- (2, 7, 20, 22) Disagreed with FARA's assertions and referred to a previous response which included notes on the applicable regulations governing the content of the EP, with which the EP complied. Woodside also noted the OPP had been accepted and that it included an assessment of environmental impacts and risks and demonstrated that they would be managed to an acceptable level.
- (11) Disagreed with the assertion that Woodside's assessment was inaccurate and that the wrong test had been applied. Woodside referred FARA to previous responses which included notes on the applicable regulations governing the content of the EP. Woodside confirmed Woodside and Perdaman had entered into a gas sale and purchase agreement, and that atmospheric emissions which may be created by processing Scarborough gas at the proposed Perdaman project had been considered and assessed in the EP. Woodside confirmed it did not have operational control over the Perdaman facility and was not involved in the items FARA had referenced and asserted had happened on the Perdaman facility.

- **(17)** Noted FARA had referenced a report authored in collaboration with FARA. The report did not appear to include original research or be peer-reviewed literature or published in a journal. Woodside noted the report presented many similar topics to those contained in the FARA letter to Woodside from 29 November 2024 and many of the claims in the article were addressed in Woodside's response.
- **(10)** Confirmed it had consulted FARA as a relevant person in the preparation of this EP in accordance with Regulation 25 – Woodside has given FARA sufficient information, allowed FARA a reasonable period of time and reasonable opportunity to consult. Woodside referred FARA to other relevant responses regarding consultation, indirect impacts, assessment of impacts on Murujuga rock art, and consistency with EPBC Approved program. Woodside
- **(10)** Noted FARA's comments that it was seeking further legal advice. Woodside noted that FARA's comment seemed to suggest FARA was well supported and advised by lawyers, which was further confirmation that FARA had had the opportunity to consult and it understood the information provided by Woodside.
- With regards to Attachment 2, FARA's letter to Woodside dated 29 November 2024, Woodside:
 - **(2, 11, 12, 13, 14, 15)** Referred FARA to previous responses regarding the context for consultation and confirmed it had reviewed, assessed and responded to FARA a time of times regarding assessment of direct and indirect impacts, including from onshore processing of Scarborough gas; cultural heritage and cultural heritage values; Perdaman; legislation relevant to the EP; and consultation.
 - **(3, 21)** Disagreed with FARA's assertions and:
 - ❖ Acknowledged impacts to cultural heritage had the potential to impact the health of Traditional Custodians, however Woodside did not agree that the activities under the EP would impact mental health due to the damage to cultural heritage arising from Woodside's operations.
 - ❖ Referred FARA to previous responses which set out information on consultation with First Nations groups, which had included undertaking cultural heritage surveys. Woodside further confirmed it had relationships with Traditional Custodians in the Pilbara and consultation enabled Traditional Custodians to understand the nature of Woodside's activities and provide feedback, including where they considered that activities were contrary to traditional lore or may lead to moral injury in the community.
 - ❖ Confirmed it regularly engaged with MAC through its CEO, Board, and Circle of Elders and had consulted extensively with MAC on the Scarborough project.
 - ❖ Referred to previous responses regarding Perdaman.
 - ❖ Provided a link to Woodside's response to the Joint Communication from Special Procedures.
 - **(5, 22)** Referred FARA to previous responses regarding the context of consultation and topics Woodside had previously reviewed, assessed and responded to FARA on, which included climate change, greenhouse gas emissions and carbon budgets.
 - **(2)** Referred FARA to previous responses regarding the context of consultation and topics Woodside had previously reviewed, assessed and responded to FARA on, which included onshore emissions associated with onshore processing.
 - **(2, 18, 24)** Referred FARA to previous responses regarding the context of consultation and topics Woodside had previously reviewed, assessed and responded to FARA on, which included MRAMP and Murujuga rock art, onshore emissions associated with onshore processing, and regulatory frameworks. (9)
 - **(2, 19, 24)** Disagreed with FARA's assertion regarding retrofitting technologies to Pluto Train 2. Woodside noted that it acted in accordance with Ministerial Statement 757 and its Best Practice Report and Pluto LNG Facility Air Quality Management Plan were updated to include Pluto Train 2 and were subject to review by the EPA before being approved by the Minister for the Environment on the advice of the EPA.
 - **(2, 18)** Referred FARA to previous responses regarding the context of consultation and topics Woodside had previously reviewed, assessed and responded to FARA on, which included Murujuga rock art, onshore processing of gas and regulatory frameworks.

<ul style="list-style-type: none"> ▪ (2, 18, 19) Referred FARA to previous responses regarding the context of consultation and topics Woodside had previously reviewed, assessed and responded to FARA on, which included Murujuga rock art, onshore processing of gas and regulatory frameworks; Woodside’s application of the “acceptable” level in the OPP and EP; and assessment of an installation of technology. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) FARA was a relevant person.</p>	<p>(1) Woodside assessment: In accordance with regulation 25 of the Environment Regulations, Woodside has assessed FARA as a relevant person based on its functions, interests or activities. Woodside response: Woodside confirmed FARA had been assessed as a relevant person for this EP and had been provided with sufficient consultation information and a reasonable period for consultation on this EP.</p>	<p>(1) Woodside’s assessment of FARA as a relevant person is described in Appendix F, Table 1.</p>
<p>(2) Impacts on the preservation and conservation of the Murujuga Petroglyphs.</p>	<p>(2) Woodside assessment: There are no planned impacts to Murujuga rock art as a result of onshore processing of Scarborough gas. Several independent studies and rock art initiatives conducted since the mid-2000s have not conclusively demonstrated a causal link between degradation of rock art and industrial activity, however Woodside will continue to assess science on this topic. Woodside response: Woodside provided information about the DWER-commissioned Ramboll (2021) study on air emissions in the Murujuga airshed and confirmed it had committed to supporting the MRAS and MRAMP. Woodside advised facilities associated with onshore processing of LNG were not subject to OPGGS(E)R and provided details of relevant legislation and approvals in place, as well as examples of best practice technologies implemented to minimise air emissions in Pluto LNG (and Train 2) design and operation. Woodside noted the <i>Aboriginal Heritage Act 1972</i> (WA) and other legislation provided for the protection and preservation of Aboriginal sites and objects in WA.</p>	<p>(2) The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP. Woodside supports the MRAS/MRAMP, as referenced as PS 7.1.1 in Section 6.7.7 of the EP.</p>
<p>(3) Impact of the Scarborough development on Traditional Custodians of Murujuga and the Dampier Archipelago.</p>	<p>(3) Woodside assessment: Woodside has consulted with First Nations relevant persons for this EP. Woodside response: Woodside confirmed it had consulted First Nations relevant persons and noted that under the United Nations Declaration on the Rights of Indigenous Persons that cultural heritage and other communal</p>	<p>(3) Woodside’s consultation with relevant persons is described in Appendix F, Table 2.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	rights of Indigenous people is to be managed through consultation with representative institutions.	
(4) Scarborough gas field development will lead to the production of 1.5 billion tonnes of carbon emissions over coming decades.	(4) Woodside assessment: Woodside does not agree with FARA's estimate of GHG emissions associated with the Scarborough Project. Woodside response: Woodside confirmed estimates of GHG emissions associated with the Scarborough Project were set out in the EP, with total lifecycle emissions estimated to be 880 MtCO ₂ -e.	(4) Estimates of GHG emissions associated with the Scarborough Project are described in Section 6.7.6 of the EP and summarised in Table 6-22.
(5) The climate impacts of the project which will cause increasing severity in heatwaves, bushfires, floods and storms, and the socio-economic pressures that will arise from these environmental changes.	(5) Woodside assessment: Woodside acknowledges that climate science understands climate change to be caused by the net cumulative global concentration of GHG emissions in the atmosphere, and changes in the global atmospheric GHG concentration cannot be attributed to any one activity or project, including the Scarborough Project. Woodside's view is that LNG can have a role in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes. Therefore, Woodside does not accept the Scarborough Project will contribute to the exacerbation of climate change impacts in Western Australia. Woodside response: Woodside confirmed its view was that LNG could have a role in the energy transition and the full volume of GHG emissions associated with the project was not expected to be additive. To facilitate a comparison against carbon budgets, a hypothetical assumption had been used in the EP where GHG emissions associated were hypothetically treated as additive, and the contribution was de minimis. Woodside confirmed climate change was recognised as a global issue, and, for reference, a contextual evaluation of climate change impacts was set out in detail in the EP. Woodside provided a list of relevant projections for climate change in Australia as well as nine key climate risks for the Australasian region.	(5) GHG emissions associated with the activity, and the potential impacts of climate change are described in Section 6.7.6 of the EP, and potential impacts of atmospheric emissions are assessed in Section 6.7.7 of the EP.
(6) Compromise of the Murujuga World Heritage consideration.	(6) Woodside assessment: Woodside understands the World Heritage nomination has been progressed with full awareness of existing and future industry. Woodside response: Woodside advised that it understood the World Heritage nomination had been progressed with full awareness of existing and future industry, and that its support for the World Heritage listing of the Burrup Peninsula reflected the co-existence of heritage and industry.	(6) The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(7) Impacts from all pollution sources on potential receptors.</p>	<p>(7) Woodside assessment: The measures and controls described within the EP address the potential impact from the proposed activities on FARA's functions, interests or activities. Woodside response: Woodside advised that while impacts to potential receptors were possible in the event of an unplanned diesel release from a vessel collision, Woodside considered it adopted appropriate controls to prevent a spill and to respond in the highly unlikely case a spill did occur. Woodside directed FARA to specific sections of the EP which contained risk assessments for planned emissions and discharges. Each of the risk assessments identified potential environmental receptors and impact, as well as controls to limit to ALARP and Acceptable levels. Woodside also provided additional information about the greatest volume that could be released in a worst-case loss of containment scenario and how the EMBA was used to frame species, communities and habitats that might be impacted.</p>	<p>(7) Potential risks and impacts from planned and unplanned activities are set out in sections 6.7 and 6.8 of the EP.</p>
<p>(8) Robust plans for decommissioning, including rehabilitation of sites used for processing and utilisation of Scarborough gas.</p>	<p>(8) Woodside assessment: Woodside proactively plans for decommissioning and activities. Woodside response: Woodside confirmed it had developed a Scarborough Decommissioning Strategy which would be used to plan for infrastructure decommissioning at the end of field life. Decommissioning of the offshore facility and infrastructure was described in the EP, however the decommissioning of onshore gas processing facilities was outside the scope of the EP.</p>	<p>(8) Decommissioning planning framework is set out in Section 7.3 of the EP.</p>
<p>(9) Support requests from Murujuga custodians [Individual 4] and [Individual 3] that they were relevant persons.</p>	<p>(9) Woodside assessment: Woodside has consulted extensively with the Traditional Custodians of Murujuga through their representatives and addressed the potential impacts which Traditional Custodian representatives have themselves identified. Woodside response: Woodside does not provide comment on the extent of consultation with specific individuals, including their status as relevant persons.</p>	<p>(9) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.</p>
<p>(10) Statements that Woodside had not provided sufficient information and a reasonable period of</p>	<p>(10) Woodside assessment: Woodside has provided FARA with sufficient information via the Consultation Information Sheet, Scarborough OPP, publicly available EP, and direct responses to FARA, for FARA to make an</p>	<p>(10) FARA has been given sufficient information and a reasonable period in which to make an informed assessment of the possible consequences of the activity</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>time for consultation and needed to be transparent with FARA's feedback.</p>	<p>informed assessment of the possible consequences of the activity. Woodside allowed FARA 4.5 months for consultation for the EP and continues to accept feedback on the EP.</p> <p>Woodside response: Woodside provided consultation information, including a summary of the PAP, impacts and risks, and proposed mitigation and management strategies, directly to FARA on 9 August and 30 August 2023. In the absence of a response, Woodside proactively addressed previous feedback provided by FARA on the Scarborough Project and provided this to FARA on 5 December 2023, while also advising Woodside had extended the consultation period to 20 December 2023 – a total of 4.5 months. Woodside has continued to directly respond to FARA's feedback regarding this EP and has provided further proactive information, including a link to the EP once it was publicly available on NOPSEMA's website.</p>	<p>on its functions, interests or activities, as described in Section 5.4 of the EP.</p>
<p>(11) Increased levels of direct disturbance and displacement of petroglyphs that would result from the utilisation of Scarborough gas on the Burrup Peninsula, in particular by the proposed Perdaman urea facility.</p>	<p>(11) Woodside assessment: No disturbance or displacement of petroglyphs or other heritage sites is planned or anticipated in the development of the Scarborough Project. Woodside response: Woodside advised FARA the processing of Scarborough gas would occur within the footprint of existing Woodside LNG processing facilities. Woodside confirmed it had a gas sale and purchase agreement with Perdaman, and that atmospheric emissions which may be created by processing Scarborough gas at the proposed Perdaman project had been considered and assessed in the EP. Woodside would not comment on the activities and impacts of other proponents such as Perdaman.</p>	<p>(11) Not required.</p>
<p>(12) Increased intensity and duration of other industrial impacts on the Murujuga cultural landscape.</p>	<p>(12) Woodside assessment: There will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurred within the footprint of existing Woodside LNG processing facilities. Developments at onshore processing were outside the scope of the activity described in the EP and were subject to relevant onshore regulatory frameworks and approvals.</p>	<p>(12) Not required.</p>
<p>(13) Increased disruption to ongoing cultural practises connected with the landscape.</p>	<p>(13)</p>	<p>(13) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside assessment: The functions, interests or activities of Traditional Custodians of Murujuga are not anticipated to be impacted by the processing of Scarborough gas.</p> <p>Woodside response: Woodside confirmed it had consulted with Traditional Custodians to understand their functions, interests or activities, which are not anticipated to be impacted by the processing of Scarborough gas.</p>	
<p>(14) Impacts on opportunity for visitors, researchers and custodians to use the cultural landscape.</p>	<p>(14) Woodside assessment: In Woodside’s assessment, there will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurred within the footprint of existing Woodside LNG processing facilities. Developments at onshore processing were outside the scope of the activity described in the EP and were subject to relevant onshore regulatory frameworks and approvals.</p>	<p>(14) Not required.</p>
<p>(15) Impacts on the opportunities that exist for local communities and custodians in connection with the protection and maintenance of the World Heritage Values of the area.</p>	<p>(15) Woodside assessment: In Woodside’s assessment, there will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities. Developments at onshore processing were outside the scope of the activity described in the EP and were subject to relevant onshore regulatory frameworks and approvals.</p>	<p>(15) Not required.</p>
<p>(16) Impacts on the ability to remediate and restore the cultural landscape in the future.</p>	<p>(16) Woodside assessment: In Woodside’s assessment, there will be no additional impact associated with the processing of Scarborough gas. Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurs within the footprint of existing Woodside LNG processing facilities. Developments at onshore processing were outside the scope of the activity described in the EP and were subject to relevant onshore regulatory frameworks and approvals.</p>	<p>(16) Not required.</p>
<p>(17)</p>	<p>(17)</p>	<p>(17)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Peer-reviewed scientific studies and other papers on impacts of industrial emissions.</p>	<p>Woodside assessment: Research to date on the impacts of emissions on rock art has not been conclusive. Woodside will continue to assess science on this topic and provide information to MRAS.</p> <p>Woodside response: Woodside confirmed the EP contained a review of published studies and literature on this topic, including information provided by FARA. Woodside included a statement from MRAS which noted the data currently available from previous monitoring projects did not allow for a conclusive answer on whether anthropogenic emissions were impacting Murujuga’s rock art, and the MRAS was essential to fill the gaps in knowledge. Woodside confirmed it would provide information to MRAS as it became available in recognition of the primacy of the program.</p>	<p>The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(18) Murujuga Rock Art Monitoring Program: Summary Monitoring Studies Report 2023 findings regarding the PH of rock surfaces.</p>	<p>(18) Woodside assessment: Woodside considers that no meaningful conclusions can be drawn from this data at this time, given the Summary Monitoring Studies Report notes “data collected in the first year of observation do not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time”.</p> <p>Woodside response: Woodside advised FARA that the report cautioned against drawing conclusions from the data during the first year of observation, and that it was incorrect to state that the publications supported the hypothesis that industrial emissions were impacting rock art through increased acidification.</p>	<p>(18) The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(19) Options for controlling and mitigating industrial emissions, including wet scrubber technology, catalytic and electrostatic pollution control, underground disposal and sequestration of compounds.</p>	<p>(19) Woodside assessment: Woodside has assessed wet scrubber and CCS technologies, and catalytic and electrostatic pollution control equipment, in the EP.</p> <p>Woodside response: Woodside noted the design of onshore processing was outside the scope of the activity described in the EP but provided a position on the feasibility of wet scrubber technology, catalytic and electrostatic pollution control, and underground disposal of compounds. Woodside noted that in response to FARA’s feedback, consideration of SCR and CCS as potential controls had been considered in the relevant sections of the EP.</p>	<p>(19) Based on FARA’s feedback, Woodside has updated sections 6.7.6 and 6.7.7 of the EP to consider SCR, CCS and catalytic and electrostatic pollution control equipment as potential controls.</p>
<p>(20) Other impacts on Murujuga cultural heritage landscape and values.</p>	<p>(20) Woodside assessment: Woodside considers cultural features and heritage values in the EP and has included further information regarding the Murujuga</p>	<p>(20) A description of cultural features and heritage values is provided in Section 4.9 of the EP. Assessment of</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>cultural landscape in the latest version of the EP. Woodside supports further research on this topic, including MRAMP.</p> <p>Woodside response: Woodside noted further information had been included in the EP, describing the highly significant cultural landscape of Murujuga; the stories, knowledge and customs that were still held by Traditional Custodians and which had significance beyond their archaeological value; and statements from the UNESCO World Heritage Centre.</p>	<p>potential risks and impacts to cultural heritage is set out in Section 6.10 of the EP.</p>
<p>(21) Health and social impacts to communities and visitors resulting from processing and utilisation of Scarborough gas.</p>	<p>(21) Woodside assessment: Woodside notes FARA’s feedback regarding health and social impacts. The risk of processing Scarborough gas to human health has been assessed in the EP as Negligible.</p> <p>Woodside response: Woodside advised the magnitude of emissions from processing Scarborough gas was insufficient to lead to the exceedance of any relevant health criteria on the Burrup Peninsula or surrounding region. Noting the absence of any current impacts to health from industrial activity on Murujuga, the risk of processing Scarborough gas to human health was assessed as Negligible. Woodside also noted it monitored air quality around the Pluto LNG Plant as per the AQMP which was publicly available on the Woodside website.</p>	<p>(21) Consideration of human health impacts is set out in Section 6.7.7 of the EP.</p>
<p>(22) Impacts and effects related to climate change and GHG emissions, including sensitive environmental receptors that would be impacted including MNES and World Heritage Values; effects of Scarborough project on these receptors; modelling; and mitigation options; impacts on local Pilbara communities.</p>	<p>(22) Woodside assessment: Woodside acknowledges that climate science understands climate change to be caused by the net cumulative global concentration of GHG emissions in the atmosphere, and changes in the global atmospheric GHG concentration cannot be attributed to any one activity or project, including the Scarborough Project.</p> <p>Woodside response: Woodside advised the contextual evaluation of climate change impacts in the EP included environmental receptors. Outcomes from reputable sources such as the IPCC had been drawn upon to provide this contextual evaluation. Woodside provided an overview of its decarbonisation strategy, as relevant to Scope 1 GHG emissions. Woodside also advised that, as set out in the EP, the AR6-WGII contained information about projected impacts to health in the Australasian region, and therefore, Woodside did not accept that the Scarborough Project would contribute to the exacerbation of climate change impacts in Western Australia. Woodside confirmed it assessed emissions against a range of scenarios including the IEA NZE. Woodside also confirmed its understanding of the EMBA.</p>	<p>(22) A description of the existing environment is provided in Section 4 of the EP. A contextual evaluation of climate change impacts is set out in Section 6.7.6. A range of climate-related scenarios are also set out in Section 6.7.6.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(23) Requests for other documents and information including studies and other material relied up in assessing the impact of chemical emissions on rock art, and GHG emissions and climate impacts.</p>	<p>(23) Woodside assessment: There is no requirement for Woodside to make studies and internal information publicly available to relevant persons. Woodside response: Woodside confirmed that studies and literature relevant to the potential for accelerated anthropogenic change to Murujuga rock art had been reviewed during the course of preparing the EP. The EP was publicly available on NOPSEMA's website.</p>	<p>(23) Not required.</p>
<p>(24) Specific reference to EPA's approval statement regarding Woodside's AQMP, noting the EPA has subsequently recommended in public advice that current controls are not adequate.</p>	<p>(24) Woodside assessment: The updated Pluto AQMP was approved by the Minister for Environment in 2020, following advice from the EPA. Further amendments may be made to Pluto documents after the outcomes from the MRAMP are published. Woodside is currently updating the Pluto LNG Plant's Greenhouse Gas Abatement Program in accordance with Ministerial Statement 1208. Woodside response: Woodside developed an Assessment of Best Practice for Minimising Emission to Air from Major Plant – Pluto Train 2 and a peer review was commissioned by DWER. The document was approved by the WA Minister for Environment in January 2020. Woodside's Pluto AQMP was updated to incorporate Pluto Train 2 and received approval from the Minister for Environment in April 2020, upon receiving advice from the EPA. Woodside later provided updated information regarding changes to the WA State Government's GHG emissions policy and EPA guidance.</p>	<p>(24) Not required.</p>
<p>(25) Information on independent archaeologists or anthropologists Woodside has consulted, and claims it had not consulted with a number of rock art experts and scientists.</p>	<p>(25) Woodside assessment: Woodside engages with independent experts in the assessment of its projects where appropriate. Woodside response: Woodside advised that it engaged with independent experts as appropriate, however Woodside considered Traditional Custodians to be the primary authority on the significance of the Murujuga Cultural Landscape. Woodside also confirmed it had consulted broadly for this EP, enabling a person or organisation whose functions, interests or activities may be affected to self-identify.</p>	<p>(25) Not required.</p>
<p>(26) Satellite imagery demonstrated air quality over the Burrup was damaging petroglyphs and would worsen.</p>	<p>Woodside assessment: Woodside is not able to comment on the satellite imagery because it does not include context on the collection methodology. Woodside uses more relevant techniques in conjunction with MRAMP which have produced inconclusive results with regards to whether industrial air emissions are affecting rock art.</p>	<p>(26) The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside response: Woodside advised it was not able to comment on the satellite imagery because it did not include sufficient context on the collection methodology. Woodside used more relevant techniques in conjunction with MRAMP to monitor rock art. An MRAMP report (Dec 2023) produced inconclusive results with regards to whether industrial air emissions were affecting rock art and recommended further scientific studies were undertaken.</p>	
<p>(27) Woodside's October 2024 consultation update contained numerous misleading statements that misrepresented FARA's concerns.</p>	<p>(27) Woodside assessment: Woodside does not agree with FARA's assertions. In complying with Regulation 25, Woodside has reviewed, assessed and responded to FARA's consultation correspondence as well as literature and information FARA has published publicly. Woodside has responded in accordance with Woodside's understanding of items raised by FARA. Woodside response: Confirmed that, in complying with the Regulations, it had reviewed, assessed and responded to FARA's correspondence as well as information FARA had published publicly. This provided context for the consultation as FARA and Woodside may have differing views and positions. Given this, it was likely FARA and Woodside would have differing views on Woodside's responses to FARA's feedback and Woodside's assessment of the merits of FARA's objections or claims, and may be a reason why FARA was re-raising topics Woodside had already assessed and responded to during the consultation process.</p>	<p>(27) Not required.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of any each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>The measures and controls described within this EP address the potential impact from the proposed activities on FARA's functions, interests or activities.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with FARA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Sufficient Information

Woodside has given FARA sufficient information to allow FARA to make an informed assessment of the possible consequences of the activity on FARA's functions interests or activities because:

- The Consultation Information Sheet has been publicly available on the Woodside website since August 2023. Woodside gave this information to FARA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the information about this activity which is contained in the OPP, information relevant to this EP provided to FARA during consultation and the specific information provided in the Consultation Information Sheet, Woodside gave FARA further detailed information which addressed FARA's specific feedback, objections or claims related to this EP (see information given on 5 December 2023, 12 January 2024, 22 February 2024, 7 March 2024, 28 May 2024, 4 July 2024, 8 October 2024, 20 January 2025).
- Woodside proactively reminded FARA about the ability to provide feedback on this EP and given FARA's interest in climate-related matters, gave FARA information on Woodside's Climate Transition Action Plan and 2023 Progress Report (email of 7 March 2024).
- Woodside again reminded FARA that it could provide feedback on this EP and proactively provided FARA with a link to the full EP when it was published on NOPSEMA's website (email of 4 July 2024). Woodside also provided specific references within the EP that addresses areas of interest identified by FARA.
- On 8 October 2024, Woodside also emailed FARA to confirm it would shortly resubmit the EP for assessment and reminded FARA that Woodside remained open to receiving feedback.
- On 20 December 2023, 1 February 2024, 24 May 2024 and 29 November 2024, FARA claimed it had not been provided with sufficient information to allow it to make an informed assessment of consequences on its functions, interests or activities. Woodside disagrees with this assertion because FARA responded to Woodside's email with questions specific to the activity indicating the information provided was sufficient to enable FARA to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. FARA shared its feedback, claims and objections based on its understanding of the project, which Woodside assessed and responded to as demonstrated in the summary of consultation above. FARA continues to reiterate the same or similar topics that Woodside has provided responses to.

Reasonable Period

Woodside has allowed FARA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was advised in the initial consultation correspondence to FARA. That correspondence advised when consultation closed for purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside ultimately allowed FARA 4.5 months for consultation.
- During the consultation period and following it, Woodside proactively sent follow-up emails to FARA to remind FARA of consultation and timeframes on numerous occasions (30 August 2023, 5 December 2023, 12 January 2024, 22 February 2024, 7 March 2024, 4 July 2024, 8 October 2024, 20 January 2025).

- In this context, Woodside allowed FARA a reasonable period for consultation in preparation of the EP.
- On 20 December 2023, FARA claimed it had not been provided with a reasonable period of time to provide feedback. Woodside disagrees with this assertion as Woodside commenced consultation on 9 August 2023, and on 5 December 2023 provided additional information to FARA and advised it had extended the consultation period to 20 December 2023. The consultation requirement under Regulation 25 cannot be one that is incapable of being complied with within a reasonable time (Tipakalippa Full Court para 136).
- As has been made clear during consultation emails, Woodside is open to receiving feedback after EP submission and throughout the life of the EP. FARA has demonstrated it understands this and it continues to provide feedback to Woodside irrespective of consultation timeframes as demonstrated in its emails received on 1 February 2024, 24 May 2024 and 29 November 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with FARA is appropriate and adapted to the nature of interests of FARA:

- Woodside published 8 advertisements in national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to FARA because Woodside notes FARA regularly uses social media as a means to share its views. This also allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside engaged with FARA in the manner that FARA has consulted in previous consultations, that is, by email.
- Woodside provided an alternative method for FARA to provide feedback by offering meetings. The offer to meet was not taken up by FARA.
- In the absence of feedback, Woodside sent a proactive letter to FARA on 5 December 2023 addressing previous feedback received from FARA on other EPs and seeking further feedback.
- Following publication of the EP on NOPSEMA's website, Woodside provided FARA with correspondence on climate-related matters and directed them to the sections of the EP which contain additional information relevant to their interests. This enable FARA to engage with those specific topics of interest and Woodside gave FARA yet another opportunity to consult on this EP.
- Woodside considers a reasonable opportunity was provided to FARA as evidenced in its exchanges with FARA and in particular as evidenced in FARA's responses on 20 December 2023, 1 February 2024, 24 May 2024 and 29 November 2024 where it provided feedback, claims and objections.

Outcomes of Consultation:

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- FARA provided feedback or objections or claims about the adverse impacts of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulations 24 and 34(g), Woodside has:
 - Responded to feedback from FARA and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - Based on FARA's feedback, assessed the feasibility of wet scrubber technology, catalytic and electrostatic pollution controls equipment, and CCS in sections 6.7.6 and 6.7.7. of the EP. No new measures were adopted as a result of FARA's feedback. However, as a result of consultation, Woodside has updated its EP to include assessment of wet scrubber technology, catalytic and electrostatic pollution controls equipment, and CCS.

- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Lock The Gate Alliance (LGA)

Context

LGA states on its website that it is a 'grassroots movement fighting destructive coal and gas across Australia'^[1] which suggests LGA has a fundamental objection to entities in the gas industry. LGA posted on Facebook in November 2023 about the lack of consultation with local Indigenous people about the seismic program for the Scarborough Energy Project.^[2]

Its website does not list any Woodside's projects under the heading Gasfields.^[3] Woodside nevertheless provided information to LGA about the various Scarborough Energy Project EPs and reached out to them three times in relation to this EP, including a proactive letter outlining past issues raised by LGA as well as offering to meet, however, despite providing opportunity and offering consultation, LGA has not engaged or responded.

The background and previous engagements with LGA are important because they confirm that consultation with LGA on this EP was appropriate and adapted to the nature of the interests of LGA.

Historical Engagement:

2022- 2023

- From 2022 to 2023 Woodside consulted and responded to feedback from LGA on the Scarborough D&C, SIT1, Subsea and Seismic EPs. A number of topics raised by LGA during consultation on those EPs have been addressed and raised as part of consultation on this EP and include:
 - LGA believed its members, especially those who lived in the Pilbara and Kimberley, those who depended on groundwater, and those who lived in areas subject to flooding (especially the Kimberley), would be affected by climate change which would be increased by the project.
 - The development would produce carbon emissions over the next 25 years, impacting climate change and socioeconomic pressures which would directly affect LGA and its supporters.
 - The Scarborough development would lead to damage to the National Heritage values of the Burrup Peninsula.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed LGA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- When no response was received, on 30 August 2023, Woodside proactively sent a follow-up email asking LGA about consultation (Record of Consultation, reference 2.1).
- On 5 December 2023, in the absence of specific feedback from LGA, Woodside sent a letter via email, (Record of Consultation, reference 2.18) which stated the following:
 - LGA self-identified for the Scarborough D&C, SIT1 and Seismic EPs and provided feedback to Woodside which has been addressed.
 - Woodside had provided LGA with the Consultation Information Sheet for the Scarborough Operations EP on 9 and 30 August 2023 and also included a link to the online Information Sheet.
 - Woodside advised that consultation in the course of preparing this EP closed on 20 December 2023 and asked if LGA had feedback and/or would like to meet.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- In the absence of feedback on this EP, Woodside reviewed previous feedback from LGA on other related Scarborough EPs and provided assessment and response as follows:
 - **(1)** LGA and its members would be affected by climate change which would be increased by the Scarborough project. It would especially affect its members who live in the Pilbara and Kimberley, the many people who depend on groundwater, and areas that were subject to flooding, especially the Kimberley.
 - **(2)** The Scarborough gas field development would lead to the production of 1.6 billion tonnes of carbon emissions over the next 25 years, adding to WA's emissions and the planet's burden of climate change impacts. LGA and its supporters stood to be directly affected by the climate impacts of the project, which would cause increasing severity in heatwaves, bushfires, floods, storms, etc., and socio-economic pressures that would arise from these environmental changes.
 - **(3)** The Scarborough gas field development would support further industrialisation of the Burrup Peninsula which would damage the National Heritage values of this area.
- Woodside responded as follows:
 - **(1)** GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess direct emissions (Scope 1) and indirect emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
 - **(1)** The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
 - **(2)** Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
 - **(3)** An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions had been undertaken including development of a decarbonisation plan for the Pluto Hub.
 - **(1,2)** Woodside had a Climate Strategy which was an integral part of the company strategy and had two key elements: Reducing Woodside's net equity Scope 1 and 2 GHG emissions and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.
 - **(1, 2)** Woodside's net equity reduction targets had an aspiration of net zero by 2050 or sooner and in 2022, Woodside achieved 11% reduction compared to starting base. Woodside planned to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:
 - ❖ Avoiding GHG emissions through the way it designs its assets.
 - ❖ Reducing GHG emissions through the way it operates its assets.
 - ❖ Originating and acquiring carbon credits to use as offsets for the remainder.
 - **(1, 2)** Avoiding and reducing emissions were Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions would allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans were matured and implemented. In the longer term, where emissions prove to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits to achieve its net zero aspiration.
- On 8 October 2024, Woodside emailed LGA advising it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside had further assessed the merits of a number of objections and claims raised by LGA (SI Report, reference 65.1). Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:

- (1) Noted it acknowledged that climate science understood climate change to be caused by the net (cumulative) global concentration of GHG in the atmosphere. However, changes in global atmospheric GHG concentration could not be attributed to any one activity or project, including the Scarborough Project, as they were instead the result of global emissions, minus GHG sinks, that had accumulated in the atmosphere since the start of the industrial revolution.
- (2) Disagreed with LGA's estimation of GHG emissions associated with the Scarborough Project. Section 6.7.6 of the EP set out a breakdown of emissions sources and the total estimated GHG emissions associated with the project were approximately 880 MtCO₂-e over the life of the activity.
- (3) Noted it had operated on Murujuga for more than 35 years and understood the World Heritage nomination had been progressed with full awareness of existing and future industry. Woodside's support for the World Heritage listing of the Burrup Peninsula reflected the successful co-existence of heritage and industry.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) LGA and its members would be affected by climate change which would be increased by the Scarborough project. Members in the Kimberley and Pilbara will be especially affected.</p>	<p>(1) Woodside assessment: Changes in global atmospheric GHG concentration cannot be attributed to any one activity or project, including the Scarborough Project, as they are the result of global GHG emissions, minus global sinks, that have accumulated in the atmosphere since the industrial revolution started. It is Woodside's view that LNG can have a role in the energy transition and the full volume of GHG emissions associated with the project are not expected to be additive to global GHG emissions. Therefore, Woodside does not accept that the Scarborough Project will contribute to the exacerbation of climate change in Western Australia. Woodside response: Woodside acknowledged that climate science understood climate change to be caused by the net cumulative global concentration of GHG in the atmosphere, and that changes in global atmospheric GHG concentration could not be attributed to any one project. However, to facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emission associated with the project were hypothetically treated as additive is considered in the latest version of the EP, and the contribution was de minimis. Notwithstanding this, climate change was recognised as a global issue and Woodside advised that for reference, a contextual evaluation of climate change impacts was set out in the EP. Woodside included a list of relevant projections for climate change in Australia and nine key climate risks.</p>	<p>(1) Comparisons against carbon budgets, and a contextual evaluation of climate change impacts, are set out in EP Section 6.7.6,</p>
<p>(2) The Scarborough gas field development will lead to the production of 1.6 billion tonnes of carbon emissions over the next 25 years, adding to WA's</p>	<p>(2) Woodside assessment: Woodside does not agree with LGA's estimation of GHG emissions associated with the Scarborough project. Woodside response: Woodside confirmed a breakdown of emissions sources extended over 11 pages in the EP, however the estimated GHG</p>	<p>(2) Estimates of sources and volumes of emissions associated with the Scarborough Project are provided in Section 6.7.6 of the EP and summarised in Table 6-22.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

emissions and the planet's burden of climate change impacts.	emissions associated with the project were approximately 880 MtCO ₂ -e over the life of the activity.	
(3) The Scarborough gas field development will support further industrialisation of the Burrup Peninsula which will damage the National Heritage values of this area.	(3) Woodside assessment: There will be no additional impact expected on the Burrup Peninsula associated with the processing of Scarborough gas. Woodside response: Woodside noted it had operated on Murujuga for more than 35 years and that it understood the World Heritage nomination had been progressed with full awareness of existing and future industry. Woodside's support for the World Heritage listing of the Burrup Peninsula reflected the successful co-existence of heritage and industry.	(3) Cultural features and heritage values are described in Section 4.9 of the EP. This includes national heritage values. Atmospheric emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7. of the EP.
Woodside has addressed objections and claims as noted above.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	The measures and controls described within this EP address the potential impact from the proposed activities on LGA's functions, interests or activities.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with LGA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given LGA sufficient information to allow LGA to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of LGA because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to LGA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
- Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- In addition to the initial consultation information provided to LGA on 9 August 2023 and information relevant to this EP that was provided to LGA in previous consultations, Woodside proactively provided LGA with further detailed information which addressed LGA's specific topics of interest and feedback, objections or claims related to this EP (see information given 5 December 2023 and 8 October 2024).
- Woodside also emailed LGA to confirm it would shortly resubmit the EP for assessment and reminded LGA that Woodside remained open to receiving feedback (email of 8 October 2024).

Reasonable Period

Woodside has allowed LGA a reasonable period for consultation in the preparation of this EP because:

- A consultation process and period were advised in the initial correspondence to LGA including when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside ultimately allowed LGA over 4.5 months for consultation.
- During the consultation period and following it, when LGA did not provide a response, Woodside proactively sent follow-up emails to LGA to remind LGA of consultation and timeframes on numerous occasions (30 August 2023, 5 December 2023, 8 October 2024).
- LGA has not responded or replied to Woodside's correspondence.
- In this context, Woodside allowed LGA a reasonable period for consultation in preparation of the EP.
- As has been made clear during consultation, Woodside is open to receiving feedback after EP submission and throughout the life of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with LGA is appropriate and adapted to the nature of interests of LGA:

- Woodside published 8 advertisements in national, state and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This is appropriate and adapted to LGA because Woodside notes LGA regularly uses social media as a means to share its views. It also allowed for broad awareness of the activity and consultation.
- Woodside also provided LGA with a link to NOPSEMA's various information sheets and brochures assisting to provide LGA with context around the consultation process (9 August 2023).
- Woodside consulted LGA in the same way that LGA corresponded with Woodside, i.e. by email. Woodside has also provided an alternative method for LGA to provide feedback by offering meetings. This offer to meet for this EP was not taken up by LGA.
- When no response to received from LGA, Woodside proactively sent a follow-up consultation email on 30 August 2023, followed by a proactive letter on 5 December 2023 which addressed previous topics of interest and feedback received from LGA on the Scarborough Project that were relevant to this EP.

Outcomes of Consultation

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were required as LGA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in the EP address the potential impact from the proposed activity on LGA's functions, interests or activities.

Telstra

Summary of information provided and record of consultation for this EP:

- On 12 March 2020, Telstra Corporation Limited as operator and owner of the Fibre Optic Cable Assets (subsequently referred to as 'Telstra') and Woodside Energy Limited signed an agreement to support engagements regarding design of the Scarborough trunkline crossing over the Telstra Fibre Optic Cables.
- Since that time Woodside and Telstra have had regular project engagements on undertaking and executing the project activities.
- On 4 November 2024, Woodside emailed Telstra to provide additional information regarding the specific activities. Woodside attached a Consultation Information Sheet and a map of submarine communication cables relevant to the activity (Record of Consultation, reference 1.40).
- On 18 November 2024, as no response had been received,, Woodside proactively sent a follow-up email reminding Telstra of the opportunity to provide feedback (SI Report, reference 68.1).
- On 18 November 2024, Telstra responded thanking Woodside for the email (SI Report, reference 68.2). Telstra advised it would liaise with its infrastructure team to provide feedback.
- On 27 November 2024, Telstra provided a response to Woodside (SI Report, reference 68.3) which advised:
 - **(1)** As the trunkline appeared likely to cross subsea cables and be where Telstra had plans to install new subsea cables, Telstra's legal and delivery quality management teams should be informed.
 - **(2)** Any crossing of the Telstra subsea cable required agreement between Telstra/InfraCo and Woodside and a disturbance-free zone within a 1 km radius of any Telstra subsea cable should be maintained.
 - **(3)** As the FPU was to be anchored to the seabed, and connecting pipes laid on the sea floor which could impact Telstra's subsea network cables, consideration was required.
- On 4 December 2024, Woodside responded to Telstra (SI Report, reference 68.4) and advised:
 - **(1)** The Scarborough Pipeline Crossing Contract between Telstra and Woodside signed 21 April 2022 acknowledged the proposed route for the pipelay of the Scarborough pipeline crossed the cable(s) owned by Telstra. The pipeline had been constructed in accordance with the agreement and work was expected to be completed by end of 2024. Woodside's primary Telstra contact was copied to this response.
 - **(2)** The agreement included reference to the Safety Zone in connection with a particular Crossing Point that meant the intersecting area was within 20 m either side of the cable(s) and 25 m either side of the Scarborough pipeline at the Crossing Point. To date, in the event of construction / survey work within that area associated with the Scarborough pipeline construction, Telstra had been informed and CMART Requests put in place. The agreement included post-construction completion commitments within the safety zone.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>– (3) The FPU would not be in proximity to any known Telstra infrastructure so no impact potential for Telstra owned assets in the area (considered in Table 4-28 in Section 4.10.6 of the EP).</p>		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Telstra's legal and delivery quality management teams may need to be informed as the trunkline appeared likely to cross Telstra's subsea cables and be in an area where Telstra had plans to install new subsea cables.</p>	<p>(1) Woodside assessment: Woodside has an existing agreement in place with Telstra. Woodside response: The Scarborough Pipeline Crossing Contract signed between Telstra and Woodside acknowledged the proposed route for the pipelay crossed the cable(s) owned by Telstra. The pipeline had been constructed in accordance with the agreement. For awareness, Woodside's primary Telstra contact was copied to this response.</p>	<p>(1) Not required.</p>
<p>(2) Any crossing of the Telstra subsea cable would require an agreement between Telstra/InfraCo and Woodside and a disturbance-free zone would need to be maintained.</p>	<p>(2) Woodside assessment: Woodside's agreement with Telstra acknowledges a disturbance-free zone with regards to any Telstra subsea cables. Woodside response: Woodside advised the agreement included reference to the Safety Zone in connection with a particular Crossing Point. Woodside had informed Telstra of any work within the area and CMART Requests had been put in place. The agreement included post-construction completion commitments within the safety zone.</p>	<p>(2) Not required.</p>
<p>(3) Potential impact with FPU connecting pipes and subsea network cables required consideration.</p>	<p>(3) Woodside assessment: Woodside has considered impact to Telstra's subsea network cable however is not aware of any Telstra infrastructure in the permit area. Woodside response: Woodside advised the FPU would not be in proximity to any known Telstra infrastructure so there was no impact potential for Telstra owned assets in the area. This was considered in Table 4-29 in Section 4.10.6 of the EP.</p>	<p>(3) Communications infrastructure in proximity to the PAA is considered in Table 4-29 in Section 4.10.6 of the EP.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of any objection or claim about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p>	<p>No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).</p>	
--	--	--

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Telstra for the purpose of regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Telstra sufficient information to allow Telstra to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of Telstra because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity and receiving environment, impacts and risks associated with the activity, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure: Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- Woodside also provided the Consultation Information Sheet to Telstra directly, along with additional information tailored to its needs including a map of submarine communication cables relevant to the activity.
- In addition, Telstra has been provided with tailored information regarding the Scarborough Project for the purposes of its role in relation to the design of the Scarborough trunkline crossing over the Telstra Fibre Optic Cables.

Reasonable Period

Woodside has allowed Telstra a reasonable period for consultation in the preparation of this EP because:

- In addition to a 30-day consultation period for this specific EP, Telstra has been engaging with Woodside on the Scarborough Project in a technical capacity since 2020.
- Consultation on this EP commenced 17 months ago in August 2023.
- Woodside and Telstra engaged throughout 2023 and 2024 regarding the Scarborough Project.

Reasonable Opportunity

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Telstra is appropriate and adapted to the nature of interests of Telstra:

- Woodside published 8 advertisements in national, state and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Telstra has been engaging with Woodside on the Scarborough Project in a technical capacity since 2020.
- In addition, Woodside sent Telstra information on the Operations EP and sought feedback.
- In this context, Woodside allowed Telstra a reasonable opportunity for consultation, as evidenced by Woodside's ongoing engagement with Telstra, and Telstra's feedback on 27 November 2024.

Outcome of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Telstra provided feedback regarding the proposed activities in this EP. In line with the intended outcome of consultation as set out in Section 5.2 and Regulation 24, Woodside has:
 - Responded to feedback from Telstra and has assessed the merits of each objection or claim (if any) about the adverse impact of the activities to which this EP relates.
 - Adopted appropriate measures (if any) because of consultation with Telstra.
 - Made no changes or inclusions to the EP as a result of consultation with Telstra because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Vocus

Summary of information provided and record of consultation for this EP:

- On 12 September 2024, Woodside telephoned Vocus to provide background on the Scarborough Operations EP and discuss consultation for the EP. Woodside also asked Vocus to provide the best contact person for consultation material regarding this EP.
- On 12 September 2024, Woodside emailed Vocus advising of the proposed activity (Record of Consultation, reference 1.39) and provided a Consultation Information Sheet, a communication cables map and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 12 September 2024, Vocus responded acknowledging receipt of Woodside's consultation information and advising it would consult internally as there were spur cables that had been built for the Scarborough FPU and Vocus needed to ensure their safety and readiness (SI Report, reference 61.1).
- On 19 September 2024, Vocus emailed and thanked Woodside for the information (SI Report, reference 61.2). Vocus noted that its Highclere active trunk cable was approximately 10km from Well 7. Vocus also:
 - **(1)** Advised there were two spur cables built for the Scarborough FPU in the area that all care should be taken not to interfere with.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> - (2) Advised that with the activity being about 10km from the main trunk cable, the Vocus (Highclere) Cable operated outside of the designated area of operations and as such, Vocus had no comments on the environment plan. - (3) Queried whether Woodside had been supplied with the route position lists for the spur cable and to reach out if not. • On 27 September 2024, Woodside responded thanking Vocus for its feedback (SI Report, reference 61.3). Woodside: <ul style="list-style-type: none"> - (1) Advised Woodside would take care not to interfere with the spur cables built for the Scarborough FPU. - (2) Noted that Vocus had no comments on the EP, due to the Highclere cable operating outside the designated area of operations. - (3) Confirmed it had the necessary information regarding the spur cables at this time. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) The need to take care to avoid interference with the spur cables for the FPU.	(1) Woodside assessment: Woodside is aware of the two spur cables built for the Scarborough FPU and will take care to avoid interference with the cables. Woodside response: Woodside confirmed it would take care to avoid interference with the spur cables.	(1) Communications infrastructure located in the vicinity of the PAP is set out in Section 4.10.6 of the EP and risked assessed accordingly in Section 6.
(2) No comments on the EP due to the Highclere cable operating outside the area of operations.	(2) Woodside assessment: Woodside accepts that Vocus has no comments on the EP. Woodside response: Woodside noted that Vocus had no comments on the EP due to the Vocus cable operating outside of the area of operations.	(2) Communications infrastructure located in the vicinity of the PAP is set out in Section 4.10.6 of the EP and risked assessed accordingly in Section 6.
(3) Enquired whether Woodside had the route position lists for the spur cables.	(3) Woodside assessment: Woodside currently has the necessary information from Vocus regarding the spur cables. Woodside response: Woodside confirmed it had the necessary RPL information at this time.	(3) Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of any objection or claim about the adverse impact of the activity to which the EP relates, as required under Regulation 24.	No additional measures or controls are required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).</p>	
--	--	--

Outcomes of Consultation

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with Vocus for the purpose of Regulation 25 complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given Vocus sufficient information to allow Vocus to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Vocus on 12 September 2024, marking the commencement of consultation on this EP. However, Vocus was already broadly aware of the Scarborough Project as owner and installer of two spur cables for the Scarborough FPU. The Consultation Information Sheet provided to Vocus included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations).
- In addition to the Consultation Information Sheet, Woodside provided Vocus with information tailored to its needs by including a map of submarine communication cables relevant to the activity.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- A consultation period was stated in the initial correspondence to Vocus advising of consultation as well as when consultation closed for the purposes of the preparation of the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside’s methodology allows a 30-day consultation period in the preparation of the EP and Woodside allowed Vocus 30 days for consultation.
- In this context, Woodside allowed Vocus a reasonable period for consultation in preparation of the EP, as evidenced by Vocus’s response on 19 September 2024.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with Vocus is appropriate and adapted to the nature of interests of Vocus:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside phoned Vocus to advise of consultation and to confirm Vocus's preferred consultation method and staff contact.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- Vocus provided feedback regarding the proposed activities in this EP. In line with the intended outcome of consultation as set out in Section 5.2 and Regulation 24, Woodside has:
 - Responded to feedback from Vocus and has assessed the merits of each objection or claim (if any) about the adverse impact of activities to which this EP relates.
 - Adopted appropriate measures (if any) because of consultation with Vocus.
 - Made no changes or inclusions to the EP as a result of consultation with Vocus because appropriate measures are already included in the EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

[Individual 2]

Context

[Individual 2] self-identified as a Relevant Person for this EP on 20 December 2023. In their correspondence, [Individual 2] claimed they were a 'relevant person' by listing their credentials working with Aboriginal people, being a Fellow of the Australian Anthropological Society and undertaking research on Burrup rock art. They also advised that they provided pro-bono advice to FARA and Save Our Songlines.

[Individual 2] publicly states they are a co-founder and current committee member of FARA (FARA website and [Individual 2]'s LinkedIn profile cited in January 2024).^{xlviii} In January 2024, Woodside responded to [Individual 2]'s claims raised in their letter. [Individual 2] has subsequently not re-engaged with Woodside on this EP. In correspondence to [Individual 2], Woodside has offered to meet with FARA.

On 26 May 2024, [Individual 2] attended the Woodside AGM where they stated "I am the co-founder of Friends of Australian Rock Art". A YouTube video of [Individual 2]'s AGM appearance at the AGM is currently posted on FARA's website.^{xlix}

This context is provided in order to demonstrate that, in the circumstances, Woodside has engaged in consultation that is appropriate and adapted to the nature of interest of [Individual 2].

Summary of information provided and record of consultation for this EP:

- On 20 December 2023, [Individual 2] sent an email and letter to Woodside (SI Report, reference 56.1), making the following assertions:
 - **(1)** Woodside was required to consult with them as a relevant person as they had worked as a consultant anthropologist and professional Aboriginal heritage consultant for a wide range of Aboriginal organisations in Western Australia and the Northern Territory, was a Fellow of the Australian Anthropological Society and had provided evidence as an expert witness in numerous Federal Court native title cases since 2012.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(2)** Woodside had availed itself of the BMIEA Agreement 4.6 gag clause which legally prevented native title BMIEA signatories as well as the Murujuga Aboriginal Corporation from objecting to Woodside's destructive activities within the Burrup industrial area.
- **(3)** They were aware of strong opposition in the local community to the continuation of Woodside's activities on the Burrup.
- **(4)** Climate Analytics had estimated that the project would result in around 1.3 billion tonnes of GHG emissions over its lifetime.
- **(5)** In terms of the rock art, it was of particular concern that, as revealed in several recent refereed scientific publications, Woodside was releasing vast quantities of NOX and SOX emissions which had generated very high acid levels which were destroying the rock art patina.
- **(6)** Although the recent Murujuga Rock Art Monitoring Program first year interim report was at a very early stage of its research, it was still able to make very disturbing findings relevant to industrial impacts on the rock art.
- **(7)** They understood Woodside had declined requests by FARA and others to install state of the art scrubber technology in its Burrup facilities.
- **(8)** Impacts on Murujuga petroglyphs and cultural heritage landscape fell under the scope of indirect consequences that would result from the EP and must be assessed in accordance with the approved NOPSEMA Program under the EPBC Act, and separately, as part of the broader environment that must be considered by NOPSEMA in accordance with the Environment Regulations.
- **(9)** Impacts on the opportunities that exist for local communities and custodians in connection with the protection and maintenance of the World Heritage Values of the area.
- **(10)** Requests for peer reviewed evidence of how Woodside was assessing the impacts of the project on Murujuga's Aboriginal cultural heritage.
- **(11)** Explain how Woodside planned to mitigate the impacts of this project on their area of research interest and activities.
- On 12 January 2024, Woodside responded to [Individual 2] (SI Report, reference 56.2) as follows:
 - **(1)** Woodside recognised [Individual 2] was a co-convenor, co-founder and committee member of FARA which, as referenced on the FARA website, held committee meetings monthly. Woodside provided consultation information including a Consultation Information Sheet on this EP to FARA on 9 August 2023 and 30 August 2023.
 - **(1)** As well as directly consulting FARA, Woodside advertised the EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and consultation information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
 - **(1)** The Consultation Information Sheet had been available to members of the public on the Woodside website since 9 August 2023. Woodside noted that [Individual 2] made references in their correspondence about claims they'd found on the Woodside website and suggested that to ensure they received future information about Woodside's EPs they could subscribe to receive information.
 - **(1)** [Individual 2] was informed that in the absence of a response from FARA to Woodside's correspondence and requests for feedback on this EP in August 2023, Woodside proactively reviewed, considered and addressed previous feedback provided by FARA on the Scarborough Project and related EPs, and assessed that feedback in the context of this EP.
 - Woodside provided this to FARA on 5 December 2023 and advised that the consultation period, which had been extended, would close on 20 December 2023. FARA acknowledged it received both the Consultation Information Sheet and the letter on 5 December 2023 in its correspondence on 20 December 2023.
 - Woodside included the Attachment A from the 5 December 2023 letter which had been sent to FARA and included a review of past feedback from FARA on the Scarborough D&C, SIT1 and Seismic EPs and provided assessment and response.

- (1) Based on the Consultation Information Sheet provided to FARA on 9 August 2023, which provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program and proposed mitigation and management measures, and Woodside's substantive feedback on 5 December 2023 addressing previous feedback from FARA, as well as responses raised in FARA's 20 December 2023 letter, FARA had been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
- (1) Woodside considered that based on [Individual 2]'s stated and close connection to FARA and [Individual 2]'s stated use of the Woodside website, they had access to sufficient information to allow an informed assessment of the possible consequences of the proposed activity on [Individual 2]'s functions, interests or activities, along with reasonable time and opportunity, to consult in relation to this EP.
- (2) Woodside took the reference to BMIEA Agreement 4.6 to mean clause 4.8 of the Burrup and Maitland Industrial Estates Agreement (BMIEA) as Clause 4.6 related to financial compensation by the Western Australian government.
 - Woodside did not interpret Clause 4.8 of the BMIEA as preventing Traditional Custodians of Murujuga Aboriginal Corporation (MAC) from objecting to projects in the Burrup industrial area if they had concerns about heritage impacts.
 - Woodside understood that MAC's own interpretation of Clause 4.8 was "The No Objections clause in the BMIEA does not prevent MAC and the contracting parties represented by MAC from objecting to the damage, destruction or any deleterious impact to cultural heritage values within a development footprint"
 - Woodside believed the State Government similarly agreed that this clause did not prevent Traditional Owners from objecting to projects on Murujuga.
- (3) Woodside had consulted extensively with Traditional Custodians in the development of this EP.
- (4) GHG emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, would be presented and assessed in this EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. This EP would assess direct and indirect GHG emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
- (4) The publicly available Scarborough OPP presented GHG emissions estimate calculations for the total expected field life of the Scarborough Project, broken into the different emissions categories.
- (3) It was not clear what recent referred scientific publications were being referred to, however compliance data for the Pluto LNG facility was available online in the Annual Compliance Reports Pluto Annual Compliance Report – Ministerial Statement 757 as amended by Ministerial Statement 850.
- (6) The Murujuga Rock Art Monitoring Program (MRAMP): Summary Monitoring Studies Report 2023 explicitly cautioned against drawing conclusions, noting that data collected in the first year of observation does not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time."
 - Woodside recognised the need for further research and supported the MRAMP and would implement relevant practicable measures resulting from the programme.
- (7) A number of technologies had been assessed by Woodside for emissions control at the Pluto LNG Plant.
 - Pluto LNG's Air Quality Management Plan (AQMP) had been reviewed and approved by the Western Australian Environment Protection Authority (EPA) as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 was consistent with best practice in the context of air emissions control for LNG plants.
 - The AQMP was publicly available on the Woodside website.
- (8) The Scarborough Offshore Project Proposal (OPP – publicly available on the NOPSEMA website) was assessed and subsequently accepted by NOPSEMA, in accordance with regulation 5D of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009*.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (11) Impact and risk assessments in this EP would provide controls that would be in place to manage risks to ALARP and acceptable levels. Mitigation measures relating to impacts onshore at Pluto Train 2 were managed according to the relevant environmental approvals including the Pluto LNG's AQMP.

Ongoing engagement:

- On 7 March 2024, Woodside proactively sent [Individual 2] an email stating that as they had shown an interest in climate-related matters, they might be interested in Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 56.3 and 57.6).
 - The email included links to the CTAP and the ASX Announcement.
 - (1) It also re-iterated that consultation in the preparation of this EP had closed however, demonstrated an openness to engage in further consultation by saying feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - (1) Finally it stated Woodside was available to meet with [Individual 2] to discuss this EP should they be interested.
- On 4 July 2024, Woodside once again proactively emailed [Individual 2] and provided a link to the publicly available EP on the NOPSEMA website (SI Report, reference 56.4). Woodside once again demonstrated an openness to engage in further consultation by advising that it continued to assess and respond to feedback throughout the life of an EP, and that Woodside was available to meet with [Individual 2] over the following month. Based on [Individual 2]'s previous feedback on climate-related matters, Woodside also proactively included a table of specific topics which [Individual 2] might be interested in, and where to find that topic in the EP, including:
 - (4) Information relating to routine and non-routine GHG emissions, including estimated emissions over the life of the facility and assessment of potential climate change impacts, could be found in Section 6.7.6 of the EP.
 - (5, 8, 11) Information about assessment of potential risks/impacts of atmospheric emissions on Murujuga rock art could be found in Section 6.7.7
 - (3, 8) Information about assessment of potential risks/impacts on cultural heritage in Section 6.10 of the EP.
 - (7) Information about atmospheric emissions requirements for onshore processing facilities could be found in Section 6.7.7 of the EP.
- On 8 October 2024, Woodside emailed [Individual 2] to thank them for their feedback and for engaging with Woodside on this EP (SI Report, reference 56.5). Woodside advised it would shortly resubmit the EP to NOPSEMA for further assessment and that as part of the consultation process, Woodside has further assessed the merits of a number of objections and claims raised by [Individual 2]. Woodside reiterated that feedback from relevant persons could continue to be provided, including after consultation for the EP had closed and after an EP had been accepted by NOPSEMA. Woodside:
 - (4) Advised it did not agree with Climate Analytics' emissions estimation. Woodside noted a breakdown of emissions sources extended over 11 pages in the EP, however the total estimated lifecycle GHG emissions associated with the Scarborough project were approximately 880 MtCO₂-e.
 - (5) Acknowledged NO_x and SO_x were emitted in association with Scarborough gas processing onshore and provided an overview of the Department of Water and Environmental Regulation (DWER)-commissioned Ramboll Australia Pty Ltd study on air emissions in the Murujuga airshed. Ramboll (2021) indicated that NO_x loads from industrial sources were estimated to be 13,937 tonnes per year and were forecast to reduce to 12,052 tonnes per year by 2030, and based on estimations in Ramboll (2021) and the Pluto AQMP, it was estimated the Pluto LNG facility would account for 11% of the total estimated 2030 NO_x load in the Murujuga region.
 - Woodside further advised that it did not agree that the statement on its website was factually incorrect. It noted there had been several independent studies and rock art monitoring since the mid-2000s, none of which had conclusively demonstrated a causal link between degradation of rock art and industrial activity. Woodside provided a statement from MRAS regarding the lack of conclusive data currently available and how the MRAS was required to fill the gaps in knowledge. Woodside noted it would continue to assess science on the topic and provide information to MRAS.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (7) Advised that the design of onshore processing facilities was outside the scope of the activity described in the EP; nevertheless, while wet scrubbers or SCR technology might result in an overall reduction in NOx emissions, it also resulted in ammonia emissions. Woodside noted that worldwide, it was aware of SCR being retrofitted to power generation turbines but not LNG mechanical drive turbines. Woodside noted that based on feedback, SCR technology would be reflected as a potential control that was assessed by Woodside in section 6.7.7 of the EP.
- (8) Woodside confirmed onshore atmospheric emissions associated with the onshore processing of Scarborough gas were assessed in Section 6.7.7. of the EP and concluded to contribute only a minor portion to the overall industrial emission airshed load on the Burrup Peninsula. Based on the implemented controls and State regulatory processes including MRAS, which can apply adaptive management and mitigation measures, impacts from indirect air emissions as a result of onshore processing of Scarborough gas were considered Negligible and of an ALARP and Acceptable level.
- (10) Advised that further information on the cultural features and heritage values of the Murujuga Cultural Landscape had been included in the latest version of the EP. Woodside confirmed the EP contained a thorough review of published studies and literature on the topic, and that it would continue to assess science as it became available and provide information it became aware of to MRAS.
- (11) Advised it did not agree there was conclusive scientific evidence that onshore emissions associated with processing of Scarborough gas would impact Murujuga rock art. Woodside confirmed it had committed to supporting the MRAS and MRAMP and noted that in accordance with State regulatory conditions, it had developed a Best Practice Report for the Pluto LNG Facility, and the Pluto AQMP, to demonstrate that best available practicable and efficient technologies were used to minimise and monitor air emissions. The reports were updated in 2019 before being approved by the Minister for Environment in 2020 on advice of the EPA. Woodside further provided examples of best practice technologies implemented in Pluto LNG and Pluto LNG (Train 2) design and operation.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) [Individual 2] was a relevant person.</p>	<p>(1) Woodside assessment: Woodside has applied its relevant persons methodology following [Individual 2]'s self-identification and has considered [Individual 2] as a relevant person for this EP. Woodside response: Woodside directly responded to [Individual 2]'s feedback, objections and claims. Woodside also included a copy of the Consultation Information Sheet, though noted that [Individual 2]'s feedback demonstrated their familiarity with Woodside's website and that consultation information for this EP had been available on the website since August 2023. Woodside acknowledged [Individual 2]'s close connection to FARA and noted Woodside had been consulting FARA on this EP since August 2023.</p>	<p>(1) Woodside's assessment of [Individual 2] as a relevant person is described in Appendix F, Table 1 of the EP.</p>
<p>(2) BMIEA Agreement 4.6 preventing objection to Woodside activities.</p>	<p>(2) Woodside assessment: Woodside takes the reference to mean clause 4.8 of the Burrup and Maitland Industrial Estates Agreement (BMIEA) and does not interpret clause 4.8 to prevent Traditional</p>	<p>(2) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>Custodians of MAC from objecting to projects in the Burrup industrial area if they have concerns about heritage impacts.</p> <p>Woodside response: Woodside advised it had taken the reference to mean clause 4.8 of the BMIEA and it understood both MAC and the State’s interpretation was that the clause did not prevent Traditional Owners from objecting to projects on Murujuga.</p>	
<p>(3) Concerns regarding damage to the cultural landscape and rock art and impacts on Traditional custodians who would be directly impacted (emissions, facilities) and indirectly impacted (noise, view, dust).</p>	<p>(3) Woodside assessment: Woodside has consulted extensively with the Traditional Custodians of Murujuga, through their representatives, for this EP. Woodside response: Woodside confirmed it had consulted extensively with Traditional Custodians of Murujuga, through their representatives, and had included the appropriate management of cultural heritage on Murujuga, and all matters raised were directly addressed through the EP. Woodside noted it did not provide comment on the content of consultation undertaken with Traditional Custodians, which may include confidential or culturally sensitive material.</p>	<p>(3) Consultation with Traditional Custodians of Murujuga is described in Appendix F, Table 2 of the EP.</p>
<p>(4) Estimations from Climate Analytics that the project would result in about 1.3 billion tonnes of GHG emissions.</p>	<p>(4) Woodside assessment: Woodside does not agree with Climate Analytics’ GHG emissions estimations regarding the Scarborough Project. Woodside response: Woodside confirmed that a breakdown of emissions sources was provided in Section 6.7.6 of the EP, and that the total estimated lifecycle GHG emissions associated with the project were approximately 880 MtCO₂-e.</p>	<p>(4) Estimated sources and volumes of GHG emissions associated with the Scarborough Project are set out in Section 6.7.6 of the EP and summarised in Table 6-22.</p>
<p>(5) It was of particular concern that, as revealed in recent scientific publications, Woodside was releasing vast quantities of NOX and SOX emissions, and a Woodside website statement that there was no peer reviewed scientific evidence which identified impacts on Burrup rock art from industrial emissions associated with LNG production was factually incorrect.</p>	<p>(5) Woodside assessment: Woodside supports further research on the impacts of emissions on rock art and is taking reasonable and practicable measures to minimise emissions. Woodside response: Woodside advised it was not clear what “recent referred scientific publications” referred to but provided an online link to compliance data for the Pluto LNG facility. Woodside noted that it had also advised FARA that reports published in relation to the Murujuga Rock Art Monitoring Program did “not permit</p>	<p>(5) The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time”.	
(6) Murujuga Rock Art Monitoring Program: Summary Monitoring Studies Report 2023 findings regarding the PH of rock surfaces.	(6) Woodside assessment: Woodside considers that no meaningful conclusions can be drawn from this data at this time, given the Summary Monitoring Studies Report notes “data collected in the first year of observation do not permit any firm conclusions to be drawn about trends in rock surface condition and any relationship to air quality over time”. Woodside response: Woodside noted that the report cautioned against drawing conclusions from the data during the first year of observation, and that it was incorrect to state that the publications supported the hypothesis that industrial emissions were impacting rock art through increased acidification.	(6) The potential impacts from indirect emissions associated with onshore processing of Scarborough gas are assessed in Section 6.7.7 of the EP.
(7) Requests by FARA and others for Woodside to install scrubber technology in its Burrup facilities.	(7) Woodside assessment: Woodside assesses wet scrubber technology as a potential control in the EP. Woodside response: Woodside noted that design of onshore processing facilities was outside the scope of this EP, and it was not aware of instances where SCR was retrofitted to LNG mechanical drive turbines. Woodside also noted that while SCR might result in a reduction of NOx and SOx, it resulted in ammonia emissions which were of concern to MRAMP. Woodside advised that as a result of feedback, it had assessed SCR as a potential control in the EP.	(7) Based on feedback, assessment of SCR technology as a potential control has been included in Section 6.7.7 of the EP.
(8) Impacts on Murujuga petroglyphs and cultural heritage landscape fell under the scope of indirect consequences that would result from the EP and must be assessed in accordance with the approved NOPSEMA Program under the EPBC Act.	(8) Woodside assessment: Impacts from indirect air emissions associated with the onshore processing of Scarborough gas are assessed as Negligible and of an ALARP and Acceptable level in the EP. Woodside response: Woodside confirmed indirect air emissions associated with the processing of Scarborough gas were assessed in the EP and were concluded to contribute only a minor portion of the overall industrial emission airshed load on the Burrup Peninsula. Atmospheric emissions within the Murujuga airshed	(8) Routine Atmospheric Emissions: Offshore, and Indirect Emissions from Gas Processing Onshore are assessed in Section 6.7.7 of the EP.
(9)	(9)	(9)

<p>Impacts on the opportunities that exist for local communities and custodians in connection with the protection and maintenance of the World Heritage Values of the area.</p>	<p>Woodside assessment: There will be no additional impact associated with the processing of Scarborough gas.</p> <p>Woodside response: Woodside advised there would be no additional impact associated with the processing of Scarborough gas, which occurred within the footprint of existing Woodside LNG processing facilities.</p>	<p>Not required.</p>
<p>(10) Peer-reviewed evidence of how Woodside is assessing impacts on Murujuga’s Aboriginal cultural heritage.</p>	<p>(10) Woodside assessment: The EP contains a review of published literature and studies and Woodside continues to assess science on this topic.</p> <p>Woodside response: Woodside advised further information on the cultural features and heritage values had been included in the latest version of the EP, which also contained a thorough review of published studies. Woodside confirmed it would continue to assess science as it became available.</p>	<p>(10) The cultural features and heritage values of the Murujuga Cultural Landscape are described in Section 4.9.5 of the EP.</p>
<p>(11) Explanation as to how Woodside was mitigating the impacts of the project on [Individual 2]’s area of interest.</p>	<p>(11) Woodside assessment: Woodside does not agree there is conclusive scientific evidence that onshore emissions associated with processing of Scarborough as will impact Murujuga Rock Art.</p> <p>Woodside response: Woodside confirms it supports the MRAS and MRAMP. To comply with State regulatory conditions, operators were also required to implement a number of controls related to air emissions. Woodside also advised its Best Practice Report and Pluto AQMP had been approved as demonstrating the best available practicable and efficient technologies to minimise and monitor air emissions.</p>	<p>(11) Not required.</p>
<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside has assessed the merits of any objection or claim about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>The measures and controls described within this EP address the potential impact from the proposed activities on [Individual 2]’s functions, interests or activities.</p>

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations and consultation with [Individual 2] for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given [Individual 2] sufficient information to allow [Individual 2] to make an informed assessment of the possible consequences of the activity on the functions, interests or activities of [Individual 2] because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. [Individual 2] self-identified on 20 December 2023, marking the commencement of consultation on this EP. Woodside responded to [Individual 2]'s feedback on 12 January 2024 and provided a copy of the Consultation Information Sheet which set out:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timing of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Noted that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).
- Woodside has addressed all feedback, claims or objections raised by [Individual 2] in their 20 December 2023 letter in Woodside's 12 January 2024 response. Accordingly, Woodside has provided [Individual 2] with sufficient information for [Individual 2] to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- Woodside proactively reminded [Individual 2] about the ability to provide feedback on this EP and given [Individual 2]'s interest in climate-related matters, gave [Individual 2] information on Woodside's Climate Transition Action Plan and 2023 Progress Report (email of 7 March 2024).
- Woodside again reminded [Individual 2] that they could provide feedback on this EP and proactively provided [Individual 2] with a link to the full EP when it was published on NOPSEMA's website (email of 4 July 2024). Woodside also provided specific references within the EP that addresses areas of interest identified by [Individual 2].
- On 8 October 2024, Woodside also emailed [Individual 2] to confirm it would shortly resubmit the EP for assessment and reminded [Individual 2] that Woodside remained open to receiving feedback.

Reasonable Period

Woodside has allowed [Individual 2] a reasonable period for consultation in the preparation of this EP because:

- Consultation for this EP commenced 17 months ago when the Consultation Information Sheet for this EP was publicly available on the Woodside website. [Individual 2] has shown familiarity with the website and the activities to which this EP relates as evidenced in their consultation feedback to Woodside
- [Individual 2] self-identified on the final day of the extended 4.5-month consultation period, indicating awareness of the consultation period.
- As has been made clear during consultation with [Individual 2], Woodside is open to receiving feedback after EP submission and throughout the life of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- [Individual 2] has not responded to any of Woodside's correspondence addressing their feedback or claims or objections. The consultation process must be pragmatic and able to be complied with. A titleholder is not required to wait forever for consultation to close.
- The above confirms a reasonable period has been provided.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with [Individual 2] is appropriate and adapted to the nature of interests of [Individual 2] because:

- [Individual 2] self-identified for this EP, demonstrating awareness of the activity and sufficient opportunity to gain an understanding of the social, economic and cultural features of the environment to make an informed assessment of the possible consequences of the activity on their functions, interests or activities.
- Woodside published 8 advertisements in national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity and also of consultation.
- Woodside consulted in the same way as [Individual 2] consulted, i.e., via email. Woodside has also provided an alternate method for [Individual 2] to provide feedback by offering meetings. The offer for meeting has not been taken up by [Individual 2].
- Following publication of the EP on NOPSEMA's website, Woodside proactively provided [Individual 2] with correspondence on climate-related matters and directed them to the sections of the EP which contain additional information relevant to what Woodside understands to be topics of interest to [Individual 2].

Outcomes of Consultation

The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- [Individual 2] provided feedback or objections or claims about the adverse impact of the proposed activities to which this EP relates. In line with the intended outcome of consultation as set out in Section 5.2 and Regulation 24, Woodside has:
 - Responded to feedback from [Individual 2] and has assessed the merits of any objections or claim about the adverse impact of activities to which this EP relates.
 - Adopted appropriate measures (if any) because of consultation with [Individual 2].
 - Based on [Individual 2]'s feedback, assessed the feasibility of wet scrubber technology in Section 6.7.7. of the EP. No new measures were adopted as a result of [Individual 2]'s feedback. However, as a result of consultation, Woodside has updated its EP to include assessment of wet scrubber technology.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.

Save Our Songlines (SOS) and / or [Individual 3] and / or [Individual 4]

Context

Woodside understands [Individual 4] is a Kuruma Mardudhunera woman and a Traditional Custodian of Murujuga. [Individual 3] is a Mardudhunera woman and a Traditional Custodian of Murujuga. SOS is an organisation formed by [Individual 4] and [Individual 3]. Woodside understands that the views expressed by SOS, [Individual 4] and [Individual 3] are the same, and has

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

consulted with SOS, [Individual 4] and [Individual 3] on this basis since at least early 2022. This approach has not been disputed by SOS, [Individual 4], [Individual 3] or their legal representative.

- [Individual 4], [Individual 3] and SOS have been consulted in their individual Traditional Owner and NGO capacities. Notably:
 - [Individual 4], [Individual 3] and SOS have been consulted in their capacities as NGOs who have a fundamental objection to the Scarborough Project and seek to pause or stop the Scarborough Project or “Stop Scarborough Gas” (Ref for example SOS website; 14 March 2023 meeting; 4 October 2023 meeting; Individual 3’s protest outside the Woodside building December 2023; correspondence May 2024).
 - [Individual 4] has indicated she is a Kuruma Mardudhunera woman and [Individual 3] has indicated she is a Mardudhunera woman. Woodside has consulted with the Kuruma and Mardudhunera people including through consultation with MAC, Wirrawandi Aboriginal Corporation (WAC), Ngarluma Aboriginal Corporation (NAC) and Robe River Aboriginal Corporations. Both [Individual 4] and [Individual 3] have been consulted in their capacities as Traditional Custodians of Murujuga in so far as their interests relate, in accordance with Indigenous tradition, to spiritual and cultural heritage and values. Further, the results from an ethnographic heritage assessment undertaken for the Scarborough Project development footprint identified no ethnographic sites, values or traditional interests relevant to this EP or the Scarborough Project (Ref MAC consultation).
- As to individual interests:
 - Woodside has addressed in this EP, topics expressed to be of interest to [Individual 4] and [Individual 3]. Controls that Woodside has either updated or implemented as a result of consultation with [Individual 4] and [Individual 3] have been discussed with them and their views have been provided on them.
 - [Individual 4] has been invited to all consultation meetings and has been provided opportunity to consult. Despite this, she has not engaged in consultation in person since 25 July 2023 and, despite being invited, did not attend consultation meetings on 12 September 2023 or 4 and 5 October 2023. Woodside has made enquiries directly to [Individual 4] by email, phone calls and text messages and has sought confirmation from [Individual 3] and the lawyers Woodside understood were acting for [Individual 4]. [Individual 4] has declined to attend meetings.
 - During correspondence, in Court affidavits and at meetings with [Individual 4] and [Individual 3] (in so far as [Individual 4] attended those meetings), [Individual 4] and [Individual 3] have expressed a deep and emotional interest in topics they have covered. They have provided information to Woodside about “visions” that come to them individually (Ref for example 14 March 2023 and 12 September 2023 meetings), information that comes to them from ancestors from the grave [Ref for example 4 October meeting], messages that are communicated to them individually from Murujuga rocks [Ref for example 14 March 2023 meeting] and to their ability to listen and speak on behalf of all plants and animals [Border Affidavit 7 Sept 2023]. Stories about Songlines have been communicated to Woodside as being “my stories” and Songlines have been expressed as being personal, as expressed in consultation [for example 4 October 2023]. Songlines have also been expressed to Woodside as having been recent and individually held, rather than ancient, group Songlines, passed down in community [25 July 2023 meeting]. For example, [Individual 4], [Individual 3] and SOS expressed words to the effect that the whales is a “big dreaming story [they] just finished” [25 July 2023 meeting]. This may have been what was referenced as a being a first proposed response by video of storytelling generally and of storytelling on-Country [Ref EDO emails 25 July 2023 and 9 August 2023]. [Individual 4], [Individual 3] and SOS later declined to provide the videos. In addition, a whale Songline was expressed to Woodside as having been recently envisioned by [Individual 3] when she was doing certain activities at a recent visit to Rosemary Island [Ref for example 12 September and 4 October meetings – sensitive woman’s only information]. Information has been expressed along the lines of being “my story”, “my Songline” [Ref 12 September and 4 October 2023 meetings].
 - In circumstances where it has been expressed to Woodside that these stories and interests are deeply personal and personally emotionally connected to [Individual 4] and [Individual 3], they are interests that are individual. They have not been expressed by [Individual 4] and [Individual 3] as being stories or connections that are communal or are held more broadly by Traditional Owner groups. Indeed, other Traditional Owner groups consulted by Woodside have indicated a position to the effect that it is very unlikely that cultural stories and values can be known only to individuals within a community. This is consistent with the sentiment expressed in [Individual 3]’s statements from 2017 when she was on the Board of MAC to the effect that: “MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

spiritual and cultural voice and with strong cultural integrity... [A]dvice given by individuals ... may not reflect the current and more valid cultural leadership ... [of MAC]”.

Ethnographic surveys undertaken by Traditional Owner groups, as well as continuing engagements with those groups, have similarly indicated there are no specific values and interests at risk of harm in the operational area or EMBA for this EP. In these circumstances, the interests conveyed by [Individual 4] and [Individual 3], while respected by Woodside appear to be individual interests and presented in an individual capacity, rather than interests held by a community.

- Consistent with the indications from other Traditional Owner groups, Woodside is not aware of any other individual interests of this nature (and no other individual First Nations persons have indicated to Woodside that they have any such individual or personal interests).
- Consistent with this position, [Individual 4], [Individual 3] and SOS have expressly stated to Woodside that their views and positions differ from that of MAC and other elders. In addition, Woodside has received communications, strong warnings and information from authorised Traditional Owner groups expressing a view that [Individual 4], [Individual 3] and SOS do not speak for them and [Individual 4], [Individual 3] and SOS views are not held by the communities. [Ref for example; emails from Woodside 3 October 2023].

Conduct in consultation:

- The process of consultation has limits. It is a statutory obligation that must be understood in a practical and reasonable way so that it is capable of performance. It cannot be one that is incapable of being complied with within a reasonable time. The consultation scheme must operate in a way that a titleholder will be able to, with reasonable diligence, discharge its obligation to consult. The consultation obligation is an obligation that must be capable of practical and reasonable discharge by the person upon whom it is imposed. Consultation does not require consent. In carrying out consultation, titleholders are not required to wait indefinitely for a response.
- During consultation, [Individual 4], [Individual 3] and SOS have made serious statements including that Woodside has caused delays in meetings, has misrepresented information, is disrespectful, discriminatory and has breached protocols. In each instance, Woodside has expressed concern that [Individual 4], [Individual 3] and SOS have formed these perceptions of consultation, and Woodside has taken time to address and clarify the issue in each instance. Despite challenging circumstances, Woodside personnel have maintained professionalism and integrity in genuine efforts to consult with [Individual 4], [Individual 3] and SOS during all consultation efforts, which have been occurring since at least 2022.
- Woodside has demonstrated a genuine openness to consult, provide and listen to information. In most instances, meetings have opened and closed amicably but, during the progress of the meeting, Woodside employees have often been subjected to hostile, offensive language and behaviours, placing Woodside personnel in unacceptable situations. This includes recent demands to meet on Rosemary Island, where cultural safety concerns were raised by the recognised Traditional Custodians. Woodside does not consider these outcomes to be aligned with the consultation requirement in circumstances where Woodside has fulfilled its obligations under regulation 25 of the Environment Regulations.
- Woodside has made clear to [Individual 4], [Individual 3] and SOS that consultation is not to be used by parties as a mechanism to stall and delay approvals [Ref Woodside 17 April 2023 letter], especially in circumstances where parties (as in this instance) have publicly stated a fundamental objection to the Scarborough Project and stated publicly an aim including one which is to stop or pause the Scarborough Project (most recently by email in May 2024).
- We note that [Individual 3] has actively been involved in public protests outside the Woodside building (for example December 2023).
- We also note that [Individual 3] has featured on Facebook posts made by the Australian Conservation Foundation indicating [Individual 3] has a connection with ACF.

This context, as well as the notes regarding historic consultation are important as they inform the way Woodside has approached consultation for this EP and demonstrate that the consultation process is appropriate and adapted and to nature of interests of SOS, [Individual 3] and [Individual 4].

Summary

Since at least 2022, Woodside has provided information to [Individual 4], [Individual 3] and SOS on the Scarborough Project to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities in their Traditional Owner and NGO capacities. While activities related to this EP have been discussed during consultation since that time

(summarised in the table of feedback referred to in the bulleted list below), information specific to this EP has been provided to [Individual 4], [Individual 3] and SOS as set out below. This information has been sufficient to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities via:

- The Consultation Information Sheet publicly available on the Woodside website since August 2023.
- PowerPoint slides about this EP were available for consultation at meetings on 25 July 2023, 12 September 2023, 4 and 5 October 2023 and the meetings cancelled by [Individual 4], [Individual 3] and SOS of 20 December 2023 and 16 February 2024.
- The Consultation Information Sheet and the Summary Information Sheets were provided to [Individual 4], [Individual 3] and SOS by email on 3 September 2023, 22 November 2023, 27 November 2023, 13 December 2023, 19 December 2023, 21 December 2023, 13 February 2024.
- The Consultation Information Sheet for this EP was provided to, and taken by [Individual 4], [Individual 3] and SOS at the face-to-face meeting in Karratha on 12 September 2023.
- To facilitate consultation on this EP, a table of topics of interest and feedback previously provided by [Individual 4], [Individual 3] and SOS on other Scarborough EPs and Woodside's assessment of relevance to this EP and proposed controls for comment and feedback by [Individual 4], [Individual 3] and SOS was provided to [Individual 4], [Individual 3] and SOS by email on 27 November 2023, 13 December 2023, 19 December 2023, 21 December 2023 and 13 February 2024.
- A video describing the floating production unit and the Scarborough Project was emailed to [Individual 4], [Individual 3] and SOS on 19 December 2023, 13 February 2024.

The method of consultation in relation to the broader Scarborough project including this EP has been informed by [Individual 4], [Individual 3] and SOS's preferences and has included consultation meetings held on-Country but also online when requested by [Individual 4], [Individual 3] and SOS. Most recently (in April 2024), SOS and [Individual 3] have stated that consultation is only to occur in writing. Since that time, Woodside has followed this preference.

Woodside has confirmed to SOS, [Individual 3] and [Individual 4] that Woodside been available to meet specifically in relation to this EP since 3 September 2023. When no response was received from SOS, [Individual 3] or [Individual 4], Woodside followed up to confirm Woodside is open to consult on this EP on 22 November 2023, 27 November 2023, 13 December 2023, 19 December 2023 seeking a time to meet. A meeting was agreed and confirmed for 20 December 2023. That meeting was cancelled by EDO (who we understand to be SOS, [Individual 3] and [Individual 4]'s lawyers) and [Individual 3] (during which EDO confirmed it was now only representing [Individual 3]).

Aside from the cancelled meeting for this EP, [Individual 3] and EDO had not taken up Woodside's offer for a face-to-face consultation meetings and have otherwise not made themselves available to meet. [Individual 4] and SOS have not provided any responses to Woodside's offers to consult or for notifications about consultation and Woodside's confirmation it is open to receiving feedback, claims and objections on the EP. Woodside repeatedly advised EDO, SOS, [Individual 3] and [Individual 4] that consultation for the preparation of this EP would close on 20 December 2023. Regardless of consultation closing, Woodside communicated availability to meet with SOS, [Individual 4] and [Individual 3] to discuss this EP or to receive and consider further claims or objections from SOS, [Individual 4] and [Individual 3]. Following further consultation correspondence, Woodside, SOS and [Individual 3] agreed to meet face-to-face with [Individual 4] and EDO on 16 February 2024. This meeting was also cancelled by EDO, SOS, [Individual 3] and [Individual 4] (Woodside had been advised [Individual 4] was attending the meeting despite EDO not representing her).

On a number of occasions, Woodside has confirmed to [Individual 4], [Individual 3] and SOS the purpose of consultation and has provided NOPSEMA's Brochure "Consultation on offshore petroleum environment plans", Guideline, "Guideline: Consultation in the course of preparing an environment plan" and Policy "Draft policy for managing gender-restricted information PL2098" [Ref for example: email 7 June 2023].

In meetings and correspondence:

- [Individual 4], [Individual 3] and SOS have confirmed that, since around 2022, they have received and read the Scarborough Project EP materials (most recently 4 October 2023).
- [Individual 4], [Individual 3] and SOS have raised specific issues and displayed an understanding of the activities under this EP as well as the broader Scarborough Project. (Ref Woodside 29 March 2023 email; 27 July 2023 email; meetings on 25 July 2023; 12 September 2023; 4 October 2023).

Page 512 of 919

Uncontrolled when printed. Refer to electronic version for most up to date information.

- Since around 2022, [Individual 4], [Individual 3] and SOS have been represented by the Environment Defenders Office (EDO), a legal team with experience in oil and gas projects and EPs, who are experienced in representing clients who, in accordance with Indigenous tradition, have cultural and spiritual values and who wish to consult on environmental matters.
- Objections, claims and topics relevant to [Individual 4], [Individual 3] and SOS and addressed by Woodside, were initially focused on Murujuga and included a focus on land-based impacts to Murujuga rock art, removal of Murujuga rock art, air emission impacts on Murujuga rock art, restriction to sites on the Burrup Peninsula and to plants and animals of Murujuga (Ref letter to Woodside 6 June 2022; letter to NOPSEMA 26 September 2022). In 2023, their focus shifted to an interest in Sea Country and marine plants and animals (Ref for example Second Border Affidavit dated 7 September 2022). As of mid-September 2023, they have identified Rosemary Island (near the Burrup Peninsula, and not near the EMBA or operations area) as being a place of particular cultural significance. Notably, the Second Border Affidavit dated 7 September 2023 stated that [Individual 4], [Individual 3] and SOS have information to share with Woodside and this information “needs to be shared at the appropriate place, namely on-Country”. However, the Second Border Affidavit did not identify Rosemary Island as being a culturally significant location or the only location at which that information could be shared with Woodside.
- During consultation, objections, claims and topics have been unclear or inconsistent in some instances – in one meeting [Individual 3] indicated her concern was not pygmy blue whales (PBW) (a focus of EP noise controls due to PBW distribution and behaviour) but humpback whales (12 September 2023). At the next meeting, Woodside was criticised for reflecting a position that humpback whales were a topic of specific interest to [Individual 4], [Individual 3] and SOS (4 October 2023). Generally speaking, [Individual 3] has stated that whales carry important Songlines, the whale Dreaming, and connection between land and sea (Second Border Affidavit dated 7 September 2023). This EP contains several controls to manage potential risks and impacts to whales to ALARP and acceptable levels.
- Throughout consultation, it has been made clear to Woodside that [Individual 4], [Individual 3] and SOS hold a fundamental objection to the Scarborough Project and their preference is for the Scarborough Project to be stopped (Ref: 14 March 2023; 12 October 2023 meetings; SOS website; 9 May 2024 consultation correspondence).
- Throughout consultation, [Individual 4], [Individual 3] and SOS have continued to state that they have further information they wish to tell Woodside and that they say Woodside requires for its EPs. However, despite Woodside offering ample opportunities for consultation, including online and in person on-Country, [Individual 4], [Individual 3] and SOS have expressly refused to provide that information to Woodside (Ref most recently February 2024 consultation correspondence).
- On a number of occasions, [Individual 4], [Individual 3] and SOS have declined to provide the information to Woodside but have been prepared to provide the information publicly (Affidavits of Jessica Border September 2023) or offered to provide the information to others (Ref: letter to NOPSEMA 26 September 2022; letter to NOPSEMA 4 October 2023). Most recently, SOS and [Individual 3] have stated they will only provide information in writing (April 2024 consultation correspondence).
- Woodside has attended all meetings with SOS, [Individual 3] and [Individual 4] in listening mode to hear from [Individual 4], [Individual 3] and SOS and also in presentation mode, ready, willing and able to present and provide information on the activities proposed under the EP as well as on the broader Scarborough Project. In those meetings, Woodside has listened to items and topics raised by [Individual 4], [Individual 3] and SOS and has prepared and brought material in the form of presentations, tables, maps and video to share with [Individual 4], [Individual 3] and SOS. (Ref meetings on 14 March 2023; 25 July 2023; 12 September 2023; 4 October 2023 and presentations prepared for those meetings).
- During meetings, Woodside has discussed with [Individual 4], [Individual 3] and SOS, the controls Woodside has in place to manage topics relating to potential impacts and risks relating to spiritual and cultural connections and values that Woodside understands are relevant to [Individual 4], [Individual 3] and SOS. Woodside has also attended ready, willing and able to answer questions and provide additional information as appropriate and when requested. In a number of instances, despite confirmation that Woodside would present on all of the activities under the Scarborough Project, [Individual 4], [Individual 3] and SOS expressly told Woodside that they did not want to hear from Woodside on the Scarborough Project activities and instead directed Woodside to only discuss or present on specific aspects of each EP. Despite that direction, at some of those meetings, [Individual 4], [Individual 3] and SOS raised queries that related more broadly to other activities in the Scarborough Project. Woodside provided responses and information in relation to those questions (Ref: meetings and following correspondence on 14 March; 25 July; 12 September; 4 October 2023).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Controlled Ref No: SA0006AF0000022

Revision: 3

Page 513 of 919

Uncontrolled when printed. Refer to electronic version for most up to date information.

- As part of consultation, Woodside has also taken time to show [Individual 4], [Individual 3] and SOS how the information [Individual 4], [Individual 3] and SOS have provided during consultation has been incorporated into Woodside's EPs and how Woodside has proposed control measures to manage potential impacts and risks to topics Woodside understands are relevant to them, including to request any input by [Individual 4], [Individual 3] and SOS into the proposed control measures or any other available measures. [Individual 4], [Individual 3] and SOS have provided input in some cases and have otherwise expressed views in relation to the control measures. In some instances, in response to queries seeking their views, [Individual 4], [Individual 3] and SOS have explicitly stated that they do not have any views to share with Woodside on the control measures (12 September; 4 October meetings).
- In a number of instances, [Individual 4], [Individual 3] and SOS have indicated an impossibility to provide information to Woodside – in that they cannot yet, or that it is not possible to provide the information. For instance they have made statements to Woodside to the effect that there is information that they do not yet know and that they don't know when they will know (for example, information that the Murujuga rocks have not yet disclosed to them) (Ref 14 March 2023) or information that they will find out from animals who speak to them (Second Border affidavit Sept 2023 para 11) as well as information that comes to them from time-to-time in visions (12 September 2023).
- During consultation, consistent with NOPSEMA's guidance and suggestions, Woodside has asked [Individual 4], [Individual 3] and SOS on a number of occasions whether there are other individuals who ought to be consulted. [Individual 4], [Individual 3] and SOS have made various references to MAC. In some instances, [Individual 4], [Individual 3] and SOS did not provide an answer to the question of their view on others Woodside ought to consult (email to EDO 3 August 2023 and EDO response 9 August 2023). In 2023, [Individual 4], [Individual 3] and SOS stated words to the effect that "it is not (their) responsibility to identify relevant persons on Woodside's behalf and to distribute information to them". Consultation with [Individual 4], [Individual 3] and SOS has not otherwise identified any other groups or individuals who, in accordance with Indigenous tradition, may have spiritual and cultural connections to the environment that may be affected by the activity, or whom may have other communally held functions, activities or interests (Ref example: Woodside email 15 Sept 2023 email; EDO email 19 September 2023).
- In correspondence and meetings, Woodside has questioned what it has perceived to be general statement by SOS and [Individual 3] that they have relevant information to provide Woodside and then, when given the opportunity, a general refusal by [Individual 4], [Individual 3] and SOS to provide information to Woodside, including at meetings where [Individual 4], [Individual 3] and SOS had confirmed they would provide information (25 July 2023; 12 September 2023; 4 October 2023; December 2023).
- Throughout consultation, [Individual 4], [Individual 3] and SOS have expressed a general dislike and mistrust of Woodside and a reluctance to provide Woodside with information, stating in a meeting in 2023 words to the effect: "I don't trust any of you. There is no trust here, trust me lady, there is nothing" (Ref 4th October 2023 meeting).
- Given those circumstances, and with a genuine aim of attempting to manage potential impacts and risks to [Individual 4], [Individual 3] and SOS and to more broadly understand their functions, interests or activities, as well as topics that might relate to a fundamental objection to the Scarborough Project and in accordance with Indigenous tradition, [Individual 4], [Individual 3] and SOS's potential spiritual cultural and connections and values; Woodside has reviewed publicly available information. This has included reviewing [Individual 3]'s statement made to the Commonwealth Senate Standing Committee on Environment and Communications (Ref Opening Statement from Miss [Individual 3], Chairperson Murujuga Aboriginal Corporation – Public Hearing, Perth – 20 April 2017), information provided by [Individual 4], [Individual 3] and SOS on their SOS website, submissions made by [Individual 4], [Individual 3] and SOS to various Commonwealth government bodies (Ref: February 2022 and 19 October 2022 s10 ATSIHP Act applications) the United Nations (Ref: UN letter 22 September 2022), the Woodside Board (Ref June 2022), various government bodies (Ref NOPSEMA letters including 22 September 2022), statements, questions and answers made at Annual General Meetings held by Woodside (Ref transcript Question time 19 May 2022; 2023 and 2024), in proceedings against NOPSEMA and Woodside in the Federal Court (Ref *[Individual 3] v NOPSEMA*; Border Affidavits dated August and September 2023) and in various Appeal Convenor processes. Topics, claims and objections in that information have been included in the EP where relevant and in brief, provide the following insights:
- Information set out in the publicly available information shows that [Individual 4], [Individual 3] and SOS have an understanding of the Scarborough Project and the activities involved in the Scarborough Project and this EP.
- [Individual 3] has expressed a view that MAC holds the key responsibility for the stewardship and management of the Land and Sea Country according to the Aboriginal Lore and Culture; MAC's work includes collecting environmental and heritage records to assist with compiling data (building a library) relevant to Law and Culture on sacred sites, including 42

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

islands of the Dampier Archipelago; MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity. This means that some decisions or advice given by individuals previously, may not reflect the current and more valid cultural leadership that governs today (Ref: 20 April 2017 Opening Statement). This position is at odds with the position being put forward by [Individual 4], [Individual 3] and SOS in consultation with Woodside.

- [Individual 4], [Individual 3] and SOS hold a fundamental objection to the Scarborough Project (for example: SOS website; consultation correspondence in April 2024).
- On a number of occasions, [Individual 4], [Individual 3] and SOS have declined to provide the information to Woodside and have instead provided information publicly (Affidavits of Jessica Border September 2023) or offered to provide the information to others (Ref: letter to NOPSEMA 26 September 2022; letter to NOPSEMA 4 October 2023). [Individual 3] has confirmed she has publicly protested against Woodside, outside the Woodside building (December 2023).

Consultation is complete:

- Consultation under regulation 25 of the Environment Regulations is complete because sufficient information, a reasonable period of time and reasonable opportunity have been provided to [Individual 4], [Individual 3] and SOS in their individual Traditional Owner and NGO capacities.
- The fact that relevant persons have requested further consultation does not mean that Woodside has not met its obligations under regulation 25 of the Environment Regulations. This is underscored in the current circumstances where further consultation is not reasonable and is not required in order to comply with Regulation 25.
- Persons being consulted have stated they have additional information they wish to share with Woodside for Woodside's EPs (Ref Federal Court proceedings) but then declined to share this information.
- Persons being consulted have stated that information has not yet been revealed to them, is not yet known to them, it will be revealed 'in time', but also they do not know when it will be revealed to or known by them (for instance where the wisdom of Murujuga rocks have not yet spoken to them; when animals have not yet provided information to them or where they at various times, receive information in visions) (Ref meetings on 14 March 2014 and 12 September 2023; Border Affidavit dated 17 August 2023).
- Persons have affirmed that information about certain matters can only be disclosed to people "born as biological female and living as a female in accordance with their beliefs and customary practices" (Ref Border Affidavit 7 September 2023 para 12). Woodside has provided [Individual 3] information about how it deals with culturally sensitive information and that protocol that has been followed.
- In December 2023, SOS and [Individual 3] noted that they would not provide information to Woodside. This was reiterated in correspondence on 28 March 2024 and 9 May 2024. As outlined in its response on 29 May 2024, Woodside has provided sufficient information, a reasonable period of time and opportunity to be heard and share concerns/ claims and/or objections, and to input on measures Woodside could implement to manage risks and impacts. Woodside also noted that information held by [Individual 3] had not been provided to Woodside despite numerous offers and opportunities to do so.
- On 13 August 2024, Woodside emailed EDO and reiterated that consultation for the purposes of preparation of this EP had closed and confirmed feedback could be provided for the life of an EP. Woodside provided an attachment with a summary of objections, claims and additional information raised by [Individual 3] in relation to this EP.
- In all of the circumstances, consultation under Regulation 25 of the Environment Regulations has been completed and Woodside has met its obligations under Regulation 25.

Historical Engagement:

2017 – September 2022

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside has engaged with the Ngarluma and Mardudhunera communities on the Scarborough Project since 2018 through their representative organisations including Murujuga Aboriginal Corporation (MAC), Wirrawandi Aboriginal Corporation (WAC) and Ngarluma Aboriginal Corporation (NAC). This is relevant because, if [Individual 3] and [Individual 4] assert they have not been consulted, their communal interests have been represented by others who have been consulted.

Woodside understands [Individual 3] was a member of MAC since inception, was the Chairperson of MAC between 2016 and 2017, was a Board Member of MAC until 11 February 2022, and took part in discussions between Woodside and MAC on the Scarborough Project. During these two-way engagements, in the three years leading up to November 2021, Woodside was not made aware of any specific concerns of [Individual 4], [Individual 3], (Mardudhunera Traditional Owners) and [Individual 27], (Ngarluma Traditional Owner) around the Scarborough Project.

While a member of MAC, [Individual 3] expressed a view that MAC holds the key responsibility for the stewardship and management of the Land and Sea Country according to the Aboriginal Lore and Culture; MAC's work including collecting environmental and heritage records to assist with compiling data (building a library) relevant to Law and Culture on sacred sites, including 42 islands of the Dampier Archipelago; MAC has been embraced by the community as the body for cultural knowledge and guidance which allows the community to speak with one spiritual and cultural voice and with strong cultural integrity. This means that some decisions or advice given by individuals previously, may not reflect the current and more valid cultural leadership that governs today (Ref Opening Statement from Ms [Individual 3] , Chairperson Murujuga Aboriginal Corporation – Public Hearing, Perth – 20 April 2017).

The first time Woodside became aware of [Individual 4], [Individual 3] and SOS's concerns regarding the Scarborough Project was via a number of public statements on the SOS websites and on social media (November 2021).

After seeing the concerns, Woodside met or has attempted to meet with individuals involved in SOS to discuss the Scarborough Project in other capacities and on numerous occasions, including:

- On 15 December 2021, Woodside held a meeting at the MAC office in Dampier with the MAC Board (including [Individual 3]) and Circle of Elders, to provide an overview of the Scarborough and Pluto Train 2 projects (Evidence of this meeting supplied with the MAC correspondence in the Traditional Custodian part of this Table) (SI Report, reference 50.1).
- In February 2022, [Individual 4] and [Individual 3] wrote to the (then) Federal Environment Minister requesting an assessment under section 10 of the *Aboriginal Torres Strait Islander Heritage Protection Act 1984 (Cth)* regarding (SI Report, reference 50.2):
 - **(1)** “threats to the Murujuga Aboriginal heritage posed by proposed Scarborough LNG...”, the letter cited potential damage to Murujuga rock art due to “acid gas emissions from Woodside’s LNG processing operations on the Burrup” and climate change.
 - **(2)** The letter also claimed that members of MAC had been subject to a “gag clause”.
- On 21 March 2022, [Individual 4] and [Individual 3] sent an email addressed to the Woodside CEO, Meg O'Neill, requesting a meeting with Woodside on the morning of 21 March 2022 (SI Report 50.3).
- On 24 March 2022, there was an attempted virtual meeting over Microsoft Teams between Woodside, [Individual 4], [Individual 3] and [Individual 27] (SI Report, reference 50.4). On the same day, Woodside emailed [Individual 4], [Individual 3] and SOS:
 - Woodside noted that despite its representatives being online and waiting for 35 minutes, the meeting did not proceed due to technical issues.
 - Woodside advised that it remained keen to understand Traditional Custodian concerns, including those matters that [Individual 4], [Individual 3] and SOS had set out, and that Woodside remained available to meet.
- On 24 March 2022, [Individual 4], [Individual 3] and SOS also emailed Woodside to advise that:
 - They were waiting to join the virtual meeting but there was no response.
 - They were disappointed at this outcome and hoped to have a more formal meeting in times to come.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Emails exchanged later that day extended Woodside's offer to hold further meetings. By this stage, there had been four attempts by Woodside to meet and discuss issues with [Individual 4], [Individual 3] and SOS. This was in addition to the previous three years of consultation with [Individual 4] and [Individual 3] via MAC (SI Report, reference 50.5).
- On 6 June 2022, some seven months after SOS had launched its public campaign on social media, [Individual 4], [Individual 3] and SOS wrote to the Chairman and Board of Woodside regarding consultation on the NOPSEMA assessment of Scarborough offshore gas field development. The letter (sent with attachments) contained the following assertions, among others (SI Report, reference 50.6 and attachment 50.7):
 - **(1)** Grave concerns about the impacts on rock art through "gas processing operations, fertiliser production and other industry on the Burrup, all of which is facilitated by Woodside's Scarborough development".
 - **(1, 3)** Impacts by industrialisation on rock art through pollution, physical displacement of rock art, damage to other heritage site.
 - **(4)** Restriction of access to sites of cultural and spiritual significance. These impacts on cultural heritage will all be further exacerbated by the Scarborough gas developments and related activities. After being preserved and respected for at least 50,000 years of continuous cultural and spiritual practice, Traditional Owners and Custodians are now seeing this degradation occur within their own lifetimes.
 - **(4)** As a result, industrial activity on the Burrup is already impacting their ability to practice cultural traditions and pass on our culture to future generations in accordance with our cultural obligations.
 - **(5)** That SOS, [Individual 3] and [Individual 4] assert their rights to be consulted as 'relevant persons' in relation to cultural heritage impacts of the Scarborough gas development according to the OPGGS (E) regulations. [This relates to cultural values that are nationally protected as part of the Dampier National Heritage Place and values yet to be described as part of the proposed World Heritage Listing for the Burrup Peninsula and surrounds].
 - **(6)** Given the lack of previous assessment of cultural heritage impacts "of the cumulative impacts of gas-related industry" and the significant uncertainties regarding these impacts a precautionary approach must be taken according to the ESD Principles in Section 3A of the EPBC Act.
 - **(4)** Direct and indirect impacts on cultural heritage must be assessed now, and for all stages of the Scarborough development according to Section 527E of the Environmental Protection and Biodiversity Conservation (EPBC) Act and the EPBC Act Indirect Consequences Policy.
 - In order to comply with requirements to consult under the Regulations, disclosure of certain information is required from Woodside.
 - Woodside's own policy, the UNDRIP and other frameworks require that Traditional Owners are provided with the right of free, prior and informed consent regarding any cultural heritage impacts.
 - Impacts to heritage values and other potential impacts associated with the Scarborough gas development must be understood and assessed with reference to the cultural practices, beliefs and customs and unique understanding of these issues held by Murujuga's traditional knowledge holders.
 - **(7)** The Murujuga Aboriginal Corporation does not represent the interests of Traditional Owners seeking to protect cultural heritage and Woodside's limited consultation with MAC does not satisfy the requirement for free, prior and informed consent for cultural heritage impacts, or the requirements of 'relevant person' consultation according to the above regulations.
 - Woodside notes that in the opening paragraph of this letter [Individual 4] and [Individual 3] state that they are Murujuga Elders, Traditional Owners, Traditional Custodians and members of the Murujuga Aboriginal Corporation (MAC). MAC was established to preserve and protect the land, heritage and culture of the Burrup and Maitland Industrial Estate and is made up of a Circle of Elders who hold cultural authority and consist of representation from the 5 language groups.

- Included with the correspondence was an open letter signed by several Traditional Custodians requesting (among other things) that further investment on project on Murujuga be withheld and that any further investments decisions on the Scarborough Project be paused. The letter was titled 'Open letter from Traditional Owners and Custodians of Murujuga concerning the proposed Woodside Scarborough gas development'.
- On 22 July 2022, Woodside responded to the 6 June letter sent by [Individual 4] and [Individual 3]. The letter largely related to the Scarborough Seismic EP, but also stated that Woodside "is open to receiving feedback and to discussing issues raised in relation to each of its Scarborough Environment Plans" (SI report, 50.8).
- Throughout July and August 2022, the Ngarluma Yindjibarndi Foundation Ltd (NYFL) offered to engage [Individual 4] and [Individual 3] and to facilitate a series of up to three meetings between Woodside and [Individual 4] and [Individual 3] to discuss Scarborough and Pluto Train 2 projects and activities. Woodside accepted this invitation, including outlining payment for [Individual 3] and [Individual 4]'s time. The proposed meeting did not progress because of a lack of response from [Individual 4] and [Individual 3].
- On 2 August 2022, Woodside wrote to NYFL accepting NYFL's offer to facilitate SOS meetings (SI Report, reference 50.9).
- On 26 August 2022, Woodside wrote to [Individual 4], [Individual 3] and SOS providing an information sheet and links for other Scarborough Project EPs. The letter confirmed ethnographic surveys undertaken of the pipeline route concluded that the pipeline route is likely to have "low to nil" impacts to Indigenous archaeological values across the project footprint (SI Report, reference 50.10).
- On 26 September 2022, [Individual 4], [Individual 3] and SOS emailed a letter to NOPSEMA regarding the Scarborough D&C, SITI and Seismic EPs (SI Report, reference 50.11).
 - [Individual 4], [Individual 3] and SOS raised several issues relating to Woodside's consultation requirements under the Regulations.
 - [Individual 4], [Individual 3] and SOS stated that they have functions interests and activities within the EMBA's of the Scarborough EPs which might be directly affected by the proposed activity.
 - [Individual 4], [Individual 3] and SOS requested that NOPSEMA refrain from accepting the Scarborough EPs until Woodside had properly complied with regulation 11A (now regulation 25 of the Environment Regulations) in relation to their functions, interests or activities and in relation to the time provided for consultation.
 - [Individual 4], [Individual 3] and SOS offered to provide to NOPSEMA, further information about their functions, interests or activities that may be affected by activities under the Scarborough EPs.
 - **(8)** Information to be shared by SOS was to be treated sensitively and confidentially.
 - The letter stated that Woodside had not provided a "reasonable opportunity to provide our objections in relation to the Trunkline and Drilling EPs, and therefore cannot have responded to those objections".
 - **(9)** [Individual 4] and [Individual 3] offered to share information about their functions, interests or activities regarding these EPs to NOPSEMA. This is an indication that as early as September 2022, [Individual 4] and [Individual 3] had information and "objections" to share about all Scarborough EPs which, despite Woodside providing ample opportunity, they had not shared with Woodside.
- On 29 September 2022, Woodside emailed [Individual 4], [Individual 3] and SOS (SI Report, reference 50.12):
 - Woodside requested a meeting to share information in relation to the Scarborough Project. Woodside requested to hold this meeting prior to 10 October 2022.
 - Woodside advised it welcomed the opportunity to meet to discuss the matters raised in the letters of 6 June 2022 and 29 September 2022, to share information in relation to the Scarborough Project and demonstrate how items raised in the correspondence have been addressed in the relevant EPs.
 - Woodside proposed that the meeting would be attended by subject matter experts and project personnel as required, to answer any questions.
- On 6 October 2022, Woodside followed up with [Individual 4], [Individual 3] and SOS via email and phone/voicemail (SI Report, reference 50.13).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 7 October 2022, [Individual 4], [Individual 3] and SOS responded to Woodside via phone to arrange a suitable date and time (SI Report, reference 50.14).
- On 7 October 2022, Woodside and [Individual 4], [Individual 3] and SOS discussed arrangements via phone to meet on 11 October 2022.
- On 7 October 2022, [Individual 4] and SOS contacted Woodside via phone to advise that [Individual 3] would be in touch to set up the meeting. [Individual 4] and SOS could not confirm if the 11 October 2022 meeting was proceeding as planned.
- On 10 October 2022, Woodside emailed [Individual 4], [Individual 3] and SOS noting it had not received any further contact or confirmation of the 11 October 2022 consultation meeting. Woodside advised it was still ready and available to proceed with a meeting (SI Report, reference 50.15).
- On 11 October 2022, Woodside flew personnel to Karratha to attend the meeting with [Individual 4], [Individual 3] and SOS and followed up with [Individual 4], [Individual 3] and SOS via phone and SMS (SI Report, reference 50.16).
- On 11 October 2022, [Individual 4], [Individual 3] and SOS advised Woodside via SMS that it was awaiting confirmation from its lawyers regarding the proposed meeting (SI Report, reference 50.16). Woodside notes:
 - Woodside did not receive further contact and, despite Woodside being ready in Karratha for the meeting as agreed, this meeting did not proceed.
 - Neither [Individual 4], [Individual 3] or SOS provided an explanation to Woodside as to their non-attendance at this meeting.
- On 8 November 2022, [Individual 4], [Individual 3] and SOS sent a letter to Woodside in relation to the Scarborough Project EP meeting. (SI Report, reference 50.17). In the letter:
 - [Individual 4], [Individual 3] and SOS referred to correspondence dated 29 September 2022 and 6 October 2022 and stated they had not been able to respond by the date requested. The letter further acknowledged their understanding that Woodside’s correspondence encompassed all activities associated with the Scarborough Project including D&C, SIT1, Seismic and the State EPs and (at the time) the forthcoming Subsea EP.
 - **(5)** [Individual 4], [Individual 3] and SOS reiterated that they were relevant persons for activities relating to these EPs and acknowledged the invitation to meet to discuss the EPs.
 - [Individual 4], [Individual 3] and SOS stated it was unfortunate that they had been unavailable to meet as requested, however they welcomed the opportunity to discuss their letters dated 6 June 2022 and 26 September 2022 and their concerns on the impacts and risks of the (above mentioned) activities. They acknowledged that Woodside may have an internal target date but that it was generally not practicable to arrange meetings with less than 4 weeks’ notice and requested that Woodside provide sufficient notice for any meeting opportunities.
 - [Individual 4], [Individual 3] and SOS offered several dates on which they were available to meet and shared their preference to meet on Murujuga.
 - [Individual 4] and [Individual 3] wrote to Woodside, stating “Unfortunately we have been unavailable to meet as requested...” but that “we acknowledge your invitation to meet... to discuss the Scarborough EPs and to answer any questions we may have” and that [Individual 4] and [Individual 3] “welcome the opportunity to discuss our letters of 6 June 2022 and 26 September 2022 and our concerns as to the impacts and risks of the above activities” (being the D&C, SIT1, Seismic and Subsea EPs). [Individual 3] and [Individual 4] therefore represented they were ready and able to discuss all Scarborough EPs. [Individual 4] and [Individual 3] also requested 4 weeks’ notice for meetings and proposed a meeting in late November 2022.
- On 22 November 2022, Woodside emailed [Individual 4], [Individual 3] and SOS (SI Report, reference 50.18).
 - Woodside acknowledged the letter addressed to Woodside on 8 November 2022 that was passed on via NOPSEMA.
 - Woodside confirmed its availability to meet in Karratha on 29 November 2022 or a date suitable to [Individual 4], [Individual 3] and SOS.
- On 24 November 2022, [Individual 4], [Individual 3] and SOS wrote a letter to Woodside regarding the proposed meeting date. Despite recording in their correspondence on 26 September 2022 and 8 November 2022 that they had information and “objections” they were ready to share regarding the Scarborough Project, [Individual 4] and [Individual 3] now

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

stated they would not proceed with consultation until there was clarification around the scope and purpose of the meeting and until Woodside confirmed their status as “relevant persons” and Woodside provided requested information. [Individual 4] and [Individual 3] stated, “We will not be in a position to provide substantive information about our functions, interests or activities at the first meeting you have proposed”, but still committed to discussing all Scarborough EPs. In particular [Individual 4], [Individual 3] and SOS sought confirmation on the following items (SI Report, reference 50.19):

- **(5)** Acknowledgement from Woodside as to relevant person status for all EPs associated with the Scarborough Project.
- Provision of necessary information about the proposed activities and the anticipated impacts to allow for informed comment and input to be made as part of the relevant person consultation process. As a minimum they requested draft copies of the Scarborough EPs and associated technical and other information and any studies, research or other information held by Woodside relating to:
 - **(4)** Cultural values (not limited to ethnographic sites) including marine fauna of cultural significance.
 - **(1)** Impacts and risks of industrial pollution from gas processing on cultural heritage at Murujuga.
 - Purpose of meeting, indicating they would be happy to meet when information requested in points above was received and they understood Woodside’s assessment of them as relevant persons. They indicated that the initial meeting would be for introductions and an opportunity for [Individual 4], [Individual 3] and SOS to ask questions and obtain information they require to determine the consequences, impacts and risks of the proposed activities so that consultation could commence.
 - **(8)** The issue of protocols around gender restricted information was raised and they stated that they would not be able to provide substantive information about their functions, interests or activities at the first meeting proposed.
- On 2 December 2022, Woodside emailed [Individual 4], [Individual 3] and SOS and included responses to address the items raised on 24 November 2022, where appropriate. Woodside reiterated its availability to meet and provided an option for any date in December 2022. [Individual 4], [Individual 3] and SOS did not respond to this offer (SI Report, reference 50.20).
 - **(9)** Woodside reiterated that it is open to continue consulting, receiving feedback and discussing concerns in relation to Woodside’s Scarborough EPs. Consultation is ongoing and feedback will continue to be accepted throughout the life of the EP, including while it is being prepared, while it is under assessment as well as after acceptance, while the EP remains in force.
 - **(9)** Woodside confirmed its arrangements to meet and consult that have been ongoing since November 2021, and it remains open to continue consulting in relation to the Scarborough EPs.
 - Woodside advised it is available to meet with [Individual 4], [Individual 3] and SOS on any date in December 2022 in Karratha. Woodside requested confirmation of availability to meet by 9 December 2022.
 - Woodside again provided a link to the Consultation Information Sheets for the Scarborough D&C, SITI, Seismic and Subsea EPs, to assist in preparing for the meeting.
 - Woodside noted there has been ample time and information available to inform feedback on EPs to date. Woodside requested [Individual 3], [Individual 4] and SOS provide feedback on those Scarborough EPs no later than at the proposed meeting in December 2022.
 - **(8)** Woodside noted the letter dated 24 November 2022 made reference to arrangements which would enable [Individual 4], [Individual 3] and SOS to share relevant information such as matters that are restricted to women or men only. Woodside requested for [Individual 4], [Individual 3] and SOS to confirm what arrangements are required to enable them to share this information by 9 December 2022.
 - **(9)** Despite Woodside being available to meet any time in December and the date of December 9 being suggested, there was no response from [Individual 4], [Individual 3] and SOS so a meeting could not proceed.

- On 4 January 2023, Woodside emailed [Individual 4], [Individual 3] and SOS to follow-up on its meeting request Woodside reiterated its availability to meet and provided an option for any date in January 2023 (SI Report, reference 50.21).
- On 13 January 2023, [Individual 4], [Individual 3] and SOS emailed Woodside (SI Report, reference 50.22).
 - [Individual 4], [Individual 3] and SOS confirmed it would like to meet with Woodside, but reiterated its requests contained within its 24 November 2022 correspondence.
 - [Individual 4], [Individual 3] and SOS stated it can advise of its availability for a meeting once the information requested is provided.
- On 19 January 2023, Woodside emailed [Individual 4], [Individual 3] and SOS. Woodside included the following responses to address the items raised, where appropriate (SI Report, reference 50.23):
 - (5) Woodside reiterated it is open to continue consulting with [Individual 3], [Individual 4] and SOS, receiving feedback and discussing their concerns in relation to Woodside’s Scarborough EPs in Commonwealth and State waters (collectively referred to as the Scarborough EPs).
 - (9) That consultation on the Scarborough EPs began when Woodside provided [Individual 3], [Individual 4] and SOS with consultation information on the Scarborough EPs. Information on the Seismic EP has been provided directly to [Individual 3], [Individual 4] and SOS since at least July 2022 (Ref Woodside letter 22 July 2022).
 - (9) That Woodside has made every effort to meet with [Individual 3], [Individual 4] and SOS to understand their claim of relevance and to develop a comprehensive understanding of potential impacts to their functions, interests or activities.
 - (9) That Woodside has been trying to arrange a meeting with [Individual 3], [Individual 4] and SOS since November 2021 to discuss the Scarborough EPs, including a representative travelling to Karratha for a planned meeting on 11 October 2022 and making representatives available for a meeting on 29 November 2022.
 - Woodside reiterated its availability to meet and provided an option for any date in January or early February 2023.
- On 8 February 2023, Woodside was copied into correspondence sent from the Environmental Defender’s Office (EDO) to the WA State Minister for Mines and Petroleum regarding a separate EP under State Regulations. Copies of previous correspondence between Woodside and [Individual 3], [Individual 4] and SOS were attached to the email. This included a detailed response from Woodside dated 5 January 2023 which responded to claims and objections made in relation to spiritual and cultural values. On the same day, the EDO (acting on behalf of SOS) emailed Woodside, referred to the email and correspondence sent to the Minister and advised that its client’s earliest availability to meet would be the weeks commencing 13 and 20 March 2023 (SI Report, reference 50.24).
- On 15 February 2023, Woodside emailed [Individual 3], [Individual 4] and SOS. Woodside reiterated its availability to meet and, based on dates suggested within the 8 February correspondence, provided [Individual 3], [Individual 4] and SOS with confirmation it was available to meet on the suggested dates in March 2023 (SI Report, reference 50.25).
- On 24 February 2023, Woodside sent [Individual 3], [Individual 4] and SOS a follow-up email. Woodside reiterated its availability to meet (SI Report, reference 50.26).
- (10) On 24 February 2023, the EDO (acting on behalf of [Individual 3], [Individual 4] and SOS) emailed Woodside requesting that correspondence to [Individual 4] and [Individual 3] was sent to the EDO as well as [Individual 4] and [Individual 3]. The EDO further advised its clients were available to meet on 13 and 14 March 2023 and requested that Woodside nominated a female staff member who could receive “highly sensitive” cultural information at the meeting, which Woodside took to mean that [Individual 3], [Individual 4] and SOS intended to share cultural information at the meeting (SI Report, reference 50.27).
- On 28 February 2023, the EDO (acting on behalf of [Individual 3], [Individual 4] and SOS) emailed Woodside to follow-up on the request to secure a meeting (SI Report, 50.28).
- (8) On 1 March 2023, Woodside emailed [Individual 3], [Individual 4] and SOS (and cc. to EDO) to propose the meeting time and location for 14 March 2023. Woodside also nominated a female staff member to receive cultural information (SI Report, reference 50.29).

- On 7 March 2023, the EDO (acting on behalf of [Individual 3], [Individual 4] and SOS) emailed Woodside to confirm the meeting time and location for 14 March 2023 (SI Report, reference 50.30).
- **(9)** On 8 March 2023, Woodside emailed the EDO, [Individual 3], [Individual 4] and SOS with a proposed agenda for the 14 March 2023 meeting and requested they advise if there were any particular issues they wished to discuss during the meeting (SI Report, reference 50.31).
- **(8)** On 10 March 2023, Woodside emailed EDO, [Individual 3], [Individual 4] and SOS with further logistic and meeting protocol details for the proposed meeting on 14 March 2023. The agreed meeting protocol, based on a discussion between Woodside and [Individual 4], included that attendees would be all female, would attend with open hearts, deep listening and seeking a respectful conversation and open to sharing knowledge about the environment that may be affected, including the heritage of places. It was also agreed that there would be no audio or video recording of the meeting to respect privacy, safety and cultural values (SI Report, reference 50.32).
- On 13 March 2023, the female nominated by Woodside to receive sensitive information called [Individual 3], [Individual 4] and SOS to check in and confirm the meeting would go ahead.
- **(4, 9) MEETING:** On 14 March 2023 (summarised in email on 16 March 2023), Woodside met with the EDO, [Individual 4], [Individual 3] and SOS on-Country and discussed the Seismic EP, Subsea EP, D&C EP, SITI EP (Cth and State). Maps and pictures of Scarborough Project footprint were shown. Despite Woodside's continued efforts and offers to meet since at least September 2022, this meeting represented the first time Woodside and [Individual 3], [Individual 4] and SOS had met in person since the establishment of SOS in November 2021.
 - Woodside provided an overview of the Scarborough activities (D&C, SITI, Seismic, Subsea EP (Cth and State)). Discussion was also held regarding the FPU.
 - Feedback from [Individual 3], [Individual 4] and SOS (at the on-Country meeting):
 - When told about the pipeline route, borrow grounds and pipelay, [Individual 4], [Individual 3] and SOS spoke of concerns to the effect of the earth and world breaking apart when the project got underway and raised specific concerns about the pipeline passing near contaminated waters near the Montebello islands. They also discussed topics relating to whales and other sea animals related to the installation of the Scarborough Trunkline.
 - **(11)** When asked for their views on how the activities could be managed by Woodside to reduce risks and impacts to their interests, [Individual 4], [Individual 3] and SOS told Woodside that the proposed activities gave them a sick feeling and the activities should be stopped. [Individual 4], [Individual 3] and SOS also informed Woodside that, in their view, there is nothing that could be done by Woodside to progress with the proposed Scarborough activities in a way that could minimise impact to [Individual 4], [Individual 3] and SOS's functions, activities and interests or that would be respectful to its culture and country. Woodside response (at the on-Country meeting):
 - ❖ **(8)** Woodside agreed to keep confidential to women and to not otherwise share cultural details which were shared at the 14 March 2023 meeting.
 - ❖ **(10)** [Individual 4] and [Individual 3] noted there is information that is not yet known to them as the rocks have not yet told them (for instance, wisdom that Murujuga rocks have for the past and future) and they are not sure when it will be known.
- On 16 March 2023, Woodside emailed EDO, [Individual 4], [Individual 3] and SOS to advise that (SI Report, reference 50.33):
 - It appreciated the request for Woodside to attend the meeting with open hearts, deep listening and respectful conversation and that it would intend to continue this approach to engagement.
 - **(9)** Woodside's consultation process is ongoing through the environmental approval process and when an activity is being performed and that Woodside looks forward to continuing its discussions with [Individual 4], [Individual 3] and SOS in the future.
 - **(9)** Woodside is open to consulting further with [Individual 4], [Individual 3] and SOS on the proposed Scarborough activities and are open to the continuing engagements regarding the Scarborough activities. Woodside noted this was notwithstanding comments made at the meeting by [Individual 4] and [Individual 3] that the proposed activities gave them a 'sick feeling' and should be stopped.
- Woodside provided responses to specific actions taken during the meeting, including:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A request for Woodside to provide background information on the “why” behind the Scarborough activities. Woodside responded that the Scarborough Project helps play a role in the global energy transition, including helping neighbouring Asian countries take action on emissions reduction and advised there is further information on Woodside’s website.
- **(12)** A request for Woodside to check with MAC whether MAC’s ethnographic survey can be shared with [Individual 4], [Individual 3] and SOS.
- **(12)** Woodside advised that the ethnographic survey is held by MAC and Woodside does not have permission to share it.
- **(13)** A request for Woodside to confirm whether fracking would occur in relation to the Scarborough activities.
- **(13)** Woodside confirmed that no fracking would be undertaken as part of the proposed Scarborough activities.
- On 17 March 2023, Woodside emailed [Individual 4], [Individual 3] and SOS acknowledging SOS correspondence to Woodside dated 6 June 2022, 26 September 2022 and 24 November 2022 and the discussion with Woodside on 14 March 2023. Woodside included an attachment containing responses to relevant objections, claims and additional information raised in the correspondence stated to relate to the Scarborough Seismic EP although some responses related to Scarborough activities under other EPs as the matters raised were about the Scarborough Project as a whole. (SI Report, reference 50.34). Woodside stated:
 - **(4)** Woodside has conducted an ethnographic survey to support the development of EPs for the Scarborough Project which have not identified any heritage places, objects or values which will be impacted.
 - **(2)** None of Woodside’s agreements with Traditional Custodians include “gag clauses” or restrictions on voicing opinions on Woodside projects.
 - Regarding the principles of FPIC: Woodside is guided by UNDRIP under our Indigenous Communities Policy and has consulted representative institutions including MAC for a number of years.
 - **(9)** Woodside has made several attempts since November 2021 to engage with [Individual 4], [Individual 3] and SOS. There was a meeting held on Tuesday 14 March 2023. Woodside is open to receiving feedback.
 - **(1)** Regarding impacts on rock art through pollution, emissions from the activities covered by the Seismic EP is not relevant, but these “may be evaluated in other Scarborough EPs”.
 - Regarding the proposed removal of rock art from the Perdaman site, Woodside stated it is not appropriate for Woodside’s EPs to address or seek to regulate the activities of third parties progressing separate projects.
 - Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities.
 - **(12)** A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so. The Scarborough Project Cultural Heritage Management Plan is a publicly available document and can be found on Woodside’s website.
 - **(7)** Woodside continues to consult with MAC on all relevant aspects of this EP prior to and during the execution of activities.
 - **(1)** Regarding impacts and risks on Aboriginal heritage sites on and around Murujuga, Woodside has undertaken archaeological assessments and ethnographic surveys to identify cultural heritage that may be impacted by Scarborough activities.
 - **(9)** Woodside considers the time it has provided to consider information prior to meetings to be more than suitable to inform [Individual 3], [Individual 4] and SOS’s feedback on Woodside’s proposed Scarborough EPs.

- **(9)** Woodside confirms as per Woodside's ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
- On 24 March 2023, the EDO (acting on behalf of [Individual 4], [Individual 3] and SOS) provided a letter to Woodside which copied NOPSEMA, DEMIRS and the WA Minister for Mines and Petroleum (SI Report, reference 50.35). The letter:
 - Acknowledged that Woodside had provided information on all relevant Scarborough EPs (D&C, SITI, Seismic and Subsea), and confirmed that [Individual 4] and [Individual 3] raised "particular concerns about the impacts that underwater activities that form part of the EP activities might have on their functions, interests and activities". This confirmed that the parties were consulting on all EPs.
 - Detailed a response to the 14 March 2023 meeting and Woodside's 16 March 2023 email, and covered the range of Scarborough EPs (Seismic, D&C, SITI, Subsea and State EPs). The EDO noted its client's concerns relating to:
 - **(7)** The summary of the meeting, stating the functions, interests or activities of their client were distinct from those of Murujuga Aboriginal Corporation and that their stories were not told as a part of any consultation with MAC.
 - **(1)** Concerns about the impact of underwater activities, impacts related to greenhouse gas and Murujuga industrialisation.
 - **(10)** Clarification of its client's position, that Woodside had mischaracterised their clients' position. Their view is that Woodside should not undertake the Scarborough Project because of the harm it will cause and that is different to the conclusion that there is 'nothing that can be done' to minimise impacts or be respectful to our clients, their culture and their country. Their clients regard genuine consultation on the proposed EP activities an important demonstration of their respect for their functions, interests or activities.
 - Asserted that they considered that the consultation process has just commenced.
 - **(5)** Communication of relevant person status – the EDO stated that its clients should be recognised as relevant persons individually and not only SOS, (the foundation its clients founded).
 - Acknowledgement of response to questions arising at the meeting of 14 March 2023. The letter:
 - ❖ **(12)** Noted that Woodside had followed up their requests and provided a link to Woodside's publicly available website and advised that the ethnographic survey was held by MAC and Woodside did not have permission to share it.
 - ❖ **(9)** Noted that the EDO's clients would review the consultation information provided, and that it anticipated its clients would require approximately six weeks to do this.
 - ❖ Requested Woodside not submit the draft EP until consultation was complete.
- On 28 March 2023, Woodside emailed the EDO, [Individual 4], [Individual 3] and SOS (cc. to NOPSEMA) in response to the 24 March 2023 letter. Woodside reiterated its responses to topics raised during the meeting and in previous correspondence, relevant to the proposed activity (SI Report, reference 50.36). The response included the following:
 - In regard to additional or new information:
 - Woodside advised it has a process in place for the life of an EP that allows the EP to be updated to include additional or new information or feedback that is received after an EP is submitted. This is done through a "Management of Knowledge" process. This means that feedback or information provided in future meetings can still be taken into account and, where appropriate, can be incorporated in the EP during the life of the activity.
 - Woodside advised that following the meeting, based on the information provided, no updates were required to the EP via the Management of Knowledge process.
 - In regard to functions, interests or activities:

- (7) Woodside acknowledged that it had been advised that [Individual 3], [Individual 4] and SOS's functions interests and activities are distinct from those of MAC and that it was interested to learn about this further.
 - (11) In response to a request for the ethnographic survey undertaken by MAC, Woodside reiterated that it has no authority to provide this information. Given [Individual 3]'s previous role with MAC at the time the ethnographic survey was being undertaken, Woodside suggested that [Individual 3] may have contacts at MAC to request a copy of that survey.
 - (9) Woodside advised that as to [Individual 4], [Individual 3] and SOS's functions, interests or activities, it continues to invite these to be shared with Woodside so it can consider the likely impacts and risks of the EP activities on these functions, interests or activities and what Woodside can do to lessen or avoid those impacts.
 - (9, 10) Woodside confirmed that as [Individual 4], [Individual 3] and SOS were not prepared to share some information with Woodside, it remains open to hearing from them when this is known, and it is ready to be shared.
 - (1) Regarding minimising impacts to functions, interests or activities, Woodside reshared its interpretation of the take-aways from the meeting in relation to underwater activities, GHG emissions and industrialisation of Murujuga.
- (14) In the meeting of 14 March 2023, there was a discussion about potential impacts of activities on whales.
 - (1) Emissions from the activities covered by the Commonwealth EPs are of a scale that no credible impact pathway to their onshore cultural interests is foreseen. This has been the subject of separate correspondence.
 - (9, 10) In relation to the detail of the EPs and information accessed and provided, the meeting provided an overview of the Scarborough Project and followed volumes of previous correspondence on the Scarborough Project. Previous correspondence indicated that a large volume of information on the Scarborough Project had been accessed, read and considered. The correspondence showed an informed and thorough understanding of the various Scarborough activities and the Scarborough Project.
 - (9) In relation to consultation in general, Woodside advised it has continued to consult with [Individual 4], [Individual 3] and SOS and continues to invite further consultation.
 - (5) In relation to relevant persons, Woodside advised that the Commonwealth approval process requires Woodside to consult with "relevant persons". Further:
 - (5) Woodside has previously explained the approval process relating to the concept of "relevant persons" and noted that, at the relevant time consultations are included under a category of "relevant persons" in EPs. Woodside generally applies this category at a stage when they are trying to understand more about a person's functions, interests or activities and also the impacts of Woodside's activities on them.
 - (5) Woodside reiterated that there is no need for it to categorise persons as relevant in order to consult with them.
 - (5) In relation to ongoing consultation, Woodside advised that once an EP is accepted, Woodside continues ongoing consultations with relevant persons. Is open to continuing consultation to understand how the proposed Commonwealth EP activities relevantly affect [Individual 4], [Individual 3] and SOS.
 - (9, 10) In relation to further consultation, Woodside noted [Individual 4], [Individual 3] and SOS's correspondence, that it would like to organise another meeting and will require approximately six weeks to read into materials and prepare for a meeting.
 - Woodside requested for [Individual 4], [Individual 3] and SOS to advise its preferred times for the next meeting, noting the time taken to arrange the previous meeting.
 - Woodside advised it was available to meet in the week commencing 8 May 2023 or earlier.
 - The agreed meeting protocol was shared again, including there being no audio or visual recording of meetings.
- On 29 March 2023, the EDO responded acknowledging receipt of Woodside's email, noted the invitation for further consultation and advised it was seeking instructions and would respond in due course (SI Report, reference 50.37).

- (8) On 17 April 2023, Woodside responded by email to a letter from the EDO dated 6 April 2023 addressed to NOPSEMA and copied to Woodside about a different activity. In the email (SI Report, reference 50.38):
 - Woodside provided notes including in relation to Woodside's repeated and protracted attempts to meet, engage and consult with [Individual 4] and [Individual 3] and SOS on the Scarborough Project.
 - Woodside reiterated the process for consultation remains open post EP approval and that it has consistently offered an open invitation to [Individual 4] and [Individual 3] and SOS to provide feedback to allow Woodside to consider the potential impacts and risks of the activities on functions, interests or activities and to provide input on things Woodside can do to mitigate those potential impacts and risks on all Scarborough EPs.
 - Woodside included a 5 page attachment sent with this response to NOPSEMA sets out the history of Woodside's extensive engagements with [Individual 4] and [Individual 3] and SOS. It states that since June 2018, Woodside has undertaken 82 substantial engagements relating to the Scarborough Project including 32 meetings with Traditional Custodians and their representatives.
 - Woodside provided further context and highlighted relevant engagements with [Individual 4] and [Individual 3] and SOS, and stated Woodside's position i.e. having regard to all of the circumstances of the consultation undertaken with [Individual 4] and [Individual 3] and SOS, and in light of the concepts of "reasonable time", "reasonable diligence", a consultation obligation that "must be capable of practical and reasonable discharge ... that must be capable of performance", NOPSEMA can be reasonably satisfied that an appropriate level of consultation has taken place with [Individual 4] and [Individual 3] and SOS.
 - Woodside outlined details about correspondence and the opportunities and invitations Woodside has attempted to provide for consultation to occur and questioned why these have not occurred.
 - Woodside closed the letter by stating Woodside would be pleased to discuss the notes contained in this letter and the issues raised in the Letter from EDO with NOPSEMA.
- On 8 May 2023, the EDO emailed Woodside to advise they had not had any response to date, and were writing again to enquire whether Woodside wished to propose dates that can put to their clients for consultation regarding another Scarborough EP (SI Report, reference 50.39).
- (8) On 9 May 2023, Woodside emailed [Individual 4], [Individual 3], and SOS via the EDO reiterating Woodside's willingness to engage in ongoing consultation on Scarborough EPs; On proposed meeting dates in May, noting that Woodside was awaiting response on [Individual 4], [Individual 3] and SOS availability and that Woodside was open to meeting either on-Country or remotely, noted draft guidance from NOPSEMA regarding Managing gender-restricted information, and included a draft agenda (SI Report, reference 50.40).
- On 9 May 2023, Woodside emailed [Individual 4], [Individual 3] and SOS (and cc. the EDO) with respect to the Scarborough SITI EP and included responses to relevant objections (some of which are broadly applicable to the entire Scarborough Project including activities under the other Scarborough EPs), claims and additional information raised on 6 June 2022, 26 September 2022 and 24 November 2022 (SI Report, reference 50.41). In the email:
 - (4, 7) Woodside confirmed it has conducted an ethnographic survey to support the development of EPs for the Scarborough Project (Mott 2019, UWA 2021, McDonald and Phillips 2021, Nutley 2022a and 2022). An ethnographic survey determines the cultural values which are associated with a particular area, feature or object. Representatives from the Mardudhunera, Ngarluma, Yaburara, Yindjibarndi and Wong-Goo-Tt-Oo Peoples—all five Indigenous groups represented by MAC—participated in these surveys (Mott 2019, McDonald and Phillips 2021). Participants were not restricted in the types of heritage or other values they were encouraged to identify, but typical results from surveys of this nature might include Songlines, ceremonial places such as 'thalu' sites for managing environmental resources, or places where activities such as birthing, initiation or other significant activities are performed.
 - (4) Woodside advised Archaeological assessments have been made over the ancient landscape, being the extent of the continental shelf, which was previously exposed during human occupation. This includes an Australian-first assessment of the archaeological perspectivity along the trunkline route conducted with the support and consultation of

Traditional Custodians (UWA 2021). An executive summary is available on Woodside's website at <https://www.woodside.com/docs/default-source/sustainability-documents/indigenous-peoples/cultural-heritage/scarborough-pipeline-cultural-heritage-assessment-exec-summary.pdf>.

- (4) Woodside advised it has had all of its submerged heritage work assessed by an expert underwater archaeologist for gaps in our processes (Nutley 2022a), as well as a review of Side Scan Sonar data to confirm whether archaeological sites could be identified on the seabed (Nutley 2022b).
- (2) Woodside reiterated that none of Woodside's agreements with Traditional Custodians include "gag clauses" or restrictions on voicing opinions on its projects. Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the Scarborough project.
- (7) Woodside advised that the principles of Free, Prior and Informed Consent (FPIC) are based in the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP) where it is envisaged as a communal right of Indigenous communities and secured through consultation with representative institutions utilising traditional decision-making mechanism such as deferring to MAC's Circle of Elders. Woodside is guided by UNDRIP under its First Nations Communities Policy and has consulted representative institutions including MAC for a number of years.
- (4) Several documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so.
- (4) Woodside provided a link to the Scarborough Project Cultural Heritage Management Plan which is a publicly available document and can be found at: https://www.woodside.com/docs/default-source/our-business---documents-and-files/burup-hub---documents-and-files/scarborough---documents-and-files/scarborough-cultural-heritage-management-plan.pdf?sfvrsn=162e353a_3.
- (7) Woodside advised it continues to consult with MAC on all relevant aspects of this EP prior to and during the execution of activities.
- Woodside advised it considers the adequate time and information it has provided, including the meeting on Tuesday 14 March 2023, to be more than suitable to inform feedback on Woodside's proposed Scarborough EPs.
- Woodside confirmed that as per Woodside's ongoing consultation approach, feedback and comments received continue to be assessed and responded to, as required, through the life of an EP, including during EP assessment and throughout the duration of the accepted EP, in accordance with the intended outcome of consultation.
- On 10 May 2023, the EDO (acting on behalf of [Individual 4], [Individual 3], and SOS) emailed Woodside to query the date of previous correspondence (SI Report, reference 50.42).
- On 15 May 2023, Woodside emailed the EDO confirming that the May 2023 correspondence refers to emails dated 9 May 2023 with the subject line "RE: Scarborough Environment Plans – Consultation (SI Report, reference 50.43).
- On 1 June 2023, the EDO emailed Woodside confirming [Individual 4], [Individual 3], and SOS were available to meet in Karratha on 13 June 2023 (SI Report, reference 50.44).
- On 6 June 2023, Woodside emailed [Individual 4], [Individual 3], and SOS with respect to the Scarborough Drillings and Completions EP. Acknowledging and in response to the SOS correspondence of 6 June 2022, 26 September 2022, 24 November 2022, correspondence via EDO of 6 April 2023, 18 April 2023 and during meeting on 14 March 2023, with information much the same as that sent on 9 May 2023 (SI Report, reference 50.45).
- On 7 June 2023, Woodside emailed the EDO requesting the email be forwarded to [Individual 4], [Individual 3], and SOS (SI Report, reference 50.46). Woodside confirmed availability to meet in Karratha on 13 June 2023 to continue consultation on the Scarborough EPs; proposed an agenda; confirmed meeting protocols and advised Woodside attendees. Woodside requested to know who would be attending on behalf of SOS and confirmation of other meeting details. The agenda included the sharing of interests, the functions of [Individual 4], [Individual 3] and SOS, a walk-through of Scarborough EPs, and a description of the Scarborough Project and activities to be undertaken under each EP. The same meeting protocol

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

agreed prior to the March meeting was shared, including female only meeting, attendance with open hearts and prepared for deep listening and respectful conversation and to share knowledge about the environment including the heritage of places. In addition, it was agreed there would be no audio or visual recording.

