the coast, and close to river and creek mouths (Parra, 2006; Parra *et al.*, 2006; Parra *et al.*, 2002). Within the NWMR, species has been found in the shallow coastal waters and estuaries along the Kimberley coast. Beagle and Pender bays on the Dampier Peninsula, and tidal creeks around Yampi Sound and between Kuri Bay and Cape Londonderry are important areas for Australian snubfin dolphins (DEWHA, 2008). Roebuck Bay has generally been considered the south-western limit of snubfin dolphin distribution across northern Australia, but the species has been recorded in Port Hedland harbour, the Dampier Archipelago, Montebello Islands, Exmouth Gulf and off North-west Cape (Allen *et al.*, 2012). A first comprehensive catalogue of snubfin dolphin sightings has been compiled for the Kimberley, north-west Western Australia (Bouchet *et al.* 2021) and documented that snubfin dolphins are consistently encountered in shallow water (<21 m depth) close to (<15 km) freshwater inputs with high detection rates in known hotspots such as Roebuck Bay and Cygnet Bay as well as suitable coastal habitat in the wider Kimberley region. Refer **Table 7-3** and **Figure 7-3** for the location and type of BIAs for Australian snubfin dolphins in the NWMR.
Indo-Pacific humpback dolphin (Australian humpback dolphin)	Previously included with *Sousa chinensis*, the Australian humpback dolphin (*S. sahulensis*) was elevated to a species in 2014. *S. chinensis* is now applied for humpback dolphins in the eastern Indian and western Pacific Oceans and *S. sahulensis* for humpback dolphins in the waters of the Sahul Shelf from northern Australia to southern New Guinea (Jefferson and Rosenbaum, 2014). The Australian humpback dolphin is listed as *S. chinensis* under EPBC Act. The Australian humpback dolphin (referred to as 'humpback dolphin' hereafter) inhabits the tropical/subtropical waters of the Sahul Shelf across northern Australia and southern Papua New Guinea (Jefferson and Rosenbaum, 2014). Based on historical stranding data, museum specimens and opportunistic sightings collected during aerial and boat-based surveys for other fauna it has been inferred that humpback dolphins occur from the WA/NT border south-west to Shark Bay (Hanf *et al.*, 2016). Allen *et al.* (2012) suggested that humpback dolphins use a range of inshore habitats, including both clear and turbid coastal waters across northern WA. The waters surrounding North-west Cape are an important area for the species. Boat-based surveys up to 5 km out from the coast (Brown *et al.*, 2012) recorded humpback dolphins from 0.3 to 4.5 km away from shore and in depths ranging from 1.2 to 20 m, with a mean of ~8 m. Other studies around North-west Cape, surveying waters up to 5 km from the coast, recorded humpback dolphins in water depths of up to 40 m (Hanf *et al.*, 2016). Based on density, site fidelity and residence patterns, North-west Cape is clearly an important habitat toward the south-western limit of this species' range (Hunt *et al.*, 2017). Aerial surveys targeting dugongs over the western Pilbara have recorded humpback dolphins more than 60 km from the mainland in shallow shelf waters (i.e. <30 m deep) near Barrow Island and the western Lowendal Islands (Hanf, 2015). The species has also been recorded in fringing coral reef and shallow, sheltered sandy lagoons at the Montebello Islands (Raudino *et al.*, 2018). Over the past ten years a number of studies have focused on populations of humpback dolphins along the Kimberley coast, including Roebuck Bay, the Dampier Peninsula, Cone Bay, Yampi Sound, Prince Regent River and the Cambridge Gulf (Brown *et al.*, 2016). Refer Table **Table 7-3** and **Figure 7-4** for the location and type of BIAs for Indo-Pacific humpback dolphins in the NWMR.
Indo-Pacific bottlenose dolphin (Spotted bottlenose dolphin)	There are four known sub-populations of spotted bottlenose dolphins, of which the Arafura/Timor Sea populations were identified as potentially occurring within the NWMR. The species is restricted to inshore areas such as bays and estuaries, nearshore waters, open coast environments, and shallow offshore waters including coastal areas around oceanic islands, from Shark Bay to the western edge of the Gulf of Carpentaria. The species

Species	Key Information
	forages in a range of habitats but is generally restricted to water depths of less than 200 m (DSEWPAC, 2012a). Important foraging/breeding areas include the shallow coastal waters and estuaries along the Kimberley coast and Roebuck Bay. Refer **Table 7-3** the location and type of BIAs for spotted bottlenose dolphins in the NWMR.
Sirenians	
Dugong	Dugongs are distributed along the WA coast throughout the Gascoyne, Pilbara and Kimberley. Specific areas supporting dugong populations include: Shark Bay; Ningaloo and Exmouth Gulf; the Pilbara coast (Exmouth Gulf to De Grey River [Marsh *et al.*, 2002]); and Eighty Mile Beach and the Kimberley coast, including Roebuck Bay (Brown *et al.*, 2014). Dugong distribution is correlated with the seagrass habitats upon which it feeds, although water temperature has also been correlated with dugong movements and distribution (Preen *et al.*, 1997; Preen, 2004). Dugongs are known to migrate between seagrass habitats (hundreds of kilometres) (Sheppard *et al.*, 2006), and in Shark Bay they exhibit seasonal movements as a behavioural thermoregulatory response to winter water temperatures (Holley *et al.*, 2006; Marsh *et al.*, 2011). Aerial surveys since the mid-1980s indicate that dugong populations are now stable at a regional scale in Shark Bay and in the Exmouth/Ningaloo Reef. Refer **Table 7-3** and **Figure 7-5** for the location and type of BIAs for dugong in the NWMR.
Pinnipeds	
Australian sea lion	The Australian sea lion is the only endemic pinniped (true seals, fur seals and sea lions) in Australian waters. It is a member of the Otariidae (eared seals) family. The birth interval in Australian sea lions is around 17–18 months. The Australian sea lion is unique among pinnipeds in being the only species that has a non-annual breeding cycle that is also temporally asynchronous across its range (DSEWPAC, 2013a; Threatened Species Scientific Committee, 2020a). This means the breeding period (copulation and birthing) in one colony will occur at different times to breeding in another colony. The Australian sea lion is considered to be a specialised benthic forager—that is, it feeds primarily on the sea floor. Studies have shown that the species will eat a range of prey, including fish, cephalopods (squid, cuttlefish and octopus), sharks, rays, rock lobsters and penguins (DSEWPAC, 2013a; Threatened Species Scientific Committee, 2020a). The Australian sea lion feeds on the continental shelf, most commonly in depths of 20–100 m, and they typically travel up to about 60 km from their colony on each foraging trip, with a maximum distance of around 190 km when over shelf waters. The current breeding distribution of the Australian sea lion extends from the Houtman Abrolhos Islands on the west coast of WA to the Pages Islands in SA. Sites for the 58 breeding colonies occurring in WA and SA are designated as habitat critical to the survival of the species under the Recovery Plan for the Australian sea lion (DSEWPAC, 2013a). Of these, four are located in the SWMR along the west coast of WA: Abrolhos Islands (Easter Group), Beagle Island, North Fisherman Island and Buller Island. There are also a number of foraging BIAs for both males and females along the west coast, extending from the Abrolhos Islands south to Rockingham. There is no designated habitat critical to survival or identified BIAs for this species in the NWMR. **Figure 7-6** shows the foraging BIAs for the Australian sea lion to the south of the NWMR.

7.5 Biological Important Areas in the NWMR

BIAs representing important life cycle stages and behaviours for six species of marine mammal in the NWMR: the humpback whale, the pygmy blue whale, Australian snubfin dolphin, Australian humpback dolphin, spotted bottlenose dolphin and dugong, are presented in **Table 7-3**.

Table 7-3 Marine mammal BIAs within the NWMR

7.6 Marine Mammal Summary for the NWMR

7.6.1 Browse

The Browse activity area includes biologically important habitat for five threatened and/or migratory marine mammal species:

- blue whale and pygmy blue whale (foraging and migration areas);
- humpback whale (breeding, calving and migration areas);
- Indo-Pacific humpback dolphin (foraging, breeding and calving areas);
- Australian snubfin dolphin (foraging, breeding and calving areas); and
- dugong (foraging).

BIAs for the marine mammal species are outlined in **Table 7-3**.

7.6.2 North-west Shelf / Scarborough

The NWS / Scarborough activity area includes biologically important habitat for five threatened and/or migratory marine mammal species:

- blue whale and pygmy blue whale (foraging and migration areas);
- humpback whale (resting and migration areas);
- Indo-Pacific humpback dolphin (foraging, breeding and calving areas);
- Australian snubfin dolphin (foraging, breeding and calving areas); and
- dugong (foraging and calving areas).

BIAs for the marine mammal species are outlined in **Table 7-3**.

7.6.3 North-west Cape

The North-west Cape activity area includes biologically important habitat for three threatened and/or migratory marine mammal species:

- blue whale and pygmy blue whale (foraging and migration areas);
- humpback whale (resting and migration areas); and
- dugong (foraging and calving areas).

BIAs for the marine mammal species are outlined in **Table 7-3**.

8. SEABIRDS AND MIGRATORY SHOREBIRDS OF THE NWMR

8.1 Regional Context

The NWMR supports high numbers and species diversity of seabirds and migratory shorebirds including many that are EPBC Act listed, threatened and migratory. The NWMR marine bioregional plan reported 34 seabird species (listed as threatened, migratory and/or marine) that are known to occur, and 30 of 37 species of migratory shorebird species that regularly occur in Australia, are recorded at Ashmore Reef in the NWMR (DSEWPAC, 2012e). The NWMR marine bioregional plan also noted that Roebuck Bay and Eighty Mile Beach are internationally significant and recognised migratory shorebird locations.

Many migratory seabirds and shorebirds are protected through bilateral agreements between Australia and Japan (JAMBA), China (CAMBA) and the Republic of Korea (ROKAMBA), recognising the migratory route and important stopover and resting habitats of the East Asian-Australasian Flyway (EAAF). Important migratory bird habitats are also recognised as part of protected wetlands of the internationally significance under the Ramsar Convention. Important Bird Areas (IBAs) for the NWMR, which are also recognised as global Key Biodiversity Areas (KBAs) (BirdLife Australia[4]), include:

- Roebuck Bay KBA (and Ramsar site): Internationally significant migratory shorebird species.
- Mandora Marsh and Anna Plains KBA (adjacent to Eighty Mile Beach, Ramsar site): Internationally significant migratory shorebird species.
- Dampier Saltworks KBA: Internationally significant migratory shorebird species.
- Montebello Islands KBA: Shorebird and seabird species.
- Barrow Island KBA: Shorebird and seabird species.
- Exmouth Gulf Mangroves KBA: Internationally significant migratory shorebird species.

Table 8-1 presents a list of the threatened and migratory seabird and shorebird species that occur within the NWMR, with their conservation status and relevant recovery plans and/or conservation advice.

4 https://www.birdlife.org.au/projects/KBA#:~:text=The%20Key%20Biodiversity%20Areas%20(KBAs,of%20advocacy%20for%20protected%20areas. Accessed April, 2021.

8.2 Seabirds in the NWMR

Seabirds are birds that are adapted to life within the marine environment (oceanic and coastal) and are generally long-lived, have delayed breeding and have fewer young than other bird species (Commonwealth of Australia, 2019). At least 34 seabird species listed as threatened, migratory and/or marine under the EPBC Act are known to occur regularly in the NWMR and include a variety of species of terns, noddies, petrels, shearwaters, frigatebirds, and boobies. Many of these species spend most of their lives at sea (predominately pelagic species), ranging over large distances to forage. These pelagic species only come onshore to breed and raise chicks at natal or high-fidelity breeding colonies on remote, offshore island locations in and adjacent to the NWMR. Many species are ecologically significant to the NWMR, as they are endemic to the region, can be present in large numbers in breeding seasons and non-breeding seasons, and many exhibit extensive annual migrations that include marine areas outside the Australian EEZ (DSEWPAC, 2012e).

The presence of seabirds within the NWMR is influenced by seabird species that migrate and forage in the area during the non-breeding season and this includes many seabird species that breed on the Houtman Abrolhos in the SWMR. Pelagic seabirds have been documented foraging at current boundaries and seasonal upwellings within the NWMR (refer to Sutton *et al*., 2019). The Houtman Abrolhos Islands National Park located in the SWMR, is one of the most significant seabird breeding locations in the eastern Indian Ocean. Sixteen (16) species of seabirds breed there. Eighty percent of common (brown) noddies, 40% of sooty terns and all the lesser noddies found in Australia nest at the Houtman Abrolhos (Surman, 2019). Important seabird areas in the NWMR are as identified by the KBAs (refer to **Section 8.1**) and the information on a select number of seabird species documented for the NWMR (based on the screening criteria presented in **Section 3**), as presented in **Table 8-2**.

Table 8-2 Information on threatened/migratory seabird species of the NWMR

Species	Key Information
Seabirds	
Southern giant petrel	This species is included in the National recovery plan for threatened albatrosses and giant petrels. Habitat critical to survival is defined for breeding and foraging. There are six known breeding localities under Australian jurisdiction (for all species giant petrels) and all are located in the Southern Ocean including islands off Tasmania and within the Australian Antarctic Territory (DSEWPAC, 2011c). Habitat critical to survival identified for foraging is defined as waters south of 25 degrees latitude. The giant petrel species distribution is mainly within the Southern Ocean but this species does migrate into subtropical waters during the winter and its distribution includes the southern extent of the NWMR. No BIAs for this species are located in the NWMR.
Abbott's booby	The Abbott's booby is a large, long-lived seabird known to nest only at Christmas Island. The recovery of this species is strongly dependent on the protection of breeding habitat defined habitat critical to the survival of this species on Christmas Island (Threatened Species Scientific Committee, 2020b). This species spends much of its time at sea and known to forage over large distances offshore when nesting and its range includes off the coast of Java, near the Chagos and in the Banda Sea, and may possibly extend into the north-western extent of the NWMR. No BIAs for this species are located in the NWMR.
Soft-plumaged petrel	This petrel species breeds only at two locations in Australian waters within the Southern Ocean (one off Tasmania and Macquarie Island) (Threatened Species Scientific Committee, 2015f). As a mainly sub-Antarctic species they are usually distributed in cooler seas but distribution extents into subtropical waters and its known distribution includes the southern extent of the NWMR. No BIAs for this species are located in the NWMR.
Australian fairy tern	The Australian fairy tern is listed as Vulnerable for the sub-species only recorded for WA. It has a coastal distribution from Sydney, south to Tasmania and around southern WA up to the Dampier Archipelago and out on the offshore island groups of Barrow, Montebello and the Lowendals (DSEWPAC, 2011d). The Australian fairy tern feeds on small baitfish and roosts and nests on sandy beaches below vegetation. These behaviours, generally, occur in inshore waters of island archipelagos and on the Australian mainland shores and adjacent wetlands. Fairy terns breed from August to February. The Australian fairy tern is unlikely to be present

Species	Key Information
	within the offshore environment of the NWMR. The largest breeding colony in Western Australia for this species is in the Houtman Abrolhos Islands, SWMR (Surman, 2019). For the description and location of BIAs in the NWMR, refer to **Table 8-3** and **Figure 8-2**.
Australian lesser noddy	The Houtman Abrolhos, WA is an important breeding habitat for the Australian lesser noddy in the eastern Indian Ocean. This species exhibits nesting habitat specialisation (white mangrove stands) and has a limited foraging range during the breeding season. Furthermore, the lesser noddy forages over shelf waters and appears not to disperse over their non-breeding period as they remain largely in the general vicinity or slightly to the south of the colony in the non-breeding season (February to September; Surman *et al*., 2018). No BIAs for this species are located in the NWMR.
Indian yellow-nosed albatross	This species is included in the National recovery plan for threatened albatrosses and giant petrels. Habitat critical to survival is defined for breeding and foraging. There are six known breeding localities under Australian jurisdiction (for all species of albatrosses) and all are located in the Southern Ocean including islands off Tasmania and within the Australian Antarctic Territory (DSEWPAC, 2011c). Habitat critical to survival identified for foraging is defined as waters south of 25 degrees latitude. All albatross species distribution (including the Indian yellow-nose albatross) is mainly within the Southern Ocean but this species does migrate into subtropical waters during the winter and its distribution includes the southern extent of the NWMR. No BIAs for this species are located in the NWMR.
Common noddy	This species is listed as migratory and marine. The common (or brown) noddy is the largest species of noddy found in Australian waters. The species is widespread in tropical and subtropical areas beyond Australia. This seabird species is gregarious and normally occurs in flocks, up to hundreds of individuals, when feeding or roosting. The Houtman Abrolhos, WA is the primary breeding habitat for the common noddy in the Eastern Indian Ocean. This species spends their non-breeding season (March to August) in the NWS area, around 950 km north from the breeding colony (Surman *et al*. 2018). The species occurs within NWMR waters, particularly around offshore islands such as the Montebello Island group. This species is recorded on unmanned oil and gas platforms within the NWS. No BIAs for this species are located in the NWMR.
Lesser frigatebird **Great frigatebird**	Both species of frigatebird are listed as migratory and marine. Within the NWMR, the lesser frigatebird is known to breed on Adele, Bedout and West Lacepede islands, Ashmore Reef and Cartier Island (Commonwealth of Australia, 2019). The lesser frigatebird feeds mostly on fish and sometimes cephalopods, and all food is taken while the bird is in flight. Lesser frigatebirds generally forage close to breeding colonies. Breeding/foraging BIAs for the lesser frigatebird are located in the NWMR; refer to **Table 8-3**.
Brown booby	The brown booby is the most common booby, occurring throughout all tropical oceans bounded by latitudes 30º N and 30º S. There are large colonies on offshore islands within the NWMR such as the Lacepede Islands (one of the largest colonies in the world), Ashmore Reef, and other offshore Kimberley islands. This seabird species is a specialised plunge diver, mostly eating fish and some cephalopods (Commonwealth of Australia, 2019). Breeding/foraging BIAs for the brown booby are located in the NWMR; refer to **Table 8-3** and **Figure 8-3**.
Red-footed booby	Within the NWMR, its known breeding sites for this species include Ashmore Reef and Cartier Island. It is a pelagic species and generally occurs away from land. It mainly eats flying fish and squid. Prey abundance is reliant on the high productivity in slope areas off remote islands where the birds breed (Commonwealth of Australia, 2019). Breeding/foraging BIAs for the red-footed booby are located in the NWMR; refer to **Table 8-3** and **Figure 8-3**.
Greater crested tern	The greater crested tern has a widespread distribution recorded on islands and coastlines of tropical and subtropical areas, ranging from the Atlantic coast of South Africa, Indian Ocean and through south-east Asia and Australia. Outside the breeding season it can be found at sea throughout its range, with the exception of the central Indian Ocean (Commonwealth of Australia, 2019). The largest breeding colony in WA for this species is the Houtman Abrolhos Islands, SWMR (Surman, 2019). No BIAs for this species are located in the NWMR.
Little tern	There are three sub-populations of this species in Australia and two of these occur in the NWMR: northern Australian breeding sub-population occurring around Broome and extending across in to the NMR, and an east Asian breeding sub-population, with the terns present from Shark Bay to south-eastern Queensland during the austral summer. Little terns

Species	Key Information
	usually forage close to breeding colonies in the shallow water of estuaries (Commonwealth of Australia, 2019). For the description and location of BIAs in the NWMR, refer to **Table 8-3** and **Figure 8-2**.
Roseate tern	This species is generally tropical in distribution and there are many breeding populations in the NWMR, including Ashmore Reef, Napier Broome Bay, Bonaparte Archipelago, Lacepede Islands, Dampier Archipelago and the Lowendal Islands. A large number of non-breeding roseate terns have been observed at several remote locations in the Kimberley and there are high numbers also recorded for Eighty Mile Beach Ramsar site. The Kimberley colonies are likely to be another sub-species that breeds in east Asia. Roseate terns predominately eat small pelagic fish (Commonwealth of Australia, 2019). The largest breeding colony in Western Australia for this species is in the Houtman Abrolhos Islands, SWMR (Surman, 2019). For the description and location of BIAs in the NWMR, refer to **Table 8-3** and **Figure 8-2**.
Wedge-tailed shearwater	The wedge-tailed shearwater is a pelagic, marine seabird known from tropical and subtropical waters. Its distribution is widespread across the Indian and Pacific oceans. It is known to breed on the east and west coasts (and offshore islands) of Australia. This species is known to consume fish, cephalopods, and other biota primarily via contact-dipping. Wedge-tailed shearwaters are now understood to undertake extensive foraging trips (over thousands of kilometres over periods of days when chicking and provisioning young) and much longer and extensive pelagic travels over the north-west Indian Ocean during the non-breeding season, targeting current boundaries and upwellings. The species breeds throughout its range, mainly on vegetated islands, atolls and cays and excavates burrows in the ground where chicks are raised (Commonwealth of Australia, 2019). Large breeding colonies of the wedge-tailed shearwater are located on the Houtman Abrolhos islands (SWMR) (Surman *et al*., 2018) and several locations in the NWMR including: Muiron Islands (North-west Cape), Varanus Island and the Dampier Archipelago in the Pilbara where burrow numbers were estimated to several hundred thousand to half a million such as on the Muiron Islands, though it is not known if all burrows are utilised on an annual basis (Birdlife Australia, 2018; Surman *et al.*, 2018). Cannell *et al* (2019) satellite tracked adult wedge-tailed shearwaters during egg incubation and chick rearing on the Muiron Islands in January 2018. For the incubation trips, there was a strong consistency for the birds to travel towards seamounts, typically located north-west of the Muiron Islands, between Australia and Indonesia. One bird however remained south-west of the islands, in the Cape Range Canyon. A similar pattern to utilise areas associated with sea mounts was also observed for the long foraging trips during chick rearing, though some of the foraging was concentrated in deeper waters. A bimodal foraging strategy during chick-rearing was observed, with adults undertaking long foraging trips after a series of shorter foraging trips within the NWMR. Surman *et al*. (2018) reported most wedge-tailed shearwaters from the breeding colonies on the Houtman Abrolhos undertook extensive non-breeding migrations. This seabird species occupied waters adjacent or to the north of their nesting sites or migrated 4200 km north-west into the equatorial central Indian Ocean near the Ninety East Ridge during the non-breeding season (later April to mid-November). For the description and location of BIAs in the NWMR, refer to **Table 8-3** and **Figure 8-1**.
Flesh-footed shearwater	The species mainly occurs in the subtropics, over continental shelves and slopes and occasionally inshore waters, with individual birds pass through the tropics and over deeper waters during migration to the North Pacific and Indian oceans (Commonwealth of Australia, 2019). They are a common visitor to the waters off southern Australia, from south-western WA to south-eastern Queensland. The fleshy-footed shearwater is a trans-equatorial migrant, breeding from late September to May off south-western Australia, and migrating north by early May, across the southern Indian and possibly Indonesia to the northern Pacific Ocean. No BIAs for the flesh-footed shearwater are located in the NWMR.
Streaked shearwater	The streaked shearwater has a broad distribution in the western Pacific Ocean, breeding on the coast and offshore islands of Japan, Russia, China and the Korean Peninsula. During winter months (non-breeding season), the species undertakes trans-equatorial migration to the coasts of Vietnam, New Guinea, the Philippines, Australia, southern India and Sri Lanka. The streaked shearwater feeds mainly on fish and squid that it catches by surface-seizing and shallow plunges (Commonwealth of Australia, 2019). No BIAs for the streaked shearwater are located in the NWMR.
White-tailed tropicbird	Tropicbirds are predominately pelagic species and the white-tailed tropicbird forages in warm waters and over long distances (pan-tropical). The species is most common off north-west Australia. In the NWMR, this species is considered a sub-species and are limited in number and distribution. Nesting sites are known for Clerke Reef (Rowley Shoals) and Ashmore

Species	Key Information
	Reef. Christmas Island is also a known nesting site and the species can disperse several thousand kilometres during foraging trips. This species feeds mainly on fish and cephalopods, captured by deep plunge diving (Commonwealth of Australia, 2019). There are breeding BIAs at the Rowley Shoals and Ashmore Reef within the NWMR for the white-tailed tropicbird; refer to **Table 8-3**.
Silver gull	The silver gull is typically described as an inshore and coastal foraging seabird and has an Australian-wide distribution including locations within the NWMR. It is noted as it has been recorded on unmanned oil and gas platforms located within the NWS.

8.2.1 Biologically Important Areas in the NWMR

BIAs representing important life cycle stages and behaviours for eight species of seabird in the NWMR are presented in **Table 8-3**.

8.2.2 Seabird Summary for NWMR

8.2.2.1 Browse

The Browse activity area includes biologically important habitat for seven threatened and/or migratory seabird species:

- wedge-tailed shearwater (breeding/foraging);
- great and lesser frigatebirds (breeding/foraging);
- brown booby (breeding/foraging);
- red-footed booby (breeding/foraging);
- little tern (breeding/foraging);
- roseate tern (breeding and resting); and,
- white-tailed tropicbird (breeding).

BIAs for the seabird species are outlined in **Table 8-3**.

8.2.2.2 NWS / Scarborough

The NWS / Scarborough activity area includes biologically important habitat for five threatened and/or migratory seabird species:

- wedge-tailed shearwater (breeding/foraging);
- lesser frigatebird (breeding/foraging);
- brown booby (breeding/foraging);
- little tern (breeding/foraging); and
- roseate tern (breeding and resting).

BIAs for the seabird species are outlined in **Table 8-3**.

8.2.2.3 North-west Cape

The North-west Cape activity area includes biologically important habitat for five threatened and/or migratory seabird species:

- Australian fairy tern (breeding);
- wedge-tailed shearwater (breeding/foraging); and
- roseate tern (breeding and resting).

BIAs for the seabird species are outlined in **Table 8-3**.

8.3 Shorebirds

Shorebirds (migratory and resident species) are generally associated with wetland or coastal environments, and the NWMR hosts a large number of many shorebird species, particularly in the Austral summer (refer to **Appendix A** for the EPBC Act PMST reports on listed species of shorebirds). Shorebirds may use coastal environments for feeding, nesting or migratory stopovers. In coastal environments, shorebirds generally feed during low tide on exposed intertidal mud and sand flats, and roost in suitable habitat above the high water mark. Many shorebird species undergo annual migrations, typically breeding at high latitudes of the Northern Hemisphere and migrating south for the non-breeding season and Australia is part of the East Asian-Australasian Flyway (EAAF). The EAAF extends from breeding grounds in the Russian tundra, Mongolia and Alaska

southwards through east and south-east Asia, to non-breeding areas of Indonesia, Papua New Guinea, Australia and New Zealand (Weller and Lee, 2017). The EAAF is of most relevance to the NWMR. There are 37 species of shorebird which annually migrate to Australia via the EAAF and 36 of these species spend the austral summer (non-breeding season) foraging and roosting in coastal and wetland habitats (Commonwealth of Australia, 2015c; Weller and Lee, 2017).

Ashmore Reef is documented as a BIA for migratory shorebirds in the NWMR (DSEWPAC, 2012a).

Table 8-4. Information on threatened/migratory shorebird species of the NWMR

Species	Key Information
Shorebirds	
Eastern curlew, Far eastern curlew	This species is the largest, migratory shorebird in the world, with a long neck, long legs and a very long downcurved bill and is a long-haul flyer. The eastern curlew is a coastal species with a continuous distribution north from Barrow Island to the Kimberley region. The species is endemic to the EAAF and is a non-breeding visitor to Australia from August to March, primarily foraging on crabs and molluscs in intertidal mudflats. During the non-breeding season in Australia, this species is most associated with sheltered coasts, especially estuaries, bays, harbours, inlets and coastal lagoons, with large intertidal mudflats or sandflats, often with beds of seagrass (DOE, 2015a).
Curlew sandpiper	The curlew sandpiper breeds in northern Siberia but has a non-breeding range that extends from western Africa to Australia, with small numbers reaching New Zealand (Bamford *et al*., 2008). In Australia, curlew sandpipers occur around the coasts and are also quite widespread inland, though in smaller numbers. Records occur in all states and the NT during the non-breeding period, and also during the breeding season when many non-breeding one-year old birds remain in Australia rather than migrating north along the EAAF. The species preferred habitat for foraging is mudflats and nearby shallow waters in sheltered coastal areas such as estuaries, bay, inlets and lagoons (DOE, 2015b).
Great knot	The great knot breeds in the Northern Hemisphere and undertakes biannual migrations along the EAAF to non-breeding habitat in Australia. The great knot winters in Australia and has been recorded around the entirety of the Australian coast the greatest numbers are found in northern Western Australia (Pilbara (Dampier Archipelago) and Kimberley and the Northern Territory. In Australia, this species prefers sheltered, coastal habitat with large intertidal mudflats or sandflats (inkling inlets, bays, harbours, estuaries and lagoons). High numbers (exceeding several thousand birds are regularly recorded from Roebuck Bay. The great knot feeds on a variety of invertebrates by pecking at or just below the surface of moist mud or sand (Threatened Species Scientific Committee, 2016a).
Bar-tailed godwit (*menzbieri*)	The bar-tailed godwit is a large, migratory shorebird and there are two sub-species in the EAAF (*Limosa lapponica baueri* and *L. l. menzbieri*). The sub-species *L. l. menzbieri* breeds in northern Siberia and spends its non-breeding period mostly in the north of WA but also in South-east Asia. The bar-tailed godwit (*menzbieri*) usually forages near the water in shallow water, mainly in tidal estuaries and harbours with a preference for exposed sandy or soft mud substrates on intertidal flats, banks and beaches (Threatened Species Scientific Committee, 2016c).
Red knot (*piersmai*)	This species is a small to medium migratory shorebird. There are two sub-species that cannot be distinguished from each other in nonbreeding plumage, however, *Calidris canutus piersmai* tend to overwinter almost exclusively in north-west Australia. The red knot migrates long distances from breeding grounds in high northern latitudes, where it breeds during the boreal summer, to the Southern Hemisphere during the austral summer with migration along the EAAF. Very large numbers are recorded for the north-west Australia and is common in all suitable habitats around the coast, including inland clay pans near Roebuck Bay (where the species roosts). The red knot usually forages in soft substrate along the waters edge on intertidal mudflats, sandflats and sandy beaches of sheltered coasts (Threatened Species Scientific Committee, 2016b).
Lesser sand plover	The lesser sand plover is a small to medium shorebird and one of 36 migratory shorebirds that breed in the Northern Hemisphere during the boreal summer and are known to annually migrate to the non-breeding grounds of Australia along the EAAF for the austral summer. There are five different sub-species and it is most likely the non-breeding ranges of the sub-species *Charadrius m. mongolus* overlaps with the NWMR. This species is widespread in coastal regions, preferring sandy beaches, mudflats of coastal bays and estuaries (Threatened Species Scientific Committee, 2016e).
Greater sand plover	The greater sand plover is a small to medium shorebird and in its non-breeding plumage is difficult to distinguish from the lesser sand plover. This species breeds in the Northern

Species	Key Information
	Hemisphere and undertakes annual migrations to and from Southern Hemisphere feeding grounds in the austral summer along the EAAF. The species distribution in Australia during the non-breeding season is widespread, in WA the greater sand plover is widespread between Northwest Cape and Roebuck Bay (Threatened Species Scientific Committee, 2016d).

9. KEY ECOLOGICAL FEATURES

Key ecological features (KEFs) are elements of the Commonwealth marine environment that are considered to be important for a marine region's biodiversity or ecosystem function and integrity. KEFs have been identified by the Australian Government based on advice from scientists about the ecological processes and characteristics of the area.

KEFs meet one or more of the following criteria:

- a species, group of species, or a community with a regionally important ecological role (e.g. a predator, prey that affects a large biomass or number of other marine species),
- a species, group of species or a community that is nationally or regionally important for biodiversity,
- an area or habitat that is nationally or regionally important for:
  - enhanced or high productivity (such as predictable upwellings – an upwelling occurs when cold nutrient-rich waters from the bottom of the ocean rise to the surface),
  - aggregations of marine life (such as feeding, resting, breeding or nursery areas), or
  - biodiversity and endemism (species which only occur in a specific area),
- a unique seafloor feature, with known or presumed ecological properties of regional significance.

Thirteen KEFs are designated within the NWMR, twelve KEFs within the SWMR and eight KEFs within the NMR. These KEFs have been identified in the Protected Matters search (**Appendix A**) and outlined in **Table 9-1, Table 9-2** and **Table 9-3,** and **Figure 9-1, Figure 9-2** and **Figure 9-3**.

Table 9-1 Key Ecological Features (KEF) within the NWMR

KEF Name	Woodside Activity Area			Values[1]	Description
	Browse	NWS/S	NW Cape		
Carbonate bank and terrace system of the Sahul Shelf	✓	-	-	Unique seafloor feature with ecological properties of regional significance Regionally important because of their role in enhancing biodiversity and local productivity relative to their surrounds. The carbonate banks and terraces provide areas of hard substrate in an otherwise soft sediment environment which are important for sessile species	The Carbonate banks and terrace system of the Sahul Shelf are located in the western Joseph Bonaparte Gulf and to the north of Cape Bougainville and Cape Londonderry. The carbonate banks and terraces are part of a larger complex of banks and terraces that occurs on the Van Diemen Rise in the adjacent NMR. The bank and terrace system of the Van Diemen Rise covers approximately 31,278 km^2 and forms part of the larger system associated with the Sahul Banks to the north and Londonderry Rise to the east. The feature is characterised by terrace, banks, channels and valleys (DSEWPAC, 2012c). The banks, ridges and terraces of the Van Diemen Rise are raised geomorphic features with relatively high proportions of hard substrate that support sponge and octocoral gardens. These, in turn, provide habitat to other epifauna, by providing structure in an otherwise flat environment (Przeslawski *et al.*, 2011). Plains and valleys are characterised by scattered epifauna and infauna that include polychaetes and ascidians. These epibenthic communities support higher order species such as olive ridley turtles, sea snakes and sharks (DSEWPAC, 2012c)
Pinnacles of the Bonaparte Basin	✓	-	-	Unique seafloor feature with ecological properties of regional significance Provide areas of hard substrate in an otherwise soft sediment environment and so are important for sessile species Recognised as a biodiversity hotspot for sponges The Pinnacles of the Bonaparte Basin KEF is located within both the NWMR and NMR (refer **Table 9-3**)	The Pinnacles of the Bonaparte Basin provide areas of hard substrate in an otherwise relatively featureless environment, the pinnacles are likely to support a high number of species, although a better understanding of the species richness and diversity associated with these structures is required (DSEWPAC, 2012a, 2012c). Covering >520 km^2 within the Bonaparte Basin, this feature contains the largest concentration of pinnacles along the Australian margin. The Pinnacles of the Bonaparte Basin are thought to be the eroded remnants of underlying strata; it is likely that the vertical walls generate local upwelling of nutrient-rich water, leading to phytoplankton productivity that attracts aggregations of planktivorous and predatory fish, seabirds, and foraging turtles (DSEWPAC, 2012a, 2012c).
Ashmore Reef and Cartier Island and surrounding Commonwealth waters	✓	-	-	High productivity, biodiversity and aggregation of marine life that apply to both the benthic and pelagic habitats within the feature	Ashmore Reef is the largest of only three emergent oceanic reefs present in the north-eastern Indian Ocean and is the only oceanic reef in the region with vegetated islands. Ashmore contains a large reef shelf, two large lagoons, several channelled carbonate sand flats, shifting sand cays, an extensive reef flat, three vegetated islands—East, Middle and West islands—and

KEF Name	Woodside Activity Area			Values[1]	Description
	Browse	NWS/S	NW Cape		
					surrounding waters. Rising from a depth of more than 100 m, the reef platform is at the edge of the NWS and covers an area of 239 km². Ashmore Reef and Cartier Island and the surrounding Commonwealth waters are regionally important for feeding and breeding aggregations of birds and other marine life; they are areas of enhanced primary productivity in an otherwise low-nutrient environment (DSEWPAC, 2012a). Ashmore Reef supports the highest number of coral species of any reef off the WA coast.
Seringapatam Reef and the Commonwealth waters in the Scott Reef complex	✓	-	-	Support diverse aggregations of marine life, have high primary productivity relative to other parts of the region, are relatively pristine and have high species richness, which apply to both the benthic and pelagic habitats within the feature	Seringapatam Reef and the Commonwealth waters in the Scott Reef complex are regionally important in supporting the diverse aggregations of marine life, high primary productivity, and high species richness associated with the reefs themselves. As two of the few offshore reefs in the north-west, they provide an important biophysical environment in the region (DSEWPAC, 2012a).
Continental slope demersal fish communities	✓	✓	✓	High biodiversity of demersal fish assemblages, including high levels of endemism	The diversity of demersal fish assemblages on the continental slope in the Timor Province, the Northwest Transition and the North-west Province is high compared to elsewhere along the Australian continental slope (DSEWPAC, 2012a). The continental slope between North-west Cape and the Montebello Trough has more than 500 fish species, 76 of which are endemic, which makes it the most diverse slope bioregion in Australia (Last *et al.*, 2005). The slope of the Timor Province and the Northwest Transition also contains more than 500 species of demersal fishes of which 64 are considered endemic (Last *et al.*, 2005), making it the second richest area for demersal fishes throughout the whole continental slope. Demersal fish species occupy two distinct demersal biomes associated with the upper slope (225–500 m water depths) and the mid-slope (750–1000 m). Although poorly known, it is suggested that the demersal slope communities rely on bacteria and detritus-based systems comprised of infauna and epifauna, which in turn become prey for a range of teleost fishes, molluscs and crustaceans (Brewer *et al.*, 2007). Higher-order consumers may include carnivorous fishes, deepwater sharks, large squid, and toothed whales (Brewer *et al.*, 2007). Pelagic production is phytoplankton-based, with hot spots around oceanic reefs and islands (Brewer *et al.*, 2007).

KEF Name	Woodside Activity Area			Values[1]	Description
	Browse	NWS/S	NW Cape		
Ancient coastline at 125 m depth contour	✓	✓	✓	Unique seafloor feature with ecological properties of regional significance Provides areas of hard substrate and therefore may provide sites for higher diversity and enhanced species richness relative to surrounding areas of predominantly soft sediment	Several steps and terraces as a result of Holocene sea level changes occur in the region, with the most prominent of these features occurring as an escarpment along the NWMR and Sahul Shelf at a water depth of 125 m. The Ancient Coastline is not continuous throughout the NWMR and coincides with a well-documented eustatic stillstand at about 130 m worldwide (Falkner *et al.*, 2009). Where the Ancient Coastline provides areas of hard substrate, it may contribute to higher diversity and enhanced species richness relative to soft sediment habitat (Falkner *et al.*, 2009). Parts of the Ancient Coastline, represented as rocky escarpment, are considered to provide biologically important habitat in an area predominantly made up of soft sediment. The escarpment type features may also potentially facilitate mixing within the water column due to upwelling, providing a nutrient-rich environment. Although the Ancient Coastline adds additional habitat types to a representative system, the habitat types are not unique to the coastline as they are widespread on the upper shelf (Falkner *et al.*, 2009)
Canyons linking the Argo Abyssal Plain and Scott Plateau	-	✓	-	Facilitates nutrient upwelling, creating enhanced productivity and encouraging diverse aggregations of marine life	Interactions with the Leeuwin Current and strong internal tides are thought to result in upwelling at the canyon heads, thus creating conditions for enhanced productivity in the region (Brewer *et al.*, 2007). As a result, aggregations of whale sharks, manta rays, humpback whales, sea snakes, sharks, predatory fishes and seabirds are known to occur in the area due to its enhanced productivity (Sleeman *et al.*, 2007).
Glomar Shoal	-	✓	-	An area of high productivity and aggregations of marine life including commercial and recreational fish species	Glomar Shoal is a submerged littoral feature located about 150 km north of Dampier on the Rowley shelf at depths of 33–77 m (Falkner *et al.*, 2009). Studies by Abdul Wahab *et al.* (2018) found a number of hard coral and sponge species in water depths less than 40 m. One hundred and seventy (170) different species of fishes were detected with greatest species richness and abundance in shallow habitats (Abdul Wahab *et al.*, 2018). Fish species present include a number of commercial and recreational species such as Rankin cod, brown striped snapper, red emperor, crimson snapper, bream and yellow-spotted triggerfish (Falkner *et al.*, 2009; Fletcher and Santoro, 2009). These species have recorded high catch rates associated with Glomar Shoal, indicating that the shoal is likely to be an area of high productivity.