- On 9 June 2023, because it had not received confirmation of the meeting and because of past history of Woodside turning up for meetings without [Individual 4], [Individual 3] or SOS attending, or meetings that did not proceed, Woodside emailed the EDO, [Individual 4], [Individual 3], and SOS requesting confirmation of the meeting scheduled for Tuesday 13 June 2023 and its time and location (SI Report, reference 50.47). Confirmation was sought by 5pm on 9 June 2023 as there were a number of flight and other logistics that needed to be confirmed by 5pm in order for that meeting to progress. If the meeting could not proceed, Woodside requested the provision of alternative meeting dates (SI Report, reference 50.46). Later that day a further email was sent correcting the proposed meeting date to 13 June 2023 instead of 14 June 2023 (SI Report, reference 50.48).
- On 9 June 2023 (after 5pm), the EDO emailed Woodside confirming availability for a morning meeting on 13 June 2023 (SI Report, reference 50.49).
- On 9 June 2023, Woodside emailed the EDO advising it was no longer available to meet on 13 June 2023 due to flights and other logistics having timed out (SI Report, reference 50.50).
- On 10 June 2023, the EDO emailed Woodside to advise [Individual 4], [Individual 3] and SOS were available to meet on 13 June 2023 on-Country with the EDO and provided a phone number to discuss logistics. The EDO did not object to the agenda or the meeting protocol (including no recording being taken) (SI Report, reference 50.51).
- On 12 June 2023, the EDO on behalf of its clients [Individual 4], [Individual 3] and SOS emailed Woodside advising availability to meet on 13 June 2023 at Hearson Cove. Despite its previous position committing to consulting on all Scarborough EPs, and confirmation that [Individual 4], [Individual 3] and SOS had information to share on all Scarborough EPs and the Scarborough Project generally (see correspondence dated 26 September 2022, 8 November 2022 and 24 November 2022) the EDO for the first time stated (SI Report, reference 50.52):
 - **(15)** It did not think it was appropriate to deal with all 4 EPs in one meeting. EDO did not raise any concern with the meeting protocol, including no recording being taken.
- On 12 June 2023, Woodside emailed [Individual 4], [Individual 3], SOS and the EDO regarding meeting arrangements and a draft agenda. Woodside requested next available dates for a meeting with [Individual 4], [Individual 3], SOS and the EDO (SI Report, reference 50.53).
- On 12 June 2023, the EDO emailed Woodside to advise that [Individual 4], [Individual 3] and SOS wanted to keep the existing arrangement for a consultation meeting on 13 June 2023 in Karratha (SI Report, reference 50.54).
- On 14 June 2023, the EDO emailed Woodside to advise that their clients, [Individual 4], [Individual 3] and SOS were still willing to meet at the times specified in the previous email while the EDO solicitors were going to be available in Karratha and that Woodside could join by phone or video conference if needed (SI Report, reference 50.55).
- On 14 June 2023, Woodside emailed the EDO and [Individual 4], [Individual 3] and SOS to advise that Woodside was not available to meet the week of 13 June 2023 and proposed 5 alternative dates in June 2023 for a meeting to be held in Karratha or remotely via Microsoft Teams. These dates allowed for Woodside to follow the agreed protocols (including having a female only team) (SI Report, reference 50.56).
- On 14 June 2023, the EDO emailed Woodside to advise it would revert back once instructions had been received from their clients (SI Report, reference 50.57).
- **(9)** On 20 June 2023, the EDO emailed Woodside to advise the EDO will not be in a position to arrange any in-person consultation meetings for the week of 20 June 2023 and the EDO is awaiting instructions as to preferred dates and next steps for consultation. In the meantime, Woodside could let the EDO know if Woodside had any questions (SI Report, reference 50.58).
- **(9, 10)** On 21 June 2023, Woodside emailed the EDO, [Individual 4], [Individual 3] and SOS, thanking them for their email and advising that Woodside was looking forward to hearing from them when ready. Woodside offered for comments/queries/requests to be emailed in the meantime if more efficient (SI Report, reference 50.59).

- **(9,10)** On 28 June 2023, the EDO on behalf of its clients, [Individual 4], [Individual 3] and SOS, emailed a letter to NOPSEMA and copied Woodside urging NOPSEMA not to accept the 4 Scarborough EPs Woodside had submitted as Woodside had failed to comply with its consultation obligations under regulation 25 of the Environment Regulations (SI Report, reference 50.60). The EDO stated:
 - Woodside had not notified their clients that the EPs had been submitted nor the dates of submission.
 - A meeting scheduled for 13 June 2023 did not proceed; plans to reschedule were ongoing.
 - Woodside had not explained the activities of the Scarborough EPs and the associated impacts and risks in a way the SOS can understand and how this will impact their functions, interests or activities. Also, [Individual 4], [Individual 3] and SOS had not been provided with sufficient information and a reasonable period for consultation.
- On 3 July 2023, Woodside emailed the EDO and copied NOPSEMA in response to the EDO's letter to NOPSEMA dated 28 June 2023 (copied to Woodside) (SI Report, reference 50.61). Woodside clarified:
 - **(5, 9)** Woodside had consulted [Individual 4], [Individual 3] and SOS while preparing the 4 Scarborough Project EPs since March 2022. Woodside reaffirmed [Individual 4], [Individual 3] and SOS's relevant persons status.
 - **(9, 10)** Consultation between Woodside and [Individual 4], [Individual 3] and SOS had been extensive and over an extended period. As at 13 April 2023, consultation had included 5 meetings, 2 attempted meetings, 19 emails, 7 phone calls and 10 letters [Ref letter to NOPSEMA, copied to EDO dated 17 April 2023].
 - **(8, 9, 10)** At a meeting on 14 March 2023, Woodside provided an overview of the Scarborough Project to [Individual 4], [Individual 3] and SOS to provide further understanding of the activities to be carried out under the Scarborough EPs. Woodside agreed to keep the full details of the meeting confidential at the request of the EDO's clients on the basis that some matters included secret women's business.
 - **(9,10)** Following this meeting, a suite of correspondence was exchanged where Woodside further explained the activities to enable [Individual 4], [Individual 3] and SOS to make an informed assessment of the possible consequences of the activities on their functions, interests or activities. This was in addition to consultation material previously provided since August 2022 and the publicly accessible Scarborough EPs published on NOPSEMA's website.
 - **(9, 10, 11)** During the meeting, without expressing to Woodside what their functions, activities and interests were (which remained (at the date of this letter) unexpressed by the EDO or its clients), [Individual 4], [Individual 3] and SOS informed Woodside that nothing could be done by it to progress with the activities to be carried out under the Scarborough EPs in a way that could minimise the effects of those activities on their undisclosed functions, interests or activities. Nonetheless, Woodside had continued to continue to consult with [Individual 4], [Individual 3] and SOS in the event they had any matters they wished to communicate to Woodside that could be relevant to the Scarborough EPs.
 - Woodside had been prepared to meet and had continued to correspond with the EDO's clients and the EDO.
 - Woodside considered it had met regulation 25 of the Environment Regulations.
 - Woodside remained open and available to meet and proposed a meeting date from 3 July 2023.
- On 17 July 2023, the EDO emailed Woodside with 4 potential video conference meeting dates in July. The EDO also acknowledged receipt of Woodside's letter of 3 July 2023 and advised it would revert in due course (SI Report, reference 50.62).
- On 17 July 2023, Woodside emailed the EDO advising it would revert with meeting details (SI Report, reference 50.63).
- On 18 July 2023, Woodside emailed the EDO confirming it was available for a video conference meeting on 25 July 2023 and asked for confirmation. A draft agenda was proposed and the agreed protocols were included that were previously agreed. This included female only attendees, an agreement to attend with open hearts and ready for deep listening and

respectful conversation and an agreement to share knowledge of the environment including the heritage of places. It also included an agreement that there would be no audio or video recordings (SI Report, reference 50.64).

- On 19 July 2023, Woodside again provided the EDO with NOPSEMA consultation documents (brochure, guideline and policy) and again asked they be provided to [Individual 4], [Individual 3] and SOS ahead of the meeting (SI Report, reference 50.65).
- On 19 July 2023, the EDO advised Ms Jess Border and Ms Alina Leikin of EDO have taken over carriage of the matter and they will respond to the latest emails from Woodside (SI Report, reference 50.66).
- On 19 July 2023, the EDO responded to Woodside confirming the meeting on 25 July 2023 and provided a revised agenda which was the agenda that was agreed ahead of the 13 June 2023 Karratha meeting that did not proceed. The EDO made no objection to the agreed meeting protocol, including no audio or video recordings (SI Report, reference 50.67).
- **(8)** On 20 July 2023, Woodside responded to the EDO agreeing to the meeting time and date, stating that the proposed agenda would be reviewed internally, and requesting confirmation on specific protocols to be adhered to in the meeting would be aligned with those previously set by SOS (SI Report, reference 50.68).
- **(8)** On 21 July 2023, Woodside emailed the EDO notifying arrangements had been made for the planned meeting on 25 July 2023, that Woodside was comfortable with the proposed agenda and that Woodside would provide information on the broader Scarborough Project and EPs currently being assessed rather than a single EP. This would give [Individual 4], [Individual 3] and SOS an opportunity to discuss and ask questions on the other Scarborough EPs currently being assessed. Woodside also sought confirmation that previously mentioned protocols would be followed (SI Report, reference 50.69).
- **(8, 15)** On 24 July 2023, the EDO emailed Woodside to inform that a presentation of broader information on the Scarborough Project and EPs was acceptable and requested that the meeting be recorded but paused for discussion of culturally sensitive matters. This was raised a day before the meeting, despite Woodside circulating the agreed protocol for comment several times since the March 2023 meeting. The EDO had also confirmed that the existing protocols would be appropriate (SI Report, reference 50.70).
- On 25 July 2023, Woodside emailed the EDO to state that Woodside intends to adhere to the protocols already agreed, including that attendees are welcome to take written notes however there will be no other recording of meetings. Woodside stated that it does not consent to the meeting being recorded (SI Report, reference 50.71).
- On 25 July 2023, [Individual 4], [Individual 3] and SOS's lawyers confirmed they were running late to the meeting (SI Report, reference 50.72).
- On 25 July 2023, Woodside acknowledged the EDO's email and stated it looked forward to meeting for the consultation (SI Report, reference 50.73).
- MEETING: On 25 July 2023, Woodside met with the EDO and SOS, [Individual 4] and [Individual 3] via video conference (SI Report, reference 50.74). The meeting included the following:
 - **(8)** Introductions: The EDO stated that for the meeting to proceed the meeting had to be recorded. It was stated that if the meeting was not recorded, [Individual 3], [Individual 4] and SOS would not participate in the meeting. [Individual 4], [Individual 3] and SOS were emphatic on this point.
 - **(8)** As this had not been agreed between the parties, around 40 minutes after the planned start time of the meeting, the meeting paused while arrangements were discussed. As noted above, the EDO raised this as an issue on 24 July, the day before the meeting. EDO, [Individual 4], [Individual 3] and SOS had an opportunity to object to the agreed meeting protocol at any time between the March and July meetings, including when Woodside circulated the agreed protocol on several occasions (SI Report, reference 50.75 and 50.76).
 - **(8)** Following the pause in the meeting to consider recording, Woodside emailed EDO to inform that following an internal discussion, Woodside agreed to rejoin the meeting and the meeting being recorded under certain conditions. The issue around recording ultimately delayed the meeting by approximately 1 hour.

- **(9, 15)** When the meeting recommenced, Woodside provided the meeting with a PowerPoint presentation covering Scarborough D&C, SIT1, Seismic and Subsea EPs and presented on regulatory context and provided an overview of the Scarborough Project including the FPU and trunkline operation. In accordance with emails exchanged before the meeting, Woodside came to the meeting ready, willing and able to address all Scarborough activities and to hear from [Individual 4], [Individual 3] and SOS on their knowledge and concerns.
- **(9, 15)** Woodside opened the presentation by describing the Scarborough Project and the 430km trunkline route and the use of the trunkline including that gas will be pumped through it and exported back to the Pluto Gas Plant. On behalf of [Individual 4], [Individual 3] and SOS, the EDO intervened on several occasions during the meeting and told Woodside words to the effect that [Individual 4], [Individual 3] and SOS did not want the opportunity to hear the presentation on any other EP, stating that their client was only there to consult on one EP (Seismic EP). This was despite the EDO confirming in its email on 24 July 2023 that Woodside had said it would provide information on the Scarborough Project and other EPs. Woodside presented on the Seismic EP including by describing the activity in detail and talking through potential risks and impacts of the proposed activity and controls in place to manage them. Woodside also attempted to provide information on the D&C, SIT1 and Subsea EPs and the broader project and gave an opportunity to hear [Individual 4], [Individual 3] and SOS (as agreed in the meeting agenda) but was declined.
- Woodside provided an overview of the Scarborough Project and the offshore infrastructure. Despite a direction to only discuss the Seismic EP, [Individual 3] asked a question relating to the Drilling EP regarding the depth of the Scarborough wells. Woodside noted the wells will be drilled in approximately 900-950 m water depth, however the wells themselves are drilled a lot deeper to get to the reservoir. Woodside noted they would take an action to provide specific accurate water depths and target reservoir depths and provided this detail as part of their correspondence on 27 July 2023. [Individual 4], [Individual 3] and SOS also asked questions relating more broadly to the other Scarborough EPs.
- Woodside provided an overview of the Scarborough Seismic survey activity. [Individual 3] asked about the spatial extent of the Operational Area and the larger Environment that May Be Affected (EMBA). Woodside provided an overview of the spatial extent of the environment that may be affected for the Scarborough Project and how it is driven by the highly unlikely event of a hydrocarbon spill from a vessel collision. [Individual 3] enquired as to:
 - **(16)** the unplanned risk of an oil spill, particularly querying who determines the credible spill scenario. Woodside offered to explain or to note the question and respond after the presentation, though EDO lawyers said they would make a list of questions to go through after.
- At this point. EDO lawyers again required that the meeting would only discuss the Seismic EP. When the topic of drilling and well depth was raised later in the meeting [Individual 3] indicated she didn't want to skip past and wanted to go through the 'whole lot', and, despite this, EDO lawyers again suggested the meeting was to only discuss the seismic EP.
- **(9, 10)** [Individual 4], [Individual 3] and SOS provided feedback and asked questions some which related to all of the Scarborough EPs. [Individual 4], [Individual 3] and SOS stated at the meeting words to the effect that no new cultural information was provided relevant to any of the Scarborough activities. [Individual 4], [Individual 3] and SOS declined to provide further detail about the nature of their cultural values at the meeting.
- **(16)** [Individual 4], [Individual 3] and SOS raised queries relating to the oil spill modelling Woodside undertakes to determine the EMBA. Woodside gave an overview of oil spill modelling and the stochastic nature of the model. The EDO requested Woodside to provide the underlying information for the oil spill modelling about how the risk is determined i.e., worst case hydrocarbon spill scenario. Woodside provided a response to this request as part of their correspondence on 27 July 2023.
- **(14, 17)** [Individual 4], [Individual 3] and SOS stated that they are broadly concerned about impact on the whales and other animals, the Songlines (unspecified) and the energy lines (unspecified).
- **(7)** [Individual 4], [Individual 3] and SOS stated that only they know the Songlines and other Traditional Custodians did not, including MAC.
- The meeting agreed outstanding questions for Woodside to revert on. Woodside also pointed [Individual 4], [Individual 3] and SOS to the Summary Consultation Information sheets which are designed to explain highly complex content in a more readily understood manner.

- **(10)** Woodside asked whether [Individual 4], [Individual 3] and SOS could share information about themselves and SOS, in particular the communal and/ or individual interests held. [Individual 4] declined to do so and suggested that this meeting was not the time for that. [Individual 4] stated the focus of herself, [Individual 3] and SOS at that time was to understand the activities, and that this information could be shared at a later time when they are ready.
- Woodside pointed out that [Individual 4], [Individual 3] and SOS had told Woodside that they would provide information at the meeting and had not done so. Woodside asked for honesty going forward so that information would be provided to Woodside where [Individual 4], [Individual 3] and SOS had told Woodside they would provide it.
- **(8)** Woodside offered to establish fortnightly meetings to provide [Individual 4], [Individual 3] and SOS opportunities to provide the information to Woodside. [Individual 4], [Individual 3] and SOS stated they would be unavailable for the next 6 weeks.
- SOS stated that they did not regard consultation had commenced until today. Woodside did not agree and this contradicts previous correspondence from [Individual 4], [Individual 3] and SOS, where their 24 March 2023 letter stated consultation had just commenced.
- The parties agreed to share the recording of the meeting.
- On 25 July 2023, the EDO emailed Woodside (SI Report, reference 50.77):
 - Requesting a copy of the recording from the earlier meeting.
 - **(18)** Requesting a response to six follow-up questions from [Individual 4], [Individual 3] and SOS which are relevant to this EP relating to the depth of wells, freshwater, migratory patterns of whales, dugongs and turtles, seagrass distribution, and the worst case spill scenario and modelling.
 - **(19)** Informing Woodside of [Individual 4], [Individual 3] and SOS's desired approach for response to the meeting on 25 July 2023 and further engagements, including that [Individual 4], [Individual 3], SOS would provide a preliminary response to the meeting in video format on-Country, which may need to be supplemented. This video has never been provided to Woodside.
 - **(15)** Proposing a sequence of meetings and responses be adopted on a per-EP basis.
- On 25 July 2023, Woodside emailed the EDO notifying that Woodside will discuss the points raised and respond accordingly, and agreeing to provide the recording of the meeting (SI Report, reference 50.78).
- On 25 July 2023, the EDO emailed Woodside requesting the meeting recording be provided via SharePoint, confirming that it would be passed on to its clients (SI Report, reference 50.79).
- On 26 July 2023, Woodside provided a recording of the meeting held on 25 July 2023 to the EDO via a secure file transfer system and requested that it be passed on to SOS (SI Report, reference 50.80).
- On 27 July 2023, Woodside responded to the EDO's email on 25 July 2023 (SI Report, reference 50.81):
 - Confirming that a copy of the meeting recording from 25 July 2023 had been sent to the EDO.
 - **(18)** Providing responses to the follow-up questions from [Individual 4], [Individual 3] and SOS.
 - **(10)** Noting that despite agreement prior to the meeting that cultural interests and feedback would be discussed at the meeting, this was not shared.
 - **(19)** Describing previous offers of meetings, noting that these were declined and confirming Woodside availability to meet on-Country.
 - **(15)** Describing why it is it Woodside's preference to consult on the Scarborough Project as a whole rather than on a per-EP basis, and noting that during the meeting [Individual 4], [Individual 3] and SOS asked questions about various Scarborough Project EPs.

- **(8)** Describing how requirements of regulation 25 of the Environment Regulations have been met, however Woodside remains open to continued consultation with SOS in good faith.
- Noting that an offer to meet fortnightly to support consultation had been made, which was declined.
- On 3 August 2023, Woodside emailed the EDO requesting that a message be passed on to SOS (SI Report, reference 50.82):
 - Following up on Woodside's offer to meet on-Country and whether SOS would be available.
 - Informing that a separate Scarborough EP had been accepted by NOPSEMA with conditions requiring Woodside to seek further input and requesting that SOS inform Woodside if it has input or information to provide.
 - Providing links to information about EP consultation and describing the purpose of EP consultation.
 - **(8)** Informing SOS that gender-restricted or culturally sensitive information is managed carefully and attaching NOPSEMA's "Policy for Managing Gender-Restricted Information".
- On 9 August 2023, the EDO emailed Woodside (SI Report, reference 50.83):
 - Confirming that the recording of the meeting from 25 July 2023 had been received and passed on to SOS.
 - **(9, 10)** Reiterating its clients had said they were not ready to provide Woodside with information following the presentation. This was contrary to previous correspondence where [Individual 4] and [Individual 3] confirmed they had information to share on all Scarborough EPs and the Scarborough Project generally (see correspondence dated 26 September 2022, 8 November 2022 and 24 November 2022).
 - **(9)** Stating that approaching consultation in good faith requires flexibility, that a fortnightly meeting arrangement is not appropriate and that a proposed date for another meeting will be part of a separate email.
 - **(15)** Reiterating that SOS, [Individual 4] and [Individual 3] intend to consult on EPs individually and consecutively, rather than concurrently, despite the previous position that consultation was occurring across all Scarborough EPs and the Scarborough Project generally.
 - Stating that SOS do not consider that requirements of the Regulations have been met, and that a response following the meeting on 25 July 2023 is in preparation.
- On 16 August 2023, Woodside emailed the EDO to clarify if the EDO were acting for [Individual 4] and [Individual 3] (SI Report, reference 50.84).
- On 17 August 2023, the EDO confirmed they represented both [Individual 4] and [Individual 3] (SI Report, reference 50.85).
- On 21 August 2023, Woodside emailed the EDO seeking consultation regarding the Seismic EP. In the email, Woodside also reiterated previously agreed upon consultation conditions and reaffirmed its readiness and willingness to meet and consult with [Individual 4], [Individual 3] and SOS, and requested available dates to meet (SI Report, reference 50.86).
- On 21 August 2023, a letter was sent to the EDO to inform that Woodside's position is that it had complied with the Regulations, and that Woodside is prepared to meet with [Individual 4], [Individual 3] and SOS at any time or place suitable to them so that they could provide any information they consider relevant. That letter attached a table confirming consultation undertaken with [Individual 4], [Individual 3] and SOS, relevant to all Scarborough EPs (SI Report, reference 50.87)
- On 22 August 2023, the EDO emailed Woodside informing that they would obtain further instructions from their clients regarding available dates for consultation and would email soon. The EDO also reiterated that SOS remains willing to consult (SI Report, reference 50.88).
- On 25 August 2023, the EDO emailed Woodside with two dates and location options available for consultation with their clients (SI Report, reference 50.89).
- On 25 August 2023, Woodside emailed the EDO seeking clarification on the two dates and information regarding payment for [Individual 4]'s airfare to and from the consultation location (SI Report, reference 50.90).
- On 25 August 2023, the EDO emailed Woodside confirming both date options (SI Report, reference 50.91).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 25 August 2023, Woodside emailed the EDO confirming receipt of the email and responding that they would revert with availability (SI Report, reference 50.92).

Summary of information provided and record of consultation for this EP:

- **(8, 9, 10, 19)** On 29 August 2023, Woodside emailed the EDO with a preferred consultation meeting date of 12 and 13 September 2023. The purpose of the meeting was to engage in ongoing consultation in relation to Woodside's EPs (including this EP). Woodside re-affirmed that these consultations would take place on a no-admission basis in relation to whether Woodside has satisfied regulation 25 of the OPGGS (E) Regulations given that EDO's clients hold a different view. It was also stated in the email that Woodside is proceeding on the basis that previously agreed protocols apply. Woodside also enquired about receipt of a video taken on Murujuga that was expected to be forwarded from [Individual 4], [Individual 3] and SOS (SI Report, reference 50.93).
- On 30 August 2023, the EDO emailed Woodside confirming receipt of the email and advised they would respond soon (SI Report, reference 50.94).
- On 1 September 2023, Woodside emailed the EDO following up a confirmation for consultation on the 12 and 13 September 2023, for a 2-day on-Country workshop with SOS (SI Report, reference 50.95).
- On 3 September 2023, Woodside emailed SOS specifically regarding consultation on this EP. The email provided an overview of the activity, and requested feedback on how it could impact functions, interests or activities or cultural values and concerns about the proposed activity and what SOS proposed to be done to mitigate these concerns, and whether there are other individuals or groups that Woodside should speak to. The email included a Summary Information Sheet about the proposed activity and requested a response by 30 September 2023 (Record of Consultation, reference 1.21).
- On 4 September 2023, the EDO emailed Woodside responding to the email sent on 29 August 2023 (SI Report, reference 50.96). The EDO:
 - Stated it understood that the consultation would take place on a no-admission basis given the diverging issues of the parties and reiterated its client's position that consultation had not occurred as per the Regulations. Provided instructions on how the 2-day consultation meeting was to proceed including separating the two days over time.
 - Asked for the first meeting (to be held on 12 September 2023) to focus on the Seismic EP and the second meeting (to be held sometime after the 29 September 2023), to be held on-Country with the intention of visiting the islands off Murujuga. As noted above, this was contrary to the initial position taken by [Individual 4], [Individual 3] and SOS that they would consult on all Scarborough EPs and had information to share on each Scarborough EP. The EDO expressed their client's interest in meeting a third time to discuss appropriate measures to be put in place for the Seismic EP.
 - The EDO asked Woodside to confirm that audio recordings at the meeting are permissible, as agreed on 25 July 2023; that the consultation is to take place with only women and responded to Woodside's query about the on-Country Murujuga video stating that their clients no longer intend to provide that video.
- On 7 September 2023, the EDO emailed Woodside asking for confirmation of the meeting for 12 September 2023 for planning purposes (flights and accommodation) (SI Report, reference 50.97).
- On 7 September 2023, Woodside emailed the EDO confirming the meeting for 12 September 2023 along with a proposed location in Karratha. Woodside restated the previously agreed upon protocols and listed the female Woodside employees that would be attending the meeting. Woodside confirmed the consultation would be conducted on a non-admission basis given the different view of the parties as to whether consultation had occurred in accordance with Environment Regulations (SI Report, reference 50.98).
- On 7 September 2023, the EDO emailed Woodside agreeing to the location, outlining dietary requirements and listing the attendees on their side (SI Report, reference 50.99).
- **(17)** On 7 September 2023, as part of the Federal Court proceedings, a second affidavit of Ms Border was filed. This affidavit sets out information relating to [Individual 4], [Individual 3] and SOS. It contains information that [Individual 4], [Individual 3] and SOS have declined to previously provide to Woodside in the course of consultation, communications and meetings that have taken place since around 2022. The affidavit contained information about [Individual 4], [Individual 3] and SOS's interests, including in relation to whale dreaming and Songlines. This information is publicly accessible in an online court file. This information was not provided to Woodside in previous consultation and was asserted it could not be provided

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

due to cultural sensitivity and as a result of a lack of information about the Scarborough EPs and their impacts on [Individual 3]'s interests. Woodside was therefore surprised to see the information for the first time being provided in a public forum when Woodside has been asking for and consulting with [Individual 4], [Individual 3] and SOS in order to hear and discuss the information for at least a year.

- On 11 September 2023, the EDO emailed Woodside confirming the 12 September 2023 meeting and asked Woodside to confirm that the purpose for the meeting was to discuss the Seismic EP only and to better understand the nature of the activities and ask questions to Woodside (SI Report, reference 50.100).
- **(9, 10, 15)** On 11 September 2023, Woodside emailed the EDO (SI Report, reference 50.101):
 - Confirming that the meeting proposed is to go over the Seismic EP as well as the Scarborough Project and answer any further questions their clients have.
 - Asking [Individual 4], [Individual 3] and SOS to provide questions in advance so that Woodside can have answers ready to share.
 - **(9, 15)** Stating that they would like to provide a refresher on other Scarborough activities with the aim to consult and provide [Individual 4], [Individual 3] and SOS the opportunity to discuss their interests and any claims and objections that they may have on the broader Scarborough Project footprint.
 - Restating Woodside's commitment to ongoing consultation with [Individual 4], [Individual 3] and SOS as part of its commitment to ongoing consultation during the life of an EP.
- MEETING: On 12 September 2023, Woodside met with [Individual 3], SOS and EDO in Karratha (SI Report, reference 50.102). [Individual 3] told Woodside that [Individual 4] sent her apologies as she could not make it and asked for the meeting to go ahead without her. At that meeting, Woodside provided and [Individual 3] took copies of Consultation Information Sheets for Scarborough EPs including this EP. Slides relating to this EP were also included in the presentation. Culturally sensitive and gender restricted content was discussed and has been provided to NOPSEMA separately in accordance with NOPSEMA's Managing Gender Restricted Information. The meeting covered all of the Scarborough activities to the extent that is described or discussed below (SI Report, reference 50.102). During the meeting:
 - EDO and [Individual 3] opened the meeting by stating that [Individual 3] would like to learn more about the activities covered under the Seismic EP and that she would then revert to Woodside to share her story.
 - **(18)** Woodside provided a recap of the previous meeting on 25 July 2023 and advised how Woodside had addressed the topics raised during that meeting. Woodside shared the control measures that had been adopted in the Scarborough EPs as a result of consultation with [Individual 4], [Individual 3] and SOS. [Individual 3], SOS and EDO queried whether any control measures have been removed from the Scarborough EPs overtime and what mitigation measures were considered and not implemented in the EPs. Woodside explained that principles of the ALARP process underpin environmental impact and risk assessment, and that the process generally means building in and improving environmental controls over time.
 - The trunkline and pipeline route were mentioned a number of times and in the context of topics of concern to [Individual 4], [Individual 3] and SOS.
 - Throughout the meeting, [Individual 4], [Individual 3] and SOS raised concerns and questions, which are summarised below, and were addressed during the meeting:
 - **(20)** How Woodside determines that the potential impacts from an activity are ALARP and acceptable.
 - **(14, 18)** A concern about the potential impacts from the Seismic EP on whales and emphasised the importance of whales and their deep connection to them.
 - **(12)** Who conducted the MAC ethnographic surveys, and whether [Individual 3] and SOS could be provided with the full report.
 - How Marine Fauna Observers (MFOs) are able to spot whales from the vessels.
 - A request for further information on the Jupiter Fields. Woodside noted that all the Scarborough gas fields are covered in the Scarborough OPP and that this information could be provided to [Individual 4], [Individual 3] and SOS.

- **(11)** In response to these concerns and questions, Woodside asked [Individual 3] and SOS whether there was anything that Woodside might be able to do to help minimise any impacts to cultural values. [Individual 3] and SOS stated words to the effect that the only thing Woodside could do is stop the project.
- **(9, 10, 12)** Woodside encouraged [Individual 3] and SOS to take some time and read through materials provided including the Consultation Information Sheet for this EP. Woodside asked whether [Individual 3] and SOS had any information from her own history and her own knowledge and information that she could share, including the kinds of issues that Woodside should be looking at that are of importance to her. [Individual 3] and SOS again stated that she could not share any further information until she is provided with the cultural heritage surveys Woodside has had completed. Woodside advised they would share the publicly available content from the report, and repeated that [Individual 3] and SOS would need to speak to MAC if they wanted access to the full report.
- **(19)** [Individual 3] and SOS indicated a desire to take Woodside employees out to Rosemary Island for an on-Country meeting. Woodside enquired as to the logistics including whether they would need to travel by boat and how long the boat ride would take.
- **(9, 10)** Woodside shared that there were consultation meetings happening in Karratha in relation to this EP, Port Hedland and Roebourne the following week, and that [Individual 4], [Individual 3] and SOS were welcome to attend and ask any questions or share anything then.
- Woodside concluded the meeting noting the information that Woodside had committed to providing [Individual 4], [Individual 3] and SOS and checking whether there were any other documents to be provided.
- **(8)** On 13 September 2023, the EDO thanked Woodside by email for the meeting on the 12 September 2023. The EDO also stated they were looking forward to receiving the requested information and listed the specific requests in the email. The EDO also reiterated that it expected that certain cultural information divulged in the meeting remained confidential and gender-restricted, referring to the agreed upon consultation protocols. This was not expected by Woodside because at all times, [Individual 3] and SOS had control to stop a recording and point out that culturally sensitive information was being shared. It was not apparent during the meeting that the information was culturally sensitive and [Individual 3] at no time asked for the recording to be stopped. In any event, Woodside acknowledged the position and undertook to manage the information sensitively (SI Report, reference 50.103).
- **(8)** On 13 September 2023, as part of the Federal Court proceedings, a third Border affidavit was filed. This affidavit confirmed that [Individual 3] “has not been consulted and wishes to be consulted in relation to the Drilling EP (and other EPs relevant to the Scarborough Project that are not the subject of these proceedings”).
- On 17 September 2023, Woodside emailed [Individual 4], [Individual 3] and SOS (SI Report, reference 50.104) acknowledging its request relating to confidential and gender-restricted information, audio recordings, and to agree a way forward to finalise consultation on the Scarborough EPs.

Summary – Correspondence leading to 4 and 5 October 2023 meeting:

A significant amount of correspondence was exchanged between Woodside and [Individual 4], [Individual 3] and SOS from 15 September 2023 in relation to Woodside’s offer to meet on 4 and 5 October 2023 to give another opportunity for [Individual 4], [Individual 3] and SOS to provide and discuss information they said they had and that Woodside needed for the Scarborough EPs.

A summary of the correspondence is as follows:

17 September – 2 October 2023

- On 17 September 2023, Woodside emailed [Individual 4], [Individual 3] and SOS to agree a way forward to finalise consultation on the Scarborough EPs with the utmost expedition and in a culturally appropriate way (SI Report, reference 50.105). In the email:
 - **(8, 9, 10)** Woodside confirmed the urgency around consultation and offered an opportunity to attend a meeting on-Country every day (including weekends) during the next week. Woodside also confirmed it was open to discussing and receiving any and all information on all Scarborough EPs. This was acknowledged by the EDO (Ref email 19 September 2023 and 20 September 2023).
 - Woodside confirmed that information provided at [Individual 4], [Individual 3] and SOS’s request relating to the DSDMP, CHMP, UWA study and OPP was already publicly available.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The information has been previously provided to [Individual 4], [Individual 3] and SOS or is information they were previously aware of. Reading that information is not a reason to delay consultation on the Scarborough Commonwealth EPs.
- On 18 September 2023, given the urgency and that there was no response, the email was followed by phone calls, voice mail and text messages to [Individual 4] and [Individual 3] on 18 September 2023.
- On 19 September 2023, the EDO emailed Woodside and noted that [Individual 3] was unable to meet due to personal circumstances, because her lawyers were heavily occupied with the Federal Court proceedings related to another Scarborough EP and because of the large amount of information provided following the 12 September 2023 meeting (SI Report, reference 50.106).
- On 20 September 2023, Woodside emailed the EDO and reiterated [Individual 3] had stated that she already knew the information she wished to provide to Woodside, had received information on each Scarborough EP since at least 2022, through questions and information had shown an understanding of each of the EPs and had been provided with the opportunity to discuss each of the EPs at each meeting this year (in 2023). Woodside requested a meeting by 6 October 2023 at the latest (SI Report, reference 50.107).
- On 20 September 2023, the EDO emailed Woodside confirming [Individual 4], [Individual 3] and SOS were available for a meeting on 4 and 5 October 2023, that they would like to visit the islands off Murujuga during this part of consultation and asked Woodside to coordinate logistics. A concern was expressed regarding the amount of information that would need to be reviewed prior to the meeting (SI Report, reference 50.108).
- **(9, 10, 15)** On 21 September 2023, Woodside emailed the EDO agreeing to a meeting on 4 and 5 October 2023 and agreed to investigate logistics regarding a trip to Rosemary Island. Woodside appreciated the confirmation that consultation would occur on all Scarborough EPs on those 2 meeting dates. Woodside also confirmed that there was no reason for concern regarding information that would need to be reviewed prior to the meeting because [Individual 3] had stated that the information, she and SOS wanted to share with Woodside was currently known to them given she and SOS had stated that they had information they wanted and were ready to share with Woodside. Woodside also reiterated that [Individual 4], [Individual 3] and SOS had had that information since at least 2022 and had shown an understanding of the content. Woodside asked [Individual 4], [Individual 3] and SOS to confirm items so that Woodside could investigate logistics associated with arranging the meeting, including hiring a boat and a venue for the meetings (SI Report, reference 50.109).
- On 25 September 2023, the EDO emailed Woodside to confirm that [Individual 3] wished to visit Rosemary Island as part of the consultation meeting, that [Individual 4]'s attendance was not yet confirmed, and that further logistics would be confirmed the next day (SI Report, reference 50.110).
- On 27 September 2023, Woodside emailed the EDO to follow-up as it had still not had confirmation from [Individual 4], [Individual 3] and SOS regarding the items that Woodside needed to be confirmed in order for the meetings and vessel hire to have progressed. Woodside set out a proposed agenda for the 4 and 5 October 2023 meetings and some logistical issues. One issue was that the vessel Woodside was investigating had limited space but could accommodate [Individual 3] and 3 other attendees [Individual 3] selected. Woodside respectfully also notified [Individual 4], [Individual 3] and SOS that the crew of the vessel was likely to be male and that there were potentially ways to manage the culturally sensitive information out of earshot of the male crew (SI Report, reference 50.111).
- **(8,10)** On 28 September 2023, the EDO provided some information regarding travel to Rosemary Island including that [Individual 3] would potentially bring eight other attendees with her on the boat to Rosemary Island and requiring Woodside to arrange a larger vessel. [Individual 3] noted that Rosemary Island is a culturally significant place and she had included two males to attend for the purposes of cultural safety. She also suggested that a third-party Appeals Convenor should be included in the trip. She also noted that she did not anticipate there would be any need for the Appeals Convenor or Woodside to share confidential or culturally sensitive information during or on the trip to Rosemary Island (SI Report, reference 50.112).
- On 29 September 2023, Woodside emailed the EDO advising that the recording of 12 September 2023 would be shared with NOPSEMA and confirming that culturally sensitive and gender restricted information would be managed appropriately, in accordance with NOPSEMA's "Draft Policy for Managing Gender Restricted Information" (SI Report, references 50.113 and 50.114).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- On 29 September 2023, the EDO emailed Woodside regarding meeting logistics for the 4 and 5 October 2023 meeting (SI Report, reference 50.115).
- On 29 September 2023, Woodside emailed the external boat provider to arrange a meeting to undertake a risk assessment (including for health and safety) for the proposed travel by boat to Rosemary Island (SI Report, reference 50.116).
- On 29 September 2023, Woodside emailed the EDO to advise that it had received broader cultural advice that Rosemary Island has high cultural significance and that Woodside has been strongly cautioned against convening a meeting at that location because of cultural sensitivity and safety concerns. Woodside suggested Hearson Cove as an alternative meeting location for [Individual 4], [Individual 3] and SOS to share any and all remaining information on the Scarborough EPs. Woodside also stated that it did not think it would be appropriate for the Appeals Convenor to attend, given the purpose of the meeting and questioned why three EDO lawyers needed to be in attendance (SI Report, reference 50.117).
- On 2 October 2023, the EDO emailed Woodside advising it was seeking instructions regarding the matters raised and would revert as soon as possible (SI Report, reference 50.118).
- On 2 October 2023, the EDO emailed Woodside expressing [Individual 3]'s disappointment at Woodside's decision regarding Rosemary Island and confirming arrangements for the meeting on 4 and 5 October 2023 (SI Report, reference 50.119).
- On 2 October 2023, Woodside emailed the EDO regarding the meeting on 4 and 5 October 2023 explaining the decision not to progress with the meeting on Rosemary Island. The email also conveyed that Woodside's priority was to understand the cultural values that [Individual 4], [Individual 3] and SOS asserted that Woodside needed to know for Scarborough EPs (SI Report, reference 50.120).
- (8) On 4 October 2023, Woodside emailed the EDO confirming that it takes cultural safety very seriously and confirmed that Ngaarda Ngarli community leaders have strongly discouraged Woodside from attending Rosemary Island. Other meeting items and logistics were confirmed (SI Report, reference 50.121).

Meeting on 4 and 5 October 2023

- MEETING: On 4 October 2023, Woodside met with [Individual 3] and SOS in Karratha (50.122):
 - Rosemary Island Trip
 - (8) There was discussion regarding [Individual 3]'s preference to travel to Rosemary Island and Woodside's position that it could not attend due to the strong cautions given to Woodside with regard to spiritual and cultural health and safety reasons.
 - Woodside's aim was to maintain integrity and respect for all First Nations people with whom it consults and to present the information in a balanced manner. [Individual 3] stated that she found Woodside's change in position on attending Rosemary Island to be disrespectful. In particular, [Individual 3] was offended by the fact that Woodside had spoken to other person(s) about her consultation with them.
 - During the meeting, [Individual 3] and SOS shared their perspective on matters leading up to the meeting, including their disappointment about the cancellation of the Rosemary Island trip. Woodside confirmed it was following meeting protocols and showing respect to the Traditional Custodian groups for the area. Woodside suggested alternative meeting locations and other options, as at a previous meeting [Individual 4], [Individual 3] and SOS had indicated that they would tell their story at Hearson Cove. The offer to meet at another place or meet at an alternative location on-Country of cultural significance where Woodside could receive the information was rejected by [Individual 3] and SOS - all options suggested by Woodside were rejected including:
 - ❖ A suggestion was made by Woodside that they use the boat Woodside had secured to circumnavigate Rosemary Island (but not disembark onto Rosemary Island), allowing [Individual 3] and SOS to share her information. [Individual 3] and SOS agreed that this could be a compromise. Woodside contacted the external boat provider during the meeting to see if a boat was available for 5 October 2023 that could circumnavigate Rosemary Island to allow for consultation on Sea Country to proceed, without embarking on the Island. The external boat provider confirmed it had a suitable vessel available and made special efforts to stand-up a marine crew. When Woodside confirmed this was available, [Individual 3] rejected the offer and declined to meet.

- ❖ Another option suggested was that [Individual 3] and SOS visited Rosemary Island and produced an audio recording of her story; and
 - ❖ A meeting at Hearson Cove, as Hearson Cove had previously been identified as culturally safe by [Individual 4], [Individual 3] and SOS and a place where they had (in March 2023) shared information with Woodside.
- Presentation and discussion on Scarborough EPs.
- **(14, 21, 22)** During the meeting, Woodside presented on Scarborough EPs (D&C, SITI, Seismic and Subsea) and controls suggested to demonstrate how Woodside had addressed each of the topics and cultural values previously raised by [Individual 4], [Individual 3] and SOS and the relevant controls in place for each of the Scarborough EP activities. Woodside displayed a table on-screen during the meeting which contained the previously expressed areas of interest to [Individual 4], [Individual 3] and SOS and controls pertaining to each of these interests. The EDO questioned why controls were being discussed, and not EP overview/content. In reviewing the newly adopted controls that were able to be covered, [Individual 3], SOS and the EDO provided views on some controls including the cultural awareness crew training control that had been included in all Scarborough EPs. [Individual 3] and SOS's feedback on the control was adopted.
 - **(10, 14,)** While Woodside was presenting on the controls implemented for humpback whales, [Individual 3] recognised the words were those she had said in the previous meeting with Woodside and noted that she was pleased that her words were used to describe the controls in the EP. [Individual 3] and SOS noted that all marine animals are important, not just whales. Woodside asked [Individual 3] and SOS to clarify, as in the previous meeting on 12 September 2023 [Individual 3] and SOS had specified humpback whales as being of particular importance. [Individual 3] and SOS stated that she had always said all animals and plants have importance, but whales and turtles are more apparent due to their size.
 - **(15)** On request of [Individual 3] and SOS, Woodside presented on Scarborough activities (D&C, SITI, Subsea, and Seismic), showing the presentation that had been prepared for the 25 July 2023 meeting including the Floating Production Unit (FPU) in the project overview, when Woodside was ready to present on all EPs and was directed to only discuss the Seismic EP.
 - Woodside described the trunkline route, the FPU, and proximity to existing infrastructure and controls protecting the environment during installation. [Individual 3] and SOS had various questions, including:
 - ❖ **(16)** [Individual 3] stated she had watched a lot of spills and was concerned that they didn't get contained.
 - ❖ **(16)** Woodside responded that gas released at 900m (Scarborough well depths) would dissolve in the water column and would not result in a typical oil spill scenario, but that the greater risk for the Scarborough activities including this from a spill perspective was diesel spill from vessels caused by vessel collisions, for example. Woodside provided an overview of a credible spill scenario from a vessel collision and discussed the Environment that May be Affected (EMBA).
 - ❖ **(16)** Whether NOPSEMA approves the oil spill preparedness and response plans, Woodside confirmed that these plans were assessed and approved as part of the EP assessment process.
 - ❖ Whether the FPU meant that Woodside had a version of the Karratha Gas Plant on the bottom of the ocean. Woodside explained the FPU in detail, how it was moored in place and connected by flow lines and umbilicals to the wells.
 - Woodside provided an overview of the proposed trunkline and explained the process for selecting the trunkline route and trunkline construction methodology. [Individual 3] and SOS spent some time looking at the figures showing where the trunkline passed through the Montebello MUZ and the various marine park classifications around the Montebello Islands and sought to understand that further. Woodside provided an overview of the dredging activity for the offshore borrow ground area, and explained the logic behind the focus on environmental impacts from dredging in that EP.
 - Woodside emphasised again a willingness to listen to [Individual 3]'s and SOS's story and keenness to ensure cultural values are protected.

- **(10,19)** Towards the end of the meeting, Woodside confirmed that a boat was available to circumnavigate Rosemary Island on 5 October 2023 as was the agreed compromise position. [Individual 3] said words to the effect that this was not good enough, and after a brief discussion on the logistics of the boat trip to Rosemary Island, the meeting ended.
- **(9)** After the close of the meeting, Woodside informed the EDO lawyers that another option available for [Individual 4], [Individual 3] and SOS to share [Individual 3]'s story was to share it directly with NOPSEMA.
- On 5 October 2023, Woodside attended the Red Earth Arts Precinct ready, willing, and able to engage in consultation on 5 October 2023. Despite Woodside confirming it was ready for the meeting, [Individual 3] and the EDO declined to attend.

Correspondence following the 4 October 2023 meeting:

A summary of the correspondence is as follows:

Woodside and the EDO exchanged emails following the meeting, noting that accounts and take-aways from the meeting differed.

- On 4 October 2023, the EDO emailed Woodside stating that each of the Scarborough EPs were not discussed “substantively” with [Individual 3] before the meeting that day (4 October 2023), other than the Seismic EP discussed at the 25 July 2023 meeting, and that it was the first time Woodside had provided a “substantive” presentation describing the activities described in the D&C, SIT1 and Subsea EPs (SI Report, reference 50.123):
 - **(21)** Through the EDO, [Individual 3] emphasised the importance of understanding the impacts and controls relating to animals affected by the activities.
 - **(8,9,10,19)** The EDO stated that [Individual 3] did not agree to meet again on 5 October 2023 in Karratha and [Individual 3] could not proceed with the proposed agenda, as she could not share the story she wanted to share with Woodside from anywhere other than on Rosemary Island. [Individual 3] wished to engage in consultation and share information about her story and how her functions, interests or activities may be affected, and she did not wish to meet in those circumstances.
 - **(19)** The EDO re-emphasised the importance of attending Rosemary Island for purposes of [Individual 3] sharing information.
- **(8, 9, 10, 19)** On 5 October 2023, Woodside emailed the EDO acknowledging the email sent on 4 October 2023 and stated that Woodside's understanding of the meeting differed. Woodside enquired if there were alternative approaches for [Individual 3] to share her story from Rosemary Island, such as recording her story or inviting the Regulator to attend and that they remained open to understanding how the issue could be progressed (SI Report, reference 50.124).
- On 5 October 2023, the EDO emailed Woodside stating that [Individual 3] and the EDO would not be attending the meeting that day (SI Report, reference 50.125). [Individual 3] considered Woodside had seriously damaged the relationship of trust and confidence required for consultation. The EDO were instructed to say that [Individual 3] was open to the prospect of future meetings if the relationship was able to be repaired.
- **(8, 9, 10, 19)** On 5 October 2023, Woodside emailed the EDO sharing their disappointment that [Individual 3] and SOS would not be attending the meeting that day. Woodside confirmed employees were at the Red Earth Arts Precinct centre in Karratha as agreed, and were keen for the meeting to go ahead and for Woodside to hear further information [Individual 3] wished to share on the Scarborough EPs. Woodside re-iterated that there was no disrespect intended towards [Individual 3]. Woodside stated that there was a limit where consultation could be held in circumstances where there were unacceptable health and safety risk, as was the case in the instance of Woodside employees going onshore for a meeting with [Individual 3] and SOS at Rosemary Island when it was advised not to. Woodside reiterated that Woodside employees had received strong advice on cultural safety and did not have cultural permission to convene a meeting with [Individual 3] or SOS on Rosemary Island and asked again if there were alternatives available for [Individual 3] to share her information. A link to the NOPSEMA draft policy for managing gender restricted information was also provided (PL2098) was provided (SI Report, reference 50.126).
- **(8, 9, 10, 19)** On 5 October 2023, the EDO sent a letter on behalf of [Individual 3] to NOPSEMA, and copied Woodside (SI Report, reference 50.127), which:
 - Acknowledged that, in [Individual 3]'s view, consultation with Woodside began in October or November 2022.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Noted that [Individual 3] believed Woodside had shared information regarding consultation with individuals not involved in the consultation.
- Stated that Woodside presented on matters outside of the agreed agenda, noting there was discussion on control measures Woodside had adopted in each of its EPs following the 12 September 2023 meeting.
- Stated that [Individual 3] felt the trust and respect had been damaged and was not conducive to her sharing her knowledge.
- Sought to arrange a meeting with female representatives of NOPSEMA at Rosemary Island or another place of her choosing, where she is able to share her information in a culturally safe manner.
- **(8, 9, 10, 19)** On 9 October 2023, Woodside emailed NOPSEMA stating that Woodside disagreed with a number of statements contained within the EDO letter sent to NOPSEMA (of 5 October 2023) and, accordingly, wished to correct the record and provide context. Woodside had consistently provided opportunities for [Individual 4], [Individual 3] and SOS to share information and engage in two-way dialogue and had attempted to accommodate the varied consultation requests made by [Individual 4], [Individual 3] and SOS. The email attached further supporting information (SI Report, reference 50.128).
- On 22 November 2023, Woodside emailed [Individual 4], [Individual 3] and SOS following up specifically on consultation for this EP, the email re-attached the email sent to [Individual 3], [Individual 4] and SOS on 3 September 2023. The email provided an overview of the activity and a Summary Information Sheet and requested feedback prior to 8 December 2023 (SI Report, reference 50.129).
- On 27 November 2023, Woodside emailed [Individual 4], [Individual 3] and SOS advising that consultation would close for this EP on 20 December 2023 and offered to meet between 4 and 20 December 2023. In order to facilitate and better enable consultation, Woodside's email included a table of topics of interest to SOS, [Individual 3] and [Individual 4] as well as feedback previously provided by [Individual 4], [Individual 3] and SOS on other Scarborough EPs and Woodside's assessment of relevance to this proposed activity and proposed controls for comment. The email notified that consultation on this EP would close on 20 December 2023 (SI Report, reference 50.130).
- **(1, 9, 16, 20)** On 6 December 2023, the EDO emailed Woodside, following up on information requested during October on spill modelling and impacts to species for each Scarborough Project activity. A request was made for a further consultation meeting in relation to this activity and that information on impacts and mitigation measures on a number of issues be provided prior to the proposed meeting (SI Report, reference 50.131). The email contained a list of preferences for consultation (including that certain subject matter experts be present and others not attend).
- **(9)** On 13 December 2023, Woodside emailed the EDO, attaching copies of consultation emails previously sent, including the information that had been requested and sent, and noting that the EDO subscribed to the Woodside website and receives Information Sheets and updates on consultation through that means. Woodside confirmed that the FPU was previously discussed, including on 4 October 2023 where [Individual 3] made direct reference to it along the lines of it being a gas plant in the middle of the ocean. Woodside considered the preferences expressed in the 6 December 2023 email and noted that Woodside would meet on terms best suited to the purposes of consultation. Woodside noted that [Individual 4], [Individual 3] and SOS have shown understanding of the project as demonstrated by questions and issues raised and the various mechanisms through which Woodside has sought and welcomed feedback. Woodside noted that consultation has limits and that a titleholder is not obliged to wait indefinitely for a response or gain consent. Woodside also requested the EDO respond as to who their client was (SI Report, reference 50.132).
- On 13 December 2023, the EDO emailed Woodside, confirming that [Individual 3] was available to meet Woodside on 20 December 2023 and wanted a meeting in Perth, requesting that Woodside coordinate a suitable venue (SI Report, reference 50.133).
- On 18 December 2023, the EDO emailed Woodside, confirming that the EDO was currently acting only for [Individual 3], not [Individual 4] or SOS. EDO requested copies of audio recordings of previous meetings and suggested another meeting date in January 2024 (SI Report, reference 50.134).
- **(9)** On 19 December 2023, Woodside emailed the EDO noting disappointment that [Individual 3] was unable to meet on 20 December 2023, offering another alternative date to meet during December. Woodside noted that as previously advised, consultation would close on 20 December 2023 and that Woodside intended to conclude consultation under regulation 25

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

of the Environment Regulations as soon as possible so that feedback, claims and objections can be best considered prior to EP submission. Woodside re-attached the information requested in the 13 December 2023 email, noting the information had been provided twice before. Woodside provided a video describing the FPU and the Scarborough Project (SI Report, reference 50.135).

- **(9, 10)** On 19 December 2023, Woodside emailed the EDO, noting that Woodside had previously provided a recording of the meeting held on 25 July 2023. Woodside stated that the EDO and Woodside had both made its own individual recordings of meetings on 12 September 2023 and 4 October 2023, and as previously requested, Woodside desired copies of EDO's recordings to cover inaudible sections in Woodside's version so that transcripts could be finalised (SI Report, reference 50.136).
- **(9, 10)** On 20 December 2023, the EDO emailed Woodside, stating that given the planned commencement of the activity, consultation prior to the EP being submitted should be delayed. It also stated that [Individual 3] has not had the opportunity to consider the proposed activity or provide feedback and, despite Woodside employees specifically noting [Individual 3] picked up an information sheet on this EP and had previously asked questions about it and shown an understanding of it, she did not recall being provided with any information about this EP at previous meetings. The email further noted that onshore processing and GHG emissions are a potential risk or impact which should be addressed in the EP and had not been discussed at previous meetings. The EDO requested availability to meet and offered to share the EDO's recording of the consultation meeting on 4 October 2023, but stating that the EDO did not have a recording of the meeting on 12 September 2023 (SI Report, reference 50.137).
- On 20 December 2023, given the EDO's email of 18 December 2023, Woodside also separately emailed [Individual 4] and SOS making reference to the 3 September 2023 email sent to [Individual 4], [Individual 3] and SOS and asking whether they would like to separately meet regarding this EP (SI Report, reference 50.138). In addition Woodside:
 - Referenced an email sent on 22 November 2023 seeking feedback by 8 December 2023 and another email sent on 27 November 2023 advising consultation would be closing on 20 December 2023 and offering to meet between 4-20 December 2023.
 - Advised that as of 20 December 2023, consultation had closed under regulation 11A (now regulation 25 of the Environment Regulations).
 - Noted that consultation could still occur and Woodside was open to receiving feedback throughout the life of an EP.
 - Attached the Summary Information Sheet (which had been taken by [Individual 3 at the September 2023 meeting], a table of information and topics previously provided by SOS, sent by Woodside on 27 November 2023.

Ongoing engagement:

- **(9)** On 21 December 2023, Woodside emailed the EDO, notifying that as previously communicated, consultation under regulation 25 of the Environment Regulations for the EP closed on 20 December 2023 and that [Individual 3] has had a reasonable period of time to consider the activities and provide feedback about how these activities affect her functions, interests or activities (SI Report, reference 50.138). The email noted:
 - That the FPU was discussed at face-to-face meetings on 14 March 2023, 25 July 2023, 12 September 2023 and 4 October 2023.
 - Woodside sent [Individual 3] an email attaching the Summary Information Sheet for the activity on 3 September 2023, requesting feedback by 30 September 2023.
 - At the face-to-face consultation meeting on 12 September 2023, [Individual 3] and SOS took hard copies of the Consultation Information Sheet and Summary Information Sheet for this EP. A photo of these Information Sheets available at the meeting was provided.
 - Woodside again sent [Individual 3] an email attaching the Summary Information Sheet for the activity on 22 November 2023, requesting feedback by 8 December 2023.
 - On 27 November 2023, Woodside emailed [Individual 3] advising that consultation would close on 20 December 2023 and suggested a range of meeting dates in December 2023. To assist, this email attached a table summarising a review of previous feedback provided by [Individual 4], [Individual 3] and SOS since at least 2022 on other Scarborough EPs, in the context of this proposed activity.

- **(11)** [Individual 3] attended a protest at the Woodside buildings on 7 December 2023, indicating her availability around that time to participate in consultation, however selected the final date for consultation (20 December 2023) to meet, a date for which she subsequently told Woodside that she was not available to attend.
- **(9, 10, 11)** A radio interview [Individual 3] had on 3CR, on 17 December 2023, where she stated that she had done everything she could in terms of providing information to Woodside as part of the consultation process and that significant information had been provided.
- **(9, 10)** On 22 December 2023, the EDO emailed NOPSEMA (and copied Woodside) (SI Report, reference 50.140). The email:
 - Informed NOPSEMA that Woodside had closed consultation on 20 December 2023, and attached an email chain in which [Individual 3] requested a consultation meeting after 24 January 2024. The EDO stated that [Individual 3] considered this request reasonable, given that the activities in the EP are not proposed to begin until 2025.
 - Noted that [Individual 3] has not yet met with Woodside in relation to this EP, and that the EP covers activities that will have impact that goes beyond the scope of what has previously been discussed.
 - Stated that consultation on the EP had not occurred with [Individual 3] in accordance with regulation 25 of the Environment Regulations, and urged NOPSEMA to ask Woodside to provide further information so that NOPSEMA can be satisfied that consultation in accordance with the Regulations had occurred.
- **(9)** On 19 January 2024, Woodside emailed the EDO in response to an email sent to Woodside by the EDO on 21 December 2023 and an email sent to NOPSEMA by the EDO on 22 December 2023, confirming consultation had closed for the preparation of this EP on 20 December 2023 (SI Report, reference 50.141). In addition:
 - Despite this, as per previous requests from the EDO on 18 December 2023 for [Individual 3] to meet with Woodside after 24 January 2024, Woodside proposed a meeting between 22 January 2024 and 11 February 2024. The purpose of the meeting would be to hear anything further [Individual 3] may have to provide by way of feedback in relation to this EP. Woodside reiterated it could also speak to a slide pack on the FPU and Operations scopes.
- On 24 January 2024, the EDO emailed Woodside thanking Woodside for its email and stating the EDO were currently seeking instructions from [Individual 3] and will revert as soon as possible (SI Report, reference 50.142).
- **(8, 9)** On 8 February 2024, the EDO emailed Woodside thanking it for Woodside's patience while they obtained instructions from [Individual 3]. A date for a meeting in Karratha was suggested with other logistical details. The EDO requested a slide presentation on this activity to be provided prior to the meeting and the same protocols as previously agreed. The EDO again requested a transcript from previous meetings (SI Report, reference 50.143). The EDO also:
 - **(23)** Noted compliance with the existing meeting protocol but also noted a change in protocols in that any cultural information resulting from consultation with [Individual 3] is not to be communicated to any third parties.
- On 9 February 2024, Woodside emailed the EDO and advised it was available to attend the 16 February 2024 meeting, face-to-face in Karratha and it would revert with further responses (SI Report, reference 50.144).
- On 9 February 2024, the EDO emailed Woodside and advised it had made travel arrangements (SI Report, reference 50.145).
- On 12 February 2024, Woodside emailed the EDO advising that due to a pilots' strike Woodside attendees had been waitlisted for flights and proposed alternate arrangements so that the meeting could still take place. For example, Woodside offered for the meeting to take place over Microsoft Teams or in Perth if [Individual 3] and [Individual 4] were intending to fly to Karratha (SI Report, reference 50.146).
- On 13 February 2024, the EDO emailed Woodside twice discussing logistics details and suggesting availability for alternative dates and advised they would seek instructions and revert to Woodside (SI Report, reference 50.147 and 50.148).
- On 13 February 2024, Woodside emailed the EDO confirming logistics to meet (SI Report, reference 50.149). In addition:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside asked for confirmation as to who the EDO was representing at the meeting and if [Individual 4] was attending as a Traditional Owner, representative of SOS and/or representation of the Australian Conservation Foundation.
- (8, 23) Woodside agreed to comply with the meeting protocol, except for a new addition about not sharing cultural information with third party Traditional Owner groups, Woodside noted that due to the communal aspect of culture it may be necessary that certain information would require testing broad acceptance with an appropriate cultural authority.
- (9, 10) Woodside confirmed the purpose of the meeting was to consult on this EP and to hear anything further [Individual 3], SOS and [Individual 4] may have to provide by way of feedback in relation to this EP. Woodside would also speak to a slide pack on this EP and the Floating Production Unit and Operations scopes.
- (10) Woodside attached the following for pre-read:
 - The summary of claims made by [Individual 3], [Individual 4] and SOS during previous Scarborough consultation and how they relate to this EP, previously sent on 27 November 2023 and 13 December 2023.
 - The Summary Information Sheet (prepared with Traditional Owner input), that had been provided to [Individual 3], [Individual 4], SOS and the EDO via email in September 2023, November 2023, and December 2023. [Individual 3] collected a Consultation Information Sheet in person at the meeting of 12 September 2023.
 - A video which provided an overview: Scarborough and Pluto Train 2 – YouTube.
- (9, 10) Woodside requested an indication of the topics, issues and questions that [Individual 3], [Individual 4] and SOS would be interested in being discussed at the meeting.
- (9, 10) Woodside advised it was looking forward to the opportunity to discuss and engage in dialogue on the EP and in particular to hearing objections or claims about the adverse impact of each activity to which the EP relates.
- Woodside thanked the EDO for providing its recording for the 4 October 2023 meeting which now enabled a full transcript to be prepared (which was then attached to the email).
- Woodside noted it was still awaiting provision of the EDO recording from the 12 September 2023 meeting and attached Woodside's recording of the meeting.
- (23) On 14 February 2024, the EDO emailed Woodside noting [Individual 3] did not wish to go ahead with the meeting previously agreed for February 2024. This was because she did not believe her cultural information would be properly handled by Woodside. The EDO noted that [Individual 3] might share information in a written or other format rather than in a meeting. No further information has been received by Woodside (SI Report, reference 50.150).
- On 15 February 2024, Woodside emailed the EDO noting disappointment at the cancellation of the meeting again, but that it looked forward to receiving written feedback on this or any other EP from [Individual 3] at any time (SI Report, reference 50.151). Regarding confidentiality Woodside:
 - Reconfirmed the position set out by the Judge in the *Munkara v Santos* decision regarding the need for a titleholder to validate cultural information provided by individuals by providing that information to cultural authorities.
 - (8) Reiterated that as per the agreed protocol, cultural details would be kept confidential amongst females. Woodside again confirmed it has not disclosed any cultural details to the public and again reiterated that SOS, [Individual 3] and [Individual 4] have put a great deal of information (including cultural information) into the public arena of their own accord.
 - (23) Reiterated its position regarding the proposed trip to Rosemary Island and cultural advice received by Woodside. Woodside further reiterated its position regarding sharing of cultural information.
 - (22) Noted information is on the public record through evidence presented in *Cooper v NOPSEMA* (Federal Court VID647/2023), in affidavits, open court, through assertions online and in the media and other public forums.
- (23) On 21 March 2024, the EDO emailed Woodside disagreeing with Woodside's assessment of *Munkara v Santos* and suggesting Woodside had changed its approach to consultation shortly before the proposed February 2024 meeting (SI Report, reference 50.152).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(23)** On 28 March 2024, Woodside emailed EDO again reiterating that it was appropriate for Woodside to take advice from Murujuga Elders on cultural matters and offering once again to meet with [Individual 3] at her earliest convenience for consultation on this EP (SI Report, reference 50.153).
- **(23)** On 10 April 2024, the EDO emailed Woodside again disagreeing with the *Munkara v Santos* assessment and claiming Woodside were not answering [Individual 3]'s questions (SI Report, reference 50.154). The EDO also stated:
 - **(23)** [Individual 3] would only provide information in writing and it would not contain culturally sensitive information. This means Woodside may not have complete information about how all relevant persons' functions, interests and activities may be affected.
 - **(23)** [Individual 3] also noted Woodside had not informed her of with whom it shared information about the Rosemary Island trip.
- On 29 April 2024, SOS and/or [Individual 3] emailed Woodside advising Woodside [Individual 3] would only engage in consultation in a written format going forward (SI Report, reference 50.155). Woodside has respected this position and has consulted in writing since that time.
- On 9 May 2024, SOS and/or [Individual 3] emailed Woodside (SI Report, reference 50.156) in response to another activity, with comments relating to this EP and the other activity. The response noted there was no culturally sensitive information included and outlined an overview of [Individual 3]'s functions, interests and activities including:
 - [Individual 3]'s connection to Murujuga and cultural responsibilities.
 - **(11)** [Individual 3]'s opposition to all industry on Murujuga.
 - **(10)** That [Individual 3] holds information that is critical for Woodside to understand the impacts of its activities and that [Individual 3] may also have feedback on proposed mitigation measures.
 - **(1)** [Individual 3]'s concern that the sacred rock art at Murujuga is at risk from emissions from the Pluto and Scarborough facilities.
 - **(24)** That Woodside's proposed mitigation/management measures to reduce GHG emissions does not focus on the protection of the environment.
 - **(4)** [Individual 3] is concerned about the cumulative impacts of any industry on Murujuga which:
 - Restricts access to Murujuga.
 - Affects cultural practices.
 - Contributes to cultural genocide by creating irreplaceable, irreversible cultural damage.
 - Affects the environment.
 - **(28)** That climate change should be considered as an impact.
 - **(25)** That activities are offshore from culturally significant islands, including Rosemary Island which is a women's island to which [Individual 3] has a significant connection and that Rosemary Island:
 - Holds a connection to songlines
 - Is a main breeding ground and habitat for turtles, which are culturally significant
 - Erosion on the island caused by climate change, vessel traffic and fishing prevent turtles laying eggs and incubating properly
 - Can only be protected by stopping the Scarborough project, and asks how Woodside will protect the island and the species reliant on the island.
 - **(26)** That consultation of relevant persons needs to be consistent. Specifically:

- Offering the same level of support
- Consulting in two stages: information provision, then response
- Providing assurance that culturally sensitive information will not be shared.
- **(17)** That the environment and cultural values are one, that Dreaming stories come from the animals depicted on the rock art and will live forever, that the connection and Songlines are being disrupted.
- **(27)** That there are other individuals that Woodside should speak to about these activities but [Individual 3] is not comfortable identifying these people.
- On 14 May 2024, Woodside emailed SOS and/or [Individual 3] to thank them for their feedback, confirm that Woodside would reply shortly, and request an attachment that was missing from the original email (SI Report, reference 50.157).
- On 16 May 2024, the EDO on behalf of [Individual 3] emailed Woodside with a copy of the body of the Border Affidavit attached (SI Report, reference 50.158).
- **(25)** On 23 May 2024, Woodside responded to the 9 May 2024 correspondence from SOS and/or [Individual 3] to advise that some of their feedback for this EP related to a WA State EP, and provided information relating to Rosemary Island, turtles and other matters relating to activity in State waters (SI Report, reference 50.159).
- On 29 May 2024, Woodside emailed SOS and/or [Individual 3] with a response to their feedback of 9 May 2024 (SI Report, reference 50.160). The response addressed:
 - Woodside's understanding of [Individual 3]'s connection to Murujuga.
 - How Woodside deals with culturally sensitive information and the protocol that has been followed.
 - **(11)** [Individual 3]'s opposition to the existence of all industry on Murujuga.
 - The process by which consultation has taken place, including:
 - Providing sufficient information, and a reasonable period of time and opportunity to be heard and share concerns, claims and/or objections, and to input on measures Woodside could implement to manage risks and impacts
 - **(10)** That information held by [Individual 3] and described as relevant to Woodside's activity had not been provided, despite numerous offers and opportunities to do so
 - **(26)** That Woodside consults consistently with relevant persons, while making consultation bespoke where appropriate
 - **(26)** That consultation is designed to enable effective engagement and the method of consultation is led by the Traditional Custodians (where appropriate)
 - **(27)** That Woodside identifies relevant persons for consultation and advertises publicly to allow others to self-identify.
 - **(1)** [Individual 3]'s concerns relating to Murujuga rock art including:
 - The regulations relating onshore processing facilities.
 - The processes around monitoring industrial emissions and studies relating to Murujuga rock art.
 - The inconclusive nature of research to date and Woodside's support of further research including involvement in the Murujuga Rock Art Monitoring Program.
 - **(3)** That activities described in this EP do not involve the movement or disturbance of any heritage sites including rock art.
 - **(24)** Mitigation and measures to reduce direct GHG emissions to ALARP.
 - **(28)** The consideration in the EP of climate change.
 - The assessment and controls of the highly unlikely potential impact of seabed disturbance.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (25) [Individual 3]'s connection to Rosemary Island, and the unlikely impact of this activity on the Island and its turtles.
- (17) The connection of culture and environment and recording of cultural values.
- (1, 11, 24) On 23 July 2024, Woodside emailed the EDO on behalf of [Individual 3] (SI Report 50.161). In the email Woodside:
 - Confirmed this EP was now available on the NOPSEMA website.
 - That the EP contained information about climate change, greenhouse gas and atmospheric emissions as well as control measures to manage the risks and impacts of activities to as low as reasonably practicable and an acceptable level.
 - Provided details on where previously issues raised during consultation could be found in the EP.
- On 30 July 2024, the EDO on behalf of [Individual 3] emailed Woodside a letter in response to Woodside's email of 23 July 2024. (SI Report, reference 50.162). The letter noted the following on behalf of [Individual 3]:
 - (29) Woodside had not assessed relevant impacts and risks to cultural values. This was because there had been no female Mardathoonera representatives on the Circle of Elders since 2015.
 - (30) The risks to rock art set out in the EP were not acceptable and have not been reduced to ALARP. There was insufficient consideration in the EP of impacts and risks to Murujuga rock art associated with the use of Scarborough gas at the proposed Perdaman facility.
 - (31) [Individual 3] has concerns about the processes by which approvals have been given to industrial projects on Murujuga by regulators in the past as reliance on the Murujuga Rock Art Strategy (MRAS) and Murujuga Rock Art Monitoring Program (MRAMP) was insufficient.
 - (32) Woodside should consider documents tabled in Parliament (Attachment A to this email) and revise its assessment of the risks and impacts of the EP on Murujuga rock art.
 - (33) Woodside has not met regulations about evaluation of environmental impacts and risks.
- On 13 August 2024, Woodside emailed the EDO/[Individual 1] a response to the 30 July 2024 letter (SI Report, reference 50.163). In the letter Woodside:
 - Reiterated that consultation for the purposes of preparation of the EP closed on 20 December 2023.
 - Confirmed feedback could be provided for the life of an EP.
 - Provided an attachment with responses to information raised by [Individual 3] These included:
 - (29) MAC is the authorised representative body to speak on behalf of Murujuga Country. Woodside respects MAC's cultural determination of the governance structures necessary and appropriate to manage Murujuga. MAC is responsible for the management and protection of Murujuga's cultural values. Woodside disagrees with the assertion that Woodside has not assessed relevant impacts because there had been no Mardathoonera representative on the Circle of Elders since 2015. This includes because Woodside understands that there is currently a female Mardudhunera Yaburara representative on the Circle of Elders.
 - (30) Section 6.7.7 of the EP provides an examination of research relating to impacts to rock art from industrial emissions. Woodside has reviewed information provided in Attachment A and no revisions to this section are required.
 - (31) The Murujuga Rock Art Monitoring Program (MRAMP) is a joint initiative of MAC and the WA Government. Woodside does not propose to undermine the process or to intervene in the exchange of information between the WA government, researchers and MAC. In the absence of MRAMP's final results, there remains no conclusive scientific research on the level of emissions which theoretically may affect rock art. Woodside is taking reasonable and practicable measures across its operations and growth projects to minimise emissions. Woodside does not run MRAMP or influence its methodology or results. Woodside will not intervene in the management of the program.

<ul style="list-style-type: none"> ▪ (32) Woodside has reviewed the documents tabled in Parliament (Attachment A). Attachment A appears to challenge the MRAMP and bring into question its operation. In answer to this, Woodside refers to the previous answer regarding MRAMP. Woodside also confirms that it does not utilise results from this study in the impact assessment of potential impacts to rock art. This is because reports produced to date from MRAMP caution against drawing conclusions about trends in rock surface condition and any relationship to air quality over time. ▪ (33) Woodside disagrees with the assertion that the EP does not contain relevant details required under the Regulations. This is because Sections 6.7 <i>Planned Activities</i> and Section 6.8 <i>Unplanned activities</i> contain an analysis and valuation of impacts and risks. Table 1-2 contains a summary of each of the components of Regulation 34 and where in the EP each of these requirements has been met. Information pertaining to Regulation 25 is in Section 5 of the EP. <ul style="list-style-type: none"> • On 7 October 2024, the EDO emailed Woodside about an administrative matter relating to correspondence (SI Report, reference 50.164). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Threat posed to Murujuga rock art due to acid gas emission from Woodside's LNG processing operations on the Burrup and climate change.</p>	<p>(1) Woodside Assessment: Potential impact from indirect emissions onshore are assessed in the EP. Woodside Response: The EP assesses direct emissions and Indirect atmospheric emissions (Sections 6.76, 6.77). Gas will be processed and exported onshore. Woodside will implement relevant feasible recommendations of the Murujuga Rock Art Monitoring Program (MRAMP).</p>	<p>(1) The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>
<p>(2) MAC is subject to gag clauses.</p>	<p>(2) Woodside Assessment: None of Woodside's agreements with Traditional Custodians include gag clauses or restrictions on voicing opinions on its projects. Woodside Response: Woodside supports Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback during consultation. (For example, emails from Woodside 5 Jan 2023, 6 June 2023 and letter dated 17 April 2023). In any event, Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(2) Not required.</p>
<p>(3)</p>	<p>(3)</p>	<p>(3) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Threat posed to Burrup by movement of rock art and damage to other heritage.</p>	<p>Woodside Assessment: No rock art will be moved by Woodside during the Scarborough Project.</p> <p>Woodside Response: Woodside advised that no rock art will be displaced as a result of the Scarborough Project (For example, email from Woodside 5 Jan 2023 letter dated 17 April 2023 and on 6 June 2023).</p>	
<p>(4) Cultural heritage impacts both direct and indirect (restriction of access to sites of cultural and spiritual significance impacts to cultural obligations).</p>	<p>(4) Woodside Assessment: Woodside accepts that access restrictions to the Operational Area apply, as detailed in Section 6.7.1 of the EP, noting the distance offshore for the Operational Area.</p> <p>Woodside Response: Woodside EPs assess cultural heritage impacts, including both direct and indirect impacts and risks associated with PAPs.</p>	<p>(4) Existing controls considered sufficient as described in Section 6.10 of the EP.</p>
<p>(5) [Individual 4], [Individual 3] and SOS stated their desire to be consulted as relevant persons.</p>	<p>(5) Woodside Assessment: Woodside acknowledges [Individual 4], [Individual 3] and SOS as relevant persons for this EP.</p> <p>Woodside Response: Woodside has consulted with [Individual 4], [Individual 3] and SOS on both the proposed activity and the broader Scarborough Project and has responded to requests for further information.. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(5) Not required.</p>
<p>(6) Precautionary approach taken for gas related industry.</p>	<p>(6) Woodside Assessment: Woodside assesses emissions against a range of scenarios including the IEA NZE. Woodside has undertaken work to estimate the direct and indirect emissions from the Scarborough project that may impact the Murujuga petroglyphs. There are no credible impacts to Murujuga cultural landscape including impacts on rock art in relation to air emissions produced at the FPU, and potential impacts from onshore processing of Scarborough gas are assessed in the EP.</p> <p>Woodside Response: Gas will be processed and exported onshore. Woodside will implement relevant feasible recommendations of the MRAMP. A description of the existing environment is provided in Section 4 of the EP.</p>	<p>(6) Existing controls considered sufficient as described in Section 6 of the EP. A description of the existing environment is provided in Section 4 of the EP. GHG Emissions are assessed ins Section 6.7.6 of the EP. The potential impacts from indirect emissions associated with downstream processing of Scarborough gas are assessed in Section 6.7.7 of the EP.</p>

<p>(7) MAC does not represent the interests of [Individual 4], [Individual 3] or SOS. [Individual 4], [Individual 3] and SOS have interests that are separate and distinct from those of MAC.</p>	<p>(7) Woodside Assessment: Woodside deals individually with each relevant person/group that Woodside accepts as relevant for any EP, including the Scarborough Project and this activity. Woodside Response: Woodside has consulted with [Individual 4], [Individual 3] and SOS separately from MAC and other relevant representative bodies (See consultation record). In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(7) Not required.</p>
<p>(8) Sensitive information shared by [Individual 4], [Individual 3] and SOS was to be treated with high sensitivity and confidentiality. Meeting protocols agreed by both parties should be met.</p>	<p>(8) Woodside Assessment: Woodside respects that relevant persons share sensitive information, including gender specific information and that information is respected and protocols are adhered to. Woodside Response: Sensitive information has been appropriately handled by Woodside in accordance with agreed protocols. Woodside has agreed with requests from [Individual 4], [Individual 3] and SOS in relation to meeting protocols. This has included significant efforts by Woodside to allocate female subject matter experts to prepare and attend meetings with [Individual 4], [Individual 3] and SOS where matters are otherwise managed by male subject matter experts for Woodside (for example, see emails setting up meetings on 14 March 2023, 25 July 2023, 12 September 2023 and 4 October 2023. See emails on 3, 4 and 5 October 2023). In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(8) Not required.</p>

<p>(9) [Individual 4], [Individual 3] and SOS have not been afforded reasonable opportunity or sufficient information for consultation.</p>	<p>(9) Woodside Assessment: Since at least 2022, Woodside has provided information to [Individual 4], [Individual 3] and SOS on the broader Scarborough Project. Information and discussions on the FPU have occurred in face-to-face meetings since around March 2023. Information to allow an informed assessment of the possible consequences of the activity on their functions, interests or activities in their Traditional Owner and NGO capacities has been provided and available for at least 12 months for this activity. [Individual 4], [Individual 3] and SOS have been provided a reasonable time and opportunity to consult in relation to this EP and all of the Scarborough EPs. (Please see consultation record). Woodside Response: The information provided by Woodside meets the requirements of regulation 25 of the Environment Regulations for the reasons set out above. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 3], [Individual 4] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(9) Not required.</p>
<p>(10) [Individual 4], [Individual 3] and SOS have interests they wish to share with Woodside, for consideration in Woodside's Scarborough EPs.</p>	<p>(10) Woodside Assessment: Woodside has provided a reasonable period of time and ample opportunity for [Individual 3], [Individual 4] and SOS to provide the information that they say Woodside requires for its EPs. Despite providing that reasonable period of time and opportunity, [Individual 4], [Individual 3] and SOS have not provided the information. Throughout consultation, [Individual 4], [Individual 3] and SOS have continued to state that they have additional information they wish to tell Woodside and that they say Woodside requires for its EPs, and, despite Woodside offering ample opportunity, to provide that information to Woodside, it has not occurred. (Ref, for example, 3, 4 and 5 October 2023, as well as correspondence in December 2024 and January 2025). In the past, on several occasions, [Individual 4], [Individual 3] and SOS have declined to provide the information to Woodside and have instead provided information publicly [Affidavits of Jessica Border September 2023] or offered to provide the information to others [Ref letter to NOPSEMA 26 September 2022, letter to NOPSEMA 4 October 2023]. Woodside Response: There is a limit to consultation. Woodside is not required to wait indefinitely to receive information. In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an</p>	<p>(10) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates. Woodside engages in ongoing consultation throughout the life of an EP.</p>	
<p>(11) Objection to the Scarborough Project, including the view that no controls could be implemented to minimise potential impacts to cultural values.</p>	<p>(11) Woodside Assessment: Based on engagements with [Individual 4], [Individual 3] and SOS, they have expressed a fundamental objection to the Scarborough Project, including this EP. Despite this, Woodside continues to engage in good faith to understand what could be done to minimise any potential impacts to cultural interests and values held by [Individual 4], [Individual 3] and SOS. (Ref, for example, consultation record and discussions with [Individual 4], [Individual 3] and SOS on their views regarding controls in place to manage topics of concern to them –4 October 2023 meetings and consultation correspondence in December 2023 and January 2024]. Woodside Response: Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).</p>	<p>(11) Impact potential to Cultural Features and Heritage Values are assessed in Section 6.10 of the EP with appropriate controls adopted including Management of Change and New Knowledge processes to capture new cultural values or information provided during consultation, application of the Woodside Unexpected Finds Procedure, training of relevant vessel and ROV crew in what to do in the case of an Unexpected Find, compliance with the ATSIHP Act, Management of vessel speeds in the humpback and pygmy blue whale BIAs during migration seasons(s) and Ministerial Statement obtainment by onshore processing facilities.</p>
<p>(12) Request for MAC ethnographic survey results to be shared with [Individual 4], [Individual 3] and SOS. Requests to know who from MAC participated in the ethnographic surveys.</p>	<p>(12) Woodside Assessment: Woodside has resourced Traditional Custodian representative institutions to access relevant information and independent expert advice so that they are enabled to provide informed and considered feedback on the broader Scarborough activities. A number of documents containing cultural heritage information, including heritage assessments, contain the intellectual property of Traditional Custodians or sensitive information that may be culturally restricted. For these reasons, Woodside respects this position and does not disclose this information. This information is held by representative institutions and may be disclosed by them where they consider it appropriate to do so. Woodside Response: Woodside has provided [Individual 4], [Individual 3] and SOS with the outcomes of these surveys to the extent that these can be shared publicly, consistent with the information in the public domain (i.e., where culturally appropriate). (Ref, for example, 14 March 2023 and following correspondence). In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to</p>	<p>(12) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	consultation, and not to an adverse impact of an activity to which the EP relates.	
(13) Whether the Scarborough activity included fracking.	(13) Woodside Assessment: No fracking will occur in the Scarborough Project for any of the activities. Woodside Response: Woodside confirmed that no fracking would be undertaken as part of Scarborough activities	(13) Not required.
(14) Cultural features associated with whales.	(14) Woodside Assessment: Woodside understands that some species hold spiritual and cultural importance to [Individual 4], [Individual 3] and SOS. Woodside discussed with [Individual 4], [Individual 3] and SOS controls that Woodside has put in place to manage impacts and risks relating to their spiritual and cultural connection to the environment. (Ref, for example, 25 July 2023 meeting and following correspondence, 12 September 2023 meeting and following correspondence as well as 4 October 2023 meeting). Woodside Response: Woodside has implemented controls to reduce potential risks and impacts to ecological and cultural values to ALARP and to an acceptable level.	(14) Control 4.8 has been adopted which requires the management of vessel speeds in the humpback and pygmy blue whale migration BIA(s) during migration season(s) – within the Trunkline Operational Area – to ≤ 10kn
(15) It is not appropriate for Woodside to consult on the Scarborough Project as a whole in each meeting.	(15) Woodside Assessment: [Individual 4], [Individual 3] and SOS originally sought to consult on all Scarborough EPs at once and confirmed they have information and “objections” to share on all Scarborough EPs as early as September 2022. (Ref correspondence and information in the public domain from around February 2022, July 2022, 26 August 2022 and 4 January 2023). From about June 2023, this position changed, and [Individual 4], [Individual 3] and SOS expressly directed Woodside to consult on individual EPs. Woodside has been ready, willing and able to consult on all Scarborough EPs (including this EP) since consultation commenced, and prepared materials to consult on all EPs – and attempted to present these materials. Consultation on this EP commenced in at least July 2023 and extended in February 2024. Woodside Response: In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.	(15) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(16) How credible spill scenarios are determined and who determines these.</p>	<p>(16) Woodside Assessment: Woodside aligns with industry guidance in assessing these scenarios. A quantitative hydrocarbon spill modelling using a three-dimensional hydrocarbon spill trajectory and weathering model was undertaken. Many replicate model simulations are completed to understand the potential behaviour of the worst-case release under various wind, wave and current conditions and these are combined to create an overall EMBA. Woodside Response: The EMBA for this activity is determined by a highly unlikely release of marine diesel as the result of damage to the production facility or vessel collision. Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of a hydrocarbon spill, as demonstrated in Section 6.8 of the EP.</p>	<p>(16) Credible spill scenarios are described in Section 6.8.2 and 6.8.3 of the EP. Woodside has addressed oil spill preparedness and response strategy in Appendix H of the EP. No additional measures or controls are required-</p>
<p>(17) Cultural features associated with Songlines, dreaming and energy lines.</p>	<p>(17) Woodside Assessment: Woodside understands that Songlines and energy lines hold personal spiritual and cultural value individually (rather than communally) to [Individual 4], [Individual 3] and SOS. Woodside has consistently sought to understand the nature of these values so that impacts to these values can be minimised. [Individual 4], [Individual 3] and SOS have declined to provide further information on these values. Woodside Response: In any event, Woodside has sought to include controls that seek to reduce risks and impacts to ALARP and acceptable levels and has sought [Individual 4], [Individual 3] and SOS's views on the proposed controls. (Ref, for example, 12 September 2023 meeting and following correspondence, 4 October 2023 meeting and consultation correspondence in December 2023 and January 2024).</p>	<p>(17) Woodside has considered [Individual 4], [Individual 3] and SOS's feedback and updated Section 4.9 to record topics of interest and cultural values, including Songlines and energy lines. These are assessed in Section 6.10 with appropriate controls implemented. At this stage, Woodside has not been provided with specific information on these potential values to enable a more fulsome assessment. In lieu of additional information on these values, Woodside has implemented a control that inductions for all relevant marine crew will include information on cultural values, including tangible and intangible cultural heritage (C 24.3). This control was updated further during the 4 October 2023 meeting based on feedback received during the meeting that the control should be timebound (updated to state this should occur prior to the individual undertaking the activity)-</p>

<p>(18) Demonstrated an interest in marine mammals, seagrass, the meeting of freshwater and saltwater.</p>	<p>(18) Woodside Assessment: [Individual 4], [Individual 3] and SOS have not expressly confirmed their interests, rather, have raised topics of interest to them. Woodside has considered [Individual 4], [Individual 3] and SOS's topics of interest and shared relevant information with [Individual 4], [Individual 3] and SOS relating to these interests, including controls put in place to manage risks and impacts to them, during meetings and subsequent emails (Ref, for example, 25 July 2023 meeting and following correspondence, 12 September 2023 meeting and following correspondence, and 4 October 2023 meeting). Woodside Response: Woodside has updated Section 4.9 of the EP to record the interests and assessed them in Section 6.10 implementing appropriate controls.</p>	<p>(18) Woodside has considered topics raised by [Individual 4], [Individual 3] and SOS's interests and updated Section 4.9 to record these. These are assessed in 6.10 with appropriate controls implemented. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural features or heritage values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).</p>
<p>(19) Need for [Individual 4], [Individual 3] and SOS to share their cultural knowledge and story on-Country.</p>	<p>(19) Woodside Assessment: Woodside has consistently sought to make arrangements for [Individual 3], [Individual 4] and SOS to be able to share their cultural knowledge and stories in a culturally appropriate manner, including offering and attending several on-Country meetings (Ref offers to consult on country – December 2023 and January 2024). Woodside also sought to meet the requests of [Individual 3] and SOS to attend an on-Country meeting at Rosemary Island in 2023 but was cautioned by the relevant cultural authority that Woodside did not have cultural permissions or spiritual protection to do so. Woodside and [Individual 3] reached a compromise relating to circumnavigating Rosemary Island rather than going on shore. [Individual 3] later declined this compromise and refused to share information [Ref meeting on 4 October 2023]. Woodside Response: In any event, as above at (2), Woodside notes that to the extent that this assertion is considered an objection or claim by [Individual 4], [Individual 3] or SOS, the objection or claim relates to consultation, and not to an adverse impact of an activity to which the EP relates.</p>	<p>(19) Not required.</p>

<p>(20) Environmental impacts from Scarborough activities and how Woodside determines that environmental impacts are at an ALARP and acceptable level.</p>	<p>(20) Woodside Assessment: Principles of the ALARP process underpin environmental risk assessment. Woodside Response: As required by the Environment Regulations, the EP will demonstrate that environmental impacts and risks will be reduced to ALARP and acceptable levels. Woodside explained this process</p>	<p>(20) The ALARP process is described in Section 2 of the EP.</p>
<p>(21) The need for Woodside to consider all animals in EP impact assessments.</p>	<p>(21) Woodside Assessment: Woodside has confirmed that consideration is given to all marine animals in the EP preparation process, Woodside has also stepped through these issues during consultation meetings (Ref, for example 12 September 2023 and 4 October 2023 meetings). Woodside Response: Marine fauna that may credibly be impacted by both direct and/or indirect activities are considered in the impact assessment in this EP (Section 6).</p>	<p>(21) Credible impacts from planned and unplanned activities are assessed in Section 6 of the EP.</p>
<p>(22) Cultural values publicly available in the Affidavits of Ms Border (September 2023) and Concise Statement (Ref. Section 4.9.4): Murujuga Rock art Caring for Country Bungarra Eagle Kangaroo</p>	<p>(22) Woodside Assessment: Through the publicly available Affidavits of Ms Border (August and September 2023) and Concise Statement, Woodside has been made aware that [Individual 4], [Individual 3] and SOS may hold cultural and spiritual values associated with Caring for Country, bungarra, eagle and kangaroo. Bungarra, eagles and kangaroos have not been identified as species credibly impacted by either direct or indirect activities associated with this proposed activity. Woodside has assessed potential risk/impact of the activity on receptors raised. Woodside has not been provided with any additional detail regarding values associated with Caring for Country. Woodside Response: Woodside has updated Section 4.9 of the EP to record topics of interest and cultural values and assessed them in Section 6.10 with appropriate controls implemented. Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2).</p>	<p>(22) Woodside has considered [Individual 4], [Individual 3] and SOS's feedback and updated Section 4.9 to record indicated topics of interest and cultural values. These are assessed in Section 6.10, with appropriate controls implemented.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(23) Expectation that there will be no communication with third parties about individual cultural values raised during consultation.</p>	<p>(23) Woodside Assessment: The Federal Court case of Munkara v Santos confirms that the communal aspect of the cultural beliefs and values requires validation that individual beliefs are broadly representative of other members of the group. Woodside Response: Woodside has consistently confirmed, since around October 2023 that, if Woodside is informed that a belief is cultural it must be respectfully taken back to the relevant cultural authority to understand whether it is broadly accepted. Gender sensitive information would follow the relevant gender protocols.</p>	<p>(23) Not required.</p>
<p>(24) That proposed mitigation/management measures to reduce GHG emissions does not focus on the protection of the environment.</p>	<p>(24) Woodside Assessment: The Scarborough Operations EP estimates and assesses Greenhouse Gas Emissions (GHG) from relevant sources including operational flaring exhaust emissions from fuel combustion, fugitive emissions from the FPU, exhaust emissions from internal combustion engines on project vessels and helicopters as well as GHG emissions associated with onshore processing of Scarborough gas (including third party transportation, regasification and combustion by end users). Woodside Response: The Scarborough FPU facility has been designed to reduce direct GHG emissions to ALARP, by implementing a number of GHG abatement opportunities in design and operational planning. The EP includes a range of controls to reduce impacts to ALARP and Acceptable levels. A comprehensive list of controls to protect the environment from emissions impact potential was provided in Woodside's response to [Individual 3], along with technology employed in the FPU facility design to reduce and minimise emissions.</p>	<p>(24) Not required, existing controls sufficient.</p>

<p>(25) The significance of offshore islands, including Rosemary Island, which is a women's island. That Rosemary Island has:</p> <ul style="list-style-type: none"> • a place to which [Individual 3] has a significant spiritual connection • a connection to Songlines • is a breeding ground for turtles which are a culturally significant species • erosion due to climate change and vessel traffic that prevents turtles from laying eggs. • Can only be protected by stopping the Scarborough project. 	<p>(25) Woodside Assessment: Woodside notes the assertion regarding connection to Rosemary Island and acknowledges the significance of the area around Rosemary Island to various turtle species. This EP does not cover activities in State Waters, where Rosemary Island is located. Woodside Response: Woodside has responded in writing to the issues raised, advising that the area around Rosemary Island relates to the Scarborough Trunkline Operations (State Waters) EP, and invited further feedback be provided for the relevant EP if required.</p>	<p>(25) Not required.</p>
<p>(26) That consultation should be consistent with all relevant persons.</p>	<p>(26) Woodside Assessment: Woodside endeavours to consult consistently while still making consultation bespoke, where appropriate. Relevant persons are provided with Consultation Information Sheets and First Nations relevant persons are provided with an additional Summary Information Sheet. Relevant persons are asked their preferred method of consultation and it is accommodated as far as is reasonable in the circumstances. Woodside Response: Consultation undertaken with Traditional Custodians considers how they would like to be engaged and support is tailored to the needs of the specific relevant person and requests for support as far as is reasonable in the circumstances.</p>	<p>(26) Not required.</p>
<p>(27) That there are other individuals who should be consulted but [Individual 3] is not comfortable identifying them.</p>	<p>(27) Woodside Assessment: Woodside seeks to engage with relevant persons it has identified as well as those who self-identify. Woodside Response: Woodside applies its methodology for the identification of relevant person for consultation and advertises publicly to invite comment from others who self-identify. Woodside notifies the relevant cultural authorities under statute, such as the Registered Native Title Bodies Corporate recognised under the Native Title Act 1993 (Cth) and the Murujuga Aboriginal Corporation included under the Aboriginal Heritage Regulations 1974 (WA), and seeks advice as to individuals who should be</p>	<p>(27) Woodside's Consultation Approach is outlined in Appendix F.</p>

	consulted and asks them to forward our notifications to their membership and the Traditional Owners they represent, if appropriate.	
<p>(28) That Woodside consider climate change as an impact of its activities and how climate change will affect Murujuga, the rock art, and Country more broadly.</p>	<p>(28) Woodside Assessment: The Environment Plans do assess Climate Change in the context of emissions (direct and indirect). Woodside Response: The EP does consider climate change. The Scarborough Operations EP assesses Routine and Non-routine Greenhouse Gas Emissions as well as Offshore and Indirect Emissions from Gas Processing Onshore, including potential to impact accelerated weathering of Murujuga rock art.</p>	<p>(28) Woodside assesses emissions and potential impacts and controls in Section 6.7.6 and Section 6.7.7. of the EP. No additional measures or controls are required-</p>
<p>(29) Woodside had not assessed relevant impacts and risks to cultural values. This was because there had been no female Mardathoonera representatives on the circle of Elders since 2015.</p>	<p>(29) Woodside Assessment: Woodside rejects this assertion. MAC is the authorised representative body to speak on behalf of Murujuga Country. MAC is responsible for the management and protection of Murujuga's cultural values. MAC has been consulted for this EP. Woodside Response: MAC is the authorised representative body to speak on behalf of Murujuga Country. Woodside respects MAC's cultural determination of the governance structures necessary and appropriate to manage Murujuga. Woodside understands that there is currently a female Mardudhunera Yaburara representative on the Circle of Elders. Woodside also consults with WAC, the approved PBC that holds and manages the native title rights and interests of the Mardudhunera and Yaburara people.</p>	<p>(29) Not required.</p>
<p>(30) The risks to rock art set out in the EP were not acceptable and have not been reduced to ALARP There was insufficient consideration in the EP of impacts and risks to Murujuga rock art associated with the use of Scarborough gas at the proposed Perdaman facility.</p>	<p>(30) Woodside Assessment: Woodside rejects this assertion. Woodside has assessed potential impacts to rock art from industrial emissions. Woodside Response: Section 6.7.7 of the EP – <i>Routine Atmospheric Emissions: Offshore and Indirect Emissions from Gas Processing Onshore</i> includes information and an assessment relating to impacts to rock art. Woodside has reviewed information provided by SoS (Attachment A) and has concluded that no revisions to this section are required.</p>	<p>(30) Section 6.7.7 of the EP addresses the potential contribution of gas processing onshore to accelerated weathering of Murujuga rock art.</p>

<p>Woodside has addressed objections and claims as noted above.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted (including any relevant new information on cultural values), it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>Woodside considers the measures and controls described within this EP address the potential impact from the proposed activities on [Individual 4], [Individual 3] and SOS's functions, interests or activities.</p>
---	---	--

Summary Report: Consultation Complete

Please see summaries at the beginning of this consultation record.

Woodside has consulted in accordance with regulation 25 of the Environment Regulations with [Individual 4], [Individual 3] and SOS by providing them with sufficient information, a reasonable period of time and a reasonable opportunity to make an informed assessment of the possible consequences of the activities on their functions, interests or activities in their individual Traditional Owner and NGO capacities.

Woodside has addressed each objection or claim made by [Individual 4], [Individual 3] and SOS, and has implemented controls in response to topics raised by them during consultation as well as in response to objections and claims they have made. Woodside has consulted [Individual 4], [Individual 3] and SOS both individually and together, providing opportunities for any and all topics relating to their functions, interests or activities – and potential risks or impacts to their functions, interests or activities – to be discussed, including those relating to a fundamental objection to the Scarborough Project as well as those relating, in accordance with Indigenous tradition, to spiritual and cultural heritage and values.

For completeness, it is also noted that [Individual 4] and [Individual 3] have also, from time to time, been members of Aboriginal corporations who have been separately consulted as relevant persons by Woodside. This is relevant because it confirms that cultural values or interests of those groups have been consulted on.

As demonstrated in the summary above consultation with [Individual 4], [Individual 3] and SOS complies with regulation 25 of the Environment Regulations and is complete.

Research Institutes and Local Conservation Groups or Organisations

University of Western Australia (UWA)

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside emailed UWA advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1). 		
<p>Summary of Feedback, Objection or Claim</p>	<p>Assessment of Merits of Feedback, Objection or Claim and Woodside's Response</p>	<p>Inclusion in Environment Plan</p>
<p>No feedback, objection or claim about the adverse impact of the activity received despite follow-up.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing</p>	<p>No additional measures or controls are required.</p>

consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with UWA for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given UWA sufficient information to allow UWA to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to UWA on 9 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description activity, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA’s brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed UWA a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to UWA advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside’s methodology allows a 30-day consultation period and Woodside allowed UWA with 30 days for consultation. For consultation on EPs, 30 days is the usual period for UWA.
- In this context, Woodside allowed UWA a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside’s approach to consultation with UWA is appropriate and adapted to the nature of UWA:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding UWA of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as UWA did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on UWA's functions, interests or activities.

Commonwealth Scientific and Industrial Research Organisation (CSIRO)

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed CSIRO advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with CSIRO for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient Information

Woodside has given CSIRO sufficient information to allow CSIRO to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to CSIRO on 11 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CSIRO a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to CSIRO advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CSIRO with 30 days for consultation. For consultation on EPs, 30 days is the usual period for CSIRO.
- In this context, Woodside allowed CSIRO a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CSIRO is appropriate and adapted to the nature of CSIRO:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- In line with NOPSEMA's guideline for engagement with Commonwealth government departments or agencies, Woodside used email for its consultation with CSIRO.
- Woodside sent a follow-up consultation email on 30 August 2023, reminding CSIRO of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CSIRO did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CSIRO's functions, interests or activities.

Curtin University

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed Curtin University advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.7).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Curtin University for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given Curtin University sufficient information to allow Curtin University to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Curtin University on 11 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans*.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed Curtin University a reasonable period for consultation in the preparation of this EP because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A consultation period was notified in the initial correspondence to Curtin University advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Curtin University with 30 days for consultation. For consultation on EPs, 30 days is the usual period for Curtin University.
- In this context, Woodside allowed Curtin University a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Curtin University is appropriate and adapted to the nature of Curtin University:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation on 30 August 2024, reminding Curtin University of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Curtin University did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Curtin University's functions, interests or activities.

Cape Conservation Group (CCG)

Historical Engagement:

- In correspondence sent to Woodside on 13 March 2023 in relation to another Woodside EP, CCG stated:
 - Due to previous Woodside consultations being unsatisfactory, CCG efforts in this space would be directed towards the regulators, government and media. Woodside noted CCG's feedback and will continue to provide consultation information to CCG where CCG is assessed as a relevant person.

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed Cape Conservation Group advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with CCG for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given CCG sufficient information to allow CCG to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to CCG on 11 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, and proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations).

Reasonable Period

Woodside allowed CCG a reasonable period for consultation in the preparation of this EP because:

- A consultation period was notified in the initial correspondence to CCG advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed CCG with 30 days for consultation.
- In this context, Woodside allowed CCG a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with CCG is appropriate and adapted to the nature of CCG:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation email on 30 August 2023 reminding CCG of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as CCG did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on CCG's functions, interests or activities.

Protect Ningaloo

Summary of information provided and record of consultation for this EP:

- On 11 August 2023, Woodside emailed Protect Ningaloo advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

Woodside has discharged its obligations for consultation under regulation 25 of the Environment Regulations, and consultation with Protect Ningaloo for the purpose of regulation 25 is complete. Sufficient information, a reasonable period and a reasonable opportunity have been provided, as described in Section 5.4 of the EP and further summarised in the Consultation Approach above. Specifically:

Sufficient information

Woodside has given Protect Ningaloo sufficient information to allow Protect Ningaloo to make an informed assessment of the possible consequences of the activity on its functions, interests and activities because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The Consultation Information Sheet for this EP has been publicly available on the Woodside website since August 2023. Woodside provided this information to Protect Ningaloo on 11 August 2023, marking the commencement of consultation on this EP. The Consultation Information Sheet included:
 - The purpose of consultation and set out what was being sought through consultation.
 - A summary of the activity description, location of the activity, timeframe of the activity, receiving environment, impacts and risks associated with the PAP, proposed mitigation and management measures.
 - A timeframe for consultation and the provision of feedback.
 - A link to NOPSEMA's brochure Consultation on offshore petroleum environment plans.
 - Advice that relevant persons can request that particular information provided during consultation not be published (to align with 25(4) of the Environment Regulations. Advice that relevant persons can request that particular information provided during consultation not be published (to align with regulation 25(4) of the Environment Regulations.

Reasonable Period

A reasonable period for consultation in the preparation of this EP has been provided because:

- A consultation period was notified in the initial correspondence to Protect Ningaloo advising of consultation as well as when consultation would close for the purposes of preparing the EP. This enabled Woodside to assess feedback before EP submission.
- Consultation for this EP commenced 17 months ago in August 2023.
- Woodside's methodology allows a 30-day consultation period and Woodside allowed Protect Ningaloo with 30 days for consultation. For consultation on EPs, 30 days is the usual period for Protect Ningaloo.
- In this context, Woodside allowed Protect Ningaloo a reasonable period for consultation in preparation of the EP.

Reasonable Opportunity

A reasonable opportunity to provide feedback has been provided because Woodside's approach to consultation with Protect Ningaloo is appropriate and adapted to the nature of Protect Ningaloo:

- Woodside published advertisements in 8 national, state, and relevant local newspapers (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside ran 2 targeted social media campaigns (see Consultation Activities). This allowed for broad awareness of the activity under the EP and also of consultation.
- Woodside sent a follow-up consultation on 30 August 2023, reminding Protect Ningaloo of the opportunity to provide feedback.

Outcomes of Consultation

Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. The measures (if any) that Woodside has adopted or proposes to adopt because of the consultation are appropriate because:

- No additional measures were considered as a result of consultation as Protect Ningaloo did not provide feedback for this EP.
- Woodside will continue to accept and assess feedback throughout the life of the EP and apply its Management of Change and Revision process when applicable.
- The measures and controls described in this EP address the potential impact from the proposed activity on Protect Ningaloo's functions, interests or activities.

TABLE 3: ENGAGEMENT REPORT WITH PERSONS OR ORGANISATIONS ASSESSED AS NOT RELEVANT

The black numbering **(N)** in the *Summary of information provided and record of consultation for this EP* in Table 3 denotes an issue raised by a stakeholder. The green numbering **(N)** in this section denotes Woodside’s response to that issue.

Commonwealth Commercial Fisheries and Representative Bodies

Western Tuna and Billfish Fishery

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Western Tuna and Billfish Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- (1)** Between 10 August 2023 and 9 September 2023, five individual licence holders from the Western Tuna and Billfish Fishery responded asking to be removed from Woodside’s mailing list and for Woodside to consult with Tuna Australia (SI Report, references 2.1, 2.2, 2.3, 2.4, 2.5, 2.6, and 2.7)
- (1)** On 10 September 2023, Woodside responded to five individual licence holders thanking them for their email and confirming they would be removed from Woodside’s mailing list and correspondence would be directed to Tuna Australia (SI Report, references 2.8, 2.9, 2.10, 2.11 and 2.12).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
(1) Five licence holders from the Western Tuna and Billfish Fishery asked to be removed from Woodside’s mailing list and for Woodside to consult with Tuna Australia.	(1) Woodside assessment: Woodside accepts that the consultation process is voluntary. Woodside response: Woodside confirmed it had removed the licence holders from mailing lists and had consulted Tuna Australia.	(1) Not required.
While feedback has been received, there were no objections or claims.	Woodside has consulted AFMA, Tuna Australia, DAFF – Fisheries, CFA, and individual relevant licence holders. Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been	Woodside has assessed the potential for interaction with Commonwealth managed fisheries in Section 4.10.1 of this EP. Woodside will provide notifications to AFMA, CFA, DAFF – Fisheries (see Table 7-8) ten days before activity commences, and following completion of activities, as referenced as PS 1.8.1 of this EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While Western Tuna and Billfish Fishery is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Western Tuna and Billfish Fishery to provide feedback during the consultation process.		

Tuna Australia

Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> • On 9 August 2023, Woodside emailed Tuna Australia advising of the proposed activity (Record of Consultation, reference 1.7) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. • (1) On 14 August 2023, Tuna Australia emailed Woodside stating it would consult on this EP once it had a services agreement in place (SI Report, reference 8.1). • On 23 August 2023, in a response to another EP, Tuna Australia stated it had not yet heard about the services agreement and asked if Woodside was planning to engage Tuna Australia on behalf of the tuna longline industry for this EP (SI Report, reference 8.2). • On 22 November 2023, Woodside responded thanking Tuna Australia for its email of 23 August 2023 regarding this EP (SI Report, reference 8.3) and advised: <ul style="list-style-type: none"> – Woodside’s consultation process identified relevant persons and provided them with sufficient information and a reasonable period to make an informed assessment of the possible consequences of a proposed activity on their functions, interests or activities. – Woodside obtained contact details of individual Commonwealth fishing statutory fishing rights and fishing permit holders so that consultation was consistent with the Regulations. As noted on its website, AFMA’s expectation was that petroleum operators consulted with fishing operators about all activities and projects which may affect day-to-day fishing activities. – In addition to consulting individual licence holders, Woodside consulted relevant fishing industry associations and representative bodies such as Tuna Australia and Commonwealth Fisheries Association, and referred to the AFMA website to help inform which associations and bodies were relevant. – While the management area for the Western Tuna and Billfish Fishery overlapped the Operational Area for this EP, based on AFMA data, no recent fishing effort had occurred within the Operational Area for at least the past 10 years. Despite this, Woodside chose to consult licence holders in this fishery. – (1) The Offshore Environment Regulations did not require entry into service agreements in order to meet EP consultation requirements. Woodside has assessed TA as not relevant for this EP. – Woodside considers it has met its consultation obligations under the Regulations and given Tuna Australia sufficient time and information to provide input. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(1) Tuna Australia advised it would consult once it had a services agreement in place.</p>	<p>(1) Woodside assessment: The Offshore Environment Regulations do not require entry into a services agreement in order to meet EP consultation requirements. Woodside response: Woodside advised that consultation requirements did not require entry into a services agreement and it considered it had given Tuna Australia sufficient time and information to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse effects of the proposed activity.</p>	<p>(1) Not required.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>
<p>Summary Report – Consultation Complete</p>		
<p>While Tuna Australia is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Tuna Australia to provide feedback during the consultation process.</p>		

State Commercial Fisheries and Representative Bodies

Mackerel Managed Fishery – Central (Area 3)

<p>Summary of information provided and record of consultation:</p> <ul style="list-style-type: none"> On 9 August 2023, Woodside sent a letter to Mackerel Managed Fishery – Central (Area 3) individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 31 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9). 		
<p>Summary of Feedback, Objection or Claim</p>	<p>Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response</p>	<p>Inclusion in Environment Plan</p>

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While Mackerel Managed Fishery – Pilbara (Area 3) is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Mackerel Managed Fishery – Pilbara (Area 3) to provide feedback during the consultation process.		

Nickol Bay Prawn Managed Fishery

Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> On 9 August 2023, Woodside sent a letter to Nickol Bay Prawn Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 1.8) and provided a Consultation Information Sheet and referred to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 31 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.9). On 11 September 2023, WAFIC, on behalf of Woodside, emailed Nickol Bay Prawn Managed Fishery individual licence holders advising of the proposed activity (Record of Consultation, reference 2.10) and provided a Consultation Information Sheet. On 12 October 2023, WAFIC emailed Woodside reporting that no feedback had been received from Nickol Bay Prawn Managed Fishery individual licence holders regarding the activity (SI Report, reference 45.1). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While Nickol Bay Prawn Managed Fishery is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Nickol Bay Prawn Managed Fishery to provide feedback during the consultation process.

Uncontrolled when printed. Refer to electronic version for most up to date information.		

Malgana Aboriginal Corporation

Malgana is established under the Native Title Act 1993 by the Malgana people to represent the Malgana people (defined broadly by reference to descent from the set of ancestors who were known to have a continuous and unbroken connection as the Traditional Custodians at the time of European colonisation) and represent their communal interests including, among other things, management and protection of cultural values.

Historical Engagement:

- **(1)** On 4 April 2023, Woodside met with Malgana and presented on several activities including the Scarborough Project relevant to Malgana (SITI and Subsea) noting that development of Scarborough would include the installation of a floating production unit (the activity relating to this EP). Malgana asked several general questions related to activities which Woodside responded to at that time. Malgana also sought information about hydrocarbon spill modelling.
- On 26 July 2023, Woodside emailed Malgana Woodside's planned Program of Ongoing Engagement with Traditional Custodians
- **(1)** On 1 August 2023, Woodside emailed Malgana with follow-up information that came out of a query about hydrocarbon spill modelling by Malgana at the meeting of 4 April 2023:
 - The information showed that Shark Bay hydrodynamics are adequately resolved in the model, as tidal flushing can be observed. This reinforces that the indication from modelling that the EMBA for the activity does not enter Shark Bay is appropriate.
- **(2)** On 1 August 2023, Malgana emailed Woodside with thanks for the information and noting that Malgana was looking to get an environmental consultant to provide advice to its Board, noting it was seeking quotes and would come back to Woodside for cost approval.
- **(2)** On 3 August 2023, Woodside emailed Malgana notifying about another activity and requesting to meet to discuss matters, including the issue raised by Malgana about getting an environmental consultant to give advice to its Board. Woodside also said it was available to catch up over the phone over the next coming days to discuss the above matters and for Malgana to reply with a preferred time. Malgana did not respond.

Summary of information provided and record of consultation for this EP:

- On 1 September 2023, Woodside emailed Malgana advising of the proposed activity (Record of Consultation, reference 1.35) and provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that Malgana and its members may have within the EMBA, information on how Malgana would like to engage, and requested that Malgana provide information to other individuals as required.
- On 11 September 2023, Malgana emailed Woodside advising that the information on the proposed activity had been shared with the Board for feedback (SI Report, reference 30.1).
- On 14 September 2023, Woodside emailed Malgana thanking it for sharing the information with the Board and offering assistance from Woodside (SI Report, reference 30.2). Woodside provided information on the planned start date for relevant Scarborough activities discussed at the meeting of 4 April 2023 and NOPSEMA's Consultation Guidelines, Consultation Brochure, and Draft Policy for Managing Gender-Restricted Information. This email also reiterated Woodside's request that Malgana advise Woodside of any other Traditional Custodian groups or individuals with whom Woodside should consult.
- On 20 October 2023, Woodside emailed Malgana requesting feedback/further information about activities that Woodside had previously notified Malgana about and offering assistance to Malgana for consultation if required (SI Report, reference 30.3).
- On 26 October 2023, Woodside attempted to call Malgana, but the number was disconnected, Woodside emailed Malgana following up on the proposed activities and requesting feedback and re-iterating an offer of assistance if required by Malgana about the activities (SI Report, reference 30.4).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> On 2 November 2023, Woodside emailed Malgana following up on the proposed activities and requesting feedback (SI Report, reference 30.5). On 14 December 2023, Woodside emailed Malgana providing the information on the proposed activity which was originally sent on 1 September 2023 (SI Report, reference 30.6). Woodside again provided a Consultation Summary Information Sheet (including a link to the detailed information sheet on Woodside's website). The email requested information on the interests that Malgana and its members may have within the EMBA, information on how Malgana would like to engage, and requested that Malgana provide information to other individuals as required. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1)</p> <p>During previous consultation in relation to separate related activities, Malgana requested further information on a topic related to this proposed activity which were responded to in correspondence shortly afterwards:</p> <ul style="list-style-type: none"> Hydrodynamic modelling and reflection of flow into the bay. 	<p>(1)</p> <p>Woodside assessment: Hydrocarbon spill modelling is undertaken using global best practice approaches and software. Modelling demonstrates tides are the primary drivers of hydrodynamic transport within Shark Bay.</p> <p>Woodside response: Specific information addressing Malgana's query was sent to Malgana on 1 August 2023. No further information request or follow-up has been received.</p>	<p>(1)</p> <p>Existing controls considered sufficient, as described in Section 6.</p>
<p>(2)</p> <p>During previous consultation in relation to separate activities, Malgana noted that their funding is restricted for these types of engagement and requested funding support, including an environmental consultant to advise the Board.</p>	<p>(2)</p> <p>Woodside assessment: Woodside supports ongoing engagement and have responded to Malgana's advice about the limitations on their resources. Woodside is implementing a program to actively support Traditional Custodians' capacity for ongoing engagement and consultation on EPs. This is described further in the Program of Ongoing Engagement with Traditional Custodians, (Appendix G). This includes addressing Malgana's resourcing issue for ongoing consultation via a Consultation Agreement.</p> <p>Woodside response: Woodside has offered to support Malgana in correspondence sent in August, September and December 2023, including support for environmental expertise supplying names of organisations that Malgana may want to consider conducting the work, however these offers have not been taken up as of yet.</p>	<p>(2)</p> <p>Although consultation for the purpose of regulation 25 of the Environment Regulations is complete, Woodside will continue to consult following acceptance of the EP, as set out in Section 7.10.5 of the EP.</p>
<p>No feedback, objections or claims received on this activity despite follow-up.</p>	<p>Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24.</p> <p>Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it</p>	<p>No additional measures or controls are required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	
Summary Report: Consultation Complete		
While Malgana is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Malgana to provide feedback during the consultation process.		

Local Government and Elected Parliamentary Representatives, Community Groups or Organisations

Town of Port Hedland

Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> On 16 August 2023, Woodside emailed Town of Port Hedland advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.8). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While the Town of Port Hedland is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Town of Port Hedland to provide feedback during the consultation process.		

Shire of Carnarvon (SoC)

Uncontrolled when printed. Refer to electronic version for most up to date information.		

- On 16 August 2023, Woodside emailed Shire of Carnarvon advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- **(1)** On 16 August 2023, SoC emailed Woodside and asked if there were any anticipated impacts on Coral Bay and Carnarvon. (SI Report, reference 9.1)
- On 16 August, Woodside presented to the SoC's Local Emergency Management Committee members and provided an overview of a variety of EPs, including this EP, the EMBA and how Woodside would respond in the unlikely event of a hydrocarbon spill. Woodside requested feedback on this EP by 11 September 2023 (SI Report, reference 9.2).
- **(1)** On 17 August 2023, Woodside emailed SoC responding to its email on 16 August 2023 further explaining the EMBA and stating it did not overlap Coral Bay or Carnarvon (SI Report, reference 9.3)
- **(1)** On 17 August 2023, SoC emailed to thank Woodside for the information regarding the EMBA (SI Report, reference 9.4).
- On 30 August 2023, Woodside sent a follow-up email to check if SoC had any further feedback regarding the proposed activity (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) SoC asked for anticipated impacts on Coral Bay or Carnarvon.	(1) Woodside assessment: The EMBA for this EP does not overlap Coral Bay or Carnarvon. Woodside response: Woodside advised that the EMBA for this EP did not overlap Coral Bay or Carnarvon.	(1) Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While the Shire of Carnarvon is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Shire of Carnarvon to provide feedback during the consultation process.		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Shire of Shark Bay

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 17 October 2023, Woodside met with the Shire of Shark Bay during a community information session in Denham. The discussion with the Shire included: <ul style="list-style-type: none"> An overview of Woodside’s consultation process. Information on the Scarborough Project and an overview of this EP. (1) The Shire advising it would provide a list of potentially relevant persons to consult in Shark Bay. On 18 October 2023, the Shire of Shark Bay emailed Woodside thanking it for the meeting (SI Report, reference 24.1). The Shire: <ul style="list-style-type: none"> (1) Recommended a list of contacts in Shark Bay who might be interested in providing feedback on the proposed activity. On 20 October 2023, Woodside emailed Shire of Shark Bay following up a face-to-face conversation with information about this EP including that although the EMBA was more than 100 km off the Shark Bay coastline, Woodside was open to receiving feedback or facilitating further discussion (SI Report, reference 24.2). <ul style="list-style-type: none"> (1) Woodside also confirmed it would send consultation information to the contacts identified by Shire of Shark Bay. On 31 October 2023, Woodside emailed Shire of Shark Bay advising of the proposed activity (Record of Consultation, reference 1.4) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 15 December 2023, Woodside sent Shire of Shark Bay a follow-up email (Record of Consultation, reference 1.22) reminding Shire of Shark Bay of the opportunity to provide feedback. 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
<p>(1) Shire of Shark Bay provided a list of potentially relevant persons.</p>	<p>(1) Woodside assessment: Woodside has assessed the relevancy of stakeholders recommended by the Shire of Shark Bay. While the stakeholders have been assessed as not relevant for this EP, Woodside, at its discretion in line with Section 5.3.7, Woodside chose to provide them consultation information. Woodside response: Woodside provided consultation information to the stakeholders recommended by Shire of Shark Bay.</p>	<p>(1) Woodside updated its Assessment of Relevance (see Appendix F, Table 1) to include the stakeholders Shire of Shark Bay identified as potentially relevant.</p>
<p>While feedback has been received, there were no objections or claims.</p>	<p>Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).</p>	<p>No additional measures or controls are required.</p>
<p>Summary Report – Consultation Complete</p>		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

While the Shire of Shark Bay is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Shire of Shark Bay to provide feedback during the consultation process.

Carnarvon Chamber of Commerce and Industry

Summary of information provided and record of consultation for this EP:

- On 16 August 2023, Woodside emailed Carnarvon Chamber of Commerce and Industry advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.8).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.

Summary Report – Consultation Complete

While the Carnarvon Chamber of Commerce and Industry is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Carnarvon Chamber of Commerce and Industry to provide feedback during the consultation process.

Port Hedland Chamber of Commerce and Industry

Summary of information provided and record of consultation for this EP:

- On 16 August 2023, Woodside emailed Port Hedland Chamber of Commerce and Industry advising of the proposed activity (Record of Consultation, reference 1.19) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.8).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While the Port Hedland Chamber of Commerce and Industry is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for the Port Hedland Chamber of Commerce and Industry to provide feedback during the consultation process.		

RAC Monkey Mia Dolphin Resort

Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> On 31 October 2023, Woodside emailed RAC Monkey Mia Dolphin Resort advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 15 December 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.22). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While RAC Monkey Mia Dolphin Resort is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for RAC Monkey Mia Dolphin Resort to provide feedback during the consultation process.		

Dirk Hartog Island

	where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	
Summary Report – Consultation Complete		
While Naturetime Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Naturetime Tours to provide feedback during the consultation process.		

Wula Gula Nyinda Eco Cultural Tours

Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> On 31 October 2023, Woodside emailed Wula Gula Nyinda Eco Cultural Tours advising of the proposed activity (Record of Consultation, reference 1.23) and provided a Consultation Information Sheet and a link to NOPSEMA’s brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 15 December 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.22). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While the Wula Gula Nyinda Eco Cultural Tours is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Wula Gula Nyinda Eco Cultural Tours to provide feedback during the consultation process.		

Other Non-government Groups or Organisations

Australasian Centre for Corporate Responsibility (ACCR)

Context

ACCR is a shareholder advocacy and research organisation which states that it ‘uses shareholder strategy to enable investors to escalate engagements with heavy-emitting companies in their portfolios and provide research and analysis for institutional capital seeking long term value in a zero-emissions economy’.¹

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

ACCR's focus in 2023 and 2024 has predominantly been on commenting on Woodside's broader corporate climate reporting and corporate investor-related announcements.ⁱⁱ Given its broader interest in Woodside's corporate announcements and investor-related presentations which are not specifically targeting this EP, Woodside chose to contact ACCR and provided consultation material on 9 August 2023.

In December 2023, ACCR met with Woodside on corporate climate and sustainability issues. Following this meeting, ACCR self-identified as a Relevant Person for this EP.

ACCR's response to consultation used essentially identical language and approach (albeit altered in parts to capture specifics about ACCR) as Environs Kimberley (self-identified), Friends of Australian Rock Art, Doctors for the Environment, Australian Conservation Foundation and [Individual 2] (self-identified), with all letters received by Woodside within 24 hours of each other on 19 and 20 December 2023.

For this EP, Woodside responded to all queries, sent further proactive information and offered to meet with ACCR. ACCR did not respond.

This and the historic consultation with ACCR are provided in order to confirm that Woodside's consultation with ACCR was appropriate and adapted to the interests of ACCR.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Australasian Centre for Corporate Responsibility advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).
- On 19 December 2023, ACCR sent a letter via email, copying in NOPSEMA, advising they had met with Woodside's investor relations and climate teams (SI Report, reference 54.1).
 - **(1)** ACCR requested to be added to the approvals consultation register.
 - **(2)** Despite being consulted on previous Woodside EPs, ACCR claimed it had not been notified of consultation for this EP and had only just become aware Woodside was seeking feedback by 20 December 2023.
 - **(3)** Asked Woodside to confirm that ACCR would be contacted for future consultations via email.
- In the letter, ACCR provided feedback and made the following assertions, claims, objections and requests for information. ACCR requested a response by 16 January 2024:
 - **(4)** ACCR considered itself a relevant person.
 - **(5)** ACCR understood that climate change impacts, including Scope 3 emissions, which would result from this EP must be assessed in accord with the approved NOPSEMA program under the EPBC Act and broader environment in accordance with Environment Regulations.
 - **(6)** ACCR stated that Woodside had not provided sufficient information and not allowed a reasonable period of time for consultation and asked that this EP not be accepted until Regulation 11A (now Regulation 25) was met.
 - **(7)** Estimates of GHG and other emissions, including Scope 3 emissions from the Scarborough project. At a minimum, this should include:
 - Assessment of all emissions that would arise from the development, including all emissions sources and scopes (direct and indirect), annually and over the lifetime of the project.
 - A breakdown of each emissions source, its nature and location, whether it was under the operational control of Woodside.
 - **(8)** Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including 1.5°C scenarios, including the IEA's NZE. At a minimum, this should include:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Independent evaluation of the impacts of the Scarborough Project on global temperature scenarios, including what incremental warming was anticipated to occur as a result of the direct and indirect emissions from the Scarborough Project.
 - Independent evaluation of the compatibility of the Scarborough Project with global 1.5°C scenarios, including what global 1.5°C scenarios were considered by Woodside to be consistent with the operation of the Scarborough Project and which were not.
 - Where global energy scenarios rely on carbon removals from the atmosphere, what was the volume of carbon removals that was assumed, how and where and by what means Woodside expected this to occur, and what (if any) carbon removals would be implemented.
- **(9)** Independent assessment of the climate change impacts of the Scarborough Project on the Australian and international environment and communities, including:
- Analysis of sensitive environmental receptors in Australia and internationally that would be impacted by global climate change, including the Great Barrier Reef, Ningaloo Reef, other Matters of National Environmental Significance (MNES) and other cultural and environmental values.
 - What the anticipated effects of emissions from the Scarborough Project would be on these receptors.
- **(10)** Independent analysis of mitigation options and commitments. At a minimum, this should include:
- An independent analysis of all available options to avoid, reduce or offset material Scope 1, 2 and 3 GHG emission sources as well as other material emission sources.
 - The qualitative and quantitative criteria that had been used to assess each option, the assessment of each option and identification of which options would and would not be implemented.
 - Independent analysis to demonstrate that mitigation efforts at each stage and scope (including Scope 1, 2 and 3 emissions) resulted in emissions reduced to As Low As Reasonably Practicable (ALARP).
 - Where the options selected were not the lowest emission option, a justification of why a lower emission option had not been selected.
 - Independent assessment of abatement options for the Scarborough Project according to a mitigation hierarchy which prioritised avoidance and at source mitigation before offsets and other forms of abatement with justification for Woodside's chosen mitigation commitments over the life of the project.
 - Identification of all (if any) offsets that would be used, including the type, method, provider and jurisdiction where the offsets would occur, what registry would be used, what standards of accountability and accreditation would be applied and, how the offsets would be retired.
 - Where GHG offsets were to be used, whether and how these would interact with national and state-based emission registries, including how these offsets will contribute to Western Australia and Australian emission reduction targets, and what ongoing public reporting and verification would be provided by Woodside of emissions and abatement from the project, including direct and indirect emissions from all sources.
 - How this demonstrates that any estimates or commitments made in the Scarborough OPP were met.
- **(11)** Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources. At a minimum, this should include:
- Evidence of what other energy sources were expected to be displaced, both in current market and for those forecast over the life of the project, including any displacement of renewable energy, fossil fuels, or other energy sources that would result from the Scarborough Project and the net effect of such displacement on global emissions.
 - Evidence of where this displacement was expected to occur, when and how.
 - Evidence of contractual or other arrangements that were, or would be, in place to ensure that this displacement occurred as predicted by Woodside.
 - Third party verification that would be provided to verify claims of abatement achieved.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- How this demonstrated that any estimates or commitments made in the Scarborough OPP were met.
- **(12)** Independent assessment of how the Scarborough Project and associated mitigation efforts meet the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines. At a minimum, this should include:
 - How Woodside's corporate emissions reduction targets and those for the Scarborough Project were science-based, and cover all-scopes of emissions, and take into consideration Woodside's historical emissions.
 - How the mitigation efforts for the Scarborough Project would deliver an immediate and absolute reduction in emissions from current levels.
 - How the Scarborough Project supported a global and local phase out of fossil fuels.
 - How the abatement efforts proposed by Woodside included targets for methane-specific emissions, including what these targets were and how they would be achieved.
 - Evidence of Woodside's lobbying and advocacy efforts and how these were aligned with global temperature scenarios.
- **(13)** Other documents, including documents relied upon by Woodside. At a minimum, this should include:
 - All studies, information and other material commissioned or relied upon by Woodside in assessing the GHG emissions and climate impacts from the project, including mitigation options, climate impacts, alignment with global temperature goals, and any other issues mentioned above.
 - A copy of this EP.
- **(14)** A signed declaration from a Scarborough executive stating that:
 - All emissions reductions options that were identified have been disclosed.
 - Any considered option that could result in a lower emissions outcome had had its costs and benefits quantitatively and qualitatively disclosed, with a clear justification of why lower emission options had not been selected.
 - The disclosures were a complete and fair reflection of Woodside's own assessment of the costs and benefits of potential options.
 - The disclosed material was consistent with representations made to other stakeholders, such as shareholders, financial regulators, the media and customers.
 - Providing false or misleading information may be an offence.
- On 27 December 2023, Woodside responded to ACCR's letter of 19 December 2023 (SI Report, reference 54.2) and received two out of office replies (SI Report, reference 54.3 and 54.4). The Woodside response was as follows:
 - **(1, 4)** Woodside explained ACCR was already on its distribution list but that it had also added the ACCR individual as requested.
 - **(2, 4)** Woodside provided consultation information and a Consultation Information Sheet on this EP to ACCR on 9 August 2023 and 30 August 2023.
 - The Consultation Information Sheet provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with Petroleum Activities Program and proposed mitigation and management measures, so ACCR had been provided with sufficient information to allow it to make an informed assessment of the possible consequences of the activity on its functions, interests or activities.
 - **(4, 6)** Woodside extended the consultation deadline from an initial four-week period ending on 11 September 2023, to 4.5 months, ending on 20 December 2023. This afforded ACCR additional time and opportunity to provide feedback, claims and objections during the consultation process.

- (6) As well as directly corresponding with ACCR, Woodside advertised this EP and consultation opportunities in The Australian, The West Australian, regional newspapers and Indigenous newspapers and ran two social media campaigns across Facebook and Instagram. Woodside also had experts and information available at a number of community events in the Pilbara, Gascoyne and Murchison, as well as a tailored community roadshow in these regions throughout September and October 2023.
- (6) Woodside did not receive any response from ACCR until 19 December 2023, the day before consultation closed for this EP.
- (6) On the basis of the extended period for consultation, provision of information sheets as well the below response to your feedback, claims and objections; sufficient information, a reasonable period of time and opportunity for consultation has been provided to ACCR.
- (3) Woodside confirmed it would consult ACCR on future activities and also suggested ACCR subscribed to Woodside's consultation activities on the Woodside website.
- (5, 7) GHG emissions relevant to the PAP, including sources and volumes, would be presented and assessed in the EP. GHG emissions would be estimated using the *National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008* and other industry standard database. The EP would assess direct emissions (Scope 1) and indirect emissions (Scope 3), aligned with the definitions of the GHG Protocol Corporate Standard and the *National Greenhouse and Energy Reporting Regulations 2008 (Cth)*.
- (5, 7) The EP would assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide, methane and nitrous oxide and Total carbon dioxide equivalent emissions would be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.
- (5, 7) Indirect emissions associated with offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users would be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.
- (8, 9, 10, 11, 12, 14) Woodside assessed emissions against a range of scenarios including the IEA NZE. Assessment of these could be found in Woodside's 2022 Climate Report which was publicly available on Woodside's website.
- (8, 9, 10, 11, 12, 14) Selected GHG emissions in Woodside's Climate Report were assured by GHD.
- (8, 9, 10, 11, 12, 14) For Woodside, a lower carbon portfolio was one from which the net equity Scope 1 and 2 GHG emissions, which included the use of offsets, were being reduced towards targets, and into which new energy products and lower carbon services were planned to be introduced as a complement to existing and new investments in oil and gas. Woodside's Climate Policy set out the principles that it believes would assist achieve this aim.
- (8, 9, 10, 11, 12, 14) Woodside's net equity emissions reduction targets had an aspiration of net zero by 2050 or sooner. The target was for net equity Scope 1 and 2 GHG emissions, relative to a starting base representative of the gross annual average equity Scope 1 and 2 GHG emissions over 2016-2020 and may be adjusted (up or down) for potential equity changes in producing or sanctioned assets with a final investment decision prior to 2021.
- (8, 9, 10, 11, 12, 14) Woodside had set near- and medium-term targets to reduce net equity Scope 1 and 2 GHG emissions and had three ways to achieve these targets: avoiding emissions through design; reducing them through efficient operations; and offsetting the remainder.
- (9) In accordance with regulation 13(2) and 13(3) of the Environment Regulations, this EP would describe the Environment that May Be Affected (EMBA) including details of receptor sensitivities and exposure potential. This included consideration of Matters of National Environmental Significance (MNES) that may potentially occur in the EMBA.
- (9) The Scarborough Offshore Project Proposal (OPP - publicly available on the NOPSEMA website) defined a level of Significant Impact for receptors, informed by the MNES Significant Impact guidelines. Environmental Performance Outcomes (EPO) and Controls were defined in the OPP and cascaded to subsequent EPs where relevant, to ensure maintenance of Acceptable impact levels.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (13) Woodside did not provide drafts of an EP while in development or under assessment due to the potential for content to change. Restricting access to publicly available versions enabled stakeholders to access and comment on the same information and removed potential for any confusion. The EP would be made publicly available on NOPSEMA's website once it had been submitted and was under assessment.
- (8, 14) On 7 March 2024, Woodside proactively sent ACCR an email stating that as they had shown an interest in climate-related matters, they may be interested in Woodside's Climate Transition Action Plan (CTAP) and 2023 Progress Report which summarised Woodside's climate-related plans, activities, progress and climate-related data (SI Report, reference 54.5). The email:
 - Included links to the CTAP and the ASX Announcement.
 - Re-iterated that consultation in the preparation of this EP had closed however, feedback could continue to be provided during the life of an EP, including after consultation had closed on the EP, during EP assessment, and after an EP had been accepted by NOPSEMA.
 - Stated Woodside was available to meet with ACCR to discuss this EP should they be interested.
- On 8 October 2024, Woodside had not received any further consultation correspondence from ACCR. Woodside therefore emailed ACCR to thank it for its initial feedback and for engaging with Woodside on this EP (SI Report, reference 54.6). Woodside advised it would shortly resubmit the EP to NOPSEMA for further assessment and that as, as a courtesy, Woodside was providing ACCR with additional information in response to its feedback. Woodside noted that based on ACCR's stated description of its functions, interests or activities, Woodside did not consider that ACCR's functions, interests or activities were impacted by the activity described in the EP. Woodside:
 - (7) Acknowledged provision of information pertaining to Scope 3 emissions from the Scarborough Project and advised that estimates of GHG emissions associated with the PAP were set out in the EP. The total estimated Scope 3 emissions associated with the project were approximately 870 MtCO₂-e. Additionally, net direct emissions created by the project would be subject to the Federal Safeguard Mechanism (SGM), which set legislated limits on the net GHG emissions of facilities including the Scarborough offshore facility and onshore gas processing plants. Woodside further advised a breakdown of emissions sources extended over 11 pages in the EP however, by way of summary, the total estimated GHG emissions associated with the project, including Source 1 and 3, were approximately 880 MtCO₂-e over the life of the activity. Woodside also provided an overview of GHG abatement and mitigation measures, noting detailed information was available in Section 6.7.6 of the EP.
 - (8) Disagreed with ACCR's position regarding independent verification including because Woodside employed internal specialists on climate matters. Woodside acknowledged climate science and that climate change was understood to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one activity or project including the Scarborough Project. Woodside noted its view that LNG could have a role in the energy transition and therefore, the full volume of GHG emissions associated with the project were not expected to be additive to global GHG concentrations. However, Woodside had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive, and the contribution to carbon budgets was de minimis. Woodside noted emissions from the project fit within Australia's NDC and the NDC of customer nations, and that through compliance with the SGM framework, the project would be aligned with Australia's implementation of the Paris Agreement.
 - (9) Acknowledged that climate change was impacting Australian and global receptors but disagreed with ACCR's position regarding independent assessment including because Woodside employs internal environmental climate and science specialists. Woodside noted that human-caused climate change was a consequence of net GHG emissions that had accumulated in the atmosphere since the start of the Industrial Revolution, and that the EP included a contextual evaluation of these impacts drawing on reputable sources including the IPCC Sixth Assessment Report. The IPCC AR6-WGII concluded that one of the nine key climate risks for the Australasian region was "loss and degradation of coral reefs" due to ocean warming and marine heatwaves.
 - (10) Confirmed that Woodside agreed that GHG emissions associated with the Scarborough project should be minimised and managed to ALARP and acceptable levels but did not agree with ACCR's assertion that this should be done independently. Third-party support had been used to identify potential opportunities for abatement, but it was more appropriate to leverage the understanding of the project held by internal personnel. Woodside also advised:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- Woodside would not provide technical evaluations and studies which included commercially sensitive or confidential information in circumstances where ACCR’s functions, interests or activities are not impacted by the activity in the EP, and even if ACCR’s functions, interests or activities were impacted, ACCR did not need this information to allow it to make an informed assessment of the possible consequences of the activity.
- It was not reasonable for Woodside to provide information on GHG abatement options that had been considered or the criteria for assessment. The incorporation (or not) of particular GHG abatement options for the project was reflected in the GHG estimates provided.
- Avoiding and reducing GHG emissions were Woodside’s priority, however offsetting emissions allowed Woodside to reduce net emissions while asset and technology de plans were matured and implemented. In the longer term, where emissions prove to be hard-to-abate, residual emissions would be offset using carbon credits.
- Carbon offset arrangements were commercially sensitive or subject to contractual confidentiality and would not be shared. Woodside established a carbon business in 2018 to develop a portfolio of carbon credits and skills and expertise in managing carbon credit integrity.
- Emissions associated with the Scarborough Project were subject to the SGM, and Woodside would report domestic GHG emissions associated with the project as required under NGERs.
- The Operations EP demonstrated how OPP requirements were implemented for the specific activity.
- (11) Disagreed with ACCR’s position on independent modelling. Woodside’s view was that LNG could have a role in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes, however, to facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emissions associated with the Scarborough project were treated as hypothetically additive was considered in the latest version of the EP. The acceptability assessment of the activity did not rely on displacement of higher carbon fuels. Compliance with Australian carbon frameworks including the Federal SGM was consistent with Australia’s implementation of the Paris Agreement, as set out in section 6.7.6.
- (12) Disagreed with ACCR’s position and noted it was aware of the UN High Level Expert Group on Net Zero Integrity Matters and the ISO Net Zero Guidelines as well as a range of forums, public dialogues and reports regarding greenwashing. Woodside recently participated in a Senate inquiry into greenwashing and its Hansard transcript was available. Woodside takes care with statements, especially in regards to climate change, so that they are accurate. Woodside further noted:
 - Its corporate emission reduction targets were included in the EP as relevant to Scope 3 emissions only.
 - The Scarborough Project was not required to deliver an immediate absolute reduction in emissions from current levels, nor was it required to support global and local phase out of fossil fuels. As such, neither were proposed in the EP.
 - It had incorporated methane-specific GHG abatement measures.
 - Its advocacy aimed to support the goals of the Paris Agreement. Woodside provided a link to its Climate Policy and a list of government submissions and reports made by Woodside.
- (13) Advised there were no requirements for Woodside to make studies and internal information publicly available and, as previously noted, Woodside did not consider ACCR to be a relevant person for this EP. Even if it were, ACCR did not need this information to make an informed assessment of the possible consequences. The Operations EP was also publicly available on the NOPSEMA website.
- (14) Woodside noted ACCR’s position and declined the request that Woodside provide a signed declaration.
- Woodside has not received any further correspondence from ACCR.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside’s Response	Inclusion in Environment Plan
---	--	-------------------------------

<p>(1) An ACCR individual requested to be added to the 'approvals consultation register'.</p>	<p>(1) Woodside assessment: ACCR is included in Woodside's distribution database but Woodside also added the individual representing ACCR to the database. Woodside response: Woodside confirmed that ACCR was already on its consultation database and that the individual representing ACCR had also been added to the database.</p>	<p>(1) Not required</p>
<p>(2) ACCR was not aware it had been consulted on this EP and had only just become aware Woodside was seeking feedback by 20 December 2023.</p>	<p>(2) Woodside assessment: Woodside has assessed ACCR as not a relevant person for this EP, based on its functions, interests or activities. Nevertheless, Woodside chose to provide ACCR with consultation information for this EP at its discretion in line with Section 5.3 of the EP. Woodside response: Woodside confirmed it had provided consultation information to ACCR on 9 August and 30 August 2023.</p>	<p>(2) A summary of Woodside's engagement with ACCR on this EP is set out above in Appendix F, Table 3.</p>
<p>(3) Requested Woodside to confirm that ACCR is contacted for future consultations.</p>	<p>(3) Woodside assessment: Woodside agrees to provide consultation information to ACCR regarding future activities. This does not mean ACCR has been assessed as a relevant person for that activity. Woodside response: Woodside agreed it would provide ACCR with consultation information on future activities and also suggested ACCR subscribe to Woodside's consultation activities on Woodside's website.</p>	<p>(3) Not required.</p>
<p>(4) ACCR considers itself a relevant person.</p>	<p>(4) Woodside assessment: Woodside does not consider ACCR's functions, interests or activities are impacted by the activity described in the EP. Woodside chose to contact ACCR at its discretion in line with Section 5.3 of the EP. Woodside response: Woodside advised ACCR that based on ACCR's publicly stated description and purpose, Woodside did not consider that ACCR's functions, interests or activities would be impacted by the activity described in the EP.</p>	<p>(4) Woodside's assessment of ACCR's relevancy is described in Appendix F, Table 1.</p>
<p>(5) Climate change impacts, including Scope 3 emissions, which will result from this EP, must be assessed in accordance with the approved NOPSEMA program under the EPBC Act and broader environment in accordance with the Environment Regulations.</p>	<p>(5) Woodside assessment: Woodside has assessed GHG emissions, including Scope 3 emissions, and potential climate change impacts in the EP in accordance with the relevant Environment Regulations. Woodside response: Woodside confirmed GHG emissions relevant to the PAP, including sources and volumes, were assessed in the EP. The EP also included assessment of potential climate change impacts.</p>	<p>(5) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(6) Woodside has not provided sufficient information nor a reasonable period of time for consultation.</p>	<p>(6) Woodside assessment: While ACCR is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ACCR to provide feedback. Despite providing information and offering to engage in face-to-face consultation meetings, ACCR has not provided a further response to Woodside.</p> <p>Woodside response: Woodside provided consultation information for this EP to ACCR on 9 August 2023 and 30 August 2023 which provided a summary of the activity description, the receiving environment, a comprehensive summary of impacts and risks associated with PAP and proposed mitigation and management measures. Woodside did not receive any response from ACCR until 19 December 2023, the day before consultation closed for this EP. Woodside provided direct responses to ACCR's feedback and, as a courtesy, provided additional information on 7 March 2024 and 8 October 2024.</p> <p>Woodside also advertised the EP and consultation opportunities in national, state, regional and Indigenous newspapers and ran social media campaigns. Woodside also had experts and information available at a number of community events and roadshows in the Pilbara, Gascoyne and Murchison regions throughout September and October 2023.</p> <p>Woodside has not received any further response or consultation correspondence from ACCR on this EP.</p>	<p>(6) Not required.</p>
<p>(7) Estimates of greenhouse gas and other emissions, including Scope 3 emissions from the Scarborough project including assessment and breakdown of emissions.</p>	<p>(7) Woodside assessment: Woodside has provided ACCR with information regarding sources and volumes of emissions associated with the EP, via the Consultation Information Sheet, publicly available EP and direct responses to ACCR's feedback.</p> <p>Woodside response: Woodside advised that while the breakdown of emissions sources extended over 11 pages in the EP, by way of summary, the total estimated GHG emissions associated with the project, including Source 1 and 3, were approximately 880 MtCO₂-e over the life of the activity. The total estimated Scope 3 emissions associated with the project were approximately 870 MtCO₂-e. Woodside also noted that GHG emissions would be subject to the Federal SGM and provided information on how indirect emissions were estimated. Woodside noted information regarding GHG abatement and management was provided in the EP and summarised some of the considerations and actions assessed.</p>	<p>(7) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(8) Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including 1.5°C scenarios, including the IEA's NZE.</p>	<p>(8) Woodside assessment: Woodside does not agree with ACCR's position regarding independent verification. In the latest version of the EP, a hypothetical assumption where GHG emissions associated with the Scarborough Project are hypothetically treated as additive is used. This scenario is not expected to eventuate. Woodside response: Woodside acknowledged that climate science understood climate change to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one project or activity including the Scarborough Project. However, to facilitate a comparison against carbon budgets, Woodside confirmed it had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive, and the amount was de minimis. Woodside noted emissions fit within Australia's NDC and would comply with the Federal SGM.</p>	<p>(8) Gas demand in climate-related scenarios is set out in Section 6.7.6 of the EP.</p>
<p>(9) Independent assessment of climate change impacts of the Scarborough Project on the Australian and international environment and communities.</p>	<p>(9) Woodside assessment: Woodside acknowledges that climate science suggests that climate change, caused by the net cumulative global concentration of GHG in the atmosphere, is impacting Australian receptors. It does not agree with ACCR's position regarding independent assessment. Woodside response: Woodside noted that climate science suggests that human-caused climate change was a consequence of net GHG emissions that had accumulated in the atmosphere since the start of the industrial revolution. Woodside included in the EP a contextual evaluation of climate change impacts which encompassed environmental receptors including coral reefs.</p>	<p>(9) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i>.</p>
<p>(10) Independent analysis of mitigation options and commitments in relation to Scope 1, 2 and 3 GHG emission sources as well as other material emission sources.</p>	<p>(10) Woodside assessment: Woodside acknowledges the legislative regime which requires emissions associated with the Scarborough Project to be minimised and managed to ALARP and acceptable levels but does not agree with ACCR's assertion that this should be done independently. Woodside response: Woodside advised it would not provide studies or internal information and even if ACCR had been assessed as a relevant person, the information was not needed for ACCR to make an informed assessment of the possible consequences of the activity. Woodside noted the incorporation of GHG abatement options was reflected in the emissions estimates provided. Woodside confirmed avoiding and reducing GHG emissions were Woodside's priority, however offsetting emissions allowed Woodside to reduce net emissions while asset and</p>	<p>(10) Management and abatement measures are set out in Section 6.7.6 of the EP.</p>

	technology decarbonisation plans were matured and implemented. Woodside also noted emissions were subject to the Federal SGM and NGERs.	
(11) Independent modelling to support Woodside's claims of gas from the Scarborough Project displacing other more carbon intensive energy sources.	(11) Woodside assessment: Woodside does not agree with ACCR's position on independent modelling. Woodside has used a hypothetical assumption in the EP where GHG emissions associated with the project are hypothetically treated as additive. This scenario is not expected to eventuate. Woodside response: Woodside confirmed its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes. However, to facilitate a comparison against carbon budgets, Woodside advised it had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive. The acceptability assessment of the activity did not rely on displacement of higher carbon fuels. In addition, Woodside provided a link to the Woodside Climate Transition Action Plan and 2023 Progress Report to ACCR when these were published.	(11) Gas's role in the energy system is set out in Section 6.7.6 of the EP.
(12) Independent assessment of how the Scarborough Project and associated mitigation efforts meet the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines.	(12) Woodside assessment: Woodside does not agree with ACCR's position. Woodside takes care with its statements, especially in relation to climate change, so that statements are accurate and not misleading. Woodside response: Woodside advised it had recently participated in the Australian Senate Inquiry into greenwashing and as per its statement at the Inquiry, took care so that statements were accurate and not misleading. Woodside noted its corporate emissions reduction targets were included in the EP. The Scarborough Project was not required to deliver an immediate absolute reduction in emissions from current levels, nor was it required to support global or local phase out of fossil fuels, thus neither was proposed in the EP. Woodside noted it had incorporated methane-specific GHG abatement measures, and its advocacy aimed to support the goals of the Paris Agreement.	(12) GHG emissions associated with the activity are considered in Section 6.7.6 of the EP.
(13) Other documents, including documents relied upon by Woodside, and a draft of this EP.	(13) Woodside assessment: There are no requirements for Woodside to make studies and internal information publicly available. Woodside response: Woodside noted it was not reasonable to provide studies or other information. Woodside did not consider ACCR to be a relevant person for this	(13) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	EP, and even if it did, the information would not be required for ACCR to be able to make an informed assessment of the possible consequences of the activity.	
(14) Requested Woodside provide a signed declaration stating in relation to disclosure of its emissions reductions.	(14) Woodside assessment: Woodside declines the request. Woodside's climate strategy is described in its Climate Transition Action Plan and 2023 Progress Report. Woodside response: Woodside noted ACCR's position and declined the request.	(14) Not required.
Woodside has addressed feedback as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While ACCR is not a relevant person under regulation 25 of the Environment Regulations, Woodside has in any event given ACCR sufficient information and a reasonable period outside of regulatory requirements for ACCR to provide feedback during the consultation process and has confirmed to ACCR that it is open to consulting with ACCR on this EP. Despite providing sufficient information and a reasonable period, ACCR has not provided further response to Woodside's consultation correspondence.		

Extinction Rebellion WA (XRWA)

Context

Extinction Rebellion is a global movement. 'Our core strategy is mass disruption of city centres through nonviolent civil disobedience.'^{lii}

In 2021, XRWA 'rebels' covered a WA pedestrian bridge near Woodside with 'messages alerting the public to the deadly path approved for Scarborough gas.'^{liii}

In April 2024, XRWA posted on its Facebook page stating, 'what's even worse is that our government is subsidising, promoting, and wanting to approve projects like Australia's biggest carbon bomb – Woodside's expanded Burrup Hub...'^{liiv}

XRWA works closely with the Disrupt Burrup Hub campaign^{lv}, which has the sole purpose to get people to 'join the fight back and bring an end to industrial expansion on the Burrup Peninsula' and claims 'Woodside's Burrup Hub mega-project...is a disaster for climate and culture.'^{lvi}

Woodside contacted XRWA twice on this EP but did not receive a response.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Extinction Rebellion WA (XRWA) advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While XRWA is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for XRWA to provide feedback during the consultation process.		

International Fund for Animal Welfare (IFAW)

Context

The International Fund for Animal Welfare (IFAW) is a global non-profit helping animals and people thrive together.^{lvii}

In 2018, IFAW was invited but did not participate in consultation on the Scarborough Energy Project OPP.

Woodside contacted IFAW twice on this EP but has not received a response.

Historical Engagement:

2018 - 2020

- Between 2018 and 2020, IFAW was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - IFAW chose not to take up the opportunity to participate in consultation.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed International Fund for Animal Welfare advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.</p> <p>Controlled Ref No: SA0006AF0000022 Revision: 3 Page 600 of 919</p> <p style="text-align: center;">Uncontrolled when printed. Refer to electronic version for most up to date information.</p>		

No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While IFAW is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for IFAW to provide feedback during the consultation process.		

Market Forces

Context

Market Forces is 'an affiliate member of Friends of the Earth Australia and a member of the BankTrack international network whose work exposes the institutions that are financing environmentally destructive projects and helps Australians hold these institutions accountable. We work with the community to prevent investment in projects that would harm the environment and drive global warming.'^{lviii}

In 2018, Market Forces was invited but did not participate in consultation on the Scarborough Energy Project OPP.

As of September 2024, Market Forces stated on its website 'Woodside is undermining a stable climate future by pursuing new oil and gas projects. Our super funds and banks must stop investing in Woodside and its climate-wrecking projects and plans now.' Also included is a Take Action feature where users can search and directly access their superannuation fund and/or send a message to their bank. Additionally it claims, "Woodside plans to develop one of the most polluting projects Australia has ever seen: the massive Scarborough gas field...'^{lix}

Woodside consulted Market Forces on this EP and Market Forces advised they would not be providing feedback.

Historical Engagement:

2018 - 2020

- Market Forces was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - Market Forces chose not to take up the opportunity to participate in consultation.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Market Forces advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- (1)** On 14 August 2023, Market Forces emailed Woodside thanking it for the opportunity to engage and informed Woodside that they would not be providing feedback on this EP but would like to continue to be consulted on EPs for Woodside's projects (SI Report, reference 7.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<ul style="list-style-type: none"> (1) On 17 August 2023, Woodside thanked Market Forces and confirmed it would continue to consult on future EPs (SI Report, reference 7.2). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) Market Forces advised it would not be providing feedback on the EP but wished to be consulted on future Woodside EPs.	(1) Woodside assessment: Woodside reviewed that Market Forces would not provide feedback on the EP but asked to be consulted on future EPs. Woodside response: Woodside noted Market Forces had no feedback on the EP but would like to be consulted on future EPs.	(1) Not required.
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While Market Forces is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Market Forces to provide feedback during the consultation process.		

Sea Shepherd Australia (SSA)

Context

Sea Shepherd is an international direct-action ocean conservation movement.^{lx}

Woodside contacted SSA twice on this EP but has not received a response.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed Sea Shepherd Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While Sea Shepherd Australia is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Sea Shepherd Australia is to provide feedback during the consultation process.		

World Wildlife Fund (WWF) Australia

Context

WWF's global mission is to stop the degradation of the planet's natural environment and to build a future in which humans live in harmony with nature.^{lxi}

In 2018, WWF was invited but did not participate in consultation on the Scarborough Energy Project OPP.

Woodside contacted WWF twice on this EP but has not received a response.

Historical Engagement:

2018 - 2020

- WWF was identified as a stakeholder in 2018 and was invited to consult on the Scarborough Offshore Project Proposal during the three phases of consultation for the Scarborough Project (preliminary, formal and ongoing). Preliminary consultation commenced in 2018. An eight-week formal consultation period ran from 5 July to 30 August 2019. Ongoing consultation continued on acceptance of the OPP in March 2020.
 - WWF chose not to take up the opportunity to participate in consultation.

Summary of information provided and record of consultation for this EP:

- On 9 August 2023, Woodside emailed World Wildlife Fund Australia advising of the proposed activity (Record of Consultation, reference 1.3) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure *Consultation on offshore petroleum environment plans: Information for the community*.
- On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.1).

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan

Environs Kimberley (EK)

Context

EK states it is ‘the peak environmental NGO of the Kimberley which works with communities, landholders and land managers, especially Aboriginal Traditional Owners and ranger groups for strong protection and sustainable management of Kimberley lands and waters.’^{lxii}

EK lists its Kimberley Campaigns and the Kimberley Nature Projects under the ‘what we do’ section of its website.^{lxiii} & ^{lxiv} Based on EK’s strong focus on matters in the Kimberley, and as the EMBA and Operational Area for this EP do not overlap the Kimberley, EK was assessed as not relevant.

EK self-identified as a relevant person for this EP on 20 December 2023. EK’s letter used identical language and approach, altered in parts to capture specifics about EK, as Australasian Centre for Corporate Responsibility (self-identified), Friends of Australian Rock Art, Doctors for the Environment, Australian Conservation Foundation and [Individual 2] (self-identified), with all letters received by Woodside within 24 hours of each other on 19 and 20 December 2023.

Summary of information provided and record of consultation for this EP:

- On 20 December 2023, Environs Kimberley sent a letter to Woodside (and copied NOPSEMA) referring to this EP and the Consultation Information Sheet (SI Report, reference 58.1). It made the following comments:
 - They understood Woodside was currently consulting with relevant persons on this EP.
 - **(1)** Environs Kimberley considered that Woodside should consult it as a relevant person.
 - **(2)** Climate change impacts fell under the scope of indirect consequences which must be assessed according to the Environment Regulations and NOPSEMA’s guidelines.
 - **(3)** Environs Kimberley was dedicated to the protection and management of the environmental values of the Kimberley in partnership with communities and Traditional Owners which were threatened by climate change and fossil fuel developments and as a result Woodside should consult with communities across the Kimberley.
 - **(4)** Woodside should provide Environs Kimberley with sufficient information. The Consultation Information Sheet was not sufficient to make an informed decision. A list of further information was also requested regarding climate change, GHG emissions and a draft of the EP. A response to this letter was required within two weeks, no later than 1 January 2024 [noting two weeks from when the letter was sent would have been 3 January 2024]. Because sufficient information had not been provided, further time was necessary to consider the information based on Environs Kimberley available personnel and resources. Environs Kimberley considered the EP should not be finalised, submitted or assessed by NOPSEMA until these requirements were met.
 - Further information was requested on:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- **(5)** Assessment of the climate change impacts of the Scarborough project on the Kimberley environment, including:
 - ❖ Analysis of sensitive environmental receptors that will be impacted.
 - ❖ Anticipated results of the Scarborough project on these receptors.
 - ❖ Modelling on the effect of the Scarborough Project on parameters including temperature, extreme weather, rainfall and fire in the Kimberley.
 - ❖ Mitigation options for impacts on the Kimberley environment.
- **(6)** Assessment of the climate change impacts of the Scarborough project on communities impacted by climate change in the Kimberley, including:
 - ❖ Evidence that consultation has been undertaken.
 - ❖ Evidence of Woodside's own analysis of impacts of the project on Kimberley communities.
 - ❖ Assessment of impacts on Kimberley communities should include social, economic and other costs and impacts.
- **(7)** Independent estimates of GHG emissions including Scope 3 emissions from the Scarborough project, including:
 - ❖ Independent assessment of all GHG emissions that will arise from the development.
 - ❖ Breakdown of each emissions source, its nature and location, and whether it is under the control of Woodside.
- **(8)** Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including:
 - ❖ Independent evaluation of the impacts of the Scarborough project on global temperature scenarios, GHG concentrations and temperature and fossil fuel phase down goals.
 - ❖ Independent evaluation of the alignment and compatibility of the project with global 1.5-degree compatible energy scenarios.
 - ❖ Where global energy scenarios rely on carbon removals, what is the volume of carbon removals, how and where and by what means Woodside expected this to occur.
 - ❖ Fossil fuel phase down scenarios considered.
 - ❖ Effect the project will have on GHG concentrations in the atmosphere.
 - ❖ Analysis of GHG concentrations that will be in the atmosphere and the climate effects that would be felt as a result.
- **(9)** Independent analysis of mitigation options and commitments, including:
 - ❖ Impact assessment of GHG emissions from the Scarborough facility and management controls to reduce GHG emissions, including a decarbonisation plan for the Pluto Hub.
 - ❖ Independent analysis of all available mitigation options that have been considered by Woodside.
 - ❖ Detailed information on what mitigation of emissions were expected to occur at each stage or facility in the extraction, processing, transport and end use of gas from the Scarborough field.
 - ❖ Independent analysis to demonstrate that mitigation efforts at each stage and scope resulted in emissions reduced to ALARP.
 - ❖ Evidence to demonstrate why any potential mitigation efforts that would not be undertaken had not been considered reasonably practicable.
 - ❖ Identification of any third parties which Woodside relied upon in delivering mitigation actions.
 - ❖ Identification of all offsets that would be utilised by Woodside in meeting abatement goals and commitments.
 - ❖ Ongoing public reporting and verification provided by Woodside of emissions and abatement from the project.
- **(10)** Independent modelling to support Woodside's claim of gas from the Scarborough project displacing other more carbon intensive energy sources, including:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- ❖ Evidence of what other energy sources were expected to be displaced, both in current market and for those forecast over the life of the project.
- ❖ Evidence of contractual or other arrangements that were, or would be, in place to ensure that this displacement occurred as predicted by Woodside.
- ❖ Independently verifiable evidence to demonstrate that any displacement of more emissions intensive fuels resulted from the Scarborough project.
- ❖ Evidence of third-party verification that would be provided by Woodside or other parties to verify claims of abatement.
- **(11)** Independent assessment of how the Scarborough Project and associated mitigation efforts meet the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines. At a minimum, this should include:
 - ❖ How Woodside's corporate emissions reduction targets and those for the Scarborough Project were science-based, and cover all-scopes of emissions, and take into consideration Woodside's historical emissions.
 - ❖ How the mitigation efforts for the Scarborough Project would deliver an immediate and absolute reduction in emissions from current levels.
 - ❖ How the Scarborough Project supported a global and local phase out of fossil fuels.
 - ❖ How the abatement efforts proposed by Woodside included targets for methane-specific emissions, including what these targets were and how they would be achieved.
 - ❖ Evidence of Woodside's lobbying and advocacy efforts and how these were aligned with global temperature scenarios.
- **(12)** Evidence of how the requirements of the approved Scarborough OPP relating to mitigation and avoidance of direct and indirect GHG emissions from the project would be achieved, including:
 - ❖ Details of contractual, regulatory, or other measures that demonstrated that both Woodside and third-party emissions reduction through fuel displacement, offsets or other abatement would be delivered according to international standards for carbon accounting.
- **(13)** Other documents, including documents relied upon by Woodside, including:
 - ❖ All studies, information and other material commissioned or relied upon by Woodside in assessing the greenhouse gas emissions and climate impacts from the project.
 - ❖ A copy of the draft Scarborough Operations EP
- On 3 January 2024, Woodside sent a letter to Environs Kimberley acknowledging they had self-identified and provided feedback, including a request to be consulted (SI Report, reference 58.2). In considering this, Woodside stated the following in its response:
 - Woodside acknowledged *NOPSEMA's Guideline on Consultation in the course of preparing an environment plan* as well as judicial guidance in the Tipakalippa Appeal on the intent of consultation.
 - **(1)** Woodside had applied its methodology which had included reviewing Environs Kimberley's public website (which notes that Environs Kimberley is a Broome-based conservation group), and, given its focus on the Kimberley, did not demonstrate that its functions, interests or activities may be affected by the activities to be carried out under the EP, in accordance with the intended outcome of consultation. The website (cited 28 December 2023) stated that Environs Kimberley undertook 'Kimberley Campaigns' and 'Kimberley Nature Projects'. More specifically, it outlined the following:
 - Protecting the Kimberley Coast
 - Keeping the Fitzroy River running wild
 - Keeping the Kimberley free from fracking
 - Watching Briefs (James Price Point)
 - Protecting the North Kimberley from bauxite mining

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- (3) The Scarborough Floating Production Unit (FPU) is 244 km north-northwest of Exmouth and 374 km west-northwest of Dampier (both in the Pilbara region) and the closest Marine Park is Gascoyne Marine Park (77 km south of the FPU). The environment that may be affected (EMBA) does not overlap with the Kimberley region.
- (1) Woodside had considered Environs Kimberley's self-identification as part of its assessment process of relevant persons, however, it was not apparent that Environs Kimberley's functions, interests or activities may be affected by the proposed activities.
- (2, 3, 4, 5, 6, 7) No response to the correspondence was required as Woodside had considered Environs Kimberley's self-identification as part of its assessment process of relevant persons, however, it was not apparent that Environs Kimberley's functions, interests or activities may be affected by the proposed activities.
- On 8 October 2024, Woodside proactively emailed Environs Kimberley thanking it for its feedback and for engaging on the EP and advising the EP was now publicly available on NOPSEMA's website (SI Report, reference 58.3). Woodside:
 - (4) Advised it would shortly resubmit the EP to NOPSEMA for further assessment and, as a courtesy, Woodside was providing additional information in response to Environs Kimberley's feedback.
 - (1, 3) Advised that, as previously communicated to Environs Kimberley, Woodside had considered Environs Kimberley's self-identification as part of its relevancy assessment process and had concluded that Environs Kimberley's functions, interests or activities were not likely to be affected by the proposed activities. As described in Section 4.1 of the EP, the EMBA for the activity was determined by the worst-case credible hydrocarbon spill scenarios associated with the project, not the global impacts of climate change, which were caused by net global GHG concentrations. The EMBA was depicted on the Consultation Information Sheet and did not include the Kimberley region or the Kimberley coastline.
 - (2, 5) Acknowledged that climate change was impacting Australian and global environmental receptors, and that climate change was understood to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one project or activity including the Scarborough project. Woodside advised a contextual evaluation of climate change impacts was set out in detail in the EP but provided a list of projections for climate change in Australia and nine key climate risks for the Australasian region. Woodside confirmed its view was that LNG could have a role in the energy transition, however, to facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emissions associated with the Scarborough project were treated as additive was considered in the latest version of the EP. Woodside further noted the EMBA was determined by worst-case credible hydrocarbon spill scenarios, not the global impacts of climate change, and the EMBA for this EP did not include the Kimberley region or coastline.
 - (6) Confirmed it consulted relevant persons whose functions, interests or activities may be affected by the activities in the EP. Since climate change impacts were associated with net global atmospheric GHG concentrations, and not with the activity described in the EP, being affected by climate change was not considered an appropriate test for inclusion as a relevant person. Woodside advised it did not consider that impacts to communities could be attributed to GHG emissions associated with the project. As described in the EP, the Kimberley region was outside the EMBA for this EP.
 - (7) Advised independent assessment of emissions sources, scopes and calculations had not been undertaken and was not warranted, including because Woodside applied estimation techniques aligned with the National Greenhouse and Energy Reporting Determination, and net direct emissions created by the project would be subject to the Federal Safeguard Mechanism (SGM). Woodside confirmed a breakdown of emissions sources extended over 11 pages in the EP. By way of summary, Woodside provided a list of sources assessed in the EP and advised the total estimated GHG emissions associated with the project were approximately 880 MtCO₂-e over the life of the activity.
 - (8) Woodside disagreed with Environs Kimberley's position regarding independent verification, including because Woodside employs internal specialists on climate change matters. Woodside acknowledged climate science and that climate change was understood to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one activity or project including the Scarborough Project. Woodside noted its view that LNG could have a role in the energy transition, however advised it had used a hypothetical assumption in the EP where GHG emissions associated with the project were treated as additive. The contribution to global carbon budgets was de minimis. Woodside noted emissions from the project fit within Australia's NDC and the NDC.

- **(9)** Confirmed that Woodside agreed that GHG emissions associated with the Scarborough project should be minimised and managed to ALARP and acceptable levels but did not agree with Environs Kimberley's assertion that this should be done independently. Third-party support had been used to identify potential opportunities for abatement, but it was more appropriate to leverage the understanding of the project held by internal personnel. Woodside also advised:
 - It would not provide technical evaluations and studies and these were not necessary for Environs Kimberley to make an informed assessment of the possible consequences of the activity on its functions, interests or activities. Access to the Pluto Hub Decarbonisation Plan was also not required by Environs Kimberley.
 - Lists of emissions abatement opportunities and features implemented were included for Scope 1 and Scope 3 GHG emissions in Section 6.7.6 of the EP. The incorporation (or not) of particular abatement options were reflected in the GHG emissions estimates provided.
 - The description of emissions abatement opportunities in the EP included when aspects were applicable and which were required under regulatory frameworks.
 - Independent analysis was not required to determine whether GHG emissions were reduced to ALARP.
 - Contractual or binding agreements between Woodside and third parties were confidential and would not be shared.
 - Avoiding and reducing GHG emissions were Woodside's priority, however offsetting emissions allowed Woodside to reduce net emissions while asset and technology carbonisation plans were matured and implemented.
 - It had established a carbon business in 2018 to develop a portfolio of carbon credits and skills and expertise in managing carbon credit integrity.
 - It would report domestic GHG emissions associated with the project as required under NGRS.
- **(10)** Disagreed with Environs Kimberley's position on independent modelling. Woodside's view was that LNG could have a role in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes, however, to facilitate a comparison against carbon budgets, a hypothetical assumption where GHG emissions associated with the Scarborough project were treated as hypothetically additive was considered in the latest version of the EP. The acceptability assessment of the activity did not rely on displacement of higher carbon fuels. Compliance with Australian carbon frameworks including the Federal SGM was consistent with Australia's implementation of the Paris Agreement, as set out in section 6.7.6.
- **(11)** Disagreed with Environs Kimberley's position and noted it was aware of the UN High Level Expert Group on Net Zero Integrity Matters and the ISO Net Zero Guidelines as well as a range of forums, public dialogues and reports regarding greenwashing. Woodside recently participated in a Senate inquiry into greenwashing and its Hansard transcript was available. Woodside takes care with statements, especially in regards to climate change, so that they are accurate. Woodside further noted:
 - Its corporate emission reduction targets were included in the EP as relevant to Scope 3 emissions only.
 - The Scarborough Project was not required to deliver an immediate absolute reduction in emissions from current levels, nor was it required to support global and local phase out of fossil fuels. As such, neither were proposed in the EP.
 - It had incorporated methane-specific GHG abatement measures.
 - Its advocacy aimed to support the goals of the Paris Agreement. Woodside provided a link to its Climate Policy and a list of government submissions and reports made by Woodside.
- **(12)** Confirmed the Scarborough OPP was approved by NOPSEMA in March 2020. The Operations EP demonstrated how these OPP requirements were implemented for the specific activity. The EPOs in the EP demonstrated an equal or better environment outcome than those in the OPP. Further, Woodside noted it would not share contractual detail due to confidentiality obligations, and that regulatory and other measures which managed GHG emissions associated with the project were comprehensively described in Section 6.7.6 of the EP.

- **(13)** Advised there were no requirements for Woodside to make studies and internal information publicly available. It was not reasonable for Woodside to provide studies, information or other material including because this was not necessary for Environs Kimberley to assess the possible consequences of the activity. Further, as Woodside had advised, it did not consider Environs Kimberley a relevant person for this EP. Woodside noted the Operations EP was publicly available on NOPSEMA’s website.
- On 7 January 2025, Environs Kimberley sent an email and letter attachment responding to Woodside’s correspondence of 8 October 2024 (SI Report, reference 58.4). Environs Kimberley’s feedback included that:
 - **(1)** It did not agree that the proposed activities did not affect its functions, interests and activities and that Environs Kimberley was therefore not a relevant person, and that:
 - Woodside’s description of the EMBA was inadequate as it failed to include indirect effects of the proposed activities and the impacts on vulnerable communities.
 - Woodside’s decision to exclude Environs Kimberley from relevant person consultation was based on an arbitrary distinction between indirect and direct impacts.
 - The severity of impacts arising from an activity were not necessarily related to physical proximity.
 - The draft EP showed Woodside had given relevant person status to other groups whose functions, interests or activities were only affected by indirect impacts outside the EMBA.
 - Environs Kimberley’s functions, interests or activities were focussed on ecosystems and environments in the Kimberley that were highly vulnerable to the impacts of climate change.
 - Relevant person consultation requirements had not been sufficiently met by Woodside.
 - Woodside had not undertaken further consultation with others across the Kimberley or responded to Environs Kimberley’s offer to assist in identifying such relevant persons.
 - **(2)** Woodside’s assessment of the climate impacts that would arise from the proposed activities was insufficient.
 - Woodside had failed to provide enforceable undertakings regarding mitigation and management of climate impacts.
 - Woodside’s assessment had not met the information requirements for relevant persons.
 - **(14)** Woodside’s carbon budget calculations were misleading and not a reliable measure for assessing the impacts of the proposal, because:
 - If the current rate of emissions continued, the claimed remaining carbon budget would be entirely used up within 3-5 years. The carbon budget was an abstract concept that must be continually updated to reflect emissions.
 - It was likely the carbon budget would be smaller again once operations began.
 - The proportion of the budget that will be used by Woodside will increase as the budget reduced.
 - **(15)** Woodside had not disclosed the assumptions implicit in the carbon budgets it relied on, including disclosing that the volume of carbon drawdown (CDR) that the budgets relied on. Other recent analysis demonstrated over-reliance on land for carbon dioxide removal. Woodside had also not provided evidence that the CDR level relied upon was achievable.
 - **(16)** Carbon budget timescales were not appropriate for the proposed operations, because:
 - References to theoretical carbon budgets in the period from now until net zero was reached was selective and misleading, because it did not take into consideration the need for net negative emissions following the achievement of net zero emissions.
 - Woodside made unenforceable corporate commitments to reduce Scope 1 emissions to net zero by 2050, however no similar commitments are provided for indirect or scope 3 emissions which will remain very high beyond 2050.
 - The use of carbon budgets which referred to emissions which may be released before 2050 to justify continuing emissions after 2050 was misleading.
 - **(17)** Carbon budgets provided insufficient certainty of achieving stated temperature outcomes, because:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The carbon budgets cited by Woodside corresponded to a 50 per cent likelihood that temperature goals would be exceeded, which was not a sufficient degree of certainty to use as a measure of what was acceptable.
- EK's position was that any chance of an exceedance of 1.5 degrees global temperature rise was unacceptable.
- **(18)** Carbon budgets were inconsistent with other assessment approaches.
 - Woodside claimed its proposed operations were supported by energy use scenarios reflected in NDCs or climate goals of various customer countries. Woodside had not disclosed which customer countries it referred to.
 - The International Climate Action Tracker rated Japan's commitments as insufficient and China's as highly insufficient and neither country's NDCs were consistent with global temperature goals or corresponding carbon budgets. This demonstrated that Woodside's assessment of climate impacts and justifications for its proposed operations based on carbon budgets and NDCs was inconsistent.
- **(19)** Global average temperature goals did not account for impacts on Australian environment.
 - The carbon budgets referenced by Woodside were associated with the achievement of global temperature goals based on average temperature rises across the globe. Within average temperature rise, significant variation could occur. In some regions such as Northern Australia, the impacts of further temperature rise was likely to be more severe. MNES in the Kimberley region was likely to be severely impacted by future climate change.
 - Given these impacts, a global average of 1.5 degrees warming could not be relied on as the appropriate measure for acceptability.
 - Budgets must be selected that are consistent with the sustainability of Australia's environment and heritage values and not simply global temperature goals.
- **(20)** Woodside's claims regarding the consistency of its proposed operations with global temperature goals could not be relied on because they were based on carbon budget scenarios that were misapplied or applied in inappropriate or misleading ways; not presently realistic; provided insufficient certainty for global temperature outcomes; were not the relevant measures when considering impact on Australia's environment; and were inconsistent with Woodside's other claims.
- **(21)** Repeated a statement from Woodside regarding the ability for Scarborough gas to lower GHG emissions elsewhere in the global energy market and stated it was misleading.
- **(22)** Recent updates to global energy scenarios included dramatic reductions in the amount of gas compatible with global temperature goals. EK included a figure.
- **(23)** IEA's Net Zero scenarios differed from the forecasts presented by Woodside in the draft EP. EK included a figure.
- **(24)** There was already more than enough LNG capacity to meet the levels of demand that corresponded with the NZE scenario. EK included a figure.
- **(25)** The various scenarios showed Woodside's argument regarding the role of gas in supporting decarbonisation was wrong and misleading.
- **(26)** Failure to adequately consider other gas supply developments.
 - Woodside had not provided detailed analysis of current and planned LNG production or supply that supported the claim that Woodside's proposed operations were necessary.
 - Woodside had not addressed significant increases in global LNG production planned in other countries.
- **(27)** Failure to justify global gas use scenarios and use of unrealistic scenarios for global gas use.
 - Woodside has not stated which scenario and what global levels of gas use it believed its proposed operations were consistent with.
 - Global energy scenarios that show increased use of gas were generally associated with a more rapid phase out of coal and / or a much greater reliance on CDR currently planned, achievable or realistic.
 - No evidence that Woodside would take actions to bring about the conditions which would be required to support higher levels of gas use.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The use of unrealistic theoretical scenarios was a fundamental data gap.
- **(28)** Woodside relied on customer country NDCs as evidence for the transition fuel hypothesis however its current customer country NDCs were not aligned with global temperature goals.
- **(29)** Woodside had failed to account for the final destination or end use of LNG produced from its operations.
- **(30)** Woodside has provided no evidence that the use of LNG in customer countries would not compete with low emissions alternatives such as renewable energy and zero carbon fuels such as hydrogen.
- **(31)** Woodside failed to account for the significant volumes of LNG currently being on-sold by Asian importers, with the climate commitment of many countries in Asia rated as 'highly insufficient' according to the Climate Action Tracker, including Singapore and India.
- **(32)** New research suggested LNG produced higher overall lifecycle emissions than coal.
- **(33)** The US Department of Energy (DoE) had released a report on implications of US LNG exports and the study contradicted many of Woodside's claims regarding LNG displacing coal, and LNG growth being consistent with global temperature goals.
- **(34)** Woodside's de minimis conclusion regarding the contribution of Scarborough gas to global GHG concentrations was not supported by evidence, and was incorrect by comparison to national decarbonisation goals under the Paris Agreement.
- **(35)** The total aggregate abatement commitments of many countries under current NDC's to 2030 were comparable to the total emissions from Woodside's proposed Scarborough Operations.
- **(36)** Woodside's claim that emissions added to the atmosphere by the Scarborough Operations was insignificant was the same as claiming the aggregate abatement efforts of many large economies was insignificant.
- **(37)** Woodside must disclose the global levels of LNG use and demand consistent with the proposed operations, and the temperature outcomes that would be consistent with this demand.
- **(38)** The Federal SGM only controlled direct or scope 1 carbon pollution from industrial facilities and could not be relied up on to control and abate the majority of carbon pollution.
- **(39)** The extent to which facilities involved in the proposed operations would be required to reduce direct emissions had not been disclosed by Woodside.
- **(40)** It was not possible to determine what abatement would be required or achieved under the SGM for facilities involved in the operations and the SGM and Australia's national emissions reduction targets were not consistent with global temperature goals.
- **(11)** EK had previously submitted evidence that Woodside's corporate climate policies and proposed abatement measures did not meet many of the key criteria established under the international standards for net zero. It was unclear if Woodside considered the international standards for net zero should not apply to its proposed operations, or if Woodside believed the mitigation measures it has proposed met the requirements.
- **(41)** The Regulations required that Woodside employ all reasonable and practicable measures to reduce GHG emissions and that those emissions were reduced to acceptable levels, including considering consultation responses from relevant persons, and the application of international standards for net zero were relevant and appropriate benchmarks.
- **(42)** Woodside has not proposed enforceable measures, commitments or undertakings that reflect its claims regarding carbon pollution and associated climate impacts. EK does not consider it acceptable that Woodside makes claims about the consistency of its operations with global emissions and temperature goals, but made no enforceable undertakings which reflect these claims.

- **(43)** EK did not accept that these matters were beyond Woodside's operational control and Woodside could impose decarbonisation stipulations as conditions of sale or withhold sale to customers where it was not contributing to verifiable emissions reductions. It was also within the operational control of Woodside to reduce or cease production of LNG if global temperature limits were in danger of being reached
- **(44)** It was in the operational control of LNG producers to undertake greater Scope 3 mitigation measures than Woodside had proposed.
- **(45)** The EPBC Act Indirect consequences policy provided that an indirect consequence was relevant for assessment if the action is a substantial cause of the event or circumstance. Climate change impacts were a reasonably foreseeable consequence of secondary action arising from a primary action.
- **(46)** It was not adequate to say that otherwise unacceptable impacts should be allowed to occur because they are not within the operational control of Woodside.
- **(47)** EK suggested control measures that could be adopted consisted with Woodside's claims regarding GHG emissions and mitigation measures.
- On 22 January 2025, Woodside responded to EK's letter (SI Report, reference 58.5). Woodside:
 - **(1)** Confirmed that, as part of its process for identifying relevant persons, Woodside maintained its position that EK was not a relevant person for this EP. Regardless, Woodside had reviewed and assessed EK's feedback, claims and objections about the adverse impacts of the activities to which the EP related and responded to EK the same way it responded to relevant persons. Woodside set out some reasons for its assessment of EK as not a relevant person for this EP, including that the EMBA for the activity did not include the Kimberley region. In addition, climate change impacts were associated with net global atmospheric GHG concentrations and having functions, interests or activities affected by climate change was not considered an appropriate factor for inclusion as a relevant person. Woodside confirmed the concept of the EMBA was set out in the Regulations, and confirmed the EP assessed direct and indirect impacts, including providing examples of potential indirect environmental impacts and risks. Woodside confirmed it had consulted broadly for the EP, and referenced Woodside's previous responses to EK on this topic on 8 October 2024.
 - **(2)** Disagreed with EK's assertions for reasons set out in subsequent responses. Woodside confirmed it had given relevant persons sufficient information and noted that EK did not mention the benefit that gas and LNG provided including energy security, grid stability, economic growth, and other socio-economic benefits.
 - **(14)** Does not agree with EK's logic or calculations. Woodside referred to the Paris Agreement goal and that 1150 GTCO₂ was the more appropriate number to use in calculations. Additionally, extrapolating from the past few years and projecting forward assumed no action to address climate change between 2025-2030. Woodside confirmed Scarborough operations were expected to begin in 2025. The Global Carbon Budget for 2 degrees warming was likely to still exceed 1000 GT of which Scarborough's yearly contribution would be de minimis. Woodside further noted there may be a point in time where the Global Carbon Budget neared zero, however attributing this result specifically to the Scarborough project was not reasonable.
 - **(15)** Confirmed it had extracted excerpts from the Global Carbon Budget numbers and had not made assumptions or edits of its own. Woodside provided a link to the Global Carbon Budget website. Woodside also noted how countries' climate pledges would be achieved was beyond the scope of Woodside or this EP.
 - **(16)** Confirmed it used the Global Carbon Budget which was a widely used global budget and an authoritative source, that Scarborough operations were subject to the SGM, and Woodside had corporate Scope 3 targets which were consistent with the 5-year timeframe of the EP. Woodside also advised the duration of the Scarborough Operations EP covered the next five years and would be revised prior to 2050.
 - **(17)** Woodside does not agree with EK's assertions and referred EK to its response on Woodside's position on the Global Carbon Budget. Woodside confirmed it had included context in the EP around the Australian Carbon Budget which noted that based on Australia's GHG emission reduction commitments and NDC, the Australian carbon budget of 4,377 MtCO₂-e for the years 2021-2030 had been estimated. Emissions associated with Scarborough represented a de minimis contribution to either Australia's GHG emissions or global GHG emissions.
 - **(18)** Woodside referred EK to Section 6.7.6 of the EP for further context around Woodside's statements. Woodside advised it had included excerpts from NDCs for Japan, South Korea and China in this section. Woodside noted the International Climate Action Tracker was a collaboration between two not-for-profit organisations and was not considered an

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

authoritative source of information. Woodside confirmed the EP provided context around the conclusion that GHG emissions associated with the project were ALARP and acceptable; for example, that gas had a role in NDC decarbonisation plans as it may offset higher carbon intensity fuels.

- (19) Directed EK to Section 6.7.6 of the EP for context around Woodside's statement. Woodside noted the Paris Agreement included objectives to hold the increase in global average temperature to well below 2 degrees and pursue 1.5 degrees. The agreement was recognised by a large number of countries globally and Woodside considered these objectives to be the appropriate measure of acceptability.
- (20) Confirmed it had used a widely applied Global Carbon Budget and referenced an Australian budget. The fact Scarborough GHG emissions were a small portion of the budgets was not inconsistent with other justifications, but was a complimentary reason why GHG emissions were acceptable.
- (21) Advised there were a number of reasons, including that the role of gas in firming and enabling renewables may have a negative or neutral impact, and if gas displaced coal, it was not partially offsetting a small proportion, it could lead to a net negative amount of GHG emissions in the overall energy system.
- (22) Noted that the image supplied by EK might contradict EK's statement as four of the five scenarios shown by EK had an increase in gas consumption.
- (23) Noted the forecasts shown in the figure were similar to what was included in the EP.
- (24) Noted the Scarborough LNG facility was currently under construction and so was likely included in the IEA graph presented by EK, rather than being additional. (44)
- (25) Advised it had not attempted to demonstrate that utilising LNG created the lowest possible GHG emissions scenario. However, in numerous scenarios, gas played a role in offsetting coal or firming and enabling renewable energy.
- (26) Advised Scarborough gas contained almost no reservoir CO₂ and would be processed through a modern, efficient facility. For net global GHG emissions it may be better that the Scarborough project goes ahead over other international projects that were higher carbon intensity. Woodside also referred generally to the principles of supply and demand.
- (27) Confirmed it had presented scenarios and data from IEA and IPCC and had not picked individual scenarios. Woodside noted EK's comments regarding the rapid phase-out of coal and noted projects like Scarborough could aid in the phase-out of coal and help reduce GHG emissions. Woodside advised it was supplying gas to support customers, a number of whom have stated they are phasing out coal-powered power plants.
- (28) Disagreed with the assertion from EK and advised Japan and South Korea had both committed to net zero by 2050. China had committed to 2060 and as the largest user of coal globally, presented an opportunity for displacement of coal with natural gas.
- (29) Disagreed with the assertion from EK and confirmed its customers included some of Japan's largest electricity generators, including JERA and Kansai Electric. Additionally, gas that was used as an industrial feedstock may have replaced coal in the past and removing gas supply could lead to reintroduction of coal.
- (30) Noted gas played an important role in stabilising grids and could act as an enabler of renewable electricity buildout. Woodside further noted the cheapest form of electricity – solar power – could not provide 24-hour power. Some key markets also had limited land for renewable energy development and large energy demands.
- (31) Referred EK to its previous response regarding the Climate Action Tracker, and noted if EK's examples of onselling were correct, they were likely net negative for GHG emissions.
- (32) Advised the EP now included comment on the research referenced by EK, and included evidence for why the findings were not relevant to Scarborough or Australian products, and provided examples.
- (33) Noted a number of projects that were authorised may not get built or become operational. Construction of the Scarborough project was under way and was expected to supply gas to the market ahead of the mentioned US projects. Woodside further noted there had been recent publications questioning the validity of the report by the DoE, and provided a link to one such example.

- (34) Disagreed with the assertion from EK and noted the context around the de-minimis statement, Paris agreement, and carbon budgets was provided in Woodside's 8 October 2024 correspondence to EK. Woodside noted that EK and Woodside have different positions and views on climate change, the role of gas, and on Woodside's role, therefore there was unlikely to be consensus on these matters. EK had also not demonstrated how the carbon budget calculations were incorrect.
- (35) Advised that comparing abatement commitment numbers to 2030 with GHG emissions over proposed Scarborough operations was not a valid comparison, and confirmed the EP set out that five years of operations and GHG emissions from Scarborough in Australia was approximately 38 MtCO₂-e with the DCCEEW suggesting an Australian carbon budget of 4,377 MtCO₂-e, resulting in approximately 0.9%.
- (36) Confirmed this was only one consideration for why the project was acceptable and that through gas displacing coal or enabling renewables, it may have a positive impact to global GHG emissions. Woodside noted EK and Woodside's differing views and referred to its previous responses on carbon budgets.
- (37) Confirmed it did not pick individual scenarios to align to and took guidance from IPCC/ IEA scenarios on the role gas could play globally.
- (38) Advised the Safeguard Mechanism was the Australian Government's policy for reducing emissions at Australia's largest industrial facilities, and the EP included information and controls consistent with the SGM.
- (39) Confirmed the EP set out relevant context and noted that Woodside would comply with requirements of the NGER Act and SGM as it pertained to facility definitions, baseline emissions intensity factors, and eligibility criteria for TEBA.
- (40) Disagreed with EK's assertions and noted the context around SGM was set out in the EP.
- (11) Confirmed that, as previously advised to EK, Woodside was aware of the UN High Level Expert Group on Net Zero Integrity Matters and the ISO Net Zero Guidelines as well as a range of other forums, public dialogues and reports regarding purported greenwashing. Woodside recently participated in the Australian Senate Inquiry into Greenwashing. As per Woodside's statement at the Inquiry, Woodside takes care with its statements, especially in relation to climate change, so that these statements are factual and accurate.
- (41) Advised Acceptable levels of impact for the project were assessed in the OPP, and the risks assessed in the EP were consistent with the Acceptable levels set out in the EP. A number of measures to reduce GHG emissions had been considered and either implemented or deemed not reasonable or practicable. Woodside referred to the consultation provisions in the Regulations and confirmed it had assessed the merits of relevant persons' feedback, claims and objections. While EK has not been assessed as relevant, Woodside has still reviewed, assessed and responded to EK's feedback as if EK were a relevant person.
- (42) Disagreed with EK's assertions and confirmed the EP contained a number of EPOs and control measures that referenced displacement of higher intensity energy sources, monitoring of the natural gas value chain, and effectiveness of Scope 3 targets.
- (43) Noted that EK's proposals were unrealistic or not practical. They were inconsistent with supply agreements currently in place and would require governments or other bodies to create regimes to support these. Woodside referred to its response regarding a control for verification of the potential for gas to displace more carbon intensive energy sources, and as to continuing supply of LNG and renewables, noted demand and supply principles generally.
- (44) Confirmed Scope 3 targets were included in annual disclosures on Woodside's website.
- (45) Confirmed the regulations enacted by Parliament that governed the content of the EP also governed consultation for EPs. The EP and consultation undertaken in preparing the EP comply with those regulations and in particular referenced direct and indirect impacts. Climate change impacts cannot be attributed to any one activity as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started.
- (46) Noted it was important to understand EK and Woodside had different positions and views on climate change, the role of gas in transition, and on Woodside's role. The EP complied with the Regulations and included control measures to reduce GHG emissions to ALARP and Acceptable.

- (47) Noted EK's suggestions and its request for specific responses, and advised the context around Woodside's EPOs and controls was set out in the EP. Updates to EPOs had also been set out in earlier responses. Woodside further noted:
 - Given EK and Woodside's differing views, there was unlikely to be consensus on the matter.
 - It did not agree the summarised versions of Woodside material was always accurate.
 - A number of EPOs, EPS and control measures that EK focussed on had already been approved in the OPP.
 - The comments from EK were not claims or objections about the adverse impact to which the EP relates, and specific responses were not required.
 - Many of EK's proposed enforceable measures and enforceable undertakings were unrealistic and not practical.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
<p>(1) Environs Kimberley considers that Woodside should consult it as a relevant person.</p>	<p>(1) Woodside assessment: Woodside has considered Environs Kimberley's self-identification as part of Woodside's relevancy assessment process and concluded that Environs Kimberley's functions, interests or activities are not affected by the proposed activities. Woodside response: Woodside considered Environs Kimberley's self-identification as part of its assessment of relevant person process and concluded that Environs Kimberley's functions, interests or activities are not affected by the proposed activities.</p>	<p>(1) Woodside's assessment of Environs Kimberley's relevancy is described in Appendix F, Table 1.</p>
<p>(2) Climate change impacts fall under the scope of indirect consequences which must be assessed according to the Environment Regulations and NOPSEMA's guidelines. Woodside's assessment of the climate impacts was insufficient.</p>	<p>(2) Woodside assessment: Woodside has assessed potential climate change impacts in the EP. Woodside response: Woodside has assessed climate change impacts in the EP. Specific information relating to Environs Kimberley's feedback on this topic is provided in subsequent responses.</p>	<p>(2) GHG emissions associated with the activity are assessed in Section 6.7.6 of the EP.</p>
<p>(3) Woodside should consult with communities across the Kimberley.</p>	<p>(3) Woodside assessment: Woodside consults relevant persons in accordance with its methodology and regulation 25 of the Environment Regulations. Kimberley communities are not relevant for this EP as the EMBA does not include the Kimberley region.</p>	<p>(3) Methodology for identifying relevant persons is described in Section 5.3 and included in Table 1 of Appendix F.</p>

	Woodside response: Woodside consults relevant persons as per its relevancy assessment methodology. The EMBA for this activity does not include the Kimberley region or the Kimberley coastline.	
(4) Requested additional information and time for consultation and stated the Consultation Information Sheet was not sufficient for making an informed decision.	(4) Woodside assessment: Although Environs Kimberley is not a relevant person, Woodside considers it has provided sufficient information and a reasonable period to Environs Kimberley outside of regulatory requirements. Woodside response: Woodside advised that Environs Kimberley was not a relevant person for this EP, however, as a courtesy, Woodside had provided Environs Kimberley with additional information in response to its feedback.	(4) Not required.
(5) Assessment of the climate change impacts of the Scarborough project on the Kimberley environment.	(5) Woodside assessment: Woodside acknowledges that climate change is impacting Australian receptors, and that climate science understands climate change to be caused by the net cumulative concentration of GHG in the atmosphere. Changes to the GHG concentrations cannot be attributed to any one activity or project, including the Scarborough project. Woodside's view is that LNG can have a role in the energy transition and the full volume of GHG emissions associated with the project are not expected to be additive to global GHG concentrations. Therefore, Woodside does not accept that the Scarborough project will contribute to the exacerbation of climate change impacts in Western Australia. Woodside response: Woodside noted that climate science suggested that human-caused climate change was a consequence of net GHG emissions that had accumulated in the atmosphere since the start of the industrial revolution. Woodside advised a contextual evaluation of climate change impacts had been included in the EP and, by way of summary, provided a list of projections for Australia. Woodside further noted the EMBA was determined by worst-case credible hydrocarbon spill scenarios, not the global impacts of climate change, and the EMBA for this EP did not include the Kimberley region or Kimberley coastline.	(5) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i> .
(6) Assessment of the climate change impacts of the Scarborough project on communities impacted by climate change in the Kimberley.	(6) Woodside assessment: Woodside consults relevant persons whose functions, interests or activities may be affected by the activities to be carried out under the EP. Since climate science suggests that climate change impacts are associated with net global atmospheric GHG concentrations, being affected by climate change is not	(6) The EMBA for this activity is defined in Section 4.1 of the EP. A contextual evaluation of climate change impacts is provided in Section 6.7.6.

	<p>considered an appropriate test for inclusion as a relevant person. Based on the EMBA, Kimberley communities are not relevant to this EP.</p> <p>Woodside response: Woodside advised that since climate change impacts were associated with net global atmospheric GHG concentrations, and not with the activity described in the EP, being affected by climate change was not considered an appropriate test for inclusion as a relevant person. Woodside advised it did not consider that impacts to communities could be attributed to GHG emissions associated with the project, and in any case, the Kimberley region was outside the EMBA for this EP.</p>	
<p>(7) Independent estimates of greenhouse gas emissions, including Scope 3 emissions from the Scarborough project.</p>	<p>(7) Woodside assessment: Woodside does not agree with Environs Kimberley's position on independent assessment. Woodside has assessed GHG emissions, including Scope 3 emissions, in the EP.</p> <p>Woodside response: Woodside confirmed it applied estimation techniques aligned with the National Greenhouse and Energy Reporting Determination and emissions were subject to the Federal SGM. Woodside noted a breakdown of emissions was included in the EP but the total estimated lifecycle GHG emissions associated with the project were approximately 880 MtCO₂-e.</p>	<p>(7) GHG emissions associated with the activity are assessed in Section 6.7.6 of the EP</p>
<p>(8) Independent assessment of the compatibility of the project with internationally agreed temperature and decarbonisation goals, including 1.5 degrees and the phase down of fossil fuels.</p>	<p>(8) Woodside assessment: Woodside does not agree with Environs Kimberley's position regarding independent verification. Woodside employs internal specialists who stay abreast of developments in the evolving science of climate change and support assessment of projects against climate frameworks. In the latest version of the EP, a hypothetical assumption where GHG emissions associated with the Scarborough project are treated as additive is considered. This scenario is not expected to eventuate.</p> <p>Woodside response: Woodside acknowledged that climate science understood climate change to be caused by the net cumulative global concentration of GHG in the atmosphere and could not be attributed to any one project or activity including the Scarborough Project. However, to facilitate a comparison against carbon budgets, Woodside confirmed it had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive, and the contribution was de minimis. Woodside noted emissions fit within Australia's NDC and would comply with the Federal SGM.</p>	<p>(8) Climate-related scenarios are presented in Section 6.7.6.</p>

<p>(9) Independent analysis of mitigation options and commitments.</p>	<p>(9) Woodside assessment: Woodside acknowledges the legislative regime which requires emissions associated with the Scarborough Project to be minimised and managed to ALARP and Acceptable levels but does not agree with Environs Kimberley's assertion that this should be done independently. Woodside response: Woodside advised that Environs Kimberley did not require technical evaluations, studies or access to the Pluto Decarbonisation Plan to assess the possible consequences of the activity on its functions, interests or activities. Emissions abatement opportunities and features implemented were included in the EP, including whether they were required under regulatory frameworks or voluntary. Woodside also noted contractual or binding agreements between Woodside and third parties would not be shared, and avoiding and reducing GHG emissions were Woodside's priorities, however offsetting emissions allowed Woodside to reduce net emissions while asset and technology decarbonisation plans were matured and implemented. Woodside also provided details on its carbon business and confirmed it would report domestic GHG emissions as required under NGRS.</p>	<p>(9) Routine and non-routine atmospheric and GHG emissions associated with the activities, and options analysis of reduction/abatement measures (in the form of ALARP demonstration) are assessed in 6.7.6 and 6.7.7 of the EP</p>
<p>(10) Independent modelling to support Woodside's claims of gas from the Scarborough project displacing other more carbon intensive energy sources.</p>	<p>(10) Woodside assessment: Woodside does not agree with Environs Kimberley's position on independent modelling. Woodside has used a hypothetical assumption in the EP where GHG emissions associated with the project are hypothetically treated as additive. This scenario is not expected to eventuate. Woodside response: Woodside confirmed its view was that LNG could have a role in the energy transition and in displacing higher carbon intensity fuels and lowering carbon intensity of existing energy mixes. However, to facilitate a comparison against carbon budgets, Woodside advised it had used a hypothetical assumption in the EP where GHG emissions associated with the project were hypothetically treated as additive. The acceptability assessment of the activity did not rely on displacement of higher carbon fuels.</p>	<p>(10) Comparisons against carbon budgets are set out in EP Section 6.7.6, <i>Gas's Role in the Energy System</i>.</p>
<p>(11) Independent assessment of how the Scarborough project and associated mitigation efforts meets the requirements of the UN High Level Expert Group on Net Zero emissions for non-state entities, and the ISO Net Zero Guidelines.</p>	<p>(11) Woodside assessment: Woodside does not agree with Environs Kimberley's position. Woodside takes care with its statements, especially in relation to climate change, to ensure statements are accurate and not misleading. Woodside response: Woodside confirmed it was aware of a range of forums, public dialogues and reports regarding greenwashing. Woodside advised it had</p>	<p>(11) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<p>recently participated in the Australian Senate Inquiry into greenwashing and as per its statement at the Inquiry, took care so that statements were accurate and not misleading. Woodside further noted its corporate emissions reduction targets were included in the EP. The Scarborough Project was not required to deliver an immediate absolute reduction in emissions from current levels, nor was it required to support global or local phase out of fossil fuels, thus neither was proposed in the EP. Woodside noted it had incorporated methane-specific GHG abatement measures, and its advocacy aimed to support the goals of the Paris Agreement.</p>	
<p>(12) Evidence of how the requirements of the approved Scarborough OPP relating to mitigation and avoidance of direct and indirect greenhouse gas emissions from the project will be achieved.</p>	<p>(12) Woodside assessment: The Operations EP demonstrates how OPP requirements are implemented for the specific activity. Woodside response: Woodside confirmed the Scarborough OPP was approved by NOPSEMA in 2020. EPOs for the EP were mapped against those from the OPP in Table 6-2 of the EP. Woodside noted it would not share contractual detail of third-party emissions reduction measures due to confidentiality obligations, but that regulatory and other measures to manage GHG emissions were described in Section 6.7.6 of the EP.</p>	<p>(12) A comparison of EPOs between the OPP and the EP is provided in the EP Section 6.3.</p>
<p>(13) Other documents, including documents relied upon by Woodside, and draft Operations EP.</p>	<p>(13) Woodside assessment: There is no requirement to make studies and internal documents publicly available. Woodside response: Woodside advised it was not reasonable for Woodside to provide studies, information or other material, as this was not needed for Environs Kimberley to make an informed assessment of the possible consequences of the activity. Further, as Woodside already noted, it did not consider Environs Kimberley a relevant person for this activity.</p>	<p>(13) Not required.</p>
<p>(14) Claims Woodside's carbon budget calculations were misleading.</p>	<p>(14) Woodside assessment: Woodside does not agree with EK's logic or calculations. Woodside response: Woodside referred to the goals of the Paris Agreement and set out more appropriate calculations regarding the Scarborough project. Woodside noted there may be a point in time where the global carbon budget neared zero however attributing this result specifically to the Scarborough project was not reasonable.</p>	<p>(14) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.</p>
<p>(15)</p>	<p>(15)</p>	<p>(15)</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Assumptions implicit in carbon budgets and volume of carbon drawdown not disclosed.</p>	<p>Woodside assessment: Woodside has not made assumptions or edits of its own in respect to the Global Carbon Budget numbers.</p> <p>Woodside response: Woodside confirmed it had extracted excerpts from the Global Carbon Budget and referred EK to the Global Carbon Budget website for further information.</p>	<p>Not required.</p>
<p>(16) Carbon budget timescales not appropriate.</p>	<p>(16) Woodside assessment: Woodside disagrees its carbon budget calculations are misleading. Woodside uses the Global Carbon Budget which is a widely used global budget and an authoritative source.</p> <p>Woodside response: Woodside confirmed it used a widely used, authoritative global budget. Woodside noted Scarborough operations were subject to the SGM, and Woodside had corporate Scope 3 targets which were consistent with the timeframe of the EP.</p>	<p>(16) Not required.</p>
<p>(17) Carbon budgets provided insufficient certainty of achieving stated temperature outcomes.</p>	<p>(17) Woodside assessment: Woodside does not agree with EK's assertions. Woodside has included text in the EP regarding global and Australian carbon budgets and emissions from the Scarborough project represent a de minimis contribution to either Australia's GHG emissions or global GHG emissions.</p> <p>Woodside response: In addition to information provided to EK regarding global carbon budget comparisons, Woodside provided context on an Australian Carbon Budget, and advised that net emissions associated with Scarborough in Australia were set to be lower than the figures noted, with ongoing abatement via implementation of the NGERs Safeguard Mechanism.</p>	<p>(17) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.</p>
<p>(18) Carbon budgets were inconsistent with other assessment approaches, including that Woodside has not disclosed which customer countries it refers to.</p>	<p>(18) Woodside assessment: Woodside disagrees with EK's assertions. Context regarding EK's statements is provided in the EP, including excerpts from NDCs for Japan, South Korea and China. Further, the International Climate Action Tracker referenced by EK is not considered an authoritative source of information.</p> <p>Woodside response: Woodside confirmed further context, including excerpts from NDCs and information around the conclusion that GHG emissions associated with the project were ALARP and acceptable, was included in the EP. Regarding the International Climate Action Tracker, Woodside noted more authoritative sources</p>	<p>(18) Context regarding customer countries' NDCs is set out in Section 6.7.6 of the EP. Context regarding ALARP and acceptable conclusions is also set out in Section 6 of the EP.</p>

	had devised pathways for countries to meet their climate targets, many of which included gas as a transition fuel.	
(19) Global average temperature goals did not account for impacts on Australian environment.	(19) Woodside assessment: Woodside has provided context around EK's statement in Section 6.7.6 of the EP. Woodside considers objectives from the Paris Agreement to be the appropriate measure of acceptability. Woodside response: Woodside noted the Paris Agreement was recognised by a large number of countries globally and its objectives were an appropriate measure of acceptability.	(19) A contextual evaluation of climate change impacts is set out in EP Section 6.7.6, <i>Climate Change – Global and Australian Context</i> .
(20) Woodside's claims regarding the consistency of its proposed operations with global temperature goals could not be relied on.	(20) Woodside assessment: Woodside disagrees with EK's assertions. Woodside has used a widely applied Global Carbon Budget and has referenced an Australian Carbon Budget, with Scarborough emissions representing a de minimis contribution to both. Woodside response: Woodside noted the fact Scarborough GHG emissions were a small portion of the budgets was not inconsistent with other justifications.	(20) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.
(21) Claims Woodside's statement regarding the displacement of higher polluting fuels was misleading.	(21) Woodside assessment: Woodside does not agree with EK's assertions. There are a number of ways gas can have a negative or neutral impact on GHG emissions. Woodside response: Woodside provided examples of the role of gas in firming and enabling renewables, and displacing coal.	(21) Gas's role in the energy system is set out in Section 6.7.6 of the EP.
(22) Recent updates to global energy scenarios included dramatic reductions in the amount of gas compatible with global temperature goals.	(22) Woodside assessment: Woodside considers that the image provided by EK contradicts EK's statement, as 4 of the 5 scenarios include an increase in gas consumption. Woodside response: Woodside noted the increase in gas in the scenarios depicted in the figure supplied by EK and in addition noted some gas fields were reaching plateau or decline, therefore new investments such as Scarborough were required to maintain present production volumes.	(22) Not required.
(23) IEA's Net Zero scenarios differed from the forecasts presented by Woodside in the draft EP.	(23) Woodside assessment: Woodside disagrees with EK's assertions as the forecasts shown are similar to what is included in the EP.	(23) Climate-related scenarios are presented in Section 6.7.6 of the EP.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside confirmed its graph used IEA data showing the NZE scenario but also included scenarios that included a larger role for gas, and showed the 2 degree scenario ranges.	
(24) There was already more than enough LNG capacity to meet the levels of demand that corresponded with the NZE scenario.	(24) Woodside assessment: Woodside notes the graph provided by EK likely already includes the Scarborough project. Woodside response: Woodside advised the Scarborough LNG facility was already under construction and therefore was likely included in the graph, rather than being additional.	(24) Not required.
(25) The various scenarios showed Woodside's argument regarding the role of gas in supporting decarbonisation was wrong and misleading.	(25) Woodside assessment: Woodside has not attempted to demonstrate that utilising LNG creates the lowest possible GHG emissions scenarios, however, in numerous scenarios gas plays a role in the energy transition. Woodside response: Woodside confirmed that in numerous scenarios, gas played a role in offsetting coal, or firming or enabling renewables.	(25) Not required.
(26) Failure to adequately consider other gas supply developments.	(26) Woodside assessment: Woodside considers that, for net global greenhouse gas emissions and global impact to climate change, it may be better that Scarborough project goes ahead over other international projects that have higher emissions intensity. Woodside response: Woodside confirmed Scarborough gas contained almost no reservoir CO2 and would be processed through a modern, efficient facility, making it one of the lowest carbon intensity sources of LNG delivered into modern markets.	(26) Not required.
(27) Failure to justify global gas use scenarios and use of unrealistic scenarios for global gas use.	(27) Woodside assessment: Woodside does not cherry pick scenarios and has presented a range of scenarios and data from IEA and IPCC in the EP. Woodside response: Woodside confirmed it had shown a range of scenarios in the EP as well as supplying quotes from customer country NDCs. Woodside noted projects like Scarborough could aid in the phase-out of coal, with a number of customer countries phasing out coal-powered power plants. Woodside noted further context was available in Section 6.7.6 of the EP.	(27) Climate-related scenarios are presented in Section 6.7.6 of the EP.
(28)	(28)	(28)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Woodside relied on customer country NDCs as evidence for the transition fuel hypothesis however its current customer country NDCs were not aligned with global temperature goals.</p>	<p>Woodside assessment: Woodside disagrees with EK's assertion. Japan and South Korea have committed to net zero by 2050 and China by 2060.</p> <p>Woodside response: Woodside noted that in addition to Japan and South Korea's alignment, China, as the largest user of coal globally, presented an opportunity for displacement of coal with natural gas to reduce GHG emissions.</p>	<p>Customer markets' NDCs are discussed in Section 6.7.6 of the EP.</p>
<p>(29) Woodside had failed to account for the final destination or end use of LNG produced from its operations.</p>	<p>(29) Woodside assessment: Woodside disagrees with EK's assertion. Woodside's customers include some of Japan's largest electricity generators including JERA and Kansai Electric.</p> <p>Woodside response: Woodside confirmed its customers included some of Japan's largest electricity generators and noted that gas that was used as an industrial feedstock may have replaced coal in the past, and removing gas supply could lead to the reintroduction of coal.</p>	<p>(29) Gas's role in the energy system is set out in Section 6.7.6 of the EP.</p>
<p>(30) Woodside has provided no evidence that the use of LNG in customer countries would not compete with low emissions alternatives.</p>	<p>(30) Woodside assessment: Gas plays an important role in stabilising grids that have a high percentage of intermittent renewable electricity, it can act as an enabler of more renewable electricity buildout.</p> <p>Woodside response: Woodside noted the role gas played in firming and enabling renewables, and advised that some of the key markets Woodside sold LNG to had limited land for renewable energy development. Woodside referred generally to supply and demand principles.</p>	<p>(30) Gas's role in the energy system is set out in Section 6.7.6 of the EP.</p>
<p>(31) Woodside failed to account for the significant volumes of LNG currently being on-sold by Asian importers, with the climate commitment of many countries in Asia are rated as 'highly insufficient' according to the Climate Action Tracker, including Singapore and India.</p>	<p>(31) Woodside assessment: Woodside does not consider the Climate Action Tracker to be an authoritative source.</p> <p>Woodside response: Woodside noted that even if EK's examples were correct, they were likely still net negative given Singapore produced the majority of its electricity through petroleum products, and India through coal.</p>	<p>(31) Not required.</p>
<p>(32) New research suggested LNG produced higher overall lifecycle emissions than coal.</p>	<p>(32) Woodside assessment: Woodside has provided evidence in the EP for why the findings of the referenced report are not relevant to Scarborough or Australia.</p>	<p>(32) Comments regarding the referenced report are set out in Section 6.7.6 of the EP under the subheading <i>Gas's Role in the Energy System</i>.</p>

	Woodside response: Woodside advised the EP now included comment on the research referenced by EK, and provided examples of why the findings were not relevant to Scarborough.	
(33) DoE report on implications of US LNG exports.	(33) Woodside assessment: Construction of the Scarborough project is underway and is expected to be supplying gas to the market ahead of the mentioned US projects. Woodside response: Woodside noted a number of projects that were authorised may not get built or become operational, and that recent publications had questioned the validity of the DoE report.	(33) Not required.
(34) Woodside's de minimis conclusion regarding the contribution of Scarborough gas to global GHG concentrations was not supported by evidence, and was incorrect by comparison to national decarbonisation goals under the Paris Agreement.	(34) Woodside assessment: Woodside disagrees with EK's assertions and notes EK has not demonstrated how the calculations are incorrect. Woodside understands EK and Woodside have different positions and views on climate change, the role of gas, and Woodside's role, which mean a consensus on such matters is unlikely. Woodside response: Woodside directed EK to its previous correspondence for further context on these topics.	(34) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.
(35) The total aggregate abatement commitments of many countries under current NDC's to 2030 were comparable to the total emissions from Woodside's proposed Scarborough Operations.	(35) Woodside assessment: Woodside does not agree with EK's assertions, logic or calculations. Comparing abatement commitment numbers to 2030 with GHG emissions over proposed Scarborough operations is not a valid comparison. Woodside response: Woodside noted the EP now included that 5 years of operations and GHG emissions from Scarborough in Australia was approximately 38 MtCO ₂ -e with the DCCEEW suggesting an Australian carbon budget of 4,377 MtCO ₂ -e, resulting in approximately 0.9%.	(35) Comparisons against an Australian Carbon Budget are set out in Section 6.7.6 of the EP.
(36) Woodside's claim that emissions added to the atmosphere by the Scarborough Operations was insignificant was the same as claiming the aggregate abatement efforts of many large economies was insignificant.	(36) Woodside assessment: Context for these topics is provided in Section 6.7.6 of the EP and in prior responses to EK. Woodside notes the differing positions and views of EK and Woodside on this topic. Woodside response: Woodside referred EK to previous responses for context on these topics. Woodside further noted this was only one consideration for why the project was acceptable.	(36) Comparisons against carbon budgets are set out in Section 6.7.6 of the EP.
(37)	(37)	(37)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Woodside must disclose the global levels of LNG use and demand that are consistent with the proposed operations, and the temperature outcomes that would be consistent with this level of demand.</p>	<p>Woodside assessment: Context for this topic is set out in Section 6.7.6 of the EP and in prior responses to EK. Woodside does not pick individual scenarios to align to.</p> <p>Woodside response: Woodside confirmed it took guidance from IPCC/ IEA scenarios on the role gas could play globally</p>	<p>Not required.</p>
<p>(38) The Federal SGM only controlled direct or scope 1 carbon pollution from industrial facilities.</p>	<p>(38) Woodside assessment: The Safeguard Mechanism is the Australian Government's policy for reducing emissions at Australia's largest industrial facilities.</p> <p>Woodside response: Woodside confirmed the SGM was an Australian Government policy and that the EP included information and controls consistent with the SGM.</p>	<p>(38) Information about the SGM is set out in Section 6.7.6 of the EP.</p>
<p>(39) The extent to which facilities involved in the proposed operations would be required to reduce direct emissions had not been disclosed by Woodside.</p>	<p>(39) Woodside assessment: Woodside disagrees that it has not disclosed relevant information. The EP sets out relevant context.</p> <p>Woodside response: Woodside confirmed it would comply with requirements of the NGER Act and SGM as it pertained to facility definitions, baseline emissions intensity factors, and eligibility criteria for TEBA</p>	<p>(39) Information about the SGM is set out in Section 6.7.6 of the EP.</p>
<p>(40) It was not possible to determine what abatement would be required or achieved under the SGM for facilities involved in the operations and the SGM and Australia's national emissions reduction targets were not consistent with global temperature goals.</p>	<p>(40) Woodside assessment: Woodside disagrees with EK's assertions and notes the different positions and views held by EK and Woodside on this topic.</p> <p>Woodside response: Woodside noted the context around SGM was set out in the EP.</p>	<p>(40) Information about the SGM is set out in Section 6.7.6 of the EP.</p>
<p>(41) The Regulations required that Woodside employ all reasonable and practicable measures to reduce GHG emissions and that those emissions were reduced to acceptable levels.</p>	<p>(41) Woodside assessment: Acceptable levels of impact were assessed in the OPP and are consistent in the EP. Woodside has assessed the merits of relevant persons' objections and claims and considered relevant persons' input in the development of the EP. While EK has not been assessed as relevant for this EP, Woodside has still reviewed, assessed and responded to EK's feedback.</p> <p>Woodside response: Woodside advised Acceptable levels of impact for the project were assessed in the OPP, and the risks assessed in the EP were consistent with the Acceptable levels set out in the EP,</p>	<p>(41) Demonstration of Acceptability is set out in Section 2.3.6 of the EP.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>(42) Woodside has not proposed enforceable measures, commitments or undertakings that reflect, or are consistent with its claims regarding carbon pollution and associated climate impacts.</p>	<p>(42) Woodside assessment: Woodside disagrees with EK's assertions. The EP contains a number of relevant EPOs and control measures. Woodside response: Woodside confirmed the EP contained EPOs and control measures that referenced displacement of higher intensity energy sources, monitoring of the natural gas value chain, and effectiveness of Scope 3 targets.</p>	<p>(42) Environmental Performance Outcomes, Standards and Measurement Criteria are set out in Section 6.3.</p>
<p>(43) EK did not accept that these matters were beyond Woodside's operational control. It was also within the operational control of Woodside to reduce or cease production of LNG if global temperature limits were in danger of being reached.</p>	<p>(43) Woodside assessment: EK's proposals are not realistic or practical. They are inconsistent with supply agreements currently in place and would require governments or other bodies to create supporting regimes. Woodside response: Woodside referred to its response regarding a control for verification of the potential for gas to displace more carbon intensive energy sources, and as to continuing supply of LNG and renewables, noted demand and supply principles generally.</p>	<p>(43) Not required.</p>
<p>(44) It was in the operational control of LNG producers to undertake greater Scope 3 mitigation measures than Woodside had proposed</p>	<p>(44) Woodside assessment: EK's proposals are not realistic or practical. Woodside response: Woodside confirmed it include its Scope 3 targets in its annual disclosures and on its website.</p>	<p>(44) Not required.</p>
<p>(45) The EPBC Act Indirect consequences policy provided that an indirect consequence was relevant for assessment if the action is a substantial cause of the event or circumstance. Climate change impacts were a reasonably foreseeable consequence of secondary action arising from a primary action.</p>	<p>(44) Woodside assessment: Climate change impacts cannot be attributed to any one activity as they are instead the result of global GHG emissions, minus global GHG sinks, that have accumulated in the atmosphere since the industrial revolution started. Woodside response: Woodside confirmed regulations enacted by Parliament that governed the content of the EP also governed consultation for EPs. The EP and consultation undertaken in preparing the EP comply with those regulations and in particular referenced direct and indirect impacts.</p>	<p>(44) Not required.</p>
<p>(46) It was not adequate to say that otherwise unacceptable impacts should be allowed to occur because they are not within the operational control of Woodside.</p>	<p>(44) Woodside assessment: Woodside notes the differing positions and views of EK and Woodside on this topic and that as a result, a consensus is unlikely to be reached.</p>	<p>(44) Not required.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside confirmed the EP complied with the Regulations and included control measures to reduce GHG emissions to ALARP and Acceptable.	
(47) EK suggested control measures that could be adopted consistent with Woodside's claims regarding GHG emissions and mitigation measures	(44) Woodside assessment: Many of EK's proposed enforceable measures and enforceable undertakings are unrealistic and not practical. Woodside response: Woodside advised EK's proposals were inconsistent with supply agreements currently in place, would require governments or other bodies to create regimes to support these and those regimes do not exist. Woodside referred EK to relevant sections of the EP, and existing relevant EPOs and control measures.	(44) Not required.
Woodside has addressed objections and claims as noted above.	Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should further feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While Environs Kimberley is not a relevant person under regulation 25 of the Environment Regulations, Woodside has in any event given Environs Kimberley sufficient information and a reasonable period outside of regulatory requirements for Environs Kimberley to provide feedback during the consultation process.		

Research Institutes and Local Conservation Groups or Organisations

Western Australian Marine Science Institution (WAMSI)

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 11 August 2023, Woodside emailed WAMSI advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.7).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While WAMSI is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for WAMSI to provide feedback during the consultation process.		

Murdoch University

Summary of information provided and record of consultation for this EP:		
<ul style="list-style-type: none"> On 11 August 2023, Woodside emailed Murdoch University advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.7). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While Murdoch University is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for Murdoch University to provide feedback during the consultation process.		

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Edith Cowan University (ECU)

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 11 August 2023, Woodside emailed ECU advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. On 30 August 2023, as no response had been received, Woodside proactively sent a follow-up email (Record of Consultation, reference 2.7). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
No feedback, objection or claim about the adverse impact of the activity received despite follow-up.	Woodside engages in ongoing consultation throughout the life of an EP. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
<p>Summary Report – Consultation Complete</p>		
<p>While ECU is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for ECU to provide feedback during the consultation process.</p>		

Australian Institute of Marine Science (AIMS)

<p>Summary of information provided and record of consultation for this EP:</p> <ul style="list-style-type: none"> On 11 August 2023, Woodside emailed AIMS advising of the proposed activity (Record of Consultation, reference 1.18) and provided a Consultation Information Sheet and a link to NOPSEMA's brochure <i>Consultation on offshore petroleum environment plans: Information for the community</i>. (1) On 21 August 2023, AIMS emailed Woodside and confirmed it would not be conducting any work in the vicinity where the activities for this EP are taking place (SI Report, reference 13.1). (1) On 5 September 2023, Woodside responded noting and thanking AIMS for its response (SI Report, reference 13.2). 		
Summary of Feedback, Objection or Claim	Assessment of Merits of Feedback, Objection or Claim and Woodside's Response	Inclusion in Environment Plan
(1) AIMS confirmed there were no overlaps with planned AIMS science activities in the area.	(1) Woodside assessment: Woodside reviewed AIMS's update that it would not be conducting any work in the vicinity of the EPs activities.	(1) Not required.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	Woodside response: Woodside noted AIMS's confirmation that there were no overlaps with planned AIMS science activities in the area.	
While feedback has been received, there were no objections or claims.	Woodside has assessed the merits of each objection or claim (if any) about the adverse impact of the activity to which the EP relates, as required under Regulation 24. Woodside engages in ongoing consultation throughout the life of an EP. Woodside notes that further feedback may be received as part of ongoing consultation. Should feedback be received after the EP has been accepted, it will be assessed and, where appropriate, Woodside will apply its Management of Change and Revision process (see Section 7.2.7.2 of this EP).	No additional measures or controls are required.
Summary Report – Consultation Complete		
While AIMS is not a relevant person under regulation 25 of the Environment Regulations, Woodside considers it has still provided sufficient information and a reasonable period outside of regulatory requirements for AIMS to provide feedback during the consultation process.		

RECORD OF CONSULTATION

1	GENERAL CONSULTATION	636
1.1	Consultation Information Sheet sent to all relevant persons – August 2023	636
1.2	Summary Consultation Information Sheet – August 2023	649
1.3	Email sent to Australian Border Force (ABF), Department of Transport (DoT), Pilbara Ports Authority, Ningaloo Coast World Heritage Advisory Committee (NCWHAC), Department of Biodiversity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of Energy, Mines, Industry Regulation and Safety (DEMIRS), Recfishwest, Marine Tourism WA, WA Game Fishing Association, Chevron Australia, Western Gas, Exxon Mobil Australia Resources Company, Shell Australia, INPEX Alpha Ltd, Carnarvon Energy Ltd, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia, Jadestone, KATO Energy, Finder Energy, KUFPEC, Santos, Coastal Oil and Gas, Bounty Oil and Gas, Vermilion Oil and Gas, OMV Australia, JX Nippon, Australian Petroleum Production and Exploration Association (APPEA), 350 Australia (350A), Australasian Centre for Corporate Responsibility (ACCR), Australian Conservation Foundation (ACF), Australian Marine Conservation Society (AMCS), Conservation Council of Western Australia (CCWA), Doctors for the Environment Australia (DEA), Extinction Rebellion WA (XRWA), Friends of Australian Rock Art (FARA), Greenpeace Australia Pacific (GAP), International Fund for Animal Welfare (IFAW), Lock the Gate Alliance (LGA), Market Forces, Say No To Scarborough Gas (SNTSG), Sea Shepherd Australia (SSA), The Wilderness Society (TWS), World Wildlife Fund (WWF), University of Western Australia (UWA), Cape Conservation Group, Protect Ningaloo, Shire of Exmouth, City of Karratha, Shire of Ashburton – 9 August 2023	652
1.4	Email sent to Department of Biodiversity, Conservation and Attractions (DBCA) – Shark Bay and Shire of Shark Bay – 31 October 2023.....	655
1.5	Email sent to Karratha Recreational Marine Users, Exmouth Recreational Marine Users – 9 August 2023	657
1.6	Letter sent to Gascoyne Recreational Marine Users, Pilbara/Kimberley Recreational Marine Users – 9 August 2023.....	661
1.7	Email sent to Australian Fisheries Management Authority (AFMA), Department of Primary Industries and Regional Development (DPIRD), North West Slope and Trawl Fishery, Western Deepwater Trawl Fishery, Western Tuna and Billfish Fishery, Commonwealth Fisheries Association (CFA), Tuna Australia, Onslow Prawn Managed Fishery, Exmouth Gulf Prawn Managed Fishery, Demersal Scalefish Fishery: Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery by Woodside – 9 August 2023.....	664
1.8	Letter sent to Marine Aquarium Managed Fishery, Mackerel Managed Fishery (Area 2 and 3), Pilbara Crab Managed Fishery, West Coast Deep Sea Crustacean Managed Fishery, Specimen Shell Managed Fishery, Nickol Bay Prawn Managed Fishery, Western Australian Sea Cucumber Fishery, Gascoyne Demersal Scalefish Fishery by Woodside – 9 August 2023.....	667
1.9	Email sent to Western Australian Fishing Industry Council (WAFIC) – 9 August 2023	671
1.10	Email sent to Australian Hydrographic Office (AHO), Australian Maritime Safety Authority (AMSA) – Marine Safety, Australian Maritime Safety Authority (AMSA) – Marine Pollution – 9 August 2023	674

1 GENERAL CONSULTATION

1.1 Consultation Information Sheet sent to all relevant persons – August 2023

CONSULTATION INFORMATION SHEET

August 2023

CONSULTATION

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

CARNARVON BASIN, NORTH-WEST AUSTRALIA

Woodside Energy Limited (Woodside) consults relevant persons in the course of preparing an environment plan (EP) to notify them, obtain their input and to assist Woodside to confirm current measures or identify additional measures, if any, that may be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. This is the intended outcome of consultation.

Woodside's aim is to ensure the activity is carried out in a manner that is consistent with the principles of ecologically sustainable development (ESD), by which the environmental impacts and risks of the activity are reduced to as low as reasonably practicable (ALARP) and of an acceptable level. Woodside want relevant persons whose functions, interests or activities that may be affected by the proposed activity to have the opportunity to identify themselves and provide feedback on our proposed activity, in accordance with the intended outcome of consultation.

Overview

Woodside plans to submit the Scarborough Offshore Facility and Trunkline Operations EP in Commonwealth waters, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (regulations). The EP will cover Floating Production Unit (FPU) installation (hook-up), commissioning, start-up and operations and other support activities, including gravimetry surveys, and inspection, maintenance, monitoring and repair (IMMR) activities for the FPU, subsea infrastructure and the gas export trunkline.

Proposed Activity Overview

Woodside plans to install the FPU and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough project within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning. The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU, and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Future decommissioning of infrastructure will be subject to separate future EPs.

Vessels

A range of vessels may be used during the FPU installation, hook-up and commissioning phase including tow, support and anchor handling tugs, light construction vessels, survey vessels, supply/support vessels and contingent accommodation support vessel.

During normal operations, vessels will typically be limited to supply/support vessels and IMMR vessels. The vessel size and type will be dependent on the work scope. Vessels are not planned to anchor/moor on the seabed. It is anticipated vessels will operate 24 hours per day for the duration of activities.

Location and Operations

The FPU and associated subsea production infrastructure will be installed in Commonwealth waters within Production Licenses WA-61-L and WA-62-L, in water depths ranging from ~900 to 1000 m and around 374 km west-northwest of Dampier, Western Australia.

Gas from the FPU will be exported through the ~440 km trunkline to the Pluto LNG Plant in Dampier, Western Australia for further processing.

Communication with mariners

The location of the Scarborough FPU will be marked on nautical charts and will be surrounded by a fixed 500 m radius petroleum safety zone (PSZ). A temporary exclusion zone will also be in place around installation vessels during activities, to manage vessel movements. These distances will be communicated through marine notices and are typically 500m. Other marine users are permitted to use the area but should take care when entering the relevant Operational Area (provided in Table 1) and remain clear of any exclusion zone(s) in effect.

Assessment

Woodside has undertaken an assessment of the potential impacts and risks to the environment as well as to relevant persons arising from the planned activities as well as unplanned events. This assessment considers timing, duration and location of activities. A number of mitigation and management measures will be implemented and are summarised in Table 3. Further details will be provided in the EP, which is being developed to manage proposed activities.

In preparing the EP, our intent is to minimise environmental and social or cultural impacts associated with the proposed activities, and Woodside are seeking any interest or comments you may have to inform our decision making.

Joint Venture

Woodside is the Titleholder for this activity, on behalf of a Joint Venture comprising both Woodside Energy Scarborough Pty Ltd and Woodside Energy (Australia) Pty Ltd.

Table 1. Activity summary

Scarborough Offshore Facility and Trunkline (Operations) Environment Plan	
Facility type	Floating Production Unit (FPU) and Gas Export Trunkline
Production License Areas	WA-61-L and WA-62-L
Pipeline License	WA-32-PL
Approximate water depth	<ul style="list-style-type: none"> • FPU: ~950 m • Production Licenses: ~900 m to 1000 m • Trunkline: ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Commencement date	The Petroleum Activities Program includes a number of temporary activities (hook-up, commissioning and start-up), followed by ongoing production of the Scarborough field (operations). The earliest commencement date (subject to approval) is estimated to be the second half of 2025.
Approximate estimated duration	<ul style="list-style-type: none"> • FPU Hook-up and commissioning: ~4 months • FPU Start-up: ~3 months • FPU operations: for the life of the EP • Gravimetry: ~2 months
Infrastructure	<p>Key infrastructure includes, but is not limited to:</p> <ul style="list-style-type: none"> • Moored Floating Production Unit (FPU) with gas processing equipment and utilities • Suction piles and anchor chains • Wells, Christmas trees, manifolds, umbilicals and risers • Gas export trunkline
Vessels	<p>Key vessels include, but are not limited to:</p> <ul style="list-style-type: none"> • Tow, Support and Anchor Handling Tugs (AHT) • Light Construction Vessel (LCV) • Survey vessel • Supply and support vessel • Accommodation support vessel (contingency)
Operational Areas and Exclusion zones	<p>The Petroleum Activities Area (PAA) consists of the following Operational Areas</p> <ul style="list-style-type: none"> • Offshore Operational Area for activities includes a radius of: <ul style="list-style-type: none"> • Facility: 2000 m around future location of the FPU • Subsea: 1500 m from the centerline of subsea infrastructure • Gravimetry: 1000 m beyond the boundary of the WA-61-L and WA-62-L • Trunkline Operational Area for activities includes a radius of: <ul style="list-style-type: none"> • 1500 m radius from the centerline of the gas export trunkline (WA-32-PL) <p>Fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU. Temporary 500 m exclusion zone around vessels to manage vessel movements.</p>
Distance to nearest town from FPU	<ul style="list-style-type: none"> • ~ 244 km north-northwest of Exmouth • ~ 374 km west-northwest of Dampier
Distance to nearest marine park/nature reserve from FPU	<ul style="list-style-type: none"> • ~ 77 km north of the Gascoyne Marine Park (Cwlth) • ~ 201 km north-west of Montebello Marine Park (Cwlth) • ~ 180 km north-northwest of Ningaloo Marine Park (Cwlth)

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision. This is depicted in Figure 3.

The EMBA does not represent the extent of the predicted impact of the highly unlikely marine diesel release. Rather, the EMBA represents the merged area of many possible paths a highly unlikely hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release.

This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time - the specific and minimal part of the EMBA that is affected will only be known at the time of the release.

The three hydrocarbon spill modelling sites are representative of the range of locations where a vessel collision could occur in the Petroleum Activities Area and are summarised below. The EMBA has been defined using a combination of all three locations:

- **Outside Mermaid Sound (Location 1):** Near the State Waters Boundary, this site represents the closest location to shore IMMR activities may occur under this EP.
- **Montebello Marine Park Multiple Use Zone (Location 2):** This location was chosen to represent around half-way along the trunkline length where IMMR activities may occur under this EP.
- **Scarborough Field (Location 3):** This location is representative of a spill in the deep-water open-ocean environment in Production License WA-61-L, where the FPU is planned to be installed and activities at the most western end of the Petroleum Activities Area.

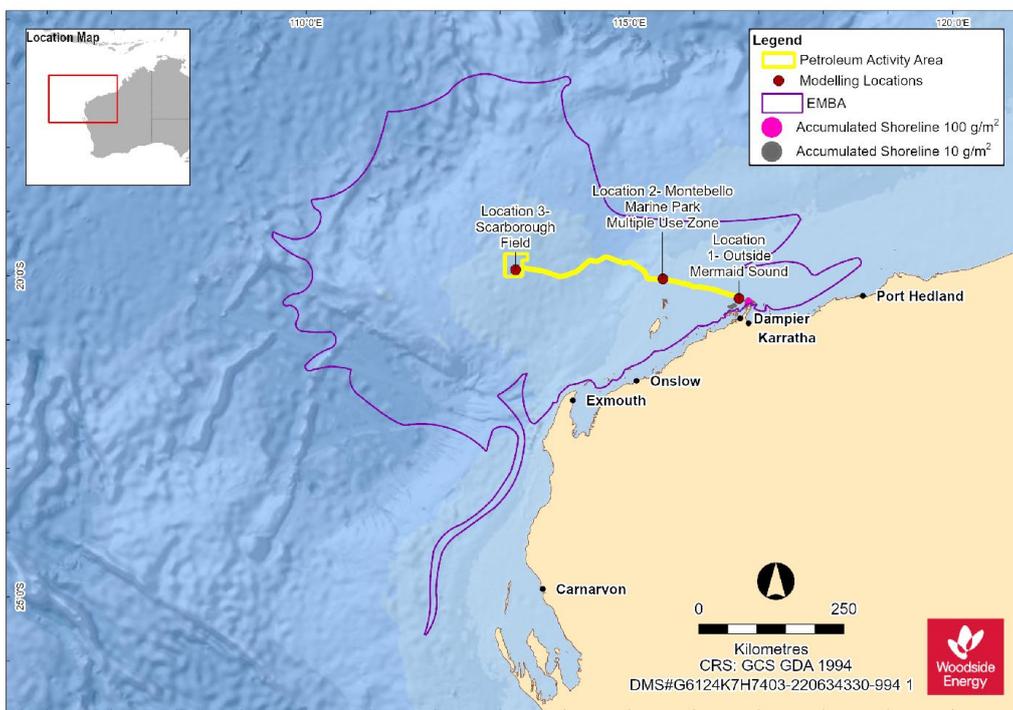

Figure 3. Environment that May Be Affected (EMBA) by a diesel release from an accident/incident during the EP Petroleum Activities Program.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Routine and Non-routine Discharges: Project Vessels	<ul style="list-style-type: none"> Discharge of sewage, grey water and putrescible waste from vessels to the marine environment. Discharge of deck, bilge and drain water from vessels to the marine environment. Discharge of brine and cooling water from vessels to the marine environment. 	<ul style="list-style-type: none"> Impacts to water quality from planned discharges above a slight or negligible level are not expected because of the minor quantities involved, the expected localised mixing zone and high level of dilution into the open water marine environment of the Operational Area. Similarly, although some marine fauna may transit the Operational Area, the potential for impact remains slight or lower (negligible) due to the localised nature of discharges and rapid dilution. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements (e.g., Marine Orders / MARPOL).
Routine and Non-routine Discharges: FPU Operations (Wastewater streams)	<ul style="list-style-type: none"> Discharge of sewage, grey water and putrescible waste from FPU to the marine environment. Discharge of deck, bilge and drain water from FPU to the marine environment. 	<ul style="list-style-type: none"> Localised and slight decrease in water and sediment quality with no lasting effect around discharge locations within Offshore Operational Area. Negligible impact potential for plankton, epifauna and infauna indirectly from decreased water quality. Localised and short-term impact potential to fish, marine mammals and marine reptiles from discharges in the Offshore Operational Area. Impacts from discharges on KEFs in the Offshore Operational Area are expected to the slight with no lasting effects. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements. FPU design includes a range of measures that specifically aid in containment of non-routine and routine discharges for example deck drainage collected to a drainage system for separation and collection of hydrocarbons for safe, contained disposal onshore.
Routine and Non-Routine Discharges: FPU and Subsea Commissioning	<ul style="list-style-type: none"> Routine and non-routine discharges of commissioning fluids during installation of the FPU and commissioning activities. 	<ul style="list-style-type: none"> The discharges are expected to result in slight or lower (negligible) impacts including a temporary decline in water quality and sediment quality around the discharge locations with no accumulation and no lasting effect predicted. Negligible impact to plankton, epifauna and infauna indirectly from decreased water quality. Localised and short-term impacts to fish, marine mammals and marine reptiles through from discharges in the Offshore Operational Area. Impacts from discharges on KEFs in the Offshore Operational Area are expected to the slight with no lasting effects. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Commissioning procedures implemented.
Routine and Non-Routine Discharges: FPU Operation (Commingled Produced water/cooling water stream)	<ul style="list-style-type: none"> Discharge of produced water, cooling water and brine during routine and non-routine operations. 	<ul style="list-style-type: none"> Localised and slight decrease in water and sediment quality with no lasting effect around discharge locations within Offshore Operational Area. Negligible impact of injury/mortality to plankton, epifauna and infauna indirectly from decreased water quality. Localised and short-term impacts to fish, marine mammals and marine reptiles through injury or behavioural changes from discharges in the Offshore Operational Area. Impacts from discharges on KEFs in the Offshore Operational Area are expected to the slight. 	<ul style="list-style-type: none"> Marine discharges will be managed according to regulatory requirements. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Implement adaptive monitoring and management for applicable FPU discharges.

Mitigation and management measures

Woodside has undertaken an assessment to identify potential impacts and risks to the environment arising from the Scarborough FPU installation (hook-up), commissioning, start-up and operations activity, including gravimetry surveys, IMMR activities and other contingent activities. A number of mitigation and management measures for the activity are outlined in **Table 3**. Further details will be provided in the EP.

Impact areas are split into the Offshore Operational Area (nominally the FPU and subsea infrastructure location(s) in WA-61-L / WA-62-L) and the Trunkline Operational Area (1500m either side, from the centerline of the gas export trunkline WA-32-PL)

Table 3. Summary of key risks and/or impacts and preliminary management measures for the Activity*

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Planned Activities (Routine and Non-routine)			
Physical Presence: Interaction with Other Marine Users, Cultural Values & Heritage.	<ul style="list-style-type: none"> The presence of FPU, trunkline and other subsea infrastructure has the potential to exclude and/or displace other users from Petroleum Safety Zone (PSZ) and routine/IMMR activities within the PAA respectively. A range of vessels will be required to complete the hook-up and commissioning activities, prior to start-up and operations. The physical presence and movement of vessels within the PAA has the potential to displace other marine users. Helicopters will be used to transport personnel, which will occur on a regular basis. Physical presence of project vessels and activities may have potential to impact cultural values and heritage. 	<ul style="list-style-type: none"> The Offshore Operational Area is not an area of high commercial fishing activity. Commercial fishing vessels will have a localised exclusion from a 500 m Petroleum safety zone (PSZ) around the FPU and temporary exclusion zones associated with vessel operations. The Offshore Operational Area does not overlap with Australian Maritime Safety Authority (AMSA) fairways and therefore impacts to commercial shipping vessels are not expected. In the Trunkline Operational Area impact to commercial shipping is limited to the temporary presence of IMMR vessels. Tourism and recreation within the Offshore Operational Area are expected to be limited due to the distance offshore and water depths. During IMMR activities in the Trunkline Project Area potential impacts to tourism and recreational activities would likely be minor interactions (i.e. navigational hazard) and temporary, localised displacement/avoidance. Several oil and gas facilities are located in proximity to the Trunkline Operational Area. Activities associated with the physical presence of IMMR vessels may result in localised, short-term interactions with industry vessels requiring minor course alteration or readjustment in asset management. 	<ul style="list-style-type: none"> Vessels adhere to regulatory requirements for navigational safety. Maintain a permanent 500 m Petroleum Safety Zone around FPU. Establish temporary exclusion zones around applicable vessels which are communicated to marine users. Notify relevant government departments, fishing industry representative bodies and licence holders of activities prior to commencement and upon completion of activities. Notify the Australian Hydrographic Office (AHO) prior to commencement of the activity to enable them to update maritime charts, so that marine users are aware of the activity. Consult with relevant persons so that they are informed of the proposed activities. Woodside will actively support the capacity of Traditional Custodians for ongoing engagement and consultation on environment plans, for the purpose of avoiding impacts to cultural heritage values.
Physical Presence: Seabed disturbance	<ul style="list-style-type: none"> Seabed disturbance may result from the following activities: Presence of subsea infrastructure, FPU moorings and trunkline modifying marine habitats. FPU mooring line retrieval and connection operations. Seabed disturbance during riser/umbilical hook-up to the FPU. Temporary placement of passive gravity meter, tide gauges during gravimetry surveys. Deployment of oceanographic monitoring systems. IMMR activities. Movement of a Remotely Operated Vehicle (ROV) near the seabed. 	<ul style="list-style-type: none"> Localised modification of seabed habitat within the PAA. Seabed disturbance has the potential to result in a change in habitat, water quality and sediment quality, which may affect fauna. However, impacts from seabed disturbance will be highly localised. Seabed disturbance is not expected to impact adversely on biologically important behaviours or biologically important habitat, including critical habitat. Displacement of individuals will not result in significant impacts at a population level. The Exmouth Plateau, Continental Slope Demersal Fish Communities and Ancient Coastline at 125 m depth Contour Key Ecological Features (KEFs) overlap the Operational Area. Potential seabed disturbances in this area are expected to be localised and short-term and are unlikely to affect the ecological value of the KEF. 	<ul style="list-style-type: none"> Infrastructure will be placed on the seabed within the predefined design footprint using positioning technology to limit seabed disturbance. Infrastructure wet parked (temporarily placed) on the seabed will be tracked and removed. Vessels are not planned to anchor/moor during routine operations. Monitoring and maintenance of infrastructure is undertaken in accordance with the IMMR process. Comply with regulatory requirements for Underwater Cultural Heritage.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Routine Light Emissions: FPU and Project Vessels	<ul style="list-style-type: none"> The FPU and vessels will use external lighting to conduct safe operations at night. Vessel lighting will also be used to communicate vessels' presence to other marine users (i.e. navigation/ warning lights). Light emissions from FPU during flaring. 	<ul style="list-style-type: none"> Light emissions have the potential to affect fauna such as fish, marine reptiles and seabirds by influencing changes in their behaviour or impacting orientation. The Operational Areas may be occasionally visited by seabirds and marine turtles. Potential impacts are expected to be limited to localised behavioural disturbance to isolated individuals, with no significant impact to seabird foraging or turtle nesting. 	<ul style="list-style-type: none"> Lighting limited to the minimum required for navigational and safety requirements, except for emergency events.
Routine Acoustic Emissions: FPU and Project Vessels	<ul style="list-style-type: none"> Generation of underwater noise from FPU and associated subsea infrastructure and vessels. Underwater noise may also be generated by geophysical sources during surveys, positioning equipment (transponders), and helicopters. 	<ul style="list-style-type: none"> Elevated underwater noise can affect marine fauna, including marine mammals, turtles and fish. Marine fauna associated with the Offshore Operational Area will be predominantly pelagic fish species, with the potential for species such as whale sharks, rays, marine turtles and whale species to transit through the Operational Area. There are no marine fauna Biologically Important Areas (BIAs) within the Offshore Operational Area. Therefore, potential impacts from FPU and vessel noise are likely to be restricted to temporary avoidance behaviour to individuals. IMMR activities occurring in the Trunkline Operational Area within the migration BIAs during migration seasons for pygmy blue whales and humpback whales, may result in a behavioural response from individuals or groups of whales transiting in proximity to vessel/s. Similarly, potential impacts from acoustic emissions on marine turtles, fish, sharks and rays from IMMR activities are likely to be restricted to localised and temporary avoidance behaviour of individuals. 	<ul style="list-style-type: none"> Comply with regulatory requirements for interactions with marine megafauna to prevent adverse interactions.
Routine and Non-routine Atmospheric and Greenhouse Gas (GHG) Emissions	<ul style="list-style-type: none"> Atmospheric emissions and GHG emissions generated through FPU, vessels and helicopters. GHG emissions associated with onshore processing of Scarborough gas. 	<ul style="list-style-type: none"> Emissions from FPU, vessels and helicopters could result in temporary, localised reductions in air quality in the immediate vicinity. Emissions associated with gas processing onshore (considered as indirect impacts from this Petroleum Activities Program) could result in temporary, localised reductions in air quality limited to the airshed of the gas plant. 	<ul style="list-style-type: none"> Comply with regulatory requirements for GHG emissions reporting. Vessel operations planned, where practicable, to minimise fuel consumption and associated GHG/air emissions. Fuel types will be selected to reduce expected GHG emissions. Project vessels will not use heavy fuel oil (HFO) or intermediate fuel oil (IFO). Optimise flaring to reduce GHG emissions and allow for safe operation of the facility.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Routine and Non-Routine Discharges: Subsea Operations and Activities	<p>Discharge of routine and non-routine operational discharges including:</p> <ul style="list-style-type: none"> Hydraulic fluid. Operational and non-process chemicals e.g., corrosion inhibitors biocides. <p>Discharges during typical IMMR activities:</p> <ul style="list-style-type: none"> Process and non-process chemicals. Residual hydrocarbons in subsea infrastructure. Cement and grout during span rectification. 	<ul style="list-style-type: none"> The discharges are expected to result in slight or lower (negligible) impacts including a temporary decline in water quality and sediment quality around the discharge locations with no accumulation and no lasting effect predicted. Impacts from discharges on fish, epifauna and infauna has been assessed as slight or negligible impact significance. Highly localised changes in habitats/ water quality and faunal communities within KEFs and Australian Marine Parks (AMPs) from planned routine and non-routine hydrocarbon, chemical and cement discharges. Assessed as slight impact significance. 	<ul style="list-style-type: none"> Marine discharges managed according to regulatory requirements. Chemicals will be selected with the lowest practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process. Subsea infrastructure flushed where practicable prior to disconnection to reduce volume/ concentration of hydrocarbons released to the environment. Limit volume of subsea control fluid discharged to the marine environment through monitoring subsea control fluid use and investigating material discrepancies.

Unplanned Events (Accidents / Incidents)			
Unplanned Hydrocarbon Release: FPU Loss of Structural Integrity	<ul style="list-style-type: none"> Surface or subsea release from flowlines and FPU to the marine environment and atmosphere. Hydrocarbon release from topsides equipment to the marine environment and atmosphere. 	<ul style="list-style-type: none"> Impacts to water and sediment quality from marine diesel oil release caused by a loss of structural integrity. Marine diesel is a relatively volatile, nonpersistent hydrocarbon with up to approximately 40% evaporating within the first 24 hours for a surface spill. Potential impacts across the EMBA will be assessed including receptors such as plankton, mangroves, seabirds and migratory shorebirds, saltmarshes, coral, tourism, recreation and cultural heritage (for example). Considering receptor sensitivity, potential loss of containment volume(s) and potential spill locations, most receptors are expected to be rated as having a potential consequence level of 'Minor' or less (Slight or Negligible). Impact assessment will be informed by loss of containment modelling and existing environment knowledge, similar to other Scarborough Environment Plans. 	<p>Preventing loss of structural integrity</p> <ul style="list-style-type: none"> The subsea infrastructure and FPU design include a range of measures that specifically aid in minimising the risk of external damage. Woodside management system implemented during operations to maintain structural safety critical element systems and safety instrumented systems to an acceptable standard. Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Unplanned Hydrocarbon or Chemical Release: Hydrocarbon Release during bunkering/ refuelling and Chemical Release during Transfer, Storage and Use	<ul style="list-style-type: none"> Loss of hydrocarbons (diesel) to marine environment from bunkering/ refuelling. Chemical release to marine environment during transfer, storage and use. 	<ul style="list-style-type: none"> Localised and temporary change in water quality from a marine diesel or chemical spill. Injury/mortality to seabirds, fish, plankton, marine mammals and marine reptiles from a marine diesel or chemical spill. 	<ul style="list-style-type: none"> Bunkering equipment controls. Liquid chemical and fuel storage areas banded or secondarily contained when they are not being handled or temporarily moved. Contractor procedures include requirements to be implemented during bunkering/refuelling operations.
Unplanned Discharges: Deck and Subsea Spills	<ul style="list-style-type: none"> Accidental discharge of hydrocarbons/ chemicals from project vessels deck activities and equipment, from subsea ROV hydraulic leaks. Unplanned release of chemicals or hydraulic fluid due to failure of subsea equipment. 	<ul style="list-style-type: none"> Unplanned discharges of non-process chemicals and hydrocarbons may decrease the water quality in the immediate vicinity of the release. Only small volumes are anticipated, resulting in very short-term impacts to water quality and limited to the immediate release location. As a result of a change in water quality, further impacts to receptors may occur, however impacts to marine fauna are expected to be limited to temporary irritation of sensitive membranes to individuals and are considered slight or less (negligible). 	<ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of marine pollution for project vessels. Liquid chemical and fuel storage areas are banded or secondarily contained when they are not being handled/moved temporarily on project vessels. Spill kits positioned in high-risk locations around the vessels (near potential spill points such as transfer stations). Chemicals will be selected with the lowest reasonably practicable environmental impacts and risks subject to technical constraints and approved through the Woodside chemical assessment process.
Unplanned Discharges: Loss of Hazardous and Non-Hazardous Wastes/ Equipment	<ul style="list-style-type: none"> Accidental loss of hazardous or non-hazardous solid wastes / equipment to the marine environment. 	<ul style="list-style-type: none"> The potential impacts of hazardous or non-hazardous solid wastes and equipment accidentally discharged to the marine environment include contamination of the environment as well as secondary impacts relating to potential contact of marine fauna with wastes. The temporary or permanent loss of waste materials/equipment into the marine environment is not likely to have a significant environmental impact, based on the location of the Operational Area, the types, size and frequency of wastes that could occur and species present. 	<ul style="list-style-type: none"> Comply with regulatory requirements for the prevention of marine pollution and handling of hazardous wastes (i.e., Marine Orders 95 and 94). Implement waste management procedures which provide for safe handling and transportation, segregation and storage and appropriate classification of waste generated. Solid waste/equipment dropped to the marine environment is to be recovered where safe and practicable to do so. Where retrieval is not practicable and/or safe, material items (property) that are lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title.

¹¹ Scarborough Offshore Facility and Trunkline (Operations) Environment Plan | August 2023

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Physical Presence (Unplanned): Seabed Disturbance	<ul style="list-style-type: none"> Dropped objects resulting in the disturbance of benthic habitat. 	<ul style="list-style-type: none"> Unplanned seabed disturbance may result in localised changes to water and sediment quality or a localised temporary impact to benthic communities and is therefore considered to present a negligible risk. Potential impacts to KEFs which intersect the PAA of the activity are considered to be minor as they would be limited to the footprint of a dropped object resulting in potential highly localised and temporary change in habitat. 	<ul style="list-style-type: none"> Project vessel work procedures for lifts, bulk transfers and cargo loading. Subsea lifts of equipment will occur overboard in a designated deployment zone to reduce the risk of dropped objects in proximity to existing subsea infrastructure that could potentially cause damage/leaks. FPU and project vessel inductions include control measures for dropped object prevention. Dropped objects intended to be recovered and relocated where safe and practicable to do so. Where retrieval is not practicable and/or safe, material items (property) lost to the marine environment will undergo an impact assessment and will be added to the inventory for the title. Appropriate approval obtained from third party asset owner prior to IMMR activities being carried out in proximity to asset.
Physical Presence (Unplanned): Vessel Collision with Marine Fauna	<ul style="list-style-type: none"> Vessel movements have the potential to result in collisions between the vessel (hull and propellers) and marine fauna. The factors contributing to the frequency and severity of impacts due to collisions vary greatly due to vessel type, vessel operation (specific activity, speed), physical environment (e.g., water depth) and the type of animal potentially present and their behaviours. 	<ul style="list-style-type: none"> The risk of vessel collision with marine mammals is present year-round but is seasonally elevated for species such as humpback whales and pygmy blue whales during migration periods and within migration BIAs. The Offshore Operational Area does not overlap with cetacean BIAs or critical habitat. Given this, and the slow speeds at which project vessels operate, collisions with cetaceans are considered highly unlikely. Whilst a portion of the Trunkline Operational Area overlaps the pygmy blue whale and humpback whale migration BIAs, this overlap represents a very small proportion of the overall area of the BIA. Given the short duration of IMMR activities, and the slow speeds at which project vessels operate, interactions with whales are considered highly unlikely. IMMR activities within sensitive turtle areas (BIAs and critical habitat) will be short term and intermittent, reducing the potential for impact at the individual and population level. It is expected whale shark presence within the Operational Area would not comprise significant numbers and their presence would be transitory and of short duration. Given the slow speeds at which project vessels operate, vessel collisions with whale sharks are considered highly unlikely. 	<ul style="list-style-type: none"> Comply with regulatory requirements for interactions (e.g., EPBC Regulations 2000 – Part 8 Division 8.1) with marine fauna to reduce the likelihood of a collision occurring.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Potential Impact/Risk	Description of Source of Potential Impact/Risk	Description of Potential Impacts/Risks	Proposed Mitigation and/or Management Measure ¹
Physical Presence (Unplanned): Introduction of Invasive Marine Species (IMS)	<ul style="list-style-type: none"> Introduction and establishment of IMS within the PAA. 	<ul style="list-style-type: none"> It is not credible for IMS to be introduced and establish on the seabed or subsea structures in the Offshore Operational Area as these deep waters are not conducive to the settlement and establishment of IMS. The Trunkline Operational Area in shallower waters (30 – 40 m) present a slightly increased risk of IMS establishment, however, the risk of establishment, whilst credible, is remote. Given the low likelihood of IMS translocation to and colonisation within the PAA, project activities are unlikely to result in establishment of IMS, and as such will not adversely affect other marine user activities in the region. 	<ul style="list-style-type: none"> Ballast water and biofouling will be managed according to regulatory requirements, including the Australian Ballast Water Management Requirements, and the Australian Biofouling Management Requirements, as applicable. Woodside's IMS risk assessment process will be applied to project vessels and immersible equipment entering the PAA.

¹ These mitigation and management measures are subject to change through the consultation and subsequent assessment process and may not represent content in the publicly available EP or in the final plan once accepted.

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **11 September 2023** via:

E: Feedback@woodside.com
Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

www.woodside.com/sustainability/consultation-activities.

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

1.2 Summary Consultation Information Sheet – August 2023

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

When preparing an environment plan (EP), Woodside needs to notify relevant persons and obtain their input. This helps confirm current measures or identify additional measures, that may need to be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. Woodside wants to give relevant persons whose functions, interests or activities may be affected by the proposed activity the opportunity to identify themselves and provide feedback on our proposed activity.

This summary information sheet provides a high-level overview of the Scarborough Offshore Facility and Trunkline Operations Environment Plan. Further details, including an assessment of the potential impacts and risks to the environment, as well as mitigation and management measures, are available within the Scarborough Offshore Facility and Trunkline Operations Environment Plan Consultation Information Sheet (August 2023) which can be found at:

www.woodside.com/sustainability/consultation-activities

Overview

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. The FPU and associated subsea production infrastructure will be installed in water depths ranging from -900 to 1000 m, in Commonwealth waters around 374 km west-northwest of Dampier, Western Australia. Gas from the FPU will be transferred through the -440 km trunkline to the Pluto LNG Plant in Dampier, Western Australia for further processing. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities, and other contingent activities.

A map showing the location of where the activities will take place is provided below, with work planned to start in the second half of 2025.

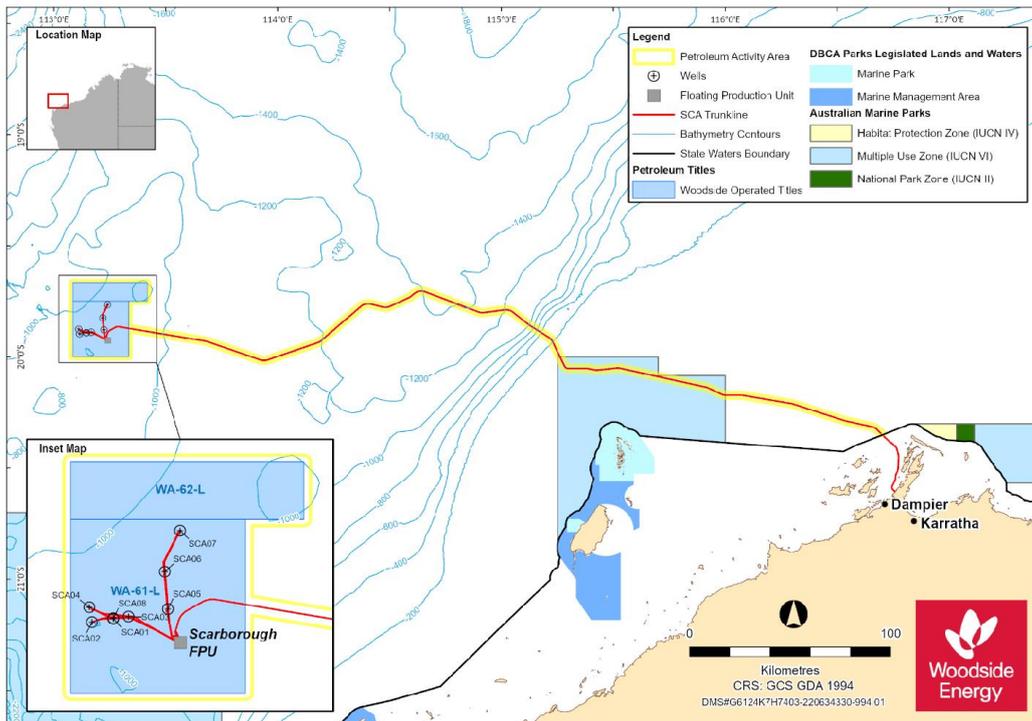

Figure 1. Petroleum Activities Area

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Work Method

Key features of the Floating Production Unit (FPU) include:

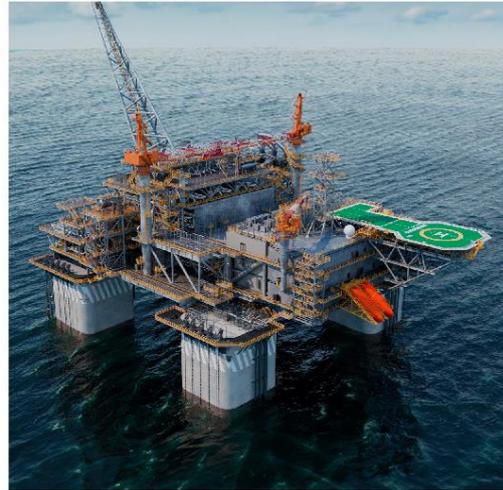

- Semi-submersible hull with integrated storage tanks, ballast and bilge systems (for balance and buoyancy).
- Connected to the seabed and subsea production system by risers, umbilicals and a chain mooring system illustrated schematically in Figure 2.
- Above the water there will be supporting gas processing systems and equipment, flare systems, utilities, cranes, laydown and storage areas, utility building, living quarters and helideck.
- The FPU provides gas processing to make the gas suitable for exporting through the trunkline.

Summary of key activities include:

- The commissioning activity involves dewatering and commissioning of the subsea production system, and activities to confirm the integrity of the entire interconnected facility, so it is ready for the introduction of reservoir hydrocarbons.
- The start-up of the FPU consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to perform to design criteria.
- Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen removal.
- Routine production operations involve transfer of reservoir fluids, including gas through the subsea infrastructure to the FPU, with gas transferred to shore via the Trunkline.
- Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities on the FPU, subsea infrastructure and gas export trunkline, and other contingent activities.

A range of vessels may be used during the FPU installation, hook-up and commissioning phase including tow, support and anchor handling tugs, light construction vessels, survey vessels, supply/support vessels and contingent accommodation support vessel.

During normal operations, vessels will typically be limited to supply/support vessels and Inspection Monitoring Maintenance and Repair (IMMR) vessels.

A floating production unit

Environment That May Be Affected (EMBA)

The environment that may be affected (EMBA) is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision. This is depicted in Figure 3.

The EMBA does not represent the extent of the predicted impact of the highly unlikely marine diesel release. Rather, the EMBA represents the merged area of many possible paths a highly unlikely hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release.

This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time - the specific and minimal part of the EMBA that is affected will only be known at the time of the release.

The three hydrocarbon spill modelling sites are representative of the range of locations where a vessel collision could occur in the Petroleum Activities Area and are summarised below. The EMBA has been defined using a combination of all three locations:

- **Outside Mermaid Sound (Location 1):** Near the State Waters Boundary, this site represents the closest location to shore Inspection, Maintenance, Monitoring and Repair (IMMR) activities may occur under this EP.
- **Montebello Marine Park Multiple Use Zone (Location 2):** This location was chosen to represent around half-way along the trunkline length where IMMR activities may occur under this EP.
- **Scarborough Field (Location 3):** This location is representative of a spill in the deep-water open-ocean environment in Production License WA-61-L, where the FPU is planned to be installed and activities at the most western end of the Petroleum Activities Area.

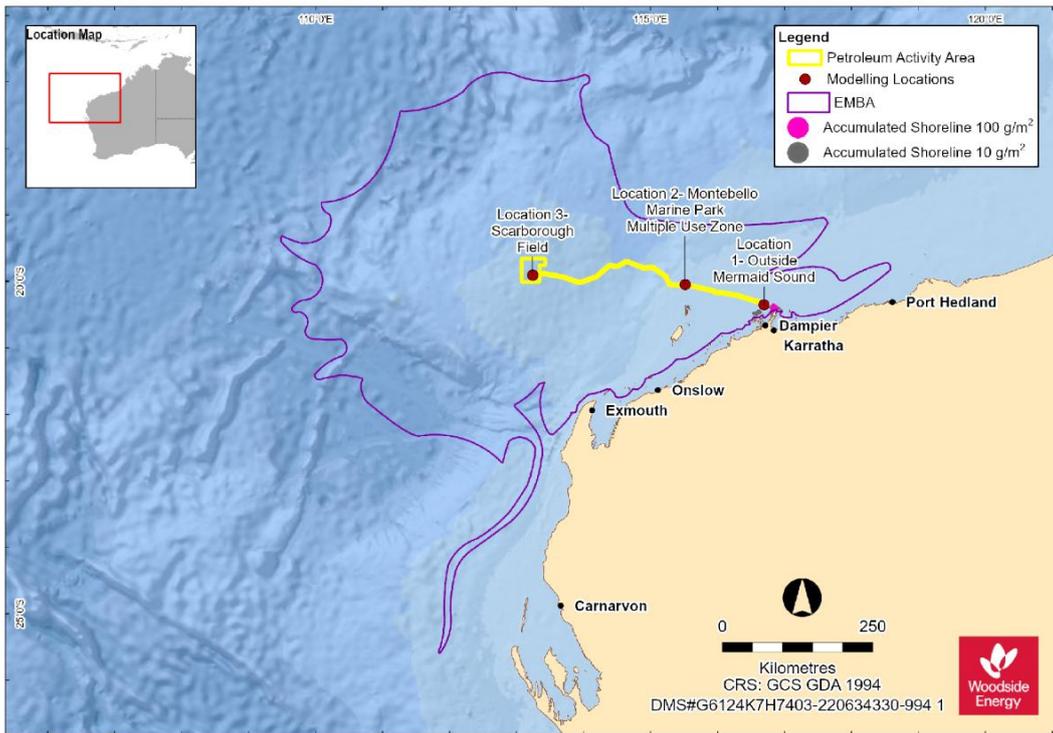

Figure 3. Environment that May Be Affected (EMBA) by a diesel release from an accident/incident during the EP Petroleum Activities Program.

Feedback

Woodside consults relevant persons in the course of preparing Environment Plans to notify them of the activity and to obtain relevant feedback to inform its planning for proposed petroleum activities in the region.

If you would like to comment on the proposed activities outlined in this information sheet, or would like additional information, please contact Woodside before **18 September 2023** via:

E: Feedback@woodside.com

Toll free: 1800 442 977

You can subscribe on our website to receive Consultation Information Sheets for proposed activities:

www.woodside.com/sustainability/consultation-activities

Please note that stakeholder feedback will be communicated to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) as required under legislation. Woodside will communicate any material changes to the proposed activity to affected stakeholders as they arise.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to NOPSEMA for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

INITIAL CONSULATATION

1.3 Email sent to Australian Border Force (ABF), Department of Transport (DoT), Pilbara Ports Authority, Ningaloo Coast World Heritage Advisory Committee (NCWHAC), Department of Biodiversity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of Energy , Mines, Industry Regulation and Safety (DEMIRS), Recfishwest, Marine Tourism WA, WA Game Fishing Association, Chevron Australia, Western Gas, Exxon Mobil Australia Resources Company, Shell Australia, INPEX Alpha Ltd, Carnarvon Energy Ltd, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia, Jadestone, KATO Energy, Finder Energy, KUFPEC, Santos, Coastal Oil and Gas, Bounty Oil and Gas, Vermilion Oil and Gas, OMV Australia, JX Nippon, Australian Petroleum Production and Exploration Association (APPEA), 350 Australia (350A), Australasian Centre for Corporate Responsibility (ACCR), Australian Conservation Foundation (ACF), Australian Marine Conservation Society (AMCS), Conservation Council of Western Australia (CCWA), Doctors for the Environment Australia (DEA), Extinction Rebellion WA (XRWA), Friends of Australian Rock Art (FARA), Greenpeace Australia Pacific (GAP), International Fund for Animal Welfare (IFAW), Lock the Gate Alliance (LGA), Market Forces, Say No To Scarborough Gas (SNTSG), Sea Shepherd Australia (SSA), The Wilderness Society (TWS), World Wildlife Fund (WWF), University of Western Australia (UWA), Cape Conservation Group, Protect Ningaloo, Shire of Exmouth, City of Karratha, Shire of Ashburton – 9 August 2023

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

Infrastructure	<p>Key infrastructure includes, but is not limited to:</p> <ul style="list-style-type: none"> • Moored Floating Production Unit (FPU) with gas processing equipment and utilities • Suction piles and anchor chains • Wells, Christmas trees, manifolds, flowlines, umbilicals and risers • Gas export trunkline
Vessels	<p>Key vessels include, but are not limited to:</p> <ul style="list-style-type: none"> • Tow, Support and Anchor Handling Tugs (AHT) • Light Construction Vessel (LCV) • Survey vessel • Supply and support vessel • Accommodation support vessel (contingency)

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,

Woodside Feedback

1.4 Email sent to Department of Biodiversity, Conservation and Attractions (DBCA) – Shark Bay and Shire of Shark Bay – 31 October 2023

Dear [Individual 5] and [Individual 6],

Woodside recently met with the Shire of Shark Bay who advised you may be interested in and have feedback on the following proposed Woodside activities. We have also consulted the central DBCA agency which has provided feedback regarding the establishment of baseline survey data for nearby areas of ecological importance, light pollution guidelines, and the 'Incidents and Emergency Response' process.

Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans (EPs):

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin FPSO facilities. Operations began in 2008 for Ngujima-Yin and 2010 for Pyrenees. Woodside is planning to submit five-year revisions of the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations EPs:

- The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.
- The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L.

Both EPs are being revised and resubmitted for the continued production of crude oil via existing subsea infrastructure to the FPSOs, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)*.

The activities that will continue at both FPSOs are:

- Routine oil production, including crude oil offloading and associated activities,
- Routine inspection, monitoring, maintenance and repair (IMMR) of the FPSOs and associated subsea infrastructure; and
- Disconnection and sail-away of the FPSO with the turret mooring and subsea infrastructure remaining in place.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Controlled Ref No: SA0006AF0000022

Revision: 3

Page 655 of 919

Uncontrolled when printed. Refer to electronic version for most up to date information.

Scarborough Offshore Facility and Trunkline Operations EP:

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Consultation Information Sheets

Consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can also choose to receive updates on our consultation activities by subscribing [here](#).

Feedback

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **13 November 2023**.

Your feedback and our response will be included in our EPs, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.5 Email sent to Karratha Recreational Marine Users, Exmouth Recreational Marine Users – 9 August 2023

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,

Dear Stakeholder

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our website at woodside.com. You can subscribe to receive updates on our consultation activities by subscribing on our website.

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.10 Email sent to Australian Hydrographic Office (AHO), Australian Maritime Safety Authority (AMSA) – Marine Safety, Australian Maritime Safety Authority (AMSA) – Marine Pollution – 9 August 2023

Dear AHO / AMSA

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). **A shipping lane map is also attached.** You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL
Location	<ul style="list-style-type: none"> ~ 374 km west-northwest of Dampier at closest landfall ~ 244 km north-northwest of Exmouth at closest landfall
Approx. Water Depth (m)	<ul style="list-style-type: none"> FPU ~950 m Production Licenses ~900 m to 1000 m Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Timing	Anticipated around H2 2025 pending approvals
Approx. Estimated Duration	<ul style="list-style-type: none"> FPU Hook-up and commissioning: ~4 months FPU Start-up: ~3 months FPU operations: for the life of the EP Gravimetry: ~2 months

Biosecurity:

With respect to the biosecurity matters, please note the following information below:

Environment description:

The Offshore Operation Area is located in water depths of approximately 900 to 1000 m on the Exmouth Plateau. The Trunkline Operational Area extends from the State-Commonwealth waters boundary on the inner continental shelf, onto the continental slope where it traverses the continental slope westwards to the Exmouth Plateau. The water depth ranges from ~31 m (trunkline route at State waters boundary) to 1400 m (KP 275 of

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

the trunkline route). The seabed in the Petroleum Activity Area is likely to be dominated by soft sediment comprised of fine to coarse sands, which typify the sediments of the North West Marine Region.

Potential IMS risk	IMS mitigation management
---------------------------	----------------------------------

Accidental introduction and establishment of invasive marine species	Vessels are required to comply with the Australian Biosecurity Act 2015, specifically the Australian Ballast Water Management Requirements (as defined under the Biosecurity Act 2015) (aligned with the International Convention for the Control and Management of Ships' Ballast Water and Sediments) and the Australian Biofouling Management Requirements to prevent introducing IMS. Vessels will be assessed and managed to prevent the introduction of invasive marine species in accordance with Woodside's IMS risk assessment process. Woodside's IMS risk assessment process is applied to vessels undertaking the Petroleum Activities Program. Based on the outcomes of each IMS risk assessment, management measures commensurate with the risk (such as the treatment of internal systems, IMS inspections or cleaning) will be implemented to minimise the likelihood of IMS being introduced.

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan

Summary Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.

Permit Area Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL

Location

- ~ 374 km west-northwest of Dampier at closest landfall
- ~ 244 km north-northwest of Exmouth at closest landfall

Approx. Water Depth (m)

- FPU ~950 m
- Production Licenses ~900 m to 1000 m
- Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)

Timing Anticipated around H2 2025 pending approvals

Approx. Estimated Duration

- FPU Hook-up and commissioning: ~4 months
- FPU Start-up: ~3 months
- FPU operations: for the life of the EP
- Gravimetry: ~2 months

Operational Areas The Petroleum Activities Area (PAA) consists of the following Operational Areas

- Offshore Operational Area for activities includes a radius of:
 - Facility: 2000 m around future location of the FPU
 - Subsea: 1500 m from the centerline of subsea infrastructure
 - Gravimetry: 1000 m beyond the boundary of the WA-61-L and WA-62-L
- Trunkline Operational Area for activities includes a radius of:
 - 1500 m radius from the centerline of the gas export trunkline (WA-32-PL)

Exclusionary/ Cautionary Zone

- Fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU.
- Temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

- Infrastructure Key infrastructure includes, but is not limited to:
- Moored Floating Production Unit (FPU) with gas processing equipment and utilities
 - Suction piles and anchor chains
 - Wells, Christmas trees, manifolds, flowlines, umbilicals and risers
 - Gas export trunkline
- Vessels Key vessels include, but are not limited to:
- Tow, Support and Anchor Handling Tugs (AHT)
 - Light Construction Vessel (LCV)
 - Survey vessel
 - Supply and support vessel
 - Accommodation support vessel (contingency)

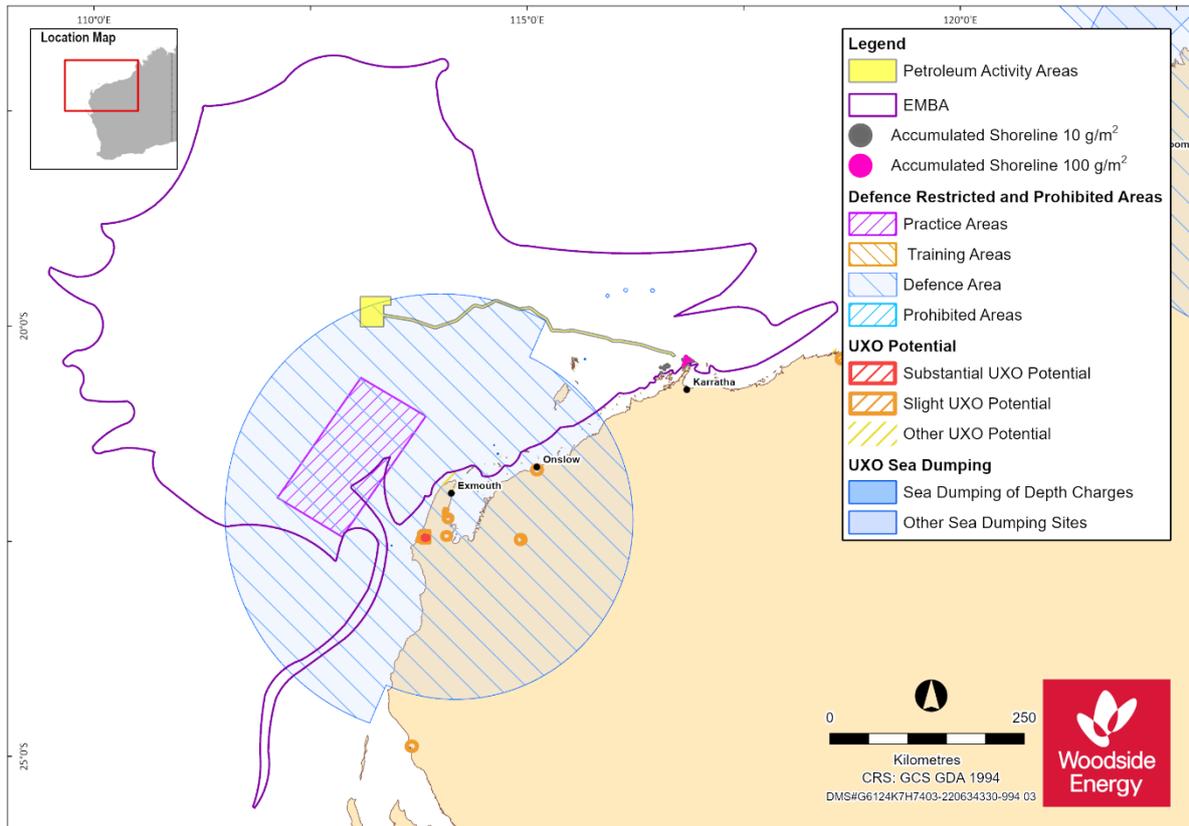

Feedback

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

1.15 Email sent to Department of Climate Change, Energy, the Environment and Water (DCCEEW) – Underwater Heritage & Petroleum and Fisheries – 9 August 2023

Dear Department of Climate Change, Energy, the Environment and Water

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or 1800 442 977 by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). **Also attached is a list of shipwrecks in Commonwealth waters within the EMBA.** You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan

Summary Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.

Permit Area Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL

Location

- ~ 374 km west-northwest of Dampier at closest landfall
- ~ 244 km north-northwest of Exmouth at closest landfall

Approx. Water Depth (m)

- FPU ~950 m
- Production Licenses ~900 m to 1000 m
- Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)

1.16 Email sent to Director of National Parks (DNP) – 9 August 2023

Dear Director of National Parks

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or 1800 442 977 by **11 September 2023**.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Australian Marine Parks (AMPs)

- We note Australian Government Guidance on consultation activities and confirm that:
 - The Trunkline Operational Area overlaps the Montebello Marine Park (Cwlth).
 - The Dampier Marine Park (Cwlth) is ~ 20 km east of KP40
 - The Gascoyne Marine Park (Cwlth) is ~ 80 km south-west of KP350
 - The Ningaloo Marine Park (Cwlth) is ~184 km south of KP350
- We have assessed potential impacts to AMPs in the development of the proposed Environment Plan and given the Trunkline Operational Area overlaps the Montebello Marine Park Multiple Use Zone, there may be slight (or lower) impacts to benthic habitats and marine fauna associated with Inspection Maintenance, Monitoring and Repairs activities along the Trunkline.
- The worst-case credible spill scenario assessed in this EP is the highly unlikely event of damage to the production facility or vessel collision resulting in a release of marine diesel. Through review of hydrocarbon spill modelling, and with consideration of a 50 ppb dissolved and 100 ppb entrained hydrocarbon threshold, the following AMPs may be contacted in the event of a spill:
 - Gascoyne (National Park Zone II, Habitat Protection Zone IV, Multiple Use Zone VI)
 - Dampier (National Park Zone II, Habitat Protection Zone IV, Multiple Use Zone VI)
 - Montebello (Multiple Use Zone VI)
 - Ningaloo (Recreational Use Zone IV)

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- A Commonwealth Government-approved oil spill response plan will be in place for the duration of the activities, which will include notification to relevant agencies and organisations as to the nature and scale of the event, as soon as practicable following an occurrence. The Director of National Parks will be advised if an environmental incident occurs that may impact on the values of the AMP.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan

Location	<ul style="list-style-type: none"> • ~ 374 km west-northwest of Dampier at closest landfall • ~ 244 km north-northwest of Exmouth at closest landfall
Approx. Water Depth (m)	<ul style="list-style-type: none"> • FPU ~950 m • Production Licenses ~900 m to 1000 m • Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Timing	Anticipated around H2 2025 pending approvals
Approx. Estimated Duration	<ul style="list-style-type: none"> • FPU Hook-up and commissioning: ~4 months • FPU Start-up: ~3 months • FPU operations: for the life of the EP • Gravimetry: ~2 months
Operational Areas	<p>The Petroleum Activities Area (PAA) consists of the following Operational Areas</p> <ul style="list-style-type: none"> • Offshore Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ Facility: 2000 m around future location of the FPU ○ Subsea: 1500 m from the centerline of subsea infrastructure ○ Gravimetry: 1000 m beyond the boundary of the WA-61-L and WA-62-L • Trunkline Operational Area for activities includes a radius of: <ul style="list-style-type: none"> ○ 1500 m radius from the centerline of the gas export trunkline (WA-32-PL)
Exclusionary/ Cautionary Zone	<ul style="list-style-type: none"> • Fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU. • Temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Infrastructure Key infrastructure includes, but is not limited to:

- Moored Floating Production Unit (FPU) with gas processing equipment and utilities
- Suction piles and anchor chains
- Wells, Christmas trees, manifolds, flowlines, umbilicals and risers
- Gas export trunkline

Vessels Key vessels include, but are not limited to:

- Tow, Support and Anchor Handling Tugs (AHT)
- Light Construction Vessel (LCV)
- Survey vessel
- Supply and support vessel
- Accommodation support vessel (contingency)

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.19 Email sent to Carnarvon Chamber of Commerce and Industry, Shire of Carnarvon, Port Hedland Chamber of Commerce, Town of Port Hedland, Karratha & Districts Chamber of Commerce and Industry – 16 August 2023

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

A **Consultation Information Sheet** is attached which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can subscribe to receive updates on our consultation activities by subscribing [here](#).

Kind regards,
Woodside Feedback

1.21 Email sent to [Individual 4], [Individual 3] and Save Our Songlines – 3 September 2023

Dear [Individual 4], [Individual 3] and Save Our Songlines,

We are contacting you regarding Woodside's Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is seeking to understand the nature of the interests you may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **30 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let us know.

You can also provide feedback directly to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

We look forward to hearing from you.

Regards,
Woodside Feedback

1.22 Email sent to Shire of Shark Bay – 31 October 2023

Dear [Individual 8], [Individual 9] and [Individual 10],

Following Woodside's recent visit, please find an overview of proposed Woodside activities you may be interested in providing feedback on.

Also below is the previous email we sent to admin@sharkbay.wa.gov.au on 16 October regarding the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations Environment Plans.

Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans (EPs):

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin FPSO facilities. Operations began in 2008 for Ngujima-Yin and 2010 for Pyrenees. Woodside is planning to submit five-year revisions of the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations EPs:

- The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.

- The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L.

Both EPs are being revised and resubmitted for the continued production of crude oil via existing subsea infrastructure to the FPSOs, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (Environment Regulations).

The activities that will continue at both FPSOs are:

- Routine oil production, including crude oil offloading and associated activities,
- Routine inspection, monitoring, maintenance and repair (IMMR) of the FPSOs and associated subsea infrastructure; and
- Disconnection and sail-away of the FPSO with the turret mooring and subsea infrastructure remaining in place.

Scarborough Offshore Facility and Trunkline Operations EP:

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Consultation Information Sheets

Consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

management measures. These are also available on our [website](#). You can also choose to receive updates on our consultation activities by subscribing [here](#).

Feedback

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **13 November 2023**.

Your feedback and our response will be included in our EPs, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.23 Email sent to Shark Bay Recreational Marine Users, RAC Monkey Mia Dolphin Resort, Dirk Hartog Island, Shark Bay Community Resource Centre, [Individual 1] MLA, Shark Bay Aviation, Shark Bay Coastal Tours, Naturetime Tours, Wula Gula Nyinda Eco Cultural Tours – 31 October 2023

Dear Stakeholder,

Woodside recently met with the Shire of Shark Bay who advised you may be interested in and have feedback on the following proposed Woodside activities:

Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans (EPs):

Woodside plans to continue producing crude oil at the Pyrenees and Ngujima-Yin FPSO facilities. Operations began in 2008 for Ngujima-Yin and 2010 for Pyrenees.

Woodside is planning to submit five-year revisions of the Ngujima-Yin FPSO Facility Operations and Pyrenees Facility Operations EPs:

- The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.
- The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L.

Both EPs are being revised and resubmitted for the continued production of crude oil via existing subsea infrastructure to the FPSOs, in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)* (Environment Regulations).

The activities that will continue at both FPSOs are:

- Routine oil production, including crude oil offloading and associated activities,
- Routine inspection, monitoring, maintenance and repair (IMMR) of the FPSOs and associated subsea infrastructure; and
- Disconnection and sail-away of the FPSO with the turret mooring and subsea infrastructure remaining in place.

Scarborough Offshore Facility and Trunkline Operations EP:

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Consultation Information Sheets

Consultation Information Sheets are attached, which provide additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. These are also available on our [website](#). You can also choose to receive updates on our consultation activities by subscribing [here](#).

Feedback

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **13 November 2023**.

Your feedback and our response will be included in our EPs, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,
Woodside Feedback

1.24 Email sent to Australian Communications and Media Authority (ACMA) – 7 December 2023

Dear Stakeholder

Woodside is planning to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **20 December 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

	<ul style="list-style-type: none"> • Trunkline ~31 m (trunkline route at State waters boundary) to 1400 m (deepest point at KP 275 of the trunkline route)
Timing	Anticipated around H2 2025 pending approvals
Approx. Estimated Duration	<ul style="list-style-type: none"> • FPU Hook-up and commissioning: ~4 months • FPU Start-up: ~3 months • FPU operations: for the life of the EP • Gravimetry: ~2 months

Feedback

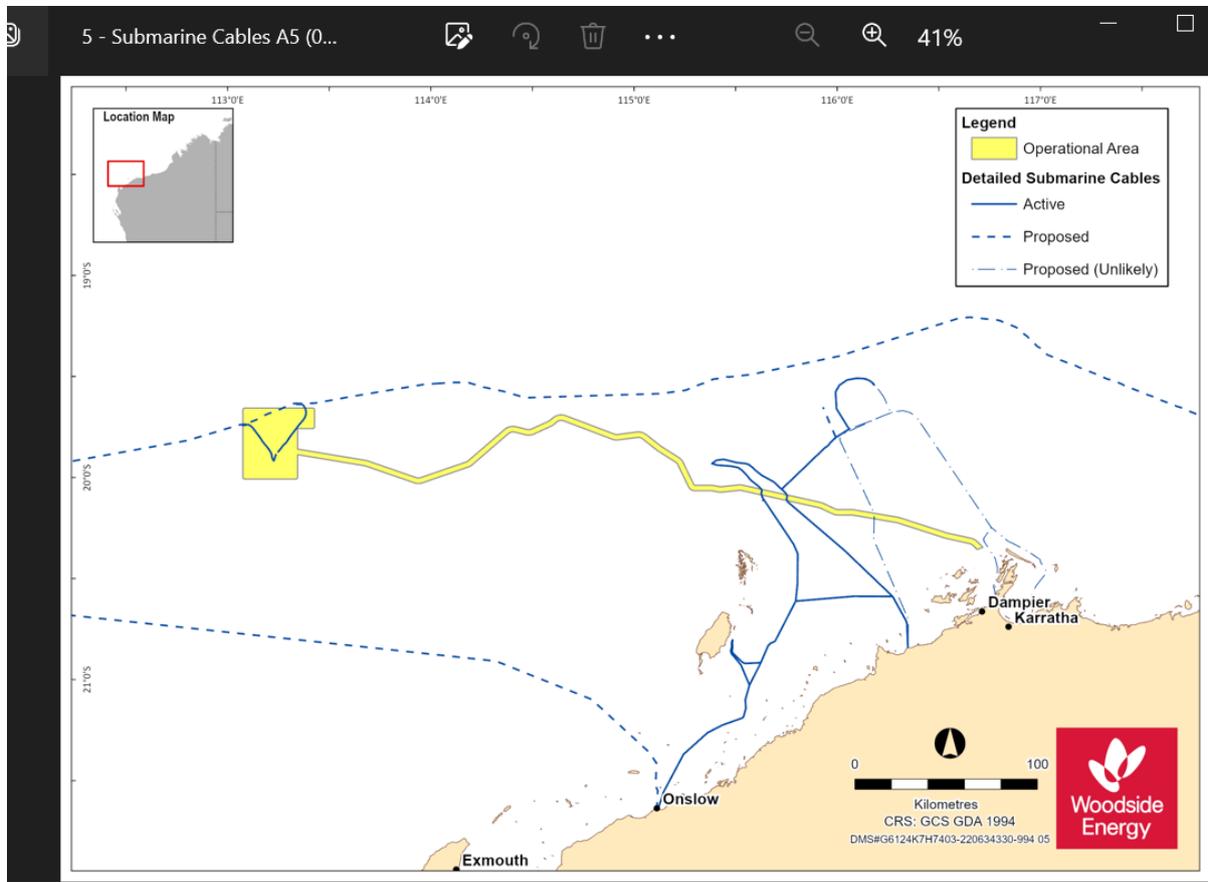

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **20 December 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

Kind regards,
Woodside Energy Feedback

Although we are meeting this Thursday, I thought it best to email Scarborough Offshore Facility and Trunkline Operations environment plan information and we will speak to this EP on Thursday.