KEF Name	Woodside Activity Area			Values[1]	Description
	Browse	NWS/S	NW Cape		
Mermaid Reef and Commonwealth waters surrounding Rowley Shoals	-	✓	-	Regionally important in supporting high species richness, higher productivity and aggregations of marine life	The Mermaid Reef and Commonwealth waters surrounding the Rowley Shoals KEF and is adjacent to the three nautical mile State waters limit surrounding Clerke and Imperieuse reefs, and include the Mermaid Reef Marine Park as described in **Section 10**. The reefs provide a distinctive biophysical environment in the region. They have steep and distinct reef slopes and associated fish communities. In evolutionary terms, the reefs may play a role in supplying coral and fish larvae to reefs further south via the southward flowing Indonesian Throughflow. Both coral communities and fish assemblages differ from similar habitats in eastern Australia (Done *et al.*, 1994).
Exmouth Plateau	-	✓	✓	Unique seafloor feature with ecological properties of regional significance, which apply to both benthic and pelagic habitats Likely to be an important area of biodiversity as it provides an extended area offshore for communities adapted to depths of approximately 1000 m	The Exmouth Plateau is a large, mid-slope, continental margin plateau that lies off the northwest coast of Australia. It ranges in depth from about 500 to more than 5000 m and is a major structural element of the Carnarvon Basin (Miyazaki and Stagg, 2013). The large size of the Exmouth Plateau and its expansive surface may modify deep water flow and be associated with the generation of internal tides; both of which may subsequently contribute to the upwelling of deeper, nutrient-rich waters closer to the surface (Brewer *et al.*, 2007). Satellite observations suggest that productivity is enhanced along the northern and southern boundaries of the plateau (Brewer *et al.*, 2007). Sediments on the plateau suggest that biological communities include scavengers, benthic filter feeders and epifauna (DSEWPAC, 2012a). Fauna in the pelagic waters above the plateau are likely to include small pelagic species and nekton attracted to seasonal upwellings, as well as larger predators such as billfishes, sharks and dolphins (Brewer *et al.*, 2007). Protected and migratory species are also known to pass through the region, including whale sharks and cetaceans.
Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula	-	-	✓	Unique seafloor feature with ecological properties of regional significance The feature is an area of moderately enhanced productivity, attracting aggregations of fish and higher-order consumers such as large predatory	The canyons are associated with upwelling as they channel deep water from the Cuvier Abyssal Plain up onto the slope. This nutrient-rich water interacts with the Leeuwin Current at the canyon heads (DSEWPAC, 2012a). Aggregations of whale sharks, manta rays, sea snakes, sharks, large predatory fish, and seabirds are known to occur in this area.

KEF Name	Woodside Activity Area			Values[1]	Description
	Browse	NWS/S	NW Cape		
				fish, sharks, toothed whales and dolphins Likely to be important due to their historical association with sperm whale aggregations	
Commonwealth waters adjacent to Ningaloo Reef	-	-	✓	High productivity and diverse aggregations of marine life The Commonwealth waters adjacent to Ningaloo Reef and associated canyons and plateau are interconnected and support the high productivity and species richness of Ningaloo Reef, globally significant as the only extensive coral reef in the world that fringes the west coast of a continent	The Leeuwin and Ningaloo currents interact, leading to areas of enhanced productivity in the Commonwealth waters adjacent to Ningaloo Reef. Aggregations of whale sharks, manta rays, humpback whales, sea snakes, sharks, large predatory fish, and seabirds are known to occur in this area (DSEWPAC, 2012a). The spatial boundary of this KEF, as defined in the NCVA, is defined as the waters contained in the existing Ningaloo AMP provided in **Section 10**.
Wallaby Saddle	-	-	✓	High productivity and aggregations of marine life: Representing almost the entire area of this type of geomorphic feature in the NWMR. It is a unique habitat that neither occurs anywhere else nearby (within hundreds of kilometres) nor with as large an area (Falkner *et al.* 2009)	The Wallaby Saddle may be an area of enhanced productivity. Historical whaling records provide evidence of sperm whale aggregations in the area of the Wallaby Saddle, possibly due to the enhanced productivity of the area and aggregations of baitfish (DSEWPAC, 2012a).

[1] Values description sourced from Marine bioregional plan for the North-west Marine Region (DSEWPAC, 2012a) and the Department of Agriculture, Water and the Environment (DAWE) SPRAT database.

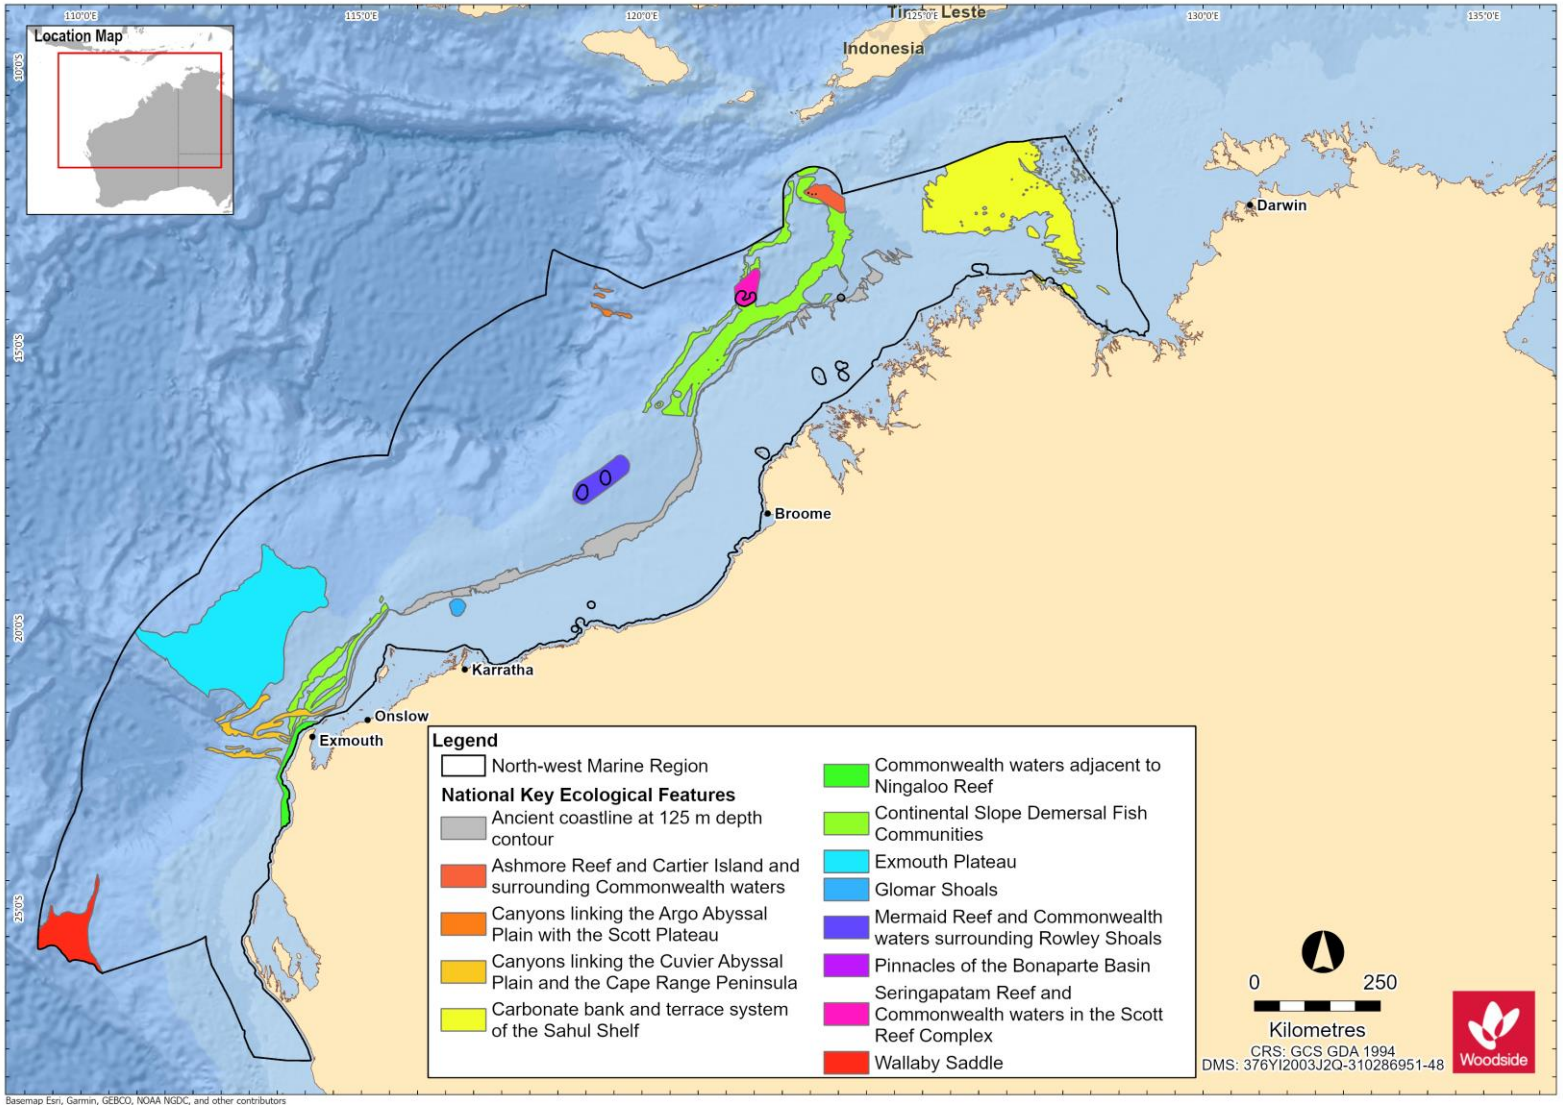

Figure 9-1 Key Ecological Features (KEFs) within the NWMR.

Table 9-2 Key Ecological Features (KEF) within the SWMR

KEF Name	Values[1]	Description
Albany Canyons group and adjacent shelf break	High productivity and aggregations of marine life, and unique seafloor feature with ecological properties of regional significance Both benthic and demersal habitats within the feature are of conservation value	The Albany Canyons group is thought to be associated with small, periodic subsurface upwelling events, which may drive localised regions of high productivity. The canyons are known to be a feeding area for sperm whale and sites of orange roughy aggregations. Anecdotal evidence also indicates that this area supports fish aggregations that attract large predatory fish and sharks.
Ancient coastline at 90-120 m depth	Relatively high productivity and aggregations of marine life, and high levels of biodiversity and endemism The feature creates topographic complexity, that may facilitate benthic biodiversity and enhanced biological productivity	Benthic biodiversity and productivity occur where the ancient coastline forms a prominent escarpment, such as in the western Great Australian Bight, where the sea floor is dominated by sponge communities of significant biodiversity and structural complexity.
Cape Mentelle upwelling	Facilitates nutrient upwelling, supporting high productivity and diverse aggregations of marine life	The Cape Mentelle upwelling draws relatively nutrient-rich water from the base of the Leeuwin Current, up the continental slope and onto the inner continental shelf, where it results in phytoplankton blooms at the surface. The phytoplankton blooms provide the basis for an extended food chain characterised by feeding aggregations of small pelagic fish, larger predatory fish, seabirds, dolphins and sharks.
Commonwealth marine environment surrounding the Houtman Abrolhos Islands (and adjacent shelf break)	High levels of biodiversity and endemism within benthic and pelagic habitats	The Houtman Abrolhos Islands and surrounding reefs support a unique mix of temperate and tropical species, resulting from the southward transport of species by the Leeuwin Current over thousands of years. The Houtman Abrolhos Islands are the largest seabird breeding station in the eastern Indian Ocean. They support more than one million pairs of breeding seabirds.

KEF Name	Values[1]	Description
Commonwealth marine environment surrounding the Recherche Archipelago	Aggregations of marine life and high levels of biodiversity and endemism within benthic and demersal communities	The Recherche Archipelago is the most extensive area of reef in the SWMR. Its reef and seagrass habitat supports a high species diversity of warm temperate species, including 263 known species of fish, 347 known species of molluscs, 300 known species of sponges, and 242 known species of macroalgae. The islands also provide haul-out (resting areas) and breeding sites for Australian sea lions and New Zealand fur seals.
Commonwealth marine environment within and adjacent to the west-coast inshore lagoons	High productivity and aggregations of marine life within benthic and pelagic habitats Important for benthic productivity and recruitment for a range of marine species	These lagoons are important for benthic productivity, including macroalgae and seagrass communities, and breeding and nursery aggregations for many temperate and tropical marine species. They are important areas for the recruitment of commercially and recreationally important fish species. Extensive schools of migratory fish visit the area annually, including herring, garfish, tailor and Australian salmon.
Commonwealth marine environment within and adjacent to Geographe Bay	High productivity and aggregations of marine life, and high levels of biodiversity, recruitment within benthic and pelagic communities	Geographe Bay is known for its extensive beds of tropical and temperate seagrass that support a diversity of species, many of them not found anywhere else. The bay provides important nursery habitat for many species. Juvenile dusky whaler sharks use the shallow seagrass habitat as nursery grounds for several years, before ranging out to adult feeding grounds along the shelf break. The seagrass also provides valuable habitat for fish and invertebrates (Carruthers *et al.*, 2007). It is also an important resting area for migratory humpback whales.
Diamantina Fracture Zone	Unique seafloor feature with ecological properties of regional significance which apply to its benthic and demersal habitats	The Diamantina Fracture Zone is a rugged, deep- water environment of seamounts and numerous closely spaced troughs and ridges. Very little is known about the ecology of this remote, deep- water feature, but marine experts suggest that its size and physical complexity mean that it is likely to support deep-water communities characterised by high species diversity, with many species found nowhere else.
Naturaliste Plateau	Unique seafloor feature with ecological properties of regional significance including high species diversity and endemism which apply to its benthic and demersal habitats	The Naturaliste Plateau is Australia's deepest temperate marginal plateau. The combination of its structural complexity, mixed water dynamics and relative isolation indicate that it supports deep- water communities with high species diversity and endemism.
Perth Canyon and adjacent shelf break, and other west-coast canyons	An area of higher productivity that attracts feeding aggregations of deep-diving mammals and large predatory fish. It is also recognised as a unique seafloor feature with ecological properties of regional significance	The Perth Canyon is the largest known undersea canyon in Australian waters. Deep ocean currents rise to the surface, creating a nutrient-rich cold- water habitat attracting feeding aggregations of deep-diving mammals, such as pygmy blue whales and large predatory fish that feed on aggregations of small fish, krill and squid.

KEF Name	Values[1]	Description
Western demersal slope and associated fish communities of the Central Western Province	Provides important habitat for demersal fish communities and supports species groups that are nationally or regionally important to biodiversity	The western demersal slope provides important habitat for demersal fish communities, with a high level of diversity and endemism. A diverse assemblage of demersal fish species below a depth of 400 m is dominated by relatively small benthic species such as grenadiers, dogfish and cucumber fish. Unlike other slope fish communities in Australia, many of these species display unique physical adaptations to feed on the sea floor (such as a mouth position adapted to bottom feeding), and many do not appear to migrate vertically in their daily feeding habits.
Western rock lobster	A species that plays a regionally important ecological role	This species is the dominant large benthic invertebrate in the region. The lobster plays an important trophic role in many of the inshore ecosystems of the SWMR. Western rock lobsters are an important part of the food web on the inner shelf, particularly as juveniles.

1. Values description sourced from Marine bioregional plan for the South-west Marine Region (DSEWPAC, 2012b) and the Department of Agriculture, Water and the Environment (DAWE) SPRAT database

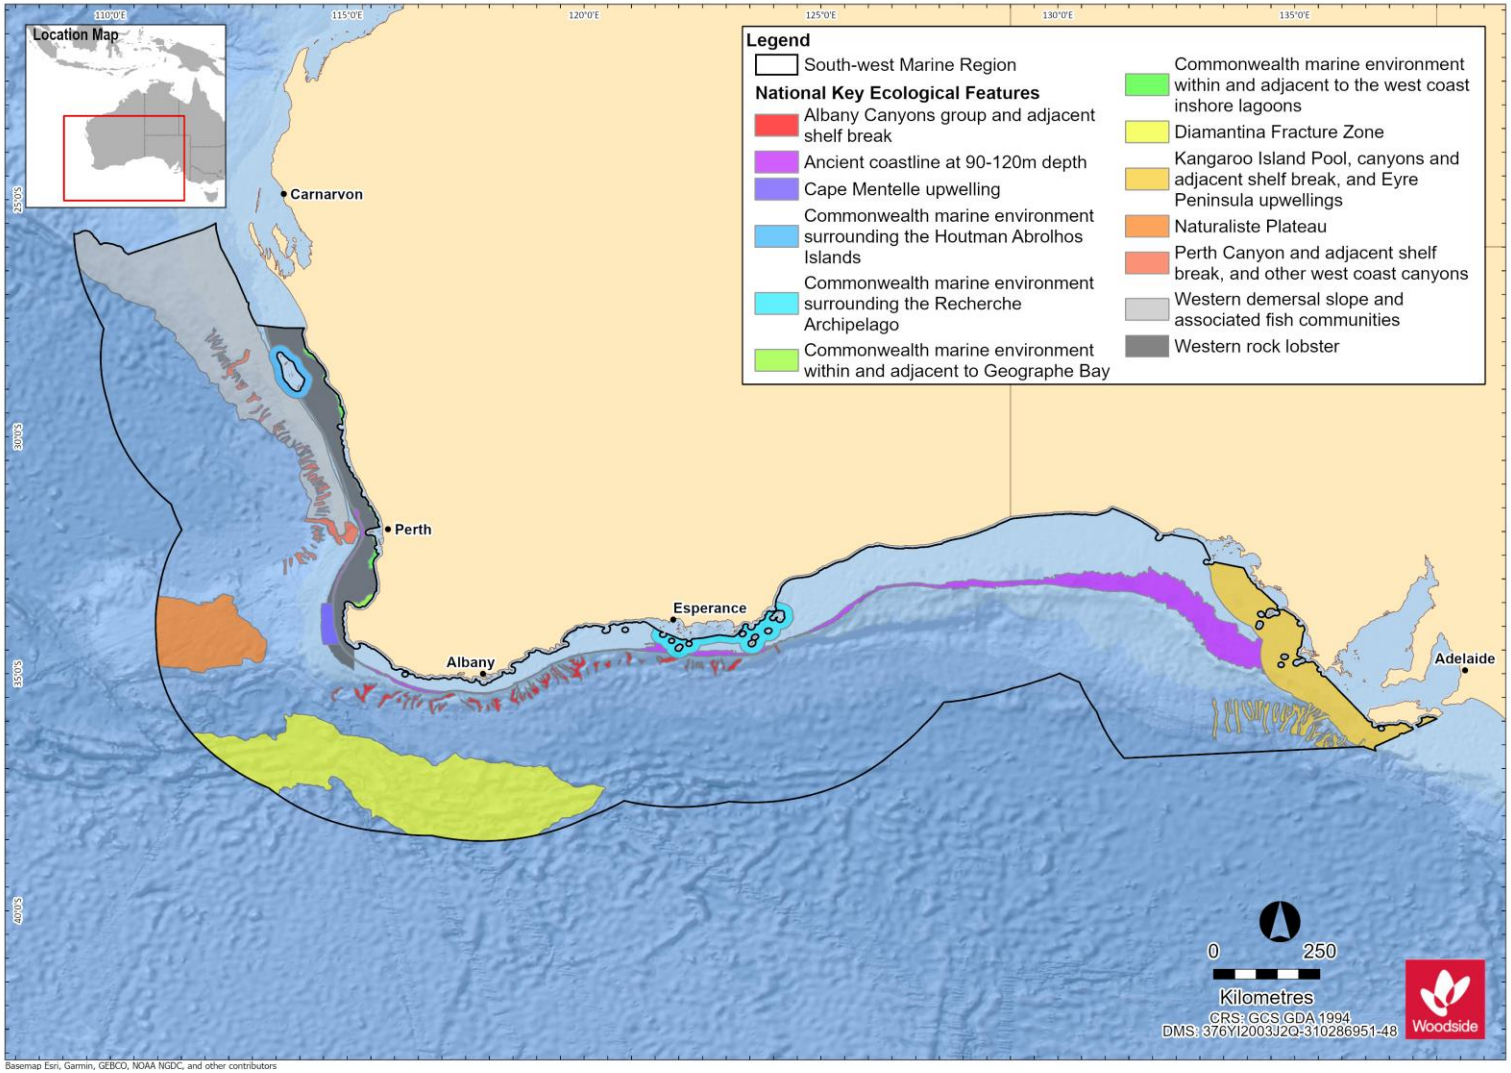

Figure 9-2. Key Ecological Features (KEFs) within the SWMR

Table 9-3 Key Ecological Features (KEF) within the NMR

KEF Name	Values[1]	Description
Carbonate bank and terrace system of the Van Diemen Rise	Important for its role in enhancing biodiversity and local productivity relative to its surrounds and for supporting relatively high species diversity The feature has been identified as a sponge biodiversity hotspot (Przeslawski *et al.* 2014)	The bank and terrace system of the Van Diemen Rise is part of the larger system associated with the Sahul Banks to the north and Londonderry Rise to the east; it is characterised by terrace, banks, channels and valleys. The variability in water depth and substrate composition may contribute to the presence of unique ecosystems in the channels. Species present include sponges, soft corals and other sessile filter feeders associated with hard substrate sediments of the deep channels; epifauna and infauna include polychaetes and ascidians. Olive ridley turtles, sea snakes and sharks are also found associated with this feature.
Gulf of Carpentaria basin	Regional importance for biodiversity, endemism and aggregations of marine life relevant to benthic and pelagic habitats	The Gulf of Carpentaria basin is one of the few remaining near-pristine marine environments in the world. Primary productivity in the Gulf of Carpentaria basin is mainly driven by cyanobacteria that fix nitrogen but is also strongly influenced by seasonal processes. The soft sediments of the basin are characterised by moderately abundant and diverse communities of infauna and mobile epifauna dominated by polychaetes, crustaceans, molluscs, and echinoderms. The basin also supports assemblages of pelagic fish species including planktivorous and schooling fish, with top predators such as shark, snapper, tuna, and mackerel.
Gulf of Carpentaria coastal zone	High productivity, aggregations of marine life (including several endemic species) and high biodiversity compared to broader region	Nutrient inflow from rivers adjacent to the NMR generates higher productivity and more diverse and abundant biota within the Gulf of Carpentaria coastal zone than elsewhere in the region. The coastal zone is near pristine and supports many protected species such as marine turtles, dugongs, and sawfishes. Ecosystem processes and connectivity remain intact; river flows are mostly uninterrupted by artificial barriers and healthy, diverse estuarine and coastal ecosystems support many species that move between freshwater and saltwater environments.
Pinnacles of the Bonaparte Basin	Unique seafloor feature with ecological properties of regional significance Provide areas of hard substrate in an otherwise soft sediment environment and so are important for sessile species Recognised as a biodiversity hotspot for sponges The Pinnacles of the Bonaparte Basin KEF is located within both the NWMR and NMR (refer **Table 9-1**)	Covering more than 520 km^2 within the Bonaparte Basin, this feature contains the largest concentration of pinnacles along the Australian margin. The Pinnacles of the Bonaparte Basin are thought to be the eroded remnants of underlying strata; it is likely that the vertical walls generate local upwelling of nutrient-rich water, leading to phytoplankton productivity that attracts aggregations of planktivorous and predatory fish, seabirds and foraging turtles.

KEF Name	Values[1]	Description
Plateaux and saddle north-west of the Wellesley Islands	High species abundance, diversity and endemism of marine life	Abundance and species density are high in the plateaux and saddle as a result of increased biological productivity associated with habitats rather than currents. Submerged reefs support corals that are typical of northern Australia, including corals that have bleach-resistant zooxanthellae; and particular reef fish species that are different to those found elsewhere in the Gulf of Carpentaria. Species present include marine turtles and reef fish such as coral trout, cod, mackerel, and shark. Seabirds frequent the plateaux and saddle, most likely due to the presence of predictable food resources for feeding offspring.
Shelf break and slope of the Arafura Shelf	The Shelf break and slope of the Arafura Shelf is defined as a key ecological feature for its ecological significance associated with productivity emanating from the slope It also forms part of a unique biogeographic province (Last *et al.*, 2005)	The shelf break and slope of the Arafura Shelf is characterised by continental slope and patch reefs and hard substrate pinnacles. The ecosystem processes of the feature are largely unknown in the region; however, the Indonesian Throughflow and surface wind-driven circulation are likely to influence nutrients, pelagic dispersal and species and biological productivity in the region. Biota associated with the feature is largely of Timor–Indonesian Malay affinity.
Submerged coral reefs of the Gulf of Carpentaria	High aggregations of marine life, biodiversity and endemism Twenty per cent of the reefs found in the NMR are situated within this KEF (Harris *et al.*, 2007)	The submerged coral reefs of the Gulf of Carpentaria are characterised by submerged patch, platform and barrier reefs that form a broken margin around the perimeter of the Gulf of Carpentaria basin, rising from the sea floor at depths of 30–50 m. These reefs provide breeding and aggregation areas for many fish species including mackerel and snapper and offer refuges for sea snakes and apex predators such as sharks. Coral trout species that inhabit the submerged reefs are smaller than those found in the Great Barrier Reef and may prove to be an endemic sub-species.
Tributary Canyons of the Arafura Depression	High productivity and high levels of species diversity and endemism of marine life within the benthic and pelagic habitats of the feature	The tributary canyons are approximately 80–100 m deep and 20 km wide. The largest of the canyons extend some 400 km from Cape Wessel into the Arafura Depression, and are the remnants of a drowned river system that existed during the Pleistocene era. Sediments in this feature are mainly calcium-carbonate rich, although sediment type varies from sandy substrate to soft muddy sediments and hard, rocky substrate. Marine turtles, deep sea sponges, barnacles and stalked crinoids have all been identified in the area.

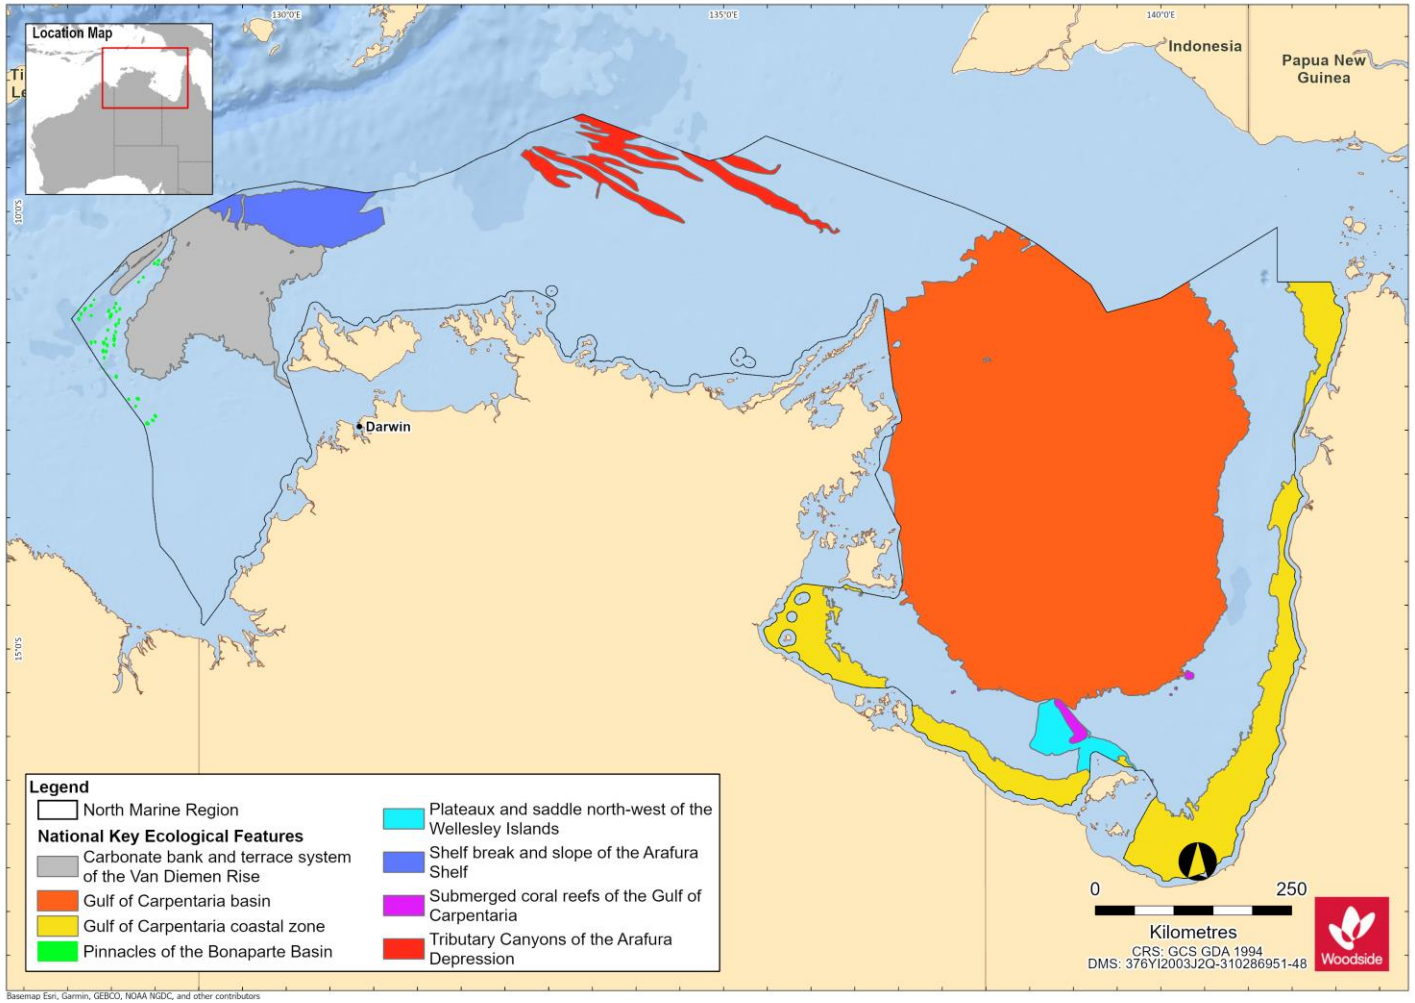

Figure 9-3. Key Ecological Features (KEFs) within the NMR

.

10. PROTECTED AREAS

10.1 Regional Context

Protected areas included World Heritage Properties, National Heritage Places, Wetlands of International Importance, Australian Marine Parks, State Marine Parks and Reserves, Threatened Ecological Communities and the Australian Whale Sanctuary. The PMST Reports (**Appendix A**) shows that there are twenty-nine protected areas found in the NWMR, eighteen in the SWMR and nine in the NMR.

Table 10-1, Table 10-2 and **Table 10-3** outline the protected areas of each of the marine regions NWMR, SWMR and NMR, respectively.

10.2 World Heritage Properties

Properties nominated for World Heritage listing are inscribed on the list only after they have been carefully assessed as representing the best examples of the world's cultural and natural heritage. Only World Heritage listings classed as natural are discussed in this section. World Heritage sites classed as cultural are discussed in **Section 11**.

The list of Australia's World Heritage Properties and the PMST Reports (**Appendix A**) show two World Heritage Properties within the NWMR (**Table 10-1**), no World Heritage Properties within the SWMR (**Table 10-2),** and though not reported in the NMR PMST Report, Kakadu National Park and World Heritage Area is included in **Table 10-3**.

10.3 National and Commonwealth Heritage Places - Natural

The National Heritage List is Australia's list of natural, historic, and Indigenous places of outstanding significance to the nation. The National Heritage List Spatial Database describes the place name, class (Indigenous, natural, historic), and status. Commonwealth Heritage Places are a collection of sites recognised for their Indigenous, historical and/or natural values which are owned or controlled by the Australian Government.

Only National and Commonwealth Heritage Places classed as natural are discussed in this section. Heritage Places classed as indigenous or historic are discussed in **Section 11**.

A search of the National Heritage List Spatial Database and the PMST Reports (**Appendix A**) identified three natural National Heritage Places in the NWMR (**Table 10-1**), three in the SWMR (**Table 10-2**) and for the NMR, Kakadu National Park (not included in the PMST report) is included in **Table 10-3**.

A search of the Commonwealth Heritage List identified four natural commonwealth heritage places within the NWMR (**Table 10-1**).

10.4 Wetlands of International Importance (listed under the Ramsar Convention)

Australia has 65 Ramsar wetlands that cover >8.3 million ha. Ramsar wetlands are those that are representative, rare, or unique wetlands, or that are important for conserving biological diversity.

The List of Wetlands of International Importance held under the Ramsar Convention and the PMST Reports (**Appendix A**) identified four Ramsar Sites with coastal features within the NWMR (**Table 10-1**), four in the SWMR (**Table 10-2**) and two for the New Territory, included for the NMR (**Table 10-3**).

10.5 Australian Marine Parks

Australian Marine Parks (AMPs), proclaimed under the EPBC Act in 2007 and 2013, are located in Commonwealth waters that start at the outer edge of State and Territory waters, generally three

nautical miles (~5.5 km) from the shore, and extend to the outer boundary of Australia's EEZ, 200 nm (~370 km) from the shore.

PMST Reports (**Appendix A**) show sixteen AMPs within the NWMR (**Table 10-1**), ten within the SWMR (**Table 10-2**) and eight within the NMR (**Table 10-3**).

10.6 Threatened Ecological Communities

No Threatened Ecological Communities (TECs) as listed under the EPBC Act are known to occur within the marine waters of the NWMR, SWMR or NMR as indicated by the PMST Reports (**Appendix A**).

10.7 Australian Whale Sanctuary

The Australian Whale Sanctuary has been established to protect all whales and dolphins found in Australian waters. Under the EPBC Act all cetaceans (whales, dolphins and porpoises) are protected in Australian waters.

The Australian Whale Sanctuary includes all Commonwealth waters from the three nautical mile State/Territory waters limit out to the boundary of the EEZ (i.e. out to 200 nm and further in some places). Within the Sanctuary it is an offence to kill, injure or interfere with a cetacean. Severe penalties apply to anyone convicted of such offences.

10.8 State Marine Parks and Reserves

State Marine Parks and Reserves, proclaimed under the *Conservation and Land Management Act 1984* (CALM Act), are located in State waters and vested in the WA Conservation and Parks Commission. State Marine Parks and Reserves of Western Australia have been considered, with 14 occurring in the NWMR (**Table 10-1**) and six occurring in the SWMR (**Table 10-2**).

10.9 Summary of Protected Areas within the NWMR

Table 10-1 Protected Areas within the NWMR

Protected Area	Woodside Activity Area			IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
	Browse	NWS/S	NW Cape			
World Heritage Properties						
Shark Bay World Heritage Property	-	-	✓		The Shark Bay World Heritage Property is adjacent to the Shark Bay AMP and was included on the World Heritage List in 1991.	Universal values of the Shark Bay World Heritage Property include large and diverse seagrass beds, stromatolites and populations of dugong and threatened species. Inscribed under Natural Criteria vii, viii, ix and x.
The Ningaloo Coast World Heritage Property	-	-	✓		The Ningaloo Coast World Heritage Property lies within the Ningaloo AMP and was included on the World Heritage List in 2011.	Universal values of the Ningaloo Coast World Heritage Property include high marine species diversity and abundance; in particular, Ningaloo Reef supports both tropical and temperate marine reptiles and mammals. Inscribed under Natural Criteria vii and x.
National Heritage Places - Natural						
Shark Bay	-	-	✓		The Shark Bay National Heritage Place consists of the same area included in the Shark Bay World Heritage Property (refer above) and was established on the National Heritage List in 2007.	The national heritage place has a number of exceptional natural features, including one of the largest and most diverse seagrass beds in the world, colonies of stromatolites and rich marine life including a large population of dugongs, and also provides a refuge for a number of other globally threatened species. Shark Bay meets the national heritage listing criteria a, b, c, d, e, f, g, h and i.
The Ningaloo Coast	-	-	✓		The Ningaloo Coast National Heritage Place consists of the same area included in the Ningaloo	The Ningaloo Coast contains one of the best developed near-shore reefs in the world, being home to rugged limestone peninsulas, spectacular coral and sponge gardens and the whale shark.

	Browse	NWS/S	NW Cape			
					Coast World Heritage Property (refer above) and was established on the National Heritage List in 2010.	The Ningaloo Coast meets the national heritage listing criteria a, b, c, d, and f.
The West Kimberley	✓	✓	-		The West Kimberley National Heritage Place covers an area of around 192,000 km^2 located in the north-west of Australia from Broome to Wyndham, and was established on the National Heritage List in 2011.	The Kimberley plateau, north-western coastline and northern rivers of the West Kimberley provide a vital refuge for many native plants and animals that are found nowhere else or which have disappeared from much of the rest of Australia. In addition, Roebuck Bay is internationally recognised as one of Australia's most significant sites for migratory wading birds. The national heritage place also contains a remarkable history of Aboriginal occupation, with many places of indigenous sacred value. The West Kimberley meets the national heritage listing criteria a, b, c, d, e, f, g, h and i.
Commonwealth Heritage Places - Natural						
Mermaid Reef – Rowley Shoals	-	✓	-	N/A	The Mermaid Reef – Rowley Shoals Commonwealth Heritage Place is located within the boundary of the Mermaid Reef Marine National Nature Reserve. The site was listed as a Commonwealth Heritage Place in 2004.	The Mermaid Reef-Rowley Shoals Commonwealth Heritage Place is regionally important for the diversity of its fauna and together with Clerke and Imperieuse reefs, has biogeographical significance due to the presence of species which are at, or close to, the limits of their geographic ranges, including fishes known previously only from Indonesian waters. Rowley Shoals is important for benchmark studies as one of the few places off the north-west coast of Western Australia which have been the site of major biological collection trips by the WA Museum.

Protected Area	Woodside Activity Area			IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
	Browse	NWS/S	NW Cape			
Ashmore Reef National Nature Reserve	✓	-	-		The Ashmore Reef Commonwealth Heritage Place is located within the boundary of the Ashmore Reef Marine Park (refer AMPs below). The site was listed as a Commonwealth Heritage Place in 2004.	Ashmore Reef has major significance as a staging point for wading birds migrating between Australia and the Northern Hemisphere and supports high concentrations of breeding seabirds, many of which are nomadic and typically breed on small isolated islands. Ashmore Reef is an important scientific reference area for migratory seabirds, sea snakes and marine invertebrates. The Ashmore Reef Commonwealth Heritage Place is significant for its history of human occupation and use. The island is believed to have been visited by Indonesian fisherman since the early eighteenth century. The islands were used both for fishing and as a staging point for voyages to the southern reefs off Australia's coast.
Scott Reef and Surrounds – Commonwealth Area	✓	-	-		Scott Reef and Surrounds Commonwealth Heritage Place is located within the Western Australian Coastal Waters surrounding North and South Scott Reef. The site was listed as a Commonwealth Heritage Place in 2004.	The Scott Reef and Surrounds Commonwealth Heritage Place is regionally important for the diversity of its fauna and has biogeographical significance due to the presence of species which are at, or close to, the limits of their geographic ranges, including fish known previously only from Indonesian waters. Scott Reef is recognised as important for scientific research and benchmark studies due to its age, the extensive documentation of its geophysical and physical environmental characteristics and its use as a site of major biological collection trips and surveys by the WA Museum and the Australian Institute of Marine Science.

	Browse	NWS/S	NW Cape			
Ningaloo Marine Area – Commonwealth Waters	-	-	✓		The Ningaloo Marine Area Commonwealth Heritage Place is located within the Commonwealth waters of the Ningaloo Marine Park (refer AMPs below). The site was listed as a Commonwealth Heritage Place in 2004.	The Ningaloo Marine Area Commonwealth Heritage Place provides a migratory pathway for humpback whales and foraging habitat for whale sharks. The place is an important breeding area for billfish and manta ray. The Ningaloo Marine Area provides opportunities for scientific research relating to aspects of the area's unique features including tourism (marine ecology, whales, turtles, whale sharks, fish and oceanography.
Wetlands of International Importance (Ramsar)						
Ashmore Reef National Nature Reserve	✓	-	-	Ramsar	The Ashmore Reef Ramsar site is located within the boundary of the Ashmore Reef Marine Park (refer AMPs below). The site was listed under the Ramsar Convention in 2002.	Ashmore Reef Ramsar site supports internationally significant populations of seabirds and shorebirds, is important for turtles (green, hawksbill and loggerhead) and dugong, and has the highest diversity of hermatypic (reef-building) corals on the WA coast. It is known for its abundance and diversity of sea snakes. However, since 1998 populations of sea snakes at Ashmore Reef have been in decline.
Eighty Mile Beach	-	✓	-	Ramsar	The Eighty Mile Beach Ramsar site covers an area of 1250 km^2, located along a long section of the Western Australian coastline adjacent to the Eighty Mile Beach AMP (refer below).	The Eighty Mile Beach Ramsar site includes saltmarsh and a raised peat bog more than 7000 years old. The site contains the most important wetland for waders in north-western Australia, supporting up to 336,000 birds, and is especially important as a land fall for waders migrating south for the austral summer.
Roebuck Bay	-	✓	-	Ramsar	The Roebuck Bay Ramsar site covers an area of 550	The Roebuck Bay Ramsar site is recognised as one of the most important areas for migratory shorebirds in Australia.