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Wanparta Aboriginal Corporation and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **28 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to Wanparta Aboriginal Corporation members as required. Woodside would be pleased to speak with Wanparta Aboriginal Corporation members in addition to the Wanparta Aboriginal Corporation Board / office holders.

Kind regards,

Please feel free to forward this email and, the attached documents to Wirrawandi Aboriginal Corporation members as required. Woodside would be pleased to speak with Wirrawandi Aboriginal Corporation members in addition to the Wirrawandi Aboriginal Corporation Board / office holders.

Kind regards,

1.30 Email sent to Yinggarda Aboriginal Corporation – 1 September 2023

Dear [Individual 17] and [Individual 18]

I write regarding Woodside's near future activities under the Scarborough Offshore Facility and Trunkline Operations Environment Plan. In summary, Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through a trunkline to Woodside's Pluto LNG Plant on the Burrup Peninsula.

Please find attached a summary information sheet that explains the activities we plan to undertake. A detailed consultation information sheet can be found at the link below:

- [scarborough-project-offshore-facility-and-trunkline-operations-environment-plan.pdf \(woodside.com\)](#)

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned activities and unplanned events. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Yinggarda Aboriginal Corporation (YAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the attached Summary Information sheet. We are interested in hearing:

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **2 October 2023**. Please also let us know as soon as possible if a meeting would be beneficial, and how you would like us to engage with you. We will also include this activity in the draft consultation framework / agreement that has been the subject of our previous correspondence.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to YAC members as required. Woodside would be pleased to speak with YAC members in addition to the YAC Board / office holders.

We look forward to hearing from you.

Sincerely,

1.31 Email sent to Yindjibarndi Aboriginal Corporation (YAC) – 28 August 2023

Hi [Individual 19]

As spokesperson for Yindjibarndi Aboriginal Corporation;

Once again, I know we are meeting Wednesday to discuss ongoing engagement/consultation with NYFL, however I thought best to send this new environment plan information ahead of our meeting.

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Controlled Ref No: SA0006AF0000022

Revision: 3

Page 721 of 919

Uncontrolled when printed. Refer to electronic version for most up to date information.

Woodside is seeking to understand the nature of the interests that Yindjibarndi Aboriginal Corporation (YAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **28 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to YAC members as required. Woodside would be pleased to speak with YAC members in addition to the YAC Board / office holders.

Kind regards,

1.32 Email sent to Buurabalayji Thalanyji Aboriginal Corporation (BTAC) – 1 September 2023

Dear [Individual 20]

Thank you for your time on the phone this morning.

As we discussed, I write regarding Woodside's near future activities under the Scarborough Offshore Facility and Trunkline Operations Environment Plan. In summary Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to Woodside's Pluto LNG Plant on the Burrup Peninsula.

Please find attached a summary information sheet that explains the activities we plan to undertake. A detailed consultation information sheet can be found at the link below: [N N Scarborough project offshore facility and trunkline operations environment plan.pdf \(woodside.com\)](#)

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned activities and

unplanned events. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Buurabalayji Thalanyji Aboriginal Corporation (BTAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the attached Summary Information sheet. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **2 October 2023**. Please also let us know as soon as possible if a meeting would be beneficial, and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to BTAC members as required. Woodside would be pleased to speak with BTAC members in addition to the BTAC Board / office holders.

We look forward to hearing from you.

Sincerely,

1.33 Email sent to Robe River Kuruma Aboriginal Corporation (RRKAC) – 29 August 2023

Dear [Individual 21]

I am contacting you regarding Woodside's plans in relation to near future activities: Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside is seeking to understand the nature of the interests that Robe River Kuruma Aboriginal Corporation (RRKAC) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

How the activity could impact your interests and activities and/or your cultural values
Your concerns about the proposed activity and what you think we should do about those concerns.

Whether there are any other individuals, groups, or organisations you think we should talk to. If you would like to speak with us, please let us know by 29 September 2023. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to RRKAC members as required. Woodside would be pleased to speak with RRKAC members in addition to the RRKAC Board / office holders.

Kind regards,

1.34 Email sent to Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC) via Yamatji Marlpa Aboriginal Corporation (YMAC) – 1 September 2023

Hi [Individual 22] and [Individual 23]

This will be the last one for the week I promise!

This email is regarding Woodside's plans in relation to near future activities as part of the Scarborough Offshore Facility and Trunkline Operations Environment Plan. For background, Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that NTGAC and its members may have in the 'environment that may be affected' (EMBA) by this activity. The Summary Information sheet (attached) provides more detail however I note your feedback regarding

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

our material at our last meeting and as previously mentioned we are reviewing these resources.

We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to discuss this further please let me know by **2 October 2023**. I appreciate there are a few matters we need to discuss therefore a meeting may be more appropriate and we can include this on the agenda. Even if it is with you both in the first instance and NTGAC down the track, noting their limited availability. We would also be more than happy to speak with NTGAC members if required.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

As always you can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to NTGAC members as required. I look forward to hearing from you.

Many thanks

1.35 Email sent to Malgana Aboriginal Corporation – 1 September 2023

Dear [Individual 24]

I hope this message finds you well and thank you for your correspondence earlier this week.

I write regarding Woodside's near future activities under the Scarborough Offshore Facility and Trunkline Operations Environment Plan. In summary Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to Woodside's Pluto LNG Plant on the Burrup Peninsula.

Please find attached a summary information sheet that explains the activities we plan to undertake. A detailed consultation information sheet can be found at the link below:

activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that NTGAC and its members may have in the 'environment that may be affected' (EMBA) by this activity. The Summary Information sheet (attached) provides more detail however I note your feedback regarding our material at our last meeting and as previously mentioned we are reviewing these resources.

We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to discuss this further please let me know by **2 October 2023**. I appreciate there are a few matters we need to discuss therefore a meeting may be more appropriate and we can include this on the agenda. Even if it is with you both in the first instance and NTGAC down the track, noting their limited availability. We would also be more than happy to speak with NTGAC members if required.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

As always you can provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700.

Please feel free to forward this email and, the attached documents to NTGAC members as required. I look forward to hearing from you.

Many thanks

1.37 Email sent to Ngarluma and Yindjibarndi Foundation Ltd (NYFL) – 29 August 2023

Hi [Individual 19]

I know we are meeting Wednesday to discuss ongoing engagement/consultation, however I thought best to send this new environment plan information ahead of our meeting.

I am contacting you regarding Woodside's plans in relation to near future activities:

1. Scarborough Offshore Facility and Trunkline Operations Environment Plan. Woodside plans to install a Floating Production Unit (FPU), 374 km west-northwest of Dampier and complete subsequent hook-up and commissioning activities before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the trunkline to the Pluto LNG Plant.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

In preparation for the activities, Woodside has undertaken assessments to identify potential impacts and risks to the marine environment arising from both planned and unplanned activities. Mitigation and management measures have been developed for each of the risks identified and will be outlined in the Environmental Plan (EP).

Woodside is seeking to understand the nature of the interests that Ngarluma Yindjibarndi Foundation Limited (NYFL) and its members may have in the 'environment that may be affected' (EMBA) by this activity. The EMBA is the total area over which unplanned events could have environmental impacts, as set out in the Summary Information sheet attached. We are interested in hearing:

- How the activity could impact your interests and activities and/or your cultural values
- Your concerns about the proposed activity and what you think we should do about those concerns.
- Whether there are any other individuals, groups, or organisations you think we should talk to.

If you would like to speak with us, please let us know by **28 September 2023**. Please also let us know as soon as possible if a meeting would be beneficial and please advise how you would like us to engage with you.

If there is any support or specific information, maps, images that you require as part of our engagement, please let me know.

You can also provide feedback directly to me on the details below, to Feedback@woodside.com.au or by calling 1800 442 977, or directly to the Australian Government's National Offshore Petroleum Safety and Environmental Management Authority to communications@nopsema.gov.au or (08) 6188 8700. Please feel free to forward this email and, the attached documents to NYFL members as required. Woodside would be pleased to speak with NYFL members in addition to the NYFL Board / office holders.

Kind regards,

1.38 Email sent to Clean Energy Regulator – 11 September 2024

As part of the Scarborough Energy Project, Woodside is developing the Scarborough Offshore Facility and Trunkline (Operations) Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Please see below for further information. We have also attached a Consultation Information Sheet which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures.

The EP is also publicly available on the [NOPSEMA website](#).

We have an existing relationship with the Clean Energy Regulator (CER) in its role in administering schemes legislated by the Australian Government for measuring, managing, reducing or offsetting Australia's carbon emissions.

Could you please advise by **25 September 2024** if you have any comments regarding the impacts of the specific activities associated with the EP on CER's functions, interests or activities.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

Activity: Scarborough Offshore Facility and Trunkline (Operations) Environment Plan

Scarborough Offshore Facility and Trunkline (Operations) Environment Plan

Summary

Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough

- Supply and support vessel
- Accommodation support vessel (contingency)

If you have feedback specific to the proposed activities described under the proposed EP, we welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or the feedback form on our website.

Your feedback on these specific activities and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

NOPSEMA has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Kind regards,

1.39 Email sent to Vocus – 12 September 2024

Dear [Individual 25],

As part of the Scarborough Energy Project, Woodside is developing the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Woodside values the ongoing relationship with Vocus on the Scarborough Project. We are seeking your feedback specific to these activities as there are submarine communication cables in proximity to the Operational Area.

Please see below for further information. We have also attached a Consultation Information Sheet which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures.

The EP is also publicly available on the [NOPSEMA website](#).

Could you please advise if you have any comments regarding the impacts of these specific activities on Vocus's functions, interests or activities.

Kind regards,

1.40 Email sent to Telstra – 4 November 2024

Dear [Individual 26]

As part of the Scarborough Energy Project, Woodside is developing the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Controlled Ref No: SA0006AF0000022

Revision: 3

Page 734 of 919

Uncontrolled when printed. Refer to electronic version for most up to date information.

Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Woodside values the ongoing relationship with Telstra on the Scarborough Project. We are seeking your feedback specific to these activities as there are submarine communication cables in proximity to the Operational Area.

Please see below for further information. We have also attached a Consultation Information Sheet which provides additional background on the proposed activities including summaries of potential key impacts and risks, and associated management measures.

The EP is also publicly available on the [NOPSEMA website](#).

Could you please advise if you have any comments regarding the impacts of these specific activities on Telstra's functions, interests or activities.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Energy Feedback

2 FOLLOW-UP CONSULTATION

2.1 Email sent to Australian Border Force (ABF), Pilbara Ports Authority, Ningaloo Coast World Heritage Advisory Committee (NCWHAC), Department of Biodiversity, Conservation and Attractions (DBCA), Department of Industry, Science and Resources (DISR), Department of Energy, Mines, Industry Regulation and Safety (DEMIRS), Marine Tourism WA, WA Game Fishing Association, Chevron Australia, Western Gas, Exxon Mobil Australia Resources Company, Shell Australia, INPEX Alpha Ltd, Carnarvon Energy Ltd, PE Wheatstone, Kyushu Electric Wheatstone, Eni Australia, Jadestone, KATO Energy, Finder Energy, KUFPEC, Santos, Coastal Oil and Gas, Bounty Oil and Gas, Vermilion Oil and Gas, OMV Australia, JX Nippon, Australian Petroleum Production and Exploration Association (APPEA), Australasian Centre for Corporate Responsibility (ACCR), Australian Conservation Foundation (ACF), Australian Marine Conservation Society (AMCS), Doctors for the Environment Australia (DEA), Extinction Rebellion WA (XRWA), Friends of Australian Rock Art (FARA), Greenpeace Australia Pacific (GAP), International Fund for Animal Welfare (IFAW), Lock the Gate Alliance (LGA), Say No To Scarborough Gas (SNTSG), Sea Shepherd Australia (SSA), The Wilderness Society (TWS), World Wildlife Fund (WWF), University of Western Australia (UWA), Cape Conservation Group, Protect Ningaloo, Karratha Recreational Marine Users, Exmouth Recreational Marine Users, Shire of Exmouth, City of Karratha, Shire of Carnarvon, Karratha Community Liaison Group, Exmouth Community Liaison Group, Exmouth Chamber of Commerce and Industry (CCI), Australian Fisheries Management Authority (AFMA), North West Slope and Trawl Fishery, Western Deepwater Trawl Fishery, Commonwealth Fisheries Association (CFA), Onslow Prawn Managed Fishery, Exmouth Gulf Prawn Managed Fishery, Demersal Scalefish Fishery: Pilbara Trawl Fishery, Pilbara Trap Fishery, Pilbara Line Fishery – 30 August 2023

Dear Stakeholder

Woodside previously consulted you on its plans to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activity is provided in the email below and in the attached Consultation Information Sheet.

We would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by 11 September 2023.

Kind regards,
Woodside Feedback

2.2 Email sent to Australian Maritime Safety Authority (AMSA) – Marine Safety, Australian Maritime Safety Authority (AMSA) – Marine Pollution – 30 August 2023

Dear AMSA

Woodside previously consulted you on its plans to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activity is provided in the email below and in the attached Consultation Information Sheet.

We would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by 11 September 2023.

Kind regards,
Woodside Feedback

2.3 Email sent to Department of Defence (DoD). Included the Defence Map – 30 August 2023

Dear Department of Defence

Woodside previously consulted you on its plans to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activity is provided in the email below and in the attached Consultation Information Sheet.

We would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by 11 September 2023.

Kind regards,
Woodside Feedback

2.4 Email sent to Department of Planning, Lands and Heritage (DPLH). Included the WA Historical Shipwrecks List – 30 August 2023

Dear Stakeholder

Woodside previously consulted you on its plans to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activity is provided in the email below and in the attached Consultation Information Sheet.

Dear Stakeholder

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

Woodside previously consulted you (correspondence dated 9 August 2023) regarding the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au, phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

You were previously sent a Consultation Information Sheet (also available on our website woodside.com), which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. You can subscribe to receive updates on our consultation activities by subscribing on our website.

Activity: Scarborough Offshore Facility and Trunkline Operations Environment Plan

Scarborough Offshore Facility and Trunkline Operations Environment Plan	
Summary	Install a Floating Production Unit and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.
Permit Area	Activities will occur in permit areas WA-61-L, WA-62-L and WA-32-PL.
Location	<ul style="list-style-type: none"> ~ 374 km west-northwest of Dampier at closest landfall ~ 244 km north-northwest of Exmouth at closest landfall

Feedback

If you have feedback specific to the proposed activities described under the proposed EP, we would welcome your feedback at Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Your feedback and our response will be included in our EP which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth). Your feedback may also be used to support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the EP in order for this information to remain confidential to NOPSEMA.

The National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) has published a brochure entitled [Consultation on offshore petroleum environment plans – Information for the Community](#) to help community members understand consultation requirements for Commonwealth EPs and how to participate in consultation.

Dear Commercial Licence Holders

WAFIC is now working with Woodside to strategically streamline consultation with the commercial fishing industry, noting you may have previously received notifications regarding this proposed activity.

Woodside is planning to submit the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations for the Scarborough Operations. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant for further processing.

Overview of Activities:

- The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.
- The commissioning activity involves:
 - Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
 - Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up with the introduction of reservoir hydrocarbons.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen removal.
- Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.
- Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

The table below provides a summary of the proposed activities under this EP. The attached Information Sheet provides additional information including a map of impacted areas, summaries of potential impacts and risks relating to the proposed activities, and associated management measures. These are also available on Woodside's [website](#).

2.12 Letter sent to Gascoyne Recreational Marine Users, Pilbara/Kimberley Recreational Marine Users – 31 August 2023

Dear Stakeholder

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

Woodside previously consulted you (correspondence dated 9 August 2023) regarding the Scarborough Offshore Facility and Trunkline Operations Environment Plan which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are seeking any feedback you may have specific to the proposed activities by a response to Feedback@woodside.com.au or phone call at 1800 442 977, or feedback form on our website by **11 September 2023**.

Overview

The FPU will be installed and connected to a pre-installed 20-point suction-piled mooring system and the riser pull-in(s) carried out. Hook-up and connection to subsea infrastructure will also occur, prior to commissioning.

The commissioning activity involves:

- Dewatering and commissioning of the subsea production system, comprising wellheads, manifolds, flowlines, umbilicals, and communication lines.
- Activities to confirm the integrity of the entire interconnected facility, so it is ready for start-up (RFSU) with the introduction of reservoir hydrocarbons.

The FPU start-up consists of initiating the subsea production system and FPU to allow reservoir gas and processing equipment to reach operational pressures and temperatures, as well as obtaining sufficient and stable equipment inlet flow to enable the equipment to perform to design criteria. Well clean-up and commissioning will also be carried out and gas export trunkline pressurisation and nitrogen (N₂) removal.

Routine production operations involve transfer of reservoir fluids, including gas and produced water from the reservoir, along with Mono Ethylene Glycol (MEG) injection at the wells, through the subsea infrastructure to the FPU; and gas export via the Trunkline.

Other activities include gravimetry surveys for the purposes of reservoir monitoring, as well as IMMR activities on the FPU, subsea infrastructure (excluding well intervention or well workover activities) and gas export trunkline, and other contingent activities.

Exclusionary / Cautionary Zones

There will be a fixed 500 m radius petroleum safety zone (PSZ) around the Scarborough FPU and a temporary 500 m exclusion zone around applicable vessels to manage vessel movements.

Environment that May Be Affected (EMBA)

Following changes to Commonwealth EP consultation requirements, Woodside is now consulting persons or organisations who are located within the EMBA by a proposed petroleum activity.

The EMBA is the largest spatial extent where the Scarborough FPU Installation, Commissioning and Operations activities could potentially have an environmental consequence (direct or indirect impact). The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this Environment Plan (EP) is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

You were previously sent a Consultation Information Sheet (also available on our website woodside.com), which provides additional background on the proposed activities, including summaries of potential key impacts and risks, and associated management measures. You can subscribe to receive updates on our consultation activities by subscribing on our website.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Feedback

2.13 Email sent to Australian Marine Conservation Society – 16 November 2023

Dear Australian Marine Conservation Society

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Woodside consulted AMCS on the following Environment Plans:

- Scarborough 4D Baseline Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI).

In response to consultation on the Seismic EP, AMCS advised it was involved in a large number of consultations and needed to prioritise limited resources but requested Woodside continue to send notifications and reminders of future consultation.

As per this previous request, on 9 and 30 August 2023 Woodside sent AMCS information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan. The consultation information for this Environment Plan is located [here](#).

Proposed activities under this Environment Plan involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licenses WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Controlled Ref No: SA0006AF0000022

Revision: 3

Page 753 of 919

Uncontrolled when printed. Refer to electronic version for most up to date information.

At this stage Woodside has not received a response from AMSC. We are now reaching out one final time to see if AMCS has any feedback or if you'd like to meet to discuss the Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth)* and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 by 8 December 2023.

Kind regards,
Woodside Energy Feedback

2.14 Email sent to [Individual 4], [Individual 3] and Save Our Songlines & and cc: Environmental Defenders Office (EDO) – 22 November 2023

Dear [Individual 4], [Individual 3] and Save Our Songlines

Woodside previously provided you with consultation information on its plans to submit the **Scarborough Offshore Facility and Trunkline Operations Environment Plan** which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activity is provided in the email below and in the attached Consultation Information Sheet.

We would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by 8 December 2023.

Kind regards,

Woodside Feedback

2.15 Email sent to Director of National Parks (DNP) – 23 November 2023

Dear Director of National Parks

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Controlled Ref No: SA0006AF0000022

Dear Say No To Scarborough Gas

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

Woodside met with Say No To Scarborough Gas on 14 October 2022 to provide a briefing on the Scarborough Project and related Environment Plans including:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)
- WA-61-L and WA-62-L Subsea Infrastructure Installation (Subsea)

Since this meeting, Say No To Scarborough Gas and Woodside have engaged in correspondence on the Seismic, D&C, SITI and Subsea EPs where Say No To Scarborough Gas provided feedback to Woodside. This feedback has been addressed.

On 9 and 30 August 2023, Woodside provided Say No To Scarborough Gas with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from Say No To Scarborough Gas on the Operations EP, Woodside has reviewed previous feedback provided by Say No To Scarborough Gas on the Seismic, D&C, SITI and Subsea EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
Say No To Scarborough Gas concerns related to the nature and process of Woodside’s community consultation, its thoroughness in nature, and whether it is genuine in intent, or purely a box-ticking exercise.	<p>Consultation requirements set out in Regulation 11A of the Environment Regulations have been complied with in relation to the consultation process for the EPs which Woodside detailed during its consultation meeting with SNTSG on 13 October 2022. Woodside’s consultation process has continued to evolve based on ongoing Regulator feedback.</p> <p>Where feedback is received which informs Woodside of measures that it may take to mitigate potential environmental impacts from the Petroleum Activities Program (PAP), Woodside incorporates this feedback into</p>

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

<p>Ecosystem impacts: Say No To Scarborough Gas concerns as to whether changing environmental conditions due to climate change will affect the interactions between marine life and the disturbance and pollution caused by the project. Where have the effects of climate change and subsequent ocean changes such as higher water temperatures increasing the toxicity of petroleum hydrocarbons, expansion of oxygen minimum zones and further oxygen depletion, and ocean acidification been considered? What is the impact of these changes on increased metabolic demand? Which ecological parameters are used to assess impacts on species, populations, assemblages and ecosystems? (i.e., biodiversity, biomass, productivity). Which ecological baselines are used for these assessments? What was the process of the deep-water environment survey? And from this, which species are most likely to suffer losses? What assessments were done on microbial communities and processes? And what grounds do Woodside propose for not suspending work during pygmy blue whale migration season?</p>	<p>All emissions and discharges including from atmospheric and greenhouse gases, as well as discharges of commingled produced water and cooling water streams will be assessed in the EP. This includes an evaluation of all receptors that may be impacted from these.</p> <p>Impacts on pygmy blue whales will be assessed throughout the EP and impacts and risks reduced to ALARP and Acceptable levels.</p> <p>In the course of preparing an EP, Woodside engages suitably qualified environmental consultants and experts to inform what ecological parameters are required to be considered to inform potential risks and impacts from activities. Additionally, Woodside has extensive experience working in the Western Australian offshore environment and has developed a comprehensive database of information related to the existing environment. Woodside draws on this experience when evaluating all aspects relating to the risks and impacts of the activity and in developing appropriate control measures to mitigate impacts to environmental receptors.</p>
---	--

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether Say No To Scarborough Gas has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Kind regards,

Woodside Energy Feedback

Dear Doctors for the Environment Australia

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Doctors for the Environment Australia (DEA) self-identified for the following Scarborough EPs:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI).

In response to the D&C, SITI and Seismic EPs, DEA provided feedback to Woodside which Woodside has addressed.

On 9 and 30 August 2023, Woodside provided the DEA with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from DEA on the Operations EP, Woodside has reviewed previous feedback provided by the DEA on the Seismic, D&C, and SITI EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
<ul style="list-style-type: none"> • DEA members will be affected by the Scarborough project because climate change and the use of gas as an energy source for domestic and commercial use produces both direct and indirect health impacts. • Climate change has impacts on health directly, indirectly, and via social mechanisms. Worldwide, including in Western Australia, we are already seeing these impacts. This includes the impacts of extreme heat, increasingly severe extreme weather events, drought, changing infectious disease patterns, and resource scarcity, among others. • In addition to the contribution to climate change, gas itself has also been recognised as a health threat. For example, the use of gas in domestic 	<p>Greenhouse Gas (GHG) emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).</p> <p>The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use, flaring, non-routine</p>

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

11.69 in

<p>premises has been demonstrated to cause a significant proportion of childhood asthma.</p> <ul style="list-style-type: none"> The processing of the gas at facilities on the Burrup Peninsula will also increase existing levels of nitrogen dioxide, sulphur dioxide, ozone, mercury, other heavy metals and many thousands of tonnes of volatile organic compounds. Air pollutants of this type can cause serious health impacts, including heart disease, stroke, lung cancer, asthma and diabetes, even at low levels of exposure. 	<p>venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions attributed to the Scarborough Project from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p> <p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions has been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p> <p>Woodside also has in place a Climate Strategy which is an integral part of the company strategy. The strategy has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.</p> <p>Woodside's net equity reduction targets have an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside plans to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:</p> <ul style="list-style-type: none"> Avoiding GHG emissions through the way we design our assets Reducing GHG emissions through the way we operate our assets Originating and acquiring carbon credits to use as offsets for the remainder. <p>Avoiding and reducing emissions are Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions will allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans are matured and implemented. In the longer term, where emissions prove to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve our net zero aspiration.</p>
---	--

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether DEA has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with

the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Dear Lock the Gate Alliance

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Lock the Gate Alliance (LGA) self-identified for the following Scarborough EPs:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)

In response to the Seismic, D&C, and SITI EPs, LGA provided feedback to Woodside which Woodside has addressed.

On 9 and 30 August 2023, Woodside provided the LGA with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from LGA on the Operations EP, Woodside has reviewed previous feedback provided by the LGA on the Seismic, D&C, and SITI EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
<ul style="list-style-type: none"> • LGA and its members will be affected by climate change which will be increased by the Scarborough project. It will especially affect our members who live in the Pilbara and Kimberley, the many people who depend on groundwater, and areas that are subject to flooding, especially the Kimberley. • The Scarborough gas field development will lead to the production of 1.6 billion tonnes of carbon emissions over the next 25 years, adding to WA’s 	<p>Greenhouse Gas (GHG) emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).</p> <p>The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use,</p>

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

11.69 in

<p>emissions and the planet's burden of climate change impacts. LGA and its supporters stand to be directly affected by the climate impacts of the project, which will cause increasing severity in heatwaves, bushfires, floods, storms, etc., and socio-economic pressures that will arise from these environmental changes.</p> <ul style="list-style-type: none"> The Scarborough gas field development will support further industrialisation of the Burrup Peninsula which will damage the National Heritage values of this area. 	<p>flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions attributed to the Scarborough Project from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p> <p>An impact assessment of GHG emissions from the Scarborough facility and mitigation and management controls to reduce GHG emissions has been undertaken. This includes development of a decarbonisation plan for the Pluto Hub.</p> <p>Woodside also has in place a Climate Strategy which is an integral part of the company strategy. The strategy has two key elements: reducing Woodside's net equity Scope 1 and 2 GHG emissions, and investing in the products and services that Woodside's customers need as they secure their energy needs and reduce their emissions.</p> <p>Woodside's net equity reduction targets have an aspiration of net zero by 2050 or sooner. In 2022, Woodside achieved 11% reduction compared to starting base. Woodside plans to achieve net equity Scope 1 and 2 GHG emissions reduction targets in three ways:</p> <ul style="list-style-type: none"> Avoiding GHG emissions through the way we design our assets Reducing GHG emissions through the way we operate our assets Originating and acquiring carbon credits to use as offsets for the remainder. <p>Avoiding and reducing emissions are Woodside's first priorities for meeting the net equity emissions reduction targets. However, offsetting emissions will allow Woodside more flexibility to meet these targets, while asset and technology decarbonisation plans are matured and implemented. In the longer term, where emissions prove to be hard-to-abate, any such residual emissions would also need to be offset using carbon credits in order to achieve our net zero aspiration.</p>

Dear The Wilderness Society

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

Woodside met with The Wilderness Society on 6 October 2022 to provide a briefing on the Scarborough Project and related Environment Plans:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)
- WA-61-L and WA-62-L Subsea Infrastructure Installation (Subsea)

Since this meeting, The Wilderness Society and Woodside have engaged in correspondence on the D&C, Subsea, Seismic and SITI EPs where The Wilderness Society provided feedback to Woodside which Woodside has addressed.

In a letter sent 17 October 2022, Woodside also noted The Wilderness Society’s more general interest in carbon offsets, biodiversity and native vegetation, and although outside of the scope of the Scarborough Project consultation, we welcomed the opportunity to meet with The Wilderness Society to discuss the work Woodside is undertaking in this space. This offer has not been taken up by The Wilderness Society.

On 9 and 30 August 2023, Woodside provided The Wilderness Society with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from The Wilderness Society on the Operations EP, Woodside has reviewed previous feedback provided by The Wilderness Society on the Seismic, D&C, SITI and Subsea EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
The work undertaken to understand marine fauna populations and their migration patterns in relation to Woodside’s proposed activities and	In development of the EP Woodside engages qualified Environmental Consultants to provide information related to the existing environment. This includes information on the migratory patterns and behaviours associated with marine mammals, which informs Woodside’s assessment of potential

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

Dear The Australian Conservation Foundation

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

Woodside met The Australian Conservation Foundation on 11 October 2022 to provide a briefing on the Scarborough Project and related Environment Plans including:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI)
- WA-61-L and WA-62-L Subsea Infrastructure Installation (Subsea)

Since this meeting, The Australian Conservation Foundation and Woodside have engaged in correspondence on the Seismic, D&C, SITI and Subsea EPs where The Australian Conservation Foundation provided feedback to Woodside which was addressed.

On 9 and 30 August 2023, Woodside provided The Australian Conservation Foundation with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from The Australian Conservation Foundation on the Operations EP, Woodside has reviewed previous feedback provided by The Australian Conservation Foundation on the Seismic, D&C, SITI and Subsea EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside’s assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
The Scarborough Gas Project EPs should include an evaluation of all impacts and risks related to the greenhouse gas emissions that will be caused by the Project.	Greenhouse Gas (GHG) emissions relevant to the Petroleum Activities Program (PAP), including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry standard database. The EP will assess Direct Emissions (Scope 1) and Indirect Emissions, aligned with the definitions of the GHG Protocol Corporate Standard and the National Greenhouse and Energy Reporting Regulations 2008 (Cth).

¹ Woodside’s current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

	<p>The EP will assess both direct and indirect impacts and risks associated with the PAP, having regard to the nature and scale of the proposed PAP. Direct GHG emissions of carbon dioxide (CO₂), methane (CH₄) and nitrous oxide (N₂O) and Total carbon dioxide equivalent (Total CO₂e) emissions will be estimated, including from fuel use, flaring, non-routine venting of process hydrocarbons via flare system, and fugitive emissions.</p> <p>Indirect emissions attributed to the Scarborough project from offshore vessel and helicopter use, hydrocarbon processing (onshore), third party transport of products, regassification, distribution and combustion by end users will be estimated using vessel fuel consumption rate estimates, helicopter fuel consumption data and emission factors from the NGER Scheme and other industry standard databases.</p>
<p>There are several vulnerable, endangered and critically endangered marine species within both the operational area and the environment that may be affected including loggerhead and leatherback turtles, blue whales and the eastern curlew.</p>	<p>In accordance with Regulation 13(2) and 13(3) of the Environment Regulations the EP will describe the existing environment that may be affected by the activity, including details of the particular relevant values and sensitivities of the environment. This includes presence of turtles, whales and seabirds.</p> <p>Controls will be implemented to reduce risks to As Low as Reasonably Possible (ALARP) and acceptable levels.</p>
<p>Light emissions from the activities are expected to have potential impacts and risks including behavioural disturbance, injury and mortality to seabirds while the activities are underway</p>	<p>Evaluation of risks and impacts associated with routine light emissions from the Field Production Unit (FPU) and Project Vessels will be presented in the EP. This includes routine lighting from FPU and vessel operation. As the FPU is ~430km offshore and away from islands or other emergent features, including a 105 km separation from a breeding Biologically Important Area (BIA) for the wedgetailed shearwater, any presence of seabirds or shorebirds is considered likely to be of a transient nature only.</p> <p>The Trunkline Operational Area is in proximity to and overlaps breeding and foraging habitat for a number of seabird species, with descriptions and impacts evaluated in the EP. However, planned activities in the Trunkline Operational Area are minimal, limited to infrequent and short-term vessel presence. The Trunkline Operational Area also represents a relatively small portion of the seabird BIAs and while seabird presence may occur, it is considered likely to be of a transient nature only.</p> <p>Further details including demonstration that impacts of lighting on seabirds will be reduced to ALARP and acceptable levels, with controls implemented will be presented in the EP.</p>
<p>Acoustic emissions from the activities are expected to have potential impacts and risks on marine species, including:</p> <ul style="list-style-type: none"> a. Recognition that noise interference is a key threat to migratory and threatened cetaceans 	<p>The Petroleum Activities Program will be comprised of different acoustic emissions sources, primarily associated with infield vessel operations and support activities, such as geophysical surveys and other IMMR activities. Some sound will also be associated with the start-up and operation phase of the FPU and subsea facilities. Sound levels will fluctuate over the course of the Petroleum Activities Program.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>and marine turtles within the operational area</p> <p>b. The potential for pygmy blue whales to deviate from their migration course</p> <p>c. Noise emissions exceeding thresholds for behavioural impacts on cetaceans</p> <p>d. A risk of moderate impacts on marine turtles, in the context of a "paucity of data" on these species</p> <p>e. Behavioural impacts on fish and sharks in the operational area</p>	<p>Generally, sound associated with steady state operations will be limited, due to the FPU being moored and not dynamic positioned, with periodic and short-term increases in sound associated with activities such as FPU installation, commissioning and start-up, and Inspection, Maintenance, Monitoring and Repair (IMMR).</p> <p>Woodside has undertaken a comprehensive assessment of routine acoustic emissions, including underwater noise emissions modelling, with full justification of the impacts and risks for the Regulator to assess in accordance with:</p> <ul style="list-style-type: none"> • Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (the Environment Regulations), and • NOPSEMA Guidance Note (N-04750-GN1344 A339814) EP Content Requirement.
<p>Localised impacts to benthic habitat and communities including displacement and/or permanent loss of epifauna and infauna within the physical footprint.</p>	<p>Disturbance to the seabed and impacts to benthic habitat and communities is assessed in the EP. Benthic epifauna and infauna living on or in the sediments may be impacted by the activities that cause disturbance to the seabed. Permanent infrastructure will be present for the duration of field life and will result in the displacement and/or permanent loss of epifauna and infauna within the physical footprint. Gravimetry surveys or IMMR activities may cause temporary disturbance to the seabed as a result of working close to or on the seabed.</p> <p>No threatened or migratory species, or ecological communities (as defined under the EPBC Act), were identified in the benthic communities during studies completed in the Petroleum Activities Area (PAA). The epifauna and infauna benthic communities known to exist in the PAA are likely to be well represented elsewhere in the region, with impacts restricted to a highly localised proportion of benthic communities.</p> <p>Demonstration of impacts reduced to ALARP and acceptable levels, with appropriate controls measures is defined in the EP.</p>
<p>Hydrocarbon spill to Ningaloo Coast and Gascoyne Marine Park</p>	<p>The EP will assess potential impacts of a highly unlikely hydrocarbon spill. This includes a combination of modelling at three locations in the PAA from a worst-case release of marine diesel from a vessel collision resulting in rupture of a tank. Worst-case modelling results are evaluated in the EP and will show the probability of hydrocarbon contact (entrained hydrocarbon ≥ 100 ppb) with Gascoyne Marine Park and Ningaloo Marine Park.</p>

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether The Australian Conservation Foundation has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

Kind regards,

Woodside Energy Feedback

5 December 2023

Dear Friends of Australian Rock Art

Consultation - Scarborough Offshore Facility and Trunkline Operations Environment Plan

In 2022, Friends of Australian Rock Art (FARA) self-identified as a 'relevant person' for the following Scarborough EPs:

- Scarborough 4D B1 Marine Seismic Survey (Seismic)
- WA-61-L Scarborough Drilling and Completions (D&C)
- Scarborough Seabed Intervention and Trunkline Installation (SITI).

On 9 and 30 August 2023, Woodside provided FARA with consultation information and requested feedback on the Scarborough Offshore Facility and Trunkline Operations Environment Plan (Operations EP). The consultation information for this Environment Plan is located [here](#).

In the absence of specific feedback from FARA on the Operations EP, Woodside has reviewed previous feedback provided by the FARA on the Seismic, D&C, and SITI EPs which may be relevant to the Operations EP. This feedback is summarised below, including Woodside's assessment and response.

Summary of previous feedback which may be relevant to the Operations EP	Woodside assessment and response ¹
<ul style="list-style-type: none"> • FARA is a relevant person/organisation. • "We have since consulted with NOPSEMA and understand further why you do not consider us 'relevant persons' with Letters from FARA regard to your current deepwater EPs - although it is just the first part of an operation which ultimately links to development which we don't condone. However, we understand that it is appropriate you consult with us as relevant persons when it comes to the preparation of your Construction and Operations EP plans." 	<ul style="list-style-type: none"> • Woodside recognises that FARA [is/considers itself/has self-identified as] a relevant person for the Scarborough Offshore Facility and Trunkline Operations Environment Plan. • In recognition of this fact, Woodside has provided FARA with consultation information and requested feedback on 9 August 2023 and 30 August 2023. • Woodside is now contacting FARA a final time to offer an opportunity to provide feedback or request a meeting by 20 December 2023.

¹ Woodside's current working assumption (which is subject to change) is that the information above is relevant to this Environment Plan.

11 50 in

<ul style="list-style-type: none"> • Preservation and conservation of the Murujuga rock art and surrounding cultural landscape. • Harmful effects of acidic gas emissions from Woodside's LNG processing facilities on rock art. 	<ul style="list-style-type: none"> • Research to date on the impacts of emissions on rock art has not been conclusive. • Woodside recognises the need for further research and supports the Murujuga Rock Art Monitoring Program (MRAMP), run by the Murujuga Aboriginal Corporation and Western Australian Department of Water and Environmental Regulation. • In the absence of scientific certainty on the level of emissions which theoretically may affect rock art, Woodside is taking reasonable and practicable measures across its operations and growth projects to minimise emissions. <ul style="list-style-type: none"> ◦ Pluto LNG's Air Quality Management Plan has been reviewed and approved by the Western Australian Environment Protection Authority as meeting the requirement for best available practicable and efficient technologies to be used to minimise and monitor air emissions from the plant. This included independent peer review assessment which concluded that the design of Pluto Train 2 is consistent with best practice in the context of air emissions control for LNG plants. ◦ A number of technologies have been assessed by Woodside; we understand that FARA has previously advocated for the use of "scrubber technology", which we interpret to refer to some form of selective catalytic reduction (SCR) technology. The installation of SCR systems would introduce new hazards, including significant importation and handling of ammonia or urea, may introduce risks associated with ammonia emissions when operating SCR, and have adverse impacts on greenhouse efficiency.
<p>Impact of the Scarborough development on Traditional Custodians of Murujuga and the Dampier Archipelago, as they consider themselves responsible for the cultural landscape and the significant cultural heritage contained in the rock art of those places.</p>	<ul style="list-style-type: none"> • Woodside has consulted extensively with the Traditional Custodians of Murujuga through their nominated representatives for all Scarborough Environment Plans. • This consultation has included the appropriate management of cultural heritage on Murujuga, and all of the matters raised are directly addressed through the Environment Plans. • Woodside believes it has addressed all of the potential impacts which Traditional Custodian representatives have themselves identified. • Woodside does not provide comment on the content of consultation undertaken with Traditional Custodians or their representatives, which may include confidential or culturally sensitive material.
<p>The Scarborough gas field development will lead to the production of 1.5 billion tonnes of carbon emissions over coming decades, adding to WA's emissions</p>	<ul style="list-style-type: none"> • GHG emissions relevant to the PAP, including sources and volumes, will be presented and assessed in the EP. GHG emissions will be estimated using the National Greenhouse and Energy Reporting (NGER) Measurement Determination 2008 and other industry

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

<p>Compromise of the Murujuga World Heritage consideration.</p>	<ul style="list-style-type: none"> • Woodside has operated on Murujuga in the Pilbara region of Western Australia for more than 35 years. Woodside understands that the World Heritage nomination has been progressed with full awareness of existing and future industry on the peninsula and reflects the ongoing co-existence of heritage and industry. • Our support for the World Heritage listing of the Burrup Peninsula reflects the successful co-existence of heritage and industry.
<p>Impacts from pollution sources on all potential receptors, specifically to the marine environment and biodiversity from "catastrophic marine pollution events".</p>	<ul style="list-style-type: none"> • While impacts to potential receptors are possible in the event of an unplanned diesel release from vessel collision (the worst case credible spill scenario for this PAP), Woodside considers it adopts appropriate controls to prevent a hydrocarbon spill and controls to respond in the highly unlikely event of occurrence.
<p>Robust decommissioning plans with funds set aside to ensure all infrastructure is properly decommissioned.</p>	<ul style="list-style-type: none"> • Woodside proactively plans for decommissioning and has developed a Scarborough Decommissioning Strategy which will be used to plan for infrastructure decommissioning at the end of field life. All decommissioning activities will be subject to future Environment Plan approvals. <p>Decommissioning activities will comply with Section 572 of the OPGGS Act.</p>
<p>Endorse and support the requests made by Murujuga custodians Josie Alec and Raelene Cooper that they are relevant persons to be consulted on all potential impacts at each stage of the Scarborough Project.</p>	<ul style="list-style-type: none"> • Woodside consults extensively with First Nations communities and stakeholders for all Environment Plans. • Woodside does not provide comment on the extent of consultation with specific individuals, including their status as relevant persons.

Proposed activities under this Environment Plan involve the installation of a Floating Production Unit (FPU) and subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

We are now reaching out one final time to notify you that consultation in the course of preparing the Operations EP closes on 20 December 2023 and to enquire as to whether FARA has any feedback or if you'd like to meet to discuss the Operations EP.

Please note that your feedback and our response will be included in our Environment Plan for the proposed activity, which will be submitted to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for acceptance in accordance with the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009 (Cth) and support other regulatory processes associated with the planned activities (which may or may not be confidential).

Please let us know if your feedback for this activity is sensitive and we will make this known to NOPSEMA upon submission of the Environment Plan in order for this information to remain confidential to NOPSEMA.

We would welcome your feedback or request for a meeting at Feedback@woodside.com.au or 1800 442 977 before 20 December 2023 when consultation closes.

2.22 Email sent to Shire of Shark Bay, Shark Bay Recreational Marine Users, Department of Biodiversity, Conservation and Attractions – Shark Bay, RAC Monkey Mia Dolphin Resort, Dirk Hartog Island, Shark Bay Community Resource Centre, [Individual 1] MLA, Shark Bay Aviation, Shark Bay Coastal Tours, Naturetime Tours, Wula Gula Nyinda Eco Cultural Tours – 15 December 2023

Dear

Woodside previously consulted you regarding its plans to submit:

1. Five-year revisions of the Ngujima-Yin Floating Production Storage and Offloading (FPSO) Facility Operations and Pyrenees Facility Operations Environment Plans:
 - The Ngujima-Yin FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 57 km north of Exmouth, Western Australia, within Production Licences WA-28-L and WA-59-L, and pipeline licence WA-28-PL.
 - The Pyrenees FPSO and associated subsea infrastructure is located in Commonwealth waters approximately 45 km north of Exmouth, Western Australia, within Production Licences WA-42-L and WA-43-L;
2. The Scarborough Offshore Facility and Trunkline Operations Environment Plan, which involves the installation of a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, prior to start-up and operations within Production Licences WA-61-L and WA-62-L. Gas from the FPU will be transferred through the gas export trunkline (the Trunkline - Pipeline Licence WA-32-PL) to the Pluto LNG Plant for further processing.

Information on the proposed activities is provided in the email below and in the Consultation Information Sheets which are available on our website [here](#) (Ngujima-Yin FPSO Facility and Pyrenees Facility Operations) and [here](#) (Scarborough Offshore Facility and Trunkline Operations).

If you have feedback specific to the proposed activities, we would welcome your feedback at Feedback@woodside.com.au or 1800 442 977 by **22 December 2023**.

Please let us know if your feedback for this activity is sensitive and we will make this known to the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) upon submission of the EPs, in order for this information to remain confidential to NOPSEMA.

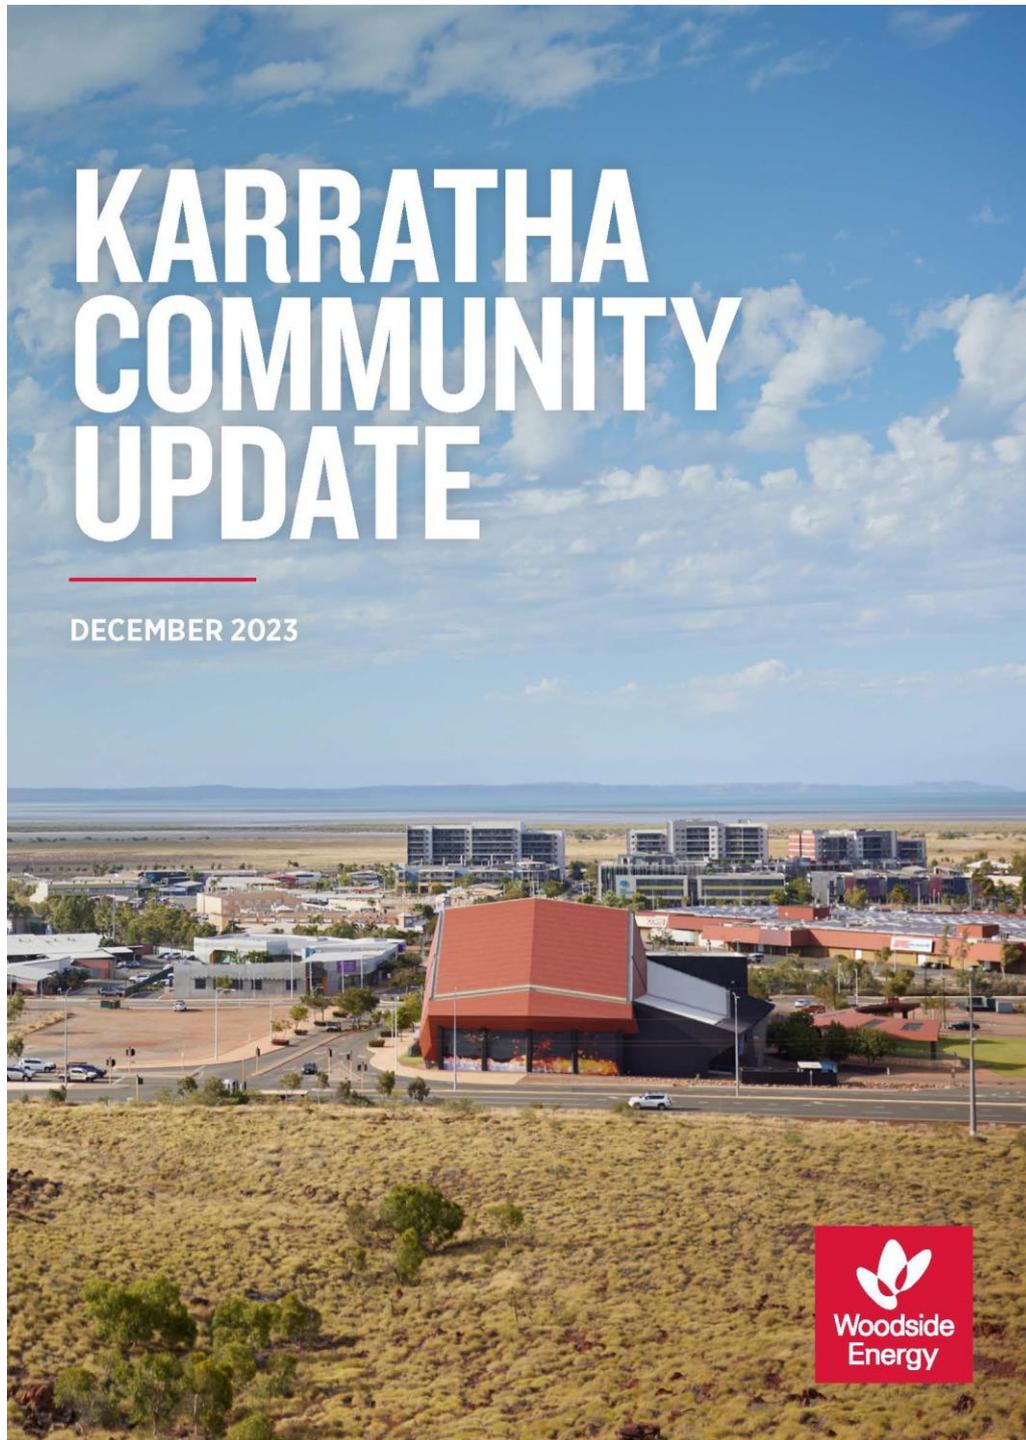

Kind regards,
Woodside Energy Feedback

3 COMMUNITY CONSULTATION

3.1 Community Newsletters

3.1.1 Karratha Community Update

Q4 - 2023

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Liz Westcott,
Executive Vice President
Australian Operations.

Karratha Community House Chairperson, Niamh and Operations Manager, Kat with Pluto Train 2 Site Manager, Chris Quinn.

Karratha is the heartbeat of Woodside's Australian operations and we are proud of the contribution that we've made to the community over almost four decades.

This year, our Pilbara operations along with our Scarborough and Pluto Train 2 projects, continued to deliver important benefits in the City of Karratha, including ongoing investment in community partnerships, contracting opportunities for local businesses and employment and training pathways for local residents. You can read more about these in this newsletter. 2024 promises to be just as dynamic. We will recognise 40 years of operations at Karratha Gas Plant and continue work on our Scarborough Energy Project. This new development, some 400 km offshore from Karratha, will deliver long term benefits to the Karratha community while the gas produced will help power industry and homes, supplying reliable energy to Western Australia and the world.

On behalf of the team at Woodside, have a safe and enjoyable festive season, and we look forward to 2024.

Liz Westcott
Executive Vice President Australian Operations.

15 years of partnership and counting - Karratha Community House

Woodside and its joint venture partners recently celebrated a three-year partnership extension with Karratha Community House.

The new partnership builds on 15 years of support for the not-for-profit, community-driven organisation whose mission is to connect families through play-based learning.

Over this time, Woodside's contribution has helped Karratha Community House to deliver initiatives such as Once Upon a Time, a walk-in educational program which aims to facilitate early learning and interest in literacy for children under five years old. The partnership also supports Ready, Set, School, which helps build school readiness in three-year-old children prior to their entry into pre-school.

Karratha Community House Chairperson, Niamh Herd said she was grateful for the commitment from Woodside and its joint venture partners.

"The partnership has enabled us to positively impact the lives of over 1,000 children through Ready, Set, School and countless other families who have been part of the Once Upon a Time program.

"The dedication to our community through the partnership has truly made a difference, and we look forward to continuing our shared journey towards a brighter future," said Niamh.

Local students learn about career opportunities

Eighteen students from Year 11 and 12 at St Luke's College and Karratha Senior High School participated in work experience at the Karratha Gas Plant, Pluto LNG Plant and the King Bay Supply Facility this year.

Through our recruitment partner Programmed, the students spent time at our operations, learning about trade pathways and engineering.

As well as rotating between various on-site teams, students were also taken on a cultural tour of Ngajarli, boarded an LNG tanker and had a technology session with the Woodside Robotics Team.

St Luke's College Year 12 student, Indiana said she wanted to get a feel for working on-site at Woodside.

"The first day as soon as we got there, we went straight out to the ship they were loading, and the pilot gave us permission to go on and we got to move the loading arms. It was so cool. It was unreal," said Indiana.

Indiana was exploring her options of either university or doing a traineeship at a company like Woodside. She says the work experience was extremely valuable in helping her make a decision.

"I like the hands-on side of the operator role and how they weren't doing one thing, but working on many different things, and making sure the place was safe to work. So, the Operator role is something I could see myself doing," said Indiana.

“ I LIKE THE HANDS-ON SIDE OF THE OPERATOR ROLE

- Indiana, work experience participant.

Training Academy set for 2024 intake

Woodside Energy is committed to providing employment and training opportunities locally and assisting our trainees and apprentices to gain the skills needed for future careers in the sector.

Our local training programs in Karratha are integral to our operations, with more than 260 apprentices and trainees completing their training at the Woodside Training Academy since it began in 2010.

The Woodside Training Academy currently has 102 apprentices and trainees building their knowledge and experience at Karratha Gas Plant. The 2024 intake will see an additional 13 Operations Trainees, 12 Apprentices, 5 Operations Support Trainees and 4 Pre-Pathway Trainees join the Academy.

Woodside is supporting 14 school leavers and 12 mature age recruits from the Karratha area. Out of the 34 new recruits, more than a third are female and over half are Indigenous.

Operations Support Trainee and local recruit, Phil said he is looking forward to developing new skills with the role.

"I've just started my Operations Support Traineeship with Woodside. I'm excited to build a career around the oil and gas industry and understand the process from exploration to production, and learn from supportive trainers in the Academy."

If you're interested in trainee and apprenticeship pathways in 2024, visit programmed.com.au/woodside to find out more.

Murujuga Commercial Transport and Woodside Energy representatives.

New buses for North West

Woodside Energy has appointed Murujuga Commercial Transport (MCT) as its new bussing services provider.

MCT is a joint venture between Murujuga Commercial Ltd (the commercial arm of Murujuga Aboriginal Corporation) and Australian Transit Group.

Under the contract, MCT will service Woodside's Karratha onshore facilities bus transport requirements, including turnaround, onshore project, airport and heliport transfers.

The MCT contract will support local employment outcomes including two positions for Indigenous employees, including an administration traineeship and a heavy-duty diesel fitter apprenticeship in the first year of its contract. In the second year of its contract, the company will further develop the career path of an employee through an operations manager traineeship.

The contract supports Woodside bus transport requirements which aim to reduce the number of vehicles on local roads and improve community safety outcomes.

"This is an important milestone for Woodside - the agreement is the first direct Woodside contract to be signed with a Murujuga Joint Venture and supports our ongoing commitment to working with our Traditional Owner businesses," said Mike Price, Vice President Pluto Scarborough Woodside Energy.

"This contract is pivotal to the success of MCT and provides a solid foundation for the further development of the company that in turn will provide longer term benefits to the members of the Murujuga Aboriginal Corporation. We would like to also recognise the commitment from Woodside to make this a commercial reality," said Derek (Jig) Albert, Director Murujuga Commercial Transport.

Woodside announces 15-year build and lease with Yurra

Woodside (as operator of the Pluto LNG Project) has entered into a long-term agreement with local Traditional Owner business Karratha Housing Pty Ltd (a subsidiary of Yurra Pty Ltd) for the build and lease back of 20 houses in Karratha with construction planned to commence in the first quarter of 2024.

The lease of the houses is for 15 years (with two five-year extension options), making it Woodside's longest Traditional Owner business direct award, providing long-term revenue and capital assets to support the business into the future.

Under the agreement, 10 homes will be built by GBSC Yurra and another 10 will be constructed by Ngarluma Yindjibarndi Foundation Limited (NYFL) in partnership with Thomas Building. All of the houses will be maintained by Karratha Housing Pty Ltd for the duration of the leases.

The houses will be leased by Woodside for its residential workforce. Seventy-five per cent of Woodside's Burrup workforce is currently residential, up from 56% in 2018.

Woodside and Yurra have worked collaboratively to deliver a sustainable long-term agreement to support local Indigenous business and employment outcomes.

This agreement demonstrates the commitment of Woodside Energy and its fellow Pluto joint venture participants to contribute to the long-term sustainability of communities in their area of operations.

The agreement is subject to conditions precedent which are targeted to be satisfied by the end of this year.

"This is an important agreement that supports local Traditional Owner businesses and employment opportunities as well as providing additional quality housing stock to support our Karratha residential workforce," said Ryan Beccarelli, Asset Manager Pluto LNG.

"The build to lease back model also provides a long-term legacy asset to Yurra, improved housing choice for our employees and supports normalisation of the Karratha housing market in the long term," said Mr Beccarelli.

"We are very proud of the Yurra team and the partnership that has been established with Woodside over recent years. This successful housing development process builds on the existing scaffold supply contract at Karratha Gas Plant and hopefully other opportunities over time as the sophistication of the relationship grows," said Michael Woodley, Chief Executive Officer at Yindjibarndi Aboriginal Corporation and Yurra Founder.

"Having long term contracts such as this enables us to work collaboratively with Woodside Energy on mutually beneficial plans that will create real legacy for our community," said Mr Woodley.

Would you like to know what Woodside has planned on land and sea?

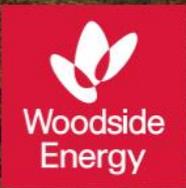

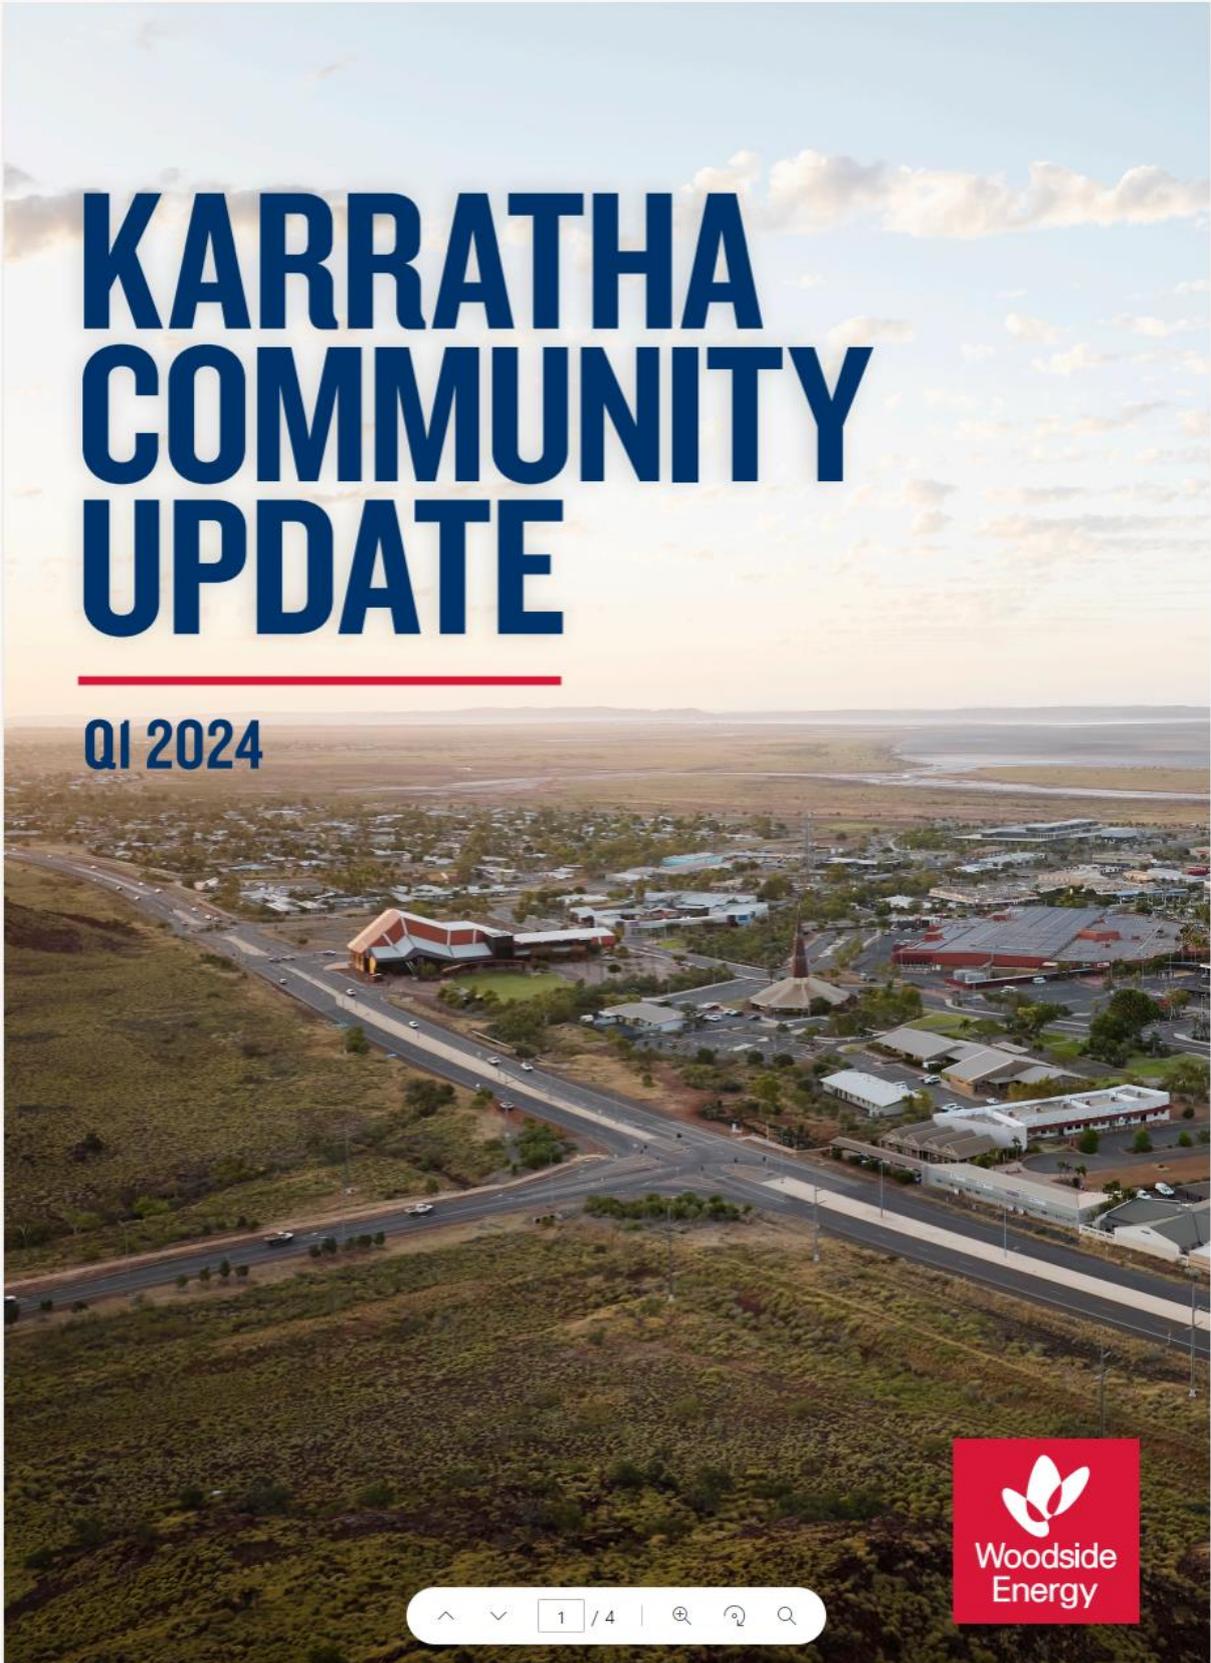

If you think your functions, interests or activities may be affected by our offshore projects, we want to hear from you. Scan the QR code and call, email or register online to receive information on our Environment Plans.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Mike Robinson
Vice President
Scarborough.

Graduating apprentices and trainees
at Red Earth Arts Precinct.

The Scarborough Energy Project will see gas from the Scarborough fields piped approximately 430 km to be processed onshore at the Pluto LNG facility, where Pluto Train 2 is currently under construction. Scarborough gas will also be processed through the existing Pluto Train 1 plant following modifications, which are expected to commence in late 2024.

The Project is now more than 55% complete¹, and in March 2024, Pluto Train 2 achieved a key milestone, the arrival of the first modules in Karratha. This year, a total of 51 modules will be delivered to Pluto for installation.

This year, Woodside also celebrates its 70th anniversary and the North West Shelf Project marks 40 years of domestic gas production and 35 years of LNG exports from Karratha. Over this period, we have provided reliable energy to Australia and the world from the community we continue to call home. Karratha is where the Woodside story began and the Scarborough Energy Project will build on the legacy of supporting the world's energy needs from this region.

We are proud of the Scarborough Energy Project and what it will deliver for the Karratha community and the nation.

Mike Robinson
Vice President Scarborough

¹ The completion percentage excludes the Pluto Train 1 modifications project.

**Celebrating success:
Woodside Training Academy
Graduation and Awards**

The Karratha Gas Plant-based Woodside Training Academy has seen more than 750 apprentices and trainees commence their learning journey with Woodside since it opened its doors in 2010.

The Academy plays an integral role in hosting those who are building their employable skills and experience, supporting the development of local workforce capabilities.

This March, Woodside welcomed 21 apprentices and trainees into roles across its Burrup assets. The Woodside Training Academy Graduation and Awards held at Red Earth Arts Precinct saw the graduating cohort celebrated for their achievements in completing their training. The event also recognised and awarded the outstanding performance of particular individuals throughout their training process. The award recipients were selected for their dedication, commitment and consistent demonstration of Woodside's values.

An additional 33 apprentices, trainees and pre-pathway trainees, including 17 school leavers from the Karratha area, have been recruited by Woodside's training partner, Programmed Training Services and are being hosted by Woodside in 2024. We're proud to have close to 100 apprentices and trainees learning their craft at the Woodside Training Academy and offshore assets this year.

Scan the QR code or click [here](#) to get to know a few of Woodside's new team members.

Woodside extends investment in education initiative

Woodside was recently joined in Karratha by the WA Minister for Education Dr. Tony Buti MLA and Kevin Michel MLA to share news of our ongoing collaboration with schools in the local community.

Together with our joint venture partners, we were pleased to announce our extended support for education in the City of Karratha after signing five-year community partnership agreements for the ongoing delivery of the Karratha and Roebourne Education Initiative (KREI).

The extension builds on more than 15 years of investment by the Woodside-operated North West Shelf Project to bridge the gap between the opportunities and resources available to students residing in the Pilbara and their metropolitan peers, and support students on their pathway to employment.

The renewed agreements with the Department of Education and St Luke's College increases funding provided for programming at local high schools and extends that support to primary schools in the community.

The funding will enable the delivery of quality educational opportunities, including ATAR revision seminars, additional STEM curriculum, student leadership programs, employment and career pathway planning, and teacher development.

Western Australia's Minister for Education, Hon Dr Tony Buti MLA, said he is thrilled support for the Initiative will continue for years to come, benefitting even more students in the Pilbara.

"It has proved to be a very successful partnership over the years helping many students achieve their best and guiding them to a range of careers," Minister Buti said.

Woodside CEO, Meg O'Neill, said the renewed agreements reflected Woodside's commitment to improving capability and capacity in its host communities.

"The Initiative has delivered strong educational outcomes and its success is a testament to what can be achieved when we work collaboratively with a student-centred approach," she said.

Baynton West Primary School Principal Lisa Ledger, WA Minister for Education Hon Dr Tony Buti MLA, Woodside Energy Corporate Affairs Manager North West Amanda Fuery, Pilbara Education Regional Office Program Coordinator Amanda Lawrence, Member for Pilbara Kevin Michel MLA and students from Baynton West Primary School.

Apprentice takes home Citizen of the Year

Meet Rhian. She's a fourth-year, Programmed Electrical Instrumentation Apprentice at Karratha Gas Plant and was recently named the City of Karratha's Citizen of the Year.

Rhian joined the Karratha Volunteer Fire and Rescue Service to meet people and make friends when she first moved to Karratha. She now holds a senior position and is on-call 24/7 with requests for jobs, including road crash rescues, house fires, HAZMAT incidents and assisting the local police.

But Rhian's contribution to the community doesn't stop at fire and rescue. Five years ago, she joined St John Ambulance as an Emergency Medical Technician volunteer.

She's attended more than 800 jobs in and around Karratha, and she also helped at the 2019-2020 Black Summer fire in QLD. Rhian also volunteers at community events like Speedway, Karratha's FeNaCING festival, Santa lolly runs, youth cadets and school visits.

"I just love giving back to the community and helping people in times of need. It's what I enjoy doing in my spare time. Some people play sport. I volunteer," said Rhian.

Electrical Instrumentation Apprentice and City of Karratha Citizen of the Year, Rhian

Indigenous Collegiate leads cargo loading

As the Woodside-operated North West Shelf Project prepares to mark 35 years of delivering LNG cargoes to our international customers, another achievement was recently recognised at Karratha Gas Plant.

In January, an LNG cargo was loaded at Karratha Gas Plant's berths by a team made up entirely of Indigenous employees.

The team consisted of nine members from Storage and Loading, including Operations Support Trainees through to Maintenance Technicians and Supervisors. The vessel was also piloted by Woodside and Australia's first Indigenous master mariner.

Woodside's Indigenous Liaisons Coach, Josh Hill, said the activity demonstrated the progress Woodside has made in creating employment opportunities for First Nation's people.

"It was inspiring to see and reflects Woodside's work to increase Indigenous recruitment and provide career support for members of the Indigenous Collegiate," he said.

Pluto Train 2 modules arriving in Karratha.

Making significant progress on the Scarborough Energy Project

The Scarborough Energy Project's Pluto Train 2 achieved a major milestone with the first three modules now safely installed on site in Karratha.

The modules, which arrived in February 2024, weigh a combined total of more than 4,000 metric tonnes, equivalent to the weight of 30 houses or 24 Boeing 787 Dreamliner aircraft. The modules were transported from Pilbara Ports to the construction site at the existing Pluto LNG facility using 21 specialised hydraulic transporters with 126 axles and 504 wheels.

Our CEO, Meg O'Neill, said the delivery of the first Pluto Train 2 module was a key milestone towards the delivery of the Scarborough Energy Project, which will help meet the growing demand for the low-cost, lower-carbon, reliable energy the world needs today and into the future.

"The safe and timely arrival of the module is a testament to the hard work and dedication of the Woodside team and our lead contractor Bechtel," she said.

The Scarborough Energy Project will contribute significantly to the Australian economy and create thousands of job opportunities during its construction phase.

The Project is already benefiting local Karratha businesses, including almost 30 Indigenous businesses that have been engaged. It is also supporting Woodside's investment in social contribution partnerships that provide positive impacts for those living in the Karratha community.

Scan the QR code or click [here](#) to see the arrival of the modules in Karratha.

Local businesses set to benefit from the Scarborough Energy Project

The Scarborough Energy Project, including Pluto Train 2 is providing opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Project has injected more than \$90 million locally and contracted with close to 70 Karratha businesses.

Local, family-owned business, ATOM is one of these businesses. ATOM was recently awarded a contract to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best, which is why their 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha.

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980, where during the same decade, we commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader of ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

Would you like to know what Woodside has planned on land and sea?

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Volunteering WA Regional Community Engagement Coordinator Kelly Nunn (left) with Woodside volunteers at Gumala Early Learning Centre.

This year, Woodside celebrates its 70th anniversary and four decades of operations in Karratha.

Over this time, we have provided the reliable energy our state needs to power homes and industry.

2024 also marks 35 years since the North West Shelf Project loaded its first liquefied natural gas (LNG) cargo. After delivering more than 6,500 cargoes from the Karratha Gas Plant and Pluto LNG, we continue to supply the gas our international customers require to continue their decarbonisation journeys.

Since 1984, Woodside and its joint venture partners have made lasting contributions to the Karratha community through valued social contribution partnerships, employment and training pathways and opportunities for local businesses. These important and positive impacts were front of mind 40 years ago, and they will be as we embark on a period of change across our North West operations.

As the North West Shelf reserves gradually decline, we are assessing our future infrastructure requirements. We have previously said that we will be retiring one LNG processing train at the Karratha Gas Plant, which could happen as early as this year. We also continue to pursue opportunities to process other resource owners' gas and are focused on remaining a world-class tolling facility, albeit one that may become smaller over time.

At the same time, we are progressing our Scarborough Energy Project and building a second train at our Pluto LNG facility. We are pursuing local new energy opportunities, including the proposed Woodside Solar facility and we are investigating a potential carbon capture and storage project to help decarbonise industry in the Pilbara.

While the North West Shelf will operate differently over the next 40 years, our commitment to the Karratha community remains strong.

Just as the North West Shelf marked itself in Australia's history books in 1984, as we start to write a new chapter in the North West, we will do so together with the Karratha community.

Breyden Lonnie
Vice President North West Shelf

WOODSIDE VOLUNTEERS MAKE VALUED CONTRIBUTIONS

At Woodside, we take pride in giving back to the communities in which we operate. One of the ways we do this is through our corporate volunteering program.

Since the launch of the program with Volunteering WA in 2010, Woodsiders have been lending a helping hand with all kinds of community projects. Most recently, volunteers have participated in a range of activities from cooking meals for The Salvation Army to building a sandpit at Gumala Early Learning Centre and assembling furniture for the redevelopment of Roebourne District High School.

Our program partner, Volunteering WA, plays a crucial role in the success of Woodside's volunteering efforts by connecting us with local organisations in need of assistance and facilitating the opportunities to participate.

Volunteering WA's Regional Community Engagement Coordinator, Kelly Nunn said the partnership has delivered some important outcomes for the local community.

"Corporate volunteering offers fantastic opportunities for community organisations to complete ongoing maintenance or projects with the help of Woodside's employees, allowing them to focus on what they do best - providing programs and events for our community," she said.

STAY UP TO DATE ON OUR CONTINUED CONTRIBUTION TO THE COMMUNITY WE CALL HOME.

WORK READINESS PROGRAM CREATES CAREER PATHWAYS

A new Work Ready Program being run as part of the Pluto Train 2 Project is supporting skills development for local participants.

The latest round of the program commenced in February 2024, with participants offered the opportunity to build employable skills and industry experience. Participants complete Construction White Card, First Aid and site induction certifications. During the program, Bechtel offered job shadow placements of participants' choice which provided invaluable insights into the industry, helping them make informed decisions about their futures.

Gaining on the job experience with Bechtel also built work-life balance skills to prepare the graduates for full-time employment.

Sixteen individuals are now ready to commence full-time employment with Bechtel on the Pluto Train 2 site as Trade Assistants. The roles vary for these dedicated participants across various disciplines, including electrical, mechanical, warehousing and concreting.

A large part of the Work Ready Program's success is the camaraderie and culture that has been fostered within the group. As their skills have grown, so have integral and supportive relationships.

Woodside will continue to provide wrap-around support for these motivated participants, identifying long-term training and development opportunities such as apprenticeships, traineeships or roles within operations and projects.

Pluto Train 2 Project Manager, Tom Feutrill said the experience is creating pathways into fulfilling careers and building capability in the local community.

"Woodside's involvement in the program is aimed at establishing employment opportunities and providing successful and meaningful careers while developing critical life skills and confidence," he said.

Working with an experienced construction contractor such as Bechtel provides a unique opportunity to be involved in a program that supports meeting the growing demand for the low-cost, lower-carbon, reliable energy the world needs today and into the future.

The Work Ready Program is run by the Ngarlyarndu Bindirri Aboriginal Corporation (NBAC), supported by the Pluto Train 2 Project and the engineering, procurement and construction contractor, Bechtel.

NBAC team members with Work Ready Program graduates.

KARRATHA CENTRAL HEALTHCARE SOLAR POWER SYSTEM INSTALL A SUCCESS

Social contribution plays an important role in building the capacity and capability of community partners to deliver positive impacts in the regions where we live and work. Together with our joint venture partners, Woodside is proud to support those who support others in the City of Karratha.

Allied health services provider, Karratha Central Healthcare is one of the valued organisations Woodside has proudly partnered with. In 2023, the Scarborough Energy Project assisted Karratha Central Healthcare to review its operations and strategies developed to support the not-for-profit's long-term sustainability. The review identified a reduction in operating costs as a key opportunity, with a particular focus on power expenditure.

The Pluto Train 2 Project was pleased to provide funding alongside the City of Karratha for the installation of a solar power system at Karratha Central Healthcare's premises. The system, which was installed by local business Coastal Electrical and Data, will go a long way in helping Karratha Central Healthcare to reduce its power costs.

Karratha Central Healthcare's Operations Manager, Kingsley Murray said the solar power system would help the organisation allocate resources into programs for the local community.

"The solar system has already made a notable difference to our operating costs; on a good day the system is supplying up to 95% of our power needs, and in overcast and lowlight conditions about 35-40%.

"These savings can then be used for our not-for-profit and charitable programs, it's a win for us and a win for our community," he said.

Karratha Central Healthcare clinic.

ACCOMMODATION INITIATIVE ACKNOWLEDGED AT EXCELLENCE AWARDS

In May 2024, the City of Karratha Service Worker Accommodation Initiative was recognised as a finalist in the Community Development category of the Australian Energy Producers' Excellence Awards.

The Service Worker Accommodation Initiative is a partnership between the City of Karratha, Woodside and industry that aims to provide additional affordable rental options for people working in critical service worker sectors in Karratha, like childcare and allied health.

Launched in 2021, the initiative established a pool of housing managed by the City of Karratha and Woodside, offering affordable rental options for service workers. Woodside and joint venture partners at Pluto LNG and the North West Shelf Project are pleased to now contribute 30 houses to the accommodation pool.

If you would like to find out more about the Service Worker Accommodation Initiative, visit the [City of Karratha website](#).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

BUILDING MOMENTUM WITH LOCAL HOUSING CONTRACT

We understand that housing is an important issue for the Karratha community. And that's why Woodside is working closely with the City of Karratha and other stakeholders to help overcome this challenge.

Some initiatives established to support housing in Karratha include contributing 30 properties to the City of Karratha's Service Worker Accommodation Initiative, the incremental divestment of older housing stock as well as making a small number of properties available for lease on the open market.

Late last year, the Pluto LNG Project also entered into a long-term agreement with Traditional Owner business Karratha Housing Pty Ltd (a subsidiary of Yurra Pty Ltd) for the build and lease back of 20 houses in Karratha.

Under the agreement, 10 homes are being built by GBSC Yurra and another 10 will be constructed by Ngarluma Yindjibarndi Foundation Limited (NYFL) in partnership with Thomas Building.

Work is now well underway on the construction of these new homes, which will be leased back to Woodside for a period of 15 years and are targeted to be completed by the end of 2025.

All of the houses will be maintained by Karratha Housing Pty Ltd as part of the lease agreement that will provide long-term revenue and capital assets to support the Yurra business into the future.

Michael Woodley, Chief Executive Officer at Yindjibarndi Aboriginal Corporation and Yurra Founder said he is very proud of the Yurra team and the partnership that has been established with Woodside over recent years.

"Having long-term contracts such as this enables us to work collaboratively with Woodside Energy on mutually beneficial plans that will create real legacy for our community," he said.

Woodside is also investigating potential options to build up to 60 additional new homes in Karratha to address its future workforce needs.

WOODSIDE JOINS THE FUN AT RED EARTH ARTS FESTIVAL

Woodside and some of our joint venture partners were pleased to support the City of Karratha's Red Earth Arts Festival (REAF) which featured over 70 performances, workshops, and experiences over four days in May 2024.

This year saw the introduction of REAF at The Quarter which offered a suite of free, family-friendly activities, activating and transforming the area into a hub of artistic and cultural activity.

The Plants of the Pilbara installation was a highlight, a pop-up flower dome sculpture invited viewers to experience the magic of Western Australia's native flora on a larger-than-life scale. Artists from Yinjaa-Barni Art Group painted and displayed art on site, welcoming the public to engage.

Locals were spoilt for dinner choices as part of Karratha City Eats, picnicking on the Quarter grass while enjoying an open-air performance featuring captivating handpan artist Sam Maher and Indigenous songwriter Frank Yamma, crossing cultural and musical boundaries.

The Community Development partnership between the City of Karratha and Woodside and our joint venture partners was extended last year, with support from the Scarborough Energy Project. This supports the continued provision of important and much-loved community events like REAFs as well as liveability initiatives and significant City projects.

City of Karratha Mayor Daniel Scott said working together was an integral part of delivering high quality community programs and well-attended community events.

"This support is incredibly important, assisting City operations in the delivery of exceptional events, programming and projects for our residents to enjoy," he said.

Woodside Energy recognises Aboriginal and Torres Strait Islander peoples as Australia's first peoples.

We acknowledge the unique connection of the Traditional Custodians to land, waters and the environment where we operate in the City of Karratha. We extend this recognition and respect to First Nations peoples and communities around the world.

Earlier this year, I relocated to Karratha and commenced as Asset Manager of the North West Shelf Project's Karratha Gas Plant.

It was a real pleasure to join Woodside's local team at a time when we were celebrating 70 years of Woodside and 40 years of operations right here in the North West.

Karratha is where our story began in Western Australia and Woodside has a proud history of contribution to the place we continue to call home. This year's milestones gave me insight into the longstanding partnerships and strong relationships we've developed with the community over this time.

The North West Shelf Project has contributed more than \$300 million within the City of Karratha since our operations began. This investment in the local community and economy continues as we support partnerships and businesses like the ones you will read about in this update.

We are entering a period of change at the Karratha Gas Plant as we undertake work to prepare for the retirement of one of our LNG processing trains later this year. This is an important step in the journey ahead as we navigate the gradual decline of the North West Shelf reserves and continue to pursue opportunities to process other resource owners' gas.

As we manage the future of the North West Shelf alongside our Pluto LNG operations and the growth of the Scarborough Energy Project, we will continue to engage and collaborate with those we work with, partner with and live alongside. We look forward to engaging and involving the local community in the future of Woodside in Karratha, working together to create opportunities in the place we call home.

Derek Paulgaard
Asset Manager North West Shelf Onshore.

Celebration sundowner

On the evening of 18 September, as the sun set over Karratha, we gathered with our local community partners to celebrate both Woodside's 70th year as a proud Australian company and 40 years of operations in the North West.

Our sundowner event, held at the Red Earth Arts Precinct, provided an opportunity to share our appreciation for the local community which has supported Woodside over its decades of operations in Karratha.

Woodside Executive Vice President and Chief Operating Officer Liz Wescott joined us at the event and expressed her gratitude for the role those in attendance continue to play in shaping Karratha into a thriving and connected community.

Liz also announced a one-off large grant round, supported by Woodside and its Joint Venture participants in the North West Shelf Project and the Scarborough Energy Project's Pluto Train 2.

With applications open throughout October, the Woodside Anniversary Grants will provide funding of up to \$100,000 to community groups and not-for-profit organisations in the City of Karratha to support health, liveability, sustainability and environmental outcomes.

Thank you to all who joined us in marking such a special occasion.

Stay up to date on our continued contribution to the local community [Woodside North West](#)

Winyama awarded construction contract

This year, Woodside awarded its largest ever Traditional Owner construction contract to Karratha company Winyama Contracting Group (Winyama). The contract was awarded for the delivery of civil works for the Pluto Train 1 Modifications Project. Winyama will work alongside Kellogg Brown & Root Pty Ltd., the project's engineering, procurement and construction management contractor.

Winyama is a 100% Karratha-owned and 50% Indigenous-owned provider of civil, construction and mining services and renewable asset hire that prioritises spend with local and Indigenous suppliers. The name Winyama, meaning Sea Eagle in the Ngarluma language, symbolises the company's mission to provide economic opportunities and prosperity for local Aboriginal people. It is a bird that has held significance through the female line of Ngarluma majority owner Arthur Ramirez's family for generations.

Woodside Pluto Expansion Project Manager Paul Baker said Woodside was thrilled to be partnering with Winyama for the delivery of the civil works for the Pluto Train 1 Modifications Project and supporting the delivery of local business and employment outcomes for the Pilbara.

"By engaging a local Indigenous-led and owned contractor, we're securing the delivery of an important service while contributing to the local economy. The contract will also support the growth of Winyama, increasing the company's capacity to deliver services to other industries across the Pilbara," he said.

Arthur Ramirez, Winyama Chairman and Indigenous Business Manager, said the new supply agreement with Woodside was a major milestone for Winyama.

"This project will allow our team to grow by about another 65 new employees, with the majority being residential employees.

"Being engaged on the Pluto Train 1 Modifications Project will help fulfil Winyama Contracting Group's vision to increase its footprint in the region, which will enable us to increase our focus on outcomes for Aboriginal people through our reflection Reconciliation Action Plan.

"We are really proud that Woodside has chosen a local Karratha-based Indigenous business to execute a major portion of one of their largest current projects, showing they live their values and support local and Indigenous business growth in the region," he said.

Winyama, KBR and Woodside representatives at Pluto LNG.

Healing comes from Country

Roebourne-based start-up Warridahs of the Ngurra (WOTN) aims to build awareness and respect for traditional bush medicine and share cultural knowledge. Meaning 'Women of Country' in Ngarluma language, WOTN was founded in 2023 by Ngarluma and Banjima woman, Kylie Mowarin.

Kylie's years of dedication to exploring the uses and benefits of native plants have seen her experiment with the ingredients in teas and ointments. The healing properties of these plants have recently been reinforced by modern scientific research conducted in partnership with Griffith University.

"We are working with Griffith University, testing two traditional plants for their antimicrobial, antioxidant and anti-inflammatory properties. So far, we are seeing very positive results," said Kylie.

With support from Woodside, Kylie recently held a bush medicine workshop on Murujuga alongside local Elders, representatives from Murujuga Aboriginal Corporation, Griffith University and a leading archaeologist.

Students from Roebourne District High School were among the attendees at the workshop at Hearson's Cove. Kylie spoke with students about the scientific attributes of traditional medicines and their gathering methods.

"It's important to pass on our knowledge from our ancestors and for our young ones to understand our cultural connections to Country and how it can help with healing our bodies and minds," said Kylie.

Liz Ritchie, Roebourne District High School Principal, said the students' involvement in the workshop was part of Connected Learning, a program developed with support from the Karratha and Roebourne Education Initiative to link classroom curriculum with cultural knowledge and community.

"We are deeply committed to delivering education that is culturally respectful and meaningful. This work can only be achieved when we

have the guidance, support and expertise of our families, community advisors, and Elders.

"Participating in the Warridahs of the Ngurra workshops enables our young people to demonstrate practical applications of the learning that occurs in class and on-Country throughout the term.

"The day was an authentic example of how curriculum delivery in a culturally responsive and connected way leads to deep two-way learning of skills and knowledge," she said.

Looking ahead, WOTN plans to create a healing hub in Roebourne, which aims to balance education, wellbeing, and a sustainable business by building upon a range of products Kylie has been developing with native plants.

"We also plan to provide on-Country tours, which will provide economic prosperity for our people through employment and educating women in how to run a business," said Kylie.

Kylie Mowarin with students from Roebourne District High School at Hearson's Cove.

Stay up to date on our continued contribution to the local community  Woodside North West

KREI supports student revision seminars

For more than 15 years, Woodside and its Joint Venture participants have contributed to programs aimed at enhancing academic achievements among students in the City of Karratha. Since the establishment of the Karratha and Roebourne Education Initiative (KREI), a key focus has been to bridge the gaps in opportunities available to local students and their peers in metropolitan areas.

During the recent school holidays, the KREI supported a group of Year 12 students from St Luke's College to travel to Perth for a 10-day educational experience. The local students participated in a series of intensive revision seminars, designed to prepare them for their WACE examinations. With small class sizes and personalised help from specialist teachers, students were able to delve into the course material and discuss valuable exam strategies.

While in Perth, the students dedicated time outside the seminars to learn about life at university. They visited several campuses where they engaged in pre-arranged faculty workshops and met with student ambassadors to gain valuable insights into the university environment, academic workload, course offerings and entry pathways.

The students also took the opportunity to explore the university accommodation colleges, helping them to envision their potential future living arrangements and supporting their readiness for their upcoming transition to higher education.

St Luke's College Upper School Pathways Coordinator Carol Potter said this year's revision seminars were an outstanding success.

"We are very fortunate to have the support of the Karratha and Roebourne Education funding, which made both the revision seminars and university visits possible. Our students are now feeling more prepared ahead of their final examinations and transition into tertiary education, away from their family to a big city," she said.

Supporting local students from St Luke's College and Karratha Senior High School to travel to Perth for revision seminars is just one example of Woodside and its Joint Venture participants' contribution to schools in the City of Karratha. Earlier this year, Woodside announced the renewal of the KREI, with five-year community partnership agreements. The renewal builds on a strong history of collaboration and provides continued investment to help local high school and primary school students thrive.

Scarborough trunkline installation a success

This October, Woodside marked an important milestone as it announced the completion of the Scarborough Energy Project's trunkline installation. Once operational, the 433 km trunkline will transport gas from the offshore Scarborough field to the onshore Pluto LNG facility for processing.

Reaching depths of up to 1400 m, the trunkline took around 12 months to install and had numerous teams and contractors contributing to the successful work program.

Woodside Executive Vice President and Chief Operating Officer Australia Liz Westcott said the trunkline was a critical piece of infrastructure for the Scarborough Energy Project.

"The completion of installation is a significant accomplishment, reflecting the dedication of all involved in achieving this project milestone.

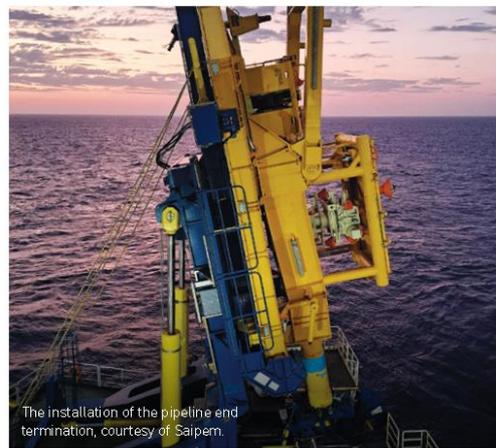

"With the last components of the trunkline in place, the focus will be maintained on safely executing the remaining project scopes to support the targeted first Scarborough LNG cargo in 2026," she said.

Following the successful installation of the trunkline, work will now commence on the pre-commissioning in preparation for hook-up of the subsea infrastructure.

The Scarborough Energy Project was 73% complete in October¹, and is set to help meet demand for the reliable energy the world needs today and into the future. This includes up to 225 terajoules a day of domestic gas supply into the Western Australian market from operations in Karratha.

These volumes will be processed by the recently delivered Pluto Train 2 domestic gas module. The important piece of infrastructure, which arrived in Karratha and was installed in early September, weighs over 1500 tonnes and will connect to the domestic gas export compressor. The domestic gas module is one of the 51 modules that is targeted to be delivered to site by the end of this year.

¹ Excluding Pluto Train 1 modifications.

LET'S TALK

MARCH 2024
OUR PLANS,
YOUR SAY

WELCOME

Welcome to the first edition of Let's Talk – a platform to stay connected on Woodside Energy's Australian happenings and the stories behind our activities and operations. Dive in and explore to learn more about what Woodside has planned on land and sea; when, where and how we're engaging on our activities; and how you can provide feedback to us. If you or your organisation have functions, interests, or activities that may be affected by our planned activities, we want to hear from you.

THE RUNDOWN

In December 2023, The Scarborough Energy Project received secondary Commonwealth environmental approvals for key offshore work scopes. The project is now well underway (over 50% complete) with the commencement of relevant offshore construction activities.

Woodside also received environmental approvals in November and December 2023 enabling in-field works for decommissioning activities at the Griffin (65 km northwest of Onslow) and Stybarrow fields (51 km to the northwest of the North West Cape).

As part of the decommissioning of the Enfield field, Woodside received environmental approvals in July 2023 for the removal of the Nganhurra riser turret mooring (RTM) from the permit area off the coast of Exmouth.

The Nganhurra RTM is a metal structure, about 83 metres long, on which Woodside previously moored an oil producing facility.

The RTM allowed the facility to rotate with weather while moored and also brought subsea production lines from the Enfield oil field to a Floating Production Storage and Offloading facility. Enfield ceased production in November 2018 and the RTM was removed as part of decommissioning activities at the field, which also included the permanent plugging and abandonment of 18 former production wells.

The decommissioning concept for the Nganhurra RTM was matured over more than two years of careful planning and detailed engineering, undertaken in conjunction with a range of specialist contractors.

To stay updated, subscribe for future editions click [here](#) or visit www.woodside.com/what-we-do/consultation-activities

The RTM is now in its final stages of deconstruction at the AMC, expected to be completed by April 2024. More than 95% of the Nganhurra RTM will be recycled or re-used, supporting local employment and contracting opportunities.

[Click here to view the safe removal of Nganhurra Riser Turret Mooring](#)

“In late 2023, Woodside safely and successfully completed activities in the Environment Plan, including lifting the RTM in one piece out of the water and placing it on a barge for transportation to the Australian Marine Complex (AMC) at Henderson.”

Join the conversation at woodside.com/sustainability/consultation-activities

LET'S TALK

TALKING POINT

Woodside safely completes marine survey

A marine seismic survey conducted by Woodside Energy in December 2023 applied controls to avoid interaction with whales as part of the environment planning process.

Once the Environment Plan for the activity was accepted by the Regulator, Woodside conducted the survey from 2 December to 31 December 2023.

The survey was undertaken with a range of standard and project-specific controls designed to reduce interactions with marine fauna including a dedicated spotter vessel with trained Marine Fauna Observers operating during daylight hours and the use of a Passive Acoustic Monitoring system to detect the presence of vocalising whales.

A shut down zone was in place for whales detected within 2 km of the acoustic source and for sea turtles spotted within 100 m of the acoustic source.

There were also specific controls in place relating to whale species of potential cultural significance, such as pygmy blue whales and humpback whales.

This included an extended 'limits of visibility' shutdown zone if these whale species or large unidentified whales were detected by observers, within their limits of vision.

Weekly project update reports were published on the Woodside website during the survey to provide information on cetacean or marine turtle observations. These reports confirmed that marine fauna continued to move through the area during the survey. They also confirmed that no pygmy blue whale or sea turtles were sighted during the survey.

COMMUNITY SPOTLIGHT

The Scarborough Energy Project

The Scarborough Energy Project will provide a boost to the WA economy and communities, growing jobs and bringing work through the supply chain, with a focus on the Pilbara region.

A second processing train, Pluto Train 2, is being constructed within the existing Pluto LNG facility located near Karratha in the Pilbara Region of Western Australia and is currently set to process about five million tonnes per annum of Scarborough gas. The project is providing various opportunities for local businesses in Karratha. To date, with collaboration from Woodside's construction partner Bechtel, the Scarborough Energy Project has injected more than \$90 million locally and contracted over 65 Karratha businesses.

Local business spotlight: ATOM

We're spotlighting local, family-owned business: ATOM. The company name stands for Aqua Terra Oil & Mineral. ATOM has recently been contracted to supply industrial consumables, safety supplies and personal protective equipment products for the Pluto Train 2 construction.

ATOM believes locals serve locals best which is why its 22 employees supporting the project are all local to Karratha. Nearly half of the team are female and there is one Indigenous employee.

The contract has supported ATOM to expand its workforce increasing local employment opportunities.

Terry Klowss, Bechtel's Site Manager for Pluto Train 2 said, "ATOM's 100% local workforce helps us ensure our partnerships are benefiting local people - this is something that is very important to us at Bechtel."

“Long-term, it's estimated Pluto Train 2 will sustain around 600 roles, once the project is operational, across Western Australia, including 70 residential positions in Karratha.”

Like Woodside, ATOM is a nationwide company, with roots in Western Australia. ATOM opened its Karratha branch in 1980. In the same decade, Woodside commissioned the North West Shelf Project.

ATOM also shares Woodside's commitment to invest where we operate, building meaningful relationships and supporting our local community.

Phil Donders, National Team Leader ATOM said, "At ATOM, we believe in investing in the success and sustainability of the communities we operate within. This is why ATOM welcomed the opportunity to support the Pluto Train 2 Project through the supply of industrial consumables and PPE."

With access to more than one million products, ATOM is one of Australia's fastest growing industrial and safety supply business.

LET'S TALK

EDITION 2 | APRIL 2024

OUR PLANS,
YOUR SAY

THE RUNDOWN

On 1 March 2024, Woodside received Commonwealth environmental acceptance for the Griffin Field Decommissioning (End State) Environment Plan, supporting the staged decommissioning program for the Griffin oil and gas field, located off the Western Australian (WA) coast 65 km north-west of Onslow and 94 km north-east of Exmouth.

During late 2023, Woodside received acceptance for other Griffin decommissioning activities, with several activities already safely and successfully completed.

WHAT IS DECOMMISSIONING?

Decommissioning involves managing infrastructure that is no longer required in a timely, safe, and culturally and environmentally responsible manner.

GRIFFIN FIELD - FAST FACTS

- Field discovered 1989
- Production period 1994 – 2009
- Gas produced for the WA domestic gas market - 62 trillion cubic feet
- Barrels of oil produced - 167 million

Griffin gas export pipeline removed safely, offshore from Onslow

Woodside recently completed staged decommissioning activities under the Griffin Gas Export Pipeline (GEP) Decommissioning Environment Plan, which was accepted on 30 November 2023. Woodside removed ~25 km of the pipeline offshore within Commonwealth waters at depths ranging from 52 m to 127 m, approximately 41 km north-west of Onslow.

During production, the 62 km long and 30 cm in diameter Griffin GEP transported gas from the field to the former onshore Griffin gas export facility south of Onslow for use by WA businesses and households.

The decommissioning of the pipeline's WA State waters section and related onshore infrastructure requires separate state approvals. Woodside will engage local stakeholders to understand their views on potential decommissioning options for this pipeline portion.

Woodside is now undertaking a post-removal assessment of the Commonwealth section of the Griffin pipeline to inform future decommissioning activities in the region. Woodside will continue to assess decommissioning options case-by-case, guided by science, consultation, and legislative requirements.

NINGALOO OUTLOOK SYMPOSIUM

To increase the ecological understanding of the Ningaloo Coast World Heritage Area's deep and shallow reefs and shark and turtle populations, Woodside and CSIRO have partnered on the Ningaloo Outlook Marine Research Partnership. For Ningaloo Outlook (Phase 1 and 2) over A\$12million has been invested in scientific research to further develop new knowledge about the Ningaloo Coast World Heritage Area. The initial Phase 1 was in partnership with BHP, now part of the merged Woodside Energy.

The 300 km long Ningaloo Reef is the largest fringing coral reef on the west coast of any continent. With shallow lagoons and deeper waters offshore, the reef is home to a variety of marine life and diverse habitats.

The sixth **Ningaloo Outlook Symposium** recently enabled marine park managers, the scientific community and interested stakeholders to discuss the partnership's 2023 research findings.

COMMUNITY SPOTLIGHT

Support for Murujuga

Woodside is proud to be a signatory of Murujuga Aboriginal Corporation's (MAC) Statement of Intent as part of our unwavering support for World Heritage Listing over the Murujuga Cultural Landscape, and our ongoing support for the protection and management of Murujuga's outstanding heritage values. We are committed to and support the protection of Aboriginal cultural heritage and continue to work closely with Traditional Custodians in the areas we operate.

Woodside was one of 11 signatories to the MAC Statement of Intent at a ceremony held at Hearson Cove on Murujuga Country. Other parties to the Statement of Intent included MAC (as the representative body for five Traditional Custodian groups, being Ngarluma, Yaburara, Yindjibarndi, Mardudhunera and Wong-Goo-tt-oo peoples), the Government (Premier, Environment Minister and Aboriginal Affairs Minister), Commonwealth Government (Environment Minister), Rio Tinto, Pardaman, Yara Pilbara, Horizon Power and the City of Karratha.

The Statement of Intent sets out the guiding principles for MAC, government and industry parties to work together to negotiate a cooperative Strategic Head Agreement in relation to the management, protection, and conservation of the Murujuga Cultural Landscape in support of the World Heritage nomination of this landscape.

Woodside takes its responsibility to protect and manage cultural heritage seriously, including through taking reasonable and practical measures across our operations and growth projects to minimise our emissions.

TALKING POINT

Supporting Science at Scott Reef

Out on the edge of Australia's continental shelf sits the north and south reefs and sandy islet of Scott Reef.

Located about 425 km north-west of Broome, to reach Scott Reef a boat would need to travel from the closest point on the WA coast for 270 km across the Indian Ocean.

Scott Reef and other reefs in the Pilbara and Kimberley were considered "poorly understood" by the Australian Institute of Marine Science (AIMS) three decades ago. However, over the last 30 years, more than 50 expeditions by numerous marine scientists have led to extensive research and understanding of Scott Reef.

In 1993, Woodside supported AIMS' extensive survey of coral and fish communities. This led to the establishment of a long-term monitoring program in 1994, which continues today. The Scott Reef coral reef monitoring program is globally one of the few continuous programs providing insight into the health and condition of resident corals and fish.

Woodside partnered with the WA Museum in 1998, contributing to research on oceanography and the biology and ecology of the resident species. The partnership has enabled long-term research to understand the reef's health and how it changes through time. WA Museum scientists visited Scott Reef in 1984 to carry out extensive surveys to sample fauna. Then, in 2006

returned with Woodside's support and catalogued 1,897 marine life species, including 262 new discoveries.

The WA Museum partnership included the Woodside Collection Project, focused on the marine life of the Dampier Archipelago and Kimberley. Over 55,000 specimens were collected and 700 new species were identified as part of the large Australian biodiversity project.

The wide-ranging Scott Reef research projects have revealed important insights into a complex ecosystem and have delivered a wealth of knowledge to support Woodside's long-term environmental planning and management.

Woodside is consulting on the Browse State Wellhead Decommissioning Environment Plan (EP), involving decommissioning options for three historical wellheads in WA State waters, approximately 430 km north of Broome.

[View the consultation information sheet.](#)

In preparing the EP, Woodside's intent is to minimise environmental and social impacts and is seeking stakeholder input to inform Woodside's development of the EP.

LET'S TALK

EMBA'S AND OIL SPILL MODELLING

Let's talk about EMBA's – what they are, and just as importantly, what they're not. When Woodside talks to community members about our activities, we're often asked about the areas marked on our consultation material referred to as the "Environment that May Be Affected" (EMBA).

EMBA's are an important part of preparing the environmental and emergency response strategies that underpin the planning for our offshore activities.

They are produced as part of our extensive oil spill modelling and response planning. They represent the largest spatial area where a petroleum activity could potentially have a direct or indirect environmental impact.

Understanding the EMBA

The EMBA represents the largest, merged area of many potential paths that a highly unlikely oil spill could travel based on predictions around weather, currents, and other conditions at the time. An EMBA is not a predicted impact of a single oil spill, which would be much smaller, and the extent and path of the impact would only be known at the time it occurred.

This means the area the EMBA covers includes locations where planned activities and unplanned events could potentially occur.

Oil Spill Modelling

While offshore oil spills are extremely rare, it is important oil and gas companies are still ready to prepare for and respond to them. There are several different approaches to oil spill modelling, and Woodside uses these in combination for information about where an oil spill could move, how quickly, and the possible effect of using methods to manage a potential oil spill.

To calculate this, our oil spill modelling involves running many (sometimes hundreds) computer simulations of the same scenario to predict the behaviour of oil under different conditions.

Each simulation is subject to a range of variables, including weather and sea conditions, tides, and times of year. In the model, the oil responds to these conditions and behaves differently in each individual simulation.

Every individual simulation is overlaid on top of the next, allowing statistical analysis of the possible area the oil spill

could travel in the highly unlikely event that a spill occurs. The smooth boundary drawn around all these computer simulations of the spill creates the EMBA.

The models process the information based on an assumption there is no emergency response, which would of course not be the case in a real emergency.

Oil spill modelling helps us develop our oil spill emergency management plans and assists in preparedness and response planning. Woodside conducts regular emergency response training exercises involving multiple facets of the business so our teams are ready to respond should they ever need to.

The many simulations used to underpin our planning are estimates and predictions only. It is not possible to exactly predict the outcome until the exact weather and other conditions are known if an oil spill event occurs.

Emergency Management Plans

The emergency management plan informed by the oil spill modelling is submitted to both State and Commonwealth regulators for approval along with all other planning documents for our activities.

Woodside, in more than 60 years, has not experienced any significant uncontrolled release of oil or gas to the environment as a result of loss of well control.

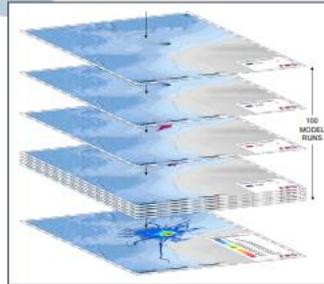

Figure 1: The first stage in EMBA creation is running computer simulations (model runs). Figure 1 shows the model runs for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

Nevertheless, our extensive planning continues, drawing on international good practice, so the impacts and risks associated with our activities are detailed, evaluated and managed to a level that is as low as reasonably practicable.

We are committed to continuous improvement and share our expertise with our peers and take the lessons learned from other operators to incorporate into our management processes.

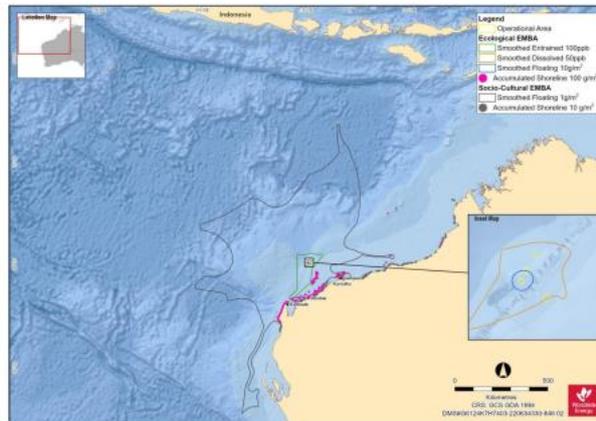

Figure 2: The EMBA is a culmination of all the computer simulations with a smooth boundary. Figure 2 shows the final EMBA for the WA-34-L Pyxis Drilling and Subsea Installation Environment Plan.

LET'S TALK

EDITION 3 | JULY 2024

OUR PLANS,
YOUR SAY

THE RUNDOWN

Woodside Energy Chief Executive Officer and Managing Director Meg O'Neill has said gas producers are ready to work with government to deliver new supplies critical to the energy transition as she highlighted the importance of removing barriers to investment.

On 21 May 2024, welcoming the release in May of the Federal Government's Future Gas Strategy, Ms O'Neill said it provided a clear statement about the critical role gas plays in Australia's economy and will continue to play in the future.

A key point the Strategy makes is that new demand of gas will be needed to meet demand during the energy transition.

Addressing an Australian Energy Producers (AEP) Conference, Ms O'Neill, who is also AEP Chair, said:

"I am pleased the Government is talking about solutions. The industry is ready to roll up our sleeves and work with the Commonwealth to achieve a solution to a shortage which is supply."

"We welcome acknowledgment in the Strategy that we'll need the right regulatory settings to do so."

"Indeed, the success of the Strategy will be measured by whether it delivers policy reforms that address the barriers to new gas supply and investment."

She said the recent passage of Federal legislation relating to the Petroleum Resource Rent Tax (PRRT) had provided certainty.

The changes bring forward PRRT payments from LNG projects. However, in order to facilitate the PRRT payment amendments, the government held off passing other amendments designed to clarify ambiguity around consultation requirements for environmental approvals.

WAFIC SEAFOOD AWARDS

Endeavour Foods General Manager Sophie Sharland's empowerment of future leaders in the seafood industry was recognised in early May when she received the Young Achievers Award, sponsored by Woodside Energy, at the 2024 Western Australian Seafood Industry Awards.

This event, hosted biennially by the Western Australian Fishing Industry Council (WAFIC), acknowledges the innovations and achievements within the WA seafood industry.

The Young Achiever Award is one of 14 categories and focuses on individuals who demonstrate positive impacts to the seafood industry.

Sophie is a shining example of the growing number of talented young women working in the commercial seafood industry.

"This helps us make future investment decisions. But it has come at the expense of addressing the ambiguity in the consultation process for offshore approvals," Ms O'Neill said.

"Leaving this issue unresolved makes the timely development of new energy supply more difficult."

"The industry stands ready to work with the Government to progress these necessary reforms as soon as possible," she said.

To stay updated, subscribe for future editions at woodside.com/what-we-do/consultation-activities

COMMUNITY SPOTLIGHT

Karratha Signs

The Scarborough Energy Project will provide a boost to the WA economy and communities, growing jobs and bringing work through the supply chain.

Karratha Signs is one of more than 75 local Karratha businesses who have been working on our Scarborough Energy Project.

Started by Jed and Suzy Griffiths in 1999 in the third bedroom of their home, they have grown to be an award-winning enterprise that operates from premises in Karratha and Port Hedland.

Karratha Signs has designed and manufactured an array of site entry, safety and wayfinding signage for the Pluto Train 2 Project and has been vendors with Woodside since 2022.

Working with Karratha Signs provides Woodside with premium products suited to the Pilbara. The company invests in top-of-the-range equipment to ensure a professional, high-quality result every time.

Using local businesses which understand the areas in which Woodside operates ensures the best possible standards and expertise on the job.

Jed Griffiths said there was a sense of community among the employees on the Pluto Train 2 project.

"We work closely with many different people throughout the company to provide locally made signage that suits their individual requirements. Every member we've spoken to has been open-minded to new signage ideas and eager to assist in the process," Jed said.

"The Pluto Train 2 contract has enabled us to open our doors to more clients – both big and small. We've been able to demonstrate the depth of our professionalism to other high-end customers and ultimately expand our client base."

Click [here](#) to learn more about Karratha Signs and their work on the Scarborough Energy Project.

TALKING POINT

National Energy Technician Training Scheme

A talk at Exmouth High School on the National Energy Technician Training Scheme (NETTS) inspired Taj, an Exmouth local, to apply for an Electrical Instrumentation apprenticeship.

NETTS is a collaboration between Programmed and several energy organisations including Woodside, to develop skilled workers for the future. It's part of Woodside's commitment to local recruitment and providing opportunities to the communities in which we operate.

The first 12 months of the four-year apprenticeship is based in a structured learning environment to provide apprentices with the skills, knowledge and experience required to transition into an onshore or offshore role. Apprentices are taught a variety of life skills designed to prepare them for the transition from school to the workplace.

Taj spent 12 months training at the Australian Centre of Energy and Processing Training and is now offshore at the Woodside-operated Ngujima-Yin, Floating Production Storage and Offloading oil production facility, located 50 km northwest of Exmouth. Taj will work offshore swings and continue his TAFE courses in Perth.

Taj is one of twelve young people currently being hosted by the Woodside NETTS apprenticeship program which has a 98% apprentice retention rate, and in line with Woodside's commitment to inclusion and diversity, First Nations apprentices account for more than 25% of the intake and around 33% are female.

"I've started learning about basic electrical work and it's been interesting. I'm enjoying it. I'm keen to expand my knowledge and ultimately, finish this apprenticeship and hopefully work for Woodside for a decent amount of time and get back up North." Said Taj, NETTS apprentice.

This story demonstrates just one of the ways our operations and projects continue to enable us to make a difference, both in this community and across the state.

Read our [2023 North West Australia Community Development Report](#) to learn more.

LET'S TALK

INFRASTRUCTURE GETS SECOND LIFE

Woodside's largest ever decommissioning campaign to date is currently in full swing with a range of activities completed or planned across the Enfield, Echo Yodel, Stybarrow and Griffin fields off the coast of Western Australia and activities planned at the Minerva field in Victoria.

Involving the removal of an estimated 35,000 tonnes of infrastructure including more than 350 km of pipe, flowlines and umbilicals and a range of other equipment, approximately 95% is planned to be recycled or reused.

Woodside has engaged a range of contractors (including international contractors) that bring significant subsea experience, technical know-how, and that use specialist offshore vessels for safe and reliable execution of campaign activities. Specialist vessels include mobile offshore drilling units required for well plug and abandonment activities, light construction vessels for removal of subsea structures and pipe, and heavy lift vessels to remove large structures including riser turret moorings.

Woodside is working with a variety of Australian businesses, many with experience supporting defence, mining and refinery disposal, which are assisting the business to complete oil and gas decommissioning activities. Companies such as McMahon, RPA, C.D. Dodd and Birdon are playing leading roles in onshore disposal scopes, adapting established processes and pathways to support the unique requirements of the oil and gas industry.

Because of the specific needs of the campaign, new onshore facilities are being developed by sub-contractors to support and complement existing facilities.

Some large infrastructure, such as the Nganhurra Riser Turret Mooring removed in late 2023, is typically taken to the Australian Marine Complex at Henderson to be cleaned and deconstructed in preparation for recycling and reuse. Infrastructure such as pipe, flexibles and umbilicals are unloaded from offshore up to three times a week at facilities near Onslow including the Port of Ashburton.

The infrastructure is then taken to a facility established by sub-contractors C.D. Dodd and RPA at the nearby Pilbara Regional Waste Management Facility where it is decontaminated and cleaned before it's transported to another C.D. Dodd facility in Karratha for deconstruction and sorting into its constituent parts in preparation for recycling.

Woodside recently hosted Shire of Ashburton President Audra Smith, Cr Brie Healy, Cr Rosanne Kapor, Cr Linton Rumble, and Deputy CEO Jo Sangster at the decommissioning facility near Onslow. With many local businesses supporting decommissioning activities, the site visit was a great opportunity to inform stakeholders about the campaign's progress and the importance of working with the Shire to its success.

"I am immensely proud of the progress we have witnessed during our recent site visit. Woodside's decommissioning campaign, one of the largest in Australia, reinforces our commitment to responsible resource management and environmental stewardship in the Shire of Ashburton.

The efforts of the lead contractor, TechnipFMC, in removing over 35,000 tonnes of offshore infrastructure, and the work of RPA and C.D. Dodd in recycling these materials, highlight the impressive collaboration and innovation driving this project. This initiative not only supports our goal of sustainable development but also contributes significantly to the local economy. As we move towards completing this campaign by the end of 2025, I am confident that our continued dedication will produce outstanding results for both the industry and the community." - Shire of Ashburton President Audra Smith.

Shire of Ashburton President Audra Smith, Cr Brie Healy, Cr Rosanne Kapor, Cr Linton Rumble, and Deputy CEO Jo Sangster visiting the decommissioning facility near Onslow.

Let's Talk

Our Plans, Your Say

Edition 4 | November 2024

The rundown

North West Shelf Visitors Centre welcomes Wanparta

The Ngarla people at the North West Shelf Visitors Centre.

We acknowledge the unique connection that First Nations communities have to land, waters and the environment and seek to consult them in relation to our operations and proposed projects.

As part of our ongoing consultation with First Nations groups, Woodside Energy recently hosted 13 Traditional Owners from Ngarla country at the North West Shelf Visitors Centre, so they could see our operations first hand.

The Ngarla people are the Traditional Owners of an area of land east of Port Hedland that covers the De Grey and Pardoo pastoral stations in Western Australia's North West.

Woodside Manager First Nations Engagements, Michael Roe said that Wanparta Aboriginal Corporation as the Prescribed Body Corporate for the Ngarla people, had been identified as a

relevant person to consult with on previously submitted and present Environment Plans.

"The Ngarla people were interested in learning more about the world of gas, and as part of the consultation process were invited to Karratha for a visit to the North West Shelf Visitors Centre overlooking the Karratha Gas Plant."

"This provided an occasion to build trust and understanding whilst providing the opportunity to provide feedback on our activities. In this case we were consulting on the five-yearly review of the Pluto Facility Operations Environment Plan," said Michael.

An accepted Environment Plan is required in order for Woodside to carry out activities. Meaningful conversations with First Nations people are documented and make up part of an Environment Plan

Munro's Mack 10k Fishing Competition

Munro's Mack10k 2024 Fishing Competition, held in Onslow from 24-25 August 2024, saw hundreds of anglers and fishing enthusiasts from across Australia enter into the running for a chance to reel in \$10,000.

The event doubles up as a research initiative, spearheaded by Recfishwest's Fishing for Science program and supported by Woodside Energy.

Working with the Department of Primary Industries and Regional Development, the Recfishwest science team collected biological samples from mackerel caught by competitors, providing insight into the health of the local fish population.

Read more about the annual competition, hosted by the Ashburton Angler Fishing Club by visiting: recfishwest.org.au

submitted to regulatory bodies for assessment ahead of continued operation. Wanparta Aboriginal Corporation Chairperson, Mary-Jo Coppin said, "the trip was really informative with good consultation, well organised and we felt very welcome at the facility."

A key element of Woodside's consultation efforts is our willingness to be flexible and adaptable to suit the audience in our overall efforts to avoid or minimise potential impacts from our operations.

Community spotlight

Wangarri Crane and Equipment Hire

Murujuga Commercial Limited's (MCL) first Pilbara business, Wangarri Crane and Equipment Hire (Wangarri), has been awarded the contract for supply and maintenance of cranes and forklifts for the Pluto Train 2 Project, the onshore component of the Scarborough Energy Project.

Established by MCL as a joint venture with Boddington's Hire, Wangarri provides a range of lifting equipment that includes cranes, forklift trucks, reach stackers and telehandlers for hire to the resource sector and other industrial clients across the Pilbara.

One of five commercial ventures managed by MCL, Wangarri forms a portfolio of businesses and commercial ventures that aim to provide a strong and economic future for its Murujuga members.

Wangarri means "Coming to Life" in Yindjibarndi, which represents MCL's journey as it moves from a start-up phase toward building business streams that align to the strategic goals and objectives of the Murujuga Aboriginal Corporation.

Bechtel, the appointed contractor for the Pluto Train 2 project, delivers engineering, procurement, construction and commissioning, has awarded contracts to local Indigenous businesses, such as Wangarri to deliver a variety of work scopes.

"We are very happy to be working with Wangarri on Pluto Train 2. We deeply value this local contract and appreciate their professionalism and dedication to providing safe and high-quality cranes and forklifts," said Bechtel Pluto Train 2 site manager Terry Klowss.

Jig Albert, MCL Managing Director said the contract with Bechtel on Pluto Train 2 had been an enormous stepping stone for their business.

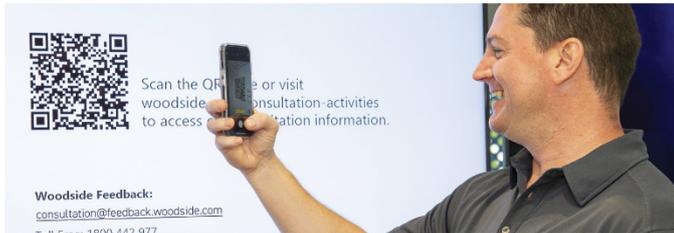

"We have been contracted to provide a range of the smaller cranes for the project. Mostly this consists of Franna pick and carry cranes, however we are also providing a 160 tonne all-terrain crane and a small three tonne Maeda spider crane, as well as the ongoing maintenance of these machines," said Jig Albert.

"It has given our business the confidence to invest in our own equipment which will drive equity for the business and in turn provide a direct return to Murujuga Aboriginal Corporation members."

The importance of consultation

"Like safety, consultation continues to be a core focus for NOPSEMA," Sue McCarrey, CEO, NOPSEMA (*Source: The Regulator, 2024, Issue 2*)

Consultation is a key component of Woodside's environmental planning and can involve a two-way process with relevant persons who wish to provide feedback on operations or proposed offshore activities.

Consultation enables Woodside to confirm current measures or identify additional measures, if any, that could be taken to lessen or avoid potential adverse effects of the proposed activity on the environment. It is a key requirement of Australia's offshore environmental management framework and Environment Regulations.

An appropriate consultation approach which meets regulatory requirements enables

Regulators such as the National Offshore Petroleum Safety and Environmental Management Authority (NOPSEMA) for Commonwealth activities, or the Department of Energy, Mines, Industry Regulation and Safety for state activities, to assess and accept Environment Plans (EP).

Woodside is committed to open and transparent consultation and does this by providing clear information on proposed activities, assessing and responding to objections or claims about the activity, and providing a reasonable period of time and opportunity for a relevant person to provide feedback.

If required due to the nature and scale of a proposed activity, Woodside undertakes additional consultation activities over a longer period to ensure a reasonable period

of time period and sufficient information has been provided. This allows for an informed assessment of the possible consequences of the activity on stakeholders' (referred to as a 'relevant person' under Commonwealth regulations) functions, interests or activities.

Subscribe to stay up-to-date

On Woodside's website we enable members of the public to subscribe to receive information about EPs as it becomes available.

Subscribing is a great way to stay informed about updates and important information related to Woodside's activities. It also provides the public with timely notifications about new projects, environmental initiatives, community engagements, and consultation information sheets for proposed activities.

Woodside has updated its consultation email address to consultation@feedback.woodside.com

To subscribe to Woodside's consultation activities [click here](#) and enter your details on the page.

Community conversations

Woodside consults local communities at local events. If you see our friendly team out-and-about, please come and chat to us about our operations and projects.

Recently our team engaged with community members at pop-up Environment Plan information sessions in Karratha and Exmouth and participated in the Dampier Beachside Markets. Our teams also recently met with stakeholders in Broome, Onslow and Roebourne.

We also meet quarterly with Community Liaison Groups in Karratha and Exmouth where we communicate updates and consult with community members on a range of relevant activities.

If you're interested in what Woodside has planned on land and sea, come and chat to our friendly team and follow the Woodside North West Facebook page for updates including our Karratha Community Update newsletter.

Stay up to date on our continued contribution to the community we call home.

Milestone celebrations at FeNaCING Festival

The City of Karratha recently hosted the FeNaCING Festival, bringing together community and celebrating the region's key industries – iron (Fe), sodium chloride, commonly known as salt (NaCl), and natural gas (NG).

Woodside Energy, along with its joint venture partners, proudly supported the event, with a pavilion that featured Woodside's 70th anniversary as a company and 40th year of safe and reliable operations in the North West.

Woodside CEO Meg O'Neill made a special appearance at the festival, meeting local community members and helping with a range of giveaways on offer.

Meg praised the event organisers who successfully celebrated the community spirit that makes Karratha a great place to live and work.

"We know that such a significant milestone could only be achieved with the support of our people and the Karratha community," she said. "I was really thrilled to have the opportunity to join our team in the Woodside marquee as they engaged with the community about issues that matter to them and answered questions about our operations and growth projects."

Many attendees who visited the Woodside marquee expressed curiosity about Woodside's Environmental Plans and other topics including Carbon Capture and Storage, the Scarborough Energy Project and the development of Browse.

Woodside's active participation in events like the FeNaCING Festival supports our consultation approach to engage the community on our current business activities, including opportunity to provide feedback on our Environment Plans.

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing LNG projects in Australia. Today, we aim to thrive through the global energy transition with a low cost, lower carbon, profitable, resilient and diversified portfolio.

We are committed to consulting and ensuring feedback from relevant persons is considered and used to inform the development of an Environment Plan for the Scarborough Offshore Facility and Trunkline Operations.

Our activities

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities.

Located around 374 km off the coast of Dampier in Western Australia, work is planned to start in the second half of 2025. We are seeking input from relevant persons whose functions, interests or activities may be affected by the proposed operations.

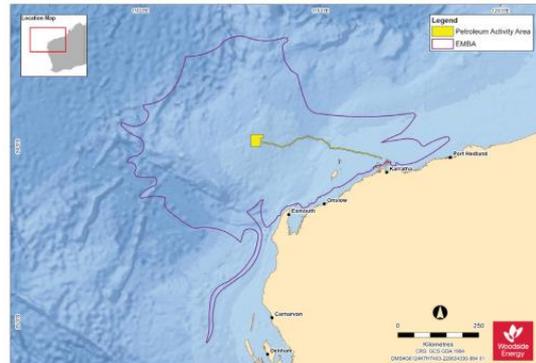

The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by a highly unlikely release of marine diesel to the environment as a result of damage to the production facility or vessel collision.

The EMBA represents the merged area of many possible paths a hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time.

We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the proposed activity, we would like to hear from you by Monday, 11 September 2023 to identify as a relevant person.

Bitter Labor row risks party split, PM intervention

EXCLUSIVE

BY TONY HERRICK
AND ANITA GRANTON

Anthony Albanese is set to be dragged into a bitter power struggle that threatens to split the mainstream Labor and divide its ranks over the market his Labor government.

Former Labor leader David Byrne – banished from caucus in 2013 in a wake of a scandal – is seeking party protection for the market.

He has a support base among voters and politicians who are split on the right and some within the left, including much of the cabinet.

Opposition Leader Anthony Albanese – successful in opening Mr Byrne from caucus – remains firmly opposed to his return, with suggestions he would split a fractured government.

With the transition of power in administration, power selection decisions will fall on the prime minister's hands.

Mr Byrne's return is seen as a high-stakes gamble.

Under the transition of power, Mr Byrne will consider a caucus vote to re-join the party.

Mr Byrne's return is seen as a high-stakes gamble.

AUSTRALIA v FRANCE SATURDAY 3PM LIVE ON 7|7+ 15

From right: Caitlin Foord with Matildas teammates Mackenzie Arnold and Sam Kerr, with her dog and pictured as a youngster with older sister Jamie.

Kerr knows there's no 'T' in team

JACKSON BARRETT

Her every move has been under the microscope for the past couple of weeks but Sam Kerr knows her teammates have been doing just fine without her.

The superstar, who made her first appearance in this World Cup with a 15-minute cameo against Denmark, was quick to praise the rest of the Matildas.

"The girls smashed it," said the 29-year-old, whose calf injury before the first game had left fans fearing they wouldn't see her in an Australia jersey.

"They've done unbelievable this week and to put in that performance after a big game against Canada, it's amazing."

And Kerr, who will looking to start in the quarterfinal against France on Saturday, said the team had been feeding off the Australian public's enthusiasm.

"I think the girls are just doing what we've always done and the crowd gets us over the line," she said.

"I think we're embracing it, the Australian public has been amazing, on the street, making us coffee — whoever it is — they have all got behind us, we have felt the love. I'm embracing it, we're loving it and hopefully we can keep pushing on."

the World Cup, Foord was Australia's best player, scoring seven times in eight games and forming a potent partnership with Kerr.

"When I'm just not thinking too much and just play the game and play it off instinct is when I'm at my best," she said.

Foord and Kerr go way back, having played together in the US with Sky Blue FC, but also at A-League Women level for Sydney FC and Perth Glory.

Foord's chemistry with Kerr is apparent, and they share a seemingly psychic connection.

With Australia on the verge of a shock exit after two group games at the World Cup, coach Tony Gustavsson decided to shift Foord from the centre back on to her favoured left wing against Canada and was rewarded with a 4-0 win. "My job as a national team coach is not about over-coaching players and trying to keep them in a small frame," Gustavsson said. "She should have a big frame and paint whatever pictures she wants."

Then came the Denmark game and the goal against the run of play — but it was a full stop, rather than an exclamation point on Foord's career up to now — after all, she has been doing this sort of thing for some time.

NEWS 7

Truck fatality involved cattle

PHIL HICKEY

Police have released new information surrounding a shocking truck crash in the Pilbara on Thursday. The crash happened about 10pm

on Thursday on the North West Coastal Highway, approximately 26km south of the Pannawonica Road intersection in Fortescue.

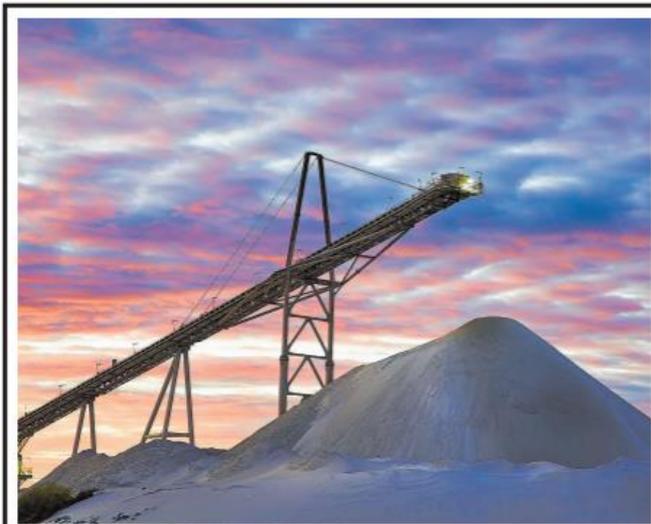

Police say the truck, which was towing a trailer containing a concrete pizza oven, was being driven by a 23-year-old man.

The Isuzu truck hit two cows that were crossing the highway before the vehicle veered off the road and rolled several times.

The 23-year-old man suffered critical injuries and died at the scene. Major crash officers have been sent to the remote area to carry out an examination of the scene and

are appealing for any witnesses to come forward.

Dash-cam or mobile phone vision relating to the crash can be uploaded directly to investigators via tinyurl.com/4vta9azt.

Pilbara Minerals' Pilgangoora plant. Picture: Pilbara Minerals

Pilbara Minerals puts plan for expansion on the table

DANIELLE LE MESSURIER

Pilbara Minerals could expand production capacity at Pilgangoora beyond one million tonnes a year after revealing a substantial 36 per cent increase in mineral resources at the lithium project, in WA's Pilbara region.

Shares in Pilbara were up 4 per cent, trading at \$5.19, about an hour before chief executive Dale Henderson was due to take the stage on the first day of Kalgoorlie's Diggers & Dealers Mining Forum.

The mineral resource has increased by 109 million tonnes to 413.8Mt, Pilbara said. It represents a 36 per cent increase in total resource tonnage compared to June 30 last year, now containing 4.75Mt of lithium oxide grading at 1.15 per cent.

Pilbara said the update would underpin an ore reserve update slated to be released in the September quarter.

The company said it "may provide an opportunity to further expand production capacity beyond P1000" — its project to expand lithium-rich spodumene output to 1Mt a year.

"This significant resource upgrade reinforces our... Pilgangoora operation as one of the largest hard rock lithium deposits globally," Mr Henderson said.

"The upgraded mineral resource is consistent with our strategy to grow our operating base and therefore maximise value by achieving the full potential from our world class operation."

"We have added 109Mt of additional mineral resource at a direct exploration cost of only 13 cents per tonne of additional resource — an outstanding result."

The announcement comes less than a week after Pilbara revealed it had given the go-ahead to a \$105m demonstration plant at Pilgangoora with Calix to produce a higher value lithium phosphate product.

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

For more than 35 years, Woodside has been developing LNG projects in Australia. Today, we aim to thrive through the global energy transition with a low cost, lower carbon, profitable, resilient and diversified portfolio.

We are committed to consulting and ensuring feedback from relevant persons is considered and used to inform the development of an Environment Plan for the Scarborough Offshore Facility and Trunkline Operations.

Our activities

Woodside plans to install a Floating Production Unit (FPU) and complete subsequent hook-up and commissioning activities, before start-up and operations for the Scarborough project. Gas from the FPU will be transferred through the gas export trunkline to the Pluto LNG Plant. Other activities include surveys to monitor the reservoir, as well as inspection, maintenance, monitoring and repair activities.

Located around 374 km off the coast of Dampier in Western Australia, work is planned to start in the second half of 2025. We are seeking input from relevant persons whose functions, interests or activities may be affected by the proposed operations.

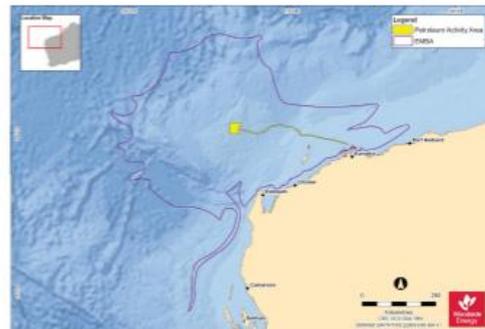

The environment that may be affected (EMBA)

The EMBA is the largest area where activities could potentially have a direct or indirect impact. The broadest extent of the EMBA takes into consideration planned and unplanned activities, and for this EP, is determined by a highly unlikely release of marine diesel to the environment as a result of loss of damage to the production facility or vessel collision.

The EMBA represents the merged area of many possible paths a hydrocarbon release could travel depending on the weather and ocean conditions at the time of the release. This means in the highly unlikely event a hydrocarbon release does occur, the whole EMBA will not be affected at one time.

We want to hear from you

If you are an individual, organisation or community group and believe your functions, interests or activities may be affected by the proposed activity, we would like to hear from you by Monday, 11 September 2023 to identify as a relevant person.

Want to know more or provide input?

West End fire accused in custody

JESSICA MORONEY

A Geraldton man accused of deliberately setting fire to the Geraldton Housing Office — which left a damage bill of about \$400,000 to the 138-year-old West End building — remains behind bars after his first court appearance.

Anthony John Kruger, 51, of Beachlands, faced Geraldton Magistrates Court on Friday morning, less than 24 hours after he is alleged to have caused shock and panic in the city.

Police say Mr Kruger walked into the Department of Communities building on Marine Terrace on Thursday just before 2pm with a jerry can of fuel, which he splashed on the front counter and set alight.

Office staff quickly evacuated and there were no other people in the building at the time.

A new high-tech helicopter, coincidentally in Geraldton for community and school engagement events, tracked Mr Kruger's vehicle in Moonyoonooka, leading officers on the ground to his location, where he was arrested about 4.15pm on Thursday.

Fire crews extinguished the blaze within half an hour, containing it to a few rooms on the ground floor.

Mr Kruger made a brief appearance in court after spending the night in custody. He was not required to enter any pleas and no bail application was made.

He is charged with criminal damage by fire and intent to harm, and unlawfully doing an act as a result of which the life, health and safety of a person was or was likely to be endangered.

His case was adjourned until September 7.

A Department of Fire and Emergency Services spokesperson on Friday said the estimated damage caused to the building was about \$400,000.

A Department of Communities spokesperson on Friday said the department would seek advice on operational plans while the Geraldton office was closed.

The day before, they said the incident had left staff in "shock and distress" and they were being provided with immediate support to "prioritise their wellbeing".

Quiet Life's worth lauding

FLAVOUR REPORT
DEREK GOFORTH

For the time being, we've had enough of takeaways, snacks and baked goods, so this time we decided to head out for a filling lunch.

Quiet Life's pork belly miso ramen came highly recommended by friends and colleagues. After all, who could say no to twice-cooked pork belly, 12-hour pork broth, mild-spiced miso, soft soy-boiled egg, sweet corn, spring onion, ramen noodles, and seasonal veg? Not us on this occasion, that's for sure.

Along with the ramen, we also opted for a slow-cooked pork bagel with slaw, pickles, and tangy-sweet barbecue sauce. And, of course, we couldn't go to Quiet Life Specialty Coffee without grabbing a couple of capps. At just under \$50 for everything, we felt happy with the value, given the service and standard.

Quiet Life would not be out of place on Fremantle's cappuccino strip or one of Melbourne's trendy corners in the city centre. Despite its hip and groovy (sorry, but I am nearly 50) atmosphere, it attracts everyone from families and youngsters to older folk out for a lunchtime walk.

Even on this relatively quiet Sunday afternoon, the place was still busy with many different people from the community. We were pleased that parking was not an issue, and there were plenty of places to sit, inside and out.

This was my first experience with ramen, so I didn't really have a frame

Pork belly miso ramen and pork bagel from Quiet Life in Geraldton. Pictures: Derek Goforth

of reference. But I must say it certainly packed a flavour punch. The broth itself had a deep, complex flavour, with just enough heat to awaken the taste buds. The noodles and the veg were fresh and tasty. But the star of the dish had to be the pork – tender and flavoursome, it melted with every forkful, offering a sublime blend of sweetness and spice. Admittedly, the price might have

seemed steep, but the quality of the ingredients made it a feast worth savouring.

To be honest, the bagel was even better, packed to the brim with flavour and so many textures that played off each other. The pork, again, was amazing, but the highlight had to be the bagel itself – crispy, fresh, and moist – everything you'd want in a good quality bagel.

We have had Quiet Life's coffees before and have never been disappointed – and we were not let down here. Smooth, mellow, and just enough foam.

Would I recommend Quiet Life? Without a doubt. They have carved out an interesting niche for themselves and pretty much guarantee a tasty experience, no matter what you order.

Quiet Life on Marine Terrace.

Nabil Bazzi. Picture: WA Courts

Convicted drug tsar has a 'win'

PHIL HICKEY

Convicted WA drug kingpin Nabil Bazzi has had a minor court victory after an attempt to pervert the course of justice charge brought against him was recently dropped.

Bazzi was jailed last year for more than two decades for being the head of a major Perth drug network that was smashed by the organised crime squad following a 10-month investigation.

The 44-year-old former Port Hedland pizza parlour owner turned Soils Ain't Soils franchisee was jailed for 21 years after being found guilty of three serious drugs offences following a three-week District Court trial.

Following his trial, The West Australian newspaper exclusively revealed how Bazzi was also facing an outstanding charge of attempting to pervert the course of justice.

As reported by The West at the time, Bazzi was charged with the offence about six weeks before his drugs trial began. Police were set to allege he personally delivered bags containing almost \$100,000 in cash to the family of a man who ultimately turned State witness against Bazzi during the

A seized Mercedes-Benz owned by Nabil Bazzi.

District Court trial. It was going to be alleged the money was an attempt by Bazzi — who was on bail at the time — to convince the witness to give evidence that would be "beneficial" to Bazzi at trial.

But Bazzi — who had pleaded not guilty to the charge — will no longer have to go to trial over the matter. Court records show the charge was discontinued several months ago.

It's understood it was dropped by State prosecutors on public interest grounds.

Sensational details about Bazzi's drug empire emerged when one of his couriers turned State witness and agreed to testify against his former boss.

The trial was told how Bazzi was first arrested by police during a traffic stop on Mounts Bay Road in Crawley in September 2019. The court heard

how a search of his car uncovered a Coles bag containing \$114,950 as well as two Ciphp phones.

Bazzi later told police the cash was from his Soils Ain't Soils business and that the phones weren't his, claiming he was going to sell them for \$250 each.

It wasn't until a few months later, following the arrest of two of Bazzi's couriers in relation to the seizure of almost 7kg of meth in East Cannington, that the organised crime squad slapped Bazzi with more serious drugs charges.

That also prompted police to seize millions of dollars in assets belonging to Bazzi, including a 2017 AMG Mercedes-Benz and two luxury properties.

Bazzi is in the process of appealing his lengthy jail sentence and his conviction.

Koori Mail – 9 August 2023

news

On the road to the Cape

Queensland Governor makes a trip to visit remote communities

By CHRISTINE HOWES

It would be fair to say the majority of visitors to Cape York – especially the more high profile ones – fly in and fly out. But Queensland Governor, the Honourable Dr Jeannette Young AC PSM, recently travelled to several communities for a wide range of reasons, by car.

Weipa, Aurukun, Napranum, Mapoon and Lockhart River were all on her itinerary.

"It was just gorgeous," she told the Koori Mail.

"It's an absolutely perfect part of Queensland, it's amazing, the scenery going across to Lockhart River and then coming over that Iron Range, it's just spectacular, and the beaches."

She said the drive was well-worth it.

"You miss so much if you don't drive," she said.

"It does take longer, but I had the time, thank goodness, and so I could see so much."

"I think it's amazing how people live in Lockhart River and then drive across to Weipa to do

HACC workers Bessie Hobson, Eleanor Short and Noella Clarke with the Governor in Lockhart River.

their shopping.

"It's not the best of roads, but it's pretty well maintained and you can see the council's doing a lot of work there – it was a really good trip to do."

Lockhart River Mayor Wayne Butcher said Dr Young officially opened the community's new secondary school premises.

"Whilst at the school, she visited a few classes and read books to the students," he said.

"She then had lunch with the community at the social club where we spoke about the importance of investing in educating our community about sensible drinking and building an environment to cater into the future."

"She also visited the new subdivision site and she expressed her interest in home ownership."

Dr Young said she met regularly with the premier and ministers of the state, and was able to pass on what she had found.

"I like to always try and catch

Queensland Governor Dr Jeannette Young and Lockhart River Mayor Wayne Butcher.

up with the ministers who are champions of the community. For instance, I spoke to Minister Grace about Napranum, she's their champion," she said.

She said she particularly enjoyed visiting the schools, art centres and health clinics, and meeting the Elders and Land and Sea Rangers.

SCARBOROUGH OFFSHORE FACILITY AND TRUNKLINE OPERATIONS ENVIRONMENT PLAN

National Indigenous Times – 29 August 2023

nt.com.au SPORT N T 23

Walk the talk for AFL star

DAVID PRESTIPINO

This year's 20th Long Walk will bear extra significance for Indigenous AFL trailblazer Michael Long as he strives to unite the nation behind the Voice to Parliament.

The Essendon great will again walk the 660km journey from Melbourne to Canberra, as he first did 20 years ago when setting off to speak with then-prime minister John Howard after the Aboriginal and Torres Strait Islander Commission (ATSIC) was abolished.

This year's event aligns the Voice referendum campaign and is expected to take the Australian football hall-of-famer 30 to 40 days.

The 63-year-old is re-creating the first journey, stopping in regional communities along the way to discuss how the upcoming referendum could band the country together

before reaching Parliament House for meetings with Prime Minister Anthony Albanese and Opposition Leader Peter Dutton.