Protected Area	Woodside Activity Area			IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
	Browse	NWS/S	NW Cape			
					km^2, located south of Broome and adjacent to the Roebuck AMP (refer below).	The site regularly supports over 100,000 waterbirds, with numbers being highest in the austral spring when migrant species breeding in the Palearctic stop to feed during migration.
Ord River Floodplain	✓			Ramsar	The Ord River Floodplain Ramsar Site is in the East Kimberley region and encompasses an extensive system of river, seasonal creek, tidal mudflat, and floodplain wetlands. The Ramsar Site is a nursery, feeding and/or breeding ground for migratory birds, waterbirds, fish, crabs, prawns, and crocodiles.	The site represents the best example of wetlands associated with the floodplain and estuary of a tropical river system in the Tanami-Timor Sea Coast Bioregion in the Kimberley. In addition, the False Mouths of the Ord are the most extensive mudflat and tidal waterway complex in Western Australia.
Wetlands of National Importance (DAWE, 2019)						
Ashmore Reef	✓	-	-		Ashmore Reef is a shelf-edge platform reef located among the Sahul Banks of north-western Australia. It covers an area of 583 km^2 and consists of three islets surrounded by intertidal reef and sand flats.	These islets are major seabird nesting sites with 20 breeding species recorded to date. The total bird population has been estimated to exceed 100,000 during the peak breeding season. The marine reserve also has the highest diversity of marine fauna of the reefs on the NWS and differs from other reefs and coastal areas in the region. The area meets criteria 1, 3, 4 and 5 for inclusion on the Directory of Important Wetlands in Australia.
Mermaid Reef	-	✓	-		Mermaid Reef Marine Park covers an area of around 540 km^2, located ~280 km west north-west of Broome, and is the most north-easterly atoll of the Rowley Shoals.	The reefs of the Mermaid Reef Marine Park have biogeographic value due to the presence of species that are at or close to the limit of their distribution. The coral communities are one of the special values of Mermaid Reef. The area meets criteria 1, 2 and 3 for inclusion on the Directory of Important Wetlands in Australia.

Protected Area	Woodside Activity Area			IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
	Browse	NWS/S	NW Cape			
Exmouth Gulf East	-	-	✓		Exmouth Gulf East covers an area of 800 km^2 and includes wetlands in the eastern part of Exmouth Gulf, from Giralia Bay; to Urala Creek, Locker Point.	The Exmouth Gulf East is an outstanding example of tidal wetland systems of low coast of north-west Australia, with well- developed tidal creeks, extensive mangrove swamps and broad saline coastal flats. The site is one of the major population centres for dugong in WA and its seagrass beds and extensive mangroves provide nursery and feeding areas for marine fishes and crustaceans in the Gulf. The area meets criteria 1, 2 and 3 for inclusion on the Directory of Important Wetlands in Australia.
Hamelin Pool	-	-	✓		Hamelin Pool covers an area of 900 km^2 in the far south-east part of Shark Bay.	Hamelin Pool is an outstanding example of a hypersaline marine embayment and supports extensive microbialite (subtidal stromatolite) formations, which are the most abundant and diverse examples of growing marine microbialites in the world. The area meets criteria 1 and 6 for inclusion on the Directory of Important Wetlands in Australia.
Shark Bay East	-	-	✓		Shark Bay East covers a 250 km area of coastline comprising tidal wetlands, and marine waters less than 6 m deep at low tide, in the east arm of Shark Bay.	The site is an outstanding example of a very large, shallow marine embayment, with particularly extensive occurrence of seagrass beds and substantial areas of intertidal mud/sandflats and mangrove swamp. The site supports what is probably the world's largest discrete population of dugong; it is also a major nursery and/or feeding area for turtles, rays, sharks, other fishes, prawns and other marine fauna; and is a major migration stop-over area for shorebirds. The area meets criteria 1, 2, 3, 4, 5 and 6 for inclusion on the Directory of Important Wetlands in Australia.
Australian Marine Parks (DNP, 2018a)						
Abrolhos Marine Park	-	-	✓	II, IV, VI	Abrolhos Marine Park is located adjacent to the WA Houtman Abrolhos Islands, covering a large offshore	Abrolhos Marine Park is significant because it contains habitats, species and ecological communities associated with four bioregions:

Protected Area	Woodside Activity Area			IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
	Browse	NWS/S	NW Cape			
					area of 88,060 km^2 extending from the WA State waters boundary to the edge of Australia's EEZ. The Abrolhos Marine Park is located within both the NWMR and SWMR.	• Central Western Province • Central Western Shelf Province • Central Western Transition • South-west Shelf Transition It includes seven KEFs: Commonwealth marine environment surrounding the Houtman Abrolhos Islands; Demersal slope and associated fish communities of the Central Western Province; Mesoscale eddies; Perth Canyon and adjacent shelf break, and other west-coast canyons; Western rock lobster; Ancient coastline at 90-120 m depth; and Wallaby Saddle. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging and breeding habitat for seabirds, foraging habitat for Australian sea lions and white sharks, and a migratory pathway for humpback and pygmy blue whales. The AMP is adjacent to the northernmost Australian sea lion breeding colony in Australia on the Houtman Abrolhos Islands.
Carnarvon Canyon Marine Park	-	-	✓	IV	Carnarvon Canyon Marine Park covers an area of 6177 km^2, located ~300 km north-west of Carnarvon.	Carnarvon Canyon Marine Park is significant because it contains habitats, species and ecological communities associated with the Central Western Transition bioregion. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. There is limited information about species' use of this AMP.
Shark Bay Marine Park	-	-	✓	VI	Shark Bay Marine Park covers an area of 7443 km^2 located ~60 km offshore of Carnarvon, adjacent to the Shark Bay World Heritage Property and National Heritage Place.	Shark Bay Marine Park is significant because it contains habitats, species and ecological communities associated with two bioregions: • Central Western Shelf Province • Central Western Transition. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under

	Browse	NWS/S	NW Cape			
						the EPBC Act. BIAs within the AMP include breeding habitat for seabirds, internesting habitat for marine turtles, and a migratory pathway for humpback whales.
Gascoyne Marine Park	-	-	✓	II, IV, VI	Gascoyne Marine Park covers an area of 81,766 km^2, located ~20 km off the west coast of the Cape Range Peninsula, adjacent to the Ningaloo Marine Park.	Gascoyne Marine Park is significant because it contains habitats, species and ecological communities associated with three bioregions: • Central Western Shelf Transition • Central Western Transition • Northwest Province. It includes four KEFs: Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula; Commonwealth waters adjacent to Ningaloo Reef; Continental slope demersal fish communities; and Exmouth Plateau. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding habitat for seabirds, internesting habitat for marine turtles, a migratory pathway for humpback whales, and foraging habitat and migratory pathway for pygmy blue whales.
Ningaloo Marine Park	-	-	✓	II, IV	Ningaloo Marine Park covers an area of 2435 km^2, stretching ~300 km along the west coast of the Cape Range Peninsula, and is adjacent to the WA Ningaloo Marine Park and Gascoyne Marine Park.	Ningaloo Marine Park is significant because it contains habitats, species and ecological communities associated with four bioregions: • Central Western Shelf Transition • Central Western Transition • Northwest Province • Northwest Shelf Province. It includes three KEFs: Canyons linking the Cuvier Abyssal Plain and the Cape Range Peninsula; Commonwealth waters adjacent to Ningaloo Reef; and Continental slope demersal fish communities. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding and

						or foraging habitat for seabirds, internesting habitat for marine turtles, a migratory pathway for humpback whales, foraging habitat and migratory pathway for pygmy blue whales, breeding, calving, foraging and nursing habitat for dugong and foraging habitat for whale sharks.
Montebello Marine Park	-	✓	-	VI	Montebello Marine Park covers an area of 3413 km^2, located offshore of Barrow Island and 80 km west of Dampier extending from the WA State waters boundary, and is adjacent to the WA Barrow Island and Montebello Islands Marine Parks.	Montebello Marine Park is significant because it contains habitats, species and ecological communities associated with the Northwest Shelf Province bioregion. It includes one KEF: Ancient coastline at 125 m depth contour. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding habitat for seabirds, internesting, foraging, mating, and nesting habitat for marine turtles, a migratory pathway for humpback whales and foraging habitat for whale sharks.
Dampier Marine Park	-	✓	-	II, IV, VI	Dampier Marine Park covers an area of 1252 km^2, located ~10 km north-east of Cape Lambert and 40 km from Dampier extending from the WA State waters boundary.	Dampier Marine Park is significant because it contains habitats, species and ecological communities associated with the Northwest Shelf Province bioregion. The AMP provides protection for offshore shelf habitats adjacent to the Dampier Archipelago, and the area between Dampier and Port Hedland, and is a hotspot for sponge biodiversity. The AMP supports a range of species including those listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding and foraging habitat for seabirds, internesting habitat for marine turtles and a migratory pathway for humpback whales.
Eighty Mile Beach Marine Park	-	✓	-	VI	Eighty Mile Beach Marine Park covers an area of 10,785 km^2, located ~74 km north-east of Port Hedland, adjacent to the	Eighty Mile Beach Marine Park is significant because it contains habitats, species and ecological communities associated with the Northwest Shelf Province and consists of shallow shelf habitats, including terrace, banks and shoals.

	Browse	NWS/S	NW Cape			
					WA Eighty Mile Beach Marine Park.	The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding, foraging and resting habitat for seabirds, internesting and nesting habitat for marine turtles, foraging, nursing and pupping habitat for sawfishes and a migratory pathway for humpback whales.
Argo – Rowley Terrace Marine Park	✓	✓	-	II, VI, VI (Trawl)	Argo-Rowley Terrace Marine Park covers an area of 146,003 km^2, located ~270 km north-west of Broome, and extends to the limit of Australia's EEZ. The AMP is adjacent to the Mermaid Reef Marine Park and the WA Rowley Shoals Marine Park.	Argo–Rowley Marine Park is significant because it contains habitats, species and ecological communities associated with two bioregions: • Northwest Transition • Timor Province. It includes two KEFs: Canyons linking the Argo Abyssal Plain with the Scott Plateau; and Mermaid Reef and Commonwealth waters surrounding Rowley Shoals. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include resting and breeding habitat for seabirds and a migratory pathway for the pygmy blue whale.
Mermaid Reef Marine Park	-	✓	-	II	Mermaid Reef Marine Park covers an area of 540 km^2, located ~280 km north-west of Broome, adjacent to the Argo–Rowley Terrace Marine Park and ~13 km from the WA Rowley Shoals Marine Park. Mermaid Reef is one of three reefs forming the Rowley Shoals. The other two are Clerke Reef and Imperieuse Reef, to the	Mermaid Reef Marine Park is significant because it contains habitats, species and ecological communities associated with the Northwest Transition. It includes one KEF: Mermaid Reef and Commonwealth waters surrounding Rowley Shoals. The Rowley Shoals have been described as the best geological examples of shelf atolls in Australian waters. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding habitat for seabirds and a migratory pathway for the pygmy blue whale.

					south-west of the AMP, which are included in the WA Rowley Shoals Marine Park.	
Roebuck Marine Park	-	✓	-	VI	Roebuck Marine Park covers an area of 304 km^2, located ~12 km offshore of Broome, and is adjacent to the WA Yawuru Nagulagun/Roebuck Bay Marine Park.	Roebuck Marine Park is significant because it contains habitats, species and ecological communities associated with the Northwest Shelf Province and consists entirely of shallow continental shelf habitat. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding and resting habitat for seabirds, foraging and internesting habitat for marine turtles, a migratory pathway for humpback whales and foraging habitat for dugong.
Kimberley Marine Park	✓	✓	-	II, IV, VI	Kimberley Marine Park covers an area of 74,469 km^2, located ~100 km north of Broome, extending from the WA State waters boundary north from the Lacepede Islands to the Holothuria Banks offshore from Cape Bougainville.	Kimberley Marine Park is significant because it includes habitats, species and ecological communities associated with three bioregions: • Northwest Shelf Province • Northwest Shelf Transition • Timor Province. It includes two KEFs: Ancient coastline at 125 m depth contour; and Continental slope demersal fish communities. The AMP supports a range of species, including protected species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding and foraging habitat for seabirds, internesting and nesting habitat for marine turtles, breeding, calving and foraging habitat for inshore dolphins, calving, migratory pathway and nursing habitat for humpback whales, migratory pathway for pygmy blue whales, foraging habitat for dugong and foraging habitat for whale sharks.
Ashmore Reef Marine Park	✓	-	-	Ia, IV	Ashmore Reef Marine Park covers an area of 583 km^2, located ~630 km north of	Ashmore Reef Marine Park is significant because it includes habitats, species and ecological communities associated with the Timor Province. It includes two KEFs:

	Browse	NWS/S	NW Cape			
					Broome and 110 km south of the Indonesian island of Roti. The AMP is located in Australia's External Territory of Ashmore and Cartier Islands and is within an area subject to a Memorandum of Understanding (MoU) between Indonesia and Australia, known as the MoU Box.	Ashmore Reef and Cartier Island and surrounding Commonwealth waters; and Continental slope demersal fish communities. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding, foraging and resting habitat for seabirds, resting and foraging habitat for migratory shorebirds, foraging, mating, nesting and internesting habitat for marine turtles, foraging habitat for dugong, and a migratory pathway for pygmy blue whales.
Cartier Island Marine Park	✓	-	-	Ia	Cartier Island Marine Park covers an area of 172 km^2, located ~45 km south-east of Ashmore Reef Marine Park and 610 km north of Broome. It is also located in Australia's External Territory of Ashmore and Cartier Islands and within an area subject to an MoU between Indonesia and Australia, known as the MoU Box.	Cartier Island Marine Park is significant because it includes habitats, species and ecological communities associated with the Timor Province. It includes two key ecological features: Ashmore Reef and Cartier Island and surrounding Commonwealth waters and continental slope demersal fish communities. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding and foraging habitat for seabirds, internesting, nesting and foraging habitat for marine turtles and foraging habitat for whale sharks. The AMP is also internationally significant for its abundance and diversity of sea snakes, some of which are listed species under the EPBC Act.
Joseph Bonaparte Gulf Marine Park	✓	-	-	VI	Joseph Bonaparte Gulf Marine Park covers an area of 8597 km^2 and is located ~15 km west of Wadeye, NT, and ~90 km north of Wyndham, WA, in the Joseph Bonaparte Gulf.	Joseph Bonaparte Gulf Marine Park is significant because it contains habitats, species and ecological communities associated with the Northwest Shelf Transition bioregion. It includes one KEF: Carbonate bank and terrace system of the Sahul Shelf. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under

Protected Area	Woodside Activity Area			IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values

					It is adjacent to the WA North Kimberley Marine Park. The Joseph Bonaparte Gulf Marine Park is located within both the NWMR and NMR.	the EPBC Act. BIAs within the AMP include foraging habitat for marine turtles and the Australian snubfin dolphin.
Oceanic Shoals Marine Park	✓	-	-	II, IV, VI	Oceanic Shoals Marine Park covers an area of 71,743 km^2 and is located west of the Tiwi Islands, ~155 km north-west of Darwin, NT and 305 km north of Wyndham, WA. The Oceanic Shoals Marine Park is located within both the NWMR and NMR.	Oceanic Shoals Marine Park is significant because it contains habitats, species and ecological communities associated with the Northwest Shelf Transition bioregion. It contains four KEFs: Carbonate bank and terrace systems of the Van Diemen Rise; Carbonate bank and terrace systems of the Sahul Shelf; Pinnacles of the Bonaparte Basin; and Shelf break and slope of the Arafura Shelf. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging and internesting habitat for marine turtles.
State Marine Parks and Reserves						
North Kimberley Marine Park	✓	-	-	Sanctuary, Special Purpose and General Use Zones	The North Kimberley Marine Park covers approx. 18,450 km^2 with its south-western boundary located ~270 km north-east of Derby.	The coral reefs of the north Kimberley have the greatest diversity in Western Australia and are some of the most pristine and remarkable reefs in the world. The park surrounds more than 1000 islands and is home to listed species such as dugongs, marine turtles, and sawfishes (DPAW, 2016a).
Lalang-garram / Horizontal Falls Marine Park and North Lalang-garram Marine Park (jointly managed)	✓	-	-	Sanctuary, Special Purpose and General Use Zones	The Lalang-garram / Horizontal Falls Marine Park covers ~3530 km^2 from Talbot Bay in the west and Glenelg River in the east. The North Lalang-garram Marine Park covers ~1100	The Lalang-garram / Horizontal Falls Marine Park's most celebrated attraction is created by massive tides of up to 10 m and narrow gaps in two parallel tongues of land meaning the tide falls faster than the water can escape, producing 'horizontal falls'. There are also islands with fringing coral reefs and mangrove-lined creeks and bays. The North Lalang-garram Marine Park has a number of islands fringed with coral reef and has been identified as an

					km^2 between Camden Sound and North Kimberley Marine Parks.	ecological hotspot and supports more than 1% of the world's population of brown boobies, with up to 2000 breeding pairs. About 500 pairs of crested terns also nest on the island (DPAW, 2016b).
Lalang-garram / Camden Sound Marine Park	✓	-	-	Sanctuary, Special Purpose and General Use Zones	Lalang-garram / Camden Sound Marine Park covers 7050 km^2 located about 150 km north of Derby.	The Lalang-garram / Camden Sound Marine Park is the most important humpback whale nursery in the Southern Hemisphere. It also features the spectacular coastal Montgomery Reef. The marine park is home to six species of threatened marine turtle. Australian snubfin and Indo-Pacific humpback dolphins, dugongs, saltwater crocodiles, and several species of sawfish (DPAW, 2013).
Rowley Shoals Marine Park	-	✓	-	Sanctuary, Recreation and General Use Zones	The Rowley Shoals comprise of three reef systems, Mermaid Reef, Clerke Reef and Imperieuse Reef, all 30-40 km apart. These reef systems are located ~300 km west north-west of Broome.	The three coral atolls of the Rowley Shoals Marine Park comprise of shallow lagoons inhabited by diverse corals and abundant marine life, each covering around 80 km^2 at the edge of Australia's continental shelf. Further offshore, the seafloor slopes away to the abyssal plain, some 6000 m below. Undersea canyons slice the slope; these features are commonly associated with diverse communities of deep-water corals and sponges and create localised upwellings that aggregate pelagic species like tunas and billfish (DEC, 2007a).
Yawuru Nagulagun / Roebuck Bay Marine Park	-	✓	-	Special Purpose Zone	Yawuru Nagulagun / Roebuck Bay Marine Park is a series of intertidal flats lying on the coast to the south-east of Broome.	Roebuck Bay is an internationally significant wetland and one of the most important feeding grounds for migratory shorebirds in Australia. Australian snubfin and Australian humpback dolphins frequent the waters and humpback whales pass through on their annual migration. Flatback turtles nest on the shores and are found in the bay's waters with other sea turtle species. Seagrass and macroalgae communities provide food for protected species such as the dugong and flatback turtle (DPAW, 2016c).
Eighty Mile Beach Marine Park	-	✓	-	Sanctuary, Recreation, Special	Eighty Mile Beach Marine Park covers ~2000 km^2 stretching across 220km of	Eighty Mile Beach Marine Park is one of the world's most important feeding grounds for small wading birds that migrate to the area each summer, travelling from countries

				Purpose and General Use Zones	coastline between Port Hedland and Broome.	thousands of kilometres away. The marine park is a major nesting area for flatback turtles which are found only in northern Australia. Sawfishes, dugongs, dolphins and millions of invertebrates inhabit the sand and mud flats, seagrass meadows, coral reefs and mangroves (DPAW, 2014).
Montebello Islands Marine Park, Barrow Island Marine Park and Barrow Island Marine Management Area (jointly managed)	-	✓	-	Sanctuary, Recreation, General Use and Special Purpose Zones	The Montebello Islands Marine Park, Barrow Island Marine Park and Barrow Island Marine Management Area are located off the north-west coast of WA, ~1600 km north of Perth, and cover areas of ~583 km^2, 42 km^2 and 1,147 km^2, respectively.	The Montebello/Barrow islands marine conservation reserves have very complex seabed and island topography, resulting in a myriad of different habitats subtidal coral reefs, macroalgal and seagrass communities, subtidal soft-bottom communities, rocky shores and intertidal reef platforms, which support a rich diversity of invertebrates and finfish. The reserves are important breeding areas for several species of marine turtles and seabirds, which use the undisturbed sandy beaches for nesting. Humpback whales migrate through the reserves and dugongs occur in the shallow warm waters (DEC, 2007b).
Ningaloo Marine Park and Muiron Islands Marine Management Area (jointly managed)	-	-	✓	Sanctuary, Recreation, General Use and Special Purpose Zones	The Ningaloo Marine Park and Muiron Islands Marine Management Area are located off the North-west Cape of WA, ~1200 km north of Perth, and cover areas of ~2633 km^2 and 286 km^2, respectively.	Ningaloo Reef is the largest fringing coral reef in Australia. Temperate and tropical currents converge in the Ningaloo region resulting in highly diverse marine life including spectacular coral reefs, abundant fishes and species with special conservation significance such as turtles, whale sharks, dugongs, whales and dolphins. The region has diverse marine communities including mangroves, algae and filter-feeding communities and has high water quality. These values contribute to the Ningaloo Marine Park being regarded as the State's premier marine conservation icon. The Muiron Islands Marine Management Area is also important, containing a very diverse marine environment, with coral reefs, filter-feeding communities and macroalgal beds. In addition, the Islands are important seabird and green turtle nesting areas. (CALM, 2005a).

Shark Bay Marine Park and Hamelin Pool Marine Nature Reserve (jointly managed)	-	-	✓	Sanctuary, Recreation, General Use and Special Purpose Zones	The Shark Bay Marine Park and Hamelin Pool Marine Nature Reserves are located 400 km north of Geraldton, covering areas of ~7487 km^2 and 1270 km^2, respectively.	Seagrass covers over 4000 km^2 of the Shark Bay Marine Park, with 12 different species making it one of the most diverse seagrass assemblages in the world. Dugongs regularly use this habitat, with the bay containing one of the largest dugong populations in the world. Humpback whales also use the bay as a staging post in their migration along the coast. Green and loggerhead turtles occur in the bay with Dirk Hartog Island providing the most important nesting site for loggerheads in Western Australia. Hamelin Pool contains the most diverse and abundant examples of stromatolites found in the world. These are living representatives of stromatolites that existed some 3500 million years ago (CALM, 1996).

**Conservation objectives for IUCN categories include:*

Ia: Strict Nature Reserve

Ib: Wilderness Area

Wetlands of International Importance (Ramsar)			
Beecher Point Wetlands	Ramsar	Beecher Point Wetlands is a system of about sixty small wetlands located near Rockingham in south-west WA, covering an area of around 7 km^2. The site was listed under the Ramsar Convention in 2001.	The wetlands support sedgelands, herblands, grasslands, open-shrublands and low open-forests. The sedgelands that occur within the linear wetland depressions of the Ramsar site are a nationally listed TEC. At least four species of amphibians and twenty-one (21) species of reptiles have been recorded on the site. The site also supports the southern brown bandicoot. The site meets criteria 1 and 2 of the Ramsar Convention.
Forrestdale and Thomsons Lakes	Ramsar	Forrestdale Lake is located in the City of Armadale and Thomsons Lake is located in the City of Cockburn both of which lie within the southern Perth metropolitan area, in Western Australia. The site was listed under the Ramsar Convention in 1990.	The lakes are surrounded by medium density urban development and some agricultural land. The sediments of Thomsons Lake are between 30,000 and 40,000 years old, which are the oldest lake sediments discovered in WA to date. These lakes are the best remaining examples of brackish, seasonal lakes with extensive fringing sedgeland, typical of the Swan Coastal Plain. The site meets criteria 1, 3, 5 and 6 of the Ramsar Convention.
Peel-Yalgorup System	Ramsar	Peel-Yalgorup System, located adjacent to the City of Mandurah in	Peel-Yalgorup System Ramsar site is the most important area for waterbirds in south-western Australia. It supports a large number of waterbirds, and a

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
		WA, is a large and diverse system of shallow estuaries, coastal saline lakes and freshwater marshes. The site was listed under the Ramsar Convention in 1990.	wide variety of waterbird species. It also supports a wide variety of invertebrates, and estuarine and marine fish. The site meets criteria 1, 3, 5 and 6 of the Ramsar Convention.
Vasse-wonnerup system	Ramsar	Vasse-Wonnerup System Ramsar wetland is situated in the Perth Basin, south-western WA. The site was listed under the Ramsar Convention in 1990.	Vasse-Wonnerup System is an extensive, shallow, nutrient-enriched wetland system of highly varied salinities. Large areas of the wetland dry out in late summer. Vasse-Wonnerup System supports tens of thousands of resident and migrant waterbirds of a wide variety of species. More than 80 species of waterbird have been recorded in the System such as red-necked avocets and black-winged stilts, wood sandpiper, sharp-tailed sandpiper, long-toed stint, curlew sandpiper and common greenshank. Thirteen waterbird species are also known to breed at the Ramsar site, including the largest regular breeding colony of black swans in south-western Australia. The site meets criteria 5 and 6 of the Ramsar Convention.
Wetlands of National Importance (DAWE, 2019)			
Rottnest Island Lakes		The Rottnest Island Lakes site is the cluster of 18 lakes and swamps on the north-east part of Rottnest Island.	An outstanding example of a series of lakes/swamps of varied depth and salinity located on an offshore island; the only island among 200 plus in WA exceeding 10 ha in area, that has a salt-lake complex; the only known example of seasonally meromictic lakes in Australia. The area meets criteria 1, 2, 3 and 6 for inclusion on the Directory of Important Wetlands in Australia.
Australian Marine Parks (DNP, 2018b)			
Abrolhos Marine Park	II, IV, VI	The Abrolhos Marine Park is located within both the NWMR and SWMR. Refer **Table 10-1** for description and conservation values.	
Bremer Marine Park	II, VI	Bremer Marine Park covers an area of 4472 km^2 and is located approximately half-way between Albany and Esperance, offshore from the Fitzgerald River National Park, extending from the WA State waters boundary.	Bremer Marine Park is significant because it contains habitats, species and ecological communities associated with two bioregions: • Southern Province • South-west Shelf Province. It includes two KEFs: Albany Canyon group and adjacent shelf break; and Ancient coastline at 90-120 m depth.

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
			The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, Australian sea lions, and white sharks, a migratory pathway for humpback whales, and a significant calving area for southern right whales. The AMP includes canyons—important aggregation areas for killer whales.
Eastern Recherche Marine Park	II, VI	Eastern Recherche Marine Park covers an area of 20,575 km^2 and is located ~135 km east of Esperance, adjacent to the Recherche Archipelago, close to the WA Cape Arid National Park.	Eastern Recherche Marine Park is significant because it contains habitats, species and ecological communities associated with three bioregions: • South-west Shelf Province • Southern Province • Great Australian Bight Shelf Transition. It includes three KEFs: Mesoscale eddies; Ancient coastline at 90-120 m depth; and Commonwealth marine environment surrounding the Recherche Archipelago. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, Australian sea lions and white sharks, and a calving buffer area for southern right whales.
Geographe Marine Park	II, IV, VI	Geographe Marine Park covers an area of 977 km^2 and is located in Geographe Bay, ~8 km west of Bunbury and 8 km north of Busselton, adjacent to the WA Ngari Capes Marine Park.	Geographe Marine Park is significant because it contains habitats, species and ecological communities associated with the South-west Shelf Province bioregion. It includes two KEFs: Commonwealth marine environment within and adjacent to Geographe Bay; and Western rock lobster. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, a migratory pathway for humpback and pygmy blue whales, and a calving buffer area for southern right whales.
Great Australian Bight Marine Park	II, VI	Great Australian Bight Marine Park covers an area of 45,822 km^2 and is located ~12 km south-east of Eucla and 174 km west of Ceduna, adjacent to the SA Far West Coast and Nuyts Archipelago Marine Parks.	Great Australian Bight Marine Park is significant because it contains habitats, species and ecological communities associated with two bioregions: • Great Australian Bight Shelf Transition • Southern Province. It includes three KEFs: Ancient coastline at 90-120 m depth; Benthic invertebrate communities of the eastern Great Australian Bight; and Small pelagic fish of the South-west Marine Region. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, Australian sea lions, white sharks and

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
			pygmy blue and sperm whales, and a calving area, migratory pathway and large aggregation area for southern right whales.
Jurien Marine Park	II, VI	Jurien Marine Park covers an area of 1851 km^2 and is located ~148 km north of Perth and 155 km south of Geraldton, adjacent to the WA Jurien Bay Marine Park.	Jurien Marine Park is significant because it includes habitats, species and ecological communities associated with two bioregions: • South-west Shelf Transition • Central Western Province. It includes three KEFs: Ancient coastline at 90-120 m depth; Demersal slope and associated fish communities of the Central Western Province; and Western rock lobster The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, Australian sea lions and white sharks, and a migratory pathway for humpback and pygmy blue whales.
Perth Canyon Marine Park	II, IV, VI	Perth Canyon Marine Park covers an area of 7409 km^2 and is located ~52 km west of Perth and ~19 km west of Rottnest Island.	Perth Canyon Marine Park is significant because it includes habitats, species and ecological communities associated with four bioregions: • Central Western Province • South-west Shelf Province • Southwest Transition • South-west Shelf Transition. It includes four KEFs: Perth Canyon and adjacent shelf break, and other west-coast canyons; Demersal slope and associated fish communities of the Central Western Province; Western rock lobster; and Mesoscale eddies. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, Antarctic blue, pygmy blue and sperm whales, a migratory pathway for humpback, Antarctic blue and pygmy blue whales, and a calving buffer area for southern right whales.
South-west Corner Marine Park	II, IV, VI	South-west Corner Marine Park covers an area of 271,833 km^2 and is located adjacent to the WA Ngari Capes Marine Park. It covers an extensive offshore area that is closest to WA State waters ~48 km west of Esperance, 73 km west of Albany and 68 km west of Bunbury.	South-west Corner Marine Park is significant because it contains habitats, species and ecological communities associated with three bioregions: • Southern Province • South-west Transition • South-west Shelf Province. It includes six KEFs: Albany Canyon group and adjacent shelf break; Cape Mentelle upwelling; Diamantina Fracture Zone; Naturaliste Plateau; Western rock lobster; and Ancient coastline at 90 m-120 m depth.

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
			The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, Australian sea lions, white sharks and sperm whales, a migratory pathway for Antarctic blue, pygmy blue and humpback whales, and a calving buffer area for southern right whales.
Twilight Marine Park	II, VI	Twilight Marine Park covers an area of 4641 km^2 and is located ~245 km south-west of Eucla and 373 km north-east of Esperance, adjacent to the WA State waters boundary.	Twilight Marine Park is significant because it contains habitats, species and ecological communities associated with the Great Australian Bight Shelf Transition bioregion. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds, Australian sea lions and white sharks, and a calving buffer area for southern right whales.
Two Rocks Marine Park	II, VI	Two Rocks Marine Park covers an area of 882 km^2 and is located ~25 km north-west of Perth, to the north-west of the WA Marmion Marine Park.	Two Rocks Marine Park is significant because it includes habitats, species and ecological communities associated with the South-west Shelf Transition bioregion. It includes three KEFs: Commonwealth marine environment within and adjacent to the west-coast inshore lagoons; Western rock lobster; and Ancient coastline at 90-120 m depth. The AMP supports a range of species including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat for seabirds and Australian sea lions, a migratory pathway for humpback and pygmy blue whales, and a calving buffer area for southern right whales.
State Marine Parks and Reserves			
Jurien Bay Marine Park	Sanctuary, Special Purpose and General Use Zones.	The Jurien Bay Marine Park is located on the central west coast of WA ~200 km north of Perth and covers an area of 824 km^2.	An extensive limestone reef system parallel to the shore has created a huge shallow lagoon that provides perfect habitat for Australian sea lions, dolphins and a myriad of juvenile fish. Extensive seagrass meadows inside the reef shelter many marine animals such as western rock lobsters, octopus and cuttlefish that make up the diet of young sea lions. The marine park also surrounds dozens of ecologically important islands that contain rare and endangered animals found nowhere else in the world (CALM, 2005b).
Marmion Marine Park	Sanctuary, Recreation and Special Use Zones.	The Marmion Marine Park lies within State waters between Trigg Island and Burns Beach and encompasses a coastal area of ~95 km^2. Marmion	The marine park has a number of sanctuary zones including Little Island, The Lumps and the Boyinaboat Reef protecting a variety of habitats from limestone reefs, seagrass beds and clear shallow lagoons that support a diversity of marine life. In addition, to a general use zone and the Waterman Recreation Area. The marine park contains important habitat for the endemic Australian

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
		Marine Park was the State's first marine park, declared in 1987.	sea lion, an array of seabird species migratory whales are regular visitors (CALM, 1992; DPAW, 2016d).
Swan Estuary Marine Park	Special Purpose and Nature Reserve Zones.	Three biologically important areas of Perth's Swan River make up the Swan Estuary Marine Park, including Alfred Cove, Pelican Point and Crawley. These three sites cover a total area of 3.4 km^2.	The sand flats, mud flats and beaches at the three locations of the Swan Estuary Marine Park provide the only remaining significant feeding and resting areas in the Swan Estuary, for trans-equatorial migratory wading and waterbirds. The Park and adjacent reserves also provide habitat for a diverse assemblage of aquatic and terrestrial flora and fauna (CALM, 1999).
Shoalwater Islands Marine Park	Sanctuary, Special Purpose and General Use Zones.	The Shoalwater Islands Maine Park is located adjacent to Rockingham on the south-west coast of WA, ~50 km south of Perth and covers an area of ~66 km^2.	The Shoalwater Islands Marine Park consists of a complex seabed and coastal topography consisting of islands, limestone ridges and reef platforms, protected inshore areas and deeper basins, sandbars and beaches, and is home to five species of cetacean and 14 species of sea and shore bird. The waters of the marine park are also used to access feeding grounds for the little penguin (*Eudyptula minor*) colony on Penguin Island, which is close to the northernmost limit of the species' range and is the largest known breeding colony in Western Australia (DEC, 2007c).
Ngari Capes Marine Park	Sanctuary, Special Purpose and Recreation Zones.	The Ngari Capes Marine Park is located off the south-west coast of WA, ~250 km south of Perth, covering ~1238 km^2.	The Ngari Capes Marine Park consists of a complex arrangement of sandy bays, high energy limestone and granite reefs bordered by headlands and cliffs and two weathered capes. Coral communities consist of both tropical and temperate species. Cetaceans and pinnipeds are resident in and/or transient through the marine park as well as a diverse range of seabirds and shorebirds (DEC, 2013).
Walpole and Nornalup Inlets Marine Park	Recreation Zone.	The Walpole and Nornalup Inlets Marine Park is located adjacent to the towns of Walpole and Nornalup on the south coast of WA, ~120 km west of Albany, and covers ~14 km^2.	The Walpole and Nornalup Inlets Marine Park consists of a geologically complex lagoonal estuarine system comprising three significant rivers and two connected inlets that are permanently open to the ocean. Approximately 40 marine and estuarine finfish species commonly inhabit the inlet system, as well as a variety of shark and ray species and numerous seabirds and shorebirds. The sandy beaches and shoreline vegetation of the inlet system are of high ecological and social importance to the marine park (DEC, 2009).

**Conservation objectives for IUCN categories include:*

Ia: Strict Nature Reserve

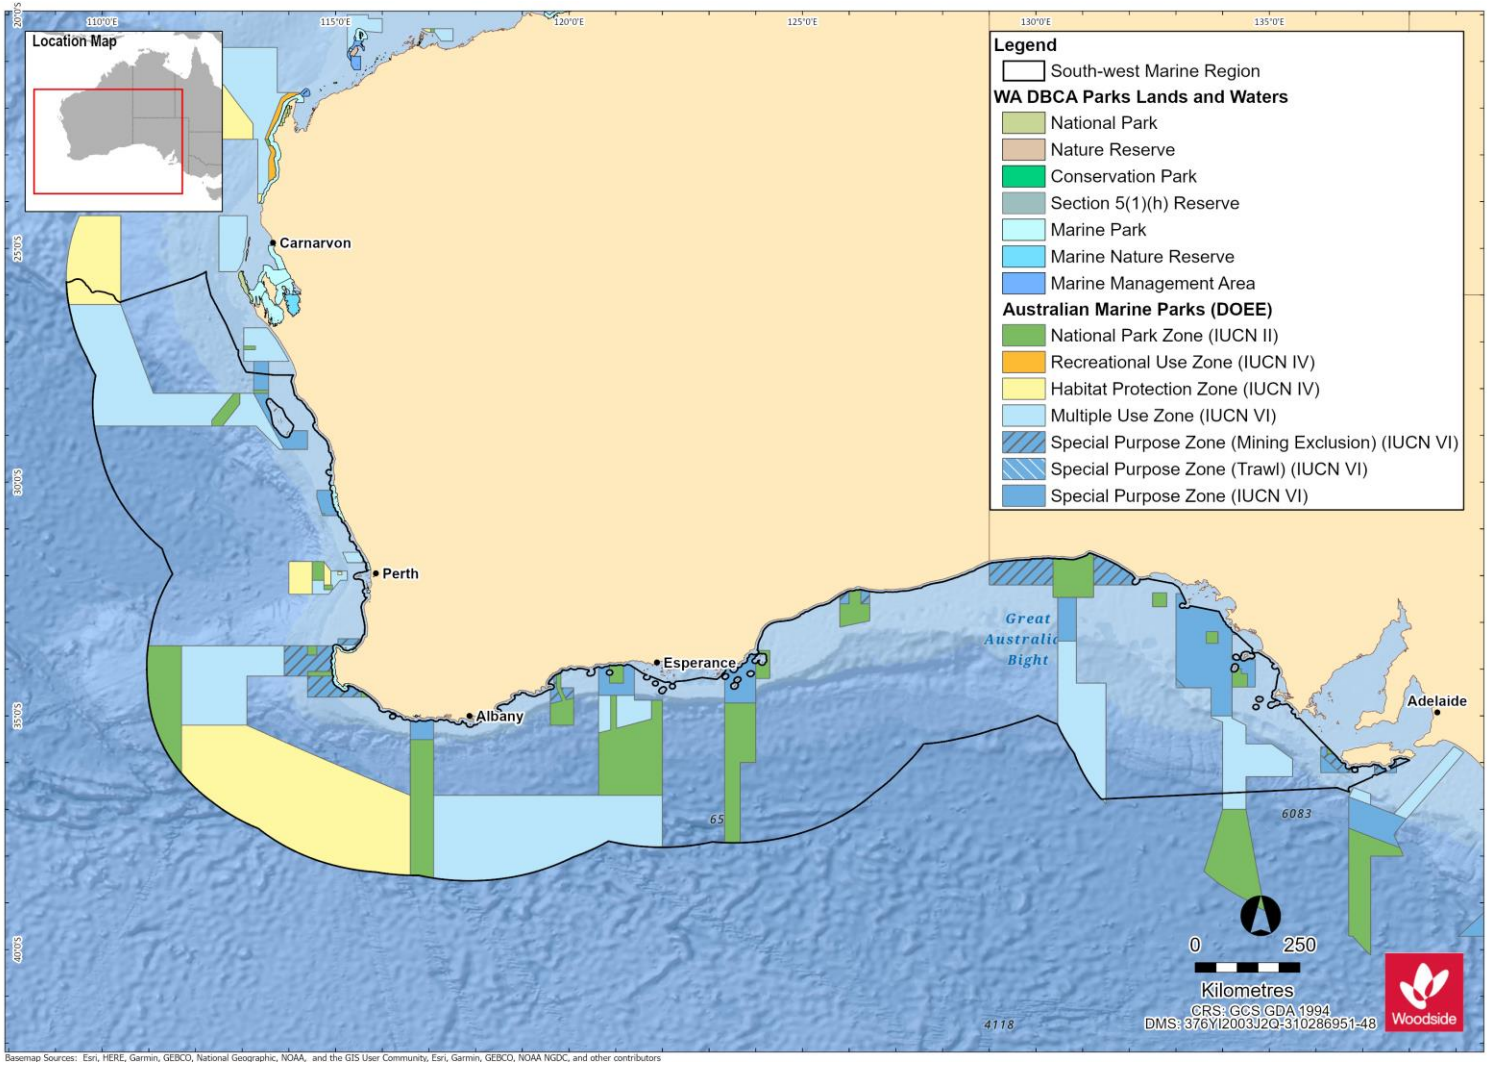

Figure 10-2. Commonwealth and State Marine Protected Areas for the SWMR

10.11 Summary of Protected Areas within the NMR

Table 10-3 Protected Areas within the NMR

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
World Heritage Properties			
Kakadu National Park		Kakadu National Park is a living landscape with exceptional natural and cultural values. It is the largest National Park in Australia and preserves the greatest variety of ecosystems on the Australian continent including extensive areas of floodplains, mangroves, tidal mudflats, coastal areas and monsoon forests. The park was inscribed the World Heritage list in three stages over 11 years. It is located in tropical north Australia covering a total area of 19,804 square kilometres.	The conservation values reflect the WHA Criterion: (i), (vi), (vii) and (ix): Natural features relate to Criterion (vii) – the remarkable contrast between the internationally recognised Ramsar-listed wetlands and the spectacular rocky escarpment and its outliers and Criterion (ix) – four major river systems of tropical Australia and floodplains that are dynamic environments, shaped by changing sea levels and big floods every wet season. These floodplains illustrate the ecological and geomorphological effects that have accompanied Holocene climate change and sea level rise. Kakadu National Park contains important and significant habitats supporting a diverse range of flora and fauna.

Wetlands of International Importance (Ramsar)			
Kakadu National Park		Australian Ramsar site number 2. The stage 1 and 2 Ramsar sites, established in 1980, 1985 and 1989, respectfully were combined into a single Ramsar site in 2010.	The Kakadu National Park Ramsar site straddles the western edge of the Arnhem Land Plateau encompassing a range of landforms and extensive floodplains. It is a mosaic of contiguous wetlands comprising the catchments of two large river systems, the East and South Alligator rivers and encompasses extensive tidal mudflat areas. It is an internationally important site for migratory shorebirds as part of the EAAF.

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
Cobourg Peninsula		Australian Ramsar site number 1 established in 1974. This Ramsar site includes freshwater and extensive intertidal areas but excludes subtidal areas. It is in a remote location and there has been minimal human impact on the site.	The wetlands encompassed in the Ramsar site are some of the better protected and near-natural wetlands in the bioregion and there is a diverse array of wetland in a confined area. The site supports important turtle nesting habitat and habitat for coastal dolphin species and is an internationally significant migratory shorebird habitat as part of the EAAF and an important location for seabird breeding colonies.
Wetlands of National Importance (DAWE, 2019)			
Southern Gulf Aggregation		The site is a complex continuous wetland aggregation in the Gulf of Carpentaria, covering an area of ~5460 km^2 located 58 km east of Burketown, Queensland.	The Southern Gulf Aggregation is the largest continuous estuarine wetland aggregation of its type in northern Australia. It is one of the three most important areas for shorebirds in Australia. The area meets criteria 1, 2, 3, 4, 5 and 6 for inclusion on the Directory of Important Wetlands in Australia.
Australian Marine Parks (DNP, 2018c)			
Arafura Marine Park	VI	Arafura Marine Park covers an area of 22,924 km^2 is located ~256 km north-east of Darwin and 8 km offshore of Croker Island, NT. It extends from NT waters to the limit of Australia's EEZ.	The AMP is significant because it contains habitats, species and ecological communities associated with two bioregions: • Northern Shelf Province • Timor Transition. It includes one KEF: Tributary canyons of the Arafura Depression. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include internesting habitat for marine turtles and important foraging and breeding habitat for seabirds.
Arnhem Marine Park	VI	Arnhem Marine Park covers an area of 7125 km^2 and is located ~100 km south-east of Croker Island and 60 km south-east of the Arafura Marine Park. It extends from NT waters surrounding the Goulburn Islands, to the waters north of Maningrida.	Arnhem Marine Park is significant because it contains habitats, species and ecological communities associated with the Northern Shelf Province bioregion. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include foraging habitat and a migratory pathway for marine turtles and seabirds.
Gulf of Carpentaria Marine Park	II, VI	Gulf of Carpentaria Marine Park covers an area of 23,771 km^2 and is located ~90 km north-west of Karumba, Queensland and is adjacent to the Wellesley Islands in	Gulf of Carpentaria Marine Park is significant because it contains habitats, species and ecological communities associated with the Northern Shelf Province bioregion.

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
		the south of the Gulf of Carpentaria basin.	It includes four KEFs: Gulf of Carpentaria basin; Gulf of Carpentaria coastal zone; Plateaux and saddle north-west of the Wellesley Islands; and Submerged coral reefs of the Gulf of Carpentaria. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding and foraging areas for seabirds and internesting and foraging areas for turtles.
Joseph Bonaparte Gulf Marine Park	VI	The Joseph Bonaparte Gulf Marine Park is located within both the NWMR and NMR. Refer **Table 10-1** for description and conservation values.	
Limmen Marine Park	IV	Limmen Marine Park covers an area of 1399 km^2 and is located ~315 km south-west of Nhulunbuy, NT, in the south-west of the Gulf of Carpentaria. It extends from NT waters, between the Sir Edward Pellew Group of Islands and Maria Island in the Limmen Bight, adjacent to the NT Limmen Bight Marine Park.	Limmen Marine Park is significant because it contains habitats, species and ecological communities associated with the Northern Shelf bioregion. It includes one KEF: Gulf of Carpentaria coastal zone. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include internesting and foraging habitat for marine turtles.
Oceanic Shoals Marine Park	II, IV, VI	The Oceanic Shoals Marine Park is located within both the NWMR and NMR. Refer **Table 10-1** for description and conservation values.	
Wessel Marine Park	IV, VI	Wessel Marine Park covers an area of 5908 km^2 and is located ~22 km east of Nhulunbuy, NT. It extends from NT waters adjacent to the tip of the Wessel Islands to NT waters adjacent to Cape Arnhem.	Wessel Marine Park is significant because it contains habitats, species and ecological communities associated with the Northern Shelf bioregion. It includes one KEF: Gulf of Carpentaria basin. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding habitat for seabirds and internesting and foraging habitat for marine turtles.
West Cape York Marine Park	II, IV, VI	West Cape York Marine Park covers an area of 16,012 km^2 and is located adjacent to the northern end	West Cape York Marine Park is significant because it contains species and ecological communities associated with two bioregions: • Northeast Shelf Transition

Protected Area	IUCN Protected Area Category* or Relevant Park Zone	Description	Conservation Values
		of Cape York Peninsula ~25 km south-west of Thursday Island and 40 km north-west of Weipa, Queensland.	• Northern Shelf Province. It includes two KEFs: Gulf of Carpentaria basin; and Gulf of Carpentaria coastal zone. The AMP supports a range of species, including species listed as threatened, migratory, marine or cetacean under the EPBC Act. BIAs within the AMP include breeding and foraging habitat for seabirds, internesting and foraging habitat for marine turtles and dugong, and foraging, breeding and calving habitat for dolphins.
Territory Marine Parks and Reserves			
Cobourg Marine Park	II, IV, VI	Cobourg Marine Park covers an area of 2,290 km^2 and is located in the waters surrounding the Cobourg Peninsula ~220 km north-east of Darwin. The Marine Park is part of the larger Garig Gunak Barlu National Park. Garig Gunak Barlu National Park includes both the Marine Park and the Cobourg Sanctuary.	Cobourg Marine Park is located in the Cobourg and Van Diemen Gulf marine bioregions with the northern portion of the Park covered by the Cobourg marine bioregion and the southern portion covered by the Van Diemen Gulf marine bioregion. The Marine Park is characterised by a number of deeply incised bays and estuaries on its northern shores. These bays are ancient river valleys that were drowned during periods of sea level rise and provide a varied environment and habitat that is quite distinct from the open water areas of the Park. The areas of the Park that have been studied and where extensive collections have been made indicates that the Park supports rich and diverse marine life including live coral reefs, seagrass, diverse reef and pelagic fish populations, marine turtles and dugong.

**Conservation objectives for IUCN categories include:*

Ia: Strict Nature Reserve

Ib: Wilderness Area

II: National Park

III: Natural Monument or Feature

IV: Habitat/Species Management Area

V: Protected Landscape

VI: Protected area with sustainable use of natural resources – allow human use but prohibits large scale development.

IUCN categories for the marine park are provided and, in brackets, the IUCN categories for specific zones within each Marine Park as assigned under the North Marine Parks Network Management Plan 2018 (DNP, 2018c)

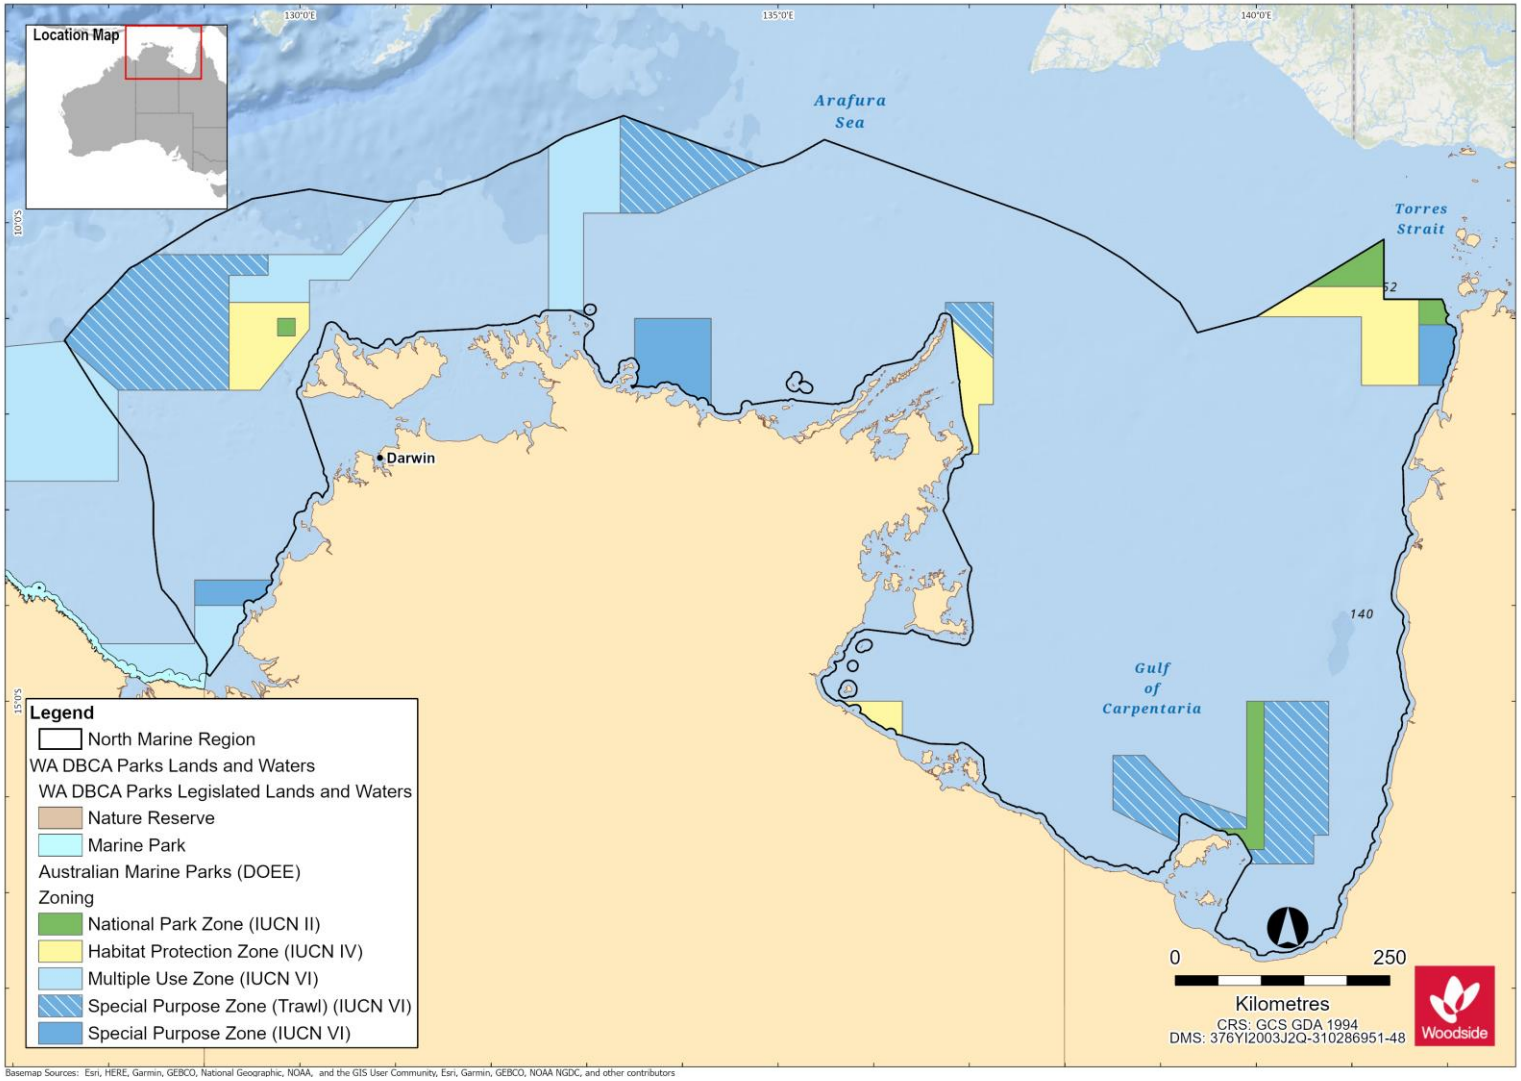

Figure 10-3. Commonwealth and State Marine Protected Areas within the NMR

11. SOCIO-ECONOMIC AND CULTURAL ENVIRONMENT

This section summarises the information relating to the socio-economic and cultural environment of the regions offshore Western Australia, with a focus on the NWMR and to a lesser extent the SWMR and NWR.

The cultural environment includes Indigenous and European heritage values, including underwater values such as historic shipwrecks. Socio-economic values include commercial and traditional fishing, tourism and recreation, shipping, oil and gas activities and defence activities.

11.1 Cultural Heritage

11.1.1 Indigenous Sites of Significance

Murujuga (the Burrup Peninsula) has a very high density of significant Indigenous heritage sites and places with tangible and intangible heritage values. The area has one of the largest, densest, and most diverse collections of rock art in the world. It is estimated that the peninsula and surrounding islands contain over a million petroglyphs (rock engravings) covering a broad range of styles and subjects. The landscape also contains quarries, middens, fish traps, rock shelters, ceremonial sites, artefact scatters, grinding patches and stone arrangements that evidence tens of thousands of years of human occupation. These places are linked to Aboriginal cosmology, Dreaming stories and songs through the stories, knowledge and customs that are still held by traditional custodians.

In 2007 the Dampier Archipelago (including the Burrup Peninsula) was included on the National Heritage List due to outstanding heritage values relating to Australia's cultural history contained in the large number, density, diversity, distribution and fine execution of rock art. Within the National Heritage Place, the Murujuga National Park covers 4913 ha and is co-managed by the Murujuga Aboriginal Corporation and the Department of Biodiversity, Conservation and Attractions. The Murujuga Cultural Landscape was also added to Australia's Tentative World Heritage List in 2020, with full World Heritage Listing anticipated in 2024.

Woodside also recognises the potential for heritage to survive in submerged landscapes. Sea-level rises since the last ice age mean that areas now under the sea were once exposed, that many of today's islands would have been connected to the mainland, and that Aboriginal people are highly likely to have inhabited these places. Woodside works with traditional custodians, academics and heritage professionals to identify tangible and intangible heritage values in the submerged landscape to avoid disturbing heritage where possible and to minimise impacts where heritage cannot be avoided.

It is an offence to excavate, destroy, damage, conceal or alter Indigenous heritage onshore or in state waters under section 17 of the *Aboriginal Heritage Act 1972 (WA) (AHA)* without ministerial authorisation. Where there is a risk of injury or desecration to a significant Aboriginal area, even where permitted under the AHA, any Aboriginal person may apply to the federal Environment Minister for a declaration under sections 9 or 10 of the *Aboriginal and Torres Strait Islander Heritage Protection Act 1984 (Cth)* for the protection and preservation of that area.

The Department of Planning, Lands and Heritage maintains a register of registered sites and heritage places including middens, burial, ceremonial [sites], artefacts, rock shelters, mythological [sites] and engraving sites. There are over 1600 registered sites on Murujuga and the Dampier Archipelago with around 1100 other heritage places. This register is not comprehensive and will be complemented by heritage surveys where necessary. Protection of National and World Heritage values is also legislated through various provisions of the *Environment Protection and Biodiversity Conservation Act 1999 (Cth)*. Murujuga National Park is managed under the *Conservation and Land Management Act 1984 (WA)*.

11.1.2 European Sites of Significance

European sites of significance and heritage value are found along adjacent foreshores of the SWMR, NWMR and NWR. Heritage values are protected in Western Australia under the *Heritage Act 2018*.

11.1.3 Underwater Cultural Heritage

Places of historic cultural significance are protected under Commonwealth, State and local regimes. Places inscribed on the National or World Heritage list are protected through various provisions of the *Environment Protection and Biodiversity Conservation Act 1999* (Cth). Historic places may also be protected under the *Heritage Act 2018* (WA); under section 129 the prohibited alteration, demolition, damage, despoilment or removal of objects from a registered place may result in a fine of A$1 million. Protection of heritage by local government typically emanates from local planning schemes produced under Part 5 of the *Planning and Development Act 2005* (WA).

The remains of vessels and aircraft in Commonwealth waters, along with any associated article, are automatically protected under the *Underwater Cultural Heritage Act 2018* (Cth) after 75 years. Remains and relics of any ship lost, wrecked or abandoned in Western Australian waters before 1900 are protected by the *Maritime Archaeology Act 1973* (WA).

The Australian National Shipwreck Database and the WA Maritime Museum Shipwreck Database list these protected wrecks.

11.1.4 National and Commonwealth Listed Heritage Places

Australia's National Heritage Sites are those of outstanding natural, historic and/or Indigenous significance to Australia. National Heritage places classed as natural are discussed in **Section 10.3**. Historic and/or Indigenous National Heritage Listed Places of the NWMR include:

- Dampier Archipelago (including Burrup Peninsula)
- Dirk Hartog Landing Site/Cape Inscription
- HMAS Sydney II and the HSK Kormoran Shipwreck Sites
- Batavia Shipwreck Site and Survivor Camps Area 1629 – Houtman Abrolhos

Commonwealth Heritage Places are a collection of sites recognised for their Indigenous, historical and/or natural values, which are owned or controlled by the Australian Government. A number of these sites are owned or controlled by the Department of Defence, as well as Government agencies relating to maritime safety, customs and communication. Commonwealth Heritage places classed as natural are discussed in **Section 10.3**. Listed Heritage Places in the NWMR include:

- Mermaid Reef – Rowley Shoals (refer **Section 10.3**)
- Ashmore Reef National Nature Reserve (refer **Section 10.3**)
- Scott Reef and Surrounds – Commonwealth Area (refer **Section 10.3**)
- Ningaloo Marine Area (refer **Section 10.3**)

World Heritage Properties are those sites that hold universal value which transcends any value they may be held by any one nation. These sites and their qualities are detailed in the Convention concerning the Protection of the World Cultural and Natural Heritage (the World Heritage Convention), to which Australia is a founding member. The Protected Matters Search Report (**Appendix A**) lists two natural World Heritage Properties in the NWMR (refer **Section 10.2**). There are no cultural heritage listings located within the NWMR.

Summary tables of heritage places for NWMR, SWMR and NMR are presented in **Table 11-1,Table 11-2** and **Table 11-3**.

National Heritage Properties						
Dampier Archipelago (including Burrup Peninsula)	-	✓	-	Indigenous	The Dampier Archipelago (including the Burrup Peninsula) contains one of the densest concentrations of rock engravings in Australia with some sites containing thousands or tens of thousands of images.	The rock engravings comprise images of avian, marine and terrestrial fauna, schematised human figures, figures with mixed human and animal characteristics and geometric designs. At a national level it has an exceptionally diverse and dynamic range of schematised human figures some of which are arranged in complex scenes. The fine execution and dynamic nature of the engravings, particularly some of the composite panels, exhibit a degree of creativity that is unusual in Australian rock engravings.
Dirk Hartog Landing Site 1616 – Cape Inscription Area	-	-	✓	Historic	Cape Inscription is the site of the oldest known landings of Europeans on the WA coastline.	The Cape Inscription area displays uncommon aspects of Australia's cultural history because of the cumulative effect its association with these explorers and surveyors had on growing knowledge of the great southern continent in Europe. The association of the site with these early navigators stimulated the development of the European view of the great southern continent at a time when they began to look at the world with a modern scientific outlook.

Cheetup Rock Shelter	Indigenous	Cheetup meaning “place of the birds” is the name of a spacious rock shelter located in Cape Le Grand National Park, about 55 km east of Esperance in WA. Aboriginal people associated with the place identify themselves as Nyungar/Noongar, Ngadju (shortened from Ngadjunmaia) or Mirning.	Cheetup rock shelter provides outstanding evidence for the antiquity of processing and use of cycad seeds by Aboriginal people. The seeds of the cycad are extremely toxic and can cause speedy death if eaten fresh without proper preparation to remove the toxins. The presence of *Macrozamia riedlei* seeds in a pit lined with Xanthorrhoea (grass tree) leaf bases indicates that the Aboriginal people in the Esperance region had the knowledge to remove the toxins of this important source of carbohydrate and protein at least 13,200 years ago.

Heritage Places	Class	Description	Conservation Values
Batavia Shipwreck Site and Survivor Camps Area 1629 – Houtman Abrolhos	Historic	The Batavia and its associated sites hold an important place in the discovery and delineation of the WA coastline. The wreck of the Batavia, and other Dutch ships like her, convinced the VOC (Dutch East India Company) of the necessity of more accurate charts of the coastline and resulted in the commissioning of Vlamingh's 1696 voyage.	Because of its relatively undisturbed nature the archaeological investigation of the wreck itself has revealed a range of objects of considerable value as well as to artefact specialists and historians.
HMAS Sydney II and HSK Kormoran Shipwreck Sites	Historic	The naval battle fought between the Australian warship HMAS Sydney II and the German commerce raider HSK Kormoran off the WA coast during World War II was a defining event in Australia's cultural history. HMAS Sydney II was Australia's most famous warship of the time and this battle has forever linked the stories of these warships to each other. The loss of HMAS Sydney II along with its entire crew of 645 following the battle with HSK Kormoran, remains as Australia's worst naval disaster.	The shipwreck sites of HMAS Sydney II and HSK Kormoran have outstanding heritage value to the nation because of their importance in a defining event in Australia's cultural history and for their part in development of the process of the defence of Australia.
Commonwealth Heritage Properties			
Cliff Point Historic Sites	Historic	Cliff Head is a limestone bluff on the east coast of Garden Island. Evidence of occupation has been reported from the beach just north of the head, the immediate hinterland, the ridge above and on the south face of the ridge.	The Cliff Point Historic Site, individually significant within the area of Garden Island is important as the first site inhabited by Governor Stirling's party in 1829 when founding the colony of WA, and as WA's first official non-convict settlement. The site was occupied in the first instance by Captain Charles Fremantle before the arrival of Captain Stirling. The party occupied the site for two months before a move was made to the Swan River settlement on the mainland.
HMAS Sydney II and HSK Kormoran Shipwreck Sites	Historic	As above	As above
J Gun Battery	Historic	J Battery comprised two 155 mm long range guns, the other similar battery being at Cape Peron on the mainland at the entrance to Cockburn Sound. Located in the dune systems at the north western	J Gun Battery (1942) is individually significant within the area of Garden Island (Register No. 019544) and is historically important as the first gun battery constructed on Garden Island and as one of two long range gun batteries which played a

		corner of Garden Island elements of the J Battery complex are now covered in part by sand.	strategic role in the coastal defences of Cockburn Sound and Fremantle following the entry of Japan into the Second World War (1939-45).

11.5 Fisheries - Commercial

11.5.1 Commonwealth and State Fisheries

The diverse range of habitats and species offshore WA has allowed for various fisheries to develop and operate throughout the region.

The Australian Fisheries Management Authority (AFMA) manages fisheries on behalf of the Commonwealth Government and is bound by objectives under the Commonwealth *Fisheries Management Act 1991*.

WA State commercial fisheries are managed by the WA Department of Primary Industries and Regional Development (WA DPIRD) under the WA *Fish Resources Management Act 1994* (FRMA), Fisheries Resources Management Regulations 1995, relevant gazetted notices and licence conditions, and applicable Fishery Management Plans.

Commonwealth and State managed fisheries that operate within the NWMR and in areas beyond this region are summarised in the **Table 11-4**.

Table 11-4 Commonwealth and State managed fisheries

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
Commonwealth Managed Fisheries							
Southern Bluefin Tuna Fishery	✓	✓	✓	**Management area**	The Southern Bluefin Tuna Fishery (SBTF) covers the entire EEZ around Australia, out to 200 nm from the coast. They do not fish in the Woodside activity area.		
				Species targeted		**Fishing methods**	**Fishing depth**
				Southern bluefin tuna (*Thunnus maccoyii*)		Longline and purse seine fishing.	Southern bluefin tuna is a pelagic species which can be found to depths of 500 m (AFMA, 2021a)
				Fishing effort	Most of the Australian fishing effort is by purse-seine vessels in the Great Australian Bight and waters off South Australia during summer months, and by longline off the New South Wales coastline during winter months (Patterson *et al*., 2020). SBTF is a fishery that is shared amongst many countries. Australia currently has a 35% share of the total global allowable catch, and while wild capture fishing in Australia to sell directly to market can occur anywhere throughout the SBTF's range, currently the vast majority of that quota is value-added through ranching (on-growing the wild captured fish for extra 5-6 months). Ranching requires significant infrastructure, a resident labour force, plus proximity to a fishery able to supply a large quantity of natural feed/sardines (40,000+ tonnes) (for example as available in Port Lincoln). North-west WA is critically important regardless of how the quota is fished because of the proximity to the single spawning ground of this global roaming species. The stock remains classified as overfished.		
				Active licences/vessels	Seven purse seine vessels, 20 longline vessels (Patterson *et al*., 2020).		
Western Skipjack Tuna Fishery	✓	✓	✓	**Management area**	The combined western and eastern skipjack tuna (*Katsuwonus pelamis*) fisheries (STF) encompass the entire Australian EEZ. The Western Skipjack Tuna Fishery (WSTF) extends westward from the SA/Victorian border across the Great Australian Bight and around the west coast of WA to the Cape York Peninsula.		

Fishery	Woodside Activity Area			Description		
	Browse	NWS/S	NW Cape			
				Species targeted	**Fishing methods**	**Fishing depth**
				Western skipjack tuna (*Katsuwonus pelamis*)	Fishers use purse seine gear (about 98% of catch) and sometimes pole and line when fishing for skipjack tuna.	Western skipjack tuna is a pelagic species that can be found to depths of 260 m (AFMA, 2021b).
				Fishing effort:	The Skipjack Tuna Fishery (STF) has not been actively fished since the 2008-2009 fishing season (Patterson *et al*., 2020). The management arrangements for this fishery will be reviewed if active boats re-enter the fishery.	
				Active licences/vessels:	No active vessels operating since 2009.	
Western Tuna and Billfish Fishery	✓	✓	✓	**Management area**	The Western Tuna and Billfish Fishery (WTBF) extends to the Australian EEZ boundary in the Indian Ocean.	
				Species targeted	**Fishing methods**	**Fishing depth**
				Bigeye tuna (*Thunnus obesus*) Yellowfin tuna (*Thunnus albacares*) Swordfish (*Xiphias gladius*) Albacore (*Thunnus alalonga*) Striped marlin (*Kajikia audax*)	Fishers mainly use pelagic longline fishing gear to catch the targeted species. Minor line (including handline, troll, rod and reel) can also be used.	Species have a broad depth distribution, with tuna occurring at 150 – 300 m, striped marlin at 150 m and swordfish at up to 600 m (BRS, 2007).
				Fishing effort:	The WTBF operates in Australia's EEZ and high seas of the Indian Ocean. Fishing effort in recent years has been concentrated off south-west WA, with occasional activity off SA.	
				Active licences/vessels:	Two pelagic longline vessels and two minor longline vessels (Patterson *et al*., 2020).	
Western Deepwater Trawl Fishery			✓	**Management area**	The Western Deepwater Trawl Fishery (WDTF) is located in deep water off WA, from the line approximating the 200 m isobath to the edge of the Australian Fishing Zone (AFZ).

</td></tr>
</table>

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
				Fishing effort:	The NWSTF commenced in 1985 and the number of active vessels peaked at 21 in the 1986-1987 season and declined through the 1990s before increasing to 10 vessels in 2000-2001 and 2002-2002 seasons. Four vessels operated in the 2017-2018 and 2018-2019 seasons (Patterson *et. al*. 2020). Fishing for scampi occurs over soft, muddy sediments or sandy habitats, using demersal trawl gear on the continental slope (Patterson *et al*., 2017).		
				Active licences/vessels:	Four vessels (Patterson *et. al*., 2020).		
State Managed Fisheries							
Pilbara Fish Trawl (Interim) Managed Fishery		✓		**Management area**	The Pilbara Trawl (Interim) Managed Fishery is of high intensity and is divided into two zones and an area governed by Schedule 5 (prohibited to trawling). In addition to the Prohibited Trawl Fishing area, no fish trawl units are allocated for use in Zone 1 or Areas 3 and 6 of Zone 2 (which comprises six management areas) (Newman *et al*., 2020a). No fish trawl units have been allocated for use in Area 6 of Zone 2 since the management plan commenced operation in 1998.		
				Species targeted		**Fishing methods**	**Fishing depth**
				The Pilbara Fish Trawl (Interim) Managed Fishery (PFTIMF) targets more than 50 scalefish species. The five main demersal scalefish species landed by the fisheries in the Pilbara region are blue-spotted emperor, crimson snapper, rosy threadfin bream, red emperor and goldband snapper in 2018 (Newman *et al*., 2020a).	Demersal trawl.	The Pilbara Fish Trawl Fishery lands the largest component of the catch and operates in waters between 50 and 200 m water depth (Allen *et al*., 2014, Newman et al. 2015). Stakeholders have advised that trawling can occur in depths of up to approximately 800 m.
				Fishing effort:	Based on State of the Fisheries annual reports provided by DPIRD, catch trends are seen to be increasing over the past reporting years:		

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
					Pilbara Trawl (Interim) Managed Fishery caught 1996 t in 2018-19, 1780 t in 2017-18, 1529 t in 2016-17, 1172 t in 2015-16, 1105 t in 2014-15.		
				Active licences/vessels:	Two Pilbara Trawl (Interim) Managed Fishery vessels in 2017 (Newman *et al*., 2020a). Active vessels data are confidential as there were fewer than three vessels in the Pilbara Fish Trawl Interim Managed Fishery (Newman *et al*., 2020a).		
Pilbara Trap Managed Fishery		✓	✓	**Management area**	The Pilbara Trap Fishery covers the area from Exmouth northwards and eastwards to the 120° line of longitude, and offshore as far as the 200 m isobath. Like the trawl fishery, the trap fishery is also managed using input controls in the form of individual transferable effort allocations monitored with a satellite-based vessel management system. The fishery includes six licences allocated to three vessels, operating principally from Onslow.		
				Species targeted		**Fishing methods**	**Fishing depths**
				Pilbara Trap Managed Fishery catch is made up of around 45-50 different fish species. The four main species landed by the fisheries in the Pilbara region are blue-spotted emperor, red emperor, goldband snapper and Rankin cod.		Demersal fish traps.	Greatest effort in waters less than 50 m depth targeting high value species such as red emperor and goldband snapper.
				Fishing effort	Based on State of the Fisheries annual reports provided by DPIRD, catch trends are seen to be increasing over the past reporting years: Pilbara Trap Managed Fishery caught 563 t in 2018-19, 573 t in 2017-18, 495 t in 2016-17, 510 t in 2015-16, 268 t in 2014-15. In 2018, the total catch for the Pilbara Trap Managed Fishery was 563 t, making up 21% of the total catch by the Pilbara Demersal Scale Fishery (Newman *et al*., 2019).		

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
				Active licences/vessels	In the 2019 season, there were six licences in the Pilbara Trap Managed Fishery, (Newman *et al*., 2020a). Active vessels data are confidential as there were fewer than three vessels in the Pilbara Trap Managed Fishery (Newman *et al*., 2019).		
Pilbara Line Managed Fishery		✓	✓	**Management area**	The Pilbara Line Managed Fishery boat licences are permitted to operate anywhere within "Pilbara waters", bounded by a line commencing at the intersection of 21°56'S latitude and the high water mark on the western side of the North-west Cape on the mainland of WA; west along the parallel to the intersection of 21°56'S latitude and the boundary of the AFZ and north to longitude 120°E.		
				Species targeted		**Fishing method**	**Fishing depths**
				The Pilbara Line Managed Fishery catch is made up around 45-50 different fish species. The Pilbara Line Managed Fishery targets similar demersal species to the Pilbara Trap and Trawl fisheries, as well as some deeper offshore species such as ruby snapper and eightbar grouper The Pilbara Line Managed Fishery operates on an exemption basis that enables licence holders to fish for any nominated five-month block during the year.		Demersal long line.	Pilbara Line Fishing Depth: Operates up to a depth of 600 m.
				Fishing effort	Based on State of the Fisheries annual reports provided by DPIRD, catch trends are seen to be increasing over the past reporting years: Pilbara Line Managed Fishery caught 93 t in 2018-19, 143 t in 2017-18, 126 t in 2016-17, 97 t in 2015-16, 40 t in 2014-15. The total catch in 2018 for the Pilbara Line Managed Fishery was 93 t, making up 3% of the total catch by the Pilbara Demersal Scalefish Fishery (Newman *et al*., 2019).		

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
				Active licences/vessels	In the 2018 season there are nine individual licences in the Pilbara Line Fishery, held by seven operators. Active vessels data is confidential as there were fewer than three vessels in the Pilbara Line Fishery (Newman *et al*., 2018).		
Mackerel Managed Fishery	✓	✓	✓	**Management area**	The commercial fishery extends from Geraldton to the Northern Territory border. There are three managed fishing areas: Kimberley (Area 1), Pilbara (Area 2), and Gascoyne and West Coast (Area 3).		
				Species targeted		**Fishing methods**	**Fishing depth**
				Spanish mackerel (*Scomberomorus commerson*) Grey mackerel (*S. semifasciatus*) Other species from the genus *Scomberomorus*		Near-surface trawling gear. Jig fishing.	Previous engagement with WAFIC suggests that the depth of fisheries may extend to 70 m.
				Fishing effort:	Most of the catch is taken from waters off the Kimberley coasts (Lewis and Brand-Gardner, 2018), reflecting the tropical distribution of mackerel species (Molony *et al.*, 2015). Most fishing activity occurs around the coastal reefs of the Dampier Archipelago and Port Hedland area, with the seasonal appearance of mackerel in shallower coastal waters most likely associated with feeding and gonad development before spawning (Mackie *et al.*, 2003). Based on State of the Fisheries annual reports provided by DPIRD, catch trends are as follows: 213 t in 2018-19 (the lowest on record (Lewis *et al*., 2020), 283 t in 2017-18, 276 t in 2016-17, 302 t in 2015-16, 322 t in 2014-15.		
				Active licences/vessels:	Fifteen boats fished in 2018, with approximately 35-40 people directly employed in the Mackerel Managed Fishery, primarily from May-November (Lewis *et al*., 2020).		
Marine Aquarium Managed Fishery	✓	✓	✓	**Management area**	The Marine Aquarium Managed Fishery is able to operate in all State waters. The fishery is typically more active in waters south of Broome and higher levels of effort around the Capes region, Perth, Geraldton, Exmouth, Dampier and Broome (Newman *et al.*, 2020b).		
				Species targeted		**Fishing methods**	**Fishing depth**

Fishery	Woodside Activity Area			Description		
	Browse	NWS/S	NW Cape			
				Finfish, hard coral, soft coral, tridacnid clams, syngnathids (seahorses and pipefish), other invertebrates (including molluscs, crustaceans, echinoderms etc.), algae, seagrasses and 'live rock'.	The fishery is diver-based, which typically restricts effort to safe diving depths (less than 30 m).	Less than 30 m, as advised by WAFIC.
				Fishing effort:	Total catch for the Marine Aquarium Managed Fishery in 2018 was 156,188 fishes, 32.025 t of coral, live rock and living sand and 176.02 L of marine plants and live feed.	
				Active licences/vessels:	Eleven licences were active in 2019 (Newman *et al.*, 2020b).	
Beche-de-mer Fishery	✓	✓	✓	**Management area**	Fishing occurs in the northern half of WA from Exmouth Gulf to the NT border and is managed under Ministerial Exemptions.	
				Species targeted	**Fishing methods**	**Fishing depth**
				The sea cucumber fishery targets two main species: sandfish (*Holothuria scabra*) and redfish (*Actinopyga echinites*).	Diving	The targeted species typically inhabit nearshore in shallow depths.
				Fishing effort	Based on State of the Fisheries annual reports provided by DPRID, catch trends are as follows: 62t in 2018 (Gaughan and Santoro, 2020), 135t in 2017, 93t in 2016, 38t in 2015	
				Active licences/vessels	Six active licences in 2019 (Hart *et al*., 2019). Active vessels data is confidential as there were fewer than three vessels.	
Onslow Prawn Managed Fishery		✓		**Management area**	The Onslow Prawn Managed Fishery encompasses a portion of the continental shelf off the Pilbara.	
				Species targeted	**Fishing methods**	**Fishing depth**

Fishery	Woodside Activity Area			Description		
	Browse	NWS/S	NW Cape			
				The fishery targets: Western king prawns (*Penaeus esculentus*) Brown tiger prawns (*Penaeus esculentus*) Blue endeavour prawns (*Metapenaeus endeavouri*	Low opening, otter prawn trawl systems.	Prawn trawling takes place in water depths of approximately 30 metres and less (licence holder feedback). Fishery and or fishing activity overlaps the Beadon Creek dredging scope (Sporer *et al*., 2015).
				Fishing effort:	The total landings for the Onslow Prawn Managed Fishery in 2018 were less than 60 t below the target catch range (Kangas *et al.*, 2020a).	
				Active licences/vessels:	One vessel (Kangas *et al.*, 2020a).	
Pearl Oyster Managed Fishery	✓	✓	✓	**Management area**	Located in shallow coastal waters with the pearl oyster managed fishery designated by four zones extending from Exmouth to Kununurra and the seaward boundary demarcated by the 200 nm EEZ.	
				Species targeted	**Fishing methods**	**Fishing depth**
				Pearl oysters (*Pinctada maxima*).	Drift diving.	Fishing effort is mostly focussed in shallow coastal waters (10-15 m depth), with a maximum depth of 35 m (Lulofs *et al.* 2002).
				Fishing effort:	In 2018, catch was taken from Zones 2 and 3 with no fishing in Zone 1. The number of pearl oysters caught for 2018-19 was 614,002. Total effort was 15,637 dive hours, this was an increase from 2017 effort of 12,845 hours. No fishing occurred in Zone 1 in 2017 and 2018 (Gaughan and Santoro, 2020).	
				Active licences/vessels:	15,637 diver hours (Hart *et al.*, 2020a).	
		✓	✓	**Management area**	The Pilbara Crab Managed Fishery comprises WA waters off the north-western coast of WA north of 23° 34′ south latitude and west of 120° 00′ east longitude. Areas of the fishery north and east of Exmouth and

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
Abrolhos Islands and Mid-West Trawl Fishery			✓	**Management area**	The Abrolhos Islands and Mid-West Trawl Fishery (AIMWTMF) operates around the Abrolhos Islands within the SWMR.		
				Species targeted		**Fishing methods**	**Fishing depth**
				Saucer scallops (*Ylistrum balloti,* formerly *Amusium balloti*)		Trawl.	Information not available, however, the species occurs at depth of around 30-60 m and therefore fishing effort would likely be at these depths (Himmelman *et al*., 2009).
				Fishing effort:	The scallop landings in the AIMWTMF were 31.0 t meat weight (154.8 t whole weight). Between 2011 and 2015, the annual pre-season surveys showed very low recruitment (1-year old), as a result of the 2011 extreme marine heatwave and subsequent poor pawning stock (Kangas *et al.*, 2020b). The fishery was closed between 2011 and 2016.		
				Active licences/vessels:	Information about licences or vessels is not available but the Department of Primary Industry and Regional Development reported 774 t of catch from this fishery in the 2019 annual report (DPIRD, 2019).		
Broome Prawn Managed Fishery	✓			**Management area**	The Broome Prawn Managed Fishery (BPMF) operates off Broome and forms part of the North Coast Prawn Fishery.		
				Species targeted		**Fishing methods**	**Fishing depth**
				Western king prawn (*Penaeus latisulcatus*) Coral prawn		Trawl.	Trawling is generally in waters between 30 and 60 m deep, however can occur down to 100 m (DOEH, 2004).
				Fishing effort:	BPMF recorded extremely low fishing effort in 2018. Only two vessels undertook trial fishing to investigate whether the catch rates were sufficient for commercial fishing. This resulted in negligible landings of Western king prawn (Kangas *et al*., 2020a).		