In its 20 years The Long Walk has transformed into an annual charity event, where people join Long in the trek from Melbourne's Birrarung Marr to the MCG before the annual Essendon-Richmond Dream-time game during AFL Indigenous Round.

Long said football had played a crucial role in improving the lives of Indigenous people in Australia, and the two-time premiership player believed the Voice can help change lives and bring Australians together for good.

"What I have learnt from footy, I have seen things transformed. I've seen sport change lives," he said.

"One of the greatest advocates in (former Collingwood

Anthony Albanese will meet with former AFL star Michael Long after the Long Walk. Picture: AAP

player) Damian Monkhorst, he has become a great advocate for change."

During a 1995 match between Collingwood and Essendon, Monkhorst used racist language during a tussle with Long.

Long spoke candidly about the referendum and the opportunities it posed, inviting all

Australians to join him along the journey to Canberra. The first leg began at Melbourne Town Hall on Sunday finishing later at the Bombers' Windy Hill home ground in Kessendon.

"I want all Australians to come walk with me," Long said.

"I want all the sporting codes — Australian rules, soccer, netball, basketball, rugby, swim-

ming, tennis — to come walk with me. I want corporate Australia to come walk with me.

"I want community groups to come walk with me, and I want Aboriginal organisations to come walk with me."

More information on The Long Walk and its legs and destinations is available at thelongwalk.com.au.

3.6 Scarborough Energy Project – Integrated Information Campaign

SCARBOROUGH ENERGY PROJECT

Production is targeted to start-up in 2026. The Scarborough Energy Project will provide thousands of jobs and supply reliable energy to Australia and the world.

- LARGE ENOUGH TO POWER MORE THAN 8.5 MILLION HOMES AROUND THE WORLD FOR MORE THAN 30 YEARS
- SCARBOROUGH ENERGY PROJECT IS ALREADY UNDER CONSTRUCTION
- WILL BOOST AUSTRALIA'S ECONOMY BY BILLIONS OF DOLLARS
- WILL PAY OVER \$10 BILLION IN TAXES SUPPORTING THE ESSENTIAL SERVICES AUSTRALIANS RELY ON, INCLUDING HOSPITALS AND SCHOOLS
- MORE GAS FOR WA HELPS KEEP DOWNWARD PRESSURE ON THE COST OF LIVING
- START OF PRODUCTION TARGETED FOR 2025
- WILL DELIVER GAS AT A TIME WHEN WA IS PREDICTED TO FACE SUPPLY SHORTAGES
- BACKS UP RENEWABLES AS WA'S COAL FIRED POWER STATIONS ARE SHUT DOWN
- IT'S A NATURAL GAS FIELD LOCATED 375 KM OFFSHORE FROM KARRATHA
- DELIVERS MORE GAS TO THE WA MARKET
- GAS WILL BE PROCESSED AT WOODSIDE'S EXISTING SITE NEAR KARRATHA
- WILL PROVIDE THE GAS NEEDED TO PRODUCE FERTILISER THAT OUR FARMERS USE TO GROW FOOD
- THE SCARBOROUGH GAS FIELD CONTAINS LESS THAN 0.1% CARBON DIOXIDE
- SECURES SAFE AND RELIABLE ENERGY FOR WEST AUSTRALIAN FAMILIES AND BUSINESSES
- WILL PAY TAX EQUAL TO THE COST OF BUILDING A NEW FIONA STANLEY HOSPITAL EVERY THREE YEARS
- DELIVERING OPPORTUNITIES FOR FIRST NATIONS JOBS AND BUSINESSES IN WA
- MORE OPPORTUNITIES FOR APPRENTICES AND TRAINEES
- PRIMARY ENVIRONMENTAL APPROVALS GRANTED THROUGH AUSTRALIA'S STRINGENT REGULATORY SYSTEM
- AWARDED MORE THAN \$3.6 BILLION IN CONTRACTS TO LOCAL WA BUSINESSES
- SUPPORTS THE ENERGY TRANSITION AND SHIFT TO RENEWABLES
- CONTRIBUTION OF \$30 MILLION TO THE CONSTRUCTION TRAINING FUND, SUPPORTING THOUSANDS OF APPRENTICES
- CREATING MORE THAN 3,200 CONSTRUCTION JOBS AND ALMOST 600 JOBS WHEN OPERATING
- TO FIND OUT MORE VISIT WWW.WOODSIDE.COM

*BASED ON AVERAGE ANNUAL AUSTRALIAN HOUSEHOLD ENERGY USE. **AUSTRALIAN ENERGY STATISTICS ENERGY SPENDING 2020 REPORT. MARCH 2020

WOODSIDE Energy

WHAT IS THE SCARBOROUGH ENERGY PROJECT AND WHY IS IT GOOD FOR WA?

Production is targeted to start-up in 2026. The Scarborough Energy Project will provide thousands of jobs and supply reliable energy to Australia and the world.

- AWARDED MORE THAN \$3.6 BILLION IN CONTRACTS TO LOCAL WA BUSINESSES
- ENGAGING MORE THAN 60 KARRATHA BUSINESSES TOGETHER WITH OUR PARTNERS AND CONTRACTORS
- WILL CREATE AROUND 70 KARRATHA RESIDENTIAL JOBS DURING OPERATIONS

3.7 Community Engagement

Community engagement conducted by Woodside is captured in the following tables.

3.7.1 Onslow Passion of the Pilbara Festival

Location	Onslow – Passion of the Pilbara festival
Date	18 August 2023
Description of the consultation	Members of Woodside’s Corporate Affairs team engaged with the community to discuss proposed EP Plan activities. The stand included Consultation Information Sheets for a number of EPs including the Scarborough Offshore Facility and Trunkline (Operations) EP.
Advertising and invitations	Ahead of the event, Woodside advertised the session in a story on the Woodside North West Facebook page on 17 August 2023 to assist individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities.
Estimated number of individuals consulted	Woodside estimates approximately 100 people visited the Woodside stand.
Summary of Feedback, Objection or Claim	
<p>Community discussions centred on:</p> <ul style="list-style-type: none"> • Update of Woodside activities and employment opportunities • General Scarborough project update and operations. A Scarborough operations map and Floating Production Unit images were available (see below). There was general community interest and support for the project. Discussions included: <ul style="list-style-type: none"> – Support for the project and dissatisfaction about protester activity against the project – Number of jobs during construction – Location of activities (noting activity was not off the coast of Onslow). 	

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- General interest on the Browse project included:
 - Awareness that Carbon Capture Storage concept is feasible and has been included in the development concept.
- In relation to the Scarborough Project, one individual asked what Woodside was doing to protect the environment.
- Community members were encouraged to provide their views on Woodside's activities through the Woodside feedback form on the Woodside website, or to subscribe to Woodside updates.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no objections or claims.

The community information sessions were part of Woodside's broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

Melski's murals brought to life

DANIEL SPENCE

Tambrey Primary School has successfully brought renowned artist Mel McVee, popularly known as Melski, and her sister Tash to create three vibrant murals around the school premises.

With funding support from corporate entities like Woodside, FMG, and Pilbara Real Estate, as well as community contributions from Jetwave Marine, Santos, Yara, and QUBE Energy, the school raised more than \$20,000 to bring this art project to life.

Home to nearly 700 students, with a third of them having Indigenous backgrounds, school Deputy Principal Toni Whitbread and visual arts specialist Felicity Collins said the mission of the project was to celebrate diversity and create a sense of belonging by reflecting students' culture through artwork.

The school's mission was to celebrate diversity and create a profound sense of belonging by reflecting the students' culture through artwork.

What particularly attracted the school to Mel's artwork was its unique paint-by-numbers style, which allowed students to actively participate in the mural creation process.

Eager to engage the entire school community, the school declared a special "paint week," during which more than 650 students enthusiastically joined hands to contribute to the murals.

Throughout the week, students not only participated in the creation of the murals but also enjoyed immersive art sessions in the park, indulging in painting, drawing, collaging, and chalk drawings under the enchanting winter weather.

The entire experience served to nurture the students' creativity and appreciation for art, leaving a lasting impact on their artistic aspirations.

Ms Collins said she was thrilled to see the whole school coming together for a week of collaborative art.

"We were delighted to see students immersed in a week of collaborative art," she said.

"Students not only contributed to the creation of the mural but also with their involvement in the immersive art in the park session — which included painting, drawing, collaging and chalk drawings — while all outside soaking up the winter weather."

The artist was brought to the school to create murals.

Beyond supplying affordable, reliable, ever-cleaner energy — we believe we have an important role to play in helping local communities build a vibrant and prosperous future.

We do this by investing in programs which contribute to areas of health and wellbeing, education, environment and building thriving communities.

We're calling for applications for the Chevron Community Spirit Fund, offering donations of up to \$15,000 to not-for-profit organisations operating in the following Northwest locations:

- Carnarvon
- Coral Bay
- Dampier
- Denham
- Exmouth
- Karratha
- Onslow
- Port Hedland
- Roebourne
- Shark Bay

Applications are open now until 13 August 2023. To apply, head to australia.chevron.com

3.7.5 Pilbara Summit 2023

Activity	Pilbara Summit 2023
Location	Karratha
Date	10 – 11 October 20203
Description of the consultation	<p>Woodside hosted a stand at Pilbara Summit 2023, a sold-out conference established to raise the profile of issues and opportunities in the Pilbara region. The event provides the opportunity for the Pilbara region’s industry, investors, businesses, community, and government representatives to connect.</p> <p>The stand was staffed by members from Woodside’s Corporate Affairs, Supply Chain and New Energy teams.</p> <p>Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website.</p> <p>Woodside also made available printed Consultation Information Sheets on the Scarborough Offshore Facility and Trunkline (Operations) EP.</p>
Advertising and invitations	<p>No advertising was undertaken.</p> <p>The Vice President for Pluto and Scarborough delivered a speech during the conference, which highlighted the important role the Pilbara region will continue to play in the energy transition. Attendees were invited to find out more about Woodside’s projects, developments or EPs by speaking to team members on the Woodside conference stand or to visit Woodside’s town office based in The Quarter.</p>
Estimated number of individuals / organisations consulted	Over 600 people attended the event over 2 days.

Summary of Feedback, Objection or Claim

Approximately 25 conversations occurred around new energy opportunities and plans, local content, social investment, Chevron’s involvement in NWSP, Onslow operations and the Scarborough Project and approvals in general.

No feedback was received regarding Woodside’s EPs.

Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response

This session forms part of Woodside’s broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

3.7.6 Carnarvon and Denham Roadshow

Location	Carnarvon and Denham - Community Consultation Roadshow
Date	16 and 17 October 2023
Description of the consultation	<p>Woodside hosted community consultation sessions in Carnarvon and Denham to enable community members to understand Woodside’s proposed activities and how it may affect them, ask questions, and provide their feedback.</p> <p>Woodside Project, Corporate Affairs and Environment representatives were available to answer questions.</p> <p>A number of EP Consultation Information Sheets were available to attendees including the Scarborough Offshore Facility and Trunkline (Operations) EP Consultation Information Sheet.</p>
Advertising and invitations	<p>Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following:</p> <ul style="list-style-type: none"> • Advertisement in the Pilbara News on 4 and 11 October 2023 • Geotargeted social media campaign advertising in Carnarvon and Denham and surrounding areas (+80 kms) from 9 to 16 October 2023 • Inviting local Traditional Custodian groups • An EP consultation banner with a QR code (linked to the Consultation Activities page on the Woodside website), and a Scarborough Project banner were displayed along with current EP Consultation Information Sheets.
Estimated number of individuals / organisations consulted	<p>Carnarvon – 3</p> <p>Denham – 2 (Shire of Shark Bay)</p>
Summary of Feedback, Objection or Claim	
<p>Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback.</p> <ul style="list-style-type: none"> • General interest in Woodside activities in the Pilbara • Discussion with the Shire of Shark Bay: <ul style="list-style-type: none"> ▪ Explained purpose of consultation for EPs ▪ Noted consultation based on an EMBA and no activities planned in Shark Bay ▪ Provided an overview of Woodside activities ▪ The Shire of Shark Bay advised it will provide a list of other relevant persons to consult, recognising the need to consult the community more broadly 	
Woodside’s Assessment of Merits of Feedback, Objection or Claim and its Response	
<p>Whilst feedback was received, there were no objections or claims.</p> <p>The community information sessions were part of Woodside’s broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).</p>

You can access our consultation information, provide feedback and subscribe for updates by scanning the QR code.

MinRes in \$24m deal with local company

DANIEL SPENCE

Local Pilbara Indigenous-owned business Djelamanna Pty Ltd has been awarded a \$24 million contract by Mineral Resources as part of the company's flagship Onslow Iron project.

It is the largest contract MinRes has ever signed with an Indigenous-owned business, as well as the first contract awarded to Djelamanna Pty Ltd, which is a Hobe River Kurrama business. The Hobe River Kurrama people are the traditional owners of the land on which the Ken's Bore mine site is located.

The four-year contract is for exploration earthworks at Ken's Bore mine site, east of Onslow, including constructing access tracks, building drill pads, road maintenance and general earthworks.

Djelamanna Pty Ltd will employ about 10 people as part of the contract including a project manager, mechanics, operators and administration staff.

Djelamanna Pty Ltd owner Bevan Wally, who grew up on country, said: "The support provided by MinRes has given us the confidence and capacity to help establish and grow our business. MinRes have shown us action and given us commitments. It's unusual for them to invest and give us a go."

MinRes managing director Chris Ellison said that the company was proud to partner with businesses such as Djelamanna that had such a strong connection to country.

"Providing practical guidance and support, such as guaranteeing finance for equipment and plant, helps to build local capability and ensure Indigenous-owned businesses share in our success," he said.

At the contract signing ceremony in Perth, Mr Wally presented traditional gifts to Mr Ellison, including boomerangs, a shield and a long stick.

Schools to get a staff cash boost

DANIEL SPENCE

Pilbara schools will benefit from a multi-million-dollar cash injection from the State Government to recruit and retain staff.

Education Minister Tony Buti said the success of last year's temporary Regional Attraction and Incentive Package meant an additional 18 schools would benefit from \$15.49 million worth of incentive packages.

Schools in the Pilbara who will receive a boost include Broome Senior High School, Carnarvon Community College, Karratha Senior High School, Hedland Senior High School, Tom Price Senior High School and Newman Senior High School.

The incentive helps rural schools to attract and recruit teachers and retain staff and school administrators at schools by providing additional financial incentives.

Staff members will receive between \$6000 and \$17,000 for working in rural and remote public schools for the 2024 school year.

The incentives will be paid in two instalments: the first at the start of the 2024 school year, the balance paid at the end of the 2024 school year.

Dr Buti said schools in regional and remote areas faced additional challenges when recruiting and retaining teachers.

"This significant investment will bring greater continuity for regional and remote students, their families, and the whole community," he said. The temporary Regional Attraction and Retention Incentive was initially allocated to 48 regional and remote schools.

Government of Western Australia
Department of Health

Fluoridation for the Newman drinking water system

Community water fluoridation helps protect teeth against decay and is a safe and effective way of improving oral health. More than 92 per cent of the Western Australian population, including the Perth metropolitan area and most large regional communities in the Pilbara and other parts of Western Australia, has benefited from fluoridation of drinking water for more than 40 years.

Fluoridation equipment has been installed at the water treatment plant servicing Newman and is now operational. As with similar plants located throughout Western Australia, the Department of Health will monitor the performance of the water treatment plant to ensure compliance with the Australian Drinking Water Guidelines and the Fluoridation of Public Water Supplies Act 1995.

For more information please contact the Department of Health by email to whinfb@health.wa.gov.au or call 08 9222 2000 or visit health.wa.gov.au and search fluoridation.

Dr Andrew Robertson
Chief Health Officer

Animal flight policy criticised

CAIN ANDREWS

A prominent pet adoption agency has slammed Qantas' animal flight policy claiming it will lead to the unnecessary deaths of hundreds of animals.

Over the past year, animal adoption agency Saving Animals From Euthanasia's regional branches in Broome, Newman, Hedland and Karratha collectively rescued 1826 animals with 62.8 per cent or 936 of them requiring air transport to get to their new homes.

But with Qantas now enforcing a "no-fly" policy for animals when temperatures are forecast to reach more than 35C SAFE founder Sue Hedley said rescue animals that required air transport might have to be destroyed.

"It is crucial to recognise that this policy alteration could have dire consequences for these animals. If they are unable to reach their destination and find new homes, they may tragically face euthanasia as an alternative," she said.

Ms Hedley said SAFE had engaged with Qantas to try to find alternative solutions such as waiters or only allowing animals on early morning flights on days over 35C but was knocked back by the company.

"In over 20 years of operation, SAFE has never had a death during transportation from regional areas to Perth, no matter the temperature," she said.

"Unfortunately, we have been advised that the policy will remain

Sue Hedley & Salem. Pic: Helen Odeh

Simone's dogs faced being bumped off a Qantas flight because of the airline's heat policy.

"We firmly believe that the risks associated with this policy extend far beyond those related to flying on a day when temperatures may reach 35C later in the day."

A Karratha woman, who only wishes to be identified as Simone, was told her two dogs would not be allowed to catch a Qantas flight on October 5 because of the policy.

According to Simone, at the last minute she was told her dogs could not catch the flight despite being told the night before her dog would be able to fly.

"It's ridiculous we're here with our dogs everything's packed, and we're going away as well."

"With the way things are in Karratha with the shortage of space available there's no one to look after our pets," she said.

"It's not just inconvenient, it's unethical as they're not even adhering to their own policy."

"I get it's about animal safety but what is ridiculous is that the policy clearly states 35C and above and it (was) only 23C."

Qantas eventually made an exception for Simone and her dogs on the day, however, she claims she was told by those at the airport to not tell Ms Hedley about the incident.

Last year, temperatures in Karratha exceeded 35C on 108 days, with a consecutive period of 43 days over 35C between February 12 and March 26.

Responding to questions about the policy, a Qantas spokesperson said the policy was led by the International Pet and Animal Association and the International Air Transport Association. "Qantas takes the safety and welfare of pets and animals who travel with us extremely seriously," the spokesperson said.

"This is why we don't transport pets when temperatures exceed 35C or fall below 5C, due to the stress and anxiety this could cause."

SUPPORTING OUR LOCAL COMMUNITIES

The MinRes Community Fund supports our commitment to making meaningful contributions to the communities in which we operate.

Grants of up to **\$10,000** are available to eligible local organisations to support programs and events that help create strong, vibrant and healthy communities.

Applications are open to groups operating in the **Pilbara and Goldfields Esperance** regions or within the **Shires of Yilgarn, Irwin and Mingenew**.

Applications accepted between 1 to 31 October 2023.

TO APPLY
visit mineralresources.com.au/our-sustainability/community or email communities@mr.com.au

MinRes in \$24m deal with local company

DANIEL SPENCE

Local Pilbara Indigenous-owned business Djoleanna Pty Ltd has been awarded a \$24 million contract by Mineral Resources as part of the company's flagship Onslow iron project.

It is the largest contract MinRes has ever signed with an Indigenous-owned business, as well as the first contract awarded to Djoleanna Pty Ltd, which is a Hobe River Kuruma business. The Hobe River Kuruma people are the traditional owners of the land on which the Kon's Bore mine site is located.

The four-year contract is for exploration earthworks at Kon's Bore mine site, east of Onslow, including constructing access tracks, building drill pads, road maintenance and general earthworks.

Djoleanna Pty Ltd will employ about 10 people as

MinRes managing director Chris Ellison and Djoleanna business owner Bevan Wally. Picture: Russell James

part of the contract including a project manager, mechanics, operators and administration staff.

Djoleanna Pty Ltd owner Bevan Wally, who grew up on country, said: "The support provided by MinRes has given us the confidence and capacity to help establish and grow our business. MinRes have shown us action and given us commitments. It's normal for them to invest and give us a go."

MinRes managing director Chris Ellison said that the company was proud to partner with businesses such as Djoleanna that had such a strong connection to country.

"Providing practical guidance and support, such as guaranteeing finance for equipment and plant, helps to build local capability and ensure Indigenous-owned businesses share in our success," he said.

At the contract signing ceremony in Perth, Mr Wally presented traditional gifts to Mr Ellison, including boomerangs, a shield and a long stick.

Schools to get a staff cash boost

DANIEL SPENCE

Pilbara schools will benefit from a multi-million-dollar cash injection from the State Government to recruit and retain staff.

Education Minister Tony Buti said the success of last year's temporary Regional Attraction and Incentive Package meant an additional 18 schools would benefit from \$15.49 million worth of incentive packages.

Schools in the Pilbara who will receive a boost include Broome Senior High School, Carnarvon Community

Colleges, Karratha Senior High School, Hedland Senior High School, Tim Price Senior High School and Newman Senior High School.

The incentive helps rural schools to attract and recruit teachers and retain staff and school administrators at schools by providing additional financial incentives.

Staff members will receive between \$6000 and \$17,000 for working in rural and remote public schools for the 2024 school year.

The incentives will be paid in two instalments: the first at the start of the 2024 school year, the balance paid at the end of the 2024 school year.

Dr Buti said schools in regional and remote areas faced additional challenges when recruiting and retaining teachers.

"This significant investment will bring greater continuity for regional and remote students, their families, and the whole community," he said. The temporary Regional Attraction and Retention Incentive was initially allocated to 48 regional and remote schools.

Government of Western Australia
Department of Health

Fluoridation for the Newman drinking water system

Community water fluoridation helps protect teeth against decay and is a safe and effective way of improving oral health. More than 92 per cent of the Western Australian population, including the Perth metropolitan area and most large regional communities in the Pilbara and other parts of Western Australia, has benefited from fluoridation of drinking water for more than 40 years.

Fluoridation equipment has been installed at the water treatment plant serving Newman and is now operational. As with similar plants located throughout Western Australia, the Department of Health will monitor the performance of the water treatment plant to ensure compliance with the Australian Drinking Water Guidelines and the Fluoridation of Public Water Supply Act 1998.

For more information please contact the Department of Health by email to whinb@health.wa.gov.au or call 08 9222 2000 or visit health.wa.gov.au and search 'fluoridation'.

Animal flight policy criticised

CAIN ANDREWS

A prominent pet adoption agency has slammed Qantas' animal flight policy claiming it will lead to the unnecessary deaths of hundreds of animals.

Over the past year, animal adoption agency Saving Animals From Euthanasia's regional branches in Broome, Newman, Hedland and Karratha collectively rescued 1026 animals with 82.8 per cent or 838 of them requiring air transport to get to their new homes.

But with Qantas now enforcing a "no-fly" policy for animals when temperatures are forecast to reach more than 35C SAFE founder Sue Hedley said rescue animals that required air transport might have to be destroyed.

"It is crucial to recognise that this policy alteration could have dire consequences for these animals. If they are unable to reach their destination and find new homes, they may tragically face euthanasia as an alternative," she said.

Ms Hedley said SAFE had engaged with Qantas to try to find alternative solutions such as waters or only allowing animals on early morning flights on days over 35C but was knocked back by the company.

"In over 20 years of operation, SAFE has never had a death during transportation from regional areas to Perth, no matter the temperature," she said.

"Unfortunately, we have been advised that the policy will remain

Sue Hedley & Salem, Pic: Helen Dale and that no exceptions will be made.

"We firmly believe that the risks associated with this policy extend far beyond those related to flying on a day when temperatures may reach 35C later in the day."

A Karratha woman, who only wishes to be identified as Simone, was told her two dogs would not be allowed to catch a Qantas flight on October 5 because of the policy.

According to Simone, at the last minute she was told her dogs could not catch the flight despite being told the night before her dog would be able to fly.

"It's ridiculous we're here with our dogs everything's packed, and we're going away as well.

"With the way things are in Karratha with the shortage of space available there's no one to look after our pets," she said.

"It's not just inconvenient, it's unethical as they're not even adhering to their own policy.

Simone's dogs faced being bumped off a Qantas flight because of the airline's heat policy.

"I get it's about animal safety but what is ridiculous is that the policy clearly states 35C and above and it (was) only 29C."

Qantas eventually made an exception for Simone and her dogs on the day, however, she claims she was told by those at the airport to not tell Ms Hedley about the incident.

Last year, temperatures in Karratha exceeded 35C on 108 days, with a consecutive period of 42 days over 35C between February 12 and March 26.

Responding to questions about the policy, a Qantas spokesperson said the policy was led by the International Pet and Animal Association and the International Air Transport Association. "Qantas takes the safety and welfare of pets and animals who travel with us extremely seriously," the spokesperson said.

"This is why we don't transport pets when temperatures exceed 35C or fall below 5C, due to the stress and anxiety this could cause."

Hard work earns Zane Walkington scholarship

DANIEL SPENCE

St Luke's College Year 12 student Zane Goes has been awarded the City of Karratha 2023 Walkington Award for his academic achievements and outstanding citizenship.

This is the 41th time the award, valued at \$5000, has been given to a Year 12 student within the City of Karratha to continue full-time or part-time tertiary studies.

Zane is a sports captain and member of St Luke's student executive council.

As part of his role he has run new initiatives such as the Father's Day breakfast, men's mental health day, International Women's Day and the school busy bee.

Zane will use the \$5000 award from the City of Karratha to support his studies in physiotherapy.

Former city of Karratha Mayor Peter Long congratulated this year's recipient and all applicants for their outstanding achievements.

"The Walkington Award has a proud history of supporting local students who embody the three pillars of academic excellence, extra-

Zane Goes receives his award from the outgoing mayor of Karratha Peter Long.

curricular activities and community service," he said. "We are beyond proud of the leadership, commitment and accountability our young people demonstrate and the significant contribution they make to our community." He said Zane was a hard working student who

had achieved stand-out results including Academic Excellence Awards in Years 11 and 12.

"I would like to wish Zane all the best on his studies as he pursues his dream to be a physiotherapist and hope to one day see him practice in Karratha."

EV charging stations open

DANIEL SPENCE

Electric vehicle fast chargers have been installed in Karratha, Exmouth and Kununurra as part of the WA EV Network extending into the Pilbara.

The stations are the first of six planned to be installed by mid-2024.

The WA EV Network is being delivered by Horizon Power and Synergy as part of the State Government's \$41.5 million investment to boost EV infrastructure and includes 58 charging stations in 46 locations connecting Perth to regional WA. When complete, the \$21m network will stretch more than 7000km which will help to make clean transportation more accessible in WA.

The charging sites have a 150kW fast charger that allows drivers to charge their vehicles in 20 minutes.

The charging station in Exmouth has an additional DC fast charger allowing four EVs to be charged at the same time.

The WA EV Network will stretch north to Kununurra, along the south-west coast to Esperance and

Horizon Power's Cameron Parrotte with member for Pilbara Kevin Michel. Picture: Marg Bertling

east to Kalbarrie and Exmouth which is due to be completed next year.

As part of the project, Horizon Power is installing EV fast chargers at 27 of these locations across regional and remote WA.

Executive GM, engineering & project delivery at Horizon Power, Cameron Parrotte in his speech at the opening of the charging station said it was hoped the project was the start of something bigger.

"It's not until you can get about 200km and be able to charge with confidence that we know we can bring these stations to this part of the country. It's great to see Red Dog renewables

hiring the cars for their employees to use," he said.

"This is site No.5 going live and around October next year we will have 27 new locations complete."

There have been more than 3200 charging sessions along the WA EV Network since the first charging site went live in Geraldton in April 2023.

Energy Minister Bill Johnston said WA's transition to a cleaner, greener electric vehicle future was well under way.

"We are delighted Karratha, Exmouth and Kununurra have joined the WA EV Network, with many more fast chargers opening soon," he said.

3.7.9 Roebourne, Karratha and Dampier Roadshow

Location	Roebourne, Karratha and Dampier Roadshow
Activity	Community information sessions
Location	22 March 2024 - Woodside Roebourne office 23 March 2024 - Karratha Shopping Centre 24 March 2024 - Dampier Beachside Markets
Date	22- 24 March 2024
Description of the consultation	Woodside hosted community consultation sessions in Roebourne, Karratha and Dampier to enable community members to understand Woodside’s proposed activities and how they may be affected by them, ask questions, and provide their feedback. Woodside Corporate Affairs, First Nations and Environment representatives were available to answer questions. A number of EP Consultation Information Sheets were available to attendees including the Scarborough Offshore Facility and Trunkline (Operations) EP Consultation Information Sheet. An iPad with a consultation/feedback subscription prompt was made available with approximately 12 people subscribing.
Advertising and invitations	Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following: <ul style="list-style-type: none"> • Advertisement in the Pilbara News on 13 March and 20 March • A geotargeted social media campaign advertising in Karratha (Reach 22,095), Port Hedland (reach 26,487), and Roebourne (reach 22,134) (+80 kms) from 19 – 30 March 2024 • Social - organic • An EP consultation banner with a QR code (linked to the Consultation Activities page on the Woodside website), a Scarborough Project banner and current EP Consultation Information Sheets were on display.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<ul style="list-style-type: none"> • Hard copy posters were also put up at high traffic areas including Lo's Café in Karratha and the Ieramugadu Store Maya in Roebourne.
Estimated number of individuals / organisations consulted	Woodside spoke to many community members, recording 32 meaningful conversations. Over 500 community members (Dampier Community Association) attended the event.
Summary of Feedback, Objection or Claim	
<ul style="list-style-type: none"> • General queries about employment and local content opportunities. • General interest in Pluto Train 2 progress and Scarborough project and trunkline location. • Comments on Red Dog Village accommodation. Woodside staff discussed that the average local economy spend was \$120 per person, per week. • Positive commentary to see Woodside active in the community and good sentiment toward the company as a respected local employer. • Interest in taking further information such as the Karratha Community Update (newsletter) and the EP newsletter (Let's Talk). Approximately 25 copies of each were distributed over the 3 days. • Woodside social investment activities and community funding opportunities. • EP awareness building with multiple conversations on "What is an Environment Plan?" and "What is an EMBA?". • Query around impacts to whales due to noise from drilling and seismic surveys. Woodside staff discussed whale migration research, vessel whale spotters and the controls that Woodside puts in place during drilling and seismic activities. Community member took Consultation Information Sheets and were referred to the consultation page on the Woodside website for further information and opportunity to provide feedback. • Query on the location of the Scarborough Energy Project and proximity to the Montebello Islands. Woodside staff discussed that the FPU would be located 201 km from the Montebello Marine Park using the potential risks and controls as per the Scarborough Trunkline Operations (State Waters) EP Consultation Information Sheet. • General comment on climate change and the impacts from fossil fuels. Woodside staff advised that Woodside are looking into new energy options including solar power and carbon capture. • Comment from a Woodside employee partner about Karratha Gas Plant hosting a family day for employees. 	
Woodside's Assessment of Merits of Feedback, Objection or Claim and its Response	
<p>Whilst feedback was received, there were no objections or claims.</p> <p>The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).</p>

Chance to argue case in political processes

KATYA MINNS

Young people in the Pilbara are being called to become the next generation of youth leaders in an opportunity to represent their electorate and participate in democratic processes.

In its 20th year, the 2024 Y WA Youth Parliament program has opened applications for people aged 15-24 who wish to gain experience in government and policy development.

Participants will have the opportunity to draft, debate and advocate for mock youth-focused legislation on topics they're passionate about and present to Members of Parliament.

In 2023, Port Hedland local Erin Hayes joined Karratha's Emer O'Brien to represent the Pilbara electorate, travelling to Perth to present their Bill focusing on sex-

Emer O'Brien and Erin Hayes during the 2023 Y WA Youth Parliament.

based discrimination. "I was in the women's committee and we wrote a Bill on education and health reform talking about menstrual justice, such as providing free period products at a higher standard than what we currently have, and menstrual leave," Ms Hayes said.

"It's an apolitical program so you don't have to express what side of politics you're on, you're

more focused on the issues that you're passionate about.

"It's kind of like a really respectful way to have debates."

After first hearing about the program through a teacher's forum at the school where she taught politics, Ms Hayes applied for the 2023 Y WA Youth Parliament and encourages other young people to do the same.

"It was amazing, I got to meet

people that were like-minded and got to talk about things we're really passionate about," she said.

"It's given me more experience as I still want to work in politics in some aspects. I think it would be really great if more local people from the Pilbara could participate." More information on how to apply can be found on the Y's Youth Parliament website.

Applications close on March 24.

The duo at WA's Parliament House.

ABORIGINAL RANGER PROGRAM

GRANT APPLICATIONS OPEN

11 MARCH TO 22 APRIL 2024

Round 8 of the Aboriginal Ranger Program is now open with up to \$16.5 million available for Aboriginal organisations.

Eligible Aboriginal organisations can apply for projects under one or more of the categories - climate action, youth and/or cultural tourism.

This new round of funding is part of a \$103 million commitment by the State Government, investing in Aboriginal rangers through the program.

Details about eligibility, the application process and assessment criteria are available at dbsa.wa.gov.au/aboriginalrangerprogram

DBSA/18/2024

Monitoring upped at KHC

The Karratha Health Campus is among the hospitals trialling new security measures.

New 24/7 security support at campus

ROSS MURRAY

The Karratha Health Campus has been selected as one of the pilot sites for the WA Government's \$400,000 investment in a state-of-the-art security hub for regional hospitals.

The new security hub, operating out of a State-wide CCTV operations room co-located within the WA Country Health Service Command Centre in Perth, will provide 24/7 real-time monitoring and support for some of the most isolated hospitals in regional WA, including Karratha.

It aims to enhance safety, deter anti-social behaviour, and provide greater support for frontline healthcare staff.

"Any kind of aggressive behaviour towards healthcare staff is completely unacceptable, and the State Government remains committed to doing all we

can to keep staff safe at work," WA Health Minister Amber-Jade Sanderson said.

WACHS chief executive Jeff Moffet acknowledged the concerning rise in violence and aggressive incidents against healthcare workers in regional areas, with an average of two assaults a day occurring.

"It's important we continue to do all we can to keep staff and patients safe," he said.

WACHS noted that the pilot sites, such as Karratha, were chosen based on their overall risk profile for incidents at the site, local crime rates, proximity to immediate police response and isolation.

"This specialised technology will be operated around the clock by security specialists and will provide another layer of security for our frontline healthcare workers," Ms Sanderson said.

Mr Moffet said the new advanced security monitoring will complement existing measures such as on-the-ground CCTV, security personnel, duress alarms and access control systems.

Other pilot sites include Hedland, Kununurra, Meekatharra, Collie, Bridgetown and Halls Creek with further sites to be added throughout 2024.

The inclusion of Hedland Health Campus comes in the wake of a high-profile incident in July 2022, when an Aboriginal woman, who was a known suicide risk and had been receiving mental health treatment, took her own life inside the hospital after being left alone in a room, despite staff being aware of her high risk.

Rural Link AH mental health: 1800 552 002 (toll free) or 1800 720 101 (TTY) Lifeline: 13 11 14

WACHS chief executive Jeff Moffet.

Health Minister Amber Jade Sanderson.

3.7.11 Community Markets – Exmouth

Location	Exmouth
Activity	Community markets – Woodside stand
Date	Sunday, 19 May 2024 (8am to 12pm)
Description of the consultation	<p>Woodside hosted a stand at the Exmouth Community Markets, held at Federation Park. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website.</p> <p>Copies of the 'Let's Talk' newsletter were also on hand.</p> <p>In addition, information on the Scarborough Energy Project, Browse to NWS Project, Browse Carbon Capture and Storage (CCS) concept, Woodside's Climate Transition Action Plan, leaflets providing QR codes to Woodside's Annual Report and Sustainability, as well as Woodside's Reconciliation Action Plan were available.</p> <p>EP Consultation Information Sheets were also available to attendees including the Scarborough Offshore Facility and Trunkline (Operations) EP Consultation Information Sheet.</p>
Advertising and invitations	<p>Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following:</p> <ul style="list-style-type: none"> • A geotargeted social media campaign advertising in Exmouth and surrounding areas (+80 kms) from 4 May to 18 May • Direct invitations to local Community Liaison Group • An EP consultation banner with a QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside's stand along with the EP Consultation Information Sheets other information sheets mentioned above.
Estimated number of individuals / organisations consulted	<p>Over 300 people attended the markets.</p> <p>Woodside had meaningful conversations with approximately 30 people. These people identified as being Exmouth community members, visitors to Exmouth (residents of the East Coast of Australia, residents of Perth, residents of Karratha), and a few transient backpackers from various overseas locations.</p>
Summary of Feedback, Objection or Claim	
	<ul style="list-style-type: none"> • Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

- General interest in Woodside activities.
- No specific queries on the EPs.
- Stakeholders identifying themselves as Woodside shareholders interested in project updates, particularly on Scarborough, Browse to NWS Project, as well as the company's climate strategy and climate transition plans.
- Queries from Exmouth residents around employment and local content opportunities.
- General queries on the progress of the Scarborough Energy Project and Browse to North West Project, with two stakeholders seeking more information on Browse CCS.
- Queries on Western Australia's domestic gas reservation policy and the existing domestic gas commitments for Woodside's activities.
- Concern from one Exmouth resident with business links to Eastern Australia over the costs of flights between Exmouth and the East Coast.
- General queries on the location of Woodside assets in relation to Exmouth and Woodside's footprint in Exmouth.
- Local residents interested in understanding current social investment programs and opportunities.
- Interest to understand how Woodside undertakes community consultation.
- A transient worker and an Exmouth local expressed a preference for the sunscreen giveaway to be made with reef-safe ingredients. (This feedback was forwarded to the appropriate Woodside focal point.)
- One stakeholder expressed opposition to oil and gas and voiced a desire for companies like Woodside to invest in geo-thermal energy instead.

Woodside Energy's Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no specific objections or claims to a particular Woodside project or activity.

Objections to the resources industry were expressed by two stakeholders.

The community information sessions were part of Woodside's broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation.

WOODSIDE VOLUNTEERS MAKE VALUED CONTRIBUTIONS

Woodside takes pride in giving back to the communities in which they operate. One of the ways they do this is through their corporate volunteering program.

Since the launch of the program with Volunteering WA in 2010, Woodsiders have been lending a helping hand with all kinds of community projects.

Last year 340 Woodsiders spent 1500 hours volunteering with local community organisations as part of their Corporate Volunteering program. Most recently, volunteers have participated in a range of activities from cooking meals for The Salvation Army to building a sandpit at Gumala Early Learning Centre and assembling furniture for the redevelopment of Roebourne District High School.

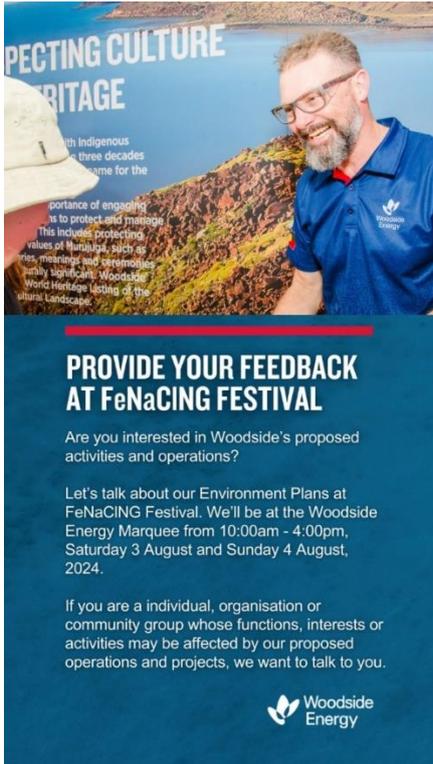

Their program partner, Volunteering WA, plays a crucial role in the success of Woodside's volunteering efforts by connecting them with local organisations in need of assistance and facilitating the opportunities to participate.

Volunteering WA's Regional Community Engagement Coordinator, Kelly Nunn said the partnership has delivered some important outcomes for the local community.

"Corporate volunteering offers fantastic opportunities for community organisations to complete ongoing maintenance or projects with the help of Woodside's employees, allowing them to focus on what they do best - providing programs and events for our community," she said.

Activity	Dampier Beachside Markets - Oktoberfest
Date	12 October 2024
Description of the consultation	<p>Woodside hosted a stand at the Dampier Beachside Markets, a community event bringing together local businesses selling local products, a variety of food vendors and community groups. The stand was staffed by members from Woodside’s Corporate Affairs team.</p> <p>Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website.</p> <p>An iPad with a consultation/feedback subscription prompt was made available.</p> <p>Woodside also had on hand printed Consultation Information Sheets on the Scarborough Offshore Facility and Trunkline (Operations) EP.</p>
Advertising and invitations	<p>Woodside advertised the event to enable individuals to self-identify, become aware of the community consultation, and to enable individuals to provide feedback on proposed activities, through the following:</p> <ul style="list-style-type: none"> • Advertisement in the Pilbara News on 9 October 2024 • A geotargeted social media posts were published inviting the public to attend on the Woodside North West Facebook page • A social media post from event host, Dampier Community Association, was published on October 11, 2024 inviting the public to attend • Advertisement was displayed on community noticeboard at Lo’s Café, Karratha, and Roebourne Library • An EP consultation banner with a QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside’s stand along with current EP factsheets.
Estimated number of individuals / organisations consulted	<p>Over 1000 community members attended the event.</p> <p>Woodside spoke to many community members, recording 6 meaningful conversations.</p>
Summary of Feedback, Objection or Claim	
<ul style="list-style-type: none"> • General positive commentary from community members working at Woodside or on Woodside projects. • General interest in Scarborough progress and the future of gas in the energy transition. • General interest in CSS process. • Interest in community grant program. • EP approval process discussed and why we want to talk to community. No concerns raised. • General queries around employment and graduate opportunities. • Interest in divestment of ex-Woodside homes. 	
Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	
<p>Whilst feedback was received, there were no objections or claims.</p> <p>The community information sessions were part of Woodside’s broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).</p>

Saturday, 12 October 2024
Between 5:30 pm - 8:30 pm
Hampton Oval, Dampier WA 6713

Author's incredible tale hopes to inspire

MADELINE HAYES covers up the true story of a woman who has overcome adversity to become one of the country's leading practitioners. With a host of impressive achievements, such as recently establishing her charity, Westerman aims to inspire Indigenous medical students, which means Indigenous people from high-risk communities to become practitioners. Dr Westerman visited Karratha for the launch of her memoir *Always*. How our Indigenous women from the remote Pilbara transformed psychology. "I have spent my life challenging systems and that means the

one also the all view of mental health that serves very few of those in mental health distress, and that's frightening because those in distress are usually from our most marginalized communities." Dr Westerman said. "These systems have been built by non-Aboriginal people to serve the needs of non-Aboriginal people."

"From child protection to justice to mental health, it is systems that is contributing to the inability to understand and respond to our families."

Dr Westerman said she hoped readers would be inspired by not only the story, but to also understand that with passion, energy and a sense of responsibility to our most vulnerable communities, great change is not only possible, it is inevitable.

"This has all been done without a cent of Federal Government funding," she said. "I want non-Aboriginal people to understand that as Aboriginal people we are capable of getting this done and my story shows that, for Aboriginal people I want them to see something that they can be optimistic about."

Dr Tracy Westerman travelled to Karratha for the launch of her book. Photo: Dr Tracy Westerman

"I am so frustrated with the pace of change. If you have been told that things can get better, this story shows that your change can occur without looking to governments to take care."

"I also hope that those who understand the research have a deep understanding of the mental health distress around the disadvantage we are seeing in Aboriginal communities and that it's vital that when Aboriginal people are in the driver's seat, they've got the opportunity to close the gaps."

2024 DAMPIER PHOTOGRAPHY AWARDS

THANK YOU

The Dampier Community Association would like to thank our sponsors for their generous support of the 2024 Dampier Photography Awards

MAJOR SPONSORS

EVENT SPONSOR

WOODSIDE COMMUNITY GRANTS

Applications open Tuesday, 1 October 2024

The Woodside Community Grants program is part of our commitment to help build local capacity and develop opportunities for community wellbeing.

If your club or organisation has a great idea or needs extra support, Woodside wants to hear from you. Grants of up to \$10k are available to support community projects in the City of Karratha and the Shire of Leonora.

If you're interested in helping us meet our goals, please email our call centre regarding our Environment Plan, and as a participant at Dampier Beachside Markets, the Lottery, 11 October from 10am - 10pm.

Applications close Thursday, 21 October 2024.

For more information please email: for@woodside.com.au or www.woodside.com.au

3.7.18 Dampier Beachside Markets

Location	Dampier
Activity	Dampier Beachside Markets – Guy Fawkes
Date	2 November 2024
Description of the consultation	<p>Woodside hosted a stand at the Dampier Beachside Markets a community event bringing together local businesses selling local products, a variety of food vendors and community groups.</p> <p>The stand was staffed by members from Woodside’s Corporate Affairs and First Nations teams.</p> <p>Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website.</p> <p>Woodside made available printed consultation information sheets on the Scarborough Offshore Facility and Trunkline Operations EP.</p>
Advertising and invitations	<p>Woodside advertised event to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following:</p> <ul style="list-style-type: none"> • Advertisement in the Pilbara News on 30 October 2024 (see below) • Social media posts were published inviting public to attend on Woodside North West Facebook page (see below) • Social media post from event host, Dampier Community Association was published on 11 October 2024 inviting public to attend. • Advertisement was displayed on community noticeboard at Lo’s Café, Karratha, and Roebourne Library. • An EP consultation display with QR code (linked to the Consultation Activities page on the Woodside website) displayed at Woodside’s stand along with current EP factsheets (see below)
Estimated number of individuals / organisations consulted	<p>Over 1200 community members (Dampier Community Association) attended the event. Woodside spoke to many community members, recording 10 meaningful conversations.</p>

Summary of Feedback, Objection or Claim

- General queries around employment opportunities.
- General interest in the Scarborough progress and Browse and the future of gas in the energy transition.
- EP approval process discussed and why we want to talk to community. No concerns raised.
- General interest in the Carbon Capture and Storage process.
- Discussions around the areas housing market and related industry opportunities.

Woodside’s Assessment of Merits of Feedback, Objection or Claim and its Response

Whilst feedback was received, there were no objections or claims raised about EPs. Woodside’s participation at the market’s is part of Woodside’s broader consultation approach to enable self-identification and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation (see Section 5.2).

3.7.19 Exmouth Community Information Session – 14 November 2024

Location	Exmouth
Activity	Community Drop-In: Woodside Marquee
Date	14 November 2024
Description of the consultation	<p>Woodside hosted a stand at Ross Street Mall in Exmouth. The stand was staffed by Woodside Environment and Corporate Affairs representatives. Woodside displayed a QR code on the stand, linked to the consultation activities page of the Woodside website.</p> <p>Information on the Scarborough Energy Project, Browse to NWS Project, Woodside’s Climate Transition Action Plan, leaflets providing QR codes to Woodside’s Annual Report and Sustainability, ‘Let’s Talk’ (a publication on the company’s Australian activities) were available. EP Consultation Information Sheets available to attendees included the Scarborough Offshore Facility and Trunkline (Operations) EP.</p>
Advertising and invitations	<p>Woodside advertised the sessions to enable individuals to self-identify, become aware of the community consultation, and enable individuals to provide feedback on proposed activities, through the following:</p> <ul style="list-style-type: none"> • Geotargeted social media campaign advertising in Exmouth and surrounding areas (+80 kms) from 9 – 14 November 2024. • Post on Woodside social media channel. • Promotion at the Exmouth Community Liaison Group meeting. • An EP consultation banner with QR code (linked to the Consultation Activities page on the Woodside website) was displayed at Woodside’s stand along with the EP factsheets and Project information sheets.
Estimated number of individuals / organisations consulted	Woodside had meaningful conversations with approximately 12 groups. These people identified as being Exmouth community members or visitors to Exmouth (residents of the East Coast of Australia or Western Australia).
Summary of Feedback, Objection or Claim	
<ul style="list-style-type: none"> • Community members were able to engage with Woodside representatives to understand the proposed activity and how it may affect them, ask questions, and provide their feedback. • There was general interest in Woodside activities. Key issues discussed: <ul style="list-style-type: none"> ○ Query on whether Woodside is building new marine infrastructure being built in the nearshore environment. A query was received on whether the design of Scarborough infrastructure allows for juvenile fauna to continue to traverse the nearshore environment. <ul style="list-style-type: none"> ▪ Woodside responded that the Scarborough trunkline was installed by horizontal directional drilling to minimise impacts to the beach and nesting turtles. The Scarborough trunkline is not a solid structure that would block movement of nearshore juvenile fauna. ○ General queries on Woodside’s footprint in Exmouth. ○ Queries about employment and local content opportunities. ○ Interest in understanding current social investment programs and opportunities. ○ One stakeholder expressed support for more industry activity in Exmouth. ○ Stakeholders identifying themselves as Woodside shareholders interested in project updates, particularly on Scarborough. ○ Query on domestic gas commitments for Woodside’s activities. 	
Woodside Energy’s Assessment of Merits of Feedback, Objection or Claim and its Response	
<p>Whilst feedback was received, there were no specific objections or claims to a particular Woodside project or activity. The community information sessions were part of Woodside’s broader consultation approach to enable self-identification, and provide relevant persons with the opportunity to assess any impacts on their functions, interests or activities, and provide feedback on proposed activities, which is consistent with the intended outcome of consultation.</p>

4 HISTORICAL – SCARBOROUGH OFFSHORE PROJECT PROPOSAL CONSULTATION REPORT

Appendix M – Scarborough OPP Formal Consultation Report

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
1	Murujuga Aboriginal Corporation (MAC)		<p><i>"The Murujuga Aboriginal Corporation (MAC) as the approved body corporate for the Burrup and Maitland Industrial Estates Agreement (BMIEA), respectfully requests a two-week extension to allow us time to prepare and finalise a submission on the Scarborough Offshore Project Proposal.</i></p> <p><i>MAC is typically reliant on pro bono support to review documents such as this proposal, so we are not able to always respond as quickly as we would like. I should add that we are broadly supportive of the proposed Burrup Hub project and do not seek to unnecessarily delay the process.</i></p> <p><i>If our request for an extension until the 13th of September 2019 can be granted, it would be most appreciated by MAC's members who are the cultural custodians of the land and waters which could potentially be impacted by this proposal."</i></p>	<p>On the afternoon that the OPP public comment period closed on 30 August 2019, the Murujuga Aboriginal Corporation (MAC) lodged a request for a two-week extension to comment on the OPP. In response to this request, Woodside's Indigenous Affairs Manager met with MAC's CEO on 2 September 2019. Woodside explained the proposed Scarborough development area and asked whether there was a specific issue MAC had wished to raise. While MAC advised of its intention to make comment on the Dredging and Spoil Disposal Management Plan required by the Western Australian Environmental Protection Authority as part of its assessment of the proposed development, MAC responded that it did not have any particular concerns about the OPP. MAC further advised, the intention for requesting an extension was to reserve its right to comment, if necessary. Consequently, MAC was advised it would be unlikely Woodside would support an extension and MAC confirmed it would accept a decision not to extend the comment period. No further action was recorded.</p> <p>Woodside notes MAC's purpose is to administer the Burrup and Maitland Industrial Estate Agreement (BMIEA) on behalf of Traditional Owner "contracting parties". We further note that the organisation is the representative for joint management of the Murujuga National Park. MAC receives annual funding from Woodside under the BMIEA Agreement to carry out its specific cultural obligations and responsibilities including input on regulatory approvals. Annual payments in direct benefits are made under the BMIEA (annual lease payment) in addition to Conservation Agreement funds for MAC Rangers other direct financial support provided for related programs and activities.</p> <p>Woodside will continue to work with MAC and Traditional Owner representatives as the proposed Scarborough development is progressed.</p>	<p>Record of this engagement has been added to Table 10.5 ('Phase 2 stakeholder consultation activities').</p>
2	Environmental Defenders Office (on behalf of CCWA)		<p>Comments have been compiled by the EDO on behalf of CCWA. The key issues are summarised below according to the EDO submission section.</p>	<p>Subsections of the submission are addressed below.</p>	<p>Subsections of the submission are addressed below.</p>
2.1	Environmental Defenders Office (on behalf of CCWA)		<p>Background Contains statements about the proposal from the OPP.</p>	<p>The statements about the project reflect information in the OPP and do not require a response.</p>	<p>The statements about the project reflect information in the OPP and do not require amendment of the document.</p>
2.2	Environmental Defenders Office (on behalf of CCWA)		<p>Impact of GHG Emissions (summary section) (EDO submission sections 6-14) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP fails to manage the impacts/risks of the Proposal's GHGe to a level that is acceptable in accordance with the established science of climate change, the EPBC Act or Australia's international obligations under the Paris Agreement the OPP and the above controls are insufficient to manage the impacts and risks of the Proposal's GHGe to an acceptable level or as low as reasonably practicable (ALARP) changes to the OPP are required to sufficiently manage impacts and risks of Greenhouse Gas emissions (GHGe); and 	<p>The themes raised in this summary section of the submission are covered in more detail in subsections of the submission. Responses to each subsection are provided below.</p>	<p>The themes raised in this summary section of the submission are covered in more detail in subsections of the submission. Changes to the OPP relevant to each subsection are described below.</p>

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
			<ul style="list-style-type: none"> discussion of risk to Murujuga rock art and controls are included and changes to the OPP are required to sufficiently manage risk. 		
2.3	Environmental Defenders Office (on behalf of CCWA)		<p>Insufficient Management and Regulation of Impacts of GHGE to Acceptable Level (EDO submission sections 15-23) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> national GHG regulation, Woodside's Climate Change Policy and WA EPA Public Environment Review (PER) documentation do not adequately regulate or manage GHG to acceptable levels. The Pluto PER documentation is outdated and does not consider processing of Scarborough Gas at Pluto Train 2, and it is therefore inappropriate to rely on this to evaluate and manage scope 2 and 3 emissions. a fresh Commonwealth assessment of risks and impacts associated with processing Scarborough gas through Pluto to be undertaken; and the OPP be amended to include details of additional GHG emitted from processing through the Pluto LNG and introduction of specific control measures that achieve net zero emissions. 	<p>The Paris Agreement represents global consensus on controls to limit anthropogenic climate change to an acceptable level. The Australian Government has ratified the Paris Agreement and implemented policy mechanisms as described in Section 3.4.1 (which has been added to provide further detail).</p> <p>Compliance with Australian legislation, as described in Sections 3.4.1 and 6.5 ensures that GHGe from the Project will be acceptable by keeping GHGe at or below the emissions baselines set by the Clean Energy Regulator or dealing with any excess emissions accordingly.</p> <p>As described in the OPP, raw product from the Scarborough Project will be processed at the onshore Pluto LNG facility. Existing environmental approvals for the Pluto LNG facility already include processing emissions for a second train and scope 3 emissions associated with sold product. Figure 7.6 has been added to section 7.1.3 of the OPP to better illustrate how related onshore processing emissions are considered in the existing approved Pluto PER.</p> <p>Pluto is required to have in place management plans including a Greenhouse Gas Abatement Program developed to address the requirements of Ministerial Statement 757, which ensures ongoing regulatory oversight. The Pluto approvals process is out of scope for the OPP.</p>	<p>Section 3.4.1 ('Greenhouse Gas Legislation') has been added, which describes Australian GHG legislation.</p> <p>A statement in the second paragraph of section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') has been added about Australia's ratification of the Paris Agreement as a relevant international standard.</p> <p>Paragraph six has been added to Section 6.5 ('Environmental Performance Outcomes and Acceptable Levels') to link Australia's implementation of the Paris Agreement via legislation to the acceptability of the project.</p> <p>The part of section 7.1.3 (Planned Aspects – Routine Greenhouse Gas Emissions) describing related onshore processing emissions has been expanded, including incorporation of updated assumptions relating to scope 3 emissions.</p> <p>Discussion of risks and impacts associated with climate change, including change in habitats, fauna behaviour, injury/mortality to fauna, and social changes has been added in section 7.1.3.8</p>
2.4	Environmental Defenders Office (on behalf of CCWA)		<p>Total Lifecycle GHGe Should be Considered and Managed (EDO submission sections 24-30) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the Pluto PER process did not assess and approve Scope 3 emissions and proposes amendment of the OPP to include details and management of total lifecycle GHG, including risk and impact to the environment and rock art using the best available climate science. 	<p>As described in the OPP, raw product from the Scarborough project will be processed at the onshore Pluto LNG facility. Existing environmental approvals for the Pluto LNG facility already include processing emissions for a second train and scope 3 emissions associated with sold product. Figure 7.6 has been added to section 7.1.3 of the OPP to better illustrate how related onshore processing emissions are considered in the existing approved Pluto PER.</p>	<p>The part of section 7.1.3 (Routine Greenhouse Gas Emissions) describing indirect GHG emissions has been updated to include a reference to where in the Pluto PER lifecycle emissions are included and recalculation of scope 3 emissions attributed to Scarborough with updated assumptions.</p> <p>The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more comprehensively explain how</p>

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
					Scarborough fits into a decarbonising global economy. Discussion of risks and impacts associated with climate change, including change in habitats, fauna behaviour, injury/mortality to fauna, and social changes has been added in section 7.1.3.8
2.5	Environmental Defenders Office (on behalf of CCWA)		<p>Cumulative Impacts Should be Considered and Managed (EDO submission sections 31-44) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP does not adequately consider the impacts of the broader Burrup Hub, including cumulative impacts. given the decision to assess the Burrup Hub projects individually, the cumulative emissions from the proposal should be considered in context of the other projects and global GHG. There are multiple cases which identify that small incremental increases to emissions as contribute to a broader global impact. 	<p>Burrup Hub is Woodside's vision to develop an integrated regional LNG production centre on the Burrup Peninsula. The Burrup Hub is not a proposal for a single activity for impact assessment; it describes Woodside's vision of several separate but related activities that, subject to respective joint venture approvals and relevant regulatory approvals, may be undertaken. The current allocation of approvals between jurisdictions has been established with all relevant regulatory bodies.</p> <p>As described in the OPP, the contribution of the Scarborough floating petroleum unit (FPU) to Australian and global GHGe is very low. Attempting to model the impact on global climate change is not feasible, and similarly it is not practical to describe associated risk to global receptors.</p>	<p>Woodside has determined that the approvals approach in place for the individual Burrup Hub activities are adequate and no changes were made to the document.</p>
2.6	Environmental Defenders Office (on behalf of CCWA)		<p>Net Zero Emissions Outcome Should be Applied as Environmental Performance Outcome (EDO submission sections 45-54) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the environmental performance outcomes described in the OPP are insufficient to achieve acceptability for GHG emissions, and that a "net zero" performance outcome should be adopted, stating that this should be the fundamental test for environmental acceptability. by reference to the DOE Report for the Prelude FLNG Facility (2010), the project should result in no net increase in Australia's GHG emissions, and the IPCC Special Report on Global Warming statement has established that global GHG must achieve net zero by 2050 to avoid global warming above 1.5°C is relevant. a carbon budget approach is appropriate and proposes that internationally agreed science has established that the amount of emissions allowable to maintain a safe climate has already been exceeded and therefore all future developments should achieve net zero GHG emissions. the project requires implementation of technologies such as renewables, all-electric design or carbon capture and storage, or offsets. 	<p>Achieving "net zero" GHGe abatement goes beyond the Climate Change Authority's recommendation to achieve that outcome by 2050. The Australian Government has established a 26-28% emissions reduction target by 2030 and the Paris Agreement encourages Australia to submit a new target by 2025. The State of Western Australian Government has also set an aspiration to achieve net zero emissions by 2050. Woodside's climate policy encourages government to set targets based on climate science.</p> <p>Acceptability for Scarborough project GHGe is achieved by actions taken to achieve compliance with Australian legislation which implements the Paris Agreement by keeping GHGe at or below the emissions baselines set by the Clean Energy Regulator or dealing with any excess emissions accordingly. Further details are provided within the response to 15-23 (Item 2.3).</p>	<p>Section 3.4.1 ('Greenhouse Gas Legislation') has been added, which describes Australian GHG legislation.</p> <p>A statement in the second paragraph of Section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') has been added about Australia's ratification of the Paris Agreement as a relevant international standard. A new section 7.1.3.5 (Customer Commitments under the Paris Agreement) has been included to provide examples of how Scope 3 emissions from Scarborough will fit within the international agreement.</p> <p>Paragraph six has been added to section 6.5 ('Environmental Performance Outcomes and Acceptable Levels') to link Australia's implementation of the Paris Agreement via legislation to the acceptability of the project.</p> <p>The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more</p>

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
					comprehensively explain how Scarborough fits into a decarbonising global economy.
2.7	Environmental Defenders Office (on behalf of CCWA)		<p>Energy Efficiency Measures Insufficient to Manage Impacts of GHGe to Acceptable Level (EDO submission sections 55-58) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the energy efficiency measures listed in the OPP (allowance for battery energy storage system, waste heat recovery unit, gas-gas exchanger, flow coated trunkline, turbine and equipment selection) are not sufficient to achieve the current environmental performance outcome of reducing GHGe to ALARP and Acceptable Levels because there is no inclusion of control measures to avoid, reduce or offset the Proposal's GHG emissions. 	The energy efficiency measures presented in section 4.5.4.1 reflect the design decisions taken to date based on ALARP principles. Demonstrations that greenhouse gas emissions have been reduced to ALARP levels in future design decisions will be submitted to NOPSEMA for approval as part of the regular Environment Plan process which will follow approval of this OPP.	A new section in the Assessment of Alternatives section (4.5.4.1 – Energy Efficiencies) has been added to describe measures implemented to date in design phase. A new section 7.1.3.6 (Greenhouse Gas Management and Mitigation) has been added to describe relevant controls in a hierarchy, including these design features but also how GHG emissions will be managed during operations.
2.8	Environmental Defenders Office (on behalf of CCWA)		<p>Specific Control Measures Required to Manage Impacts of GHGe to Acceptable Level (EDO submission sections 59-64) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP does not refer to any specific control measures to manage impacts or avoid, reduce or offset. DOE report on Prelude is cited in reference to required measures and offsets that result in no net increase to Australia's CO₂ emissions. the OPP should consider LNG projects (Kitimat, Gorgon) that are employing renewable energy and carbon capture storage for management of GHG to an acceptable level. 	The environmental performance outcomes in the OPP are designed to ensure that the risks and impacts associated with the project are acceptable. Compliance with the safeguarding mechanism will ensure that emission reductions implemented through the Emissions Reduction Fund (ERF) are not offset or exceeded by significant GHG emissions (above 'business-as-usual levels') emanating from other industrial or economic sectors. The safeguarding mechanism includes a framework to offset emissions if necessary for compliance.	Section 3.4.1 ('Greenhouse Gas Legislation') has been added, which describes Australian GHG legislation. A statement in the second paragraph of section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') has been added about Australia's ratification of the Paris Agreement as a relevant international standard.
2.9	Environmental Defenders Office (on behalf of CCWA)		<p>Reporting Under NGER Act Insufficient to Manage Impacts of GHGe to Acceptable Level (EDO submission sections 65-69) *</p> <p>Submits that voluntary public reporting should be implemented that includes facility level GHG data, including Scope 3, performance on managing GHG to acceptable and ALARP, publish through a government hosted portal and include data on offsets.</p>	The NGER Act requires the Clean Energy Regulator to publish facility level emissions on an annual basis for facilities subject to the Safeguard Mechanism, including the use of Australian Carbon Credit Units. Additionally, Woodside also currently voluntarily participates in the Carbon Disclosure Project which includes publishing scope 3 emissions data at an equity, portfolio level.	Woodside considers that GHG emissions reporting is adequately described in the document and no changes were made. The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more comprehensively explain how Scarborough fits into a decarbonising global economy. A new section in the Assessment of Alternatives section (4.5.4.1 – Energy Efficiencies) has been added to describe measures implemented to date in design phase. A new section 7.1.3.6 (Greenhouse Gas Management and Mitigation) has been added to describe relevant controls in a hierarchy, including these design features but also how GHG emissions will be

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
					managed during operations and reporting.
2.10	Environmental Defenders Office (on behalf of CCWA)		<p>Argument that LNG Displaces Emission Intensive Fuels Not Substantiated (EDO submission sections 70-79) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the statement that LNG is able to displace higher carbon intensity fossil fuels and complements renewables is not valid because it is not aligned with market mechanics and fails to consider policy trends and global market transition away from fossil fuels; and the Proponent must produce proof that the claim is substantiated and backed with credible evidence, data from customer countries and robust reporting of Scope 3 GHG emissions. 	<p>Woodside acknowledges that the effect of LNG exports on global GHGe is complex and subject to market mechanisms. However, it does have the potential to play a role in displacing higher carbon intensity fossil fuels and complementing renewables. In 2019, the International Energy Agency concluded that gas use has resulted in over 500 MCO₂e emissions savings since 2010, where it had displaced coal power. Providing clean burning LNG as a power source can displace higher emissions energy sources in transport and power generation and provide firming capacity for renewable energy sources in a growing global economy.</p>	<p>The new sections 7.1.3.3 (Lifecycle and Intensity) and 7.1.3.4 (Natural Gas in the Context of Global Emissions) have been added to more comprehensively explain how Scarborough fits into a decarbonising global economy.</p>
2.11	Environmental Defenders Office (on behalf of CCWA)		<p>Impact on Rock Art (EDO submission sections 80-86) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP does not contain details of risk and impact of the project and related Burrup Hub on Murujuga rock art, or any control measures. includes reference to NOx and CO₂ from the proposal over estimated 2070 life of field and refers to controls for French cave paintings which include mitigation of CO₂ from tourists' breath. 	<p>The effective management of Aboriginal cultural heritage is critical to Woodside's continued operations and growth success.</p> <p>Woodside's preferred development concept is to transport gas from the Scarborough fields through a pipeline for processing at the Woodside operated onshore Pluto LNG Facility. Emissions from the Pluto LNG Facility will remain within the impact envelope of the existing approval for that facility. Woodside has contributed to air monitoring studies of the Burrup Peninsula since 2008 and our approach to emissions management practices has been informed by third-party studies including the work undertaken by the Burrup Rock Art Monitoring Management Committee. Woodside's approach to protection of rock art on the Burrup Peninsula is further informed by our relationship with the Murujuga Aboriginal Corporation and Traditional Owners and takes into account their vision for the protection and management of cultural heritage. Woodside is also playing an active and productive role in the Department of Water and Environmental Regulation's Burrup Rock Art Stakeholder Reference Group, established in 2018.</p> <p>Woodside will continue to focus on emissions reductions from all its operations and support appropriate scientific air emissions monitoring.</p>	<p>Woodside considers potential measures described in this comment to be outside the scope of the OPP. As indicated in the response to this comment, Woodside will continue to work with stakeholders on this issue through the appropriate mechanisms.</p>
2.12	Environmental Defenders Office (on behalf of CCWA)		<p>Control Measures to Manage Impacts on Rock Art Required (EDO submission sections 87-91) *</p> <p>It is submitted that:</p> <ul style="list-style-type: none"> the OPP must include control measures for managing the impacts/risks on rock art and proposes a precautionary approach in context of UNESCO World Heritage nomination for the Burrup Peninsula. 	<p>Woodside supports the decision of Traditional Owners and the State to pursue World Heritage listing for the Burrup Peninsula. This support reflects our commitment to the successful co-existence of heritage and industry. In this context, Woodside also supports the reinstatement of ambient air quality monitoring on the Burrup Peninsula and is working with stakeholders including Traditional Owners and the State on the preferred monitoring options and approach.</p>	<p>Woodside considers potential measures described in this comment to be outside the scope of the OPP. As indicated in response to a related comment above, Woodside will continue to work with stakeholders on this issue through the appropriate mechanisms.</p>
3	Western Gas		<p>It is suggested that in relation to Woodside's statement in the OPP that it is engaging other resource owners on future development opportunities (section 4.1) these opportunities should be included as alternate development options in the OPP.</p>	<p>The OPP currently identifies the Equus development as a future proposal in section 5.7.6. This section has been further updated to show the location of the Equus fields in Figure 5-57 and notes the proposed project in Table 5-11.</p> <p>As per Table 10.5 Woodside has held a series of consultations with Western Gas with regards to alternate development concepts. The merits of these concepts were subject to internal assessment processes and were considered unsuitable for the current development timeline. Details of this assessment process were communicated to</p>	<p>Updates have been made to section 5.7.6 ('Description of the Environment – Industry') and consultation has been added to the table in section 10.4.2 ('Formal OPP Consultation').</p>

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
				Western Gas along with a commitment to consider future opportunities for cooperation including tie-backs. This consultation has been added to the table in section 10.4.2.	
4	Anonymous		<p><i>"It is clear reviewing all combined impacts from the Scarborough project that offsetting residual impacts (e.g. on protected matters impacted including but not limited to pygmy blue whales, other whales/cetaceans, seabirds, whale sharks, turtles, commonwealth marine area) should occur because the project is not delivering net biodiversity benefit.</i></p> <p><i>In addition, cumulative impacts of the O&G industry operating on the NW shelf should be taken into account here i.e. considering what's there already and what is planned to come and what may reasonably be expected to come in future, the cumulative impacts on the MNES of the marine environment are nothing short of significant.</i></p> <p><i>EPBC policy and international impact assessment process (hierarchy of control) requires offsets to be considered in such circumstances which result in a net biodiversity benefit from the project.</i></p> <p><i>Note, I don't think like for like offsets are appropriate or required in the case of Scarborough, however there should be a strong case of indirect offsets which add value to the broader region from a biodiversity perspective.</i></p> <p><i>Implementing this will ensure the impact assessment follows EPBC policy (http://www.environment.gov.au/epbc/publications/epbc-act-environmental-offsets-policy) and is consistent with international practice for impact assessment (see bottom of page 16 https://www.unepfi.org/fileadmin/documents/biodiversity_offsets.pdf and principle 7 of https://www.iaia.org/uploads/pdf/SP3%20Biodiversity%20Ecosystem%20Services%2018%20Jan.pdf).</i></p> <p><i>These standards, and many more like them apply to setting the acceptable levels of impact of the project as a whole - no net loss of biodiversity."</i></p>	<p>The Australian Government's <i>Environmental Protection and Biodiversity Conservation Act 1999 Environmental Offsets Policy, October 2012</i>, refers to 'environmental offsets' as measures that compensate for all residual adverse impacts of an action on the environment. The policy states that for assessments under the EPBC Act, offsets are only required if residual impacts are significant, with significance to be as defined in the <i>Matters of National Environmental Significance (MNES) – Significant impact guidelines 1.1</i>.</p> <p>The residual impacts of Scarborough to all MNES has been assessed to not be significant under the significant impact guidelines.</p> <p>In terms of cumulative impacts, in section 8.2.2 ('Receptor-based Cumulative Impacts'), the cumulative impacts from Pluto, Equus, Fisheries and Shipping were assessed, and it was identified that the aspects that were common to those activities related to vessel movements (i.e. physical presence – displacement, light emissions and vessel discharges). Cumulative assessment has been undertaken which indicates that residual impacts to species (including MNES) are low.</p>	A seventh paragraph was added to section 6.2.3 ('Risk Assessment – Environmental Legislation and other requirements') which describes obligations under the <i>Environmental Protection and Biodiversity Conservation act 1999 Environmental Offsets Policy</i> .

7	Private		<i>"Great to see another project in the planning. W/A and communities like Exmouth need these projects to go ahead to create secure long-term jobs."</i>	Woodside is pleased to note that independent economic modelling indicates its Burrup Hub proposals, of which Scarborough is a key component, will support the creation of an average 4,000 full-time equivalent jobs per annum nationally over a 40-year time-frame. Almost half of these will be located in northern Western Australia.	Woodside considers that no modification to the document is necessary.
8	Anonymous		<i>"It's great to see these projects going ahead and delivering much needed employment opportunities and opportunities for local businesses under the company's local content policy. In particular the Exmouth community has suffered from all this activity happening offshore for many years now yet very little economic benefit to the town or meaningful contracts for the town and its community. "</i>	Woodside welcomes community support for the proposed development of the Scarborough gas field and will work with communities to identify opportunities for local content and employment.	Woodside considers that no modification to the document is necessary.

Scarborough – Offshore Project Proposal

Name	Organisation	Email address	Key comment(s) on proposal (summarised where lengthy comment has been made) - including any objections or claims	Woodside assessment of merit of comment(s) and response to comment(s)	Changes made to the OPP in response to comment(s)
			"Get it going as soon as possible and push as much work through Exmouth as practicable. Don't let the loud voices of the minorities drown out the support of the silent majority. The Exmouth community wants it and it is in line with the shire council's strategic plans."		
9	Private		"The Scarborough development proposal is an excellent opportunity for further expansion of Australia's gas resource potential. This development should be fully endorsed by all Australians for the benefit of all Australians."	Woodside is pleased to note that independent economic modelling indicates its Burrup Hub proposals, of which Scarborough is a key component, will boost Australia's Gross Domestic Product by \$414 billion between now and 2063 while tax and royalties payments are estimated to total \$82 billion.	Woodside considers that no modification to the document is necessary.
10	Private		"What capping plan is in place to meet highest risk i.e. a spill results from a leaking well? We know from Macondo failings majority of loss / risk resulted from spill. Why has little been done by operators / regulators to assure that a faster safer capping system is not in place for offshore projects, i.e. a system designed around a Xmas tree that can be kept on site in the field to be able to respond to cap and kill a well in hrs vs days or weeks of spillage that could result to meet worst case needs? There are systems available; e.g. Abel Engineering well control specialists etc. Why is such a safer better cheaper faster response system not to be used?"	The OPP process, is in place to allow the regulator to make an assessment of the environmental acceptability of proposed offshore projects. Following OPP acceptance, activity specific Environment Plans (EPs) (and other permissioning documents such as Well Operations Management Plans (WOMPs) will be required to be prepared and accepted. Broadly, the purpose of EPs will be for the titleholder to confirm that the impacts and risks are within the scope of that accepted under the OPP, and to identify the control measures that will manage the impacts and risks ALARP. The EP will describe the level of performance for these control measures during activities and including emergency situations. An emergency response plan which identifies source control options including capping systems, will be developed and submitted as a part of the activity's EPs. At this stage of the approval process, there will be consideration of source control methods and technology in order to demonstrate that the impacts and risks will be managed to ALARP levels. Hydrocarbons of the Scarborough, Jupiter and Thebe reservoirs contain no measurable liquid condensate fraction. It is therefore expected that there would be no, or negligible, liquid component in a loss of containment scenario. In the event of a loss of well control, the response strategy detailed in the EP will be based on the risk, and the properties of the released hydrocarbons.	On review of the merit of this comment, Woodside considers that the concern raised is adequately addressed and no modification to the document is required.
11	Private		"I think that this project should go ahead with the caveat that cheaper gas is made available for Western Australia. What would be even better is that the AU government develops the fields, undertake all production and distribution / sales of LNG. That way Australia would have a sustainable income for years to come. Not only that all future exploration and development of fields should be under the control of the Australian government not a foreign government or company. With this then could be the Australian engineering rig/ship building capability to ensure jobs and growth for Australia."	Woodside is proposing to expand the Pluto LNG facility to process Scarborough gas and work is underway on the design of a domestic gas plant at Pluto to facilitate supply to Western Australia. As an Australian company, Woodside has a proud history of developing resources and delivering long term benefits to the country. Independent economic modelling indicates tax and royalties payments from the proposed Burrup Hub projects will add up to \$82 billion. Woodside has also developed an Australian Industry Participation Plan for the proposed Scarborough development. This plan has been approved by the Australian Government and is designed to maximise opportunities for Australian businesses.	Woodside considers that no modification to the document is necessary.

Proposed Program of Ongoing Engagement with Traditional Custodians

This Program of Ongoing Engagement with Traditional Custodians ("Program") has been developed to demonstrate Woodside's commitment to ongoing engagement and support of Traditional Custodians' capacity to care for and manage Country, including Sea Country, and has been directly informed by Traditional Custodians' feedback regarding their capacity to engage and consult on Environment Plans.

It is a living document designed to evolve with ongoing consultation and feedback from Traditional Custodians and, at a minimum, will be subject to annual review. In addition to this Program, Woodside will continue to participate in, and support collective industry engagement with Traditional Owners on the development of a future, sustainable, industry wide Program. Through the Program, Woodside actively supports Traditional Custodians' capacity for, and involvement in, ongoing engagement and feedback on environment plans.

The Program has been developed so that Traditional Custodians can, on an ongoing basis, provide Woodside with feedback relating to the possible consequences of an activity to be carried out under an environment plan on their functions, interests and activities as they relate to cultural values. This feedback will be evaluated in conjunction with Traditional Custodians and, where necessary, avoidance or mitigation strategies will be developed in collaboration with Traditional Custodians. How the Program is implemented with specific Traditional Custodians will depend on their stated needs and priorities.

The Program is underpinned by Woodside's First Nations Communities Policy (woodside.com), the objective of which is to ensure Woodside partners and engages with First Nations communities to create positive economic, social and cultural outcomes that leave a lasting legacy. Woodside does this through building respectful relationships and partnerships with First Nations communities where we are active, in the areas where they are most interested in. We acknowledge the unique connection that First Nations communities have to land, waters and the environment.

The Program will include, as agreed with relevant communities, reasonable commitment to:

1. Support for ongoing dialogue and engagement

Woodside will support the capacity of Traditional Custodians to participate in ongoing dialogue and engagement about the environment plans and to enable the ongoing and future identification of cultural values potentially impacted by Woodside's activities. Woodside further commits to agreeing consultation protocols with individual Traditional Custodians to ensure the material provided is appropriate in level of detail such that the potential for cultural impact from Woodside activities can be determined and as required measures can be adopted to avoid or minimise impact.

In addition, Woodside will receive feedback on cultural values from an individual person or organisation that identifies as a Traditional Custodian, at any stage during the development and implementation of activities. This feedback will be evaluated, in conjunction with the Traditional Custodian individual or group and if required, control measures will put in place to avoid impacts to cultural values, or where avoidance is not possible, to minimise and mitigate the impacts to an acceptable level.

Where cultural values are identified post activity completion, any controls relevant to value management will be implemented during the next relevant activity.

2. Support for the identification and recording of cultural features

Woodside will support Traditional Custodians to record and articulate their Sea Country values and will invest in cultural assessments codesigned with Traditional Custodians, where required, to inform potential risks to cultural values from our petroleum activities.

This may include supporting cultural mapping by Traditional Custodians to identify and map significant cultural features including archaeological sites and other cultural values. The scoping of the mapping process will be codesigned with Traditional Custodians.

Woodside understands that cultural knowledge remains the intellectual property of Traditional Custodians and will agree with Traditional Custodians at the outset how that information from surveys will be used to feedback into and inform the environment plan's design and implementation.

In addition, Woodside applies the Cultural Heritage Management Procedure 2019, updated in 2023, to the Program which:

- provides a process for the identification, protection, and management of Cultural Heritage taking into account relevant standards, in particular, the United Nations Declaration on the Rights of Indigenous Peoples, the Charter for the Protection and Management of the Archaeological Heritage, the Convention for the Safeguarding of the Intangible Cultural Heritage, and the Convention on the Protection of the Underwater Cultural Heritage;
- applies to underwater cultural heritage and, consistent with current practice, provides for the commissioning of (where appropriate) both archaeological and ethnographic assessments of cultural values over the submerged landscape; and
- the process includes the following:
 - early engagement with relevant Traditional Custodians
 - identification of potential heritage, this could include desktop and field surveys undertaken with the Traditional Custodians.
- the development of cultural management strategies; and, where it is determined cultural heritage may be impacted, the development of Cultural Heritage Management Plans codesigned with Traditional Custodians and implemented by Woodside's First Nations team which:
 - focus on avoidance or minimisation of impacts; and
 - provide regular reviews and for inclusion of new information and further development of the Cultural Heritage Management Plan.

Woodside is committed to continue to receive feedback on cultural values for the life of an environment plan, the inclusion of new information and the development of avoidance or mitigation strategies in collaboration with Traditional Custodians. This information will be recorded via the Woodside Management of Knowledge Process and any potential impacts to the accepted Environment Plan evaluated via the Woodside Management of Change Process.

3. Building capacity for the ongoing protection of country

Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups. This is guided by Woodside's Indigenous Affairs Strategy 2019 ("Strategy"), which is designed to enable the building and maintaining of relationships with Traditional Custodians to leave a lasting legacy, including strengthening of Traditional Custodians' capacity to care for and manage Country, including Sea Country. The Strategy was developed with inputs from Traditional Custodians and contains four pillars that direct Woodside's social investment, policies relating to economic development, procurement and employment, and Woodside's agreement making and implementation of agreements. The pillars are:

1. Culture and Heritage Management: support social outcomes through protection, recognition and respect for culture and heritage;
2. Economic Participation: provide training, jobs, and business opportunities;

3. Capability and capacity: ensure strong corporate governance, leadership development and education initiatives to support self-determination; and
4. Safer and Healthier Communities: partner with Aboriginal people and service providers to maximise safer and healthier community outcomes.

Woodside is committed to an ongoing relationship between Woodside and the Traditional Custodian groups. Through consultation with Traditional Custodians Woodside will continue to:

- establish support for Indigenous ranger programs via social investment;
- establish support for Indigenous oil spill response capability via investigating training models;
- establish support for identification and recording of cultural values and the management of that information by Traditional Custodians;
- establish support for programs identified by the Traditional Custodians as important to them and as agreed by Woodside.

4. Support for capacity and capability in relation to governance

Pillar 3 of the Indigenous Affairs Strategy 2019 focuses on ensuring strong corporate governance, leadership development and education initiatives to support self-determination. To enable this, Woodside will support measures to increase the capability and capacity of the Traditional Custodian groups, including in relation to governance and management systems.

The nature of this support will be informed by the individual needs of Traditional Custodian groups, but may include:

- funding or other support for community meetings, particularly where consultation with representative bodies lies outside of that body's core business and cultural authority or mandate needs to be secured,
- resourcing internal expertise so that information is managed consistently and internally, including ensuring appropriate record keeping of consultation to provide stakeholders with a lasting record of discussions, and
- development or upgrade of IT systems to manage information.

5. Program Reporting and Review of Effectiveness

Woodside will undertake an annual review of the Program to assess its effectiveness and adapt the Program accordingly. The annual review will also include an assessment of appropriateness of the methods used to undertake ongoing consultation with Traditional Custodians.

Progress of the Program will be reported annually in line with annual sustainability reporting via the Woodside website.

6. Current Status

Following distribution of this proposed Program, Woodside is now participating in a number of specific ongoing consultation activities with Traditional Custodian Relevant Persons. Specific ongoing activities are tabulated below:

Traditional Custodian Relevant Person	Ongoing Consultation Description	Forward Plan	Estimated Timeframes
Buurabalayji Thalanyji Aboriginal Corporation (BTAC)	BTAC proposed a Collaboration Agreement in May 2023. Woodside agreed in principle and exchanged correspondence to understand details of the proposal. The Collaboration Agreement would enable support for BTAC to undertake an ethnographic assessment to articulate values, and ensure appropriate cost recovery.	Woodside and BTAC have executed a Costs Acceptance Letter. Woodside provided a draft Consultation Agreement to BTAC in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with BTAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by BTAC in relation to BTAC's capacity and priorities to finalise the agreement.
Yamatji Marlpa Aboriginal Corporation (YMAC)	In June 2023, YMAC provided Woodside a proposed draft Framework Agreement, and a proposal to fund in-house expertise to support consultation and implement the Collaboration Framework. In July 2023, Woodside agreed in principle to the proposed Collaboration Framework and the funding proposal and requested a meeting to work together on details. Woodside provided the Proposed Program of Ongoing Consultation to complement the proposed Collaboration Framework.	Woodside provided a draft Consultation Agreement to YMAC for NTGAC, who are represented by YMAC, in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with YMAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by YMAC in relation to YMAC's capacity and priorities to finalise the agreement.
Wirrawandi Aboriginal Corporation (WAC)	In August 2023, WAC proposed a Framework Agreement with Woodside to provide a streamlined, formalised approach to consultation between WAC and Woodside. Woodside has confirmed receipt of the proposed framework from WAC.	Woodside provided a draft Consultation Agreement to WAC in March 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with WAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by WAC in relation to WAC's capacity and priorities to finalise the agreement.
Ngarluma Aboriginal Corporation (NAC)	In September 2023, NAC proposed a Joint Working Group to practically manage consultation processes. It was proposed that the group would meet monthly for 2023 and quarterly thereafter, meetings would include NAC CEO and NAC Directors and potentially independent SME/s, the proposal was that Woodside draft a Framework Agreement, and included a request for funding for this approach. Woodside provided in-principle support for the proposal.	Woodside provided a draft Consultation Agreement to NAC in March 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with NAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by NAC in relation to NAC's capacity and priorities to finalise the agreement.
Nganhurra Thanardi Garrbu Aboriginal Corporation (NTGAC)	In a meeting during August 2023, NTGAC proposed a Framework Agreement. This included terms for ongoing engagement such as frequency of consultation, participation, and content. NTGAC has also requested Woodside provide funding for an in-house environmental scientist to review material. Woodside agreed in principle to this approach and has requested a first draft of the Framework Agreement for consideration. Woodside have agreed to pay for YMAC's in-house scientist to attend NTGAC meetings to advise NTGAC.	Woodside has been responding to queries from NTGAC regarding various Environment Plans, who have passed information provided by Woodside onto their Environmental Scientist. Woodside provided a draft Consultation Agreement to NTGAC via YMAC in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with NTGAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by NTGAC in relation to NTGAC's capacity and priorities to finalise the agreement.

Yinggarda Aboriginal Corporation (YAC)	In August 2023, YAC requested Woodside provide a draft Framework Agreement for their consideration. Woodside has provided a draft Framework Agreement to YAC for review.	Woodside provided a draft Consultation Agreement to YAC in March 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with YAC regarding the draft proposed Consultation Agreement. Woodside continues to be guided by YAC in relation to YAC's capacity and priorities to finalise the agreement.
Robe River Kuruma Aboriginal Corporation (RRKAC)	RRKAC have noted that they are insufficiently resourced to engage further and respond to Woodside regarding EPs. Woodside assesses that a Framework Agreement could address this.	Woodside has on several occasions written to RRKAC offering to fund consultation meetings. Woodside will offer RRKAC a Framework Agreement which will propose funding, scope of work and timeframes to assist with consultation and ongoing consultation. If RRKAC are open to the proposal, it is intended to put forward a draft Framework Agreement to RRKAC.	Woodside continues to be guided by RRKAC in relation to RRKAC's capacity and priorities relating to an agreement.
Ngarluma Yindjibarndi Foundation Limited (NYFL)	NYFL and Woodside have an existing Agreement in place which enables quarterly communication about Woodside activities. NYFL has advised they are working with other First Nations organisations and representative Bodies developing a Framework Agreement.	Woodside provided a draft Consultation Agreement to NYFL in March 2024. NYFL responded with a quote for an initial review of the draft terms of agreement. Woodside supports funding requests that are reasonable and will seek to reach agreement on a funding proposal put forward by NYFL.	Woodside is in regular discussions with NYFL regarding the draft proposed Consultation Agreement and continues be guided by NYFL in relation to its progress.
Kariyarra Aboriginal Corporation (KAC)	In September 2023 KAC proposed an agreement which would include meeting arrangements, ongoing consultations, specialist advice and contact protocols.	Woodside supports funding requests that are reasonable and will seek to reach agreement on a funding proposal put forward by KAC. Woodside agrees that a Framework Agreement is a sound tool to set out ongoing consultation with KAC, funding arrangements and social investment opportunities that KAC would want explored. Woodside provided a draft Consultation Agreement to KAC in February 2024. Discussions about the agreement are continuing.	Woodside is in regular discussions with KAC regarding the draft proposed Consultation Agreement and continues be guided by KAC in relation to its progress.

EXECUTIVE SUMMARY

Woodside Energy Scarborough Pty Ltd (Woodside) has developed its oil spill preparedness and response position for the Scarborough Offshore Facility and Trunkline Operations, hereafter known as the Petroleum Activities Program (PAP).

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP detailed in the Environment Plan (EP). This document then details Woodside’s decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness.

A summary of the key facts and references to additional detail within this document are presented below.

Table 0-1: Summary of the key details for assessment

Key details of assessment	Summary	Reference to additional detail
Worst Case Credible Scenario	<p>Credible Scenario-01 (CS-01): Instantaneous Release of 250 m³ of Marine Diesel (MDO) outside Mermaid Sound from a vessel collision. 20° 21' 3.28" S, 116° 42' 5.58" E.</p> <p>Instantaneous release of 250 m³ MDO.</p> <p>5% residual component of 12.5 m³.</p>	Section 2.2
	<p>Credible Scenario-02 (CS-02): Instantaneous Release of 250 m³ of MDO within Montebello AMP from a vessel collision. 20° 03' 1.44" S, 115° 31' 35.04" E.</p> <p>Instantaneous release of 250 m³ MDO.</p> <p>5% residual component of 12.5 m³.</p>	
	<p>Credible Scenario-03 (CS-03): Instantaneous Surface Release of 470 m³ of MDO due to a loss of structural integrity at the FPU Location. 19° 53' 54.72" S, 113° 14' 19.56" E.</p> <p>Instantaneous surface release of 470 m³ MDO.</p> <p>5% residual component of 23.5 m³.</p>	
	<p>Credible Scenario-04 (CS-04): Loss of well containment due to a failure at the wellheads and/or Xmas trees.</p> <p>Subsea release of 423 MMscf per day (at virgin reservoir pressure/ day one of production) of dry gas for an estimated 65.3 days until well kill.</p> <p>Negligible liquid component at atmospheric pressures.</p>	
Hydrocarbon Properties	<p>MDO</p> <p>MDO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (BP < 180 °C); a further 35% should evaporate within the first 24 hours (180 °C < BP < 265 °C); and a further 54% should evaporate over several days (265 °C < BP < 380 °C). Approximately 5% of the oil is shown to be persistent. The aromatic content of the oil is approximately 3%.</p> <p>Dry gas</p> <p>The Scarborough reservoir properties are dry gas, primarily methane (approximately 95%) and nitrogen (approximately 4%), with some ethane, CO₂ contents and limited heavier hydrocarbon components. No liquid hydrocarbons are expected at atmospheric conditions. Furthermore, worst case discharge rate ('blowout' rate) modelling predicts that the gas plume will not breach the water's surface.</p>	<p>Section 6.8.2 of the EP</p> <p>Appendix A of the First Strike Plan</p>

Modelling Results	<p>Quantitative, stochastic assessments have been undertaken for credible spill scenarios CS-01, CS-02 and CS-03 to help assess the environmental risk of a hydrocarbon spill.</p> <p>A total of 200 replicate simulations were completed for the three scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (50 simulations per quarter for each scenario).</p> <p>No stochastic hydrocarbon spill modelling was required for CS-04 due to the hydrocarbon type being dry gas.</p>				Section 2.3.4	
		CS-01: Instantaneous release of 250 m³ of MDO outside Mermaid Sound	CS-02: Instantaneous release of 250 m³ of MDO within Montebello AMP	CS-03: Instantaneous surface release of 470 m³ of MDO due to a loss of structural integrity at the FPU Location	CS-04: Loss of well containment due to a failure at the wellheads and/ or Xmas trees	
	Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a concentration of 10 g/m ²)	Dampier Archipelago - 6 hours (0.25 days)	Montebello MP - 1 hour (0.04 days)	No contact at threshold	N/A – dry gas	
	Minimum time to shoreline contact (above 100 g/m ²)	Dampier Archipelago - 18 hours (0.75 days) Legendre Island - 18 hours (0.75 days)	No contact at threshold	No contact at threshold	N/A – dry gas	
	Largest volume ashore at any single Response Protection Area (RPA) (above 100 g/m ²)	Dampier Archipelago – 55 m ³	No contact at threshold	No contact at threshold	N/A – dry gas	
	Largest total shoreline accumulation (above 100 g/m ²) all shorelines	Dampier Archipelago – 55 m ³	No contact at threshold	No contact at threshold	N/A – dry gas	
	Minimum time to entrained/dissolved hydrocarbon contact with the offshore	Dampier Archipelago – 5 hours (0.21 days)	Montebello AMP – 1 hour (0.04 days)	Gascoyne MP – 71 hours (2.96 days)	N/A – dry gas

1 INTRODUCTION

1.1 Overview

Woodside Energy Scarborough Pty Ltd (Woodside) has developed its oil spill preparedness and response position for the Scarborough Offshore Facility and Trunkline Operations activity, hereafter known as the Petroleum Activities Program (PAP). This document details Woodside's decisions and techniques for responding to a hydrocarbon loss of containment event and the process for determining its level of hydrocarbon spill preparedness.

1.2 Purpose

This document, together with the documents listed below, meet the requirements of the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023* (Cth) (Environment Regulations) relating to hydrocarbon spill response arrangements.

- The Scarborough Offshore Facility and Trunkline Operations Environment Plan (EP)
- Oil Pollution Emergency Arrangements (OPEA) (Australia)
- The Scarborough Offshore Facility and Trunkline Operations Oil Pollution Emergency Plan (OPEP) including:
 - First Strike Plan (FSP)
 - Relevant Operations Plans
 - Relevant Tactical Response Plans (TRPs)
 - Relevant Supporting Plans
 - Data Directory.

1.3 Scope

This document demonstrates that the risks and impacts from an unplanned hydrocarbon release, and the associated response operations, are controlled to As Low as Reasonably Practicable (ALARP) and an acceptable level. It achieves this by evaluating response options to address the potential environmental risks and impacts resulting from an unplanned loss of hydrocarbon containment associated with the PAP detailed in the EP. This document then outlines Woodside's decisions and techniques for responding to a hydrocarbon release event and the process for determining its level of hydrocarbon spill preparedness. It should be read in conjunction with the documents listed in Table 1-1. The location of the PAP is shown in Figure 3-3 of the EP.

1.4 Oil spill response document overview

The documents outlined in Table 1-1 and Figure 1-1 are collectively used to manage the preparedness and response for a hydrocarbon release.

The Oil Pollution First Strike Plan (FSP) contains a pre-operational Net Environmental Benefit Analysis (NEBA) summary, detailing the selected response techniques for this PAP. Relevant Operational Plans to be initiated for associated response techniques are identified in the FSP and relevant forms to initiate a response are appended to the FSP.

The process to develop an Incident Action Plan (IAP) begins once the Oil Pollution FSP is underway. The IAP includes inputs from the operational monitoring and the operational NEBA (Section 4). Planning, coordination and resource management are initiated by the Corporate Incident Management Team (CIMT). In some instances, technical specialists may be utilised to provide expert advice. The planning may also involve liaison officers from supporting government agencies.

During each operational period, field reports are continually reviewed to evaluate the effectiveness of response operations. In addition, the operational NEBA is continually reviewed and updated to confirm the response techniques implemented continue to result in a net environmental benefit (Section 4).

The response will continue as described in Section 5 until the response termination criteria have been met.

2 RESPONSE PLANNING PROCESS

This document details Woodside's process for identifying potential response options for the hydrocarbon release scenarios, identified in the EP. Figure 2-1 details the interaction between Woodside's response, planning, preparedness and selection process.

This structure has been used because it shows how the planning and preparedness activities inform a response and provides indicative guidance on what activities would be undertaken, in sequential order, if a real event were to occur. The process also evaluates alternative, additional and/or improved control measures specific to the PAP.

The Scarborough Offshore Facility and Trunkline Operations First Strike Plan then summarises the outcome of the response planning process and provides initial response guidance and a summary of ongoing response activities if an incident were to occur.

2.1 Response planning process outline

This document is expanded below to provide additional context on the key steps in determining capability, evaluating ALARP and hydrocarbon spill response requirements.

- Section 1. INTRODUCTION
- Section 2. RESPONSE PLANNING PROCESS
 - identification of worst-case credible scenario(s) (WCCS)
 - spill modelling for WCCS.
- Section 3. IDENTIFY RESPONSE PROTECTION AREAS (RPAs)
 - areas predicted to be contacted at concentration >100 g/m².
- Section 4. NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)
 - pre-operational NEBA (during planning/ALARP evaluation): this must be reviewed during the initial response to an incident to confirm its accuracy
 - selected response techniques prioritised and carried forward for ALARP assessment.
- Section 5. HYDROCARBON SPILL ALARP PROCESS
 - determines the response need based on predicted consequence parameters
 - details the environmental performance of the selected response options based on need
 - sets the environmental performance outcomes, environmental performance standards and measurement criteria.
- Section 6. ALARP EVALUATION
 - evaluates alternative, additional, and improved options for each response technique to demonstrate the risk has been reduced to ALARP
 - provides a detailed ALARP assessment of selected control measure options against:
 - predicted cost associated with implementing the option.
 - predicted change to environmental benefit.
 - predicted effectiveness / feasibility of the control measure.
- Section 7. ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES
 - evaluation of impacts and risks from implementing selected response options.
- Section 8. ALARP CONCLUSION
- Section 9. ACCEPTABILITY CONCLUSION

2.1.1 Response Planning Assumptions

Figure 2-2 illustrates the initial steps of a response to an oil spill event and, where available, the indicative timing. For the latter stages, the timing will be specific to the selective response option.

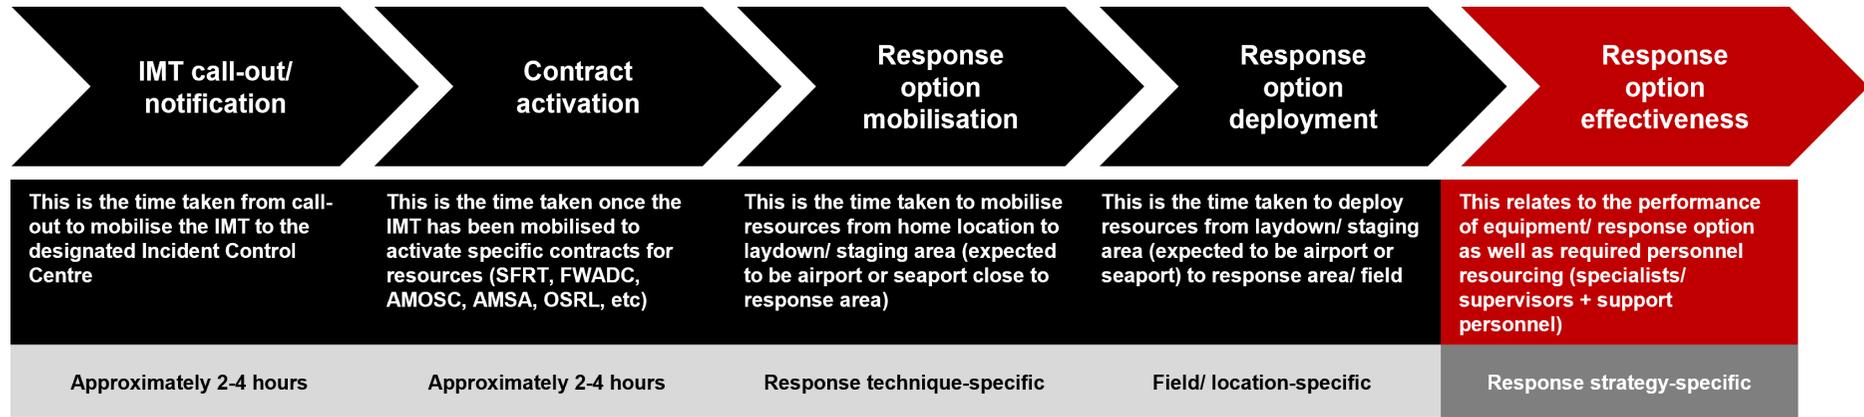

Figure 2-2: Response planning assumption – timing, resourcing and effectiveness

2.2 Environment plan risk assessment (credible spill scenarios)

Potential hydrocarbon release scenarios from the PAP have been identified during the risk assessment process (Section 6 of the EP). Further descriptions of risk, impacts and mitigation measures (which are not related to hydrocarbon preparedness and response) are provided in Section 6 of the EP. Four unplanned events or credible spill scenarios for the PAP have been selected as representative across types, sources and incident/response levels, up to and including the WCCS.

Table 2-1 presents the credible scenarios for the PAP. The WCCS for the activity is then used for response planning purposes, as all other scenarios are of a lesser scale and extent. By demonstrating capability to manage the response to the WCCS, Woodside assumes other scenarios that are smaller in nature and scale can also be managed by the same capability. Response performance measures have been defined based on a response to the WCCS.

Stochastic modelling has been completed for a worst-case spill scenarios of an instantaneous surface release of MDO, representing loss of vessel fuel tank integrity after a collision, at two locations: 250 m³ of MDO outside Mermaid Sound (CS-01) and 250 m³ of MDO within Montebello Marine Park (CS-02). A third scenario has been modelled for the instantaneous surface release of 470 m³ MDO following a loss of structural integrity at the Floating Production Unit (FPU) location in the Scarborough field (CS-03). Credible Scenario 4 (CS-04) is a loss of well containment of dry gas, so no hydrocarbon spill modelling was undertaken for this scenario.

The instantaneous surface release of 250 m³ of MDO outside Mermaid Sound scenario (CS-01) is considered to determine the WCCS for response planning purposes as it is the only scenario with floating and shoreline hydrocarbons contacting shoreline receptors above thresholds. Whilst CS-02 and CS-03 do not contact shorelines above shoreline hydrocarbon thresholds, they are included for planning purposes as they contact offshore receptors above entrained hydrocarbon thresholds. CS-04 has no or negligible liquid hydrocarbon component so the dry gas will dissolve into the immediate water surrounding a spill causing only localised disturbance. Other credible scenarios have smaller volumes of hydrocarbons and so are considered to be within the risk profile and spill response capability requirements of the WCCS.

Table 2-1: Petroleum Activities Program credible spill scenarios

Credible Spill Scenarios	Scenario selected for planning purposes	Scenario description	Maximum credible volume released (liquid m ³)	Incident level	Hydrocarbon type	Residual proportion	Residual volume (m ³)
Instantaneous Release of 250 m ³ of MDO outside Mermaid Sound (CS-01)	Yes	Instantaneous release of 250 m ³ of MDO outside Mermaid Sound	250	2	MDO	5.0 %	12.5
Instantaneous Release of 250 m ³ of MDO within Montebello AMP (CS-02)	Yes	Instantaneous Release of 250 m ³ of MDO within Montebello AMP	250	2	MDO	5.0 %	12.5
Instantaneous surface release of 470 m ³ of MDO following a loss of structural integrity at the FPU location (CS-03)	Yes	Instantaneous Surface Release of 470 m ³ of MDO following a loss of structural integrity at the FPU Location	470	2	MDO	5.0 %	23.5
Loss of well containment due to a failure at the wellheads and/or Xmas trees (CS-04)	Yes	Loss of well containment due to a failure at the wellheads and/or Xmas trees (CS-04)	No or negligible liquid hydrocarbon	3	Dry gas	N/A	N/A
Loss of containment during bunkering	No	Loss of containment during bunkering at the FPU or trunkline route	50	1	MDO	5.0 %	2
Topside loss of containment	No	Topside loss of containment at the FPU	220	2	MDO	5.0 %	11
Subsea infrastructure loss of containment	No	Loss of containment from the trunkline, riser, infield flowlines or subsea equipment	No or negligible liquid hydrocarbon	1	Dry gas	N/A	N/A
Accommodation Support Vessel loss of structural integrity	No	Slow leak of MDO after sinking of the ASV from a loss of structural integrity	Slow leak	1	MDO	5.0 %	N/A

2.2.1 Hydrocarbon characteristics

Hydrocarbon characteristics, including modelled weathering data and ecotoxicity, are included in Section 6 of the EP.

Marine Diesel (CS-01, CS-02, CS-03)

Marine Diesel Oil (MDO) is typically classed as an International Tanker Owners Pollution Federation (ITOPF) Group I/II oil. Group I oils are non-persistent and tend to dissipate completely through evaporation within a few hours and do not normally form emulsions.

MDO is a mixture of volatile and persistent hydrocarbons with low proportions of highly volatile and residual components. In general, about 6% of the oil mass should evaporate within the first 12 hours (boiling point <180°C); a further 35% should evaporate within the first 24 hours (180°C < boiling point <265°C); and a further 54% should evaporate over several days (265°C < boiling point <380°C). About 5% of the oil is shown to be persistent. The aromatic content of the oil is about 3%.

The mass balance forecast for the constant-wind case for MDO shows that about 41% of the oil is predicted to evaporate within 24 hours. Under these calm conditions the majority of the remaining oil on the water surface weathers at a slower rate due to comprising the longer-chain compounds with higher boiling points. Evaporation of the residual compounds slows significantly and is then subject to more gradual decay through biological and photochemical processes.

Under the variable-wind case, where the winds are of greater strength, entrainment of MDO into the water column is indicated to be significant. Approximately 24 hours after the spill, around 72% of the oil mass is forecast to have entrained and a further 24% is forecast to have evaporated, leaving only a small proportion of the oil floating on the water surface (<1%). The residual compounds will tend to remain entrained beneath the surface under conditions that generate wind waves (approximately > 6 m/s).

The increased level of entrainment in the variable-wind case results in a higher percentage of biological and photochemical degradation, where the decay of the floating slicks and oil droplets in the water column occurs at an approximate rate of 2.4% per day with an accumulated total of ~16% after seven days, in comparison to a rate of ~0.2% per day and an accumulated total of 1.3% after seven days in the constant-wind case. Given the large proportion of entrained oil and the tendency for it to remain mixed in the water column, the remaining hydrocarbons decay and/or evaporate over time scales of several weeks to a few months. This long weathering duration will extend the area of potential effect, requiring the break-up and dispersion of the slicks and droplets to reduce concentrations below the thresholds considered in this study.

Dry gas (CS-04)

The Scarborough reservoir properties are dry gas, primarily methane (approximately 95%) and nitrogen (approximately 4%), with some ethane, CO₂ contents and limited heavier hydrocarbon components. No liquid hydrocarbons are expected at atmospheric conditions. Furthermore, worst case discharge rate ('blowout' rate) modelling predicts that the gas plume will not breach the water's surface.

2.3 Hydrocarbon spill modelling

Oil spill trajectory modelling (OSTM) tools are used for environmental impact assessment and during response planning to understand spatial scale and timeframes for response operations. Woodside recognises there is a degree of uncertainty related to the use of modelling data and has subsequently utilised conservative approaches to volumes, weathering, spatial areas, timing and response effectiveness to scale capability to need.

The Oil Spill Model and Response System (OILMAP) and Integrated Oil Spill Impact Model System (SIMAP) models are both used for stochastic and deterministic trajectory modelling. They have been developed over three decades of planning, exercises, actual responses, several peer reviews, and validation studies. OILMAP was originally derived from the United States Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Type A model (French et al. 1996), for assessing marine transport, biological impact and economic damage that was also used under the United States Oil Pollution Act 1990 Natural Resource Damage Assessment (NRDA) regulations. Notable spills where the model has been used and validated against actual field observations include, Exxon Valdez (French McCay 2004), North Cape Oil Spill (French McCay 2003), along with an assessment of 20 other spills (French McCay and Rowe, 2004). In addition, test spills designed to verify fate, weathering and movement algorithms have been conducted regularly and in a

range of climate conditions (French and Rines 1997; French et al. 1997; Payne et al. 2007; French McCay et al. 2007).

Further to this, the algorithms have been updated using the latest findings from the Macondo/Deepwater Horizon well blowout in the Gulf of Mexico and validated according to the Deepwater Horizon (DWH) oil spill in support of the NRDA (Spaulding et al. 2015; French McCay et al. 2015, 2016). Finally, the OILMAP and SIMAP models have been used extensively in Australia to prosecute pollution offences, predict discharge locations and likely spill volumes based on weathering and surveillance observations, and has been used as expert witness evidence in Australian court proceedings, aiding the prosecution to determine spill quantum estimates.

2.3.1 Stochastic modelling

Quantitative, stochastic assessments have been undertaken for the credible spill scenarios (refer to Table 2-1) to help assess the environmental consequences of a hydrocarbon spill.

A total of 200 replicate simulations were completed for each of the scenarios to test for trends and variations in the trajectory and weathering of the spilled oil, with an even number of replicates completed using samples of metocean data that commenced within each calendar quarter (50 simulations per quarter). Further details relating to the assessments for the scenarios can be found in Section 6 of the EP.

2.3.1.1 Environmental impact thresholds – Environment that May Be Affected (EMBA) and hydrocarbon exposure

The outputs of the stochastic spill modelling are used to assess the potential environmental impact from the credible scenarios. The stochastic modelling results are used to delineate areas of the marine and shoreline environment that could be exposed to hydrocarbon levels exceeding environmental impact threshold concentrations. The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA and is discussed further in Section 6 of the EP. As the weathering of different fates of hydrocarbons (surface, entrained and dissolved) differs due to the influence of the metocean mechanism of transportation, a different EMBA is presented for each fate within the EP.

A conservative approach – adopting accepted accumulation thresholds for impacts on the marine environment – is used to define the EMBA. These hydrocarbon thresholds are presented in Table 2-2 below and described in Section 6 of the EP.

Table 2-2: Summary of thresholds applied to the stochastic hydrocarbon spill modelling to determine the EMBA and environmental impacts

Hydrocarbon	Surface hydrocarbon (g/m ²)	Dissolved hydrocarbon (ppb)	Entrained hydrocarbon (ppb)	Accumulated hydrocarbon (g/m ²)
Diesel	10	50	100	100

2.3.2 Deterministic modelling

Deterministic modelling is undertaken where initial stochastic modelling has indicated that floating oil is present at an impact threshold of 50 g/m² and/or where there are shoreline accumulations at an impact threshold of 100 g/m². The deterministic modelling outputs are then used to scale the required capability for the offshore (containment and recovery and dispersant) and/or shoreline responses.

Whilst modelling for this activity predicts that there may be some floating hydrocarbons present at the 50 g/m² threshold at Dampier Archipelago (CS-01), Montebello Marine Park (CS-02) and in open waters, together with some shoreline contact above 100 g/m², many standard response techniques requiring deterministic analysis are not feasible for spills of MDO e.g. dispersant application and containment and recovery. Stochastic modelling has therefore been used to scale the response.

2.3.3 Response planning thresholds for surface and shoreline hydrocarbon exposure

Thresholds to determine the EMBA are used to predict and assess environmental impacts and inform the Scientific Monitoring Program (SMP), however they do not appropriately represent the thresholds at which an effective response can be implemented. Additional response thresholds are used for response planning and

to determine areas where response techniques would be most effective. The modelling is then used to assess the nature and scale of a response.

In the event of an actual response, modelling would be reviewed for suitability and additional modelling would be conducted using real-time data and field information to inform CIMT decisions.

The modelling outputs are presented at response planning thresholds for surface hydrocarbons for the WCCS. Surface spill concentrations are expressed as grams per square metre (g/m²). The thresholds used are derived from oil spill response planning literature and industry guidance and are summarised in the following subsections.

2.3.3.1 Surface hydrocarbon concentrations

Table 2-3: Surface hydrocarbon thresholds for response planning

Surface hydrocarbon threshold (g/m ²)	Description	Bonn Agreement Oil Appearance Code	Mass per area (m ³ /km ²)
>10	Predicted minimum threshold for commencing operational monitoring ¹	Code 3 – Dull metallic colours	5 to 50
50	Predicted minimum floating oil threshold for containment and recovery and surface dispersant application ²	Code 4 – Discontinuous true oil colour	50 to 200
100	Predicted optimum floating oil threshold for containment and recovery and surface dispersant application	Code 5 – Continuous true oil colour	>200
Shoreline hydrocarbon threshold (g/m ²)	Description	National Plan Guidance on Oil Contaminated Foreshores	Mass per area (m ³ /km ²)
100	Predicted minimum shoreline accumulation threshold for shoreline assessment operations	Stain	>100
250	Predicted minimum threshold for commencing shoreline clean-up operations	Level 3 – Thin Coating	200 to 1000

The surface thickness of oil at which dispersants are typically effective is approximately 100 g/m². However, substantial variations occur in the thickness of the oil within the slick, and most fresh crude oils spread within a few hours, so that overall the average thickness is 0.1 mm or approximately 100 g/m² (ITOPF 2011). Additionally, the recommended rate of application for surface dispersant is typically one part dispersant to 20 or 25 parts of spilled oil. These figures assume a 0.1 mm slick thickness, averaged over the thickest part of the spill, to calculate a litres/hectare application rate from vessels and aircraft. In practice this can be difficult to achieve as it is not possible to accurately assess the thickness of the floating oil.

Some degree of localised over-dosage and under-dosage is inevitable in dispersant response. An average oil layer thickness of 0.1 mm is often assumed, although the actual thickness can vary over a wide range (from less than 0.0001 mm to more than 1 mm) over short distances (International Petroleum Industry Environment Conservation Association [IPIECA] 2015).

Guidance from the Australian Maritime Safety Authority (AMSA, 2020) indicates spreading of spills of Group II or III products will rapidly decrease slick thickness over the first 24 hours of a spill resulting in the potential requirement of up to a ten fold increase in capability on day 2 to achieve the same level of performance.

Further guidance from the European Maritime Safety Authority (EMSA) states spraying the 'metallic' looking area of an oil slick (Bonn Agreement Oil Appearance Code (BAOAC) 3, approx. 5 – 50 µm) with dispersant

¹ Operational monitoring will be undertaken from the outset of a spill whether or not this threshold has been reached. Monitoring is needed throughout the response to assess the nature of the spill, track its location and inform the need for any additional monitoring and/or response techniques. It also informs when the spill has entered State Waters and control of the incident passes to statutory authorities e.g. Western Australia Department of Transport (WA DoT) or AMSA.

² At 50 g/m², containment and recovery and surface dispersant application operations are not expected to be particularly effective. This threshold represents a conservative approach to planning response capability and containing the spread of surface oil.

from spraying gear designed to treat an oil layer 0.1 mm (100 µm) thick, will inevitably cause dispersant over-treatment by a factor of 2 to 20 times (EMSA 2012).

Therefore, dispersant application should be concentrated on the thickest areas of an oil slick and Woodside intends on applying surface dispersants to only BAOAC 4 and 5. Spraying areas of oil designated as BAOAC Code 4 (Discontinuous true oil colour) with dispersant will, on average, deliver approximately the recommended treatment rate of dispersant.

Spraying areas of oil designated as BAOAC Code 5 with dispersant (Continuous true oil colour and more than 0.2 mm thick) will, on average, deliver approximately half the recommended treatment rate of dispersant. Repeated application of these areas of thicker oil, or increased dosage ratios, will be required to achieve the recommended treatment rate of dispersant (EMSA 2012).

Guidance from the National Oceanic and Atmospheric Administration (NOAA) in the United States is found in the document: *Characteristics of Response Strategies: A Guide for Spill Response Planning in Marine Environments 2013* (NOAA 2013). This guide outlines advice for response planning across all common techniques, including surface dispersant spraying and containment and recovery. It states oil thickness can vary by orders of magnitude within distinct areas of a slick, thus the actual slick thickness and oil distribution of target areas are crucial for determining response method feasibility. Further to this, ITOPF also states in terms of oil spill response, sheen can be disregarded as it represents a negligible quantity of oil, cannot be recovered or otherwise dealt with to a significant degree by existing response techniques, and is likely to dissipate readily and naturally (ITOPF, 2014a, 2014b).

Figure 2-5 from AMSA's Identification of Oil on Water – Aerial Observation and Identification Guide (AMSA, 2014) shows expected percent coverage of surface hydrocarbons as a proportion of total surface area. Windrows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

From this information and other relevant sources (Allen and Dale, 1996; EMSA, 2012; Spence, 2018) the surface threshold of 50 g/m² was chosen as an average/equilibrium thickness (50 g/m² is an average of 50% coverage of 0.1 mm Bonn Agreement Code 4 – discontinuous true oil colour, or 25% coverage of 0.2 mm Bonn Agreement Code 5 – continuous true oil colour which would represent small patches of thick oil or windrows).

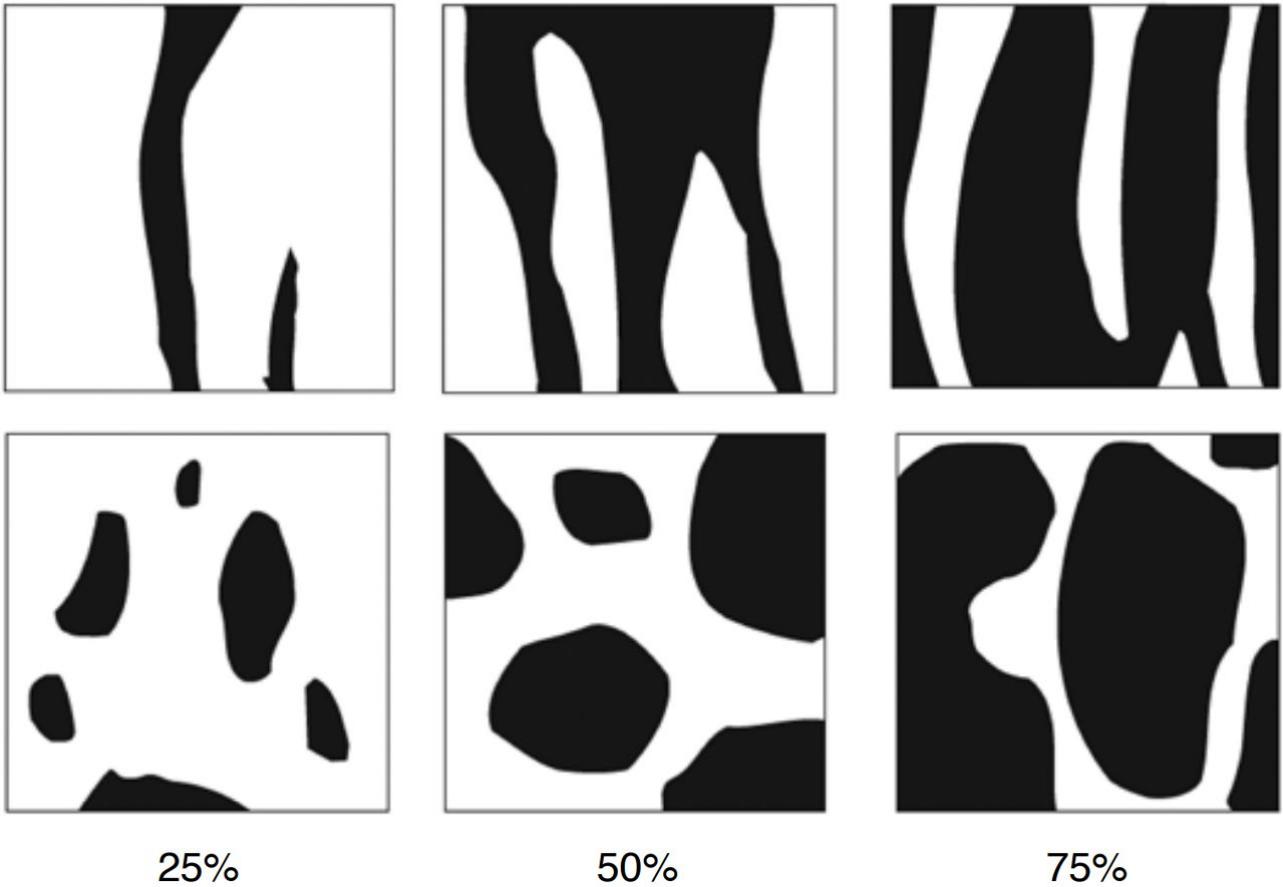

Figure 2-5: Proportion of total area coverage (AMSA, 2014)

Figure 2-6 illustrates the general relationships between on-water response techniques and slick thickness. Windrows, heavy oil patches and tar balls, for example, must be considered, as they influence oil encounter rates, chemical dosages and ignition potential. Each method has different thickness thresholds for effective response.

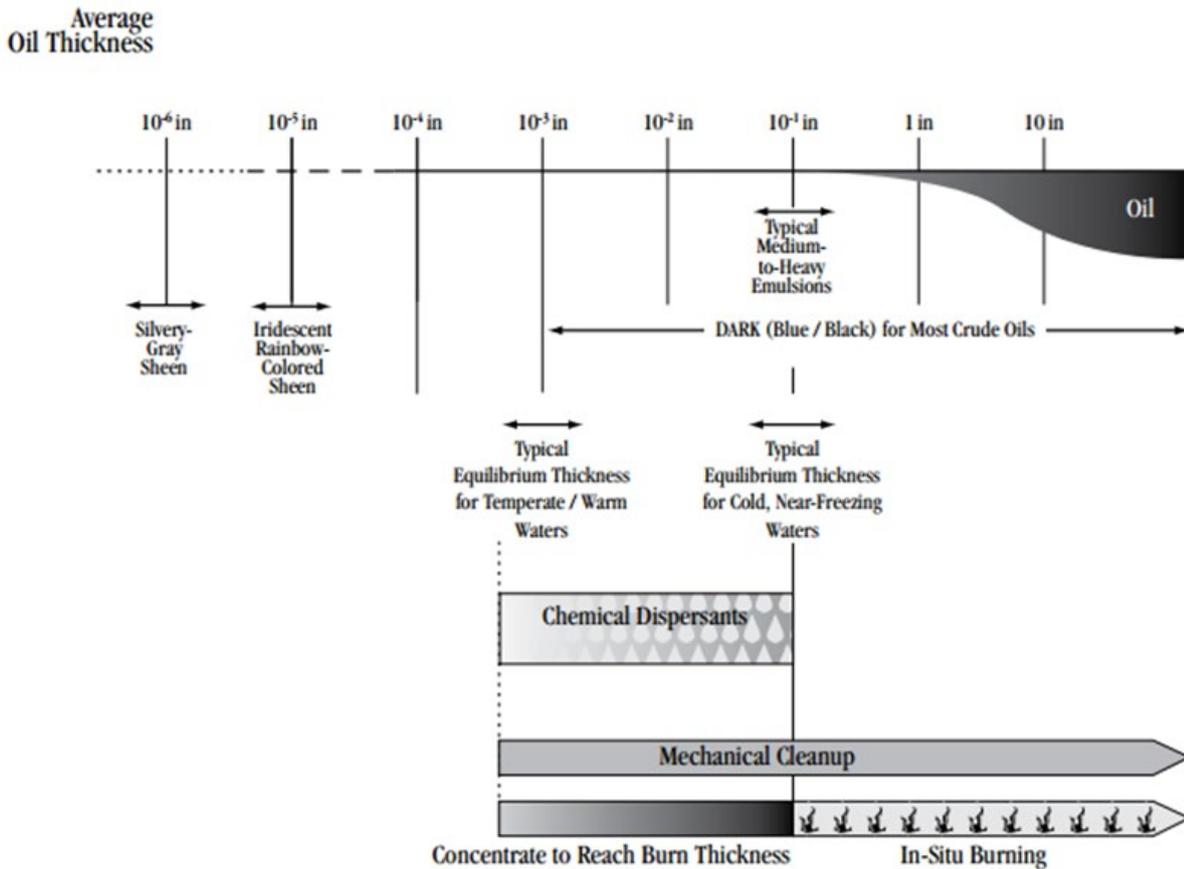

Figure 2-6: Oil thickness versus potential response options (from Allen and Dale 1996)

Wind and waves influence the feasibility of response operations, dropping the effectiveness significantly because of entrainment and/or splash-over as short period waves develop beyond two to three feet (0.6 to 0.9 m) in height. Waves and wind can also be limiting factors for the safe operation of vessels and aircraft.

2.3.3.2 Surface hydrocarbon viscosity

Table 2-4: Surface hydrocarbon viscosity thresholds

Surface viscosity (cSt)	Description	European Maritime Safety Authority	Viscosity at sea temperature (cSt)
5,000*	Predicted optimum viscosity for surface dispersant operations	Generally possible to disperse	500-5000
10,000*	Predicted maximum viscosity for effective surface dispersant operations	Sometimes possible to disperse	5,000-10,000

*Measured at sea surface temperature

Further to the required thickness for surface dispersant application and containment and recovery to be deployed effectively as outlined above, changes to viscosity will also limit the treatment of offshore response techniques. As outlined in the EMSA Manual on the Applicability of Oil Spill Dispersants (EMSA, 2012), guidance around changes to viscosity and likely effectiveness of surface dispersant application is provided.

This includes the following statements: "It has been known for many years that it is more difficult to disperse a high viscosity oil than a low or medium viscosity oil. Laboratory testing had shown that the effectiveness of dispersants is related to oil viscosity, being highest for modern "Concentrate, UK Type 2/3" dispersants at an oil viscosity of about 1000 or 2000 mPa (1000 – 2000 cSt) and then declining to a low level with an oil viscosity of 10,000 mPa (10,000 cSt). It was considered that some generally applicable viscosity limit, such as 2000 or 5000 mPa (2000 – 5000 cSt), could be applied to all oils."

However, modern oil spill dispersants are generally effective up to an oil viscosity of 5000 mPa (5000 cSt) or more, and their performance gradually decreases with increasing viscosity; oils with a viscosity of more than 10,000 cSt are in most cases, no longer dispersible. Guidance from CEDRE (EMSA, 2012) also indicates products with a range of 500 – 5000 cSt at sea temperature are generally possible to disperse, while 5000 – 10,000 cSt at sea temperature above pour point are sometimes possible to disperse, with products beyond 10,000 cSt at sea temperature below pour point are generally impossible to disperse.

To support decision making and response planning, a threshold of 10,000 cSt at sea temperature was chosen as a conservative estimate of maximum viscosity for surface dispersant spraying operations.

Spills of MDO will not reach the 10,000 cSt threshold for the duration of the spill and dispersant is not deemed to provide a net environmental benefit for response to a spill of MDO. The thresholds described above are compared with the modelling results for the WCCS (**Table 2-5**).

2.3.4 Spill modelling results

Details of the scenario and modelling inputs and results are included in **Table 2-5**.

The volumes as presented in **Table 2-5** are the worst-case volumes resulting from the stochastic modelling and have been used to determine appropriate level of response.

Table 2-5: Worst case credible scenario modelling results

Scenario description	Results			
	CS-01	CS-02	CS-03	CS-04
WCCS – total volume released Refer to Section 2.2.1 for detailed hydrocarbon characteristics	Instantaneous Release of 250 m³ of MDO outside Mermaid Sound Hydrocarbon release resulting from a collision with a third-party vessel - Loss of containment from the IMMR vessel fuel tank within the Trunkline Operational Area. Instantaneous release of 250 m ³ of MDO.	Instantaneous Release of 250 m³ of MDO within Montebello AMP Hydrocarbon release resulting from a collision with a third-party vessel - Loss of containment from the IMMR vessel fuel tank within the Trunkline Operational Area. Instantaneous release of 250 m ³ of MDO.	Instantaneous surface release of 470 m ³ of MDO following a loss of structural integrity at the FPU location. Instantaneous release of 470 m ³ of MDO.	Loss of well containment due to a failure at the wellheads and/or Xmas trees.
WCCS – residual volume remaining post-weathering	5% residual component of 12.5 m ³	5% residual component of 12.5 m ³	5% residual component of 23.5 m ³	N/A – dry gas with no liquid hydrocarbons
Location	20° 21' 3.28" S, 116° 42' 5.58" E	20° 03' 1.44" S, 115° 31' 35.04" E	19° 53' 54.72" S, 113° 14' 19.56" E	N/A – dry gas
Modelling results				
Surface area of hydrocarbons (>50 g/m²)	Deterministic modelling was not undertaken so spatial area information is not available. Surface hydrocarbon concentrations greater than 50 g/m ² are predicted at Dampier Archipelago after 7 hours, however, offshore response techniques, i.e. containment and recovery, and surface dispersant application, are not considered appropriate for spills of MDO.	Deterministic modelling was not undertaken so spatial area information is not available. Surface hydrocarbon concentrations greater than 50 g/m ² are predicted at Montebello Marine Park after 1 hour, however, offshore response techniques, i.e. containment and recovery, and surface dispersant application, are not considered appropriate for spills of MDO.	Deterministic modelling was not undertaken so spatial area information is not available. Surface hydrocarbon concentrations greater than 50 g/m ² are not predicted at any RPA for the duration of the spill.	N/A – dry gas
Surface area of hydrocarbons (>50 g/m² and <15,000 cSt)	N/A	N/A	N/A	N/A – dry gas
Minimum time to floating hydrocarbon contact with the offshore edge(s) of any shoreline receptor polygon (at a concentration of 10 g/m²)	Dampier Archipelago - 0.25 days	Montebello MP – 1 hour	No contact at threshold	N/A – dry gas
Minimum time to commencement of hydrocarbon accumulation at any shoreline receptor (at a concentration of 100 g/m²)	Dampier Archipelago - 0.75 days (55 m ³) Keast Island - 0.75 days (20 m ³)	No contact at threshold	No contact at threshold	N/A – dry gas
Maximum cumulative hydrocarbon volume accumulated at any individual shoreline receptor (at a concentration of 100 g/m²).	Dampier Archipelago – 55 m ³	No contact at threshold	No contact at threshold	N/A – dry gas
Maximum cumulative hydrocarbon volume accumulated across all shoreline receptors contacted by accumulated hydrocarbons (at a concentration of 100 g/m²)	Dampier Archipelago – 55 m ³	No contact at threshold	No contact at threshold	N/A – dry gas
Minimum time to entrained/dissolved hydrocarbon contact with the offshore edges of any receptor polygon (at a threshold of 100 ppb)	Dampier Archipelago – 0.21 days	Montebello MP – 1 hour	Gascoyne MP – 2.96 days	N/A – dry gas
The full list of response protection areas (RPAs) predicted from modelling is available in Table 3-1				

From the above modelling results, the volumes and timeframes for CS-01 have been selected as the basis for response planning.

3 IDENTIFY RESPONSE PROTECTION AREAS

In a response, operational monitoring programs (OMPs) – including trajectory modelling and vessel/aerial observations – would be used to predict Response Protection Areas (RPAs) that may be impacted. For the purposes of planning and appropriately scaling a response, modelling has been used to identify RPAs as outlined below in Figure 3-1.

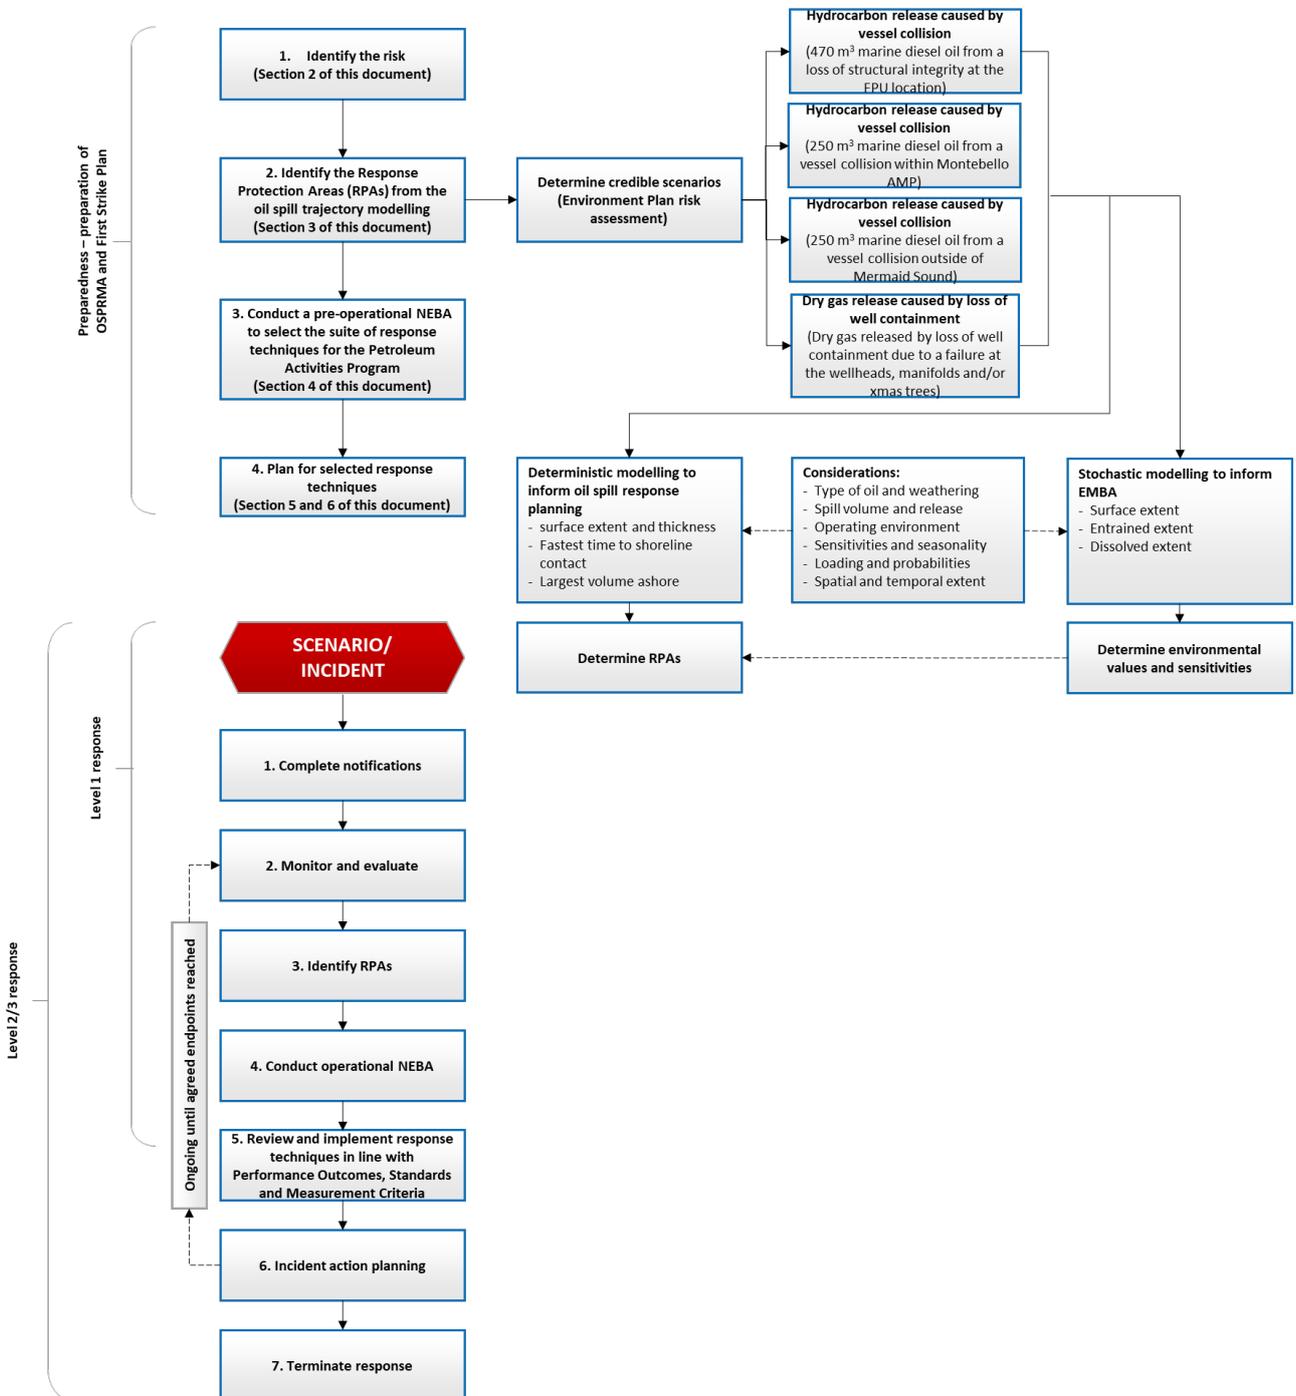

Figure 3-1: Identify Response Protection Areas (RPAs) flowchart

3.1 Identified sensitive receptor locations

Section 6 of the EP includes the list of sensitive receptor locations that have been identified by stochastic modelling as meeting the requirements outlined below:

- receptors with the potential to incur surface, entrained or shoreline accumulation contact above environmental impact thresholds
- receptors within the EMBA which meet any of the following:
 - priority protection criteria/ categories
 - International Union of Conservation of Nature (IUCN) marine protected area categories
 - high conservation value habitat and species
 - important socio-economic/heritage value.

3.2 Identify Response Protection Areas

RPAs have been selected on the basis of their environmental ecological, social, economic, cultural and heritage values and sensitivities and the ability to conduct a response based on the minimum response thresholds (Section 2.3.3). The figures outlined in Table 3-1 are the combined results of the individual worst-case runs and do not indicate a single worst case credible scenario (where the timings and volumes are all expected from one release).

From the identified sensitive receptors described in Section 6 of the EP, only those which a shoreline response could feasibly be conducted (accumulation > 100 g/m² for shoreline assessment and/or contact with surface slicks >10 g/m² for operational monitoring) have been selected for response planning purposes. While not discounting other sensitivities, these RPAs have been used as the basis for demonstrating the capability to respond to the nature and scale of a spill from the WCCS and prioritising response techniques.

Table 3-1 outlines locations which were identified from the modelling runs for the WCCS but does not constitute the full list of Priority Protection Areas (PPAs) potentially contacted from stochastic modelling (as per EMBA definition) (see Section 4 of the EP). Other RPA outliers were identified from the modelling and have been included in the assessment of capability in Sections 5 and 6.

Additional sensitive receptors are presented the existing environment description (Section 4 of the EP) and impact assessment section (Section 6 of the EP) for each respective spill scenario. The pre-operational NEBA (Section 4) includes the results from the stochastic modelling to allow consideration of all feasible response techniques in the planning phase, therefore additional receptors are also included in the pre-operational NEBA.

The RPAs identified in Table 3-1 are used to plan for the nature and scale of a shoreline response.

Table 3-1: Response Protection Areas (RPAs) from stochastic modelling

4 NET ENVIRONMENTAL BENEFIT ANALYSIS (NEBA)

A Net Environmental Benefit Analysis (NEBA) is a structured process to consider which response techniques are likely to provide the greatest net environmental benefit.

The NEBA process typically involves four key steps outlined in Figure 4-1: evaluate data, predict outcomes, balance trade-offs, and select response options. These steps are followed in the planning/preparedness process and would also be followed in a response.

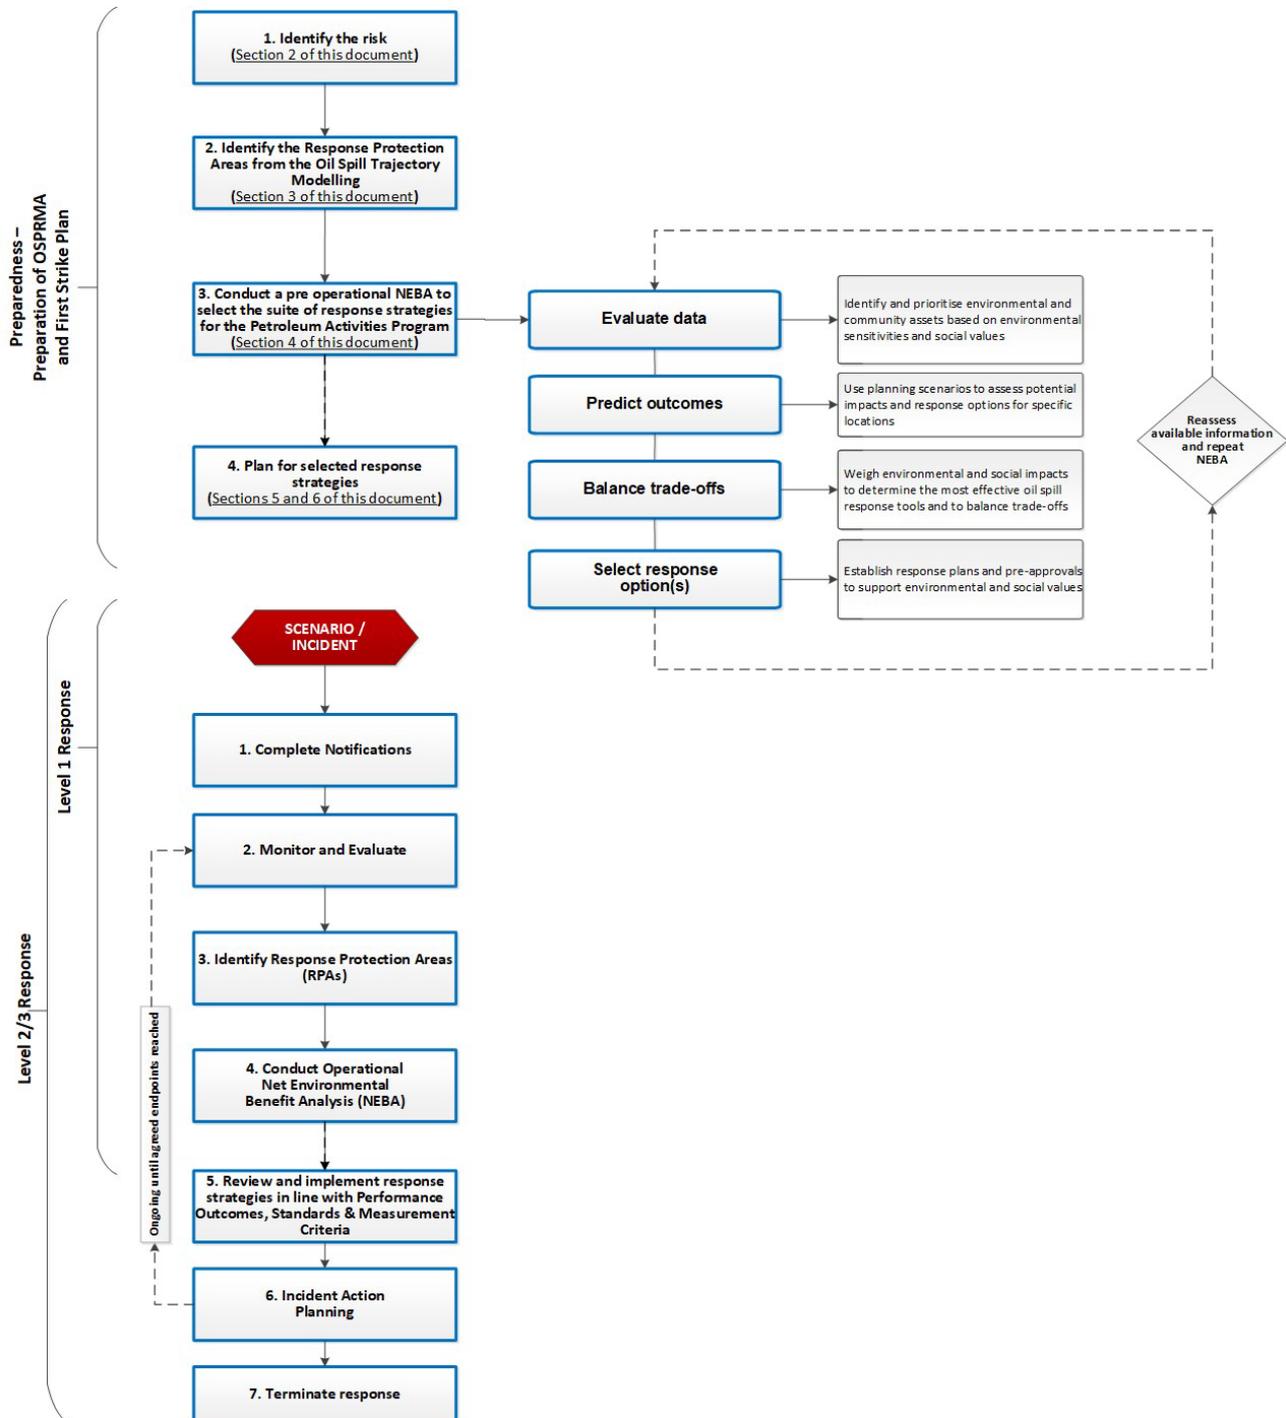

Figure 4-1: Net Environmental Benefit Analysis (NEBA) flowchart

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

4.1 Pre-operational / Strategic NEBA

The pre-operational NEBA identifies positive and negative impacts to sensitive receptors from implementing the response techniques. Feasibility is considered by assessing the receptors potentially impacted above response thresholds (Section 2.3.3) and the surface concentrations (Section 2.3.3.1) from the modelling.