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
				Active licences/vessels:	Two vessels conducting fishing trial operated in 2018 (Kangas *et al*., 2020a).		
Exmouth Gulf Prawn Managed Fishery			✓	**Management area**	The estimated employment in the fishery in 2017 was 18 people including skippers and other crew (Kangas *et al*., 2018). The fishery occupies a total area of 4000 km², with only half of this area being trawled (Fletcher and Santoro, 2015).		
				Species targeted		**Fishing methods**	**Fishing depth**
				Western king prawn (*Penaeus latisulcatus*) Brown tiger prawn (*Penaeus esculentus*) Blue endeavour prawn (*Metapenaeus endeavouri*) Banana prawn (*Penaeus merguinensis*)		Trawl.	Information not available.
				Fishing effort:	The total landings of prawns in 2018 were 880 t (Kangas *et al*., 2020a). In the 2016 season, a fishing effort of about 23,000 hours resulted in a catch of 822 t.		
				Active licences/vessels:	The precise number of vessels is unreported. Eighteen people were said to be employed in this fishery in 2018 (Kangas *et al.*, 2019); however, in 2013 it was reported that 18 skippers as well as other crew and support staff were employed (WAFIC[7]).		
Gascoyne Demersal Scalefish Managed Fishery			✓	**Management area**	The Gascoyne Demersal Scalefish Fishery (GDSF) is located between the southern Ningaloo Coast to south of Shark Bay (23°07.30'S to 26°.30'S) with a closure area at Point Maud to Tantabiddi (21°56.30'S) (WAFIC[8]).		
				Species targeted		**Fishing methods**	**Fishing depth**

				Pink snapper (*Chrysophrys auratus*) Goldband snapper (*Pristipomoides multidens*) Red emperor (*Lutjanus sebae*) Cods (*Gadus morhua*) Emperors (*Lethrinus miniatus)*	Mechanised handlines.	Information not available.
				Fishing effort:	The GDSF reported a total commercial catch of 210 t in 2017-18.	
				Active licences/vessels:	In 2018, 13 vessels fished during the season, in the 2017 season there were 16 vessels (Gaughan and Santoro, 2018).	
Kimberley Developing Mud Crab Fishery	✓			**Management area**	The Kimberley Developing Mud Crab Fishery is one of two small trap-based crab fisheries that exist in the North Coast Bioregion between Cambridge Gulf and Broome (Gaughan and Santoro, 2018).	
				Species targeted	**Fishing methods**	**Fishing depth**
				Brown mud crab (*Scylla olivacea*) Green mud crab (*Scylla serrata*)	Trap.	Information not available.
				Fishing effort:	The catch landed represents all commercially caught mud crabs landed in WA for 2018. A nominal catch rate of 0.66 kg/traplift was recorded for 2018, which is a 28% decrease from 2017 but remains above the harvest strategy threshold (Johnston *et al*., 2020).	
				Active licences/vessels:	There are currently three licences issued to commercial operators (600 trap limit), and three exemptions issued to Indigenous groups (total of 210 traps currently allocated of a maximum 600 traps) (Johnston *et al*., 2020).	
Nickol Bay Prawn Managed Fishery		✓		**Management area**	The Nickol Bay Prawn Managed Fishery operates in nearshore and offshore waters of the Pilbara region along the NWS.	
				Species targeted	**Fishing methods**	**Fishing depth**

Fishery	Woodside Activity Area			Description		
	Browse	NWS/S	NW Cape			
				Banana prawn (*Penaeus merguiensis*) Western king prawn (*Penaeus latisulcatus*) Brown tiger prawn (*Penaeus esculentus*) Blue endeavour prawn (*Metapenaeus endeavouri*)	Trawl.	Information not available.
				Fishing effort:	Trawling has been reported to occur at several locations along the Pilbara coast to the east of the Burrup Peninsula, including within the waters of Nickol Bay (Fletcher and Santoro, 2015). The total landings for the 2018 season were 81 t. Fishing effort was less than half at 138 days, compared to 281 boat days in 2017 (Kangas *et al*., 2020a).	
				Active licences/vessels:	The precise number of vessels is unreported, though low effort produced a catch of 17 t in 2016 (Kangas *et al.*, 2018).	
Northern Demersal Scalefish Managed Fishery	✓			**Management area**	The fishery is divided into two fishing areas: an inshore sector (Area 1) and an offshore sector (Area 2) (Newman *et al.*, 2018). Area 1 permits line fishing only, between the high water mark and the 30 m isobath. Area 2 permits handline, dropline and fish trap fishing methods and is further divided into zones. Zone A is an inshore area, Zone B comprises the area with most historical fishing activity, and Zone C is an offshore deep slope area representing waters deeper than 200 m (Fletcher *et al.*, 2017).	
				Species targeted	**Fishing methods**	**Fishing depth**
				Goldband snapper (*Pristipomoides multidens*) Blue-spotted emperor (*Lethrinus punctulantus*) Red emperor (*Lutjanus sebae*) Rankin cod (*Epinephelus multinotatus*)	Line fishing, handline, dropline and fish trap fishing.	Information not available.

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
				Fishing effort:	In 2018, the fishery reported a total catch of 1297 t. Most of the catch is landed from Zone B, with a catch of 1106 t in 2018. The level of catch in Zone B is the highest reported since zoning was implemented in 2006 (Newman *et al.*, 2019).		
				Active licences/vessels:	Six vessels fished in the 2018 season and at least 20 people were directly employed (Gaughan and Santoro, 2018).		
Octopus Interim Management Fishery				**Management area**	The developing Octopus Fishery operates from Kalbarri Cliffs in the north to Esperance in the south.		
				Species targeted		**Fishing methods**	**Fishing depth**
				Octopus sp. cf. tetricus		Passive shelter pots and active traps.	In inshore waters to a depth of 70 m (DPIRD, 2018).
				Fishing effort:	In 2019, the total commercial octopus catch was 314 t, which was 22% higher than the 2017 catch of 257 t. In 2016, about 200 vessels reported a total catch of 252 t (Hart *et al.*, 2020c).		
				Active licences/vessels:	About 21 vessels fish within the octopus specific fisheries, and about 200 vessels from the West Coast Rock Lobster Fishery catch octopus as bycatch (Gaughan and Santoro, 2018).		
Shark Bay Beach Seine and Mesh Net Managed Fishery				**Management area**	The Shark Bay Beach Seine and Mesh Net Managed Fishery operates from Denham.		
				Species targeted		**Fishing methods**	**Fishing depth**
				Whiting *(*yellowfin *Sillago schomburgkii* and goldenline *S. analis*) Sea mullet *(Mugil cephalus*) Tailor (*Pomatomus saltatrix*) Western yellowfin bream (*Acanthopagrus australis*)		Beach seine and mesh net.	Information not available.

Fishery	Woodside Activity Area			Description			
	Browse	NWS/S	NW Cape				
				Fishing effort:	In 2018, the total catch was 176 t (Gaughan and Santoro, 2020). The fishery currently employs about 14 fishers based on the seven fishery licences in operation (WAFIC[9]).		
				Active licences/vessels:	Six vessels operated employing around 12 fishers (Gaughan and Santoro, 2018).		
Shark Bay Crab Managed Fishery				**Management area**	The Shark Bay Crab Managed Fishery operates within the NWMR.		
				Species targeted		**Fishing methods**	**Fishing depth**
				Blue swimmer crab (*Portunus armatus*)		Trap and trawl.	Information not available.
				Fishing effort:	Commercial fishing for blue swimmer crabs in Shark Bay was voluntarily halted by industry in 2012 to facilitate stock rebuilding. The stock is still in a recovery phase; however, the fishery has resumed and reported a total commercial catch of 518 t in the 2017/18 season. The average commercial trap catch rate was 1.5 kg/traplift during 2017/18 (Chandrapavan *et al.*, 2017).		
				Active licences/vessels:	The precise number of vessels in the Shark Bay Blue Swimmer Crab Fishery is unreported. There are five crab trap permits. These permits are consolidated onto three active vessels (WAFIC[10]).		
Shark Bay Prawn and Scallop Managed Fishery				**Management area**	The Shark Bay Prawn Managed Fishery is the highest producing WA fishery for prawns.		
				Species targeted		**Fishing methods**	**Fishing depth**
				Western king prawn (*Penaeus latisulcatus*) Brown tiger prawn (*Penaeus esculentus*)		Low-opening otter trawls.	Information not available.

[9] https://www.wafic.org.au/fishery/inner-shark-bay-scalefish-fishery/

				Endeavour prawns (*Metapenaeus endeavouri*) Coral prawns (*Metapenaeopsis sp*.) Saucer scallop (*Amusium balloti*)		
				Fishing effort:	The Shark Bay Scallop Managed Fishery is currently in a recovery phase due to the results from the pre-season survey of stock abundance (Fletcher and Santoro, 2015; Kangas *et al.*, 2018).	
				Active licences/vessels:	The precise number of vessels in the Shark Bay Prawn Managed Fishery is unreported; however, about 100 people are employed in this fishery (Gaughan and Santoro, 2018). About 20 skippers and crew are employed in scallop fishing in the Shark Bay and South Coast fisheries across 18 vessels in 2015 (Sporer *et al.*, 2015).	
South Coast Crustacean Managed Fishery	-	-	-	**Management area**	The South Coast Crustacean Managed Fishery comprises four fisheries: the Windy Harbour/Augusta Rock Lobster Managed Fishery, the Esperance Rock Lobster Managed Fishery, the Southern Rock Lobster Pot Regulation Fishery and the South Coast Deep-Sea Crab Fishery.	
				Species targeted	**Fishing methods**	**Fishing depth**
				Southern rock lobster (*Jasus edwardsii*) Western rock lobster (*Panulirus cygnus*) Giant crab (*Pseudocarcinus gigas*) Crystal crab (*Chaceon albus*) Champagne crab (*Hypothalassia acerba*)	Pots.	Information not available.
				Fishing effort:	The South Coast Crustacean Managed Fishery reported a total catch of 101.2 t in 2018 season and the value of the fishery for 2017/2018 was about $5.9 million (Howe and Orme, 2020b).	
				Active licences/vessels:	The number of vessels is unknown; however, a total of 1977 pots are licensed to be used.	
	-	-	-	**Management area**	The fishery is active in coastal waters between Cape Leeuwin and the South Australia border. Landings are primarily at Albany, Bremer Bay and Esperance (Norriss and Blazeski, 2020).

11.5.2 Aquaculture

Aquaculture operations in the northwest are typically restricted to inland and shallow coastal waters.

West Coast Bioregion

Aquaculture activities in the West Coast bioregion, defined by the Department of Primary Industries and Regional Development (DPIRD) (as the government body responsible management of primary industries in WA) are focused on blue mussels and edible oysters (mainly in Cockburn Sound) and marine algae for production of beta-carotene, used as a food additive and as a nutritional supplement. Offshore marine finfish production is also being developed, initially focusing on yellowtail kingfish.

There is also an emerging black pearl industry (from the *Pinctada margaritifera* oyster) in the Abrolhos Islands. As well as expansion in the production of Akoya pearls (small white pearls from *Pinctada fucata martensi*), *Pinctada albina* (small, yellow pearls) and *Pteria penguin*, which are often used to produce half (mabe) pearls in pink and bluish shades.

Aquaculture licences for producing coral and live rock (pieces of old coral reefs colonised by marine life, such as beneficial bacteria, for aquariums) at the Abrolhos Islands have also been issued and other applications are being assessed.

Gascoyne Coast Bioregion

In the Gascoyne Coast bioregion, aquaculture activities are focused on the blacklip oyster (*Pinctada margaritifera*) and Akoya pearl oyster (*Pinctada imbricata*) (Gaughan and Santoro, 2020). Several hatcheries supply *P. margaritifera* juveniles to the region's developing black pearl farms.

Other aquaculture developments in the Gascoyne Coast bioregion include emerging producers of coral and live rock species for aquariums.

North Coast Bioregion

Aquaculture activities in the North Coast bioregion is dominated by the production of pearls. A large number of pearl oysters for seeding are obtained from wild stocks and supplemented by hatchery produced oysters, with major hatcheries operating at Broome and around the Dampier Peninsula (Gaughan and Santoro, 2018). Primary spawning of the pearl oyster occurs from mid-October to December. A smaller secondary spawning occurs in February and March (Gaughan and Santoro, 2020).

Other aquaculture developments in the North Coast include emerging producers of coral and live rock species for aquariums as well as barramundi (*Lates calcarifer)* farms and microalgae culturing for Omega-3, biofuels and protein biomass (Gaughan and Santoro, 2020).

11.6 Fisheries – Traditional

Traditional or customary fisheries are typically restricted to shallow coastal waters and/or areas with structures such as reef.

Dugong, fish and marine turtles that move between coastal and Commonwealth waters are important components of the Aboriginal people's culture and diet. Aboriginal people continue to actively manage their sea country in coastal waters of WA in order to protect and manage the marine environment, its resources and cultural values.

Indonesian fishers can fish within designated areas under the Australia-Indonesia Memorandum of Understanding regarding the Operations of Indonesian Traditional Fishermen in Areas of the Australian Fishing Zone and Continental Shelf – 1974 (MoU 74). Traditional fishing is allowed within the MoU Box (**Figure 11-1)**, which encompasses: Ashmore Reef (Pulau Pasir), Cartier Island (Pulau Baru), Seringapatam Reef (Afringan), Scott Reef (Pulau Dato) and Browse Island (Berselan). Restrictions have since been introduced around Ashmore Reef and Cartier Island following their

designation as Nature Reserves under the Commonwealth's *National Parks and Wildlife Conservation Act 1975* in 1983 and 2000, respectively.

The MoU allows Indonesian fishers to fish in designated areas using traditional methods only. These methods include reef gleaning, free-diving, hand lining and other non-mechanised methods. Scott Reef is currently the principal reef in the MoU 74 Box and is utilised seasonally by Indonesian fishers to harvest trepang, trochus shells and other reef species. The peak season is July to October due to more favourable wind conditions, and to allow fishers to sun dry their catch on their boat decks (ERM, 2009). Browse Island is also frequently visited by shark fishers who mostly fish along the eastern margin of the MoU 74 Box.

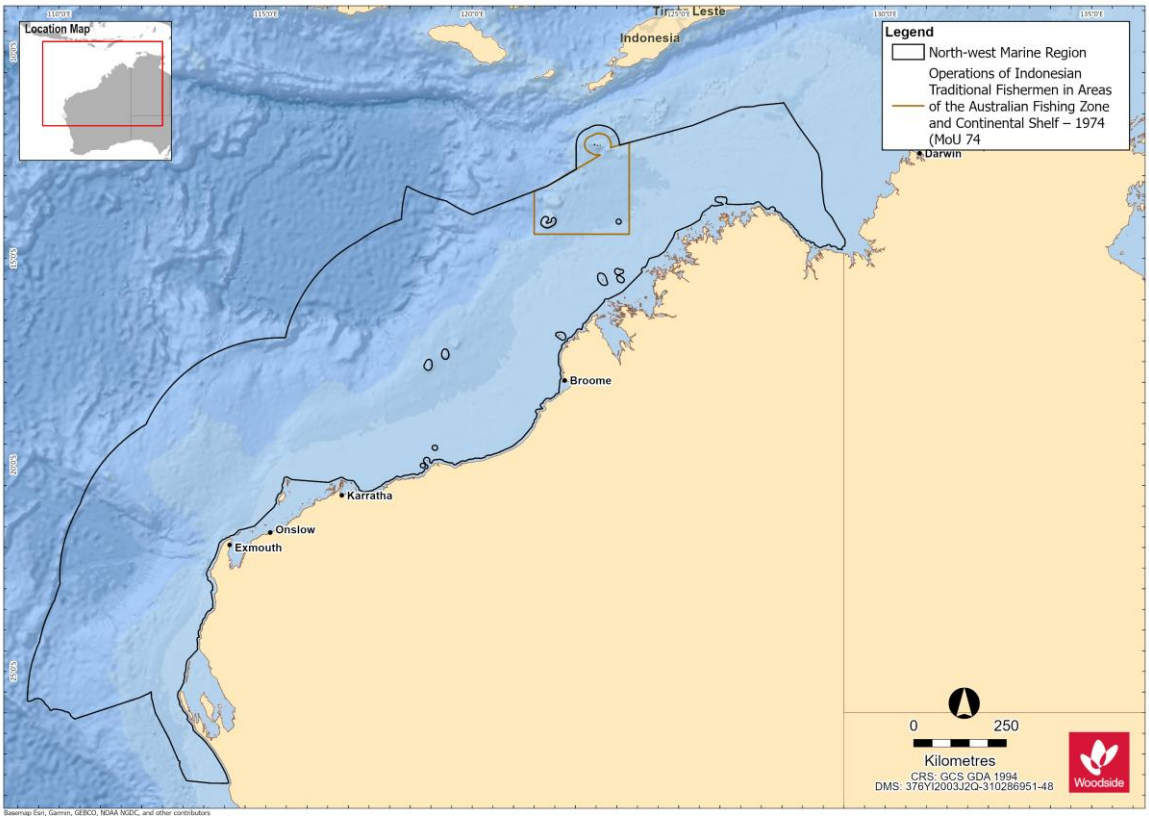

Figure 11-1 MOU 74 Box. Operations of Indonesian Traditional Fishermen in Areas of the Australian Fishing Zone and Continental Shelf – 1974

11.7 Tourism and Recreation

There are growing tourism and recreational sectors in WA. The Kimberley, Pilbara and Gascoyne regions are popular visitor destinations for Australian and international tourists. Tourism is concentrated in the vicinity of population centres including Broome, Dampier, Exmouth, Coral Bay and Shark Bay.

Recreational and tourism activities include: charter fishing, other recreational fishing, diving, snorkelling, marine fauna watching, and yachting.

11.7.1 Gascoyne Region

Outside the petroleum industry, tourism is the largest revenue earner of all the major industries of the Gascoyne region. It contributes significantly to the local economy in terms of both income and

employment. In 2018 there was an average of 337,400 visitors with a visitor spend of $359 million (Gascoyne Development Commission[11]).

In 2018-19, the Ningaloo region (Ningaloo Reef and the surrounding coastal region Exmouth Gulf, communities of Exmouth and Coral Bay, and adjacent proposed southern coastal reserves and pastoral leases) contributed an estimated $110 million in value added to the WA economy (DCBA, 2020). Ningaloo's economic contribution to WA is attributed to four key types of economic activity, tourism expenditure by international, interstate and WA visitors to the Ningaloo region, commercial fishing in the Exmouth Gulf, recreation activity involving the Reef by residents of the Ningaloo region and management and research relating to the Reef (DCBA, 2020). More than 90% of this value added is attributed to the domestic and international tourists who visit Ningaloo each year (DCBA, 2020). The main marine nature-based tourist activities are concentrated around and within the Ningaloo WHA.

11.7.2 Pilbara region

Recreation and tourism activities within the Pilbara are of high social value. Tourism is a key economic driver for the Pilbara with more than 1 million visitors to the region every year, generating $413 million in gross revenue annually (Pilbara Development Commission[12]).

Recreational fishing within the Pilbara region tends to be concentrated in State waters adjacent to population centres. Recreational fishing is known to occur around the Dampier Archipelago with boats launched from boat ramps around Dampier and Karratha (Williamson *et al.*, 2006). Once at sea, charter vessels may also frequent the waters surrounding the Montebello Islands.

11.7.3 Kimberley Region

Recreation and tourism activities in the Kimberley region occur predominantly in WA State waters (extending offshore 3 nm from the mainland), adjacent to coastal population centres (e.g. Broome), with a peak in activity during the winter months (dry season). These activities include recreational fishing, diving, snorkelling, wildlife watching and boating.

Primary dive locations in the Kimberley region include the Rowley Shoals, including Mermaid Reef AMP, Scott Reef, Seringapatam Reef, Ashmore Reef AMP and Cartier Island.

11.8 Shipping

Commercial shipping traffic is high within the NWMR with vessel activities including commercial fisheries, tourism such as cruises, international shipping and oil and gas operations. There are 12 ports adjacent to the NWMR, including the major ports of Dampier, Port Hedland and Broome, which are operated by their respective port authorities. These ports handle large tonnages of iron ore and petroleum exports in addition to salt, manganese, feldspar chromite and copper (DEWHA, 2008).

Heavy vessel traffic exists within the Pilbara Port Authority management area which recorded 10,064 vessel movements in Port of Dampier 2019/20 annual reporting period (PPA, 2020). Twenty-six designated anchorages for bulk carriers, petroleum and gas tankers, drilling rigs, offshore platforms, and pipelay vessels are located offshore of Rosemary Island.

In 2012, AMSA established a network of shipping fairways off the northwest coast of Australia. The shipping fairways, while not mandatory, aim to reduce the risk of collision between transiting vessels and offshore infrastructure. The fairways are intended to direct large vessels such as bulk carriers and LNG ships trading to the major ports into pre-defined routes to keep them clear of existing and planned offshore infrastructure (AMSA, 2013).

[12] https://www.pdc.wa.gov.au/our-focus/strategicinitiatives/tourism

11.9 Oil and Gas Infrastructure

The NWMR supports a number of industries including petroleum exploration and production.

Within the NWMR there are seven sedimentary petroleum basins: Northern and Southern Carnarvon basins, Perth, Browse, Roebuck, Offshore Canning and Bonaparte basins. Of these, the Northern Carnarvon, Browse and Bonaparte basins hold large quantities of gas and comprise most of Australia's reserves of natural gas (DEWHA, 2008), which is reflected by the level of development in the area. In addition to existing facilities, there are proposed developments in the region. This includes proposals to develop gas and condensate from a number of fields within the NWMR.

In addition to the oil and gas industry, other land-based industries depend upon the marine environment in the nearshore area. These include ports, salt mines such as Karratha and Onslow, LNG onshore processing facilities such as Burrup Hub, Thevenard Island, Barrow Island, Varanus Island, and small-scale desalination plants at Barrow Island, Burrup, Cape Preston, and Onslow.

11.10 Defence

Key Australian Department of Defence (DoD) operational areas and facilities areas of the NWMR for training and operational activities, include:

- An operating logistics base has been established in Dampier to support vessels patrolling the waters around offshore oil and gas facilities. A dedicated navy administrative support facility is also being constructed at the nearby township of Karratha.
- The Royal Australian Air Force currently maintains two 'bare bases' in remote areas of WA that are used for military exercises. One of these is the Royal Australian Air Force Base in Learmonth. The Royal Australian Air Force maintains the Commonwealth Heritage listed Learmonth Air Weapons Range Facility, which is located between Ningaloo Station and the Cape Range National Park. The air training area associated with the Learmonth base extends over the offshore region.
- The Royal Australian Air Force Base Curtin is located on the north coast of WA, south-east of Derby and 170 km east of Broome. It provides support for land, air and sea operations aimed to support Australia's northern approaches.
- The Naval Communications Station Harold E. Holt is located ~6 km north of Exmouth. The main role of the station is to communicate at very low frequencies (19.8 kHz) with Australian and United States submarines and ships in the eastern Indian Ocean and the western Pacific Ocean.

APPENDIX A. PROTECTED MATTER SEARCH REPORTS FOR NWMR, SWMR AND NMR

Australian Government

Department of Agriculture, Water and the Environment

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

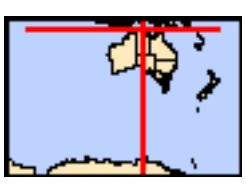
Information is available about Environment Assessments and the EPBC Act including significance guidelines, forms and application process details.

Report created: 10/05/21 12:59:15

This map may contain data which are ©Commonwealth of Australia (Geoscience Australia), ©PSMA 2015

Coordinates

Buffer: 1.0Km



Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance:	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	None
Listed Threatened Species:	33
Listed Migratory Species:	70

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at http://www.environment.gov.au/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	None
Commonwealth Heritage Places:	None
Listed Marine Species:	127
Whales and Other Cetaceans:	25
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	15

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	2
Regional Forest Agreements:	None
Invasive Species:	1
Nationally Important Wetlands:	1
Key Ecological Features (Marine)	8

Details

Matters of National Environmental Significance

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside the Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area. Generally the Commonwealth Marine Area stretches from three nautical miles to two hundred nautical miles from the coast.

Name
EEZ and Territorial Sea
Extended Continental Shelf

Marine Regions [Resource Information]

If you are planning to undertake action in an area in or close to the Commonwealth Marine Area, and a marine bioregional plan has been prepared for the Commonwealth Marine Area in that area, the marine bioregional plan may inform your decision as to whether to refer your proposed action under the EPBC Act.

Name
North

Listed Threatened Species [Resource Information]

Name	Status	Type of Presence
Birds		
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat known to occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Vulnerable	Species or species habitat likely to occur within area
Erythrura gouldiae Gouldian Finch [413]	Endangered	Species or species habitat may occur within area
Falcunculus frontatus whitei Crested Shrike-tit (northern), Northern Shrike-tit [26013]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-	Vulnerable	Species or species

Name	Status	Type of Presence
tailed Godwit [86380]		habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat may occur within area
Mammals		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Species or species habitat likely to occur within area
Notomys aquilo Northern Hopping-mouse, Woorrentinta [123]	Endangered	Species or species habitat may occur within area
Saccolaimus saccolaimus nudicluniatus Bare-rumped Sheath-tailed Bat, Bare-rumped Sheathtail Bat [66889]	Vulnerable	Species or species habitat may occur within area
Xeromys myoides Water Mouse, False Water Rat, Yirrkoo [66]	Vulnerable	Species or species habitat may occur within area
Reptiles		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Cryptoblepharus gurrmul Arafura Snake-eyed Skink [83106]	Endangered	Species or species habitat known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Congregation or aggregation known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Sharks		
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area

Name	Status	Type of Presence
Glyphis garricki Northern River Shark, New Guinea River Shark [82454]	Endangered	Species or species habitat known to occur within area
Glyphis glyphis Speartooth Shark [82453]	Critically Endangered	Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat known to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area

Listed Migratory Species [Resource Information]

* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.

Name	Threatened	Type of Presence
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Foraging, feeding or related behaviour known to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat known to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sternula albifrons Little Tern [82849]		Species or species habitat may occur within area
Sula leucogaster Brown Booby [1022]		Breeding known to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat known to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Congregation or aggregation known to occur within area
Dugong dugon Dugong [28]		Species or species habitat known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding known to occur within area
Manta alfredi Reef Manta Ray, Coastal Manta Ray, Inshore Manta Ray, Prince Alfred's Ray, Resident Manta Ray [84994]		Species or species habitat likely to occur within area
Manta birostris Giant Manta Ray, Chevron Manta Ray, Pacific Manta Ray, Pelagic Manta Ray, Oceanic Manta Ray [84995]		Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Species or species habitat known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat known to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Species or species habitat known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area
Sousa chinensis Indo-Pacific Humpback Dolphin [50]		Breeding known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Migratory Terrestrial Species		
Cecropis daurica Red-rumped Swallow [80610]		Species or species habitat may occur within area
Cuculus optatus Oriental Cuckoo, Horsfield's Cuckoo [86651]		Species or species habitat may occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area
Migratory Wetlands Species		
Acrocephalus orientalis Oriental Reed-Warbler [59570]		Species or species habitat may occur within area
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Arenaria interpres Ruddy Turnstone [872]		Species or species habitat known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat known to occur within area
Calidris alba Sanderling [875]		Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area

Name	Threatened	Type of Presence
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limicola falcinellus Broad-billed Sandpiper [842]		Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Species or species habitat known to occur within area
Numenius phaeopus Whimbrel [849]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Species or species habitat known to occur within area
Pluvialis squatarola Grey Plover [865]		Species or species habitat known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding likely to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Species or species

Name	Threatened	Type of Presence
		habitat known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Species or species habitat known to occur within area
Xenus cinereus Terek Sandpiper [59300]		Species or species habitat known to occur within area

Other Matters Protected by the EPBC Act

Listed Marine Species		[Resource Information]
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Birds		
Acrocephalus orientalis Oriental Reed-Warbler [59570]		Species or species habitat may occur within area
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus Common Noddy [825]		Foraging, feeding or related behaviour known to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Arenaria interpres Ruddy Turnstone [872]		Species or species habitat known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat known to occur within area
Calidris alba Sanderling [875]		Species or species habitat likely to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat known to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat known to occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
Heteroscelus brevipes Grey-tailed Tattler [59311]		Species or species habitat known to occur within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Species or species habitat known to occur within area
Hirundo daurica Red-rumped Swallow [59480]		Species or species habitat may occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area
Limicola falcinellus Broad-billed Sandpiper [842]		Species or species habitat likely to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Species or species habitat known to occur within area

Name	Threatened	Type of Presence
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius minutus Little Curlew, Little Whimbrel [848]		Species or species habitat known to occur within area
Numenius phaeopus Whimbrel [849]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Species or species habitat known to occur within area
Pluvialis fulva Pacific Golden Plover [25545]		Species or species habitat known to occur within area
Pluvialis squatarola Grey Plover [865]		Species or species habitat known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Species or species habitat known to occur within area
Rostratula benghalensis (sensu lato) Painted Snipe [889]	Endangered*	Species or species habitat may occur within area
Sterna albifrons Little Tern [813]		Species or species habitat may occur within area
Sterna bengalensis Lesser Crested Tern [815]		Breeding known to occur within area
Sterna bergii Crested Tern [816]		Breeding likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Stiltia isabella Australian Pratincole [818]		Species or species habitat known to occur within area
Sula leucogaster Brown Booby [1022]		Breeding known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
Tringa stagnatilis Marsh Sandpiper, Little Greenshank [833]		Species or species habitat known to occur within area
Xenus cinereus Terek Sandpiper [59300]		Species or species habitat known to occur within area
Fish		

Name	Threatened	Type of Presence
Acentronura tentaculata Shortpouch Pygmy Pipehorse [66187]		Species or species habitat may occur within area
Bhanotia fasciolata Corrugated Pipefish, Barbed Pipefish [66188]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys amplexus Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Corythoichthys haematopterus Reef-top Pipefish [66201]		Species or species habitat may occur within area
Corythoichthys intestinalis Australian Messmate Pipefish, Banded Pipefish [66202]		Species or species habitat may occur within area
Corythoichthys ocellatus Orange-spotted Pipefish, Ocellated Pipefish [66203]		Species or species habitat may occur within area
Corythoichthys schultzi Schultz's Pipefish [66205]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Cosmocampus maxweberi Maxweber's Pipefish [66209]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Festucalex cinctus Girdled Pipefish [66214]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus dunckeri Red-hair Pipefish, Duncker's Pipefish [66220]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus macrorhynchus Whiskered Pipefish, Ornate Pipefish [66222]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys cyanospilos Blue-speckled Pipefish, Blue-spotted Pipefish [66228]		Species or species habitat may occur within area
Hippichthys heptagonus Madura Pipefish, Reticulated Freshwater Pipefish [66229]		Species or species habitat may occur within area
Hippichthys parvicarinatus Short-keel Pipefish, Short-keeled Pipefish [66230]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippichthys spicifer Belly-barred Pipefish, Banded Freshwater Pipefish [66232]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Hippocampus zebra Zebra Seahorse [66241]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Micrognathus brevirostris thorntail Pipefish, Thorn-tailed Pipefish [66254]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Microphis brachyurus Short-tail Pipefish, Short-tailed River Pipefish [66257]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammals		
Dugong dugon Dugong [28]		Species or species habitat known to occur within area
Reptiles		
Acalyptophis peronii Horned Seasnake [1114]		Species or species habitat may occur within area
Aipysurus duboisii Dubois' Seasnake [1116]		Species or species habitat may occur within area
Aipysurus eydouxii Spine-tailed Seasnake [1117]		Species or species habitat may occur within area
Aipysurus laevis Olive Seasnake [1120]		Species or species habitat may occur within area
Astrotia stokesii Stokes' Seasnake [1122]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area

Name	Threatened	Type of Presence
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Congregation or aggregation known to occur within area
Disteira kingii Spectacled Seasnake [1123]		Species or species habitat may occur within area
Disteira major Olive-headed Seasnake [1124]		Species or species habitat may occur within area
Emydocephalus annulatus Turtle-headed Seasnake [1125]		Species or species habitat may occur within area
Enhydrina schistosa Beaked Seasnake [1126]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Black-ringed Seasnake [1100]		Species or species habitat may occur within area
Hydrophis atriceps Black-headed Seasnake [1101]		Species or species habitat may occur within area
Hydrophis caerulescens Dwarf Seasnake [1103]		Species or species habitat may occur within area
Hydrophis coggeri Slender-necked Seasnake [25925]		Species or species habitat may occur within area
Hydrophis czeblukovi Fine-spined Seasnake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Seasnake [1104]		Species or species habitat may occur within area
Hydrophis gracilis Slender Seasnake [1106]		Species or species habitat may occur within area
Hydrophis inornatus Plain Seasnake [1107]		Species or species habitat may occur within area
Hydrophis mcdowelli null [25926]		Species or species habitat may occur within area
Hydrophis melanosoma Black-banded Robust Seasnake [1109]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Seasnake, Ornate Reef Seasnake [1111]		Species or species habitat may occur within area
Hydrophis pacificus Large-headed Seasnake, Pacific Seasnake [1112]		Species or species habitat may occur within area
Hydrophis vorisi a seasnake [25927]		Species or species

Name	Threatened	Type of Presence
		habitat may occur within area
Lapemis hardwickii Spine-bellied Seasnake [1113]		Species or species habitat may occur within area
Laticauda colubrina a sea krait [1092]		Species or species habitat may occur within area
Laticauda laticaudata a sea krait [1093]		Species or species habitat may occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Breeding known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Parahydrophis mertoni Northern Mangrove Seasnake [1090]		Species or species habitat may occur within area
Pelamis platurus Yellow-bellied Seasnake [1091]		Species or species habitat may occur within area

Whales and other Cetaceans		[Resource Information]
Name	Status	Type of Presence
Mammals		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Species or species habitat likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat may occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Species or species habitat likely to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Species or species habitat likely to occur within area
Delphinus delphis Common Dophin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia simus Dwarf Sperm Whale [58]		Species or species habitat may occur within area

Name	Status	Type of Presence
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Species or species habitat likely to occur within area
Orcaella brevirostris Irrawaddy Dolphin [45]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa chinensis Indo-Pacific Humpback Dolphin [50]		Breeding known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Extra Information

State and Territory Reserves [Resource Information]

Name	State
Anindilyakwa	NT
Marthakal	NT

Invasive Species [Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resouces Audit, 2001.

Name	Status	Type of Presence
Plants		
Andropogon gayanus Gamba Grass [66895]		Species or species habitat likely to occur within area

Nationally Important Wetlands [Resource Information]

Name	State
Southern Gulf Aggregation	QLD

Key Ecological Features (Marine) [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Carbonate bank and terrace system of the Van	North
Gulf of Carpentaria basin	North
Gulf of Carpentaria coastal zone	North
Pinnacles of the Bonaparte Basin	North
Plateaux and saddle north-west of the Wellesley	North
Shelf break and slope of the Arafura Shelf	North
Submerged coral reefs of the Gulf of Carpentaria	North
Tributary Canyons of the Arafura Depression	North

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

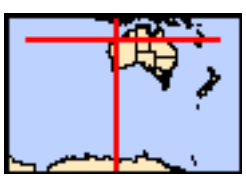
Information is available about Environment Assessments and the EPBC Act including significance guidelines, forms and application process details.

Report created: 10/05/21 13:07:00

This map may contain data which are ©Commonwealth of Australia (Geoscience Australia), ©PSMA 2015

Coordinates

Buffer: 1.0Km



Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	2
National Heritage Places:	5
Wetlands of International Importance:	2
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	1
Listed Threatened Species:	70
Listed Migratory Species:	84

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at http://www.environment.gov.au/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	None
Commonwealth Heritage Places:	1
Listed Marine Species:	149
Whales and Other Cetaceans:	34
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	17

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	10
Regional Forest Agreements:	None
Invasive Species:	23
Nationally Important Wetlands:	3
Key Ecological Features (Marine)	5

Details

Matters of National Environmental Significance

World Heritage Properties [Resource Information]

Name	State	Status
Shark Bay, Western Australia	WA	Declared property
The Ningaloo Coast	WA	Declared property

National Heritage Properties [Resource Information]

Name	State	Status
Natural		
Shark Bay, Western Australia	WA	Listed place
The Ningaloo Coast	WA	Listed place
The West Kimberley	WA	Listed place
Indigenous		
Dampier Archipelago (including Burrup Peninsula)	WA	Listed place
Historic		
Dirk Hartog Landing Site 1616 - Cape Inscription Area	WA	Listed place

Wetlands of International Importance (Ramsar) [Resource Information]

Name	Proximity
Eighty-mile beach	Within Ramsar site
Ord river floodplain	Within 10km of Ramsar

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside the Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area. Generally the Commonwealth Marine Area stretches from three nautical miles to two hundred nautical miles from the coast.

Name
EEZ and Territorial Sea
Extended Continental Shelf

Marine Regions [Resource Information]

If you are planning to undertake action in an area in or close to the Commonwealth Marine Area, and a marine bioregional plan has been prepared for the Commonwealth Marine Area in that area, the marine bioregional plan may inform your decision as to whether to refer your proposed action under the EPBC Act.