Completing a pre-operational NEBA is a key response planning control that reduces the environmental risks and impacts of implementing the selected response techniques. Comprehensive details of the pre-operational NEBA for this PAP are contained in **ANNEX A: Net Environmental Benefit Analysis detailed outcomes**.

4.2 Stage 1: Evaluate data

Woodside identifies and prioritises environmental and community assets based on environmental sensitivities and social values, informed using trajectory modelling. Interpretation of stochastic oil spill modelling determines the EMBA for the release, which defines the spatial area that may be potentially impacted by the PAP.

4.2.1 Define the scenario(s)

Woodside uses scenarios identified from the risk assessment in the EP to assess potential impacts and response options for specific locations. The WCCS is then selected for deterministic modelling and is used for this pre-operational NEBA. Outlier locations with potential environmental impacts, selected from the stochastic modelling may also be included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness and scale of the response. Modelling results are available in Table 2-5 and Table 3-1.

4.3 Stage 2: Predict Outcomes

Woodside uses planning scenarios to assess potential impacts and response options for specific locations. Locations with potential environmental impacts, selected from the stochastic modelling are included for assessment. Response thresholds and deterministic modelling are then used to assess the feasibility/effectiveness of a response.

4.4 Stage 3: Balance trade-offs

Woodside considers environmental impacts and response feasibility/ effectiveness to determine the most effective oil spill response tools and balance trade-offs, using an automated NEBA tool. The tool considers potential benefits and impacts associated with a response at sensitive receptors and then considers the feasibility/ effectiveness of the response to select the response techniques carried forward to the ALARP assessment. The NEBA can be found in **ANNEX A: Net Environmental Benefit Analysis detailed outcomes**.

4.5 Stage 4: Select Best Response Options

To select the response technique, all the other stages in the NEBA process are considered and used to establish response plans and any pre-approvals to support protection of identified environmental and social values.

The response techniques implemented may vary according to a particular spill. The hydrocarbon type released, and the sensitivities of the receptors (both ecological and socio-economic), may influence the response. The pre-operational NEBA broadly evaluates each response technique and supports decisions on whether they are feasible and of net environmental benefit. Response techniques that are not feasible or beneficial are rejected at this stage and not progressed to planning.

Further risks and impacts from implementing these selected response options are outlined in Section 7.

4.5.1 Determining potential response options

The available response techniques based on current technology can be summarised under the following headings:

- Operational monitoring
- Source control
 - remotely operated vehicle (ROV) intervention
 - debris clearance and/or removal

- capping stack
- relief well drilling
- Source control via vessel SOPEP
- Surface dispersant application:
 - aerial dispersant application
 - vessel dispersant application
- Mechanical dispersion
- In-situ burning
- Containment and recovery
- Shoreline protection and deflection:
 - protection
 - deflection
- Shoreline clean-up:
 - Phase 1 – mechanical clean-up
 - Phase 2 – manual clean-up
 - Phase 3 – final polishing
- Oiled wildlife response (including hazing).

Support functions may include:

- Waste management
- Post spill/scientific monitoring.

Table 4-1 and Table 4-2 include scenario-specific assessments of feasible response options and justification for the exclusion of inappropriate options. These options are evaluated against the scenario parameters including oil type, volume, characteristics, prevailing weather conditions, logistical support, and resource availability to determine deployment feasibility.

A shortlist of the feasible response options is then carried forward for the ALARP assessment. This assessment will typically result in a range of available options, that are deployed at different areas (at-source, offshore, nearshore and onshore) and different times during the response. The NEBA process assists in prioritising which options to use where and when, and timings throughout the response.

Table 4-1: Response technique evaluation – Instantaneous Release of MDO (CS-01, CS-02, CS-03)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: MDO				
Operational Monitoring	<p>Will be effective in tracking the location of the spill, predicting potential impacts and triggering further monitoring and response techniques as required. Monitoring techniques include:</p> <ul style="list-style-type: none"> OM01 Predictive modelling of hydrocarbons – used throughout spill. ‘Ground-truthed’ using the outputs of all other monitoring techniques. OM02 Surveillance and reconnaissance to detect hydrocarbons and resources at risk – from outset of spill. OM03 Monitoring of hydrocarbon presence, properties, behaviour and weathering in water – from outset of spill. OM04 Pre-emptive assessment of sensitive receptors at risk – triggered once OM01, OM02 and OM03 inform likely RPAs at risk. OM05 Shoreline assessment – once OM02, OM03 and OM04 inform if any RPAs have been impacted. 	<p>Monitoring of a MDO spill is a feasible response technique and outputs will be used to guide decision making on the use of other monitoring/response techniques and providing information to regulatory agencies including AMSA and WA DoT. Practicable techniques that could be used for this scenario include predictive modelling (OM01), surveillance and reconnaissance OM02) and monitoring of hydrocarbon presence in water (OM03).</p> <p>Modelling predicts impact of the Dampier Archipelago, Gidley Island, Cape Bruguieres, Keast Island, and Legendre Island shoreline receptors at threshold (CS-01), therefore, pre-emptive assessment of sensitive receptors at risk (OM04) and monitoring of contaminated resources (OM05) will be utilised.</p>	Yes	<p>Monitoring the spill will be necessary to:</p> <ul style="list-style-type: none"> validate trajectory and weathering models determine the behaviour of the oil in water determine the location and state of the slick provide forecasts of spill trajectory determine appropriate response techniques determine effectiveness of response techniques confirm impact pathways to receptors provide regulatory agencies with required information.
Source control via vessel SOPEP	Controlling the spill of diesel at source would be the most effective way to limit the quantity of hydrocarbon entering the marine environment.	A spill of diesel from a vessel collision (CS-01 and CS-02) or loss of structural integrity on the FPU (CS-03) will be instantaneous and source control will be limited to what the vessel or facility can safely achieve whilst responding to the incident.	Yes	Ability to stop the spill at source will be dependent upon the specific spill circumstances and whether it is safe for response personnel to access/isolate the source of the spill.
Surface dispersant application	<p>Application of surface dispersant would likely reduce the volumes of hydrocarbons contacting sensitive surface receptors.</p> <p>Dispersant can also enhance biodegradation and may reduce volatile organic compounds (VOCs) in some circumstances therefore reducing potential health and safety risk to responders.</p> <p>Dispersant can increase dispersed/entrained hydrocarbons which can potentially have higher toxicity to biota in shallow water than naturally dispersed hydrocarbons.</p> <p>Subsurface oil plume likely to increase in size resulting in greater spatial extent of entrained oil.</p> <p>Entrained oil could potentially impact on sensitive shallow-water receptors e.g. corals, which otherwise may have been unaffected.</p>	<p>Whilst modelling for CS-02 predicts that floating oil will reach the minimum feasible threshold at which to commence surface dispersant application (>50 g/m²) within the Montebello AMP, this technique is not suitable for MDO spills as this hydrocarbon is prone to rapid spreading and evaporation and are not considered effective when applied on thin surface films such as MDO as the dispersant droplets tend to pass through the surface films without binding to the hydrocarbon resulting in the unnecessary addition of chemicals to the marine environment.</p> <p>The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon thus this response technique is deemed inappropriate.</p>	No	The application of dispersant to MDO is unnecessary as the diesel will rapidly evaporate and would thus unnecessarily introduce additional chemical substances to the marine environment. The additional entrainment would also increase exposure of subsea species and habitats to hydrocarbons.
Mechanical dispersion	Mechanical dispersion involves the use of a vessel’s prop wash and/or fire hose to target surface hydrocarbons to achieve dispersion into the water column. However, this technique is of limited benefit in an open ocean environment where wind and wave action are likely to deliver similar advantages.	<p>Although the technique is feasible, highly volatile hydrocarbons are likely to weather, spread and evaporate quickly.</p> <p>The volatile nature of the oil likely to lead to unsafe conditions in the vicinity of fresh hydrocarbon.</p> <p>Additionally, any vessel used for mechanical dispersion activities would be contaminated by the hydrocarbon and could potentially cause secondary contamination of unimpacted areas when exiting the spill area.</p> <p>The decontamination of a vessel used for mechanical dispersion activities would result in additional quantities of oily waste requiring appropriate handling and treatment.</p>	No	Given the limited benefit of mechanical dispersion over natural wind and wave action, secondary contamination and waste issues, and the associated safety risk of implementing the response for this activity, this strategy is deemed unsuitable.
In-situ burning	In-situ burning is only effective where minimum slick thickness can be achieved.	<p>Use of in-situ burning as a response technique for MDO is unfeasible as the minimum slick thickness cannot be attained due to rapid spreading.</p> <p>In addition, there is a limited window of opportunity in which this technique can be applied (prior to evaporation of the volatiles) which is unlikely to be achieved.</p> <p>Furthermore, entering a volatile environment to undertake this technique would be unsafe for response personnel and its used would unnecessarily cause an increase the release of atmospheric pollutants.</p>	No	Diesel characteristics are not appropriate for the use of in-situ burning and would unnecessarily cause an increase the release of atmospheric pollutants.

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Containment and recovery	Containment and recovery has an effective recovery rate of 5-10% when a hydrocarbon encounter rate of 25-50% is achieved at BAOAC 4 and 5 with a 50-100% coverage of 100 g/m ² to 200 g/m ² .	<p>Whilst modelling predicts that floating oil will reach the minimum feasible threshold at which to commence containment and recovery (50 g/m²) within the Montebello Marine Park, this technique is not suitable for MDO spills as it is prone to rapid spreading and evaporation and is deemed unsuitable for effective containment and recovery operations.</p> <p>The volatile nature of MDO is also likely to lead to unsafe conditions in the vicinity of the hydrocarbon thus this response technique is deemed inappropriate.</p>	No	Containment and recovery would be an inappropriate response technique for a spill of MDO. Corraling a volatile hydrocarbon such as MDO is deemed unsafe for response personnel thus this response strategy is not considered feasible. In addition to the safety issues, most of the spilled diesel would have been subject to rapid evaporation prior to the commencement of containment and recovery operations.
Shoreline protection and deflection	Shoreline protection and deflection can be effective at preventing contamination of at-risk areas.	<p>Real-time Operational Monitoring activities (OM01, OM02 and OM03) will be used to track surface hydrocarbons moving towards shorelines. Where feasible, pre-emptive assessments of sensitive receptors at risk (OM04) and existing TRPs will be utilised to guide shoreline protection and deflection operations, in agreement with WA DoT (for Level 2/3 spills).</p> <p>For CS-01, first shoreline accumulation (> 100 g/m²) is predicted on day 0.75 at Dampier Archipelago (55 m³) and Keast Island (20 m³). Feasibility of deploying this technique prior to shoreline contact will be assessed based on real-time monitoring.</p> <p>For scenarios CS-2 and CS-03, no shoreline receptors will be contacted at threshold.</p> <p>Access to sensitive areas may cause more negative impact than benefit.</p>	Yes (CS-01)	<p>The modelling undertaken for CS-01 predicts that shoreline receptors would be contacted by floating oil concentrations above 100 g/m².</p> <p>RPA's predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event.</p> <p>For RPA's deemed to be at risk based on real-time modelling during a spill event, shoreline protection and deflection techniques will be employed to minimise hydrocarbon accumulation providing a net environmental benefit.</p>
Shoreline clean-up	Shoreline clean-up is an effective means of hydrocarbon removal from contaminated shorelines where coverage is at an optimum level of 250 g/m ² .	<p>Real-time Operational Monitoring activities (OM01, OM02 and OM03) will be used to indicate shorelines at risk of hydrocarbon contact. Pre-emptive assessments of sensitive receptors at risk (OM04), shoreline assessments (OM05) and existing TRPs will be utilised to guide shoreline clean-up operations, in agreement with WA DoT (for Level 2/3 spills).</p> <p>For CS-01, first shoreline accumulation (> 100 g/m²) is predicted on day 0.75 at Dampier Archipelago (55 m³) and Keast Island (20 m³).</p> <p>The modelling for CS-02 and CS-03 predicts that no shoreline receptors will be contacted at threshold – any minor contact is significantly below any threshold concentration that would allow a response to be feasible.</p> <p>Through shoreline assessment, verify that sensitive sites will benefit from clean-up activities as the response itself may cause more negative impact than benefit through disturbance of habitats and species.</p>	Yes (CS-01)	<p>The modelling undertaken for CS-01 predicts that shoreline receptors would be contacted by floating oil concentrations above 100 g/m².</p> <p>Response Protection Areas predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event.</p> <p>If RPA's are at risk, based on real-time monitoring and modelling during a spill event, shoreline clean-up techniques will be deployed to expedite clean-up of the impacted sites.</p> <p>Removal of hydrocarbons will help shorten the recovery window unless shoreline type is of a sensitive nature.</p> <p>This technique can help prevent remobilisation of hydrocarbon and impact on shorelines.</p>
Oiled wildlife response	Oiled wildlife response is an effective response technique for reducing the overall impact of a spill on wildlife. This is mostly achieved through hazing to prevent additional wildlife from being contaminated and through rehabilitation of those already subject to contamination.	<p>Operational Monitoring will be deployed from the outset of a spill to track the spill location and fate in real-time. Thus, in the event that wildlife is at risk of contamination, oiled wildlife response will be undertaken in accordance with the Oiled Wildlife Response Operational Plan as and where required. In addition, any rehabilitation would only be undertaken by trained specialists.</p> <p>Due to the likely volatile atmospheric conditions surrounding a diesel spill, response options may be limited to hazing to maximise the safety of response personnel.</p> <p>For CS-01, first shoreline accumulation (> 100 g/m²) is predicted from day 0.75 at Dampier Archipelago and Keast Island. The modelling undertaken for CS-02 and CS-03 predicts that no shoreline areas will be impacted thus it is unlikely that this technique would be required.</p>	Yes	<p>The modelling undertaken for CS-01 predicts above 100 g/m² for Dampier Archipelago, Gidley Island, Cape Bruguieres, Keast Island, and Legendre Island receptors.</p> <p>In the event that wildlife is at risk of contamination, oiled wildlife response will be undertaken as and where required.</p>

Table 4-2: Response technique evaluation – Dry gas release (CS-04)

Response Technique	Effectiveness	Feasibility	Decision	Rationale for the decision
Hydrocarbon: Dry gas				
Operational Monitoring	For a dry gas release, established (liquid hydrocarbon) spill monitoring techniques are not applicable. Monitoring the gas plume via the ROV sonar tool may be effective, in conjunction with other well information, in determining appropriate source control techniques.	Monitoring the gas plume may be feasible where safe access via the ROV can be achieved and line of (sonar) sight is achievable to observe the gas plume. Outputs may be used to guide decision making on the use of source control techniques including options for safe and effective capping stack deployment, and relief well execution. Although modelling of the gas release for CS-04 predicts the plume will not breach the water's surface, gas monitoring at the surface is a feasible practice and may be undertaken via the support vessels' gas monitoring equipment.	Yes	If feasible and safe, monitoring the gas plume via ROV and gas monitoring at the surface may: <ul style="list-style-type: none"> determine the behaviour of the plume monitor the surface plume (if water's surface is breached) determine appropriate source control response techniques inform on effectiveness of response techniques verify safety of response personnel guide SIMOPS.
Source control via Xmas tree intervention	It may be possible to isolate flow from the tree, depending on the nature of the leak.	The installed tree system incorporates several isolation valves, both hydraulically actuated and manually operated, which could be used to prevent or reduce flow depending on the nature of the leak. ROV intervention to close subsea valves is a routine and standard operation.	Yes	The use of source control intervention via ROV may be feasible and would reduce quantity of methane released.
Source control via debris clearance and capping stack	Controlling a loss of well containment at source via capping stack could be an effective way to limit the quantity of hydrocarbon entering the marine environment, depending on the nature of the leak/failure. Debris clearance tools could, in some scenarios, be useful.	Woodside has developed a project specific capping stack deployment plan and also commissioned an independent, capping stack landing study for the Scarborough wells (Wild Well Control Inc (WWCI), 2021). The study indicates that deployment of the capping stack is feasible. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement.	Yes	Conventional/vertical capping stack deployment with a heavy lift vessel is feasible once metocean conditions (wind, waves etc) are appropriate for safe deployment. Since the produced gas does not breach the sea surface, the response to the incident should not be unduly hampered by plume conditions.
Source control via relief well drilling	A subsea release of methane will be stopped approximately 65.3 days after the initiation of a relief well response.	If required, relief well drilling is a widely accepted and utilised technique.	Yes	Relief well drilling is a proven technique employed to control a loss of well containment event should the other containment measures be unsuccessful.
Surface dispersant application	Not applicable for a dry gas loss of well containment (LOWC).	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
Mechanical dispersion	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.
In-situ burning	Not applicable for a dry gas LOWC.	Not applicable for a dry gas LOWC.	No	Not applicable for a dry gas LOWC.

5 HYDROCARBON SPILL ALARP PROCESS

Woodside's hydrocarbon spill ALARP process is aligned with guidance provided by NOPSEMA in *ALARP Guidance Note N-04300-GN0166* (2022) and *Oil Spill Risk Management Guidance Note N-04750-GN1488* (2021) and is set out in the 'Woodside Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) Guidelines'.

From the identified response planning need and pre-operational NEBA/SIMA, Woodside conducts a structured, semi-quantitative hydrocarbon spill process which has the following steps:

- It considers the Response Planning Need identified in terms of surface area (km²) and available surface hydrocarbon volumes (m³) against existing Woodside capability.
- It considers alternative, additional, and improved options for each response technique/control measure by providing an initial and, if required, detailed evaluation of:
 - predicted cost associated with adopting the control measure
 - predicted change/environmental benefit
 - predicted effectiveness/feasibility of the control measure.
- It evaluates the risks and impacts of implementing the proposed response techniques, and any further control measures with associated environmental performance to manage these additional risks and impacts.

Woodside considers the risks and impacts from a hydrocarbon spill to have been reduced to ALARP when:

- A structured process for identifying and considering alternative, additional, and improved options has been completed for each selected response technique.
- The analysis of alternate, additional, and improved control measures meets one of the following criteria:
 - all identified, reasonably practicable control measures have been adopted; or
 - no identified reasonably practicable additional, alternative and/or improved control measures would provide further overall increased proportionate environmental benefit; or
 - no reasonably practical additional, alternative, and/or improved control measures have been identified.
- Where an alternative, additional and/or improved control measure is adopted, a measurable level of environmental performance has been assigned.
- Higher order impacts/ risks have received more comprehensive alternative, additional, and improved control measure evaluations and do not just compare the cost of the adopted control measures to the costs of an extreme or unreasonable control measure.
- Cumulative effects have been analysed when considered in combination across the whole activity.

The response technique selection is based on the risk assessment conducted in the EP. The risk assessment identifies the type of oil, volume of release, duration of release, predicted fate, weathering and the EMBA (along with other requirements such as time to impact and predicted volumes ashore). Modelling is then used to inform the NEBA and the prioritisation of suitable response options. The scale of the response techniques selected in the pre-operational NEBA is informed through the assessment of results from deterministic modelling.

For the ALARP assessment, the following terms and definitions have been used:

- Response techniques are considered the control measures that reduce consequences from hydrocarbon spill events. The terms 'response technique' and 'control measure' are used interchangeably.
- Cost is defined as the time, effort and/or complexity of financial, safety, design/ storage/ installation, capital/ lease, and/or operations/ maintenance required to adopt a control measure.

- Environmental impact is the comparison against standard environmental values and sensitivities' impacts using positive or negative criteria from the NEBA Impact Ranking Classification Guidance in Annex A.

5.1 Operational Monitoring

Operational Monitoring includes the gathering and evaluation of data to inform the oil spill response planning and operations. It includes fate and trajectory modelling, spill tracking, weather updates and field observations. This response option is deployed in some capacity for every event.

The table below provides the operations monitoring plans that support the successful execution of this response technique.

Table 5-1: Description of supporting operational monitoring plans

ID	Title
OM01	Predictive modelling of hydrocarbons to assess resources at risk
OM02	Surveillance and reconnaissance to detect hydrocarbons and resources at risk
OM03	Monitoring of hydrocarbon presence, properties, behaviour and weathering in water
OM04	Pre-emptive assessment of sensitive receptors at risk
OM05	Shoreline assessment

Woodside maintains an *Operational Monitoring Operational Plan*. If shoreline contact is predicted, RPAs will be identified and assessed before contact. If shorelines are contacted, a shoreline assessment survey will be completed to guide effective shoreline clean-up operations. This plan includes the process for the IMT to mobilise resources depending on the nature and scale of the spill.

The proximity of Dampier, Onslow and Exmouth to the spill event location means that multiple logistical options are available to monitor the spill in relatively short timeframes. The primary mobilisation base for initial monitoring activities would be Dampier. However, in the unlikely event of an extended spill with potential to impact receptors further afield, monitoring activities may also be mobilised from Exmouth and Onslow.

5.1.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Floating surface oil in sufficient concentrations for effective operational monitoring is expected:
 - for CS-01 with surface concentrations of 10 g/m² up to ~19 km from the vessel collision location outside of Mermaid Sound
 - for CS-02 with surface concentrations of 10 g/m² up to ~43 km from the vessel collision location within the Montebello AMP
 - for CS-03 with surface concentrations of 10 g/m² up to ~105 km from the loss of structural integrity at the FPU location.
- The shortest timeframe that shoreline contact from floating oil is predicted is 0.75 days (Dampier Archipelago and Keast Island) for CS-01. No shore contact at response threshold is predicted for CS-02 or CS-03.
- The time to contact for oil at concentrations of entrained hydrocarbons greater than 100 ppb at shoreline receptors is 5 hours at Dampier Archipelago (CS-01), 1 hour at Montebello AMP (CS-02), and 71 hours at Gascoyne MP (CS-03).
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support functions. These should be reviewed and updated regularly.
- Response operations may take up to 7-8 days based on the predicted time to complete shoreline clean-up operations.

5.1.2 Environmental performance based on need

Table 5-2: Environmental Performance – Operational Monitoring

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.10)
1	Oil spill trajectory modelling	1.1	Initial modelling available within 6 hours using the Rapid Assessment Tool.	1, 3B, 3C, 4
		1.2	Detailed modelling available within 4 hours of RPS receiving information from Woodside.	
		1.3	Detailed modelling service available for the duration of the incident upon contract activation.	
2	Tracking buoy	2.1	Tracking buoy located on facility/ lead vessel and ready for deployment 24/7.	1, 3A, 3C, 4
		2.2	Deploy tracking buoy from facility/ lead vessel within 2 hours as per the First Strike Plan.	1, 3A, 3B, 4
		2.3	Contract in place with service provider to allow data from tracking buoy to be received 24/7 and processed.	1, 3B, 3C, 4
		2.4	Data received to be uploaded into Woodside COP daily to improve the accuracy of other Operational Monitoring techniques.	1, 3B, 4
3	Satellite imagery	3.1	Contract in place with 3 rd party provider to enable access and analysis of satellite imagery. Imagery source/type requested on activation of service.	1, 3C, 4
		3.2	3 rd party provider will confirm availability of an initial acquisition within 2 hours.	1, 3B, 3C, 4
		3.3	First image received with 24 hours of Woodside confirming to 3 rd party provider its acceptance of the proposed acquisition plan.	1
		3.4	3 rd party provider to submit report to Woodside per image. Report is to include a polygon of any possible or identified slick(s) with metadata.	1
		3.5	Data received to be uploaded into Woodside COP daily to improve accuracy of other Operational Monitoring techniques.	1, 3B, 4
		3.6	Satellite Imagery services available and employed during response.	1, 3C, 4
4	Aerial surveillance	4.1	2 trained aerial observers available to be deployed by day 1 from resource pool.	1, 2, 3B, 3C, 4
		4.2	1 aircraft available for two sorties per day, available for the duration of the response from day 1.	1, 3C, 4
		4.3	Observer to compile report during flight as per First Strike Plan. Observers report available to the IMT within 2 hours of landing after each sortie.	1, 2, 3B, 4
		4.4	Unmanned Aerial Vehicles/Systems (UAV/UASs) to support SCAT, containment and recovery and surface dispersal and pre-emptive assessments as contingency if required.	1, 2
5	Hydrocarbon detections in water	5.1	Activate 3 rd party service provider as per first strike plan. Deploy resources within 3 days: <ul style="list-style-type: none"> • 3 specialists in water quality monitoring • 2 monitoring systems and ancillaries • 1 vessel for deploying the monitoring systems with a dedicated winch, A-frame or Hiab and ancillaries to deploy the equipment. 	1, 2, 3C, 3D, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Environmental Performance Outcome		To gather information from multiple sources to establish an accurate common operating picture as soon as possible and predict the fate and behaviour of the spill to validate planning assumptions and adjust response plans as appropriate to the scenario.		
Control measure		Performance Standard		Measurement Criteria (Section 5.10)
		5.2	Water monitoring services available and employed during response.	1, 3C, 4
		5.3	Preliminary results of water sample as per contractor's implementation plan within 7 days of receipt of samples at the accredited lab.	
		5.4	Daily fluorometry reports as per service provider's implementation plan will be provided to IMT to validate modelling and monitor presence/ absence of entrained hydrocarbons.	
6	Pre-emptive assessment of sensitive receptors	6.1	Within 24 hours, in liaison with WA DoT (for Level 2/3 incidents), deployment of 1 specialist(s) from resource pool in establishing the status of sensitive receptors.	1, 2, 3B, 3C, 4
		6.2	Daily reports provided to CIMT on the status of the receptors to prioritise Response Protection Areas (RPAs) and maximise effective utilisation of resources.	1, 3B, 4
7	Shoreline assessment	7.1	Within 24 hours, in liaison with WA DoT (for Level 2/3 incidents), deployment of 1 specialist(s) in SCAT from resource pool for each of the Response Protection Areas (RPAs) with predicted impacts.	1, 2, 3B, 3C, 4
		7.2	SCAT reports provided to IMT daily detailing the assessed areas to maximise effective utilisation of resources.	1, 3B, 4
		7.3	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations.	1

The control measures and capability of Woodside and its third-party service providers are shown to support Operational Monitoring activities up to and including the identified WCCS. This is demonstrated by the following:

- Woodside has a documented, structured and tested capability for Operational Monitoring operations including internal trajectory modelling capabilities, tracking buoys located offshore and contracted aerial observation platforms with access to trained observers.
- Woodside and its third-party service providers seek to maintain sufficient capability for the duration of the response.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.1.

5.2 Source Control via Vessel SOPEP

Vessel source control will be conducted, where feasible and in accordance with MARPOL 73/78 Annex I, by the Vessel Master under the Shipboard Oil Pollution Emergency Plan (SOPEP) triggered by any loss of containment from the PAP vessels.

The SOPEP provides guidance to the Master and Officers on board the vessel with respect to the extra steps to be taken when an unexpected pollution incident has occurred or is likely to occur. The SOPEP contains all information and operational instructions required by IMO Resolution MEPC.54 (32) adopted on 6 March 1992, as amended by resolution MEPC.86 (44) adopted on 13 March 2000.

Its purpose is to set in motion the necessary actions to stop or minimise oil discharge and mitigate its effects and outlines responsibilities, pollution reporting requirements, procedures and resources needed in the event of a hydrocarbon spill from vessel activities.

In the event of the WCCS vessel collision event, the vessel master may engage precautionary marine manoeuvres to avoid collision or commence pumping operations to transfer MDO and thus minimise the release.

5.2.1 Environmental performance based on need

Woodside has established control measures, environmental performance outcomes, performance standards and measurement criteria to be used for vessel-source oil spill response during the PAP which are detailed in Section 6.8 of the EP. The vessel master's roles and responsibilities are described in EP Section 7.3.

Performance standards for each contracted PAP vessel are detailed in the vessel's specific SOPEP.

These standards maintain availability of sufficient resources and are adequately tested for successful implementation of the SOPEP in the event of a hydrocarbon spill.

5.3 Source control and well intervention

The worst-case scenario for a loss of well containment is considered to be loss of well control due to a 'tree off' scenario. This scenario would result in an uncontrolled flow of dry gas from the well as outlined in the EP. In the event of a loss of well containment, the primary response would be source control and well intervention.

The Woodside Source Control Emergency Response Planning Guideline has been developed as part of the Woodside assurance plans and in alignment with the guidelines in the *NOPSEMA Source Control Planning and Procedures Information Paper* (N-04750-IP1979 A787102). It includes the process for the CIMT to mobilise resources for Subsea First Response Toolkit (SFRT) support, and capping support. This plan has pre-identified vessel specifications and contracts required for SFRT debris clearance work.

Woodside is a signatory to a MoU between Australian offshore operators to provide mutual aid to facilitate and expedite mobilising a MODU and drilling a relief well if a loss of well containment incident were to occur. The MoU commits the signatories to share rigs, equipment, personnel and services to assist another operator in need. Moored and Dynamically Positioned (DP) MODUs are suitable for the Scarborough wells.

Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. Circumstances that limit the safe execution of this control measure include lower explosive limit (LEL) concentrations, volatile concentrations of hydrocarbons in the atmosphere, weather window, waves and/or sea states (>1.5m waves) and high ambient temperatures. As the dry gas plume for the PAP is not predicted to breach the water's surface, LEL concentrations and volatile concentrations of hydrocarbons in the atmosphere are unlikely to pose a safety issue for response personnel. Gas monitoring will, however, be undertaken in line with standard protocol.

5.3.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which a response need can be based:

- Prior to any source control activities, Woodside will implement protocols seeking to ensure that the site is safe including subsea ROV surveys and surface air monitoring.
- Hydrocarbons will flow from the well until one of the following interventions can be made:
 - closure of the tubing retrievable safety valve (TRSV) if present (only present after installation of the completion)
 - intervention with a capping stack
 - a relief well is drilled and first attempt at well kill within 65.3 days.
- Arrangements for support organisations who provide specialist services or resources should be tested regularly.
- Plans, procedures and support documents need to be in place for Operational and Support functions. These should be reviewed and updated regularly.
- The duration of the release may be up to 65.3 days.

In addition, a number of assumptions are required to estimate the response need for source control. These assumptions have been described in the table below.

Table 5-3: Response Planning Assumptions – Source Control

Response planning assumptions	
Capping stack feasibility	Woodside has developed a project specific capping stack deployment plan and also commissioned an independent, capping stack landing study for the Scarborough wells (WWCI, 2021). The study indicates that the safe deployment of a capping stack is feasible.
Safety considerations	<p>Source control operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site, in accordance with the Woodside Management System (WMS). Personnel safety issues may include:</p> <ul style="list-style-type: none"> • hydrocarbon gas and/or liquid exposure • high winds, waves and/or sea states • high ambient temperatures.
Feasibility considerations	<p>Woodside’s primary source control options would be ROV intervention and capping stack deployment. Relief well drilling operations may be needed to provide an option to permanently abandon the well after the well flow is stopped.</p> <p>The following approaches outline Woodside’s hierarchy approach for selecting suitable MODU’s for relief well operations;</p> <ul style="list-style-type: none"> • primary – review internal drilling programs and MODU availability to source appropriate rig(s) operating within Australia with an approved Safety Case • alternate – source and contract MODUs through Australian Energy Producers (AEP) (formerly Australian Petroleum Production & Exploration Association (APPEA)) Memorandum of Understanding (MoU) that is operating within Australia with an approved Safety Case • contingency – source and contract a MODU outside Australia with an approved Australian Safety Case.

5.3.2 Environmental performance based on need

Table 5-4: Environmental Performance – Source Control

Environmental Performance Outcome		To stop the flow of hydrocarbons into the marine environment		
Control measure		Performance Standard	Measurement Criteria (Section 5.10)	
8	Subsea First Response Toolkit (SFRT)	8.1	Oceanering support staff available all year round, via contract, to assist with the mobilisation, deployment, and operation of the SFRT equipment.	1, 3B, 3C
		8.2	Intervention vessel with minimum requirement of a working class ROV and operator.	1, 3C
		8.3	Mobilised to site for deployment within 11 days.	1, 3B, 3C
		8.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
9	Well intervention	9.1	Frame agreements with ROV providers in place to be mobilised upon notification. ROV equipment deployed within 7 days.	1, 3B, 3C
		9.2	Source control vessel will have the following minimum specifications: <ul style="list-style-type: none"> active heave compensated crane, rated to at least 150 T in shallower water and 250 T in deeper water. at least 90 m in length deck has water/electricity supply deck capacity to hold at least 110 T of capping stack. 	1, 3B, 3C
		9.3	Identify source control vessel availability within 24 hours and begin contracting process. Vessel mobilised to site for deployment within 16 days for conventional capping.	1, 3B, 3C
		9.4	Well intervention attempt made using ROV and SFRT within 11 days.	1, 3B, 3C
		9.5	Capping stack on suitable vessel mobilised to site within 16 days. Deployment and well intervention attempt will be made once safety and metocean conditions are suitable.	1, 3C
		9.6	Contract in place for access to equipment and staff to assist with the mobilisation, deployment, and operation of the capping stack and well intervention equipment.	1, 3B, 3C
		9.7	MODU mobilised to site for relief well drilling within 21 days.	1, 3C
		9.8	First well kill attempt completed within 65.3 days.	1, 3B, 3C
		9.9	Open communication line(s) to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
		9.10	Monthly monitoring of the availability of MODUs through existing market intelligence including current Safety Case history.	3C
10	Support vessels	10.1	Access to 24/7 vessel tracking software to monitor availability of suitable vessels to meet specifications for source control.	3C
		10.2	Frame agreements for installation support vessels (ISVs) require vessels maintain in-force Safety Case approvals covering ROV operations and provide support in the event of an emergency.	1, 3B, 3C
		10.3	MODU and vessel contracts include clause outlining requirement for support in the event of an emergency	1, 3C
11	Safety case	11.1	Woodside will prioritise MODU or vessel(s) for intervention work(s) that have an existing Safety Case.	1, 3C
		11.2	Woodside Planning, Logistics, and Safety Officers (on-roster/ call 24/7) to assist in expediting the Safety Case assessment process as far as practicable.	1, 3C

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Environmental Performance Outcome	To stop the flow of hydrocarbons into the marine environment		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)
	11.3	Woodside will maintain minimum safe operating standards that can be provided to MODU and vessel operators for Safety Case guidance.	1, 3C

The resulting source control capability has been assessed against the WCCS. The range of techniques provide a feasible and viable approach to well intervention and, if necessary, relief well drilling operations to stop the well flowing.

The health and safety, financial, capital and operations/maintenance costs of implementing the alternative, additional or improved control measures identified and not carried forward are considered disproportionate to the insignificant environmental benefit gained and/or not reasonably practicable for this PAP.

Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in **Section 6.3.8**.

5.4 Shoreline Protection and Deflection

The placement of containment, protection or deflection booms on and near a shoreline is a response technique to reduce the potential volume of hydrocarbons contacting or spreading along shorelines, which may reduce the scale of shoreline clean-up. Hydrocarbons contained by the booms would be collected where practicable.

Shorelines would be protected where accessible via vessel or shore. Where hydrocarbon contact has already occurred, there may still be value in deploying protection equipment to limit further accumulations and preventing remobilisation of stranded hydrocarbons.

Shoreline protection and deflection equipment would be mobilised to selected locations, where the following conditions were met:

- Sea-states and hydrocarbon characteristics are safe to deploy protection and deflection measures,
- Oil trajectory has been identified as heading towards identified RPAs.

5.4.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest timeframe that shoreline contact from floating oil above threshold is predicted to be 0.75 days at Dampier Archipelago (55 m³) and Keast Island (20 m³) for CS-01. No shore contact at response threshold is predicted for CS-02 or CS-03.
- Pre-emptive assessment and shoreline assessments (OM04 and OM05) will be mobilised to RPAs contacted at 100 g/m², which occurs from day 0.75 at Dampier Archipelago and Keast Island.
- The duration of the spill will be instantaneous with shoreline response operations extending to 7 to 8 days based on the predicted time to complete shoreline clean-up operations.
- Arrangements for support organisations who provide specialist services (trained personnel, protection and deflection equipment) and/or resources and should be tested regularly.
- TRPs for RPAs along with other relevant plans, procedures and support documents need to be in place for Operational and Support functions. These should be reviewed and updated regularly.

In addition, a number of assumptions are required to estimate the response need for shoreline protection and deflection. These assumptions have been described in the table below.

Table 5-5: Response Planning Assumptions – Shoreline Protection and Deflection

Response Planning Assumptions	
Safety considerations	<p>Shoreline protection and deflection operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include:</p> <ul style="list-style-type: none"> • hydrocarbon gas and/or liquid exposure • safe for deployment and conditions within range of vessels • high ambient temperatures.
Shoreline Protection and Deflection	<p>One Shoreline Protection and Deflection operation may include:</p> <ul style="list-style-type: none"> • quantity of shoreline sealing boom (as outlined in TRP) • quantity of fence or curtain boom (as outlined in TRP) • 1-2 trained supervisors • 8-10 personnel/ labour hire <p>Specific details of each operation would be tailored to the TRP implemented (where available).</p>

5.4.2 Environmental performance based on need

Table 5-6: Environmental Performance – Shoreline protection and deflection

Environmental Performance Outcome		To stop hydrocarbons encountering particularly sensitive areas		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)	
12	Response teams	12.1	In liaison with WA DoT (for Level 2/3 incidents), relevant Tactical Response Plans (TRPs) will be identified in the First Strike plan for activation within 12 hours of the release.	1, 3A, 3C, 4
		12.2	In liaison with WA DoT (for Level 2/3 incidents), mobilise teams to RPAs within 24 hours. Teams to contaminated RPAs comprised of: <ul style="list-style-type: none"> • 1-2 trained specialists per operation • 8-10 personnel/labour hire • personnel sourced through resource pool. 	1, 2, 3B, 3C, 4
		12.3	In liaison with WA DoT (for Level 2/3 incidents), 1 operation mobilised within 24 hours to each identified RPA.	1, 3A, 3B, 4
		12.4	12 trained personnel available within 24 hours sourced through resource pool.	1, 2, 3A, 3B, 3C, 4
		12.5	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
		12.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline operations: <ul style="list-style-type: none"> • All personnel in a response will receive an operational/safety briefing before commencing operations. • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel. 	1, 3B, 4
13	Response equipment	13.1	Equipment mobilised from closest stockpile within 24 hours.	1, 3A, 3C, 4
		13.2	Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours.	1, 3C, 3D, 4
		13.3	Supplementary equipment mobilised from OSRL within 48 hours.	
		13.4	Woodside maintains integrated fleet of vessels. Additional vessels can be sourced through existing contracts/frame agreements.	1, 3A, 3C, 4
14	Management of environmental impact of the response risks	14.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified.	1
		14.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines.	

The resulting shoreline protection and deflection capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline protection and deflection at identified RPAs.

Under optimal conditions, the capability available meets the need identified by day 3. It indicates that, the shoreline protection and deflection capability has the following expected performance:

- The shortest predicted timeframe for shoreline contact from floating oil is 0.75 days at Dampier Archipelago (55 m³) and Keast Island (20 m³) for CS-01. No shore contact at response threshold is predicted for CS-02 or CS-03.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

- Existing capability allows for mobilisation and deployment of 1-2 protection and deflection operations within 24 hours (if required). Whilst modelling predicts contact at a further 6 RPAs above response threshold within 24-48 hours (Table 3-1), it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Exmouth and Port Hedland, and the management of response generated waste. From previous assessment of accommodation in this region, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.4.

5.5 Shoreline Clean-up

Shoreline clean-up may be undertaken using a broad range of techniques when floating hydrocarbons contact shorelines. The timing, location and extent of shoreline clean-up activities can vary from one scenario to another, depending on the hydrocarbon type, sensitivities and values contacted, shoreline type and access, degree of oiling, and area oiled.

Shoreline clean-up is typically undertaken as a three-phase process:

- phase one (gross contamination removal) involving the collection of bulk oil, either floating against the shoreline or stranded on it
- phase two (moderate to heavy contamination removal) involving removal or in-situ treatment of shoreline substrates such as sand or pebble beaches
- phase three (final treatment or polishing) involving removal of the remaining residues of oil.

As phase one typically involves recovery of floating and pooled oil, and phase three removes minor volumes, they have not been considered in the assessment of response need for the scenarios identified.

The *Shoreline Clean-up Operational Plan* details the mobilisation and resource requirements for a shoreline clean-up operation including the logistics, support and facility arrangements to manage the movement of personnel and resources.

The *Shoreline Clean-up Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Woodside would activate and mobilise trained and competent personnel in shoreline assessment before or following shoreline contact at response thresholds.

Shoreline clean-up consists of different manual and mechanical recovery techniques to remove hydrocarbons and contaminated debris from a shoreline; this is to minimise ongoing environmental contamination and impact. The National Plan also provides guidance on shoreline clean-up techniques as outlined in National Plan Guidance *Response assessment and termination of cleaning for oil contaminated foreshores* (AMSA 2015).

5.5.1 Response need based on predicted consequence parameters

The following statements identify the key parameters upon which the response need can be based:

- The shortest predicted timeframe for shoreline contact from floating oil above feasible response threshold is 0.75 days at Dampier Archipelago (55 m³) and Keast Island (20 m³) for CS-01 with shoreline accumulation peaking on day 2. No shore contact at response threshold is predicted for CS-02 or CS-03.
- The nature of the spill is instantaneous, with shoreline response operations extending to 7-8 days based on the predicted time to complete shoreline clean-up operations.
- Pre-emptive assessment and shoreline assessments (OM04 and OM05) will be mobilised to RPAs with shoreline contact.
- Following Shoreline Assessment and agreement of prioritisation with WA Department of Transport, clean-up operations would commence until agreed termination criteria are reached.
- Arrangements for support organisations who provide specialist services (trained personnel, labour hire, shoreline clean-up, and site management equipment) and/or resources and should be tested regularly.
- TRPs for RPAs along with other relevant plans, procedures and support documents should be in developed and in place for Operational and Support functions. These should be reviewed and updated regularly.

In addition, assumptions are required to estimate the response need for shoreline clean-up. These assumptions have been described in the table below.

Table 5-7: Response Planning Assumptions – Shoreline Clean-up

Response planning assumptions: Shoreline clean-up	
Safety considerations	<p>Shoreline clean-up operations cannot be implemented if the safety of response personnel cannot be guaranteed. This requires an initial and ongoing risk assessment of health and safety hazards and risks at the site. Personnel safety issues may include:</p> <ul style="list-style-type: none"> • hydrocarbon gas and/or liquid exposure • waves and/or sea states, tidal cycle and intertidal zone limits • presence of wildlife • high ambient temperatures.
Manual shoreline clean-up operation (Phase 2)	<p>One, manual shoreline clean-up operation (Phase 2) may include:</p> <ul style="list-style-type: none"> • 1–2 x trained supervisor • 8–10 x personnel/ labour hire • supporting equipment for manual clean-up including rakes, shovels, plastic bags etc.
Physical properties	<p>Surface Threshold</p> <ul style="list-style-type: none"> • Lower – 100 g/m²–100% coverage of ‘stain’ – cannot be scratched off easily on coarse sediments or bedrock. Expected trigger to undertake detailed shoreline survey. • Optimum – 250 g/m²– 25% coverage of ‘coat’ – can be scratched off with a fingernail on coarse sediments. Expected trigger to commence clean-up operations.
Efficiency (m ³ oil recovered per person per day)	<p>Manual shoreline clean-up (Phase 2) – approximately 0.25–1 m³ oil recovered per person per 10 hour day is based on moderate to high coverage of oil (100 g/m²–1000 g/m²) with manual removal using shovels/rakes, etc. from studies of previous response operations and exercises.</p>

Table 5-8: Shoreline Clean-up techniques and recommendations

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Natural recovery	Allowing shoreline to self-clean; no intervention undertaken.	<p>Remote and inaccessible shorelines for personnel, vehicles and machinery.</p> <p>Other clean-up techniques may cause more damage than allowing the shoreline to naturally recover.</p> <p>Natural recovery may be recommended for areas with mangroves and coral reefs due to their sensitivity to disturbance from other shoreline clean-up techniques.</p> <p>High-energy shorelines: where natural removal rates are high, and hydrocarbons will be removed over a short timeframe.</p>	<p>Low-energy shorelines: these areas tend to be where hydrocarbon accumulates and penetrates soil and substrates.</p>	<p>May be employed, if the operational NEBA identifies that other clean-up techniques will have a negligible or negative environmental impact on the shoreline.</p> <p>May also be used for buried or reworked hydrocarbons where other techniques may not recover these.</p>
Manual recovery	<p>Use of manpower to collect hydrocarbons from the shoreline.</p> <p>Use of this form of clean-up is based on type of shoreline.</p>	<p>Remote and inaccessible shorelines for vehicles and machinery.</p> <p>Areas where shorelines may not be accessible by vehicles or machinery and personnel can recover hydrocarbons manually.</p> <p>Where hydrocarbons have formed semi-solid to solid masses that can be picked up manually.</p> <p>Areas where nesting and breeding fauna cannot or should not be disturbed.</p>	<p>Coral reef or other sensitive intertidal habitats, as the presence of a response may cause more environmental damage than allowing them to recover naturally.</p> <p>For some high-energy shorelines such as cliffs and sea walls, manual recovery may not be recommended as it may pose a safety threat to responders.</p>	<p>May be used for sandy shorelines. Buried hydrocarbons may be recovered using shovels into small carry waste bags, but where possible the shoreline should be left to naturally recover to prevent any further burying of hydrocarbons (from general clean-up activities).</p>

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Sorbents	Sorbent boom or pads used to recover fluid or sticky hydrocarbons. Can also be used after manual clean-up to remove any residues from crevices or from vegetation.	When hydrocarbons are free-floating close to shore or stranded onshore. As a secondary treatment method after hydrocarbon removal and in sensitive areas where access is restricted.	Access for deploying and retrieving sorbents should not be through soft or sensitive habitats or affect wildlife.	Used for rocky shorelines. Sorbent boom will allow for deployment from small shallow draught vessels, which will allow deployment close to shore where water is sheltered and to aid recovery. Sorbents will create more solid waste compared with manual clean-up, so will be limited to cleaning rocky shorelines.
Vacuum recovery, flushing, washing	The use of high volumes of low-pressure water, pumping and/or vacuuming to remove floating hydrocarbons accumulated at shorelines.	Suited to rocky or pebble shores where flushing can remobilise hydrocarbons (to be broken up) and aid natural recovery. Any accessible shoreline type from land or water. May be mounted on barges for water-based operations, on trucks driven to the recovery area, or hand-carried to remote sites. Flushing and vacuum may be useful for rocky substrate. Medium- to high-energy shorelines where natural removal rates are moderate to high. Where flushed hydrocarbons can be recovered to prevent further oiling of shorelines.	Areas of pooled light, fresh hydrocarbons may not be recoverable via vacuum due to fire and explosion risks. Shorelines with limited access. Flushing and washing not recommended for loose sediments. High-energy shorelines where access is restricted.	High volume low pressure (HVLP) flushing and washing into a sorbent boom could be used for rocky substrate, if protection booming has been unsuccessful in deflecting hydrocarbons from these areas.
Sediment reworking	Movement of sediment to surf to allow hydrocarbons to be removed from the sediment and move sand via heavy machinery.	When hydrocarbons have penetrated below the surface. Recommended for pebble/cobble shoreline types. Medium- to high-energy shorelines where natural removal rates are moderate to high.	Low-energy shorelines as the movement of substrate will not accelerate the natural cleaning process. Areas used by fauna which could potentially be affected by remobilised hydrocarbons.	Use of wave action to clean sediment: appropriate for sandy beaches where light machinery is accessible.

Technique	Description	Shoreline type		Application
		Recommended	Not recommended	
Vegetation cutting	Cutting vegetation to prevent oiling and reduce volume of waste and debris.	Vegetation cutting may be recommended to reduce the potential for wildlife being oiled. Where oiling is restricted to fringing vegetation.	Access in bird-nesting areas should be restricted during nesting seasons. Areas of slow-growing vegetation.	May be used on shorelines where vegetation can be safely cleared to reduce oiling.
Cleaning agents (OSCA)	Application of chemicals such as dispersants to remove hydrocarbons.	May be used for manmade structures and where public safety may be a concern.	Natural substrates and in low-energy environments where sufficient mixing energy is not present.	Not recommended for shorelines. Could be used for manmade structures such as boat ramps.

5.5.2 Environmental performance based on need

Table 5-9: Environmental Performance – Shoreline Clean-up

Environmental Performance Outcome		To remove bulk and stranded hydrocarbons from shorelines and facilitate shoreline amenity habitat recovery.		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)	
15	Shoreline responders	15.1	In liaison with WA DoT (for Level 2/3 incidents), deployment of shoreline clean-up teams to contaminated RPAs comprised of: <ul style="list-style-type: none"> • 1-2 trained specialists per operation • 8-10 personnel/labour hire • personnel sourced through resource pool within 24 hours of request from the IMT. 	1, 2, 3A, 3B, 3C, 4
		15.2	Relevant Tactical Response Plans (TRPs) will be identified in the first strike plan for activation within 24 hours of a release.	1, 3A, 3C, 4
		15.3	Clean-up operations for shorelines in line with results and recommendations from SCAT outputs.	1, 3A, 3B
		15.4	All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates.	
		15.5	In liaison with WA DoT (for Level 2/3 incidents), mobilise and deploy 1-2 shoreline clean-up operations within 24 hours.	1, 2, 3A, 3C, 4
		15.6	The safety of shoreline response operations will be considered and appropriately managed. During shoreline clean-up operations: <ul style="list-style-type: none"> • All personnel in a response will receive an operational/safety briefing before commencing operations • Gas monitoring and site entry protocols will be used to assess safety of an operational area before allowing access to response personnel. 	1, 3B, 4
		15.7	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
16	Shoreline clean up equipment	16.1	Contract in place with 3 rd party providers to access equipment.	1, 3A, 3C, 4
		16.2	Equipment mobilised from closest stockpile within 24 hours.	
		16.3	Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours.	1, 3C, 3D, 4
		16.4	Supplementary equipment mobilised from OSRL within 48 hours.	
17	Management of environmental impact of the response risks	17.1	If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified.	1
		17.2	Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines.	
		17.3	Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves.	
		17.4	Removal of vegetation will be limited to moderately or heavily oiled vegetation.	
		17.5	Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations.	
		17.6	Oversight by trained personnel who are aware of the risks.	
		17.7	Trained unit leaders will brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline.	

The resulting shoreline clean-up capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside's existing capability will cover all required shoreline clean-up operations for the PAP by day 4.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Existing capability allows for mobilisation and deployment of 1-2 shoreline clean-up operations within 24 hours (if required). Whilst a further 6 RPAs are predicted to be contacted above response threshold (Table 3-1) within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus unlikely that these could all be contacted from a single release.

Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stages of the response. In addition, given the natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is managing risks and impacts to ALARP.

The capability available has limitations identified for this activity. The shoreline clean-up capability has the following performance (if required during a response):

- Woodside has the capacity to mobilise and deploy up to 15–20 shoreline clean-up teams within 7 days at up to 6-10 RPAs using existing labour hire contracts with Woodside, AMOSC, Core Group, AMSA and OSRL team leads.
- Assessment of response capability indicates that for a worst-case scenario the actual teams required would not meet the available capability until day 4, with the response completed by day 7-8.
- Woodside has considered deployment of additional personnel to undertake shoreline clean-up operations but is satisfied that the identified level of resource is balanced between cost, time and effectiveness.
- The most significant constraint on expanding the scale of response operations is the availability of accommodation and transport services in the region between Onslow and Dampier and management of response generated waste. From previous assessment of accommodation in Onslow and Dampier, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day for an ongoing operation.
- TRPs have been developed for identified RPAs excepting international locations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.5.

5.6 Oiled wildlife response (including hazing)

Oiled wildlife response (OWR) includes wildlife surveillance/reconnaissance, wildlife hazing, pre-emptive capture, and the capture, cleaning, treatment, and rehabilitation of animals that have been oiled. In addition, it includes the collection, post-mortem examination, and disposal of deceased animals that have succumbed to the effects of oiling.

For a petroleum activity spill in Commonwealth waters, Woodside will act as the Control Agency and will be responsible for the wildlife response. In such circumstances, Woodside would implement a response in accordance with the *Oiled Wildlife Operational Plan*, the WA Oiled Wildlife Response Plan (WAOWRP) (DBCA, 2022a) and the WA OWR Manual (DBCA, 2022b). The *Oiled Wildlife Operational Plan* includes the process for the IMT to mobilise resources depending on the nature and scale of the spill. Oiled wildlife operations would be implemented with advice and assistance from the Oiled Wildlife Advisor from the Department of Biodiversity, Conservation and Attractions (DBCA).

The key plan for OWR in WA is the WAOWRP (DBCA, 2022a). The WAOWRP establishes the framework for preparing and responding to potential or actual wildlife impacts during a spill and sets out the management arrangements for implementing an OWR in conjunction with the DoT *State Hazard Plan – Maritime Environmental Emergencies* (SHP-MEE). It is the responsibility of DBCA to administer the WAOWRP under the direction of the DoT. The WA OWR Manual (DBCA, 2022b) supports, and should be used in conjunction with, the WAOWRP. The purpose of the WA OWR Manual is to standardise the operating procedures, protocols and processes for an OWR during a spill event in WA waters, and to create alignment between the wildlife response processes and the overall incident response (DBCA, 2022b).

If a spill occurs in WA State waters or enters State waters, DBCA is the Jurisdictional Authority for wildlife, for level 2/3 spills, and will also lead the oiled wildlife response under the control of the DoT. DBCA is the State Government agency responsible for administering the *Biodiversity Conservation Act 2016 (WA) (BC Act)* which has provisions for authorising activities that affect wildlife.

For level 1 spills in State waters, Woodside will be the Control Agency, including for wildlife response. It is, however, also an expectation that for level 2/3 petroleum activity spills, Woodside will conduct the initial first-strike response actions for wildlife response and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

Woodside retains specialist personnel to support and manage oiled wildlife operations, including trained and competent responders for deployment in Exmouth and Dampier. Additional personnel would be sourced through Woodside's arrangements to support an oiled wildlife response as required.

5.6.1 Response need based on predicted consequence parameters

Wildlife response protection areas and assessment of wildlife impact

French-McCay et al. (2002), based on a review of existing literature at the time, determined lethal thresholds for floating and shoreline oil for the external coating of wildlife to be 10 g/m² for floating, and 100 g/m² for shoreline accumulation. It should however be noted that toxicity thresholds for wildlife are likely to be highly variable due to differences in species sensitivity, type of hydrocarbon, type of exposure (ingestion or external oiling), life-stage, and on-water versus land habitat.

For planning purposes, determination of wildlife priority protection areas is based on stochastic modelling of the worst-case spill scenarios at 10 g/m² for floating, and 100 g/m² for shoreline accumulation (acknowledging that impacts to wildlife may occur at lower concentrations), the known presence of wildlife, and in consideration of the following:

- presence of high densities of wildlife, threatened species, and/or endemic species with high site fidelity
- greatest probability of shoreline accumulation
- shortest timeframe to contact.

At the time of a spill, identification and allocation of wildlife response protection areas should also take into consideration any key biological activities.

For WA, although somewhat out-dated, the Pilbara and Kimberley Regional Oiled Wildlife Plans (DBCA [formerly Department of Parks and Wildlife], 2014) provide useful information relating to wildlife priority response areas in their respective regions.

Table 5-10: Key at-risk species potentially in Priority Protection Areas and open ocean

Species	Dampier Archipelago	Gidley Island	Keast Island	Legendre Island	Cape Bruguieres	Angel Island	Rosemary Island	Cohen Island	Montebello MP	Gascoyne MP	Hammersley Shoal	Madeleine Shoal
Marine turtles	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓		
Whale sharks	✓	✓	✓			✓	✓		✓	✓		
Seabirds and/or migratory shorebirds	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓		
Cetaceans – migratory whales	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓		
Cetaceans – dolphins and porpoises	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Dugongs	✓	✓	✓	✓		✓	✓	✓				
Sharks and rays	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

The following statements identify the key parameters upon which a wildlife response need can be based:

- For CS-01, floating hydrocarbon at >10 g/m² is predicted at:
 - Dampier Archipelago within 6 hours
 - Hammersley Shoal within 17 hours
 - Madeleine Shoal within 18 hours
 - Legendre Island within 19 hours
 - Rosemary Island within 28 hours
 - Cape Bruguieres within 29 hours
 - Keast Island within 38 hours
- For CS-02, floating hydrocarbon at >10 g/m² is predicted at:
 - Montebello MP within 1 hour
 - Gascoyne MP within 58 hours
- For CS-03, floating hydrocarbon at >10 g/m² is not predicted for the duration of the spill.
- The shortest timeframe for shoreline accumulation at response thresholds (>100 g/m²) is predicted to be 0.75 days at Dampier Archipelago (55 m³) and Keast Island (20 m³) for CS-01. There is no shoreline impact predicted at response thresholds for CS-02 and CS-03.
- At sea, there are likely to be low numbers of at risk or impacted wildlife, and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment.
- As the surface oil approaches shorelines and as oil accumulates on the shoreline, potential for oiled wildlife impacts is likely to increase as well as opportunities to rescue wildlife.
- It is estimated that the wildlife impact would be between low and medium, as defined in the WAOWRP (DBCA, 2022a) (Table 5-11).

Table 5-11: WAOWRP Guide for rating wildlife impact of an oil spill (DBCA, 2022)

Wildlife Impact Rating	Low	Medium	High
What is the likely duration of the wildlife response?	<3 days	3-10 days	>10 days
What is the likely total intake of animals?	<10	11-25	>25
What is the likely daily intake of animals?	0-2	2-5	>5
Are threatened species, or species protected by treaty, likely to be impacted, either directly or by pollution of habitat or breeding areas?	No	Yes – possible	Yes – likely
Is there likely to be a requirement for building primary care facility for treatment, cleaning and rehabilitation?	No	Yes – possible	Yes – likely

Tactics

Where there is imminent or actual impact to wildlife, Woodside will activate the Wildlife Division and follow the oiled wildlife incident management framework and implementation plan outlined in the Woodside *Oiled Wildlife Operational Plan*.

In Commonwealth waters, Woodside will be responsible for the planning and implementation of the OWR in its entirety. Noting that at sea, and in comparison, to the shoreline, there are likely to be less wildlife impacted by an oil spill and limited opportunities to rescue wildlife, given the distribution and behaviour of animals in the open marine environment. At sea, continued wildlife reconnaissance, carcass recovery, sampling of carcasses that cannot be retrieved and integration with scientific monitoring are more likely to be the focus of the OWR.

In State waters, Woodside will conduct the initial first-strike response actions for wildlife and continue to manage those operations until DBCA is activated as the lead agency for wildlife response and formal handover occurs. Following formal handover, Woodside will function as a support organisation for the OWR and will be expected to continue to provide planning and resources as required.

If a protracted response requiring preventative actions and/or wildlife rescue is likely, and formal hand over to the Control Agency (in State waters) has not yet occurred, the Wildlife Division will be responsible for the development of the Wildlife Division portion of the IAP. Preventative actions, such as hazing, capture,

intake and treatment, require a higher degree of planning, approval (licenses) and skills. These activities will be planned for and carried out under the IAP as outlined in the *Oiled Wildlife Operational Plan* and in accordance with the WAOWRP (DBCA, 2022a) and WA OWR Manual (DBAC, 20022b).

5.6.2 Environmental performance based on need

Table 5-12: Environmental Performance – Oiled Wildlife Response

Environmental Performance Outcome		OWR is conducted in accordance with the Western Australian Oiled Wildlife Response Plan (WAOWRP, 2022) to meet legislative requirements to house, release or euthanise wildlife under the <i>Biodiversity Conservation Act 2016 (WA)</i> .		
Control measure		Performance Standard	Measurement Criteria (Section 5.10)	
18	Wildlife response arrangements	18.1	Oiled Wildlife Operational Plan in place and utilised during a response to plan, coordinate, implement and terminate operations.	1, 3A, 4
		18.2	Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by relevant Operational Monitoring techniques (OM01-05) and in liaison with DBCA.	1
19	Wildlife response equipment	19.1	Maintain contract with AMOSC for immediate access to oiled wildlife response equipment.	1, 3C, 3D, 4
		19.2	Maintain contract with OSRL to access additional oiled wildlife response equipment.	1, 3C, 3D, 4
20	Wildlife responders	20.1	Two Oiled Wildlife Team Members to supervise the oiled wildlife operations who have completed an Oiled Wildlife Response Management course.	1, 2, 3B
		20.2	Maintain contract with AMOSC for immediate access to trained oiled wildlife response specialists.	1, 3B, 3C
		20.3	Maintain contract with OSRL to access additional trained OWR specialists.	1, 3B, 3C
		20.4	Open communication line to be maintained between IMT and infield operations to ensure awareness of progress against plan(s).	1, 3A, 3B
21	Management of environmental impacts of response risks	21.1	Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan.	1

The resulting wildlife response capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to response at identified RPAs.

Under optimal conditions, during the subsea or surface release, the capability available meets the need identified. It indicates that, the wildlife response capability has the following expected performance to:

- undertake OWR first strike response including
 - mobilisation of operational monitoring (OM01-05) to identify wildlife and RPAs contacted or at imminent risk of contact by hydrocarbons
- confirm availability and mobilisation of trained OWR personnel to supervise OWR activities
- access to wildlife resources (personnel and equipment) to meet the needs where there are medium or high levels of wildlife impact.

5.7 Waste Management

Waste management is considered a support technique to wildlife response, containment and recovery and shoreline clean-up. Waste generated and collected during the response that will require handling, management and disposal may consist of:

- liquids (hydrocarbons and contaminated liquids) collected during shoreline clean-up and oiled wildlife operations
- solids/semi-solids (oily solids, garbage, contaminated materials) and debris (e.g. seaweed, sand, woods, and plastics) collected during shoreline clean-up and oiled wildlife operations.

Expected waste volumes during an event are likely to vary depending on oil type, volume released, response techniques employed and how weathering of hydrocarbons. Waste management, handling and capacity should be scalable to maintain continuous response operations.

All waste management activities will follow the Environment Protection (Controlled Waste) Regulations 2004 (WA) and the waste will be managed to minimise final disposal volumes. Waste treatment techniques will consider contaminated solids treatment to allow disposal to landfill and solids with high concentrations of hydrocarbon will be treated and recycled where possible or used in clean fill if suitable.

The waste products would be transported from response locations to the nearest suitable staging area/waste transfer station for treatment, disposal or recycling. Waste will be transferred with appropriately licensed vehicles. Containers will be available for temporary waste storage and will be:

- labelled with the waste type
- provided with appropriate lids to prevent waste being blown overboard
- banded if storing liquid wastes.

Processes will be in place for transfers of bulk liquid wastes and include

- inspection of transfer hose undertaken prior to transfer
- watchman equipped with radio visually monitors loading hose during transfer
- tank gauges monitored throughout operation to prevent overflow.

The *Oil Spill Preparedness Waste Management Support Plan* details the procedures, capability and capacity in place between Woodside and its primary waste services contractor to manage waste volumes generated from response activities.

5.7.1 Response need based on predicted consequence parameters

Table 5-13: Response Planning Assumptions – Waste Management

Response planning assumptions: Waste management	
Waste loading per m ³ oil recovered (multiplier)	Shoreline clean-up (manual) – approximately 5-10x multiplier for oily solid and liquid wastes generated by manual clean-up.
	Oiled wildlife response – approximately 1 m ³ of oily solid and liquid waste generated for each wildlife unit cleaned.

5.7.2 Environmental performance based on need

Table 5-14: Environmental Performance – Waste Management

Environmental Performance Outcome		To minimise further impacts, waste will be managed, tracked and disposed of in accordance with laws and regulations.		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)	
22	Waste Management	22.1	Contract with waste management services for transport, removal, treatment and disposal of waste.	1, 3A, 3B, 3C, 4
		22.2	Access to at least 124 m ³ of solid and liquid waste storage available within 24 hours upon activation of 3 rd party contract.	
		22.3	Access to up to 2400 m ³ by within 7 days.	
		22.4	Recovered hydrocarbons and wastes will be transferred to licensed treatment facility for reprocessing or disposal.	
		22.5	Waste management provider support staff available year-round to assist in the event of an incident with waste management as detailed in contract.	
		22.6	Open communication line to be maintained between IMT and waste management services to ensure the reliable flow of accurate information between parties.	1, 3A, 3B
		22.7	Waste management to be conducted in accordance with Australian laws and regulations.	1, 3A, 3B, 3C, 4
		22.8	Waste management services available and employed during response.	
23	Management of environmental impacts of response risks	23.1	Teams will segregate liquid and solid wastes at the earliest opportunity.	1, 3A, 3B, 3C, 4

The resulting waste management capability has been assessed against the WCCS. The range of techniques provide an ongoing approach to waste management at identified RPAs.

The largest shoreline volumes ashore are predicted during day 1 and 2 at a maximum volume of 90 m³ and 86 m³ respectively, with between 413 m³ and 2099 m³ of waste expected across all shoreline clean-up operations up to and including day 7. The capability available meets the need identified by day 4. It should be noted that the shoreline volumes predicted by modelling are based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stages of the response. In addition, given the natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is managing risks and impacts to ALARP.

It indicates that the waste management capability has the following expected performance:

- Shoreline and nearshore operations may generate up to 2099 m³ over seven days of operations.
- Woodside has assessed the existing capability available and considered potential alternative, additional and improved control measures. Where control measures have been selected and implemented, they are included in Section 6.6.
- Woodside’s waste contractor has access to approximately 120,000 m³ to treat overall waste volumes. The waste management requirements are within Woodside’s and its service providers’ existing capacity.

5.8 Scientific monitoring

A scientific monitoring program (SMP) would be activated following a Level 2 or 3 unplanned hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors. This would consider receptors at risk (ecological and socio-economic) for the entire predicted EMBA and, in particular, any identified Pre-emptive Baseline Areas (PBAs) for the credible spill scenario(s) or other identified unplanned hydrocarbon releases associated with the Petroleum Activities Program (PAP) (refer to Table 2-1: PAP credible spill scenarios).

The outputs of the stochastic hydrocarbon spill modelling are used to assess the environmental risk, in terms of delineating which areas of the marine environment are predicted to be exposed to hydrocarbons exceeding environmental threshold concentrations (refer to Table 2-2, Section 2.3.1.1). The summary of all the locations where hydrocarbon thresholds could be exceeded by any of the simulations modelled is defined as the EMBA. The PAP worst-case credible spill scenarios, CS-01, CS-02 and CS-03, define the EMBA and are the basis of the SMP approach presented in this section.

It should be noted that the resulting SMP receptor locations differ from the RPAs presented and discussed in Section 3 of this document due to the applicability of different hydrocarbon threshold levels. The SMP would be informed by the data collected via the Operational Monitoring Program (OMP) studies, however, it differs from the OMP in being a long-term program independent of, and not directing, the operational oil spill response or monitoring of impacts from response activities (refer to Section 5.1) for operational monitoring overview).

Key objectives of the Woodside oil spill scientific monitoring program are:

- assess the extent, severity and persistence of the environmental impacts from the spill event
- monitor subsequent recovery of impacted key species, habitats and ecosystems.

The SMP comprises ten targeted environmental monitoring programs to assess the condition of a range of physico-chemical (water and sediment) and biological (species and habitats) receptors including EPBC Act listed species, environmental values associated with protected areas and socio-economic values, such as fisheries. The ten SMPs are as follows:

- SM01 – assessment of the presence, quantity and character of hydrocarbons in marine waters (linked to OM01 to OM03)
- SM02 – assessment of the presence, quantity and character of hydrocarbons in marine sediments (linked to OM01 and OM05)
- SM03 – assessment of impacts and recovery of subtidal and intertidal benthos
- SM04 – assessment of impacts and recovery of mangroves/saltmarsh habitat
- SM05 – assessment of impacts and recovery of seabird and shorebird populations
- SM06 – assessment of impacts and recovery of nesting marine turtle populations
- SM07 – assessment of impacts to pinniped colonies including haul-out site populations
- SM08 – desktop assessment of impacts to other non-avian marine megafauna
- SM09 – assessment of impacts and recovery of marine fish (linked to SM03)
- SM10 – assessment of physiological impacts to important fish and shellfish species (fish health and seafood quality/safety) and recovery.

These SMPs have been designed to cover all key tropical and temperate habitats and species within Australian waters and broader, if required. A planning area for scientific monitoring is also identified to acknowledge potential hydrocarbon contact below the environmental threshold concentrations and beyond the EMBA. This planning area has been set with reference to the entrained low exposure value of 10 ppb detailed in NOPSEMA Bulletin #1 Oil Spill Modelling (2019), as shown in Figure 5-1.

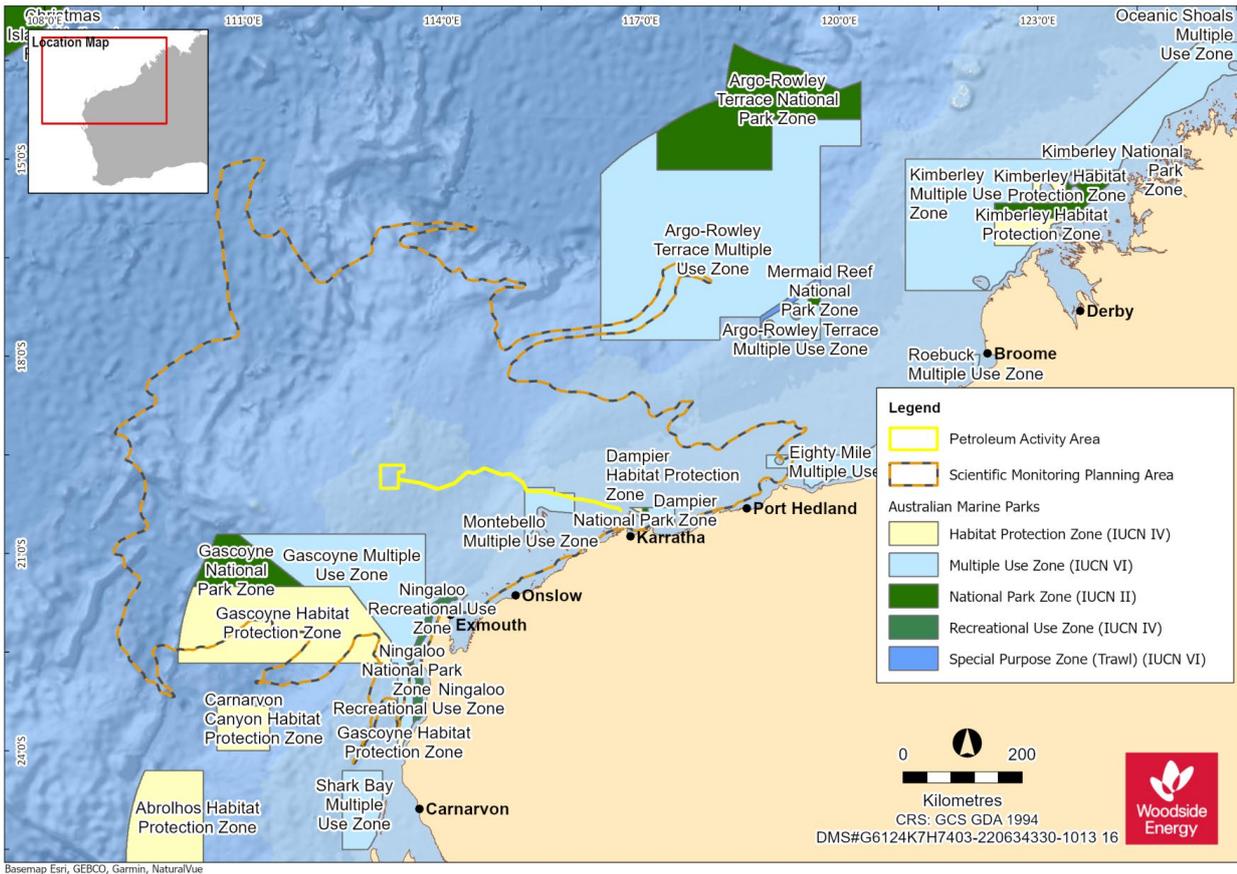

Figure 5-1: The planning area for scientific monitoring based on the area potentially contacted by the low (below ecological impact) entrained hydrocarbon threshold of 10 ppb in the event of the worst-case credible spill scenarios (CS-01, CS-02, and CS-03).

Please note that Figure 5-1 represents the overall combined extent of the oil spill model outputs based on a total of 200 replicate simulations per scenario over an annual period and therefore represents the largest spatial boundaries of all oil spill combinations, not the spatial extent of a single spill.

5.8.1 Scientific Monitoring Deployment Considerations

Scientific Monitoring Deployment Considerations	
Existing baseline studies for sensitive receptor locations predicted to be affected by a spill	<p>PBAs of the following two categories:</p> <ul style="list-style-type: none"> • PBAs within the predicted <10-day hydrocarbon contact time prediction: The approach is to conduct a desktop review of available and appropriate baseline data for key receptors for locations (if any) that are potentially impacted within 10 days of a spill and look to conduct baseline data collection to address data gaps and demonstrate spill response preparedness. Planning for baseline data acquisition is typically commenced pre-PAP and execution of studies undertaken with consideration of weather, receptor type, seasonality and temporal assessment requirements. • PBAs >10 days to predicted hydrocarbon contact in the event of an unplanned hydrocarbon release from a vessel collision outside of Mermaid Sound (CS-01), a vessel collision within Montebello MP (CS-02), and a loss of structural integrity at the FPU location (CS-03). SMP activation (as per the Scarborough Offshore Facility and Trunkline Operations First Strike Plan) directs the SMP team to follow the steps outlined in the SMP Operational Plan. The steps include checking the availability and type of existing baseline data, with particular reference to any PBAs identified as >10 days to hydrocarbon contact. Such information is used to identify response phase PBAs and plan for the activation of SMPs for pre-emptive (i.e. pre-hydrocarbon contact) baseline assessment.
Pre-emptive Baseline in the event of a spill	Activation of SMPs in order to collect baseline data at sensitive receptor locations with predicted hydrocarbon contact time >10 days (as documented in ANNEX C).
Survey platform suitability and availability	In the event of the SMP activation, suitable survey platforms are available and can support the range of equipment and data collection methodologies to be implemented in nearshore and offshore marine environments.
Trained personnel to implement SMPs suitable and available	Access to trained personnel and the sampling equipment contracted for scientific monitoring via a dedicated scientific monitoring program standby contract.
Metocean conditions	<p>The following metocean conditions have been identified to implement SMPs:</p> <ul style="list-style-type: none"> • Waves <1 m for nearshore systems • Waves <1.5 m for offshore systems • Winds <20 knots • Daylight operations only <p>SMP implementation will be planned and managed according to HSE risk reviews and the metocean conditions on a day to day basis by SMP operations.</p>

5.8.2 Response planning assumptions

Response Planning Assumptions	
Pre-emptive Baseline Areas (PBAs)	<p>PBAs identified through the application of defined hydrocarbon impact thresholds during the Quantitative Spill Risk Assessment process and a consideration of the minimum time to contact at receptor locations fall into two categories:</p> <ul style="list-style-type: none"> • PBAs for which baseline data exist or are planned for and data collection may commence pre-PAP (≤ 10 days minimum time to contact). • PBAs (> 10 days minimum time to contact) for which baseline data may be collected in the event of an unplanned hydrocarbon release. Response phase PBAs are prioritised for SMP activities due to vulnerability (i.e. time to contact and environmental sensitivity) to potential impacts from hydrocarbon contact and an identified need to acquire baseline data. <p>Time to hydrocarbon contact of >10 days has been identified as a minimum timeframe within which it is feasible to plan and mobilise applicable SMPs and commence collection of</p>

	<p>baseline (pre-hydrocarbon contact) data, in the event of an unplanned hydrocarbon release from the Scarborough Offshore Facility and Trunkline Operations.</p> <p>Pre-emptive Baseline Areas for the Scarborough Offshore Facility and Trunkline Operations facility are identified and listed in ANNEX D, Table D-1. The PBAs together with the situational awareness (from the operational monitoring) are the basis for the response phase SMP planning and implementation.</p>
Pre-spill	<p>A review of existing baseline data for receptor locations with potential to be contacted by floating or entrained hydrocarbons at environmental thresholds within ≤ 10 days has identified the following locations based on the combined EMBA for the credible spill scenarios (CS-01, CS-02 and CS-03):</p> <ul style="list-style-type: none"> • Rankin Bank ¹¹ • Dampier Archipelago • Barrow, Lowendal and Montebello Island groups • Barrow Island MMA and Montebello State Marine Park • Pilbara Islands – Middle and Southern Island Groups • Ningaloo Coast and the Muiron Islands (State Marine Park, MMA and WHA) <p>Australian Marine Parks (AMPs) potentially affected include:</p> <ul style="list-style-type: none"> • Dampier AMP • Montebello AMP • Gascoyne AMP • Ningaloo AMP. <p>Note: The AMPs are located in offshore, open waters where hydrocarbon exposure is possible on surface waters and in the upper water column (entrained hydrocarbons) only.</p>
In the event of a spill	<p>Receptor locations with >10 days to hydrocarbon contact, as well as the wider area, will be investigated and identified by the SMP team (in the Environment Unit of the CIMT) as the spill event unfolds and as the situational awareness provided by the OMPs permits delineation of the spill affected area (for example, updates to the spill trajectory tracking). The full list is presented in Annex D, based on the PAP credible spill scenario(s) (Table 2-1).</p> <p>No additional receptor locations were predicted to be contacted between >10 days and 20 days.</p> <p>The unfolding spill affected area predictions and confirmation of appropriate baseline data will determine the selection of receptor locations and SMPs to be activated in order to gather pre-emptive (pre-hydrocarbon contact) data. Refer to ANNEX C for further details on scientific monitoring plan implementation and delivery). The timing of SMP activation and mobilisation of the individual SMPs to undertake data collection will be decided and documented by the Woodside SMP team following the process outlined in the SMP Operational Plan.</p> <p>In the event key receptors within geographic locations that are potentially impacted after 10 days following a spill event or commencement of the spill and where adequate and appropriate baseline data are not available, there will be a response phase effort to collect baseline data for the following purposes:</p> <ul style="list-style-type: none"> • Priority will be given to the collection of baseline data for receptors predicted to be within the spill affected area prior to hydrocarbon contact. The process is initiated with the investigation of available baseline and time to hydrocarbon contact (>10 days which is sufficient time to mobilise SMP teams and acquire data before hydrocarbon contact). • Collect baseline data for receptors predicted to be outside the spill affected area so reference datasets for comparative analysis with impacted receptor types can be assessed post-spill.

¹¹ Floating oil will contact submerged features in open ocean locations; therefore, only entrained hydrocarbon contact is predicted at ≤ 10 days. Predicted upper water column entrained hydrocarbons may extend to approximately 20 m depth and contact the submerged shoal benthic communities.

Baseline data	<p>A summary of the spill affected area and receptor locations as defined by the EMBA for the PAP credible spill scenarios is presented Section 2.3.</p> <p>The key receptors at risk by location and corresponding SMPs based on the EMBA for the PAP are presented in ANNEX D, as per credible spill event scenario(s). This matrix maps the receptors at risk with their location and the applicable SMPs that may be triggered in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors. Receptor locations and applicable SMPs are colour coded to highlight possible time to contact based on receptor types and locations.</p> <p>The status of baseline studies relevant to the PAP are tracked by Woodside through the maintenance of a Corporate Environment Environmental Baseline Database (managed by the Woodside Biodiversity and Science Team), as well as accessing external databases such as the Department of Water and Environmental Regulation (WA) Index of Marine Surveys for Assessment (IMSA)[1] (refer to ANNEX C: Oil Spill Scientific Monitoring</p>
---------------	---

5.8.3 Summary – scientific monitoring

The resulting scientific monitoring capability has been assessed against the PAP credible spill scenario(s). The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts. All known reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness determined to be medium. The SMP's main objectives can be met, with no additional, alternative or improved control measures providing further benefit.

5.8.4 Response planning: need, capability and gap – scientific monitoring

The receptor locations identified in Annex D provide the basis of the SMPs likely to be selected and activated. Once the Woodside SMP Delivery team and the SMP standby contractor have been stood up and the exact nature and scale of the spill becomes known, the SMPs to be activated will be confirmed as per the process set out in the SMP Operational.

Scope of SMP Operations in the event of a hydrocarbon spill

Receptor locations of interest for the SMP during the response phase are:

- Rankin Bank
- Dampier Archipelago
- Barrow, Lowendal and Montebello Island groups
- Barrow Island MMA and Montebello State Marine Park
- Pilbara Islands – Middle and Southern Island Groups
- Ningaloo coast and the Muiron Islands (State Marine Park, MMA and WHA).

Documented baseline studies are available for certain receptor locations including the Dampier Archipelago, Montebello Islands, Barrow Island, Lowendal Islands, Rankin Bank, Pilbara Islands – Middle and Southern Island Groups, and Ningaloo coast and the Muiron Islands (Annex D, Table D-2). The SMP approach in the response phase would still deploy SMP teams to maximise the opportunity to collect pre-emptive baseline data at sensitive receptor locations, i.e., the sections of the WA Coast not immediately contacted by hydrocarbons. As the exact locations where hydrocarbon contact occurs may be unpredictable, SM01 would be mobilised as a priority to detect hydrocarbons and track the leading edge of the spill to verify where hydrocarbon contact occurs which will assist in prioritising deployment of SMP resources to obtain pre-emptive baseline data.

The ALARP assessment for the SMP (Section 6.8) considers alternate, additional, and/or improved control measures on each selected response technique.

26	<ul style="list-style-type: none"> Roles and responsibilities for SMP implementation are captured in Table C-1 (Annex C) and the SMP team (as per the organisational structure of the CIMT) is outlined in the Oil Spill Scientific Monitoring Program Operational Plan. Woodside has a defined Crisis and Incident Management structure including Source Control, Operations, Planning and Logistics Sections to manage a loss of well control response. SMP Team structure, interface with SMP standby contractor (standby SMP contractor) and linkage to the CIMT is presented in Figure C-1, ANNEX C Woodside has a defined Command, Control and Coordination structure for Incident and Emergency Management that is based on the ICS framework. Woodside utilises online incident management software to coordinate and track key incident management Sections. This includes specialist modelling programs, geographic information systems (GIS), as well as communication flows within the Command, Control and Coordination structure. SMP activated via the Oil Pollution First Strike Plan. Step by step process for activation of individual SMPs provided in the SMP Operational Plan. All decisions made regarding SMP logged in the online incident management software (SMP team members trained in its use.). SMP component input to the CIMT Incident Action Plan (IAP) as per the identified CIMT timed sessions and the SMP IAP logged on the online incident management software. Woodside Biodiversity and Science Team provide awareness training on the activation and stand-up of the SMP for the Environment Advisers in Woodside who are listed on the SMP team on an annual basis. Woodside Biodiversity and Science Team provide awareness training on the activation and stand-up of the SMP for the SMP standby contractor. Woodside Biodiversity and Science Team co-ordinates an annual SMP arrangement testing exercise with the SMP standby contractor. 	26.1	<ul style="list-style-type: none"> Woodside have established an SMP organisational structure and processes to stand up and deliver the SMP. 	<ul style="list-style-type: none"> Oil Spill Scientific Monitoring Program Operational Plan SMP Implementation Plan SMP annual arrangement testing and reporting
27	<ul style="list-style-type: none"> Chartered and mutual aid vessels. Suitable vessels would be secured from the Woodside support vessels, regional fleet of vessels operated by Woodside and other operators and the regional charter market. Vessel suitability will be guided by the need to be equipped to operate grab samplers, drop camera systems and water sampling equipment (the individual vessel requirements are outlined in the relevant SMP methodologies (refer to Table C-2, ANNEX C). Nearshore mainland waters may use the same approach as for open water. Smaller vessels may be used where available and appropriate. Suitable vehicles and machinery for onshore access to nearshore SMP locations would be provided by Woodside's transport services contract and sourced from the wider market. Dedicated survey equipment requirements for scientific monitoring range from remote towed video and drop camera systems to capture seabed images of benthic communities to intertidal/onshore surveying tools such as quadrats, theodolites and spades/trowels, cameras and binoculars (specific survey equipment requirements are outlined in the relevant SMP methodologies (refer to Table C-2, ANNEX C)). Equipment would be sourced through the existing SMP standby contract with SMP standby contractor for SMP resources and if additional surge capacity is required this would be available through the other Woodside Environmental Services Panel Contractors and specialist contractors. SMP standby contractor can also address equipment redundancy through either individual or multiple suppliers. MoUs are in place with one marine sampling equipment companies and one analytical laboratory (SMP resourcing report register). Availability of SMP equipment for offshore/onshore scientific monitoring team mobilisation is within one week to ten days of the commencement of a hydrocarbon release. This meets the SMP mobilisation lead time that will support meeting the response objective of 'acquire, where practicable, the environmental baseline data prior to hydrocarbon contact required to support the post-response SMP. 	27.1	<p>Woodside maintains standby SMP capability to mobilise equipment required to conduct scientific monitoring programs SM01 – SM10 (except desktop based SM08):</p> <ul style="list-style-type: none"> Equipment is sourced through the existing standby contract with SMP standby contractor, as detailed within the SMP Implementation Plan. 	<ul style="list-style-type: none"> HSP Internal Control Environment tracks the quarterly review of the Oil Spill Contracts Master. 5.9 Incident Management System

The Incident Management System (IMS) is both a control measure and a measurement criterion. As a control measure, the function of the IMS is to prompt, facilitate and record the completion of three key response planning processes detailed below. As a measurement criterion, the IMS records the evidence of the timeliness of all response actions included in the environmental performance standards and the plans used for the PAP.

As the IMS does not directly remove hydrocarbons spilt into the marine environment, there is no direct relationship to the response planning need.

5.9.1 Incident action planning

The CIMT will be required to collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist the IMT with the execution of that plan. The site-based Incident Commander (IC) may request the CIMT to complete notifications internally within Woodside, to relevant persons/ organisations and government agencies as required. Depending on the type and scale of the incident, the CIMT IC will be responsible for ensuring the development of the IAP. Incident Action Planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.

5.9.2 Operational NEBA process

In the event of a response, Woodside will confirm that the response techniques adopted at the time of Environment Plan/Oil Pollution Emergency Plan (EP/OPEP) acceptance remain appropriate to reduce the consequences of the spill. This process verifies that there is a continuing net environmental benefit associated with continuing the response technique through the operational NEBA process. This process manages the environmental risks and impacts of response techniques during the spill response. An operational NEBA will be undertaken throughout the response, for each operational period.

The operational NEBA will consider the risks and benefits of conducting and response activity. For example, if vessels are required for access to nearshore or onshore areas, anchoring locations will be selected to minimise disturbance to benthic habitats. Vessel cleanliness would be commensurate with the receiving environment. The operational NEBA will consider the risks and benefits of conducting other response techniques.

The operational NEBA process is also used to terminate a response. Using data from operational and scientific monitoring activities, the response to a hydrocarbon spill will be terminated in accordance with the termination process outlined in the Oil Pollution Emergency Arrangements (Australia). In effect, the operational NEBA will determine whether there is net environmental benefit to continue response operations.

5.9.3 Consultation process

Woodside will consult relevant persons/organisations during the spill response in accordance with internal standards. This process requires that Woodside will:

- Undertake all required notifications (including government notifications) for relevant persons/ organisations in the region (identified in the First Strike Plan). This includes notification to mariners to communicate navigational hazards introduced through response equipment and personnel.
- In the event of a response, identify and engage with relevant persons/ organisations and continually assess and review.

5.9.4 Environmental performance based on need

Table 5-16: Environmental Performance – Incident Management System

Environmental Performance Outcome	To support the effectiveness of all other control measures and monitor/record the performance levels achieved.		
Control measure	Performance Standard		Measurement Criteria (Section 5.10)
31 Operational SIMA	31.1	Confirm that the response techniques adopted at the time of acceptance remain appropriate to reduce the consequences of the spill within 24 hours.	1, 3A
	31.2	Record the evidence and justification for any deviation from the planned response activities.	
	31.3	Record the information and data from operational and scientific monitoring activities used to inform the SIMA.	
32 Stakeholder engagement	32.1	Prompt and record all notifications (including government notifications) for relevant persons/ organisations in the region	
	32.2	In the event of a response, identification of relevant persons/ organisations will be re-assessed throughout the response period.	
	32.3	Undertake communications in accordance with: <ul style="list-style-type: none"> • External Communication and Continuous Disclosure Procedure • External Stakeholder Engagement Procedure 	
33 Personnel required to support any response	33.1	Action planning is an ongoing process that involves continual review to confirm the appropriateness of techniques to control the incident for the situation at the time.	1, 3B
	33.2	A duty roster of trained and competent people will be maintained to confirm minimum manning requirements are met all year round.	3C
	33.3	Immediately activate the CIMT with personnel filling one or more of the following roles: <ul style="list-style-type: none"> • CIMT Incident Commander • CIMT Deputy Incident Commander • Operations Section Chief • Planning Section Chief • Logistics Section Chief • Documentation Unit Leader • Safety Officer • Environment Unit Leader • Human Resources Officer • Public Information Officer • Situation Unit Leader • Finance Section Chief • Source Control Section Chief. 	1, 2, 3B, 3C, 4
	33.4	Collect and interpret information from the scene of the incident to determine support requirements to the site-based IMT, develop an IAP and assist with the execution of that plan.	
	33.5	Security and Emergency Management advisors will be integrated into CIMT to monitor performance of all functional roles.	
	33.6	Continually communicate the status of the spill and support Woodside to determine the most appropriate response by delivering on the responsibilities of their role.	
	33.7	Follow the OPEA, Operational Plans, FSPs, support plans and the IAPs developed.	
	33.8	Contribute to Woodside’s response in accordance with the aims and objectives set by the Incident Commander.	1, 2, 3A, 4

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

5.10 Measurement criteria for all response techniques

Woodside measures compliance with environmental performance outcomes and standards through four primary mechanisms. The performance tables in the previous sections identify which of these four mechanisms monitors the readiness and records the effectiveness and performance of the control measures adopted.

1. The Incident Management System

The Incident Management System (IMS) supports the implementation of the Emergency and Crisis Management Procedure. The IMS provides a near real-time, single source of information for monitoring and recording an incident and measuring the performance of those control measures.

The Emergency and Crisis Management Procedure defines the management framework, including roles and responsibilities, to be applied to any size incident (including hydrocarbon spills). The organisational structure required to manage an incident is developed in a modular fashion and is based on the specific requirements of each incident. The structure can be scaled up or down.

The Incident Action Plan (IAP) process formally documents and communicates the:

- incident objectives
- status of assets
- operational period objectives
- response techniques (defined during response planning)
- the effectiveness of response techniques.

The information captured in the IMS (including information from personal logs and assigned tasks/close outs) confirms the response techniques implemented remain appropriate to reduce the consequences of the spill. The system also records all information and data that can be used to support the site-based IMT, and development and execution of the IAP.

2. The Security and Emergency Management Competency Dashboard

The Security and Emergency Management Competency Dashboard (the Dashboard) records the number of trained and competent responders that are available across Woodside, and some external providers, to participate in a response.

This number varies dependent on expiry of competency certificates, staff attrition, internal rotations, leave and other absences. As such, the Dashboard is designed to identify the minimum manning requirements and to identify sufficient redundancy to cater for the variances listed above.

Figure 5-2 shows the minimum manning numbers for the different hydrocarbon spill response roles and the number of qualified persons against those roles.

Woodside's pool of trained responders is composed of, but not limited to, personnel from the following organisations:

- Woodside
- Australian Marine Oil Spill Centre (AMOSC) Core Group
- AMOSC
- Oil Spill Response Limited (OSRL)
- Marine Spill Response Corporation (MSRC)
- AMSA
- Woodside contracted workforce.

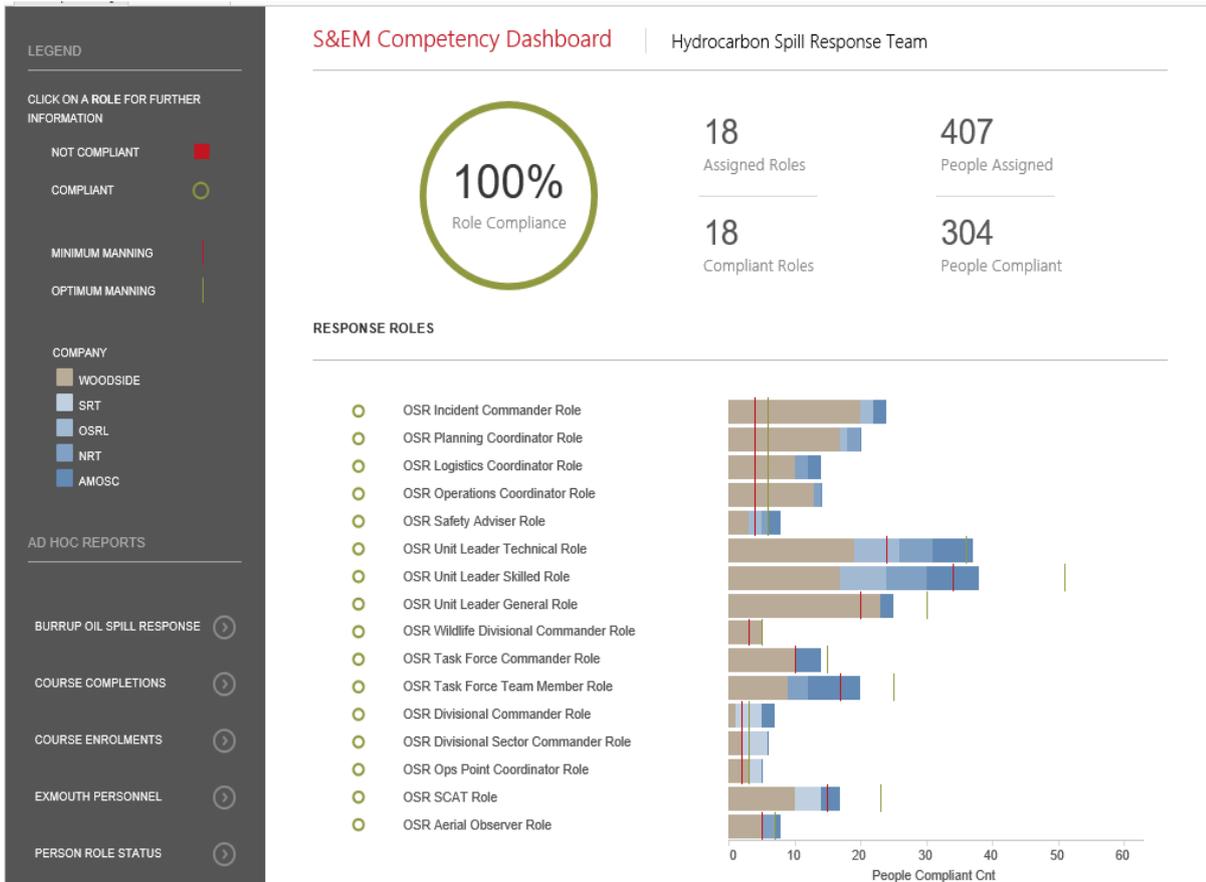

Figure 5-2: Example screenshot of the HSP competency dashboard

The Dashboard is one of Woodside’s key means of monitoring its readiness to respond. It also demonstrates Woodside’s ability to meet the requirements of the environmental performance standards that relate to certain response roles.

Figure 5-3 shows deeper dive into the Operations Point Coordinator role and the training modules required to show competence.

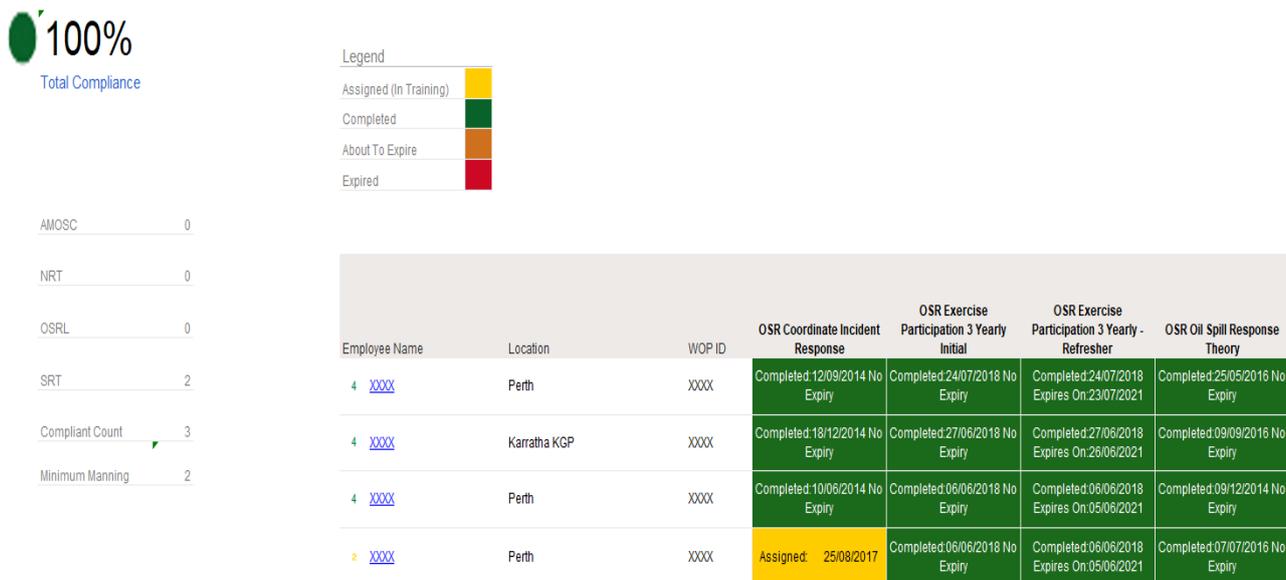

Figure 5-3: Example screenshot for the Operation Point Coordinator role

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

3. The Hydrocarbon Spill Preparedness ICE Assurance Process

The Hydrocarbon Spill Response Team has developed a Hydrocarbon Spill Preparedness Internal Control Environment (ICE) process to align and feed into the Woodside Management System Assurance process for a hydrocarbon spill. The process tracks compliance over four key control areas:

- a) Plans – confirms all plans (including Oil Pollution Emergency Arrangements, first strike plans, operational plans, support plans and tactical response plans) are current and in line with regulatory and internal requirements.
- b) Competency – confirms the competency dashboard is up to date and minimum numbers of required personnel are maintained across CIMT, CMT and hydrocarbon spill response roles. The hydrocarbon spill training plan and exercise schedule, including testing of arrangements, is also tracked. The Testing of Arrangements (ToA) register tracks the testing of all hydrocarbon spill response arrangements, key contracts and agreements in place with internal and external parties to meet compliance requirements.
- c) Capability – tracks and monitors the capability that could be required in a hydrocarbon incident, including integrated fleet¹² vessel schedule, dispersant availability, rig/vessels monitoring, equipment stockpiles, tracking buoy locations and the CIMT duty roster.
- d) Compliance and Assurance – confirms all regulator inspection outcomes are actioned and closed out, the global legislation register is up to date and that the key assurance components are tracked and managed. Assurance activities (including audits) conducted on memberships with key Oil Spill Response Organisations (OSROs), including AMOSC and OSRL, are also tracked and recorded in the ICE.

The ICE assurance process records how each commitment listed in the performance tables above is managed for ongoing compliance monitoring. The level of compliance can be reviewed in real time and is reported monthly through the S&EM Business Group.

The completion of the assurance checks (over and above the ICE process) is also applied via the Woodside Integrated Risk and Compliance System (WiRCs) and subject to the requirements of Woodside's Provide Assurance Procedure.

4. The Hydrocarbon Spill Preparedness and Response Procedure

This procedure sets out how to plan and prepare for a liquid hydrocarbon spill to the marine environment.

This procedure details the:

- requirement for an Oil Pollution Emergency Plan (OPEP) to be developed, maintained, reviewed, and approved by appropriate regulators (where applicable) including:
 - defining how spill scenarios are developed on an activity specific basis
 - developing and maintaining all hydrocarbon spill related plans
 - ensuring the ongoing maintenance of training and competency for personnel
 - developing the testing of spill response arrangements
 - maintaining access to identified equipment and personnel
- planning for hydrocarbon spill response preparedness
- accountabilities for hydrocarbon spill response preparedness
- spill training requirements
- requirements for spill exercising / testing of spill response arrangements
- spill equipment and services requirements.

The procedure also details the roles and responsibilities of the dedicated Woodside Hydrocarbon Spill Preparedness team. This team is responsible for:

- assuring that Woodside hydrocarbon spill responders meet competency requirements
- establishing the competency requirements, annual training schedule and a training register of trained personnel

¹² The Integrated fleet consists of vessels from multiple operators that have been contracted to Woodside to undertake a number of duties including hydrocarbon spill response

- establishing and maintaining the total numbers of trained personnel required to provide an effective response to any hydrocarbon spill incident
- ensuring equipment and services contracts are maintained
- establishing OPEPs
- establishing OPEAs
- determining priority response receptor
- determining ALARP
- ensuring compliance and assurance is undertaken in accordance with external and internal requirements.

6 ALARP EVALUATION

This Section should be read in conjunction with Section 5 which is the capability planned for this activity.

6.1 Operational Monitoring – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.1.1 Operational Monitoring – Control Measure Options Analysis

6.1.1.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Aerostat (or similar inflatable observation platform) for localised aerial surveillance.	Lead time to Aerostat surveillance is disproportionate to the environmental benefit. The system also provides a very limited field of visibility around the vessel it is deployed from.	Long lead time to access (>10 days). Each system would require an operator to interpret data and direct vessels accordingly. Requires multiple systems for shoreline use.	Purchase cost per system is approximately A\$300,000.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No

6.1.1.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional personnel trained to use systems.	Current arrangement provides an environmental benefit in the availability of trained personnel facilitating access to operational monitoring data used to inform all other response techniques. No improvement required.	Woodside considers no improvement can be made, all personnel in technical roles e.g. intelligence unit are trained and competent on the software systems. Personnel are trained and exercised regularly. Use of the software and systems forms part of regular work assignments and projects.	Cost for training in-house staff would be approximately A\$25,000.	This option is not adopted as the current capability meets the need.	No
Additional satellite tracking buoys to enable greater area coverage.	Increased capability does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	Tracking buoy on location at manned facility and additional needs are met from Woodside-owned stocks in King Bay Support Facility (KBSF) and Exmouth or can be provided by service provider.	Cost for an additional satellite tracking buoy would be A\$200 per day or A\$6000 to purchase.	This option is not adopted as the current capability meets the need, but additional units are available if required.	No
Additional trained aerial observers.	Current capability meets need. Woodside has access to a pool of trained, competent observers at strategic locations to allow timely and sustainable response. Additional observers are available through current contracts with AMOSC and OSRL.	Aviation standards and guidelines confirm all aircraft crews are competent for their roles. Woodside maintains a pool of trained and competent aerial observers with various home base locations to be called upon at the time of an incident. Regular audits of oil spill response organisations maintain training and competency.	Cost for additional trained aerial observers would be A\$2000 per person per day.	This option is not adopted as the current capability meets the need, but additional observers are available via response contractors if required.	No

6.1.1.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented

Faster turnaround time from modelling contractor.	Improved control measure does not provide an environmental benefit compared to the disproportionate cost in having an additional contract in place.	External contractor on CIMT roster to be called as soon as required. However initial information needs to be gathered by CIMT team to request an accurate model. External contractor has person on call to respond from their own location.	Modelling service with a faster activation time would be achieved via membership of an alternative modelling service at an annual cost of A\$50,000 for 24hr access plus an initial A\$5,000 per modelling run.	This option is not adopted as the minimal environmental benefit gained is disproportionate to the cost and complexity of its implementation.	No
Nighttime aerial surveillance.	The risk of undertaking the aerial observations at night is disproportionate to the limited environmental benefit. The images would be of low quality and as such the variable is not adopted.	Flights will only occur when deemed safe by the pilot. The risk of night operations is disproportionate to the benefit gained, as images from sensors (IR, UV, etc). will be low quality. Flight time limitations will be adhered to.	No improvement can be made without risk to personnel health and safety and breaching Woodside's Golden Safety Rules.	This option is not adopted as the safety considerations outweigh any environmental benefit gained.	No
Faster mobilisation time (for water quality monitoring).	Due to the restriction on accessing the spill location on day one, there is no environmental benefit in having vessels available from day one. The cost of having dedicated equipment and personnel is disproportionate to the environmental benefit. The availability of vessels and personnel meets the response need. Shortening the timeframes for vessel availability would require dedicated response vessels on standby in KBSF.	Operations are not feasible on day one as the hydrocarbon will take time to surface, and volatility has potential to cause health concerns within the first 24 hours of the response.	The cost and organisational complexity of employing two dedicated response vessels (approximately A\$15m per year per vessel) is considered disproportionate to the potential environmental benefit to be realised by adopting this delivery options. Cost for purchase of equipment is approximately A\$200,000. Ongoing costs per annum for cost of hire and pre-positioning for life of asset/activity would be larger than the purchase cost. Dedicated equipment and personnel, living locally and on short notice to mobilise. The cost would be approximately A\$1 m per annum, which is disproportionate to the incremental benefit this would provide, assets are already available on day one. two integrated fleet vessels are available from day one, however these could be tasked with other operations.	This option is not adopted as the area could not be accessed earlier due to safety considerations. Additionally, the cost and complexity of implementation outweighs the benefits.	No

6.1.2 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.2 Source Control via Vessel SOPEP – ALARP Assessment

Alternative, additional and improved control measure options have been assessed against the base capability described in Section 5. Those that have been selected for implementation highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.2.1 Source Control via Vessel SOPEP – Control Measure Options Analysis

6.2.1.1 Alternative Control Measures

Alternative Control Measures considered					
<i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.2.1.2 Additional Control Measures

Additional Control Measures considered					
<i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical additional control measures identified					

6.2.1.3 Improved Control Measures

Improved Control Measures considered					
<i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.2.2 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.3 Source Control – ALARP Assessment

Woodside has based its response planning on the worst-case scenario (as described in Section 2.2). This includes the following selection of source control and well intervention techniques:

- direct remotely operated vehicle (ROV) intervention on Xmas tree
- debris clearance and/or removal
- capping stack
- relief well drilling.

6.3.1 ROV Intervention

Following confirmation of an emergency event, Woodside would mobilise inspection class ROVs to assess the status of the wellhead and Xmas tree. Work class ROVs for well intervention are available through the existing frame agreements.

As Woodside holds frame agreements for vessels along with contracts for ROV providers and pilots, inspection activities using ROVs are expected to commence within seven days of an emergency event.

A hydraulic accumulator contained as part of the SFRT can be mobilised and deployed with well intervention attempted within 11 days.

Table 6-1: ROV timings

	Estimate ROV inspection duration for Scarborough wells(days)
Source and mobilise vessel with work class ROV	2 days
Liaise with Regulator regarding risks and impacts*	4 days
Undertake ROV Inspection	1 day
TOTAL	7 days*

* Based on timings from the Report into the Montara Commission of Enquiry, submission and discussion of revised documentation for limited activities inside the Petroleum Safety Zone (water deluge operations) to manage personnel risks and impacts was up to 20 days.

6.3.1.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661), confirming that vessels conducting subsea intervention operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements to be in place. In the event of an emergency, Woodside has access to suitable installation support vessels (ISVs) for well intervention through existing frame agreements. The frame agreements for ISV vessels require the vessels to maintain in-force Safety Case approval covering a range of subsea activities. This would cover the requirement for intervention operations such as subsea manifold installation, maintenance and repair, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case scenario from those presented in Figure 6-3 for implementing this response would be “no Safety Case revision required”. Timeframes for well intervention are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the “no Safety Case” revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.3.2 Debris clearance and/or removal

The Woodside Source Control Response Procedure details the mobilisation and resource requirements for implementing this strategy. Debris clearance may be required as a prerequisite to deployment of the capping stack. The AMOSC SFRT would be mobilised from Fremantle. The mobilisation of the SFRT would

take place in parallel with mobilisation of the capping stack to allow initial ROV surveys and debris clearance to have commenced before the arrival of the capping stack. The SFRT comprises ROV-deployed cutters and tools that are used to remove damaged or redundant items from the wellhead and allow improved access to the well. The SFRT can be mobilised and deployed with well intervention attempted within 11 days.

6.3.2.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting debris clearance and removal operations are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place. In the event of an emergency, Woodside has access to suitable ISVs for these operations through existing frame agreements. The frame agreements for ISVs require the vessels to maintain in-force Safety Case approval covering a range of subsea activities. This would cover the requirement for debris clearance and removal operations such as subsea manifold installation, commissioning, cargo transfer (including bulk liquids) and ROV operations. With frame agreements in place, the credible Safety Case Scenario, from those presented in Figure 6-3 for implementing this response would be “no Safety Case revision required”. Timeframes for debris clearance and removal equipment deployment are detailed in Figure 6-2 and would be implemented concurrently to the actions required by the “No Safety Case” revision scenario detailed in Figure 6-3, therefore, the Safety Case scenario will have no impact on the delivery of the strategy.

6.3.3 Capping stack

The Woodside Source Control Emergency Response Planning Guideline details the mobilisation and resource requirements for implementing capping stack deployment. A capping stack is designed to be installed on a subsea well and provides a temporary means of sealing the well, until a permanent well kill can be performed through either a relief well or well re-entry.

In the event of a loss of well containment, the use of a subsea deployment method such as a heavy lift vessel, which is more commonly used in industry, is a more reliable and, in turn, an ALARP approach. If environmental conditions permit (wind speed, wave height, current and plume radius), deployment of a capping stack with a heavy lift vessel with a 150 T crane capacity in shallower waters or 250 T crane in deeper waters could be feasible.

Woodside assumes that sourcing conventional capping stack deployment vessels would be per the Woodside Source Control Emergency Response Guideline. This has pre-identified vessel specifications for the capping stack deployment. Woodside maintains several frame agreements with various vessel service providers and maintains the ability to call off services with a capping stack and debris clearance agreement.

A capping stack can be mobilised to site within 16 days. Woodside will monitor the conditions around the wellsite and deployment for a well intervention attempt will be undertaken once plume size is acceptable and safety and metocean conditions are suitable.

6.3.3.1 Safety Case considerations

Woodside has assessed against the NOPSEMA Safety Case guidance (NOPSEMA N-09000-GN1661) and can confirm that vessels conducting deployment of the capping stack are not classified as an “associated offshore place” but as a facility and therefore require the appropriate Safety Case arrangements in place.

The 16-day timeframe to mobilise the vessel is based on the following assumptions:

- An existing frame agreement vessel is located outside the region with approved Australian Safety Case.
- A Safety Case revision and scope of validation is required.
- The vessel meets the technical requirements for deploying capping stack as per the Source Control Emergency Response Planning Guideline.

- The vessel has an active heave compensated crane, rated to at least 150 T for shallow waters or 250 T in deeper waters and at least 90 m in length and a deck capacity to hold at least 110 T of capping stack.

Timeframes for capping stack deployment detailed in Figure 6-2 and Figure 6-3 would be implemented concurrently with the actions required for the Safety Case revision development scenarios detailed in Figure 6-3 and Table 6-3. To reduce uncertainty in the regulatory approval timeframe, Woodside is collaborating with the AEP Drilling Industry Steering Committee (DISC) and a contracted ISV vessel operator to develop a generic Safety Case revision that contemplates a capping stack deployment. This Safety Case revision will be used to reduce uncertainty in permissioning timeframes in the event a capping stack deployment is required. Woodside will execute a capping stack response within the timeframes detailed in Figure 6-2, dependent upon presence of required safety and metocean conditions. Woodside has considered a broad range of alternate, additional, and improved options as outlined later in Section 6.3.5.

6.3.4 Relief Well drilling

The options analysis detailed in this section considers options to source, contract and mobilise a MODU and obtain necessary regulatory approvals to meet timelines for relief well drilling. The screening for relief well drilling MODUs is based on the following three approaches and is illustrated in Figure 6-1:

- Primary – review internal Woodside drilling programs and MODU availability to source an appropriate MODU operating within Australia with an approved Safety Case
- Alternate – source and contract a MODU through AEP MOU that is operating within Australia with an approved Safety Case
- Contingency – source and contract a MODU outside Australia with an approved Australian Safety Case.

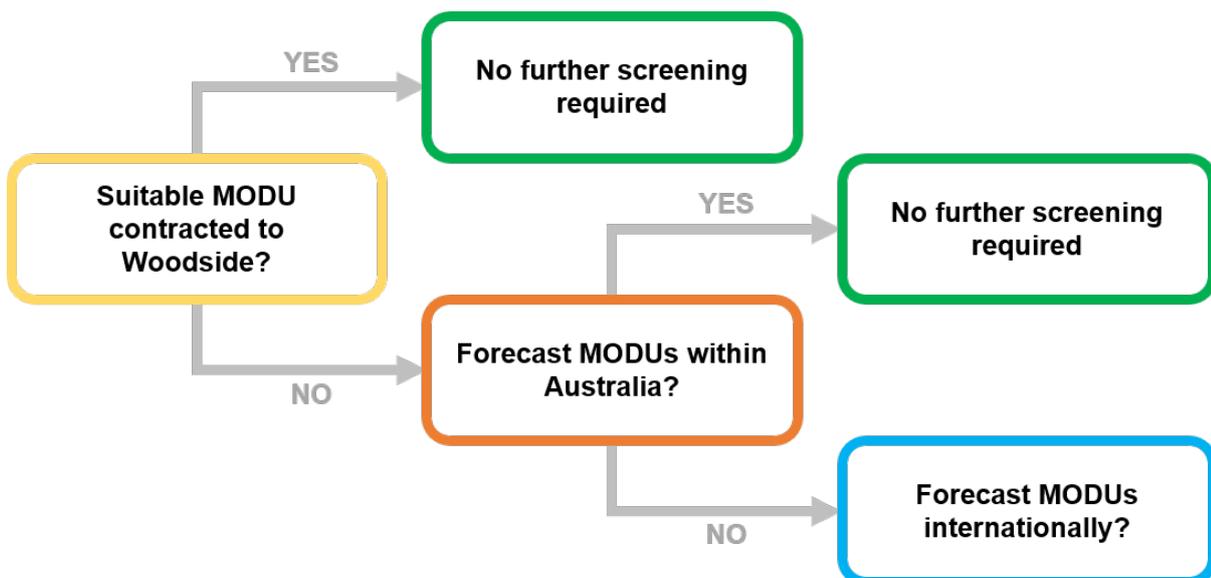

Figure 6-1: Scarborough Operations process for sourcing relief well MODU

Screening of a relief well MODU from international waters is undertaken only if required, i.e. there is low confidence in local (Australian) availability. The capability, location and Australian Safety Case status is assessed for each Woodside contracted MODU. In the event the Woodside contracted MODUs are unsuitable, screening is extended to all MODUs operating in Australian Waters.

Based on the detail provided, the primary and alternate approaches are expected to be achieved within the 21-day period.

The internal and external availability of MODUs, plus MODU activities of registered operators and MODUs with approved Safety Cases, are tracked by Woodside on a monthly basis to allow the best available options to be sourced and utilised in the event of the worst-case scenario.

If the above forecast indicates a gap in availability of a suitable MODU for relief well drilling within Australia, screening would be extended to MODUs with a valid Safety Case outside Australia. If an international

MODU with an Australian Safety Case is not identified, an internal review will be undertaken, NOPSEMA notified, and the issue tabled at the AEP DISC. A review of the significance of the change in risk will be undertaken in accordance with Woodside’s environment management of change requirements and relevant regulatory triggers. The aforementioned lookahead process would allow two years’ warning of any potential gap. Woodside will seek to execute relief well drilling in the fastest possible timeframe.

The detail of these arrangements demonstrates that the risks have been reduced to ALARP and an acceptable level through the control measures and performance standards outlined in Section 5.3.

6.3.4.1 Relief Well drilling timings

The duration of a blowout (from initiation to a successful kill) is assessed as 65.3 days for the Scarborough Operations PAP. Relief wells for other wells within the field are expected to be similar duration.

Details on the steps and time required to drill a relief well is shown in Table 6-2. DP and moored MODUs are suitable for the Scarborough Operations PAP. A moored MODU has been used as the basis for the time estimate below.

To validate the effectiveness of the relief MODU supply arrangements through the AEP MoU, an exercise to test the 21-day mobilisation period forms part of Woodside’s three-yearly Hydrocarbon Spill Arrangements Testing Schedule. Testing of these arrangements are facilitated by an external party and includes suspension of the assisting operator’s activities, contracting the MODU, vessel Safety Case revision and transit to location.

Table 6-2: Relief well drilling timings

Estimate Relief Well duration for Scarborough wells (days) – moored	
Source and contract MODU comprising the following stages:	21 days total:
<i>Activate MOU. Secure and suspend well. Complete relief well design. Secure relief well materials.</i>	8 days
<i>Transit to location based on mobilisation from North West Shelf region.</i>	2 days
<i>Backload and loadout bulks and equipment, complete internal assurance of relief well design.</i>	2 days
<i>Contingency for unforeseen event (e.g. longer transit from another area, problems in securing well, cyclone event)</i>	9 days
Pre-spud survey	Already included
Relief well construction:	24.8 days
Intersect and well kill comprising the following stages:	19.5 days total:
<i>Drill out shoe, conduct formation integrity test and drill towards intersection point</i>	1.5 days
<i>Execute well-specific ranging plan to intersect blowout well bore in minimum timeframe, with highest possible accuracy.</i>	15 days
<i>Pump kill weight drilling fluid per the relief well plan. Confirm the well is static with no further flow.</i>	0.5 days
<i>Contingency for unforeseen technical issues (e.g. more ranging runs required to make intersect, additional mud circulations required to execute kill)</i>	2.5 days
	65.3 days

Woodside has considered a broad range of alternate, additional, and improved options as outlined in Section 6.3.5.

Intersect and kill duration is estimated at 19.5 days. This is a moderately conservative estimate. During the intersect process, the relief well will be incrementally drilled and logged to accurately approach and locate the existing well bore. This will result in the highest probability of intersecting the well on the first attempt and thus will reduce the overall time to kill the well.

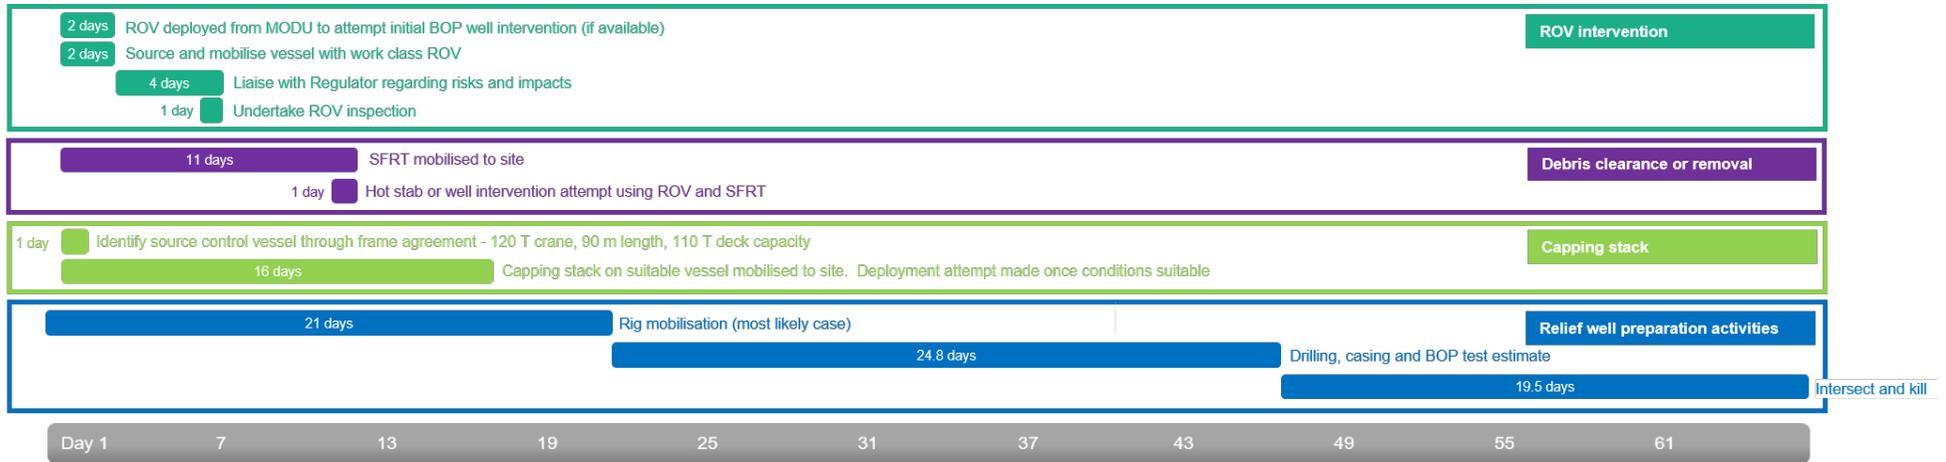

Figure 6-2: Source control and well intervention response strategy deployment timeframes for Scarborough wells.

6.3.4.2 Safety Case considerations

Woodside recognises that it will not be the Operator or holder of the Safety Case for the MODU and/or vessels involved in relief well activities. If a revision to the Operator's Safety Case is required for relief well drilling, Woodside has identified measures to enable timely response and optimise preparedness as far as practicable that can be undertaken to expedite a straightforward Safety Case revision for a MODU/vessel to commence drilling a relief well. Performance standards associated with these measures have been included in **Section 5.3**.

These include:

- access to Safety and Risk discipline personnel with specialist knowledge
- monthly monitoring internal and external MODUs and vessel availability in the region and extended area through contracted arrangements, with a two-year lookahead
- prioritisation of MODUs/vessels with current or historical contracting arrangements with Woodside maintaining records of previous contracting arrangements and companies, and all current contracts for vessels and MODUs that are required to support Woodside in the event of an emergency
- leverage mutual aid arrangements such as the AEP MOU for vessel and MODU support
- Woodside Planning and Logistics, and Safety Officers (on-Roster/Call 24/7) who can articulate need for, and deliver Woodside support, in key delivery tasks including those sitting with potential outside operators
- ongoing strategic industry engagement and collaboration with NOPSEMA to work toward time reductions in regulatory approvals for emergency events.

Woodside has identified three Safety Case revision development and submission scenarios for a MODU and plotted these alongside the relief well preparation activities in Figure 6-3. The assumptions for each of the cases are detailed in subsequent Table 6-3.

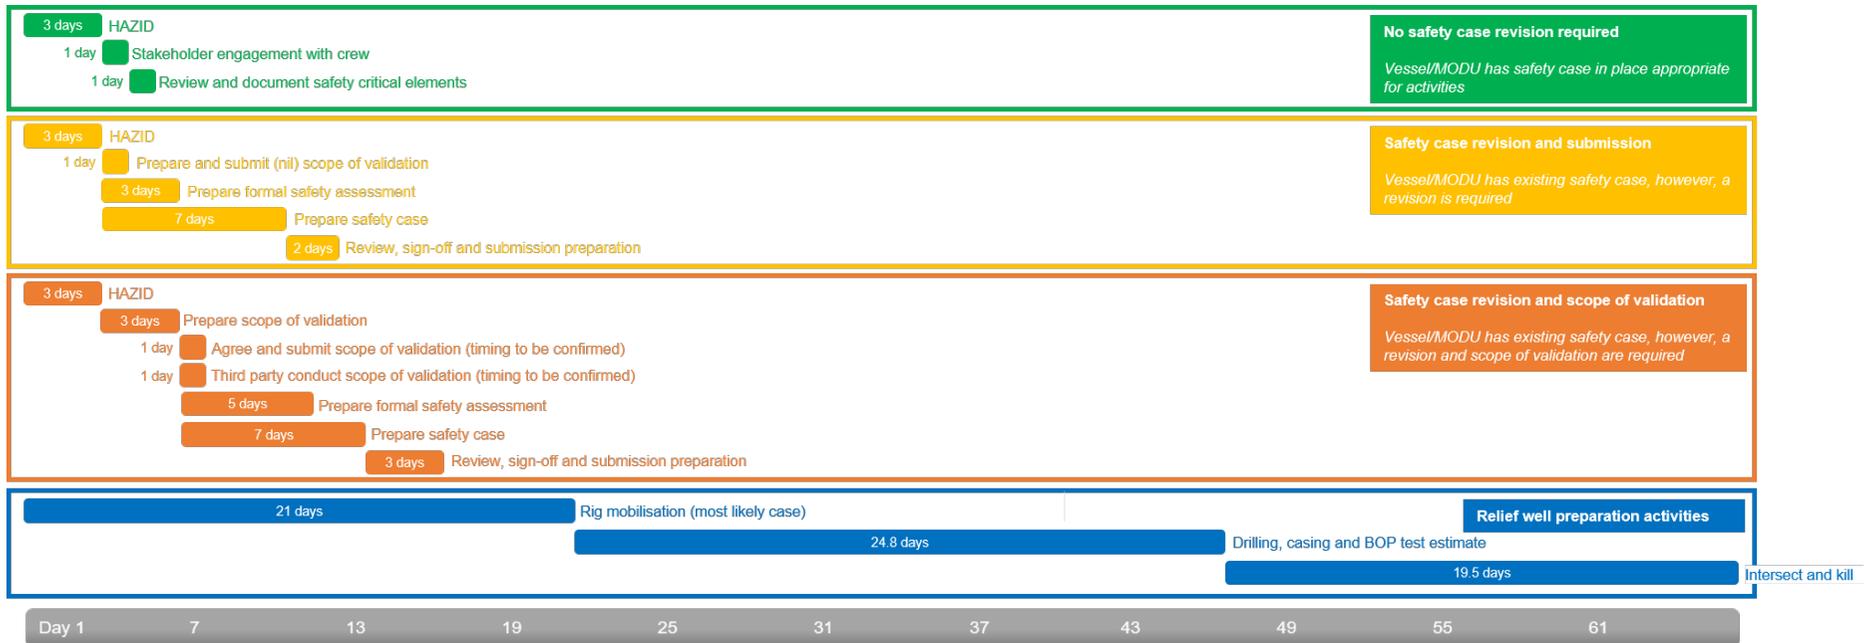

Figure 6-3: Timeline showing Safety Case revision timings alongside other relief well preparation activity timings for Scarborough Wells

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. Table 6-3: Safety Case revision conditions and assumptions

Case	No Safety Case revision required	Safety Case revision and submission	Safety Case revision and scope of validation
Description	Vessel/MODU has a Safety Case in place appropriate for activities.	Vessel/MODU has an existing Safety Case, however, a revision is required.	Vessel/MODU has an existing Safety Case, however, a revision is required plus scope of validation.
Conditions/assumptions	Assumes that existing vessel/MODU Safety Case covers working under the same conditions or the loss of containment is not severe enough to result in any risk on the sea surface.	Safety Case timing assumes vessel/MODU selected and crew are available for workshops and Safety Case studies.	Safety case timing assumes vessel/ MODU selected and crew are available for workshops and Safety Case studies.
		Assumes nil scope of validation. This assumes that the vessel for source control allows for working in a hydrocarbon environment and control measures are already in place in the existing Safety Case. For MODU, it assumes that the relief well equipment is already part of the MODU facility and MODU Safety Case.	Validation will be required for new facilities only. The time needed for the validator to complete the review (from the last document received) and prepare validation statement is undetermined. This is not accounted for here as the Safety Case submission is not dependent on the validation statement, however the Safety Case acceptance is.
		Assumes Safety Case preparation is undertaken 24/7.	Assumes Safety Case preparation is undertaken 24/7.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. 6.3.5 Source Control – Control Measure Options Analysis

The assessment described in Section 6.3.1, 6.3.2, 6.3.3 and 6.3.4 outline the primary, alternate and contingency approaches respectively that Woodside would implement for relief well drilling.

Woodside has outlined the options considered against the activation, mobilisation (improved options), deployment (alternate and additional options) process described in Section 2.1.1 that provides an evaluation of:

- predicted cost associated with adopting the option
- predicted change/environmental benefit
- predicted effectiveness/feasibility of the option.

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. The control measure options are defined as:

- Alternative control measures are potentially more effective and/or novel control measures that are evaluated as replacements for an adopted control
- Additional control measures are evaluated in terms of their ability to reduce an impact or risk when added to the existing suite of control measures
- Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility.

Options where there is not a clear justification for their inclusion or exclusion may be subject to a detailed assessment.

6.3.6 Activation/Mobilisation – Control Measure Options Analysis

This section details the assessment of alternative, additional or improved control measures that were considered to meet the selected level of performance in Section 5.3 and reduce the risk to ALARP. The alternative, additional and improved control measures that have been assessed and selected are highlighted in green and the relevant performance of the selected control is cross referenced. Items highlighted in red have been considered and rejected on the basis that they are not feasible or the costs are disproportionate compared to the environmental benefit.

6.3.6.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Standby MODU shared for all Woodside activities	A standby MODU shared across all Woodside activities is likely to provide a moderate environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to 10 days (to 11 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities.	This option is not considered feasible for all Woodside activities as there are a large range of well depths, complexities, geologies and geophysical properties across all Woodside's operations. The large geographic area of Woodside activities also means that the MODU is unlikely to be in the correct location at the right time when required.	Even with costs shared across Woodside operations, the costs (approximately A\$219 m per annum, A\$1,095 bn over the five years) of maintaining a shared MODU are considered disproportionate to the environmental benefit potentially achieved by reducing mobilisation times by up to 10 days.	The costs and complexity of having a MODU and maintaining this arrangement for the duration of the PAP are disproportionate to the environmental benefit gained above finding a MODU through the MoU agreement for all spill scenarios.	No
Standby MODU shared across AEP MOU Titleholders	A standby MODU shared across all titleholders who are signatories to the AEP MoU is likely to provide a minor environmental benefit as it may reduce the 21-day sourcing, contracting and mobilisation time by up to seven days (to 14 days). This would reduce the volume and duration of release and may reduce impacts on receptors and sensitivities.	This option is not considered feasible for many titleholders due to the remote distances in Australia as well as a substantial range of well depths, types, complexities, geologies and geophysical properties across a range of Titleholders.	As the environmental benefit is only considered minor and the reduction in timing would only be for the mobilisation period (reduction from 21 days to 14 days) the costs are considered disproportionate to the minor benefit gained.	The costs and complexity of having a MODU and maintaining a shared arrangement for the duration of the PAP are disproportionate to the environmental benefit gained above finding a MODU through the MoU agreement for all spill scenarios.	No

6.3.6.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Implement and maintain minimum standards for Safety Case development	Woodside's contingency planning consideration would be to source a rig from outside Australia with an existing Safety Case. This would require development and approval of a Safety Case revision for the rig and activities prior to commencing well kill operations.	This option is considered feasible and would require Woodside to develop minimum standards for safe operations for relevant Safety Case input along with maintaining key resources to support review of Safety Cases. Woodside would not be the operator for relief well drilling and would therefore not develop or submit the Safety Case revision. Woodside's role as Titleholder would be to provide minimum standard for safe operations that MODU operators would be required to meet and/or exceed.	Woodside has outlined control measures and performance standards regarding template Safety Case documentation and maintenance of resources and capability for expedited Safety Case review.	This option has been selected based on its feasibility, low cost and the potential environmental benefits it would provide.	Yes

6.3.6.3 Improved Control Measures

Improved Control Measures considered					
<i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Monitor internal drilling programs for rig availability	Woodside may be conducting other campaigns that overlap with the PAP, potentially providing availability of a relief well drilling rig within Woodside. The environmental benefit of monitoring other drilling programs internally is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbon to the environment.	Woodside monitors MODU availability through market intelligence services. Woodside will continually monitor other drilling and exploration activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations.	Associated cost of implementation is minimal to the environmental benefit gained. Related control measures and performance standards are included in Section 5.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes
Monitor external activity for rig availability	The environmental benefit achieved by monitoring drilling programs and rig movements across industry provides the potential for increased availability of suitable rigs for relief well drilling. Additional discussions with other titleholders may be undertaken to potentially gain faster access to a rig and reduce the time taken to kill the well and, therefore, the volume of hydrocarbons released.	Woodside will source a relief well drilling rig in accordance with the AEP MOU on rig sharing in the unlikely event this is required. Woodside will continually engage with other Titleholders and Operators regarding activities within Australia and as available throughout the region to track rigs and explore rig availability during well intervention operations. Commercial and operational provisions do not allow Woodside to discuss current and potential drilling programs in detail with other titleholders.	Associated cost of implementation is moderate to the environmental benefit gained.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes
Monitor status of Registered Operators/ Approved Safety cases for rigs	Woodside can monitor the status of Registered Operators for rigs operating within Australia (and therefore Safety Case status). Woodside can monitor monthly the status of Registered Operators for rigs operating within Australia (and therefore Safety Case status). This allows for a prioritised selection of rigs in the event of a response with priority given to those with an existing Safety Case.	The environmental benefit of monitoring rigs is for Woodside to understand what other rigs may be rapidly available for relief well operations if required, potentially reducing the time to drill the relief well, resulting in less hydrocarbons released to the environment.	The cost is minimal.	This option is a low-cost control measure with potential to reduce the volume of hydrocarbon released to the environment.	Yes

6.3.7 Deployment Options Analysis

6.3.7.1 Alternative Control Measures

Alternative Control Measures considered					
Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified					

6.3.7.2 Additional Control Measures

Additional Control Measures considered					
Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Offset capping alternative to conventional capping stack deployment	While the use of an offset capping system could reduce the quantity of hydrocarbon entering the marine environment, the mobilisation lead times for both a capping system and required vessels/ support equipment, would minimise any environmental benefit gained over conventional capping.	<p>The base case considerations for offset installation equipment (OIE) requires a coordinated response by four to seven vessels working simultaneously outside of the 500m exclusion zone, introducing complex SIMOPS issues. Due to the OIE's scale, fabrication of equipment (e.g. mooring anchors) outside of the contractor's scope of supply is likely to require engagement of international suppliers, further increasing complexity and uncertainty in associated time frames.</p> <p>Screening indicates that mobilising some components of the OIE (which are based in Italy) can only be done by sea and is likely to erode any time savings realised through killing the well via a relief well.</p> <p>The March 2019 OSRL exercise in Europe tested deployment of the OIE. It highlighted that a >600 T crane vessel would be required for deployment to allow for a useable hook-height for the crane to conduct the lift of the carrier. Vessels with such capability and a current Australian vessel Safety Case are not locally or readily available.</p>	Due to risks, uncertainty and complexity of this option, and the inability to realise any environmental gains, any cost would be disproportionate to the benefits gained.	<p>Woodside has confidence in availability of suitable relief well MODUs across the required drilling time frame thus the OIE would provide no advantage.</p> <p>Implementation of OIE has been assessed as a complex and unfeasible SIMOPs operation, precluded by a combination of the site-specific metocean and worst-case discharge conditions at the Scarborough location.</p> <p>Implementation of a novel technology such as OIE culminates in low certainty of success while at the same time increasing associated health and safety risks.</p> <p>As such, the primary source control response and ALARP position remains drilling a relief well.</p>	No
Dual vessel capping stack deployment	While the use of dual vessel to deploy the capping system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the feasibility issues surrounding a dual vessel capping deployment together with mobilisation lead times for both a capping system and required vessels and support equipment, would minimise any environmental benefit gained over conventional capping.	A dual vessel deployment is somewhat feasible provided a large enough deck barge can be located. Deck barges of 120m are not, however, very common and will present a logistical challenge to identify and relocate to the region. Further, the longer length barges may need mooring assist to remain centred over the well. The capping stack would be handed off from a crane vessel to the anchor handler vessel (AHV) work wire outside of the exclusion zone. The AHV would then manoeuvre the barge into the plume to get the capping stack over the well. In this method, the barge would be in the plume, but the AHV and all personnel would be able to maintain a safe position outside of the gas zone. The capping stack would be lowered on the AHV work wire so a crane would not be required on the barge.	Due to there being minimal environmental benefits gained by the prolonged lead times needed to execute this technique, plus a potential increase in safety issues, any cost would be disproportionate to the benefits gained.	Given there is minimal environmental benefit and an increase in safety issues surrounding SIMOPS and deployment in shallow waters, this option would not provide an environmental or safety benefit.	No
Subsea Containment System alternative to capping stack deployment	While the use of a subsea containment system could reduce the quantity of hydrocarbon entering the marine environment, this is an unproven technology. Additionally, the system is unlikely to be feasibly deployed and activated for at least 90 days	The timing for mobilisation, deployment and activation of the subsea containment system is likely to be >90 days which is longer than the expected 65.3 days relief well drilling operations based on the location, size and scale of the equipment required,	Woodside has investigated the logistics of reducing this timeframe by pre-positioning equipment but the costs of purchasing dedicated equipment by Woodside for this PAP are not considered reasonably practical and are considered	This option would not provide an environmental benefit.	No

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

	following a blowout due to equipment requirements and logistics. No environmental benefit is therefore predicted given the release duration is 65.3 days before drilling of a relief well under the adopted control measure.	including seabed piles that can only be transported by vessel.	disproportionate to the environmental benefit gained.		
Contract in place with Wild Well Control Inc and Oceaneering	Woodside has an agreement in place with Wild Well Control Inc and Oceaneering to provide trained personnel in the event of an incident. This will make competent personnel available in the shortest possible timeframe.	Having contracts in place to access trained, competent personnel in the event of an incident would reduce mobilization times. This option is considered reasonably practicable.	Minimal cost implications – Woodside has standing contract in place to provide assistance across all activities.	This control measure is adopted as the costs and complexity are not considered disproportionate to any environmental benefit that might be realised.	Yes

6.3.7.3 Improved Control Measures

Improved Control Measures considered					
<i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Maintaining relief well drilling supplies	There is not predicted to be any reduction in relief well timing or spill duration from Woodside maintaining stocks of drilling supplies (mud, casing, cement, etc.)	It would be feasible to source some relief well drilling supplies such as casing but the actual composition of the cement and mud required will need to be specific to the well. This option is also not deemed necessary as the lead time for sourcing and mobilising these supplies is included in the 21 days for sourcing and mobilising a rig.	The capital cost of Woodside purchasing relevant drilling supplies is expected to be approximately A\$600,000 with additional costs for storage and ongoing costs for replenishment. These costs are considered disproportionate to the environmental benefit gained.	This option would not provide an environmental benefit.	No

6.3.8 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - implement and maintain minimum standards for Safety Case development
 - contract in place with Wild Well Control Inc and Oceaneering to supply trained, competent personnel
- improved
 - monitor internal drilling programs for MODU availability
 - monitor external activity for MODU availability
 - monitor status of Registered Operators / Approved Safety cases for MODUs.

6.4 Shoreline Protection and Deflection – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are clearly disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.4.1 Existing Capability – Shoreline Protection and Deflection

Woodside’s existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside’s direct control.

6.4.2 Response Planning: Scarborough Project Offshore Facility and Trunkline Operations activity – Shoreline Protection and Deflection

Planning for shoreline protection is based upon identification of RPAs from deterministic modelling and the logistics associated with deploying protection at these locations. The response planning scenarios indicate that this would require effective mobilisation to priority shorelines and maintenance of protection until operational monitoring confirms that the locations are no longer at risk. Woodside has identified the RPAs from deterministic modelling results provided from specific scenarios.

The control measures selected provide capability to mobilise shoreline protection equipment within 24 hours (if required). Stochastic modelling scenarios indicate that first shoreline impact at Dampier Archipelago and Keast Island within 0.75 days for CS-01. No shoreline contact is expected at 100 g/m² threshold from CS-02 and CS-03. The existing capability is considered sufficient to mobilise and deploy protection at RPAs within 72 hours, guided by the ongoing operational monitoring. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in Table 3-1.

Tactical response plans exist for many of the RPAs identified. The plans identify values and sensitivities that would be protected at location. To allow for the best use of available shoreline protection and deflection resources, operational monitoring (OM01 and OM02) will inform the response, targeting RPAs where contact is predicted above response threshold levels.

Table 6-4 below outlines the capability required (number of RPAs predicted to be impacted) against the capability available (number of shoreline protection and deflection operations that can be mobilised and deployed). As can be seen from the table below, Woodside’s capability meets the response planning need identified for shoreline protection and deflection operations at identified RPAs within 72 hours.

Table 6-4: Response Planning – Shoreline Protection and Deflection

Scarborough Project Offshore Facility and Trunkline Operations activity		Day	Week	Week	Week	Month	Month						
		1	2	3	4	5	6	7	2	3	4	2	3
	Oil on shoreline (from deterministic modelling of CS-01) m ³	90	86	3	0	0	0	0	0	0	0	0	0
A Capability Required

	<ul style="list-style-type: none"> dependent on seasonality presence of sensitive receptors, the strategies to either protect or clean-up the shorelines will be decided through NEBA.
<p>Dampier Archipelago – Inshore Waters of Mermaid Sound/ Dampier Archipelago (applicable to RPAs including; Gidley Island, Keast Island, Cape Bruquieres, Angel Island and Cohen Island)</p>	<p>First response objective: Ongoing operational monitoring and evaluation of the hydrocarbon spill to adapt aims and response tactics to the evolving nature of the incident and to assist in locating relevant booming areas.</p> <p>Second response objective: Recovery of floating oil at sea where possible through the use of skimming systems and other appropriate recovery devices to reduce shoreline impact.</p> <p>Third response objective: Protection of sensitive shorelines within Dampier Archipelago through use of shoreline booms. Formation types to deploy will be dependent on the time available until the hydrocarbon impacts the shoreline and local geographical and tidal/weather conditions.</p> <p>Fourth response objective: Clean-up of the shoreline. Manual clean up techniques, use of mechanical recovery methods and techniques where appropriate.</p> <p>NOTES:</p> <ul style="list-style-type: none"> Relevant permissions must be sought from DBCA to carry out any response operations within the limits of the area. In the event that the existing Woodside equipment stockpile at the King Bay Supply Base becomes exhausted, Woodside has an MoU with AMSA and the DoT to provide surplus equipment from their stockpile. Additionally, Woodside is a member of both AMOSC and OSRL and has the ability to call upon their relevant technical advisory services and equipment stockpiles 24/7. This TRP should be considered a draft until it has been verified and tested.

Pre-emptive mobilisation of equipment and personnel would commence as soon as practicable prior to oil contact. Additional resources would be mobilised depending on the scale of the event to increase the length or number of shorelines being protected.

A shoreline protection and deflection response would be launched only when operational monitoring operations identify a spill heading towards RPA(s) and there is sufficient time for deployment prior to shoreline contact.

6.4.3 Shoreline Protection and Deflection – Control Measure Options Analysis

6.4.3.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Pre-position equipment at Response Protection Areas (RPAs)	<p>Additional environmental benefit of having equipment prepositioned is considered minor as the RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event making it impractical to preposition equipment in advance.</p> <p>Equipment is currently available to protect RPAs, however, deployment may be constrained by levels of volatile hydrocarbons arising from an MDO spill.</p>	<p>The incremental environmental benefit associated with these delivery options is unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options.</p> <p>Considering the highly unlikely nature of a significant hydrocarbon release, the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the environmental benefit that might be realised.</p> <p>Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options.</p> <p>The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment.</p>	Total cost to preposition protection/ deflection packages at each site of potential impact would be approximately A\$6100 per package per day.	This option is not adopted as pre-positioning shoreline protection and deflection capability is not considered practicable due to uncertainty of the sites that may be contacted during a real spill event and the predicted time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.4.3.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Supplemented stockpiles of equipment to protect additional shorelines	<p>Additional equipment would increase the number of receptor areas that could be protected from hydrocarbon contact. However, current availability of personnel and equipment is capable of protecting up to 30 km of shoreline, commensurate with the scale and progressive nature of shoreline impact. Additional stocks would be made available from international sources if long term up scaling were necessary.</p> <p>A reduction in environmental consequence from a 'B' rating is unlikely to be realised as a result of having more equipment available locally.</p>	<p>The incremental environmental benefit associated with these delivery options is considered minor and unlikely to reduce the environmental consequence of a significant hydrocarbon release beyond the adopted delivery options. Considering the highly unlikely nature of a significant hydrocarbon release and the costs and organisational complexity associated with prepositioning and maintenance of equipment, the sacrifice is considered disproportionate to the limited environmental benefit that might be realised.</p> <p>Furthermore, these options would conflict with the mutual aid philosophy being adopted under the selected delivery options.</p> <p>The selected delivery options for shoreline protection and deflection meet the relevant objectives of this control measure and do not require prepositioned or additional equipment.</p>	Total cost for purchase supplemental protection and deflection equipment would be approximately A\$455,000 per package.	This option is not adopted as addition shoreline protection and deflection capability is not considered practicable in the time frame prior to contact. Whilst modelling for this activity predicts contact at 8 RPAs within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No
Additional trained personnel	The level of training and competency of the response personnel allows the shoreline protection and deflection operation to be delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	<p>Additional personnel required to sustain an extended response can be sourced through the <i>Woodside People & Global Capability Surge Labour Requirement Plan</i>. Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders.</p> <p>Response personnel are trained and exercised regularly in shoreline response techniques and</p>	Additional specialist personnel would cost A\$2000 per person per day.	This option is not adopted as the existing capability meets the need. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current	No

		methods. All personnel involved in a response will receive a full operational/safety briefing prior to commencing operations.		capability is considered to reduce the risk to ALARP.	
--	--	---	--	---	--

6.4.3.3 Improved Control Measures

Improved Control Measures considered					
Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/mobilisation time	Modelling predicts floating or shoreline accumulation at threshold at day 0.75 at Dampier Archipelago and Keast Island (CS-01), thus faster response times are not practicable.	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.	The cost of establishing a local stockpile of new mitigation equipment (including protection and deflection boom) closer to the expected hydrocarbon stranding areas is not commensurate with the need.	This option is not adopted as addition shoreline protection and deflection capability is not considered practicable in the time frames prior to contact. Safety factors have also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of MDO, faster mobilisation is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.4.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.5 Shoreline Clean-up – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.5.1 Existing Capability – Shoreline Clean-up

Woodside’s existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside’s direct control.

6.5.2 Response planning: Scarborough Project Offshore Facility and Trunkline Operations activity – Shoreline Clean-up

Woodside has assessed existing capability against the WCCS and has identified that the range of techniques provide an ongoing approach to shoreline clean-up at identified RPAs. Woodside’s capability can cover all required shoreline clean-up operations for the PAP.

Modelling predicts shoreline contact from day 0.75 at Dampier Archipelago (55 m³) and Keast Island (20 m³) for the CS-01. No shoreline contact is expected at 100 g/m² threshold from CS-02 and CS-03. The largest volumes ashore are Dampier Archipelago with approximately 55 m³ predicted on day 0.75. These volumes assume no treatment of floating surface oil by containment and recovery or shoreline protection and deflection prior to contact so are considered very conservative. The full list of RPAs predicted to be contacted by oil above response thresholds are detailed in Table 3-1.

These figures have been combined into a single response planning need scenario that provides a worst-case scenario for planning purposes as outlined below. It should be noted that whilst modelling for this activity predicts contact at eight RPAs within 24-48 hours, this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Given all other shoreline contact scenarios identified from modelling are longer time frames and lesser volumes, demonstration of capability against this need will enable Woodside to meet requirements for any other outcome.

The potential scale and remoteness of a response coupled with the uncertainty of which locations will be affected precludes the stockpiling or prepositioning of equipment specific to shorelines. The most significant constraint is accommodation and transport of personnel in Dampier to undertake clean-up operations and to manage wastes generated during the response effort. From previous assessment of facilities in Dampier, Woodside estimates that current accommodation can cater for a range of 500-700 personnel per day.

Woodside has identified several options which could be mobilised to achieve defined response objectives. Evaluation considers the benefit in terms of the time to respond and the scale of response made possible by each option. The evaluation of possible control measures is summarised in Section 6.5.3.

Table 6-6: Response Planning – Shoreline Clean-up

Shoreline Clean-up (Phase 2)	Day	Week	Week	Week	Month	Month	Month							
	1	2	3	4	5	6	7	2	3	4	2	3	4	
Oil on shoreline (from deterministic modelling) m ³														
Shoreline accumulation (above 100 g/m ²) – m ³	90	86	3	0	0	0	0	0	0	0	0	0	0	0
Oil remaining following response operations – m ³	90	26	35	15	6	2	1	0	0	0	0	0	0	0
A Capability Required (number of operations)														
A1 SCU operations required (lower)	11	3	4	2	1	0	0	0	0	0	0	0	0	0
A2 SCU operations required (upper)	13	4	5	2	1	0	0	0	0	0	0	0	0	0
B Capability Available (number of operations)														
B1 SCU operations available – Stage 2 – Manual (lower)	0	1	3	5	8	12	15	105	105	105	560	560	560	560
B2 SCU operations available – Stage 2 – Manual (upper)	0	2	5	8	10	15	20	140	140	140	560	560	560	560
C Capability Gap														
C1 SHC operations gap (lower)	11	2	1	-3	-7	-12	-15	-105	-105	-105	-560	-560	-560	-560
C2 SHC operations gap (upper)	13	2	0	-6	-9	-15	-20	-140	-140	-140	-560	-560	-560	-560

A1 and A2 – the number of Shoreline Clean-up operations required based on the hydrocarbon volumes ashore above 100 g/m²

B1 and B2 – the upper and lower number of shoreline clean-up operations available (based on response planning assumptions in Section 5.5),

C1 and C2 – the gap between the upper and lower number of shoreline clean-up operations required in A1 and A2 compared to the operations available in B1 and B2

6.5.3 Shoreline Clean-up – Control measure options analysis

6.5.3.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified.					

6.5.3.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional trained personnel available	The level of training and competency of the response personnel allows the shoreline clean-up operation to be delivered with minimum secondary impact to the environment. Training additional personnel does not provide an increased environmental benefit.	Additional personnel required to sustain an extended response can be sourced through the Woodside <i>People & Global Capability Surge Labour Requirement Plan</i> . Additional personnel sourced from contracted OSROs (OSRL/AMOSC) to manage other responders. Response personnel are trained and exercised regularly in shoreline response techniques and methods. All personnel involved in a response will receive a full operational/safety briefing prior to commencing operations.	Additional specialist personnel would cost A\$2000 per person per day.	Whilst modelling for this activity predicts contact at 8 RPAs within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Larger numbers of additional personnel may also be detrimental to sensitive shoreline areas. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No
Additional trained personnel deployed	Maintaining a span of control of 200 competent personnel is deemed manageable and appropriate for this activity. Additional personnel conducting clean-up activities may be able to complete the clean-up in a shorter timeframe, but modelling predicts ongoing stranding of hydrocarbons over a period of weeks. Managing a smaller, targeted response is expected to achieve an environmental benefit through ensuring the shoreline clean-up response is suitable and scalable for the shoreline substrate and sensitivity type. This will reduce the risk of increased impact from the shoreline clean-up through the presence of unnecessary personnel and equipment.	The figure of 200 personnel is broken down to include on 1-2 trained supervisors managing 8-10 personnel/labour hire responders. This allows for multiple operational teams to operate along the extended shoreline at different locations. Typically, an additional 30-50% of the tactical workforce is required to support ongoing operations including on-scene control, logistics, safety/medical/welfare and transport. Personnel on site will include members with the appropriate specialties to efficiently clean-up the shoreline. Additional personnel are available through existing contracts with oil spill response organisations, labour hire organisations and environmental panel contractors.	Additional specialist personnel would cost A\$2000 per person per day.	Whilst modelling for this activity predicts contact at 8 RPAs within 24-48 hours, it should be noted that this is based upon 200 stochastic model runs thus it is unfeasible for this to all occur from a single release. Larger numbers of additional personnel may also be detrimental to sensitive shoreline areas. Safety factors have also been considered, including the potential for personnel to be exposed to volatile hydrocarbons in the early stage of the response. Given the rapid natural weathering rate of MDO, mobilising additional capability is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	No

6.5.3.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response/mobilisation time	Modelling predicts floating or shoreline accumulation at threshold at day 0.75 at Dampier	Response teams, trained personnel, contracted oil spill response service providers, government agencies and the associated mitigation equipment	The cost of establishing a local stockpile of new shoreline clean-up equipment closer to the expected	This option is not adopted as additional shoreline clean-up capability is not considered practicable in the time frames prior to contact. Safety factors have	No

	Archipelago and Keast Island (CS-01), thus faster response times are not practicable.	required to enact an initial protection and deflection response will be available for mobilisation within 24-48 hrs of activation. Additional equipment from existing stockpiles and oil spill response service providers can be on scene within days.	hydrocarbon stranding areas is not commensurate with the need.	also been considered, including the potential for personnel to be exposed to hydrocarbon gas vapours in the early stage of the response. Given the rapid natural weathering rate of MDO, faster mobilisation is not expected to provide a material net environmental benefit, therefore the current capability is considered to reduce the risk to ALARP.	
--	---	---	--	---	--

6.5.4 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.6 Oiled Wildlife Response – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.6.1 Existing Capability – Oiled Wildlife Response

Woodside’s existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside’s direct control.

6.6.2 Oiled Wildlife Response – Control Measure Options Analysis

6.6.2.1 Alternative Control Measures

Alternative Control Measures considered					
<i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Direct contracts with service providers	This option duplicates the capability accessed through AMOSC and OSRL and would compete for the same resources. Does not provide a significant increase in environmental benefit.	These delivery options provide increased effectiveness through more direct communication and control of specialists. However, no significant net benefit is anticipated.	Duplication of capability – already subscribed to through contracts with AMOSC and OSRL	This option is not adopted as the existing capability meets the need.	No

6.6.2.2 Additional Control Measures

Additional Control Measures considered					
<i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Additional wildlife treatment systems	<p>The selected delivery options provide access to call-off contracts with selected specialist providers. The agreements allow these resources to be mobilised to meet the required response objectives, commensurate with the progressive nature of environmental impact and the time available to monitor hydrocarbon plume trajectories.</p> <p>Provides response equipment and personnel by day 2. The additional cost in having a dedicated oiled wildlife response (equipment and personnel) in place is disproportionate to environmental benefit.</p> <p>These selected delivery options provide capacity to carry out an oiled wildlife response if contact is predicted, and to scale up the response if required to treat widespread contamination.</p> <p>Current capability meets the needs required within 48 hours of the spill and there is no additional environmental benefit in adopting the improvements.</p>	<p>Although hydrocarbon contact above wildlife response threshold concentrations (>100 g/m²) with shoreline is expected from day 1 (CS-01), given the low likelihood of such an event occurring and that the current capability meets the need within 48 hours of the spill, the cost of implementing measures to reduce the mobilisation time is considered disproportionate to the benefit.</p> <p>Oiled wildlife response capacity would be addressed for open Commonwealth waters through the AMOSC arrangements, as informed by operational monitoring, and under the direction of DBCA in nearshore areas.</p> <p>The cost and organisational complexity of this approach is moderate, and the overall delivery effectiveness is high.</p>	Additional wildlife response resources could total A\$1700 per operational site per day.	This option is not adopted as the existing capability meets the need from day 2.	No
Additional trained wildlife responders	<p>Numbers of oiled wildlife are expected to be low in the remote offshore setting of the oiled wildlife response, given the distance from known aggregation areas.</p> <p>The potential environmental benefit of training additional personnel is expected to be low.</p>	<p>Current numbers meet the needs required (within 48 hours of the spill) and additional personnel are available through existing contracts with oil spill response organisations and environmental panel contractors.</p> <p>Additional equipment and facilities would be required to support ongoing response, depending on the scale of the event and the impact to wildlife and may be sourced via existing contracts with OSROs. Materials for holding facilities, portable</p>	Additional wildlife response personnel cost A\$2000 per person per day	This option is not adopted as the existing capability meets the need from day 2.	No

		pools, enclosures and rehabilitation areas would be sourced as required.			
--	--	--	--	--	--

6.6.2.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster mobilisation time for wildlife response	This control measure provides increased effectiveness through faster mobilisation of specialists. Some net environmental benefit is expected if teams could be mobilised by day 1, however, the volatile nature of a spill of MDO may preclude access on day 1 for response personnel.	Pre-positioning vessels or equipment would reduce mobilisation time for oiled wildlife response activities. However, RPAs predicted to be contacted are based on modelling outputs and thus may differ under the prevailing conditions of a real event.	Wildlife response packages to preposition at vulnerable sites identified through the deterministic modelling cost A\$700 per package per day. The cost of having dedicated equipment and personnel available to respond faster is considered disproportionate to the environmental benefit.	This option is not adopted as the existing capability meets the need from day 2.	No

6.6.3 Selected control measures

Following review of alternative, additional and improved control measures, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected

6.7 Waste Management – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.7.1 Existing Capability – Waste Management

Woodside’s existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/vessel/aircraft/vehicle location and duties, survey or classification society inspection requirements, overflight/port/quarantine permits and inspections, crew/pilot duty and fatigue hours, refuelling/re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside’s direct control.

6.7.2 Waste Management – Control Measure Options Analysis

6.7.2.1 Alternative Control Measures

Alternative Control Measures considered <i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical alternative control measures identified.					

6.7.2.2 Additional Control Measures

Additional Control Measures considered <i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Increased waste storage capability	The procurement of waste storage equipment options on the day of the event will allow immediate response and storage of collected waste. The environmental benefit of immediate waste storage is to reduce ecological consequence by safely securing waste, allowing continuous response operations to occur.	Access to Woodside’s waste service provider’s storage options provides the resources required to store and transport sufficient waste to meet the need. Access to waste contractors existing facilities enables waste to be stockpiled and gradually processed within the regional waste handling facilities. Additional temporary storage equipment is available through existing contract and arrangements with AMOSC/ OSRL. Existing arrangements meet identified need for the PAP from day 4 onwards.	Cost for increased waste disposal capability would be approximately A\$1300 per m ³ . Cost for increased onshore temporary waste storage capability would be approximately A\$40 per unit per day.	This option is not adopted as the existing capability meets the need.	No

6.7.2.3 Improved Control Measures

Improved Control Measures considered <i>Improved control measures are evaluated for improvements they could bring to the effectiveness of adopted control measures in terms of functionality, availability, reliability, survivability, independence and compatibility</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Faster response time	The access to Veolia waste storage options provides the resources to store and transport waste, permitting the wastes to be stockpiled and gradually processed within the regional waste handling facilities. Bulk transport to Veolia’s licensed waste management facilities would be undertaken via controlled-waste-licensed vehicles and in accordance with Environmental Protection (Controlled Waste) Regulations 2004. The environmental benefit from successful waste storage will reduce pressure on the treatment and disposal facilities reducing ecological consequences by safely securing waste. In addition, waste storage	Woodside already maintains an equipment stockpile in Exmouth to enable shorter response times to incidents. This stockpile includes temporary waste storage equipment. Woodside has access to stockpiles of waste storage and equipment in Dampier and Exmouth through existing contracts and arrangements.	The incremental benefit of having a dedicated local Woodside owned stockpile of waste equipment and transport is considered minor and cost is considered disproportionate to the benefit gained given predicted shoreline contact times.	This option is not adopted.	No

	<p>and transport will allow continuous response operations to occur.</p> <p>This delivery option would increase known available storage, eliminating the risk of additional resources not being available at the time of the event. However, the environmental benefit of Woodside procuring additional waste storage is considered minor as the risk of additional storage not being available at the time of the event is considered low and existing arrangements provide adequate storage to support the response.</p>				
--	--	--	--	--	--

6.7.3 Selected control measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - none selected
- improved
 - none selected.

6.8 Scientific Monitoring – ALARP Assessment

Alternative, additional and improved control measure options have been identified and assessed against the base capability described in Section 5. Those that have been selected for implementation are highlighted in green. Items highlighted in red have been considered and rejected on the basis that they are not feasible, the costs are disproportionate to the environmental benefit, and/or the option is not reasonably practical. Control measures where there is not a clear justification for their inclusion or exclusion may be subject to a detailed ALARP assessment.

6.8.1 Existing Capability – Scientific Monitoring

Woodside’s existing level of capability is based on internal and third-party resources that are available 24 hours, 7 days per week. The capability presented below is displayed as ranges to incorporate operational factors such as weather, crew/ vessel/ aircraft/ vehicle location and duties, survey or classification society inspection requirements, overflight/ port/ quarantine permits and inspections, crew/ pilot duty and fatigue hours, refuelling/ re-stocking provisions, and other similar logistic and operational limitation that are beyond Woodside’s direct control.

6.8.2 Scientific Monitoring – Control Measure Options Analysis

6.8.2.1 Alternative Control Measures

Alternative Control Measures considered					
<i>Alternative control measures, including potentially more effective and/or novel control measures, are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Analytical laboratory facilities closer to the likely spill affected area	The environmental consideration of having access to suitable laboratory facilities in Karratha to carry out the hydrocarbon analysis would provide faster turnaround in reporting of results only by a matter of days (as per the time to transport samples to laboratories).	SM01 water quality monitoring requires water samples to be transported to NATA-rated laboratories in Perth or over to the East coast. Consider the benefit of laboratory access and transportation times to deliver water samples and complete lab analysis. There is a time lag from collection of water samples to being in receipt of results and confirming hydrocarbon contact to sensitive receptors.	Laboratory facilities and staff available at locations closer to the spill affected area can reduce reporting times only to a moderate degree (days) with associated high costs of maintaining capability do not improve the environmental benefit.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	No
Dedicated contracted SMP vessel (exclusive to Woodside)	Would provide faster mobilisation time of scientific monitoring resources, however, the environmental benefit associated with faster mobilisation time would be minor compared to selected options.	Chartering and equipping additional vessels on standby for scientific monitoring has been considered. The option is reasonably practicable, but the sacrifice (charter costs and organisational complexity) is significant, particularly when compared with the anticipated availability of vessels and resources within in the required timeframes. The selected delivery provides capability to meet the scientific monitoring objectives, including collection of pre-emptive data where baseline knowledge gaps are identified for receptor locations where spill predictions of time to contact are >10 days.	The cost and organisational complexity of employing a dedicated response vessel is considered disproportionate to the potential environmental benefit by adopting these delivery options.	This control measure is not adopted as the costs and complexity are considered disproportionate to any environmental benefit that might be realised.	No

6.8.2.2 Additional control measures

Additional Control Measures considered					
<i>Additional control measures are evaluated in terms of them reducing an environmental impact or an environmental risk when added to the existing suite of control measures</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
Determine baseline data needs and provide implementation plan in the event of an unplanned hydrocarbon release	Address resourcing needs to collect post spill (pre-contact) baseline data as spill expands in the event of a loss of containment from a vessel collision from the PAP activities.	As part of Woodside’s Scientific Monitoring Program, the following are considered and incorporated into the spill response approach and the SMP Standby Service contract: <ul style="list-style-type: none"> Woodside relies on existing environmental baseline for receptors which have predicted hydrocarbon contact (above environment threshold) <10 days and acquiring pre-emptive data in the event of a loss of well control from the PAP activities based on receptors predicted to have hydrocarbon contact >10 days. It provide appropriate baseline for key receptors for all geographic locations that are potentially impacted <10 days of spill event. 	No cost associated with baseline for SM01.	This control measure is adopted as the costs and complexity are not disproportionate to any environmental benefit that might be realised.	Yes

		<ul style="list-style-type: none"> It addresses resourcing needs to collect pre-emptive baseline as spill expands in the event of a spill of MDO from the PAP activities. For SM01, pre-emptive baseline is not required as marine water quality is assumed to be pristine. 			
--	--	---	--	--	--

6.8.2.3 Improved Control Measures considered

Improved Control Measures considered					
<i>Improved, including potentially more effective and/or novel control measures are evaluated as replacements for an adopted control</i>					
Option considered	Environmental consideration	Feasibility	Approximate Cost	Assessment conclusions	Implemented
No reasonably practical improved control measures identified					

6.8.3 Selected Control Measures

Following review of alternative, additional and improved control measures as outlined above, the following controls were selected for implementation for the PAP:

- alternative
 - none selected
- additional
 - determine baseline data needs and provide implementation plan in the event of an unplanned hydrocarbon release
- improved
 - none selected.

6.8.4 Operational Plan

Key actions from the Scientific Monitoring Program Operational Plan for implementing the response are outlined in **Table 6-7**.

Table 6-7: Scientific monitoring program operational plan actions

Responsibility	Action
Activation	
CIMT Planning (CIMT Planning – Environment Unit)	Mobilises SMP Lead/Manager and SMP Coordinator to the CIMT Planning Section.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager and SMP Coordinator)	Constantly assesses all outputs from OM01, OM02 and OM03 (Annex B) to determine receptor locations and receptors at risk. Confirm sensitive receptors likely to be exposed to hydrocarbons, timeframes to specific receptor locations and which SMPs are triggered. Review baseline data for receptors at risk.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager and SMP Coordinator)	SMP co-ordinator stands up SMP Standby contractor. Stands up subject matter experts, if required.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Establish if, and where, pre-contact baseline data acquisition is required. Determines practicable baseline acquisition program based on predicted timescales to contact and anticipated SMP mobilisation times. Determines scope for preliminary post-contact surveys during the Response Phase. Determines which SMP activities are required at each location based on the identified receptor sensitivities.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	If response phase data acquisition is required, stand up the contractor SMP teams for data acquisition and instruct them to standby awaiting further details for mobilisation from the CIMT.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	SMP standby contractor, to prepare the Field Implementation Plan. Prepare and obtain sign-off of the Response Phase SMP work plan and Field Implementation Plan. Update the IAP.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Liaise with CIMT Logistics, and determine the status and availability of aircraft, vessels and road transportation available to transport survey personnel and equipment to point of departure. Engage with SMP standby contractor, SMP Manager and CIMT Logistics Section to establish mobilisation plan, secure logistics resources and establish ongoing logistical support operations, including: <ul style="list-style-type: none"> • vessels, vehicles and other logistics resources • vessel fit-out specifications (as detailed in the Scientific Monitoring Program Operational Plan) • equipment storage and pick-up locations • personnel pick-up/airport departure locations • ports of departure

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved. Document to be read in conjunction with Scarborough Offshore Facility and Trunkline Operations Environment Plan.

Responsibility	Action
	<ul style="list-style-type: none"> land based operational centres and forward operations bases, accommodation and food requirements.
CIMT Planning (CIMT Planning – Environment Unit) (SMP Lead/Manager, SMP Coordinator, SMP Standby contractor)	Confirm communications procedures between Woodside SMP team, SMP standby contractor, SMP Team Leads and Operations Point Coordinator.
Mobilisation	
CIMT Logistics	Engage vessels and vehicles and arrange fitting out as specified by the mobilisation plan. Confirm vessel departure windows and communicate with the Service Provider's SMP Manager. Agree SMP mobilisation timeline and induction procedures with the Division and Sector Command Point(s).
CIMT Logistics	Coordinate with SMP standby contractor to mobilise teams and equipment according to the logistics plan and Sector Induction procedures.
SMP Survey Team Leads	SMP Survey Team Leader(s) coordinate on-ground/on-vessel mobilisations and support services with the Sector Command point(s).

6.8.5 ALARP and Acceptability Summary

ALARP and Acceptability Summary		
Scientific Monitoring		
ALARP Summary	X	All known reasonably practicable control measures have been adopted.
		No additional, alternative and improved control measures would provide further benefit.
		No reasonably practical additional, alternative, and/or improved control measure exists.
<p>The resulting scientific monitoring capability has been assessed against the credible spill scenarios. The range of techniques provide an ongoing approach to monitoring operations to assess and evaluate the scale and extent of impacts.</p> <p>All known reasonably practicable control measures have been adopted with the cost and organisational complexity of these options determined to be moderate and the overall delivery effectiveness considered medium. The SMP's main objectives can be met, with the addition of one alternative control measures to provide further benefit.</p>		
Acceptability Summary		<ul style="list-style-type: none"> • The control measures selected for implementation manage the potential impacts and risks to ALARP. • In the event of a hydrocarbon spill for the PAP, the control measures selected, meet or exceed the requirements of Woodside Management System and industry best-practice. • Scientific Monitoring control and activities are compliant with relevant environmental legislation and regulations, including the EPBC Act. • Throughout the PAP, relevant Australian standards and codes of practice will be followed to evaluate the impacts from a loss of well control. • Consultation undertaken for the PAP did not receive feedback regarding concerns for Scientific Monitoring activities in response to a hydrocarbon spill. • The level of impact and risk to the environment has been considered with regards to the principles of ESD and risks and impacts from a range of identified scenarios were assessed in detail. The control measures described consider the conservation of biological and ecological diversity, through both the selection of control measures and the management of their performance. The control measures have been developed to account for credible case scenarios, and uncertainty has not been used as a reason for postponing control measures.
<p>On the basis from the impact assessment above and in Section 6.8 of the EP, Woodside considers the adopted controls discussed manage the impacts and risks associated with implementing scientific monitoring activities to a level that is ALARP and acceptable.</p>		

7 ENVIRONMENTAL RISK ASSESSMENT OF SELECTED RESPONSE TECHNIQUES

The implementation of response techniques may modify the impacts and risks identified in the EP and response activities can introduce additional impacts and risks from response operations themselves. Therefore, it is necessary to complete an assessment so these impacts and risks have been considered and specific measures are put in place to continually review and manage further impacts and risks to ALARP and an acceptable level. A simplified assessment process has been used to complete this task which covers the identification, analysis, evaluation and treatment of impacts and risks introduced by responding to the event.

7.1 Identification of impacts and risks from implementing response techniques

Each of the control measures can modify the impacts and risks identified in the EP. These impacts and risks have been previously assessed within the scope of the EP. Please refer to the EP for details regarding how these risks are being managed as they are not discussed further in this document. These risks include:

- atmospheric emissions
- routine and non-routine discharges
- physical presence, proximity to other vessels (shipping and fisheries)
- routine acoustic emissions vessels
- lighting for night work/navigational safety
- invasive marine species
- collision with marine fauna
- disturbance to seabed.

Additional impacts and risks associated with the control measures not included within the scope of the EP include:

- drill cuttings and drilling fluids environmental impact assessment for relief well drilling
- vessel operations and anchoring
- presence of personnel on the shoreline
- Human presence (manual cleaning)
- vegetation cutting
- additional stress or injury caused to wildlife
- secondary contamination from the management of waste

7.2 Analysis of impacts and risks from implementing response techniques

The table below compares the adopted control measures for this activity against the environmental values that can be affected when they are implemented.

Table 7-1: Analysis of risks and impacts

	Environmental Value						
	Soil and Groundwater	Marine Sediment Quality	Water Quality	Air Quality	Ecosystems/Habitat	Species	Socio-Economic
Operational monitoring		✓	✓		✓	✓	
Source control		✓	✓	✓	✓	✓	✓
Shoreline protection and deflection	✓	✓	✓		✓	✓	✓
Shoreline clean-up	✓	✓	✓		✓	✓	✓
Oiled wildlife					✓	✓	
Scientific monitoring		✓	✓		✓	✓	✓
Waste management	✓			✓	✓	✓	✓

7.3 Evaluation of impacts and risks from implementing response techniques

Drill cuttings and drilling fluids environmental impact assessment for relief well drilling

The identified potential impacts associated with the discharge of drill cuttings and fluids during a relief well drilling activity include a localised reduction in water and seabed sediment quality, and potential localised changes to benthic biota (habitats and communities).

Direct and indirect ecological impact pathways are identified for drill cuttings and drilling fluids as follows:

- temporary increase in total suspended solids (TSS) in the water column
- attenuation of light penetration as an indirect consequence of the elevation of TSS and the rate of sedimentation
- sediment deposition to the seabed leading to the alteration of the physio-chemical composition of sediments, and burial and potential smothering effects to sessile benthic biota
- potential contamination and toxicity effects to benthic and in-water biota from drilling fluids.

Potential impacts from the discharge of cuttings range from the complete burial of benthic biota in the immediate vicinity of the well site due to sediment deposition, smothering effects from raised sedimentation concentrations as a result of elevated TSS, changes to the physico-chemical properties of the seabed sediments (particle size distribution and potential for reduction in oxygen levels within the surface sediments due to organic matter degradation by aerobic bacteria) and subsequent changes to the composition of infauna communities to minor sediment loading above background and no associated ecological effects. Predicted impacts are generally confined to within a few hundred metres of the discharge point (International Association of Oil and Gas Producers 2016) (i.e. within the EMBA for a hydrocarbon spill event).

The discharge of drill cuttings and unrecoverable fluids from relief well drilling is expected to increase turbidity and TSS levels in the water column, leading to an increased sedimentation rate above ambient levels associated with the settlement of suspended sediment particles near to the seabed or below sea surface, depending on location of discharge. Cuttings with retained (unrecoverable) drilling fluids are discharged below the water line at the MODU location, resulting in drill cuttings and drilling fluids rapidly diluting, as they disperse and settle through the water column. The dispersion and fate of the cuttings is determined by particle size and density of the retained (unrecoverable) drilling fluids, therefore, the sediment particles will primarily settle in proximity to the well locations with potential for localised spread downstream (depending on the speed of currents throughout the water column and seabed) (IOGP 2016). The finer particles will remain in suspension and will be transported further before settling on the seabed.

These conclusions were supported by discharge modelling which was undertaken by Woodside in support of the Greater Enfield Development EP. Modelling results indicating that the TSS plume of suspended cuttings will typically disperse to the south-west while oscillating with the tide and diminish rapidly with increasing distance from the well locations. Maximum TSS concentrations predicted for 100 m, 250 m and 1 km distances from the wellsite were 7, 5 and 1 mg/L, respectively. Furthermore, water column concentrations below 10 mg/L remain within 235 m of the discharge location for each modelled well. For all well discharge locations (outside of direct discharge sites), TSS concentration did not exceed 10 mg/l. Nelson et al. (2016) identified <10 mg/L as a no effect or sub-lethal minimal effect concentration.

The low sensitivity of the deep-water benthic communities/habitats within and in the vicinity of relief well locations, combined with the relatively low toxicity of water based muds (WBM) and non-water based muds (NWBMs), there being no bulk discharges of NWBM and the highly localised nature and scale of predicted physical impacts to seabed biota, indicate that any localised impact would likely be of a slight magnitude (especially when considering the broader consequence of the loss of well containment event that a relief well drilling activity would be responding too).

Vessel operations and anchoring

Typical booms used in shoreline protection operations are designed to float, meaning that fauna capable of diving, such as cetaceans, marine turtles and sea snakes can readily avoid contact with the boom. Impacts to species that inhabit the water column such as sharks, rays and fish are not expected. Additionally, some fauna, such as cetaceans, are likely to detect and avoid the spill area, and are not expected to be present in the proximity of containment and recovery operations.

During the implementation of response techniques, where water depths allow, it is possible that response vessels will be required to anchor (e.g. during shoreline protection and surveys). The use of vessel anchoring will be minimal and likely to occur when the impacted shoreline is inaccessible via road. Anchoring in the nearshore environment of sensitive receptor locations will have the potential to impact coral reef, seagrass beds and other benthic communities in these areas. Recovery of benthic communities from anchor damage depends on the size of anchor and frequency of anchoring. Impacts would be highly localised (restricted to the footprint of the vessel anchor and chain) and temporary, with full recovery expected.

Presence of personnel on the shoreline

Presence of personnel on the shoreline during shoreline operations could potentially result in disturbance to wildlife and habitats. During the implementation of response techniques, it is possible that personnel may have minimal, localised impacts on habitats, wildlife and coastlines. The impacts associated with human presence on shorelines during shoreline surveys may include:

- damage to vegetation/habitat to gain access to areas of shoreline oiling
- damage or disturbance to wildlife during shoreline surveys
- removal of surface layers of intertidal sediments (potential habitat depletion)
- excessive removal of substrate causing erosion and instability of localised areas of the shoreline.

Human presence

Human presence for manual clean-up operations may lead to the compaction of sediments and damage to the existing environment especially in sensitive locations such as mangroves and turtle nesting beaches. However, any impacts are expected to be localised with full recovery expected.

Waste generation

Implementing the selected response techniques will result in the generation of the following waste streams that will require management and disposal:

- liquids (recovered oil/water mixture), collected during shoreline clean-up and oiled wildlife response operations
- semi-solids/solids (oily solids), collected during shoreline clean-up and oiled wildlife response operations
- debris (e.g. seaweed, sand, woods, plastics), collected during shoreline clean-up and oiled wildlife response operations.

If not managed and disposed of correctly, wastes generated during the response have the potential for secondary contamination of previously uncontaminated areas and/ or impacts to wildlife through contact with or ingestion of waste materials.

Cutting back vegetation could allow additional oil to penetrate the substrate and may also lead to localised habitat loss. However, any loss is expected to be localised in nature and lead to an overall net environmental benefit associated with the response by reducing exposure of wildlife to oiling.

Additional stress or injury caused to wildlife

Additional stress or injury to wildlife could be caused through the following phases of a response:

- capturing wildlife
- transporting wildlife
- stabilisation of wildlife
- cleaning and rinsing of oiled wildlife
- rehabilitation (e.g. diet, cage size, housing density)
- release of treated wildlife

Inefficient capture techniques have the potential to cause undue stress, exhaustion or injury to wildlife, additionally pre-emptive capture could cause undue stress and impacts to wildlife when there are uncertainties in the forecast trajectory of the spill. During the transportation and stabilisation phases, there is the potential for additional thermoregulation stress on captured wildlife. Additionally, during the cleaning process, it is important personnel undertaking the tasks are familiar with the relevant techniques to manage and mitigate further injury and the removal of water proofing feathers. Finally, during the release phase it is important that wildlife is not released back into a contaminated environment.

7.4 Treatment of impacts and risks from implementing response techniques

In respect of the impacts and risks assessed, the following treatment measures have been adopted. It must be recognised that this environmental assessment is seeking to identify how to maintain the level of impact and risks at levels that are ALARP and of an acceptable level rather than exploring further impact and risk reduction. It is for this reason that the treatment measures identified in this assessment will be captured in Operational Plans, Tactical Response Plans, and/or First Strike Plans.

Vessel operations and access in the nearshore environment

- If vessels are required for access, anchoring locations will be selected to minimise disturbance to benthic primary producer habitats. Where existing fixed anchoring points are not available, locations will be selected to minimise impact to nearshore benthic environments with a preference for areas of sandy seabed where they can be identified (Performance Standard (PS) 14.1, PS 17.1).
- Shallow draft vessels will be used to access remote shorelines to minimise the impacts associated with seabed disturbance on approach to the shorelines (PS 14.2, PS 17.2).

Presence of personnel on the shoreline

- Oversight by trained personnel who are aware of the risks (PS 17.6).
- Trained unit leaders will brief personnel prior to operations of the environmental risks of presence of personnel on the shoreline (PS 17.7).

Human Presence

- Shoreline access routes with the least environmental impact identified will be selected by a specialist in SCAT operations (PS 7.3, PS 17.5).
- Vehicular access will be restricted on dunes, turtle nesting beaches and in mangroves (PS 17.3).

Waste generation

- All shoreline clean-up sites will be zoned and marked before clean-up operations commence to prevent secondary contamination and minimise the mixing of clean and oiled sediment and shoreline substrates (PS 15.4).
- Removal of vegetation will be limited to moderately or heavily oiled vegetation (PS 17.4).
- Teams will segregate liquid and solid wastes at the earliest opportunity (PS 23.1).

Additional stress or injury caused to wildlife

- Oiled wildlife operations (including hazing) would be implemented with advice and assistance from the Oiled Wildlife Advisor from the DBCA, and in accordance with the processes and methodologies described in the WA OWRP and the relevant regional plan (PS 21.1).

8 ALARP CONCLUSION

An analysis of alternative, additional and improved control measures has been undertaken to determine their reasonableness and practicability. The tables in Section 6 document the considerations made in this evaluation. Where the costs of an alternative, additional, or improved control measure have been determined to be disproportionate to the environmental benefit gained from its adoption, it has been rejected. Where this is not considered to be the case, the control measure has been adopted.

The risks from a hydrocarbon spill have been reduced to ALARP because:

- Woodside has a significant hydrocarbon spill response capability to respond to the WCCS through the control measures identified.
- New and modified impacts and risks associated with implementing response techniques have been considered and will not increase the risks associated with the activity.
- A consideration of alternative, additional, and improved control measures identified any other control measures that delivered proportionate environmental benefit compared to the cost of adoption for this activity ensuring that:
 - All known, reasonably practicable control measures have been adopted.
 - No additional, reasonably practicable alternative and/or improved control measures would provide further environmental benefit.
 - No reasonably practical additional, alternative, and/or improved control measure exists.
- A structured process for considering alternative, additional, and improved control measures was completed for each control measure.
- The evaluation was undertaken based on the outputs of the WCCS so that the capability in place is sufficient for all other scenario from this activity.
- The likelihood of the WCCS spill has been ignored in evaluating what was reasonably practicable.

9 ACCEPTABILITY CONCLUSION

Following the ALARP evaluation process, Woodside deems the hydrocarbon spill risks and impacts have been reduced to an acceptable level by meeting the following criteria:

- Techniques are consistent with Woodside's processes and relevant internal requirements including policies, culture, processes, standards, structures and systems.
- Levels of risk/impact are deemed acceptable by relevant persons/organisations and are aligned with the uniqueness of, and/or the level of protection assigned to the environment, its sensitivity to pressures introduced by the activity, and the proximity of activities to sensitive receptors, and have been aligned with Part 3 of the EPBC Act.
- Selected control measures meet requirements of legislation and conventions to which Australia is a signatory (e.g. MARPOL, the World Heritage Convention, the Ramsar Convention, and the Biodiversity Convention etc.). In addition to these, other non-legislative requirements met include:
 - Australian IUCN reserve management principles for Commonwealth marine protected areas and bioregional marine plans
 - National Water Quality Management Strategy and supporting guidelines for marine water quality)
 - conditions of approval set under other legislation
 - national and international requirements for managing pollution from ships
 - national biosecurity requirements.
- Industry standards, best practices and widely adopted standards and other published materials have been used and referenced when defining acceptable levels. Where these are inconsistent with mandatory/legislative regulations, explanation has been provided for the proposed deviation. Any deviation produces the same or a better level of environmental performance (or outcome).

10 GLOSSARY AND ABBREVIATIONS

10.1 Glossary

Term	Description / Definition
ALARP	Demonstration through reasoned and supported arguments that there are no other practicable options that could reasonably be adopted to reduce risks further.
Availability	The availability of a control measure is the percentage of time that can perform its function (operating time plus standby time) divided by the total period (whether in service or not). In other words, it is the probability that the control has not failed or is undergoing a maintenance or repair function when it needs to be used.
Control	The means by which risk from events is eliminated or minimised.
Control effectiveness	A measure of how well the control measures perform its required function.
Control measure (risk control measure)	The features that eliminate, prevent, reduce or mitigate the risk to environment associated with PAP.
Credible spill scenario	A spill considered by Woodside as representative of maximum volume and characteristics of a spill that could occur as part of the PAP.
Dependency	The degree of reliance on other systems for the control measure to be able to perform its intended function.
Environment that may be affected	The summary of quantitative modelling where the marine environment could be exposed to hydrocarbons levels exceeding hydrocarbon threshold concentrations.
Incident	An event where a release of energy resulted in or had (with) the potential to cause injury, ill health, damage to the environment, damage to equipment or assets or company reputation.
Major Environment Event	The events with potential environment, reputation, social or cultural consequences of category C or higher (as per Woodside's operational risk matrix) which are evaluated against credible worst-case scenarios which may occur when all controls are absent or have failed.
Performance outcome	A statement of the overall goal or outcome to be achieved by a control measure
Performance standard	The parameters against which [risk] controls are assessed so they reduce risk to ALARP. A statement of the key requirements (indicators) that the control measure must achieve to perform as intended in relation to its functionality, availability, reliability, survivability and dependencies.
Preparedness	Measures taken before an incident to improve the effectiveness of a response
Reasonably practicable	... a computation ... made by the owner, in which the quantum of risk is placed on one scale and the sacrifice involved in the measures necessary for averting the risk (whether in money, time or trouble) [showing whether or not] that there is a gross disproportion between them ... made by the owner at a point of time anterior to the accident. (Judgement: Edwards v National Coal Board [1949])
Receptors at risk	Physical, biological and social resources identified as at risk from hydrocarbon contact using oil spill modelling predictions.
Receptor areas	Geographically referenced areas such as bays, islands, coastlines and/or protected area (WHA, Commonwealth or State marine reserve or park) containing one or more receptor type.

Term	Description / Definition
Receptor Sensitivities	This is a classification scheme to categorise receptor sensitivity to an oil spill. The Environmental Sensitivity Index (ESI) is a numerical classification of the relative sensitivity of a particular environment (particularly different shoreline types) to an oil spill. Refer to the Woodside Oil Pollution Emergency Arrangements (Australia) for more details.
Regulator	NOPSEMA are the Environment Regulator under the Environment Regulations.
Reliability	The probability that at any point in time a control measure will operate correctly for a further specified length of time.
Response technique	The key priorities and objectives to be achieved by the response plan Measures taken in response to an event to reduce or prevent adverse consequences.
Survivability	Whether or not a control measure is able to survive a potentially damaging event is relevant for all control measures that are required to function after an incident has occurred.
Threshold	Hydrocarbon threshold concentrations applied to the risk assessment to evaluate hydrocarbon spills. These are defined as: surface hydrocarbon concentration – ≥ 10 g/m ² , dissolved – ≥ 50 ppb and entrained hydrocarbon concentrations – ≥ 100 ppb.
Zone of Application	The zone in which Woodside may elect to apply dispersant. The zone is determined based on a range of considerations, such as hydrocarbon characteristics, weathering and metocean conditions. The zone is a key consideration in the Net Environmental Benefit Analysis for dispersant use.

10.2 Abbreviations

Abbreviation	Meaning
ADIOS	Automated Data Inquiry for Oil Spills
AEP	Australian Energy Producers (formerly APPEA)
ALARP	As low as reasonably practicable
AMOSOC	Australian Marine Oil Spill Centre
AMP	Australian Marine Park
AMSA	Australian Maritime Safety Authority
AUV	Autonomous Underwater Vehicle
BAOAC	Bonn Agreement Oil Appearance Code
BOP	Blowout Preventer
cST	Centistokes
CIMT	Corporate Incident Management Team
DM	Duty Manager
DoT	Western Australia Department of Transport
DBCA	Western Australia Department of Biodiversity, Conservation and Attractions (former Western Australian Department of Parks and Wildlife)
DWER	Western Australia Department of Water and Environmental Regulation
EMBA	Environment that May Be Affected
EMSA	European Maritime Safety Agency
EP	Environment Plan
Environment Regulations	Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2023
ESI	Environmental Sensitivity Index
ESD	Emergency Shut Down
ESP	Environmental Services Panel
FPSO	Floating Production Storage Offloading
FSP	First Strike Plan
GIS	Geographic Information System
GPS	Global Positioning System
HSP	Hydrocarbon Spill Preparedness
IAP	Incident Action Plan
IC	Incident Commander
ICS	Incident Command System
IMS	Incident Management System
IMT	Incident Management Team
IPIECA	International Petroleum Industry Environment Conservation Association
ITOPF	International Tanker Owners Pollution Federation
IUCN	International Union for Conservation of Nature
KBSF	King Bay Supply Facility
KSAT	Kongsberg Satellite

Abbreviation	Meaning
LOWC	Loss of Well Containment
MODU	Mobile Offshore Drilling Unit
MoU	Memorandum of Understanding
NEBA	Net Environmental Benefit Analysis
NOAA	National Oceanic and Atmospheric Administration
NRT	National Response Team
OILMAP	Oil Spill Model and Response System
OMP	Operational Monitoring Program
OPEA	Oil Pollution Emergency Arrangements
OPEP	Oil Pollution Emergency Plan
OPGGSA	Offshore Petroleum and Greenhouse Gas Storage Act
OSRL	Oil Spill Response Limited
OSTM	Oil Spill Trajectory Modelling
OWR	Oiled Wildlife Response
OWRP	Oiled Wildlife Response Plan
PAP	Petroleum Activities Program
PEARL	People, Environment, Asset, Reputation, and Livelihood
PBA	Pre-emptive Baseline Areas
PPA	Priority Protection Area
PPB	Parts per billion
PPM	Parts per million
ROV	Remotely Operated Vehicle(s)
RPA	Response Protection Area
SCAT	Shoreline Contamination Assessment Techniques
S&EM	Security and Emergency Management
SIMA	Spill Impact Mitigation Assessment
SIMAP	Integrated Oil Spill Impact Model System
SSDI	Subsea Dispersant Injection
SFRT	Subsea First Response Toolkit
SMP	Scientific monitoring program
SOP	Standard Operating Procedure
TRP	Tactical Response Plan
UAS	Unmanned Aerial Systems
UAV	Unmanned Aerial Vehicles
VOC	Volatile Organic Compound
WHA	World Heritage Area
Woodside	Woodside Energy Limited
WCC	Woodside Communication Centre
WWCI	Wild Well Control Inc

A NEBA has been conducted to assess the net environmental benefit of different response techniques to selected receptors in the event of an oil spill from the PAP for CS-01, CS-02 and CS-03. The complete list of potential receptor locations within the EMBA within the PAP is included in Section 4 of the EP.

The locations utilised for the NEBA were limited to the identified RPAs of the PAP identified from modelling (see Section 3 for outline of selection). These include receptors which have potential for the following:

- Surface contact (>50 g/m²)
- Shoreline accumulation (>100 g/m²) at any time
- Entrained contact (>100 ppb) within 14 days

The detailed NEBA assessment outcomes are shown below. The Scarborough Project Offshore Facility and Trunkline Operations preoperational NEBAs contain the full assessments.

Table A-1: NEBA assessment technique recommendations for MDO oil – CS-01, CS-02, CS-03 (combined NEBA)

Receptor	Operational Monitoring	Containment and recovery	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source Control (Vessel)

Overall assessment

Sensitive receptor (sites identified in EP)	Operational Monitoring	Containment and recovery	Dispersant application: > 20 m water depth and > 10 km from shore/reefs	Shoreline protection	Shoreline clean-up (manual)	Shoreline clean-up (mechanical)	Shoreline clean-up (chemical)	Oiled wildlife response	In situ burning	Mechanical dispersion	Source Control (Vessel)
Is this response Practicable?	Yes	No	No	Potentially	Potentially	Potentially	No	Yes	No	No	Yes
NEBA identifies response potentially of net environmental benefit?	Yes	No	No	Potentially	Potentially	Potentially	No	Yes	No	No	Yes

NEBA Impact Ranking Classification Guidance

To reduce variability between assessments, the following ranking descriptions have been devised to guide the workshop process:

		Degree of impact ¹³		Potential duration of impact	Equivalent Woodside Corporate Risk Matrix Consequence Level
Positive	3P	Major	Likely to prevent: <ul style="list-style-type: none"> behavioural impact to biological receptors behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches) or regulatory designations. 	Decrease in duration of impact by > 5 years	N/A
	2P	Moderate	Likely to prevent: <ul style="list-style-type: none"> significant impact to a single phase of reproductive cycle of biological receptors detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. 	Decrease in duration of impact by 1–5 years	N/A
	1P	Minor	Likely to prevent impacts on: <ul style="list-style-type: none"> significant proportion of population or breeding stages of biological receptors socio-economic receptors such as: <ul style="list-style-type: none"> significant impact to the sensitivity of protective designation; or significant and long-term impact to business/industry. 	Decrease in duration of impact by several seasons (< 1 year)	N/A
	0	Non-mitigated spill impact	No detectable difference to unmitigated spill scenario.		
Negative	1N	Minor	Likely to result in: <ul style="list-style-type: none"> behavioural impact to biological receptors behavioural impact to socio-economic receptors e.g. changes to day-to-day business operations, public opinion/behaviours (e.g. avoidance of amenities such as beaches), or regulatory designations. 	Increase in duration of impact by several seasons (< 1 year)	Increase in risk by one sub-category, without changing category (e.g. Minor (E) to Minor (D))
	2N	Moderate	Likely to result in: <ul style="list-style-type: none"> significant impact to a single phase of reproductive cycle for biological receptors; or detectable financial impact, either directly (e.g. loss of income) or indirectly (e.g. via public perception), for socio-economic receptors. This level of negative impact is recoverable and unlikely to result in closure of business/industry in the region. 	Increase in duration of impact by 1–5 years	Increase in risk by one category (e.g. Minor (D) to Moderate (C or B))
	3N	Major	Likely to result in impacts on: <ul style="list-style-type: none"> significant proportion of population or breeding stages of biological receptors socio-economic receptors resulting in either: <ul style="list-style-type: none"> significant impact to the sensitivity of protective designation; or significant and long-term impact to business/industry. 	Increase in duration of impact by > 5 years or unrecoverable	Increase in risk by two categories (e.g. Minor (E) to Major (A))

¹³ NOTE: the maximum likely impact should be considered; for example, if a spill were to directly impact the behaviour that results in an impact to reproduction and/or the breeding population (such as fish failing to aggregate to spawn), then the score should be a 2 or 3 rather than a 1. Similarly, if a change in behaviour resulted in an increased risk of mortality of a population, then it should be scored as a 2 or 3

ANNEX B: OPERATIONAL MONITORING ACTIVATION AND TERMINATION CRITERIA

Table B-1: Operational monitoring objectives, triggers and termination criteria

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational Monitoring Operational Plan – 01 (OM01)</p> <p>Predictive Modelling of Hydrocarbons to Assess Resources at Risk</p>	<p>OM01 focuses on the conditions that have prevailed since a spill commenced, as well as those that are forecasted in the short term (1–3 days ahead) and longer term. OM01 utilises computer-based forecasting methods to predict hydrocarbon spill movement and guide the management and execution of spill response operations to maximise the protection of environmental resources at risk.</p> <p>The objectives of OM01 are to:</p> <ul style="list-style-type: none"> • Provide forecasting of the movement and weathering of spilled hydrocarbons • Identify resources that are potentially at risk of contamination • Provide simulations showing the outcome of alternative response options (booming patterns etc.) to inform on-going Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options to reduce risks to ALARP 	<p>OM01 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The criteria for the termination of OM01 are:</p> <ul style="list-style-type: none"> • The hydrocarbon discharge has ceased and no further surface oil is visible • Response activities have ceased • Hydrocarbon spill modelling (as verified by OM02 surveillance observations) predicts no additional natural resources will be impacted

Operational Monitoring Operational Plan	Objectives	Activation triggers	Termination criteria
<p>Operational Monitoring Operational Plan – 02 (OM02)</p> <p>Surveillance and reconnaissance to detect hydrocarbons and resources at risk</p>	<p>OM02 aims to provide regular, on-going hydrocarbon spill surveillance throughout a broad region, in the event of a spill.</p> <p>The objectives of OM02 are:</p> <ul style="list-style-type: none"> • Verify spill modelling results and recalibrate spill trajectory models (OM01). • Understand the behaviour, weathering and fate of surface hydrocarbons. • Identify environmental receptors and locations at risk or contaminated by hydrocarbons. • Inform ongoing Net Environmental Benefit Analysis (NEBA) and continually assess the efficacy of available response options to reduce risks to ALARP. • To aid in the subsequent assessment of the short- to long-term impacts and/or recovery of natural resources (assessed in SMPs) by ensuring that the visible cause and effect relationships between the hydrocarbon spill and its impacts to natural resources have been observed and recorded during the operational phase. 	<p>OM02 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The termination triggers for the OM02 are:</p> <ul style="list-style-type: none"> • 72 hours has elapsed since the last confirmed observation of surface hydrocarbons. • Latest hydrocarbon spill modelling results (OM01) do not predict surface exposures at visible levels.
<p>Operational Monitoring Operational Plan – 03 (OM03)</p> <p>Monitoring of hydrocarbon presence, properties, behaviour and weathering in water</p>	<p>OM03 will measure surface, entrained and dissolved hydrocarbons in the water column to inform decision-making for spill response activities.</p> <p>The specific objectives of OM03 are as follows:</p> <ul style="list-style-type: none"> • Detect and monitor for the presence, quantity, properties, behaviour and weathering of surface, entrained and dissolved hydrocarbons. • Verify predictions made by OM01 and observations made by OM02 about the presence and extent of hydrocarbon contamination. <p>Data collected in OM03 will also be used for the purpose of longer-term water quality monitoring during SM01.</p>	<p>OM03 will be triggered immediately following a level 2/3 hydrocarbon spill.</p>	<p>The criteria for the termination of OM03 are as follows:</p> <ul style="list-style-type: none"> • The hydrocarbon release has ceased. • Response activities have ceased. • Concentrations of hydrocarbons in the water are below available ANZECC/ ARMCANZ (2018) trigger values for 99% species protection.

ANNEX C: OIL SPILL SCIENTIFIC MONITORING PROGRAM

Oil spill environmental monitoring

The following provides some further detail on Woodside's oil spill scientific monitoring Program and includes the following:

- The organisation, roles and responsibilities of the Woodside oil spill scientific monitoring team and external resourcing.
- A summary table of the ten scientific monitoring programs as per the specific focus receptor, objectives, activation triggers and termination criteria.
- Details on the oil spill environmental monitoring activation and termination decision-making processes.
- Baseline knowledge and environmental studies knowledge access via geo-spatial metadata databases.
- An outline of the reporting requirements for oil spill scientific monitoring programs.

Oil Spill Scientific Monitoring – Delivery Team Roles and Responsibilities

Woodside Oil Spill Scientific Monitoring Delivery Team

The Woodside science team are responsible for the delivery of the oil spill scientific monitoring. The roles and responsibilities of the Woodside scientific monitoring delivery team are presented in Table C-1 and the organisational structure and Corporate Incident Management Team (CIMT) linkage provided in Figure C-1.

Woodside Oil Spill Scientific monitoring program – External Resourcing

In the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors, scientific monitoring personnel and scientific equipment to implement the appropriate SMPs will be provided by SMP Standby contractor who hold a standby contract for SMP via the Woodside Environmental Services Panel (ESP). If additional resources are required other consultancy capacity within the Woodside ESP will be utilised (as needed and may extend to specialist contractors such as research agencies engaged in long-term marine monitoring programs). In consultation with the SMP Standby Contractor and/or specialist contractors, the selection, field sampling and approach of the SMPs will be determined by the nature and scale of the spill.

Table C-1: Woodside and Environmental Service Provider – Oil Spill Scientific Monitoring Program Delivery Team Key Roles and Responsibilities

Role	Location	Responsibility
Woodside Roles		
SMP Lead/Manager	Onshore	<ul style="list-style-type: none"> Approves the SMPs activated based on operational monitoring data provided by the Planning Section Provides advice to the CIMT in relation to scientific monitoring Provides technical advice regarding the implementation of scientific monitoring Approves detailed sampling plans prepared for SMPs Directs liaison between statutory authorities, advisors and government agencies in relation to SMPs.
SMP Co-Ordinator	Onshore	<ul style="list-style-type: none"> Activates the SMPs based on operational monitoring data provided by the Planning Section Sits in the Planning Section of the CIMT. Liaises with other CIMT Sections to deliver required logistics, resources and operational support from Woodside to support the Environmental Service Provider in delivering on the SMPs. Acts as the conduit for advice from the SMP Lead/Manager to the Environmental Service Provider Manages the Environmental Service Provider's implementation of the SMPs Liaises with the Environmental Service Provider on delivery of the SMPs Arranges all contractual matters, on behalf of Woodside, associated with the Environmental Service Provider's delivery of the SMPs.
Environmental Service Provider Roles		
SMP Standby Contractor – SMP Duty Manager/Project Manager (SMP Liaison Officer)	Onshore	<ul style="list-style-type: none"> Coordinates the delivery of the SMPs Provides costings, schedule and progress updates for delivery of SMPs Determines the structure of the Environmental Service Provider's team to necessitate delivery of the SMPs Verifies that HSE Plans, detailed sampling plans and other relevant deliverables are developed and implemented for delivery of the SMPs Directs field teams to deliver SMPs Arranges all contractual matters, on behalf of Environmental Service Provider, associated with the delivery of the SMPs to Woodside Manages sub-consultant delivery to Woodside Provides required personnel and equipment to deliver the SMPs.
SMP Field Teams	Offshore – Monitoring Locations	<ul style="list-style-type: none"> Delivers the SMPs in the field consistent with the detailed sampling plans and HSE requirements, within time and budget. Early communication of time, budget, HSE risks associated with delivery of the SMPs to the Environmental Service Provider – Project Manager Provides start up, progress and termination updates to the Environmental Service Provider – Project Manager (will be led in-field by a party chief).

Table C-2: Oil Spill Environmental Monitoring: Scientific Monitoring Program – Objectives, Activation Triggers and Termination Criteria

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
Scientific monitoring program 1 (SM01) Assessment of Hydrocarbons in Marine Waters	SM01 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine waters following the spill and the response. The specific objectives of SM01 are as follows: <ul style="list-style-type: none"> Assess and document the extent, severity and persistence of hydrocarbon contamination with reference to observations made during surveillance activities and / or in-water measurements made during operational monitoring; and Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs. 	SM01 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors	SM01 will be terminated when: <ul style="list-style-type: none"> Operational monitoring data relating to observations and / or measurements of hydrocarbons on and in water have been compiled, analysed and reported; and The report provides details of the extent, severity and persistence of hydrocarbons which can be used for analysis of impacts recorded for sensitive receptors monitored under other SMPs. SMP monitoring of sensitive receptor sites: <ul style="list-style-type: none"> Concentrations of hydrocarbons in water samples are below NOPSEMA guidance note (201914) concentrations of 1 g/m² for floating, 10 ppb for entrained and dissolved; and Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in water have been documented at sensitive receptor sites monitored under other SMPs.
Scientific monitoring program 2 (SM02) Assessment of the Presence, Quantity and Character of Hydrocarbons in Marine Sediments	SM02 will detect and monitor the presence, extent, persistence and properties of hydrocarbons in marine sediments following the spill and the response. The specific objectives of SM02 are as follows: <ul style="list-style-type: none"> Determine the extent, severity and persistence of hydrocarbons in marine sediments across selected sites where hydrocarbons were observed or recorded during operational monitoring; and Provide information that may be used to interpret potential cause and effect drivers for environmental impacts recorded for sensitive receptors monitored under other SMPs. 	SM02 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: <ul style="list-style-type: none"> Response activities have ceased; and Operational monitoring results made during the response phase indicate that shoreline, intertidal or sub-tidal sediments have been exposed to surface, entrained or dissolved hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation). 	SM02 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of: <ul style="list-style-type: none"> Concentrations of hydrocarbons in sediment samples are below ANZECC/ ARMCANZ (201315) sediment quality guideline values (SQGVs) for biological disturbance; and Details of the extent, severity and persistence of hydrocarbons from concentrations recorded in sediments have been documented.
Scientific monitoring program 3 (SM03) Assessment of Impacts and Recovery of Subtidal and Intertidal Benthos	The objectives of SM03 are: <ul style="list-style-type: none"> Characterize the status of intertidal and subtidal benthic habitats and quantify any impacts to functional groups, abundance and density that may be a result of the spill; and Determine the impact of the hydrocarbon spill and subsequent recovery (including impacts associated with the implementation of response options). Categories of intertidal and subtidal habitats that may be monitored include: <ul style="list-style-type: none"> Coral reefs Seagrass Macro-algae Filter-feeders SM03 will be supported by sediment contamination records (SM02) and characteristics of the spill derived from OMPs.	SM03 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: <ul style="list-style-type: none"> As part of a pre-emptive assessment of PBAs of receptor locations identified by time to hydrocarbon contact >10 days, to target receptors and sites where it is possible to acquire pre-hydrocarbon contact baseline; and Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for subtidal and intertidal benthic habitat. 	SM03 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of: <ul style="list-style-type: none"> Overall impacts to benthic habitats from hydrocarbon exposure have been quantified. Recovery of impacted benthic habitats has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 4 (SM04) Assessment of Impacts and Recovery of Mangroves / Saltmarsh	The objectives of SM04 are: <ul style="list-style-type: none"> Characterize the status of mangroves (and associated salt marsh habitat) at shorelines exposed/contacted by spilled hydrocarbons; Quantify any impacts to species (abundance and density) and mangrove/saltmarsh community structure; and 	SM04 will be activated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows: <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; and 	SM04 will be terminated once pre-spill condition is reached and agreed upon as per the SMP termination criteria process and include consideration of: <ul style="list-style-type: none"> Impacts to mangrove and saltmarsh habitat from hydrocarbon exposure have been quantified. Recovery of impacted mangrove/saltmarsh habitat has been evaluated.

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
	<ul style="list-style-type: none"> Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options). <p>SM03 will be supported by sediment sampling undertaken in SM02 and characteristics of the spill derived from OMPs.</p>	<ul style="list-style-type: none"> Operational monitoring identified shoreline potential contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) for mangrove/saltmarsh habitat. 	<ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 5 (SM05) Assessment of Impacts and Recovery of Seabird and Shorebird Populations	<p>The Objectives of SM05 are to:</p> <ul style="list-style-type: none"> Collate and quantify impacts to avian wildlife from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population level; and Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to seabirds and shorebird populations at targeted breeding colonies / staging sites / important coastal wetlands where hydrocarbon contact was recorded. 	<p>SM05 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented as follows:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Operational monitoring predicts shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at important bird colonies / staging sites / important coastal wetland locations; or Records of dead, oiled or injured bird species made during the hydrocarbon spill or response. 	<p>SM05 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Impacts to seabird and shorebird populations from hydrocarbon exposure have been quantified. Recovery of impacted seabird and shorebird populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 6 (SM06) Assessment of Impacts and Recovery of Nesting Marine Turtle Populations	<p>The objectives of SM06 are to:</p> <ul style="list-style-type: none"> To quantify impacts of hydrocarbon exposure or contact on marine turtle nesting populations (including impacts associated with the implementation of response options); Collate and quantify impacts to adult and hatchling marine turtles from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels (including impacts associated with the implementation of response options); and Undertake monitoring to quantify and assess impacts of hydrocarbon exposure to nesting marine turtle populations at known rookeries (including impacts associated with the implementation of response options). 	<p>SM06 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Predicted shoreline contact of hydrocarbons (at or above 0.5 g/m² surface, 5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known marine turtle rookery locations; or Records of dead, oiled or injured marine turtle species made during the hydrocarbon spill or response. 	<p>SM06 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Impacts to nesting marine turtle populations from hydrocarbon exposure have been quantified. Recovery of impacted nesting marine turtle populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 7 (SM07) Assessment of Impacts to Pinniped Colonies including Haul-out Site Populations	<p>The objectives of SM07 are to:</p> <ul style="list-style-type: none"> Quantify impacts on pinniped colonies and haul-out sites as a result of hydrocarbon exposure/contact. Collate and quantify impacts to pinniped populations from results recorded during OM02 and OM05 (such as mortalities, oiling, rescue and release counts) and undertake a desk-based assessment to infer potential impacts at species population levels. 	<p>SM07 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring has:</p> <ul style="list-style-type: none"> As part of a pre-emptive assessment of receptor locations identified by time to hydrocarbon contact >10 days; Identified shoreline contact of hydrocarbons ((at or above 0.5 g/m² surface, ≥5 ppb for entrained/dissolved hydrocarbons and ≥1 g/m² for shoreline accumulation) at known pinniped colony or haul-out site(s) (i.e. most northern site is the Houtman Abrolhos Islands); or Records of dead, oiled or injured pinniped species made during the hydrocarbon spill or response. 	<p>SM07 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Impacts to pinniped populations from hydrocarbon exposure have been quantified. Recovery of pinniped populations has been evaluated. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 8 (SM08) Desk-Based Assessment of Impacts to Other Non-Avian Marine Megafauna	<p>The objective of SM08 is to provide a desk-based assessment which collates the results of OM02 and OM05 where observations relate to the mortality, stranding or oiling of mobile marine megafauna species not addressed in SM06 or SM07, including:</p> <ul style="list-style-type: none"> Cetaceans; Dugongs; 	<p>SM08 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring reports records of dead, oiled or injured non-avian marine megafauna during the spill/ response phase.</p>	<p>SM08 will be terminated when the results of the post-spill monitoring have quantified impacts to non-avian megafauna.</p>

Scientific monitoring Program (SMP)	Objectives	Activation Triggers	Termination Criteria
	<ul style="list-style-type: none"> Whale sharks and other shark and ray populations; Sea snakes; and Crocodiles. <p>The desk-based assessment will include population analysis to infer potential impacts to marine megafauna species populations.</p>		<ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 9 (SM09) Assessment of Impacts and Recovery of Marine Fish associated with SM03 habitats	<p>The objectives of SM09 are:</p> <ul style="list-style-type: none"> Characterise the status of resident fish populations associated with habitats monitored in SM03 exposed/contacted by spilled hydrocarbons; Quantify any impacts to species (abundance, richness and density) and resident fish population structure (representative functional trophic groups); and Determine and monitor the impact of the hydrocarbon spill and potential subsequent recovery (including impacts associated with the implementation of response options). 	<p>SM09 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented with SM03.</p>	<p>SM09 will be undertaken and terminated concurrent with monitoring undertaken for SM03, as per the SMP termination criteria process</p> <ul style="list-style-type: none"> Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.
Scientific monitoring program 10 (SM10) SM10 - Assessment of physiological impacts important fish and shellfish species (fish health and seafood quality/safety) and recovery	<p>SM10 aims to assess any physiological impacts to important commercial fish and shellfish species (assessment of fish health) and if applicable, seafood quality/safety. Monitoring will be designed to sample key commercial fish and shellfish species and analyse tissues to identify fish health indicators and biomarkers, for example:</p> <ul style="list-style-type: none"> Liver Detoxification Enzymes (ethoxyresorufin-O-deethylase (EROD) activity) PAH Biliary Metabolites Oxidative DNA Damage Serum SDH Other physiological parameters, such as condition factor (CF), liver somatic index (LSI), gonado-somatic index (GSI) and gonad histology, total weight, length, condition, parasites, egg development, testes development, abnormalities. Seafood tainting may be included (where appropriate) using applicable sensory tests to objectively assess targeted finfish and shellfish species for hydrocarbon contamination. <p>Results will be used to make inferences on the health of commercial fisheries and the potential magnitude of impacts to fishing industries.</p>	<p>SM10 will be initiated in the event of a Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors and implemented if operational monitoring (OM01, OM02 and OM05) indicates the following:</p> <ul style="list-style-type: none"> The hydrocarbon spill will or has intersected with active commercial fisheries or aquaculture activities. Commercially targeted finfish and/or shellfish mortality has been observed/recorded. Commercial fishing or aquaculture areas have been exposed to hydrocarbons (≥ 0.5 g/m² surface and ≥ 5 ppb for entrained/dissolved hydrocarbons); and Taste, odour or appearance of seafood presenting a potential human health risk is observed. 	<p>SM10 will be terminated once it is agreed that the receptor has returned to pre-spill condition. The SMP termination criteria process will be followed and include consideration of:</p> <ul style="list-style-type: none"> Physiological impacts to important commercial fish and shellfish species from hydrocarbon exposure have been quantified. Recovery of important commercial fish and shellfish species from hydrocarbon exposure has been evaluated. Impacts to seafood quality/safety (if applicable) have been assessed and information provided to the relevant persons/ organisations and regulators for the management of any impacted fisheries. Agreement with relevant persons/ organisations and regulators based on the nature and scale of the hydrocarbon spill impacts and/or that observed impacts can no longer be attributed to the spill.

Activation Triggers and Termination Criteria

Scientific monitoring program – Activation

The Woodside oil spill scientific monitoring team will be stood up immediately with the occurrence of a hydrocarbon spill (actual or suspected) Level 2 or 3 hydrocarbon release, or any release event with the potential to contact sensitive environmental receptors via the first strike plan for the petroleum activity programme. The presence of any level of hydrocarbons in the marine environment triggers the activation of the oil spill scientific monitoring program (SMP). This is to consider the full range of eventualities relating to the environmental, socio-economic and health consequences of the spill in the planning and execution of the SMP. The activation process also takes into consideration the management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the EPBC Act) potentially exposed to hydrocarbons. With the first 24-48 hours of a spill event, such information will be sourced and evaluated as part of the SMP planning process guided by Appendix D (identified receptors vulnerable to hydrocarbon contact), the information presented in the Existing Environment section of the EP as well as other information sources such as the Woodside Baseline Environmental Studies Database.

The starting point for decision-making on what SMPs are activated and spatial extent of monitoring activities will be based on the predictive modelling results (OM01) in the first 24-48 hours until more information is made available from other operational monitoring activities such as aerial surveillance and shoreline surveys. Pre-emptive Baseline Areas (WHA, CMRs and State Marine Parks encompassing key ecological and socio-economic values) are a key focus of the SMP activation decision-making process, particularly, in the early spill event/response phase. As the operational monitoring progresses and further situational awareness information becomes available, it will be possible to understand the nature and scale of the spill. The SMP activation and implementation decision-making will be revisited daily to account for the updates on spill information. One of the priority focus areas in the early phase of the incident will be to identify and execute pre-emptive SMP assessments at key receptor locations, as required. The SMP activation and implementation decision tree is presented in Figure C-2.

Scientific monitoring Program – Termination

The basis of the termination process for the active SMPs (SMPs 1-10) will include quantification of impacts, evaluation of recovery for the receptor at risk and consultation with relevant authorities, persons and organisations. Termination of each SMP will not be considered until the results (as presented in annual SMP reports for the duration of each program) indicate that the target receptor has returned to pre-spill condition.

Once the SMP results indicate impacted receptor(s) have returned to pre-spill condition (as identified by Woodside) a termination decision-making process will be triggered and steps will be undertaken as follows:

- Woodside will engage expert opinion on whether the receptor has returned to pre-spill condition (based on monitoring data). Subject Matter Expert (SMEs) will be engaged (via the Woodside SME scientific monitoring terms of reference to review program outcomes, provide expert advice and recommendations for the duration of each SMP).
- Where expert opinion agrees that the receptor has returned to pre-spill condition, findings will then be presented to the relevant authorities, persons and organisations (as defined by the Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulation 11A). Stakeholder identification, planning and engagement will be managed by Woodside's Reputation Functional Support Team (FST) and follow the Stakeholder Management FST. These guidelines outline the FST roles and responsibilities, competencies, communications and planning processes. An assessment of the merits of any objection to termination will be documented in the SMP final report.
- Woodside will decide on termination of SMP based on expert opinion and merits of any relevant persons'/ organisations' objections. The final report following termination will include: monitoring results, expert opinion and consultation, including merits of any objections.
- Termination of SMPs will also consider applicable management objectives, species recovery plans, conservation advices and conservations plans for any World Heritage Area (WHA), CMRs, State Marine Parks, other protected area designations (e.g., State nature reserves) and Matters of National Environmental Significance (including listed species under part 3 of the EPBC Act).

The SMP termination decision-making process will be applied to each active SMP and an iterative process of decision steps continued until each SMP has been terminated (refer to decision-tree diagram for SMP termination criteria, Figure C-3).

SMP ACTIVATION & IMPLEMENTATION DECISION PROCESS

Receptors at Risk and Baseline Knowledge

To assess the baseline studies available and suitability for oil spill scientific monitoring, Woodside maintains knowledge of environmental baseline studies through the upkeep and use of its Environmental Knowledge Management System.

Woodside's Environmental Knowledge Management System is a centralised platform for scientific information on the existing environment, marine biodiversity, Woodside environmental studies, key environmental impact topics, key literature and web-based resources. The system comprises several data directories and an environmental baseline database, as well as folders within the 'Corporate Environment' server space. The environmental baseline database was set up to support Woodside's SMP preparedness and as a SMP resource in the event of an unplanned hydrocarbon spill. The environmental baseline database is subject to updates including annual reviews completed as part of SMP standby contract. This database is accessed pre-PAP to identify PBAs where hydrocarbon contact is predicted to occur <10 days.

In addition to Woodside's Environmental Knowledge Management System, many relevant baseline datasets are held by other organisations (e.g. other oil and gas operators, government agencies, state and federal research institutions and non-governmental organisations). To understand the present status of environmental baseline studies a spatial environmental metadata database for Western Australia (Industry-Government Environmental Metadata, IGEM) was established. IGEM is a collaboration comprising oil and gas operators (including Woodside), government and research agencies and other organisations. IGEM held data were integrated into the DWER IMSA¹⁶ in 2020. IMSA is an online portal for information about marine-based environmental surveys in Western Australia. IMSA is a project of DWER for the systematic capture and sharing of marine data created as part of an environmental impact assessment (EIA).

In the event of an unplanned hydrocarbon release, Woodside intends to interrogate the information on baseline studies status as held by the various databases (e.g. Woodside Environmental Knowledge Management System, IMSA and other sources of existing baseline data) to identify Pre-emptive Baseline Areas (PBAs), i.e., receptors at risk where hydrocarbon contact is predicted to be >10 days, and baseline data can be collected before hydrocarbon contact.

Reporting

For the scientific monitoring program relevant regulators will be provided with:

- Annual reports summarising the SMPs deployed and active, data collection activities and available findings; and
- Final reports for each SMP summarising the quantitative assessment of environmental impacts and recovery of the receptor once returned to pre-spill condition and termination of the monitoring program.

The reporting requirements of the scientific monitoring program will be specific to the individual SMPs deployed and terms of responsibilities, report templates, schedule, quality assurance/ quality control (QA/QC) and peer-review will be agreed with the contractors engaged to conduct the SMPs. Compliance and auditing mechanisms will be incorporated into the reporting terms.

Table D-2: Baseline studies for the SMPs applicable to identified Pre-emptive Baseline Areas for the Petroleum Activities Program

Major Baseline	Proposed Scientific monitoring operational plan and Methodology	Ningaloo Coast and the Muiron Islands	Rankin Bank & Glomar Shoal	Barrow, Montebello and Lowendal Islands	Montebello AMP	Pilbara Islands – Southern Island Group	Dampier Archipelago
Benthic Habitat (Coral Reef)	SM03 Quantitative assessment using image capture using either diver held camera or towed video. Post analysis into broad groups based on taxonomy and morphology.	Studies: 1. DBCA LTM Ningaloo Reef program: 1991-ongoing. 2. AIMS/DBCA 2014 Baseline Ningaloo and Muiron Islands Survey – repeat and expansion on the LTM (Co-funded survey: Woodside and AIMS). 3. Pilbara Marine Conservation Partnership. 4. WAMSI LTM Study: Ningaloo Research node: 2009 -10 over the length of Ningaloo reef system (with a focus on coral and fish recruitment). 5. Ningaloo Outlook (CSIRO) - Shallow and Deep Reefs Program (2015-ongoing). 6. Ningaloo Collaboration Cluster: Habitats of the Ningaloo Reef and adjacent coastal areas determined through hyperspectral imagery 7. Allen Coral Atlas 8. Gorgon Barrow Island Net Conservation Benefit Fund administered by DBCA: Characterisation of water quality and benthic communities across an environmental gradient – Ningaloo and Exmouth Gulf	1. Glomar Shoal and Rankin Bank Environmental Survey Report, 2013, quantitatively surveyed benthic habitats and communities. AIMS report to Woodside. Scientific Publication - Biodiversity and spatial patterns of benthic habitat and associated demersal fish communities at two tropical submerged reef ecosystems, 2018. 2. Rankin Bank Environmental Survey Extension, 2014, Habitat assessment of an area southeast of Rankin Bank. 3. Glomar Shoal and Rankin Bank surveys, 2017. GWF-2 Monitoring Programme. Quantitatively surveyed benthic habitats and communities. 4. Temporal Studies survey of Rankin Bank and Glomar Shoal, 2018.	Barrow Island: East and West Coast baseline and monitoring for soft sediment, limestone pavement and coral assemblages (Chevron) Barrow, Montebello and Lowendal Islands: 1. Benthic community monitoring as part of DBCA Western Australian Marine Monitoring Program (2015-ongoing). 2. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013).	Coral Reefs & Filter Feeders 1. Montebello Marine Park, 2019, Identification and qualitative descriptions of benthic habitat. 2. Montebello Australian Marine Parks – 2019 – Baseline survey on benthic habitats. 3. Pluto Trunkline within Montebello Marine Park – Monitoring marine communities.	1. Benthic habitat mapping of the subtidal and intertidal habitats of the islands and shoals. Coral communities in shallow subtidal habitat, intertidal pavement. 2. Coral monitoring at Varanus and Airlie Islands (2000 to present) to identify corals, growth from and percentage cover 3. Pilbara Marine Conservation Partnership Seabed biodiversity survey (2013; 2016)	1. Coral Monitoring, Mermaid Sound. URS on behalf of Chevron, 2004. 2. Scarborough Trunkline Marine Habitat Survey 2018. 5. Benthic community monitoring as part of DBCA's Dampier Archipelago Marine Monitoring Program (2007-ongoing). 6. WA Museum study on the Scleractinian corals collected in 1998. (Griffith 2004). 7. Regional Biodiversity — Pilbara Seabed Biodiversity Mapping & Characterisation (2016). 9. Distribution, patterns and key processes of major marine communities and large marine fauna – DBCA Pluto Offset Program D. 11. Study of the spatial and temporal distribution of coral assemblages at Dampier Archipelago (Cape Preston to Delambre Island), using 871 datasets dating back to the early 1970s. Sites surveyed in <u>May 2017</u> .
		Methods: 1. LTM transects, diver based (video) photo quadrats, specimen collection. 2. LTM sites, transects, diver-based video quadrat. 3. Diver video transects, still photography, video and in situ visual estimates from transects, quadrats, manta-tows, towed video and ROV. 4. Video point intercept transects recorded by towed video or diver hand-held video camera. 5. Video transects. 6. LTM transects, diver based (video) photo quadrat. 7. Combination of satellite imagery analysis and mapped/monitored areas. 8. CSIRO and DBCA [Doropolous et al. 2022]	1. Towed video transects, photo quadrats using towed video system. 2. Towed video transects, photo quadrats using towed video system. 3. Towed video transects, photo quadrats using towed video system. 4. Towed video transects, photo quadrats using towed video system.	Barrow Island: Coral habitat – mapping, rapid visual assessment, size-class frequency, photoquadrats – live coral cover and survival, tagged corals – growth and survival and coral recruitment Benthic macro-invertebrate surveys – video belt transects Barrow, Montebello and Lowendal Islands: 1. Fixed long-term monitoring sites. Diver video transect. 2. Towed video, benthic trawl and sled.	1.ROV Transects 2. Benthic habitat mapping, multibeam acoustic swathing. 3. ROV video.	1. ROV transects. 2. ROV transects and driver surveys 3. Towed video, benthic trawl and sled	1. Towed Video. 2. Towed video, 5. Diver swum – belt transects, photo quadrats. 6. Coral collection for taxonomic records. 7. Towed video, benthic trawl and sled. 9. Collection of fish, coral, mangrove and seagrass samples from reefs along the WA coast, including reefs within the proposed Dampier Archipelago Marine Park. Samples subject to genetic testing. 11. Photo quadrants and recruitment tiles

CONTROL AGENCIES AND INCIDENT CONTROLLERS

Source	Location	Level	Jurisdictional Authority/ Hazard Management Agency	Control Agency	Incident Controller
Spill from facility including subsea infrastructure Note: pipe laying and accommodation vessels are considered a “facility” under Australian regulations	Commonwealth waters	1	NOPSEMA	Woodside	Person In Charge (PIC) with support from Onshore Team Leader (OTL)
		2/3		Woodside	Corporate Incident Management Team (CIMT) Incident Commander
	State waters	1/2/3	Western Australia Department of Transport (DoT)	DoT	DoT Incident Controller
	Within port limits	1	DoT	Port Authority	Port Harbour Master
2/3		DoT		DoT Incident Controller	
Spill from vessel Note: SOPEP should be implemented in conjunction with this document	Commonwealth waters	1	Australian Marine Safety Authority (AMSA)	AMSA	Vessel Master
		2/3		AMSA	AMSA (with response assistance from Woodside)
	State waters	1/2/3	DoT	DoT	DoT Incident Controller
	Within port limits	1	DoT	Port Authority	Port Harbour Master
2/3		Port Authority/DoT		Port Harbour Master/DoT Incident Controller	

SPILLS IN STATE/ PORT WATERS

In the event of a hydrocarbon spill (hereafter ‘spill’) where Woodside Energy Ltd (‘Woodside’) is the responsible party and the spill may impact State waters and shorelines, Woodside (or the Vessel Master) will commence the initial response actions and notify the Western Australian Department of Transport (DoT). In the event that Woodside is the responsible party for a spill that occurs within port limits, Woodside will notify the Port Authority and DoT for all spill levels.

Initially Woodside will be required to make available an appropriate number of suitably qualified persons to work in the DoT Incident Management Team (IMT) ([APPENDIX F](#) – Woodside Liaison Officer resources to DoT). DoT/ Port Authority’s role as the Controlling Agency in State waters/ within port limits does not negate the requirement for Woodside to have appropriate plans and resources in place to adequately respond to a marine hydrocarbon spill incident in State waters/ within port limits, or to commence the initial response actions to a spill prior to DoT establishing incident control in line with DoT *Offshore Petroleum Industry Guidance Note – Marine Oil Pollution: Response and Consultation Arrangements* (July 2020). Cost recovery arrangements for offshore marine pollution incidents (MOP) are in accordance with Section 9 of the Guidance Note:

https://www.transport.wa.gov.au/mediaFiles/marine/MAC_P_Westplan_MOP_OffshorePetroleumIndGuidance.pdf

Woodside’s Incident Management Structure for a hydrocarbon spill, including Woodside Liaison Officer’s command structure within DoT can be seen at [APPENDIX E](#) – Woodside Incident Management Structure.

The coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines is shown in [APPENDIX D](#) – Coordination structure for a concurrent hydrocarbon spill in both Commonwealth and State waters/ shorelines.

RESPONSE PROCESS OVERVIEW

For guidance on credible scenarios and hydrocarbon characteristics, refer to APPENDIX A		
ALL INCIDENTS	Notify the Woodside Communication Centre (WCC) on: [1]	
	Incident Controller or delegate to make relevant notifications in Table 1-1 of this Oil Pollution First Strike Plan.	
LEVEL 1	FACILITY INCIDENT	VESSEL INCIDENT
	Coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan. Remember to download each Operational Plan.	Notify AMSA or Port Authority (if within port limits) and coordinate pre-identified tactics in Table 2-1 of this Oil Pollution First Strike Plan Remember to download each Operational Plan.
	If the spill escalates such that the site cannot manage the incident, inform the WCC on: [1] and escalate to a level 2/3 incident.	
LEVEL 2/3	FACILITY INCIDENT	VESSEL INCIDENT
	Handover control to CIMT and notify DoT or Port Authority (if within port limits)	Handover control to AMSA or Port Authority (if within port limits) and stand up CIMT to assist.
	Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.	If requested by AMSA/Port Authority: Commence quick revalidation of the recommended strategies on Table 2-1 taking into consideration seasonal sensitivities and current situational awareness. Commence validated strategies.
	Create an Incident Action Plan (IAP) for ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational Net Environmental Benefit Analysis (NEBA) see the OSPRMA Appendix A.	If requested by AMSA/Port Authority: Create an IAP for ongoing operational periods. The content of the IAP should reflect the selected response strategies based on current situational awareness. For the full detailed pre-operational NEBA see the OSPRMA Appendix A.

1. NOTIFICATIONS

The Incident Controller or delegate must ensure the below notifications (Table 1-1) are completed within the designated timeframes.

For spills from a vessel, relevant notifications must be undertaken by a Woodside representative.

Table 1-1: Notifications

In the event of an incident between campaign vessels, also activate relevant vessel Emergency Response Plans and/or Bridging Documents

Timing	By	To	Name	Contact	Instruction	Form	Complete? (✓)
NOTIFICATIONS FOR ALL LEVELS OF SPILL							
Immediately	Offshore Installation Manager (OIM) or Vessel Master	Woodside Communication Centre (WCC)	CIMT IC	[1]	Verbally notify WCC of event and estimated volume and hydrocarbon type.	Verbal	
Within 2 hours	Woodside Site Rep (WSR), Corporate Incident Management Team Duty Manager (CIMT DM) or Delegate	National Offshore Petroleum Safety Environmental Management Authority (NOPSEMA ¹)	Incident notification office	[2]	Verbally notify NOPSEMA for spills >80L. Record notification using Initial Verbal Notification Form or equivalent and send to NOPSEMA as soon as practicable (cc to NOPTA and DEMIRS).	Link	
Within 3 days	WSR, CIMT DM or Delegate				Provide a written NOPSEMA Incident Report Form as soon as practicable (no later than 3 days after notification) (cc to NOPTA and DEMIRS). NOPSEMA [2] NOPTA [3] DEMIRS [4]	[2]	
As soon as practicable	CIMT IC or Delegate	Woodside	Environment Unit Leader	As per roster	Verbally notify Environment Unit Leader of event and seek advice on relevant performance standards from EP.	Verbal	
Within 2 hours of becoming aware of a marine pollution incident (MOP) that occurs in or may impact state waters	CIMT IC or Delegate	DoT	DoT Maritime Environmental Emergency Response Unit (MEER) Duty Officer	[5]	Verbally notify DoT MEER Duty Officer that a spill has occurred and, if required, request use of equipment stored in Karratha. Follow up with a written Marine Pollution Report (POLREP) as soon as practicable following verbal notification. Additionally, DoT to be notified if spill is likely to extend into WA State waters. Request DoT to provide liaison to Woodside IMT.	[5]	
As soon as practicable if spill arises in or is likely to extend into port limits.	CIMT IC or Delegate	Pilbara Ports Authority (PPA)	PPA Dampier Vessel Traffic Services (VTS)	[6]	Any spill within or close to the Dampier Port boundary should be reported immediately to the PPA Dampier VTS.	Verbal/ [6]	
As soon as practicable	CIMT IC or Delegate	Department of Climate Change, Energy, the Environment and Water (DCCEEW) Director of National Parks	Marine Park Compliance Duty Officer	[7]	The Marine Park Compliance Duty Officer is notified in the event of oil pollution within a marine park, or where an oil spill response action must be taken within a marine park, so far as reasonably practicable, prior to response action being taken. This notification should include: <ul style="list-style-type: none"> titleholder details time and location of the incident proposed response arrangements and locations as per the OPEP contact details for the response coordinator confirmation of access to relevant monitoring and evaluation reports when available. 	Verbal	
As soon as practicable if there is potential for oiled wildlife or the spill is expected to contact land or waters managed by WA Department of	CIMT IC or Delegate	DBCA	Duty Officer	[8]	Phone call notification to Pilbara regional office.	Verbal	

¹ Notification to NOPSEMA must be from a Woodside Representative.

Biodiversity, Conservation and Attractions (DBCA)						
As soon as practicable	Public Information	Relevant persons/ organisations	To be determined	To be determined	Should it be identified that additional persons/organisations such as, but not limited to, commercial fishers and tourism operators may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the Oil Spill Preparedness and Response Mitigation Assessment (OSPRMA) for the Scarborough Offshore Facility and Trunkline Operations activity. Relevant persons/organisations will be re-assessed throughout the response period.	Verbal initially
As soon as practicable	Public Information	Relevant cultural authorities	To be determined	To be determined	Should it be identified that relevant cultural authorities may be affected, Woodside would, at the relevant time, engage with these parties as appropriate and in alignment with the OSPRMA for the Scarborough Offshore Facility and Trunkline Operations activity. Relevant cultural authorities will be re-assessed throughout the response period.	Verbal initially
As soon as practicable	Public Information	Murujuga Aboriginal Corporation (MAC)	MAC CEO	[9]	Woodside will engage MAC and seek input to spill response planning as the relevant cultural authority as soon as practicable after becoming aware of a marine pollution incident from Scarborough trunkline activities that may impact cultural heritage values.	Verbal initially
ADDITIONAL NOTIFICATIONS TO BE MADE ONLY IF SPILL IS FROM A VESSEL						
"Without delay" as per <i>Protection of the Sea (Prevention of Pollution from Ships) Act 1983 (Cth)</i> s 11(1)	Vessel Master	Australian Maritime Safety Authority (AMSA)	Response Coordination Centre (RCC)	[10]	Verbally notify AMSA RCC of the hydrocarbon spill. Follow up with written Harmful Substances Report (POLREP – AMSA) as soon as practicable.	[10]
ADDITIONAL LEVEL 2/3 NOTIFICATIONS						
As soon as practicable	CIMT IC or Delegate	Australian Marine Oil Spill Centre (AMOSC)	AMOSC Duty Manager	[11]	Notify AMOSC that a spill has occurred and follow-up with an email from the CIMT IC/ Deputy CIMT IC/CMT Leader to formally activate AMOSC. Determine what resources are required consistent with the AMOS Plan and detail in a Service Contract that will be sent to Woodside from AMOSC upon activation.	[11]
As soon as practicable	CIMT IC or Delegate	Oil Spill Response Limited (OSRL)	OSRL Duty Manager	[12]	Contact OSRL duty manager and request assistance from technical advisor in Perth. Send the completed notification form to OSRL as soon as practicable.	[12]
					For mobilisation of resources, send the mobilisation form to OSRL as soon as practicable. The mobilisation form must be signed by a nominated callout authority from Woodside. OSRL can advise the names on the call out authority list, if required.	[12]
As soon as practicable if extra personnel are required for incident support	CIMT IC or Delegate	Marine Spill Response Corporation (MSRC)	MSRC Response Manager	[13]	Activate the contract with MSRC (in full) for the provision of up to 30 personnel depending on what skills are required. Please note that provision of these personnel from MSRC are on a best endeavours basis and are not guaranteed.	Verbal

2. RESPONSE TECHNIQUES

Table 2-1: Response techniques

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Dry gas					
Operational monitoring – tracking buoy (OM02)	Yes	No	ALL	If a vessel is on location, consider the need to deploy the oil spill tracking buoy. If no vessel is on location, consider the need to mobilise oil spill tracking buoys from the King Bay Supply Base (KBSB) Stockpile. If a surface sheen is visible from the facility, deploy the satellite tracking buoy within two hours.	Operations	WITHIN 24 HOURS: Tracking buoy deployed within 2 hours.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02 of The Operational Monitoring Operational Plan). Deploy tracking buoy in accordance with Link .
Operational monitoring – predictive modelling (OM01)	Yes	No	ALL	MDO: Undertake initial modelling using the Rapid Assessment Oil Spill Tool and weathering fate analysis using Automated Data Inquiry for Oil Spills (ADIOS) or refer to the hydrocarbon information in Appendix A . Dry gas (Level 2/3): If feasible, existing worst-case discharge modelling will be verified with available real-time data.	Situation or Environment	WITHIN 24 HOURS: Initial modelling within 6 hours using the Rapid Assessment Tool.	Predictive Modelling of Hydrocarbons to Assess Resources at Risk (OM01 of The Operational Monitoring Operational Plan). <i>Planning Section to download immediately and follow steps.</i>
	Yes	No	ALL	MDO: Send Oil Spill Trajectory Modelling (OSTM) form (Appendix B, Form 7) to RPS Response ([14]).	Situation	WITHIN 24 HOURS: Detailed modelling within 4 hours of RPS Response receiving information from Woodside.	
Operational monitoring – aerial surveillance (OM02)	Yes	No	ALL	MDO: Instruct Aviation Unit Leader to commence aerial observations in daylight hours. Aerial surveillance observer to complete log in Appendix B Form 8 . Dry gas (Level 2/3): overflights only feasible if gas detection indicates it is safe to do so.	Logistics – Aviation	WITHIN 24 HOURS: 2 trained aerial observers. 1 aircraft available. Report made available to the IMT within 2 hours of landing after each sortie.	Surveillance and Reconnaissance to Detect Hydrocarbons and Resources at Risk (OM02 of The Operational Monitoring Operational Plan). <i>Planning Section to download immediately and follow steps.</i>
Operational monitoring – satellite tracking (OM02)	Yes	No	ALL	The Situation Unit Leader to action satellite imagery services. This may be obtained via: <ul style="list-style-type: none">• AMOSC Duty Manager: [11]• OSRL Duty Manager: [12]• KSAT: [15]• Others identified by CIMT.	Situation	WITHIN 24 HOURS: Service provider will confirm availability of an initial acquisition within 2 hours. Data received to be uploaded into Woodside Common Operating Picture.	
Operational monitoring – monitoring hydrocarbons in water (OM03)	Yes	No	ALL	MDO: Consider the need to mobilise resources to undertake water quality monitoring (OM03).	Planning or Environment	WITHIN 72 HOURS: Water quality assessment access and capability. Daily fluorometry reports will be provided to IMT.	Detecting and Monitoring for the Presence and Properties of Hydrocarbons in the Marine Environment (OM03 of The Operational Monitoring Operational Plan).
Operational monitoring – pre-emptive assessment of receptors at risk (OM04)	Yes	No	ALL	MDO: Consider the need to mobilise resources to undertake pre-emptive assessment of sensitive receptors at risk (OM04).	Planning or Environment	WITHIN 24 HOURS: In agreement with WA DoT, deployment of 1 specialist for each of the Response Protection Areas (RPA) with predicted impacts.	Pre-emptive Assessment of Sensitive Receptors (OM04 of The Operational Monitoring Operational Plan).
Operational monitoring – shoreline assessment (OM05)	Yes	No	ALL	MDO: Consider the need to mobilise resources to undertake shoreline assessment surveys (OM05).	Planning or Environment	WITHIN 24 HOURS: In agreement with WA DoT, deployment of 1 specialist trained in Shoreline Clean-up Assessment Technique (SCAT) for each of the RPAs with predicted impacts.	Shoreline Assessment (OM05 of The Operational Monitoring Operational Plan).
Surface dispersant	No	No	N/A	This response strategy is not recommended.			
Containment and recovery	No	No	N/A	This response strategy is not recommended.			
Mechanical dispersion	No	No	N/A	This response strategy is not recommended.			
In-situ burning	No	No	N/A	This response strategy is not recommended.			
Shoreline protection and deflection	Yes	No	L2/3	Equipment from Woodside, Pilbara Port Authority (PPA) (if within port limits), AMOSC and AMSA Western Australian Stockpiles mobilised. Consideration of mobilisation of interstate/international shoreline protection equipment (i.e. OSRL).	Operations and Planning	WITHIN 24 HOURS: In agreement with WA DoT, activate relevant Tactical Response Plans (TRPs) within 12 hours. In agreement with WA DoT, mobilise teams to RPAs within 24 hours of operational monitoring predicting impacts.	Protection and Deflection Operational Plan. <i>Logistics Section to download immediately and follow steps.</i>

Technique	Spill type		Level	Pre- Identified Tactics	Responsible	ALARP Commitment Summary	Link to Operational Plans for notification numbers and actions
	MDO	Dry gas					
	Yes	No				In agreement with WA DoT, equipment mobilised from closest stockpile within 24 hours. WITHIN 48 HOURS: Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours. Supplementary equipment mobilised from OSRL within 48 hours.	
Shoreline clean-up	Yes	No	L2/3	Equipment from Woodside, and/or PPA (if within port limits) AMOSC and AMSA Western Australian Stockpiles and relevant personnel mobilised. Consideration of mobilisation of interstate/international shoreline clean-up equipment and relevant personnel (i.e. OSRL).	Logistics and Planning	WITHIN 24 HOURS: Relevant Tactical Response Plans (TRPs) will be identified in the First Strike Plan for activation within 24 hours of a release. In liaison with WA DoT (for Level 2/3 incidents), mobilise and deploy 1-2 shoreline clean-up operations within 24 hours. In agreement with WA DoT, equipment mobilised from closest stockpile within 24 hours. Access to ~124 m ³ of solid and liquid waste storage available within 24 hours upon activation of 3 rd party contract. WITHIN 48 HOURS: Supplementary equipment mobilised from AMOSC, AMSA and State stockpiles within 48 hours. Supplementary equipment mobilised from OSRL within 48 hours.	Shoreline Clean-up Operational Plan. <i>Logistics Section to download immediately and follow steps.</i>
Oiled wildlife response	Yes	No	L2/3	If oiled wildlife is a potential impact, request AMOSC to mobilise containerised oiled wildlife first strike kits and relevant personnel. Refer to relevant Tactical Response Plan for potential wildlife at risk. Mobilise AMOSC oiled wildlife containers. Consider whether additional equipment is required from local suppliers.	Logistics and Planning	WITHIN 24 HOURS: Initiate a wildlife first strike response within 24 hours of confirmed or imminent wildlife contact as directed by relevant Operational Monitoring techniques (OM01-05) and in liaison with DBCA.	Oiled Wildlife Response Operational Plan.
Scientific monitoring (type II)	Yes	No	L2/3	Notify Woodside science team of spill event.	Environment		Oil Spill Scientific Monitoring Programme – Operational Plan.
Source Control Techniques							
Well Intervention - SFRT	No	Yes	L2/3	Dry Gas: As per Source Control Emergency Response Plan.	Operations, Logistics and Planning (source control)	WITHIN 48 HOURS: Remotely Operated Vehicle (ROV) on Mobile Offshore Drilling Unit (MODU) ready for deployment within 48 hours.	Subsea First Response Toolkit (SFRT) Operational Plan Source Control Emergency Response Plan.
Subsea Dispersant	No	No	N/A	Not applicable for a diesel spill or dry gas release.			
Capping Stack	No	Yes	L2/3	Dry Gas: Conventional/vertical capping stack deployment with a heavy lift vessel will be attempted at the discretion of the vessel master on the day, giving due regard to the safety of the vessel and crew and consideration to the factors that may influence a safe deployment such as plume and environmental conditions (e.g. wind speed, wave height and current).	Operations, Logistics and Planning (source control)	DAY 16: Capping stack deployed by a chartered construction vessel.	SFRT and Capping Stack Operational Plan. Source Control Emergency Response Plan.
Relief Well	No	Yes	L2/3	Dry Gas: As per Source Control Emergency Response Plan.	Operations, Logistics and Planning (source control)	WITHIN 24 HOURS: Identify source control vessel availability within 24 hours. ROV on MODU ready for deployment within 48 hours. MODU mobilised to location.	Source Control Emergency Response Plan.

3. RESPONSE PROTECTION AREAS

Action: Provide relevant Control Agency with applicable Tactical Response Plans for any Response Protection Areas (RPAs) identified during operational monitoring.

Based on stochastic hydrocarbon spill modelling results, only CS-01 is predicted to result in shoreline contact at feasible response thresholds (>100 g/m²). The sensitive receptors outlined in **Table 3-1** are identified as priority protection areas, as they have the potential to be contacted by hydrocarbon at or above impact threshold levels within ~48 hours of a spill.

Table 3-1: Receptors for Priority Protection with Potential Impact within ~48 Hours

Receptor	Distance and Direction from Operational Area (km)	Minimum time to shoreline contact (above 100 g/m ²) in days	Maximum shoreline accumulation (above 100 g/m ²) in m ³	Tactical Response Plans
Dampier Archipelago	Adjacent to Trunkline Operational Area (State Waters end)	0.75	55	Mermaid Sound - Dampier Archipelago Inshore Waters
Keast Island	8.54 km east of Trunkline Operational Area (State Waters end)	0.75	20	
Gidley Island	8.97 km south-east of Trunkline Operational Area (State Waters end)	1.63	12	
Cape Bruguieres	6 km south-east of Trunkline Operational Area (State Waters end)	1.25	48	
Angel Island	12.10 km south-east of Trunkline Operational Area (State Waters end)	2.46	3	
Cohen Island	5.83 km east of Trunkline Operational Area (State Waters end)	1.29	5	
Rosemary Island	15.80 km south-west of Trunkline Operational Area (State Waters end)	1.21	21	Rosemary Island – Dampier
Legendre Island	9.53 km east of Trunkline Operational Area (State Waters end)	0.83	15	Legendre Island – Dampier

Tactical Response plans for these and other locations can be accessed via this [link](#) and include the details of potential forward operating bases and staging areas.

Oil Spill Trajectory Modelling specific to the spill event will be required to determine the regional sensitive receptors to be contacted beyond 48 hours of a spill.

Figure 3-1 illustrates the location of regional sensitive receptors in relation to the Scarborough Offshore Facility and Trunkline Operations Operational Areas (collectively referred to as the Petroleum Activities Area (PAA)).

Consideration should be given to other stakeholders (including mariners) in the vicinity of the spill location.

Table 3-2 indicates the assets within the vicinity of the PAA.

Table 3-2: Assets within 50 km of the Scarborough Project PAA

Asset	Distance and Direction from PAA	Operator
Wheatstone Platform	10 km north	Chevron
Pluto Platform	2 km north	Woodside
Stag Platform	5 km south	Jadestone
Reindeer Platform	15 km north	Santos
Goodwyn Platform	48 km north	Woodside
Campbell Platform and Sinbad platform (Varanus hub)	50 km south	Santos

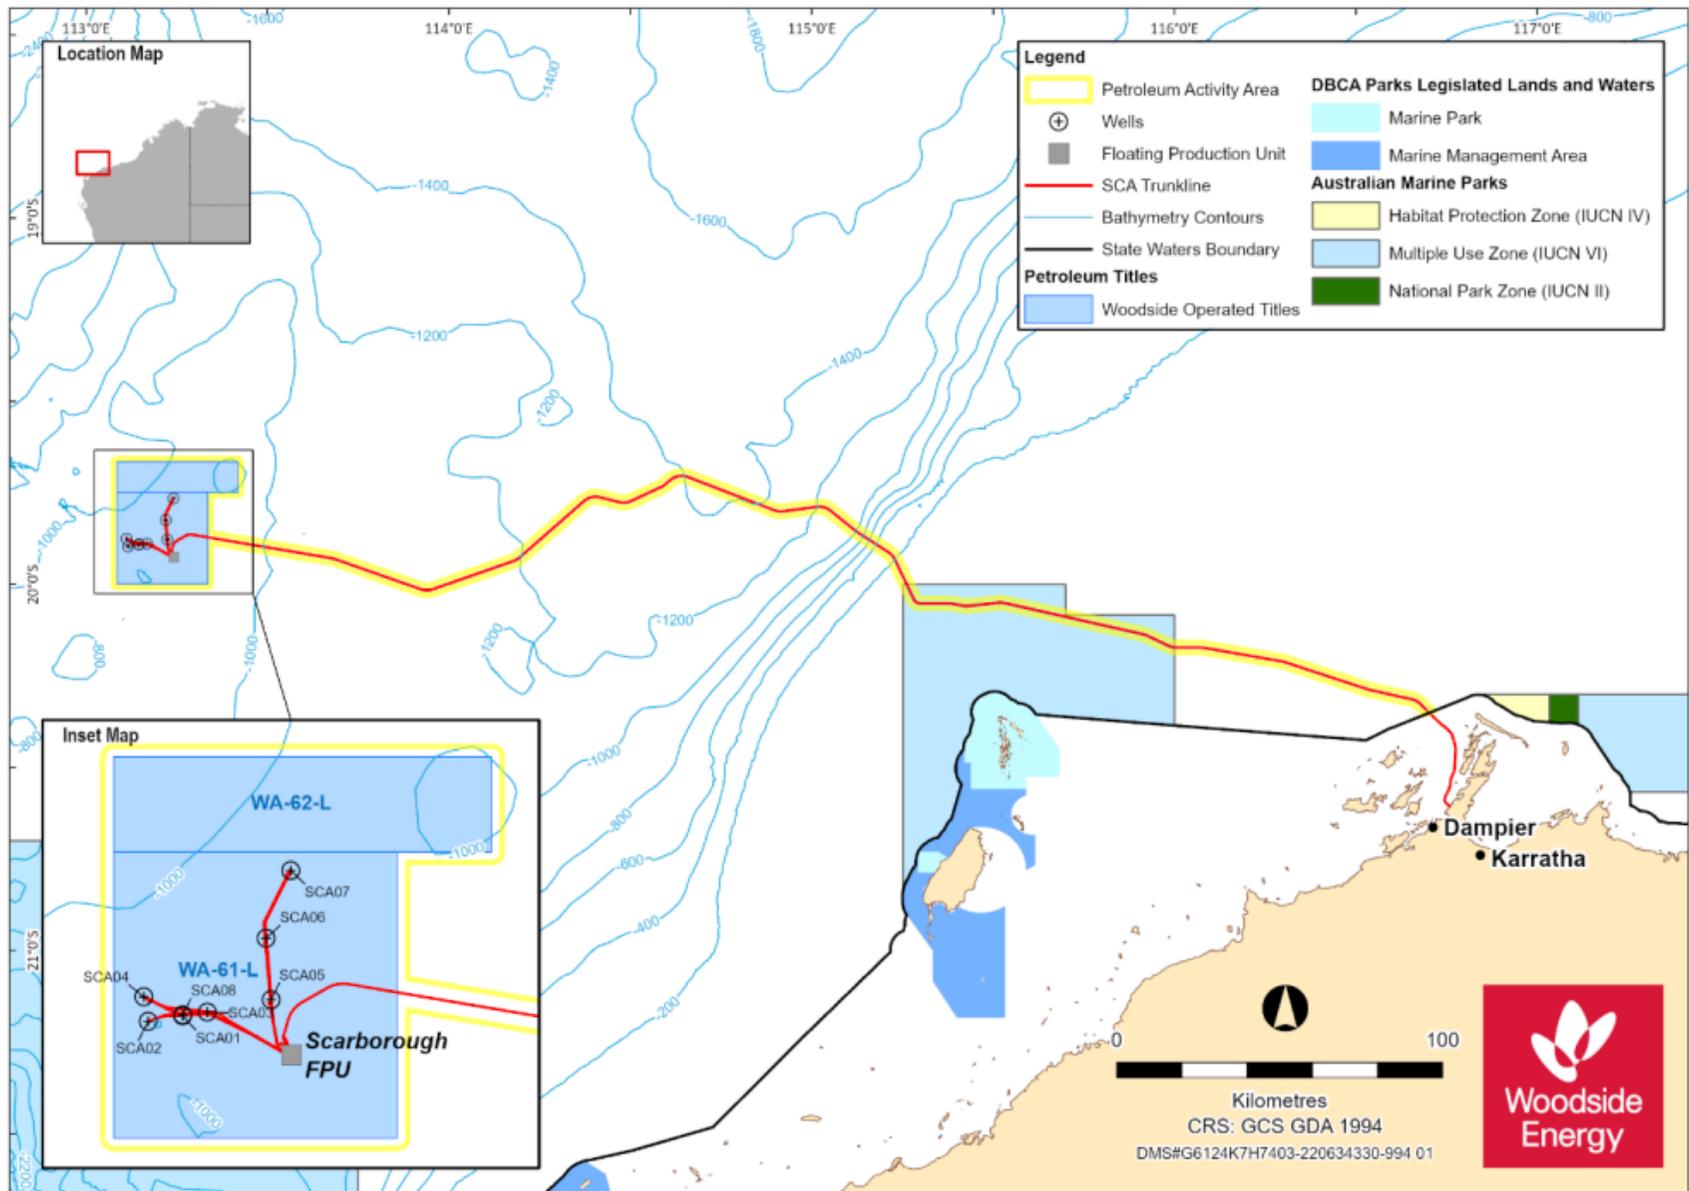

Figure 3-1: Petroleum Activity Area and regional sensitive receptors

4. DISPERSANT APPLICATION

Dispersant is not considered an appropriate response strategy for this activity as described in the Scarborough Offshore Facility and Trunkline Operations Environment Plan Appendix D (Woodside's Oil Spill Preparedness and Response Mitigation Assessment).

APPENDIX A – CREDIBLE SPILL SCENARIOS AND HYDROCARBON INFORMATION

Table A - 1: Credible spill scenarios and hydrocarbon information

Scenario	Product	API gravity	Volume	Residue	Weathering rate		Suggested ADIOS2 Analogue ²
CS-01 <i>Instantaneous Release of 250 m³ of Marine Diesel outside Mermaid Sound</i>	MDO	0.829 @ 25°C	250 m ³	5% (12.5 m ³)	12 hours (BP < 180 °C)	6.0%	<i>Diesel Fuel Oil (Southern USA 1). API of 37.2</i>
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	
CS-02 <i>Instantaneous Release of 250 m³ of Marine Diesel within Montebello AMP</i>	MDO	0.829 @ 25°C	250 m ³	5% (12.5 m ³)	12 hours (BP < 180 °C)	6.0%	<i>Diesel Fuel Oil (Southern USA 1). API of 37.2</i>
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	
CS-03 <i>Instantaneous Release of 470 m³ of Marine Diesel at the FPU Location</i>	MDO	0.829 @ 25°C	470 m ³	5% (23.5 m ³)	12 hours (BP < 180 °C)	6.0%	<i>Diesel Fuel Oil (Southern USA 1). API of 37.2</i>
					24 hours (180 °C < BP < 265 °C)	34.6%	
					Several days (265 °C < BP < 380 °C)	54.4%	
CS-04 <i>Loss of well containment due to a failure at the wellheads and/or Xmas trees</i>	Dry Gas	N/A	No liquid hydrocarbon	N/A	N/A	N/A	N/A
					N/A	N/A	
					N/A	N/A	

² Initial screening of possible ADIOS2 analogues considered hydrocarbons with similar APIs. Suggested selection is based on the closest distillation cut to the Woodside hydrocarbon. Only hydrocarbons with >380°C distillation cuts were included in selection process.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX B – NOTIFICATION FORMS

APPENDIX E – WOODSIDE INCIDENT MANAGEMENT STRUCTURE

Woodside incident management structure for hydrocarbon spill (including Woodside Liaison Officers command structure within DoT IMT if required).

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

APPENDIX F – WOODSIDE LIAISON OFFICER RESOURCES TO DOT

In the event that the DoT is required to establish an IMT, Woodside will make available an appropriate number of appropriately qualified persons to work within the DoT IMT. In the event the PPA is the Control Agency within the Dampier Port limits, Woodside will make available similar roles as requested.

It is an expectation that Woodside's nominated CMT Liaison Officer and the Deputy Incident Controller attend the DoT Fremantle Incident Control Centre (ICC) as soon as possible after the formal request has been made by the SMPC, and no later than 8 am on the day following the request being formally made. For Woodside personnel designated to serve in DoT's Forward Operating Base (FOB), it is expected that they arrive at the FOB no later than 24 hours from the formal request being made by the SMPC.

Area	Role	Woodside Liaison Role ⁴	Key Duties	#
DoT Maritime Environmental Emergency Coordination Centre (MEECC)	CMT Liaison Officer	CIMT Liaison	<ul style="list-style-type: none"> Provide a direct liaison between the CMT and the MEECC. Facilitate effective communications and coordination between the CIMT Leader and State Marine Pollution Coordinator (SMPC). Offer advice to SMPC on matters pertaining to PT crisis management policies and procedures. 	1
DoT IMT Incident Control	Deputy Incident Controller	Deputy Incident Commander (Deputy IC)	<ul style="list-style-type: none"> Provide a direct liaison between the PT IMT and DoT IMT. Facilitate effective communications and coordination between the PT IC and the DoT IC. Offer advice to the DoT IC on matters pertaining to PT incident response policies and procedures. Offer advice to the Safety Coordinator on matters pertaining to PT safety policies and procedures, particularly as they relate to PT employees or contractors operating under the control of the DoT IMT. 	1
DoT IMT Intelligence	Deputy Intelligence Officer	Situation Unit Leader (Intelligence)	<ul style="list-style-type: none"> As part of the Intelligence Team, assist the Intelligence Officer in the performance of their duties in relation to situation and awareness. Facilitate the provision of relevant modelling and predications from the PT IMT. Assist in the interpretation of modelling and predictions originating from the PT IMT. Facilitate the provision of relevant situation and awareness information originating from the DoT IMT to the PT IMT. Facilitate the provision of relevant mapping from the PT IMT. Assist in the interpretation of mapping originating from the PT IMT. Facilitate the provision of relevant mapping originating from the DoT IMT to the PT IMT. 	1

⁴ These positions would be mobilised, in consultation with DoT, to align to the actual spill scenario. The selected roles and/or individual personnel would be subject to continued evaluation to ensure continued 'best fit'. For CIMT roster arrangements, contact the WCC. During a prolonged response, additional personnel may be sourced through internal resourcing and mutual Aid agreements such as the AMOSC Core Group via [11]

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside Liaison Role ⁴	Key Duties	#
DoT IMT Intelligence – Environment	Environment Support Officer	Deputy Environment Unit Leader	<ul style="list-style-type: none"> As part of the Intelligence Team, assist the Environment Coordinator in the performance of their duties in relation to the provision of environmental support into the planning process. Assist in the interpretation of the PT OPEP and relevant TRP plans. Facilitate in requesting, obtaining and interpreting environmental monitoring data originating from the PT IMT. Facilitate the provision of relevant environmental information and advice originating from the DoT IMT to the PT IMT. 	1
DoT IMT Planning-Plans/ Resources	Deputy Planning Officer	Deputy Planning Section Chief	<ul style="list-style-type: none"> As part of the Planning Team, assist the Planning Officer in the performance of their duties in relation to the interpretation of existing response plans and the development of incident action plans and related sub plans. Facilitate the provision of relevant IAP and sub plans from the PT IMT. Assist in the interpretation of the PT OPEP from the PT. Assist in the interpretation of the PT IAP and sub plans from the PT IMT. Facilitate the provision of relevant IAP and sub plans originating from the DoT IMT to the PT IMT. Assist in the interpretation of the PT existing resource plans. Facilitate the provision of relevant components of the resource sub plan originating from the DoT IMT to the PT IMT. <p>(Note this individual must have intimate knowledge of the relevant PT OPEP and planning processes)</p>	1
DoT IMT Public Information-Media/ Community Engagement	Deputy Public Information Officer	Deputy Public Information Officer	<ul style="list-style-type: none"> As part of the Public Information Team, provide a direct liaison between the PT Media team and DoT IMT Media team. Facilitate effective communications and coordination between the PT and DoT media teams. Assist in the release of joint media statements and conduct of joint media briefings. Assist in the release of joint information and warnings through the DoT Information and Warnings team. Offer advice to the DoT Media Coordinator on matters pertaining to PT media policies and procedures. Facilitate effective communications and coordination between the PT and DoT Community Liaison teams. Assist in the conduct of joint community briefings and events. Offer advice to the DoT Community Liaison Coordinator on matters pertaining to the PT community liaison policies and procedures. Facilitate the effective transfer of relevant information obtained from through the Contact Centre to the PT IMT. 	1

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Area	Role	Woodside Liaison Role ⁴	Key Duties	#
DoT IMT Logistics	Deputy Logistics Officer	Deputy Logistics Section Chief	<ul style="list-style-type: none"> As part of the Logistics Team, assist the Logistics Officer in the performance of their duties in relation to the provision of supplies to sustain the response effort. Facilitate the acquisition of appropriate supplies through the PTs existing OSRL, AMOSC and private contract arrangements. Collects Request Forms from DoT to action via PT IMT. <p>(Note this individual must have intimate knowledge of the relevant PT logistics processes and contracts)</p>	1
DoT IMT Finance-Accounts/ Financial Monitoring	Deputy Finance Officer	Deputy Finance Section Chief	<ul style="list-style-type: none"> As part of the Finance Team, assist the Finance Officer in the performance of their duties in relation to the setting up and payment of accounts for those services acquired through the PTs existing OSRL, AMOSC and private contract arrangements. Facilitate the communication of financial monitoring information to the PT to allow them to track the overall cost of the response. Assist the Finance Officer in the tracking of financial commitments through the response, including the supply contracts commissioned directly by DoT and to be charged back to the PT. 	1
DoT IMT Operations	Deputy Operations Officer	Deputy Operations Section Chief	<ul style="list-style-type: none"> As part of the Operations Team, assist the Operations Officer in the performance of their duties in relation to the implementation and management of operational activities undertaken to resolve an incident. Facilitate effective communications and coordination between the PT Operations Section and the DoT Operations Section. Offer advice to the DoT Operations Officer on matters pertaining to PT incident response procedures and requirements. Identify efficiencies and assist to resolve potential conflicts around resource allocation and simultaneous operations of PT and DoT response efforts. 	1
DoT IMT Operations – Waste Management	Deputy Waste Management Coordinator	Deputy Waste Coordinator (Materials)	<ul style="list-style-type: none"> As part of the Operations Team, assist the Waste Management Coordinator in the performance of their duties in relation to the provision of the management and disposal of waste collected in State waters. Facilitate the disposal of waste through the PT's existing private contract arrangements related to waste management and in line with legislative and regulatory requirements. Collects Request Forms from DoT to action via PT IMT. 	1
DoT FOB Operations Command	Deputy Division Commander	FOB Deputy Incident Commander	<ul style="list-style-type: none"> As part of the Field Operations Team, assist the Division Commander in the performance of their duties in relation to the oversight and coordination of field operational activities undertaken in line with the IMT Operations Section's direction. Provide a direct liaison between the PT FOB and DoT FOB. 	1

APPENDIX G – DOT LIAISON OFFICER RESOURCES TO WOODSIDE

Once DoT activates a State waters/shorelines IMT, DoT will make available the following roles to Woodside.

Area	DoT Liaison Role	Personnel Sourced from:	Key Duties	#
Woodside CIMT	DoT Liaison Officer (prior to DoT assuming Controlling Agency)/ Deputy Incident Controller – State waters (after DoT assumes Controlling Agency)	DoT	<ul style="list-style-type: none"> Facilitate effective communications between DoT’s SMPC/Incident Controller and the Petroleum Titleholder’s appointed CMT Leader/Incident Controller. Provide enhanced situational awareness to DoT of the incident and the potential impact on State waters. Assist in the provision of support from DoT to the Petroleum Titleholder. Facilitate the provision technical advice from DoT to the Petroleum Titleholder Incident Controller as required. 	1
Woodside Public Information – Media	DoT Media Liaison Officer	DoT	<ul style="list-style-type: none"> Provide a direct liaison between the PT Media team and DoT IMT Media team. Facilitate effective communications and coordination between the PT and DoT media teams. Assist in the release of joint media statements and conduct of joint media briefings. Assist in the release of joint information and warnings through the DoT Information & Warnings team. Offer advice to the PT Media Coordinator on matters pertaining to DoT and wider Government media policies and procedures. 	1
Total DoT Personnel Initial Requirement to Woodside				2

Uncontrolled when printed. Refer to electronic version for most up to date information.

The Scarborough OPP describes the scope of the project and its component activities, at a level comprehensive enough to facilitate thorough evaluation of environmental impacts and risks and appropriate setting of EPOs. However, in accordance with NOPSEMA guidance, it is acknowledged that an OPP is prepared at an early stage in project development, before detailed planning of component activities has occurred. More detailed descriptions of the component activities are therefore expected in subsequent EPs.

Refinement or modifications to methods or timing for individual project activities may occur after an OPP acceptance and before the submission of EPs. These refinements or modifications to the accepted project cannot be new activities and cannot significantly change the overall environmental impacts and risks of the project as described in the accepted OPP. Table 1 below shows which scopes from the Scarborough OPP may have progressed in level of definition from the time the Scarborough OPP was authored.

Section 4 of the Scarborough OPP provides a detailed description of the entire Scarborough project, including the Petroleum Activities Program covered by this EP.

Table 1: Concordance of activities described in the Scarborough Offshore Project Proposal with those included in this Environment Plan

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
Introduction	The OPP states that Woodside is targeting a final investment decision (FID) in 2020 to be ready for first cargo in 2024.	FID occurred in November 2021, and first cargo planned for 2026.	No	Yes	No	No relevance to environmental impact/risks. Achieving these milestones is subject to regulatory approvals and commercial arrangements being finalised.
4.4.2.1	With respect to reservoir monitoring methodology, the OPP states that "Pressure and saturation changes in the reservoir will be monitored over the life of the Project. Data will be used to inform decisions regarding reservoir management."	Reservoir monitoring methods have since been further defined to include gravimetry, a process involving installation of concrete pads on the seabed which are used to periodically support a passive gravity meter and enable determination of a field-wide measurement of gravity (refer to Section 3.10).	Yes	No	No	This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP. Section 6.7.2 of the EP has assessed the impact/consequence of seabed disturbance from subsea infrastructure (including gravimetry concrete pads) to have a maximum impact significance level of 'D' (Minor) based on impact potential for the most sensitive receptor (KEFs). The impact significance levels for receptors are consistent with the levels rated in the Scarborough OPP.

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
		The extent of seabed disturbance caused by gravimetry concrete pads across WA-61-L and WA-62-L is up to 530 m ² (concrete pads are each ~2 m ² in area). Although this area was not specifically included in the OPP seabed disturbance calculations, it is encompassed in the contingency area included in the 0.234 km ² total disturbance estimate. This area was used as a basis for impact assessment in the OPP. Hence there is no change in impact from the OPP.				As part of consultation for this EP, all relevant stakeholders have been consulted on the activity, including the gravimetry scope.
4.4.2.3	The OPP states that FPU Mooring radius is 1400 m.	Mooring horizontal distance from fairlead chain stopper to pile up to 1770 m.	Yes	No	No	Seabed disturbance assessment in (Section 6.7.2) is independent of mooring horizontal distance length.
4.4.2.3	The OPP states that FPU deck dimensions are 2 @ 70x 70 x 13 m, and draft is 28 m.	3 decks. Middle (largest) deck is 78 x 101 m, with draft of 32 m.	Yes	No	No	No relevance to environmental impact/risks.
4.4.6.1	The OPP states that chemicals stored on the FPU include acids and solvents, hydrate and corrosion inhibitor, surfactants,	FPU also stores scale inhibitor, deoiler/ demulsifier, biocide, oxygen scavenger, divalent cation removal,	Yes	No	No	Chemical selection in line with Section 3.9.16.5

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
	lubricating fluid and greases, hydraulic oils and fluids, paints, specialised cleaning fluids, seawater system treatment chemicals"	antifoam, inorganic scale remover				
7.1.1.1	The OPP states that FPU light emissions are generally metal halide, halogen or fluorescent bright white	This has been changed to LED fixtures.	Yes	No	No	No relevance to environmental impact/risks. There are no relevant receptors of light emissions.
7.1.3.2	The OPP states that average annual total Scope 1 and Scope 3 GHG emissions are 28.42 MtCO ₂ -e in an average year.	Estimates updated with most recent available information and aligned to most recent regulatory framework, for an estimate of 36 MtCO ₂ -e.	Yes	No	No	<p>This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP.</p> <p>These changes are best understood by comparing material differences between Table 6-22 from the EP and Table 7-20 from the OPP.</p> <p>The estimate for annual direct emissions has increased from 0.47 to 0.61 MtCO₂e. This is due to a number of factors:</p> <ul style="list-style-type: none"> The OPP estimate is based on an average year of production, whereas the updated EP estimate is the highest expected annual emissions in the five-year life of the EP. Higher emissions are expected during the early phases of operation (i.e., the duration of this EP) due to start-up and high production/export rates. This is expected to change over time in line with production profile.

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
						<ul style="list-style-type: none"> Design development since the OPP was published has resulted in an increased production rate expected in early field life. Assumptions related to design and equipment have been updated to reflect latest engineering information, and methodology used to estimate emissions associated with fuel gas combustion on the facility was changed from NGERS Method 2 to the more conservative Method 1. <p>The annual estimate of GHG emissions associated with onshore processing has slightly increased from 2.84 in the OPP to 2.90 MtCO₂e in the EP. Design development since the OPP has resulted in higher expected maximum onshore processing rate (8.55 t LNG and 1.35 t Domgas as described in Section 6.7.6) which has now been applied.</p> <p>The estimate for annual third party transport of products, regasification, distribution and end use has increased from 25.11 in the OPP to 32 MtCO₂e in the EP due to increased expected LNG and Domgas production rate associated with Scarborough gas following onshore processing.</p> <p>Further, A factor of 3.4 tCO₂e/tLNG was applied in estimates for the OPP. This was misrepresented in Table 7-18 of the OPP for Third Party LNG consumption as 3.13 tCO₂e/tLNG. As stated in Table 6-20 of this EP, a factor of 3.32 tCO₂/tLNG is now used. This is based on the same underlying data from Ecoinvent, however</p>

Scarborough OPP Section	Scope or overview of the Activity	Relevance to this EP	Refinement or modification to methods	Refinement or modification to timing	Is this a new activity	Significance of change
						has changed due to updated LNG density assumptions. As described in section 6.7.6, it is not appropriate to apply these annual values over the expected field life due to production rate changes as the field/s decline. Due to this uncertainty, conservative estimates over development life from the OPP have been retained. These are also inclusive of Thebe and Jupiter fields which may be tied into the Scarborough FPU in future and is therefore selected as the most appropriate bounds for the assessment.
7.1.4.1	The OPP states the expected underwater noise source levels.	Updated underwater noise modelling was conducted, providing underwater noise source levels specific to the FPU and associated operations.	Yes	No	No	This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP. The underwater noise source levels described in the EP do not differ significantly from those described in the OPP, and provide a more accurate representative of the noise sources for this scope.
7.2.6.1	The OPP states that credible loss of hydrocarbon to sea during bunkering is 8 m ³ MDO.	Credible bunkering loss of containment has been reassessed as 50 m ³ , based on more stringent application of AMSA guidance (AMSA 2023)	Yes	No	No	This change does not significantly alter the overall environmental impacts and risks of the project as described in the accepted Scarborough OPP. This is not the governing hydrocarbon loss of containment scenario for this scope, hence the assessment of this risk is covered under the governing scenario (loss of structural integrity of the FPU).

APPENDIX K: MURUJUGA ROCK ART STRATEGY AND MURUJUGA ROCK ART MONITORING PROGRAM

Program: Murujuga Rock Art (Western Australian Government)

The Western Australian Government publish on their aboriginal heritage conservation website a summary of their Murujuga Rock Art Program, the partnership with Murujuga Aboriginal Corporation, and the Murujuga Rock Art Strategy.. A description of the program is provided below, courtesy of Govt of Western Australia Website: <https://www.wa.gov.au/service/aboriginal-affairs/aboriginal-heritage-conservation/program-murujuga-rock-art>

Background:

Murujuga (which means 'hip bone sticking out' in the Ngarluma-Yaburara language) comprises the Burrup Peninsula and the Dampier Archipelago 1,300 km north of Perth, Western Australia. The Government of Western Australia (State Government) recognises Murujuga as a unique ecological and archaeological area containing one of the largest collections of Aboriginal engraved rock art in the world. Murujuga is also home to industry that contributes to the local, state and national economy and employment. Concerns the rock art could be damaged by industrial air emissions have led to several independent scientific studies and rock art monitoring initiatives since the mid 2000s.

Murujuga Rock Art Strategy:

The purpose of the Murujuga Rock Art Strategy (MRAS) is to protect the Aboriginal rock art by providing a long-term framework that builds on previous work to deliver an improved approach to monitoring, analysis and management.

The Murujuga Rock Art Strategy will be reviewed at least every five years. This will ensure it remains current, supports appropriate governance arrangements, and that the best scientific knowledge and management practices are used to protect the rock art.

Scope:

The department has primary responsibility for the day-to-day implementation of the strategy in partnership with MAC. This includes working with MAC to oversee the development and implementation of a world's best practice monitoring and analysis program that will determine whether the rock art on Murujuga is subject to accelerated change.

The scope of this strategy is to:

- establish an environmental quality management framework, including the derivation and implementation of environmental quality criteria
- develop and implement a robust program of monitoring and analysis to determine whether change is occurring to the rock art on Murujuga
- identify and commission scientific studies to support the implementation of the monitoring and analysis program and management
- establish governance arrangements to ensure that:
 - monitoring, analysis and reporting are undertaken in such a way as to provide confidence to Traditional Owners, the community, industry scientists and other stakeholders about the integrity, robustness, repeatability and reliability of the monitoring data and results
 - government is provided with accurate and appropriate recommendations regarding the protection of the rock art, consistent with legislative responsibilities
 - develop and implement a communication strategy in consultation with stakeholders.

Monitoring Program [Murujuga Rock Art Monitoring Program – MRAMP]:

A best practice monitoring and analysis program commenced in 2020. It will provide reliable information on changes and trends in the condition of the rock art and whether the rock art is showing signs of accelerated change.

The program includes:

- installation of air quality monitoring stations across Murujuga
- regular field measurements of selected rock art panels using a variety of methods
- detailed laboratory investigation of rock samples, including the microorganisms living on the rock surface.

The results from these studies will guide management and protection of the rock art. Reports produced as part of the monitoring program are regularly published in the Murujuga Rock Art Strategy document collection.

The monitoring program is overseen by the department and MAC, in consultation with national and international subject matter experts, a panel of independent peer reviewers and stakeholders. MAC has developed the Murujuga Research Protocols as a set of governing principles and guidelines to ensure research is conducted in a respectful and culturally appropriate manner.

The monitoring program is being implemented by Calibre Group and experts from Curtin University until early 2026. Curtin University has also developed a training program for MAC Rangers to build their skills and knowledge in monitoring and analysis techniques. Once Rangers are qualified, MAC will be well placed to implement the monitoring from 2026 onwards.

Conceptual models of the rock art system were published in 2021 to share the current understanding of the system and interactions that are likely to be occurring. These models inform the development of the monitoring studies plans and the development of an environmental quality management framework.

The monitoring studies data collection and analysis plan, published in April 2022, is crucial to the design of the Murujuga Rock Art Monitoring Program, and the scope and quality of the science to monitor, evaluate and report on changes and trends in the integrity of the rock art on Murujuga.

The first Monitoring Studies Technical Report was published in December 2023, following an independent peer review process. View the Summary Monitoring Studies Report. View all reports from the Murujuga Rock Art Monitoring Program.

Key milestones and status:

Year	Program key milestone and status
2020-2021	<ul style="list-style-type: none"> • <i>Review of weathering/alteration/degradation processes that have the potential to cause change in the rock art (completed)</i> • <i>Delivery of a stakeholder workshop (completed)</i> • <i>Development of conceptual models and monitoring studies plan (completed)</i> • <i>Determination of optimal monitoring sites (completed)</i> • <i>Peer review of conceptual model and monitoring studies plan (completed)</i>
2022	<ul style="list-style-type: none"> • <i>MAC and the department's approval of the monitoring studies plan (completed)</i> • <i>State Government commitment to funding dedicated MAC Ranger positions and to support training and capacity building for MAC (announced May 2022)</i> • <i>Completion of fieldwork and laboratory monitoring studies (2022 studies completed)</i> • <i>Commencement of Ranger training needs analysis, Ranger training and capacity building (completed)</i>
2023	<ul style="list-style-type: none"> • <i>Continuation of fieldwork and laboratory monitoring studies (2023 fieldwork completed)</i> • <i>Procurement and installation of air quality monitoring stations (completed)</i> • <i>Continuation of Ranger training and capacity building (completed)</i> • <i>Development of report on monitoring studies March 2022–March 2023 (peer reviewed) (completed)</i> • <i>Delivery of a stakeholder workshop (completed)</i>
2024	<ul style="list-style-type: none"> • <i>Continue fieldwork and laboratory monitoring studies</i> • <i>Report on monitoring studies April 2023–April 2024 (peer reviewed)</i> • <i>Design ongoing monitoring program</i> • <i>Develop interim Environmental Quality Criteria (EQC) based on field and laboratory (chamber) studies</i> • <i>Implement the ongoing monitoring program</i> • <i>Commence reporting against interim EQC</i> • <i>Continue Ranger training and capacity building (Curtin University micro credentials)</i> • <i>Develop Environmental Monitoring Programme Regulations under the Environmental Protection Act 1986</i> • <i>Independent review of the Murujuga Rock Art Strategy</i>
2025	<ul style="list-style-type: none"> • <i>Report on monitoring studies April 2024–April 2025 (peer reviewed)</i> • <i>Design final monitoring program</i> • <i>Develop final EQC</i> • <i>Report on monitoring program 2024–2025</i>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

	<ul style="list-style-type: none"> • Commence progressive handover monitoring and reporting program to Murujuga Aboriginal Corporation (with support from the department) • Independent review of the monitoring program
2026 (and beyond)	<ul style="list-style-type: none"> • Ongoing monitoring program managed by the Murujuga Aboriginal Corporation and the Department of Water and Environmental Regulation • Ongoing monitoring and reporting against final EQC

Stakeholder Reference Group:

The Murujuga Rock Art Stakeholder Reference Group is an advisory group that was established by the previous Minister for Environment, Hon. Stephen Dawson MLC, in September 2018. The group facilitates engagement between the Murujuga Aboriginal Corporation (MAC) and key government, industry and community representatives on the development and implementation of the strategy. Professor Stephen van Leeuwen is the independent chair of the stakeholder reference group, which meets on a quarterly basis. Visit the document collection to read [summaries of meetings and community forums](#). The [Terms of Reference](#) are reviewed regularly in consultation with MAC and the Independent Chair to ensure the group remains effective in achieving its purpose.

1. INTRODUCTION

1.1 Purpose

This document applies, where indicated in the relevant Environment Plan (EP), to Woodside Energy Ltd. (Woodside) activities and operations.

1.2 Scope

This document describes the existing environment within the Woodside areas of activity located in Commonwealth waters off north-western Western Australia (WA), with a focus on the North-west Marine Region (NWMR) (

Figure 1-1). This document includes details of the particular and relevant values and sensitivities of the environment as required by the *Offshore Petroleum and Greenhouse Gas Storage (Environment) Regulations 2009* (Cth) (OPGGS (E) Regulations) to inform the impact and risk evaluation of Woodside's activities within the NWMR. Furthermore, the key values of the South-west Marine Region (SWMR) and the North Marine Region (NMR) are summarised to encompass areas outside the NWMR. This is with reference to the environment that may be affected (EMBA), as defined and described in individual EPs, for unplanned hydrocarbon spill risks. Additional information appropriate to the nature and scale of the impacts and risks of activities that may interact with the environment will be used to further inform impact and risk assessments and be included in the Description of the Existing Environment of individual EPs.

This document is informed by a variety of resources that includes: a search of the Department of Climate Change, Energy, the Environment and Water (DCCEEW) Protected Matters Search Tool (PMST) for the marine bioregions (NWMR, SWMR and NMR) and the three PMST reports provided in **APPENDIX A. Protected Matter Search Reports for NWMR, SWMR and NMR**; State (WA)/ Commonwealth Marine Park Management Plans, the *Environment Protection and Biodiversity Conservation Act 1999* (Cth) (EPBC Act) Species Profile and Threats Database (SPRAT), EPBC Act Part 13 statutory instruments (recovery plans, conservation advices and wildlife conservation plans for listed threatened and migratory species); and peer reviewed scientific publications, as well as Woodside and Joint Venture (JV) funded studies and other titleholder funded study findings available in the public domain.

1.3 Review and Revision

The information presented in this document is reviewed and updated on at least a 5-year basis. Key updates are captured in a 'change register'. Material risk may trigger updates within the 5-year review period, as per the OPGGS (E) Regulations. Key updates may include but are not limited to the status of EPBC Act listed species, Part 13 Instruments, policies and guidelines, key advice from external stakeholders and recently published scientific literature.