Name
North-west

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Name	Status	Type of Presence
Monsoon vine thickets on the coastal sand dunes of Dampier Peninsula	Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Name	Status	Type of Presence
Birds		
Anous tenuirostris melanops Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species

Name	Status	Type of Presence
		habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat may occur within area
Erythrotriorchis radiatus Red Goshawk [942]	Vulnerable	Species or species habitat likely to occur within area
Erythrura gouldiae Gouldian Finch [413]	Endangered	Species or species habitat known to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat known to occur within area
Falcunculus frontatus whitei Crested Shrike-tit (northern), Northern Shrike-tit [26013]	Vulnerable	Species or species habitat likely to occur within area
Geophaps smithii blaauwi Partridge Pigeon (western) [66501]	Vulnerable	Species or species habitat likely to occur within area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area
Limosa lapponica baueri Nunivak Bar-tailed Godwit, Western Alaskan Bar-tailed Godwit [86380]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Critically Endangered	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Malurus leucopterus leucopterus White-winged Fairy-wren (Dirk Hartog Island), Dirk Hartog Black-and-White Fairy-wren [26004]	Vulnerable	Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Pezoporus occidentalis Night Parrot [59350]	Endangered	Species or species habitat may occur within

Name	Status	Type of Presence
		area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat likely to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Tyto novaehollandiae kimberli Masked Owl (northern) [26048]	Vulnerable	Species or species habitat likely to occur within area
Mammals		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Bettongia lesueur lesueur Burrowing Bettong (Shark Bay), Boodie [66659]	Vulnerable	Species or species habitat likely to occur within area
Bettongia penicillata ogilbyi Woylie [66844]	Endangered	Species or species habitat likely to occur within area
Conilurus penicillatus Brush-tailed Rabbit-rat, Brush-tailed Tree-rat, Pakooma [132]	Vulnerable	Species or species habitat may occur within area
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat may occur within area
Dasyurus hallucatus Northern Quoll, Digul [Gogo-Yimidir], Wijingadda [Dambimangari], Wiminji [Martu] [331]	Endangered	Species or species habitat known to occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area

Name	Status	Type of Presence
Isoodon auratus auratus Golden Bandicoot (mainland) [66665]	Vulnerable	Species or species habitat likely to occur within area
Lagostrophus fasciatus fasciatus Banded Hare-wallaby, Merrnine, Marnine, Munning [66664]	Vulnerable	Translocated population known to occur within area
Leporillus conditor Wopilkara, Greater Stick-nest Rat [137]	Vulnerable	Translocated population known to occur within area
Macroderma gigas Ghost Bat [174]	Vulnerable	Species or species habitat known to occur within area
Macrotis lagotis Greater Bilby [282]	Vulnerable	Species or species habitat likely to occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Breeding known to occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area
Perameles bougainville bougainville Western Barred Bandicoot (Shark Bay) [66631]	Endangered	Translocated population known to occur within area
Petrogale concinna monastria Nabarlek (Kimberley) [87607]	Endangered	Species or species habitat known to occur within area
Phascogale tapoatafa kimberleyensis Kimberley brush-tailed phascogale, Brush-tailed Phascogale (Kimberley) [88453]	Vulnerable	Species or species habitat likely to occur within area
Rhinonicteris aurantia (Pilbara form) Pilbara Leaf-nosed Bat [82790]	Vulnerable	Species or species habitat may occur within area
Saccolaimus saccolaimus nudicluniatus Bare-rumped Sheath-tailed Bat, Bare-rumped Sheathtail Bat [66889]	Vulnerable	Species or species habitat likely to occur within area
Xeromys myoides Water Mouse, False Water Rat, Yirrkoo [66]	Vulnerable	Species or species habitat may occur within area
Reptiles		
Aipysurus apraefrontalis Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus foliosquama Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Egernia stokesii badia Western Spiny-tailed Skink, Baudin Island Spiny-tailed Skink [64483]	Endangered	Species or species habitat likely to occur

Name	Status	Type of Presence
		within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour known to occur within area
Lerista nevinae Nevin's Slider [85296]	Endangered	Species or species habitat known to occur within area
Liasis olivaceus barroni Olive Python (Pilbara subspecies) [66699]	Vulnerable	Species or species habitat likely to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Sharks		
Carcharias taurus (west coast population) Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat known to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Glyphis garricki Northern River Shark, New Guinea River Shark [82454]	Endangered	Species or species habitat known to occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat known to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Listed Migratory Species		[Resource Information]
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Migratory Marine Birds		
Anous stolidus Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Species or species habitat likely to occur within area
Ardenna pacifica Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat known to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species

Name	Threatened	Type of Presence
		habitat likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat may occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Foraging, feeding or related behaviour likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sternula albifrons Little Tern [82849]		Breeding known to occur within area
Sula leucogaster Brown Booby [1022]		Breeding known to occur within area
Sula sula Red-footed Booby [1023]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Migratory Marine Species		
Anoxypristis cuspidata Narrow Sawfish, Knifetooth Sawfish [68448]		Species or species habitat likely to occur within area
Balaena glacialis australis Southern Right Whale [75529]	Endangered*	Species or species habitat likely to occur within area

Name	Threatened	Type of Presence
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Species or species habitat known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Dugong dugon Dugong [28]		Breeding known to occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour known to occur within area
Manta alfredi Reef Manta Ray, Coastal Manta Ray, Inshore Manta Ray, Prince Alfred's Ray, Resident Manta Ray [84994]		Species or species habitat known to occur within area
Manta birostris Giant Manta Ray, Chevron Manta Ray, Pacific Manta Ray, Pelagic Manta Ray, Oceanic Manta Ray [84995]		Species or species habitat known to occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Breeding known to occur

Name	Threatened	Type of Presence
		within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Orcaella heinsohni Australian Snubfin Dolphin [81322]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pristis clavata Dwarf Sawfish, Queensland Sawfish [68447]	Vulnerable	Breeding known to occur within area
Pristis pristis Freshwater Sawfish, Largetooth Sawfish, River Sawfish, Leichhardt's Sawfish, Northern Sawfish [60756]	Vulnerable	Species or species habitat known to occur within area
Pristis zijsron Green Sawfish, Dindagubba, Narrowsnout Sawfish [68442]	Vulnerable	Breeding known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sousa chinensis Indo-Pacific Humpback Dolphin [50]		Breeding known to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area

Migratory Terrestrial Species	
Cecropis daurica Red-rumped Swallow [80610]	Species or species habitat may occur within area
Cuculus optatus Oriental Cuckoo, Horsfield's Cuckoo [86651]	Species or species habitat may occur within area
Hirundo rustica Barn Swallow [662]	Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]	Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]	Species or species habitat likely to occur within area

Migratory Wetlands Species	
Acrocephalus orientalis Oriental Reed-Warbler [59570]	Species or species habitat may occur within area
Actitis hypoleucos Common Sandpiper [59309]	Species or species habitat known to occur within area
Arenaria interpres Ruddy Turnstone [872]	Species or species habitat known to occur within area

Name	Threatened	Type of Presence
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat known to occur within area
Calidris alba Sanderling [875]		Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius phaeopus Whimbrel [849]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Pluvialis squatarola Grey Plover [865]		Species or species habitat known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Species or species habitat known to occur within area
Tringa glareola Wood Sandpiper [829]		Species or species habitat known to occur

Name	Threatened	Type of Presence
		within area
Tringa nebularia		
Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
Xenus cinereus		
Terek Sandpiper [59300]		Species or species habitat known to occur within area

Other Matters Protected by the EPBC Act

Ningaloo Marine Area - Commonwealth Waters	WA	Listed place

Listed Marine Species		[Resource Information]
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Birds		
Acrocephalus orientalis		
Oriental Reed-Warbler [59570]		Species or species habitat may occur within area
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Anous tenuirostris melanops		
Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Anseranas semipalmata		
Magpie Goose [978]		Species or species habitat may occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardea ibis		
Cattle Egret [59542]		Species or species habitat may occur within area
Arenaria interpres		
Ruddy Turnstone [872]		Species or species habitat known to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]		Species or species habitat known to occur within area
Calidris alba		
Sanderling [875]		Species or species

Name	Threatened	Type of Presence
		habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat known to occur within area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Calonectris leucomelas Streaked Shearwater [1077]		Species or species habitat known to occur within area
Catharacta skua Great Skua [59472]		Species or species habitat may occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Species or species habitat known to occur within area
Charadrius veredus Oriental Plover, Oriental Dotterel [882]		Species or species habitat may occur within area
Chrysococcyx osculans Black-eared Cuckoo [705]		Species or species habitat likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Species or species habitat may occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat known to occur within area
Fregata minor Great Frigatebird, Greater Frigatebird [1013]		Species or species habitat likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat may occur within area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat known to occur within area
Heteroscelus brevipes Grey-tailed Tattler [59311]		Species or species habitat known to occur

Name	Threatened	Type of Presence
		within area
Himantopus himantopus Pied Stilt, Black-winged Stilt [870]		Species or species habitat known to occur within area
Hirundo daurica Red-rumped Swallow [59480]		Species or species habitat may occur within area
Hirundo rustica Barn Swallow [662]		Species or species habitat may occur within area
Larus novaehollandiae Silver Gull [810]		Breeding known to occur within area
Larus pacificus Pacific Gull [811]		Foraging, feeding or related behaviour known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Limosa limosa Black-tailed Godwit [845]		Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Motacilla flava Yellow Wagtail [644]		Species or species habitat likely to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat known to occur within area
Numenius phaeopus Whimbrel [849]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Papasula abbotti Abbott's Booby [59297]	Endangered	Species or species habitat may occur within area
Phaethon lepturus White-tailed Tropicbird [1014]		Foraging, feeding or related behaviour likely to occur within area
Pluvialis squatarola Grey Plover [865]		Species or species habitat known to occur within area
Pterodroma macroptera Great-winged Petrel [1035]		Foraging, feeding or

Name	Threatened	Type of Presence
		related behaviour known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Puffinus assimilis Little Shearwater [59363]		Foraging, feeding or related behaviour known to occur within area
Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [1043]		Species or species habitat likely to occur within area
Puffinus pacificus Wedge-tailed Shearwater [1027]		Breeding known to occur within area
Recurvirostra novaehollandiae Red-necked Avocet [871]		Species or species habitat known to occur within area
Rostratula benghalensis (sensu lato) Painted Snipe [889]	Endangered*	Species or species habitat likely to occur within area
Sterna albifrons Little Tern [813]		Breeding known to occur within area
Sterna anaethetus Bridled Tern [814]		Breeding known to occur within area
Sterna bengalensis Lesser Crested Tern [815]		Breeding known to occur within area
Sterna bergii Crested Tern [816]		Breeding known to occur within area
Sterna caspia Caspian Tern [59467]		Breeding known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding likely to occur within area
Sterna fuscata Sooty Tern [794]		Breeding known to occur within area
Sterna nereis Fairy Tern [796]		Breeding known to occur within area
Sula leucogaster Brown Booby [1022]		Breeding known to occur within area
Sula sula Red-footed Booby [1023]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area

Name	Threatened	Type of Presence
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Tringa glareola Wood Sandpiper [829]		Species or species habitat known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
Xenus cinereus Terek Sandpiper [59300]		Species or species habitat known to occur within area
Fish		
Acentronura larsonae Helen's Pygmy Pipehorse [66186]		Species or species habitat may occur within area
Bhanotia fasciolata Corrugated Pipefish, Barbed Pipefish [66188]		Species or species habitat may occur within area
Bulbonaricus brauni Braun's Pughead Pipefish, Pug-headed Pipefish [66189]		Species or species habitat may occur within area
Campichthys galei Gale's Pipefish [66191]		Species or species habitat may occur within area
Campichthys tricarinatus Three-keel Pipefish [66192]		Species or species habitat may occur within area
Choeroichthys brachysoma Pacific Short-bodied Pipefish, Short-bodied Pipefish [66194]		Species or species habitat may occur within area
Choeroichthys latispinosus Muiron Island Pipefish [66196]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Corythoichthys amplexus Fijian Banded Pipefish, Brown-banded Pipefish [66199]		Species or species habitat may occur within area
Corythoichthys flavofasciatus Reticulate Pipefish, Yellow-banded Pipefish, Network Pipefish [66200]		Species or species habitat may occur within area
Corythoichthys intestinalis Australian Messmate Pipefish, Banded Pipefish [66202]		Species or species habitat may occur within area
Corythoichthys schultzi Schultz's Pipefish [66205]		Species or species habitat may occur within area
Cosmocampus banneri Roughridge Pipefish [66206]		Species or species habitat may occur within area
Doryrhamphus dactyliophorus Banded Pipefish, Ringed Pipefish [66210]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Doryrhamphus excisus Bluestripe Pipefish, Indian Blue-stripe Pipefish, Pacific Blue-stripe Pipefish [66211]		Species or species habitat may occur within area
Doryrhamphus janssi Cleaner Pipefish, Janss' Pipefish [66212]		Species or species habitat may occur within area
Doryrhamphus multiannulatus Many-banded Pipefish [66717]		Species or species habitat may occur within area
Doryrhamphus negrosensis Flagtail Pipefish, Masthead Island Pipefish [66213]		Species or species habitat may occur within area
Festucalex scalaris Ladder Pipefish [66216]		Species or species habitat may occur within area
Filicampus tigris Tiger Pipefish [66217]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Halicampus dunckeri Red-hair Pipefish, Duncker's Pipefish [66220]		Species or species habitat may occur within area
Halicampus grayi Mud Pipefish, Gray's Pipefish [66221]		Species or species habitat may occur within area
Halicampus nitidus Glittering Pipefish [66224]		Species or species habitat may occur within area
Halicampus spinirostris Spiny-snout Pipefish [66225]		Species or species habitat may occur within area
Haliichthys taeniophorus Ribboned Pipehorse, Ribboned Seadragon [66226]		Species or species habitat may occur within area
Hippichthys penicillus Beady Pipefish, Steep-nosed Pipefish [66231]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus histrix Spiny Seahorse, Thorny Seahorse [66236]		Species or species habitat may occur within area
Hippocampus kuda Spotted Seahorse, Yellow Seahorse [66237]		Species or species habitat may occur within area
Hippocampus planifrons Flat-face Seahorse [66238]		Species or species habitat may occur within area
Hippocampus spinosissimus Hedgehog Seahorse [66239]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Hippocampus trimaculatus Three-spot Seahorse, Low-crowned Seahorse, Flat-faced Seahorse [66720]		Species or species habitat may occur within area
Lissocampus fatiloquus Prophet's Pipefish [66250]		Species or species habitat may occur within area
Micrognathus micronotopterus Tidepool Pipefish [66255]		Species or species habitat may occur within area
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]		Species or species habitat may occur within area
Phoxocampus belcheri Black Rock Pipefish [66719]		Species or species habitat may occur within area
Solegnathus hardwickii Pallid Pipehorse, Hardwick's Pipehorse [66272]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Solenostomus cyanopterus Robust Ghostpipefish, Blue-finned Ghost Pipefish, [66183]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Trachyrhamphus bicoarctatus Bentstick Pipefish, Bend Stick Pipefish, Short-tailed Pipefish [66280]		Species or species habitat may occur within area
Trachyrhamphus longirostris Straightstick Pipefish, Long-nosed Pipefish, Straight Stick Pipefish [66281]		Species or species habitat may occur within area
Mammals		
Dugong dugon Dugong [28]		Breeding known to occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area
Reptiles		
Acalyptophis peronii Horned Seasnake [1114]		Species or species habitat may occur within area
Aipysurus apraefrontalis Short-nosed Seasnake [1115]	Critically Endangered	Species or species habitat known to occur within area
Aipysurus duboisii Dubois' Seasnake [1116]		Species or species habitat may occur within area
Aipysurus eydouxii Spine-tailed Seasnake [1117]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Aipysurus foliosquama Leaf-scaled Seasnake [1118]	Critically Endangered	Species or species habitat likely to occur within area
Aipysurus laevis Olive Seasnake [1120]		Species or species habitat may occur within area
Aipysurus pooleorum Shark Bay Seasnake [66061]		Species or species habitat may occur within area
Aipysurus tenuis Brown-lined Seasnake [1121]		Species or species habitat may occur within area
Astrotia stokesii Stokes' Seasnake [1122]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Breeding known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Breeding known to occur within area
Crocodylus johnstoni Freshwater Crocodile, Johnston's Crocodile, Johnstone's Crocodile [1773]		Species or species habitat may occur within area
Crocodylus porosus Salt-water Crocodile, Estuarine Crocodile [1774]		Species or species habitat likely to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Disteira kingii Spectacled Seasnake [1123]		Species or species habitat may occur within area
Disteira major Olive-headed Seasnake [1124]		Species or species habitat may occur within area
Emydocephalus annulatus Turtle-headed Seasnake [1125]		Species or species habitat may occur within area
Enhydrina schistosa Beaked Seasnake [1126]		Species or species habitat may occur within area
Ephalophis greyi North-western Mangrove Seasnake [1127]		Species or species habitat may occur within area
Eretmochelys imbricata Hawksbill Turtle [1766]	Vulnerable	Breeding known to occur within area
Hydrelaps darwiniensis Black-ringed Seasnake [1100]		Species or species habitat may occur within area
Hydrophis atriceps Black-headed Seasnake [1101]		Species or species habitat may occur within area
Hydrophis coggeri Slender-necked Seasnake [25925]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Hydrophis czeblukovi Fine-spined Seasnake [59233]		Species or species habitat may occur within area
Hydrophis elegans Elegant Seasnake [1104]		Species or species habitat may occur within area
Hydrophis inornatus Plain Seasnake [1107]		Species or species habitat may occur within area
Hydrophis mcdowelli null [25926]		Species or species habitat may occur within area
Hydrophis ornatus Spotted Seasnake, Ornate Reef Seasnake [1111]		Species or species habitat may occur within area
Lapemis hardwickii Spine-bellied Seasnake [1113]		Species or species habitat may occur within area
Lepidochelys olivacea Olive Ridley Turtle, Pacific Ridley Turtle [1767]	Endangered	Foraging, feeding or related behaviour known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Breeding known to occur within area
Pelamis platurus Yellow-bellied Seasnake [1091]		Species or species habitat may occur within area

Whales and other Cetaceans		[Resource Information]
Name	Status	Type of Presence
Mammals		
Balaenoptera acutorostrata Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Delphinus delphis Common Dophin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Species or species habitat likely to occur within area
Feresa attenuata Pygmy Killer Whale [61]		Species or species habitat may occur within

Name	Status	Type of Presence
		area
Globicephala macrorhynchus Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Globicephala melas Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus Risso's Dolphin, Grampus [64]		Species or species habitat may occur within area
Indopacetus pacificus Longman's Beaked Whale [72]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia simus Dwarf Sperm Whale [58]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Breeding known to occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Orcaella brevirostris Irrawaddy Dolphin [45]		Species or species habitat known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Species or species habitat may occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area
Sousa chinensis Indo-Pacific Humpback Dolphin [50]		Breeding known to occur within area
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species

Name	Status	Type of Presence
		habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops aduncus (Arafura/Timor Sea populations) Spotted Bottlenose Dolphin (Arafura/Timor Sea populations) [78900]		Species or species habitat known to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Invasive Species

[Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resouces Audit, 2001.

Name	Status	Type of Presence
Birds		
Columba livia Rock Pigeon, Rock Dove, Domestic Pigeon [803]		Species or species habitat likely to occur within area
Passer montanus Eurasian Tree Sparrow [406]		Species or species habitat likely to occur within area
Streptopelia senegalensis Laughing Turtle-dove, Laughing Dove [781]		Species or species habitat likely to occur within area
Frogs		
Rhinella marina Cane Toad [83218]		Species or species habitat may occur within area
Mammals		
Canis lupus familiaris Domestic Dog [82654]		Species or species habitat likely to occur within area
Capra hircus Goat [2]		Species or species habitat likely to occur within area
Equus asinus Donkey, Ass [4]		Species or species habitat likely to occur within area
Equus caballus Horse [5]		Species or species habitat likely to occur within area
Felis catus Cat, House Cat, Domestic Cat [19]		Species or species habitat likely to occur within area
Mus musculus House Mouse [120]		Species or species habitat likely to occur within area
Oryctolagus cuniculus Rabbit, European Rabbit [128]		Species or species habitat likely to occur within area
Rattus rattus Black Rat, Ship Rat [84]		Species or species habitat likely to occur within area
Sus scrofa Pig [6]		Species or species habitat likely to occur within area
Vulpes vulpes Red Fox, Fox [18]		Species or species habitat likely to occur within area
Plants		
Andropogon gayanus Gamba Grass [66895]		Species or species habitat likely to occur within area
Cenchrus ciliaris Buffel-grass, Black Buffel-grass [20213]		Species or species

		habitat likely to occur within area
Jatropha gossypifolia Cotton-leaved Physic-Nut, Bellyache Bush, Cotton-leaf Physic Nut, Cotton-leaf Jatropha, Black Physic Nut [7507]		Species or species habitat likely to occur within area
Lantana camara Lantana, Common Lantana, Kamara Lantana, Large-leaf Lantana, Pink Flowered Lantana, Red Flowered Lantana, Red-Flowered Sage, White Sage, Wild Sage [10892]		Species or species habitat may occur within area
Lycium ferocissimum African Boxthorn, Boxthorn [19235]		Species or species habitat likely to occur within area
Opuntia spp. Prickly Pears [82753]		Species or species habitat likely to occur within area
Parkinsonia aculeata Parkinsonia, Jerusalem Thorn, Jelly Bean Tree, Horse Bean [12301]		Species or species habitat likely to occur within area
Tamarix aphylla Athel Pine, Athel Tree, Tamarisk, Athel Tamarisk, Athel Tamarix, Desert Tamarisk, Flowering Cypress, Salt Cedar [16018]		Species or species habitat likely to occur within area
Reptiles		
Ramphotyphlops braminus Flowerpot Blind Snake, Brahminy Blind Snake, Cacing Besi [1258]		Species or species habitat likely to occur within area

Nationally Important Wetlands [Resource Information]

Name	State
Exmouth Gulf East	WA
Hamelin Pool	WA
Shark Bay East	WA

Key Ecological Features (Marine) [Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Carbonate bank and terrace system of the Sahul	North-west
Commonwealth waters adjacent to Ningaloo Reef	North-west
Continental Slope Demersal Fish Communities	North-west
Pinnacles of the Bonaparte Basin	North-west
Wallaby Saddle	North-west

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

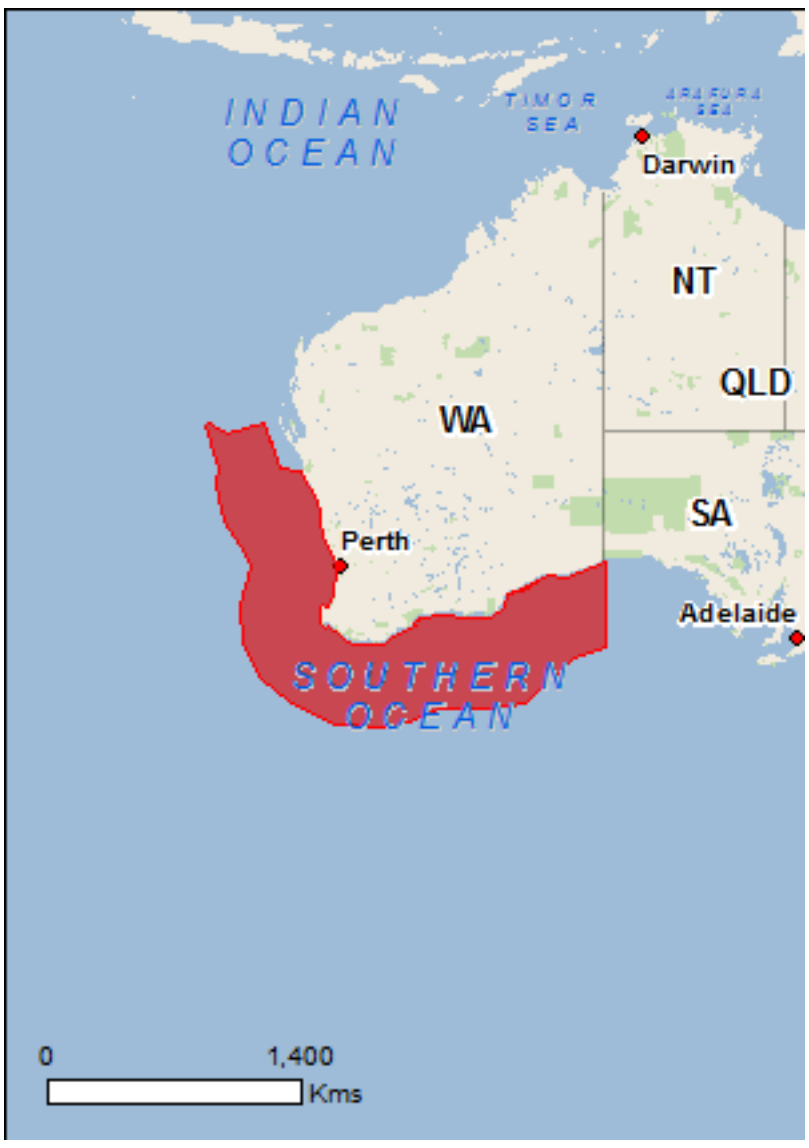
EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about Environment Assessments and the EPBC Act including significance guidelines, forms and application process details.

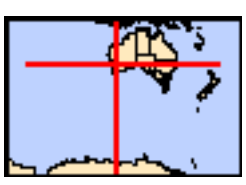
Report created: 10/05/21 12:51:00



This map may contain data which are ©Commonwealth of Australia (Geoscience Australia), ©PSMA 2015

Coordinates

Buffer: 1.0Km



Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance.

World Heritage Properties:	None
National Heritage Places:	1
Wetlands of International Importance:	4
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	2
Listed Threatened Ecological Communities:	3
Listed Threatened Species:	65
Listed Migratory Species:	67

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at http://www.environment.gov.au/heritage

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	2
Commonwealth Heritage Places:	1
Listed Marine Species:	106
Whales and Other Cetaceans:	40
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	21

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	10
Regional Forest Agreements:	None
Invasive Species:	42
Nationally Important Wetlands:	None
Key Ecological Features (Marine)	8

Details

Matters of National Environmental Significance

National Heritage Properties [Resource Information]

Name	State	Status
Indigenous		
Cheetup Rock Shelter	WA	Listed place

Wetlands of International Importance (Ramsar) [Resource Information]

Name	Proximity
Becher point wetlands	Within 10km of Ramsar
Forrestdale and thomsons lakes	Within 10km of Ramsar
Peel-yalgorup system	Within 10km of Ramsar
Vasse-wonnerup system	Within 10km of Ramsar

Commonwealth Marine Area [Resource Information]

Approval is required for a proposed activity that is located within the Commonwealth Marine Area which has, will have, or is likely to have a significant impact on the environment. Approval may be required for a proposed action taken outside the Commonwealth Marine Area but which has, may have or is likely to have a significant impact on the environment in the Commonwealth Marine Area. Generally the Commonwealth Marine Area stretches from three nautical miles to two hundred nautical miles from the coast.

Name
EEZ and Territorial Sea
Extended Continental Shelf

Marine Regions [Resource Information]

If you are planning to undertake action in an area in or close to the Commonwealth Marine Area, and a marine bioregional plan has been prepared for the Commonwealth Marine Area in that area, the marine bioregional plan may inform your decision as to whether to refer your proposed action under the EPBC Act.

Name
South-west

Listed Threatened Ecological Communities [Resource Information]

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Name	Status	Type of Presence
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community may occur within area
Proteaceae Dominated Kwongkan Shrublands of the Southeast Coastal Floristic Province of Western Australia	Endangered	Community may occur within area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area

Listed Threatened Species [Resource Information]

Name	Status	Type of Presence
Birds		
Anous tenuirostris melanops		
Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Atrichornis clamosus		
Noisy Scrub-bird, Tjimiluk [654]	Endangered	Species or species habitat known to occur within area
Botaurus poiciloptilus		
Australasian Bittern [1001]	Endangered	Species or species habitat likely to occur within area

Name	Status	Type of Presence
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Calyptorhynchus banksii naso Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat likely to occur within area
Calyptorhynchus latirostris Carnaby's Cockatoo, Short-billed Black-Cockatoo [59523]	Endangered	Species or species habitat known to occur within area
Cereopsis novaehollandiae grisea Cape Barren Goose (south-western), Recherche Cape Barren Goose [25978]	Vulnerable	Breeding known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat known to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Falco hypoleucos Grey Falcon [929]	Vulnerable	Species or species habitat likely to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Leipoa ocellata Malleefowl [934]	Vulnerable	Species or species habitat may occur within area
Limosa lapponica menzbieri Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Critically Endangered	Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel	Endangered	Species or species

Name	Status	Type of Presence
[1060]		habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pachyptila turtur subantarctica Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat known to occur within area
Pezoporus flaviventris Western Ground Parrot, Kyloring [84650]	Critically Endangered	Species or species habitat likely to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Rostratula australis Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area
Sternula nereis nereis Australian Fairy Tern [82950]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Mammals		
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Bettongia penicillata ogilbyi Woylie [66844]	Endangered	Species or species habitat may occur within

Name	Status	Type of Presence
		area
Dasyurus geoffroii Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat may occur within area
Eubalaena australis Southern Right Whale [40]	Endangered	Breeding known to occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
Parantechinus apicalis Dibbler [313]	Endangered	Species or species habitat known to occur within area
Petrogale lateralis hacketti Recherche Rock-wallaby [66849]	Vulnerable	Species or species habitat known to occur within area
Potorous gilbertii Gilbert's Potoroo, Ngilkat [66642]	Critically Endangered	Translocated population known to occur within area
Pseudocheirus occidentalis Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Species or species habitat may occur within area
Setonix brachyurus Quokka [229]	Vulnerable	Species or species habitat known to occur within area
Plants		
Caladenia elegans Elegant Spider-orchid [56775]	Endangered	Species or species habitat may occur within area
Caladenia granitora [65292]	Endangered	Species or species habitat may occur within area
Caladenia hoffmanii Hoffman's Spider-orchid [56719]	Endangered	Species or species habitat may occur within area
Diuris micrantha Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area
Drummondita ericoides Morseby Range Drummondita [9193]	Endangered	Species or species habitat likely to occur within area
Eucalyptus insularis Twin Peak Island Mallee [3057]	Endangered	Species or species habitat likely to occur within area
Isopogon uncinatus Albany Cone Bush, Hook-leaf Isopogon [20871]	Endangered	Species or species habitat likely to occur within area
Reptiles		
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area

Name	Status	Type of Presence
Dermochelys coriacea		
Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Egernia stokesii badia		
Western Spiny-tailed Skink, Baudin Island Spiny-tailed Skink [64483]	Endangered	Species or species habitat may occur within area
Liopholis pulchra longicauda		
Jurien Bay Skink, Jurien Bay Rock-skink [83162]	Vulnerable	Species or species habitat known to occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Sharks		
Carcharias taurus (west coast population)		
Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat known to occur within area
Carcharodon carcharias		
White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Rhincodon typus		
Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area

Listed Migratory Species [Resource Information]

* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.

Name	Threatened	Type of Presence
Migratory Marine Birds		
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardenna carneipes		
Flesh-footed Shearwater, Fleshy-footed Shearwater [82404]		Breeding known to occur within area
Ardenna grisea		
Sooty Shearwater [82651]		Species or species habitat may occur within area
Ardenna pacifica		
Wedge-tailed Shearwater [84292]		Breeding known to occur within area
Ardenna tenuirostris		
Short-tailed Shearwater [82652]		Breeding known to occur within area
Diomedea amsterdamensis		
Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea antipodensis		
Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea dabbenena		
Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora		
Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area

Name	Threatened	Type of Presence
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Hydroprogne caspia Caspian Tern [808]		Breeding known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Onychoprion anaethetus Bridled Tern [82845]		Breeding known to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Migratory Marine Species		
Balaena glacialis australis Southern Right Whale [75529]	Endangered*	Breeding known to occur within area
Balaenoptera bonaerensis Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni Bryde's Whale [35]		Species or species habitat likely to occur within area

Name	Threatened	Type of Presence
Balaenoptera musculus Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Caperea marginata Pygmy Right Whale [39]		Foraging, feeding or related behaviour may occur within area
Carcharhinus longimanus Oceanic Whitetip Shark [84108]		Species or species habitat likely to occur within area
Carcharodon carcharias White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Isurus oxyrinchus Shortfin Mako, Mako Shark [79073]		Species or species habitat likely to occur within area
Isurus paucus Longfin Mako [82947]		Species or species habitat likely to occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lamna nasus Porbeagle, Mackerel Shark [83288]		Species or species habitat likely to occur within area
Manta alfredi Reef Manta Ray, Coastal Manta Ray, Inshore Manta Ray, Prince Alfred's Ray, Resident Manta Ray [84994]		Species or species habitat known to occur within area
Manta birostris Giant Manta Ray, Chevron Manta Ray, Pacific Manta Ray, Pelagic Manta Ray, Oceanic Manta Ray [84995]		Species or species habitat known to occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Natator depressus Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Rhincodon typus Whale Shark [66680]	Vulnerable	Species or species

Name	Threatened	Type of Presence
		habitat may occur within area
Migratory Terrestrial Species		
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Migratory Wetlands Species		
Actitis hypoleucos Common Sandpiper [59309]		Species or species habitat known to occur within area
Arenaria interpres Ruddy Turnstone [872]		Species or species habitat known to occur within area
Calidris acuminata Sharp-tailed Sandpiper [874]		Species or species habitat likely to occur within area
Calidris alba Sanderling [875]		Species or species habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat known to occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Thalasseus bergii Greater Crested Tern [83000]		Breeding known to occur within area
Tringa brevipes Grey-tailed Tattler [851]		Species or species habitat known to occur

Name	Threatened	Type of Presence
		within area
Tringa nebularia		
Common Greenshank, Greenshank [832]		Species or species habitat likely to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Land [Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Garden Island	WA	Listed place

Listed Marine Species [Resource Information]

* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.

Name	Threatened	Type of Presence
Birds		
Actitis hypoleucos		
Common Sandpiper [59309]		Species or species habitat known to occur within area
Anous stolidus		
Common Noddy [825]		Species or species habitat likely to occur within area
Anous tenuirostris melanops		
Australian Lesser Noddy [26000]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Apus pacificus		
Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Ardea ibis		
Cattle Egret [59542]		Species or species habitat may occur within area
Arenaria interpres		
Ruddy Turnstone [872]		Species or species habitat known to occur within area
Calidris acuminata		
Sharp-tailed Sandpiper [874]		Species or species habitat likely to occur within area
Calidris alba		
Sanderling [875]		Species or species

Name	Threatened	Type of Presence
		habitat known to occur within area
Calidris canutus Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calidris melanotos Pectoral Sandpiper [858]		Species or species habitat likely to occur within area
Calidris ruficollis Red-necked Stint [860]		Species or species habitat known to occur within area
Calidris tenuirostris Great Knot [862]	Critically Endangered	Species or species habitat known to occur within area
Catharacta skua Great Skua [59472]		Species or species habitat may occur within area
Cereopsis novaehollandiae grisea Cape Barren Goose (south-western), Recherche Cape Barren Goose [25978]	Vulnerable	Breeding known to occur within area
Charadrius leschenaultii Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat known to occur within area
Charadrius mongolus Lesser Sand Plover, Mongolian Plover [879]	Endangered	Species or species habitat known to occur within area
Charadrius ruficapillus Red-capped Plover [881]		Species or species habitat known to occur within area
Chrysococcyx osculans Black-eared Cuckoo [705]		Species or species habitat likely to occur within area
Diomedea amsterdamensis Amsterdam Albatross [64405]	Endangered	Species or species habitat likely to occur within area
Diomedea antipodensis Antipodean Albatross [64458]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea dabbenena Tristan Albatross [66471]	Endangered	Species or species habitat likely to occur within area
Diomedea epomophora Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea exulans Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Diomedea sanfordi Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Eudyptula minor Little Penguin [1085]		Breeding known to occur within area

Name	Threatened	Type of Presence
Fregata ariel Lesser Frigatebird, Least Frigatebird [1012]		Species or species habitat likely to occur within area
Glareola maldivarum Oriental Pratincole [840]		Species or species habitat known to occur within area
Haliaeetus leucogaster White-bellied Sea-Eagle [943]		Species or species habitat known to occur within area
Halobaena caerulea Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area
Heteroscelus brevipes Grey-tailed Tattler [59311]		Species or species habitat known to occur within area
Larus novaehollandiae Silver Gull [810]		Breeding known to occur within area
Larus pacificus Pacific Gull [811]		Breeding known to occur within area
Limosa lapponica Bar-tailed Godwit [844]		Species or species habitat known to occur within area
Macronectes giganteus Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area
Macronectes halli Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area
Merops ornatus Rainbow Bee-eater [670]		Species or species habitat may occur within area
Motacilla cinerea Grey Wagtail [642]		Species or species habitat may occur within area
Numenius madagascariensis Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Pachyptila turtur Fairy Prion [1066]		Species or species habitat known to occur within area
Pandion haliaetus Osprey [952]		Breeding known to occur within area
Pelagodroma marina White-faced Storm-Petrel [1016]		Breeding known to occur within area
Phalacrocorax fuscescens Black-faced Cormorant [59660]		Breeding known to occur within area
Phoebetria fusca Sooty Albatross [1075]	Vulnerable	Species or species habitat likely to occur within area
Pterodroma macroptera Great-winged Petrel [1035]		Breeding known to occur within area
Pterodroma mollis Soft-plumaged Petrel [1036]	Vulnerable	Foraging, feeding or related behaviour likely

Name	Threatened	Type of Presence
		to occur within area
Puffinus assimilis Little Shearwater [59363]		Breeding known to occur within area
Puffinus carneipes Flesh-footed Shearwater, Fleshy-footed Shearwater [1043]		Breeding known to occur within area
Puffinus griseus Sooty Shearwater [1024]		Species or species habitat may occur within area
Puffinus pacificus Wedge-tailed Shearwater [1027]		Breeding known to occur within area
Puffinus tenuirostris Short-tailed Shearwater [1029]		Breeding known to occur within area
Rostratula benghalensis (sensu lato) Painted Snipe [889]	Endangered*	Species or species habitat known to occur within area
Sterna anaethetus Bridled Tern [814]		Breeding known to occur within area
Sterna bergii Crested Tern [816]		Breeding known to occur within area
Sterna caspia Caspian Tern [59467]		Breeding known to occur within area
Sterna dougallii Roseate Tern [817]		Breeding known to occur within area
Sterna fuscata Sooty Tern [794]		Breeding known to occur within area
Sterna nereis Fairy Tern [796]		Breeding known to occur within area
Thalassarche carteri Indian Yellow-nosed Albatross [64464]	Vulnerable	Foraging, feeding or related behaviour may occur within area
Thalassarche cauta Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area
Thalassarche chrysostoma Grey-headed Albatross [66491]	Endangered	Species or species habitat may occur within area
Thalassarche impavida Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area
Thalassarche melanophris Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area
Thalassarche steadi White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Thinornis rubricollis Hooded Plover [59510]		Species or species habitat known to occur within area
Tringa nebularia Common Greenshank, Greenshank [832]		Species or species habitat likely to occur within area
Fish		

Name	Threatened	Type of Presence
Acentronura australe Southern Pygmy Pipehorse [66185]		Species or species habitat may occur within area
Campichthys galei Gale's Pipefish [66191]		Species or species habitat may occur within area
Choeroichthys suillus Pig-snouted Pipefish [66198]		Species or species habitat may occur within area
Halicampus brocki Brock's Pipefish [66219]		Species or species habitat may occur within area
Heraldia nocturna Upside-down Pipefish, Eastern Upside-down Pipefish, Eastern Upside-down Pipefish [66227]		Species or species habitat may occur within area
Hippocampus angustus Western Spiny Seahorse, Narrow-bellied Seahorse [66234]		Species or species habitat may occur within area
Hippocampus breviceps Short-head Seahorse, Short-snouted Seahorse [66235]		Species or species habitat may occur within area
Hippocampus subelongatus West Australian Seahorse [66722]		Species or species habitat may occur within area
Histiogamphelus cristatus Rhino Pipefish, Macleay's Crested Pipefish, Ring-back Pipefish [66243]		Species or species habitat may occur within area
Leptoichthys fistularius Brushtail Pipefish [66248]		Species or species habitat may occur within area
Lissocampus caudalis Australian Smooth Pipefish, Smooth Pipefish [66249]		Species or species habitat may occur within area
Lissocampus fatiloquus Prophet's Pipefish [66250]		Species or species habitat may occur within area
Lissocampus runa Javelin Pipefish [66251]		Species or species habitat may occur within area
Maroubra perserrata Sawtooth Pipefish [66252]		Species or species habitat may occur within area
Mitotichthys meraculus Western Crested Pipefish [66259]		Species or species habitat may occur within area
Nannocampus subosseus Bonyhead Pipefish, Bony-headed Pipefish [66264]		Species or species habitat may occur within area
Notiocampus ruber Red Pipefish [66265]		Species or species habitat may occur within area
Phycodurus eques Leafy Seadragon [66267]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Phyllopteryx taeniolatus Common Seadragon, Weedy Seadragon [66268]		Species or species habitat may occur within area
Pugnaso curtirostris Pugnose Pipefish, Pug-nosed Pipefish [66269]		Species or species habitat may occur within area
Solegnathus lettiensis Gunther's Pipehorse, Indonesian Pipefish [66273]		Species or species habitat may occur within area
Stigmatopora argus Spotted Pipefish, Gulf Pipefish, Peacock Pipefish [66276]		Species or species habitat may occur within area
Stigmatopora nigra Widebody Pipefish, Wide-bodied Pipefish, Black Pipefish [66277]		Species or species habitat may occur within area
Syngnathoides biaculeatus Double-end Pipehorse, Double-ended Pipehorse, Alligator Pipefish [66279]		Species or species habitat may occur within area
Urocampus carinirostris Hairy Pipefish [66282]		Species or species habitat may occur within area
Vanacampus margaritifer Mother-of-pearl Pipefish [66283]		Species or species habitat may occur within area
Vanacampus phillipi Port Phillip Pipefish [66284]		Species or species habitat may occur within area
Vanacampus poecilolaemus Longsnout Pipefish, Australian Long-snout Pipefish, Long-snouted Pipefish [66285]		Species or species habitat may occur within area
Mammals		
Arctocephalus forsteri Long-nosed Fur-seal, New Zealand Fur-seal [20]		Breeding known to occur within area
Neophoca cinerea Australian Sea-lion, Australian Sea Lion [22]	Endangered	Breeding known to occur within area
Reptiles		
Aipysurus laevis Olive Seasnake [1120]		Species or species habitat may occur within area
Aipysurus pooleorum Shark Bay Seasnake [66061]		Species or species habitat may occur within area
Caretta caretta Loggerhead Turtle [1763]	Endangered	Foraging, feeding or related behaviour known to occur within area
Chelonia mydas Green Turtle [1765]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Dermochelys coriacea Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Foraging, feeding or related behaviour known to occur within area
Disteira kingii Spectacled Seasnake [1123]		Species or species habitat may occur within area

Name	Threatened	Type of Presence
Disteira major		
Olive-headed Seasnake [1124]		Species or species habitat may occur within area
Ephalophis greyi		
North-western Mangrove Seasnake [1127]		Species or species habitat may occur within area
Natator depressus		
Flatback Turtle [59257]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Pelamis platurus		
Yellow-bellied Seasnake [1091]		Species or species habitat may occur within area

Whales and other Cetaceans		[Resource Information]
Name	Status	Type of Presence
Mammals		
Balaenoptera acutorostrata		
Minke Whale [33]		Species or species habitat may occur within area
Balaenoptera bonaerensis		
Antarctic Minke Whale, Dark-shoulder Minke Whale [67812]		Species or species habitat likely to occur within area
Balaenoptera borealis		
Sei Whale [34]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Balaenoptera edeni		
Bryde's Whale [35]		Species or species habitat likely to occur within area
Balaenoptera musculus		
Blue Whale [36]	Endangered	Migration route known to occur within area
Balaenoptera physalus		
Fin Whale [37]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area
Berardius arnuxii		
Arnoux's Beaked Whale [70]		Species or species habitat may occur within area
Caperea marginata		
Pygmy Right Whale [39]		Foraging, feeding or related behaviour may occur within area
Delphinus delphis		
Common Dophin, Short-beaked Common Dolphin [60]		Species or species habitat may occur within area
Eubalaena australis		
Southern Right Whale [40]	Endangered	Breeding known to occur within area
Feresa attenuata		
Pygmy Killer Whale [61]		Species or species habitat may occur within area
Globicephala macrorhynchus		
Short-finned Pilot Whale [62]		Species or species habitat may occur within area
Globicephala melas		
Long-finned Pilot Whale [59282]		Species or species habitat may occur within area
Grampus griseus		
Risso's Dolphin, Grampus [64]		Species or species habitat may occur within

Name	Status	Type of Presence
		area
Hyperoodon planifrons Southern Bottlenose Whale [71]		Species or species habitat may occur within area
Kogia breviceps Pygmy Sperm Whale [57]		Species or species habitat may occur within area
Kogia simus Dwarf Sperm Whale [58]		Species or species habitat may occur within area
Lagenodelphis hosei Fraser's Dolphin, Sarawak Dolphin [41]		Species or species habitat may occur within area
Lagenorhynchus obscurus Dusky Dolphin [43]		Species or species habitat likely to occur within area
Lissodelphis peronii Southern Right Whale Dolphin [44]		Species or species habitat may occur within area
Megaptera novaeangliae Humpback Whale [38]	Vulnerable	Foraging, feeding or related behaviour known to occur within area
Mesoplodon bowdoini Andrew's Beaked Whale [73]		Species or species habitat may occur within area
Mesoplodon densirostris Blainville's Beaked Whale, Dense-beaked Whale [74]		Species or species habitat may occur within area
Mesoplodon ginkgodens Gingko-toothed Beaked Whale, Gingko-toothed Whale, Gingko Beaked Whale [59564]		Species or species habitat may occur within area
Mesoplodon grayi Gray's Beaked Whale, Scamperdown Whale [75]		Species or species habitat may occur within area
Mesoplodon hectori Hector's Beaked Whale [76]		Species or species habitat may occur within area
Mesoplodon layardii Strap-toothed Beaked Whale, Strap-toothed Whale, Layard's Beaked Whale [25556]		Species or species habitat may occur within area
Mesoplodon mirus True's Beaked Whale [54]		Species or species habitat may occur within area
Orcinus orca Killer Whale, Orca [46]		Species or species habitat may occur within area
Peponocephala electra Melon-headed Whale [47]		Species or species habitat may occur within area
Physeter macrocephalus Sperm Whale [59]		Foraging, feeding or related behaviour known to occur within area
Pseudorca crassidens False Killer Whale [48]		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Stenella attenuata Spotted Dolphin, Pantropical Spotted Dolphin [51]		Species or species habitat may occur within area
Stenella coeruleoalba Striped Dolphin, Euphrosyne Dolphin [52]		Species or species habitat may occur within area
Stenella longirostris Long-snouted Spinner Dolphin [29]		Species or species habitat may occur within area
Steno bredanensis Rough-toothed Dolphin [30]		Species or species habitat may occur within area
Tasmacetus shepherdi Shepherd's Beaked Whale, Tasman Beaked Whale [55]		Species or species habitat may occur within area
Tursiops aduncus Indian Ocean Bottlenose Dolphin, Spotted Bottlenose Dolphin [68418]		Species or species habitat likely to occur within area
Tursiops truncatus s. str. Bottlenose Dolphin [68417]		Species or species habitat may occur within area
Ziphius cavirostris Cuvier's Beaked Whale, Goose-beaked Whale [56]		Species or species habitat may occur within area

Invasive Species [Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resouces Audit, 2001.

Name	Status	Type of Presence
Birds		
Acridotheres tristis Common Myna, Indian Myna [387]		Species or species habitat likely to occur within area
Anas platyrhynchos Mallard [974]		Species or species habitat likely to occur within area
Carduelis carduelis European Goldfinch [403]		Species or species habitat likely to occur within area
Columba livia Rock Pigeon, Rock Dove, Domestic Pigeon [803]		Species or species habitat likely to occur within area
Passer domesticus House Sparrow [405]		Species or species habitat likely to occur within area
Passer montanus Eurasian Tree Sparrow [406]		Species or species habitat likely to occur within area
Streptopelia chinensis Spotted Turtle-Dove [780]		Species or species habitat likely to occur within area
Streptopelia senegalensis Laughing Turtle-dove, Laughing Dove [781]		Species or species habitat likely to occur within area
Sturnus vulgaris Common Starling [389]		Species or species habitat likely to occur within area
Turdus merula Common Blackbird, Eurasian Blackbird [596]		Species or species habitat likely to occur within area
Mammals		
Bos taurus Domestic Cattle [16]		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Canis lupus familiaris Domestic Dog [82654]		Species or species habitat likely to occur within area
Felis catus Cat, House Cat, Domestic Cat [19]		Species or species habitat likely to occur within area
Feral deer Feral deer species in Australia [85733]		Species or species habitat likely to occur within area
Funambulus pennantii Northern Palm Squirrel, Five-striped Palm Squirrel [129]		Species or species habitat likely to occur within area
Mus musculus House Mouse [120]		Species or species habitat likely to occur within area
Oryctolagus cuniculus Rabbit, European Rabbit [128]		Species or species habitat likely to occur within area
Rattus norvegicus Brown Rat, Norway Rat [83]		Species or species habitat likely to occur within area
Rattus rattus Black Rat, Ship Rat [84]		Species or species habitat likely to occur within area
Sus scrofa Pig [6]		Species or species habitat likely to occur within area
Vulpes vulpes Red Fox, Fox [18]		Species or species habitat likely to occur within area
Plants		
Anredera cordifolia Madeira Vine, Jalap, Lamb's-tail, Mignonette Vine, Anredera, Gulf Madeiravine, Heartleaf Madeiravine, Potato Vine [2643]		Species or species habitat likely to occur within area
Asparagus aethiopicus Asparagus Fern, Ground Asparagus, Basket Fern, Sprengi's Fern, Bushy Asparagus, Emerald Asparagus [62425]		Species or species habitat likely to occur within area
Asparagus asparagoides Bridal Creeper, Bridal Veil Creeper, Smilax, Florist's Smilax, Smilax Asparagus [22473]		Species or species habitat likely to occur within area
Asparagus plumosus Climbing Asparagus-fern [48993]		Species or species habitat likely to occur within area
Brachiaria mutica Para Grass [5879]		Species or species habitat may occur within area
Cenchrus ciliaris Buffel-grass, Black Buffel-grass [20213]		Species or species habitat may occur within area
Chrysanthemoides monilifera Bitou Bush, Boneseed [18983]		Species or species habitat may occur within area
Chrysanthemoides monilifera subsp. monilifera Boneseed [16905]		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Genista linifolia Flax-leaved Broom, Mediterranean Broom, Flax Broom [2800]		Species or species habitat likely to occur within area
Genista sp. X Genista monspessulana Broom [67538]		Species or species habitat may occur within area
Lantana camara Lantana, Common Lantana, Kamara Lantana, Large-leaf Lantana, Pink Flowered Lantana, Red Flowered Lantana, Red-Flowered Sage, White Sage, Wild Sage [10892]		Species or species habitat likely to occur within area
Lycium ferocissimum African Boxthorn, Boxthorn [19235]		Species or species habitat likely to occur within area
Olea europaea Olive, Common Olive [9160]		Species or species habitat may occur within area
Opuntia spp. Prickly Pears [82753]		Species or species habitat likely to occur within area
Pinus radiata Radiata Pine Monterey Pine, Insignis Pine, Wilding Pine [20780]		Species or species habitat may occur within area
Rubus fruticosus aggregate Blackberry, European Blackberry [68406]		Species or species habitat likely to occur within area
Sagittaria platyphylla Delta Arrowhead, Arrowhead, Slender Arrowhead [68483]		Species or species habitat likely to occur within area
Salix spp. except S.babylonica, S.x calodendron & S.x reichardtii Willows except Weeping Willow, Pussy Willow and Sterile Pussy Willow [68497]		Species or species habitat likely to occur within area
Salvinia molesta Salvinia, Giant Salvinia, Aquarium Watermoss, Kariba Weed [13665]		Species or species habitat likely to occur within area
Tamarix aphylla Athel Pine, Athel Tree, Tamarisk, Athel Tamarisk, Athel Tamarix, Desert Tamarisk, Flowering Cypress, Salt Cedar [16018]		Species or species habitat likely to occur within area
Reptiles		
Hemidactylus frenatus Asian House Gecko [1708]		Species or species habitat likely to occur within area

Key Ecological Features (Marine)

[Resource Information]

Key Ecological Features are the parts of the marine ecosystem that are considered to be important for the biodiversity or ecosystem functioning and integrity of the Commonwealth Marine Area.

Name	Region
Ancient coastline at 90-120m depth	South-west
Commonwealth marine environment surrounding	South-west
Commonwealth marine environment within and	South-west
Commonwealth marine environment within and	South-west
Diamantina Fracture Zone	South-west
Naturaliste Plateau	South-west
Western demersal slope and associated fish	South-west
Western rock lobster	South-west

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

APPENDIX B. SUPPORTING FIGURES FOR SECTION 2.3 METEOROLOGY AND OCEANOGRAPHY

Browse

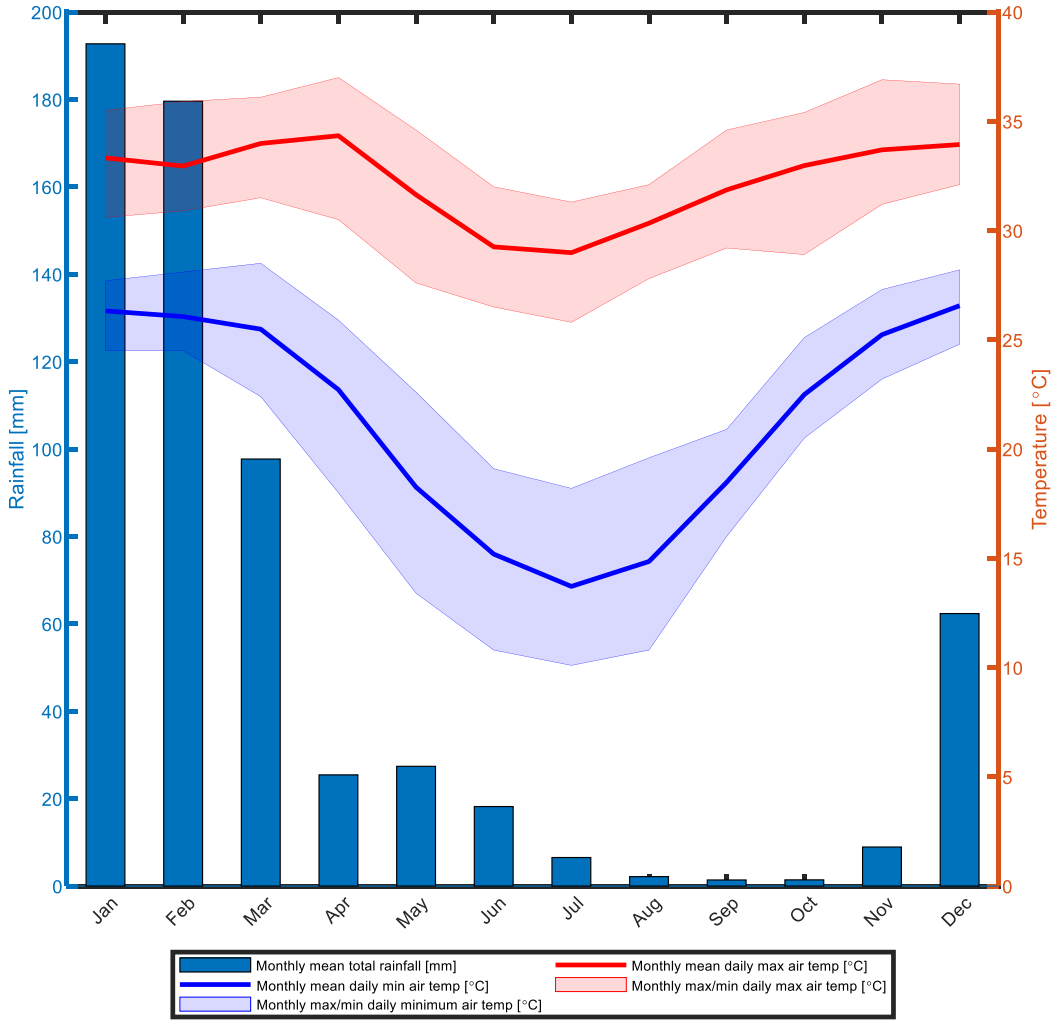

Figure 1. Monthly average total rainfall [mm] and air temperature [°C], calculated based on observations at the Broome Airport weather station from 1939-2020 (Bureau of Meteorology 2020). Bars show the monthly average total rainfall values, and thick blue and red lines denote monthly average daily minimum and maximum air temperatures, respectively. Shaded blue and red areas denote monthly recorded extremes of daily minimum and maximum air temperature, respectively.

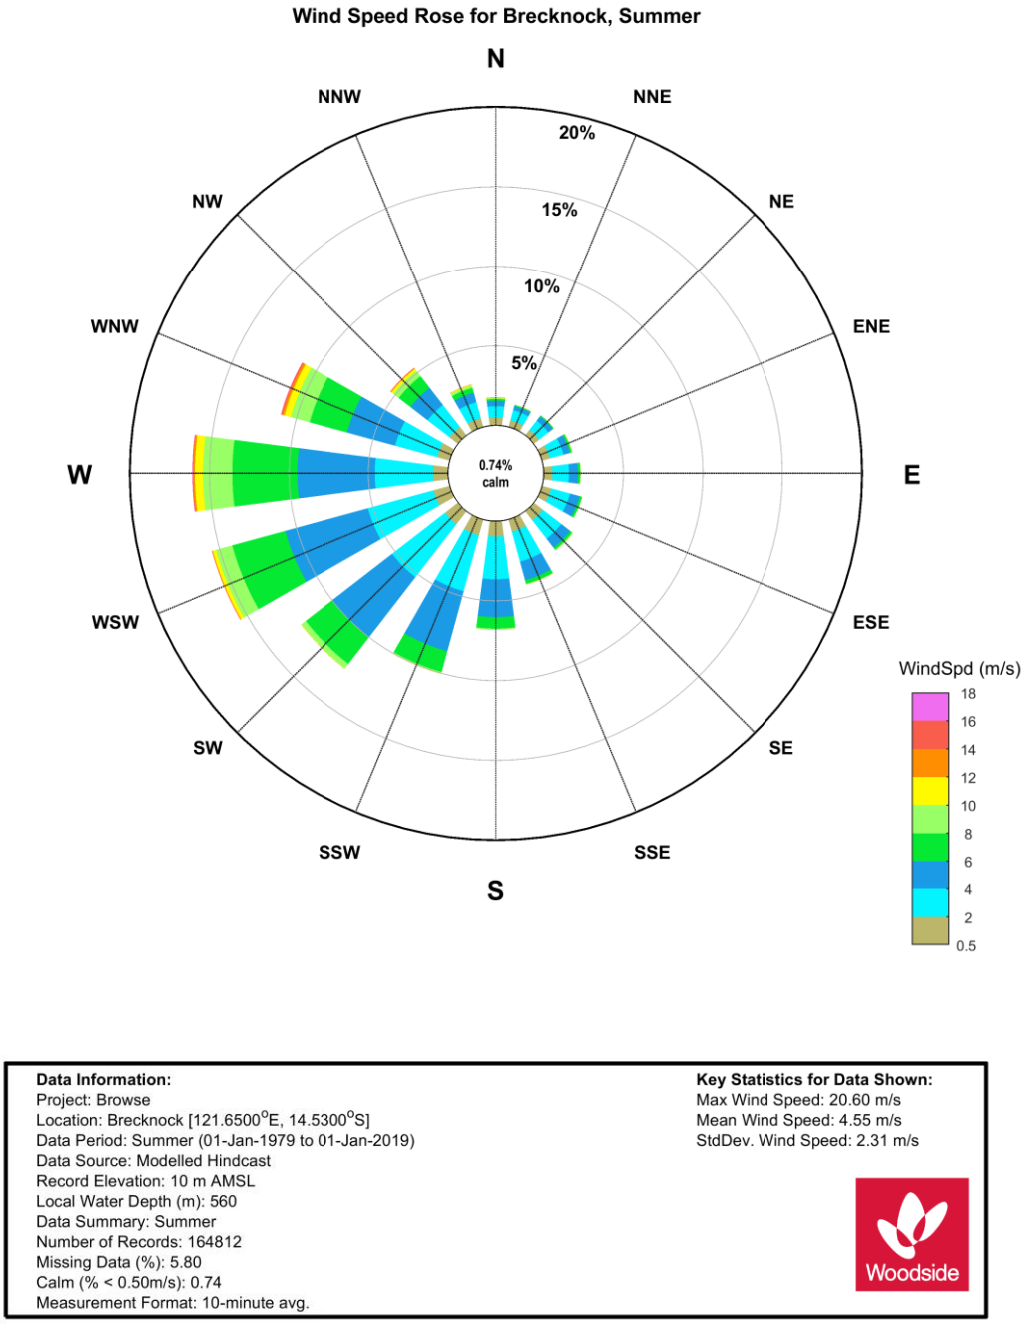

Figure 2. Summer distributions of 10-minute average wind speeds by 22.5° directional sectors at the Brecknock site (Metocean Solutions Ltd, 2019). Note tropical cyclone events were not included in this distribution. Winds at Brecknock in summer are predominantly from the WNW to SW due to the North West Monsoon (WEL, 2019).

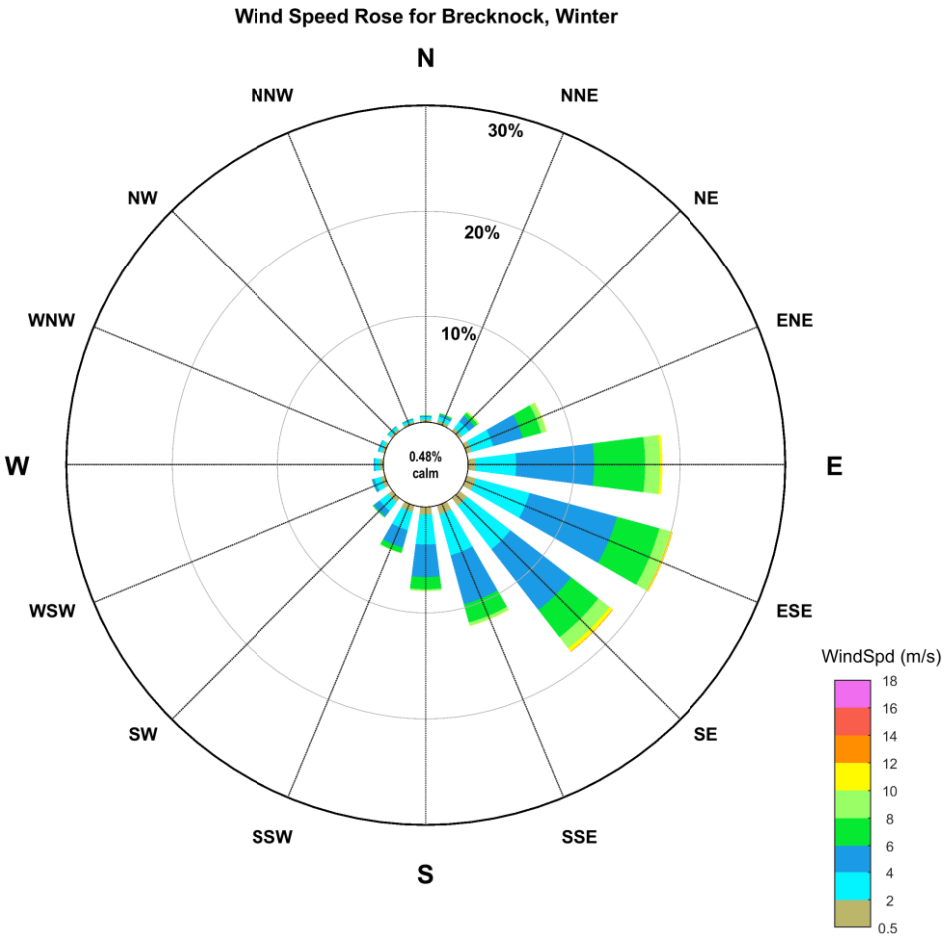

Data Information:
Project: Browse
Location: Brecknock [121.6500°E, 14.5300°S]
Data Period: Winter (01-Apr-1979 to 30-Sep-2018)
Data Source: Modelled Hindcast
Record Elevation: 10 m AMSL
Local Water Depth (m): 560
Data Summary: Winter
Number of Records: 173751
Missing Data (%): 1.10
Calm (% < 0.50m/s): 0.48
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 14.34 m/s
Mean Wind Speed: 4.71 m/s
StdDev. Wind Speed: 2.01 m/s

Woodside

Figure 3. Winter distributions of 10-minute average wind speeds by 22.5° directional sectors at the Brecknock site (Metocean Solutions Ltd, 2019). Note tropical cyclone events were not included in this distribution. Winds at Brecknock in winter are predominantly from the E to SE due to the South East Trade Winds coming from the Australian mainland (WEL, 2019).

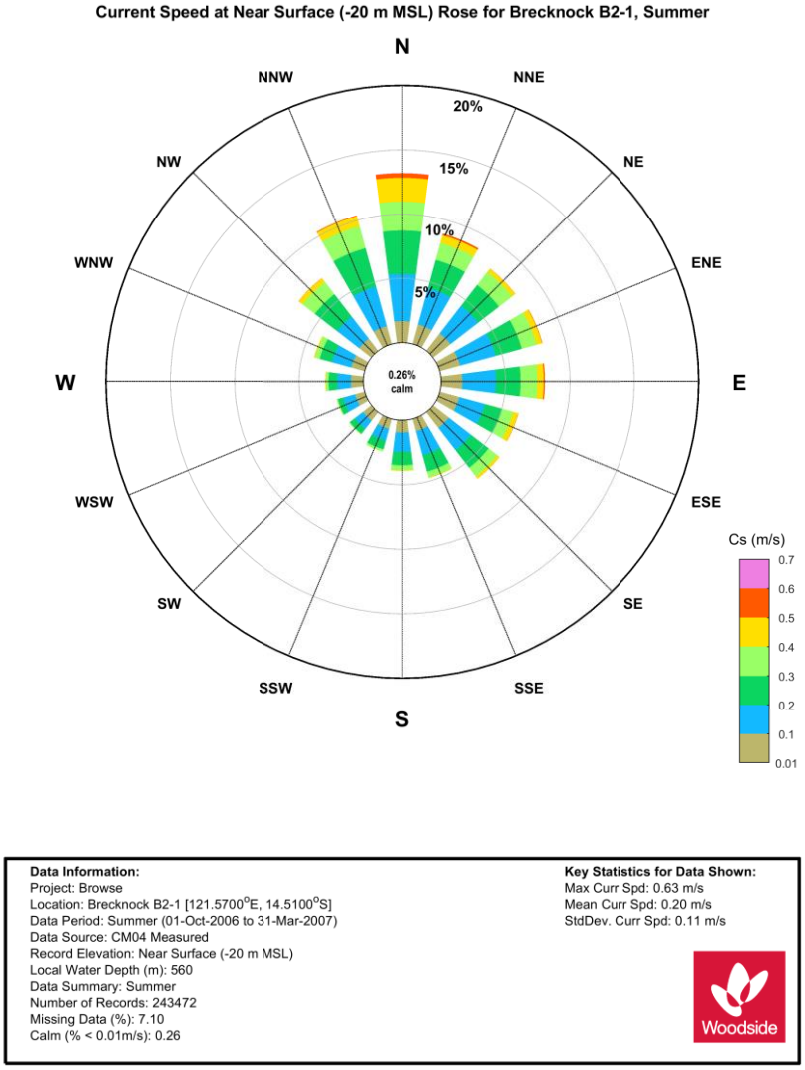

Figure 4. Summer (Nov-Apr) near surface combined frequency of 1-minute mean current speed and direction (towards) measured at Brecknock B2-1 location (cyclones removed) (RPS Metocean Ltd. 2008).

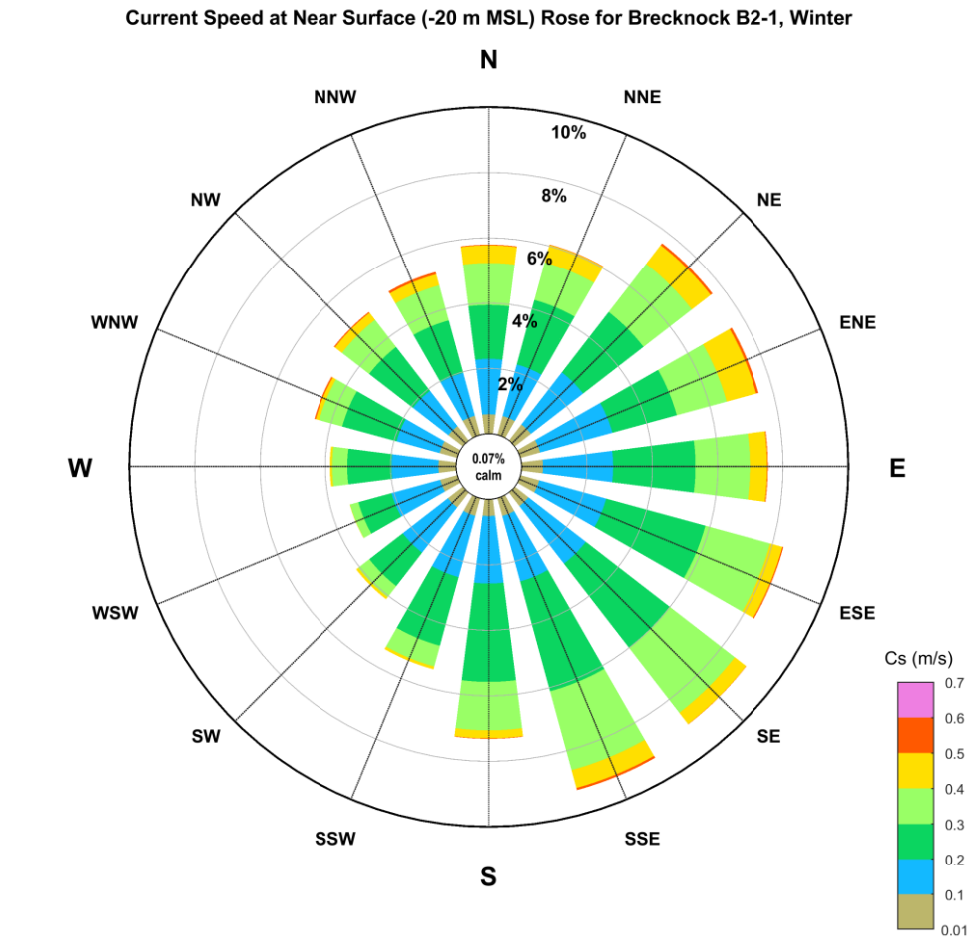

Data Information:
Project: Browse
Location: Brecknock B2-1 [121.5700°E, 14.5100°S]
Data Period: Winter (17-Sep-2006 to 08-Sep-2007)
Data Source: CM04 Measured
Record Elevation: Near Surface (-20 m MSL)
Local Water Depth (m): 560
Data Summary: Winter
Number of Records: 246184
Missing Data (%): 1.46
Calm (% < 0.01m/s): 0.07

Key Statistics for Data Shown:
Max Curr Spd: 0.62 m/s
Mean Curr Spd: 0.24 m/s
StdDev. Curr Spd: 0.10 m/s

Woodside

Figure 5. Winter (May-Sep) near surface combined frequency of 1-minute mean current speed and direction (towards) measured at Brecknock B2-1 location (cyclones removed) (RPS Metocean Ltd. 2008).

North-west Shelf/Scarborough

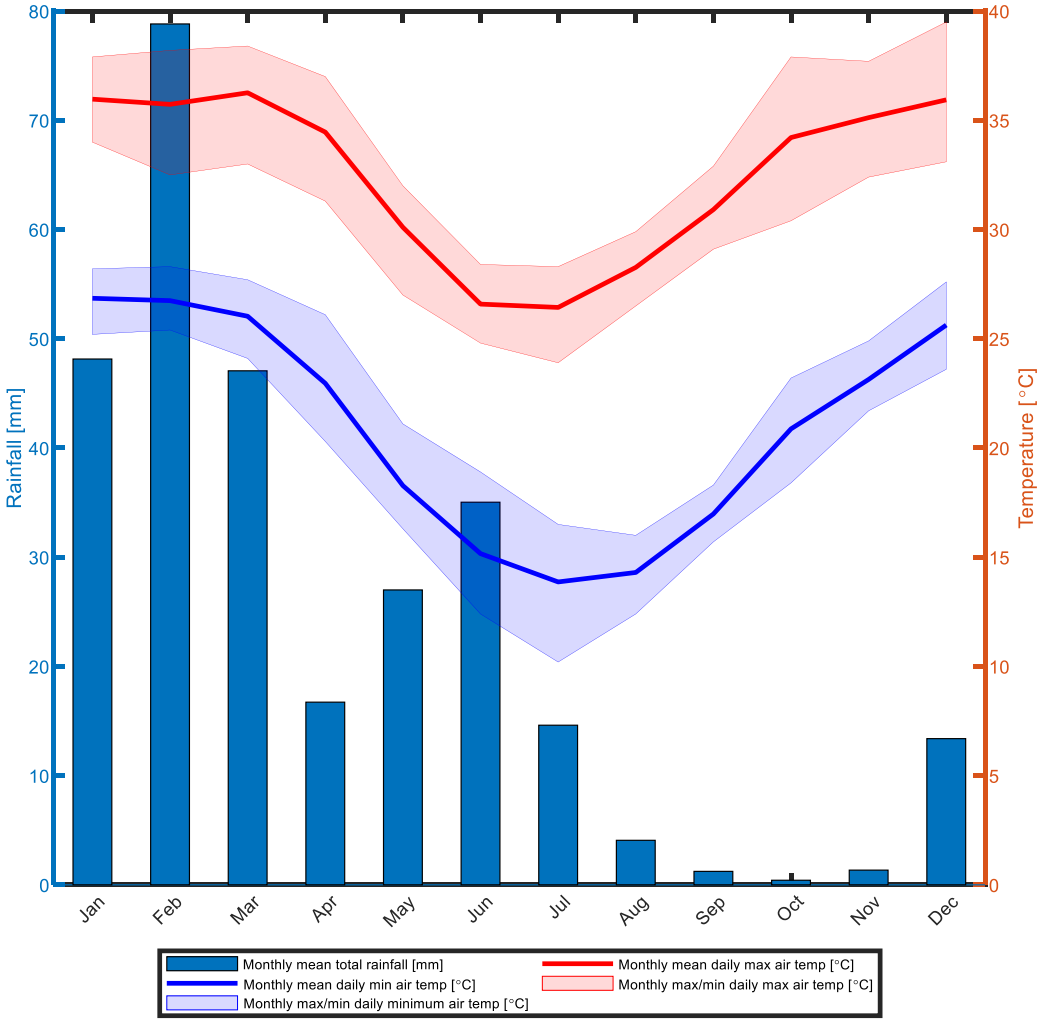

Figure 1. Monthly average total rainfall [mm] and air temperature [°C], calculated based on observations at the Karratha Aero weather station from 1972-2020 and 1993-2020 respectively (Bureau of Meteorology 2020). Bars show the monthly average total rainfall values, and thick blue and red lines denote monthly average daily minimum and maximum air temperatures, respectively. Shaded blue and red areas denote monthly recorded extremes of daily minimum and maximum air temperature, respectively.

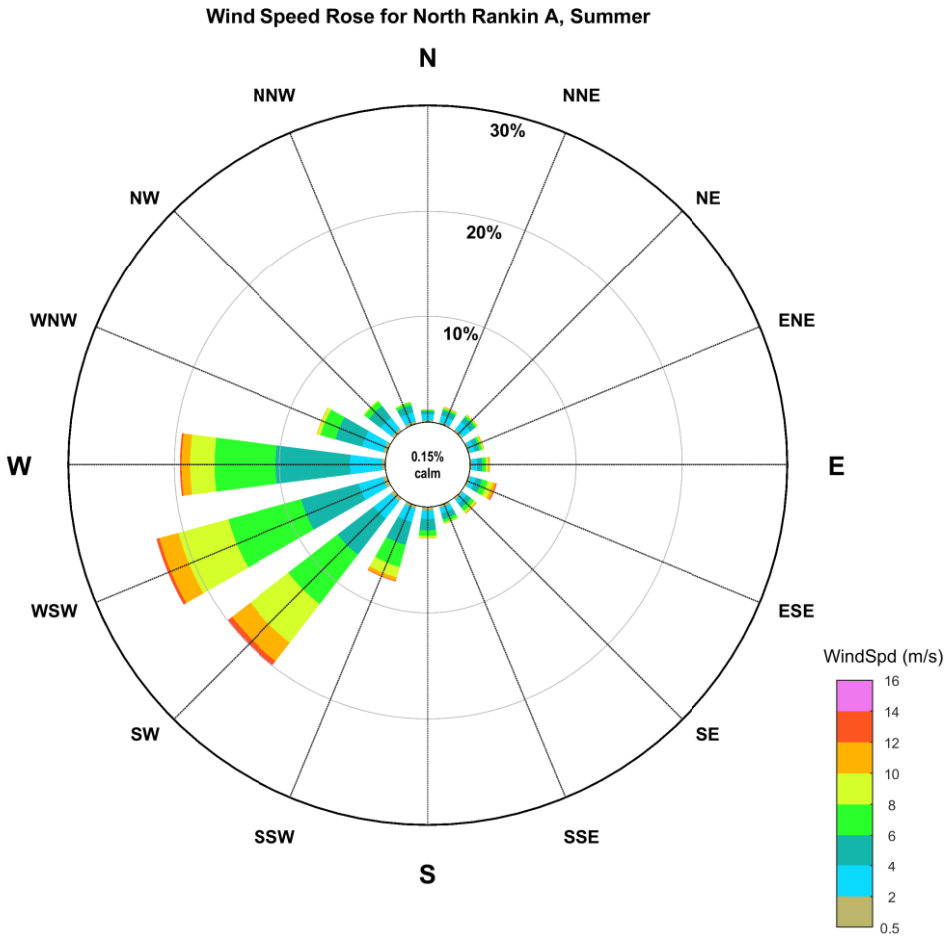
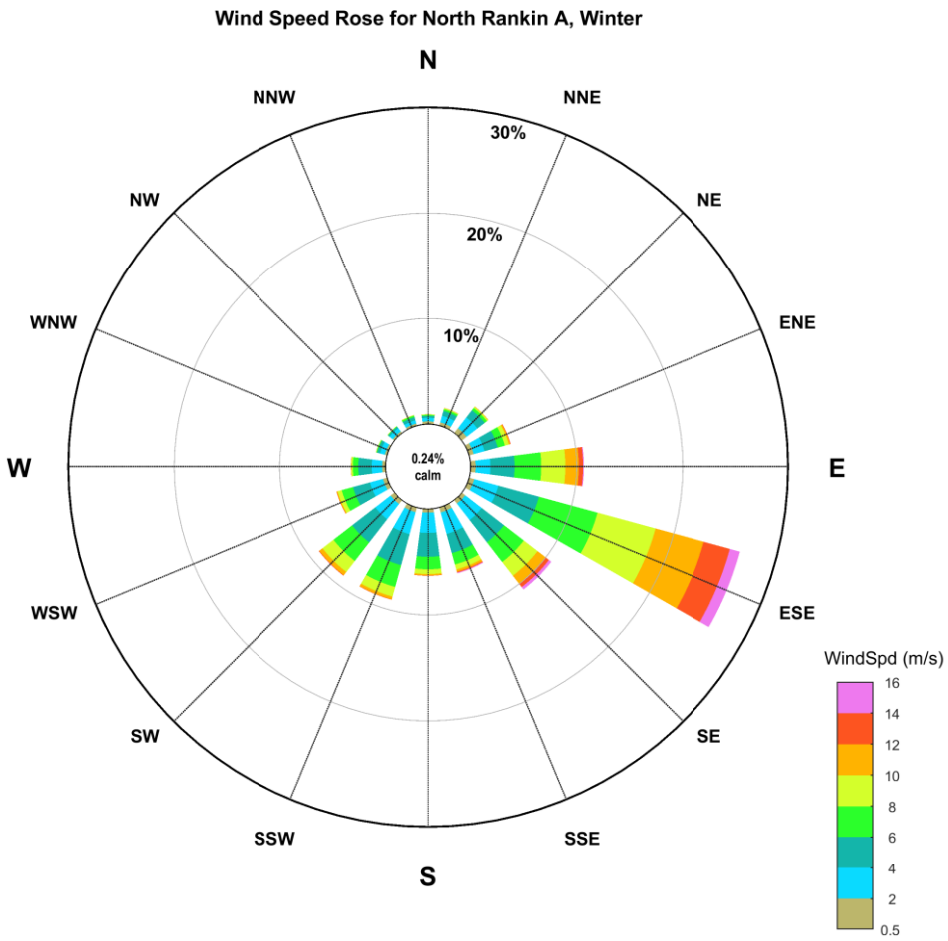


Data Information:
Project: North West Shelf
Location: North Rankin A [116.1200°E, 19.6100°S]
Data Period: Summer (01-Oct-1995 to 30-Nov-2015)
Data Source: Measured Winds
Record Elevation: 10 m AMSL
Local Water Depth (m): 125
Data Summary: Summer
Number of Records: 674659
Missing Data (%): 7.24
Calm (% < 0.50m/s): 0.15
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 18.50 m/s
Mean Wind Speed: 6.04 m/s
StdDev. Wind Speed: 2.55 m/s

Woodside

Figure 2. Summer distributions of 10-minute average wind speeds by 22.5° directional sectors at the North Rankin A site (WEL, 2015). Note tropical cyclone events were not included in this distribution. Winds at North Rankin A in summer are characterised by W to SW driven by the North West Monsoon (RPS, 2016).



Data Information:
Project: North West Shelf
Location: North Rankin A [116.1200°E, 19.6100°S]
Data Period: Winter (22-Jun-1995 to 30-Sep-2015)
Data Source: Measured Winds
Record Elevation: 10 m AMSL
Local Water Depth (m): 125
Data Summary: Winter
Number of Records: 673213
Missing Data (%): 4.43
Calm (% < 0.50m/s): 0.24
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 24.23 m/s
Mean Wind Speed: 6.25 m/s
StdDev. Wind Speed: 3.16 m/s

Woodside

Figure 3. Winter distributions of 10-minute average wind speeds by 22.5° directional sectors at the North Rankin A site (WEL, 2015). Note tropical cyclone events were not included in this distribution. Winds at North Rankin in winter are predominantly influenced by the South East Trade Winds over Australia (RPS, 2016).