1.4 Regional Context

Where relevant, the physical, biological and social environments within the areas of interest are discussed with reference to the three marine bioregions of Australia—North-west marine region (NWMR), South-west marine region (SWMR) and North marine region (NMR), the Marine Bioregional Plans has been prepared under section 176 of the Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)¹ (**Table 1-1**). The NWMR is the focal marine bioregion for the Woodside Description of the Existing Environment as this is currently the location of most of Woodside's activities.

¹ <https://www.dcceew.gov.au/environment/marine/marine-bioregional-plans> (accessed:04/08/2024)

Table 1-1. Description of the Marine Bioregions

Marine Bioregion	Description
North-west (DSEWPAC, 2012a)	The NWMR includes all Commonwealth waters (from 3 nautical mile (nm) from the Territorial Sea Baseline (TSB) to the 200 nm Exclusive Economic Zone (EEZ) boundary) extending from the WA/Northern Territory border to Kalbarri, south of Shark Bay in WA, covering an area of approximately 1.07 million km ² and includes extensive areas of shallower waters on the continental shelf, as well as deep areas of abyssal plain where water depths are 5000 m or greater.
South-west (DSEWPAC, 2012b)	The SWMR comprises Commonwealth waters from the eastern end of Kangaroo Island in South Australia to Shark Bay in WA. The region spans approximately 1.3 million km ² of temperate and subtropical waters and abuts the coastal waters of SA and WA.
North (DSEWPAC, 2012c)	The NMR comprises Commonwealth waters from West Cape York Peninsula to the NT/WA border). The region covers approximately 625,689 km ² of tropical waters in the Gulf of Carpentaria and Arafura and Timor seas, and abuts the coastal waters of Queensland and the NT.

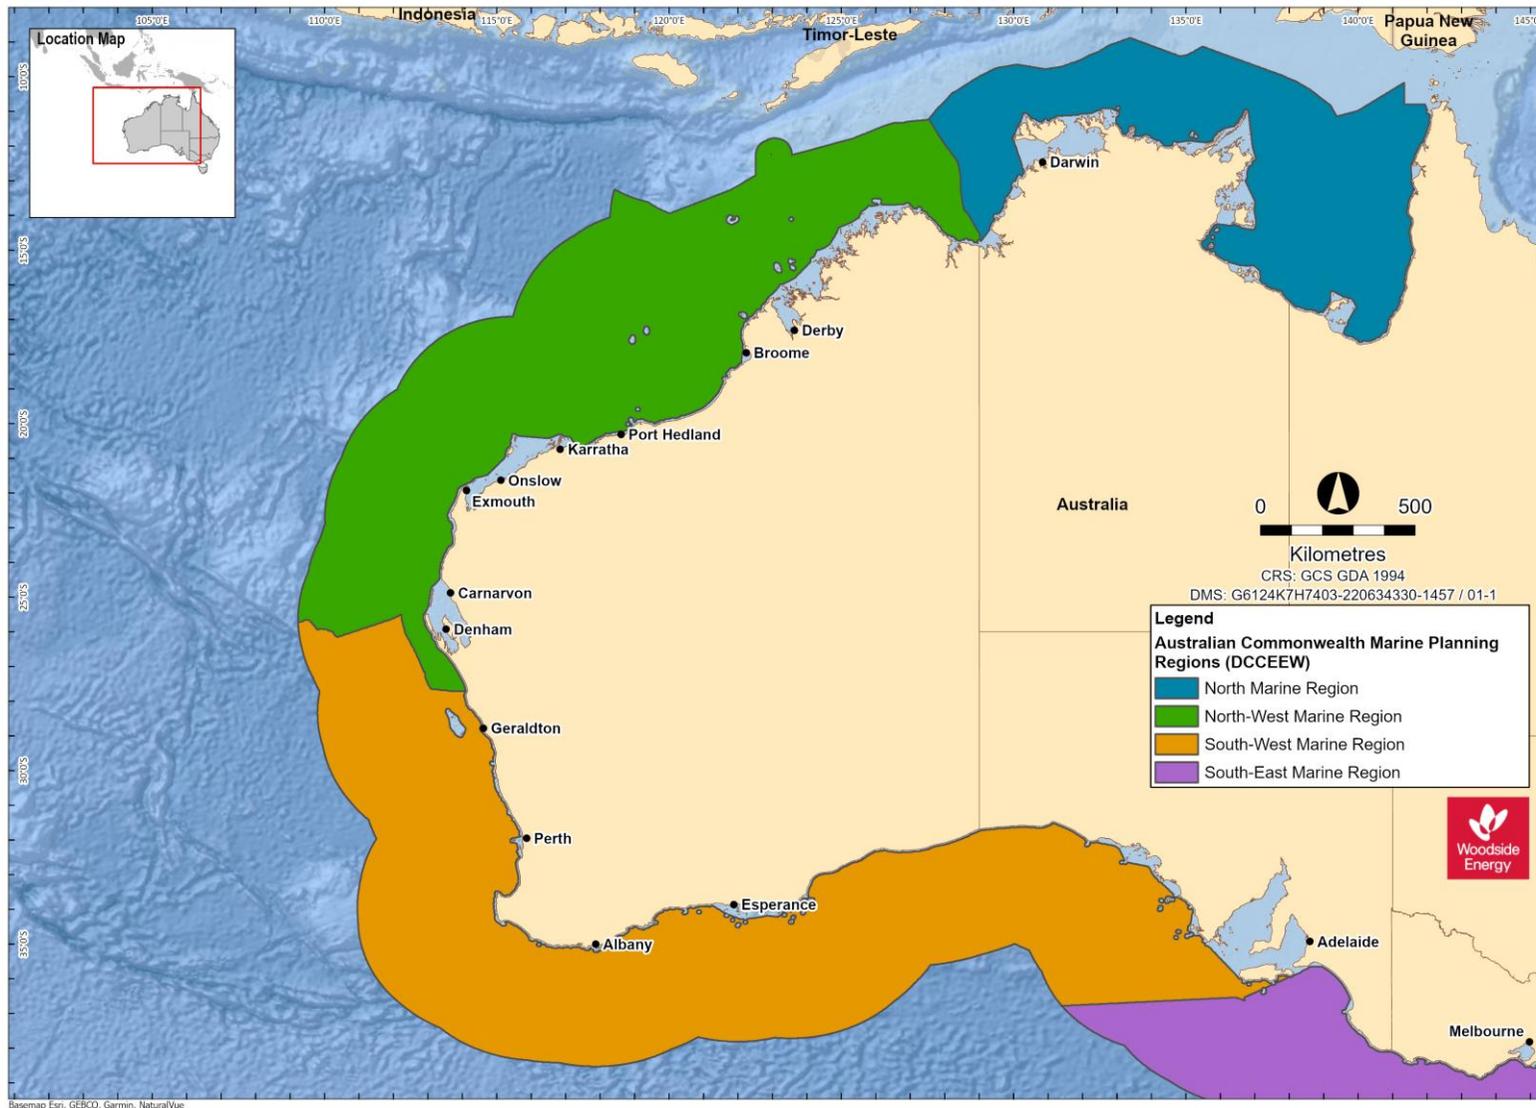

Figure 1-1. Marine Bioregions: North-west (NWMR), South-west (SWMR), North (NMR) and South-East (as defined under the EPBC Act, refer to (DCCEE, 2021b)).

2. PHYSICAL ENVIRONMENT

2.1 Regional Context

The key physical characteristics of the NWMR, SWMR and NMR are presented in **Table 2-1**. The remainder of this section then focuses entirely on the NWMR.

Table 2-1 Key physical characteristics of the NWMR, SWMR and NMR

Bioregion	Key Characteristics
North-west Marine Region	The NWMR experiences a tropical monsoonal climate towards the northern extent of the region, transitioning to tropical arid and subtropical arid within the central and southern areas of the region (DSEWPAC, 2012a).
	The NWMR is part of the Indo-Australian Basin, the ocean region between the north-west coast of Australia and the Indonesian islands of Java and Sumatra. Dominant currents in the Region include: the South Equatorial Current, the Indonesian Throughflow; the Eastern Gyral Current, and the Leeuwin Current (DEWHA, 2007a).
	The seafloor of the NWMR consists of four general feature types: continental shelf; continental slope; continental rise; and abyssal plain and is distinguished by a range of topographic features including canyons, plateaus, terraces, ridges, reefs, and banks and shoals.
South-west Marine Region	The SWMR contains both subtropical and temperate climates, with overall light climatic cycles.
	The SWMR experiences complex and unusual oceanographic patterns, driven largely by the Leeuwin Current and its associated currents that have a significant influence on biodiversity distribution and abundance.
	The major seafloor features of the SWMR include a narrow continental shelf on the West coast to the waters off South-west WA, and a wide continental shelf dominated by sandy carbonate sediments of marine origin in the Great Australian Bight. The region also contains a steep, muddy continental slope, many canyons and large tracts of abyssal plains (DSEWPAC, 2012b).
North Marine Region	The NMR experiences a tropical monsoonal climate with complex weather cycles, including high temperatures and heavy seasonal yet variable rainfall and cyclones, which can be both destructive (loss of seagrass and mangroves) and constructive (mobilisation of sediment into coastal habitats).
	The NMR comprises Commonwealth waters from West Cape York Peninsula to the NT-WA border, covering tropical waters in the Gulf of Carpentaria and Arafura and Timor seas. Currents in the NMR are driven largely by strong winds and tides, with only minor influences from oceanographic currents such as the Indonesian Throughflow and the South Equatorial Current (DSEWPAC, 2012c).
	The seafloor of the NMR consists mainly of a wide continental shelf, as well as other geomorphological features such as shoals, banks, terraces, valleys, shallow canyons and limestone pinnacles.

2.2 Marine Systems of the North-west Marine Region.

The NWMR is divided into three large scale ecological marine systems on the basis of the influence of major ocean currents, seafloor features and eco-physical processes (e.g. climate, tides, freshwater inflow) upon the Region (DSEWPAC, 2012a). The three large scale marine systems approximate the Woodside activity areas within the NWMR (**Figure 2-1**). The key characteristics of each marine system are outlined in **Table 2-2**.

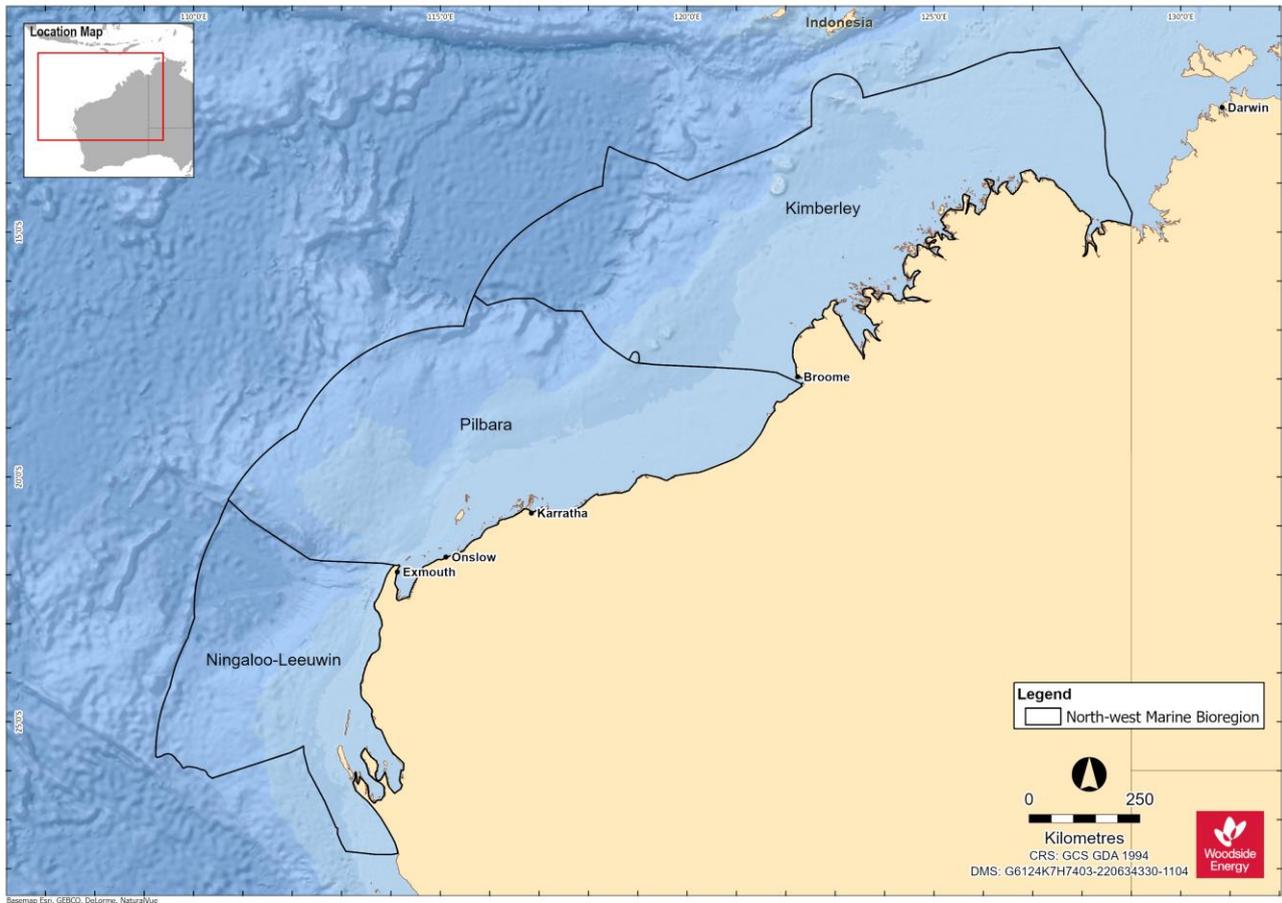

Figure 2-1. The marine systems of the North-west Marine Region (NWMR) (data source: DEWHA 2007a)

Table 2-2. Key characteristics of the Marine Systems of the NWMR

Note: Woodside areas align with the marine systems as described in DEWHA (2007a)

Marine System	Woodside Activity Area	Key Characteristics
Kimberley	Browse	<p>Tropical monsoonal climate</p> <p>Strong influence from Indonesian Throughflow</p> <p>Predominantly tropical Indo-Pacific species</p> <p>Subject to episodic offshore cyclonic activity, rarely crossing the coast</p> <p>Large tidal regimes</p> <p>Freshwater input from terrestrial monsoonal run-off</p> <p>Turbid coastal waters (i.e. light limited systems)</p> <p>Dominated by shelf environments</p> <p>Predominantly hard substrates in inner to mid-shelf environments</p> <p>Includes a number of shelf-edge atolls (i.e. Scott Reef, Rowley Shoals)</p>
Pilbara	North-west Shelf (NWS) / Scarborough	<p>Tropical arid climate</p> <p>Transition between Indonesian Throughflow and Leeuwin Current dominated areas</p> <p>Predominantly tropical species</p> <p>High cyclone activity with frequent crossing of the coast</p> <p>Transitional tidal zone</p> <p>Internal tide activity</p> <p>Large areas of shelf and slope</p> <p>Dry coast with ephemeral freshwater inputs</p>
Ningaloo-Leeuwin	North-west Cape	<p>Subtropical arid climate</p> <p>Leeuwin Current consolidates</p> <p>Transitional tropical/temperate faunal area</p> <p>Higher water clarity in near-shore and offshore environments</p> <p>Narrow shelf and slope</p> <p>Marginal tidal range</p> <p>Seasonal wind forcing more dominant influence on marine environment</p>

2.3 Meteorology and Oceanography

This section describes the general meteorological conditions and oceanography for the NWMR and provides further detail for the three Woodside activity areas (**Table 2-3**). The NWMR is influenced by a complex system of ocean currents that change between seasons and between years, which generally result in its surface waters being warm and nutrient-poor, and of low salinity (DEWHA, 2007a). The mix of bathymetric features, complex topography and oceanography across the whole North-west marine environment has created and supports a globally important marine biodiversity hotspot (Wilson, 2013). The purpose of **Table 2-3** is to provide high-level physical characteristics of the marine environment within and across the NWMR. This subsection does not describe warming trends or discuss forecast trajectories for the NWMR.

Table 2-3 NWMR climate and oceanography summary

Receptor	Description
Meteorology	
Seasonal patterns	The NWMR associated land mass of the Australian continent is characterised as a hot and humid summer climate zone. The broader NWMR experiences variations of a tropical or monsoon climate. In the far North-west (Kimberley), there is a hot summer season from December to March and a milder winter season between April and November. The Pilbara area is described as having a tropical arid climate with high cyclone activity (DEWHA, 2007a). The Pilbara and North-west Cape has a hot summer season from October to April and a milder winter season between May and September with transition periods between the summer and winter regimes.
Air temperature and rainfall	In summer (between September and March), maximum daily temperatures range from 18°C to 36°C. During winter (May to July), mean daily temperatures range from 12°C to 30°C (BOM, 2023c), refer to Figure 2-2a and b . Rainfall in the region typically occurs during the summer, with highest falls observed late in the season. This is often associated with the passage of tropical low-pressure systems and cyclones.
Wind	Wind patterns in North-west WA are dictated by the seasonal movement of atmospheric pressure systems. During summer, high-pressure cells produce prevailing winds from the North-west and South-west, which vary between 10 and 13 ms ⁻¹ . During winter, high-pressure cells over central Australia produce North-easterly to South-easterly winds with average speeds of between 6 and 8 ms ⁻¹ . Refer to Figure 2-3 and b .
Tropical cyclones	The NWS and Pilbara coast (within the NWMR) experiences more cyclonic activity than any other region of the Australian mainland coast (BOM, 2021a). Tropical cyclone activity typically occurs between November and April and is most frequent in the region during December to March (i.e. considered the peak period), with an average of about one cyclone per month (BOM, 2021a). Refer to Figure 2-4 .
Oceanography	
Ocean temperature	Waters in NWMR are tropical year-round, with sea surface temperature in open shelf waters reaching ~26°C in summer and dropping to ~22°C in winter. Nearshore temperatures (as recorded for the NWS area) fluctuate more widely on an annual basis from ~<23°C in winter to ~31°C in summer (Hallenberger et al. 2022), indicative of present-day sea surface temperatures, acquired from the CISRO Oceans and Atmosphere database. Refer to Figure 2-5a and b , for the seasonal variation across and within the NWMR.
Currents	<p>The major surface currents influencing North-west WA flow towards the poles and include the Indonesian Throughflow, the Leeuwin Current, the South Equatorial Current, and the Eastern Gyral Current. The Ningaloo Current, the Holloway Current, the Shark Bay Outflow, and the Capes Current are seasonal surface currents in the region. Below these surface currents are several subsurface currents, the most important of which are the Leeuwin Undercurrent and the West Australian Current. These subsurface currents flow towards the equator in the opposite direction to surface currents (DEWHA, 2007a). Refer to Figure 2-6.</p> <p>The offshore waters of the NWMR are characterised by surface and subsurface boundary currents that flow along the continental shelf/slope and are enhanced through inflows from the ocean basins and are an important conduit for the poleward heat and mass transport along the West coast (Wijeratne et al., 2018).</p> <p>Local physical oceanography is strongly influenced by the large-scale water movements of the Indonesian Throughflow (Liu et al. 2015; Sutton et al. 2019). Typically, a warm and well-mixed oligotrophic surface layer, and a cooler and more nutrient rich deeper water layer (Menezes et al. 2013).</p>
Waves	<p>Sea surface waves within the NWMR generally reflect the direction of the synoptic winds and flow predominately from the South-west in the summer and East in winter (Pearce et al., 2003).</p> <p>The NWS within the NWMR is a known area of internal wave generation. Both internal tides and internal waves are thought to be more prevalent during summer months due to the increased stratification of the water column (DEWHA, 2007a).</p> <p>Along the continental slope of the NWMR, strong internal waves and interaction between semi-diurnal tidal currents and seabed topographic features facilitates upwelling events and localised productivity events (Holloway, 2001).</p>
Tides	<p>Tides on the NWS (NWMR) increase as the water moves from deep towards the shallower coast. The highest offshore tides are experienced at the border of the Browse and Canning basins. The smallest tides are experienced at the Exmouth Plateau, near the coast.</p> <p>Tides of the NWS (NWMR) are predominantly semi-diurnal (two highs and two lows each day), but with increasing importance of the diurnal (once per day) inequality at the southern and northern extremities of the NWS.</p>

Receptor	Description
	The tide range—represented by the Mean Spring Range (MSR)—increases northwards along the coast from 1.4 m at North-west Cape (Point Murat) to 7.7 m at Broome, before decreasing again (apart from local amplification in King Sound and Collier Bay) to about 5 m off Cape Londonderry. The MSR then increases again through Joseph Bonaparte Gulf and on up 5.5 m at Darwin (RPS, 2016).

2.3.1 Browse

Table 2-4 Summary meteorology and oceanography for Browse (refer to APPENDIX B. Supporting Figures for Section 2.3 Meteorology and Oceanography for supporting metocean figures and data sources)

Receptor	Description
Meteorology	
Seasonal patterns	The Browse area overlapping the Kimberley marine system experiences tropical monsoon climate with two distinct seasons: the wet season from December to March and dry season from April to November.
Air temperature	The mean annual air temperature recorded at Troughton Island between 2010 and 2020 ranged from 22.5°C in 2019 to 32.8°C in 2016 and highest mean monthly air temperatures were recorded for the months of November and December (BOM, 2023a).
Rainfall	Rainfall recorded from Troughton Island in the Browse basin ranged from barely detectable (<1 mm) mean monthly level to >100 mm in December to March, with the highest rainfall recorded for January (reflecting the wet monsoon season of the Kimberley marine system) (BOM, 2023a).
Wind	The dry season experiences high-pressure systems that bring East to South-easterly winds with average wind speeds during the season of approximately 16.6 km/h and maximum wind gusts of 65 km/h. In contrast the wet season brings predominately westerly winds with average wind speeds approximately 17 km/h and maximum gusts exceeding 100 km/h (generally associated with tropical cyclones (MetOcean Engineers, 2005).
Oceanography	
Currents	Surface currents exhibit seasonal directionality, with flow to the South-west during March to June and more variable outside this period (Woodside, 2019). This is consistent with the stronger Leeuwin Current flow during winter months, with more variable currents driven by local wind stress during periods of weaker Leeuwin Current flow.

2.3.2 North West Shelf / Scarborough

Table 2-5 Summary meteorology and oceanography for the North West Shelf and Scarborough (refer to APPENDIX B. Supporting Figures for Section 2.3 Meteorology and Oceanography for supporting metocean figures and data sources)

Receptor	Description
Meteorology	
Seasonal patterns	The NWS and Scarborough areas experience the monsoonal climate of the wider NWMR with a distinct wet and dry seasonal regime and transitions periods between seasons.
Air temperature	Air temperatures as measured at the North Rankin A platform on the NWS ranged from a maximum average of 39.8°C in summer to a minimum average temperature of 15.2°C in winter (Woodside, 2015).
Rainfall	Rainfall patterns annually reveal the wet season with highest rainfalls during the late summer, often associated with the passage of tropical low-pressure systems and cyclones. Rainfall in the dry season is typically extremely low (Pearce et al. 2003) and Appendix B .
Wind	Winds are typically from the southwest during the wet season (summer) and tending from the South-east during the dry season (winter). The summer South-westerly winds are driven by high pressure cells that pass from West to East over the Australian continent. During the winter period, the relative position of the high-pressure cells shifts further North, leading to prevailing South-easterly winds from the mainland (Pearce et al. 2003) and Appendix B .
Oceanography	
Currents	The large-scale ocean currents of the NWMR, primarily the Indonesian Throughflow and Leeuwin Current (and Holloway Current), are the primary influence on the NWS and Scarborough areas. The Indonesian Throughflow and Leeuwin Current are strongest during the late summer and winter and flow reversals to the North-east, typically short-lived and weak when there are strong South-westerly winds, can generate localised upwelling on the shelf edge (Holloway and Nye, 1985; James et al. 2004 and Condie et al. 2006).

2.3.3 North-west Cape

Table 2-6 Summary meteorology and oceanography for the North-west Cape (refer to APPENDIX B. Supporting Figures for Section 2.3 Meteorology and Oceanography for supporting metocean figures)

Receptor	Description
Meteorology	
Seasonal patterns	The climate of the NWMR is dry tropical exhibiting a hot summer season and a mild winter season. There are often distinct transition periods between the summer and winter regimes, characterised by periods of relatively low winds.
Air temperature	Air temperatures in the North-west Cape area range from high summer temperatures (maximum average of 38°C) and mild winter temperatures (minimum average of 11.5°C) as recorded from the Learmonth Airport (BOM, 2023b).
Rainfall	Rainfall typically occurs during the summer, with highest rainfall during later summer and autumn (mean monthly level to >19 mm), with the highest rainfall recorded during June, often associated with the passage of tropical low-pressure systems and cyclones. Rainfall is typically low in winter (<2 mm) (BOM, 2023b).
Wind	Winds vary seasonally, generally from the South-west quadrant during summer months and the south, south-east quadrant during the autumn and winter months. The summer south-westerly winds are driven by high pressure cells that pass from West to East over the Australian continent. Winds typically weaken and are more variable during the transitional period between the summer and winter seasons, generally between April to August.
Oceanography	
Currents	Surface currents exhibit seasonal directionality, with flow to the South-west during March to June and more variable outside this period (Woodside, 2022). This is consistent with the stronger Leeuwin Current flow during winter months, with more variable currents driven by local wind stress during periods of weaker Leeuwin Current flow.

2.4 Physical Environment of NWMR

Based on the Integrated Marine and Coastal Regionalisation of Australia (IMCRA) Version 4.0, there are eight provincial bioregions that occur within the NWMR, which are based on patterns of demersal fish diversity, benthic habitat and oceanographic data (Commonwealth of Australia, 2006), **Figure 2-7**. Of the eight provincial bioregions that occur within the NWMR, these include four offshore (~65% of total NWMR area) and four shelf (~35% of total NWMR area) bioregions (Baker et al., 2008).

The NWMR is a tropical carbonate margin that comprises an extensive area of shelf, slope and abyssal plain/deep ocean floor, as well as complex areas of bathymetry such as plateau, terraces and major canyons (Harris et al., 2005). A series of reefs are located on the outer shelf/slope of the NWMR, including Ashmore, Cartier, Scott and Seringapatam reefs (Baker et al., 2008). The distribution of seafloor geomorphic features has been systematically mapped over much of the Australian margin and adjacent seafloor. The mapped area can be divided into 10 geomorphic regions, of which the NWMR overlays two; the Western Margin and Northern Margin (Harris et al., 2005). Most of the region consists of either continental slope (61%) or continental shelf (28%) (DEWHA, 2007a) with more than 40% of the NWMR having a water depth less than 200 m. The shallow shelf is contrasted by features such as the Cuvier and Argo abyssal plains, which reach depths of more than five km. A unique feature of the region is the significant narrowing of the continental shelf around North-west Cape (approximately 7 km wide) from the broad continental shelf in the north of the region (approximately 400 km wide at Joseph Bonaparte Gulf) (DEWHA, 2007a), **Figure 2-8**.

The geological history of the region, as well as its geomorphology and oceanography, has influenced the composition and distribution of sediments (DEWHA, 2007a). The sedimentology of the NWMR is dominated by marine carbonates, which show a broad zoning and fining with water depth. Main trends of the NWMR sediments include a tropical carbonate shelf that is dominated by sand and gravel, an outer shelf/slope zone that is dominated by mud and a relatively homogenous rise and abyssal plain/deep ocean floor that is dominated by non-carbonate mud (Baker et al., 2008), **Figure 2-9**.

The distribution and resuspension of sediments on the inner shelf is strongly influenced by the strength of tides across the continental shelf as well as episodic events such as cyclones. Further offshore, on the mid to outer shelf and on the slope itself, sediment movement is primarily influenced by ocean currents and internal tides (DEWHA, 2007a).

This variation in bathymetry and interactions with oceanographic processes provides a diversity of habitats to marine fauna and flora within the NWMR.

2.5 Air quality

The ambient air quality of all three marine regions is largely unpolluted due to the extent of the open ocean area, the activities currently carried out in each and the relative remoteness of each region.

Vessel traffic and existing offshore surface infrastructure are the only likely sources of pollutants in the marine region. Closer to the coast there may be localised and temporary reductions in air quality around areas of high vessel traffic, or due to the occurrence of dust storms and bushfires. International contributors to reduced air quality in the marine region may include 'slash-and-burn' agricultural methods and large forest fires in South-east Asian regions (Vadrevu et al. 2014; Kim Oanh et al. 2018).

3. MATTERS OF NATIONAL ENVIRONMENTAL SIGNIFICANCE (EPBC ACT)

3.1 Summary of Matters of National Environmental Significance (MNES)

This section summarises the matters of national environmental significance (MNES) reported for the three bioregions; NWMR (**Table 3-1**), SWMR (**Table 3-2**) and NMR (**Table 3-3**), based on the Protected Matters search reports (**APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR).

Additional information on these MNES is provided in subsequent sections (referenced in **Table 3-1**, **Table 3-2** and **Table 3-3**).

3.2 Part 13 Statutory Instruments for EPBC Act Listed Threatened and Migratory Species in the NWMR, SWMR and NMR

A screening process was conducted to identify which EPBC Act listed threatened and migratory species, and associated Part 13 statutory instruments, are relevant in the context of the assessment of impacts and risks associated with petroleum activities in each of the Woodside activity areas. The screening criteria included:

- overlap amongst the Woodside activity areas with habitat critical for survival (marine turtles etc) and with biologically important areas (BIAs) (overlapping the marine environment) for any listed threatened and/or migratory species as reported in the PMST searches;
- published literature, unpublished reports and/or credible anecdotal information (e.g. feedback from stakeholders) indicating species presence/occurrence within the Woodside activity areas;
- temporal overlap between the likely timing of petroleum activities and peak periods for key critical life stage behaviours (e.g. breeding, nesting, calving, resting, foraging, migration); and
- environmental aspects associated with petroleum activities that have been identified as a key threat to a species in a Part 13 statutory instrument (e.g. anthropogenic noise, light emissions, marine debris).

Relevant EPBC Act threatened and migratory species and their Part 13 statutory instruments are listed in **Table 3-4**. For the full list of EPBC Act listed species for each marine bioregion refer to the PMST reports (**APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR).

Table 3-4 Summary of EPBC Act threatened and migratory species to be considered for impact or risk evaluation for Woodside operations

Species	EPBC Act Part 13 Statutory Instrument
All vertebrate marine fauna	Threat Abatement Plan for the impacts of marine debris on vertebrate marine life (Commonwealth of Australia, 2018)
Marine Mammals	
Blue whale	Conservation Management Plan for the Blue Whale: A Recovery Plan under the <i>Environment Protection and Biodiversity Conservation Act 1999</i> 2015–2025 (Commonwealth of Australia, 2015a)
Southern right whale	National Recovery Plan for the Southern Right Whale <i>Eubalaena australis</i> (DCCEEW, 2024a)
Sei whale	Conservation Advice <i>Balaenoptera borealis</i> sei whale (Threatened Species Scientific Committee, 2015a)
Fin whale	Conservation Advice <i>Balaenoptera physalus</i> fin whale (Threatened Species Scientific Committee, 2015c)
Australian sea lion	Recovery Plan for the Australian Sea Lion (<i>Neophoca cinerea</i>) 2013 (DSEWPAC, 2013a) Conservation Advice <i>Neophoca cinerea</i> Australian Sea Lion (Threatened Species Scientific Committee, 2020a) (in effect under the EPBC Act from 23-Dec-2020)
Marine Reptiles	
All marine turtle species (loggerhead, green, leatherback, hawksbill, flatback, olive ridley)	Recovery Plan for Marine Turtles in Australia 2017-2027 (Commonwealth of Australia, 2017) National Light Pollution Guidelines for Wildlife Including Marine Turtles, Seabirds and Migratory Shorebirds (DCCEEW, 2023d)
Mitchell's water monitor	Conservation Advice for <i>Varanus mitchelli</i> (Mitchell's water monitor) (DCCEEW, 2023c)
Short-nosed sea snake	Approved Conservation Advice for <i>Aipysurus apraefrontalis</i> (Short-nosed Sea Snake) (DSEWPAC, 2011a)
Leaf-scaled sea snake	Approved Conservation Advice for <i>Aipysurus foliosquama</i> (Leaf-scaled Sea Snake) (DSEWPAC, 2011b)
Fishes, Sharks, Rays and Sawfishes	
Grey nurse shark (West coast population)	Recovery Plan for the Grey Nurse Shark (<i>Carcharias taurus</i>) 2014 (DOE, 2014)
White shark	Recovery Plan for the White Shark (<i>Carcharodon carcharias</i>) 2013 (DSEWPAC, 2013b)
Whale shark	Conservation Advice <i>Rhincodon typus</i> whale shark (Threatened Species Scientific Committee, 2015d)
All sawfishes (largetooth, green, dwarf, speartooth, narrow)	Sawfish and River Sharks Multispecies Recovery Plan (Commonwealth of Australia, 2015b)
Seabirds	
Migratory seabird species	Wildlife Conservation Plan for Seabirds (Commonwealth of Australia, 2020) National Light Pollution Guidelines for Wildlife Including Marine Turtles, Seabirds and Migratory Shorebirds (DCCEEW, 2023d)

4. HABITAT AND BIOLOGICAL COMMUNITIES

4.1 Regional context

The NWMR habitats range from nearshore benthic primary producer habitats such as seagrass beds, coral communities and mangrove forests, to offshore soft sediment seabed habitats and submerged and emergent reef systems. These habitats support biological communities that range from low density sessile and mobile benthos, such as sponges, molluscs and echinoids (with noted areas of sponge hotspot diversity) in offshore soft sediment habitat (DSEWPAC, 2012a) to complex, diverse, remote coral reef systems.

Benthic primary producer habitats, such as seagrass beds, coral communities and mangrove forests within the SWMR, are described as a mixture of tropical and temperate species, due to the seasonal influences of the tropical waters carried south by the Leeuwin Current and the temperate waters carried north by the Capes Current (DSEWPAC, 2012b).

The NMR shares similar habitat types to the NWMR. The predominant habitat of the region includes soft muddy sediments on relatively flat terrain. Other habitat types include seagrasses, reefs, shoals and coastal habitats such as mangroves and coastal wetlands (Rochester et al., 2007).

The summary of key habitats and biological communities provided in the following sub-sections is focused on the primary features of relevance to the activity areas within the NWMR – primarily the offshore habitats of the continental shelf and slope, submerged shoals and banks, and remote oceanic reef systems of recognised conservation value.

4.2 Biological Productivity of NWMR

Primary productivity of the NWMR is generally low and appears to be largely driven by offshore influences (Brewer et al., 2007), with periodic upwelling events and cyclonic influences driving coastal productivity with nutrient recycling and advection. Seasonal weather patterns also influence the delivery of nutrients from deep-water to shallow water. Cyclones and North-westerly winds during the North-west monsoon (approximately November–March) and the strong offshore winds of the South-east monsoon (approximately April–September) facilitate the upwelling and mixing of nutrients from deep-water to shallow water environments (Brewer et al., 2007).

The Indonesian Throughflow (ITF) has an important effect on productivity in the northern areas of the Region. Generally, its deep, warm and low nutrient waters suppress upwelling of deeper comparatively nutrient-rich waters, thereby forcing the highest rates of primary productivity to occur at depths associated with the thermocline. When the ITF is weaker, the thermocline lifts bringing deeper, more nutrient-rich waters into the photic zone and hence resulting in conditions favourable to increased productivity (DEWHA, 2007a). Similarly, the Leeuwin Current has a significant role in determining primary productivity in the southern areas of the NWMR. As with the ITF, the overlying warm oligotrophic waters of the Leeuwin Current suppress upwelling. A subsurface chlorophyll maximum is therefore formed at a depth in the water column where nutrients and light are sufficient for photosynthesis to proceed. Seasonal changes in the strength of the Leeuwin Current influence primary productivity levels, and seasonal interactions between the Leeuwin and Ningaloo currents in the south of the NWMR, are believed to be particularly important (DEWHA, 2007a).

Internal tides (defined as internal waves generated by the barotropic tide) are a striking characteristic of many parts of the NWMR and are associated with highly stratified water columns. Internal waves (solitons), which can raise cooler, generally more nutrient rich water higher in the water column, are generated between water depths of 400 m and 1000 m where bottom topography results in a significant change in water depth over a relatively short distance. Cyclones are episodic events in the NWMR that contribute to spikes in productivity through enrichment of surface water layers due to enhanced vertical mixing of the water column. Temporary increases in primary productivity as a result of cyclones generally last between one and two weeks, and it is believed that the impacts of

cyclones are generally limited to waters less than 100 m deep and affect benthic communities more substantially than pelagic systems (DEWHA, 2007a).

Water depth also has a significant overriding influence over productivity in the marine environment, due to its influence on light availability. This is reflected by distinct onshore and offshore assemblages of major pelagic groups of phytoplankton, microzooplankton, mesoplankton and ichthyoplankton. Productivity booms are thought to be triggered by seasonal changes to physical drivers or episodic events, as detailed above, which result in rapid increases in primary production over short periods, followed by extended periods of lower primary production. The trophic systems in the NWMR are able to take advantage of blooms in primary production, enabling nutrients generated to be used by different groups of consumers over long periods (DEWHA, 2007a).

Little detailed information is available about the trophic systems in the NWMR. The utilisation of available nutrients is thought to differ between pelagic and benthic environments, influenced by water depth and vertical migration of some species groups in the water column. In the pelagic system, it is thought that approximately half of the nutrients available are utilised by microzooplankton (e.g. protozoa) with the remainder going to macro/meso-zooplankton (e.g. copepods). As primary and secondary consumers, gelatinous zooplankton (e.g. salps, coelenterates) and jellyfish are thought to play an important role in the food web, contributing a significant proportion of biomass in the marine system during and for periods after booms in primary productivity. Salps are semi-transparent, barrel-shaped marine animals that can reproduce quickly in response to bursts in primary productivity and provide a food source for many pelagic fish species (DEWHA, 2007a).

4.3 Planktonic Communities in the NWMR

The NWMR has two distinct phytoplankton assemblages; a tropical oceanic community in offshore waters and a tropical shelf community confined to the NWS (Hallegraeff, 1995). MODIS (Moderate Resolution Imaging Spectrometer) satellite datasets from the NWMR indicates that chlorophyll (and thus phytoplankton) levels are low in summer months (December to March) and higher in the winter months (Schroeder et al., 2009). Low chlorophyll levels during summer months may be a result of lower plankton productivity during the wet season or lower nutrient inputs from warm surface waters dominant during summer. However, it is likely that much of the primary production is taking place below the surface, where the MODIS imagery does not penetrate (Schroeder et al., 2009). The winter months are relatively cloud-free and surface chlorophyll is high throughout most of the region.

Zooplankton may include organisms that complete their lifecycle as plankton (e.g. copepods, euphausiids) as well as larval stages of other taxa such as fishes, corals and molluscs. Peaks in zooplankton such as mass coral spawning events (typically in March and April) (Rosser and Gilmour, 2008) and fish larvae abundance (CALM, 2005a) can occur throughout the year. Spatial and temporal patterns in the distribution and abundance of macro-zooplankton on the North-west Shelf are influenced by sporadic climatic and oceanographic events, with large inter-annual changes in assemblages (Wilson et al., 2003). Amphipods, euphausiids, copepods, mysids and cumaceans are among the most common components of the zooplankton in the region (Wilson et al., 2003).

4.3.1 Browse

Phytoplankton within the Browse activity area is expected to reflect the conditions of the NWMR. There is a tendency for offshore phytoplankton communities in the NWMR to be characterised by smaller taxa (e.g. bacteria), whereas shelf waters are dominated by larger taxa such as diatoms (Hanson et al., 2007).

Zooplankton within the activity area may include organisms that complete their lifecycle as plankton (e.g. copepods, euphausiids) as well as larval stages of other taxa such as fishes, corals and molluscs. Peaks in zooplankton such as mass coral spawning events (typically in March and April) (Rosser and Gilmour, 2008; Simpson et al., 1993) and fish larvae abundance (CALM, 2005a) can occur throughout the year.

The influence of the Indonesian Throughflow restricts upwelling across the Kimberley System (approximately equates to the Browse activity area). However, small-scale topographically associated current movements and upwellings are thought to occur, which inject nutrients into specific locations within the system and result in 'productivity hot-spots'. Similarly, internal waves, generated at the shelf break (e.g. west of Browse Island and around submerged cliffs located at the continental shelf edge) play a role in making nutrients available in the photic zone (Sutton et al, 2019). Productivity within shallow nearshore waters is driven primarily by tidal movement and terrestrial runoff whereby nutrients are mixed by tidal action and new inputs of organic matter come from the land.

4.3.2 North-west Shelf / Scarborough

Plankton communities within the NWS / Scarborough activity area are expected to reflect conditions of the NWMR. Internal tides along the NWS and Exmouth Plateau result in the drawing of deeper cooler waters into the photic zone, stirring up nutrients and triggering primary productivity. Broadly the greatest productivity within this sub-system is found around the 200 m isobath associated with the shelf break.

4.3.3 North-west Cape

Waters of the North-west Cape experience a relatively high diversity of phytoplankton groups including diatoms, coccolithophorids and dinoflagellates. During the warmer months blooms of *Trichodesmium* occur in the region, these have been observed particularly on the frontal systems around Point Murat (Heyward et al., 2000).

Average Leeuwin Current phytoplankton biomass is characteristic of low productivity oceanic waters like the Indian, Pacific and Atlantic Oceans (Hanson et al., 2005). However, the Canyons linking the Cuvier Abyssal Plain and Cape Range Peninsula Key Ecological Feature(KEF) are connected to the Commonwealth waters adjacent to Ningaloo Reef and may also have connections to Exmouth Plateau. The canyons are thought to interact with the Leeuwin Current to produce eddies inside the heads of the canyons, resulting in waters from the Antarctic intermediate water mass being drawn into shallower depths and onto the shelf (Brewer et al. 2007). These waters are cooler and richer in nutrients and strong internal tides may also aid upwelling at the canyon heads (Brewer et al. 2007). The narrow shelf width (about 10 km) near the canyons facilitates nutrient upwelling and relatively high productivity. This high primary productivity leads to high densities of primary consumers, such as micro and macro-zooplankton, such as amphipods, copepods, mysids, cumaceans, euphausiids (Brewer et al., 2007).

4.4 Habitats and Biological Communities in the NWMR

4.4.1 Offshore Habitats and Biological communities

The NWMR has a large area of continental shelf and continental slope, with a range of bathymetric features such as canyons, plateaus, terraces, ridges, reefs, banks and shoals. The marine environment in this region is typified by tropical to sub-tropical marine ecosystems with diverse habitats from soft sediments, canyons, remote oceanic coral reef systems and continental shelf limestone pavement seabed habitat. The NWMR encompasses large seabed areas of deepwater seabed habitats dominated by soft sediments (sandy and muddy substrata with occasional patches of coarser sediments) and sparse benthic biota. Comprehensive surveys and documentation of habitats and biota from the shelf to deep waters (100 m to 1000 m) spanning 13 sites between Barrow Island and Ashmore Reef, running downslope across the continental shelf and slope of NWS were conducted in 2007 (Williams et al., 2010). Sites on the continental slope (approximately 400 m deep) predominately comprised soft, muddy sediments and epifauna were sparsely distributed and limited to isolated individual sessile biota such as crinoids, anemones, glass sponges and sea pens. Occasional non-sessile biota, characteristic of the deeper water benthic communities was recorded and included: echinoderms (urchins, holothurians and sea stars) and decapod crustaceans (prawns and crabs). Similar benthic biota composition was reported for the continental slope seabed habitats at depths of 700-1000 m (Williams et al., 2010) With reference to the North-west Shelf (NWS), multiple surveys have documented habitats comprising bare unconsolidated carbonate sediments supporting a sparse assemblage of deposit and filter feeding organisms, including glass sponges, urchins, sea cucumbers, sea stars and crustaceans (URS 2010). Filter feeding communities documented within the NWS include bryozoans, sponges, gorgonians, and hydroids attached to consolidated substrate; these were interspersed with sand which hosted fewer filter feeders (AIMS 2014). Infauna associated with soft, unconsolidated sediment habitat such as polychaetes are widespread and well represented along the continental shelf and upper slopes (Brewer et al. 2007, RPS 2012). The key habitats and biological communities that are representative of the broader NWMR are summarised in **Table 4-1**.

The key habitats and biological communities representative of the broader SWMR and NMR are summarised in **Table 4-2** and **Table 4-3**.

There is a marked biodiversity gradient from high ecological valued coastal (primary producer habitats and associated benthic and mobile biota) to the lower valued deeper offshore habitats comprising soft, unconsolidated sediments and typically sparser biota (epifauna and infauna), with the exception of the submerged shoal features, remote oceanic reef systems of the Rowley Shoals, Scott Reef and Ashmore Reef as well as the fringing reef habitats of Ningaloo, the Kimberley coastline, the offshore island groups such as Barrow Island, Lowendal and Montebellos and the Dampier Archipelago. A brief overview of the high valued biodiversity reef and mesophotic habitats and associated benthic communities are presented in the following sub-sections.

4.4.2 Browse

The most diverse habitats and benthic communities in the Kimberley region of North-western Australia, are where the oceanic reef systems of Ashmore, Cartier, Scott and Seringapatam reefs, and the Rowley Shoals, sit near the edge of the continental shelf hundreds of kilometres from the mainland and from each other (Gilmour et al., 2019 and 2023), refer to **Figure 4-1**. The long-term monitoring program for Scott Reef and the Rowley Shoals conducted by AIMS since 1994 is now one of the world's longest studies of coral reef ecosystems and provides unprecedented understanding of the background (baseline) changes at oceanic reefs on Australia's North-west Shelf, encompassing the physical drivers, and underlying processes of change (impact and recovery) from acute disturbances (heat stress – coral mass-bleaching and cyclones).

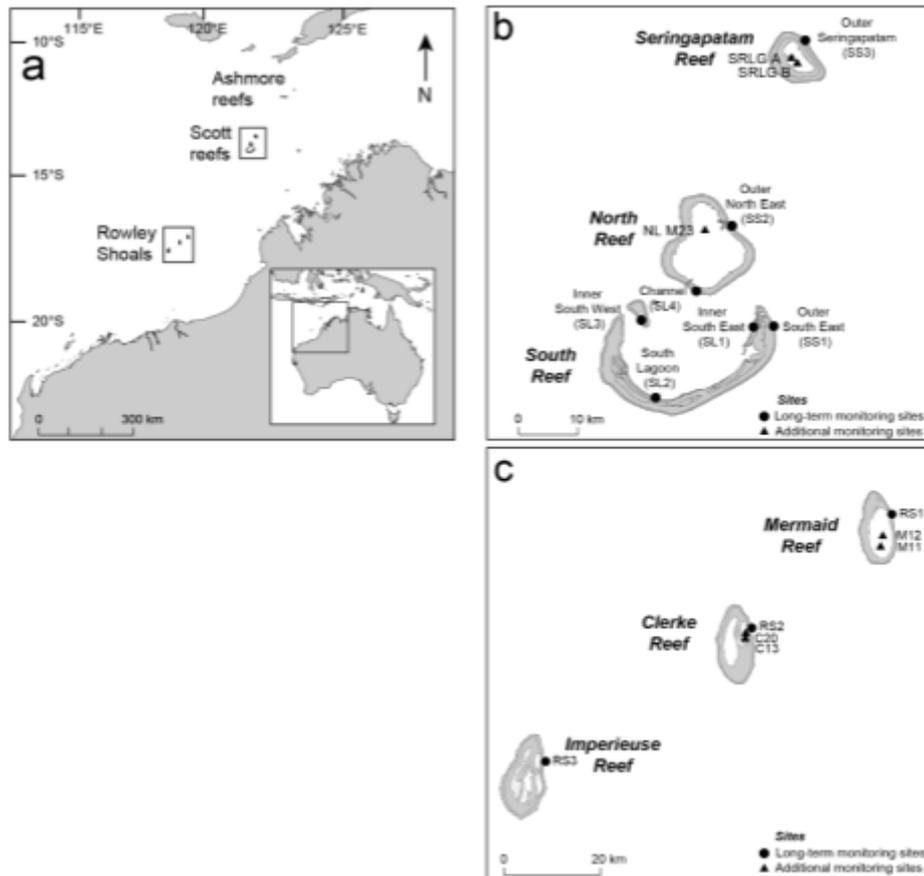

Figure 4-1. The position of Scott Reef, Ashmore and the Rowley Shoals off North-western Australia and location of permanent long-term monitoring sites (source: Gilmour et al., 2023)

Scott Reef is an annular reef approximately 17 km long and 16 km wide comprising two coral reef atolls rising steeply from depths of approximately 400-500 m. These atolls, referred to as South Scott Reef and North Scott Reef, are separated by a deep channel (**Figure 4-1**). North Scott Reef features an emergent reef flat, outer slope habitats and a shallow lagoon approximately 20 m deep with two small channels linking it to the surrounding ocean. The shallow closed waters of North Scott Reef lagoon contain a range of habitats from bare sand, sand with coral outcrops, and to shallow to deep lagoonal coral dominated habitats (Gilmour et al., 2013). This in contrast to the deeper, more open lagoon of South Scott Reef described as an extensive, unique mesophotic (30-70 m depth) coral dominated habitat comprising hard corals, calcareous algae, soft corals, sponges, bryzoans and other invertebrates (Gilmour et al. 2013; Heyward and Radford, 2019). It is largely protected from the direct influence of major storms by the surrounding horseshoe-shaped emergent reef rim (Heyward and Radford, 2019). South Scott Reef shallow water habitats also include reef flats (of low coral cover) and extensive outer reef slopes with the highest hard coral diversity of any habitat at Scott Reef (Gilmour et al., 2013).

Over the past 30 years the coral communities at Scott Reef have been extensively studied and the Scott Reef long-term monitoring program showed that from 1994-2021 the mean cover of hard and soft corals on the reef slopes was 36%, and ranged between 13% to 59%. Decreases in coral cover were caused by damaging waves, generated by storms and cyclones, and recurrent heat stress causing coral bleaching. The most severe heat stress and mass coral bleaching occurred in 1998 and 2016. Recovery from the first mass-bleaching event in 1998 took over a decade. By 2010, coral cover had reached pre-bleaching levels (45%). Despite moderate coral bleaching and cyclone disturbances, cover had increased by 49% in January 2016, after which the reefs were impacted by a second mass bleaching event that reduced mean coral cover to 15%. Five years after the 2016 mass bleaching event, total cover of hard and soft corals had reached 34%, showing a similar rate

of recovery to that following the 1998 mass bleaching (Gilmour et al. 2023). The Rowley Shoals comprise three distinct reef continental shelf atolls of similar dimension, shape and orientation, named Mermaid Reef, Clerke Reef and Imperieuse Reef. The reefs are orientated North-south and are approximately 30-40 km apart. Each atoll covers an area approximately 80-90 km² and extends almost vertically from seafloor depths of approximately 400 m. Each atoll comprises extensive lagoon habitat composed of bare sand, coral dominated patches and coral outcrops, emergent reef crests and outer reef slopes. At high tide only the sandy cays of Clerke Reef and Imperieuse Reef remain visible.

Across the Rowley Shoals, the reef crest and reef slope were most similar and the lagoon most unique in terms of habitat and benthic communities. Hard corals and coralline algae were the most abundant biota (>40%) and other benthic organisms such as sponges, ascidians and macroalgae are rare (<5%). Soft corals were also rare (<1%) at all reefs and habitats, apart from the reef slope (4%) at Mermaid Reef. Across all surveys (1995-2019), the mean cover of hard and soft corals at the reef slope was 46% and ranged between 26% and 58%. Decreases in coral cover were primarily due to frequent storms and cyclones. Between 2005 and 2008, three cyclones and moderate heat stress caused a mean reduction in coral cover (52% to 42%) at the reef slope habitat across the Rowley Shoals. Coral bleaching was low (<10%) in January 2016 except for minor to moderate (11-30%) bleaching at two lagoon sites at Mermaid Reef. A prolonged heat stress period (45 days) in May 2020 caused the worst coral bleaching on record (approximately 20%) across reef habitats with the highest heat stress and declines in coral cover at the reef slope for Imperieuse Reef (9%) and minor bleaching and small decreases in coral cover at the reef slope (5%) and lagoon (3%) at Clerke Reef (Gilmour et al. 2023).

The reefs of Seringapatam, Scott Reef, Ashmore Reef and Cartier Island are recognised as key ecological features (KEFs) within NWMR, refer to **Table 10-1**. Protected Area status (Australian Marine Parks and State Marine Parks and Reserves are listed and described in **Section 11** and includes: Commonwealth Marine Parks of Ashmore Reef, Cartier Island, Kimberley and Mermaid Reef, and State Marine Parks of the North Kimberley, the Rowley Shoals and Lalang-garram-horizontal falls and North Lalang-garram.

4.4.3 North-west Shelf / Scarborough

The NWS contains numerous submerged shoal features and as relatively recent surveys have revealed several of these features are of high biodiversity value comprising hard coral and macro-algae communities on upper reaches of the shoals and mesophotic filter-feeding benthic communities in deeper waters on and in proximity to the shoal features, namely, Rankin Bank and Glomar Shoal.

Rankin Bank

Rankin Bank comprises three main sedimentary banks rising steeply from between 80 and 120 m below sea level, reaching 20 – 40 m below the sea surface and featuring plateaus and troughs (Abdul Wahab et al., 2018). Rankin Bank is one of only two large, complex bathymetrical features on the outer western shelf of the West Pilbara (the other being Glomar Shoal, about 125 km West-south west) (Abdul Waheb et al., 2018), **Figure 4-1**.

Surveys of Rankin Bank were undertaken by the Australian Institute of Marine Science (AIMS) in 2013 and in 2017 to better understand the habitats and complexity of the submerged shoal ecosystems, and associated fish assemblages (AIMS, 2014; Abdul Waheb et al., 2018 and 2017 - Jones et al. 2021). The surveys were undertaken using various methods, including multibeam survey, towed video, Stereo Baited Underwater Video Survey (SBRUVS) and beam transmissions (to measure turbidity), at depths between 20 and 115 m (Abdul Waheb et al., 2018). Water column data were also collected in January 2017 to examine potential temporal variation in these parameters (Abdul Waheb et al., 2018).

Seabed sediments at Rankin Bank were primarily carbonate with a grain size of mostly sand, with finer muds found at the deeper sample sites (AIMS, 2014). Sand was also found to increase with depth and unconsolidated reef exceeded 30% at all depths (Abdul Waheb et al., 2018). Hydrocarbon and trace metal concentrations in sediments indicated the bank was unaffected by anthropogenic pollution (AIMS, 2014). Turbidity was lower at Rankin Bank than Glomar Shoal during the survey, with beam transmissions remaining above 95% at all depths (Abdul Waheb et al., 2018). Turbidity was slightly lower in 2017, whereas temperature and salinity were slightly higher at all depths (Abdul Waheb et al., 2018).

Proportion of cover by benthic taxa was highest for macroalgae and hard corals, particularly at depths less than 40 m, and decreased with increasing depth. Other benthic taxa included soft corals and sponges which were present in lower proportions at all depths. Encrusting corals were common, reaching cover of about 12.5% at depths less than 40 m. Solitary corals were also present (about 10% cover) primarily at depths between 40 and 60 m. Foliose and submassive/columnar corals were also present (Abdul Waheb et al., 2018).

Fish abundance and diversity at Rankin Bank were found to be comparable with other reefs in North-west Australia, and notably twice as abundant and 1.5 times more diverse than those fishes identified in a comparable survey at Glomar Shoal (Abdul Waheb et al., 2018). A total of 205 fish species were recorded at Rankin Bank, 100 of which were common to both Glomar Shoal and Rankin Bank. Depth, location, sand, sponges and hard coral were all found to contribute to the fish communities present. Specifically, fish communities were primarily associated with hard coral and shallow depths at Rankin Bank (Abdul Waheb et al., 2018).

Glomar Shoal

Glomar Shoal is a large (215 km²) and complex bathymetrical feature situated on the outer continental shelf off the Pilbara. Glomar Shoal is about 8.5 times wider than Rankin Bank at the 60 m contour. Glomar Shoal rises from 80 m depth on its South-west side and 70 m depth on its North-eastern side to form a single plateau at 40 m depth (Abdul Waheb et al., 2018). Together with Rankin Bank, these remote shallow water areas represent regionally unique habitats and are considered

likely to play an important role in the productivity of the Pilbara region (AIMS 2014, Abdul Wahab et al. 2018), **Figure 4-1**.

Baseline biodiversity and habitat mapping surveys of the benthic habitats and communities at Glomar Shoal and Rankin Bank were undertaken in 2013 and 2017 by AIMS (2014) as detailed in Abdul Waheb et al., (2018) and Jones et al. (2021), respectively. Salinity and temperature were found to be slightly higher in 2017 compared with the 2013 values (Abdul Wahab et al., 2018), most likely due to seasonality. Substrates at Glomar Shoal were found to vary with depth, from coarse unconsolidated sediment at depths greater than 60 m and hard substrate (i.e. consolidate reef) supporting benthic communities comprising hard and soft corals, sponges and macroalgae at depths < 40 m (Abdul Wahab et al., 2018). Total cover of benthic taxa (hard coral, soft coral, sponges and other benthic biota) was highest at depths < 40 m and decreased with depth (Abdul Wahab et al., 2018). At depths of 60-80 m benthic cover was low (about 2%) and at depths greater than 80 m benthic cover was barely present (Abdul Wahab et al., 2018).

A total of 170 fish species were identified at Glomar Shoal and fish abundance and diversity of the demersal fish communities of Glomar Shoal were found to vary with seabed habitat type; sand, hard coral and sponge coverage influenced fish communities, with higher abundance and diversity of fish associated with shallow hard coral habitats. (Abdul Wahab et al., 2018). In general, the fish abundance and diversity of Glomar Shoal are considered comparable with other reefs and the submerged shoals and banks in the region, although less diverse and abundant than fish assemblages at Rankin Bank (Abdul Wahab et al., 2018).

Glomar Shoal is recognised as a Key Ecological Feature (KEF) within NWMR, refer to **Table 10-1**. Protected Area status (Australian Marine Parks and State Marine Parks and Reserves) are described in **Section 11** and includes: Commonwealth Marine Parks of Montebello and State Marine Parks Montebello Islands and Barrow Island and the Barrow Island marine management area.

4.4.4 North-west Cape

Ningaloo Reef and Shark Bay are among Australia's iconic marine areas, and the significance of these ecosystems is recognised through their inclusion in State and Commonwealth Marine Parks and the World Heritage Register. Ningaloo Reef is the only example in the world of an extensive fringing reef on the West coast of a continent and is host to over 200 coral species and more than 500 reef fish species. Shark Bay is the most westerly point of Australia and represents a transition zone between temperate and tropical marine fauna, resulting in high species diversity (Miller et al., 2015), including fringing coral communities on the leeward side of the barrier islands of Dirk Hartog, Bernier and Dorre. Ningaloo Reef is one of the longest (approximately 300 km) and most pristine fringing reefs in the world, with an unusually narrow continental shelf. Deep oceanic waters, the reef and coastline habitats and benthic communities are in close proximity resulting in a huge array of internationally significant marine life coexisting. More than 200 hard coral species, 500 fish, 650 mollusc, 600 crustacean, 1000 marine algae, 155 sponge and 25 echinoderm species have been recorded from the shelf, slope and deep-water habitats². Refer to the CSIRO Ningaloo Outlook program for further information and publications relating to the shallow and deep-water reef systems, and megafauna species (marine turtles and whale sharks)³.

The extensive reef system has been classified by topography and benthic cover using airborne hyperspectral surveys and much of the area was allocated as shallow, flat lagoons intersected by narrow, deeper channels that facilitate water circulation. Five distinct geomorphic/benthic classes of coral-algae mosaics in different topographic settings: coral and algal communities (reef flat and very shallow areas), coral and algal communities (backreef and shallow forereef), coral and algal

² <https://www.dbca.wa.gov.au/management/world-heritage-areas/ningaloo-coast-world-heritage-area#:~:text=One%20of%20the%20longest%20and,life%20coexisting%20in%20one%20area.> [accessed on 18/08/2024]

³ <https://research.csiro.au/ningaloo/outlook/research-outputs/publications/>

communities (deep forereef and other deep areas), sand or limestone pavement (lagoonal slopes and flat lagoon areas) (Kobryn et al., 2022).

Ningaloo and the Muiron Islands fringing reef habitat supports benthic communities dominated by algae and consolidated reef in the shallow reef environment. Surveys conducted by AIMS in 2024 documented hard coral cover averaged approximately 13% across the Ningaloo Marine Park area (Miller et al., 2015). A notable pattern in the benthos recorded by Miller et al. (2015) was an increase in coral cover with latitude, with the highest coral cover recorded around Coral Bay and the reef areas in southern Ningaloo. Coral cover was the lowest at the East Ningaloo Province (northern Exmouth Gulf) (<6%). Relative to Scott Reef and the Rowley Shoals, the Ningaloo benthic communities are distinct in that they are characterised by high biotic cover overall, but dominated by algal cover and with less than half the cover of key biota including hard corals, soft corals and sponges as recorded on offshore reefs (Miller et al., 2015).

Ningaloo Reef is vulnerable to storm damage and marine heat stress events that have resulted in past localised coral damage and moderate coral bleaching. Coral bleaching occurred in 2022 due to warm ocean temperatures driven by the 2021–22 La Niña. The region's last severe marine heatwave was driven by the 2010–11 La Niña, which resulted in bleaching being recorded for the first time on Ningaloo⁴. Also of note is the recurrent deoxygenation events at Bills Bay (Coral Bay) following coral spawning events. In March 2022, the deoxygenation event was triggered by a combination of weather and oceanographic conditions that led to a prolonged trapping of coral spawn in Bills Bay and this in turn caused mass coral mortality and a large but localised fish kill. The 2022 deoxygenation event was the seventh such event recorded in documented history (Richards et al., 2024).

The Shark Bay region is renowned for its terrestrial and marine biodiversity including seagrass cover extending over 4,000 km² of the bay and the 1.030 km² Wooramel Seagrass Bank is the largest structure of its type in the world. Baseline surveys conducted in 2014 by AIMS specifically targeted the outer Shark Bay area and the habitats and benthic communities surrounding the barrier islands of Dirk Hartog, Bernier and Dorre. Sand was a dominant feature of the benthos (>60%), particularly in areas inside the bay and in deep water outside the bay. Benthic communities in relatively sheltered areas of outer Shark Bay were characterised by seagrass and turf algae, whereas in more exposed locations, benthos was dominated by macroalgal and turf algal communities. Corals and sponges made up <1% of the cover in outer Shark Bay, although due to inclement weather during surveys shallow areas where coral species are more likely to occur could not be surveyed. Observations of patchy but high coral cover in shallow parts of some towed video transects suggests coral cover across outer Shark Bay may have been underestimated. The highest coral cover was recorded in the channel between Dirk Hartog and Dorre Islands, indicating this area may be particularly favourable for coral growth (Miler et al., 2015).

Commonwealth waters adjacent to Ningaloo Reef is recognised as a Key Ecological Feature (KEF) within NWMR, refer to **Table 10-1**. Protected Area status (Australian Marine Parks and State Marine Parks and Reserves) are described in **Section 11** and includes: Commonwealth Marine Parks of Ningaloo and Shark Bay and State Marine Parks of the Ningaloo Reef and the Muiron Island marine management area and Shark Bay marine park and Hamelin Pool nature reserve.

4.4.5 Shoreline, coastal habitats and biological communities

The NWMR encompasses offshore and coastal waters, islands and mainland shoreline habitats typified by mangroves, tidal flats, saltmarshes, coral reefs (remote, offshore reef systems to extensive fringing reef systems like NingaloolikeNingaloo), sandy beaches, and smaller areas of rocky shores. Each of these shoreline types has the potential to support different flora and fauna assemblages due to the different physical factors (e.g. waves, tides, light, etc.) influencing the habitat.

⁴ <https://www.csiro.au/en/research/environmental-impacts/climate-change/state-of-the-climate>

The key shoreline habitats representative of the broader NWMR are summarised in **Table 4-1**.

The key shoreline habitats representative of the broader SWMR and NMR are summarised in **Table 4-2** and **Table 4-3**.

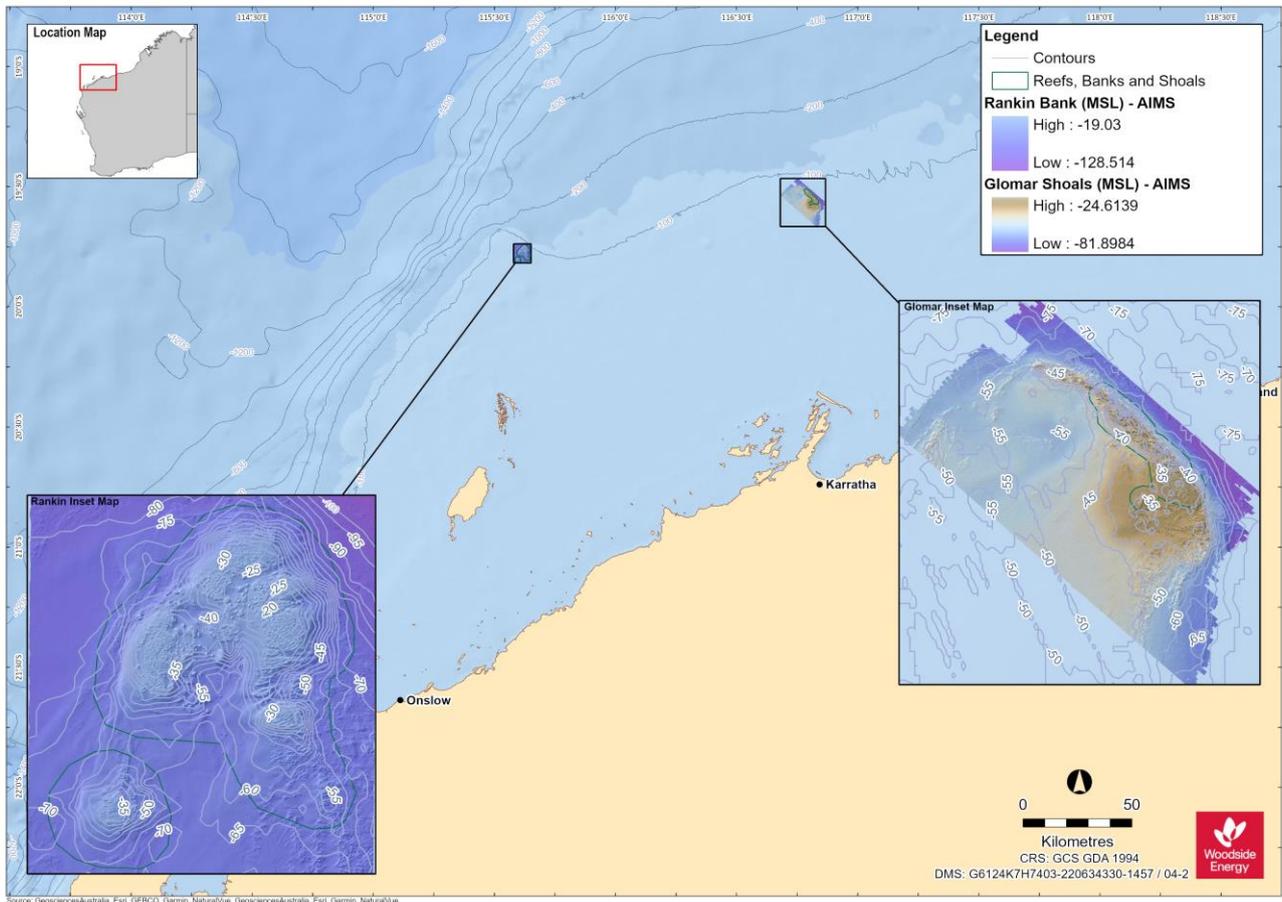

Figure 4-2. Habitat maps of Rankin Bank and Glomar Shoal (source: AIMS, 2014)

Table 4-1 Habitats and biological communities within the NWMR

Habitat/Community	Browse	NWS / Scarborough	North-west Cape	Reference
Offshore habitats and biological communities				
Soft sediment with infauna	The offshore environment of the NWMR comprises predominately of seabed habitats dominated by soft sediments (sandy and muddy substrata with occasional patches of coarser sediments) and sparse benthic biota. The benthic communities inhabiting the predominantly soft, fine sediments of the offshore habitats are characterised by infauna such as polychaetes, and sessile and mobile epifauna such as crustacea (shrimp, crabs and squat lobsters) and echinoderms (starfish, cucumbers). The density of benthic fauna is typically lower in deep-sea sediment habitats (greater than 200 m) than in shallower coastal sediment habitats, but the diversity of communities may be similar.			
Soft sediment with hard substrate outcropping	A unique seafloor feature combining both soft sediment and hard substrates, including outcrops, terraces, continental slope, and escarpments. This habitat is found in offshore areas of the NWMR, often associated with key ecological features such as the ancient coastline at 125 m depth contour KEF.			Section 10
	Ancient coastline at 125 m depth contour KEF Continental Slope Demersal Fish Communities KEF	Ancient coastline at 125 m depth contour KEF Continental Slope Demersal Fish Communities KEF	Ancient coastline at 125 m depth contour KEF Continental Slope Demersal Fish Communities KEF	Section 10
Coral Reef	Coral reef habitats within the NWMR have a high species diversity that includes corals, and associated reef species such as fishes, crustaceans, invertebrates, and algae. Coral reef habitats of the offshore environment of the NWMR include remote oceanic reef systems, large platform reefs, submerged banks and shoals.			
	Browse Island Scott Reef Seringapatam Reef Ashmore Reef Cartier Island Hibernia Reef	Rowley Shoals (including Mermaid Reef, Clerke Reef, Imperieuse Reef) Glomar Shoal Rankin Bank		Section 4.4.1 Section 10 Section 11
Seagrass and Macroalgae communities	Seagrass beds and benthic macroalgae reefs are a main food source for many marine species and also provide key habitats and nursery grounds (Heck et al., 2003; Wilson et al., 2010). In the northern half of Western Australia, these habitats are restricted to sheltered and shallow waters, including around offshore reef systems, due to large tidal movement, high turbidity, large seasonal freshwater run-off and cyclones.			
	Scott Reef Seringapatam Reef Ashmore Reef	Rowley Shoals (including; Mermaid Reef, Clerke Reef, Imperieuse Reef)		Section 11
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water by passing the water over specialised filtration structures (DEWHA, 2008). Filter feeders generally live in areas that have strong currents and hard substratum, often associated with deeper environments of the shoals and banks in the offshore NWMR.

Nearshore/coastal habitats and biological communities				
Coral Reef	Coral reef habitats typically found in nearshore regions of the NWMR include the fringing reefs around coastal islands and the mainland shore.			
	Kimberley East Holothuria and Long Reefs Bonaparte and Buccaneer Archipelagos Montgomery Reef Adele complex (Beagle, Mavis, Albert, Churchill reefs, Adele Island)	Dampier Archipelago Montebello, Lowendal and Barrow Island Groups	Ningaloo Reef Exmouth Gulf Shark Bay	Section 11
Seagrass and Macroalgae communities	Seagrass beds and benthic macroalgae reefs are a main food source for many marine species and also provide key habitats and nursery grounds (Heck Jr. et al., 2003; Wilson et al., 2010). In the nearshore areas of the NWMR, these habitats are restricted to sheltered and shallow waters due to large tidal movement, high turbidity, large seasonal freshwater run-off and cyclones. These areas include in bays and sounds and around reef and island groups.			
	King Sound	Roebuck Bay Dampier Archipelago Montebello, Lowendal and Barrow Island Groups	Ningaloo Reef Exmouth Gulf Shark Bay	Section 11
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water by passing the water over specialised filtration structures (DEWHA, 2007a). Filter feeders generally live in areas that have strong currents and hard substratum. Conversely, higher diversity infauna is mainly associated with soft unconsolidated sediment and infauna communities are considered widespread and well represented along the continental shelf and upper slopes of the NWMR. In nearshore areas of the NWMR, these species are generally found around reef systems.			
		Deeper habitats of Rankin Bank and Glomar Shoal	Deeper habitats of Ningaloo Reef and the protected sponge zone in the South	

Habitat/Community	Browse	NWS / Scarborough	North-west Cape	Reference
Mangroves	Mangroves grow in intertidal mud and sand, with specially adapted aerial roots (pneumatophores) that provide for gas exchange during low tide (McClatchie et al., 2006). Mangrove forests can help stabilise coastal sediments, provide a nursery ground for many species of fish and crustacean, and provide shelter or nesting areas for seabirds (McClatchie et al., 2006). Mangroves are confined to shoreline habitats, in nearshore areas of the NWMR.			
	Dampier Peninsula (including Carnot Bay, Beagle Bay and Pender Bay)	Pilbara Coastline (including; Ashburton River Delta, Coolgra Point, Robe River Delta, Yardie Landing, Yammadery Island and the Mangrove Islands) Montebello, Lowendal and Barrow Island Groups Roebuck Bay	Shark Bay Mangrove Bay, Cape Range Peninsula Exmouth Gulf	Section 11
Saltmarshes	Saltmarsh communities are confined to shoreline habitats and are typically dominated by dense stands of halophytic plants such as herbs, grasses, and low shrubs. The diversity of saltmarsh plant species increases with increasing latitude (in contrast to mangroves). The vegetation in these environments is essential to the stability of the saltmarsh, as they trap and bind sediments. The sediments are generally sandy silts and clays and can often have high organic material content.			
		Eighty Mile Beach Roebuck Bay	Shark Bay	Section 11
Sandy Beaches	Sandy beaches are dynamic environments, naturally fluctuating in response to external forcing factors (e.g. waves, currents, etc). Sandy beaches vary in length, width and gradient, and in sediment type, composition, and grain size throughout the NWMR. Sandy beaches are important for both resident and migratory seabirds and shorebirds and can also provide an important habitat for turtle nesting and breeding. They are located along many coastlines of the nearshore environments of the NWMR.

Table 4-2 Habitats within the SWMR

Location	
Offshore	
Soft sediment with infauna	Most of the SWMR seafloor is composed of soft unconsolidated sediments, but due to large variations in bathymetry there are marked differences in sedimentary composition and benthic assemblage structure across the region. Despite the prevalence of these habitats in the SWMR, very little is known about the composition or distribution of the region's sedimentary infauna (DEWHA, 2008b).
Soft sediment with hard substrate outcropping	A unique seafloor feature combining both soft sediment and hard substrates, including outcrops, terraces, continental slope, and escarpments. Perth Canyon Marine Park Ancient coastline at 90-120 m depth contour KEF Diamantina Fracture Zone Naturaliste Plateau
Coral Reef	To date, studies and understanding of the corals within the SWMR have concentrated on the shallow water areas in State waters. Within the deeper Commonwealth waters of the SWMR little is known of the distribution of corals.
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water by passing the water over specialised filtration structures (DEWR, 2007). Filter feeders generally inhabit deeper habitat (below the photic zone) that have strong currents and hard substratum Ancient coastline at 90-120 m depth Diamantina Fracture Zone Naturaliste Plateau Perth Canyon Marine Park South-west Corner Marine Park
Nearshore	
Coral Reef	The northern extent of the SWMR coincides loosely with the disappearance of abundant and diverse coral from coastal habitats. To the south of Shark Bay, abundant corals occur predominantly around offshore islands, with corals at inshore sites occurring in very isolated patches of non-reef coral communities, usually of reduced species richness. Houtman Abrolhos Islands Rottnest Island
Seagrass and Macroalgae communities	Within the SWMR, macroalgae and seagrass communities are noted for their extent, species richness and endemism. The clear waters of the region allow light to reach greater depths, with some species found at much greater depths than usual (down to 120 m) (DEWR, 2007). Of the known species there are more than 1000 species of macro-algae and 22 species of seagrass consisting of tropical and temperate species. Seagrass and macro-algae occur in areas with sheltered bays and in the inter-reef lagoons along exposed sections of the coast. Houtman Abrolhos Islands Jurien Marine Park Shoalwater Islands Marine Park Geographe Marine Park Cockburn Sound Rottnest Island

Table 4-3 Habitats and Biological Communities within the NMR

Habitat/Community	Location
Offshore habitats and biological communities	
Soft sediment with infauna	Most of the offshore environment of the NMR is characterised by relatively flat expanses of soft sediment seabed. The soft sediments of the region are characterised by moderately abundant and diverse communities of infauna and mobile epifauna dominated by polychaetes, crustaceans, molluscs, and echinoderms.
Soft sediment with hard substrate outcropping	A unique seafloor feature combining both soft sediment and hard substrates, including outcrops, terraces, continental slope, and escarpments. The variability in substrate composition may contribute to the presence of unique ecosystems. Species present include sponges, soft corals and other sessile filter feeders associated with hard substrate sediments.
	Carbonate bank and terrace system of the Van Diemen Rise KEF Pinnacles of the Bonaparte Basin KEF
Coral Reef	Offshore coral reefs within the NMR are generally associated with a series of submerged shoals and banks. The shoals/banks in the region support tropical marine biota consistent with that found on emergent reef systems of the Indo West Pacific region such as Ashmore Reef, Cartier Island, Seringapatam Reef and Scott Reef (Heyward et al., 1997).
	Pinnacles of the Bonaparte Basin KEF Evans Shoal Tassie Shoal Blackwood Shoal
Filter Feeders/ heterotrophic	Filter feeder epifauna such as sponges, ascidians, soft corals and gorgonians are animals that feed by actively filtering suspended matter and food particles from water by passing the water over specialised filtration structures (DEWHA, 2007b). Filter feeders generally live in areas that have strong currents and hard substratum and typically associated with the deeper habitats of the submerged shoals and banks, and canyon features.
	Carbonate bank and terrace system of the Van Diemen Rise KEF Pinnacles of the Bonaparte Basin KEF Tributary Canyons of the Arafura Depression KEF Evans Shoal Tassie Shoal Goodrich Bank
Nearshore	
Coral Reef	Within the NMR corals occur both as reefs and in non-reef coral communities. Nearshore reefs include patch reefs and fringing reefs sparsely distributed within the region. Coral reefs within the NMR provides breeding and aggregation areas for many fish species including mackerel and snapper and offer refuges for sea snakes and apex predators such as sharks.
	Submerged coral reefs of the Gulf of Carpentaria KEF Darwin Harbour
Seagrass and Macroalgae communities	Seagrasses provide key habitats in the NMR. They stabilise coastal sediments and trap and recycle nutrients. They provide nursery grounds for commercially harvested fish and prawns and provide feeding grounds for dugongs and green turtles. Seagrass distribution in the region is largely associated with sheltered small bays and inlets including shallow waters surrounding inshore islands.
	Field Island The mainland coastline adjacent to Kakadu National Park

5. FISHES, SHARKS AND RAYS

5.1 Regional Context

Western Australian waters provide important habitat for listed fishes, sharks, and rays including areas that support key life stages such as breeding, foraging, and migration routes for fish species. Pelagic and demersal fishes occupy a range of habitats throughout each of the regions, from coral reefs to open offshore waters, and are an extremely important component of ecosystems, providing a link between primary production and higher predators, with many species being of conservation value and important for commercial and recreational fishing.

The NWMR supports a wide diversity of global fish species. Of the approximately 500 shark species found worldwide, 94 are found in the region (DEWHA, 2008). Approximately 54 species of syngnathids (seahorses, seadragons, pipehorses and pipefishes) and one species of solenostomids (ghostpipefishes) are also known to occur in the NWMR or adjacent State waters (DSEWPAC, 2012a).

The fish fauna of the SWMR includes more than 900 species occupying a large variety of habitats. However, only three species of bony fishes known to occur in the region are listed under the EPBC Act as threatened or marine species, and seven listed species of shark (DSEWPAC, 2012b).

The NMR is considered an important area for the sawfish and river shark species group, with five species of sawfishes and river sharks listed under the EPBC Act known to occur in the region (DSEWPAC, 2012c). Approximately 28 species of syngnathids and two species of solenostomids are listed marine and known to occur in the NMR, however there is a paucity of knowledge on the distribution, relative abundance and habitats of these species in the region (DEWHA, 2008).

The following sections focus on the fish species (including sharks and rays) listed as threatened or migratory that are known to occur within the NWMR. In addition, listed, conservation-dependent fish and shark species for the NWMR are described. A detailed account of commercial and recreational fisheries that operate in the region is provided in **Section 12**.

Table 5-1 outlines the threatened and migratory fish species that may or are known to occur within the NWMR, with their conservation status and relevant recovery plans and/or conservation advice. **Table 5-2** includes fish species listed as conservation dependent that may occur within the NWMR, NMR and SWMR.

Table 5-2 EPBC Act listed Conservation Dependent species of fishes and sharks that may occur in the NWMR, NMR and SWMR

Species Name	Common Name	Likely Occurrence / Distribution	Listing Advice
<i>Hoplostethus atlanticus</i>	Orange roughy, Deep-sea perch, Red roughy	SWMR	No conservation listing advice for this species. Refer to the Marine bioregional plan for the SWMR (DSEWPAC, 2012b) for further information. Managed under AFMA's Orange Roughy Stock Rebuilding Strategy (AFMA, 2014)
<i>Sphyrna lewini</i>	Scalloped hammerhead	NWMR, NMR and SWMR ⁷	Threatened Species Scientific Committee (2018)
<i>Galeorhinus galeus</i>	School shark, Eastern school shark, Snapper shark, Tope, Soupfin shark	SWMR	Threatened Species Scientific Committee (2009)
<i>Centrophorus uyato</i>	Little gulper shark	NWMR and SWMR	No conservation listing advice for this species. Refer to listing advice (Threatened Species Scientific Committee, 2013)

⁷ A recurrent aggregation of scalloped hammerheads has been recorded within the Shoalwater Islands Marine Park (32° S; 115° E), 240 km south of Jurien Bay, observed from drone footage collected during the 2019 and 2020 Austral summers. The species has rarely been recorded south of Jurien Bay previously (López et al., 2022).

5.2 Protected Sharks, Sawfishes and Rays in the NWMR

The EPBC Act Protected Matters search (**APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR) identified seven species of shark and five species of river shark or sawfish listed as threatened and/or migratory within the NWMR. In addition, two species of ray (the reef manta ray and giant manta ray) are listed as migratory within the region (refer **Table 5-3**).

5.2.1 Sharks and Sawfishes

The shark species that may or are known to occur within the NWMR include: the whale shark, grey nurse shark, white shark, shortfin mako, and longfin mako (**Table 5-3**).

Five species of river shark or sawfish that may or are known to occur in the NWMR include: the narrow sawfish, northern river shark, freshwater sawfish, green sawfish and dwarf sawfish (**Table 5-3** Error! Reference source not found.).

There are identified biologically important areas (BIAs) within the NWMR for the whale shark, freshwater sawfish, green sawfish, and dwarf sawfish (**Table 5-5**).

Table 5-3 Information on the EPBC-listed threatened shark, fish and sawfish species that may or are known to occur within the NWMR.

Species	Preferred Habitat and Diet	Habitat Location
Whale shark	Preferred habitat: They have a widespread distribution in tropical and warm temperate seas, throughout oceanic and coastal Australian waters (Last and Stevens, 2009). Diet: Whale shark are planktivorous and feed on a variety of planktonic species including krill, jellyfish, and crab larvae (Last and Stevens, 2009).	Ningaloo Reef is the main known aggregation site for whale sharks in Australian waters and has the largest density of whale sharks per kilometre in the world (Martin, 2007). Acoustically tagged whale sharks have been detected on the North-west Shelf in June, July and October-January (Thomson et al. 2021). Satellite tagging and sightings of whale sharks off the Western Australian coast indicate that whilst whale sharks aggregate in higher numbers at Ningaloo Reef seasonally, they may be present year-round (Norman et al., 2017). Refer Table 5-5 for the BIA summary for the whale shark.
Grey nurse shark (West-coast population)	Preferred habitat: Most found in temperate waters on, or close to, the bottom of the continental shelf, from close inshore to depths of about 200 m (McAuley, 2004; Kyne et al., 2021). Diet: A variety of teleost and elasmobranch fishes and some cephalopods (Gelsleichter et al., 1999; Smale, 2005).	Details of movement patterns of the western sub-population are unclear (McAuley, 2004) and key aggregation sites have not been formally identified within the NWMR (Chidlow et al., 2006). The NWMR represents the northern limit of the West-coast population. Sighting and bycatch data have indicated grey nurse sharks are present near Exmouth and Shark Bay between May - December (Hoschke et al., 2023).
White shark	Preferred habitat: The species typically occurs in temperate coastal waters between the shore and the 100 m depth contour; however, adults and juveniles have been recorded diving to depths of 1000 m (Bruce et al., 2006; Bruce, 2008). Diet: Smaller white sharks (less than 3 m length) feed primarily on teleost and elasmobranch fishes,	There are no known aggregation sites for white sharks in the NWMR, and this species is most often found south of North-west Cape, in low densities (DSEWPAC, 2012a). Given the migratory nature of the species, it most likely has a broad

Species	Preferred Habitat and Diet	Habitat Location
	broadening their diet as larger sharks to include marine mammals (Last and Stevens, 2009).	distribution within the NWMR. No BIAs identified for NWMR.
Shortfin mako	<p>Preferred habitat: The shortfin mako shark is a pelagic species with a circumglobal, wide-ranging oceanic distribution in tropical and temperate seas (Mollet et al., 2000). Tagging studies indicate shortfin makos spend most of their time in water less than 50 m deep but with occasional dives up to 880 m (Abascal et al., 2011; Stevens et al., 2010). Satellite telemetry data suggest shortfin makos have multiple movement phases, displaying both high connectivity between Australian populations and periods of residency (Corrigan et al., 2018).</p> <p>Diet: Feeds on a variety of prey, such as teleost fishes, other sharks, marine mammals, and marine turtles (Campana et al., 2005).</p>	Given the migratory nature of the species, it most likely has a broad distribution within the NWMR. No BIAs identified for NWMR.
Longfin mako	<p>Preferred habitat: A pelagic species with a wide-ranging, patchy, oceanic distribution in tropical and temperate seas (Mollet et al., 2000; Kyne et al., 2021). They have been recorded at depth ranges of 0–1,752 m (Kyne et al., 2021).</p> <p>Diet: Primarily teleost fishes and cephalopods (primarily squid) (Last and Stevens, 2009).</p>	<p>Records on longfin mako sharks are sporadic and their complete geographic range is not well known (Reardon et al., 2006).</p> <p>Given the migratory nature of the species, most likely has a broad distribution within the NWMR. No BIAs identified for NWMR.</p>
Mackerel/Porbeagle shark	<p>Preferred habitat: The porbeagle shark primarily inhabits offshore waters around the edge of the continental shelf. They occasionally move into coastal waters, but these movements are temporary (Campana and Joyce, 2004; Francis et al., 2002). The porbeagle shark is known to dive to depths exceeding 1300 m (Campana et al., 2010; Saunders et al., 2011). Depth range records are 0-370 m (Kyne et al., 2021).</p> <p>Diet: Primarily teleost fish, elasmobranchs, and cephalopods (primarily squid) (Joyce et al., 2002; Last and Stevens, 2009).</p>	In Australia, the species occurs in waters from southern Queensland to South-west Australia (Last and Stevens, 2009). Distribution within the NWMR is unknown, but there are several records for this species within the NWS (Atlas of Living Australia (ALA)).
Oceanic whitetip shark	<p>Preferred habitat: The oceanic whitetip shark is globally distributed in warm-temperate and tropical oceans (Andrzejczek et al., 2018). The species may occur in tropical and sub-tropical offshore and coastal waters around Australia. They primarily occupy pelagic waters in the upper 200 m of the water column; however, they have been observed diving to depths of around 1000 m, potentially associated with foraging behaviour (Howey-Jordan et al., 2013; D'Alberto et al., 2017). The species is highly migratory, travelling large distances between shallow reef habitats in coastal waters and oceanic waters (Howey-Jordan et al., 2013). The species does exhibit a strong preference for warm and shallow waters above 120 m.</p> <p>Diet: Opportunistic feeders and generally target a variety of finfishes and pelagic squid, depending on habitat. Targets pelagics such as tuna in open ocean as noted by the large bycatch numbers in the long line fisheries.</p>	Given the migratory nature of the species, it most likely has a broad distribution within the NWMR. No BIAs identified for NWMR.
Narrow sawfish	Preferred habitat ¹ : Shallow coastal, estuarine, and riverine habitats, however it may occur in waters up to 40 m deep (D'Anastasi et al., 2013).	Shallow coastal waters of the Pilbara and Kimberly coasts (Last and Stevens, 2009).

Species	Preferred Habitat and Diet	Habitat Location
	Diet: Shoaling fishes, such as mullet, as well as molluscs and small crustaceans (Cliff and Wilson, 1994).	
Northern river shark	Preferred habitat ¹ : Rivers, tidal sections of large tropical estuarine systems and macrotidal embayments, as well as inshore and offshore marine habitats (Pillans et al., 2009; Thorburn and Morgan, 2004). Adults have been recorded only in marine environments. Juveniles and sub-adults have been recorded in freshwater, estuarine and marine environments (Pillans et al., 2009). Depth range of up to 23 m (Kyne et al., 2021). Diet: Variety of fish and crustaceans (Stevens et al., 2005).	The northern river shark has a relatively restricted northern Australian range (although with an extent of occurrence >20,000 km ²) (Kyne et al., 2021). Within the NWMR records have come from both the West and East Kimberley, including King Sound, the Ord and King rivers, West Arm of Cambridge Gulf and also from Joseph Bonaparte Gulf (Thorburn and Morgan, 2004; Stevens et al., 2005; Thorburn, 2006; Field et al., 2008; Pillans et al., 2008, Whitty et al., 2008; Wynen et al., 2008).
Largetooth (freshwater) sawfish	Preferred habitat: Sandy or muddy bottoms of shallow coastal waters, estuaries, river mouths and freshwater rivers, and isolated water holes. Diet: Shoaling fishes, such as mullet, as well as molluscs and small crustaceans (Cliff and Wilson, 1994).	The largetooth sawfish has a wide Northern Australia range (Kyne et al., 2021). The Kimberley region, particularly the Fitzroy River, is identified as an important nursery site (Bateman et al. 2024). The Exmouth Gulf represents the approximate southern limit for the largetooth (freshwater) sawfish, although there are a few historical records further south (Bateman et al. 2024). Refer to Table 5-5 for the BIA summary for the Largetooth (freshwater) sawfish.
Green sawfish	Preferred habitat ¹ : Inshore coastal environments including estuaries, river mouths, embayments, and along sandy and muddy beaches, as well as offshore marine habitat (Stevens et al., 2005; Thorburn et al., 2003). They are found at depths of up to 70 m (Kyne et al., 2021). Diet: Schools of baitfish and prawns (Pogonoski et al., 2002), molluscs and small crustaceans (Cliff and Wilson, 1994).	An aggregation of green sawfish (<i>Pristis zijsron</i>) has been identified in the Garig Gunak Barlu National Park (Cobourg Peninsula, NMR). Davies et al., 2022) suggests this may be a nursery area. The Ashburton River Estuary (Onslow region) has been recorded as a nursery site, with juveniles also observed along the Pilbara coast and Exmouth Gulf (Bateman et al., 2024). Refer Table 5-5 for the BIA summary for the green sawfish.
Dwarf sawfish	Preferred habitat ¹ : Shallow (up to 20 m) silty coastal waters and estuarine habitats, occupying relatively restricted areas and moving only small distances (Stevens et al., 2008; Kyne et al., 2015). Diet: Shoaling fish such as mullet, molluscs, and small crustaceans (Cliff and Wilson, 1994).	Literature indicates the most southern range for the dwarf sawfish is Port Hedland (Bateman et al., 2024). Refer Table 5-5 for the BIA summary for the dwarf sawfish.

¹ Preferred habitat as described within the *Sawfish and River Sharks Multispecies Recovery Plan* (Commonwealth of Australia, 2015b).

5.2.2 Rays

Rays are commonly found in the NWMR. Two listed and migratory species of ray are known to occur within the NWMR: the reef manta ray and giant manta ray.

No BIAs for either the reef or giant manta ray species have been identified in the NWMR.

Table 5-4 Information on migratory ray species within the NWMR

Species	Preferred Habitat and Diet	Habitat Location
Reef manta ray	Preferred habitat: The reef manta ray is commonly sighted within productive nearshore environments, such as island groups, atolls or continental coastlines. However, the species has also been recorded at offshore coral reefs, rocky reefs, and seamounts (Marshall et al., 2009). Recorded depth range of 0-432 m (Kyne et al., 2021). Diet: Feed on planktonic organisms including krill and crab larvae.	A resident population of reef manta rays has been recorded at Ningaloo Reef. No BIAs identified for NWMR.
Giant manta ray	Preferred habitat: The species primarily inhabits near-shore environments along productive coastlines with regular upwelling, but they appear to be seasonal visitors to coastal or offshore sites including offshore island groups, offshore pinnacles and seamounts (Marshall et al., 2011). Recorded depth range of up to 1000 m (Kyne et al., 2021). Diet: Feed on planktonic organisms including krill and crab larvae.	The Ningaloo coast is an important area for giant manta rays from March to August (Preen et al., 1997). No BIAs identified for NWMR.

5.3 Fish, Shark and Sawfish Biological Important Areas in the NWMR

A review of The Australian Marine Spatial Information System (GA, 2024) identified Biologically Important Areas (BIAs) for four species of fish, shark and sawfish (whale shark, largetooth (freshwater) sawfish, green sawfish and dwarf sawfish) within the NWMR. The BIAs for the whale shark and the sawfish species include foraging, nursing, juvenile and pupping areas. These are described in **Table 5-5**.

Table 5-5 Fish, whale shark and sawfish BIAs within the NWMR (source: AMSIS, accessed 14/08/2024)

	Woodside Activity Area			BIAs

5.4 Fish Assemblages of the NWMR

5.4.1 Regional Context for Fish Assemblages of NWMR

The NWMR contains a diverse range of fishes of tropical Indo-west Pacific affinity (Allen et al., 1988). The region is characterised by the highest level of endemism and species diversity compared with other areas of the Australian continental slope. Last et al. (2005) recorded 1,431 species from the three bioregions encompassing the continental slope, whilst also acknowledging some information gaps. A study of fish assemblages of the Dampier Archipelago found habitat type and complexity influenced fish abundance, with significantly higher abundance in mangrove and coral habitats (Moustaka, et al. 2024).

The NWMR is known for its demersal slope fish assemblages; the continental slope of the Timor Province and the North-west Transition supports more than 418 and 505 species of demersal fishes respectively, of which 64 are considered to be endemic. This is the second richest area for demersal fish species across the entire Australian continental slope. Conversely, the broad Southern Province, which covers most of southern Australia, supports 463 species with only 26 possibly being endemic. The continental slope demersal fish assemblages of the NWMR have been identified as a KEF (DEWHA, 2008), as described in **Section 10**.

The ancient coastline at 125m depth contour KEF within the NWMR is thought to support enhanced diversity. Drivers of fish species richness, biodiversity and assemblage composition have been assessed, finding that depth, seafloor complexity and habitat type explain richness and abundance of fish assemblages (Currey-Randall et al., 2021). This study also found that fish communities along the ancient coastline KEF are similar to other mesophotic areas on the NWS. Most of the surveyed feature was characterised by soft sediment and highly mobile fish species (Currey-Randall et al., 2021).

The NWMR also features a diversity of pelagic fishes (those living in the pelagic zone) and benthopelagic fishes, including tuna, billfish, bramids, lutjanids, serranids and some sharks (DEWHA, 2007a). These species feed on salps and jellyfish, and more often on secondary consumers such as squid and bait fish. Water depth provides an indication of the level of interaction between pelagic and benthic communities within the NWMR; in waters deeper than 1000 m, for instance, the trophic system is pelagically-driven and benthic communities rely on particulates that fall to the seafloor (DEWHA, 2007a).

Pelagic fishes play an important ecological role within the NWMR; small pelagic fishes, such as lantern fish, inhabit a range of marine environments, including inshore and continental shelf waters and form a vital link in and between many of the region's trophic systems, feeding on pelagic phytoplankton and zooplankton and providing a food source for a wide variety of predators including large pelagic fishes, sharks, seabirds and marine mammals (Bulman, 2006; Mackie et al., 2007). Large pelagic fishes, such as tuna, mackerel, swordfish, sailfish and marlin are found mainly in oceanic waters and occasionally on the continental shelf (Brewer et al., 2007). Both juvenile and adult phases of the large pelagic species are highly mobile and have a wide geographic distribution, although the juveniles more frequently inhabit warmer or coastal waters (DEWHA, 2008).

5.4.2 Listed Fish Species in the NWMR

The family Syngnathidae is a group of bony fishes that includes seahorses, pipefishes, pipehorses and seadragons. Along with syngnathids, members of the related Solenostomidae family (ghost pipefishes) are also found in the NWMR (DSEWPAC, 2012a).

There are 55 solenostomid and syngnathid species that are listed marine species that may occur within the NWMR, although no species is currently listed as threatened or migratory, according to the PMST report (**APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR).

Syngnathids live in nearshore and inner shelf habitats, usually in shallow coastal waters, among seagrasses, mangroves, coral reefs, macroalgae dominated reefs, and sand or rubble habitats (Dawson, 1985; Lourie et al., 1999, Lourie et al., 2004; Vincent, 1996). Two species, the winged seahorse (*Hippocampus alatus*) and western pipehorse (*Solegnathus sp. 2*) have been identified in deeper waters of the NWMR (up to 200 m) (DSEWPAC, 2012a), however, these species were not identified by the Protected Matters search of the NWMR.

Knowledge about the distribution, abundance and ecology of both syngnathids and solenostomids in the NWMR is limited. No BIAs for syngnathids and solenostomids have been identified in the NWMR.

5.4.3 Browse

The proposed Browse activity area includes biologically important habitat for the whale shark and three sawfish species:

- whale shark (foraging northward from Ningaloo along the 200 m isobath (July - November) (**Table 9-1**))
- Largetooth (freshwater) sawfish (pupping, nursing and foraging areas),
- green sawfish (pupping, nursing and foraging areas); and
- dwarf sawfish (pupping, nursing and foraging areas).

BIAs for the shark and sawfish species are outlined in **Table 5-5** and **Figure 5-**.

The proposed Browse activity area has partial overlap with the continental slope demersal fish communities KEF.

5.4.4 NWS / Scarborough

The NWS / Scarborough activity area includes biologically important habitat for the whale shark and three sawfish species:

- whale shark (foraging northward from Ningaloo along the 200 m isobath (July - November) (**Table 9-1**))
- freshwater sawfish (pupping, nursing and foraging areas),
- green sawfish (pupping, nursing and foraging areas); and
- dwarf sawfish (pupping, nursing and foraging areas).

BIAs for the whale shark and sawfish species are outlined in **Table 5-5** and **Figure 5-**.

The NWS / Scarborough activity area has partial overlap with the continental slope demersal fish communities KEF. The continental slope between North-west Cape and the Montebello Trough has more than 500 fish species, 76 of which are endemic, which makes it the most diverse slope bioregion in Australia (Last et al., 2005).

5.4.5 North-west Cape

The North-west Cape activity area includes biologically important foraging habitat for the whale shark:

- Foraging (high density) in Ningaloo Marine Park and adjacent Commonwealth waters (March- July) (**Table 9-1**); and
- Foraging northward from Ningaloo along the 200 m isobath (July- November) (**Table 9-1**)
 - BIAs for the whale shark are outlined in **Table 5-5** and **Figure 5-**.

The North-west Cape activity area coincides with part of the continental slope demersal fish communities KEF.

6. MARINE REPTILES

6.1 Regional Context for Marine Reptiles

The NWMR contains important habitat for listed marine reptiles, including areas that support key life stages such as nesting, internesting, migration and foraging for marine turtle species, and habitats supporting resident sea snake and crocodile populations.

Six of the seven marine turtle species occur in Australian waters, and all six (the green turtle, hawksbill turtle, loggerhead turtle, flatback turtle, leatherback turtle and olive ridley turtle) occur in the NWMR and NMR, with four species of marine turtles occurring in the SWMR (see Protected Matters reports in APPENDIX A. Protected Matter Search Reports for NWMR, SWMR and NMR).

There are 25 listed species of sea snake reported within or adjacent to the NWMR (Guinea, 2007a; Udyawer et al., 2016), of which four are endemic to reef habitats in the remote parts of the region (see NWMR Protected Matters report in **APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR).

There are significantly fewer marine reptile species that frequently occur within the SWMR and presently include four species of listed marine turtle and six sea snake species. Other species of sea snake may occur because of the southward-flowing Leeuwin Current as vagrants in the region (DSEWPAC, 2012b) (see SWMR Protected Matters report in **APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR).

28 listed sea snake species 'may' occur in the NMR, as reported in the Protected Matters report in APPENDIX A. Protected Matter Search Reports for NWMR, SWMR and NMR.

The following sections focus on the listed marine reptile species known to occur within the NWMR.

Table 6-1 outlines the threatened and migratory marine reptile species that may or are known to occur within the NWMR, with their conservation status and relevant recovery plans and/or conservation advice.

Table 6-1 Marine reptile species identified by the EPBC Act PMST that may occur within or utilise habitats in the NWMR for key life cycle stages

¹⁰ At time of writing (August 2024), Dusky sea snake proposed for inclusion on the EPBC Act threatened species list in the Endangered category (DCCEEW, 2023e).

6.2 Marine Turtles in the NWMR, SWMR and NMR Bioregions

According to the Protected Matters search (**APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR) six species of marine turtle known to occur within the NWMR are listed as threatened and migratory (three Vulnerable and three Endangered) under the EPBC Act—the green (*Chelonia mydas*), hawksbill (*Eretmochelys imbricata*), flatback (*Natator depressus*), loggerhead (*Caretta caretta*), leatherback (*Dermochelys coriacea*) and olive ridley (*Lepidochelys olivacea*) turtles (DSEWPAC, 2012a) (refer **Table 6-1**).

The NWMR supports globally significant breeding populations of four marine turtle species: the green, hawksbill, flatback and loggerhead turtle. Olive ridley turtles are known to forage within the NWMR, but there are only occasional records of the species nesting in the region. Leatherback turtles regularly forage over Australian continental shelf waters within the NWMR but there are also no records of the species nesting in the region (DSEWPAC, 2012a).

The six marine turtle species reported for the NWMR also occur within the NMR.

Four marine turtle species; the green, loggerhead, flatback, and leatherback turtle, have presumed feeding areas within the SWMR; however, no known nesting areas exist within the region (DSEWPAC, 2012b).

Discrete genetic stocks have evolved within each marine turtle species. This is the result of marine turtles returning to the location where they hatched. These genetically distinct stocks are defined by the presence of regional breeding aggregations. Stocks are composed of multiple rookeries in a region and are delineated by where there is little or no migration of individuals between nesting areas. Turtles from different stocks typically overlap at feeding grounds (Commonwealth of Australia, 2017). There are 17 genetic stocks across both the NWMR and NMR (nine in the NWMR, six in the NMR, and two overlapping both regions). Of these 17 genetic stocks, nine are known to occur within Woodside's three areas of activity (**Table 6-2**).

6.2.1 Life Cycle Stages

Marine turtles are highly migratory during non-reproductive life phases and have high site fidelity during breeding and nesting life phases. The majority of their lives are spent in the ocean, with only adult female marine turtles coming ashore to lay eggs in the sand above the high-water mark on natal beaches (Commonwealth of Australia, 2017). **Figure 6-1** summarises the generalised life cycle of marine turtles. Species-specific life cycle information is outlined within the Recovery Plan for Marine Turtles of Australia (Commonwealth of Australia, 2017).

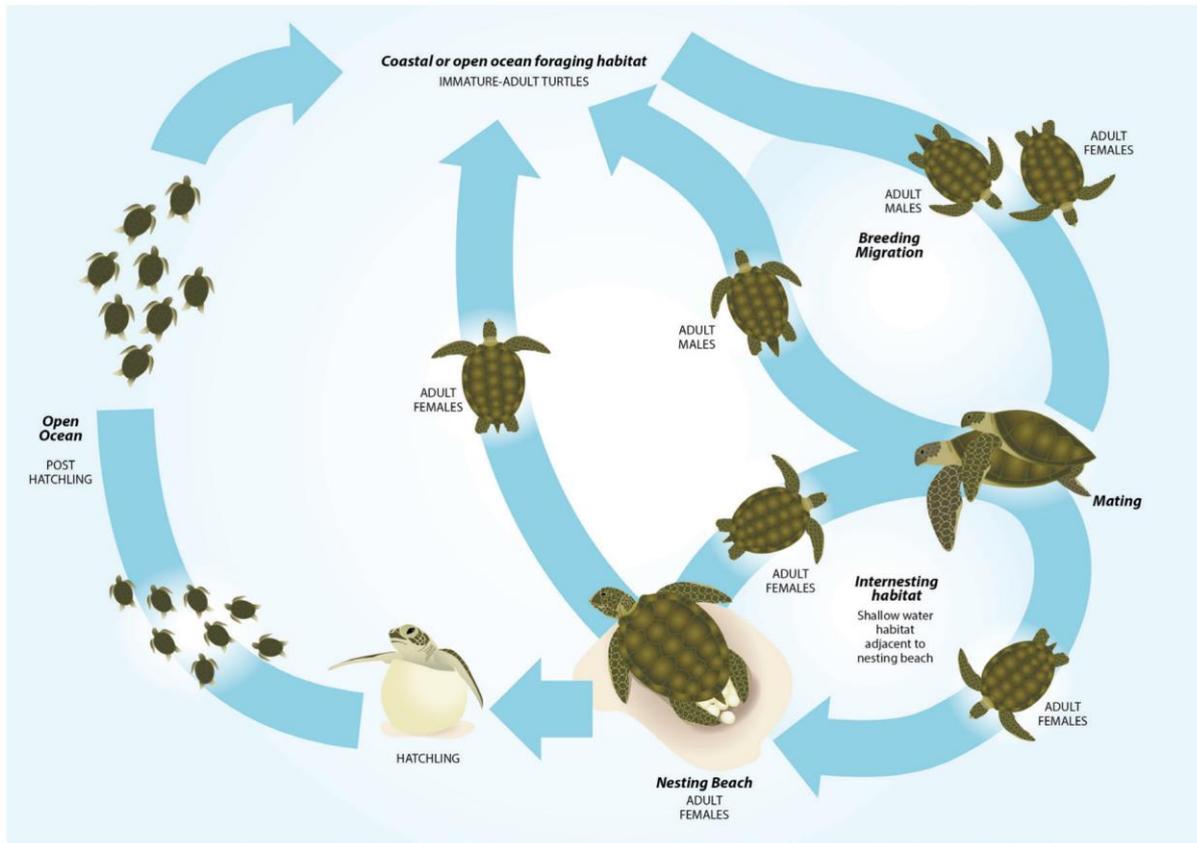

Figure 6-1 Generalised life cycle of marine turtles (Commonwealth of Australia, 2017)

6.2.2 Habitat Critical to Survival for Marine Turtles in the NWMR

The Recovery Plan for Marine Turtles of Australia (Commonwealth of Australia, 2017) identifies habitat critical to the survival of a species for marine turtle stocks under the EPBC Act. Habitat critical to survival is defined by the EPBC Act *Significant Impact Guidelines 1.1 – Matters of National Environmental Significance* as areas necessary:

- for activities such as foraging, breeding or dispersal;
- for the long-term maintenance of the species (including the maintenance of species essential to the survival of the species);
- to maintain genetic diversity and long-term evolutionary development; and
- for the reintroduction of populations or recovery of the species.

The Recovery Plan for Marine Turtles of Australia (Commonwealth of Australia, 2017) has identified nesting locations and associated internesting areas as habitat critical to survival for four marine turtle species within the NWMR and these are identified, described and mapped in **Table 6-2** and **Figure 6-2**. No habitat critical to survival has been identified within the NWMR for olive ridley or leatherback turtles.

Table 6-2 outlines the relevant genetic stock, habitat critical to survival and key life cycle stage seasonality of the four species of marine turtles within the NWMR.

Table 6-2 Genetic stock, habitat critical to survival and key life cycle stage seasonality of the four species of marine turtles within the NWMR

6.3 Marine Turtle Biological Important Areas in the NWMR

A review of the Australian Marine Spatial Information System (GA, 2024), the Marine Bioregional Plan for the North-west Marine Region (DSEWPAC, 2012a) and the Recovery Plan for Marine Turtles in Australia (CoA, 2017) identified BIAs for the four marine turtle species that occur within the NWMR. These are described in **Table 6-3**.

Table 6-3 Marine turtle BIAs within the NWMR

Species	Woodside Activity Area			BIAs				
	Browse	NWS/S	NWC	Mating	Nesting	Internesting	Foraging	Migration ¹¹
Green turtle	✓	✓	✓	Barrow Island Montebello Islands (including Hermite Island, North West Island, Trimouille Island) Dampier Archipelago (islands to the west of the Burrup Peninsula) Ashmore Reef	Barrow Island Montebello Islands (including Hermite Island, North West Island, Trimouille Island) Middle Island Dampier Archipelago (islands to the west of the Burrup Peninsula) North and South Muiron Islands North West Cape Delambre Island Legendre Island and Huay Island Lacepede Islands Scott reef- Sandy Island Ashmore Reef Cartier Island Cassini Island	Locations of 20 km internesting buffer BIAs for green turtles are described in the Marine Bioregional Plan for the North-west Marine Region (DSEWPAC, 2012a). Year round and seasonal 20 km internesting buffer BIAs are located around nesting sites. Habitat critical to survival internesting buffer (Table 6-2) is the legally recognised area of protection under the EPBC Act	Foraging inshore areas of Barrow Island Foraging at Montgomery Reef Foraging at Montebello Islands Foraging at Dixon Island Foraging around Ashmore Reef Foraging at Seringapatam Reef and Scott Reef Foraging in the De Grey River area to Bedout Island Foraging around the Islands between Cape Preston and Onslow and inshore of Barrow Island Foraging around Dampier Archipelago (islands to the west of the Burrup Peninsula) Foraging at Legendre Island and Huay Island Foraging around Delambre Island Foraging in the Joseph Bonaparte Gulf	Migration corridor at Dampier Archipelago (islands to the west of the Burrup Peninsula). Green turtles can migrate more than 2600 km between their feeding and nesting grounds. Individual turtles foraging in the same area do not necessarily take the same migration route (Limpus et al., 1992). Ferreira et al. (2021) broadly identified two migratory corridors, one used by the NWS stock-Pilbara and another used by the NWS stock-Kimberley and the Scott-Browse stock with some overlap at the northern and southern extents respectively. This study showed that the foraging distribution of green turtles from two stocks in WA expands throughout North-west and northern Australian coastal waters, including the NT and Queensland.

¹¹ Migration BIA included in AMSIS (GA, 2024). General information for migratory behaviours also provided.

Species	Woodside Activity Area			BIAs				
	Browse	NWS/S	NWC	Mating	Nesting	Interesting	Foraging	Migration ¹¹
Hawksbill turtle	✓	✓	✓	Montebello Islands Barrow Island Lowendal Island Group Dampier Archipelago (to the west of the Burrup Peninsula)	Lowendal Island Group Montebello Islands (including Ah Chong and South East islands) Rosemary Island Delambre Island Barrow Island Varanus Island and Thevenard Island Dampier Archipelago (to the west of the Burrup Peninsula) Ningaloo Coast and Jurabi coast Sandy Islet at Scott Reef	Locations of 20 km interesting buffer BIAs for hawksbill turtles are described in the Marine Bioregional Plan for the North-west Marine Region (DSEWPAC, 2012a). Year round and seasonal 20 km interesting buffer BIAs are located around nesting sites. Habitat critical to survival interesting buffer (Table 6-2) is the legally recognised area of protection under the EPBC Act	Foraging in waters adjacent to James Price Point Recent data shows foraging ranges from the north of Exmouth Gulf to offshore Broome (Fossette et al., 2021a). Foraging around the Lowendal Island group Foraging at Delambre Island Foraging around Dixon Island Foraging in the De Grey River area to Bedout Island Foraging around the islands between Cape Preston and Onslow and inshore of Barrow Island Foraging around the islands of the Dampier Archipelago (to the west of the Burrup Peninsula) Foraging at Ashmore Reef	Migration corridor at Dampier Archipelago (islands to the West of the Burrup Peninsula). Individuals may migrate up to 2400 km between their nesting and foraging grounds (DSEWPAC, 2012a), although reproductive migration distances over 1000 km appear less common in Hawksbill turtles than other species (Fossette et al., 2021a). Recent satellite tracking data shows turtles migrating from WA rookeries remained on the continental shelf, with the majority following the coastline and dispersing in a North-easterly direction, with some turtles from the Montebello Archipelago and Lowendals moving in a South-westerly direction and some stopping around Barrow Island. A migratory corridor was

								observed from Cape Preston to De Grey River (Fossette et al., 2021a)
Flatback turtle	✓	✓	-	Lacepede Islands Montebello Islands Dampier Archipelago (islands to the West of the Burrup Peninsula) Mating at Barrow Island	Thevenard Island - South coast (summer) high use on beaches with high dune height Barrow Island Montebello Islands (including Hermite Island, North West Island, Trimouille Island) Dampier Archipelago (islands to the west of the Burrup Peninsula) Delambre Island Legendre Island and Huay Island Dixon Island Intercourse Island West of Cape Lambert Various locations along the Pilbara coast between Karratha and Broome, including Cape Thouin, Mundabullangana, Cowrie Beach, Port Hedland (Cemetery Beach, Paradise Beach) and 80 Mile Beach	Locations of 80 km interesting buffer BIAs for flatback turtles are described in the Marine Bioregional Plan for the North-west Marine Region (DSEWPAC, 2012a). Year-round and seasonal interesting buffer BIAs of 80 km are located around nesting sites, extending 20 km further than the habitat critical to survival. Habitat critical to survival interesting buffer (Table 6-2) is the legally recognised area of protection under the EPBC Act	Foraging at the islands between Cape Preston and Onslow and inshore of Barrow Island. Foraging at Montebello Islands Foraging at Dampier Archipelago (islands to the West of the Burrup Peninsula) Foraging at Legendre Island and Huay Island Foraging at Delambre Island Foraging in the Joseph Bonaparte Depression Foraging in waters adjacent to James Price Point	Migration corridor at Dampier Archipelago (islands to the West of the Burrup Peninsula). The flatback turtle is a resident to Australian waters and spends 99% of its time within the Australian EEZ. A migratory corridor connects the coastlines between the Kimberley and Pilbara (Peel et al., 2024). There is evidence that some flatback turtles undertake long-distance migrations between breeding and feeding grounds (Limpus et al., 1983). However, flatback turtles generally do not have a pelagic phase to their lifecycle. Instead, hatchlings grow to maturity in shallow coastal waters thought to be close to their natal beaches (DSEWPAC, 2012a). A study predicting the dispersal of flatback turtle hatchlings found

6.4 Marine Turtle Summary for NWMR

Six of the seven marine turtle species occur within the Woodside activity areas. Across all three areas, globally significant breeding populations of four marine turtle species; the green, hawksbill, flatback and loggerhead turtle, have been recorded.

However, offshore waters do not represent biologically important habitat for marine turtles in any of the three Woodside activity areas. Isolated records of transient individuals (on post-nesting migration) are expected, but there is no evidence of important habitat or behaviours for marine turtles in the offshore, open water environment of the NWS, in general.

6.4.1 Browse

The proposed Browse activity area includes major nesting areas that support globally significant breeding populations of two marine turtle species:

- the green turtle, including two distinct genetic stocks (Ashmore Reef and Scott Reef-Browse Island); and
- the flatback turtle, Cape Domett genetic stock.

Locations of habitat critical for each of the two species are outlined in **Table 6-2** and **Figure 6-2**.

BIAs for the green and flatback turtle are outlined in **Table 6-3** and **Figure 6-3** Green turtle BIAs within the NWMR (data source: DCCEEW, 2024b)

Figure -.

Table 6-4 Marine turtle key information for Browse activity area.

Species / Genetic Stock	Key Information
Green Turtle	
Ashmore Reef Stock (G-AR)	<p>The G-AR stock nests in a localised area of the Indian Ocean in the Ashmore Reef and Cartier Island Australian Marine Park (AMP) areas. Population estimates are not available for Ashmore Reef, although annual breeding numbers are thought to be in the low hundreds (Whiting, 2000).</p> <p>Designated habitat critical for the G-AR stock are the nesting locations of Ashmore Reef and Cartier Reef, and an internesting buffer of 20 km radius around these rookeries, year-round with peak internesting activity occurring December to January (refer Table 6 of the Recovery Plan).</p> <p>Juvenile and adult turtles forage within the tidal/sub-tidal habitats of offshore islands and coastal waters with coral reef, mangrove, sand, rocky reefs, and mudflats where there are algal turfs or seagrass meadows present (Commonwealth of Australia, 2017).</p>
Scott Reef-Browse Island Stock (G-ScBr)	<p>The G-ScBr stock is a discrete unit known to nest at only two locations within the North-east Indian Ocean—Sandy Islet and Browse Island. There is currently very limited data available for the G-ScBr stock, therefore population numbers are not known.</p> <p>Designated habitat critical for the G-ScBr stock are the nesting locations of Sandy Islet and Browse Island, and an internesting buffer of 20 km radius around these rookeries, for the period November to March (refer Table 6 of the Recovery Plan).</p> <p>Surveys conducted at Scott Reef in 2006, 2008 and 2009 indicate that the summer months from late November to February are the preferred breeding season for green turtles at Sandy Islet (Guinea, 2009).</p> <p>Satellite tagging studies (Pendoley, 2005; Guinea, 2011) have provided an indication of the behaviour and migratory routes of adult green turtles leaving Scott Reef. Most animals appear to swim through South Reef lagoon and disperse toward the Western Australian mainland via two distinct post-nesting migration pathways; travelling east and north toward the Bonaparte Archipelago and then north along the coast to foraging areas in NT waters or travelling south to Cape Leveque and then south along the coast to the Turtle Islands off the mouth of the De Grey River in the Pilbara region (Ferreira et al., 2021).</p>

Species / Genetic Stock	Key Information
Flatback Turtle	
Cape Domett Stock (F-CD)	<p>Cape Domett is an important high density nesting area (Tucker et al., 2021). Combined with a smaller site at Lacrosse Island, the F-CD stock is one of the largest flatback turtle stocks in Australia. Average nesting abundance at Cape Domett is estimated at 3,250 females per year (Whiting et al., 2008).</p> <p>Designated habitat critical for the F-CD stock are the nesting locations of Cape Domett and Lacrosse Island, and an internesting buffer of 60 km radius around these rookeries, year-round with peak internesting activity occurring July to September.</p> <p>Extending further than the habitat critical internesting buffer, an internesting buffer BIA of 80 km is located at Cape Domett and Lacrosse Island.</p>

6.4.2 North-west Shelf / Scarborough

The NWS / Scarborough activity area includes major nesting areas that support globally significant breeding populations of three marine turtle species, representing four discrete genetic stocks:

- the green turtle, NWS genetic stock;
- the hawksbill turtle, WA genetic stock; and
- the flatback turtle, South-west Kimberley stock and Pilbara genetic stock.

Locations of habitat critical for each of the four species are outlined in **Table 6-2** and **Figure 6-2**.

BIAs for the green, hawksbill, and flatback turtles are outlined in **Table 6-3** and **Figure 6-3** Green turtle BIAs within the NWMR (data source: DCCEE, 2024b)

Figure -.

Table 6-5 Marine turtle key information for NWS / Scarborough activity area

Species / Genetic Stock	Key Information
Green Turtle	
NWS Stock (G-NWS)	<p>The G-NWS stock is one of the largest green turtle stocks in the world and the largest in the Indian Ocean. The G-NWS stock is estimated at approximately 20,000 individuals (DSEWPAC, 2012a) and the trend for the stock is reported as stable (Commonwealth of Australia, 2017).</p> <p>Major rookeries of the NWS stock within the NWS / Scarborough activity area are located at Lacepede Islands, Montebello Islands, Barrow Island (Tucker <i>et.al.</i>, 2021), Bells Beach, Delambre Island, Mundabullangana, Port Hedland, and Thevenard Island. These areas are designated habitat critical for survival of the stock and include an interesting buffer of 20 km radius around these rookeries from November to March.</p>
Hawksbill Turtle	
Western Australia Stock (H-WA)	<p>The H-WA stock is the largest in the Indian Ocean. The majority of the nesting for this stock is located in the Pilbara. The Dampier Archipelago has the largest nesting aggregation recorded. In particular, Rosemary Island supports the most significant hawksbill turtle rookery in the WA region and one of the largest in the Indian Ocean; approximately 500-1000 females nest on the island annually, more than at any other WA rookery (Pendoley, 2005; Pendoley et al., 2016).</p> <p>Major rookeries of the H-WA stock within the NWS / Scarborough activity area are located at Rosemary Island, Delambre Island and the Montebello Islands. These areas are designated habitat critical for the stock and include an interesting buffer of 20 km radius around these rookeries from October to February.</p>
Flatback Turtle	
South-west Kimberley Stock (F-swKim)	<p>The genetic relationship between this nesting aggregation and the Cape Domett and Pilbara stocks is currently under review. Population numbers of the F-swKim stock are unknown.</p> <p>Major rookeries of the F-swKim stock are located at Eighty Mile Beach and Eco Beach. These areas are designated habitat critical for the stock and include an interesting buffer of 60 km radius around these rookeries from October to March.</p>
Pilbara Stock (F-Pil)	<p>The extent of genetic relatedness of flatback turtles along the WA coast is currently under review. Population numbers of the F-Pil stock are unknown.</p>

This document is protected by copyright. No part of this document may be reproduced, adapted, transmitted, or stored in any form by any process (electronic or otherwise) without the specific written consent of Woodside. All rights are reserved.

Species / Genetic Stock	Key Information
	<p>This stock nests on many islands in the Pilbara and southern Kimberley, with major rookeries at Mundabullangana Beach, Delambre Island, Rosemary Island and Barrow Island. These areas are designated habitat critical for the F-Pil stock and include an interesting buffer of 60 km radius around these rookeries from October to March. A study using aerial photogrammetry showed nesting beaches were spread across the Pilbara from Y Island (Exmouth Gulf) in the southwest, to Bedout Island in the north and Mulla Mulla Downs Creek in the east (Fossette et al., 2021b).</p> <p>Other large flatback rookeries include Legendre Island and Thevenard Island. The Dampier Archipelago has been identified as a high-use area for flatback nesting (i.e., > 50% of the stock) (Fossette et al., 2021b).</p> <p>Extending further than the habitat critical interesting buffer, a year-round interesting buffer BIA of 80 km is located north and north-west of the Montebello Islands. However, use level for this BIA has been defined as very low (Commonwealth of Australia, 2017) and the habitat critical interesting buffer is the legally recognised area of protection under the EPBC Act <i>Significant Impact Guidelines 1.1 – Matters of National Environmental Significance</i>.</p> <p>Post-nesting satellite tracking indicates foraging occurs along the WA coast in water shallower than 130 m and within 315 km of shore (Commonwealth of Australia, 2017). Flatbacks exhibit high fidelity to nesting beaches during periods of nesting attempts (Peel et al., 2024).</p>

6.4.3 North-west Cape

The North-west Cape activity area includes major nesting areas that support globally significant breeding populations of two marine turtle species, representing two discrete genetic stocks:

- the green turtle, NWS genetic stock; and
- the loggerhead turtle, Western Australia genetic stock.

Locations of habitat critical for each of the two species are outlined in **Table 6-2** and **Figure 6-2**.

BIAs for the green and loggerhead turtles are outlined in **Table 6-3** and **Figure 6-3** Green turtle BIAs within the NWMR (data source: DCCEEW, 2024b)

Figure -.

A 2018 survey, including on-beach monitoring of the Muiron Islands and Ningaloo Coast from North-west Cape to Bungelup (Rob et al., 2019), supports the concept that North-west Cape and the Muiron Islands are major important nesting areas for green and loggerhead turtles, as identified in the Recovery Plan (Commonwealth of Australia, 2017).

Table 6-6 Marine turtle key information for North-west Cape activity area

Species / Genetic Stock	Key Information
Green Turtle	
NWS Stock (G-NWS)	<p>The G-NWS stock is one of the largest green turtle stocks in the world and the largest in the Indian Ocean. The G-NWS stock is estimated at approximately 20,000 individuals (DSEWPAC, 2012a) and the trend for the stock is reported as stable (Commonwealth of Australia, 2017).</p> <p>There is one major rookery of the G-NWS stock located within the North-west Cape activity area. Located on the mainland coast of the North-west Cape, this area is designated habitat critical for the stock and includes an internesting buffer of 20 km radius around the rookery from November to March.</p> <p>For the 2022-23 Ningaloo Turtle Program season, green turtles were the most active species in the NW Cape division, with 91.2% of total turtle activity (DBCA, 2023a). The number of green turtle nests has varied largely among years since commencement of the program in 2002 (range of 1.06 to 18.13 nests per subsection per day) with an average of 5.69. The average number of green turtle nests in the 2022-23 peak season were below average, with 4.07 nests per subsection per day (DBCA, 2023a). There have been two clear peaks (2011-12 and 2020-21) in activity since the beginning of the Ningaloo Turtle Program, where activity has been approximately 2.5 to 11 times greater than other seasons (DBCA, 2023a). Both seasons coincided with La Niña weather patterns (DBCA, 2021a).</p>
Loggerhead Turtle	
Western Australia Stock (LH-WA)	<p>The LH-WA stock is one of the largest in the world (Limpus, 2009). The trend for the stock is reported as stable (Commonwealth of Australia, 2017).</p> <p>Major rookeries of the LH-WA stock are located at Dirk Hartog Island, Muiron Islands and Gnaraloo Bay. These areas are designated habitat critical for the stock and include an internesting buffer of 20 km radius around these rookeries from November to May.</p> <p>Dirk Hartog Island in the Shark Bay Marine Park, with an average of 122 nests per day over 2.1 km (Reinhold and Whiting, 2014), is recognised as the most important loggerhead turtle rookery in WA (Commonwealth of Australia, 2016; as cited in Rob et al., 2019).</p> <p>The standardised level of loggerhead turtle nesting along the North-west Cape was above the long-term average (0.36) for the 2022-23 season and the third highest since the Ningaloo Turtle Program began (2002), with 0.46 nests per subsection per day (DBCA, 2021a).</p>

6.5 Sea Snakes

Sea snakes are commonly found in the NWMR and NMR, but less so in the SWMR, and occupy three broad habitat types: shallow water coral reef and seagrass habitats, deepwater soft bottom habitats away from reefs, and surface water pelagic habitats (Guinea, 2007a).

There are 25 listed species of sea snake reported within or adjacent to the NWMR (Guinea, 2007a; Udyawer et al., 2016), of which four are endemic to reef habitats in the remote parts of the region:

- dusky sea snake (*Aipysurus fuscus*);
- large headed sea snake (*Hydrophis pacificus*);
- short-nosed sea snake (*Aipysurus apraefrontalis*); and
- leaf-scaled sea snake (*Aipysurus foliosquama*).

The short-nosed sea snake and the leaf-scaled sea snake are listed threatened species (Critically Endangered) under the EPBC Act and the dusky sea snake is currently under assessment for inclusion on the EPBC Act threatened species list as Endangered (**Table 6-7**).

The Kimberley coast has the world's highest diversity of sea snakes, supporting over one third of all known species (Somaweera and Saunders, 2015). There is currently limited knowledge about the ranges and distribution patterns of sea snake species in the NWMR, in addition to a lack of understanding of population status and threats. Recent findings of *A. apraefrontalis* and *A. foliosquama* in locations outside of their previously defined ranges have highlighted the lack of information on species distributions in the NWMR (Udyawer et al., 2016). Udyawer et al. (2020) used a correlative modelling approach to understand habitat associations and identify suitable habitats for five sea snake species (*A. apraefrontalis*, *A. foliosquama*, *A. fuscus*, *A. l. pooleorum* and *A. tenuis*). Species-specific habitat suitability was modelled across 804,244 km² of coastal waters along the NWS, and the resulting habitat suitability maps enabled the identification of key locations of suitable habitat for these five species (refer **Table 6-6**).

No habitat critical to survival or BIAs for sea snake species have been identified in the NWMR. While the Ashmore Reef and Cartier Island AMPs have been recognised for their high diversity and density of sea snakes (DSEWPAC, 2012a), surveys have revealed a steep decline in sea snake numbers at Ashmore Reef (Guinea, 2007b; Lukoschek et al., 2013). Leaf-scaled and short-nosed sea snakes have been absent from surveys at Ashmore Reef since 2001, despite an increase in survey intensity (Guinea, 2006, 2007b; Guinea and Whiting, 2005; Lukoschek et al., 2013). The reason for the decline is unknown.

Table 6-7 Information on the two threatened sea snake species within the NWMR

Species	Preferred Habitat and Diet	Habitat Location
Short-nosed sea snake	Preferred habitat: Primarily on reef flats or in shallow waters of outer reef edges to depths of 10 m (Minton et al., 1975). Typically, movement is restricted to within 50 m of reef flat habitat (Guinea and Whiting, 2005). Diet: Primarily fishes and eels.	The short-nosed sea snake has been recorded from Exmouth Gulf to the reefs of the Sahul Shelf, although most records come from Ashmore and Hibernia reefs (Guinea and Whiting, 2005). Key locations of suitable habitat: Ashmore Reef, Exmouth Gulf and coral habitat fringing the Muiron Islands and the Montebello Islands (Udyawer et al., 2020).
Leaf-scaled sea snake	Preferred habitat: The leaf-scaled sea snake occurs in shallow protected areas of reef flats, typically in water depth less than 10 m. Diet: Primarily shallow water coral-associated wrasse, gudgeons, clinids and eels (McCosker, 1975; Voris, 1972; Voris and Voris, 1983).	The leaf-scaled sea snake has only been recorded at Ashmore and Hibernia reefs (Guinea and Whiting, 2005), indicating it has a very limited distribution. Key locations of suitable habitat: Ashmore Reef, Shark Bay, Exmouth Gulf, Barrow Island and Montebello Islands (Udyawer et al., 2020).

6.6 Crocodiles

The salt-water crocodile (*Crocodylus porosus*) is a listed migratory species under the EPBC Act known to occur within the NWMR. The species is found in most major river systems of the Kimberley, including the Ord, Patrick, Forrest, Durack, King, Pentecost, Prince Regent, Lawley, Mitchell, Hunter, Roe and Glenelg rivers. The largest populations occur in the rivers draining into the Cambridge Gulf and the Prince Regent River and Roe River systems. There have also been isolated records in rivers of the Pilbara region, around Derby near Broome and as far south as Carnarvon on the mid-west coast. No BIAs for salt-water crocodile have been identified in the NWMR.

6.7 Water Monitor

Mitchell's water monitor (*Varanus mitchelli*) is listed as critically endangered under the EPBC Act. The species is known to occur in wetlands and coastal floodplains in the northern extent of the NWMR, with distribution from Yampi Sound Training Area, across the Kimberley and into the Top End of the Northern Territory and far northwest Queensland (DCCEEW, 2023c). The species inhabits freshwater and saline wetlands that range from seasonal gorges in upper catchments to large rivers and coastal floodplains. It has been recorded in rivers, creeks, riffle zones, gorges, springs, lagoons, swamps, mangroves, and foreshores (DCCEEW, 2023c).

Habitat critical to the survival of the species has not been mapped however includes all areas where the species persists following the establishment of cane toads and areas within known distribution where habitat occurs or can be restored (terrestrial) (DCCEEW, 2023c). No BIAs for Mitchell's water monitor have been identified in the NWMR.

7. MARINE MAMMALS

7.1 Regional Context

The offshore waters of WA include important habitat for marine mammals, including areas that support key life stages such as breeding, calving, foraging, and migration. Of the 45 species of cetacean occurring in Australian waters, 27 species occur regularly in the waters of the NWMR, nine species in the waters of the NMR and 33 species in the SWMR. The waters of the NWMR and the NMR support globally significant dugong populations (DSEWPAC, 2012a, 2012c).

The NWMR is an important migratory pathway between feeding grounds in the Southern Ocean and breeding grounds in tropical waters of the NWMR for several cetacean species (DSEWPAC, 2012a). Numerous large mysticetes (baleen whale) species, in particular the humpback whale, are known to utilise the region for migration and calving, and the pygmy blue whale is known to utilise the region for foraging and as a migration pathway between southern feeding and northern breeding/feeding areas north of the equator.

The SWMR is an important area for numerous marine mammal species including pinniped species, large, migratory whale species and resident coastal whale and dolphin species (DSEWPAC, 2012b).

The NMR and adjacent areas are important for several species of cetacean, particularly inshore dolphin species. These species, and other marine mammals, rely on the waters of the NMR and adjacent coastal areas for breeding and foraging (DSEWPAC, 2012c).

Table 7-1 outlines the threatened and migratory marine mammal species that may occur within the NWMR, with their conservation status and relevant recovery plans and/or conservation advice.

Table 7-1 Marine mammal species identified by the EPBC Act PMST that may occur within the NWMR.

7.2 Cetaceans in the NWMR

Cetaceans are generally widely distributed and highly mobile. In general, distribution patterns reflect seasonal feeding and breeding areas, characterised by high productivity, and migration routes associated with reproductive patterns. The NWMR is an important migratory pathway between feeding grounds in the Southern Ocean and breeding grounds in tropical waters for several cetacean species (DSEWPAC, 2012a).

From the Protected Matters search, 34 EPBC Act listed species were recorded as potentially occurring or having habitat within the NWMR (**APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR). Of those, 12 cetacean species are listed as threatened and/or migratory, including baleen whales, toothed whales and dolphins that occur within the NWMR (**Table 7-2**).

7.3 Dugongs in the NWMR

The dugong is listed as migratory under the EPBC Act. Dugongs inhabit seagrass meadows in coastal waters, estuarine creeks and streams, and reef systems (DSEWPAC, 2012a).

Some of the coastal waters adjacent to the NWMR support significant populations of dugongs, including Shark Bay, Exmouth Gulf, in and adjacent to Ningaloo Reef, in coastal waters along the Kimberley coast, and on the edge of the continental shelf at Ashmore Reef (DEWHA, 2008).

Although the patterns of dugong movement in WA are not well understood, it is thought that dugongs move in response to availability of seagrass (Marsh et al., 1994; Preen et al., 1997) and water temperature. Cleguer and Marsh (2023) present the most contemporary data on dugongs and population estimates via an inventory of dugong aerial surveys of Australia, including northwest Australia (Shark Bay, Ningaloo, Exmouth Gulf and Pilbara, the Kimberley Region).

There are a number of BIAs for dugong within and adjacent to waters of the NWMR (refer **Section 7.5**).

7.4 Pinnipeds in the NWMR

The Australian sea lion is listed as a species that may occur or may have habitat within the NWMR (Protected Matters search - **APPENDIX A**. Protected Matter Search Reports for NWMR, SWMR and NMR). It is included here as the Australian sea lion is the only pinniped endemic to Australia (Strahan, 1983) and has been recorded within the southern extent of the NWMR at Shark Bay, WA (Kirkwood et al., 1992). The most northern known breeding colony is at the Houtman Abrolhos Islands in the SWMR. The Australian sea lion's breeding range extends from the Houtman Abrolhos Islands, WA to The Pages Island, east of Kangaroo Island, SA. The Australian sea lion was listed as endangered in 2020 (Threatened Species Scientific Committee, 2020a). An assessment of the status and trends in abundance of this endemic, coastal pinniped species (Goldsworthy et al. 2021) documented an overall reduction in pup abundance over three generations, providing strong evidence that the species meets IUCN endangered criteria.

There are no BIAs for the Australian sea lion in the NWMR.

7.5 Marine Mammals in the NWMR

Marine mammal descriptions within the NWMR including baleen whales, toothed whales and dolphins and dugongs are presented in **Table 7-2**.

Table 7-2 Information on the threatened/migratory marine mammal species within the NWMR

Species	Key Information
Baleen whales (Mysticeti) – Low Frequency hearing	
Humpback whale	<p>In Australian waters, there are two genetically distinct populations of humpback whales that migrate annually along the west (Group IV/ Group D) and east (Group V) coasts between May and November (Jenner et al., 2001). The population of humpback whales (<i>Megaptera novaeangliae</i>) known as Group IV/D migrate annually from Antarctic feeding grounds passing along the coast of Western Australia to warm tropical waters including the Kimberley, North West Cape, and Exmouth Gulf for breeding and calving (Russell et al., 2024). The biannual migration of humpback whales through the NWMR occurs in winter (June to August) for northbound migrating whales and southbound in early spring (September to November). Population data for the West Australian sub-population is considerably variable (DAWE, 2022). The population has been increasing in size at a rate of approximately 10% per annum since the cessation of whaling in Western Australian waters by 1963 (Thums et al., 2018) and population numbers have increased from approximately 2,000 to 3,000 individuals in 1991 to between 19,200–33,850 individuals in 2008 (Bannister and Hedley, 2001; Bejder et al., 2019; Hedley et al., 2011). Aerial surveys off the WA coast undertaken between 2000 and 2008 produced a population estimate for the Group IV population of 26,100 individuals (Salgado Kent et al., 2012) and the predicted increasing trend in abundance predicted by modelling (Thums et al., 2018). The International Whaling Commission (IWC) estimated that in 2012 the Western Australian subpopulation had recovered to 90% (74-98% 90% PI) of its pre-whaling levels and projected that by 2020 it would have reached 98% (88-100% PI) (IWC 2015 cited in (DAWE, 2022)). Due to the unprecedented population recovery the humpback whale was removed from the EPBC Act threatened species list as it was deemed no longer eligible for inclusion (DAWE, 2022) after a previous listing as Vulnerable for many decades.</p> <p>The Group IV population migrates northward from their Antarctic feeding grounds around May each year, reaching the NWMR around early June. The southward migration subsequently starts in mid-September, after time for breeding and calving (typically within August and September) (Threatened Species Scientific Committee, 2015b). Within the NWMR there are key calving areas between Broome and the northern end of Camden Sound, and resting areas in the southern Kimberley region, Exmouth Gulf and Shark Bay. In particular, high numbers of humpback whales are observed in Camden Sound and Pender Bay from June to September each year (Threatened Species Scientific Committee, 2015b) and as far south as Gourdon Bay in the Kimberley (Thums et al., 2018). There are reports of neonates present further south, suggesting that the calving areas may be poorly defined, expanding or returning to pre-whaling patterns as the population recovers. Aerial photogrammetric surveys in 2013 and 2015 recorded large numbers of humpback whale calves along the North-west Cape, with estimated minimum relative calf abundance of 463–603 in 2013 and 557–725 in 2015 (Irvine et al., 2018). The majority of calves sighted in both years (85% in 2013; 94% in 2015) were neonates, and these observations indicate that a minimum of approximately 20% of the expected number of calves of this population are born near, or south of the North-west Cape. Thus, the calving grounds for the Group IV population extend south from Camden Sound to at least North-west Cape, 1000 km South-west of the currently recognized calving area (Irvine et al., 2018) and further south, as reported for Geographe Bay and Flinders Bay (in July and August) in south-west, Western Australia (Jolliffe et al. 2024).</p> <p>The seasonal presence of humpback whales is presented in Table 9-1.</p> <p>Migration, breeding and calving BIAs for the humpback whale within the NWMR are presented in Table 7-3 and Figure 7-2.</p>
Blue whale	<p>There are two recognised sub-species of blue whale in the Southern Hemisphere, both of which are recorded in Australian waters. These are the southern (or 'true') blue whale (<i>Balaenoptera musculus</i>) and the 'pygmy' blue whale (<i>Balaenoptera musculus brevicauda</i>) (Commonwealth of Australia, 2015a). In general, southern blue whales occur in waters south of 60°S and pygmy blue whales occur in waters north of 55°S (i.e., not in the Antarctic). On this basis, it is reasonably assumed all blue whales sighted in the NWMR are likely to be pygmy blue whales.</p> <p>The migratory population, known as the East Indian Ocean (EIO) pygmy blue whale population, migrate biannually through the NWMR. This population is seasonally distributed from Indonesia (a potential breeding ground) to south-west of Australia and east across the Great Australian Bight and Bonney Upwelling to beyond the Bass Strait (Blue Planet Marine, 2020 and McCauley et al. (2018)). Migration seems to be variable, with some individuals appearing as resident to areas of high productivity and others undertaking migrations across long distances (Commonwealth of Australia, 2015a). McCauley et al. (2018) describe three migratory stages around Australia for the EIO pygmy blue whale population, based on collated passive acoustic</p>