Scarborough

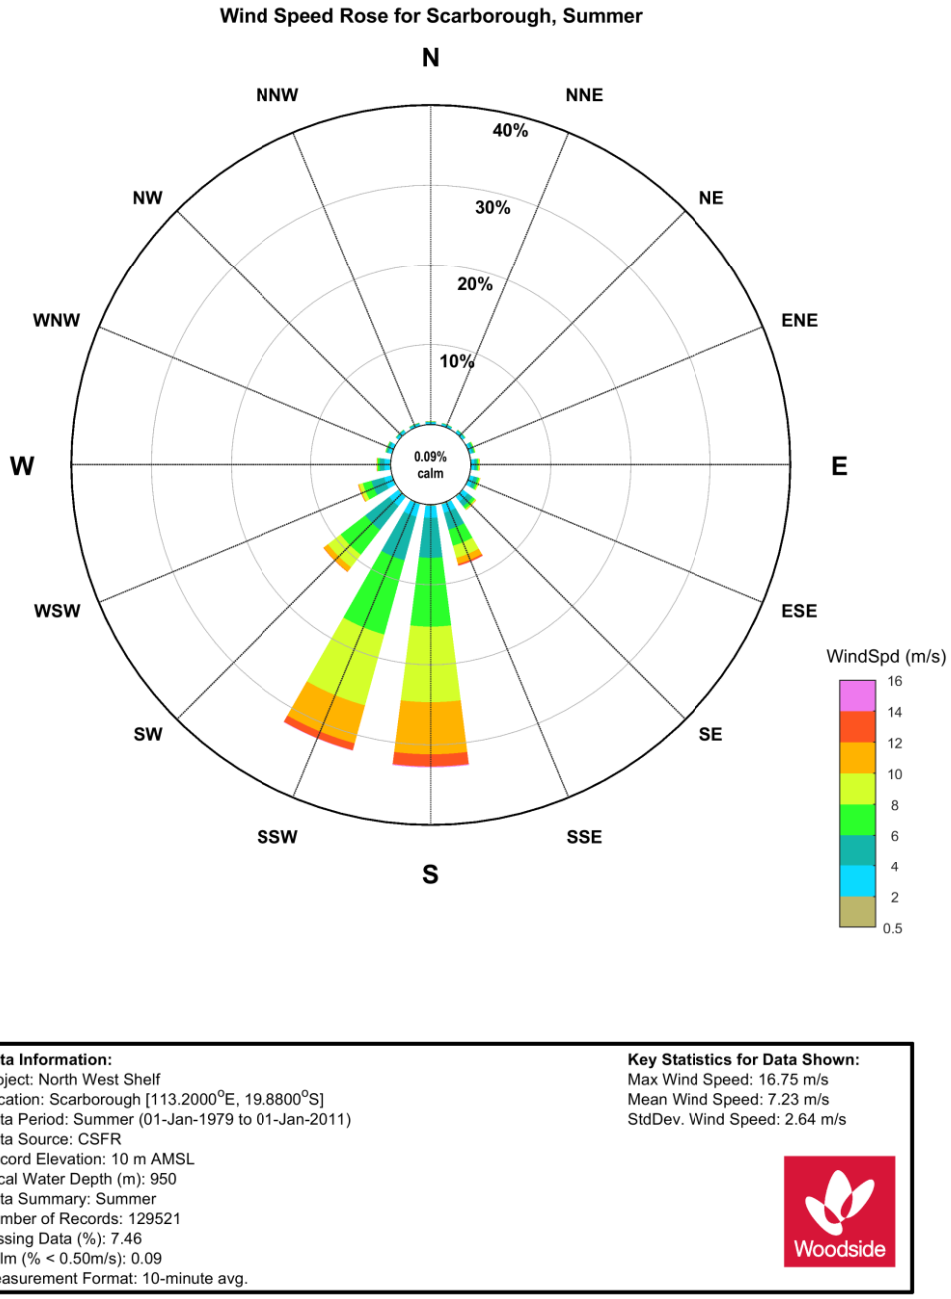


Figure 4. Summer distributions of wind speeds (10-minute at 10m ASL) by 22.5° directional sectors at the Scarborough site (WEL, 2018). Note tropical cyclone events were not included in this distribution. Winds at Scarborough in summer are predominantly from the S to SSW due to a Pilbara Heat Low forming over the northwest coast of Western Australia [R8] SW winds are also experienced at this site due to the monsoon trough.

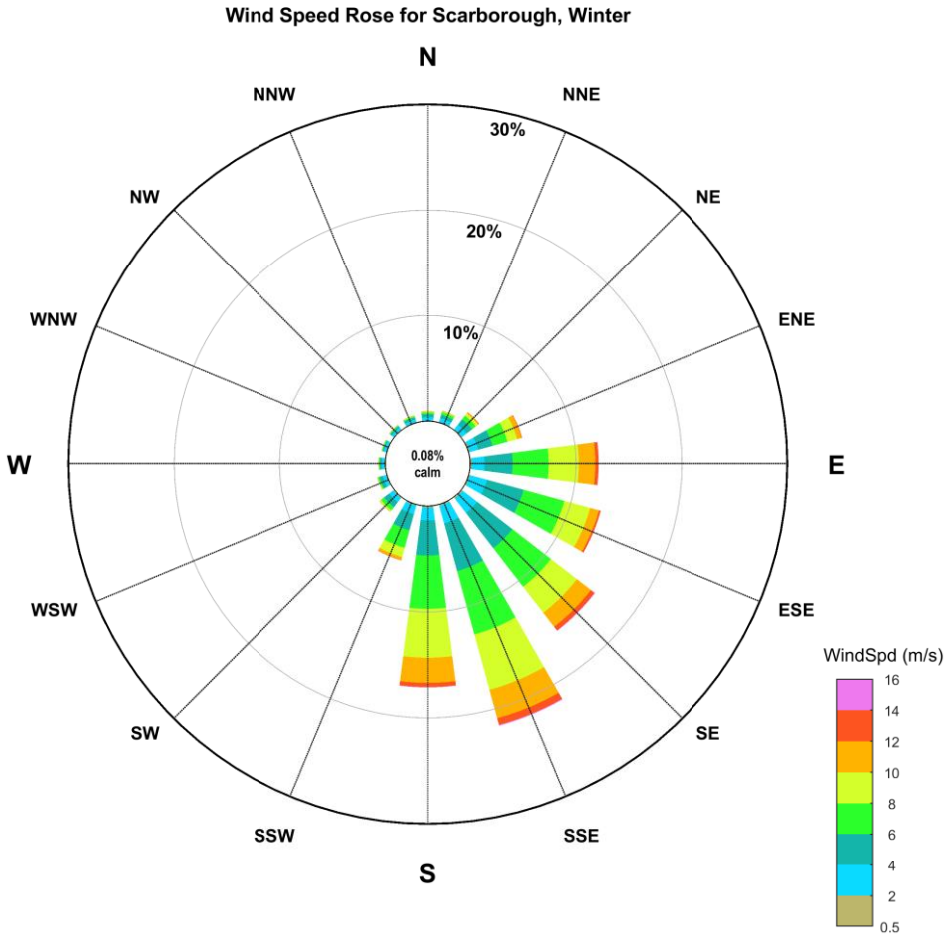


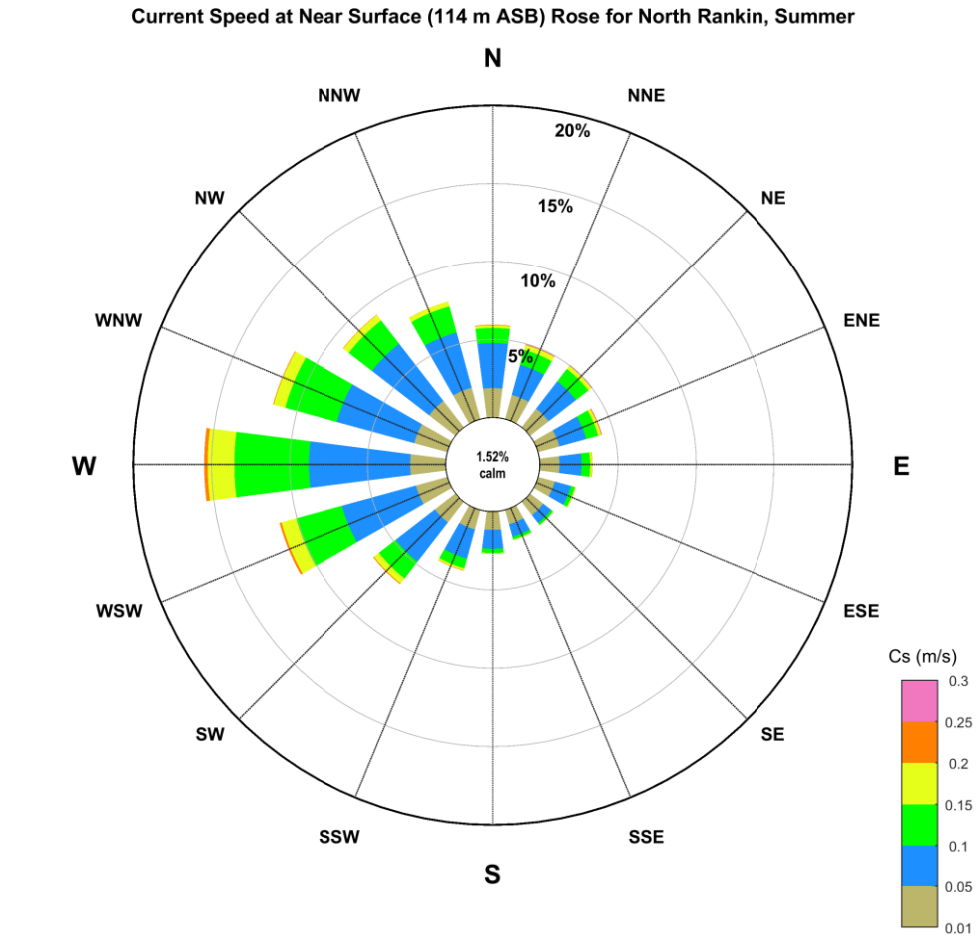
Data Information:
Project: North West Shelf
Location: Scarborough [113.2000°E, 19.8800°S]
Data Period: Winter (01-Apr-1979 to 30-Sep-2010)
Data Source: CSFR
Record Elevation: 10 m AMSL
Local Water Depth (m): 950
Data Summary: Winter
Number of Records: 138863
Missing Data (%): 1.20
Calm (% < 0.50m/s): 0.08
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 19.15 m/s
Mean Wind Speed: 6.90 m/s
StdDev. Wind Speed: 2.57 m/s

Woodside

Figure 5. Winter distributions of wind speeds (10-minute at 10 m ASL) by 22.5° directional sectors at the Scarborough site (WEL, 2018). Note tropical cyclone events were not included in this distribution. Winds at Scarborough in winter are predominantly from the S to E driven by the South East Trade Winds over Australia (RPS, 2016).

North-west Shelf

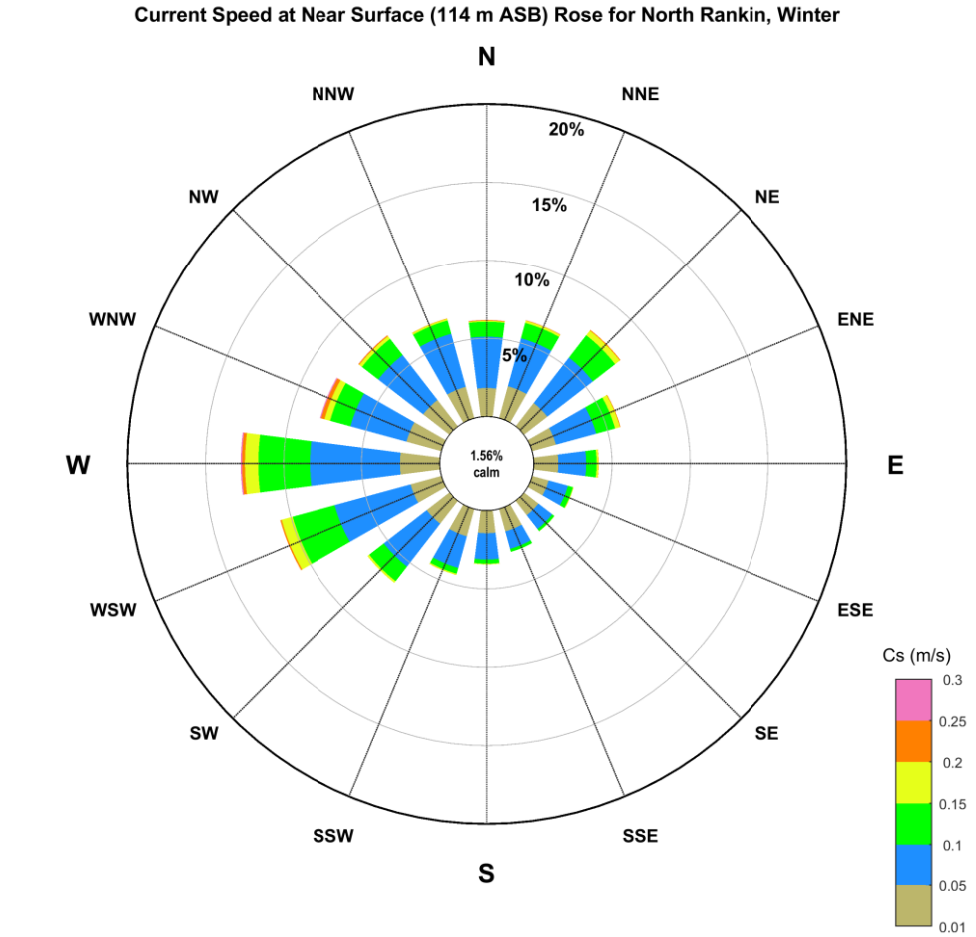


Data Information:
Project: North West Shelf
Location: North Rankin [116.1400°E, 19.5800°S]
Data Period: Summer (01-Oct-2004 to 31-Mar-2009)
Data Source: Measured Data
Record Elevation: Near Surface (114 m ASB)
Local Water Depth (m): 124.5
Data Summary: Summer
Number of Records: 496705
Missing Data (%): 6.63
Calm (% < 0.01m/s): 1.52

Key Statistics for Data Shown:
Max Curr Spd: 0.49 m/s
Mean Curr Spd: 0.08 m/s
StdDev. Curr Spd: 0.04 m/s

Woodside

Figure 6. Summer (Nov-Apr) near surface combined frequency of 1-minute mean current speed and direction (towards) measured at the North Rankin location (cyclones removed) (WEL, 2011).



Data Information:
Project: North West Shelf
Location: North Rankin [116.1400°E, 19.5800°S]
Data Period: Winter (21-Sep-2004 to 08-May-2009)
Data Source: Measured Data
Record Elevation: Near Surface (114 m ASB)
Local Water Depth (m): 124.5
Data Summary: Winter
Number of Records: 337723
Missing Data (%): 0.88
Calm (% < 0.01m/s): 1.56

Key Statistics for Data Shown:
Max Curr Spd: 0.32 m/s
Mean Curr Spd: 0.07 m/s
StdDev. Curr Spd: 0.04 m/s

Woodside

Figure 7. Winter (May-Sep) near surface combined frequency of 1-minute mean current speed and direction (towards) measured at the North Rankin location (cyclones removed) (WEL, 2011).

Scarborough

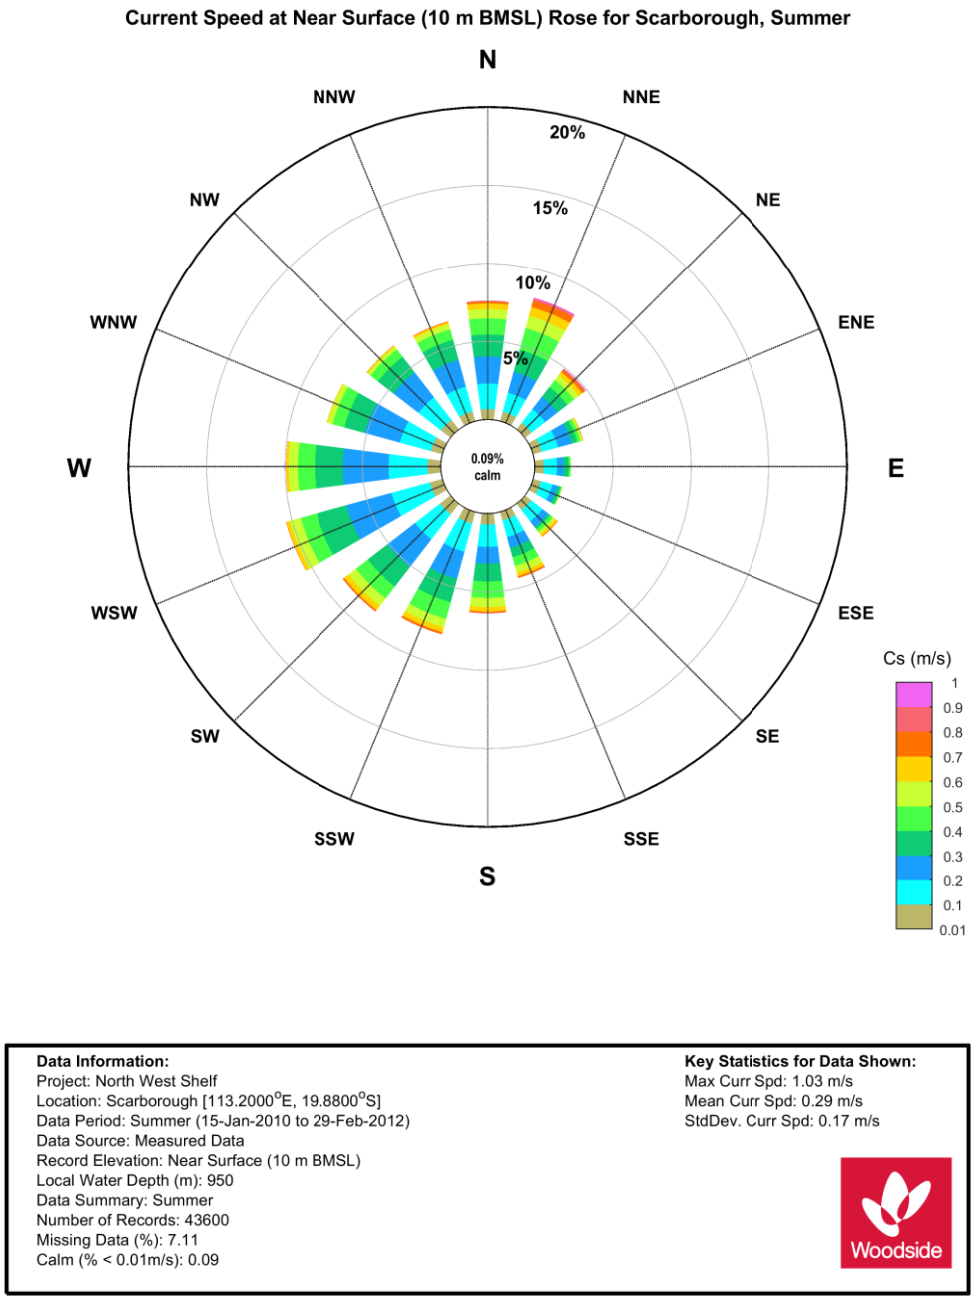


Figure 8. Summer (Nov - April) near surface combined frequency of 1-minute mean current speed and direction (towards) measured at the Scarborough location (cyclones removed) (WEL, 2018).

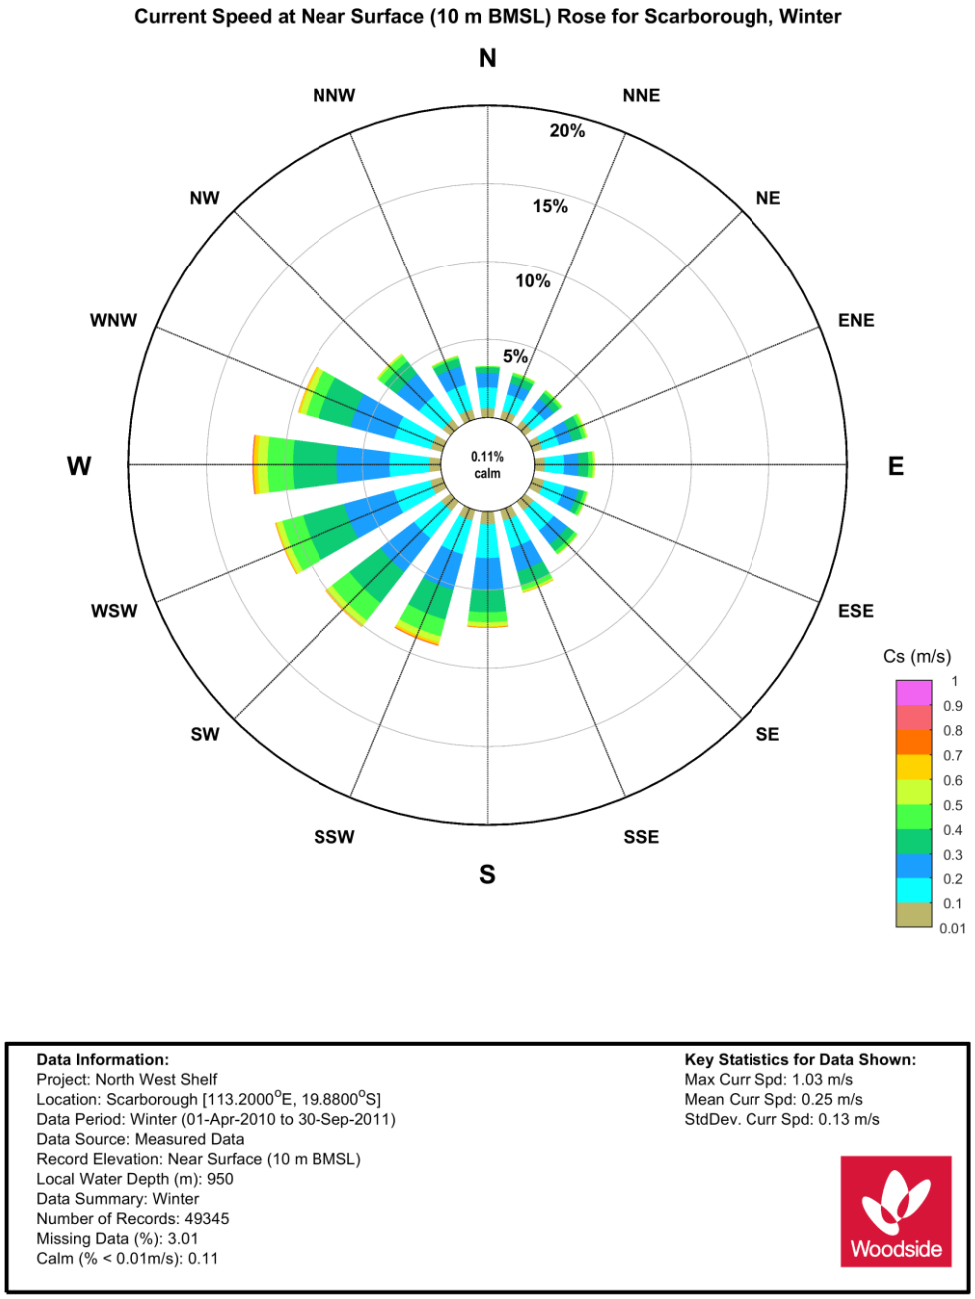

Figure 9. Winter (May-Sep) near surface combined frequency of 1-min mean current speed and direction (towards) measured at the Scarborough location (cyclones removed) (WEL, 2018).

North-west Cape

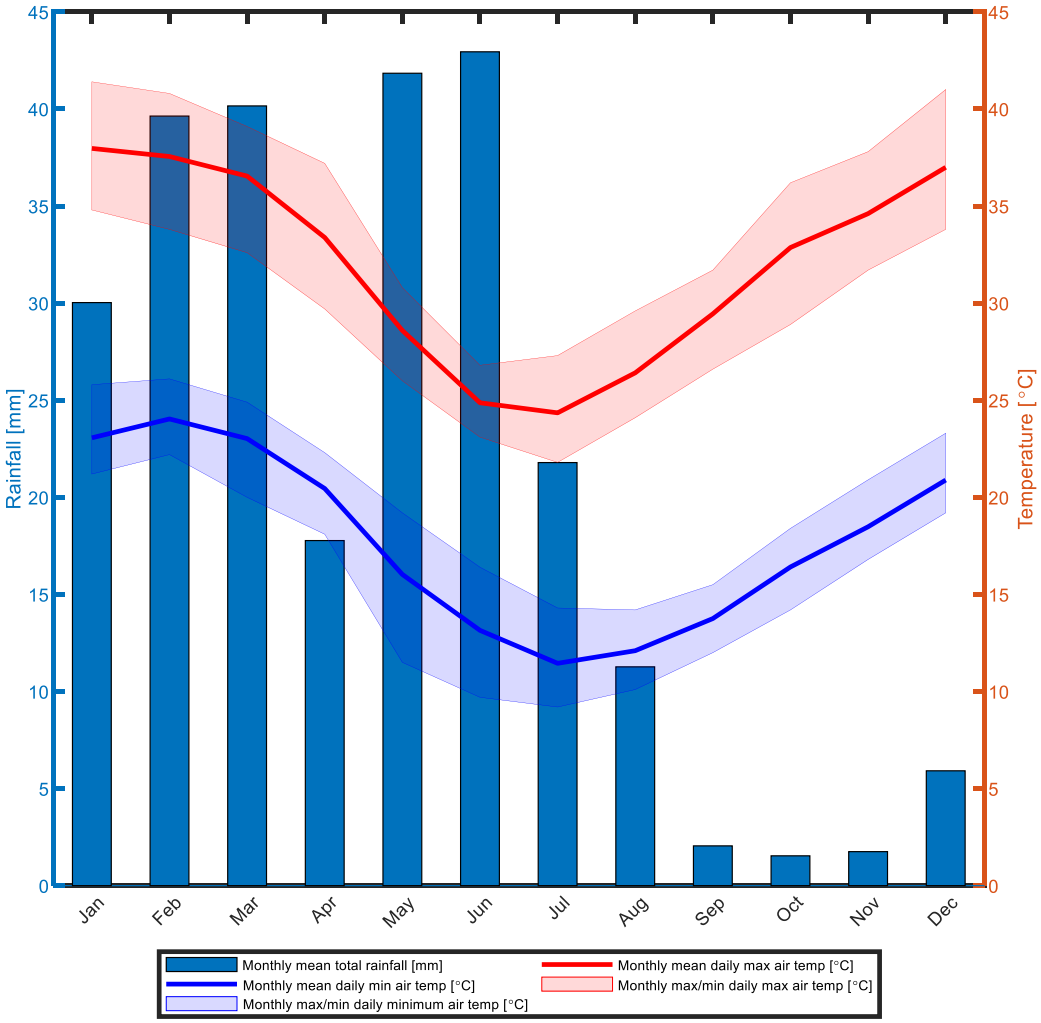

Figure 1. Monthly average total rainfall [mm] and air temperature [°C], calculated based on observations at the Learmonth Airport weather station from 1945-2020 and 1975-2020 respectively (Bureau of Meteorology 2020). Bars show the monthly average total rainfall values, and thick blue and red lines denote monthly average daily minimum and maximum air temperatures, respectively. Shaded blue and red areas denote monthly recorded extremes of daily minimum and maximum air temperature, respectively.

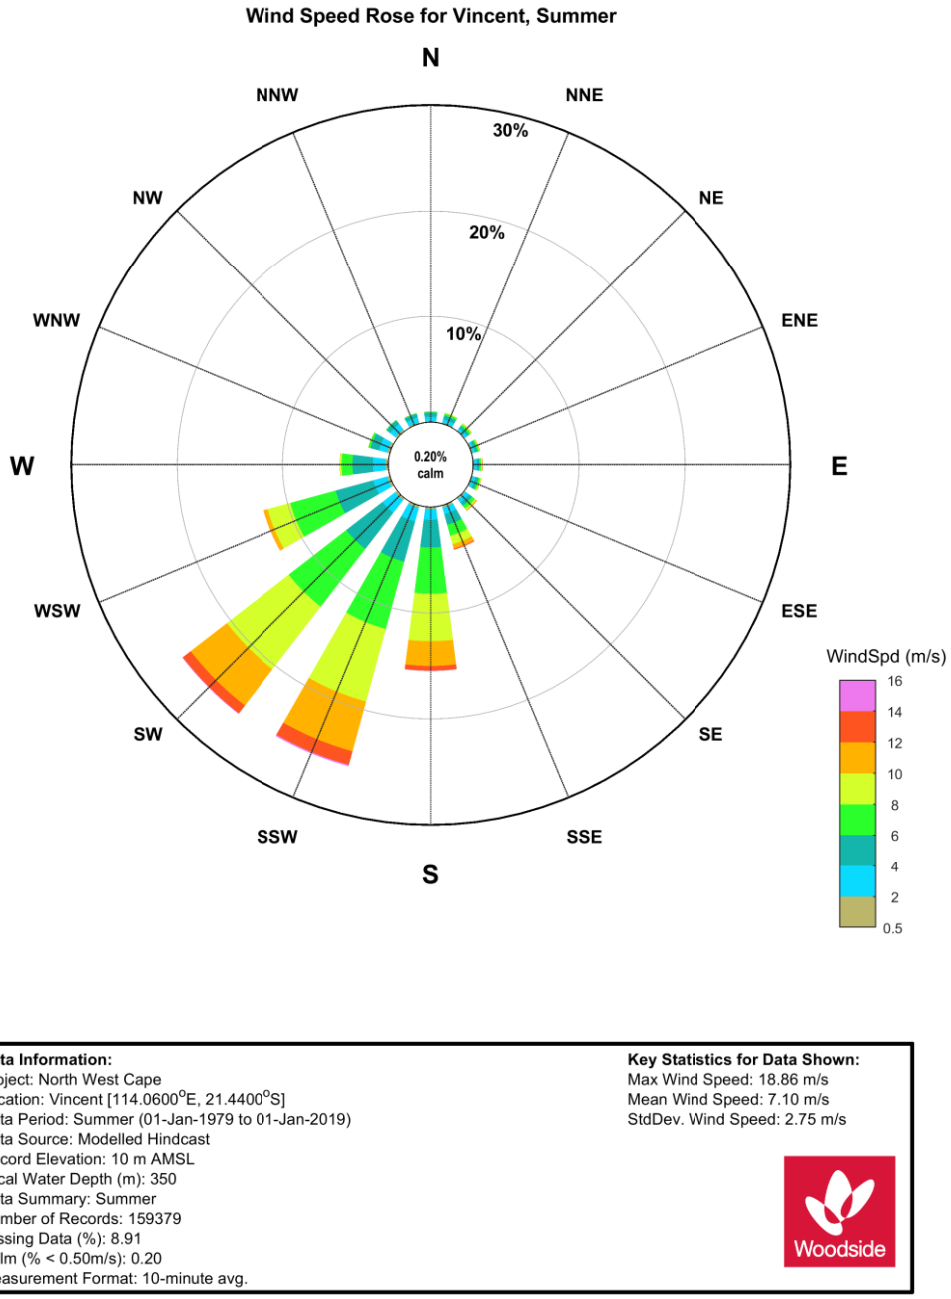

Figure 2. Summer distributions of wind speeds (10-minute at 10 m ASL) by 22.5° directional sectors at the Vincent site (Vincent Metocean). Note tropical cyclone events were not included in this distribution. Winds at Vincent in summer are predominantly from the SW to SSW in summer due to the presence of the Pilbara Heat Low (MetOcean Engineers, 2005).

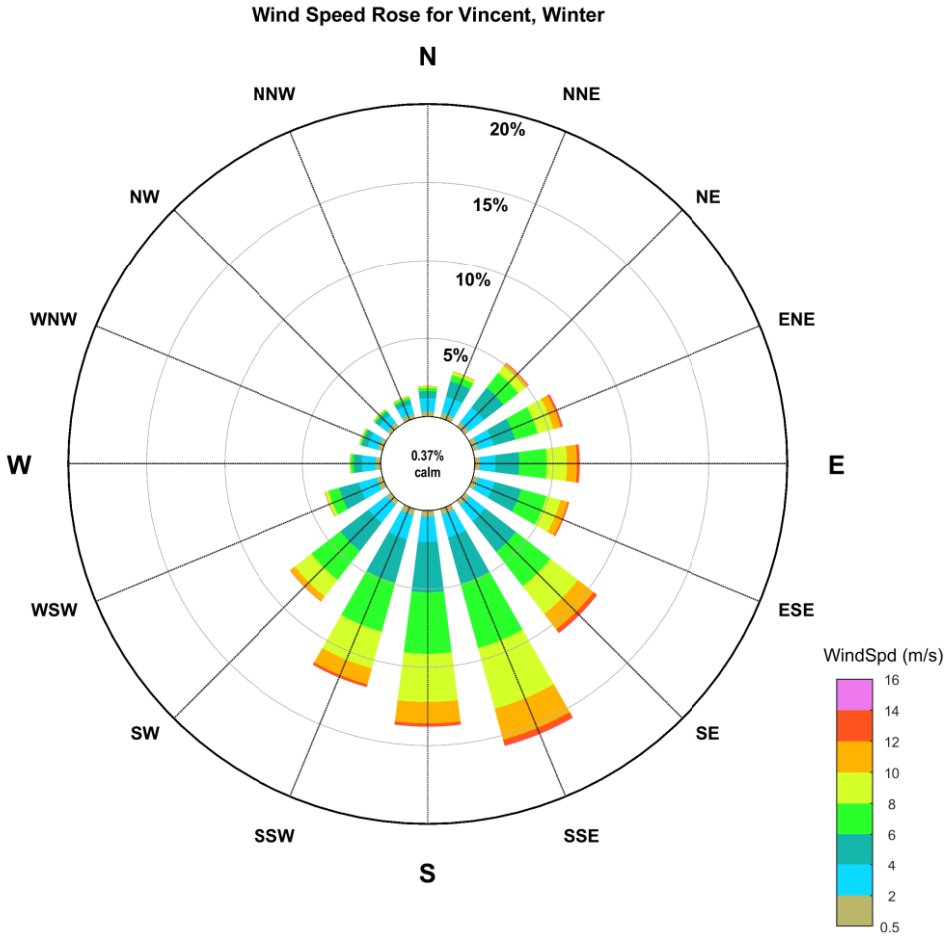
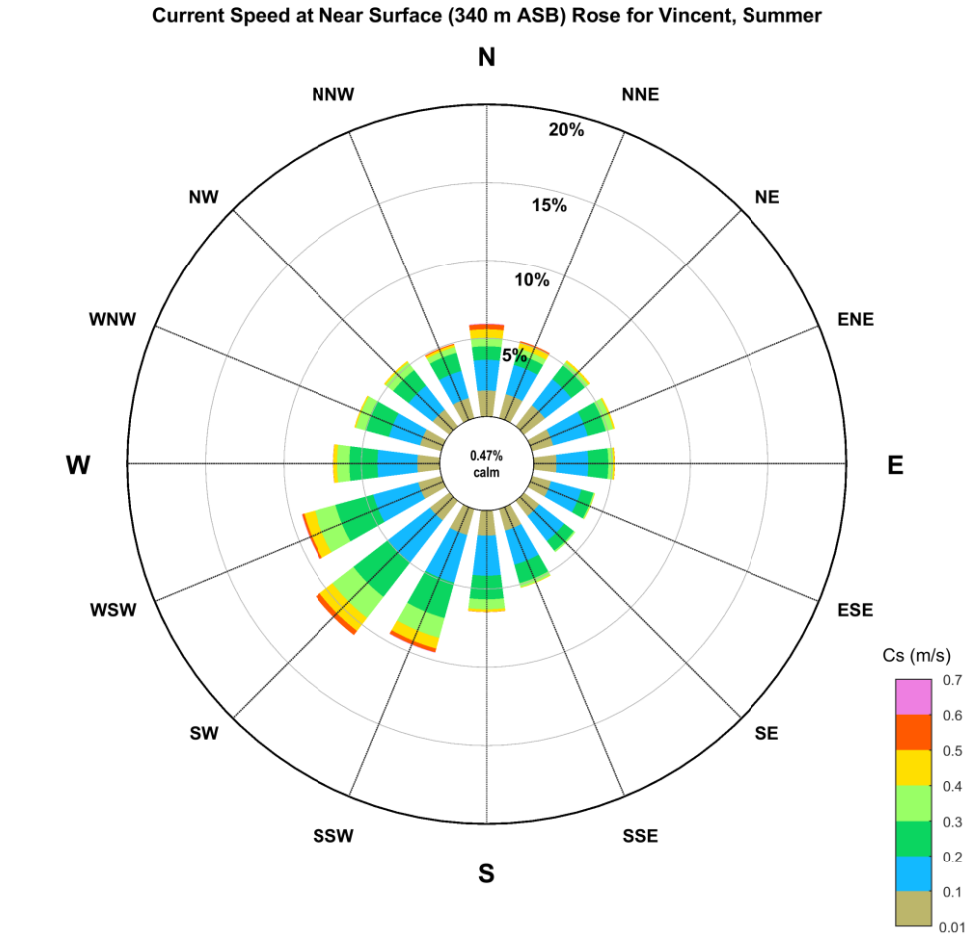


Data Information:
Project: North West Cape
Location: Vincent [114.0600°E, 21.4400°S]
Data Period: Winter (01-Apr-1979 to 30-Sep-2018)
Data Source: Modelled Hindcast
Record Elevation: 10 m AMSL
Local Water Depth (m): 350
Data Summary: Winter
Number of Records: 173626
Missing Data (%): 1.17
Calm (% < 0.50m/s): 0.37
Measurement Format: 10-minute avg.

Key Statistics for Data Shown:
Max Wind Speed: 19.39 m/s
Mean Wind Speed: 6.23 m/s
StdDev. Wind Speed: 2.78 m/s

Woodside

Figure 3. Winter distributions of wind speeds (10-minute at 10 m ASL) 22.5° directional sectors at the Vincent site (Vincent Metocean). Note tropical cyclone events were not included in this distribution. In winter, winds at are predominantly from the S to SE, associated with the South East Trades. Easterly gales are experienced at the Vincent location due to high pressure systems generating from the Great Australian Bight area to the site (MetOcean Engineers, 2005).

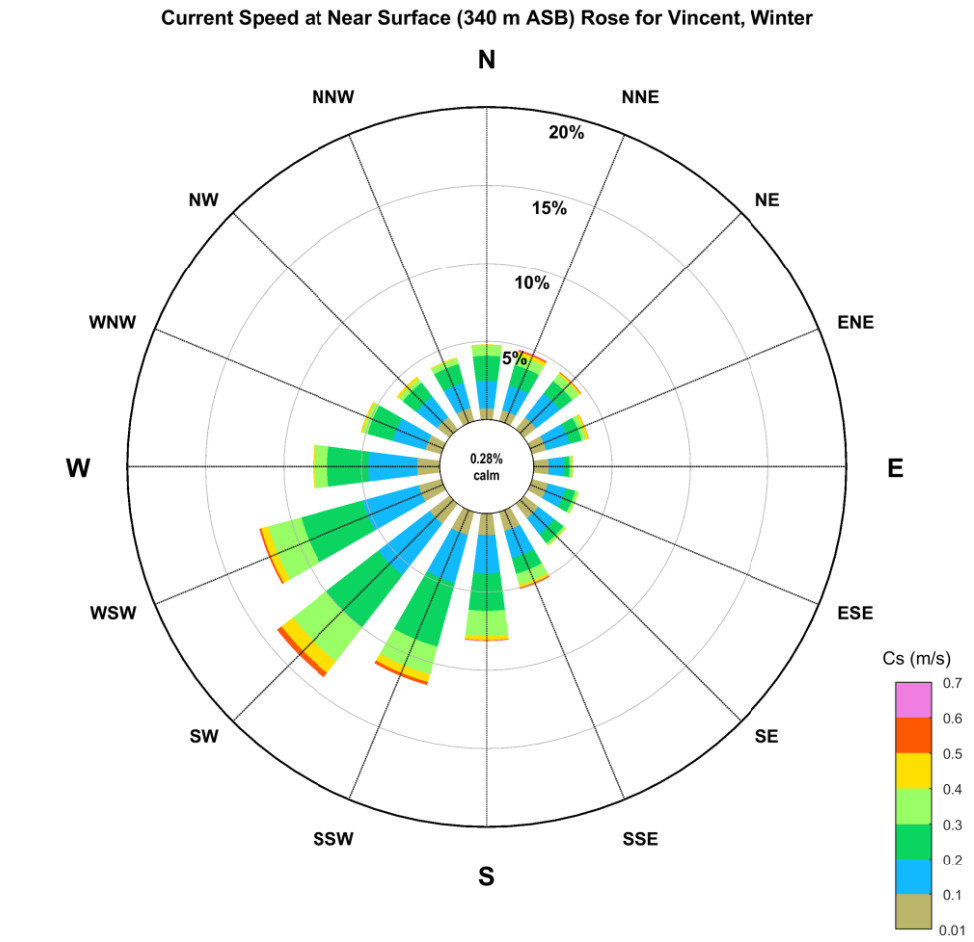


Data Information:
Project: North West Cape
Location: Vincent [114.0600°E, 21.4400°S]
Data Period: Summer (21-Nov-2000 to 13-Dec-2001)
Data Source: Measured Data
Record Elevation: Near Surface (340 m ASB)
Local Water Depth (m): 350
Data Summary: Summer
Number of Records: 144668
Missing Data (%): 1.59
Calm (% < 0.01m/s): 0.47

Key Statistics for Data Shown:
Max Curr Spd: 0.75 m/s
Mean Curr Spd: 0.19 m/s
StdDev. Curr Spd: 0.11 m/s

Woodside

Figure 4. Summer (May – Sep) near surface combined frequency of 1-minute mean current speed and direction (towards) measured at the Vincent location (cyclones removed) (WEL, 2016).



Data Information:
Project: North West Cape
Location: Vincent [114.0600°E, 21.4400°S]
Data Period: Winter (01-Apr-2001 to 30-Sep-2001)
Data Source: Measured Data
Record Elevation: Near Surface (340 m ASB)
Local Water Depth (m): 350
Data Summary: Winter
Number of Records: 126313
Missing Data (%): 4.13
Calm (% < 0.01m/s): 0.28

Key Statistics for Data Shown:
Max Curr Spd: 0.64 m/s
Mean Curr Spd: 0.20 m/s
StdDev. Curr Spd: 0.11 m/s

Woodside

Figure 5. Winter (Nov – Apr) near surface combined frequency of 1-minute mean current speed and direction (towards) measured at the Vincent location (cyclones removed) (WEL, 2016).
